Banks in Travancore-Cochin have spread out in rural areas and operate even in remote villages and in places where, as pointed out by Mr. Chidambaram Chettiyar, there is not even a post office. There are, we are told, about 150 to 200 banks functioning in the State and of these, 10 banks have established 175 branches. The banks claim—with some well deserving pride—that not only nave they been able to drive out the usurious moneylenders but have brought down the rate of interest charged from 24 per cent. to about 9 per cent. The clients of these banks are mostly agriculturists, who are engaged in trade and business as a sideline and these have been enabled to carry on with the help of loans raised on personal credit supported by land as collateral security. To quote Mr. Chettiyar: "There is a strong prejudice, in theory, against such loans being advanced by banks, but land, which is accepted as collateral security, is different in many ways from land in the rest of India, in that not only valuable plantations of tea, rubber, and cardamoms but commercial crops such as pepper, coconuts, etc., are raised on holdings both small and large. These banks have thus operated in a field not familiar to other banks and have done invaluable service to the lower middle class people of the State."

Role of Small Banks

These small banks have thus rendered a signal service—which probably would be beyond the scope of big banks—by promoting thrift and saving habit among the rural folk and by supplying cheap and easy credit to them. The Bankers Association, while pointing out these special features of the banking system in the State, has always been emphasising the point that there is a difference between the system, the methods and the conduct of the people in the regions on the Malabar Coast and those elsewhere, and that these differences find themselves reflected in the systems of banking that have developed in the regions. It is, therefore, argued that legislation such as the Indian Banking Companies Act, framed to suit the requirements of the whole country, cannot be applicable straightaway to an area like Travancore-Cochin with a special set of conditions peculiar to it. Emphasising this point, Mr. A. J. John, Chief Minister of the State, makes certain notable observations thus: "I can understand the apprehension of the banks in Travancore-Cochin, that an all-India administration, keeping in view the general economic setup of India as a whole, might not be able to fully assess, in the correct perspective, their peculiar difficulties. We have here a highly congested populous area, wherein small landholders, small traders and small industrialists predominate. Here land is the most coveted form of investment. The small banks here being asked all on a sudden to conform to all-India standards, might cause them serious hardships. The rural aspect of our economy and the role our banks play in the development of our agriculture and trade have all to be given due weight when advising them to change their methods of business and to bring in new methods of activity."

Now let us see how the provisions of the Act are causing hardship to the banks in Travancore-Cochin. These have been clearly brought out by Mr. George Thomas in his speech. One of the provisions, namely, section 24, requires all banks to maintain 20 per cent. of their total deposits in cash, gold and unencumbered approved securities and balances with the Reserve Bank of India and/or the Imperial Bank of India. Commenting on this requirement, Mr. George Thomas points out that there is not even one branch of the Imperial Bank in the interior State, let alone branches of the Reserve Bank of India. Consequently, the State banks have had to deposit their funds with Scheduled and Non-scheduled banks serving in the interior. If the funds are to be diverted to the Reserve Bank of India or the Imperial Bank of India which are outside the orbit of the business of these banks, as insisted by the provision, the area will suffer from lack of finance for its normal trading.

Twenty Per Cent. Cash Ratio

Pointing to another difficulty caused by this requirement, Mr. Thomas says that to insist on a cash ratio of 20 per cent. might work all right in cities and urban centres where generally demand liabilities and time liabilities of banks form two-thirds and one-third respectively of their deposits. But this is not so in Travancore-Cochin; here, as banks function in rural areas and attract more surplus funds, not from traders but from agriculturists, time liabilities account for as much as two-thirds of their total deposits. Interest rates on fixed deposits, as everyone knows, are higher than on demand deposits. If these banks are to work profitably and survive, they must naturally invest a larger proportion of their deposits in commercial loans and advances. That being so, Mr. Thomas asks, how could these banks be expected to maintain such a high ratio of liquidity. In short, his contention seems to be that the cash ratio for those banks the deposits of which are predominantly fixed should be fixed at a lower level. The specific suggestion of T.-C. State bankers is that either there should be a reduction in the percentage or banks' balances with other banks, Reserve, Imperial or others, should be taken into account for the purpose of calculating the 20 per cent. [illegible] provision which has caused a considerable amount of hardship is section 11. This section enjoins banks to raise their paid-up capital in relation to the number of their branch offices. This section, in other words, asks the banks to go to the capital market. For this the climate is stated to be not at all suitable at the moment. Besides, the position seems to have been worsened by another provision which forbids payment of dividend before the preliminary expenses are entirely written off.

Pattern of Securities

Then again, there is the question of acceptable pattern of securities against loans granted by the banks. The difficulty arising out of this provision has been put forward forcibly by Mr. Thomas thus: "In an area of lower middle class agriculturists, land is the only available security. But land is banned from the accepted patterns. In Travancore-Cochin, pearl-fishing in the turbulent tempestuous Arabian Sea is easier than to secure Gilt-edged, or bullion or stock exchange shares, for loans. This is the stress and strain that occur from the attempt to streamline the entire banking structure of a sub-continent like India which is as vast and varied as Europe minus the red region."

These provisions seem to irritate the Chairman of the Association so much that he questions the very essence of Central control of banks. His remarks are in this context quite interesting. He observes: "A large number of our banks were started, were working, were prosperous and were acknowledged to be rendering a useful service to agriculture, industry and trade, before the establishment of the Reserve Bank of India was thought of. They were able to carry on a modern, efficient banking service into the remotest regions of the land as in other States in India. No acknowledgment of their good work was forthcoming from the central organisation. The Central Banking authority should have been the first to assess, in the right perspective, the tremendous significance of developing rural banking in a country of vast dimensions like India with few cities and thousands of far-away villages... Police force can curb crime, but it cannot promote virtue."

Need for Control Advisable

It must, however, be pointed out here that both Mr. Chidambaram Chettiyar and the Chief Minister of the State were not at all moved by these emotional observations of Mr. Thomas. For both laid stress on the need for control and regulation. Mr. Chidambaram Chettiyar, for instance, pointed out that, in a planned economy it is very necessary that there should be an orderly growth and organisation of the country's credit system. He declared that on fundamentals there could be no relaxations but felt that the Reserve Bank of India would consider sympathetically when its attention was drawn to any peculiar difficulties. An indication of such sympathetic consideration was, he said, provided by the establishment of an office of the Department of Banking Operations in Trivandrum. He advised them to adopt strict banking principles in their operations and also to explore the possibilities of bringing about amalgamation of smaller banks wherever possible.

Similarly, the Chief Minister of Travancore-Cochin also stated that credit institutions such as banks dealt with people's money and, therefore, there was a need to have control over the working of such institutions. He welcomed the control now exercised by the Reserve Bank of India, as he felt that the advice tendered by the Bank could help strengthen the banking structure in the State. He was also certain that by mutual consultation between the Bank and the Association, the difficulties of banks in the State could be overcome. The fact that the Reserve Bank had already allowed time to the banks in the State to comply with the requirements of the new banking law on the recommendation of the State Government was adequate proof of its recognition of the difficulties of banks in Travancore-Cochin.

It may be mentioned here that, while addressing this Association last year, Mr. C. R. Srinivasan, Chairman of the Local Board, Southern Circle, Reserve Bank of India, stated that the authorities would certainly relax the law, if a proper case was made out for such relaxation. According to him, Cochin is that some of them are indulging in spheres beyond the capacity of their resources and are, therefore, exposing themselves to dangers of unsound banking practices. It is with a view to preventing such practices that one looks to the Reserve Bank of India for initiating timely action. The banks can, however, rest assured that no genuine grievance of theirs would go unredressed by the authorities concerned.

MYSORE BANK'S NEW PREMISES AT MADRAS

The Madras branch of the Mysore Bank Ltd. will, in the course of the next few months, be moving into its own new premises for which the foundations were laid by His Highness Sri Jayachamaraja Wadiyar, Rajpramukh of Mysore, on the 20th inst. A solid building of its own in that important centre has been a long-felt need of the Bank. The new building is being constructed in the old China Bazar Road, now known as Netaji Subhas Chandra Bose Road, on the plot where formerly the "Anderson Hall" stood. This site, with the old building, was purchased by the Bank for Rs. 3 lakhs in 1946. But the property came into the possession of the Bank only in 1949. It was subsequently decided to put up a new structure in place of the old at a cost of Rs. 15 lakhs. The building when completed will consist of six floors and a basement consisting of godowns, strong room, lockers, garages, etc. The ground and first floors will contain the banking hall, office and showrooms, banking balcony, manager's and accountant's office rooms. Living quarters and other offices of the Bank will also be provided in the building.

On the occasion of laying the foundation-stone of the building, high tributes were paid to the services rendered by the Bank of Mysore, by both His Highness and Rajaji, who attended the function. Speaking on the occasion, Rajaji stated that the Bank of Mysore had served not only Mysore but the whole of South India in a creditable manner. "Banks render," he said, "a great service. A bank is like a reservoir, the Mettur Reservoir, for example, which collects the waters of the river during good seasons and bad, and distributes the water to the peasants who cultivate the land down below. In the same manner banks manage to keep in reservoir the moneys of the rich and the poor and distribute them carefully, wisely and whenever wanted. The more banks we have the better for us. Whether it be the Bank of Mysore, the Bank of Baroda or some Scotch bank, if they would receive deposits from the people and lend to people, any bank is good, as it serves as a reservoir for making intermittent supply into a regular unbroken supply. That is the function of banks."

His Highness the Rajpramukh of Mysore, in his address on the occasion, stated that the Bank of Mysore had a consistent record of steady progress and sound traditions. Judged by its past record one could confidently look forward to a career of enterprise and service to the business community. After tracing the origin of the Bank, His Highness pointed out that, in the earlier stages, it was an institution of the Government and private agencies for fostering Mysore trade, industry

WHAT IS IT THAT STUDY OF ECONOMICS PURPORTS TO DO?

RIGHT APPROACH TO ECONOMIC PROBLEMS WANTED

(By Dr. JOHN MATTHAI)

[Few will dispute that progress in the field of economic research in India has not gone beyond the fact-finding stage, and, even here, it is neither full nor suited to the needs of the country. Considering the rapid strides that the countries of the West have made in economic studies, the need for a new line of economic thinking and teaching in India cannot be stressed too strongly. Before deciding upon such a new line, our academic men will do well to pay some thought to the question: What is it that the study of economics purports to do? After all, it must be remembered that, if the study of economics is to serve its purpose, it should be lifted out of its academic isolation and related more closely to the current realities of Indian life. It was precisely this aspect which Dr. John Matthai, one of India's leading economists, chose as the main theme of his address delivered at the Annual Foundation Day of the Delhi School of Economics in New Delhi on Thursday this week. The address of Dr. Matthai is so lucid and thought-provoking that it deserves to be reproduced. We have no doubt that the points raised by Dr. Matthai will receive the prompt attention of our academic men and the powers-that-be.—ED.]

IT is a significant fact obvious to students of public affairs that, in common with the rest of the world, the greater part of the problems facing us in India today is economic. It is important, therefore, that both the Government and the people should be helped to understand the nature of these problems and the right approach to them. This need has never been greater than in the years following the attainment of independence and the creation of a Government based on the widest possible franchise. There is now a positive awakening of interest in economic matters and a keen desire to know the why and the wherefore of these matters. The teaching and study of economics have thus become a matter of pre-eminent public interest and an institution like the Delhi School of Economics has a function to perform of deeper import than at any comparable period in the past.

It is but natural that we should ask ourselves the question: what is it that the study of Economics purports to do? Those of us who have been connected with it throughout our working lives are apt to take many things for granted and seldom pause to make clear to ourselves the nature of the task on which we are engaged and where it leads. If I was asked what the study of economics implied, I would state my answer as follows:

It is to analyse the manner in which men and women react to the problem of satisfying their material wants in a world in which, for the time being, there is not enough to go round. Three things at least are involved in this, namely, (i) to know the technique of ascertaining and measuring economic facts, (ii) to understand the behaviour of human beings, while engaged in the pursuit of desired ends, and (iii) to examine the developments resulting from such behaviour in the light of ascertained facts in a given situation.

Appreciation of Relevant Facts

All these three are important. But I venture to think that the greatest of these is the first, namely, a correct appreciation of relevant facts. If this goes wrong, the results yielded by the other processes will possess little validity. On the other hand, one can, without special training, obtain a working understanding of human behaviour by observing oneself and others one comes across. One can also, by the exercise of a reasonable degree of common sense, reach a tentative estimate of the form that human behaviour would assume in a given situation and the consequences to which it might lead, which would be good enough for working purposes. But nothing can replace the effort and the skill required for a correct ascertainment and evaluation of facts. I attach high priority to this aspect of the study of economics at the stage we have reached in India.

By its very nature, the study of economics differs from that of other subjects with which a university is occupied. It differs, for example, from natural sciences, in that, unlike the latter, economics cannot be studied in a laboratory; its scope is too wide and ramified for the essential elements to be reproduced in the narrow compass of a laboratory. It differs from engineering, since no pilot plant can bring within manageable dimensions the conditions in which economic problems occur in real life. It is unlike also such studies as history, literature and philosophy, in the sense that the material required for these can be made reasonably accessible in libraries, whereas books by themselves cannot yield to the student of economics the necessary insight into the varying reactions of human beings, which are his proper study. There is, in fact, for him no satisfactory alternative to direct contact with men and women both as individuals and as organised in groups. It is the lack of direct contact with the realities of human life which must account for the failure of economic studies adequately to fulfil their ultimate object of promoting knowledge on which purposive action can be based.

A Wrong Start

In this country the teaching of economics made altogether a wrong start when it was first taken up by universities more than 50 years ago. It did so for reasons which it is now possible to see more clearly in the light of the advances made in recent years. The textbooks on which most teaching was based had been fashioned in a foreign country in conditions fundamentally dissimilar to ours. Their background was a highly individualistic society which had broken away from mediæval feudalism and was in violent reaction against it. They were based on the circumstances of a community which was in a stage of rapid and widespread transition from an agricultural to an industrial economy. They presumed a large-scale employment of power-driven machinery, in place of human labour, with little conception of its drawbacks and limitations. Lastly, they reflected the powerful impact on Liberal thinking in Western Europe of the idea current at the time of an unending struggle for existence in which only the fittest, as judged by certain narrow tests, could survive.

Nor were the teachers who based their work on these books qualified by their experience or training to appreciate the difference between the conditions pictured in them and those which prevailed in the country in which they or their pupils lived. The teaching was, therefore, unreal in the highest degree and provided the student with neither interest in his work nor stimulus to individual thinking. The lectures, dictated for the most part in those days in the form of ready-made notes, represented a mass of inert propositions whose only use was to enable those who received them to survive an examination which tested neither knowledge nor ability to think.

The irony of it was that, while the teaching of economics was pursued in this barren way by Indian universities, important developments on the economic front had been taking place in the country, which urgently called for the services of trained economists. If some effort had been made to put to practical use such knowledge as they possessed, it would have provided Indian students with invaluable opportunities for checking their academic knowledge against hard facts and sharpening their minds by contact with real problems. These problems, however, were handled then by hardened bureaucrats, educated in another country, who had little use for Indian universities and little faith in the people who received their education in them. No responsible position concerned with the administration of economic affairs or the investigation of economic problems was open to graduates of Indian universities. There was almost a complete divorce between the universities which attempted, however feebly, to train economists and those great departments of Government which dealt with live problems in economics.

Beginnings of New Tradition

It was during the years that followed the First World War that the importance of utilising the services of Indian economists in the handling of economic problems began to be realised. This was partly because, as a result of the war, economic problems had begun to assume a new urgency and partly also because the practice which arose in England during the war of associating economists from the universities with Government activities was known to have yielded useful results. The beginnings of a new tradition in this respect could be seen in the appointment of Indian economists as members of important committees of enquiry, such as the Indian Fiscal Commission, the Indian Tariff Board and the Royal Commission on Indian Agriculture. The tradition thus created soon developed until, during the inter-war period, Indian economists found increasing opportunities of employing their knowledge in practical work, which provided a much needed link between academic studies and important fields of economic activity. Since the advent of independence, this tradition has grown into a well-established practice, the value of which is acknowledged and is above dispute.

While the study of economics has thus been lifted out of its academic isolation and related more closely to the current realities of Indian life, it has brought in its train another problem which portends serious consequences of a different character, calling for urgent consideration. Economists are now in greater demand than ever before, not merely in Government positions but also in industry and trade. One result of this is that, since these positions are more attractive in terms of income as well as prestige, universities are beginning to be drained of the services of their abler men. An economist who has made his mark in his subject now finds greater opportunities of interesting work, well-rewarded elsewhere than in universities, [illegible] therefore [illegible] hands. To careful observers, it is becoming patent that, unless something is done to curb this tendency, the situation may become critical for the universities. While it is essential that those who teach economics in universities should be in continuous contact with economic activities and movements, it is also important that the universities whose primary purpose it is to train economists should have their due share of the best available talent in the country. The danger has already assumed formidable dimensions and its solution cannot be delayed.

Status and Salaries of University Teachers

An improvement in the status and salaries of university teachers would undoubtedly be an important step in meeting this problem and I am happy to find that an endeavour is being made by the Government of India to make university teaching worthwhile to those who are engaged in it. It is high time also that an inter-university convention was established which would restrict the title of 'Professor' to teachers of recognised standing and proficiency and restore to the title something of its lost dignity and status. More than this, however, is required, if an effective solution is to be found.

One way in which, in my judgment, an approach may usefully be made is that, in seeking the assistance of universities in the investigation of economic problems, Government and business organisations should make a practice of approaching not individual teachers but the universities themselves. When an important problem which concerns Government or business calls for investigation, it should be referred to a university which has made a reputation in the particular field and it should be the responsibility of the university, with such financial assistance as it might get, to arrange for the work to be done by its teachers. Such a system would help to preserve the spirit of team-work in universities, to give the whole teaching staff the benefit of contact with the work-a-day world, and to generate a spirit of healthy rivalry among universities and raise the standard of work all round.

Another direction in which the problem might be tackled is that, since the need has arisen for trained economists to be appointed to several permanent positions in Government service, Government should prepare a list of these appointments and constitute the holders into an economic civil service for which recruitment should be made in the ordinary way by a competitive examination open to graduates having the requisite qualifications. The practice of recruiting university teachers for these positions as and when required should be discouraged, except in rare cases. If university teachers have a reasonable status and salary assured to them and are given opportunities of doing interesting and useful work on current problems, it will go a long way towards improving the stability and worthwhileness of university teaching as a profession and also enabling universities to maintain an adequate staff in point of both numbers and quality.

EXPORTS OF INDIAN COTTON CLOTH

UPWARD TREND WELL MAINTAINED

THE distinctly upward trend in exports of cotton piecegoods witnessed in the last quarter of 1953 seems to have gathered further momentum during the first month and the subsequent two weeks of this year. Thus, the quantity of cloth passed for shipment at the port of Bombay alone during the first fortnight of February, 1953, was as much as 47.2 million yards, as against 36.0 million yards and 44.0 million yards in the previous two fortnights, respectively. This figure does not include cloth passed for shipment from the other centres such as Madras, Calcutta and Tuticorin. Assuming that this trend of export is maintained during the fourteen days ending 28th February also, the aggregate exports for the whole month of February will be of the order of 94 million yards, which compares favourably with 79.6 million yards in January, 1954, and 38.6 million yards in February, 1953. The estimated figure of 94 million yards, it may be noted here, exceeds the monthly average of exports that must be maintained in the coming months, if India is to attain the Buxton target of 1,000 million yards, by over 10 million yards.

A striking feature of the foreign trade in cotton piecegoods in recent months is the marked rise in the exports of medium cloth. During the first fortnight of February, for instance, 28.2 million yards of this variety were passed for shipment. Similarly, the bulk of the cloth exported during the month of January, 1954, was accounted for by medium varieties, the quantity exported being 48.8 million yards, as against 34.2 million yards in the previous month and 15.0 million yards in January, 1953. This significant rise in exports of these varieties must be attributed to the abolition of the 10 per cent. export duty on them with effect from 24th October, 1953. Exports of coarse cloth, however, have not been quite encouraging, evidently because of the continuation of export duty. During the first fourteen days of February, 1954, only 11.7 million yards of this variety were passed for shipment. The figure for January, 1954, was 21.0 million yards, as against 21.9 million yards a month before and 17.7 million yards twelve months before. The low level of exports has revived the plea for the complete abolition of the 10 per cent. export duty on coarse cloth. With regard to exports of fine and superfine counts, the position is none too satisfactory. The quantity of cloth passed for shipment during the first fortnight of February was a bare 6.7 million yards, while that during the month of January was not more than 10 million yards, as against 12.6 million yards in December, 1953 and 10.7 million yards in January, 1953.

Japanese Competition

From the improvement in exports of cloth witnessed in the past few months, one should not, however, rush to the conclusion that prospects for cotton piecegoods exports are very bright. For, as a result of the Anglo-Japanese trade and payments agreement concluded recently, India's export of cotton goods will no longer have the same sheltered markets in British territories as hitherto. Further, Japan has recently entered into a long-term trade agreement with Burma in which cotton textiles figure prominently. It is making strenuous efforts, too, to boost up its exports of cloth to the other Asian and African markets. It was only recently that this country concluded a deal with Pakistan for the supply of Rs. 3 crores worth of cotton textiles.

Notwithstanding the stiff Japanese competition, traders feel that prospects for Indian textiles are better, at any rate, so far as the immediate future is concerned. In support of this view, they point to the decision of the Sudan Government to allow imports of grey sheetings which were hitherto subject to a ban, in view of the large stocks that had accumulated in the past. It is reported that the Government is considering the question of allowing free imports of cloth as soon as the stocks held with it are sold out. Business amounting to about 1,500 bales of grey cloth is reported to have already been booked with Sudan. With regard to other export markets, the latest position is described as follows:

Hongkong is, as usual, interested in medium grey sheetings and drill grey 17½×17½, but the price factor is hampering materialisation of business. There are again enquiries from Singapore for bleached shirtings in 42" width, and some business is also reported to have been booked in this line. Indonesia is also interested in grey and bleached shirtings, while there are only negligible enquiries from Australia in cotton duck and work shirtings. Ceylon is interested in printed chintz, white shirtings, poplins, etc., and business is booked in these lines on a fair scale. Burma was entirely out of the market for about three or four months, but has since resumed interest in Indian cloth. It is reported that fair quantities of bleached shirtings 42", poplins and printed voiles have been booked for shipment to this market. In fact, several lots have been shipped regularly in recent weeks.

Iraq is interested in booking grey sheetings, mulls, white shirting, etc., but the price factor has proved to be a handicap in concluding business. Saudi Arabia is rather quiet, while the Persian Gulf ports are interested in booking printed voiles, bleached mulls, black permatto, dyed twills, etc., though the quantity booked so far is rather small.

The United Kingdom is interested in grey cloth 37" and 50", etc., but business has proved to be most difficult due to price disparity. It is also feared that the recent trade pact between Japan and Britain may lead to a slackening of interest on the part of the Lancashire cotton "finishers" in Indian grey cloth, despite the competitive position of the Indian varieties, consequent on the abolition of the export duty on medium cloth.

West Africa has shown some interest in grey sheetings calendered and is also reported to have booked some quantity, though not large. It has also booked a fair quantity of "domestic" cloth. Reports from East Africa do not indicate a satisfactory state of affairs, due probably to political situation in Buganda. It is, however, hoped that conditions will improve soon, rendering business smoother.

As regards the last mentioned market, it may be mentioned here that the Governments of East Africa have decided to continue the embargo on imports of Japanese textiles. This means that, at least in one British territory, India will have no competition from Japan, its only main rival being Britain. Another item of interest to exporters of cotton piecegoods is the comment made by a British newspaper, Discussing the outlook for textile exports to Malaya and Singapore, the *Manchester Guardian* observes as follows:

"Growing competition from India is one of the factors responsible for the decline in Japanese textile trade with Singapore. India's cheapest cloths, for which there is a large domestic demand in Malaya and Singapore, are in fact the cheapest available in many lines and have largely replaced the comparable Japanese fabrics. As a consequence, the rivalry of Japanese and U.K. cloths is always tending to move to the higher qualities."

Following good overseas enquiries, and also better demand for domestic consumption, the offtake of cotton piecegoods has been quite encouraging and the recent gains in prices have been well maintained. Reports from Ahmedabad centre, however, indicate dull trading conditions. Despatches of cloth to consuming areas are said to have been slow of late, consequent on transport difficulties. To quote one report: "Textile mills in Ahmedabad have about 50,000 bales of cloth worth Rs. 6 crores. The major part of this quantity has been duly registered, but are not being despatched, as the railway authorities are not handling more than 2,500 bales per day." It is, therefore, pointed out that, unless the railway authorities make available more wagons for the despatch of cloth, the Ahmedabad mills will once again be faced with the problem of heavy accumulation of stocks.

EXPORTS OF COTTON YARN

Textile traders are somewhat intrigued at the delay in the announcement by the Government of India of its policy in regard to exports of cotton yarn in the current half-year. The export quotas granted by the Government for the period July-December, 1953, are said to have almost been exhausted. The quotas, it will be recalled, were fixed on the basis of yarn supplies made by the mills to the handlooms in 1950-51 plus 25 per cent. of the production resulting from any new spindles installed since that year. The delay in the announcement of export policy perhaps reflects the Government's anxiety to conserve supplies for the handloom sector, the offtake by which is reported to have gone up of late. The traders also fully appreciate this anxiety on the part of the Government. But they point out that the cotton yarn output has been steadily rising and, even after fully meeting the requirements of handlooms, there will still be surplus left for exports. In the course of his presidential address at the recent annual meeting of the All-India Exporters' Association

NO PURCHASE TAX RELIEF TO TEXTILES

E. AFRICA'S DECISION TO RETAIN EMBARGO ON JAPANESE CLOTH HAILED

(From A Special Correspondent)

MANCHESTER, 16th *February*

THE year 1954 is starting with a whole series of shocks for the Lancashire cotton trade. Following closely on the heels of the Japanese trade agreement, the Government has refused to give way and make any concession in purchase tax on textiles, and to add to the confusion the upheaval in cotton supply prospects in Egypt and the Sudan has now come into prominence.

MANCHESTER LETTER

Deputations from cotton trade leaders have been visiting London to protest against the possible implications of the Jap pact. They have all come away empty-handed, meeting a firm refusal to consider that the agreement will harm Lancashire to the extent they envisage. Mr. Peter Thorneycroft, President of the Board of Trade, is convinced that the pact is of benefit to the country as a whole and that Lancashire will not be very adversely affected. Representatives of the spinning and weaving employers made the first visit and they were later followed by the Legislative Council of the United Textile Factory Workers' Association which speaks for all the 285,000 spinning and weaving operatives.

The Cotton Board has denied the Government statements that the industry was consulted before the Jap pact was signed. "Exchanges were limited to prior information given in confidence a short time before public announcement and decisions already taken by the Government for which the Cotton Board are in no way responsible," an official statement declared.

No Purchase Tax Relief

Mr. R. A. Butler, Chancellor of the Exchequer, again disappointed the textile trades when he announced that there would be no change in purchase tax either before or in his Budget statement due in April. There had been widespread hopes in Lancashire that some relief would be forthcoming, especially in view of the recent changes which had assisted other industries.

The contention among textile men is that the tax deters enterprise by stifling new constructions which, if found unsuitable abroad, cannot be sold at home without carrying a large tax burden. On behalf of 19 textile trade organisations which had strongly urged purchase tax cuts, Sir Raymond Streat said that Mr. Butler's news had been received with profound regret. "While it is appreciated that the decision removes uncertainty, it is," he stated, "nevertheless a blow to those firms who are seeking to develop Britain's export trade in high quality textiles."

Lancashire traders are very anxious over the recent developments in the Sudan, following the large purchases made by Egyptian cotton interests at the latest auction. Although it is appreciated that the amount involved was small in relation to the total crop, there are fears that supplies may be seriously interfered with, if similar action is taken at subsequent auctions.

The immediate result in Lancashire was the withdrawal of Sudan cotton prices by the Raw Cotton Commission and by spinners of Egyptian type yarns. Higher rates were later quoted ranging up to as much as 7*d.* a lb. over the previous prices. In addition, there is nervousness over the likely shortage of Egyptian cotton, according to reports from Alexandria. The Raw Cotton Commission, before its dissolution at the end of August, has already promised to ensure that adequate supplies of Sudan cotton are made available for the trade, particularly to those spinners who elected to remain with the organisation to the bitter end. Whether this pledge can be fully implemented, in view of current conditions, is a point for the industry to talk[illegible]

More About Mill Deals

[illegible] Company's take-over bids have received [illegible] as a result of the debate on [illegible] in the House of Commons. Varying [illegible] expressed as to how the [illegible] should be treated, whether the attitude of the possible victims in raising their dividend distributions was altogether advisable. In Lancashire, there have been further developments along these lines and, although one Rochdale group which reported an offer has since announced its withdrawal, an impending bid for the Granville Mill at Oldham has subsequently been reported. The trend is clearly not yet over.

East African Decision Hailed

The gloom caused by the new Japanese trade agreement was lifted, to some extent, by the announcement in Lancashire this week that the Governments of British East Africa had decided to retain the virtual embargo on imports of Japanese cloth for a further eight months from the beginning of May. A statement issued by the Hon. A. D. Campbell, leader of last year's trade mission to East Africa, expressed profound satisfaction at the news. Instead of large-scale Jap textile imports, as feared by many Lancashire traders, East Africa will limit its trade with Japanese mills to kikois (women's undergarments) and unbleached sheetings from 1st May to the end of the year. This is an eight months' extension of the agreement operating before the announcement of the new trade pact with Japan. "This announcement," says Mr. Campbell, "is in keeping with the spirit of co-operation accorded to the team by the East African Governments and will be warmly welcomed by all sections of the cotton industry in Lancashire."

In reaching their decisions, the East African Governments must have taken into account the large volume of orders now booked with Lancashire firms and of the effect on the economic stability of the market of a sudden large influx of Japanese goods. "The cotton industry as a whole is very grateful to the East African Governments for adopting this considerate policy and will continue the efforts it has made to meet the needs of the East African peoples to the fullest extent possible," declared Mr. Campbell.

Bolton Mills' Recovery

Trade union pessimists who have declared that reopening of the Liverpool Cotton Exchange will bring raw material shortages and unemployment to the mills were answered by Mr. W. Howarth, Chairman, at the annual meeting of the Bolton Master Cotton Spinners' Association. He said: "I believe their fears will prove groundless whatever difficulties managements themselves may have to contend with during the inaugural period. Most things will work when there is a determination to make them do so."

It would be the desire and intention of millowners to do their utmost to ensure that working conditions and regularity of employment were maintained. All 182 mills covered by the Bolton Master Cotton Spinners' Association had achieved complete recovery from the textile recession and, in the past year, could have produced more if they could have found more workers. Cases had occurred of mills closing down because only a part of their machines was operating, due to labour shortages. Describing this as "disturbing," Mr. Howarth told the meeting: "If a well-equipped mill had to be closed, because of the lack of operatives, it would be deplorable."

One of the best insurances for the future of Lancashire's cotton industry was working at near full capacity. "For this reason," Mr. Howarth said, "it is essential for all of us to do our utmost to extend a welcome to adults returning to the trade and to those entering for the first time."

Lancashire, there have been further developments along these lines and, although one Rochdale group which reported an offer has since announced its withdrawal, an impending bid for the Granville Mill at Oldham has subsequently been reported. The trend is clearly not yet over.

When the makers of these offers are firms already within the industry who are endeavouring to increase their productive capacity or ensure a closer relationship with suppliers or customers, there is usually no valid objection to the deals. But when, as sometimes happens, outsiders knowing little or nothing of textiles show an interest in mills, the industry as a whole is not happy about the prospects. Although the situation is vastly different, the memory of the 1920-21 era still lingers.

Giving voice to the fears which have been expressed in certain quarters at these developments, the Lord Mayor of Manchester had this to say at the annual meeting of the Manchester Chamber of Commerce: "I have become a little apprehensive during the past few years when there seemed to be more profits available from the cotton mills and rather avaricious eyes have been put on our industry by people from other parts of the country who have never been in the cotton trade at all." The Lord Mayor, himself a textile man, described how he had visited many mills where the directors personally assisted in the activity of production. He contended that, in these firms, output was higher and the relationship between workpeople and management of the most friendly character.—*All Rights Reserved.*

SCINDIA STEAM NAVIGATION COMPANY LIMITED

MR. DHARAMSEY M. KHATAU'S ADDRESS AT ANNUAL MEETING

IRREGULAR PRACTICES IN COASTAL TRADE CONDEMNED

REVIEWING the progress made by the Scindia Steam Navigation Company Ltd., during the past year, in the course of his address to the shareholders at their Thirty-fourth Annual General Meeting held in Bombay on the 24th inst., Mr. Dharamsey M. Khatau, the Chairman, referred to two important developments which have a bearing on the working of shipping companies in general. One was the "go-slow" policy of port labour which has resulted in a reduction of output at all coastal ports. Mr. Khatau was of the opinion that the "go-slow" movement has reached such a stage now that immediate action to remedy the situation effectively was necessary. The other one was the irregular practices adopted by a section of the Coastal Conference Lines, since the latter half of 1952, to secure cargoes. In this connection, he suggested that the most satisfactory way of solving the problem now facing the Conference was to fix quotas for member lines, having due regard to the size of the fleet owned by each company and the past performance of each line during the three years ended December, 1952.

Addressing the shareholders, Mr. Khatau said:

"GENTLEMEN,

"Before we begin, I am sure, it is the desire of all those assembled here that we should pay tribute to the memory of our great former Chairman, Sheth Walchand Hirachand. In enterprise, daring and imagination he was equalled by none; his vision was wide, and his plans were always drawn on a large canvas. In the field of industry generally, and of transport in particular, he has left indelible marks of great and lasting achievement. Shipping and shipbuilding, aviation and aeronautical construction, the manufacture of motor vehicles and the execution of large civil engineering projects in cement, steel and concrete—these are the living monuments to his constructive imagination and ceaseless energy. His place in our recent economic history will assuredly be among the few really great industrialists which this country has produced.

Working Results of 1952-53

"The Company's operations in 1952-53 have yielded satisfactory results. The provision for normal depreciation in 1952-53 is higher than in the previous year by over Rs. 20 lakhs; and the provision made for deferred taxation relative to the profits of the year under report is Rs. 60 lakhs, as against only Rs. 3 lakhs provided in the previous year. Notwithstanding these larger provisions, the profits earned during the year have enabled the Board not only to recommend an increase in the rate of dividend from As. 8 per share to As. 12 per share but also to create, for the first time, a dividend equalisation fund with an initial allocation of Rs. 11,75,000. It has also been possible to transfer from the profits a sum of Rs. 10 lakhs to the fleet replacement account which at the end of the year stands at Rs. 2,13,19,434.

"The broad picture of our present total capital resources, inclusive of the paid-up capital, the reserves and surpluses, and the debentures (excluding the debentures of the Bombay Steam which are to be paid off), is that they aggregate Rs. 19.72 crores, of which Rs. 7.05 crores only is accounted for by the paid-up capital. As against this, our total fixed capital expenditure and investments in subsidiary and associated companies, aggregate Rs. 20.01 crores. In these circumstances, your Directors have recommended in their report that, subject to the sanction of the Controller of Capital Issues which has been applied for, the paid-up value of the shares of your Company may be increased from Rs. 15 each to Rs. 20 each, by capitalising the sum required for this purpose from the premium on shares collected on the issues of capital made in 1946 and 1948, and at present forming part of the reserves and surpluses of the Company. Certain aspects of this proposal are, however, under further examination by your Directors. The scheme of capitalisation as it may finally emerge after this examination will then be placed before the shareholders at an extraordinary general meeting to be specially convened for the purpose.

The B.S.N. Line

"The cargo and passenger trade on the West Coast, in which the former Bombay Steam Navigation Company Ltd. (hereinafter referred to as the B.S.N. Line) operated, constitutes a distinctive part of the coastal trade of India. In spite of our continued efforts at rationalisation, the total cargo carried by the B.S.N. Line during 1952-53 was considerably less than in the previous year, though we did carry extra traffic in foodgrains. As regards the causes responsible for the general decline in our liftings, a material factor was the increasing resort to irregular practices, due to overtonnaging on this sector of the coastal trade. Other contributory causes were the virtual stoppage of all movement of cargoes by sea between India and Pakistan, and the diversion to rail routes of some of the traffic which used formerly to move to Saurashtra by sea.

"As for passenger traffic, we carried about 20,000 passengers more during 1952-53 than in the previous year. This was due mainly to the pilgrim traffic to Mormugao in connection with the Exposition of St. Francis Xavier. During the year under review, we have implemented the recommendations of the Deck Passenger Committee as regards increased space and amenities on our passenger-carrying ships, as a result of which their carrying-capacity has diminished by about 20 per cent.; but the fares were not increased. It is hoped that the travelling public will appreciate the better amenities now available.

Coastal and Adjacent Trades

"The aggregate liftings of cargo in all the above trades by the Company's fleet rose by about 1.98 lakh tons in 1952-53 compared with the previous year; and the aggregate freight earnings from these operations rose by about Rs. 76.22 lakhs, notwithstanding considerable reductions in the rates of freight on rice from Burma to India and Ceylon and in the rates for the carriage of salt from Saurashtra and Tuticorin to Calcutta.

"While the inordinate delays which colliers used to experience both at loading and discharging ports lessened considerably during 1952-53, normal despatch of ships was hardly attained at any port, owing mainly to labour trouble in one form or another and deteriorating labour output at almost all the coastal ports. This 'go-slow' policy of Port labour, resulting in reduction of output at all coast ports, has reached such a stage that the Government must devise suitable measures immediately, and must effectively enforce the same, so as to restore the normal rate of working and ensure quicker turnround of ships on the Indian coast.

"While the early months of the current year began with prospects which, so far as the coastal trade was concerned, seemed decidedly gloomy, the picture does not seem quite so bad to me now. Certainly, we may still not do as well as we did last year, mainly because of the fall in some of the main bulk-commodity rates; but I now feel equally certain there is no cause for undue concern.

Indian Coastal Conference

"Gentlemen, you will no doubt recall the prominent part your Company played in securing reservation of the Indian coastal trade for Indian shipping. Soon after reservation, in the general interests of all Indian lines and with a view to promoting healthy development of Indian shipping, we contributed our full share of effort in the formation of the Indian Coastal Conference and in working it wholeheartedly. However, it is to be regretted that since the latter half of 1952, we have been observing a steady growth of irregular practices on the coast, especially in the West Coast trade, designed to secure cargoes by improper means. During the second half of 1952, this problem became so serious that the Conference had specifically to consider these developments and try to rectify the situation; but these efforts were unsuccessful. Basically, there was a serious state of imbalance between the supply and demand factors in the coastal trade; and this resulted in a disparity between the tonnage capacity available, the cargoes offering and the prevailing level of freight rates.

"These developments naturally caused serious concern to your Directors. After watching the situation for some months it was found that the position was steadily deteriorating and cargoes were being frequently diverted from our ships by irregular practices. Under these circumstances, your Directors were reluctantly compelled to the conclusion that no useful purpose would be served by continuing in the Conference. Your Company, therefore, regretfully gave the required six months' notice, at the end of August of last year, of termination of the Conference Agreement so far as we were concerned. Our withdrawal from the Conference will thus be effective from the first of next month. In the light of our experience of the working of Conference arrangements on the Indian coast in recent years as well as over a long period prior to the formation of the present Indian Coastal Conference, your Directors are convinced that the most satisfactory way of solving the problem now facing the Conference, so as to ensure orderly progress of Indian shipping in the coastal trades, lies in fixing a system of quotas for member lines having due regard to the size of the fleet owned by each company and the past performance of each line during the three years ended December, 1952. Under a proper quota system, there would be no restriction on expansion of tonnage as, in practice, the supply of tonnage for the requirements of coastal trades would then be bound to adjust itself almost automatically to trade requirements on a fairly long-term basis. Further, it will also facilitate rationalisation of berthings which is essential not only for offering a better, more regular, frequent and reliable service to the public but also for better utilisation and, therefore, for more economic employment of available tonnage.

Overseas Trade—India/U.K-Continent

"The two passenger ships, the s.s. *Jalazad* and the s.s. *Jaljawahar*, continued to maintain regular services in the India/U.K. trade during the year under review. But it has since been decided to withdraw them from India/U.K. passenger service and to sell them to the Eastern Shipping Corporation for employment in the India/Africa and India/Malaya passenger services. The decision to withdraw the *Azad* and *Jawahar* from the India/U.K. passenger service was taken by your Directors with a heavy heart. The prestige and advertisement-value of those vessels in that service were not overlooked; nor did we, or the Government of India for that matter, forget for a moment what our continuance in that particular service meant in terms of the prestige and standing they gave to our country. All these and several other relevant factors were weighed with anxious concern before purely commercial considerations were allowed ultimately to prevail.

"I appreciate how deeply disappointed you all are that the Government of India should have declined to shoulder even the modest share, we suggested, of our heavy burden in continuing to run the U.K. passenger service, and in consequence of which your Directors have felt reluctantly compelled to discontinue that service altogether. But while I share your feeling of despondency at this outcome, I would ask you to remember that what we and the country may lose by way of prestige in the field, from which we shall now withdraw, will probably be more than made up for in the new field we shall enter through the Eastern Shipping Corporation with which we are so closely connected. Indeed, in some respects, the need for suitable Indian-owned passenger vessels operating in the India-Africa service and the India/Malaya service where these two vessels will, in future, be employed is, in my judgment, perhaps more acute than in the India/U.K. service, though the 'glamour value' of the latter may be greater.

"The withdrawal of these vessels from the U.K. passenger trade will not be allowed to affect the regularity and frequency of the cargo service which your Company has been maintaining between the West Coast of India and U.K. and Continental ports. Two fast vessels, namely, the m.v. *Nordhval* and the m.v. *Nordvard*, have been chartered as immediate replacements, to be substituted, eventually, by owned vessels as early as possible, so that the service we offer in this trade may continue to be maintained at the same level of efficiency as heretofore.

"Towards the close of the year opportunity was taken to reorganise these services by the employment of 12 steamers; and it is expected that the cargo services, as now reorganised, will provide more regular shipping opportunities to the mercantile community.

"The joint service operated by your Company in collaboration with India Steamships Ltd. from the ports of Hamburg and Bremen to ports in India, Pakistan and Ceylon, has been functioning satisfactorily and is very much appreciated by the shippers in Germany and the importers at this end.

"Your Company has now been admitted to partial membership of the Western Italy/India-Pakistan-Burma Conference. We have accordingly commenced berthing our vessels at Genoa; but as our membership is restricted to the Indian section of the Conference only, we may have some initial difficulty in securing adequate loads.

"During the current year all the overseas agents and branch managers of your Company were invited to Bombay for personal discussions on current matters with the management and departmental heads. The problems considered were essentially of a practical nature, though ranging over a wide field.

Overseas Trade—India/U.S.A.

"As indicated in my speech last year, the decline in the availabilities of cargoes from Atlantic ports (U.S.N.H. range) adversely affected the freight earnings in the American service. As a result, more vessels were diverted to the Far East and Pacific trades during the year under review, on account of the fact that the earning position there was somewhat better than in the North Atlantic American trade. Even so, freight rates eventually went down so low as to necessitate our gradual withdrawal from the India/U.S. trade altogether. The American service thus remains suspended for the present; but under the expansion programme we have now in hand, we have planned for its revival with faster vessels such as will enable us to re-enter the trade with adequate support from shippers at both ends.

Tonnage Position

"The keels of three out of the five 7,000-dwt. cargo motor ships of Maierform design, ordered from Messrs. Hindustan Shipyard Ltd. at Visakhapatnam, have been laid and it is expected that they will be completed and delivered to us during our next accounting year. The remaining two will be delivered during 1955-56. These five ships are primarily intended for coastal services; but they are of a type and design which will readily fit them for operation in overseas trades also. In fact, it is intended to employ two of them in our overseas services from the very start.

"I referred last year to the question of expansion of Indian shipping and the provision made in the Five-year Plan for loans from Government on attractive terms for purchase or building of ships suitable for the overseas trade. As a result of further discussion, it has been decided that loans will now also be available from Government, though at a higher rate of interest, for purchasing or building ships for the requirements of coastal trade.

"Your Directors have, therefore, given careful consideration to the question of additional tonnage required to enable your Company to participate adequately in the coastal and overseas trades and the extent to which the acquisition of such additional tonnage should be financed by accepting loans from Government. The conclusion they have reached is that, in addition to the six ships already ordered from Messrs. Hindustan Shipyard Ltd., there is scope for adding two or three cargo vessels of small size and three cargo vessels of intermediate size, partly by way of replacement of old units due for scrapping and partly as net additions to the fleet employed in the coastal trade. Furthermore, six modern cargo vessels suitable for the overseas trade will also be required; two in replacement of the *Azad* and *Jawahar* and four for the India-U.S.A. service. This large programme will be financed by loans from Government to the extent of about Rs. 820 lakhs, the balance to the extent of about Rs. 410 lakhs being found from out of our own present and prospective resources.

"These are ambitious plans, involving long-term financial commitments on a large scale, and requiring, therefore, very careful consideration by the shareholders also. Your Directors have, accordingly, decided that it would be best to place the whole scheme before the shareholders at a meeting which will be specially called for the purpose, so that all shareholders may have an opportunity to consider our plans and proposals in some detail and at leisure. I believe this way of dealing with the matter will have your approval; and I shall not, therefore, go into further details at this stage.

Subsidiary and Associated Companies

"I am sure you will have noted with satisfaction the number of subsidiaries that have already been wound-up or are in process of liquidation. Of the remainder, the Air Services of India Ltd. will be taken into liquidation as soon as the compensation receivable by it from the Indian Airlines Corporation, to which its assets and undertaking were statutorily transferred last year, is determined. This compensation is not expected to exceed Rs. 5 per fully-paid up share of Rs. 15. The result will be a substantial loss on this investment, for which, however, adequate provision exists in the investments reserve fund.

"The B.S.N.-Scindia Merger Scheme, to which effect was given at the close of the year under review, calls for special comment. It was a major operation involving conformity with intricate legal procedure and requiring the solution of difficult questions of fact and principle. Organisationally also it was a difficult task. I take this opportunity to thank the officers on whose hard and thorough work the success of this important scheme so very much depended. I am also grateful to the various classes of shareholders and debenture-holders who so readily appreciated the substance of the scheme and did not wander unduly into its shadows.

"The Merger Scheme was mainly [illegible] the issue of three new fully-paid shares [illegible] Company in exchange for every one fully-paid share of the old Bombay Steam Navigation Company, Ltd. That, I think, was eminently fair, having due regard to all the circumstances. An essential part of the scheme as it finally emerged from the High Court was that the Managing Agents of your Company, who would otherwise have been entitled to commission at ten per cent. on the profits of the merged Bombay Steam's business, and that too *before* charging depreciation, were to be restricted to only 1 per cent. commission on such profits *after* charging depreciation. I must not fail to express our gratitude to the Managing Agents for having so readily consented to this important modification.

"As a result of this merger two new wholly-owned subsidiaries have come into being, one for ship-repairing workshop and the other for the purely passenger services on the Konkan coast.

"I turn now to our associated companies. The Eastern Shipping Corporation Ltd., of which your Company is the Managing Agents, has done well over the last three years of its working; but it has difficult times ahead of it during the current year and over the next two or three years. It has on hand an adequate expansion programme such as will enable it to cover all the important trades within its sphere of activity.

"The Hindustan Shipyard Ltd. is another associated company in which we hold a substantial minority interest. It is going ahead well with its development programme. It has already three building berths in operation, instead of two when we owned the shipyard; and two more berths are under construction. A development plan in regard to certain changes in lay-out, installation of new and additional machinery and cranes, and the erection of certain essential engineering shops has been sanctioned. The decision to construct a dry dock as part of the shipyard development project has also been taken in principle. All this certainly adds up to good progress in the direction of firmly establishing [illegible] industry of which [illegible] was the proud [illegible]

[illegible] Floating Staff [illegible] During the year under review the position as regards the numerical strength of navigating and engineering officers improved considerably; and it is expected that no difficulty will be experienced in manning the additional tonnage that will be acquired during the current and ensuing years.

"As I stated last year, the Maritime Union of India, representing the floating officers, had submitted demands for higher pay and substantial improvements in other terms and conditions of service. After prolonged negotiations, an

BEST TODAY—STILL BETTER TOMORROW

COTTON IMPORT POLICY LIBERALISED

SEQUEL TO TIGHT STOCK POSITION OF INDIAN COTTON

FURTHER liberalisation of the Central Government's policy relating to imports of cotton was announced by the Joint Chief Controller of Imports soon after we went to press last week. Accordingly, imports of cotton of staple 1.1/16" and above against prior sales to mills have been permitted from the entire dollar area, not from the U.S. alone, as had been announced earlier. Import licences will, however, be given only to those who have exhausted their licences on U.S. cotton issued previously and extended for shipment up to 30th June, 1954. The announcement is a partial modification of the one made on 4th February last, under which licences for import of cotton of staple length of not less than 1.1/16" from the U.S. for the January-June, 1954, period are being issued freely.

The above decision of the Government to liberalise imports of cotton is evidently a sequel to the need for maintaining adequate supplies of cotton in the country, in view of the high level of consumption by mills in the face of not-quite-comfortable domestic crop. At one time the crop was expected to be no more than 3.8 million to 3.9 million bales, as against the earlier estimate of 4.2 million bales. It is true that, at present, the production is expected to be about 4.1 million bales. Nevertheless, the demand for Indian cotton is so keen that prices of some of the varieties have tended to exceed the ceilings. It is widely believed that the margin between the demand and supply on the present basis of mill consumption is so narrow that, unless the overall supply is increased through larger imports, the position might become acute as the current season draws to a close.

Latest available figures relating to stocks of cotton with mills relate to October last. These show that, as at 31st October, 1953, mills had only 962,635 bales, as against as much as 1,366,787 bales a year before. The fall has been steeper in the case of Indian cotton, the stock of which had declined from over 1 million bales to 733,759 bales. Stocks of foreign cotton were lower at 228,876 bales, as against 350,311 bales a year before. An idea of the stock position of cotton—according to varieties—at the end of October, 1953, as compared with that obtained a year prior to that date, can be had from the following statement:

(In bales of 400 lbs. each)

	Stocks as on 31st October	
	1952	1953
Indian cotton	1,016,476	733,759
Of which:		
Jarilla	371,121	199,389
Benzal Deshi	66,884	35,821
Jayadhar	79,054	21,802
Farm	60,017	44,621
Surti	34,091	25,174
Gaorani 6 and 18	72,065	44,346
216F	27,850	16,251
Munzari	8,286	2,093
Cambodia	42,024	33,146
Karunganni	34,946	22,524
Buri	22,876	15,926
Virnar Vijay	99,909	72,102
Wavad	30,774	46,328
Laxmi	38,589	45,347
Rajapalayam	10,057	12,022
Foreign cotton	350,311	228,876
Of which:		
U.S.A.	222,161	38,817
Peruvian	4,530	2,104
Pakistani	1,199	370
Egyptian	43,414	62,822
Sudan Egyptian	17,277	82,716
East African	60,902	82,449

In view of the downward trend in stocks of Indian cotton and with a view to maintaining production of cloth and yarn, the Textile Commissioner to the Government of India recently advised all the cotton mills to organise their purchases of cotton (and also production of cloth) in such a way that there might not be any need for them to exceed the quotas allotted to them for Indian cotton. He also advised the mills to utilise foreign cotton and staple fibre to meet any possible gap between their requirements and the allotted quotas of Indian cotton. It was doubtless in pursuance of this directive that the Government allowed imports of U.S. cotton of staple length of 1.1/16" and above, which have since been liberalised to include cotton of the entire dollar origin, as stated at the outset.

The sharp decline in stocks of cotton—Indian and foreign—has been mainly the effect of the steady upward trend in mill consumption of cotton and partly also of the reluctance of mills to maintain large stocks of cotton, as they were very uncertain about the trend of the cloth market. Further, they were so severely bitten by the unexpected slump in 1952 that they had lost the courage to keep more stocks of raw material than was absolutely necessary. They were, therefore, living only on a hand-to-mouth basis. During the first two months of the current cotton season, the monthly average rate of consumption of cotton by mills was more than 380,659 bales, which compares favourably with 300,970 bales in 1952-53 and 248,950 bales in 1951-52. The quantity of cotton actually consumed during the two-month period under review was 761,319 bales, as against 717,671 bales in the corresponding period of the previous season. If the trend of consumption were to be maintained at this rate throughout, the aggregate consumption of cotton by mills during the whole of the 1953-54 season would be of the order of 4,568,000 bales, a record in post-war history.

The rise in cotton consumption during the two months under review, as noted above, was entirely accounted for by Indian cotton. The consumption of this cotton amounted to 637,353 bales, as against 553,953 bales a year before. Consumption of foreign cotton, on the other hand, receded from 163,718 bales to 123,966 bales. The decline in consumption was primarily in that of American which fell from 143,324 bales to 77,999 bales. Egyptian varieties, however, accounted for an increase from 20,078 bales to 45,777 bales.

Textile mills in Bombay State consumed the largest quantity of cotton during the September-October, 1953 period, being 372,812 bales, a rise of 6,326 bales as compared with the corresponding period of 1952-53. Consumption of cotton by mills in all the other chief consuming States, excepting Mysore and Ajmer-Merwara, was also higher, as will be seen from the figures below:

(In bales of 400 lbs. each)

	Sept.-Oct., 1952	Sept.-Oct. 1953
Indian Union	717,671	761,319
Of which:		
Bombay Island	193,577	204,707
Ahmedabad	103,214	104,295
Other areas	63,605	63,810
Total Bombay State	362,486	372,812
Madras	106,834	120,039
Uttar Pradesh	65,560	61,632
Madhya Bharat	41,984	45,369
West Bengal	27,836	24,063
Madhya Pradesh	27,856	29,365

WORK OF COTTON LABORATORY

ANOTHER YEAR OF ALL-ROUND PROGRESS

IN the present context of the growing need for improving the quality of cotton textiles and reducing the cost of manufacture, the development of better varieties of cotton to meet the varying needs of the textile industry assumes special significance. Great importance is, therefore, accorded to the work done by the Cotton Technological Laboratory, Matunga, (Bombay), the technical adjunct of the Indian Central Cotton Committee. The Laboratory recorded an all-round progress during the year ended 31st May, 1953. Thus, according to the twenty-ninth Annual Report issued by the Director of the Laboratory, the Spinning and Testing Sections worked, despite their limited capacity, a second shift for six months to clear the arrears of a large number of samples accumulated in previous years. The total number of yarns spun during 1952-53 was 4,121, as against 2,761 in 1951-52.

As in previous years, so also during the year under review, the cotton industry and trade took full advantage of the facilities offered by the Laboratory's Testing House. Numerous enquiries from mills, firms and other organisations seeking expert advice on the difficulties in processing encountered by them were successfully tackled. The total number of fibre, yarn and fabric samples handled in the House was 413. In addition, 102 samples were received from the East India Cotton Association Ltd., Bombay, for staple length tests. During 1952-53, 1,894 samples of all types were received for tests and 517 technical reports were issued. Much of the testing work related to new strains and improved varieties, with a view to helping the Agricultural Officers to select strains for further propagation.

Notable progress was also made in the field of research. The technological investigations conducted at the Laboratory during the year under review were concerned primarily with the problems connected with the ginning of cotton. Experiments, for instance, were carried out with long-staple cottons on single-roller gin, after suitably converting it from double action to single action. These experiments revealed a rise in the output of lint per hour, reduction in power consumption by the gin, elimination (practically) of seed cutting, minimisation of blow-room loss, and improvement in yarn strength. Another investigation conducted on the formation of neps due to ginning reveal that the lint separated from seed-cotton by hand gives the least number of neps and the saw-ginned lint the highest, while the roller-ginned lint gives an intermediate value. The Laboratory evolved a new dye-technique for determining the maturity of cotton. It also devoted considerable attention to investigations on spinning and fibre properties. These investigations covered:

(1) Adoption of suitable formulæ for connecting the lea strengths obtained for the 10 lbs. samples and for the 60 100 gm. samples in small-scale spinning tests, which have proved extremely useful to the cotton breeders and mills;

(2) performance of mixings of Indian cottons with special reference to their fibre properties;

(3) effects of different processing treatments on the spinning performance of some Indian cottons whose spinning value, estimated from fibre properties, was found to be abnormal; and

(4) comparative merits of fabrics prepared from combed yarns of good quality Indian cottons and those prepared from carded African cottons.

The Laboratory has nearly completed work on standardising a suitable nep-counting technique for raw cotton.

In view of the ever-increasing work which the Laboratory has been called to tackle, it is noteworthy that proposals are under consideration for establishing a new spinning laboratory and expanding the other research sections.

Imports of cotton into the U.S. during November, 1953 amounted to 8,510 bales, according to the U.S. Department of Agriculture. The total of 45,625 bales for the August-November, 1953, period included 7,409 bales from India, 1,437 bales from Pakistan, 17,190 bales from Egypt, 10,107 bales from Mexico, 4,393 bales from Peru, 2,799 bales from Anglo-Egyptian Sudan and 2,290 bales from Brazil.

(In crores of rupees)

	Actuals, 1952-53	Budget Estimate, 1953-54	Revised Estimate, 1953-54	Budget Estimate, 1954-55
Traffic Receipts				
Gross Traffic Receipts	270.56	272.23	272.00	273.25
Working Expenses				
Ordinary Working Expenses	187.96	190.99	197.63	194.31
Appropriation to Depreciation Reserve Fund	30.00	30.00	30.00	30.00
Payments to Worked Lines	0.21	0.21	0.24	0.22
Total Working Expenses	218.17	221.20	227.87	224.53
Net Traffic Receipts	52.39	51.03	44.13	48.72
Miscellaneous Transactions				
Receipts	0.31	0.32	0.32	0.31
Expenditure	5.52	7.32	6.81	8.39
Net Miscellaneous Expenditure	5.21	7.00	6.49	8.08
Net Railway Revenues	47.18	44.03	37.64	40.64
Dividend to General Revenues	33.99	34.77	34.46	35.50
Net gain or surplus	13.19	9.31	3.18	5.14

The anticipated surplus of Rs. 5.14 crores will be credited entirely to the Development Fund. The Depreciation Reserve Fund is expected to open with a balance of Rs. 107.86 crores on 1st April, 1954. During the year, the Fund will be credited with Rs. 30.00 crores chargeable to working expenses and Rs. 0.38 crore in respect of capital assets of the Chittaranjan Locomotive Works chargeable to its manufacture suspense, making a total contribution of Rs. 30.38 crores, against which the withdrawals from the Fund will be about Rs. 43.30 crores. Thus, including Rs. 3.22 crores on account of interest accruing on the balance during the year, the Fund is expected to close with a balance of Rs. 98.16 crores. The withdrawal from the Development Fund in the coming year is estimated at Rs. 10.59 crores. With Rs. 5.14 crores added to this Fund as contribution during the year and Rs. 50 lakhs as interest accruing on the balance, the Fund will close with a balance of Rs. 13.67 crores. There will be neither withdrawals from, nor contributions to, the Revenue Reserve Fund during the budget year. Taking into account the interest, etc., of Rs. 1.18 crores accruing on the balance, the closing balance of the Fund at the end of the year will stand a little higher, at Rs. 38.36 crores.

Reserves

The following table provides a comparison of the reserves of the railways over a period of five years:

(In crores of rupees)

	Depreciation Reserve	Revenue Reserve	Development Fund	Total Reserves
1949-50	109.01	6.82	13.80	129.63
1950-51	123.65	13.58	19.44	156.67
1951-52	122.02	33.72	23.48	179.22
1952-53	116.36	36.05	27.14	179.55
1953-54*	107.86	37.18	18.62	163.66
1954-55†	98.16	38.36	13.67	150.19

* Revised estimate. † Budget estimate.

It will be seen from the above table that the total reserves, including depreciation, after improving from Rs. 129.63 crores in 1949-50 to Rs. 179.55 crores in 1952-53 have actually declined by about Rs. 16 crores in the current year and is expected to go down further by Rs. 13.50 crores in the next year.

1954-55, the ... being ... against Rs. 78.2 crores in 1953-54. He said ... arrangements had been made ... proposed. The budget estimates ... provided for an increased outlay of ... ture on works and also to increase the pur... chases of rolling stock during the remaining two years of the Five-year Plan in such a manner as to ensure that the target expenditure of Rs. 400 crores was reached.

Main Features

The main features of Mr. Shastri's 25-page budget speech are summarised below:

The net surplus for the current financial year is Rs. 3.18 crores, as against Rs. 9.31 crores estimated in the budget. The fall has been mainly due to an increase in the working expenses on account of the acceptance of the recommendations of the Gadgil Committee to treat 50 per cent. of the dearness allowance paid to employees as pay, which involves an additional expenditure of about Rs. 3 crores annually, and to the increased diversion of coal by sea for the Southern, Central and Western Railways.

Certain financial and accounting changes have been proposed to be introduced with effect from 1st April, 1954, in order to assess the financial results of the working of individual zonal railways.

The budget estimate of passenger earnings for 1954-55 is placed at Rs. 101.51 crores, which is nominally higher than the revised estimate but slightly lower than the original estimate for the current year. As regards goods earnings, a more optimistic view is taken, on account of the increasingly encouraging trends of industrial production and agricultural production. The goods earnings is, therefore, placed at Rs. 148.6 crores, or one per cent. higher than the revised estimates for 1953-54. The overall estimate for gross receipts is thus placed at Rs. 273.25 crores, against Rs. 272.0 crores in the revised estimates for 1953-54.

The ordinary working expenses for 1954-55 is placed at Rs. 3.32 crores lower than the revised estimate for the current year. The appropriation to the Depreciation Reserve Fund has been maintained at the same level as in the current year, namely, Rs. 30 crores. After providing for a net miscellaneous expenditure of Rs. 8.08 crores and a dividend of Rs. 35.50 crores to the general revenues, the net surplus expected to accrue in 1954-55 is estimated at Rs. 5.14 crores.

Higher Expenses, Diminished Revenue

The Railway Minister referred to "the trend of continued increase in the working expenses of the railways and the progressive diminution of the railway surplus," and said: "Although there has been a slow improvement of the position, I cannot see in the present conditions any indications to expect in the near future a marked spurt in passenger traffic. At the same time, working expenses have been going up owing to factors over which we have but little control. The budget estimates for 1954-55 show an increase of nearly Rs. 50 crores over that for 1948-49. Except for a sum of Rs. 10 crores which is due to the taking over of the State Railways, the bulk of this increase is attributable to the liberalisation of benefits to staff. The fuel bill accounts for an increase of about Rs. 7 crores. This is consequent on expansion of services to meet the demands of traffic."

In a brief reference to the progress made under the Five-year Plan, the Minister said that the railways actually spent Rs. 131.04 crores during the first two years of the Plan period and a sum of Rs. 77.88 crores was likely to be spent during the current year, leaving a balance of about Rs. 191.08 crores out of Rs. 400 crores allowed to the railways under the Plan. He revealed that arrangements had been made to step up expenditure on works and also to increase the procurement of rolling-stock during the remaining two and about 44 per cent. over the actuals for 1952-53. The provision made for rolling stock reflected a heavier procurement programme than in the past. Orders for a large number of locomotives were placed abroad recently to accelerate the rehabilitation of railways. He expected to receive, during the Plan period, a total number of about 1,600 locomotives. This should result in an overall improvement in the power position of the railways. The Minister acknowledged the assistance from Canada under the Colombo Plan for supply of 120 broad-gauge passenger locomotives and from the United States Government under their foreign aid programme of 100 broad-gauge locomotives.

Utilising and Expanding Indigenous Resources

The Minister said that the objective of utilising indigenous resources to the maximum extent continued to guide and regulate all orders. It was his intention to step up the production target of the Chittaranjan Locomotive Works from 120 to 150 and, thereafter, to 200 average-sized locomotives in the course of the next four years. The Tata Locomotive and Engineering Company had so far produced and delivered 50 locomotives in all, but they were expected to reach their target of 50 locomotives a year in 1954-55.

As regards wagons, practically all the increased procurement had been planned on indigenous production. New manufacturers had come into the field and established manufacturers had agreed to expand their production capacity. Orders for about 11,000 wagons were being placed against the 1954-55 programme with manufacturers in India. The Minister said that 5,000 wagons were also expected to be received under the foreign assistance programme of the Government of the United States.

The policy of not placing new orders for passenger coaches abroad was being continued this year. The capacity of the Hindustan Aircraft Limited and of railway workshops was being stepped up. The construction of the Integral Coach Factory at Perambur was making satisfactory progress, and coach body-shells would start coming out during the second half of 1955. The Minister disclosed that he had decided to set up a committee to advise how the manufacture of certain special types of wagons, narrow-gauge locomotives and other stock and fittings, which were still being imported, could be established in the country. He hoped that the Indian industry would rise to the occasion and take to the manufacture of specialised railway items in increasing numbers.

New Major Works

The Minister said that, in 1954-55, it was proposed to concentrate on the execution of the works already in hand, although certain new major works would also be undertaken. A major project that had been included was the electrification of the suburban services in the Calcutta area and work on the electrification of the Howrah-Burdwan main line section of the Eastern Railway would commence forthwith. Provision had also been made for a traffic survey for rail connection to Garo Hills in Assam. In addition, the construction of the Pathankot-Madhopur broad-gauge line, 7.06 miles in length, was proposed to be undertaken to facilitate movement to Jammu and Kashmir State. The line was estimated to cost about Rs. 35 lakhs.

Proposals for new constructions under examination include the Indore-Ujjain broad-gauge line, rail connection to Etah, the Mangalore-Hassan, the Diva-Dasgaon, the Teldanga-Khajurla-Malda, the Bhavnagar-Tarapur and the Patehpur-Churu lines. The question of providing electrification for the

R TRADE IN U.K.

of raw sugar have, since the ar, become wholly responsible in refined sugar. The freedom has prompted the sugar trade the possibilities for evolving tures market in raw sugar. market will have to be a 's home requirements of sugar, amounting to nearly 2,000,000 tons, are still being handled by the Food Ministry. Consequently, any scheme for starting futures trading may have to be restricted only to the raw sugar privately imported by refiners. These imports, however, are by no means so large as to permit futures trading on a sound basis, the amount involved being only about 650,000 tons per annum. In addition, about 40,000 tons of imported raw sugar are used in the manufacture of certain export goods containing sugar. This total of about 690,000 tons, privately imported for both refining and re-export, would prove so narrow a basis for futures trading that the hedge it could offer would be of little value. Yet, the London trade seems to feel that futures trading in this commodity might serve as a pilot market till the Food Ministry unfolds its plan for the future marketing of sugar imported for domestic use. Commenting on the issues involved in starting a limited futures market in raw sugar, the *Economist*, London, makes the following interesting observations:

"The main problem is to prevent the market from being used as a place where foreign holders of sterling could buy dollar sugar. As in other futures markets, delivery abroad of dollar goods could be prohibited, unless payment was made in dollars; but this would probably weaken foreign confidence in the contract. The foreign operator would have to decide what he would do, if dollar sugar, which he could not export, were tendered to him in London, and might think that British refiners would call the tune. But if the Bank of England was prepared to take a fairly liberal view of the dollar risks involved, it might tolerate a limited delivery of dollar sugar to be swapped on the actual market for sterling sugar. It might then also be possible to broaden the market by extending its facilities to participants in Britain's large entrepot trade of some two million tons a year—roughly half the sugar traded through the free world market."

yield of sugarcane, the area under the crop in the current season may be estimated at 56.7 million tons, as against 52.6 million tons in 1952-53 and the area at 4.57 million acres, as against 4.38 million acres. The improvement in cane output is thus to the extent of 7.8 per cent. This is in distinct contrast to the marked setback in cane cultivation experienced during the 1952-53 season, when the yield had fallen by over 13 per cent. as compared with 1951-52.

Trend of Cane Cultivation

The trend of area and yield of sugarcane crop in the different States during the season under review, as compared with that in the previous season, are indicated in the following table:

—	Area (000 acres)		Yield (000 tons)	
	1952-53	1953-54	1952-53	1953-54
Uttar Pradesh ..	2,653	2,581	27,590	28,720
Bihar	254	294	2,079	1,740
Punjab	356	373	4,210	3,790
Bombay	179	166	4,920	4,980
Madras	88	89	2,120	2,520
Andhra	83	87	2,200	2,570
Hyderabad	62	58	1,180	1,110
Orissa	60	60	1,000	1,000
Mysore	46	46	770	790
P.E.P.S.U. ..	70	75	750	880
West Bengal	49	46	910	830
Assam	33	34	620	630
Madhya Pradesh ..	42	35	490	430
Madhya Bharat ..	44	39	410	350
Rajasthan	47	41	860	850
Saurashtra	13	12	210	270
Other States	25	20	190	170
Total ..	4,228	4,101	49,900	51,000

It will be seen from the above figures that the State of Bihar has suffered a severe setback in cane cultivation, in that both the area and the outturn have been downward, the actual fall in each being as much as 17 per cent. This has been the result of adverse weather conditions, thanks to floods in vast areas of the State. Consequent on the poor sugarcane crop and considering the high level of *gur* prices, the supplies of cane to the sugar factories have greatly been restricted. The aggregate quantity of cane that will be crushed by the factories in the State during 1953-54 is estimated at not more than 50 million maunds, which compares unfavourably with 75 million maunds in 1952-53. Sugar production is, therefore, expected to be "unusually low." Hyderabad, West Bengal, Madhya Pradesh, Madhya Bharat and Rajasthan have also accounted for a fall in the area and yield of sugarcane crop in 1953-54. In the case of the Punjab, while the acreage under cane cultivation shows an improvement, yield has fallen appreciably.

In distinct contrast to the aforesaid trend, the sugarcane crop in Uttar Pradesh is reported to be excellent during the current season. Thus, the total yield is of the order of over 28.7 million tons, as against 27.6 million tons in 1952-53, which represents a rise of 4 per cent. It is noteworthy that this increase in the yield has occurred, despite a decline in acreage, thereby indicating that the yield of cane per acre must have been upwards. Similarly, in the State of Saurashtra, a larger yield of sugarcane is expected, although the area devoted to cane has

In Hawaii, for instance, the average yield of cane per acre is as high as 62 tons, in Java 56 tons and in Puerto Rico 24 tons. Even in some parts of India, the average per-acre yield is as high as 54 tons. This means that, in many parts of the country, the actual yield must be very much less than the average yield. It will thus be seen that the trend of per-acre yield of sugarcane has not registered any worthwhile improvement. This indicates that adequate attention has not been paid to improving the cultivation of cane. This is indeed highly surprising, considering the crores of rupees that the State Governments have all along been collecting by way of cane cess.

Inasmuch as the fortunes of the sugar industry rest chiefly on a healthy and prosperous sugarcane economy, it is of the utmost importance that attention should be concentrated on intensive development of cane, that is, raising higher yield of cane in the same area by enhancing the fertility of the soil and by growing appropriate types of cane. By intensive cultivation, not only the yield of cane can be increased but a larger area can be devoted to the growing of food and other commercial crops.

The table below indicates the approximate yield of cane per acre—based on the second

What is NEWALLS 85% Magnesia?

It is a blended mixture of not less than 85%, by weight, of Pure Hydrated Carbonate of Magnesia. The balance is made up of high quality Asbestos fibre.

Why is NEWALLS 85% Magnesia so efficient?

Because millions of crystals in each cubic inch trap an infinite number of 'dead' air spaces. These reduce heat transmission most effectively.

Why is NEWALLS 85% Magnesia cheaper?

Because its covering capacity is very high (one ton applied evenly 1" thick over a flat surface will cover 2,200 sq. ft.) and because its higher efficiency results in a higher saving of heat. And heat costs money!

AMY-5

COAL MINES PROVIDENT FUND SCHEME

PROPOSAL FOR CHANGING THE BASIS OF CONTRIBUTION

THE main question discussed at the tenth meeting of the Board of Trustees of the Coal Mines Provident Fund Scheme, held at Dhanbad on 10th inst., under the chairmanship of Mr. Vishnu Sahay, I.C.S., Secretary to the Ministry of Labour, Government of India, was the proposal for extending the basis for the calculation of provident fund in such a manner as to include not only basic wages but also dearness allowance and value of food concessions. Press reports indicate that the Coal Commissioner suggested a formula, not yet officially made public, for recovering contributions in the various States, in the event of the proposal materialising. The employers' representatives are stated to have expressed their approval to the formula but reiterated that the implementation of the proposal should be accompanied simultaneously by a rise in the controlled selling price of coal, in proportion to the increase in the cost per ton of coal as a result of this burden.

The employers' demand for a rise in the controlled price is logical. The new proposal would, according to competent circles, result in an increase in the cost per ton of coal by As. 2½ to Rs. 3½. The industry cannot be expected to meet this increase in cost from its already low margin of profit. It is needless to point out, in this connection, that even the present scheme, under which contributions are calculated on basic wages only, is causing a serious drain on the resources of the industry. Under the present scheme, which covers as many as 852 collieries in Bihar, West Bengal, Madhya Pradesh and Orissa, the employers and the workers are contributing 6¼ per cent. each of the basic wages. Besides, the employers are required to pay an administrative charge of 5 per cent. of the aggregate contribution, which accounts for 10 per cent. of their contribution. Small wonder, therefore, the employers have been complaining against its heavy incidence.

It may be asked as to why the Government should not allow an increase in the controlled price in proportion to the increase in the burden on the industry that would follow the implementation of the proposal. This is a very complex question. For any increase in the selling price of coal will reflect itself in the price structure of all the manufactures in the production of which the cost of coal constitutes a major factor. In short, any increase in the price of coal will give rise to a fresh wave of rising prices and wages. The rise will further adversely affect the already dwindling exports of coal, consequent on increased competition from Chinese, Australian and South African coal in the South and South-East Asian markets.

While an increase in the selling price of coal will undoubtedly affect the cost of fuel to consumers, the colliery workers demand for basing the provident fund contributions on the aggregate of basic wages and dearness allowance (either in cash or in kind) cannot be brushed aside, inasmuch as the workers in six other leading industries are getting provident fund on these lines. It is too late now to deny this demand. That such a demand would arise should have been anticipated at the time the provident fund scheme was compulsorily introduced in these six industries. The argument that, while the other industries can afford to pay higher provident fund contributions, the coal industry cannot, is no argument at all. For, then the colliery workers can turn round and say that these industries are able to do so, because of the low cost of fuel, among other factors, and that they do not see as to why they should make a sacrifice for the sake of workers employed in other industries. There are only two ways of meeting the consequential increase in the price of coal. One is for consumers of this fuel to effect economies in their cost of production. The other is for colliery workers to increase the per-man output to an extent which would not necessitate an increase in the selling price of coal.

The Conference also discussed a proposal which contemplated recovery of contributions at fixed flat rates for various categories of workers irrespective of attendance and amount of wages. In other words, contribution under this proposal will not be linked to actual earnings; instead, an arbitrary amount will be fixed for different categories of wage earners. While welcoming the proposal, the employees deferred their comments as they desired to study the proposal in detail. The proposal, of course, appears to be simple, in that it avoids a lot of clerical work every week as the total emoluments of workers vary from week to week and lets the worker know the exact amount deductible. But it is difficult to comment on the merits of the scheme, for the amount deductible in the case of workers who work for one day will be the same as that in the case of those who work for six days in a week.

Further, the Board of Trustees decided that retrenched members should be allowed refund of the accumulations to their credit in the fund after a period of six months from the date of retrenchment and, accordingly, recommended a suitable amendment to the Coal Mines Provident Fund Scheme. They also recommended that the rate of interest allowed to members on their accumulations during the financial year 1954-55 should continue to be 3 per cent. These recommendations are not objectionable and, therefore, could be implemented without any further delay.

COAL AND COKE OUTPUT IN DECEMBER 1953

More persons were employed daily and more coal and coke were produced during December, 1953. As many as 843 collieries and eight coke plants worked in December, 1953, as compared with 839 collieries and eight coke plants in November, 1953.

On an average, 324,644 persons were engaged daily which was 7,264 persons more than those employed in the previous month. The overall percentage of absenteeism dropped from 14.51 in November to 12.38 in December.

Output of coal during December was 5,705,[illegible] tons, which was 630,734 tons more than the figure for the previous month. As much as [illegible] of soft, hard and other kinds of coal were produced in December, 1953, as compared with 571,[illegible] tons in the previous month. The [illegible] tons of soft coal and slack and the [illegible] tons of hard coal, coke, bituminous coal, bituminous coal and smithy nuts

RUBBER INDUSTRY IN INDIA

RESEARCH CENTRE TO BE SET UP

THE story of the utility of rubber is, indeed, an interesting one. At one time, rubber was known to be useful only as eraser, but it has now developed itself into a vital raw material for a wide variety of manufacturing industries. Thanks to the latest advances in the science and technology of natural rubber, much progress in the direction of proper utilisation of rubber in all possible ways has been made in the advanced countries abroad. Although the achievement in India in this respect is not very encouraging, the progress, in the context of the existing facilities, is considered to be satisfactory. The Five-year Plan has opened a vista for the further development of the utility of rubber. But any such development is possible only if some of the handicaps facing the industry are removed by concerted action on the part of both the Government and the industry. In this context, it must be stated that the six-day Conference and Exhibition organised by the Indian Rubber Industries Association (I.R.I.A.) which began in Bombay last week-end has done well in focussing attention on the progress made so far by the industry and on the problems confronting it today. The Conference and Exhibition were inaugurated by Mr. Morarji Desai, Chief Minister of Bombay.

The Indian rubber industry has made rapid progress during the short span of its history which dates back only from 1920 when the first factory for the manufacture of rubber goods was started in Calcutta. But it was not until the thirties that the rubber manufacturing industry established itself on any large-scale footing in India. Today, there are about 130 solid rubber factories and about 170 latex factories in operations, manufacturing almost every type of rubber goods from toy balloons to giant tyres and tubes, including extremely intricate parts required by a highly technical industry. The consumption of rubber in India, which was almost negligible up to 1930, rose to 5,600 tons in 1938. By 1941, the domestic consumption reached 14,292 tons. In 1951, it touched a record level of 22,427 tons and in 1953 it amounted to 22,373 tons. The manufacturing industry has developed so much that rubber consumption is more than what the country produces today. India has, therefore, been importing rubber to meet its full requirements.

Strident Progress

The strident progress made by the rubber goods manufacturing industry is also evident from a decline in the value of imports and a rise in those of exports of manufactured rubber goods since the pre-war years. Thus, in 1939-40, India imported rubber goods of the value of Rs. 148.42 lakhs and exported goods worth Rs. 9.53 lakhs. In 1952-53, imports were no more than Rs. 53.35 lakhs, while exports were of the order of Rs. 142.25 lakhs, though in 1946-47, they were Rs. 26.65 lakhs and Rs. 275.26 lakhs, respectively.

The industry is, however, not without its troubles and tribulations. For, according to Mr. Lalit Mohan Jamnadas, Honorary General Secretary of the I.R.I.A., who addressed the Conference, most of the plants are not well equipped with testing facilities very essential for the sound development of this industry. There are, we are told, many well qualified and trained rubber technicians in the industry, but they have not been able to achieve results expected of them, due to lack of necessary testing equipment. This is because the average unit in the industry is a small one and, therefore, cannot afford a well equipped testing laboratory. Mr. Lalit Mohan is quite right when he emphasises that a central service laboratory should be set up in each centre to give necessary service to these small-scale manufacturers. He notes that a skeleton scheme for the setting up of a rubber research institute has been prepared by the Council of Scientific and Industrial Research for the consideration of rubber goods manufacturers in India, but he considers that by itself the proposed rubber research institute will not serve the purpose of small factories and that it should be supplemented by such service laboratories as proposed by him. Considering the conditions prevailing in the industry, he says that both types of laboratories are of great importance. His request to the Government of Bombay, in this connection, to contribute a part of the capital and recurring expenditure towards the establishment of a service laboratory in Bombay deserves full support. For Bombay is an important centre of rubber manufacturing industry in the country.

As Dr. J. C. Ghosh, Director, Indian Institute of Technology, Kharagpur, rightly pointed out in his message to the Conference, at no time in the industrial history of India, a higher degree of technical skill in the field of standardisation and quality control under mass production conditions has been in demand as it is at present. "Most of the problems connected with popularisation of various products of industries," he says, "call for the most scientific answer to the needs of the user and operator alike. This is more so in the rubber industries." An expert committee is, as he says, examining the question of imparting advanced knowledge in applied research and development of processes and methods of manufacture on modern lines, as also training technical personnel engaged in rubber industries. The recommendations of this committee is expected to be made available shortly. A start will also be made soon to provide post-graduate short-time courses in rubber technology in the Kharagpur Institute.

Scheme for Reclaim Rubber Plant

Another direction in which the Association has made a useful contribution is the working out of a skeleton scheme for setting up a reclaim rubber plant. Some of the member manufacturers are being induced to implement this scheme. At present, reclaim rubber is being imported from abroad, while old tyre and tube cuttings, old tyres with lead wires cut off and all types of vulcanised rubber scrap and waste are being exported. If these old waste rubber products can be utilised for reclaiming rubber, the import of reclaim rubber can be eliminated. The Association has planned for setting up a reclaim rubber plant of a capacity of 2,000 tons per year.

Other important raw materials for producing rubber goods, such as refined sulphur, accelerators and anti-oxidants, carbon black and synthetic rubber, have given rise to a number of problems of their own. Attention is drawn particularly to the shortage of synthetic rubber which is necessary for special types of rubber goods which require such properties as oil resistance, petrol resistance, flame resistance, etc. The Association, therefore, urges that, unless suitable synthetic rubber is used in the manufacture of finished goods in order to obtain these properties, the industry cannot meet with the exacting requirements of the expanding economy of the country. The Association is willing to contribute its mite towards the development projects and to co-operate with the Government in such projects.

(Concluded from next column)

vision of the G.A.T.T. Sooner or later, therefore, the U.K. authorities will have to find alternative arrangements to safeguard the interests of the British industry.

One of the suggestions put forward relates to the raising of import tariffs on jute goods as an alternative. If this suggestion were followed, the U.K. would be violating the Indo-British Trade Agreement signed at Ottawa in 1932. Under this Agreement, jute and jute manufactures are duty-free commodities and, therefore, no duties are leviable on Indian imports. This suggestion can, therefore, be implemented only through negotiations with India.

It will be interesting to refer here to the views of the *Financial Times*, London, on this question:

"The continuance of the present system of protection will, understandably, be received with feelings of relief in Dundee. At the same time, the fact that the Government has now openly recognised the claim of the U.K. industry for protection must mean that the present system will continue for some time to come. For, by the provision of G.A.T.T., this country is precluded from placing a tariff on Indian goods and it is difficult to see what alternative there is to the present method of control which will safeguard the industry in this country as the Government wishes. The practical choice is between existing arrangements and no protection at all. The Government, for the time being, adheres to the former, but this still leaves a major problem to be solved in the longer term."

The above quotation suggests that the *Financial Times* is not aware that even the present method of protecting the Dundee industry is against the provisions of the G.A.T.T., a point which has been admitted by a section of the British financial Press.

U.K. RESTORES FREE TRADING IN JUTE

BUT CONTROL ON GOODS STAYS

THE U.K. Government has decided to restore the trading in imported raw jute to private trade. This decision was announced by Mr. Heathcoat-Amory, Minister of State, Board of Trade, in the House of Commons on the 16th inst., and is in accordance with the Government's policy of handing back trade to private channels. The exact date on which the trade would be returned to private hands, however, has not yet been decided. The announcement fixing the date is being awaited, as the authorities are holding a series of discussions with leading members of the industry for making arrangements preparatory to implementing the decision.

The Jute Control was set up in Dundee at the beginning of the war. At first, it was limited to raw jute, jute waste, cuttings, yarns and twist. In 1940, the Control was extended to imported jute goods. In addition to the centralised purchase of both jute and jute goods, the processing of raw jute and jute yarn was controlled and licences were required to dispose of the imported jute goods obtained from the Control. Yarn prices and the use to which second-hand bags could be put were also controlled. These controls were gradually relaxed after the war. On 16th September, 1952, all internal licensing of processing and use was abolished. Only the centralised purchase and sale of jute and imported jute goods remained.

At present, the U.K. Jute Control is still, as has been described in *Commerce*, dated 5th December, the sole importer of both raw jute and jute goods. With the abolition of control over raw jute, there will still remain the trading imported jute goods in the hands of the Government. Referring to this aspect of the Jute Control, the Minister, mentioned above, announced that State trading in imported jute goods would continue until appropriate measures to safeguard the U.K. jute manufacturing industry under conditions conducive to efficiency could be worked out and introduced.

Consequently, the present arrangements for imports and selling of jute goods would continue for some time. Under these arrangements, the Control does not trade in home-made jute goods. This is left to private channels but the prices of these goods are controlled on the basis of an agreement with the jute industry in Dundee allowing a generous margin of profit. Imported goods are also sold at these levels. This system of equalising the prices of cheaper imported jute goods with the dearer domestically produced products, introduced during the war, has in it an element of protection against Indian-made jute goods, which are favoured by the British export industries, because they are relatively cheaper. If the control over imports are removed, the Dundee interests feel that their manufactures would be priced out of the home market by Indian goods. An indication of the fears of these interests is provided by the expression of relief by Mr. L. M. Hill, Chairman, British Jute Trade Federal Council, over the present decision of the U.K. Government. Commenting on the Minister's statement referred to at the outset, Mr. Hill said:

"The momentous part of the Minister's statement is the acknowledgement of the broad principle of protection for an efficient jute manufacturing industry. If protection had not been given, it would have meant that, on the abolition of Jute Control, there would have been a marked increase in the quantity of imported jute goods on the British markets which, in turn, would have led to serious unemployment in Dundee and districts.

"The Government's decision to safeguard the home industry brings the U.K. into line with every other jute processing country in the world. At the same time, it seems reasonable to assume that imports into the U.K. of Indian manufactured jute goods will continue at approximately the same level as in the immediate past."

The present policy is undoubtedly favourable to the Dundee industry, but it must be mentioned here that it violates the British obligations under the General Agreement on Tariffs and Trade which prohibits quantitative restrictions for purposes of protection to industries. It is also against the spirit of the system of Imperial Preference. This is so because only 60 per cent. of Britain's requirements are supplied by Dundee mills, the balance of 40 per cent. being covered by purchases from makers, mostly from India. In other words, this policy tantamounts to a total ban on imports in excess of this 40 per cent. It thus goes against the pro-

RAILWAYS IN INDIA

PROGRESS OF FIVE-YEAR PLAN SO FAR REVIEWED

A REVIEW of the progress of the Five-year Plan on Indian railways so far discloses that, as in other sectors, so also in the railway sector, the plan is becoming increasingly effective and the main weight of expenditure will be felt in the latter half of the period. There was a fall in expenditure in the first two years of the Plan. Thus, as against an estimated annual investment of Rs. 80 crores, the expenditure in the first year fell short by Rs. 10 crores and in the second year by about Rs. 20 crores. In the current year, it is expected to aggregate, according to revised estimates, Rs. 78 crores, as against the budgetted estimate of Rs. 80 crores. The expenditure in the fourth and fifth years is expected to be about Rs. 95 or Rs. 96 crores, annually.

The lag in expenditure in the second year was larger than in the first. This was chiefly due to the non-receipt of rolling stock ordered in the pre-Plan years, and short supplies of essential materials like cement and steel which retarded progress all round, namely, restorations of discontinued services, opening of new lines, widening of line capacity and welfare work. Should the arrangements for the import of the large number of rolling stock units and track materials on order go through, according to schedule, the planned expenditure of Rs. 400 crores for five years would be completed.

The Five-year Plan in regard to the railways has a threefold objective, as follows:

(i) An extensive rehabilitation of the fixed and mobile assets of railways so as to recover the standards of efficiency which had declined since the pre-war years;

(ii) the removal of the principal bottlenecks on existing lines in order to handle currently traffic offering, and the provision of additional facilities, to the extent possible, to meet new traffic arising out of implementation of the Five-year Plan; and

(iii) the policy of improving amenities to the travelling public and measures designed to improve the housing and welfare of staff.

Problem of Rehabilitation

These objectives were determined partly with particular reference to the problem of rehabilitation which developed as far back as in the depression of the thirties and partly by the situation obtaining at the time of the formulation of the Plan. Indeed, the situation then was such that the main objective could be conceived in terms no wider than embarking upon a planned rehabilitation of the systems so as at least to recover the loss of efficiency that had occurred and to keep in step at the same time, with the traffic currently offering. The impact on railways of the progress of various projects in other sectors would, it was realised, generate a 10 per cent. increase in traffic during the course of the Plan years. The planners felt that, while this general increase could not be satisfactorily handed within the Plan period, special measures would be necessary to cope with particular problems. While even this limited objective called for an all-round investment of a massive nature, the resources indicated as being available to the railways did not admit of the planning being undertaken to meet all possible demands. The allotment to the railways was placed initially at Rs. 350 crores and later raised to Rs. 400 crores out of the aggregate investment of Rs. 2,069 crores.

When the draft Five-year Plan was prepared in July, 1951, the first year of the Plan had already advanced and the allocations for the second year were taking shape. It was anticipated that the impact of the Plan, as finally approved by Parliament, would actually be felt in the budgets for 1953-54 and the succeeding years of the Plan period. The anatomy of the expenditure in 1951-52 and the forecast for 1952-53 indicated the general pattern on which the Plan expenditure could be expected to run in increasing measure during the rest of the Plan years. Accordingly, a key plan was prepared showing the main classes of expenditure and the proportions in which they were to be spread over the Plan period. This key plan affords the clue to the inclusion from time to time of new works, the rate of expenditure on works in progress and the relative priorities within the objectives, set in the Plan.

The following table sets out the structure and the general features of the key plan.

Railway Plan for 1951-56

Estimates of Expenditure on the Principal Categories Comprising the Plan

(In crores of rupees)

Rehabilitation and additions	1951-52	1952-53	1953-56	Five years' total	Percentage of the total
Rolling stock and machinery	37.91	42.55	127.50	207.96	52.2
Track	5.51	14.36	42.00	64.87	16.2
Bridges	0.85	1.15	3.60	5.60	1.4
Other structural and engineering works	7.89	8.52	27.00	43.41	10.9
Restorations	0.52	1.14	4.00	5.66	1.4
New lines, special projects, major bridges, electrification of track, conversion of narrow gauge into metre gauge and broad gauge	6.55	5.97	16.00	28.52	7.1
Passenger amenities	3.00	3.00	9.00	15.00	3.8
Labour welfare, staff quarters and welfare works	4.55	4.54	15.00	24.09	6.0
Collieries	0.06	0.39	1.00	1.45	0.6
Ports	0.16	0.18	0.70	1.04	
Miscellaneous items	2.61	—2.70	2.49	2.40	0.6
Total	72.61	79.10	248.29	400.00	100.0

The progress of the Plan in the initial two years, the position in the current year and the forecast for the fourth year of the Plan are as follows:

Progress of the Plan

(In crores of rupees)

Categories of expenditure and percentages of allocation	1951-52 1st year (Actuals)	1952-53 2nd year (Actuals)	1953-54 3rd year (Revised estimate)	1954-55 4th year (Budget)
Rolling stock and machinery	34.36	33.23	45.06	56.17
	(52.2)	(48.4)	(55.2)	(67.3)	(59.1)
Track	9.72	13.46	11.30	12.86
	(16.2)	(13.7)	(22.4)	(14.5)	(13.0)
Bridges	1.00	0.50	0.73	1.02
	(1.4)	(1.4)	(0.8)	(0.9)	(1.1)
Other structural and engineering works	6.68	7.24	10.44	13.42
	(10.9)	(9.4)	(12.0)	(13.4)	(14.1)
Collieries and ports	0.15	0.10	0.62	0.94
	(0.6)	(0.2)	(0.2)	(0.8)	(1.0)
Labour welfare, staff quarters and other welfare works	3.74	3.14	4.97	5.55
	(6.0)	(5.2)	(5.2)	(6.4)	(5.8)
Restoration of dismantled lines	0.60	0.50		
	(1.4)	(0.7)		
New lines including electrification of track and major bridges	5.76	3.71	4.77	5.09
	(7.1)	(6.2)	(5.1)	(5.4)
Passenger amenities	2.45	2.34	2.99	2.85
	(3.8)	(3.5)	(3.8)	(3.0)
Miscellaneous items	5.49	—3.54	—2.99	—3.43
	(0.6)	(7.8)	(—4.8)	(—3.8)	(—3.5)
Total	70.86	60.18	77.88	95.00

Note:—Figures within brackets indicate percentages.

In 1955-56, a balance of Rs. 96.08 crores out of the Rs. 400 crores allotment will be available for distribution among the above categories in the budget year.

So far, the acquisition of new rolling stock has been progressing to the extent permitted by the availability of finance, the ability of foreign manufacturers to supply locomotives and the pace of growth of domestic manufactures of locomotives, carriages and wagons in India, which is, however, severely restricted by inadequacy of trained technicians and machine tools. Nevertheless, as a result of action taken by the Railway Board in enlarging supplies from home as well as foreign sources, the problem of rehabilitation is being steadily overcome. The drive towards self-sufficiency has been particularly marked in the field of carriage and wagon production. The Chittaranjan Locomotive Works and the Tata Engineering and Locomotive Works have generally maintained their production targets almost according to schedule. The following table furnishes the procurement action taken during the Plan period in regard to locomotives, coaches and wagons, as well as the actual receipts thereof.

Orders Placed

Items	*Year*	*India*	*Abroad*	*Total*
Locomotives ...	1951-56	407	1,097	1,504
Coaching vehicles	,,	4,997	789	5,786
Wagons	,,	41,268	18,025	59,293
Receipts				
Locomotives ...	1951-56	146	321	467
Coaching vehicles	,,	1,940	335	2,275
Wagons	,,	14,639	8,478	23,117

In regard to the restoration of the dismantled lines and the construction of new ones, the record is claimed to be satisfactory. Twelve out of 26 branch lines which were dismantled during the war years will have been restored, according to the Plan, by the end of the Plan period. The Plan started with 12 new lines in progress, the most important of them being the Assam Rail Link project and the Kandla-Deesa railway. During the course of the Plan year, 12 additional lines have been sanctioned. All these are in various stages of progress and will add 336 miles to the existing route mileage. The more important of the projects are:

(1) Chunar-Robertsganj; (2) Quilon-Ernakulam; (3) Khandwa-Hingoli; (4) Champa-Korba; (5) Gua-Manoharpur; and (6) Ganga Bridge at Mokameh.

In addition to these, the execution of the major project of the electrification of the Calcutta-Burdwan main lines, which will make a substantial utilisation of power from the Damodar Valley Corporation possible, will commence in the fourth year of the Plan.

The progress of the rehabilitation and expansion scheme is reflected in the operating performance. Between 1951 and 1953, as many as 492 additional passenger services were introduced and 303 existing services were extended. In the coaching section, passenger train-miles rose from 101.27 million in 1950-51 to 106.53 million in 1952-53. Similarly, in the goods section, freight train-miles operated increased from 69.31 million in 1950-51 to 74.69 million in 1952-53.

There has been good progress of the plans for providing amenities to passengers. The total allotment under this trend for the Plan period is Rs. 15 crores and this amount is expected to be fully utilised.

The record in the field of amenities for staff is also considered satisfactory. To take housing, for instance. During the first four years of the Plan, as many as 32,212 quarters will have been built, the major portion of them being for Class IV employees.

Financial Position

The financial position of the railways was the best in the first year of the Plan. Thus, the railways finished this year with a surplus of Rs. 28.34 crores. This surplus declined to Rs. 13.19 crores in the second year. The surplus for the third year, according to revised estimates for 1953-54, is even lower, being no more than a mere Rs. 3.18 crores. If the budget for 1954-55 is an indication, the fourth year, however, may fare somewhat better than the third, in that the surplus is expected to be Rs. 5.14 crores. This shortfall in the surplus has to be compensated by proportionately larger allocation from the general revenues, that is, from the Central Government's other resources. While it was envisaged that the Central Finance was to allot from its resources an amount of Rs. 80 crores from the entire period, its contribution will have exceeded the amount planned for by more than Rs. 10 crores by 1954-55. The railway resources have fallen short of expectations and, consequently, railway fund balances will be standing at considerably lower levels at the end of the Plan period.

Expenditure on the major projects which have been commenced in the Plan years and will be in progress in 1955-56, will naturally become the first commitment in drawing up the outlines of the second Five-year Plan. The Mokameh Bridge, the new lines already sanctioned and those that may be started in the concluding year of the Plan and the large line capacity works on the North-East and South-West lines are anticipated to absorb about Rs. 60 crores in the next period. On the other hand, luckily, the burden of replacement of rolling stock will not press so heavily. For instance, the number of locomotives and wagons attaining overage during 1956-61 will be of a markedly lower order, as additions to stock during the years immediately following the First World War were extremely limited.

Even so, the railway resources will need to be carefully conserved and developed, if the development of the railways were to keep pace with progress in other sectors. And with greater support from Central Finance, the scope for flexibility and expansion in the second Five-year Plan will be wider. Also, there will be more opportunity to broad-base the Plan and build it up from below. The first Five-year Plan will have been one of consolidation, while the second Five-year Plan should open a period of development.

MANUFACTURE OF BABY CARS

Reports from New Delhi indicate that three schemes relating to the manufacture of baby cars have been approved by the Government of India. The schemes submitted were "Morris Minor" by Messrs. Hindusthan Motors Ltd., "Standard Eight" by Messrs. Standard Motor Products of India Ltd. and "Fiat 1100" (somewhat of a bigger model) by Messrs. Premier Automobiles. No price ceiling, it is said, has been determined yet, but it is likely that the Government may do so after full data needed are available on the manufacturing and other items of cost.

Since the manufacture of baby cars in India is a new line altogether, the Government, it is understood, will permit the firms concerned to start with assembly from the imported components and progress thereafter towards the manufacture of essential components. It is expected that baby cars assembled in India by the firms referred to above will be available in the country by the middle of the year.

So far as the manufacturing programmes of bigger types of automobiles and trucks are concerned, various schemes, apart from those already approved, are, it is stated, under the consideration of the Government and a decision on them will be announced shortly.

AUDITOR'S REPORT.

1. I beg to report that I have examined the foregoing Balance Sheet of the Canara Bank, Ltd., as at 31st December, 1953, and the Profit and Loss Account for the year ended 31st December, 1953, with the books and vouchers of the Head Office and the certified returns from the branches and that I have visited the major branches of the Bank during the year and have examined the books and accounts and cash and securities as at the time of my visit and that I have obtained all the information and explanations I have required.

2. In my opinion such Balance Sheet and Profit and Loss Account are drawn up in conformity with the law, and the Balance Sheet exhibits a true and correct view of the state of affairs of the Bank according to the best of my information and the explanations given to me and as shown by the books of the Bank. Further, in my opinion, the books of accounts have been maintained by the Bank as required by Section 150 of the Indian Companies Act.

3. The information and explanations required by me have been found to be satisfactory.

4. The transactions of the Bank which have come to my notice have been within the powers of the Bank.

5. The returns received from the branch offices of the Bank have been found adequate for the purposes of the audit; and

6. The Profit and Loss Account shows a true balance of profit and loss for period covered by such accounts.

A. UMANATH RAO, B.A., F.C.A., Chartered Accountant, } Auditor.

MANGALORE, 15th January, 1954.

A. DAMODAR PAI, Chairman.

H. LAXMINARAYANA KAMATH, } Directors.
P. SARVOTHUM NAYAK, General Manager.

INSURANCE IN CANADA

OBSTACLES TO PROGRESS OF NATIONAL CONCERNS

FEW countries in the world are so richly endowed with natural resources as Canada. The country has not lagged behind in exploiting these resources to its advantage. It has undergone, and is still undergoing, intensive development. In the spheres of industry, trade, transport, banking, etc., Canada has made rapid strides during the past few decades. But the organisation of general insurance has not kept pace with the general progress of the economy. Consequently, this field is dominated by non-Canadian offices which have been providing sound and efficient service to Canadian business and industry. The predominance of these offices would appear to have latterly given rise to an intensive spirit of nationalism which is manifesting itself in the plea for the extension of support for indigenous insurance companies.

An accurate picture of the position of Canadian-owned and controlled companies *vis-a-vis* other companies emerges from the figures published in the *Report of the Dominion Superintendent of Insurance* for 1951. On 31st December, 1951, as many as 277 companies were registered in Ottawa to transact fire insurance business. Of these, 68 were classed as Canadian, 83 British and 126 foreign (U.S.A.). The 68 Canadian companies included those the capital of which is controlled from outside Canada, the number of such companies being 32. Thus, companies owned and controlled by Canadian nationals were only 36 or 13 per cent. of the total number registered in the year. These companies accounted for only 14.83 per cent. of fire insurance business, their share in absolute figures being $19.9 million out of a total of $134.5 million.

During 1951, as many as 292 companies were engaged in underwriting casualty insurance. Of these, 79 were Canadian, 78 British, and 144 foreign. Again, 206 of these companies also underwrote fire business. In addition to these 292 casualty insurers, there were 22 fraternal societies carrying on accident and sickness insurance. Of the 70 Canadian companies, details of which are not given in the *Report*, it is estimated unofficially that about 42 were Canadian controlled and owned.

The table below gives the classes of business written, total premiums of all companies and the share of Canadian-controlled companies in 1951:

	Total premiums all companies $	Canadian-controlled companies $	Percentage Canadian companies
Fire	134,496,218	19,951,174	14.83
Accident and sickness	63,823,775	2,176,434	3.44
Aircraft	1,075,359	4,374	0.40
Automobile	105,244,462	30,552,978	29.00
Boiler insurance	2,064,541	1,913	0.09
Credit insurance	473,257	..	..
Guarantee insurance	4,873,630	1,131,515	23.25
Hail insurance	4,012,309	19,020	0.47
Inland transportation	4,134,320	414,462	10.02
Liability insurance	13,096,319	2,515,343	19.40
Livestock	65,373	..	..
Machinery	1,306,870	..	..
Personal property	16,093,271	1,442,989	8.97
Plate glass	1,774,901	376,182	21.17
Real property	309,148	5,742	12.32
Theft	3,780,832	688,312	18.20
Windstorm	295,816	125,317	42.36
Miscellaneous classes	164,140	27,103	16.20
Marine insurance	8,886,985	504,042	5.40
Totals	$365,768,196	$59,937,984	16.38

It will be observed from the table above that the fire, casualty and marine insurance business transacted by all the companies registered in Canada, amounted to $365.8 million of which the Canadian-controlled companies accounted for $59.9 million or 16.38 per cent. of the total.

Life Insurance

The position of Canadian owned and controlled insurance companies in the sphere of life insurance was, however, far better than that of those in general business. This is indicated by the *Report of the Dominion Superintendent of Insurance* for 1950. In that year, 55 companies were engaged in life assurance. Of these, 30 were Canadian, five British and 20 foreign. The total sum assured in force at the end of the year was $10,756 million written by Canadian companies, $343 million by British and $4,647 million foreign, the total of all companies being $15,746 million. These figures reveal that the share of the Canadian companies was as much as 68 per cent. of the total which compares with 16.38 per cent. in the sphere of general insurance.

The low percentage of Canadian insurers of the total general insurance business becomes all the more significant when it is noted that, in the case of other financial institutions, national concerns predominate. Thus, out of the ten Canadian chartered banks, nine are Canadian-controlled and only one is British-owned, the latter accounting for a mere 0.3 per cent. of the total assets of all the banks. Same is the case with trust, mortgage and loan companies; with one exception all the rest are Canadian-controlled.

The causes for the predominance of non-Canadian companies in the sphere of general insurance have been analysed by Mr. W. W. Foot, General Manager, Economical Mutual Insurance Company, Canada. His analysis makes interesting reading. According to him, the most evident shortcoming of Canadian management is the lack of insurance capacity, especially in fire insurance. The very foundation of insurance is capital, the greater the capacity demanded the greater the capital required. Canadian capital has not been easy to attract in the establishment of insurance companies for two reasons. One is the substantial amount required to start individual companies and the other the little prospect of profit in such enterprises.

Legal Hurdles

Legal restrictions, too, have retarded expansion of Canadian-controlled insurance companies. The minimum requirement for starting an insurance company is $100,000 for fire business. Varied additional amount for additional classes is also fixed. The capital must be raised in cash and is not to be impaired by expenses of organisation. This means that the Canadian investor should be prepared to provide a premium of, say, 25 per cent. above the par value of his stock in order to get a Canadian office going. This has worked harshly against attracting Canadian capital into the business. On the other hand, a well-organised foreign company, with its large resources, can easily fulfil this obligation by transferring a part of its existing resources to the Canadian account.

After getting over the hurdles of incorporation, the Canadian companies are required to face a series of other hurdles. Non-intercourse rule in the Province of West Canada, for instance, has closed many agency doors to Canadian companies.

Canadian insurance companies are required to pay heavier income taxes than British and foreign companies operating in Canada. Thus, the Canadian company is required to pay income-tax on profits arising from underwriting and taxable investment income. But a foreign company is only required to pay profits taxes on its underwriting gain. The exemption of the investment income of British and foreign insurers encourages development of their business, because, investment income is earned on the premium reserves and loss reserves provided by the premiums of the Canadian public.

Another obstacle in the way of development of Canadian companies is the practice of a number of trust and loan companies to accept the fire insurance policies of only those fire companies which maintain deposits or investments with them. Some trust and loan companies, which are substantial mortgage lenders, require a deposit or investment of as much as $50,000 before they accept fire policies submitted as collateral to mortgage loans. Canadian companies with their limited capital resources are stated to be not in a position to keep their funds with these trusts fetching a relatively low rate of interest. In the circumstances, the majority of the companies preferred by trust and loan companies is British and foreign.

Canadian insurance agents, too, would appear to have preferred to serve foreign companies because of superior service facilities provided by them. In many cases, "agents have been," says Mr. Foot, "pressured into the position where they must support the non-domestic companies with a substantial portion of their business under threat of withdrawal of facilities." Further, the agent, too, has been influenced, it is stated, by the national advertising, particularly of the American companies, which overflows into Canada in numerous publications stressing the greatness of these companies.

Last but not the least is that rates and rating are controlled by the most powerful and numerous British and foreign companies in Canada. With only 16.38 per cent. of the total underwriting, Canadian companies have no influence over the fixation of rates.

NEW BUSINESS OF LIFE OFFICES IN U.K.

Preliminary new business figures issued by 62 offices in the U.K. in respect of ordinary life assurance show that net new sums assured written under individual and group contracts in 1953 amounted to £736 million, as compared with £695 million transacted by the same offices in 1952, an increase of 6 per cent. These figures include the ordinary life business of the industrial life offices. The Industrial branch figures notified so far show a total new sum assured of £222 million in 1953, as compared with £217 million transacted in 1952.

The Directors submit to the Shareholders the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1953. The Auditors' Report is also annexed.

	Rs.	a.	p.
The transactions for the past year, including the balance brought forward from the previous year, Rs. 6,36,553-4-6, have resulted in a profit of	82,39,778	2	6
An interim dividend was paid for the half-year ended 30th June, 1953, at the rate of 6 per cent. free of income-tax on the Paid-up Capital of Rs. 2,50,00,000, which absorbed	15,00,000	0	0
Provision made for Income-tax and Super-tax for the year	29,00,000	0	0
Bonus to Staff	11,10,000	0	0
The Directors now propose:— To pay a final dividend for the half-year ended 31st December, 1953, at the rate of 8 per cent. free of income-tax, making 14 per cent. for the year, on the Paid-up Capital of Rs. 2,50,00,000, which will absorb	20,00,000	0	0
To carry forward to the next account	7,29,778	2	6
Total .. Rs.	82,39,778	2	6

The Bank's business continued to function satisfactorily.

The Official Bank Rate remained stationary at 3½ per cent.

Sir Kikabhai Premchand resigned his seat on the Board during the year, and the Directors report with deep regret his subsequent death on 5th December, 1953.

Branches have been opened during the year in India at Gandhidham and New Delhi, and abroad at Aden, Mombasa and Kampala.

In accordance with Article 92, read with Regulation 78 of Table "A" of the Indian Companies Act, Mr. Ambalal Sarabhai, Mr. Bhagvandas C. Mehta and Mr. A. D. Shroff retire from the Board by rotation, but are eligible and offer themselves for re-election.

The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

COWASJEE JEHANGIR, *Chairman.*

AMBALAL SARABHAI, JOSEPH KAY, DINSHA K. DAJI, *Directors.* BHAGVANDAS C. MEHTA, K. M. D. THACKERSEY, A. D. SHROFF

H. T. COULTAS, *Chief Accountant*

A. C. CLARKE, *General Manager.*

BOMBAY, *28th January*, 1954.

N.B.—The Dividend, when sanctioned, will be payable on and from Saturday, the 27th March, 1954, to Shareholders whose names are on the Register on 6th March, 1954.

Dividend Warrants will be posted to Shareholders at their Registered Addresses. Early intimation should be given to the Bank of any change of address.

Balance Sheet as at 31st December, 1953.

CAPITAL AND LIABILITIES.	Rs.	a.	p.	Rs.	a.	p.

TRUTH ABOUT SOAP INDUSTRY

LEVER BROTHERS' REJOINDER TO STATEMENTS OF INDIAN SOAP MAKERS

IN an article recently published in one or two newspapers and doubtless sent to many more, which set out the views of the Indian Soap and Toiletries Makers' Association, various allegations have been made against Lever Brothers, leading up to the following propositions:

(1) "In view of the extreme unbalance in the industry, it would be a wise thing if Government instituted a system of production quotas." In other words, let everyone's production be limited to a quota, and, as Levers are said to produce to their full capacity, their quota should be so limited as to transfer part of their market to others.

(2) Lever Brothers are "indulging in price-cutting in one or the other of their major lines, choosing in particular a period of falling sales." In other words, prevent Lever Brothers from reducing prices, although it is known that they are making profits and are able to pay the highest wages in the industry and a bonus as high as one-third of the basic earnings of the years 1952 and 1953.

(3) Lever Brothers are spending lavishly on advertisement and this should be prevented.

If these proposals were implemented, one would visualise something of a soap cartel which would operate on the basis of restricted production, high prices and little advertising effort to expand the market. The Association says, moreover, that the indigenous industry has "almost reached the end of its tether," thus inferring that all possible efficiency has been achieved in its production and distribution systems, that there is no scope for further expansion of the market and what remains to be done is a re-distribution of the market through State intervention. We submit that such an attitude is neither conducive to the industrial progress of the country nor in consonance with the spirit animating the Five-year Plan nor in the service of the consumer.

Our detailed comments on the points brought out in the said article are as follows:

It is stated that Indian soap had very good export markets, developed during the later years of the last war, in Indonesia, Malaya, Ceylon and Pakistan and that these markets have been lost by reason of the establishment of factories by Levers in these countries. The inference is that Levers had no markets of their own in these countries, that their factories came into existence only after the end of the war to capture the market developed by Indian exporters, and that Indian exporters today cannot export to these markets. It is a fact, however, that Levers first established a factory in Indonesia in 1934 and in Ceylon in 1941. Their factory in Malaya came into production in 1952, to replace supplies previously imported into Malaya by them and to conform to the desire of the Malayan Government to establish local industries. The Lever factory in Pakistan is barely yet in production.

Pioneers in the Field

Apart from the fact that factories in two of the four countries mentioned have been long in production and those in the other two have hardly begun to affect the market, it is equally important to note that Lever were the pioneers of the soap industry, who, introduced quality soaps in those countries as in India, and that they had built up, long before the war, years of goodwill for their products. The remarks of Mr. J. R. D. Tata, again, in export markets for their products. The remarks of the Indian Soap and Toiletries Makers' Association in fact [illegible] Lever Brothers, as they did not have the initial difficulties and expenses of creating and organising a soap market for themselves. What Levers have done is to pioneer the Soap markets, developing the demand for their products and, incidentally, for soap in general, and when their own sales reached a high enough level to make local production economical, opening up factories on the spot.

If today soaps manufactured in India cannot be sold in such markets in as great a quantity as before, it is precisely because Indian prices are too high.

Prices

It is suggested that, in order to destroy competition, Levers deliberately depress their prices in India below those at which similar brands are offered in other countries where competition is less strong. The fact, however, is that the price of Sunlight Soap is 39 per cent. higher in India than in the U.K., where purchasing power is much greater, and some 15 per cent. higher than the general export price from the U.K. Apart from that, to suggest, as has been done, that Indian soap prices are about the lowest in the world, is astonishing in the face of statements made in this country by fully competent spokesmen. Take, for instance, these statements: (a) that of Mr. J. R. D. Tata to the shareholders of his company in 1950, reading, "In spite of their good quality, Indian soaps cannot compete in these foreign markets, because of their high costs," or (b) that of the Secretary of the South Indian Soap Makers' Association in his report for the year 1950, reading, "Due to high prices of Indian-made soaps, no entrance could be got in the foreign markets"; or (c) that of the President of the Association itself at its annual meeting in 1952, reading, "Indian soaps are finding it extremely difficult to compete in the Far Eastern markets with those manufactured in the U.K. and U.S.A., due mainly to the comparatively high [illegible] Mr. J. R. D. Tata, again, in [illegible] these countries have [illegible] improving its export business with neighbouring countries. Established European exporters to these territories have the advantage of lower cost of production." These quotations are sufficient to show the truth of the matter and, what is more, that, given the effort to reduce prices, improve packaging and increase sales promotion activities, India can build up an export market; and also that the export market is not static, notwithstanding the long-established trade of Levers in all these countries.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Bank of India Limited, as at 31st December, 1953 and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the authenticated returns from Branches, and report that:—

(a) we have obtained all the information and explanations we have required and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) the returns received from Branch Offices of the Bank have been found adequate for the purpose of the audit;

(d) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;

(e) such Profit and Loss Account shows a true balance of profit for the year;

(f) such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and the explanations given to us and as shown by the books of the Bank, and

(g) in our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

A. F. FERGUSON & CO., *Chartered Accountants.*

S. B. BILLIMORIA & CO., *Chartered Accountants*

Statement pursuant to Section 132-A of the Indian Companies Act of 1913 as amended by Act XXII of 1936.

The Profit and Loss Account of the Bank of India Limited for the year ended 31st December, 1953, does not include any profit or loss of its subsidiary, the Bank of India (U.K.) Nominees Limited (a Nominee Company operating in the United Kingdom), as no profit was made and no loss was sustained by that subsidiary. All expenses incurred were borne and paid by the Bank.

COWASJEE JEHANGIR, *Chairman.*

AMBALAL SARABHAI, JOSEPH KAY, DINSHA K. DAJI, *Directors.* BHAGVANDAS C. MEHTA, K. M. D. THACKERSEY, A. D. SHROFF.

H. T. COULTAS, *Chief Accountant.*

A. C. CLARKE, *General Manager.*

BOMBAY, *28th January*, 1954.

THE BANK OF INDIA (U. K.) NOMINEES LIMITED.

Balance Sheet 31st December, 1953.

Capital Authorised and Fully Paid Up— 100 Ordinary Shares of £1 each .. £100	£100	Cash at Bankers £100	£100

Signed on behalf of the Board,
J. DONALDSON,
S. H. BRADFORD, } *Directors.*

We have obtained all the information and explanations which we have required and which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Company. We have examined the above Balance Sheet which is in agreement with the books of account. In our opinion such Balance Sheet gives the information required by the Companies Act 1948 in the manner so required and is properly drawn up so as to exhibit a true, correct and fair view of the state of the Company's affairs at 31st December, 1953 according to the best of our information and the explanations given to us and as shown by the books of the Company.

No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.

27, Old Broad Street,
London, E.C. 2.
1st January, 1954.

FERGUSON, GILCHRIST & CO.,
Chartered Accountants, Auditors.

To quote Levers' prices in some Eastern countries can be most misleading, unless it is stated whether they are manufacturers' prices or market prices, what the import duty and taxes are, etc., quite apart from the fact that manufacturers have no control on the wild fluctuations of market prices brought about by the irregularity of supplies arising from import and other restrictions. Furthermore, the inference that Levers deflate soap prices in India and recoup their loss in other countries is directly refuted by the fact that Levers pay in India the highest wages and bonuses in the soap industry and regularly pay large sums in taxes on profits to the Indian Exchequer. Besides, if market prices in some Eastern countries are as high as the Association quotes them, we do not understand what prevents the Indian manufacturers from exporting to those countries and making handsome profits.

No Price Cutting

It is said that, in India, Levers indulge in price cutting in one or other of their major lines, choosing in particular a period of falling sales. In fact, the major Lever lines are quality products, usually selling at a premium and any price reduction that has been made has been the result of a commensurate fall in raw material prices. Indeed, the industry as a whole was morally obliged to make the last general price reduction in October, 1953, in response to the Government's helpful action in removing (or reducing) the import duties on palm oil. Further, if manufacturers are not prepared, in a period of falling sales, to stimulate trade by reducing prices as much as they can, how else can they achieve the progress of their industry? Levers have consistently made profits in India and it is obvious that their prices are not uneconomic.

In this context, reference may be made to the relation of soap prices to oil prices. The Association's statement on this aspect of the problem is likely to mislead the public. It is true to say that coconut oil prices were at one period 10 times their pre-war level and that soap prices have, in the same period, increased only four to five times. In a normal washing soap, however, the cost of oil, after allowing for the glycerine recovered, is only some 39 per cent. of the consumer price. The fact is that, where coconut oil is the only oil used in soap making (which it is not), or even assuming, for the sake of argument, a tenfold increase in the cost of all soap-making oils, the influence upon the ultimate consumer price, other factors remaining equal, is under fourfold. Thus, though soap prices may have gone up only four or five times over their pre-war level, they have increased sufficiently, at any rate, to absorb the greater cost of oil without loss of profit. This situation will be more readily appreciated, when it is realised that glycerine, a valuable by-product of the soap industry, has risen in value to four times its pre-war level. In fact profits have apparently been sufficiently encouraging at one time or another to prompt many soap makers to go in for what the Association calls "bold expansion of capacity."

Advertising

It is stated that Levers spend crores of rupees on advertising every year and that the advantage that they reap thereby is unfair. In fact, their advertising expenditure on soap products has never reached even half a crore of rupees in a year. Mr. J. R. D. Tata, in the course of his address to the shareholders of his company in 1953, stated as follows: "Publicity is an unavoidable item of expenditure in selling a competitive product like soap . . . I wish to point out that, even with our increased rate of expenditure of over Rs. 8 lakhs per year, representing approximately 2 per cent. of our gross realisation, we are lagging behind our more successful rivals, who are able to afford bigger advertising budgets in proportion to their turnover." It may be stated here that, on Sunlight Soap, which is advertised widely, Levers do not spend at any higher rate than the 2 per cent. of gross realisation indicated by Mr. Tata as his company's expenditure. Levers' advertising expenditure in India in relation to turnover is in fact very much less than that of leading soap manufacturers in Europe and the U.S.A.

Recently, Mr. A. D. Shroff, also of the House of Tatas, and now Chairman of the Indian Society of Advertisers, emphasised in his speech to his society the importance of advertising as a factor in increasing turnover and reducing distribution costs.

Levers are also said to indulge in publicity which cannot be considered to be ethical. This is, of course, a matter of opinion. Levers take considerable care when preparing their advertising and follow themes which are internationally acceptable and used and which, in fact, they have used for many years in many countries. It is equally important to note that advertising can only introduce the product to a consumer and that the continuation of the consumer's patronage depends entirely on his appreciation of the qualities of the product. If Lever products enjoy goodwill, it is because their quality meets with the approval of the consumer. Neither Levers nor anyone else can afford to tell false stories in advertisement without reaping a loss of patronage as a natural consequence.

Oils

Levers in India buy oils for soap manufacture both in the Indian and international markets according to their availability. They pay market prices which are openly quoted to anyone according to the quantities required. As to the import of oil in bulk, there are others in India who do this. The United Africa Company, to which reference has been made by the Association, sell such products as come into their hands to the highest bidder without discrimination. Levers buy steadily, directly and with the sole end in view of supplying their factories. Any benefits arising from such a consistent policy are open to all.

New Factory

It is stated that Levers have precipitated a crisis in the industry in India by making an application for a licence to import a new plant. The fact is that, as long ago as 1951, they were exploring the advisability of establishing a small new soap factory elsewhere in India and discussed the matter informally with the Government. They have not made an official application for sanction of such a project and, what is more, such an application would now come within the scope of the Industries (Development and Regulation) Act.

Monopolistic Tendencies

The article holds that it is the declared aim of Unilever, the parent Company, to control at least 75 per cent. of the trade wherever it operates. If this refers to a statement reported by a well-known journal some years ago as having been made by a spokesman for the Company, it is a gross distortion. As reported, that statement, having emphasised the *need for competition*, in fact ran: "It is unhealthy to get more than 75 per cent. of the trade in any of the commodities it sells." In India, Levers' sales are barely 25 per cent. of what they believe to be the total sales of soaps in the country.

It is further said that countries such as the U.S.A. have legislated against combines. The fact is, however, that all such legislation in the U.S.A. and other countries is aimed against cartels which seek the division of markets, restriction of production, non-exploitation of patents, price maintenance and other such objectives, all of which are against the interests of the consumer. Such legislation is not against integrations which lead to efficiencies, keen competition and progressive utilisation of all scientific achievements.

Enquiry Into the Industry

It is said that too large a proportion of aspects of the soap industry are kept secret. The fact, however, is that all relevant information on every important aspect of the industry is known to the Government, who collect it under the Statistics Act, the Industries (Development and Regulation) Act, the Factories' Act and other pieces of legislation, or through Commissions such as the Press Commission, or through departments such as those dealing with Income-tax, Import-Export, Customs, etc. It is difficult to see what additional information can reasonably be supplied. It is understood that the Government have rejected the demand for an enquiry, and this is presumably because they are in possession of all relevant information regarding the organised sector and are obtaining such information as can possibly be gathered from the rural sector through the National Sample Survey, etc.

Levers believe that there is room and need for co-operation among all units in the industry for solving common problems; that India holds an enormous potential demand for soap, which needs only to be awakened by the collective marketing efforts of the industry, coupled with the success of the Five-year Plan in raising the standard of living, for all soap manufacturing capacity to be kept fully at work.

U.S. STEEL INDUSTRY SETS NEW RECORDS

DRIVE TO RAISE EFFICIENCY

THE U.S. steel industry established a new production record for a single year in 1953. It also accomplished the second largest yearly increase in steel-making capacity in the industry's history. Leaders of steel industry are confident that 1954 will also be a good year. The U.S. steel mills produced 111,600,000 short tons of raw steel last year. This output was six per cent. above the 105,200,000 short tons of steel ingots and castings produced in 1951, the previous peak year. It was also 20 per cent. above the 93,200,000 short tons poured in 1952 when a strike reduced steel production.

The American steel industry surprised itself last year by making a net gain in steel-making capacity of 6,782,940 short tons, a total that exceeded an industry estimate early last year by about 2,500,000 tons. The capacity increase last year was surpassed only by the gain of almost 9,000,000 tons during 1952. The American Iron and Steel Institute estimated the nation's steel-making capacity on 1st January, 1954, at 124,330,410 short tons. This is the potential capacity figure on which the industry's weekly operating rate will be computed during 1954. In this connection, *Iron Age* magazine recently pointed out that the United States, with its present steel-making capacity, can make about three times as much steel as was turned out by Soviet Russia last year. It estimated Soviet production last year at just under 42,000,000 short tons, as compared with U.S. production of 111,600,000 short tons.

After the United States and Soviet Russia, the biggest steel producing country last year, according to *Iron Age*, was the United Kingdom, with a production estimated at nearly 20,000,000 short tons. Next came West Germany, with an estimated 17,000,000 short tons, followed by France with 11,000,000 short tons. The world steel production for 1953 was estimated by *Iron Age* magazine at 234,000,000 short tons.

Because the rated capacity of U.S. steel mills on 1st January last was increased nearly 7,000,000 tons, the weekly operating rate, expressed in terms of percentage of rated capacity, will drop out of proportion to whatever decline in production occurs. In order to avoid misinterpretations of this so-called ingot rate, a barometer closely watched for appraisal of the industrial situation, the American Iron and Steel Institute in December, 1953, adopted an index of steel output, based on the average annual production of 1947, 1948 and 1949. The new index will be issued weekly along with the weekly operating rate. As registered by the index, the 1953 output was 133.2 per cent.

The Institute also reported that the new annual capacity of the U.S. steel industry is a gain of more than 32,000,000 short tons or 35 per cent. in the eight post-war years, and an increase of 52 per cent. since 1940. Post-war expenditures on plant and equipment by American steel companies amount to more than $5,000 million.

While the steel expansion is past its peak and probably will taper off for several years, the steel mills are continuing to spend large sums to modernise their facilities. An indication of this is the recent announcement that the U.S. Steel Corporation will spend approximately $300 million during 1954 on new equipment and replacement of its production facilities. In 1953, this Corporation, the largest steel producer, spent more than $350 million on capital investment. Its sprawling $400 million Fairless Works, at Morrisville, Pennsylvania, was completed in December, 1953. Started in March, 1951, the steel works is considered the fastest built installation of its size in the United States.

Other steel companies also are planning high capital outlays this year, even though demand for steel in 1954 may be lower than 1953's total output. The President of the Armco Steel Corporation, W.W. Sebald, believes 1954 will be "a year of good business." "As an indication of our confidence," Sebald said, "we at Armco plan to spend as much for capital improvements in 1954 as we did in 1953—not to enlarge capacity but to increase efficiency and reduce production costs."

With production pressure off after many years, the emphasis generally in the industry has swung to bettering production efficiency. Companies plan to make better utilisation of low-cost facilities and to replace marginal plants and equipment with modern plants and equipment.

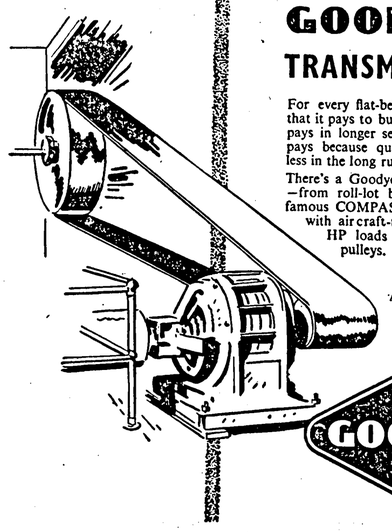
Your Best Buy for the Long Pull...
GOODYEAR
TRANSMISSION BELTS


For every flat-belt transmission drive, you'll find that it pays to buy and specify Goodyear belting—pays in longer service, pays in lower maintenance, pays because quality Goodyear belting costs you less in the long run.
There's a Goodyear construction to fit every need—from roll-lot belting for agricultural use to the famous COMPASS Steel Cable Belt that is bodied with air craft-type steel cables to handle highest HP loads and cope with small, high-speed pulleys.
Ask us for help in belting your drives—and always insist on Goodyear transmission belting.

REPORT OF THE DIRECTORS TO BE PRESENTED TO SHAREHOLDERS AT THE FORTY-FIRST ANNUAL GENERAL MEETING TO BE HELD AT THE REGISTERED OFFICE OF THE BANK IN BANGALORE CITY

The Directors have pleasure in submitting to the Shareholders the Balance Sheet and Profit and Loss Statement as at 31st December, 1953.
The result of the Bank's working for the year ended 31st December, 1953, is a surplus of Rs. 17,90,687-3-7, which sum, together with Rs. 86,306-7-3 brought forward from 31st December, 1952, aggregates Rs. 18,76,993-10-10.

The following appropriations have been made:—

	Rs.	a.	p.
An Interim Dividend at the rate of 12 per cent. per annum and a Bonus at the rate of 4 per cent. per annum, free of Income-tax, was paid for the half-year ended 30th June, 1953, which absorbed	4,00,000	0	0
Transferred to Reserve for Income-tax and Super-tax	3,50,000	0	0
The Directors now propose:			
To pay a final Dividend at the rate of 12 per cent. and a Bonus of 4 per cent. per annum for the year ended 31st December, 1953, free of Income-tax, which will absorb	4,00,000	0	0
To provide for Income-tax and Super-tax	2,50,000	0	0
To pay a Bonus to Staff of three months' salary about	2,50,000	0	0
To carry forward to next account	2,26,993	10	10
Total .. Rs.	18,76,993	10	10

The Head Office accounts and the returns from the Branches, as at 30th June and 31st December, 1953, have been audited by Messrs. Fraser and Ross, Chartered Accountants, while the accounts of the Branches have been audited by Messrs. Brahmayya & Co., Chartered Accountants, B. K. Ramadhyani & Co., Chartered Accountants, and D. S. Subrahmaniya & Co., Chartered Accountants. Sri. R. V. Subramanyam, Deputy Comptroller, has examined the accounts for the year on behalf of the Government of Mysore.
Sri. Tubagere Nanjappa and Sri. P. Hanumanthiah are the two Directors who retire on this occasion. They are eligible for re-election but do not offer themselves for re-election.
The Auditors, Messrs. Fraser and Ross, Brahmayya & Co., B. K. Ramadhyani & Co. and D. S. Subrahmaniya & Co., also retire and offer themselves for re-appointment.
The Dividend, when sanctioned, will be payable on and after 10th March, 1954.

By Order of the Board,
B. V. NARAYANA REDDY,
General Manager.

KANDY SESSION OF E.C.A.F.E. ENDS

PLEA FOR ENLIGHTENED SELF-INTEREST AMONG MORE DEVELOPED COUNTRIES

AFTER deliberations spread over eleven days, the Economic Commission for Asia and the Far East (E.C.A.F.E.) concluded its tenth session at Kandy, Ceylon, on Thursday last week. The session was widely attended by as many as 200 member-delegates, 23 observers, 6 representatives of U.N. specialised agencies and 7 members from non-Governmental organisations. At this session, the Commission reviewed the activities of its subsidiary bodies in the past year, considered questions of general policy and approved of the programme of work for the coming year.

Three days had been devoted for the review of the economic situation in the countries of the E.C.A.F.E. region. There was a threadbare debate which was packed with statements of facts and expressions of opinion by Cabinet Ministers, diplomats, high-ranking Government officials, economists, and representatives of the business community. Throughout the debate, world attention was focussed on the several outstanding economic problems confronting the Governments and peoples of the region. All the delegates sought to drive home the fact that, since world economic prosperity was indivisible, international co-operation in the economic and political fields was of the utmost importance. Stress was laid on larger flow of capital, goods and services from the economically more advanced countries to the countries of the E.C.A.F.E. region. In asking the countries to ensure such flow, the delegates, however, made it clear that they were not "begging for aid," but only appealing to the advanced countries to remember that it would be a matter of "enlightened self-interest" to help the underdeveloped areas.

The other highlights of the debate that took place at this Conference were as follows:

(1) There was general concern over the adverse effects of violent price fluctuations in exports on the region's economic situation. The downward trend of export earnings appears at present checked, with the exception of rubber and tin, on a level slightly higher than that early in 1950. Export earnings, however, are lower and foreign exchange balances practically used up. Many Asian countries are, therefore, facing the dilemma of either to cut vital development programmes or to run up budget deficits.

(2) The need for stable and fair prices of primary raw materials and equitable price relationship between primary commodities and manufactured goods was strongly emphasised. The delegates felt that work in the field of price stabilisation had not yet made much progress, and as such called for greater efforts on the lines of international long-term commodity agreements (similar to those concluded for sugar and tin) and other measures.

(3) In considering the possibility of a recession in the industrialised countries, the delegates expressed the view that such a danger might be averted and, at the same time, Asian market possibilities enhanced, if industrialised countries increased sufficiently their exports of capital, including machinery and equipment, to the underdeveloped countries. The Commission, it will be recalled, had, in its annual report to the Economic and Social Council, expressed the hope that foreign capital, public and private, would flow into the region in larger amounts. It had also urged that capital exporting as well as capital importing countries should try to promote such flow.

(4) Countries outside the region voiced determination to continue their efforts to increase their trade and financial co-operation, including technical assistance, with the region. The U.S. delegate said that his country was expected to be at least as good a customer of Asian products this year as last year and he drew attention to the U.S. assistance given bilaterally and through the United Nations. Reassuring statements were also made by the delegates of Britain, France, Netherlands and Japan. The Soviet Union delegate followed up specific technical assistance offers made at the E.C.A.F.E.'s Committee on Industry and Trade and invited experts from 12 Asian countries to visit the Soviet Union this September and October "for a month or so to [illegible] trial and exploitation of [illegible] appropriate Soviet organisations would be ready to finance the trip on Soviet territory.

(5) Dissatisfaction was expressed by most of the delegates over the slow rate of economic development in Asian countries. In particular, it was pointed out that imports of capital goods were small; progress in industrialisation not speedy enough; that very little, if any, progress had been made in the diversification of Asian economies; and mobilisation of domestic capital had produced only limited successes. One of the main arguments was that economic development was thus not keeping pace with the growth in population.

(6) A certain shift in emphasis was noticeable in ideas put forward for priorities to be fixed in economic planning. While the necessity of industrialisation was as fully recognised as ever, it was thought that "high priority" should be given to agricultural production as a prerequisite for industrialisation. Development of transport and electric power was also felt to be basic, and the development of cottage and small-scale industries was considered particularly necessary to provide increased employment opportunities.

(7) Production of foodgrains in 1952-53 exceeded the pre-war level for the first time after the war, but output per head of the population was still below pre-war. Sellers' market in rice had turned into a buyers' market, but it was felt that price reductions might help food countries to increase substantially the rice imports. On the other hand, it was recognised that prices of rice should be kept at a level which should not discourage production and reduce exports.

(8) Much encouragement was derived from the possibilities and good results achieved in community development programmes which had utilised voluntary rural labour from the ranks of the underemployed. Many rural facilities, such as roads, canals, tanks, wells, and community houses, have thus been provided, with the Government supplying materials and technical supervision.

The Commission considered next the various reports submitted by its subsidiary organs. In the past year, nearly 100 studies and documents were prepared by the E.C.A.F.E. More than a dozen meetings, including two large regional conferences, were held. There was, besides, a study tour, a seminar and an inter-Secretariat Working Party. In particular, the Commission approved the reports of its Committees on Inland Transport and Industry and Trade, and the report of the Bureau of Flood Control and Water Resources Development.

The Commission also discussed the E.C.A.F.E.'s co-operation with the U.N. Technical Assistance Administration and the U.N. Technical Assistance Board, as well as with various U.N. specialised agencies. Considerable importance was attached to the development of co-ordinated national technical assistance programmes which would allow the maximum possible use of the services extended to each country. It was felt that, without prejudice to [illegible] in certain cases, be most effective and, in special circumstances, [illegible] proposed by India and adopted by 12 votes to none, the Commission recommended that regional projects should be permanent elements in the planning and allocation of funds to the Technical Assistance Programmes.

A Soviet resolution calling for normalisation of trade relations with all countries which would be prepared to vote on the basis of equality and mutual advantage, was defeated by 10 votes to 1 (U.S.S.R.) with three abstentions (Burma, India, Indonesia). Objections were raised by several delegates, particularly to the part of the resolution blaming, among other things, the official limitation of markets and the frustration of normal trade with countries which could provide substantial markets for the "unfavourable" economic development of the countries of the region. The resolution, it was pointed out, would contravene the U.N. General Assembly resolution on embargo against China.

Two Japanese resolutions concerning associated membership were adopted. The first of these urged the Economic and Social Council to give effect to the Commission's wish that the E.C.A.F.E. associate members who were responsible for their own international relations should be admitted to membership. The second resolution related to the amendment of Rules of Procedure 13 and 15, to enable associate members to be elected to chairmanship and vice-chairmanship.

The next session of the E.C.A.F.E. will be held in Tokyo.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS OF THE BANK OF MYSORE, LIMITED

We have audited the Balance Sheet of the Bank of Mysore, Ltd., as at 31st December, 1953, and the Profit and Loss Account for the year ended that date and report that:

(a) We have obtained all the information and explanations we have required.
(b) Such information and explanations have been found to be satisfactory.
(c) The transactions of the Bank as have come to our notice have been, in our opinion, within the powers of the Bank.
(d) The returns received from the Branches have been found adequate for the purpose of our audit.
(e) In our opinion the Profit and Loss Account shows a true balance of profit and loss for the period covered by the audit.
(f) In our opinion the Balance Sheet and Profit and Loss Account are drawn up in conformity with the law and the Balance Sheet exhibits a true and correct view of the state of affairs of the Bank according to the best of our information and the explanations given us and as shown by the books of the Bank.
(g) We are further of the opinion that the books of account have been maintained in accordance with the Law.

PARLIAMENTARY CONTROL OVER STATE-OWNED INDUSTRIES

AN INTERESTING DEBATE IN BRITAIN

THE exercise of Parliamentary control over nationalised undertakings has always given rise to some very difficult administrative problems. Excessive interference with the work of these undertakings will rob their administrators of the spirit of initiative and enterprise, a quality very essential for the success of any commercial undertaking, whether owned by the State or by private entrepreneurs. At the same time, it is also true that, if no control is exercised, there is likely to be wastage, corruption and lack of responsibility. Even in large private-owned undertakings, a large measure of control is exercised by the Board of Directors who, in turn, are subject to the control of shareholders. Similarly, the taxpayer, who finances these undertakings, is entitled to know how they are being run.

Viewed against this background, the debate in the British House of Commons on the report of the Select Committee on Nationalised Industries, which took place recently, makes interesting reading. It is worthwhile to record here the main features of this debate, because a similar problem is facing this country also. It will be recalled that the Select Committee, in its report submitted in August, 1953, suggested the appointment of a permanent committee of the House of Commons to examine the report, accounts and activities of the Committee. It was stipulated that the Committee should include an officer of the status of Comptroller and Auditor-General and at least one professional accountant. It was further provided that the Committee should act as a liaison body between Parliament and the State Boards administering the State-owned undertakings. After considering the report of the Select Committee, the British Government has accepted, in principle, the idea of a select committee, subject to the condition that it should be a joint committee including members of the House of Lords.

The debate disclosed the existence of diverse opinion on the method of Parliamentary control over nationalised industries. Mr. Harry Crookshank, Leader of the House, while accepting the principle of constituting a select committee, made plain the Government's anxiety lest even this cautious approach held hampering risks for the progress of nationalised industries. He revealed that the proposal that the permanent examining committee, recommended by the Select Committee, should include the Comptroller and Auditor-General or a member of equal authority did not appeal to the Government. The Conservative back-benchers, however, pleaded strongly for the inclusion of a Comptroller on the proposed body for examining the nationalised undertakings. But Mr. Crookshank remained unmoved. He contended that, in the field of Parliamentary control over State-owned undertakings, it was better not to go too fast and added: "We have got to feel our way. Nobody knows what the right answer is yet, but a great number of people think that we ought to start looking for one. We do agree that there should be some direct contact between the Boards and Parliament but with a big proviso. The position and duties of responsible ministers should be safeguarded."

Although he accepted in principle the idea of a select committee, the Government, he said, wanted to keep open the possibility of a joint committee, including the House of Lords. He suggested that the Committee should have between 10 to 14 members and discounted the proposal of sub-committees as they were liable to go into too much of detail. Nor did he think that it would be wise to publish all the evidence. Reports from time to time, he felt, should satisfy the House, without every industry having to go yearly before a committee. Care should be taken not to frighten the Boards. If every thing was published, they might well take refuge in red-tape. In short, the theme of Mr. Crookshank's contention was that any nationalised industry would lose its nerve, if Parliament constantly looked over its shoulder. With this view, almost all front-benchers belonging to both Labour and Conservative parties agreed, though the back-benchers of both the parties were for a certain measure of direct control by Parliament.

Mr. Herbert Morrison from the opposition front bench stoutly opposed the idea of a select committee for a number of other reasons. His main argument was that the Select Committee's proposal could imperil the commercial freedom of the undertakings. He was of the view that, if the leaders of the State Boards were constantly liable to have their decisions questioned and "put through the mill" by the members of Parliament, they would inevitably begin to play for safety. He considered that, with a permanent select committee sitting in judgment over the activities of the Boards, centralisation was bound to increase. There would be more references to the central offices of the Board. Fear of politics would creep in. He maintained that the best course would be for the Government to initiate a mixed type of enquiry like that which went with the affairs of the British Broadcasting Corporation. Proceeding, he remarked that, left to him, he would start with electricity and would not have the enquiry more than once in seven years, except for special reasons. Not all Labour members shared Mr. Morrison's views. Not even Mr. Ernest Davies, an opposition authority on transport, would agree with him. On the contrary, he said he was in favour of establishing an examining committee on State undertakings responsible to Parliament.

That there is need for sufficient Parliamentary control over State undertakings is indisputable, especially when they are national trusts and, therefore, require to be managed efficiently in the larger interests of the nation. But, at the same time, there is considerable force in the argument that any control that is imposed on administrations in charge of State-owned undertakings should not deprive them of freedom of action, so essential for initiative and drive. Commenting on this subject the *Financial Times*, London, observes as follows:

"The more Parliament debates the problems of its own control over the nationalised industries, the better adapted the company system seems to the administration of modern industry on a large scale. In the public company, a device has been hit on which gives the management the necessary freedom to act, while at the same time providing just the right amount of check on efficiency. All but the blind can see that it ensures responsibility to the national interest as well. In the Public Board, on the other hand, at any rate as the 1945 Government adapted it, Parliament seems to have invented something which even its supporters now feel to be neither fish, flesh, nor good red herring. Each Board is specifically enjoined to pursue the national interest. But somehow its interpretation of the national interest does not always agree with Parliament. Meanwhile, the Boards can be treated neither as though they were ordinary Government departments—because, though their capital is publicly guaranteed they do not, on the whole, handle public money—nor as though they were some special form of public company—not only because they are deliberately removed from the ordinary discipline of profit and loss, but because the Minister, who is presumably supposed to act as a shareholder's representative, more often, in fact, operates either as an agent of Government policy or as a kind of Parliamentary Public Relations Officer."

After recognising the need for filling in the vacuum between Parliament and the Boards of nationalised industries, this paper examines the question whether the link between the two should be a select committee or septennial enquiries, as advocated by Mr. Morrison, and concludes thus:

"There seems little real substance in Mr. Morrison's objection to this (the appointment of a select committee) on the grounds that it would unduly upset the day-to-day management of the industries. Any Parliamentary enquiry will be inclined to do this, whether it occurs once in two years or once in seven. Indeed, it might well be that the longer the period between enquiries, the more paralysing the prospect of it might be. The real argument for the Select Committee is that if any kind of Parliamentary means of communication between the nationalised industries and the public is to be successful, it must be open to the passage of information and ideas in both directions. It may be that Parliament should examine the methods of organisation of the nationalised industries to see whether they are adapted to promote technical efficiency. A Select Committee is the more likely to be able to provide the platform for the informed debate which at present is so sadly lacking."

The British Parliament, however, could reach no conclusion on this question. After debating for six long hours, the debate concluded, with the problem still open to solution at a later date. This shows how intricate the problem is.

IMPORT OF PLASTIC P.V.C. SHEETINGS

Traders in plastics raw materials are perturbed over the Central Government's policy of restricting imports of P.V.C. sheetings. These sheetings, it will be noted, have not been included in the list of items for which the basic period for purposes of calculating import quotas is extended to include the financial year 1952-53. The restricted import policy is said to have resulted in shortage of goods in the market leading to a rise in prices, so much so that the consumers of plastics P.V.C. sheetings, especially the small producers of *chappals*, purses, brief cases, spectacle cases, etc., are subjected to much hardship. There are reports even of a curtailment of output, followed by retrenchment, in some units. Why then should the Government still persist in not liberalising imports of the sheetings? The one possible answer to the poser is that the Government wants to protect the interests of indigenous manufacturers. This, no doubt, is a laudable objective. But the point is whether the indigenous manufacturers are in a position to satisfy the requirements of the manufacturers of plastics goods. It is stated that they are not. The P.V.C. plastics sheets were until recently not being produced at all. The rate of output is at present very poor. "It does not," to quote one report, "meet even a fraction of the requirements of those engaged in the manufacture of plastic goods."

The P.V.C. plastic sheetings are an important raw material for the manufacture of a wide range of utility articles—wallets, brief cases, purses, spectacle cases, to mention only a few—besides being used extensively for tapestry, upholstery, shoes, etc. What is more, the sheetings, it is said, are more economical in value than leather goods. To the extent that the industry is assured of adequate supplies of P.V.C. sheetings at reasonable prices, production will be maintained at a high level, which is imperative, considering the growing demand for the utility articles—indigenous and foreign. Prospects of a sizable export trade in these goods with Ceylon, East Africa and Burma are stated to be quite bright. In view of all these factors, it is contended that larger imports of P.V.C. sheetings should be allowed.

SMALL-SCALE INDUSTRIES

The international team of experts on village and small-scale industries is now visiting various places in India. After investigating into the present position of the village and small-scale industries, the team of experts will make recommendations for alleviating the problems facing them. They will suggest measures for developing existing approaches to service these industries. They will also explore new approaches. Further, they will enquire into the possibilities of setting up a multi-purpose institute of technology for village and small-scale industries.

The importance of the recommendations that will be made by the team of experts needs no emphasis. For, as aptly pointed out by the Ministry of Commerce and Industry, Government of India, in its note on *A Plan for the Development of Village and Small-Scale Industries*, one of the pressing problems facing India today is that of limited opportunities for employment in village and small-scale industries. This has not only resulted in increasing unemployment and under-employment in both rural and urban areas but has also resulted in adding more man-power to the already overcrowded ranks of agricultural workers. The problem is further complicated by the fact that industrial growth—both large and small—has not been rapid enough to provide expanded employment opportunities for India's increasing population. The Government of India recognises that all segments of the population must be gainfully employed if the basic goals set forth in the Five-year Plan are to be achieved. It, therefore, logically follows that immediate steps must be taken to launch a comprehensive programme for village and small-scale industries directed towards increasing national production and providing constructive employment for people.

INDIA AND G.A.T.T.

It is learned that the 15-nation Inter-Sessional Committee of the General Agreement on Tariffs and Trade (G.A.T.T.) voted unanimously, on the 19th inst., authorising India to negotiate duties on a limited range of imported goods. No date is believed to have been fixed for the new negotiations to be held between India and the major suppliers of those items on which it wishes to raise tariffs. Strictest secrecy is being maintained about the individual items concerned. India has been prompted to make this request in order to raise sufficient revenue for financing development schemes and to give protection to certain domestic industries. It is said that the contracting parties took a sympathetic view of India's request and agreed to give the required authority for negotiations with member nations.

TRIVANDRUM PERMANENT BANK LIMITED

Formerly THE TRIVANDRUM PERMANENT FUND

(THE PERMANENT FUND OF 1899)

Head Office: TRIVANDRUM (T. C. STATE)

Fourteen Branches at Important Centres In Travancore-Cochin State.

AGENCIES AT IMPORTANT CITIES IN INDIA

PAID-UP CAPITAL .. .. Rs. 5.00 lakhs
RESERVE ACCOUNTS .. .. Rs. 1.81 lakhs

PROFIT OF KOHINOOR MILLS NEARLY TREBLED

SHAREHOLDERS TO GET 2 PER CENT. MORE

ONE of the main inspiring factors behind the present strength of textile shares on the Stock Exchange has been the fond hope that textile mills in this country would be able to show excellent results for 1953, in refreshing contrast to the unfavourable results for the preceding year. The financial results of the Kohinoor Mills Company, Ltd. (Agents: Messrs. Killick Industries Ltd., Bombay), for the year ended 31st December, 1953, a brief reference to which was made in our last issue, have fully justified this expectation. The gross profit for the year amounts to Rs. 65.22 lakhs, which is nearly three times that of Rs. 23.22 lakhs earned for the previous year. It, however, falls short of the profit for 1951 by no less than Rs. 27.8 lakhs and of that for 1949 by Rs. 6.11 lakhs. This comparison with some of the previous years has been made just to show that, although 1953 was a year of record production, the profit for that year was not.

Nevertheless, the Company's performance during the year under review is very encouraging and the Directors have thought it fit to pass on part of the increase in the profit to the shareholders. They have done this by enhancing the final distribution from 12 per cent. to 14 per cent., the interim distribution having been maintained at 6 per cent. It is significant that this increase is in the form of a bonus. This means that the Directors are confident of maintaining the dividend at 18 per cent., that the additional 2 per cent. is being given just because the profit for the year permitted it and that it is not certain whether the Company will be able to repeat this extra in future.

The salient features of the Company's results for the past four years are compared in the following table, which shows at a glance the Company's progress since 1950:

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950
Sale proceeds (net) ..	706.74	725.27	814.88	524.63
Other receipts ..	0.49	1.59	1.46	8.14
Expenses	642.02	703.64	722.82	468.16
Gross profit ..	65.22	23.22	93.02	64.59
Agents' remuneration ..	6.56	5.42	9.39	6.05
Depreciation	14.97	14.38	18.22	20.14
Taxation	17.80	4.00	28.00	15.00
Net profit	25.88	0.42	37.41	18.70
E.P.T. post-war refund (net) ..	..	18.33	..	..
To reserves	6.00	1.00	12.00	4.50
Dividend	20.00	18.00	25.00	18.00
	(D.18%+B.2%)	(D. 18%)	(D.18%+B.7%)	(D.18%)
Carry forward ..	2.11	2.23	2.48	0.53

It will be noted that the decline in net sale proceeds by Rs. 18.53 lakhs has been more than offset by the drop of Rs. 61.62 lakhs in expenses. The saving in expenses is mainly due to the decline in cost of cotton and fibre consumed by Rs. 93.76 lakhs and in that of silk and other yarn consumed by Rs. 16.59 lakhs. On the other hand, cost of stores and fuel consumed and repairs account for an increase of Rs. 8.50 lakhs, cost of power consumed for Rs. 1.22 lakhs, salaries, wages and allowances for Rs. 32.95 lakhs, yarn and cloth commission for Rs. 1.11 lakhs, insurance for Rs. 1.99 lakhs and interest for Rs. 2.41 lakhs, the last mentioned item of expenditure being due to larger borrowings. The provision for depreciation has been more or less maintained at the previous level, despite the substantial additions made to the gross block during the year. Provision for taxation has been raised by Rs. 14.80 lakhs. The Directors state that all taxation upto and including the Company's year ended 31st December, 1952, has been agreed with the income-tax authorities.

Out of the net profit of Rs. 25.88 lakhs, as against Rs. 0.42 lakh for the previous year, a sum of Rs. 5 lakhs has been transferred to the machinery reserve account which had received only Rs. 1 lakh in the previous year. The dividend equalisation fund which had not been provided with anything a year ago now receives Rs. 1 lakh. The dividend at 20 per cent. requires Rs. 20 lakhs, leaving Rs. 2.11 lakhs to be carried forward to the next year.

The foregoing results can be considered quite satisfactory in the light of the difficult trading conditions that prevailed during the major part of the year. Referring to these conditions, the Directors observe as follows:

"All price and distribution controls on cotton fabrics were removed during the course of the year, and the only control remaining was that on production. However, even in regard to this, there was some relaxation to the extent that, if mills wished to make fabrics which fell outside the control, Government usually issued deviation orders.

"In order to protect the handloom industry, Government brought into force the *Dhotis* Control Order in December, 1952. By this order all mills were restricted in the production of *dhotis* to 60 per cent. of their previous production. All restrictions on exports were removed, except the quantitative control on yarns and sewing threads. Cotton prices showed a marked upward tendency towards the middle of the year. Due to a shortfall in the Indian crop, foreign cottons were also marked up towards the close of the year. Despite the rise in the price of cotton, however, cloth prices remained at a low level."

The financial position of the Company is as sound as ever. The reserves and surplus, as on 31st December, 1953, amount to Rs. 157.11 lakhs, of which general reserve accounts for Rs. 23 lakhs, machinery reserve for Rs. 98 lakhs, dividend equalisation fund for Rs. 23 lakhs and employees' pension and gratuity fund Rs. 11 lakhs. The reserves and surplus represent over 157 per cent. of the paid-up capital. Provision for taxation stands at Rs. 5.53 lakhs and current liabilities at Rs. 187.44 lakhs. Of the latter, which have risen from Rs. 128.79 lakhs, loans from the Company's bankers (secured by stocks and stores) show an increase from Rs. 64.43 lakhs to Rs. 98.84 lakhs, unsecured loans from Rs. 3.85 lakhs to Rs. 9.47 lakhs, and other liabilities from Rs. 60.51 lakhs to Rs. 79.13 lakhs. The gross block of the value of Rs. 327.03 lakhs has been written down to a book value of Rs. 104.81 lakhs, the depreciation provided so far being Rs. 222.22 lakhs. There has been an addition of Rs. 37.09 lakhs to the block during the year under review, of which the value of machinery represents Rs. 36.55 lakhs. Of this, machinery worth Rs. 25.54 lakhs was erected during the year. The current assets stand at Rs. 345.27 lakhs, of which stock-in-trade alone accounts for Rs. 273.45 lakhs and stores, fuel, etc. for Rs. 54.24 lakhs. The current assets exceed the current liabilities and provision for taxation by a large margin of Rs. 152.30 lakhs.

The Rs. 100 paid-up shares of the Company are being currently quoted at Rs. 320-8 *cum-div.*, at which rate and on the basis of the latest dividend, the yield works out to 6.25 per cent. per annum, free of tax.

KIL KOTAGIRI'S RECORD RESULTS

DIVIDEND STEPPED UP

A RECORD tea crop, followed by a welcome decline in cost of production, has been responsible for the record earnings of the Kil Kotagiri Tea and Coffee Estates Company, Ltd. (Managing Agents and Secretaries: Messrs. Peirce Leslie & Co., Ltd., Kozhikode, Malabar) for the year ended 31st October, 1953. The average price realised for tea was, on the other hand, lower than in the previous year. There was also a sizable drop in the crop of coffee and the average price realised on it, but the effects of these have been more than offset by the increase in tea crop and the fall in cost of production. As a result, the trading profit for the year under review has jumped up from Rs. 3.93 lakhs for 1951-52 to Rs. 5.47 lakhs and the net profit from Rs. 2.44 lakhs to Rs. 3.26 lakhs, both constituting a record in the history of the Company. The dividend on ordinary shares has been stepped up from 30 per cent. to 40 per cent.—which is also a record—but the allocation to the reserve has been slightly reduced from Rs. 1.66 lakhs to Rs. 1 lakh.

Due to favourable weather conditions, the crop of tea harvested, which had declined to a low of 2,57,200 lbs. in 1951-52, has risen to a record of 3,70,500 lbs. in the year under review and has even exceeded the estimate of 3,50,000 lbs. The Directors had expected to produce tea at an average cost of 88.32 cents per lb. f.o.b., but the cost has exceeded this and gone up to 96.39 cents per lb. However, it is the lowest in the history of the Company and represents a decline of 40.68 cents per lb. as compared with that for the previous year. The average price realised is lower by 7.81 cents per lb.

In the case of the coffee crop, the Company's experience has not been favourable, though this was not unexpected. The crop of coffee harvested amounts to 297 cwts.; although this is some 97 cwts. more than the estimate, it falls short of the previous year's crop by 357 cwts. The decline in yield has been accompanied by a fall in price, the year's crop having been valued at Rs. 2 per point or Rs. 155.16 per cwt. as compared with Rs. 2.11 per point or Rs. 213.15 per cwt. in the previous year.

The following comparative table shows at a glance the Company's progress since 1950:

	For the year ended 31st October			
	1953	1952	1951	1950
Sale proceeds of—	Rs.	Rs.	Rs.	Rs.
Tea	7,46,742	5,53,173	6,20,223	6,25,062
Coffee	49,814	1,40,162	24,462	44,545
Stocks of tea	1,72,224	93,328	2,10,806	63,410
Tea estate expenditure	3,57,125	3,52,555	3,38,013	3,08,236
Coffee estate expenditure	64,661	61,405	42,051	51,567
Trading profit ..	5,47,242	3,92,911	4,87,599	3,74,261
Managing Agents' commission ..	25,272	21,512	28,988	21,849
Depreciation	48,338	39,383	39,214	38,435
Taxation	1,14,000	45,100	89,000	60,000
To reserve	1,00,000	1,86,292	..	4,25,000
Dividends—				
6% Preference ..	15,000	15,000	15,000	15,000
Ordinary	2,00,000 (40%)	1,50,000 (30%)	1,50,000 (30%)	55,000 (10%)
Carry forward ..	90,631	79,174	1,05,865	85,273
Tea crop (in lbs.) ..	3,70,500	2,57,200	3,44,400	2,86,000
Cost per lb. (in cents) ..	96.39	137.07	97.56	107.77
Average price realised per lb. (in cents)	209.24	217.05	216.46	206.92
Coffee crop (in cwts.) ..	297	654	174	262
Value per cwt. Rs.	155.16	213.15	178.80	169.05

The Company's earnings would have been still higher but for the setback in the yield of coffee and the fall in price thereof. The decline in coffee crop is not surprising, for a period of a progressively continuous increase in the crop cannot be expected in coffee estates. A period of high yield will usually be followed by one of lower yield. The estate expenditure on coffee has, however, advanced from Rs. 61,405 to Rs. 64,661. The provision for depreciation has been stepped up by nearly Rs. 9,000, evidently due to the additions made during the year to staff and labour quarters and other minor buildings.

The Company's dividend record is impressive. Established only in July, 1948, the Company paid a maiden dividend of 10 per cent. for 1948-49 and this was repeated in the subsequent year. The dividend was trebled, that is, to 30 per cent., for 1950-51, on a capital which had been doubled in February, 1952, by the capitalisation of part of the reserves. After maintaining this rate for 1951-52, the dividend has now been raised again to 40 per cent. for the year under review. Thus, in the course of three years, the Company has not only issued a scrip-for-scrip bonus but stepped up the dividend fourfold, and that too on the enhanced capital.

The financial position of the Company is quite satisfactory. Even after the capitalisation of a sum of Rs. 2.50 lakhs in February, 1952, the reserves and surplus stand at Rs. 6.16 lakhs, as against a paid-up capital of Rs. 7.50 lakhs. Reserve for taxation amounts to Rs. 2.44 lakhs, while current liabilities aggregate Rs. 2.78 lakhs. The gross block of the value of Rs. 12.93 lakhs has been written down to Rs. 10.79 lakhs. The current assets, amounting to Rs. 8.08 lakhs, more than adequately cover the current liabilities and taxation reserve.

The Rs. 2 paid-up ordinary shares of the Company are being quoted at Rs. 7-9 *cum-div.* On an *ex-div.* basis, the yield works out to nearly 12 per cent. per annum, free of tax.

Points From The Chair

Irregular Practices in Coastal Trade

"YOU will no doubt recall the prominent part your Company played in securing reservation of the Indian coastal trade for Indian shipping. Soon after reservation, in the general interests of all Indian lines and with a view to promoting healthy development of Indian shipping, we contributed our full share of effort in the formation of the Indian Coastal Conference and in working it wholeheartedly. However, it is to be regretted that since the latter half of 1952, we have been observing a steady growth of irregular practices on the coast, especially in the West Coast trade, designed to secure cargoes by improper means. During the second half of 1952, this problem became so serious that the Conference had specifically to consider these developments and try to rectify the situation; but these efforts were unsuccessful. Basically, there was a serious state of imbalance between the supply and demand factors in the coastal trade; and this resulted in a disparity between the tonnage capacity available, the cargoes offering and the prevailing level of freight rates. Remedial measures were considered in the direction of voluntary agreement to restrict tonnage, fixing freight rates at realistic levels and strict observance of freight rates and enforcement of agreed practices. However, in practice it was found impossible to make any headway in implementing such measures, although the Chairman of the Conference was empowered to institute enquiries and to impose penalties on the offending lines."

DHARAMSEY M. KHATAU,
Scindia Steam Navigation Co., Ltd.

Shipbuilding in U.K.

"I do not wish to sound too pessimistic a note, but common prudence calls for some reference to the uncertainties with which the shipbuilding industry is now faced. Foreign competition on an ever-increasing scale and the continued demand for higher wages are not assisting United Kingdom shipyards in obtaining the necessary work to fill their rapidly dwindling order books. Shipowners, both at home and abroad, not unnaturally buy in the most advantageous markets, and if wages cannot be maintained at a reasonable and economical level, coupled with high productivity, the future of our shipyards must remain uncertain. Rights imply responsibilities, and it would be hypocritical to suggest that output per man in our yards could not be appreciably increased. Also, in these days of payment by results, increased output means more in the wage packet with no corresponding increase in the cost of living."

J. A. MILNE,
J. Samuel White and Co., Ltd.

Future of Sisal

"The future of sisal prices depends upon world factors outside the control of producers, although they can contribute by orderly marketing organisation, and appreciable headway in this respect has been made since the war. We can form a fairly accurate short-term estimate on facts within our knowledge. At present, stocks in producers' hands are low and unsold stocks for six months ahead in very short supply. The world carry-over of sisal at the end of 1953 was just over 5 per cent. of the year's production, a figure lower than in any other commodity, while for hard fibres as a whole it was 10 per cent. We look to 1954 for a steady expansion in consumption, with a decline in world production and a satisfactory adjustment of the stock position."

E. F. HITCHCOCK,
Bird & Co. (Africa) Ltd.

Twofold Benefits of Thrift and Saving

"All who have been connected with the saving and thrift movement realise the immense benefit the practice of these habits means to the individual in giving him or her a strong, self-reliant and independent character and position which will serve them and their families immeasurably. It is also a twofold benefit to the nation, as savings have never been more necessary to it than now, and individuals of the characteristics I have outlined above, as developed by these habits, are equally necessary to it. It is, therefore, to be hoped that circumstances can be contrived that will bring about an increasing margin of income available for this purpose. The importance of this individually and nationally, cannot, I am sure, be exaggerated."

LIEUT.-COLONEL F. W. MOORE,
Provincial Building Society.

Strike by Workpeople

"The Companies Act has seen to it that the interests of the shareholders are widely and amply protected. They have the right to act and the power to investigate, while their leaders, the directors, can be subjected to serious penalties, if they fail in their duties. When shareholders make a decision by a majority vote, the world at large knows it is the expressed opinion of the majority because it has been reached within the framework of the law. When, however, we come to the affairs of the workpeople, and a strike is declared by a majority vote, are we all content and certain in our own minds that it is really the expressed opinion of the majority?"

CAPTAIN ALLAN KYLE,
Jonas Woodhead and Sons, Ltd.

Notices

THE PHALTAN SUGAR WORKS LTD. SAKHARWADI, DISTRICT SATARA NORTH

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the shareholders of the Company will be held at the Registered Office of the Company at Sakharwadi, District Satara North on Saturday, 27th February, 1954, at 3 p.m. (S.T.), when the undermentioned resolution will be proposed as a Special Resolution.

RESOLUTION

"That the Articles of Association be amended in the manner following:—

(1) Article 2. Definition of "The Indian Companies Act 1913" the portions "as applied in the Phaltan State and" and the words "British India" wherever they occur shall mean Phaltan State unless the context shows otherwise, be deleted.

(2) Add the following to the Article 30:

"No renewal fee shall be charged except when a certificate is torn through, defaced, destroyed or lost."

(3) Article 42, 1st line. For the word "befought" the word "brought" be substituted.

(4) Article 46, 2nd line. For the words [illegible] debts" be substituted.

(5) Article 48, 6th line. For the word "purchaser" the word "purchase" be substituted.

(6) Article 59, 1st line. The word "shall" be inserted between the words "share" and "be".

(7) Article 79, 5th line. For the word "adequate" the word "aliquot" be substituted.

(8) Article 101, 3rd line. For the word "or" the word "on" be substituted.

(9) Article 114. Delete words beginning with "if in the form" up to "by the letter (b)".

(10) Article 121, 3rd and 4th lines. Delete the portion "that any person . . . a Director of the Company".

(11) Article 127, 4th line. Delete words "either" and "otherwise".

5th line. Insert the word "in" between the words "either" and "addition".

7th line. Substitute word "incurred" for the word "occurred."

(12) Article 130, 6th line. After the word "but" the word "it" be inserted.

(13) Article 138, 3rd line. The word "and" be deleted.

(14) Article 146, 5th line. For the word "confirm" the word "conform" be substituted.

(15) Article 152, (16) 2nd line. After the words "Managing Agents" the word "by" be inserted.

(16) Article 156 (*a*), 6th line. For the word "convened" the word "concerned" be substituted.

(17) Article 172, 4th line. For the word "distributor" the word "distribution" be substituted.

30th line. The word "or" occurring after the word "partly" be deleted.

31st line. The word "or" be added after the word "paid".

32nd line. For the word "or" the words "and partly" be substituted.

33rd line. For the word "filled" the word "filed" be substituted.

(18) Article 179, 7th line. For the word "one" the word "are" be substituted.

(19) Article 183 (1). The words "Phaltan State" be omitted and the words "Government of Bombay" be inserted therefor.

(20) Article 185, 4th line. The word "and" occurring after the word "Company" be deleted.

(21) Article 188, 1st line. For the word "or" the word "of" be substituted.

(22) Article 196, 7th line. The word "in" be inserted after the word "him".

(23) Article 200, 3rd line. The word "as" occurring after the word "distributed" be deleted and the word "so" be substituted therefor.

(24) Article 201, 4th line para (2). The word "of" occurring after the word "case" be deleted."

By Order of the Board of Directors,
For MAFATLAL, APTE & KANTILAL LTD.,
L. V. APTE,
Managing Director,
Managing Agents.

Dated 1st February, 1954.

Notice is also given that the Transfer Books of the Company will be closed from Monday, 15th March, 1954, to Monday, 29th March, 1954, both days inclusive.

By Order of the Directors,
TATA INDUSTRIES, LIMITED,
Managing Agents,
J. D. CHOKSI,
Director.

BOMBAY, dated 22*nd February*, 1954.

A DIFFICULT YEAR FOR ANGELO BROS.

DELTA AND ORIENT JUTES MAINTAIN DIVIDEND

Angelo Bros., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Turner, Morrison & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st August, 1953.

The profit for the year after providing for depreciation, directors' fees and taxation amounted to Rs. 1,68,989 (Rs. 5,43,895) to which was added the amount transferred from provision for taxation Rs. 1,05,892 (*nil*) and the balance brought forward from previous year of Rs. 5,24,909 (Rs. 5,31,014) making a total of Rs. 7,99,790 (Rs. 10,74,909). After transferring to general reserve *nil* (Rs. 1,75,000) there remained a balance of Rs. 7,99,790 (Rs. 8,99,909). The directors disposed of this by paying a dividend of 12½ (12½) per cent. which absorbed Rs. 3,75,000 (Rs. 3,75,000), leaving a balance to be carried forward of Rs. 4,24,790 (Rs. 5,24,909).

The year under review has been a very difficult one for the Company and for the shellac industry as a whole. Trading conditions were very unfavourable throughout the period because the cost of raw material remained at an abnormally high level owing to poor crops, whereas world prices for shellac were low in comparison. Competition was severe and the margin of profit very small. Taking into account the difficult conditions prevailing however, the result of the year's working is considered satisfactory. Although sales were somewhat less than the previous year, the Company's share of total shellac exports increased.

T.N. was quoted at Rs. 70 at the commencement of the season and fluctuated around this level until June when there was a revival of activity which carried the market to Rs. 104 by the end of the Company's financial year. The steadier tone has been maintained with rather better demand from foreign countries and the present level of prices is more economic, if raw material could be obtained at a reasonable parity. As far as can be seen at the time of writing this report, the difficulties of the situation are likely to remain until the next main crop is marketed in March-April, 1954.

The factory plant and buildings were maintained in good condition. No major capital expenditure was incurred during the year in view of the uncertain situation, but improvements were made in the handling of shellac by installing conveyors in two buildings.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	30,00,000	Block ...	11,41,871
Reserves ...	38,21,355	Stock ...	14,41,936
Provision for taxation ...	4,26,000	Stores ...	3,68,780
Liabilities ...	8,65,583	Debts, deposits and advances ...	32,30,095
Profit and loss account ...	4,24,790	Investments ...	9,76,126
		Cash ...	13,78,900
	Rs. 85,37,728		Rs. 85,37,728

Delta Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th November, 1953.

After providing Rs. 1,75,000 (Rs. 2,00,000) for taxation, there is a balance of Rs. 3,57,157 (Rs. 3,43,326) at the credit of profit and loss account from which the directors recommend payment as follows:—

Dividends on preference shares at Rs. 2-8 (Rs. 2-8) per share Rs. 12,500 (Rs. 12,500) and on ordinary shares at Rs. 10 (Rs. 10) per share Rs. 2,80,000 (Rs. 2,80,000) leaving Rs. 64,657 (Rs. 50,826) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills' Association, the mills worked 42½ hours per week with 12½ per cent. of the total looms sealed.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	33,00,000	Block ...	27,94,213
Reserves ...	44,74,179	Stocks ...	28,38,027

Liabilities ...	8,04,222	Debts, deposits and advances	4,82,829
Profit and loss account	64,657	Investments	15,13,569
		Cash ...	16,72,019
	Rs. 1,02,76,916		Rs. 1,02,76,916

Orient Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th November, 1953.

After providing Rs. 55,000 (*nil*) for taxation there is a balance of Rs. 2,82,927 (Rs. 2,30,816) at the credit of profit and loss account from which the directors recommend payment of a dividend on ordinary shares at Rs. 6 (Rs. 6) per share, absorbing Rs. 1,49,460 (Rs. 1,49,460) and leaving Rs. 1,33,467 (Rs. 81,356) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills' Association, the mills worked 42½ hours per week with 12½ per cent. of the total looms sealed.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	24,91,000	Block ...	21,96,151
Reserves ...	26,56,049	Stocks ...	20,81,722
Provision for taxation ...	1,96,170	Stores ...	10,68,110
Liabilities ...	5,79,587	Debts, deposits and advances ...	4,59,386
Profit and loss account ...	1,33,467	Investments	53,243
		Cash ...	1,97,661
	Rs. 60,56,273		Rs. 60,56,273

Kumergode Estates Ltd.

The directors of the above Company (Managing Agents and Secretaries: Messrs. Peirce, Leslie and Co., Ltd., Kozhikode, Malabar) submitted the audited accounts of the Company for the year ended 31st October, 1953.

After providing for depreciation and all charges, and after writing off loss prior to incorporation, the accounts showed a profit of Rs. 22,943 (Rs. 42,769) to which was added the balance brought forward from the previous year of Rs. 72,138 (Rs. 29,369) making a total of Rs. 95,081 (Rs. 72,138). The directors carried forward this amount.

Additions amounting to Rs. 8,030 (Rs. 7,999) represent cost of constructing one concrete water dam, a five-room line for labourers, and other minor works. The amount of Rs. 1,169 (Rs. 1,793) spent on additions during the year represents cost of one bungalow, lighting plant and one paddy thresher.

Additions amounting to Rs. 28,099 (Rs. 24,133) include expenditure on replanting 34.26 acres arabica and upkeep charges on earlier immature replantings. The 1930-51 replanted area of 10.70 acres arabica coffee has been included under bearing area as from the commencement of the current season.

A total crop of 1,987-0-6 cwts. of coffee was delivered in full to the Coffee Board and has been valued at Rs. 2-4 per point or Rs. 178-3 per cwt. of arabica and Rs. 125-5 per cwt. of robusta. Payment received to date amounts to Rs. 1-15 per point. The 1953-54 crop is estimated at 84 tons and present indications show that this might be slightly exceeded.

A total crop of 269½ lbs. of cardamoms was harvested, which were sold and realised Rs. 1,190-4-6. The estimate for 1953-54 is 85 lbs.

The visiting agent reports that the estate has been well maintained. The policy of replanting poor areas and of consolidating and exploiting the good, by generous treatment and reduction of shade, has paid dividends in the form of crops which tend to increase despite the reduction of cropping area consequent upon uprooting and replanting. There now appears to be another good crop on the trees, as well as plenty of wood forming for 1954-55.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,00,000	Block ...	5,19,363
Debentures ...	3,00,000	Stock-in-trade	1,03,035
Reserves ...	3,447	Stores and spare parts	17,585
Liabilities ...	1,11,523	Other assets	32,085
Profit and loss account ...	95,081	Advances, etc.	20,526
		Investments	250
		Cash ...	17,207
	Rs. 7,10,051		Rs. 7,10,051

Bharat Collieries Ltd.

The directors of the above Company (Managing Agents: Messrs. Sahu Jain Ltd., Dalmianagar) submitted the audited accounts of the Company for the year ended 30th June, 1953.

The revenue profit for the year ended 30th June, 1953 amounted to Rs. 14,70,526 (Rs. 14,61,888). After providing depreciation of Rs. 6,41,372 (Rs. 6,60,569), there remained a profit of Rs. 8,29,154 (Rs. 8,01,319) to which was added Rs. 23,814 (Rs. 19,183) being the last year's balance, making a total of Rs. 8,52,968 (Rs. 8,20,501) for which the directors disposed of as follows:—

Payment of dividend on or after 16th March, 1954, on 30,000 cumulative preference shares at 5½ (5½ per cent.) less income-tax for the year ended 30th June, 1953 Rs. 1,21,687 (Rs. 1,21,687), on 4,00,000 ordinary shares at As. 10 (As. 10) per share, i.e., 6¼ (6¼) per cent. for the year ended 30th June, 1953 Rs. 2,50,000 (Rs. 2,50,000), provision for taxation Rs. 3,75,000 (Rs. 3,75,000), transfer to general reserve Rs. 1,00,000 (Rs. 50,000) and carried forward the balance of Rs. 6,280 (Rs. 23,814).

The Company have commenced deep sinking of a pair of pits at Chapui Khas Colliery to win coal from the lower seams, one of which contains the well-known Dishergarh Seam at about 1,150 feet from surface.

The directors are considering the installation of a modern coal washery at one of the collieries producing coking coal. Owing to gradual exhaustion of high grade coking coal in the country, it is essential to improve the quality of lower grade coal by beneficiation and the installation of a washery will go a long way towards meeting the demand for washed coal. The prospects of the Company continue to be favourable.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	69,99,998	Block ...	63,71,036
Debentures ...	30,00,000	Stock-in-trade	13,87,818

Budge-Budge Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st October, 1953.

After providing Rs. 67,000 (Rs. 15,000) for taxation and transferring Rs. 50,000 (*nil*) from dividend equalisation reserve there is a balance of Rs. 1,76,498 (Rs. 2,91,098) at the credit of profit and loss account from which the directors recommend payment as follows:

Dividend on preference shares at Rs. 3-8 (Rs. 3-8) per share Rs. 31,500 (Rs. 31,500), and on ordinary shares at Rs. 4 (Rs. 6-8) per share Rs. 1,44,000 (Rs. 2,34,000) leaving Rs. 998 (Rs. 25,598) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills' Association, the Mills worked 42½ hours per week with 12½ per cent. of the total looms sealed.

Accounts in brief are as under:—

An exhibition of Swiss industry

17 groups distributed in 21 halls

Information, booklets and catalogues obtainable directly from the Fair or from Swiss Legations, Consulates and Chambers of Commerce abroad

Swiss Industries Fair
Basel 8th-18th May 1954

The watchmaking section has been considerably increased
A watchmaking display with a world-wide reputation

National Rolling and Steel Ropes Ltd.

The directors of the Company (Managing Agents: Associated Industrial Development Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 30th June, 1953.

After providing Rs. 2,87,838 (Rs. 97,382) for depreciation Rs. 7,601 (Rs. 40,000) as debenture interest and Rs. 4,08,102 (Rs. 1,24,339) as other interest, the net profit for the year amounted to Rs. 18,65,549 (Rs. 5,23,783). To this was added Rs. 24,520 (Rs. 1,25,697) being carry forward from last year making a total of Rs. 18,90,078 (Rs. 6,49,401), out of which a sum of Rs. 9,68,979 (Rs. 2,40,000) has been set apart for taxation, Rs. 5,00,000 (Rs. 3,00,000) as general reserve, Rs. 2,50,000 (*nil*) as preference shares redemption reserve and Rs. 50,000 (Rs. 5,000) as investment depreciation reserve, thus leaving a balance of Rs. 1,21,099 (Rs. 1,04,481) which was disposed of as under:—

In payment of dividend on cumulative preference shares at 6 per cent. per annum free of income-tax Rs. 30,000 (Rs. 17,452), in payment of dividend on ordinary shares at As. 9-6 (As. 10) per share, free of income-tax Rs. 59,375 (Rs. 62,500) and balance to be carried forward Rs. 31,724 (Rs. 24,529).

In view of the fact that one of the main purchasers of electrolytic copper rods from this Company have installed their own copper rod mill, it was considered uneconomical to run the copper rolling business by this Company for a rather comparatively small offtake and accordingly the copper rolling was stopped.

The Company's activities have been diverted to the rolling of steel and every assistance has been received by the Company from the Iron and Steel Controller and the Ministry of Commerce and Industry, Government of India, in the project of manufacture of steel wire ropes which are now produced by this Company for the first time in India.

The present rod mill plant requires modifications some additions and alterations to make it suitable for rolling high quality rods. Orders for some of the mechanical equipments from abroad have already been placed.

Under the circumstances, the production in the current year is bound to be adversely affected which would mean that the trading results would be equally affected.

The directors were not in a position to recommend any higher dividend for the accounts under review having regard to the fact that the Company has received a loan from the Industrial Finance Corporation of India and it has been provided as a condition of the loan that the Company will not be entitled to declare a higher dividend than 6 per cent. till their loan is squared.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,00,000	Block ...	31,74,413
Reserves ...	29,00,000	Stock ...	16,79,631
Provision for taxation ...	11,40,000	Stores ...	3,14,064
Liabilities ...	45,47,762	Investments	2,44,546
Profit and loss account ...	1,21,099	Debts, deposits and advances ...	47,73,090
		Cash ...	23,117
	Rs. 1,02,08,861		Rs. 1,02,08,861

Benares Electric Light and Power Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th June, 1953.

In order to assist in providing funds to meet the cost of additional mains and services, to enable the Undertaking to meet the obligations under its licence, a sum of Rs. 55,000 has been set aside for development.

Normal progress is being maintained as will be seen from the following schedule for the past three years.

Half-year ended	*Units sold*	*Revenue* Rs.
31st December, 1950 ...	7,881,723	11,40,343
30th June, 1951	8,243,843	11,12,177
31st December, 1951 ...	8,978,556	13,71,950
30th June, 1952	9,544,518	12,56,950
31st December, 1952 ...	9,926,818	14,50,157
30th June, 1953	10,983,183	14,38,649

After complying with the provisions of the Electricity (Supply) Act, 1948, and making adequate provision for liabilities and setting aside Rs. 55,000 (Rs. 15,000) to development and extensions account there remains a balance of Rs. 1,44,279 (Rs. 1,34,777) including Rs. 33,248 (Rs. 31,100) brought forward from the previous half-year available for distribution, and this the directors recommend be disposed of as follows:—

Payment of a dividend at the rate of 10 (10) per cent. per annum free of income-tax Rs. 84,995 (Rs. 84,995) an additional As. 2 per share Rs. 21,249 (Rs. 21,249) and carrying forward to next half-year Rs. 38,035 (Rs. 28,534).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	16,99,900	Block ...	47,36,252
Reserves ...	14,57,454	Stocks, stores, etc. ...	9,92,236
Debentures ...	12,31,349	Debts, deposits and advances ...	8,56 839
Provision for taxation ...	7,68,300	Investments	1,33,460
Liabilities ...	23,43,055	Cash ...	8,71,643
Profit and loss account ...	1,44,279	Other assets	51,906
	Rs. 76,42.336		Rs. 76,42,336

N.B.—Figures within brackets relate to the corresponding period of the previous year.

COMPANY MEETINGS AND DIVIDENDS

KOHINOOR MILLS CO., LTD. Annual General Meeting, Bombay, 8th March, 1954. Dividend: Rs. 20 per share, for the year (including interim dividend Rs. 2 and Rs. 2 bonus) payable on 9th March, 1954. Transfer books remain closed from 8th February to 8th March, 1954, both days inclusive.

INDIAN IRON AND STEEL CO., LTD. Annual General Meeting, Calcutta, 10th March, 1954. Dividend: Re. 1 per share. Transfer books will remain closed from 4th to 10th March, 1954, both days inclusive.

CHAMPDANY JUTE CO., LTD. Half-yearly General Meeting, Calcutta, 11th March, 1954. Dividend: Rs. 3 per share. Transfer books remain closed from 24th February to 11th March, 1954, both days inclusive.

BENGAL PAPER MILL CO., LTD. Half-yearly General Meeting, Calcutta, 12th March, 1954. Transfer books will remain closed from 4th to 12th March, 1954, both days inclusive.

ORIENT JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 12th March, 1954. Dividend: Rs. 6 per share. Transfer books remain closed from 27th February to 12th March, 1954, both days inclusive.

DELTA JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 12th March, 1954. Dividend: Rs. 10 per share. Transfer books remain closed from 27th February to 12th March, 1954, both days inclusive.

ALKALI AND CHEMICAL CORPORATION OF INDIA LTD. Annual General Meeting, Calcutta, 12th March, 1954. Transfer books will remain closed from 1st February to 12th March, 1954, both days inclusive.

ASSOCIATED [illegible] Annual General Meeting, 13th March, 1954. Dividend: Rs. 7 per share. Transfer books will remain closed from 7th [illegible]

IND[illegible] ral Meeting, Calcutta, 16th March, 1954. Dividend: Rs. 6 per share. Transfer books will remain closed from 2nd to 16th March, 1954, both days inclusive.

EAST INDIA DISTILLERIES AND SUGAR FACTORIES LTD. Annual General Meeting, 26th March, 1954. Dividend of 10 per cent "A" shares and 20 per cent. on "B" shares free of Indian income-tax, for the year ended 30th September, 1954.

PERIA KARAMALAI TEA AND PRODUCE CO., LTD. Interim dividend of As. 4-4/5 per share, for season 1953-54. Transfer books will remain closed from 5th to 15th March, 1954, both days inclusive.

CHEVIOT MILLS CO., LTD. Dividend of Rs. 6 per share, for the half-year ended 30th November, 1953.

COMPANY REGISTRATIONS

INDIAN DYESTUFF INDUSTRIES LTD. (First Director: Shri Anandlal Hiralal.) Business: Manufacturers, Importers and Dealers in Chemical Products of all nature, Dyemakers, etc. Authorised capital: Rs. 30,00,000. Private company. Address: 28, Apollo Street, Bombay 1.

K. T. DONGRE & CO., LTD. (First Director: Mr. R. V. Dongre.) Business: Chemists, Druggists and Dealers in Chemicals, Pharmaceuticals, etc. Authorised capital: Rs. 10,00,000. Private company. Address: 384, Lamington Road, Bombay.

NATIONAL HELICOPTERS LTD. (First Director: Mr. K. S. Cambata.) Business: Establish, Maintain and Operate Air Services, Airlines and other Lines of Conveyances, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Cambata Building, 42, Queen's Road, Churchgate Reclamation, Bombay.

A-ONE COMMERCIAL TRADERS LTD. (First Director: Mr. K. H. Surana (Bima Kesari.) Business: Manufacturers and Dealers in Agricultural Manures, Chemicals, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Advani Chambers, S. P. Mehta Road, Fort, Bombay.

ASHOKA CYCLES LTD. (First Director: Mr. Shantilal Sankalchand Parikh.) Authorised capital Rs. 5,00,000. Public. Business: Manufacture and assembly of bicycles, motor cycles, etc. Address: Khadia Char Rasta, Ahmedabad.

(*Concluded from page 352*)

held in Bombay, Mr. Sankalchand G. Shah, for instance, observed that, in the past, there had always been a certain exportable surplus in yarn, which continued to be exported and some overseas markets were regularly supplied with Indian yarn. Urging the Government to adopt a "clear-cut" policy with regard to exports of cotton yarn, Mr. Shah observed:

"The Government should maintain a regular and uniform policy irrespective of the quantity involved, as this alone would create confidence in the export markets regarding the availability and continuity of the supply of our cotton yarns. I am afraid, if overseas buyers do not get our cotton yarns regularly, even in limited quantities, our valuable export markets for cotton yarns would be lost in course of time and we would be faced with serious difficulties to find outlets for our surplus cotton yarns."

In the absence of accurate details regarding the supply position in respect of cotton yarn in the country at present, it is difficult categorically to say whether or not the Government should allow exports of this commodity. So far as the Government's policy is concerned, it is stated that cotton yarn cannot be treated as an item of export, although small quantities will be permitted for export now and again to meet temporary situations of overstocking in the mills.

WOOL AND WOOLLEN GOODS

Messrs. John Worral, Ltd., Oldham, England, have [illegible] annual publica[illegible] introduction. It is a comprehensive and authoritative record of the developments in the wool economy of India and Pakistan in recent years. Besides the customary review of the different sections of the woollen industry, namely, the wool, worsted, carpet and hosiery sections, the publication covers raw wool production, classification, marketing, and import and export.

There are several feature articles on wool and woollen industry written by experts in the line. Mention may be made, for instance, of the interesting articles "Carding Wool for Worsted Yarns" by Dr. P. P. Townend, "Wool Combing" and "Manufacture of Worsted Yarns" by Mr. H. Beevers, "Wool Dyeing" by Mr. R. J. Hannay, "Tentering" by Mr. D. Hill, and "Knitting Yesterday and Today" by Mr. James Norbury. The utility of the publication has been enhanced by bringing up-to-date the statistical material on various aspects of the wool and woollen industries in India and Pakistan, as also the directory of individual firms, factories and associations connected with those industries. Also given at the end is a revised illustrated list of advertisers' trade marks and designs and alphabetical lists of trade and brand names.

TEXTILE RESEARCH INSTITUTE AT COIMBATORE

A textile research institute will be established at Coimbatore, if the scheme drawn up by the South Indian mills is accepted by the Cotton Textile Fund Committee. This institute is in addition to the one proposed to be set up in Bombay under the auspices of the Millowners' Association. It was as early as in May, 1950, it will be recalled, that the Committee decided to go ahead with its original decision to have two textile research institutes—one at Bombay and the other at Coimbatore—provided the textile mills in these two regions were prepared to meet a part of the capital and recurring expenditure.

The proposed textile research institute in Coimbatore, it is reported, will be modelled on the lines of the Shirley Institute of Manchester. The aggregate capital outlay of the project is estimated at Rs. 36 lakhs. The South Indian mills have already constituted Rs. 7 lakhs. After Rs. 3 lakhs more are collected, the Cotton Textile Fund Committee will make available a sum of Rs. 10 lakhs. The recurring expenditure of the Institute is expected to be about Rs. 4 lakhs, to be shared equally by the mills and the Fund. The proposed institute will concentrate its attention on research in spinning, which is only as it should be, in view of the fact that the major part of the cotton mill industry in South India consists of spinning units only.

Imperial Chemical Industries Ltd. has concluded a licence agreement with Algemene Kunstzijde Unie N.V., Velperweg 76, Arnhem, the Dutch manufacturers of rayon and nylon, under which the latter company will have the right to manufacture the new versatile synthetic fibre "Terylene" in the Netherlands and Belgium. I.C.I. is already building a big factory at Wilton in North Yorkshire (U.K.) to produce "Terylene." This fibre will also be produced in France, Italy and Western Germany, as also in Canada where Imperial Chemical Industries of Canada Ltd. is building its own plant for the production of "Terylene" at a cost of more than $20,000,000.

QUESTION HOUR IN PARLIAMENT

Engines Manufacture

A PROPOSAL for the manufacture of engines and boilers at the Hindustan Shipyard is under the consideration of the Government.

—Minister for Production

Air-India International

Air-India International is contemplating an increase in the frequency of the air service after it gets the new types of aircraft for which orders have been placed. There has been an overall increase in the traffic carried by the Air-India International Corporation during January-November, 1953, as compared with the corresponding period of 1952. Passenger traffic has increased by 7.66 per cent. and cargo and mail traffic by 6.87 per cent. The increase in the overall traffic is 7.4 per cent. Air-India International is not running at a loss.

• • • •

Purchase of New Aircraft

The Indian Airlines Corporation has under consideration the question of purchasing a few new aircraft for operation on the trunk routes. A demonstration of "Convair" has been arranged by the manufacturers on their own initiative in Delhi in the presence of officers of the Directorate-General of Civil Aviation and the Indian Airlines Corporation. A committee of experts is at present studying various economies in operation as between the British "Viscount" and the American "Convair" and will soon submit its views to the Government. The Government will then take a decision as to the type of aircraft to be purchased.

• • • •

Compulsory Insurance

The Government is considering the question of introducing a scheme of compulsory insurance for passengers travelling by Indian Airlines and Air-India International. Facilities are available at present for passengers to get themselves insured, covering the risk of air travel. After detailing the facilities provided in each line, the Director-General of Civil Aviation has leased out insurance booths to certain insurance companies at Delhi and Madras airports for providing insurance facilities for air passengers. The question of providing similar booths at other import aerodromes, especially Calcutta and Bombay airports, is also under consideration.

—Deputy Minister for Communications

National Income

The *per capita* national income in the country was Rs. 246.9 (revised) in 1948-49, Rs. 253.9 for 1949-50 and Rs. 265.2 for the subsequent year. The figure for 1948-49 was revised for technical reasons, as more up-to-date data were later available. So far as the aspect of the question relating to increase in national income is concerned, I may state that there has been an improvement in the national income, but it is probably true that there has not been an increase in real income.

• • • •

Dollar Debt

During the five years ending 1953-54, a sum of $243,954,170 has been added to the dollar debt of India, while $888,024 has been repaid. No sinking fund has been established for the repayment of the various loans. The major part of the debt is $196,164,486 by way of the wheat loan.

—Minister for Finance

Quilon Rail Link

Work on the Ernakulam-Kottayam section of the Quilon rail link has been taken in hand before the other sections and approximately 80 per cent. of the land acquisition, 60 per cent. of the earthwork in formation and 30 per cent. of bridge work have already been completed on the section. On the other sections, land acquisition is still in progress. Thirty-seven bridges have been completed.

• • • •

New Railway Lines in Andhra

No new lines are at present proposed to be opened in the Andhra State during the first Five-year Plan period, but the Renigunta-Gudur line is being converted into a broad-gauge section.

• • • •

Shipping Conferences

The Government of India is aware that Indian shipping companies have been refused admission to some of the shipping Conferences governing the intermediate trades in the India-Pakistan-U.K.-Continental trade sectors. Some of the U.K. shipping companies are members of these Conferences. The matter is, however, one for the Indian shipping companies themselves to settle direct with the Conference Lines concerned, and it is expected that the Indian Lines would make further sustained efforts at a commercial level to secure admission to the Conference in question.

• • • •

Loans to Shipping Companies

The question of liberalisation of the terms of loans to shipowners is under consideration of the Government, but, meanwhile, on an *ad hoc* basis, the Government has started granting a higher percentage of the cost of ships as loans and allowing a longer period of repayment than before. There is no proposal made by shipowners for acquisition of any tankers, but the matter is under the consideration of Government.

• • • •

Calcutta Port Development

The estimated cost of the Calcutta port development programme is Rs. 10.61 crores. So far, estimates amounting to Rs. 6.46 crores have been sanctioned. An expenditure of Rs. 1.07 crores is likely to be incurred in the current year and of Rs. 4.58 crores during 1954-55.

—Deputy Minister for Railways

New D.V.C. Board

The new Board for the Damodar Valley Corporation is expected to be constituted on 5th April, 1954. The life of the present Board will expire on 4th April. The Rao Committee's report on the working of the D.V.C. would be published shortly. Before reconstituting the D.V.C. Board, the Government would take a decision on the recommendations of the Committee.

• • • •

Andhra Irrigation Works

A sum of Rs. 5 crores is allotted by the Planning Commission for a programme of permanent improvements in scarcity areas in Andhra State. The Andhra Government has proposed 28 irrigation schemes for consideration by the Planning Commission. Of these, in consultation with the representatives of the Andhra Government, 17 schemes have been selected and tentatively approved for execution during 1954-55 and 1955-56.

—Deputy Minister for Planning, Irrigation and Power

Wage Boards

Wage Boards for fixing wages in important industries, as recommended by the Planning Commission, have not been set up, but advisory committees, sub-committees, advisory boards, etc., have been set up by various appropriate Governments under the Minimum Wages Act to assist in the fixation and revision of minimum wages. In fact, the Planning Commission's recommendation was based on the Fair Wages Committee's report. These advisory committees and boards are, in fact, functioning as wage boards. A Fair Wages Bill was introduced in Parliament and the Government is considering whether it should be introduced again. The question of implementing the provisions of the Minimum Wages Act in a particular industry was considered at the tripartite conference held recently at Mysore, and the conference expressed certain views on the matter, which would be considered by the Central Advisory Board meeting in New Delhi shortly.

• • • •

Training Within Industry

The Government has formulated a "Training Within Industry" scheme. The services of two foreign experts have been requisitioned for the purpose and one of them has already been in the country for the last six months. It is proposed eventually to establish a National "T.W.I." Institute in India and officers to man the Institute are proposed to be trained under the foreign experts. It will cover all categories of workers and training will be given within the working hours of the workers.

—Minister for Labour

Food Position in 1954

The food position in 1954 is likely to be much more favourable than in the last several years. The *kharif* crop of 1953-54 is good and there is promise of a good winter crop which will be harvested in the next two or three months. In view of the satisfactory supply position, coarse grains have been completely decontrolled since 1st January, 1954, except that movement from Saurashtra, Madhya Bharat and the eleven districts of Banaras food region of U.P. which are considered to be deficit in coarse grains, has not been permitted. Wheat has also been decontrolled, though its inter-State movement on trade account is still not permitted. There is ample stock of wheat in the Central reserve and arrangements are being made to sell this wheat freely to consumers and traders at Rs. 15-8 per maund wholesale without any quantitative restriction. As regards rice, it is expected that there will be sufficient internal surplus to meet the requirements of deficit States. Bombay will be allotted 175,000 tons of rice this year, Madras 150,000 tons, West Bengal 200,000 tons, Jammu and Kashmir 50,000 tons and Travancore-Cochin 375,000 tons.

—Deputy Minister for Food

Indo-Burma Rice Deal

The Government of India is negotiating to buy 600,000 tons of rice from Burma to build up a reserve. Negotiations started last year when India wanted to buy Burmese rice at £40 a ton, while Burma wanted £60 per ton. Therefore, no deal could be got through. Talks were resumed some time last month and they have almost concluded an agreement for the purchase of 600,000 tons of rice.

—Minister for Food and Agriculture

(Concluded from next column)

since Independence. Among the industries dealt with in detail are cotton textiles, plantations, radio manufacturing, plastics, cement and soap. Shipbuilding, industrial finance, motor transport, import and export policy, and full employment form the subject-matter of separate articles. In one of the special articles, a writer has analysed the trend of profits in industries based on the financial statistics relating to 80 companies covering coal, engineering, electricity, cotton, jute and other industries. In another article, Dr. J. D. Sundaram has sought to emphasise the beneficial role which the private sector can successfully play in the Indian economy, provided the powers-that-be adopt rational policies.

NEW PUBLICATIONS

Problems of Indian Economics. By P. C. Jain. Chaitanya Publishing House, 10-B, Beli Road, Allahabad. Price: Rs. 10-8.

THE book is a useful addition to the literature on the economic history of India. For, unlike several other books which are purely of a descriptive nature, the publication under review gives not only a descriptive but also a critical account of the Indian economic problems. By breaking away from the traditional way of writing books, Mr. P. C. Jain, the author, has certainly avoided the common mistake of being lost in a wealth of details. Indeed, the author has ably fulfilled the object of focussing the attention of readers on current problems of Indian economics.

Although the author discusses each individual topic in a separate chapter he has arranged the matter in such a way as to give a connected picture. The first ten chapters deal with the various issues pertaining to agriculture and co-operation. Special mention must be made of the interesting chapter on agricultural planning. Industry and labour constitute the subject-matters of the subsequent 14 chapters. Other chapters deal with trade, tariffs and transport, currency, banking and finance, public finance and planning. The publication under review will be useful to students of economics, in particular, and to the public interested in current economic problems, in general.

Directory of Chambers of Commerce and Associations. Compiled by the Indian Merchants' Chamber, Churchgate, Fort, Bombay. Price: Rs. 2.

The Indian Merchants' Chamber, Bombay, has served the business community well by publishing this Directory. Neatly printed, attractively got up and well bound into a handy size of 280 pages, the publication gives the names and addresses of chambers of commerce, industrial and commercial associations in India and in foreign countries. A list of Indian chambers set up abroad is also included. The Directory undoubtedly supplies a missing link between trade and industry in this country with those overseas. It opens up a new vista for the exchange of useful, valuable commercial information between India and other countries. Through the addresses made available by this Directory to the business community, enterprising exporters in India can now reach their customers easily for developing and establishing valuable contacts to expand Indian trade abroad. The utility of the Directory has been further enhanced by providing information concerning Indian and foreign missions, consulates and trade commissions. We have no hesitation in saying that, by reason of its utility, it will not be long before the Chamber comes out with the second and enlarged edition of the Directory.

A Simple Guide to Estate Duty. By Babu Lal Goyal and Nemi Chand Goyal. Published by Ram Prasad and Sons, Agra. Price: Rs. 5.

To those who need an elementary, but at the same time, a comprehensive, introduction to the Estates Duty Act, adopted by the Indian Parliament, last year, it is safe to recommend *A simple Guide to Estate Duty*. The authors, Mr. B. L. Goyal and Mr. N. C. Goyal, have been at some pains to explain the main features of the Act, in language which ought to appeal to the layman. The main chapters of the book deal with the scope and rates of estate duty, assessment and valuation of property and procedural matters connected with assessment and collecion of duty. The text of the Act is given in the appendix. A notable feature of the book is the large number of worked examples which will serve to show how property is assessed, the exemptions are presided and the duty is calculated. An additional feature is the Estate Duty Reckoner, which gives at a glance the duty that will become due to Government on properties (both joint Hindu family property and other property) ranging in value from Rs. 50,000 to Rs. 20 lakhs.

Free Press Journal Industries Review. Republic Day, 1954. Acting Editor: M. Sivaram. 21, Dalal Street, Fort, Bombay. Price: As. 4.

For a price of just As. 4, the *Free Press Journal Industries Review* provides the reader a variety of food for thought on the economic problems facing the country. The *Review* has sought to assess the progress of Indian industries

(Continued in previous column)

STRINGENCY IN MONEY EASES A LITTLE

(From Our Own Correspondent)

BOMBAY, 24th *February*

The extremely difficult conditions witnessed in the short-term money market during the past several weeks eased a little in the week under review. No further perceptible expansion in the demand for funds was reported; on the contrary, there was a small inflow of funds. The supply, however, was too meagre to bring down the interest rates to any appreciable extent. The inter-bank call money among the Exchange banks and big Indian banks, which had been unavailable even at 3 per cent. throughout the day in the previous two weeks, was still done at 3 per cent. in the morning hours, while after clearing hours there were a few lenders at 2½ per cent. The corresponding rate among the smaller Indian banks was unchanged at 3 per cent.

Borrowers did not find it so hard to get their requirements fulfilled as in the previous weeks, because conditions in Calcutta were easier, due to maturity of tea bills, and borrowers in Bombay could get funds from there, albeit in a small measure. Exchange banks were not borrowers, as their books were well balanced. Even when they needed funds, they found it cheaper to get them from their foreign offices than to pay 3 per cent. here. Some of the Indian banks were able to repay a part of their borrowings from the Reserve Bank and the Imperial Bank.

House money at call was, however, on offer at no less than 3 per cent. Short-term deposits were taken up at 3 per cent. for one to six months and at 2½ to 2¾ per cent. for longer periods.

The Government of India Treasury Bill rate, on the other hand, hardened further from Rs. 2-9-11 per cent. to Rs. 2-10-6 per cent. per annum, the upward trend thus being kept up for the third week in succession. The amount offered was also higher at Rs. 127.5 lakhs, as against Rs. 108.5 lakhs, in response to the invitation for Rs. 100 lakhs. Tenders for a like sum have been invited for next week also.

After three weeks of successive rise, notes in circulation have contracted by Rs. 5.66 crores. Disclosing this, the Reserve Bank's statement for the week ended 19th February, 1954 records an increase of Rs. 6.11 crores in notes held in the Banking Department. The net increase of Rs. 45 lakhs in total notes issued is covered by a similar rise in rupee coin. A decline of Rs. 4.31 crores is noted in the Central Government deposits, a part of which may be attributed to the payment of interest on loans which fell due during the week. Deposits of other Governments and banks have risen by Rs. 4.79 crores and Rs. 70.58 lakhs, respectively, while those of others have declined by Rs. 32.90 lakhs. Cash balances show an increase of Rs. 6.15 crores and balances held abroad of Rs. 2.56 crores. Loans and advances to Government have gone down by Rs. 72 lakhs and other loans and advances by Rs. 3.18 crores. The total amount of advances availed of by Scheduled banks against usance bills from the beginning of the current year is Rs. 16.19 crores, of which borrowings during the week amounted to Rs. 96 lakhs. The outstandings of such loans at the close of the week, however, show a decline of Rs. 2.60 crores.

The consolidated statement of position of the Scheduled banks for the week ended 12th February, 1954, as compared with that for the previous week, discloses a decline of Rs. 3.34 crores in demand deposits and an increase of Rs. 97.37 lakhs in time deposits. Inter-bank borrowings have risen by Rs. 43.20 lakhs. Borrowings from the Reserve Bank are higher by Rs. 5.62 crores and those from the Imperial Bank by Rs. 13 lakhs. Advances have gone up by Rs. 2.53 crores and bills purchased and discounted by Rs. 1.45 crores. The total advances at Rs. 515 crores are higher than those in the corresponding week of 1953 by over Rs. 14 crores and fall short of the peak touched in the previous busy season by only Rs. 25 crores. Investments are lower by Rs. 1.59 crores, while cash on hand and balances with the Reserve Bank are together higher by Rs. 2.81 crores. Balances with other banks and money at call and short notice are better by Rs. 25 lakhs.

No noteworthy change either in prices or in volume of business was witnessed in the Gilt-edged market during the week under review. Enquiries were small and selective, and fractional rises in prices were recorded in those securities which were in demand. The persistent stringency in the money market and the proximity of the Budget kept away institutional investors. 3 per cent. 1957 was unchanged at Rs. 98-7. 3 per cent. 1958, which was listed *ex-voucher* last week at Rs. 98-1, held its ground. 3 per cent. 1959-61 experienced some enquiries, after it was listed *ex-voucher* at Rs. 96-1 last week, and rose by an anna to Rs. 96-2. 3 per cent. 1963-65 and 3 per cent. 1964 were unchanged at Rs. 92-8. 3 per cent. 1965-68 was maintained at Rs. 90-4, as also 3 per cent. 1970-75 at Rs. 86-8. though some business was reported in the latter. 3 per cent. 1986 Conversion Loan was put up by As. 2 to Rs. 82-10 on the emergence of buyers. 3½ per cent. 1961 N.P. Bond had some business at Rs. 98-14. 4 per cent. 1960-70 changed hands As. 2 better at Rs. 102. 4½ per cent. 1955-60 was on offer and dropped As. 7 to close at Rs. 102-6.

LINSEED DECLINES

(Messrs. A. Bradley & Co.)

CALCUTTA, 22nd *February*

A somewhat quieter tendency has developed in the market towards the close and prices have registered a small decline. Trading has been limited, despite keen enquiries from crushers, and ready supplies are still scarce, owing to transport restrictions; there has been very little interest both from buyers and sellers for forward delivery. The oil market has been generally inactive with buyers showing little interest, except for a small local demand for ready goods. The latest quotations is as follows:—Ready Rs. 21-8 per maund.

BULLION IRREGULAR

(From Our Own Correspondent)

BOMBAY, 24th *February*

The upward surge in bullion noted in the previous week abated during the week under review and a narrowly irregular movement in prices developed in both the metals. On balance, values were a shade lower, but the undertone at the close was steady.

In the earlier part of the week, the market turned a little easy, the sentiment having been adversely affected by the heavy arrivals in gold, the application of *mandi* option by professional operators and the poor offtake in silver. Subsequently, however, both the metals hardened a little, mainly due to the fall in arrivals and better demand for gold, covering by short-sellers and revival of bull support in silver.

Silver for forward delivery (18th February settlement) opened the week at Rs. 165-9 and closed on the same day at Rs. 165-5 when the settlement ran out. Business in the next settlement (22nd March) began at Rs. 164-15 and prices reacted to Rs. 163-12 on Saturday, but recovered to Rs. 164-8 on Monday. After a temporary setback to Rs. 163-6 yesterday, forward silver climbed to Rs. 164-15 and still further to Rs. 165-6 today before closing at Rs. 164-15.

Ready silver (.996 Mint), which was done on par with the forward rate for the second settlement early in the week, came to command a premium of As. 4, the opening and closing rates being Rs. 165-9 and Rs. 165-3, respectively. The floating stocks of silver are estimated at 2,200 bars. The daily average offtake was of the order of 10 bars.

Opening at Rs. 87-15, gold for forward delivery (19th March settlement) turned soft consequent on an increase in arrivals and paucity of sufficient [illegible] take in the ready position. As more arrivals were reported in the next two days, forward gold [illegible] down to Rs. 86-4 on Saturday, but a change for [illegible] better was noted from Monday onwards, when [illegible] prices began to [illegible] on good [illegible] local operators [illegible] a high [illegible] was again a shade lower at Rs. 87-6.

Ready gold opened at Rs. 88-5 and wound up the week at Rs. 87-12, commanding a premium of As. 6 over the forward. At one time during the week, the premium had narrowed down to just an anna, reflecting the weight of the arrivals. The floating stocks of gold are reported to be 25,000 tolas. The daily average arrivals were 7,500 tolas, while the offtake was 7,000 tolas on an average.

The following comparative table shows the trend of the market during the week under review:

	24-2-54	Highest	Lowest	17-2-54
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	87 12	88 6	86 5	88 12
Forward	87 6	88 0	86 2	88 6
Sovereign	57 4	57 8	57 4	57 4
SILVER				
Ready (.996 fine Mint) ..	165 3	165 12	163 10	166 6
Forward	164 15	165 9	163 6	166 2
London Ready	78¼d.	—	—	78¾d.
London Forward	78¼d.	—	—	78¾d.
New York Ready	85⅛c.	—	—	85⅛c.

KIPS OFFTAKE SLOW

(From Our Own Correspondent)

MADRAS, 22nd *February*

Arrivals of kips into the market have been as usual and offtake slow. U.K. buying has been selective and demand centred round 8/8½ lbs. average only at 42d. basis which is one penny below Madras prices. U.K. buyers report that sales have been freely made on 42d. basis. Light-weights have been neglected even at 53d. basis and heavies at 39½d. Inferiors are in keen request at 37d. and 30d. for lights and heavies, while sellers' idea was ½d. to 1d. more, due to good inland demand for these. Enquiries for cow calf, buff calf and buff heavies are patchy. There has been some call for buff calf and lights from the U.S.

The tanned skins section has ruled steady and arrivals are restricted in the goat section. The next London auctions will take place on 15th March, 1954, when large stocks are likely to be available for sale.

The U.S. buyers of drysalted goat skins are bidding at $9.00 basis with sellers at 50 cents more. The raw skins market is easier by Rs. 10 per hundred skins.

HIDES INDIFFERENT

(From Our Own Correspondent)

KANPUR, 21st *February*

During the week under review, the hides and skins market presented a rather confused and indifferent note. There was brisk demand for buff, but it was not sufficiently strong to effect a rise in prices. The local tanners were the main purchasers. The Madras dealers were inactive during the week.

The latest quotations are: Wet salted cow 1st grade Rs. 340 and 2nd grade Rs. 300 per score; wet salted buff 1st grade 1 lb. 6 ozs. and 2nd grade 1 lb. 14 ozs. to 2 lbs. per rupee; goat 1st grade Rs. 275 to Rs. 300 and 2nd grade Rs. 225 to Rs. 250 per 100 pieces and sheep Rs. 250 to Rs. 300 per 100 pieces.

FORWARD COTTON REACTS

(From Our Own Correspondent)

BOMBAY, 24th *February*

The forward section of the cotton market, nay even the spot market, to a certain extent, is suffering from cold feet. It was but natural that the *tempo* of hectic buying during the previous weeks could not be kept up indefinitely. A severe reaction was bound to come and the increased deliveries against the February Contract provided the psychological excuse for staging this retreat. The mills' interest in Indian cotton had by no means been lessened, but, having gorged themselves to temporary satisfaction and having turned their attention to the acquisition of foreign cotton, which is also necessary for their production programmes, the mills slackened their buying somewhat for the time being. The over-bought forward market reacted sharply to this with a loss of more than Rs. 38 from the highest peak of Rs. 718 touched last week.

The ostensible reason advanced for this behaviour of unloading contracts of the longs is the fear of large-scale hedging in the coming months. Undoubtedly, the volume of hedging will increase, but this does not provide a valid reason for a severe fall, inasmuch as, under tight supply conditions, these hedges are bound to be lifted before the delivery period. Perhaps, a more pertinent reason is the monetary stringency and comparative fall in the offtake of cloth, resulting from unduly inflated prices.

In any case, the fall in cotton futures at Kalbadevi should not be regarded as an unhealthy feature. It has made forward trading in cotton more healthy and realistic. It is not unlikely that moderate support will be forthcoming round about Rs. 680-685.

The E.I.C.A. authorities, however, should consider seriously the position of trading which [illegible] with a loss of morale as was witnessed on [illegible] in the past few weeks, merely because of [illegible] daily dealings in less than 7,000 bales [illegible] allowed. The [illegible] position of [illegible] in particular, is [illegible] comparatively high, should indulge in building up huge long positions. If the elders in the Association are really serious about their frequent advices to the operators against over-trading, they should give proof of it by sponsoring some system of margins to prevent unhealthy manipulations and wide fluctuations. It seems that even the Forward Markets Commission is sitting inactive, as if it did not exist. One thought that the Commission would at least justify its existence by drawing the attention of the market authorities to unhealthy trends, instead of sitting Buddha-like in deep contemplation.

In the spot market, the volume of business has gone down to a certain extent, with the reduction in enquiries for domestic cotton. This, however, does not point to any imminent recession in prices, because both mill and investment interests are bound to revive at any slackening of prices. Amongst imported cotton, the main concentration is still on the U.S.A., as, on price parity, it is still the cheapest cotton available outside the country. The search for Mexicans continues, but it is not likely to yield spectacular results, in view of the conservativeness of most of the mills. Demand for Egyptian and East African cotton is good. But the offers are only for small lots at hardening prices.

With regard to exports, fresh rumours seem to have seized the market regarding release of an additional quantity of Bengal *deshi*, as the supply position of this cotton is believed to be very satisfactory. The local mills have had enough time to satisfy their requirements and it is reasonable to expect that the Government might now be induced to allow any surplus that remains to be exported, in view of the advanced nature of the season. In any case, fresh representations are being made to the authorities to allow an additional quantity of 35,000 bales of Bengals for exports.

In the forward section, I.C.C. February Contract met with good buying support, induced by strong advices from spot section and reports of remarkable advance in world cotton consumption, and forged ahead to Rs. 735 on the 19th inst., as against Rs. 713-8 last week. The improvement could not be sustained, as the Government's decision to allow futures trading in August delivery and continued fears of larger tenders adversely affected the sentiment of operators. There was nervous long liquidation and the Contract staged a retreat. Not only were the previous gains completely erased, but the closing quotations today was substantially lower at Rs. 695. At one time, it had gone down even lower, namely, Rs. 692-8. The net loss during the week was to the extent of Rs. 18-8. I.C.C. May Contract moved up from Rs. 699-8 to 709 on Friday, but reacted to Rs. 681-8 before finishing a shade higher at Rs. 682, the net loss during the week being Rs. 17-8. The spread between the two contracts which was Rs. 14 last week narrowed down to Rs. 13 this week.

The trend of prices in the forward section during the week under review was as follows:

		Opening	*High*	*Low*	*Closing*
I.C.C. Feb.	... Rs.	718	735	692½	695
I.C.C. May	... Rs.	698½	709	681½	682

The latest available quotations from the spot market are: Bengal *deshi* Rs. 625 to Rs. 650; Berar Jarillas Rs. 790; Khandesh Rs. 860 to Rs. 870; Vijay Rs. 895 to Rs. 900; Oomra *deshi* Rs. 750; Moglai Rs. 715.

Prices at Karachi have been steady without any important development during the week under review. There are hopes of the Continent turning gradually to Pakistan for supplies, as prices elsewhere tend to rise and the gap between the general run of world prices and those ruling at Karachi is narrowed down. Japan being the general buyer

in this market under a trade agreement, the situation in this market will, however, not be cleared till this Far Eastern country makes up its mind about its offtake from the source.

The latest available quotations from the Karachi market are: Sind *deshi* Rs. 74-8; Punjab *deshi* Rs. 71-8 to Rs. 74; 4F Punjab R.G. Rs. 70-8; S.G. Rs. 76-8; L.S.S. Punjab R.G. Rs. 75-8; S.G. Rs. 80-8; N.T.R.G. Rs. 74-8 to Rs. 76; S.G. Rs. 79-8; 289F Punjab R.G. Rs. 76-8; S.G. Rs. 85-8.

At Alexandria, the tempo of trade has remained accelerated with one lakh bales accounted for within a week. Enquiries are pouring in from every side—the U.S.A., the U.K., the Continent, India and Japan—while Iron Curtain countries are also interested in supplying petrol to Egypt at concession rate so as to utilise the earnings for purchase of Egyptian cotton. The spot basis has gone up for every variety and it will not be long before prices harden much further. The position with regard to East Africa is dark and no fresh light will be thrown on it till the Lint Marketing Board fixes the date definitely for auction. The exports from Alexandria so far have reached 452,739 bales, as against 365,000 bales for the same period during the last season.

Once again, New York prices have been creeping up to the 34.50 cent level after the reaction and somewhat selling pressure in the nearby deliveries, though internal consumption in the U.S.A. has been as brisk as during the last season. This is more than made up for by increased demand for exports, prospects for which continue to be singularly bright. The fact that spot prices are firm should be taken as a pointer to the future trend.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	19-2-54	16-2-54	9-2-54
Spot	35.20	35.05	35.00
March	34.33	34.33	34.28
May	34.40	34.38	34.37
July	34.30	34.20	34.24
October	33.61	33.58	33.41

STAPLE FIBRE YARN RECEDES

(From Our Own Correspondent)

BOMBAY, 24th *February*

Persistent pressure of sales by local and upcountry mills, coupled with poor enquiries from consuming centres, weakened the sentiment of operators in staple fibre yarn during the first four sessions of the week under review. Values, as a result, drifted lower. The downward trend was, however, halted yesterday, on budget rumours of an increase in import duty on staple fibre, with a view to giving protection to the indigenous industry, and expectation of the imposition of excise duty on Indian-made staple fibre (and also cotton) yarn. Incidentally, it may be noted that the gap in the prices of indigenous and imported staple fibre is about As. 2 per lb. Traders, therefore, showed an inclination towards fresh business and values staged a recovery. But the recovery was not sustained enough to regain in full the previous losses, with the result that the closing quotations today were lower than those a week before.

Staple fibre yarn (40×2) March contract receded from Rs. 704 to Rs. 682 on Monday, but recovered to Rs. 696 today before finishing at Rs. 690. The net loss over the week was thus to the extent of Rs. 14. Spot prices of (40×2) yarn—indigenous and foreign—also suffered losses. Among indigenous yarns, Hindusthan dropped an anna and a half to Rs. 3-8 per lb. Vasanta shed an anna to Rs. 3-11. New Great was lower at Rs. 3-11, as against Rs. 3-12½. Among foreign yarns, Shino and Aurora declined by an anna and a half to Rs. 4-4 and Rs. 4-4½, respectively. Sinco eased by an anna to Rs. 4-5. Paramount and S. Fuji also lost a like amount to Rs. 4-4 and Rs. 4-4½.

In the art silk yarn market, the forward section presented easy conditions. Operators were not keen on fresh business, as they preferred to await the Central budget proposals to be presented on Saturday next. 150 March contract, after improving from Rs. 798 to Rs. 802 on Friday, receded to Rs. 788 on Monday. Lower levels attracted support and values recovered slightly. The recovery was also assisted by steadiness in the ready section. Spot prices were well maintained, on account of good buying support, thanks to shortage of tenderable yarn and expectation of tighter stock position in coming weeks, because of restricted import policy of the Government of India in respect of art silk yarns. For the Silk and Art Silk Mills' Association, Bombay, has been granted, it is stated, import licences of art silk yarn valued at Rs. 1.86 crores for the current half-year, as against Rs. 2 crores for July-December, 1953. 150 Japan advanced by an anna to Rs. 4-9. 120 Japan was fully steady at Rs. 4-14, 120 Italy at Rs. 4-8 and 150 Italy at Rs. 3-15-6.

The differences in prices of yarns of various deniers and qualities ruling in the local and upcountry markets at present, it is reported, do not at all conform to the actual spinning costs. To quote one report: "It appears rather strange and ridiculous that prices of 120 deniers bright are about As. 8 per lb. higher than the prices of 150 deniers bright, although foreign manufacturers and suppliers have been booking business for forward delivery at more or less the same prices. This sort of irregularity and anomaly in prices creates considerable difficulties for the silk mills and various other consumers, including handlooms and powerlooms, as a result of which they are not able to produce cloth at reasonable price and, in many cases, stand to suffer heavy losses."

The cotton yarn market presented slightly easy conditions, due chiefly to bearish advices from the local cotton market. Prices of yarn tended to decline, and the actual turnover was greatly restricted. Among 80s, Finlay dropped a rupee to Rs. 69 per bundle of 10 lbs. Sriram receded by As. 8 to Rs. 64-8. Among 60s, City shed a rupee to Rs. 47. Finlay and Pioneer lost As. 4 each to Rs. 59-8 and Rs. 44-4, respectively. Yarns of 40 counts also were quoted lower. Thus, Meenakshi declined by As. 5 to Rs. 26-5 and Gokak by an anna to Rs. 26-5. Among 20s, Seksaria and Madura changed hands, As. 2 and As. 4 lower, at Rs. 16-10 and Rs. 18-8, respectively. Edward lost an anna to Rs. 16-10. Yarns of 10 counts, however, were steady, Modern, Podar and Colaba being quoted at Rs. 13-8, Rs. 13-5 and Rs. 13-6, respectively. Yarns of 30 counts evoked special support and recorded improvement. Madura, for instance, rose from Rs. 23-14 to Rs. 24-4.

The table below gives the prices of art silk, staple fibre and cotton yarns quoted today, as compared with those in the previous week:—

	24-2-1954	17-2-1954
	Rs. a.	Rs. a.
Art silk yarn—		
150 March (per case of 200 lbs.)	790 0	798 0
120 Japan (per lb.)	4 14	4 14
150 Japan (per lb.)	4 9	4 8
120 Italy (per lb.)	4 8	4 8
150 Italy (per lb.)	3 15½	3 15½
Staple fibre yarn—		
40×20 March (per case of 200 lbs.) ..	690 0	704 0
Sulco (per lb.)	4 5	4 6
New Great (per lb.)	3 11	4 5½
Cotton yarn (per bundle of 10 lbs.)—		
10s Modern	13 8	13 8
20s Seksaria	16 10	16 12
30s Madura	24 4	23 14
40s Gokak	26 5	26 6
60s City	47 0	48 0
80s Finlay	69 0	70 0

OILSEEDS DECLINE

(From Our Own Correspondent)

BOMBAY, 24th *February*

The oilseeds market ruled generally easy during the week under review. Operators were inclined to be cautious against enlarged commitments, pending the announcement of the Central Budget on Saturday next. The easiness in groundnuts was also due to liquidation of over-bought position, which had resulted in expectation of the announcement of export quota, the prospects for which have turned out latterly to be extremely bleak. Further, offtake of *vanaspati* interests was poor, with the volume of arrivals of groundnut oil enlarged. The weakness in rapeseeds in North Indian markets was another contributory factor. The castorseed section too put on a downward trend, profit-taking by upcountry interests at the high levels touched at the end of last week. Linseed, *kardi* and *niger* seeds also declined in sympathy with the groundnut and castorseed sections.

In the groundnut section, Bold F.A.Q. ready declined from Rs. 34-8 to Rs. 33-12. February-March was lower by As. 11 at Rs. 33-8. April-May delivery eased from Rs. 34-6 to Rs. 33-8. Khandesh quality was lower by As. 12 at Rs. 34-4. Groundnut oil ex-mill declined from Rs. 17-6 to Rs. 16-13. Railway receipts disclosed a loss of As. 10 at Rs. 16-12. March and April deliveries changed hands at Rs. 17 and Rs. 17-3, as against Rs.17-9 and Rs. 17-12, respectively.

In the absence of any possible indication of the Government's policy towards castor oil exports, both bulls as well as bears were trying to minimise their risks, so that they might not be caught unawares. Moreover, arrivals of new crop have commenced during the week. Consequently, prices tended to decline. May 1954, which opened at Rs. 113-12 as against Rs. 114-4, fluctuated between Rs. 117-6 and Rs. 113-2, before closing at Rs. 113-4. Madras quality declined from Rs. 24-4 to Rs. 23-12 and F.A.Q. from Rs. 24 to Rs. 23-4. Castor oil B.S.S. eased from Rs. 13-6 to Rs. 13, I Pressure from Rs. 12-12 to Rs. 12-10 and Commercials from Rs. 11-14 to Rs. 11-10.

Last week's uptrend in the linseed section, following business deal with Australia, gave way to an easier trend. But Bold ready was a solitary exception to the general trend in that it gained As. 8 to Rs. 27. Bold February-March and April-May deliveries eased from Rs. 24-8 and Rs. 24 to Rs. 23-12 and Rs. 23-2, respectively. Linseed oil fell from Rs. 15 to Rs. 14-12.

Among others, *kardi* Bold ready declined from Rs. 19-8 to Rs. 18. February-March was lower by Re. 1-10 at Rs. 17-14. *Niger* F.A.Q. eased from Rs. 28 to Rs. 26-4 Madras was down by Re. 1 to Rs. 27 and February-March by Re. 1-12 at Rs. 28-4.

Arrivals from 1st January to 11th February 1954 in oilseeds and oils were as follows:

(In cwts.)

	1954	1953
Groundnut	4,70,856	6,02,575
Linseed	8,095	7,171
Castorseed	3,594	94,856
Groundnut oil	1,66,582	1,55,892
Linseed oil	6,148	2,763
Castor oil	2,610	21,408

The following table shows the prices of oilseeds and oil on the 24th inst., as compared with those at the end of the previous two weeks.

	24-2-54	17-2-54	10-2-54
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—			
Khandesh Quality Ready (per cwt.)	34 4	35 0	34 8

Groundnut oil—			
Ex-mill Ready (per quarter) ..	16 13	17 6	17 1
Castor Oil—			
Commercial (per quarter) ..	11 10	11 14	11 2

SUGAR EASY

(From Our Own Correspondent)

BOMBAY, 24th *February*

Following the reported move on the part of the Central Government to hand over the responsibility of distributing imported sugar to the trade in Bombay to a syndicate of sugar dealers, the sugar market presented easy conditions during the week under review. There was a distinct tendency for prices to recede. The downward movement was further assisted by larger arrivals of sugar into the market. In the forward section, *Fagan* delivery, which had risen to as high as Rs. 85-6 per bag some time last week, was quoted today at Rs. 83-14. Spot sugar prices also staged a retreat, the quotations for small, medium and large grains being each a rupee lower at Rs. 90, Rs. 92-94 and Rs. 96-97, respectively. Among foreign sugars, Czechoslovakian declined from Rs. 83-88 to Rs. 82½-87 per bag of 200 lbs. German sugar lost As. 4 to Rs. 82-8 per bag of 2 cwts. British refined, however, was steady at Rs. 85 per bag of 2 cwts. So also Cuban at Rs. 36-12 per 100 lbs. and Mexican at Rs. 40-12 per 100 lbs.

Arrivals of sugar into the Bombay market this week were larger, the quantity actually received being 8,600 bags, as against 7,100 bags and 6,700 bags in the previous two weeks, respectively.

As stated at the outset, the Central Government proposes to entrust the task of distributing the imported sugar to a syndicate of dealers on the same basis as is being done in Calcutta. Mr. P. A. Gopalakrishna, Joint Secretary, Union Food and Agriculture Ministry, who was in Bombay this week, held a meeting with the local sugar merchants to discuss the question of sugar distribution. The proposed scheme of the Centre has found favour with the traders. It is, however, reported that there has arisen some differences of opinion among the members of the Bombay Sugar Merchants' Association over the manner in which the scheme should be worked. Some members are said to have criticised the Association for refusing to treat 'B' class members on a par with 'A' class members. These dissident members have, therefore, organised themselves into a new association, called the *Shakkar Vyapari Mandal*. In view of this split among members of the sugar trade, it remains to be seen how the proposed scheme of sugar distribution will be implemented. In any case, a clear picture of the developments is expected to be available in the course of next week. In the meantime, it is reported that no concrete decisions for distributing the March shipments of imported sugar have yet been taken by the Union Food Ministry.

No fresh purchases of foreign sugar has so far been made. Traders are, therefore, inclined to feel that there will be no continuity in the arrivals of imported sugar and that there is bound to be a gap in the availability of sugar imported into Bombay port towards the close of March, 1954.

JUTE GOODS STEADY

(From Our Own Correspondent)

CALCUTTA, 23rd *February*

The jute goods market put on a slightly cheerful appearance this week. Early rumours of withdrawal of complete control over jute in the U.K. and decontrol of import trade in jute goods in Australia induced some speculative activity in the first few sessions of the week. Subsequently when it was clarified that decontrol in the U.K. was confined, at the moment, to only raw jute, activity, particularly, in hessians tapered off with quotations disclosing fractional declines. But in sackings strong speculative support boosted up values, with B.Twills witnessing the week's best rates on the 22nd inst. At this level, profit-taking set in and erased a large portion of the earlier gains. The undertone, however, remained steady at close.

B. Twills commenced the week at Rs. 106 per 100 bags as against the previous day's close of Rs. 105-10. On reports of decontrol of the import trade in jute in Australia, operators indulged in speculative deals and lifted the quotation gradually to Rs. 107-8 on the 22nd inst. The rise, however, did not persist, as some weak holders preferred to book profits, and the rate declined to Rs. 106. Hessians 40 oz. "A" opened the week at Rs. 46-6 per 100 yards. They oscillated between Rs. 46-8 and Rs. 46-6, till 22nd inst., when owing to selling pressure they developed weakness. As a result, prices declined and stood today at Rs. 45-13.

The raw jute section continued to depict an easy tone with sellers keen on lowering quotations for bulk orders. But mills continued to make their purchases sparingly, showing preference to quality. In spite of occasional support by mills as well as balers quotations were a shade lower with Assam bottoms fetching Rs. 26-8 to Rs. 27 per maund. Trading continued to remain dull and uninteresting at the close, following weaker advices from East Bengal.

• • • •

Ways and means of increasing the yield of high quality jute in Assam are suggested in a memorandum submitted to the Jute Enquiry Commission by the All-Assam Jute Growers' Association. Drawing attention to the present 'disastrous' practice of growers of taking private loans at 100 per cent. interest by executing sale deeds on their lands, the Association urges the grant of State loans on easy terms to deserving cultivators. According to the Association, facilities for ratting jute, available to growers in the State's four main jute growing districts—Nowgong, Darrang, North Lakhimpur and Goalpara—are inadequate. At present, cultivators they cannot harvest their mature crop for want of sufficient accumulation of water in the ditches. An elaborate chain of canals should be dug throughout the jute growing districts. The proposed canal net-work, besides providing ratting and irrigation facilities, will help drainage where the land is low and surrounded by high lands, as well as create new avenues for water transport.

The Association advocates setting up of a State-run model agricultural farm at Nowgong to train up young cultivators in the modern, scientific methods of jute cultivation. In order to remove the marketing difficulties of growers in areas lying far in the interior and inaccessible by road from the nearest markets, the Association suggests construction of a number of good roads. But the most urgent remedy sought for is fixation of a minimum selling price for jute.

PULSES WEAK

(From Our Own Correspondent)

HAPUR, 22nd *February*

Foodgrains markets remained quiet to bearish, reflecting an excellent overall food situation in the country and growing optimism regarding the immediate future. Reviewing the food position in Parliament this week, the Government spokesmen stated that the *kharif* crop of 1954 was good and there was a promise of good winter crop which would be harvested during the next two or three months. The food position in 1954 thus was likely to be much more favourable than in the past several years. There is reported to be sufficient internal supply of rice to meet the requirements of the deficit States, while ample stocks of wheat in the Central reserve have induced the Government to sell this week freely to consumers and the traders at Rs. 15-8 per maund wholesale without any quantitative restrictions. New Delhi's decision to reduce the price of imported wheat to be supplied to the flour mills for the manufacture of fines by a rupee per maund has been welcomed by wheat grinders in Bombay. It is stated that this step will, to some extent, help in bringing the rates of their products in line with the consumers' prices of imported wheat which were reduced a fortnight ago when private trading in imported quantities was resumed.

As was reported last week, the Central Government is negotiating for the purchase of 600,000 tons of rice from Burma to build up a reserve in the country. Rice supply, according to Mr. Kidwai, has to be made now to Calcutta, Travancore-Cochin and Bombay. Hyderabad and Madras have become self-sufficient and Andhra has been declared a surplus State. The surplus that has been declared by the States exceeds the requirements of the deficit States by 300,000 tons. The rice position is so good in U.P. that procurement has been stopped. Rice has been decontrolled in Punjab and rationing discontinued. Rationing of rice in Delhi is also expected to be abolished shortly. Superior quality rice imported from U.P. will be available at cheaper rates in the market after decontrol. Rationing of rice continues in Calcutta and in Travancore-Cochin side by side with the free market. In Bombay, the rice ration quantum has already been increased to 6 ounces.

In Uttar Pradesh, the State Government has started selling both indigenous and imported wheat to the public and the trade at the uniform rate of Rs. 16 per maund, inclusive of the cost of the bag ex-Government godowns with no extra charges levied for weighment. The minimum units of sale are five bags. There will be no quantitative restrictions on the sale of wheat lifted under the above scheme, but such wheat will not be utilised for the manufacture of fines. This move has not only affected the sentiment in the wheat section but has also had a general bearish reaction on all foodgrains sections. Stock holders of wheat, millets and coarse grains are generally anxious sellers in the markets. Supplies which had been augmented by receipts from surplus areas are plentiful now and prices have continued to recede.

There will be no import or export or procurement of foodgrains on Government account in U.P. in the next financial year. No provision has been made for these operations in the budget for 1954-55 presented to the legislature.

Pulses futures have reacted very bearishly this week and there has been a spectacular fall in prices. Heavy rains were received this week over a wide area in Northern India and at some places slight harm to the crops has been done. Generally the crops are progressing well. The latest quotations (per maund) are: Ready wheat Rs. 16 to Rs. 18, gram Rs. 10-8 to Rs. 13, barley Rs. 10, *bejhar* Rs. 9-8, maize Rs. 10 to Rs. 11, *bajra* Rs. 10-4 to Rs. 11-4, *jowar* Rs. 7-8 to Rs. 11, *guwar* Rs. 9, rice Rs. 29 to Rs. 19, peas Rs. 9, *arhar* Rs. 9-8, *urd* Rs. 14-8 to Rs. 16-8, *moong* Rs. 14-8 to Rs. 16, and *masoor* Rs. 14. Futures peas *jeth* Rs. 8-10, *arhar jeth* Rs. 9-10-6, *urd baishak* Rs. 14-4, *guwar baishak* Rs. 7-10.

SUGAR BEARISH

(From Our Own Correspondent)

HAPUR, 22nd *February*

The Government of India's decision to import adequate quantity of sugar and to associate private traders with the import business reacted bearishly on the Indian markets. There was poor demand in most of the centres. At ports, sugar prices moved within a narrow range, due to adequate supplies of better quality foreign sugar which reduced the premium on Indian sugar. Kanpur reported unsatisfactory enquiries from outstations.

Offers of foreign sugar March shipments which will be arriving in April will first be considered and later shipments arriving in May and June will receive second preference. While it will take some days before the Government receives offers from the shippers and the price and sources of supply are known, the general belief is that the bulk of imports will be of British refined quality. Conditions in the world markets have lately been dull, it is reported that, if sizable orders appear on the market, prospective buyers may be faced with selling reserve. Cuba, Mexico and Czechoslovakia are reported to be unable to promise shipments before April.

The strike of sugarcane growers in U.P. continues in name only. Spokesmen of the U.P. Hind Kisan Panchayat claim that nearly all sugar mills in east U.P. have closed down or are on the verge of closure with the exhaustion of cane stocks in their possession. The Indian Food Minister, on the other hand, says that there is no strike at all and that supplies of sugarcane to the factories are normal. The closure of the mills in east U.P. may be accounted for by the fact that no sugarcane is left in the fields in that region. No date has yet been fixed for the proposed tripartite conference to evolve a formula for a share to the cane growers in excess sugar profits. It has been officially stated that the principle of profit-sharing would apply not only to excess profits in current season but also in the future.

Mill delivery quotations (per maund) in the local market are: Jaswant Rs. 30-12, Simbhauli Rs. 31, Daurala Rs. 31-8, Mansoorpur Rs. 31-6, Amroha Rs. 30-9, Bijnor Rs. 30-9, Sehora Rs. 30-10, Rohana Rs. 32 and Rampur Rs. 33.

Gur markets remained quiet to steady and prices in the ready section moved within a narrow range. Movements in the futures section were fairly erratic on speculative manipulations, particularly after the initiation of the *Baishak* delivery contracts in the local market. The long-term trend in the *gur* markets is now viewed with some apprehension, for there are growing indications that there may be a fall in overall production of *gur* along with sugar during the current season. Already, the Indian Food Minister has hinted that sugar production is expected to decline from 1,370,000 tons to about 1,200,000 tons.

Gur stocks in west U.P. surplus *mandies* are not burdensome, while there is sustained demand at current rates. Stock accumulations are comparatively high in South Indian markets and traders there are inclined to build stocks at current rates. Baramati has a stock of 450,000 rounds and Shrirampur over 400,000 rounds. This has induced speculative sales on the [illegible] price decline.

The U.P. Hind Kisan *Panchayat* which is conducting the strike of the cane growers in the State has decided to launch an intensive campaign to persuade them to divert their cane for making *gur*, instead of delivering it to sugar mills. It is said that there is no question of making *gur* in the eastern districts, as the crushing season is closing there and some of the mills have already stopped crushing. The leaders of the *Panchayat* expect that the price of *gur*, which is higher than in the previous year, will not be affected, if the cane now still in the field is used for making *gur*.

Gur arrivals in the assembling markets were satisfactory this week, except on cloudy and rainy days. There were heavy rains this week and, for about a week, *gur* receipts would be very small. Despatches from west U.P. *mandies* were again small, due to wagon shortage affecting loadings. There was moderate enquiry from importing areas where traders are inclined to build stocks. Pansera *gur* at Hapur is now quoted at Rs. 15 and *balti* at Rs. 15-12 per maund.

FINANCES OF INDIAN RAILWAYS

(Concluded from page 357)

operation of the Quilon-Ernakulam line was also under consideration. Extension of electrification to Tambaram-Villupuram section of the Southern Railway was receiving attention.

Work for augmenting the line capacity in congested sections was being programmed on a larger scale, a sum of Rs. 3.1 crores having been provided in the budget year, against Rs. 2.1 crores in the current year, for this purpose. Special attention is being paid to the following:—

(i) Siliguri-Alipur Duar section of the Assam rail link, the capacity of which is proposed to be more than doubled;

(ii) Bezwada-Madras section of the Southern Railway including the remodelling of the Bezwada yard and the conversion of Gudur-Renigunta section from metre-gauge to broad-gauge. The capacity of the section will be increased from 300 to 420 wagons per day.

(iii) Central India coalfields via Katni-Marwara, where movement will be stepped up from 265 to 350 wagons per day.

(iv) Via Chheoki on the Central Railway, where movement is proposed to be increased from 190 to 240 wagons per day.

(v) Raichur-Arkonam section, for running additional goods trains.

(vi) Anara-Jaychandi Pahar-Burnpore section and Sini-Gomharria section, the doubling of which is being carried out for the movement of raw materials for increased production of steel.

Railway Convention Committee

Mr. Shastri disclosed that he would invite the House during the present session to set up a committee to go into the question of the rate of dividend payable by the railways to general revenues of the Central Government. Such a review was provided for in the resolution passed by the Constituent Assembly (Legislative) in 1949 defining the relationship between railway finance and general finance.

Proceeding, the Minister said that considering the vast areas which were awaiting economic exploitation through the introduction of satisfactory transport facilities, he felt that it was necessary to adopt a bold policy of development and expansion of the railways. But the prospects of increased financial resources were none too bright. Against Rs. 320 crores to be contributed by the railways for the execution of the Five-year Plan, the contribution in the first three years was likely to be Rs. 165 crores only and a shortfall of about Rs. 60 crores was expected during the Plan period. "I am examining in the above context," he added, "the implications and practicability of certain suggestions for adjustments in our fare and freight rate structure which it is claimed are necessary for a developmental economy."

He said that there was also the need for maintaining and, if possible, accelerating the pace of construction of new lines. The present high levels of the cost of materials and labour involved unremunerative investment at least for some time to come. The balance in the Development Fund were rapidly dwindling. He observed: "The only way in which new construction seems to be possible is to provide for a recovery of charges on the basis of inflated mileage for a limited period so that the projects may not be burdensome. The device may also profitably be adopted in cases where a shorter route is provided reducing the cost of transportation substantially, the whole of which need not be passed on to the consumer."

Operational Performance

The Minister said that the punctuality of trains further improved during 1953. The revised procedure for movement of commodities introduced in August, 1953, had so far worked satisfactorily. An Efficiency Bureau had been set up in the Railway Board to investigate and eliminate outmoded and costly practices and to evolve suitable techniques for achieving efficiency and economy in diverse fields of railway operation and management. As regards the working of the regrouped railways, the Minister remarked that the data available was only for a limited period which did not permit of reliable comparison being made. Some more time [illegible] made. The accounting changes to be [illegible] would also enable the [illegible] of each zone being ascertained [illegible] Amenities [illegible] the Minister said that it was his intention in the budget year to see that more of these amenities were provided at small and wayside stations. The amenities would include provision of improved platform and waiting facilities, electrification, improved lighting and foot overbridges, etc., at a large number of stations. A representative Amenities Committee had also been set up on each railway. Mr. Shastri contended that the fears entertained in some quarters about the effects of the abolition of first class on railway earnings had proved to be without foundation. Moreover, with the abolition of first class, it had been possible to increase the lower class accommodation: He added that it was the Railway Ministry's object to reduce, as far as possible, the difference that existed today between the lower and higher classes. The new third-class coaches were an appreciable improvement on the old ones. Wider seats, fans, better lights and improved lavatories had been provided. New coaches were being manufactured, keeping this standard in view. Efforts had been continued to reduce overcrowding in passenger trains. Between April, 1953, and November, 1953, 190 new trains were introduced and 126 trains extended. During 1952-53, 184 broad-gauge and 135 metre-gauge third-class coaches were put on the line. While the number of the third class passengers decreased from 1,163 million in 1951-52 to 1,120 million in 1952-53, the number of seats provided for third-class passengers increased from 856,000 to 864,000 over the same period. The position was expected to improve further. The previous year's improvement in regard to the disposal of compensation claims had been maintained.

Definite steps had been taken to improve the watch and ward and the security organisations on the railways. It was proposed to appoint for each zonal railway a security officer of the rank of a Deputy Inspector General of Police who would have direct access to the General Manager. The Home Ministry, too, was considering measures to co-ordinate action with the railways in this connection. In order to secure better representation of the vast body of railway users, National Zonal and Regional or Divisional Railway users' consultative committees had been set up.

The Minister said that, although he had not found it possible to offer at present any relief in the matter of freights and fares generally, the following travel concessions were being introduced:

(i) Circular tour tickets for distances of 1,500 miles and over at concessional fares of three-fourth the public tariff rates for second, inter and third classes. These concession tickets will apply not only to the standard circular tours notified by railways but also to circular tours suggested by parties themselves and approved by the railways.

(ii) Round tour tickets for students available for 45 days at the usual concessional rates when they undertake travel in parties of not less than four instead of in parties of not less than ten as at present. The existing concession for educational tours in parties of not less than ten will also apply to such students travelling in parties of not less than four.

(iii) Students' concessional monthly tickets in non-suburban areas, for students proceeding daily from their homes to attend schools or colleges and returning therefrom. These monthly tickets will be issued from stations not more than 30 miles distant from the station of the school or college attended, on payment of 12 single journey fares.

(iv) Concessional hill station return tickets at 1½ single journey fares to certain selected hill stations during April to October for second, inter and third classes, available for three months from all stations from which the chargeable distance is 150 miles or more.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. a Sales and amount written off. (k) Investments. ‡ For ten months ended 31st December 1951.

(j) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 392 in the debentures section:—

§§ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent premium.

(b) Bearer bonds of Rs. 1,000 each repayable a par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959

(d) Bearer bonds of Rs. 1 000 each with option of redemption in whole or in part at par on 30th June, 1952 of on any subsequent interest date at one month's notice.

e Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955 on six months' notice in each case

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months notice

MARKET GOSSIP

(Concluded from page 343)

about Rs. 7-4 per maund. Roughly speaking, 25 per cent. of the price the consumer pays for sugar today represents taxes to Central and State Governments.

• • •

When such is the case, all talk of the Government wanting to reduce the price of sugar for consumers seems a farce. The new distribution scheme sought to be introduced in Bombay will actually raise the cost of imported sugar to consumers, thereby defeating the very object of importing sugar. There seems to be no need for it. The evil in the present system referred to at the outset could be effectively met by preventing those who are not *bona fide* sugar merchants from applying for tenders. In actual practice, the new scheme amounts to subjecting the imported sugar to both distribution and price controls. This is against the principles which Mr. Kidwai has been preaching all along in regard to controls.

• • •

The emergence of a strong buyers' market in wheat in the wake of a large world crop would appear to have been making itself felt on sellers at the terms of the International Wheat Agreement. Only recently, we had occasion to refer to the frantic search for new buyers of its wheat initiated by Australia, one of the parties to the pact. Now comes the turn of another participant, namely, Canada, which has cut down wheat prices by as much as seven cents a bushel to $1.79, the lowest rate touched in that country during the current crop year. This reduction is evidently designed to attract customers from Europe where, we are all told, *non-agreement* countries, such as, for instance, Turkey, France, Russia and the Danubian countries have been successful in expanding their wheat sales. Canadian officials are reported to have complained that some members of the Agreement have bought nothing, although the offtake by Britain, which is not a party to the pact, has been good.

• • •

The most disquieting development which threatens the future of the International Wheat Agreement is the disinclination of importing countries to lift their agreed quotas. Austria, Brazil, Denmark, Italy, Jordan, Korea and Sweden have not purchased even a single bushel under the Agreement, while Ireland, Mexico and Peru have taken only small quantities. India's purchases, amounting to about 345,000 bushels out of its share of 36.7 million bushels, are stated to be the lowest among the deals so far put through by the member countries. It may be mentioned here that importing countries are under no obligation to lift their quotas except at the minimum price of $1.55 a bushel for the current season. It is, therefore, not at all surprising that figures relating to wheat sales under the pact make poor reading. Thus between 1st August, 1953 the date on which the pact came into operation, and 2nd February, upto which figures have been published, sales under the Agreement amounted to no more than 142 million bushels. This compares very unfavourably with a total sale of 342 million bushels in the same period a year previously. During the period under review, the U.S. was able to sell only 71 million bushels out of its export quota of 210 million bushels. Similarly, Canada and Australia could sell 56 million bushels and 14.8 million bushels out of their respective quotas of 163 million bushels and 48 million bushels. In other words, the sellers under the Agreement have not been able to dispose of more than a third of their quota. In this context, the *Corn Trade News* make interesting reading. It says that the experience of the present season and the general trend of world production and demand may well send the Agreement to its grave. "Monopoly selling of wheat," it observes, "is rapidly becoming outdated and the movement towards vastly increased grain output throughout the world, to which selling has given impetus, are too real to be ignored." These remarks show how correct Britain has been in judging the trend of the wheat market and refusing to sign on the dotted line indicated by the U.S. when the renewal of the Wheat Agreement came up last year.

• • •

It is understood that two of the producing countries which contribute to the expenditure of the Tea Council of the U.S.A., viz., Ceylon and Indonesia, have agreed to make an increase in their respective contributions for 1954. Ceylon's contribution is to be raised from $350,000 to $375,000, and Indonesia's from $50,000 to $55,000. It is not known whether there would be any increase in India's present contribution of $450,000. The contributions received by the Tea Council during the first six months ended 30th September, 1953 were stated to be as follows: U.S.A. trade $304,402; producing countries $373,090; total $677,492. Expenditure for the period amounted to $528,267, the major part of which is in respect of advertising. Excess of receipts over income for the period amounted to $149,225. The Council is stated to have had an operating balance of $581,768 on 30th September, 1953.

• • •

It is understood that the Council has been considering a proposal to offer facilities for training nationals of the producing countries in the various aspects of tea business and trade in the U.S.A. Following the experience of the U.S.A., it is learned that arrangements are almost complete for the setting up of a Tea Council for Canada and that representatives of the Canadian tea trade and of producers in India and Ceylon have already met and discussed the matter. The scheme is expected to come into force from 1st June, 1954.

AMERICANS AND ECONOMIC SECURITY

The subject of economic security in a free society is one that concerns all Americans, from President Eisenhower down. How far should the Government go in promoting individual security? How much security, and of what kinds, do the American people have? These questions take on added significance today, with the United States experiencing a moderate business decline in the transition from a war-time to a peace-time economy.

A report issued a few weeks ago by the American Assembly—a national non-partisan research programme—throws some light on this important subject. The Assembly, incidentally, was established in 1950 by Mr. Eisenhower, when he was President of Columbia University.

ON RAZOR'S EDGE

THE Government of India's budget for 1954-55, presented to Parliament last week by Mr. C. D. Deshmukh, can be criticised on two main grounds. One is that it does not provide sufficient incentive to stimulate economic activity so essential for achieving the objectives of the Five-year Plan. The other is that it relies rather too much on deficit financing, a risky method of finding resources, even if it be for productive purposes. But, in the circumstances in which the Finance Minister finds himself today, there is little else that he can do. It is the misfortune of this country that, right from the beginning of the Plan, those who have been in charge of its destiny should have bungled in choosing priorities. Take, for instance, the Taxation Enquiry Commission. The one reason why the Finance Minister is not in a position to present what is compendiously called an "incentive budget" is that, "with the Taxation Enquiry Commission at work, it is neither proper nor desirable to initiate any large-scale change in the present structure of taxation, until the whole problem has been considered in the light of the Commission's recommendations." The same explanation is being offered by the State Governments, too, for not raising additional resources needed for implementing the Five-year Plan. This, in turn, has left no choice but to depend to a greater extent than is necessary on deficit financing. Perhaps, the country would not have been in this plight had the Taxation Enquiry Commission been appointed before the Plan was launched or at least simultaneously. When the Plan was framed, the right thing to do would have been to explore not only the resources available for the implementation of the Plan but also the manner in which such should be collected. For this and similar other initial mistakes in planning, the country is now paying the penalty of inadequate, if not haphazard, economic growth.

Another instance of wrong priority is to be found in the social objectives of the Plan. This may sound stale to many, for it has been reiterated so often. Nevertheless, it is very important, in that it has directly contributed to many evils, infinitely worse than the disease to cure which it was brought into being. We have in mind here Prohibition. It is true that Prohibition is not in force all over the country. But the loss to the community, even as a result of its application only to a part of the country, is so large that it should not have been given the high priority that it enjoys now. In terms of money value, the loss is anything between Rs. 50 and Rs. 60 crores per annum. If Prohibition had not been introduced, there would have been no necessity to rely on deficit financing of the magnitude now proposed. In fine, it is no exaggeration to say that the priority given to Prohibition is leading the country through the path of inflation. This is not the only evil. The loss of revenue to the States where Prohibition is in force has compelled them to resort to regressive forms of taxation which, in turn, are acting as strong disincentives to individual enterprise without which there can be no economic progress in a democratic society. In saying this, it is not suggested that the forms of taxation that have been introduced to offset the loss of revenue through Prohibition would not have come into being had Prohibition not been introduced. They would have surely found a place in the armoury of a State Exchequer, for they are generally accepted as a legitimate source of taxation. But there would have been no necessity to resort to these forms of taxation in such rapacious manner as to mar the growth of trade and give impetus to the law of diminishing returns in certain sectors.

It is easy to give a few more instances of defects in the basic policies of the Government. But the purpose of this article is to examine the budget under reference and not to expatiate on the general policies of Government. A reference to this subject in the introduction, however, became necessary, in order to enable one to view the budget in its proper perspective. It can certainly be argued that the defects referred to are not irremediable. If the Congress High Command were to see the problem as we do, the defects could be remedied quickly and the economic development of the country fostered on sound lines with minimum sacrifice by the people. But it is not prepared to do so. The Finance Minister has, therefore, no choice before him. The only alternative before him is to slow down the expenditure on development. This, however, would mean economic stagnation, if not retrogression, for the country. He has courageously preferred to tread not this path of comparative safety but the bold, if somewhat risky, path of reflation. He has deliberately chosen the razor's edge, for the difference between inflation and reflation is only one of degree. Whether it will safely take the country to the goal it has chosen will depend on the efficiency and skill with which the Administration implements the whole Plan.

The implications of resorting to credit expansion of the order of Rs. 250 crores to the economic stability of the country are so serious that it is difficult to resist the temptation of dwelling on it at some length. But before doing so, it is necessary to examine the other features of the budget, details of which are published elsewhere in this issue. The Finance Minister has continued to follow the policy of taking the instalments of debts due from Pakistan in the revenue budget. In the revenue estimates for the current year, he took two such instalments aggregating Rs. 18 crores and it is because of their non-receipt that the year will end with a deficit of nearly Rs. 17 crores, instead of with a nominal surplus of Rs. 45 lakhs anticipated a year ago. For the next year, he has taken credit for Rs. 9 crores under this head and he is confident of getting this amount from Pakistan. How far this confidence is justified remains to be seen. Another procedural innovation which the Finance Minister has made in preparing the revenue budget is to transfer certain items of grants to the States to the capital budget. This transfer will reduce the expenditure in the revenue budget. The amount involved will, however, be written back to revenue over a period of 15 years. The result of this change will be that the annual burden of grants to States on Central revenue will be relatively small. In the light of the explanation given by the Finance Minister it looks as though this is an innocuous change.

The actuals for 1952-53 and the revised estimates for 1953-54 bear testimony to the conservative policy of the Finance Ministry in preparing the budget. In both the years, the revenue has turned out to be more than expected, while the expenditure is less than that provided for. This is not such a bad policy as many consider it to be, especially in these days when Governments are more inclined to spend rather than save. In saying this, we do not mean that the Government of India is fully conscious of the need for utmost economy. It is true that the revised estimates of expenditure for 1953-54 show a fall of Rs. 1.57 crores in the expenditure on the cost of revenue collections and Rs. 2.7 crores in the provision for Civil Administration. These savings are due more to certain adjustments and non-utilisation of amounts provided for certain specific purposes than to any conscious effort at securing economy in the cost of administration. Considering that a large number of controls has been abandoned, one would naturally expect a reduction in this item. But the Finance Minister has given no hope of any saving in this direction even for the next year.

As regards other items of expenditure, a larger provision has been made for nation-building and development services. It is doubtful whether the large sums that are being expended on Community Projects will yield any tangible return of a productive nature and one can justifiably question the appropriateness of devoting sizable resources on a dubious experiment at a time when funds are scarce. While the need for teaching people in rural areas better methods of living and efficient forms of raising their productivity is not questioned, one wonders whether that goal cannot be reached through vigorous efforts at spreading education among them. More schools staffed with trained and well-paid teachers are likely to secure sustained results than the building of model villages at enormous cost. The decision not to enter into any race for armaments, in spite of the latest provocative developments in Pakistan, which, by inviting U.S. military assistance, has brought the cold war to India's borders, is commendable. It reflects the presence of mind of the Government of India and its sense of proportion. A mere addition of Rs. 50 crores or even Rs. 100 crores to the Defence expenditure is not going to make India a militarily strong power. Nor will such an expenditure suffice to help it to meet aggression from any of the big power blocs, if and when it comes about. Indeed, the attainment of such a position or preparation for such a contingency is beyond its material resources. India's security lies in abolishing its grinding poverty, maintaining goodwill with all nations and striving for world peace.

The new taxation proposals of the Finance Minister mean that the limits for direct taxation have been reached and that the scope for even indirect taxation is so restricted that the net has to be cast far and wide. With export markets remaining pronouncedly in favour of buyers and with the internal economy bedevilled by both rigidity of costs and buyers' resistance, there is scarcely any room for expecting customs duties to yield more than they do. On the contrary, there might have to be further reductions in export duties if there were to be a recession abroad. The reliance on import duties should be even less, for they are bound to be a progressively diminishing source of revenue as industrialisation advances. The

excises are, therefore, the main source on which the Finance Minister has to depend for broad-basing the country's tax structure. But, even in this sphere, there is not much room left. Already almost all important commodities are subject to excise duties. Then, on top of this, the State Governments are collecting sales tax at stiff rates on all commodities, including industrial raw materials and food. The burden of indirect taxation is so heavy that great care must be taken to see that expansion of industries is not affected by the curb that will be placed on consumption by excises and sales taxes.

Excepting, perhaps, the increase in excise duties on cloth, the new taxes imposed by the Finance Minister in this budget are not objectionable. The relief given to cotton textile industry by abolition of the import duty on cotton has been more than offset by the increase in excises on all varieties of cloth. This industry is already groaning under the weight of excessive tax burden that the additional impost now thrust on it is unreasonable. Mr. Deshmukh has very ably and impressively argued the case for raising the import duty on betelnuts and for bringing soap, art silk and footwear into the sphere of excises, but he is not so convincing in regard to cement, though it must be said that the additional burden will discourage waste in the use of this commodity which is still scarce. The excise duty on soap, in particular, is a well-thought-out measure, in that it will lead to an efficient utilisation of the available raw materials, which is very essential in view of the fact that they are not in plentiful supply. It is true that this will give an additional advantage to soap-making on a cottage industry basis and, to that extent, there will be a wastage of raw materials. But that cannot be helped; in any case, large-scale soap manufacturers have many advantages which the cottage industry sector has not.

There is a school of thought which argues that the Finance Minister need not have resorted to the additional taxation referred to above, inasmuch as he is depending on deficit financing for as much as Rs. 250 crores and he can as well add another Rs. 15 crores to it. This contention is not convincing, because, as Mr. Deshmukh has rightly pointed out, every effort should be made to keep the amount raised by recourse to deficit financing as low as possible, "so that it fills only the unavoidable gap between the available resources and the inescapable requirements for development and is not used to cover any shortfall in resources which could otherwise be currently raised." In other words, it is absolutely essential to keep down inflationary financing to the minimum and every effort must be made to raise resources through taxation wherever possible and such other ingenious means as a State lottery. Mr. Deshmukh would be setting a bad example to the States if he were not to do so. In fact, we wish he had the courage to fight with his colleagues for the reintroduction of the salt duty, instead of raising the excise on cloth. There is no need for him to await the verdict of the Taxation Enquiry Commission for taking this step.

Mr. Deshmukh is, perhaps, right in saying that not many in the country will have doubts as to the wisdom of launching upon deficit financing. But, we wonder whether he is equally right in adding the words "on this scale." While many in the country have, of course, now reconciled themselves to the necessity for deficit financing to some extent, we are not so sure that they would view without concern the prospect of deficit financing of the order of Rs. 250 crores per annum. The economic climate in the country or outside is not so favourable as to absorb inflation of this order. Cost of living in the country, which is more relevant than the index number of wholesale prices, is still quite high everywhere, being higher in some centres than in the period of the Korean war boom. Nor are we convinced that production in the country has gone up to such an extent that one can confidently assert that pressure on prices is unlikely to emerge again vigorously. It is, therefore, to be hoped that the Finance Minister will proceed warily. He cannot be unaware of the fact that, in deciding to wield this weapon, he is playing with fire and that, if his calculations in regard to increase in production, availability of imports at appropriate prices, etc., which, he expects, will offset the expansion in money supply, were to go wrong, the final result would be a permanent dilution of the currency. Another prerequisite for the successful use of deficit financing is a suitable domestic political climate. That, we are afraid, is not there, at any rate, not to the extent to which it is necessary. There is no evidence yet of the State Governments acting in perfect unison with the Centre. And more than half the developmental expenditure contemplated for the coming year is to be carried out by the States. It is the complaint of many competent observers that the States are neither raising adequate resources nor spending the funds placed at their disposal in the right manner, let alone in the right direction. It would indeed be a double tragedy to the country if the funds raised through deficit financing were to be squandered away through unproductive expenditure and mismanagement of the projects undertaken. The Centre must, therefore, exercise greater control over the States, particularly on the implementation of the various projects which are left to their care.

BOMBAY BUDGET

SIR James Grigg, a former Finance Member of the Government of India, who took as well as gave many hard knocks in his battle with the opposition, once said that the only commodity which he would not tax was the patience of the House, and added that it was primarily because such taxation would yield him no revenue. The Bombay State's Finance Minister, Dr. Jivraj Mehta, shines by contrast. He inflicted on the House a 44-page address. The members, however, must at least have been relieved by the thought that he imposed no new taxes. This is a great relief; for this State, as Dr. Jivraj himself confessed, is one of the most heavily taxed of the Indian States. If he proposed no fresh imposts, it was perhaps because he was convinced of the "inelasticity of our resources." There is, however, scope for really worthwhile expenditure. Indeed, there is, as the Minister pointed out, a "pressing need for development expenditure in different fields." This line of reasoning is true, and yet perhaps not wholly true, considering how grievous has been the loss of revenue through Prohibition, and how heavy is the cost of administration, notably in regard to the police.

Dr. Jivraj is entitled to the satisfaction that he has been able to present a surplus budget for 1954-55, though only time can prove whether his optimism is correct. So far as 1953-54 is concerned, his estimates, as is now clear, were on the low side. He estimated the revenue and the expenditure for the year at Rs. 67.83 crores and Rs. 67.76 crores respectively—a small surplus of Rs. 7 lakhs. But the revised estimates place the revenue and the expenditure at Rs. 70.46 crores and Rs. 72.06 crores, respectively—a deficit of Rs. 160 lakhs. We are told that this deficit is due to some technical difficulty in treating certain receipts under revenue account and that, if allowance were made for them, there would actually be a surplus of Rs. 10 lakhs. Even so, the fact remains that, in the 1953-54 budget, individual items on the receipts side show very large variations, as, for instance, an increase of Rs. 157 lakhs under "other taxes and duties," of Rs. 146 lakhs under "agriculture" and Rs. 45 lakhs under "land revenue." On the expenditure side, the increase in the revised estimates over the budgetted figures is partly due to larger expenditure on irrigation works in scarcity areas, and bunding works. The following table shows the budget figures for the three years ending 1954-55:

(In crores of rupees)

	Receipts	Expenditure
1952-53 (Accounts) ...	62.50	68.44
1953-54 (Estimates) ...	67.83	67.76
1953-54 (Revised) ...	70.46	72.06
1954-55 (Budget) ...	72.38	72.22

It will be seen that the difference in receipts between the revised estimates for 1953-54 and the budget estimates for 1954-55 is of the order of Rs. 191 lakhs. Dr. Jivraj explained that this was mainly due to the proposed withdrawal of Rs. 250 lakhs from the State Development Fund in 1954-55, as against Rs. 50 lakhs in 1953-54. The estimates for the current year take into account receipts from Estate Duty to the extent of Rs. 25 lakhs. The other differences between the revised estimates for 1953-54 and the budget estimates for 1954-55 on the receipts side are: a decrease of Rs. 46 lakhs in the State's share of the Union excise duties, an increase of Rs. 29 lakhs in "land revenue," a decrease of Rs. 160 lakhs under "agriculture" due mainly to the absence of transactions in fertilisers and an increase of Rs. 115 lakhs under "civil works." Although the overall difference between the 1953-54 revised estimate of expenditure and the 1954-55 budget estimate shows only a slight variation, there are, as Dr. Jivraj explained, substantial differences under individual heads. These differences include: an increase of Rs. 48 lakhs under "land revenue" on account of new schemes for survey; an increase of Rs. 58 lakhs under debt charges; an increase of Rs. 78 lakhs under "general administration," partly due to the National Extension Service, an increase of Rs. 135 lakhs under "education," a decrease of Rs. 230 lakhs under "agriculture" partly on account of absence of transactions in fertilisers, an increase of Rs. 202 lakhs on "electricity schemes," a decrease of Rs. 104 lakhs under "famine" and an increase of Rs. 70 lakhs under "community development projects."

A notable feature of the Bombay Government's budgets is that the capital expenditure shows a steady increase. In 1952-53, it amounted to Rs. 11.38 crores and was met through loans (Rs. 3.67 crores), withdrawal from Development Fund (Rs. 2.50 crores), and the balance from the Central Government's loans and other funds. The revised estimate for 1953-54 places capital expenditure at Rs. 11.81 crores, which will be financed through loans (Rs. 5.50 crores), loans from the Central Government (Rs. 4.96 crores) and withdrawal from State funds (Rs. 1.24 crores). A somewhat more ambitious programme has been drawn up for 1954-55. The total capital expenditure is placed at Rs. 18 crores. This includes Rs. 7.86 crores for irrigation works, Rs. 3.44 crores for electricity schemes (inclusive of Rs. 1.27 crores for the Koyna project), Rs. 2.50 crores for buildings and roads, Rs. 1.50 crores for rehabilitation of displaced persons, Rs. 1 crore for investment in the Bombay State Road Transport Corporation, Rs. 64 lakhs for water-supply schemes and Rs. 51.66 lakhs for tube-well scheme. These capital projects will be financed by the Central Government to the tune of Rs. 7.28 crores and by the withdrawal of Rs. 2.50 crores from the Development Fund and of Rs. 0.32 crore from other funds. There is thus a deficit of about Rs. 8 crores in the capital budget, which, it is stated, will be met by raising a development loan and from past balances.

A matter on which the State deserves to be congratulated is the successful manner in which it has implemented its part of the Five-year Plan. The State's share of the total outlay on the Plan is Rs. 146.3 crores. During 1951-52 and 1952-53, it spent Rs. 23.1 crores and Rs. 28.3 crores, respectively, on implementing the various aspects of the State's share of the Plan. In 1953-54, such expenditure is estimated to reach Rs. 31.5 crores. All this expenditure has certainly enabled the State to make steady progress on a wide front, particularly on the agricultural front. A large area has been brought under irrigation. The targets for agricultural production are now within measurable distance. If they have not already been reached, it is due to the severe scarcity conditions which the State witnessed in recent years. In rice production, the State bids fair to exceed the target. Although the day of complete decontrol has not yet arrived, rationing has been withdrawn or liberalised in most centres where it had been introduced. Roads are being laid at a rapid pace. Although this is a sphere where even a high level of expenditure would be too little, it is encouraging to find that actual expenditure will be well above the level provided in the Plan. Whether as part of the Plan or otherwise, some fillip has been given to industrial production through the grant of loans to industries, particularly small-scale industries. In order to aid industries more effectively, the State has set up a State Financial Corporation, in which the State's share of the Rs. 1 crore capital structure is Rs. 31 lakhs. Although expenditure on the Plan has been incurred according to schedule, one would like to know whether the actual results achieved are worth the money that has been spent. No precise data are available either in the Finance Minister's speech or in the budget paper to judge these results. It is the duty of the members of the legislature to scrutinise carefully the expenditure that has already been incurred and find out whether there has been any wastage and, if so, to what extent.

The Finance Minister has provided for Rs. 32.8 crores to be spent on the Plan in 1954-55. This amount, together with the amounts already expended on the Plan, would leave only about Rs. 30 crores to be found in the final year of the Plan. This should not, as the Minister admitted, "present a difficult task," considering the large amounts that the State has already found for the purpose of carrying out the Plan. Only, it would mean that all the reserves would have been exhausted by then, that the State's indebtedness would have gone up substantially and that, in course of time, it would necessitate, for want of funds, a postponement or at least restriction of expenditure on certain very necessary activities, such as education and public health. It is against this background that one should consider the loss of revenue through Prohibition.

COMMODITIES REACT ADVERSELY TO BUDGET PROPOSALS

LIFE INSURERS REDUCE PREMIUM RATES

THURSDAY, 5 P.M.

THE taxation proposals made by Mr. Deshmukh in his budget for 1954-55 did not come as a surprise to markets in this city. Even 24 hours before he announced them to the House the markets were agog with rumours, most of which turned out to be correct. In fact, as readers will recall, in the afternoon of last Thursday itself, textile, cement and rayon shares were hammered down, in expectation of excise duty on the products of their respective industries, with the result that there was a sizable fall in prices. This trend continued for a while even after the budget proposals were known. It may be argued that, if these proposals had been discounted in advance, share values could not have declined further after the budget was out. But the fact is the market had become heavily overbought and the bulls, who had increased their commitments in expectation of the Finance Minister plumping in favour of heavy deficit financing, decided to cash in, especially as the transfer books of a number of companies, the shares of which are the leading counters, were scheduled to be closed. Operators were reluctant to enter into fresh commitments, as they knew they would have to pay heavy budli rates on the settlement day, which fell a day after the budget, on account of transfer charges. Once this technical factor was out of the way the market presented a steady trend which later yielded place to a distinctly buoyant undertone.

MARKET GOSSIP

• • • •

Excepting for the increase in excise duty on cotton textiles which is not fully compensated by the abolition of import duty on cotton, there is little in the budget that could be regarded as bearish. On the contrary, the decision to raise resources through deficit financing may be regarded as a somewhat bullish factor. But one should not exaggerate the inflationary implications of this method. The extent of increase in money supply will hinge on the progress of the implementation of the Plan. If the past is any guide, the increase may not be as large as is envisaged by Mr. Deshmukh. Again, it is well to remember that the Government may, at any time, take countermeasures to keep under control the effects of inflationary finance. The imposition of excise on a few new articles and the enhancement of that on cloth, the increase in import duties on betelnuts, and the hint that liberal imports will be allowed are, in fact, an indication of the Finance Minister's awareness of the need to keep prices under check. The upward trend in Indian cotton prices, for instance, has already been brought under control by the increase in the excise duty on cloth and by the abolition of the import duty on foreign cotton, coupled with permission given for unlimited imports of foreign cotton. The excise duty on soap and the refusal of the Government to reduce the export duty on castor oil are also evidently meant to keep the prices of vegetable oils under check. The increase in import duty on betelnuts is an instance to show that the Government will not permit middlemen to earn large profits at the expense of consumers.

• • • •

How will the increase in excise duty on cloth and the abolition of import duty on cotton affect the cotton textile industry? The Finance Minister expects to lose Rs. 4 crores following the abolition of import duty on cotton but hopes to raise Rs. 6.5 crores through the increase in excises on cloth. Thus, the industry is a net loser to the tune of Rs. 2.5 crores. But, in actual practice it may be a little more, that is, Rs. 3 crores to Rs. 3.5 crores. The net effect of the variations of these duties on the different groups of cloth according to counts is difficult to determine. But a rough calculation reveals that the superfine cloth will have to bear a net increase in its burden to the tune of 2 to 2.5 pies per yard. This means that manufacturers of superfine goods will be hard hit, except to the extent they succeed in exporting their products. The manufacturers of *dhotis*, however, may be able to pass on a part of the extra burden they are now being called upon to carry to consumers, inasmuch as supplies of *dhotis* are not plentiful and there is no control on prices. Fine counts, made out of foreign cotton, actually get a net relief of about 2 pies per yard and, to this extent, the injustice done last year when the excise was converted from an *ad valorem* duty to a specific duty has been undone. The abolition of import duty offers only a limited relief to medium counts but that is negligible as compared with the increase in excise duty. In the case of coarse counts, there is no relief at all but a rise in its burden. The effect of these changes will not, however, be appreciable on those mills as, for instance, Bombay Dyeings, which export the bulk of their production. In fact, a general outcome of the steps now taken by the Government will be a tendency among the mills to export as much cloth as possible.

• • • •

The Finance Minister's analysis of the ways and means position of the Government and indication of the future borrowing programme have had no perceptible effect on the Gilt-edged market. The trend is quite steady, though the volume of business is small. This is only as it should be, for the Finance Minister does not propose to borrow more than Rs. 75 crores, of which Rs. 48 crores will be towards repayment of two loans that mature this year. In other words, he has no intention of depleting the resources of the capital market except to the extent of Rs. 27 crores. Thus, he has in mind only a modest borrowing programme, which he can easily fulfil without trying such artificial methods as a reduction in the Bank rate. It is to be hoped that the Finance Minister will realise that, ultimately, artificial stimulation of the capital market does more harm than good to the economy and that he will not succumb to the theory that lower interest rates are necessary for inducing business activity. If he were to reduce the Bank rate at a time when he is contemplating deficit financing on a large-scale, he would simply be adding fuel to fire. In a semi-developed country such as India, the effect of cheap money policy will be of limited and passing nature. Moreover, when the time for a readjustment comes, as it is bound to, the Government will be faced with strong opposition from the vested interests which thrive under a cheap money policy. It was only two years ago that India found how difficult it was to readjust interest rates in an upward direction.

• • • •

It is too early to anticipate the terms of the new loan. But, in the light of what has been stated above, they cannot differ very much from the current yields. On this basis, it looks as though the new loan will be a 10-year one, carrying interest at 3½ per cent. and issued at a discount of about a couple of rupees.

• • • •

The artificial silk yarn market was the worst to suffer from the Central budget proposals. Immediately following the imposition of an excise duty of 18 pies and an additional excise of 3 pies per yard on art silk fabrics, the yarn market was subject to a stampede of selling and values sank heavily. Art silk yarn (150D) for March delivery, for instance, was hammered down to Rs. 750 per bundle of 200 lbs. on Monday, as against Rs. 790 on Saturday, that is, before the announcement of the budget proposals. Spot prices also suffered losses. Traders in yarn are greatly intrigued at this fresh heavy impost of 21 pies for yarn on art silk fabrics which, they fear, would lead to drastic curtailment of demand for yarn. Already, the small art silk weaving mills of Ludhiana have closed down. Several mills in Surat it is stated, propose to close down. The Textile Manufacturers' Association of Amritsar has decided to do likewise with effect from 10th April next, if the Centre does not withdraw the proposed excise duty on art silk fabrics.

The levy, it is pointed out, has imposed a burden of 10 to 25 per cent. on most of the art silk varieties, which, in the present context of a buyers' market, has to be borne by the industry itself. Already, the industry is paying as much as 50 per cent. *ad valorem* import duty on art silk yarn (on the basis of market value), while the cotton mills are now enabled to get raw cotton imports duty-free. Further, the wage bill of the art silk mills is said to have gone up by about 120 per cent. in the past five years. These factors, coupled with the slackness in the indigenous and export demand, have caused considerable hardship to the mills, the majority of which consists of small units. The imposition of excise duty is, therefore, considered to be highly regressive. Criticising the levy, the Silk and Art Silk Mills' Association, Bombay, has urged, in the course of a telegram addressed to the Union Finance Minister, abolition of the excise duty. The new duty, it warns, will act like a strangle-hold on a struggling industry, as, in the present circumstances, the entire burden is bound to fall on the industry itself. Even the total profits of the industry, the mill interests point out, are far less than the amount estimated to be realised from the duty. The result would thus have, they say, an adverse affect on production and employment and deal a severe blow to the industry.

It is but natural that the soap industry should resent the levy of excise duty on soaps. Further, the levy itself is considered heavy. On the basis of a levy of Rs. 5-4 per cwt. on washing soap in bars of one pound and more in weight, of Rs. 6-2 per cwt. on other washing soaps, and of Rs. 14 per cwt. on toilet and other soaps, the levy will work out to 9 pies on a bar of one pound weight of washing soap, 4 pies on a cake of 6 ounces of washing soap and 3.3 pies on toilet soaps of 3½ ounces. Following this imposition, soap manufacturers have increased the selling prices of their products. Messrs. Lever Brothers (India) Ltd., for instance, have increased the price of Wheel oar soap of 1 lb. in weight from Re. 1-1-6 to Re. 1-2-6, Sunlight washing cake of 6 ozs. from As. 5 to As. 5-3, Lifebuoy soap of 6 ozs. from As. 5-3 to As. 5-6 and Lux toilet soap of 3½ ozs. from As. 5-9 to As. 6. Messrs. Tatas, the other important manufacturers of soaps, have also decided upon a similar increase in prices. It is hardly five months since the prices of soaps were first reduced. It is unfortunate that there should now be a restoration of prices almost to their original levels. The increase in selling prices, however, is not proportionate to the incidence of the levy; rather, it is less. Thus, a major portion of the levy has been passed on to consumers, the rest being borne by the manufacturers. A significant feature to be noted, in this connection, is that soap produced by cottage industry is not subject to the levy and, therefore, it gives a price advantage to this soap. This is only an extension, although in a restricted manner, of the principle adopted in the textile industry to protect the handloom weavers against the mills.

• • • • • •

Now that the prices of groundnut and other edible oils are declining and that, although the import of palm oil is not placed on the O.G.L., its import being liberally allowed, a pertinent question that may be asked is: Will it not be possible for the manufacturers to bear the levy entirely? It is true that there are one or two efficient firms which can afford to bear it, but it is contended that the industry, as a whole, cannot. There are many marginal firms in this industry and it is feared that the present levy will affect them most, unless they try to minimise their cost of production by rationalisation. It is further pointed out that, latterly, the demand for soaps is on the downtrend. Soap production has, in fact, gone down from 85,000 tons in 1952 to 80,000 tons in 1953.

• • • • • •

It may be argued that the demand for soap is inelastic, in that those who have acquired the habit of using soap will be reluctant to forgo the use of this article. That may be so only in the urban areas, but the demand for soap is certainly elastic in rural areas. The soap interests, therefore, urge the Government to reconsider the position and abolish the levy. They point out, in this connection, that the *per capita* consumption of soap is only 0.75 lb. per annum, as against 22 lbs. to 23 lbs. in western countries, and that, unless soap is made available at the cheapest possible rates, there is no likelihood of a rise in the *per capita* consumption of this article. The popularisation of the use of soap, they say, is vital even to the preservation, let alone improvement, of the health of the people. It should be treated on par with other essential articles of consumption, and not as a luxury, in the levy of duties.

• • • • • •

With the increase in the preferential rate of import duty on betelnuts from As. 9½ to Re. 1 per pound, betelnut prices have staged a sharp rise. The enhanced duty per Bengal maund comes to more than Rs. 82-4. Singapore (split) betelnut, for instance, has shot up from Rs. 95 to Rs 112. Penang (split) has advanced from Rs. 90 to Rs. 105 and whole from Rs. 100 to Rs. 120. Mangalore whole new crop has rallied Rs. 25 to Rs. 150. Prices would have advanced still further had it not been for the issue of licences for the import of betelnuts on a liberal basis to establish importers as well as newcomers. Although market circles admit that there is a case for increase in duties, as the profit margin on imported betelnuts range from 25 per cent. to 40 per cent., they contend that the increase in duty by over 68 per cent., as it is in the present case, is unwarranted. The aggregated value of betelnuts imported in 1952-53 was Rs. 3.6 crores, as against Rs. 5.78 crores in 1951-52. The value of imports during April-October, 1953, was Rs. 1.9 crores as against Rs. 2.5 crores in the corresponding period of the previous year.

A veritable bombshell has been thrown into the insurers' camp by the decision of the New India Assurance Co., Ltd., to effect substantial reduction in its premium rates with effect from 1st March, 1954. The reduction varies from about two to ten per cent. in certain classes of endowment policies to as much as 25 per cent. in some classes of whole life policies. The fact is, according to insurance circles, that, in certain tables, the reduction is too attractive to be brushed aside as a minor readjustment in premium rates. There is, therefore, no doubt that the decision will have far-reaching repercussions on insurance. Already, other insurers are perturbed. They are holding feverish parleys with their Board of Directors, in order to act, at least, in pure self-defence. They have asked their learned pundits in that esoteric science which deals with life and death in the aggregate, namely, the actuarial science, to commence working on a downward revision of premium rates. Very soon, life insurance premium rates will be marked down—and marked down substantially. There is, of course, no knowing whether it will stop there, or it will be but a prelude to a calamitous rate war.

• • • • • •

In the meanwhile, some insurers are asking the question whether it is right for an insurer to take so momentous a step in such a unilateral fashion. Whether it is in strict conformity with

EQUITIES CLOSE FIRM

TATA DEFERREDS TOUCH NEW HIGH SINCE JULY 1947

(From Our Own Correspondents)

BOMBAY, 4th *March*

THE Stock Exchange witnessed a remarkable steadiness in equities during the Budget week. There was, of course, a fair-sized liquidation in two sessions of the week, the one on Friday preceding Budget day and the other on the following Monday. But the liquidation did not cause such serious erosions in equity values as to undermine the confidence of operators. For the market staged a marked recovery in the last two sessions of the week with the result that *most equities closed on a firm note* with fair gains over a wide front.

The Budget proposals themselves did not cause any big surprises or upsets, because most of the proposals were well anticipated in the market a few days in advance. Though the levy of excise duty on cotton cloth, art silk fabrics and soap was viewed with a certain amount of disappointment, the relief granted by way of abolition of import duty on raw cotton was well received. Further, the Finance Minister's encouraging account of the general economic situation, implications of deficit financing, absence of any direct taxation and the prospects of setting up two Industrial Development Corporations *imparted strength to the market.* Although most of the budget proposals were, as already stated, well anticipated, the operators thought it wise to lessen their commitments before Budget day. This accounted for the liquidation on Friday last. If the market failed, as it did, to stage a quick recovery after the announcement of the Budget proposals, it was due to apprehensions of heavy carry forward charges in the forthcoming settlement, in view of the closure of books by several companies. The oversold position on Monday attracted heavy short covering and replacement buying on Tuesday and today, which paved the way for a sizable recovery under the leadership of Tata Steels. The market remained closed yesterday on account of *Mahashivarathri.*

In the steel section, Tata Deferreds opened the week at Rs. 2,136-4 and retreated to Rs. 2,123 on pre-Budget liquidation. But in the immediate pre-Budget session and in the special Budget session the loss was more than retrieved when the scrips touched a high of Rs. 2,170 in the Budget session. *Fears about heavy carry-over charges* in the coming settlement acted as a damper and in the consequent realisation, Deferreds touched a low of Rs. 2,111-4 on Monday. But revival of speculative buying and bear covering lifted them up to Rs. 2,177-8 today—*a level not seen since July, 1947—before closing at* Rs. 2,175. Tata *Ordinaries* came up to Rs. 368-4 at the close, after receding to Rs. 356-4 on Monday, thus recording a rise of Rs. 4-12 over the week. Indian Irons advanced from Rs. 30-2 to Rs. 30-10 in the Budget session, but a steep fall occurred on Monday when they dropped to Rs. 29-3. In the subsequent recovery, the shares could not wipe off the entire loss and they closed at Rs. 29-10 with a loss of As. 8 over the week.

The abolition of import duty on raw cotton brought in substantial support to cotton textile mills, particularly those which export a substantial part of their production. Had it not been for the excise duty on cloth, the gains in equity values would have been more perceptible. Bombay Dyeings appreciated from Rs. 420 to Rs. 428-12 earlier in the week. After a dip to Rs. 405 on Monday, they came up to Rs. 436-4 before closing at Rs. 428-12. The Company has announced today a final dividend of Rs. 12-8 per share and a bonus of Rs. 2-8 per share, as against the corresponding distribution of Rs. 12-8 without any bonus in the previous year. This announcement was not well received by the market for two reasons: (1) it fell short of market expectation of a final dividend of Rs. 17-8 and (2) the distribution has been split up into dividend and bonus. Reflecting this disappointment was the initial drop today from Rs. 436-4 to Rs. 423-12. But the subsequent recovery to Rs. 428-12 was due to reports that the Company's project for manufacture of hydrogen peroxide, in collaboration with a British firm, had reached an advanced stage and that the Directors' report would throw full light on this. It is also rumoured that the shareholders of Bombay Dyeing would be allowed to subscribe to the capital of the new project, by issuing the shares of the latter as bonus to them.

Among other textile shares Kohinoors moved up from Rs. 315 to Rs. 322 on Saturday, but dropped to Rs. 311-8 on Monday. The subsequent recovery to Rs. 319-8 at the close was not marked, because of reports that the levy of excise duty on art silk fabrics would affect its earnings in the current year, as one of the units of the Company's mills is entirely producing art silk fabrics. The declaration of a higher final dividend of Rs. 14, as against Rs. 12 in the previous year, was greeted by Centurys, *with a gain of Rs. 10 over the week* to Rs. 324-8. It will be noted that these shares, which had been lagging behind Kohinoors, have *gone ahead* of the latter this week. Standards were steady with a rise of Re. 1-14 to Rs. 326-14. The Company has maintained the dividend for 1953 at Rs. 20 per share. Svadeshis added Rs. 5 and closed at Rs. 295-8 and Swans Rs. 7-8 at Rs. 357-8. Central Indias, however, declined by Rs. 3 to Rs. 181-8, Finlays by Rs. 2 to Rs. 270, Gokaks by a rupee to Rs. 269 and New Greats by Rs. 2-8 to Rs. 165. Sassoon Silk dropped As. 14 to Rs. 18-12.

Bank shares were steady with fractional rise in values over the week. Barodas were better by As. 8 at Rs. 109-8, Centrals by As. 4 at Rs. 59 and their New shares by as much at Rs. 61-8, Indias by As. 8 at Rs. 153-8 and United Commercials by As. 4 at Rs. 42-12. Imperial Fully Paids were, however, a shade lower at Rs. 1,800 and the Contributories at Rs. 436-4.

A sharp rise of Rs. 415 to Rs. 7,500 in Orientals was a feature in the insurance section. New Indias, added As. 4 to last week's gain and closed at Rs. 48-4. British India Generals were better by As. 2 at Rs. 13-2.

The miscellaneous section showed a mixed pattern. However, Bombay Burmas, were conspicuous with a rise of *Rs. 10* to Rs. 407-8, on continued demand inspired by encouraging reports about the Company's timber trading. After being marked down from Rs. 153 to Rs. 147-8, A.C.C. appreciated to Rs. 154, despite the levy of an excise duty of Rs. 5 per ton. Alcocks reacted from Rs. 363-12 to Rs. 336-4. Belapurs could gather no more than As. 8 to Rs. 259. B.B. Petrols were steady at Rs. 3-9½, while B.I.Cs looked down from Rs. 9-9 to Rs. 9-6½. National Rayons suffered a decline of Rs. 8 to Rs. 154 *cum-div. Premier Constructions* moved up by Rs. 2 to Rs. 126-4. Scindias, after being listed *ex-div.* at Rs. 17-4, as against Rs. 18-3½ *cum-div.* last week, improved to Rs. 17-14½ *ex-div.* Tata Chemicals continued its upward trend with a further rise of As. 7 to Rs. 14-8. Tata Oils reacted to the levy of excise duty on soap with a drop of As. 12 to Rs. 39-8. Wimcos were unchanged at Rs. 210.

• • • • •

Calcutta Stock Exchange

CALCUTTA, 2nd *March*

The strong bullish fervour that dominated the Calcutta Stock Exchange last week yielded place to irregular conditions during the week under review. This was due to the mixed feelings with which the operators received the Central Government's budget. One section among them was jubilant over the Finance Minister's encouraging account of the general economic situation and announcement of a larger dose of deficit financing to the tune of Rs. 250 crores during 1954-55. It viewed with satisfaction the absence of any upward revision in income-tax, corporation tax and export duty on tea. Another section, however, was greatly disappointed at the levy of additional excise duty on mill-made cotton piecegoods and new ones on rayon fabrics, cement, footwear and soap. Absence of abolition or reduction of export duty on jute goods was also viewed with some disappointment. But abolition of import duty on cotton was welcomed. The dividend feelings in fact reflected in the irregular movement of values created by bouts of selling and buying. Closing quotations, on balance, revealed sprinkling of both gains and losses over the entire list.

The earlier sessions of the week witnessed a fairly large turnover in jute shares on renewed support from bulls. Towards the later sessions, however, profit-taking set in and the previous gains of several counters were completely erased, while a few scrips continued to remain firm till the close. Over the week, Kamarhatys lost 6 points to Rs. 196. Unions dropped Rs. 3 to Rs. 168. Nationals and Howrahs receded by As. 9 to Rs. 25 and Rs. 25-9, respectively. Nellimarlas declined by As. 6 to Rs. 12-4. Agarparas and Presidencys were lower by As. 4 each, the former at Rs. 16-12 and the latter at Rs. 5-9. Kelvins on the other hand, received good enquiries and put on Rs. 5 to Rs. 235. Chitavalsas and Reliance were better by As. 2 each at Rs. 12-7 and Rs. 15-6, respectively. New Centrals were fully steady at Rs. 295 and Champdanys at Rs. 154.

In the coal section, Bengals evoked special buying support and picked up Rs. 6 to Rs. 520. Equitables advanced by Rs. 2-6 to Rs. 34-1. Sendras rallied As. 15 to Rs. 9-12. East Indias rose by As. 8 to Rs. 26-4 and New Beerbhooms by As. 3 to Rs. 18-6. Talchars, on the other hand, dropped As. 9 to Rs. 3-7. Central Indias shed As. 6 to Rs. 6-8. Burrakurs and Western Bengals fell by As. 4 each to Rs. 8-14 and Rs. 5-9, respectively. South Karanpuras were a shade easy at Rs. 10-2, as against Rs. 10-5.

Among engineering scrips, Indian Irons were subjected to nervous liquidation induced by unconfirmed reports that the increase in retention prices would not be appreciable. The quotation of this scrip tumbled down from Rs. 30-8 to Rs. 29-8. Marshalls were neglected at Rs. 6-13, as against Rs. 7-3. Braithwaite Indias, however, provided a bright spot and gathered As. 11 to Rs. 15-4. Kumaradhubis were also favoured As. 4 higher at Rs. 9-4. Jessop and Co. and National Irons gained As. 2 each to Rs. 27-6 and Rs. 6-6, respectively.

Mining shares ruled slightly easy. For want of support, Indian Coppers slided down by As. 3 to Rs. 3-3. Tavoy Tins declined by As. 2 to As. 14. Consolidated Tins lost an anna to Rs. 2-3.

Despite encouraging reports from local and London tea markets, and absence of an increase in export duty, as was originally expected, shares of tea companies failed to display an impressive performance, and fluctuations in prices were confined to narrow limits. The highlight was, however, provided by Hassimaras which, on special request, advanced by Re. 1-6 to Rs. 33-8. Banarhats were better by As. 5 at Rs. 410 and Hattikhiras by As. 4 at Rs. 14. Bishunauth, Brooke Bonds and Huldibaris improved by As. 2 each to Rs. 33-8, Rs. 12-2 and Rs. 24-8, respectively. But Basmatias dropped As. 10 to Rs. 34-6 Dufflaghurs As. 9 to Rs. 39-4, and Hantaparas As. 8 to Rs. 189. East Indias lost As. 2 to Rs. 19-4. Dhelakhats were a shade easy at Rs. 13-8.

The outstanding feature of trading in the paper section was the spurt of Rs. 3-8 to Rs. 60-8 in the price of Bengal Papers. Orient Papers and Shree Gopals improved by As. 4 each to Rs. 52 and Rs. 20-12, respectively. Titaghurs, on the other hand, drifted lower from Rs. 39-2 to Rs. 38-8. Stars lost As. 5 to Rs. 9-4.

Share values in the miscellaneous section showed a general tendency to decline. India Steamships fell by As. 8 to Rs. 8-12. British India Corporations receded by As. 6 to Rs. 9-5. Martin Burns and Rohtas decreased by As. 2 each to Rs. 21 and Rs. 12-4, respectively. British Burma Petroleums, Indian Coppers and Metal Boxes lost an anna each to Rs. 3-10, Rs. 21-1 and Rs. 17-11, respectively. Jardine Hendersons, however, met with investment support and moved up by Rs. 4-8 to Rs. 120-8. Similarly, Rallis India hardened by Re. 1-2 to Rs. 61-2 and Calcutta Landings by As. 14 to Rs. 21-14. National Tobaccos scored a gain of As. 2 to Rs. 11. Dunlop Rubbers were steady at Rs. 33-8 and Calcutta Electrics at Rs. 14-1. F. & C. Oslers were transacted at Rs. 11-10 *ex-div.*, as against Rs. 12-4 *cum-div.*

• • • • •

Madras Stock Exchange

MADRAS, 2nd *March*

The Madras Stock Exchange presented a mixed trend during this week. The *materialisation* of the apprehensions of levy of agricultural income-tax on plantation products, such as coffee, tea, rubber, and cardamom, and the imposition of extra sales tax of 15 pies on mill cloth, as well as additional Union excise duties on it induced longs to liquidate their positions, especially in certain planting shares. Although there was evidence of support at low levels, the market failed to gather strength. Consequently, the steady trend witnessed last week gave way to a generally easy tendency, with planting scrips in the lead. The textile section, however, came in for selective enquiry on better prospects of export demand. Miscellaneous scrips also received some support.

In the textile section, Bangalore Woollens shot up from Rs. 307-8 to Rs. 312-8. Saradas gained Re. 1-8 to Rs. 63-8. Rajalakshmis and Rangavilas rallied Re. 1 each to Rs. 101 and Rs. 49, respectively. Travancore Rayons and Janardhanas gathered As. 4 each to Rs. 8-7 and Rs. 72-8, respectively. Kotharis were higher by As. 2 at Rs. 11-14. Buckinghams, however, lost Rs. 4 to Rs. 131-8 and Radhakrishnas Rs. 2 to Rs. 167. Coimbatore Spinnings eased from Rs. 46 to Rs. 45. Maduras were down by As. 12 at Rs. 41-4 *cum-div.* Rubbers, among plantings, came in for considerable selling pressure. Cochin Malabars lost As. 6 to Rs. 6-10 and Thirumbadis As. 5 to Rs. 3-2½. Vaikundams and Pullangodes eased from Rs. 16-3 and Rs. 3-2½ to Rs. 16-2 and Rs. 2-15½, respectively. Malankaras were, however, higher by As. 8 at Rs. 37-4 and Mercars As. 4 at Rs. 3-10. Kailas gained an anna and a half to Rs. 4.

Teas presented a mixed performance. United Nilgiri Tea declined from Rs. 206 to Rs. 195. Nilgiri Tea lost As. 14 to Rs. 13 and Parksides As. 12 to Rs. 17-4. Kalasas fell down by As. 4 to Rs. 13 and Highland Produces As. 4 to Rs. 12-12. Mlamallays, however, shot up by Re. 1 to Rs. 41 and Twytords As. 4 to Rs. 15-12. Haileyburias rallied As. 2 to Rs. 16-11. Devoshalas were unchanged at Rs. 21-4, Devons at Rs. 18-12 *cum-right* and Emerald Valley at Rs. 5-1.

Coffee scrips were out of shape. Coffee Lands and Consolidated Coffees declined As. 2 to Rs. 8-10 and Rs. 15-13, respectively. Nilgiri Neerugundis eased from Rs. 3-13 to Rs. 3-9 and Puthuthotams from Rs. 3-4½ to Rs. 3-3. Shevroys were down by As. 1½ to Rs. 1-5½.

Among miscellaneous scrips, Rallis gained Rs. 3-8 to Rs. 59. Mettur Chemicals were higher by As. 2 at Rs. 6-3 and South Madras Electrics by an anna to Rs. 10-13. Mysore Chemical Manufacturings were up by As. 4 at Rs. 12-4. But for some of these scrips, the rest were either easy or dull. Aluminium Industries declined by As. 10 to Rs. 13 and India Cements by As. 5 to Rs. 18-6. Andhra Cement 'B' were lower by As. 2 at Rs. 11. Spencers changed hands at Rs. 16 *ex-div.*, as against Rs. 17 *cum-div.*

STANDARD MILLS

The financial results of the Standard Mills Co., Ltd. (Managing Agents: Messrs. Mafatlal Gagalbhai and Sons, Bombay) for the year ended 31st December, 1953 make impressive reading. The gross profit (after providing for managing agency commission) shows a rise of Rs. 8.14 lakhs at Rs. 39.18 lakhs. The provision for depreciation has been raised from Rs. 4.70 lakhs to Rs. 5.70 lakhs and that for special depreciation from Rs. 3.30 lakhs to Rs. 10 lakhs. The allocation to taxation has been stepped up from Rs. 7.50 lakhs to Rs. 11.50 lakhs. Consequent on these larger allocations, the Directors have not been able to strengthen the reserves, while last year they added Rs. 3 lakhs to the dividend equalisation fund and Rs. 1 lakh to the general reserve. The dividend on the 4 per cent. preference shares absorbs Rs. 48,000. The dividend on the ordinary shares has been maintained at Rs. 20 per share which requires Rs. 11.20 lakhs. The surplus left to be carried forward is Rs. 32,648, which compares well with Rs. 2,888 brought in.

NEWS IN BRIEF

THE Government of India has decided to permit export of chicory for the purpose of admixture with coffee.

The Central Tea Board has sanctioned a sum of Rs. 2 lakhs for the welfare of tea garden workers in Assam.

The amount of tax recovered by the Income-tax Investigation Commission, since it began its operations, is Rs. 8.86 crores.

The Government of Mysore has decided to conduct an unemployment survey with a view to collecting information on the nature and extent of unemployment in the State.

The Government of India may establish two new national laboratories, namely, an electronics and radio engineering research institute and a mechanical engineering research institute.

There are 13,477 miles of national highways in India. The State of Bombay tops the list with 1,546 miles, Uttar Pradesh and and Madhya Pradesh standing next with 1,390 and 1,199 miles, respectively.

The Government of India has decided to continue, till the end of June, 1954 the present system of free licensing of the export of certain varieties of paper and paper boards. *Free licensing of processed paper, strawboards, millboards and grey boards* and paper and boards manufactured by paper mills *was to have ended on the 28th ult.*

The Government of India has informed the International Wheat Council that it is not taking India's quota of one million tons of wheat under the International Wheat Agreement for the first year, namely, July, 1953 to June, 1954. Under the Agreement, India has to take its quota of wheat, only if the international wheat price reaches the fixed minimum.

The Government of India has decided to nationalise the mineral sands industry in Travancore-Cochin. A Central and State Corporation is to be formed to take over the industry. A provision of Rs. 20 lakhs has been made in the 1954-55 Budget estimates for this purpose. The Budget estimates also provide Rs. 10 lakhs for obtaining project reports on the prospects of manufacturing synthetic oil from lignite.

A Land Revenue Commission of seven members has been established in Hyderabad under the Hyderabad Tenancy and Agricultural Land Act. The Commission will advise the Government on fixing the extent of basic and family holdings and areas to which they applied, on problems relating to the acquisition of lands by Government, on prevention of fragmentation and generally on agrarian policy as a whole.

The Pharmaceutical Enquiry Committee is now touring Assam where it is discussing with the State Government problems relating to the pharmaceutical industry and visiting pharmaceutical factories, other institutions and the drug plantations within the State. The Committee will visit cinchona and drug plantations in Darjeeling District on 7th, 8th and 9th March and the Sindri Fertilisers and Chemicals Ltd., Sindri, on 11th and 12th March, 1954.

The Government of India has decided to issue licences for the import of betel-nuts on a liberal basis to established importers as well as newcomers. Established importers who have already applied for or obtained import licences for the current half-year may apply for additional licences to the licensing authorities at the ports. Newcomers who have previous experience of dealing in betel-nuts may also apply to the licensing authorities at ports.

Electricity generated by 637 public utility power stations in India during November, 1953, amounted to 563 million kw. h., of which 455.7 million kw. h. were sold to ultimate consumers. There was a decrease in production of about 20 million kw. h. as compared to October, 1953. The corresponding figures of output and sale for November, 1952, were 629.7 million kw. h. and 436.4 million kw. h. and for November, 1939 216.6 million kw. h. and 181.3 million kw. h., respectively.

A new cleaning device, the industrial vacuum cleaner, developed by Messrs. Robert Munster, Muttenz, Basel, Switzerland, has been gaining popularity all over the world and has been introduced in India. The cleaner, which is the result of careful research, is expected to satisfy the long-felt need of the industries for a device to keep their machines clean and smooth. The use of the vacuum cleaner makes it unnecessary for plants to be stopped for cleaning purposes which would result in loss of production.

The trend of the employment situation in January, 1954 conformed more or less to the pattern as it was in the same month of the years 1952 and 1953. 19,254 vacancies were notified to the Employment Exchanges and 13,606 applicants were placed in employment, as against 20,344 and 15,215, respectively in December, 1953. The total number of unemployed persons on the registers of the Exchanges on 31st January, reached the figure of 534,317. A study of statistics relating to the educated unemployed disclosed that at the end of 1953, the number of such persons requiring employment assistance was 163,176, as compared with 120,019 at the end of December, 1952.

The Government of India announced on 15th February, 1954, that it had decided to import sugar and would consider offers of foreign sugar of polarisation 99.8 and moisture content not exceeding 0.2 per cent. Several offers have since been received in which polarisation of less than 99.8 has been specified. The Government wishes to make it clear that, while polarisation of 99.8 is preferred, it would be prepared to accept a lower polarisation also, provided the price and other terms are attractive and the quality is otherwise acceptable to Indian consumers.

The Government of India has agreed to grant a loan of over Rs. 1 crore towards the Rs. 9-crore Matatila Dam Project during the next financial year. According to present plans, the U.P. Government, which is bearing the entire construction cost of this dam, intends to levy irrigation rates in the two States of Vindhya Pradesh and Madhya Bharat, which will be directly benefited. The proposed dam is to be built on the river Betwa and will be constructed partly in Madhya Bharat and partly in U.P. territory. The capacity of the dam is estimated at 45,000 million c. ft. According to details available, the dam will be about three miles long with a maximum height of 160 feet. In all, about 316,000 acres of land will be irrigated, out of which 9,000 acres will be in the Bhander and Lahar tehsils of Madhya Bharat and the rest of the area lies in U.P. and Vindhya Pradesh to the extent of 264,000 and 43,000 acres, respectively.

From Abroad

Negotiations for a long-term Sino-Burmese trade agreement are now in progress at the usual diplomatic level.

One of the world's biggest sugar refineries, capable of treating 500,000 to 600,000 tons of cane a year, will be established in the next few years in the north-west of Madagascar.

The statutory control on distribution of newsprint in the U.K. may be removed next year, if an additional 100,000 tons were made available. At present, supplies are not sufficient to permit lifting of the control.

A delegation of U.K. industrialists will visit Burma this month to discuss the Burmese Government's long-term plans for developing the resources of the country and consider how best British industry can contribute towards the development.

A programme of economic and industrial development of war damaged Burma has just been drawn up. The plan, which was thrashed out at a nine-day conference of experts, will now go before the Economic and Social Board and the Cabinet for final approval.

The foreign trade surplus of the U.S. last year amounted to $500 million, the lowest for any post-war year. Exports of non-military goods and services aggregated $17,000 million, a decline of $1,000 million from 1952. Payments for imports and services, on the other hand, rose by $700 million to about $16,500 million.

Indonesia will export 20,000 tons of tin to the U.S. during the next 12 months, under the new contract between the two countries to be concluded shortly. The price charged to the U.S. will be the average market price in New York for a period of 30 days after delivery of the tin in New York.

The Norwegian State Railways have taken delivery of the first of three locomotives, said to be the most powerful in Europe. The locomotives have engines capable of developing 5,000 h.p. and are designed to haul 65 loaded ore wagons weighing 3,100 tons. The locomotives are built in Sweden.

Sales of Goodyear Tyre and Rubber Company of U.S.A. reached an all-time high for the third year in succession during 1953. The sales during the past year amounted to $1,210.51 million. Net earnings touched a record with group income aggregating $49.32 million, or $10.28 per common share.

The General Electric Company of U.S.A. is now producing the most powerful airborne search radar yet developed. The new equipment is being built under a multi-million dollar contract with the U.S. Navy's Bureau of Aeronautics. The new radar is about twice as powerful as previous airborne search units.

The International Bank for Reconstruction and Development has given a loan of $3.8 million to Turkey for port development. This supplements the loan of $12.5 million made in July, 1950, to finance foreign exchange costs involved in work to build new ports and improve existing port establishments. The present loan is for a period of 21½ years, and carries interest of 4½ per cent., including the usual one per cent. commission. Amortisation will begin on 1st April, 1956.

Financial and trade negotiations between the United Kingdom and Hungary, which were broken off by the British Government in 1949, will be resumed in London on the 15th inst. Financial questions for settlement include British claims under the economic clauses of the peace treaty. It is pointed out in London that, in the matter of trade, both sides would welcome an increased exchange of commodities, Hungary notably being understood to require raw materials for industry.

The International Bank for Reconstruction and Development has granted a loan of $18.79 million to the Brazilian Traction Light and Power Company for financing construction of a thermal electric power plant. The loan is for a period of 20 years, bears interest at the rate of 4½ per cent. per annum, and is guaranteed by the Brazilian Government. Amortisation of the loan will begin on 1st September, 1955.

PERSONAL

MR Louis St. Laurent, Prime Minister of Canada, who arrived in India last week in the course of his six-week world tour, left for Colombo early this week.

Mr. T. C. Puri, I.C.S., Deputy Secretary, Ministry of Works, Housing and Supply, has been appointed to officiate as Joint Secretary of the Ministry vice Mr. S. Ranganathan, who is officiating as Secretary.

Mr. D. V. Potdar, Working President of the Maharashtra Chamber of Commerce and Industry, has been appointed member of the Western Area Local Board of the Reserve Bank of India.

Mr. W. R. Natu, former Executive Director, International Monetary Fund, who has been appointed member of the Forward Markets Commission, Government of India, assumed charge of his office last week.

Mr. Shankar Prasad, Chief Commissioner of Delhi, has been appointed Principal of the I.A.S. School. Mr. A. D. Pandit, Chief Commissioner of Ajmer, has been appointed Chief Commissioner of Delhi.

Mrs. Durgabai Deshmukh, member of the Planning Commission, has relinquished her membership of the Commission to take up the post of whole-time Chairman of the Central Social Welfare Board from the 1st inst.

Mr. George Wood, Vice-President of Messrs. Thos. W. Ward Ltd., Sheffield, England, and Chairman of Messrs. Thos. W. Ward (India) Ltd., Bombay, has arrived from the U.K. on a short visit to India en route to Australia.

Mr. Chinoobhai C. Jhaveri, member of the Export Advisory Council, has been elected President of the All-India Exporters' Association, Bombay, for the current year. Mr. Purshotamdas R. Ashar has been elected Vice-President.

Mr. G. M. Mackinlay, Director, Messrs. Jardine Henderson Ltd., Calcutta, has been elected to succeed Mr. E. J. Pakes as President of the Bengal Chamber of Commerce and Industry for the year 1954-55. Mr. G. A. S. Sim, Director, Messrs. Andrew Yule & Co., Ltd., has been elected Vice-President. The other members of the Committee are: Mr. D. Beath of the Chartered Bank of India, Australia and China, Mr. R. H. D. Campbell of Messrs. Shaw Wallace & Co., Ltd., Sir Allan Eliott Lockhart of Messrs. Gladstone Lyall & Co., Ltd., Mr. K. R. Fettes, of Messrs. Gillanders Arbuthnot & Co., Ltd., Mr. N. D. Harris of I.C.I. (India) Ltd., Mr. O. T. Jenkins of Messrs. Balmer Lawrie & Co., Ltd., and Mr. A. S. Officer of Messrs. Bird & Co., Ltd.

"COMMERCE" 1929

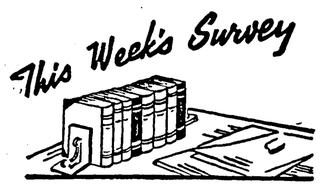
FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 9th *March*

The Central Budget

On the last day of last month, Sir George Schuster, the new Finance Member, presented, in the Legislative Assembly, the budget for 1929-30. It was the first occasion that Sir George was called upon to tackle the finance of a vast dependency where the success of the Minister lies not so much with himself as with the Providence that determines the seasons. If the country is blessed with a succession of good monsoons, his task, no doubt, becomes comparatively easy; if not, difficulties beset his path. But Sir George is a financier of the first rank and he does not possess a lily-heart. "Difficulties," he says, "are also opportunities, for it is by those that the strength of a system is tested, and success in overcoming them may lead to its permanent strengthening." He recognises that the time before us is not one for the achievement of spectacular results—and he does not wish to claim credit for them, if they are achieved. His only ambition is to learn, when he lays down the reins of office, no matter whether during his regime the country encountered good season or bad, that he served India to the utmost of his powers and that in all that he did his main thought was for the interests of the people of India. A noble ambition, and, let us hope, when his task is done, he will be leaving behind him a nobler achievement to fully justify the high reputation he has won in the realm of finance. India till now has had one priceless possession in her credit with the outside world and the economic advancement of the country depends on the maintenance and use of this credit both within and without; and Sir George warns us that the economic foundations of this country must always rest upon political stability.

The National Bank of Australasia Ltd. has decided to finance the hire-purchase business which, in the past, did not form part of normal banking business, thus following the footsteps of the English, Scottish and Australian Bank Ltd., which established a hire-purchase department for purchasing articles and goods and then virtually re-selling them on terms to its customers. The National Bank of Australasia Ltd. will act as financial agent for a Sydney firm. It will take 800,000 ordinary shares of 5s. each in a £A350,000 issue by the firm. The firm will provide a full range of hire-purchase facilities throughout Australia.



POOLING OF BONUSES

THE Government of Bombay is determined to pursue its scheme of pooling and distributing bonuses on an industry-cum-region basis. It has proposed, through a Bill published in the *Bombay Government Gazette*, dated 24th February, 1954, to amend the Bombay Industrial Relations Act, 1946, to this effect. The Bill authorises the Industrial Court to frame a scheme for pooling amounts of bonuses and for distribution thereof through a Treasurer of Bonus Schemes, to be appointed by the Government. The Court will specify, among others, the following:

(1) The employers who are directed to pay the bonus, the basis on which the bonus is payable to them and the date on which the amount of bonus due by them shall be paid to the Treasurer;

(2) the employers who are not directed to pay bonus;

(3) the employees or class of employees amongst whom the amount paid to the Treasurer is to be distributed; and

(4) the conditions under which the employees will be eligible for the bonus or debarred from getting the bonus in whole or in part.

Provision is also made for crediting the unclaimed or any other surplus amount of bonus to the Labour Welfare Fund set up under the Labour Welfare Fund Act, 1953.

The statement of objects and reasons says that, when a claim for bonus is made on industry-cum-region basis, the award for payment is usually based on the results of the financial working of the industry. The employees in the loss-making units in the local area concerned are excluded from the benefit of receiving the bonus, even if the employees in the local area are willing to pool the bonus and distribute it equally among all the employees, including those of the loss-making units, since the Court has at present no powers to order such pooling and distribution of bonus. The proposed amendment to the Act is to rectify the position, with a view to authorising the Court to frame a scheme for pooling the amounts of bonuses.

The proposed amendment is, indeed, unfortunate. It is true that it will not in any way add to the liability of the employers to pay bonus under the award. But the principle on which the scheme is based is unsound. It drives a wedge into the productivity of workers which is already low and places a premium on inefficient mills. In effect, it seeks to subsidise inefficient concerns at the expense of the more efficient ones. It will not help usher in healthier industrial relations, but would set in motion such demands in almost all industries, thus leading to more industrial unrest. Certainly, it would have been better if the Government had advocated a better wage policy in place of the bonus scheme. In the alternative, the bonus scheme, which is part of the wage policy, should have been based on the productive idea so as to guarantee in advance the intimate coupling together of individual effort and remuneration which alone can provide spontaneous incentive to increased productivity. It is to be hoped that the Government will not go ahead with the Bill in the teeth of all logical opposition to it.

This is not all. The Government has also proposed to amend sections 114 and 115 relating to registered agreement, settlement, submission or award to which a registered union is a party. According to a recent judgment of the Bombay High Court, it has been held that such an agreement or settlement, submission or award to which a registered union is a party would be binding on the members of only that union and not on the members of other unions. The present amendment seeks to amend the sections in such a way as to provide that they bind all the employees in the local area. A provision is also made for giving retrospective effect to amendments to sections 114 and 115. This, it is stated, arises from the need to preserve the binding character of all agreements, settlements, submissions and awards to which registered unions are parties and which may still be in force.

Even these amendments are unwarranted. They tantamount to coercing the members of the non-registered union to the authority of the registered union. It may be argued that this will help develop a single trade union for a unit or industry, as the case may be. But a pertinent question that may be asked is: Do the means proposed to be adopted justify the end sought to be realised? After all, only those trade unions which are developed under a democratic atmosphere can survive the test of time.

MADRAS BUDGET

In line with the budgets of most of the other Part A States, the budget of Madras for the year 1954-55 also discloses a deficit. The deficit amounts to Rs. 58 lakhs, with revenue estimated at Rs. 44.60 crores and expenditure at Rs. 45.18 crores. It is difficult to say whether this deficit is due to a fall in revenue receipts or a rise in expenditure. For the budget estimates relate to the Government of the new Madras State after the Separation of Andhra and as such comparative figures (revised) for the current year are not available. The deficit, which reflects the financial difficulties of the residuary State, is causing serious concern to the Government. Thus, the State's Finance Minister, Mr. C. Subramaniam, stated: "We have to take a crucial decision whether to follow the line of least resistance and give up the Plan or to make a determined effort to tap new resources so as to implement as much of the Plan as practicable."

Out of the deficit of Rs. 58 lakhs for 1954-55, Rs. 40 lakhs are to be covered by additional taxation, the balance being left uncovered. The new tax proposals contemplated in the budget are as follows:

(1) Surcharge on the total land revenue assessment on large holdings, the rate being calculated on a sliding scale; *pattadars* with a total assessment below Rs. 500 will be exempted;

(2) agricultural income-tax on plantation products such as coffee, tea, rubber and cardamom;

(3) betterment levy on holders of land benefited by Government irrigation works after 1st January, 1947;

(4) sales tax of 15 pies in the rupee at one point, in addition to the existing tax, on all mill-made cloth, including woollen and silk fabrics but excluding coarse cotton cloth of 16 counts and less; and

(5) inclusion of gold and silverwares and precious and imitation stones in the list of luxury articles, such as motor cars, which are now taxed at 6 pies in the rupee at one single point, in addition to the normal tax at all points; in addition, a higher rate of tax at another point is also proposed.

Considering the depletion of the Madras Government's cash balances in recent years and the none-too-comfortable financial position of the Centre on which the State can rely for larger financial assistance, the need for raising more resources within the State cannot indeed be disputed. But the point is that the Government is not tapping the right sources of revenue. Apart from persistently refusing to revoke prohibition which has denied to the Exchequer considerable revenue, the Government of Madras has come out with fresh tax burdens on the community. It is a pity that the Government should not have realised that, as it is, taxes have been loaded up to the last straw.

There is no justification whatever for the imposition of an additional sales tax of 15 pies per yard on mill-made textile fabrics. The Central Government has already enhanced the excise duty on superfine cloth by six pies to As. 2-6 per yard and on other varieties by three pies. As a result of this and also of the proposed increase in the rate of sales tax in Madras, the price of cloth in that State will rise by a further 21 pies per yard. This is, indeed, a heavy impost which, in the present context of the buyers' market, will have to be borne by the mills themselves. It looks as though the Madras Government is only too ready to sacrifice the mill industry in its anxiety to provide sustenance to handloom weavers.

Viewed from the angle of social cost involved also, the imposition of the additional sales tax on mill-made textile fabrics will be highly unjustified. The number of handloom weavers in the State of Madras is about 1.3 million which accounts for a bare 3.5 per cent. of the total population. In other words, for the sake of protecting this minority, the entire population, the majority of whom consists of people with very low incomes, has to pay a considerably higher price for mill-made cloth.

Considering, however, the difficult financial position in which the Madras Government is placed at present, the proposed agricultural income-tax on plantation products is certainly a fruitful source of revenue. It may even be said that the levy could have been introduced earlier, especially as the Travancore-Cochin Government had done so years ago. The new measure will no doubt adversely affect the plantation industries, what with increased labour costs and high incidence of Central income-tax —as much as 40 per cent. of the profits of tea estates is liable to income-tax—and the export duties such as the one on coffee. But one might ask: Is the Centre justified in imposing heavy burdens on plantation industry? The answer to this poser is not far to seek. Since plantation products are nothing but agricultural commodities, the State Governments should have the priority to tax this source. The Centre should, therefore, reduce the imposts it has placed on the plantation industry.

NATIONAL INCOME OF INDIA

A summarised version of the final report of the National Income Committee (now under print), released to the Press on Thursday last week, is published on page 410 of this issue. It will be seen therefrom that the national income of India has increased from Rs. 8,650 crores in 1948-49 to Rs. 9,530 crores in 1950-51, which represents a rise of 10.15 per cent. The increase in *per capita* income, however, has been less than proportionate, being 7.41 per cent., that is, from Rs. 246.9 to Rs. 265.2. Such is due to the advance of 2.55 per cent. in population; the population in 1950-51 was 359.33 million, as against 350.38 million two years before. This, incidentally, emphasises the increasing pressure of population on resources which must be limited if economic progress is not to be retarded.

The rise of 10.15 per cent. in the total national income during the year under review, as compared with 1948-49, should not, however, be taken to mean that there has been an appreciable improvement in the country's economic standards. For the major portion of the increase is accounted for by a rise in prices. The index of wholesale prices (Base: August, 1939=100) during 1950-51, for instance, was as high as 409.7, as against 376.2 in 1948-49, or an advance of 8.90 per cent.. The "real" increase in national income over the three-year period will thus be of the order of 1.25 per cent. However, judged against the background of the post-Partition difficulties and considering the inflation under which the country was groaning, even this small rise in national income is indeed creditable. With the increase in the tempo of economic activity under the Five-year Plan, the national income must have increased in the past three years.

A striking feature revealed by the estimates of income from different economic sectors during the period 1948-49 to 1950-51 is that the contribution from the agricultural sector (including animal husbandry, forestry and fishery) has gone up by a little more than 15 per cent., while that from mining, manufacturing and hand trades has risen by a bare 3.4 per cent. and the output from commerce, transport and communications by 5.6 per cent. One conclusion that can be drawn from these figures is that the agricultural community has benefited much from the rise in the prices of their products, while industrial and commercial sectors have been handicapped by the heavy cost structure, thanks to rise in raw material prices, labour charges and tax imposts. The rise in the net output from "services" has also been less, being 7.5 per cent., as against the rise of 8.9 per cent. in the price level.

Another striking feature revealed by the estimates relates to the share of the Government in domestic product. The net output of Government enterprises and administration during 1950-51 as compared with 1948-49 was higher by 11.9 per cent. at Rs. 720 crores, as against an increase of 9.9 per cent. in that of the private sector, from Rs. 8,030 crores to Rs. 8,830 crores. Yet another feature is the rise of 11.6 per cent. (to Rs. 770 crores) in Government draft on private income. This increase is accounted for largely by indirect taxes, which have risen from Rs. 360 crores to Rs. 430 crores. Direct taxes, on the other hand, have fallen from Rs. 240 crores to Rs. 230 crores. The increasing reliance of the Government on indirect taxes has become inevitable, in view of the already high level of direct taxation. But it is needless to add that too much reliance on indirect taxes has the danger of checking consumption and ultimately economic activity.

BOMBAY STATE TRANSPORT NEW LOAN

The Bombay State Transport Corporation (B.S.T.) owes the remarkable progress it has made so far as much to its monopolistic character as to the ability for organisation of its sponsors and administrators. At a recent Press Conference in Bombay, the Chairman of the Corporation, Mr. Chhotabhai S. Patel, gave a brief account of the growth of this nationalised enterprise. When it was started in 1948, it had a fleet of only 35 vehicles. It now has about 2,500 vehicles to serve the cause of the State's transport. It now plies its vehicles on 1,420 routes, the route mileage having increased since 1948 from 310 to 37,933. It carries, on an average, about 3½ lakh passengers every day, as against a mere 2,500 it did at the time it was started. Considering it is at all times difficult to keep a strict watch over economy in such a vast organisation as the B.S.T., it is noteworthy that the cost per bus mile which in 1948-49 was 15.07 pies has come down to 10.30 pies. The establishment cost per bus mile has declined from 62.54 pies to 59.76 pies and the cost on spare parts from 27.10 pies to 16.87 pies.

The Corporation has neither sought nor obtained any concessions by way of exemptions from Government taxes or local taxes or other imposts. But it has not, on that account, allowed its programme of providing amenities to the travelling public to go by default. Its buses are the most modern of their kind. The amenities which it has provided to the passengers include bus stations, waiting sheds and bus stops, canteens and welfare centres for its workers. It has done all this without raising the rate structure which has remained unaltered at nine pies per mile since its inception. The B.S.T's activities have hitherto been generally confined to the sphere of passenger transport. It has, however, made a small beginning in the sphere of goods transport. This has been made possible by the gift of 800 and odd trucks from Canada, under the Colombo Plan.

The capital for the Corporation, as is well known, has been contributed by the Union and the State Government in the proportion of one to two. The Corporation's capital amounts to Rs. 864 lakhs which will increase, with the capital budget estimate of Rs. 150 lakhs for 1953-54, to Rs. 1,014 lakhs on 31st March, 1954. The magnitude of the B.S.T.'s operations will be evident from the fact that its gross receipts during 1954-55 are expected to exceed Rs. 10 crores. In order to supplement its working capital, the Corporation is issuing a 4 per cent. Rs. 1 crore loan, at Rs. 99 per cent., repayable at par on 1st March, 1966. The loan is being raised on the security of the present and future revenue of the B.S.T. and has been guaranteed by the Bombay Government. The list for this loan will be open for public subscription on Monday, the 8th March, and will close on 13th March, 1954, though it might be closed earlier, if the loan is fully subscribed. There is no doubt that it will be fully subscribed, considering that the terms of the loan are in accordance with the ruling ideas of the market. It may be noted here that this is the second loan to be raised by the B.S.T. The first loan, repayable in 1964, is now being quoted at Rs. 99-10. Further, the terms of the present loan compare favourably with the last loan raised by the Bombay Government, namely, 4 per cent. 1963 which is now standing at a premium of one rupee.

CO-OPERATION IN ASIA

The stress laid on the need for accelerating the pace of the co-operative movement in Asia and the Far East by the Food and Agriculture Organisation's nine-day technical meeting on co-operation in the region, held at Kandy (Ceylon) recently, is certainly very appropriate. For, in a vast continent like Asia which is underdeveloped and where poverty and undernourishment is appalling, the co-operative movement has a great opportunity for service. If the movement is to succeed and if it is definitely to pass beyond the stage of a scattered collection of sporadic organisations, it must win the support of the people and generate the force of a real popular movement working on a nation-wide scale.

Sir John Kotelawala, Ceylon's Prime Minister, who inaugurated the Conference, said that the definition of co-operation which appealed to him most was the one given by Mr. Kagawa, a Japanese citizen and one given of the world's most outstanding co-operative leaders, who once referred to co-operation as "brotherhood economics." That description, as Sir John said, indicates how those who are economically weak and oppressed can seek the aid of the co-operative movement in their struggle for survival. Proceeding, he pointed out how every country had developed its own special type of co-operative movement. The Scandinavian countries were models of co-operation in agriculture. The U.K. had encouraged large-scale development in consumer co-operation. Japan had organised one of the most extensive co-operative health and hospitalisation schemes that the world had known.

OFF THE RECORD

(By "ROVER")

WHO would have thought that Mr. Rafi Ahmed Kidwai, the hero of the food front, would come out such a cropper, over a series of minor skirmishes in the comparatively almost insignificant battle over sugar. Some of my fellow observers are inclined to think that, coming from the typical sugar State of Uttar Pradesh, he has too long been involved in the politics centring round sugar in that State, to be able to take a detached and dispassionate view of the situation. When preconceived notions and past associations, either by way of prejudices or prepossessions, colour a man's faculty of judgment in a given case, his brain loses its sharp edge. It is apt to lead him astray. This is possibly the reason why a good surgeon never operates on a patient closely related to him and even the best of physicians prefers to obtain a second and independent opinion on his diagnosis, where his heart is involved as much as his head.

Be that as it may, the Union Food Minister has been singularly unsuccessful in unravelling the knots, which a combination of strange circumstances and unforeseen developments has tied round the comparatively simpler problem regarding sugar. I cannot think of a single step of his, where sugar is concerned, which has gone right. With an amazing consistency, he has fumbled and faltered and failed in every one of his policies concerning price fixation of cane or sugar, releases, exports, imports and distribution. The manufacturers, especially those in U.P. and Bihar, the State Governments, the sugar trade and, in most cases, his own secretariat have all served him ill and foiled one move of his after another, to the detriment of the consumer and his own political reputation. His Ministry let him down badly in the matter of exports and later, though to a smaller extent, in the case of imports as well. The U.P. State Government played him false in his sound policy of reducing the price of cane. The industry betrayed him, especially when he offered subsidies for surplus stocks of sugar to be sold at reduced prices, and ever since then about prices in general. The trade took its revenge for a long stretch of unemployment, by continuing to create *temporary pockets of scarcity* and manipulating distribution in such a way as to maintain prices at an unduly high level.

But Western India is more concerned at present with a more localised problem than the general one affecting the whole country. Repeatedly, some of those who have an intimate association with the sugar industry and indirectly with the sugar trade, have advised the Food Ministry to wash its hands clean of all controls, including those on cane prices, imports and releases and to let the problem solve itself. Repeatedly has this sane advice been ignored, possibly because the Ministry officials could not part with the last vestige of power they had enjoyed for a long time, and, perhaps, in part, because Mr. Kidwai's greed was greater than his avowed intention to bring down the price of sugar. While congratulating him for his courage in taking a prompt decision about arranging for imports—another man in his place might have been frightened out of his wits and would have played with the idea for some time—I cannot absolve him for his cupidity in trying to turn this measure to the advantage of the Central treasury.

Apart from the duty earned on imports, the Food Ministry has, not unlike merchants and manufacturers, taken advantage of the shortfall in production and supplies and made a handsome profit from a transaction, which was intended not only to fill the gap in supplies, but to act as a lever to bring down the unjustifiably high price of home-made sugar. But for this lure of profits to be earned, I am positive, he would have, as originally decided upon, left the task of importing the requisite quantity and distributing it to the trade. Private channels would have done it better; they would have obtained better sugar than he did, at a price more competitive than what he was inveigled into paying. The importers, if the whole business had been thrown open to them without favour or monopoly, would have certainly made some money out of it, but that gain would have been more at the expense of shippers abroad and not at the cost of the consumer in India. And what is more pertinent and important in the present context, these imports would have worked better towards bringing down the general run of prices. But the milk has been spilled and it would serve no purpose to cry over it now.

In this series of successive blunders, there was one bright spot. It was the Food Minister's last minute decision to throw open the shiploads of imported sugar to the trade and large industrial consumers. At Calcutta, the arrangement was different. Mr. Kidwai has a soft corner both for the trade and industry and, in his anxiety not to deprive the established trade, he had created an extra middleman, by agreeing to hand over distribution of these imports to the trade association in that centre for a consideration. Perhaps, it was a suitable device for Calcutta and the region served by that port. Luckily for the consumers and for hundreds and, possibly, thousands of small merchants in the city of Bombay and in all upcountry centres, the negotiations for such an arrangement in Bombay failed at the last moment, partly because of the rapacity of the local Association and partly because of dissensions amongst its members. This not only diminished an intervening agency, but saved one extra stage of sales tax, which would have added to the ultimate cost to the consumers. This also benefited the few confectionery, fruit preservation, soft drink and biscuits and allied industries, by enabling them to obtain their supplies at an uninflated rate.

While I should be in the front line of battle, whenever the legitimate interests of Bombay's trade are at issue, my loyalty to and admiration for this great city will not stand the strain of being stretched so far as to back up a claim of the Bombay sugar merchants that they should hold the whole of the area served by this port in fee and exact a profit from whatever is unshipped in its docks. The upcountry merchants in Maharashtra and Gujerat have every right to obtain their supplies of merchandise direct, if and when they can get it. Under the present arrangements for imported sugar, they could, and I see no reason why they should, enrich the members of the Bombay Sugar Merchants' Association, by being compelled to contribute a part of the margin to these worthies, when till now they have been able to get on, so far as imported sugar is concerned, without their services.

What has brought up this exploded idea once again to the fore is the difficulty experienced by the Food Ministry officials in Bombay, in handling the great rush of applicants for getting a slice off the last consignment from Czechoslovakia. It was, indeed, a trying time for the Regional Director for Food in Bombay and his staff and I must congratulate him for the tactful and patient manner in which he met the situation without giving rise to any mishap or heartburning. It is true that the readily available margin, at almost a token investment for a short period, had gradually attracted a large number of people, who had nothing to do with the sugar trade, to apply for this money for jam. But this defect in the present system could be easily remedied by insisting upon some proof of belonging to the trade to be furnished along with the tenders. This would have weeded out the money-for-nothing crowd and reduced the labour of the local officials. Now that imports are going to be of a larger measure, and, if not a permanent feature, at least, one of some duration, a list could have been opened of those genuinely engaged in the sugar trade, necessitating work only for a few days at the outset.

This difficulty, which was not superlative and certainly not one which could not be surmounted, did not justify the revival of the old idea of entrusting this work to the Sugar Merchants' Association, which by all accounts does not cover the whole sugar trade of the State or even of the city. Another reason given for the proposed change in distribution machinery is that sugar prices fluctuate widely at times when shipments are either delayed or when stocks run down. But my own study of the sugar market reveals that price movements have been within a narrower range since imports started coming, because distribution was over a more comprehensive field. The system of periodical releases from factories in the country, without any set programme, is as much responsible for these ups and downs in the market as the irregular arrivals of consignments of imported sugar. And, in any case, there is no guarantee that the creation of a new agency for distribution of this sugar would not result in the same situation as at present. It is much too flimsy and transparent a ground for reviving an indirect pseudo distribution and price control to deceive anybody. Reasonable fluctuations form a regular feature of a free market and it is the market's method of adjusting itself to the changing conditions.

While this is the basic objection to the proposed move, there is a very cogent but secondary objection also, which should make the authorities pause before deciding upon entrusting the work of distribution of imported sugar in Bombay to the Bombay Sugar Merchants' Association or any new body sponsored by it. It is not a body representative of the whole sugar trade even in the city and its chequered history has been marked by ugly squabbles and internal fissures, exposing it to many alleged irregularities, partiality and discriminating treatment for newcomers. In any case, there is no gainsaying the fact that, with its tiers of membership classes—the heaven-born and the outcast—its constitution and composition are undemocratic and out of harmony with the times. The underprivileged, though otherwise powerful, parties in the trade, together with some who are outside this close preserve of outmoded caste system, are believed to have already formed a rival body and to have offered more competitive terms to the authorities at New Delhi for undertaking this work. By entering this fray at this stage, the Food Ministry will be inviting a host of troubles, deadlocks and petty breakdowns in the distribution and marketing of imported sugar, all to the detriment of the consumers. As a result of this step, there will be chaos, where there is at least some order and rough justice at present.

The best course, therefore, for the authorities would be to ask the Association to put its own house in order, before presuming to speak or negotiate in the name of the sugar trade of Bombay, and carry on with the work as they have been doing so far, after weeding out those who are not in the trade. The ideal arrangement, however, would be to throw the import trade open to all and ask the industry and the cane growers in India to adjust prices of cane and sugar on a parity with the world prices. This is the only solution for the problem of sugar, which has baffled the country for twenty years, if the Central Government has the requisite moral strength to rise above the petty, political intrigues and importunities of the sugar States in the Union.—*All Rights Reserved.*

SOME REFLECTIONS ON CENTRAL BUDGET

ARE REVENUES UNDERESTIMATED?

(From A Special Correspondent)

New Delhi, 2nd March

DELHI LETTER

CANTANKEROUS critics apart, most members of Parliament are of the opinion that Mr. Chintaman Deshmukh has done his job well. Mr. Deshmukh has been holding the stewardship of the nation's finances for the last four years with considerable success. In fact, his handling of the fiscal and kindred problems during these years has evoked great admiration and unstinted praise from well-informed financial *pundits* within and without. Perhaps, when the economic history of India is written, Mr. Deshmukh's name will find an honoured place as a man who began his task with a purpose and plan, faced colossal problems and handicaps with courage and conviction and, finally, achieved notable success in the implementation of his objectives. Just as the illustrious Sir Basil Blackett, whose reputation as a financier was well known and who was mainly instrumental in restoring order and stability to the country's finances after World War I, Mr. Deshmukh has, during the last few years, been able to achieve a remarkable measure of success in his task. In certain respects, Mr. Deshmukh has been called upon to fulfil still more difficult tasks than those that confronted Sir Basil Blackett. For instance, unlike his great English predecessor, Mr. Deshmukh has had to formulate and evolve financial policies that could be made applicable to a Welfare State.

Even a perusal of the budget figures will suffice to show that the revenue estimates both in the budgets of 1953-54 and 1954-55 have, as usual, been moderately underestimated. For instance, a year ago, the revised budget estimates in regard to revenue for 1952-53 were placed at Rs. 418.64 crores, while the actuals amounted to Rs. 435.11 crores. In this year, the revenue from the Central excise, corporation and income taxes rose by about Rs. 18 crores. It is, therefore, not impossible that the revised revenue budget estimates for 1953-54 will show a higher figure by about the same figure as the preceding year and so the deficit of Rs. 16.96 crores for 1953-54 caused as a result of the non-receipt of the Pakistan loan, is likely to be wiped out eventually, especially as the Government of India has to collect substantial sums by way of arrears of income-tax.

Corporation and Income-tax

The receipts by way of corporation and income taxes continue to be an underestimate, despite the fact that the trend of industrial production has been maintaining an upward trend. In 1951, the monthly average index of industrial production hovered around 117, while in 1952 and 1953, the indices stood at 129 and 134. Since many new industries started during the last few years have been coming into full production, the current year's index is expected to show a still higher figure. In 1952-53, the revenue from these two taxes amounted to Rs. 185 crores, while in 1953-54 and 1954-55 they are placed at Rs. 165 crores only. In the coming fiscal year, the tempo of the economic activity is expected to be maintained at a higher level than the current year, and, as the profit trend in industry has been satisfactory, these taxes will yield more revenue to Government. It is, therefore, possible that the revenue for 1954-55 will show a substantial rise from the budget figure of Rs. 452.88 crores, eventually wiping out the deficit of Rs. 14.21 crores. The total yield from taxes might not be adversely affected by the possibility of a slight economic recession in the U.S.A., inasmuch as the huge development finance as envisaged by Mr. Deshmukh during the forthcoming fiscal year will maintain the economic activity of the country at a high level, perhaps isolating the operation of the world forces to some extent.

In another respect also, the budget appears to be an underestimate. The Finance Minister has provided a receipt of Rs. 9 crores from Pakistan towards loan repayments, but has discreetly omitted those which are likely to be got from Burma with whom the Government has now entered into a rice deal. In case all these were to materialise, there would no longer be any deficit of Rs. 14.21 crores; on the contrary, he might be able to report even some surplus.

At the conclusion of his speech, the Finance Minister referred briefly to the achievements of the Government of India during the last seven years since the attainment of independence and spoke eloquently that "in this period, the country's economy has been strengthened, inflationary stresses have been subsided or eliminated and production expanded in many directions." He listed, among other things, the creditable progress on the food front, the rehabilitation of the railways, construction of large irrigation and power works, establishment of many vital industries with active Government support, the rehabilitation of displaced persons, integration of Princely States into well knit administrative units, etc.

Revenue Resources

During this period, there has also been a steady increase in the Government of India's revenue resources. In 1947-48, the total gross tax revenue amounted to Rs. 177.50 crores. There has been a gradual rise in this sphere, the figure touching the peak level of Rs. 459.99 crores in 1951-52, largely owing to the fortuitous circumstances generated by the Korean War. For the current year (1953-54), the revenue is placed at Rs. 363.51 crores, while for the next year the estimates are around Rs. 379 crores. The customs receipts have gone up from Rs. 72.74 crores in 1947-48 to Rs. 175 crores in 1954-55 (barring 1951-52 when they were marked up to the record level of Rs. 231.69 crores). The revenue from the Central excise has been moved up more than fourfold. In 1947-48, it stood at Rs. 24.38 crores, while the budget estimates for 1954-55 place it at Rs. 108.89 crores, including Rs. 16.29 crores being the divisible share of States. The increase in regard to corporation and income taxes has not been so impressive as that of the Central excise. In 1947-48, the receipts from corporation and income taxes amounted to Rs. 78.11 crores, excluding the States' share, while the estimates for 1954-55 are placed at Rs. 109.02 crores. In 1951-52, they came to the high figure of Rs. 134.74 crores. During the war period, when the E.P.T. was in operation, the collections in undivided India (excluding States' share) were higher, the peak figure being Rs. 164.74 crores in 1944-45.

From the above, it will be noted that there has been a shift in favour of indirect taxes as against direct taxes during the last few years. With the increase in the living standards of the people, the consumption of many articles on which the Union excise is being levied at present will increase, thereby resulting in a further rise in the yield from these taxes. The Finance Minister last year admitted that the incidence of the Central excise was pretty heavy on the urban people as against rural population and that 20 per cent. of the people living in urban centres was bearing these taxes to the extent of 90 to 95 per cent. From the equity point of view, therefore, the Finance Minister and the States Government will have to see to it that, in the coming years, a part of the tax burden is transferred to people living in rural areas.

Considerable stimulus to the economic activity of the country will be provided during the forthcoming fiscal year, both in the private and public sectors if the proposal to start two credit institutions takes concrete shape. In regard to the public sector, the Industrial Development Corporation will come into existence within the next few months so as to stimulate the flow of capital into new industries. With a view to assisting the progress of this scheme, the Commerce and Industry Ministry will shortly appoint one of its top personnel to be in charge of this organisation. As regards the other organisation, details are now being worked out in co-operation with the World Bank members, as to how it could be made to foster private enterprise in India. This organisation will be designed in such a manner as to attract the flow of foreign capital into the country, especially from the U.S.A. and the U.K.

Among the important schemes that will receive encouragement at the hands of Government, particular mention may be made of the expansion of key industries. With a view to increasing the output of steel, loans are being granted to the Indian Iron and Steel Company, Ltd., Calcutta. In addition to the loan of Rs. 5 crores granted in 1949-50, the Government will be giving another loan of Rs. 2.9 crores and a special repayable advance of Rs. 10 crores. As a result of its expansion policy, this Company will raise its annual production capacity ultimately to 620,000 tons of finished steel and 500,000 tons of foundry pig iron for sale by 1956-57 or alternatively 700,000 tons of finished steel and 400,000 tons of pig iron for sale. The estimated

PRIVATE FINANCE IN AGRICULTURE

MR. M. A. SRINIVASAN'S CRITICAL REVIEW OF ITS ROLE

THERE are two classes of persons who habitually come in for much—and often, undeserved—criticism at the hands of politicians and reformers. They are the village moneylender and the absentee landlord. Should they necessarily be regarded as the chief villains of rural India? Have they not contributed in any way towards the country's agricultural prosperity? Even if it is politically unwise to support them, it seems necessary to consider whether they can be supplanted from their present position without making prior arrangements for other men or institutions to take their place. In a very thought-provoking address, at the Government Agricultural College, Hebbal (Bangalore), Mr. M. A. Srinivasan, Chairman of the Kolar group of gold mining companies, made a critical review of the problem of agricultural finance and entered a strong plea for some consideration being shown to the absentee landlord who has utilised his money for the improvement of the land he owns.

Mr. Srinivasan agreed that Indian agriculture had to be "lifted out of the slough of despondency and penury, where it has remained sunk for centuries, and to be improved and transformed into a prosperous industry." He, however, wondered whether the path the country was now treading would lead it to that goal. This was because some recent measures had tended to block the flow of finance to the agricultural sector. He said:

"It is common knowledge that finance is the life blood of every industry. The other day, the wise and revered Rajaji, one of the clearest thinkers our land is blessed with, likened a bank to a great reservoir like Mettur or Krishnarajasagar which collects water from streams and rivers during good seasons and bad and distributes it to a thousand farms and cultivators. In the same way, finance can itself be likened to a river that fertilises and enriches the land through which it runs, or is made to flow. If the stream dries up, or is blocked, crops wither away and the land is bleak and famine-stricken. I have often wondered whether in their wholly laudable zeal for agrarian reform, and their eagerness to improve the lot of the peasant, our leaders and legislators have not often adopted measures that have tended to block and dry up the flow of finance to the great and important industry called agriculture."

Restrictions on Absentee Landlordism

The present tendency to legislate against the absentee landlord, Mr. Srinivasan said in effect, checked the smooth flow of agricultural finance. In fact, he questioned the economic or even the ethical basis of the measures designed to place restrictions on absentee landlordism. In this connection, he said:

"In the olden days, and till not very long ago, investment in land was accepted as a traditional and safe form of investment. A lawyer in Madras, a doctor in Bangalore, a merchant in Mandya, or a banker in Poona, inherited or invested his savings in land. In return for his investment, and the additional rupees he spent from time to time on having a new well dug, or a pump installed, or a bund or fence put up, he received an agreed share of the produce, raised by the tenant. Today he is called an absentee landlord—an expression that platform oratory and electioneering eloquence have equated to a term of abuse. I know I tread a thorny field, but if one comes to think of it dispassionately, how is the landowner really different from the owner of any other form of property? We have not abolished property. A man or woman may hold shares in the Mysore Sugar Company at Mandya, or the Tata Iron and Steel Works at Jamshedpur or the Andhra Cement Company and receive the dividend on his or her investment, and without being castigated as an absentee sugar-owner or an absentee steel or cement lord. He may own houses in Madras or Coimbatore, and let them to tenants—the Rent Controller may sometimes prevent him from occupying his own house—yet he may receive rent and not be dubbed as an absentee houseowner.

"The hapless landowner, however, finds the scales weighed continuously against him, and his return precarious and diminishing. He has no heart to spend more on his land. Indeed, he feels inclined to dispose of his land in a market that is already bearish, with the result that land values go further down. He finds that what was once regarded as the most immovable and secure of least secure. Meanwhile, the cultivator also is denied the funds he used to get for his farming needs. Production goes down, and costly and ambitious schemes like the Grow-more-food campaign produce results that are acknowledged as disproportionately poor."

Although Mr. Srinivasan admitted that there were bad landowners as well as callous moneylenders, he rightly insisted that the evils, which their presence causes, could not be remedied by legislation. He said:

"True, there were and are bad landowners—just as there are bad bankers or politicians or administrators. It is true too that Agrarian discontentment and unrest, like poverty, is a fertile field for Communist propaganda and infiltration. At the same time, it is well to remember that legislation, however well-intentioned, cannot cure economic ills, nor counter subversive propaganda. It is important to see that, in our attempt to remedy an evil, we do not administer something that ultimately debilitates the patient or aggravates his condition—to see that, in our efforts to reduce unemployment, we do not generate conditions which discourage employment; that, in our anxiety to improve agriculture, we do not impoverish it; that, in our determination to fight communism, we do not take some of the very steps that the communists would love to see us take. If a cobra menaces, surely the thing to do is to destroy it, and not to go about amputating the limbs of the people in the neighbourhood, in anticipation of snake-bite.

"If some landlords are callous or *zowcars* extortionate, the obvious step to take is to encourage the genuine investors and to build up rural credit facilities like co-operative societies. It is doing poor service to a slum dweller whose room is dingy and whose roof leaks to demolish his habitation before you have built a new low-cost house he can move into.

"I have heard it said that, in a democracy based on adult franchise such as ours where the electorate is largely illiterate, and the havenots are so much more numerous than the haves and where tenants have more votes than owners, it would be unreasonable to expect Governments dispassionately to foresee and weigh the long-term effects of measures that popular clamour goads them to undertake. But it is surely the part of statesmanship to plan not for the next election, or the election after that, but for this generation and the next. The ballot box was not invented to be turned into a Pandora's Box by politicians, however hard-pressed or ambitious."

Mr. Srinivasan cited the plantation industry as an instance to show what "adventure and enterprise" could do to agriculture. Referring to the role which private capital could play in the sphere of agriculture, he observed:

"Agriculture can and should be made an efficient, progressive and paying industry—an enterprise that attracts capital and revitalises villages, that pays good wages and builds good houses and hospitals and schools, and temples, that is able to afford and adopt modern and improved machines and methods to produce more, and to pay income-tax. The plantation industry, which is also agricultural, is still a fine example of what adventure and enterprise can do to open up jungle and make it productive, conquer malaria and pest, build townships, provide better living conditions all round, pay taxes, and earn valuable foreign exchange."

Entering a plea for raising the status and prosperity of Indian agriculture to a higher level that is rightfully its due, Mr. Srinivasan said: "Let us not, in planning to make our agriculture prosperous, refuse to learn from the examples and experience of other free countries who have succeeded in making it so. Should it be said of us who belong to a land famed for its learning, that we are slow to learn? Should we await the advent of a new Mahatma to rid us of the curse of unteachability?

COMMONWEALTH BANK LOAN TO SOUTH AFRICA

The Commonwealth Development Finance Company is making a £2 million loan to the South African Electricity Supply Commission.

The loan is for 15 years at an effective issue price of 98½ per cent. and will carry interest at 5 per cent. per annum. Its purpose is to increase power generation for the Rand and Orange Free State gold mines.

This is the second project to be undertaken by the Company under the terms of its formation—assisting in providing financial aid for the development of the Commonwealth's resources.

The first announced recently this month, was an investment of the rupee equivalent of about £1 million in the equity of the Sui Gas Transmission Company, of Pakistan.

WORLD BANK LOANS

The International Bank for Reconstruction and Development has granted 18 loans amounting to $190.4 million during the seven months ended 31st January, 1953. With these loans, the total amount lent by the Bank so far aggregates $1,781 million and covers 31 countries. Disbursements on loans during the seven-month period amounted to $158 million bringing the progressive total disbursements to $1,261.3 million.

The Bank's 18 loans were for economic development programmes and went to Brazil, Chile, Colombia, Iceland, Italy, Japan, Nicaragua, Panama, Turkey and the Union of South Africa.

RUSSIAN LOAN TO AFGHANISTAN

The U.S.S.R. has granted a loan, the amount of which has not been disclosed to the Government of Afghanistan for the purpose of constructing two grain elevators, a mill and a mechanised bakery. The loan will be utilised for payment towards equipment and materials delivered by the U.S.S.R. as also towards cost of the surveying and designing of the construction work by U.S.S.R. technicians. An agreement to this effect was signed by the representatives of the two countries on 27th January last.

DINAJPORE BANK LTD.

The Dinajpore Bank Ltd., Calcutta, has been refused a licence to carry on banking business in India under the Indian Banking Companies, Act, 1949. The refusal of licence makes it obligatory on the part of the bank to cease transacting the business of banking.

BOMBAY STATE ROAD TRANSPORT CORPORATION

LOAN NOTIFICATION

No. ST/SCR/565/3

Bombay, dated the 4th March, 1954.

The 4% Rs. One Crore Loan

Issued at Rs. 99/- per cent. and redeemable at par in 12 years

REPAYMENT GUARANTEED BY THE GOVERNMENT OF BOMBAY

1. With the sanction and guarantee of the Government of Bombay, the Chairman, on behalf of the Bombay State Road Transport Corporation, hereby invites applications for debentures of the value of Rs. 1 crore.

2. Constitution of the Corporation

Nationalisation of the Road Transport Services in the State of Bombay was commenced on the 1st June, 1948, as a Government Department under the administrative control of the Home Department of the Government of Bombay. The administration was later passed on to a statutory public Corporation on the 8th December, 1949. This Corporation has been set up under an Act of the Parliament (Road Transport Corporations Act). The Management of the Corporation consists of 11 members, six of whom are non-officials and five represent the Government of Bombay and the Union Government.

Management

1. Shri Chhotabhai S. Patel, J.P.	Chairman.	
2. Shri R. J. Rebello, B.A. (Cantab), I.A.S. ...	Vice-Chairman, ex-officio representative nominated by the State Government.	
3. Shri Santappa S. Yelamali, Merchant ...	Member.	
4. Shri Maganbhai Shankarbhai Patel, Member of the Legislative Assembly	Member.	
5. Shri Vasantrao N. Naik, Member of the Legislative Assembly.	Member.	
6. Shri Sonusingh D. Patil, Member of the Legislative Council	Member.	
7. Shri R. B. Shirke, Member of the Legislative Assembly ...	Member.	
8. Shri U. N. Mahida, I.S.E., Chief Engineer (Roads and Buildings), Government of Bombay	Ex-officio representative nominated by the State Government.	
9. Shri V. L. Gidwani, I.C.S., Deputy Secretary, Finance Department, Government of Bombay	Do.	
10. Rajkumar Shri Ajit Singh, Road Superintendent, Western and Central Railways ...	Ex-officio representative of the Central Government.	
11. Shri S. S. Gore, B.A., M.I.R.A., I.R.A.S., Deputy Chief Accounts Officer and Financial Adviser, Central Railways	Do.	

3. Progress

During the period of a little over five years, from 1st June, 1948, to the 31st December, 1953, nationalisation of passenger transport services has been extended over nearly four-fifths of the entire State of Bombay. The figures below indicate the extent of the progress:

	As on 1-6-48	As on 31-12-53
Number of routes	8	1,420
Route mileage	310	37,933
Daily service mileage	3,627	1,56,968
Number of vehicles held	36	2,351
Number of passengers carried daily	2,459	3,49,590

4. Capital

The capital for the Corporation has so far been contributed by the Government of Bombay and the Union Government in the ratio of 2:1. As on 31st of March, 1953, the capital contributed by the two Governments stood at Rs. 864.09 lakhs. The capital budget estimate for the financial year 1953-54 is Rs. 150.00 lakhs. This will place the capital invested as on the 31st of March, 1954 at Rs. 1014.09 lakhs.

5. Objects

The loan is being raised for the purpose of supplementing the working capital of the Corporation.

6. Security for the Loan

The loan is raised on the security of the present and future revenue of the Bombay State Road Transport Corporation. The repayment of the principal and interest is guaranteed by the Government of Bombay. The debentures are, therefore, approved and Trustee Securities.

7. Description

The loan is being raised in the form of debentures of the face value of Rs. 1,000 each and the stocks will be registered and transferable in amounts of Rs. 1,000 or multiples thereof. Any debenture-stocks outstanding on 1st March, 1966, will be repaid on that date at par together with interest due thereon.

8. Amount of Issue

The amount of the loan will be Rupees One Crore.

9. Issue Price

Issue price will be Rs. 99-0-0 per cent.

10. Subscription

Subscriptions will be received from 8th of March, 1954, to 13th March, 1954. The loan will be closed without notice as soon as it appears that the total subscriptions amount approximately to one crore of rupees and in any case, not later than the close of business on 13th March, 1954. The Corporation reserves the right to accept applications for subscriptions received in excess of the sum of Rs. 1 crore upto 10 per cent.

11. Date of Repayment

The loan will have a currency of 12 years from 1st March, 1954, and will be repaid on 1st March, 1966.

12. Interest

Interest will be payable half-yearly at the Local Head Office of the Imperial Bank of India, Bombay, on the 1st of March and 1st September each year in respect of half-years ending on the last days of February and August, respectively. The first payment of interest will be made on 1st September, 1954, and will be Rs. 20 less income-tax, for each Rs. 1,000 of debenture-stock.

13. Form of Securities

The loan will be issued in the form of debentures transferable by endorsement and will be in denominations of Rs. 1,000 or multiples thereof.

14. Applications for Loan

(i) Applications for the loan must be for Rs. 1,000 or for a multiple of that sum and will be received at the Head Offices of the Imperial Bank of India, Bombay, Calcutta, Madras and all the branches in the Indian Union.

(ii) Applications will be made in the form available at the Imperial Bank of India, Bombay, Calcutta, Madras and all its Branches.

15. Method of Paying Subscriptions

Applications should be accompanied by the necessary payment either in cash or by cheque for the amount of the loan applied for. Cheques should be drawn in favour of the Imperial Bank of India and cheques drawn on local Banks will be collected at par. Where the application money is received by cheques, the debentures will be issued only after the cheques have been realised.

16. Brokerage

Brokerage will be paid at the rate of annas four per cent. to Banks and recognised brokers on allotments made in respect of applications for the loan bearing their stamps.

17. Sinking Fund

Sinking Fund will be created and maintained by paying an equated sum each year. The amount set aside for the Sinking Fund will be invested in approved securities.

18. Scrip Receipts

Scrip receipts for payment made by the applicants will be granted by the Imperial Bank of India and will be exchanged for the debentures as soon as possible.

CHHOTABHAI S. PATEL,
Chairman,
Bombay State Road Transport Corporation.

PATTERN OF INTEREST RATES ON DEPOSITS AND ADVANCES

SPREAD BETWEEN LENDING AND BORROWING RATES FAIRLY WIDE

SOME very interesting light is thrown on the structure of interest rates and their relationship to bank deposits and advances in an article published in the latest issue of the Reserve Bank of India monthly bulletin. The article, prepared by the Bank's Department of Research, covers the position of deposits and advances as on 30th September, 1953. An outstanding feature disclosed by this study is that, on nearly 50 per cent. of their total deposits, banks paid interest at rates ranging from more than one per cent. to not more than 3 per cent., while, on 94 per cent. of the advances, they charged a rate of interest ranging from over 3 per cent. to not more than 6 per cent. Again, on as much as 26.06 per cent. of the total deposits, no interest was paid, whereas, on as much as 28.03 per cent. of deposits, the rates offered ranged from over 0 per cent. to 1 per cent. but not above that rate. With regard to advances, however, only on 5.74 per cent. of the total advances, the interest rates charged varied from upto and including one per cent. to 3 per cent. inclusive. The highest rate of interest paid on deposits was 4½ per cent. and that was in respect of three-year fixed deposits paid by only one Scheduled bank.

Another feature revealed by the Bank's analysis is that, in respect of both interest paid on deposits and that charged on advances, the smaller banks' rates appeared to be higher than those charged by big Scheduled banks. This is attributed partly to local conditions in which the small banks operate, namely, a relatively high demand for capital in relation to available funds and partly to the more risky nature of business at higher rates handled by them. This enabled them to offer higher rates of interest for deposits.

The table below discloses deposits of Scheduled and Non-scheduled banks at various rates of interest as reported by 194 banks (figures in brackets relate to percentage to total):

(In crores of rupees)

Rate of interest	Scheduled banks	Non-scheduled banks	Total
Nil	220.43 (26.80)	3.12 (8.83)	223.55 (26.06)
More than 0 per cent. but upto and including ½ per cent. ..	143.75 (17.41)	0.59 (1.67)	143.84 (16.77)
More than ½ per cent. but upto and including 1 per cent. ..	92.87 (11.29)	3.71 (10.50)	96.58 (11.26)
More than 1 per cent. but upto and including 2 per cent. ..	123.81 (15.05)	7.62 (21.56)	131.43 (15.32)
More than 2 per cent. but upto and including 3 per cent. ..	192.44 (23.39)	9.37 (26.51)	201.81 (23.52)
Over 3 per cent. ..	49.80 (6.05)	10.94 (30.95)	60.74 (7.08)
Total ..	822.59	35.35	857.94

N.B.—Total deposits in the above table include inter-bank deposits but not inter-bank borrowings and contingency unadjusted accounts.

It will be evident from the table that, of the total deposits of Rs. 857.94 crores, as much as Rs. 822.59 crores were on account of Scheduled banks, while Non-scheduled banks accounted for only 35.35 per cent. or about 4 per cent. of the total. Of the total deposits, as much as Rs. 224 crores carried no interest at all. Another Rs. 240 crores or 28 per cent. of the total carried interest upto and including 1 per cent. and Rs. 131 crores or 15 per cent. of the total over 1 per cent. but not exceeding 2 per cent. A substantial amount of Rs. 201.81 crores, or 23.52 per cent. of the total, bore interest at over 2 but not more than 3 per cent., while the balance of 7 per cent. or Rs. 60.74 crores were secured at over 3 per cent.

Deposits of Scheduled Banks

To take deposits of Scheduled banks alone. Of the total of Rs. 822.59 crores held by them, as much as Rs. 220 crores or 27 per cent. carried no interest, while on about 17 per cent. of the total interest was paid at ¼ per cent. The proportion of *nil* or low-interest bearing deposits was, however, not the same for all Scheduled banks. It was 24 per cent. in the case of Exchange banks and 48 per cent. in the case of seven major Indian banks, Rs. 13 crores or barely 2 per cent. of the deposits of all Scheduled banks were held at ¼-½ per cent.

Again, on about 25 per cent. or Rs. 204 crores of the total deposits, the Scheduled banks paid interest at between ½ and 2 per cent. inclusive, of which Rs. 80 crores were held at between ½ and 1 per cent., Rs. 75 crores at 1 and 1½ per cent., and Rs. 49 crores 1½ and 2 per cent. In the case of seven major Indian banks, deposits bearing interest between ½ and 2 per cent. comprised about 29 per cent. of their total deposits, the corresponding percentage for Exchange banks being 15 per cent.

On nearly a quarter—Rs. 192 crores to be precise—of the Scheduled bank deposits, the interest rates varied between 2 and 3 per cent. Exchange banks paid interest rates above 3 per cent. on only Rs. 2 crores of deposits, while Indian Scheduled banks paid the same rate of interest on deposits aggregating Rs. 12 crores.

Advances

The table below shows advances of Scheduled and Non-scheduled banks at various rates of interest.

(In crores of rupees)

Rate of interest	Scheduled banks	Non-scheduled banks	Total
Upto and including 1 per cent. ..	4.46 (1.04)	0.39 (1.84)	4.85 (1.07)
Over 1 per cent. to 3 per cent. inclusive. ..	18.96 (4.40)	2.11 (10.08)	21.07 (4.67)
Over 3 per cent. to 6 per cent. inclusive. ..	300.58 (83.74)	7.84 (37.44)	368.42 (81.59)
Over 6 per cent. ..	46.61 (10.82)	10.60 (50.62)	57.21 (12.67)
Total ..	430.61	20.94	451.55

It will be seen from the table that, out of the total advances of Rs. 451.55 crores, as much as Rs. 368.42 crores fell within the medium range of interest, that is, between 3 and 6 per cent. Of this, the bulk was accounted for by the Scheduled banks, their advances in this range amounting to Rs. 360.58 crores. About Rs. 57.21 crores of the total advances fall in the higher range of interest, namely, above 6 per cent. Non-scheduled banks' advances in this range, amounting to Rs. 10.60 crores, formed 50.62 per cent. of their total deposits.

Advances carrying low interest rates, that is, upto and including 3 per cent., comprised about 7 per cent. of the total advances of Exchange banks, and 4 per cent. in the case of major Indian Scheduled banks.

The medium-interest advances, that is, advances earning over 3 but no more than 6 per cent., formed 92 per cent. of advances in the case of Exchange banks, followed by 91 per cent. in the case of major Indian banks.

The average rate of interest on deposits with Scheduled banks works out to 1.25 per cent. The rates for Indian Scheduled banks and Exchange banks were 1.27 per cent. and 1.17 per cent., respectively. On advances, the average rate for all Scheduled banks was 5.02 per cent.; for Indian Scheduled banks and Exchange banks, the rates were 5.18 per cent. and 4.61 per cent., respectively. The rates are in respect of only advances and not bills purchased and discounted. It will thus be seen that the spread between the rates of interest paid by banks on their deposits and those charged by them on advances is much wider than is made out by the spokesmen of banks.

Term Deposits

An analysis of rates in respect of the call and term deposits discloses that a number of Scheduled banks in upcountry centres did not have any call money transactions at all. In Bombay and Calcutta, the common rate for call money was 2 to 2½ per cent. The call money rate quoted by Exchange banks was somewhat lower at between 1 and 2½ per cent.

On current deposits, most banks generally allowed interest at ¼ to ½ per cent., though rates upto 1 per cent. were not uncommon. Smaller Scheduled Banks generally paid higher rates. In some centres, the rates were higher than in the major cities such as Bombay and Calcutta. In Delhi, for instance, one bank allowed as high as 2 per cent.

For savings deposits, the general rate was 1 to 2 per cent. Indian Scheduled banks did not allow interest on savings accounts above 1½ per cent., while most of the Exchange banks did not have savings deposits, but those which had, offered 1½ to 2 per cent. The rates allowed on savings deposits were generally higher in centres other than Ahmedabad, Bombay, Calcutta, Nagpur and Rajkot.

The rates for three and six months' funds varied between 1 and 3 per cent., going up to 3½ per cent. in some cases. In Bombay and Calcutta, the rates varied from 1½ to 2½ per cent. Some banks in Calcutta quoted for six months' rates lower than that for three months. The minimum quotation for one year deposits was 1½ per cent., but 2 per cent. was a more common rate in Calcutta and 2½-3 per cent. in Bombay. In a number of centres, 4 to 4½ per cent. was also allowed. A large number of banks did not hold deposits for three years; where they had such deposits, the rates appeared a shade higher than those for one year deposits. Disparity in rates on the same class of deposits in the same centres may be attributed partly to the difference in the standing of banks.

Non-scheduled Banks

Low interest bearing deposits comprised only about 11 per cent. of the total in the case of Non-scheduled banks as against 44 per cent. in the case of Scheduled banks. Deposits carrying ¼ to 2 per cent. accounted for 24 per cent. and those bearing 2-3 per cent. for 27 per cent. of the total.

Only about 12 per cent. of the total advances of Non-scheduled banks were charged interest upto and including 3 per cent. The proportion of advances at over 3 but not more than 6 per cent. was 37 per cent. (as against 84 per cent. in respect of Scheduled banks) of the total, but the proportion of those at over 6 per cent. was as high as 50 per cent.

The average rate paid on deposits by Non-scheduled banks was 2.29 per cent., while the average rate charged on advanced was 6.87 per cent.

The rates on current deposits was generally around 1 to 2 per cent. But on savings deposits the rate allowed was 2-3 per cent. in Madras and 3 per cent. in Travancore-Cochin, the common rate in other areas being 2 per cent. On three months' deposits, the ruling rates in Madras and Travancore-Cochin were 3-3½ per cent., going up to 5½ per cent. in the former and 4½ per cent. in the latter State. Six months' deposits were accepted at 4 to 4½ per cent. in Madras, Travancore-Cochin and West Bengal. One-year fixed deposits were accepted at 3½ per cent. in Bombay and 3 per cent. in U.P., 4 to 4½ per cent. in Madras and 4½-5 per cent. in Travancore-Cochin.

LB/G/96—1954

FRACTIONAL FALL IN BANK OF INDIA'S PROFIT

DEPOSITS LOWEST SINCE 1942

A SMALL drop of Rs. 1.48 lakhs in profit, that is, from Rs. 77.51 lakhs to Rs. 76.03 lakhs, is disclosed by the audited accounts of the Bank of India Ltd. (General Manager: Mr. A. C. Clarke, Bombay), for the year ended 31st December, 1953. Though this is the second year in succession in which the Bank has sustained a fall in its profit, the extent of fall during the year under review has been much smaller than that (of Rs. 2.04 lakhs) noted in the previous year. The results must, however, be said to be satisfactory considering that demand for bank finance during the major part of the year was somewhat smaller than in 1952. Reflective of the contraction in profit is the fall in the balance-sheet total from Rs. 71.33 crores at the end of 1952 to Rs. 68.72 crores at the close of the year under review. At the end of 1951, it may be remembered, it stood at a high of Rs. 81.93 crores.

The provision for taxation which had been raised from Rs. 25 lakhs to Rs. 31 lakhs in the previous year, notwithstanding the fall in profit in that year, has now been reduced by Rs. 2 lakhs to Rs. 29 lakhs. As in the previous year, no addition has been made to the investment reserve—the general reserve has not received anything for the last seven years. The provision for payment of bonus to staff, on the other hand, has been increased by Rs. 35,000 to Rs. 11.10 lakhs. The dividend at 14 per cent. per annum, free of tax, requires, as in the previous year, Rs. 35 lakhs, leaving to be carried forward Rs. 7.30 lakhs, which compares well with Rs. 6.36 lakhs brought in.

The progress of the Bank during the last three years is well brought out by the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950
Interest and discount earned ..	175.76	175.90	151.06	154.59
Commission and exchange ..	33.35	40.44	42.72	16.06
Gross income	216.31	223.63	200.25	174.29
Interest paid	42.25	46.23	32.88	27.38
Expenses	97.54	99.09	87.85	71.87
Depreciation and repairs ..	0.49	0.80	0.48	0.58
Profit	76.03	77.51	79.55	75.04
Taxation	29.00	31.00	25.00	23.00
To property fund	..	..	..	7.50
" investment reserve	..	..	12.00	7.50
" bonus to staff ..	11.10	10.75	10.00	9.55
Dividend	35.00 (14%)	35.00 (14%)	31.55 (14%)	20.00 (14%)
Carry forward	7.30	6.36	5.61	4.90

	As on 31st December			
	1953	1952	1951	1950
Paid-up capital	2,50.00	2,50.00	2,48.86	2,00.00
Reserve funds	3,52.00	3,52.00	3,49.76	2,50.00
Deposits	54,88.73	58,12.52	57,78.93	59,50.44
Borrowings from other banks	..	..	1,75.00	..
Advances (including bills purchased and discounted	33,58.40	32,21.76	42,43.10	36,33.09

Investments	35.2	34.9	23.8*	32.4
Cash	15.4	18.7	13.4	14.3

* Arrived at after taking into consideration the securities pledged against borrowings from other banks, to the extent of such borrowings.

It will be noted that, while there has been practically no change in interest and discount earned, there has been a sharp fall in income through commission and exchange earned. The effect of this decline on the profit would have been quite perceptible but for the saving made in expenses and interest paid. Though the upward trend has been reversed to some extent, the decline has not been very marked, the level of expenses in 1953 being much higher than that in 1951 and still higher than in 1950.

The downward trend in the Bank's deposits noted in the previous two years persisted in the year under review also when there was a shrinkage of Rs. 1.24 crores. If the year 1950, when the deposits were a shade better than in 1949, is excluded, there has been an unbroken downward trend in the Bank's deposits from 1947, the fall over these years being of the order of Rs. 13.74 crores. Another interesting feature is that the deposits as at the end of 1953 were the lowest since 1942 when they stood at Rs. 36.82 crores. A break-up analysis of the Bank's deposits as at the close of the year under review shows that, while fixed deposits have risen by Rs. 2.36 crores, savings bank deposits and current and other accounts have gone down by Rs. 14.49 lakhs and Rs. 3.46 crores, respectively. Bills for collection show an increase of about Rs. 30 lakhs to Rs. 1.13 crores, while acceptances, endorsements and other obligations have fallen by Rs. 2 crores to Rs. 5.68 crores.

Over the year, total advances have risen by Rs. 1.36 crores, but this rise offsets only by a fraction the decline of Rs. 10.21 crores experienced in the previous year. Even this increase is due only to the rise of Rs. 1.87 crores in bills purchased and discounted. Loans, cash, credits and overdrafts have been down by Rs. 50 lakhs. However, the rise in total advances in the face of a decline in deposits has raised the advances ratio from 57.4 per cent. to 61.2 per cent., but it is very much lower than that of 73.4 per cent. at the end of 1951. Investments (shown at below market value) have fallen, but the fall is of the order of Rs. 23 lakhs only, so that the ratio of investments to deposits is slightly higher at 35.2 per cent. as against 34.9 per cent. a year ago. The increase in advances in the face of a decline in deposits has resulted in a fall of over Rs. 2 crores in cash balances with the result that the cash coverage has dropped from 18.7 per cent. to 15.4 per cent. which is however, well above the all-India average.

The Bank increased its number of branches during the year by opening two offices in India, one at Gandhidham and another in New Delhi, and three abroad, at Aden, Mombasa and Kampala.

PAKISTAN SECURITIES

The procedure regarding the payment by the Government of India of the interest and redemption proceeds on Pakistan securities and *vice versa* follows the general pattern of the Partition arrangements under which the payments on either side before the Partition were continued. There is no question of any agreement between the two countries regarding the types of remittances which they should permit. Each country is free to determine the types of remittances it will allow. Under the present exchange control regulations of both countries, however, the remittance of interest and dividends on securities and shares held by non-residents is permitted. Such remittances have to take place at the official rate of exchange. The redemption proceeds and interest on Pakistan securities to the Indian holders were originally expressed in Indian rupees before Partition and, as they are the liability of Pakistan, in the absence of specific authority from Pakistan to pay at the official rate, these payments are being continued at par. This information was disclosed by the Parliamentary Secretary to the Finance Minister in the Union Parliament recently.

BANK CREDIT IN CANADA

The Canadian Government has asked Parliament to give the Bank of Canada more control over credit issued by the chartered banks. The Finance Minister, Mr. Abbott, has introduced another provision which would tend to strengthen the central bank's influence over prices on the country's bond markets. A third change proposed would enable the Bank of Canada to make short-term loans to the chartered banks on the security of insured mortgages on which they would be allowed to lend money for building homes.

The powers of the Bank of Canada over bank credit would be increased by an amendment giving the Bank authority to alter the ratio of cash reserves which each of the chartered banks must maintain to its total deposits. The minimum figure of the amount of deposits would be raised to between 8 per cent. and 12 per cent. instead of the present 5 per cent.

Hitherto the Bank of Canada has been discouraged from holding Government securities not maturing in two years after their acquisition by the Bank. The amendment would take away this restriction and permit the Bank to buy and sell any securities issued or guaranteed by the Federal Government or the Provinces.

(*Concluded from next column*)

Members (who already enjoy free travel to their constituencies) free postage, a free office and free secretarial assistance—in other words, the same facilities that a Civil Servant enjoys. Had this been done it might have been even better for the Members than the proposed "salary" increase while provoking hardly a fraction of the controversy and probably none of the jokes! As it is, there is a danger that the Members may have to sacrifice their rights on the altar of political expediency.—*All Rights Reserved.*

POLITICS AND SPENDING

M.PS.' SALARIES TO BE RAISED

(*From Our Own Correspondent*)

LONDON, *28th February*

THIS last fortnight has shown just how difficult Parliament can find it to discuss objectively issues on which any sort of party capital can be made when the balance between the parties is so fine. First there have been arguments about the high cost of the agricultural subsidies (which were higher still when they were called food subsidies under the Labour Government) which the Opposition have attributed to Government profligacy and bad budgetting. Instead of the long explanations into which it entered, the Government would have done better to point out that the high cost is nothing more than the cost of insurance: the Government has given guarantees to the farming community about their minimum incomes and as world prices have fallen and domestic demand has slackened with the increase in all varieties of food, the minimum incomes have had to be found increasingly by the Treasury. Both parties in the House support the principle of guaranteeing the home farmer and if the Opposition were not out to annoy the Government as much as possible, it would not suggest that the cost of meeting the farm guarantee is not wholly legitimate.

LONDON LETTER

The second issue is more delicate. Several wage negotiations are in progress at present and the courts of enquiry into wages in the engineering and shipbuilding industries have just recommended an increase of 5 per cent. against the 15 per cent. asked for by the Unions. If the award is accepted and applied to all the 3¾ million men and women workers in the industries concerned, the cost to industry will be some £57 million. But while the general level of negotiations is around 5 to 10 per cent. increases on current earnings, a special commission of both Houses of Parliament has recommended a 50 per cent. increase in the pay of Members of the House of Commons. Already the 50 per cent. increase has become a music-hall joke and members on both sides of the House are highly concerned both about keeping a common front, while the recommendation is debated and about keeping their constituents informed of the realities of the case. It looks too much as if the Government is counselling restraint in all earnings except that of Members of Parliament.

This is very far from being the case. The £1,500 it is proposed to pay the Members is, in terms of net income, no more than the £1,000 that was voted in 1946 or the £400 voted in 1911. No increase is, in fact, proposed in real terms over the 1911 income level: Members of Parliament, alone among the country's workers, are debarred any increase in their living standard over forty years! Actually it appears that of the £1,000 currently received by members, £750 goes in unavoidable expenses, leaving a net salary of £250. How do members live on this? Of course, they don't, either they have private means, or they are financed by their businesses or by their trade unions. Even under the new proposals Members will earn net £750 only —the salary of a senior clerk! Yet the London *Times* seriously suggests that this salary will make membership of Parliament lucrative! The *Times* is even more bothered about the proposal to pay a small pension to Members who have served upwards of ten years—it argues that Members will cling to their seats till they earn the pension. The counter to this is that a pension will make the older Members more, not less, independent of the Party Whips, since if they lose their seats at an Election they will not thereby lose their livelihood.

However, there seem to be some vested interests in keeping Membership of the House confined largely to those classes who can either finance themselves or rely on the Unions, and meanwhile the proposed increase is being made out to be far more than it is. It is now apparent that the recommendations were not made as skillfully as might have been: in view of the fact that such a high proportion of the salary is absorbed by expenses, it would have been much more objective to propose to pay each Member a tax-free expense allowance of £500 in addition to the salary, which could then have been left at £1,000. Even better is one suggestion to give

(*Continued in previous column*)

INDIA BEGINS MANUFACTURE OF STAPLE FIBRE

SIGNIFICANT LANDMARK IN HISTORY OF TEXTILE INDUSTRY

INDIA'S first factory designed to manufacture staple fibre and fabrics made out of that fibre has commenced production. The samples of these products were shown to a party of journalists in Bombay last week. The factory goes under the name of the Gwalior Rayon and Art Silk Mills Ltd. It is situated at Nagda, near Gwalior, on the Western Railway. The credit for pioneering this industry goes to Messrs. Birla Bros. Ltd., who are the Managing Agents of the Company. Some idea of the financial stake in this bold venture can be had from the fact that the capital invested in it is Rs. 3.25 crores. The factory has been brought into existence in record time, as we shall presently show. It is needless to add that this event constitutes an important landmark in the history of our textile industry, nay, in the whole of South Asia, for nowhere else in this region is staple fibre being made. It is important, because it constitutes another successful effort at taking India towards self-sufficiency in the production of textile fibres. It marks no threat to Indian cotton but to cottons that are now being imported.

In taking to the manufacture of staple fibre, India is keeping step with the developments in textiles in other parts of the world. Though of recent origin, staple fibre has come to hold an important place among textile fibres. An indication of this is provided by the fact that staple fibre today accounts for nearly 20 per cent. of the aggregate world output of cotton yarn, the quantity actually produced being 650,000 tons per annum. It is being produced both in countries which grow large quantities of cotton and also in countries which do not. An example of the former is provided by the U.S. which is now producing about 120,450 tons of staple fibre. Germany is an example of the latter and it is one of the world's biggest producers of staple fibre; during war years, this country was producing at the rate of about 346,750 tons per annum. The production of the fibre in the U.K. is at the rate of 47,450 tons and efforts are being made to step up output substantially. Incidentally, it will be interesting to note that, out of the aggregate spindleage amounting to 27.26 million in the U.K., 2 million spindles are now permanently engaged in the spinning of staple fibre. The *per capita* consumption of staple fibre fabrics in the U.K. is placed at 10 yards.

Uses of Staple Fibre

This brief account will suffice to show how popular the staple fibre has become of late. It is claimed that this man-made fibre is the most versatile available which can be spun over every known system and which presents an extensive range of yarns unsurpassed by any other textile fibre. One great advantage in the spinning of staple fibre is the reduction in waste. Under proper conditions, staple fibre produces only 2 per cent. waste, against as much as 20 per cent. on cotton. Further, the fibre yields its maximum strength with a low-twist factor. Thus, staple fibre of 1.7/16" 1.5 denier requires a finish factor of only 2.7, as compared with 4.5 to 5.5 in the case of Indian cotton and 3.75 to 4.25 in the case of American cotton. This fibre has led to the manufacture of fabrics "with characteristics and a distinctive beauty of their own." An idea of the several uses to which this man-made fibre can be put can be had from the following extract culled from the interesting brochure, *Why Import Cotton*, published some time ago by Messrs. Dobson and Barlow (Rayon Plants) Ltd., the well-known British firm of rayon machinery makers who, incidentally, designed, manufactured and erected the plant at Nagda, Gwalior:

One distinct advantage in staple fibre is that, unlike natural fibres, it is produced to specification and factors such as staple length, filament denier, extensibility, lustre and colour may be arbitrarily controlled. The staple fibre spinner can now command staple length and fineness in almost any combination. Staple fibre is extensively used in union with natural fibres and many interesting and practical fabrics result from such blends. In blending cotton with staple fibre, one great advantage is that a yarn can be produced with virtues of the man-made fibre such as whiteness, cleanness and good draping qualities, together with a wet yarn strength equal to the dry strength.

Spun dyed staple fibre has also found great favour. Here the viscose is pigmented prior to extrusion. Low cost, fastness and the range of shades opens new possibilities to the spinner. Furthermore, spun dyed will process as easily as standard viscose staples which is the reverse of stock dyed natural fibres. Viscose fibre loses about 40 per cent. of its strength on wetting, but this may be corrected by blending with cotton when the properties of both the fibres may be utilised. The effect of blending staple fibre with cotton reduces the dry strength of the staple fibre—which is greater than cotton—but increases its wet strength. Staple fibre, on the other hand, possesses high extensibility, particularly when wet. The product of tensile strength and extensibility is a matter of great concern, particularly to the weaver. It is, therefore, a combination of factors which affects the strength of a yarn, the chief of which are fibre length, hair weight, clinging power, amount of twist and fibre resistance to bending. Finally, the construction of the individual fabric is a matter of great importance.

A large field is opening in the cotton industry for staple fibre/wool blends. A short staple wool of 64s to 80s quality is used and, if the staple length of 2¾" can be handled, the wool can be blended with the staple fibre at the draw frames. Alternatively, the wool may be "stapled," usually to 1.9/16", and blended with 1.7/16" staple fibre at the openers. High quality worsted type yarns suitable for dress wear, underwear and tropical suitings can be produced in this manner on normal cotton spinning machinery. The high hygroscopic character of viscose fibre makes it particularly suitable for wear in tropical climates. At a temperature of 75° F. and relative humidity of 90 per cent. viscose will regain moisture up to 25 per cent. of its dry weight. Moisture from the body is thus taken into the fabric of the material, imparting a general feeling of comfort to the wearer. This is quite the reverse with certain textiles of low hygroscopic regain, such fabrics are cold and clammy to the wearer in tropical climates.

Vast Scope for Expansion

There is vast scope in India for the manufacture of staple fibre and staple fibre fabrics. Even on the basis of a *per capita* consumption of only one yard of fabric, the total quantity of staple fibre required will be about 34,000 tons per annum, which is more than six times the present capacity of the Nagda factory, estimated at 5,400 tons per annum. The importance of developing the staple fibre industry lies in the saving of considerable foreign exchange, amounting to about Rs. 3 crores, which is now being spent on fibre and yarn. During the seven months ended October, 1953, for instance, India imported more than Rs. 1.85 crores worth of staple fibre and yarn from abroad. Again, to the extent that staple fibre is used, the consumption of raw cotton in the manufacture of textile goods will be reduced. Two advantages accrue from this, namely, (1) lesser dependence on imports of foreign cotton, which means saving of foreign exchange, and (2) reduced pressure of cotton cultivation on land, which means availability of more land for production of food crops.

In view of the vast potentialities for development, the pioneering efforts of Messrs. Birla Brothers Ltd. in undertaking the manufacture of staple fibre and fabrics are indeed commendable. The Nagda factory, as already stated, has been designed and equipped with up-to-date machinery supplied by Messrs. Dobson and Barlow Ltd. of England. Plant and machines have been erected under expert supervision of foreign technicians. Built over an area of 200,000 square feet, on the banks of the river Chambal, the factory comprises a pumping station delivering about 8 million gallons of water per day for process and auxiliaries, an extensive water treatment station for settling, filtering and softening water for process purposes, an 8,000 kw. power station, an air-conditioning and refrigeration plant of 1,000 tons capacity for process cooling, and extensive caustic soda and sulphuric acid recovery plants. Plants have also been erected to manufacture sulphuric acid and carbon-bisulphide, the two important raw materials from imported sulphur. As regards cellulose (generally in the form of wood plup), the basic raw material, it is proposed to develop in subsequent stages the use of indigenous material which can be derived from several potential sources, such as cotton linters, cotton waste, bamboo and bagasse. In the initial stages, rayon grade pulp will be imported. Yet another important raw material that goes into the manufacture of this fibre is caustic soda which is already being produced in India in substantial quantities, though not sufficient to meet the demands of the rapidly expanding rayon industry.

The whole installation of machinery and equipment has been completed in 14 months from commencement of erection to start-up of the factory, a record practically without parallel in any plant installation of comparable size. Throughout this period, there has been the closest collaboration with the British firm of designers and manufacturers. Every item of plant and machinery has been erected under the expert supervision of foreign technicians and no less than 14 such experts have been resident at the factory site.

EXPORT OF COTTON YARN

The Central Government is reported to have decided not to allow any quotas of cotton yarn for exports during the current half-year. The chief consideration which has weighed with the Government is, it is stated, "the excellent demand for yarn within the country."

A NEW INDUSTRY FOR INDIA

THE FIRST STAPLE FIBRE TO BE MADE IN INDIA PRODUCED AT BIRLAGRAM, NAGDA, BY

GRASIM

(STAPLE FIBRE DIVISION)

COTTON BILL PASSES THIRD READING

WILL IMPORTS OF JAPANESE GREY GOODS BE BOYCOTTED?

(From A Special Correspondent)

MANCHESTER, *23rd February*

AMID the already well-established contrasting arguments of the politicians, the Cotton Bill, which paves the way for the reopening of the Liverpool futures market, has now received its third reading in the House of Commons. In barely three months, the industry will have returned to a system which was in force prior to the war, although the extent of the facilities to be offered will be by no means as comprehensive. Discussions are proceeding on the new arrangements, but the industry at large is still without details as to what opportunities for covering transactions will be put at its disposal. The opponents of the system whisper darkly of the threat to supplies and the possibility of widespread difficulties arising from the narrow nature of a purely American contract.

MANCHESTER LETTER

The present situation concerning long-staple cotton in Egypt and the Sudan strikes a warning note as to the problems yet to be faced, but these would equally affect the Raw Cotton Commission if it was to remain in being. Spinners as a whole are anxious to test the re-formed market and believe that they will be able to make it work effectively, even if the transitional period creates some confusion.

Arguments About Japan

Mr. Peter Thorneycroft, President of the Board of Trade, visited Manchester last week for discussions with the Cotton Board about many problems affecting the industry. The meeting had been called some time ago and was not solely in connection with the recently negotiated Japanese trade agreement. In view, however, of the widespread concern expressed in Lancashire about this pact, the talks were bound to centre on the subject of Far Eastern competition.

Almost providentially for Mr. Thorneycroft, the East African Governments announced their decision to maintain the restrictions on imports of Japanese cotton goods for a further eight months to the end of the year, in time for him to take some credit for this action. The goodwill extended to the Lancashire mission to those territories has now been borne out by events and the team merits the warm thanks of the industry for their efforts. If one area is prepared to maintain its ties with Lancashire, it only means that even more intensive competition must be expected in other markets where the Japanese are sure to press for entry. In view of its significance to Lancashire, some assurances from West Africa would be doubly welcome at the present time.

In spite of its overriding importance just at the moment, the Japanese trade agreement was only one of a series of problems which the President of the Board of Trade discussed with the leaders of the industry. For some time, there has been pressure in Lancashire for members of the Government to give an indication of their attitude towards Lancashire's staple trade. There are many who feel that London is convinced that an even smaller, if more compact, Lancashire cotton trade would suit the national economy better than the existing structure.

Confirmation that this view prevails in Government circles came almost immediately, in the course of a speech made at Cardiff by Mr. D. Heathcoat-Amory, Minister of State to the Board of Trade, who said that many of Britain's traditional markets had gone for ever. We had, he added, to develop and prepare for a new pattern of trade. We would have to sell more capital goods, instead of consumer goods.

Jap Cloth Boycott

Mr. Percy C. Fish, Chairman of J. F. and H. Roberts Ltd., the £1,300,000 Lancashire textile concern, stated, at the annual meeting in Manchester, that the Company would not handle any Japanese cloth brought into this country. Other "like-minded companies who have the Lancashire industry at heart," he declared, are also refusing to book business which involves the purchase of Japanese grey cloth." Claiming that it was sometimes advisable to forgo an order, Mr. Fish said that his Company preferred to support a "British spun, woven and finished" policy to help a fine industry maintain its hard-earned reputation.

Proceeding, Mr. Fish said: "No matter what we think of the Japanese, we must admit they are altogether too clever and farseeing for some of our leaders of the textile industry who are only too anxious to grab immediate gains without any consideration for the industry's future." Mr. Fish said that it was penny wise and pound foolish to prejudice deliveries of home-produced cloth and to "go on merrily supporting an unenviable foreign competitor."

Under the new payments agreement with Japan £3,000,000 worth of Japanese grey cloth is to be allowed into Britain for finishing and re-export.

Home Trade Supplies

Further evidence that any expansion in output of cotton and rayon goods in Britain is more likely to benefit the home trade than result in export business is contained in the figures showing the distribution of supplies during 1953. Although production made a recovery from the low levels of 1952, the share obtained on export account was negligible and the vast majority of this extra cloth went to home trade sources.

The reduction in imports of foreign fabrics during the past two years has further restricted supplies, but the struggle to maintain export trade in the face of competition and other difficulties is equally obvious. The quantity of cloth used by industrial consumers at home appears to be increasing, while the regular trade in such goods as dress materials and the wide variety of household uses for cotton and rayon goods shows no sign of diminishing.

The table below shows the comparative distribution of cotton and rayon cloth in recent years:

(In million yards)

Year	Output (a)	Imports (b)	Total (a) and (b)	Exports	Balance for home trade
1937 ..	4,122	75	4,197	2,001	2,196
1947 ..	2,012	174	2,186	539	1,647
1948 ..	2,440	248	2,688	896	1,792
1949 ..	2,502	400	2,902	1,078	1,914
1950 ..	2,840	342	3,182	1,017	2,165
1951 ..	2,960	476	3,436	1,105	2,331
1952 ..	2,192	210	2,402	871	1,531
1953 ..	2,632	143	2,775	895	1,880

Cloth Output

Rayon's revival, lately noted in the figures for yarn production, is equally obvious from the cloth output totals for 1953. The quantity of rayon and mixture goods turned out by the mills last year showed an almost equal advance over 1952, as compared with cotton, but, whereas rayon's full production exceeded the previous peak in 1951, cotton cloth output remained well below the aggregate for that year, as the following table shows:

(In million linear yards)

Cloth production	1953	1952	1951
Total	2,632.21	2,201.74	2,960.10
Cotton	1,903.67	1,600.93	2,201.41
Rayon and mixtures	768.54	600.81	758.69

In the 12 months, spinning and weaving employers gained an extra 16,000 workers, the labour force rising from 272,230 to 288,130 available for employment. Manpower gains were more noticeable in the spinning and doubling branch than in the weaving section, but the increase can only be described as moderate in the circumstances.

Smaller Shipments—Larger Imports

Lancashire's export prospects for 1954 do not seem particularly bright and the year has made only a moderate beginning, according to the January figures. Total earnings from cotton goods were slightly below £10,000,000, a reduction of £500,000 on the corresponding month a year ago. Yarn shipments, however, showed an expansion on the previous month, although they remained below the level recorded towards the end of 1953. Exports amounted to 4,178,033 lbs. worth £1,814,377. Chief buyers were Australia 506,380 lbs., Western Germany 462.829 lbs., Irish Republic 422,931 lbs., Canada 255,270 lbs. and India 251,089 lbs.

The volume of cotton piecegoods shipped abroad in January was rather lower than the monthly average in 1953, being 57,887,000 square yards at a value of £7,328.320. The average for last year was slightly in excess of 59,000,000 yards per month. Chief consumers of cotton cloth in January were (in square yards): Australia 8,446,000, South Africa 6,814,000, Nigeria 6,106.000. Gold Coast 3,279,000 and New Zealand 3,142,000.

Imports of cotton grey cloth were nearly twice as big as in January, 1953, the total being 9,983,000 square yards, valued at £554,205. Arrivals of finished cotton cloth amounted to 3,118,000 square yards, as against 2,012,000 yards a year ago and yarn imports exceeded 1,000,000 lbs., as against 115,000 lbs. in January, 1953.—*All Rights Reserved.*

INTENSIFYING DEVELOPMENT OF SUGARCANE

RESEARCH WORKERS MUST ACCEPT THE CHALLENGE

RESEARCH and development of sugarcane in India have been lagging behind; it is essential that a sense of urgency permeate the entire body politic of the hierarchy concerned with the well-being of the sugar industry. This, is brief, is the sum and substance of the presidential address of Mr. K. L. Khanna, Director of Sugarcane Research and Development, Bihar, delivered at the meeting of the Sugarcane Development Section of the Second Biennial Conference of Sugarcane Research and Development Workers in the Indian Union, held at Jullunder recently. As has been pointed out ere now in these columns, if, in spite of the protection for well over 18 years, the sugar industry cannot endure the weather of a free market, it is undoubtedly due to the rather unhealthy state of affairs in the sugarcane economy. The yield per acre and the sucrose content of cane have not only not improved but have actually suffered a setback in recent years in U.P., Bihar and other parts of Northern India. It is no wonder, therefore that the cost of sugar in India has been high. Surely, the expectation of the consumer getting his requirements of sugar at an economic price has been belied. The Government of India, of course, has now decided to import large quantities of sugar from abroad with a view to ensuring supply for domestic consumption. But this is not the correct way of solving the problem of assuring adequate supply of sugar to the people at reasonable prices. At best, it can be regarded only as a short-term solution. As Mr. Khanna pertinently remarked, the lure of cheap sugar from abroad may eventually kill the goose that lays golden eggs. What is wanted now is not negative approach but positive action. To quote the words of Mr. Khanna:

"I submit that the answer to either short supply or high cost of production lies not in imports but in a well conceived plan to raise home production by improving acre-yield and quality in a concerted manner with the least possible delay. Else it would be a reverse gear movement and we would be undoing the labours of the past quarter of a century or more. It is, therefore, here that this assemblage of devoted and experienced workers in sugarcane can lend its full weight and see to it that the cost of production is progressively cheapened in the field and a rich quality raw material is made available to the factories where it is processed under conditions of least loss in available sugar. This is a challenge that has to be accepted on all fours, if the research and development organisations have themselves to survive, for it will be little consolation to own them and not the industry—both cultivating and milling—for whose abiding interest and lasting benefit they were specifically brought into being.

"The sugar industry is too precious a possession to be treated lightly, much less lost, and my plea is that we set about doing our honest and earnest bit in whatever sphere we are placed to see that the acre-yield factor and quality show an immediate and progressive rise and that all the present waste of the industry is turned into wealth . . . The situation demands work being done on a war footing where delays, however small, may make all the difference between success and failure. The State development schemes in their entirety must be pushed ahead and research function, wherever lacking in facilities and personnel, must be assisted such that the science of cane agriculture and technology is made to reach the door of the cultivator in a continuous stream."

Cane Supplies to Factories

Turning to some of the specific problems relating to sugarcane supplies to the factories, Mr. Khanna drew particular attention to the time lag between the cutting of the cane in the field and its actual crushing in the factory. This has been due to the fact that the factories, more especially those located in the northern sugar belt, have to tap small growers who are placed at varying distances and who have small holdings. The loss under such conditions during the latter half of the crushing season is estimated at 6 to 8 per cent. in weight and 0.6 per cent. in sugar recovery. This loss, Mr. Khanna feels, can be greatly reduced if the factory roads are rapidly improved and quick means of transport in the form of tractor trailers or tramway locomotives are ensured. He also suggests mist-spraying of cane in transit at the rate of 2 gallons to a 10-ton wagon which will result in additional sugar recovery of 0.4 to 0.7 unit.

Another direction in which rapid development is feasible, and to which Mr. Khanna alluded, relates to time schedules of sugarcane supplies. As these schedules are based on the quantity of cane offered by a cultivator, instead of on quality at the time of cutting and despatching, the initial recovery is abnormally low. Thus, the average purities of cane supplied in the early part of the crushing season range between 62 and 83 per cent., 30 per cent. of which falls below 70 per cent. parity, while the same during the middle part of the season varies between 74 and 89 per cent., the difference will be even less pronounced as the season draws to a close. In the opinion of Mr. Khanna, the existing rules of issuing supply challans in an equitable manner, as provided for under the Sugar Factories Control Act, are detrimental to the efficient utilisation of the crop. The loss in recovery under this system, for instance, is said to be not less than 0.5 unit for every 100 maunds of cane crushed. On this basis, the aggregate loss which the two States of Uttar Pradesh and Bihar alone suffered during 1952-53 is estimated at 1.3 million maunds of sugar worth Rs. 4 crores. The Central Government also lost about Rs. 35 lakhs in that year by way of reduction in excise duty. If this is true, then something must be done to avoid this loss which is quite sizable. Mr. Khanna's solution for this is the adoption of a "system of harvest control in succession of ripening."

Price of Sugarcane

Closely allied to the question of time schedules of cane supplies is the issue relating to price of sugarcane. Inasmuch as this issue has assumed special significance in the present context of the agitation of sugarcane growers of Uttar Pradesh to secure a higher price for their produce, it is but natural Mr. Khanna should have referred to it in his address. His remarks on this question are as follows:

"The benefits accruing from the industry have not been distributed equitably to its two essential counterparts, namely, the miller and the grower, and I fear the present upsurge of dissatisfaction and even suspicion in the latter is in no small way due to this cause. Governments both at the Centre and in the States have doubtless endeavoured to keep the scales even, but, in the very nature of things, this has neither been very easy nor feasible. The discriminatory price incentives have not wholly delivered the goods for the simple reason that parities with competitive crops have not always been maintained nor sustained long enough, the data on crop costings is meagre and is certainly not as elaborate and meticulously calculated as that on the milling side; while defaults or departures from normal (anticipated) rarely, if ever, remain uncompensated, for, so far as the milling industry is concerned, there is little or no reflection of a similar dispensation in the case of the cane-growing community. Unlike other advanced sugar countries, the crop is paid for on its weight and not quality, thus widening the gulf between the two parties, one concerned with production of the raw material and the other with its processing into white sugar. Moreover, the country as a whole is a near continent in size with large variations in the edaphic and environmental factors under which the crop has to grow and the impress thereof cannot but be expressed in the differential output not only of the sugarcane crop but also of crops that rotate or compete with it and whose parity prices enter significantly into the wise counsels of the cultivator, thereby making it difficult to fix a uniform price for the raw material.

Cane prices cannot be divorced from those of other agricultural commodities and, in a trend of falling prices, any disconcerting rise can only complicate the already difficult price structure. The criterion, however, has to be whether or not a crop can be sustained at a desired level by the offer of a certain price and, if it cannot be, some price stimulus has to be provided for, its quantum and variations thereof to meet different conditions, being in accordance with the essential needs of the objective referred to above. Besides, certain basic principles, if accepted, would retrieve, to a large extent, the present difficult position."

Mr. Khanna finds little justification for the sugar price determining that of the raw material. For, according to him, the basis should be the cost of cultivation of the crop with a reasonable margin of profit. He emphasises that such of the items in cost analysis as interest on working and block capital, insurance against crop failures and incidence on account of transport and supervision, that still remain controversial, need to be critically examined and reconciled to the best advantage of the industry.

Few would dispute the reasoning behind those observations of Mr. Khanna. But the point is whether the cost of cane cultivation can be accurately assessed. The former Tariff Board felt that it was extremely difficult to determine, with any degree of accuracy, the cost of production of a commodity, industrial or agricultural. In support of this view, it said: "... the factors influencing the cost are many and complex. Moreover, such factors vary widely from year to year, from place to place and even from cultivator to cultivator ... reliable data of costs are not available, because the cultivators do not maintain any accounts regarding their expenses of cultivation. Owing to these difficulties, all attempts of ascertaining the cost of cultivation of sugarcane in this country have been attended with unsatisfactory results."

Fixation of sugarcane prices purely on the basis of cultivation costs, therefore, may not be quite feasible. At the same time, there is no gainsaying the fact that, whatever may be the basis chosen, it will be quite unreal if that basis does not take into account the cost of producing cane. Again, due attention must be paid to the quality aspect. The price of cane should be linked not to its weight but to the sucrose content. In other words, the cultivator who supplies cane with higher recovery per cent. sugar should be assured of higher price *vis-a-vis* the cultivator who grows inferior quality cane. That is the most effective way of giving encouragement to the cultivation of better quality cane. It is a pity that Mr. Khanna failed to stress this point in his otherwise interesting address.

QUALITY OF SUGAR

A perceptible improvement in the quality of sugar produced in India was recorded during the 1952-53 season. According to the review made by the Director, Indian Institute of Sugar Technology, Kanpur, the bulk of the sugar output was accounted for by the two highest colour grades, namely, I.S.S. 29 and 28, the actual share of both being 82.72 per cent., as against 35.54 per cent. in the previous season. The improvement was more marked in the case of I.S.S. 28, the percentage share of which in the total sugar production rose from a bare 15.08 to as much as 60.15, while that of I.S.S. 29 increased from 20.46 to 22.57. Lower colour grades of sugar, on the other hand, suffered a setback, a welcome development indeed. The share of I.S.S. 27 and 26 in the total sugar manufactured in 1952-53 was not more than 14.42 per cent. and 1.85 per cent., as against 23.64 per cent. and 3.26 per cent., respectively, in 1951-52. Although colour standards below I.S.S. 26 have been dropped from the schedule of Indian Sugar Standards since 1950-51, a few factories still continue to report production under colour grades below I.S.S. 26. But the quantity actually produced is negligible, representing only 0.07 per cent. of the total.

The following table indicates the production of different colour grades of sugar during the 1952-53 season, as compared with the previous season:

I.S.S. colour grades	1951-52		1952-53	
	Quantity (Tons)	Percentage share	Quantity (Tons)	Percentage share
29	301,589	20.46	293,011	22.57
28	762,845	51.06	780,900	60.13
27	348,390	23.64	187,105	14.42
26	48,029	3.26	20,043	1.85
Below 26	11,803	0.80	846	0.07
Ungraded *Kori* and other sugar ..	10,889	0.74	11,639	0.90
Crushed sugar ..	378	0.02	606	0.05
Total ..	1,473,982	100.00	1,298,149	100.00

The trend of sugar production with regard to grain size during the season under review did not show any marked deviation from that in 1951-52, except the fall in the percentage of production under I.S.S./E from 31.9 to 25.03. The figures below give the production of sugar corresponding to different grain sizes in the past two seasons:

I.S.S. grain size	1951-52		1952-53	
	Quantity (Tons)	Percentage share	Quantity (Tons)	Percentage share
AA	222	0.02	5,060	0.39
A	15,108	1.03	10,677	0.82
B	35,571	2.41	42,845	3.29
C	220,003	14.93	242,563	18.66
D	710,069	48.18	638,805	49.19
E	470,199	31.90	324,977	25.03
F	9,010	0.61	20,249	1.57
G	2,446	0.17	1,529	0.11
Crushed and ungraded sugars ..	11,267	0.76	12,244	0.95
Total ..	1,473,982	100.00	1,298,149	100.00

It will be seen from the above figures that the percentage of sugar production under I.S.S. AA, B, C, D and F registered a small rise during 1952-53, while that under A and G declined. I.S.S. "D" grain accounts for the highest production, a trend which has been in evidence for the past seven years.

The position regarding production of a number of grades of sugar by the same factory during 1952-53 shows a slight improvement over the preceding year. The number of factories manufacturing only five grades of sugar was 90, representing 56.5 per cent. of the total, as against 87, representing 45.3 per cent. of the total. The number of factories producing more than 15 different grades was also higher at 3, as against 1.

The foregoing account reveals that the Indian sugar industry has been making efforts to improve the quality of its product. In this task, the industry is advised and assisted by the Bureau of Sugar Standards. Nevertheless, much remains to be done. There is considerable scope for raising the quality still further. This can be done by enhancing the technical efficiency of the sugar-producing plants. It is here that the scientists and technologists connected with the sugar industry play a vital role.

MANUFACTURE OF STEEL WITHOUT COKING COAL

JAPANESE EXPERIMENTS REVIEWED

THE production of steel with as little, if not completely without, use of coking coal as far as possible is of importance today to Asia and the Far East, for the known reserves of coking coal in this region are limited. In those countries of this region where they exist, the distance between the sources of coking coal and iron ores is generally wide. So far, only in China, including Manchuria, and in India are there large deposits of high-grade coking coal. But, even in these countries, the resources are not unlimited. So far as India is concerned, it is stated that the coking coal reserves would be exhausted before the iron ore reserves are fully exploited. This is the reason why the Government of India has ushered in a programme of conservation of coking coal. Although deposits of coking coal are reported to exist in the Philippines and Indo-China, their extent and coking quality have yet to be fully investigated.

In the light of the above situation, experiments now being conducted in Japan in manufacture of iron and steel by the use of "coal blends," not commonly considered to be of coking quality, will be of considerable interest to nations in South and South-East Asia desirous of developing their iron ore reserves. More so to India, now that the erection of a State-owned iron and steel plant will commence shortly and there is also a move to establish another plant under the second Five-year Plan. We, therefore, give below a review of the experiments conducted so far in Japan, as published in one of the recent issues of the *Iron and Coal Trades Review*, London:

"For making blast-furnace coke, a blend of indigenous and imported coal has been used in Japan, where there are relatively large reserves, but no coking coals. The imported coal comes mainly from North China and Saghalin, and is blended with local coal in the proportion of roughly 30:70. Experiments have been conducted with a view to making the country independent of imported coal and the best results so far have been obtained by blending low-temperature coke with indigenous coal in proportions of about 20:80. The coke, finely pulverized, is itself low volatile, but when blended with the indigenous coal, produces a coke of suitable characteristics and a drum index of from 85 to 90 per cent., for use in small blast furnaces, although it is unsuitable for furnaces of more than about 300 tons daily capacity.

"For best results, the coal must undergo careful preparation, including: (a) Double washing in order to reduce ash content; (b) careful screening to obtain small size which in Japanese coals possesses the best characteristics; and (c) double pulverizing of low-temperature coke to ensure maximum blending. By this method of preparation, it has been demonstrated that a satisfactory metallurgical coke can be made from Japanese coal. The capacity to produce low-temperature coke, however, is limited and will remain so until suitable coking capacity can be acquired.

"Experiments in Japan have also demonstrated that anthracite from Indo-China (Hongey) can be blended with coking coal from North China (Kailan) to make a suitable metallurgical coke, tests showing a drum index of about 90 per cent. using about 40 per cent. Indo-China anthracite, above this there is a decline in coke strength. Indo-China anthracite has been used successfully at the Yawata plant, but other anthracite only when a small proportion was used in the mixture.

"Another promising experiment being conducted in Japan is that of increasing the coking quality of a coal by the addition of a solvent, this being either creosote oil or pitch oil. Coal is crushed and mixed with the solvent in a proportion of 1:1.5 and the mixture is heated for several hours at about 200 deg. C. to make depolymerized coal. The second stage is the blending of a poor quality coking coal with depolymerized coal and fine coke in proportions of about 85:10:5 and putting the blend through the ordinary high-temperature carbonization process. The resulting coke in these experiments has a drum index of approximately 90 per cent. and promises to be suitable for metallurgical uses. Further, in the process, most of the solvent is recovered."

COAL IN ASSAM

The output of coal in Assam in 1953 was 486,321 tons. Taken together with the carry-over of 22,249 tons from the previous year, the total amount available for disposal during the year was 508,570 tons. Out of this, nearly 5,00,000 tons were despatched to different industries. It is stated that the producers in Khasi and Jaintia hill districts have been finding it difficult to dispose of their stocks due to ban on imports of Kasi coal into East Pakistan. Meanwhile, it is learned that the Government of India has taken up the matter with East Pakistan authorities.

RATIONALISATION OF WAGES IN DUNDEE JUTE MILLS

WAGES LINKED TO PRODUCTIVITY

A COMPREHENSIVE account of a new scheme of wage structure introduced in the Dundee jute industry is contained in the February (1954) issue of the *Times Review of Industry*, London. The scheme is based on a very detailed job analysis carried out by the managements of jute mills with the co-operation of their staff workers. A study of this scheme should be of some interest to Indian jute mills, for they have to compete with the Dundee mills not only in the U.K. but also in a few other markets. Further, while the conditions that existed in Dundee before the introduction of the new scheme and those prevailing in the Indian jute mills now may not be exactly similar, there may still be something in the new scheme followed by Dundee from which mills in this country may benefit. A brief reference to it, therefore, will not be out of place.

Before the new scheme was introduced in Dundee—there are still some units there which have yet to follow it—there were numerous anomalies in the wage structure. Thus, for the same work carried on by different operators, different wages were being given. Again, wages differed from department to department in the same mills and from mills to mills in the same area. There was no uniform scale of wages and each mill had its own rate. Some operatives were being paid by piece rates, while others were receiving wages on a time-rate basis. There was, generally speaking, no link between work done and the wage packet received. Some were paid more than what was commensurate with their work, while others were getting actually less than what was due to them. This was due to independent bargaining in the past between workers and managements. These anomalies attracted the attention of the Government's Working Party on Jute and figured prominently in its report submitted to the Government in 1948.

Job Analysis

Shortly after the publication of the Report, the managements of the jute industry conducted exploratory talks with trade unions concerned. The principle of job analysis as the basis of a new wage structure was, as a result, accepted by both. In order to carry out the analysis, industrial experts were called in, and a three-point progress plan was drawn up. The latter was intended to ensure smooth progress of the work, as far as possible, towards achieving three objectives, namely, (1) establishment of merit ratings for all occupations, (2) translation of merit ratings into money rates, and (3) scientific measurement of the work content of each occupation to enable the money values arrived in (2) above to be related to work done.

The work of rating all the jobs in the industry was Herculean. For it concerned a number of departments in the mills such as (*a*) batching and preparing, (b) spinning and winding, (c) weaving, (d) cloth finishing, (*e*) sewing, etc. Committees were set up to deal with these departments in all the mills of members of the Association of Jute Spinners and Manufacturers. Altogether 111,744 assessments were made by 504 members of management, supervision and workers' staffs. In making the assessments—and this is important to note—four main considerations were taken into account. These were:

(1) Skill, training and experience required for a given work,

(2) responsibility and mental requirements of the job concerned,

(3) physical requirements, and

(4) hazards.

Once the assessments had been completed and collated by the consultants, a base rate analysis, or merit rating as it is called, for every job in the industry was finally agreed. This formed the first stage of the implementation of the new wage structure. The second stage concerned linking these merit rates to money values and getting the consent of the contracting parties to it. The third and last stage related to the implementation of the agreement.

Agreement Signed in 1952

Although the work of scientific measurement in the industry had begun shortly after the end of the war, the agreement embodying the principle of job evaluation was not signed by the parties till November, 1952. The industry in Dundee is now passing through the last stage. In the last 14 months since it was signed, 50 per cent. of the member firms of the Association of the Jute Spinners and Manufacturers have begun to introduce the new wage structure in their establishments. The entire scheme covers a wide variety of occupations and many different departments. The main feature of the agreement is that there is in it a plan of incentive, built up carefully through scientific work study, which ensures to the industrious operative a bonus averaging 33⅓ per cent. of the basic wage under conditions of full work loading at standard performance. It is claimed that this plan provides adequate recompense not only for ability but also for effort.

In the majority of instances, the new scheme of wage structure gives the operative the opportunity of increasing his or her wage packet. But it is not free from minor difficulties. For, in a few instances, it has been found, on scientific work assessment, that the wages paid under the old system were in excess of the new target earnings. In such instances, the agreement provides for a protection of the earnings award which is progressively reduced at six-monthly intervals. While such cases are regretted, it is generally felt that an outstanding advantage will be gained in labour relations, provided, of course, there are consistency and equity in the potential earnings of the various operations in the industry.

Modernisation

Fortunately, the implementation of the new wage scheme has coincided with the modernisation of the industry in Dundee, as, in most units, new plant and methods have been introduced. The resulting joint effect of redeployment and labour-saving devices has, it is stated, greatly helped the industry to overcome a post-war shortage of workers. Where automatic machinery has been used, the number of looms handled by an operator has gone up to 6, 8, 10 or even 12, according to the type of cloth being woven, whereas in mills where the looms are non-automatic, the number handled is as low as two to four looms. In one works, where redeployment has been carried out, as a result of the new wage scheme, 11 women in the bag printing department now turn out the same number of branded bags as 15 did before and wages have risen in a typical case from £4-5*s.* to £5-12*s.* a week.

By introducing the new wage structure, by revolutionising production methods, by establishing research laboratories and by adopting other production and administrative aids, the jute industry in Dundee has, we are told, improved its status and demonstrated, in the most practical way, its determination to keep abreast of the rapidly changing conditions of industrial life in Britain. Indian jute mills should not lag behind in following the example of Dundee in improving their productivity and reducing costs of production.

A point which clearly emerges from the Dundee experiment in wage fixation is that it is the outcome of a bipartite agreement between labour and management. The Government finds no place at all there, unlike in India where it is associated, in some way or other, with industrial disputes. It is to be hoped that workers' organisations, in particular, will understand the significance of the Dundee example which seeks to serve the benefit of the employee and the employer alike.

RECORD TEA PRICE IN U.K.

NO REIMPOSITION OF CONTROL

TEA prices have once again been in the news in London. This is on account of the sharp increase in the price of Indian common tea which, at last week's tea auctions in London, improved by as much as 1½d. per lb. over the previous week's auction price to touch a record level of 4*s.* 4¾d. per lb. The advance in price was, it is stated, due to the emergence of a strong demand, as also to the efforts of blenders to cover their requirements in the coming months when there is a seasonal gap in supplies from Northern India. A year ago, the price of Indian common tea fetched 2*s.* 7½d. per lb. and in the autumn of 1952 it stood at a low of 1*s.* 6d.

About two weeks ago, there was a strong suggestion in tea trade circles in London to the effect that a rise in retail price of tea was inevitable, in view of the substantially higher prices fetched in auction sales. For the retail price of tea has been standing around 4*s.* 1d. for some weeks past after it had been raised by 4d. to 4*s.* per lb. early in January this year, while the auction price stood last at 4*s.* 3½d. It was stated two weeks ago that if the auction prices continued to go up, a rise in packet tea prices was certain. According to a spokesman of the tea trade, the increase is likely to take place before the end of the first week of March. Now that the auction price has staged a further rise, it will not be surprising if the increase in retail price of tea comes off sooner than expected. There is, however, no price-fixing body or agreement in trade and it is a matter for individual firms.

The retail price has, as already stated, been standing around 4*s.* 1d. per lb. It would have risen from this level much earlier than now expected but for the large stocks held by retailers at the time when prices first started moving up. This does not mean that the statistical position of tea in London has undergone a sudden change, and to such an extent, that the overall supply is much less than the demand for tea. The North Indian tea crop is, no doubt, far from being large; it has fallen short by about 17 million lbs., thanks to the unfavourable weather conditions. On the other hand, larger crop in other parts of the world, such as in South India, seems to have offset the fall in the North Indian crop. The statistical position would not by itself have brought about the rise in tea prices. If the world consumption of tea had not risen, as it has done, the suppy and demand would have balanced each other. But consumption has actually risen to a remarkable extent not only in the U.K. and other traditional tea-drinking countries but also in the U.S. The de-rationing of tea and sugar in the U.K. is one of the factors which have been responsible for the rise in tea consumption.

When the North Indian tea estates begin placing their crop, as they will do, from April onwards, it will have a psychological effect on the market. But it will not be until September this year, that the weight of the exportable quantity will be felt to a marked extent. It is, therefore, not surprising that in the meantime prices have shown a tendency to harden. Commenting on this, the *Financial Times*, in the course of an editorial, says:

"Blenders have to provide for the time-lag which inevitably exists between a higher demand and an increased supply. Even if there is an overall adequacy of tea, blenders have to make sure that they obtain what they want to cover their requirements in the next few months. They are, in fact, suffering from the post-war attitude towards stocks which is affecting a number of other commodities. Before the war, the pipeline was filled with generous supplies, so that blenders were better able to cushion themselves against sudden changes in the statistical position. This they can no longer do, and thus they remain exposed to sudden shortages like the present. It is probably true to say that blenders have only managed to keep retail prices as low as they have by forward contracts entered into some months ago at prices lower than the present. But these contracts—for North India at least —are running out and, in any case, they cover only marginal supplies. Not until the weight of tea comes to the Calcutta market in September is there likely to be any slackening of demand. Whether the price of tea at the auctions will be higher in the meantime is unpredictable, but it seems very unlikely that it can fall substantially from its present level before the last quarter of the year."

The rising trend in tea prices in London seems to have caught the close attention of a member of Parliament, who asked the Minister of Food whether the latter would reintroduce price control on tea. Major Lloyd George, Minister of Food, replied in the negative. When

(Continued in previous column)

(Concluded from next column)

his attention was drawn to the fact that it was the distributors and not the producers who were asking for an increase, the Minister declared that the cost of production had a great relevance to the matter. "To say that by controlling tea prices to the consumer tea would come down is completely untrue." he added.

TEA CONSUMPTION IN U.S.

Every index of activity in tea in the U.S. market showed a rise in 1953. Thus, iced tea sales in restaurants were 28 per cent. higher than in 1952. Retail grocery sales increased by 6.5 per cent. Total imports of tea increased to 105 million lbs., that is 11 per cent. more than in 1952. Americans drank, it is computed, 1.6 billion more cups of tea. The Tea Council in the U.S. has intensified its efforts to increase tea drinking in restaurants. If Americans chose tea in restaurants as frequently as they do at home, the U.S. consumption could be increased, according to the Tea Council, by 14 million lbs. per annum.

NATIONAL INCOME OF INDIA FOR 1950-51

GROSS INCOME ESTIMATED AT RS. 9,530 CRORES

THE National Income Committee has submitted its Final Report to the Government of India, 33 months after submitting its first report. The Committee estimates the gross national income of India at Rs. 9,530 crores for 1950-51, which compares favourably with Rs. 9,010 crores for 1949-50 and Rs. 8,650 crores (revised) for 1948-49. The *per capita* income at current prices works out to Rs. 265.2, as against Rs. 253.9 for 1949-50 and Rs. 246.9 for 1948-49. When calculated in real terms, the *per capita* income, however, does not show any appreciable change during the period.

The following table shows at a glance the estimates of India's national income for the year 1950-51, as compared with the preceding two years:

Items		1950-51	1949-50	1948-49
Population	(millions)	359.33	354.82	350.38
National income	(Rs. crores)	9,530	9,010	8,650
Per capita income	(Rs.)	265.2	253.9	246.9
Net domestic product at factor cost	(Rs. crores)	9,550	9,030	8,670
Net national product at market prices	(,,)	10,030	9,460	9,060
Net output of Government enterprises	(,,)	290	270	240
Net output of Government administration	(,,)	430	410	400
Net output of private sector	(,,)	8,330	8,350	8,030
Government share in national expenditure	(,,)	820	810	850
Government draft on private income	(,,)	770	710	690

The estimates of national income for 1950-51, 1949-50 and 1948-49 are presented in different economically useful forms. With four chapters and four appendices, the Report is a comprehensive document replete with a large volume of statistical information. The narrative portion of the Report describes in detail the method of estimation employed, reviews the gaps in the existing statistics, makes recommendations for the improvement of the quality of the available data and for the collection of essential statistics required for estimation of national income, and discusses the ways and means of improving national income estimates and of promoting research in this field. The First and Final Reports thus, between them, cover all the terms of reference of the Committee. An appendix to the Report gives estimates for 1950-51, 1949-50 and 1948-49—all expressed at 1948-49 prices enabling the reader to get some broad idea of the variation in real output during the period. Another appendix presents approximate margin of error to be attached to the estimate presented. A comprehensive bibliographical list is also given.

National Income Estimation

The longest chapter in the Report is devoted to the estimates of national income. A seetion each has been devoted for describing the generation of national income in a particular industrial sector. For each sector, the Committee gives a detailed account of the sources used with critical remarks on the quality of material. Then, the actual method of estimation is elaborated. In most of the sectors, the Committee has given a table on the total value of the output generated by commodity classes and a second table giving the procedure of getting the net value of production from this total value. Thus, in this respect, the final Report gives considerably more material than was released in the first Report of the Committee.

The treatment of procedure of estimation and the examination of data is very detailed in most of the cases. In the Agricultural sector, for instance, the Committee fully examines the available area statistics, statistics bearing on yield rates, price statistics and the various material needed for getting the net value. As regards price statistics, various alternative price data have been examined from the standpoint of their usefulness for national income estimation. For calculating the net value, the Committee has considered, among other things, the question of depreciation of implements, cost of materials required for cultivation and repairs, maintenance of bunds, irrigation works, etc., uses of various kinds of manures and fertilisers, availability of data on seed rate, and feed of livestock.

Per Capita Real Income

After covering all the sectors in this fashion, the Committee devotes the last part of the chapter for presenting the national estimates which are built up from the sectoral estimates considered earlier. The national tables are more or less in the form as given in the first Report. In all the tables, estimates are presented side by side for the three years 1950-51, 1949-50 and 1948-49.

The Committee has also drawn some very broad conclusions about the estimates presented. The most important finding is, perhaps, the stability of *per capita* real income during the three years. As regards the sectoral estimates, the industrial enterprises as a whole show a decline during the period, while Government activities, including Government enterprises, depict a marked increase.

Industrial Sectors

The most important table of the Committee's report is the one which gives the contribution of different industrial sectors to national income. These contributions are presented in the table below:

National income of the Indian Union by industrial origin

(Rs. abja*)

Items	1950-51	1949-50	1948-49
Agriculture:			
Agriculture, animal husbandry and ancillary activities	47.8	43.8	41.6
Forestry	0.7	0.7	0.6
Fishery	0.4	0.4	0.3
Total of agriculture	48.9	44.9	42.5
Mining, manufacturing and hand trades:			
Mining	0.7	0.6	0.6
Factory establishments	5.5	5.4	5.5
Small enterprises	9.1	9.0	8.7
Total of mining, manufacturing and hand trades	15.3	15.0	14.8
Commerce, transport and communications:			
Communications (post and telegraph)	0.4	0.3	0.3
Railways	1.8	1.8	1.7
Organised banking and insurance	0.7	0.5	0.5
Other commerce and transport	14.0	13.9	13.5
Total of commerce, transport and communications	16.9	16.6	16.0
Other services:			
Professions and liberal arts	4.7	4.6	4.8
Government services (Administration)	4.3	4.1	4.0
Domestic service	1.3	1.3	1.2
House property	4.1	4.0	3.9
Total of other services	14.4	13.8	13.4
Net domestic product at factor cost	95.5	90.3	86.7
Net earned income from abroad	—0.2	—0.2	—0.2
Net national output at factor cost—National income	95.3	90.1	86.5

* abja=100 crores=Rs. 1,000 million.

The table, incidentally, gives revised figures for 1948-49. Thus, the national income in 1948-49 is now estimated at Rs. 8,650 crores, as against Rs. 8,710 crores given in the Committee's first report. This revision is due mainly to availability of fresh data. In so far as incomes in money terms are concerned, the table indicates a steady rise in income generated in agriculture and a relative stagnation in industries, as also in some other sectors. However, when appropriate adjustments are made for the price changes, as has been done by the Committee in an appendix, it becomes clear that this tendency is more apparent than real.

Working Population

It may be recalled that when the first report was prepared, data collected during the 1951 census were not available to the Committee. This material has since been used for estimation purposes for all the three years. The revised estimates of the working force as derived by the Committee are presented below:

Distribution of working force by industries in the Indian Union

(In thousands)

	1950-51	1949-50	1948-49
Agriculture and animal husbandry	10,27,11	10,11,35	9,95,91
Forestry	2,50	3,49	3,48
Fishery	5,79	5,78	5,77
Total	10,36,40	10,20,62	10,05,16
Mining	7,80	7,78	7,77
Factory establishments	29,69	30,70	30,65
Small enterprises	1,15,21	1,13,23	1,12,30
Total	1,52,70	1,51,71	1,50,72
Communications	1,95	1,75	1,09
Railways	11,78	11,81	11,02
Banks and insurance	1,47	1,47	1,47
Other commerce and transport	95,33	94,37	93,43
Total	1,10,53	1,09,40	1,06,51
Professions and liberal arts	64,25	61,91	60,16
Government administration	35,66	37,65	35,97
Domestic service	29,47	28,47	27,91
House property	..	..	..
Total	1,32,58	1,28,03	1,23,64
Total working force	14,32,21	14,09,76	13,86,03

The table is prepared on the basis of 1951 and 1941 census data supplemented by currently available statistics relating to employment in a number of industrial sectors. It will be seen that about 72 per cent. of the working population is engaged in agriculture and allied activities, while about 11 per cent. is engaged in mining and industries. The remaining 17 per cent. is engaged in the tertiary enterprises.

Role of Government

The Committee attempts to portray the role of Government in the national economy as follows:

Share of Government in domestic product and expenditure

(Figures in Rs. abja*)

Items	1950-51	1949-50	1948-49
Government share in generation of net domestic product:			
Net output of Government enterprises	2.9	2.7	2.4
Net output of Government administration	4.3	4.1	4.0
Net output of the private sector	88.3	83.5	80.3
Net domestic product	95.5	90.3	86.7
Government share in national expenditure:			
Government current expenditure on commodities and services (Government administration)	5.6	5.4	6.4
Government administrative capital expenditure	1.0	1.2	1.0
Government enterprises capital expenditure	1.6	1.5	1.1
Net national expenditure at market price	100.3	94.6	90.6
Government draft on private income:			
Direct taxes	2.3	2.2	2.4
Indirect taxes	4.3	3.9	3.6
Miscellaneous fees, etc.	1.1	1.0	0.9
Private income	95.7	90.5	87.0
Government capital formation and finance:			
Surplus on current account and maintenance provision	1.9	1.6	0.1
Government borrowing at home	0.5	0.1	2.7
Government borrowing abroad	0.1	0.2	—2.2
Extra budgetary receipts and adjustments for cash balances	0.2	0.8	1.5
Gross capital formation on Government account	2.7	2.7	2.1

* abja=100 crores=Rs. 1,000 million.

The above table gives the income generated in the Government sector and the share of Government in national expenditure, side by side with comparable aggregates of national income and national expenditure. It presents next a concise account of the Government draft on private income by way of direct and indirect taxes and other miscellaneous receipts and relates these magnitudes with an estimate of private income. This has been followed by a summary statement of the gross capital formation in the Government account and its finance.

The Report contains a number of other tables. A table gives the net output per engaged person by different types of industries. Another table is concerned with a classification of productive sectors by large- and small-scale enterprises. Three tables elaborate the international transactions of the country. Several tables give detailed accounts of the public authority sector as a whole. Current transactions for the administrative departments and the public enterprises are given in two separate tables, while all capital transactions have been consolidated in a single table. One table gives the generation of national income in various Government activities in considerable detail. Lastly, there is a table which depicts the relations between the different national aggregates such as domestic product at factor cost, national income, private income, national income at market prices, etc.

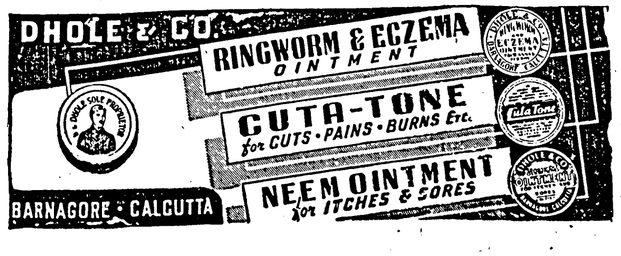
Saves on Repairs
Saves on Petrol

Mobiloil

STANDARD-VACUUM OIL COMPANY
(The Liability of the Members of the Company is Limited)



NATIONAL INCOME OF INDIA FOR 1950-51

(*Concluded from page 410*)

The next chapter of the Report is devoted to a critical examination of the available data in various fields and incorporates recommendations of the Committee on the improvement of data. The Committee has important and significant recommendations to make in almost all the fields of data collection some of which are given below:

In the field of agriculture, it has been recommended that reporting agency should be introduced in all the non-reporting areas. Present area reporting should be arranged in such a way that the primary reporters could cover a fifth of the villages every year. This will enable them to have complete coverage in the course of every five years. As regards wages and employment statistics, the Committee has recommended that the Labour Bureau should be made responsible for the entire body of the work and that the collection of such statistics should be extended to some special fields in which such statistics are not being collected at present.

The Committee suggests that the Central Government should take measures for bringing out uniformity in the reporting of statistics relating to sales tax. With regard to certain aspects of agriculture, animal husbandry, trade, transport, small enterprises, etc., the Committee recommends small-scale structural studies to be undertaken mainly by research institutions and academic bodies. In the case of small enterprises, such studies should be initiated by the Central Government, and State Bureaus and all-India private organisations for encouragement and protection of such industries should fully co-operate. The National Income Unit should prepare periodic reports on the implementation of the various recommendations.

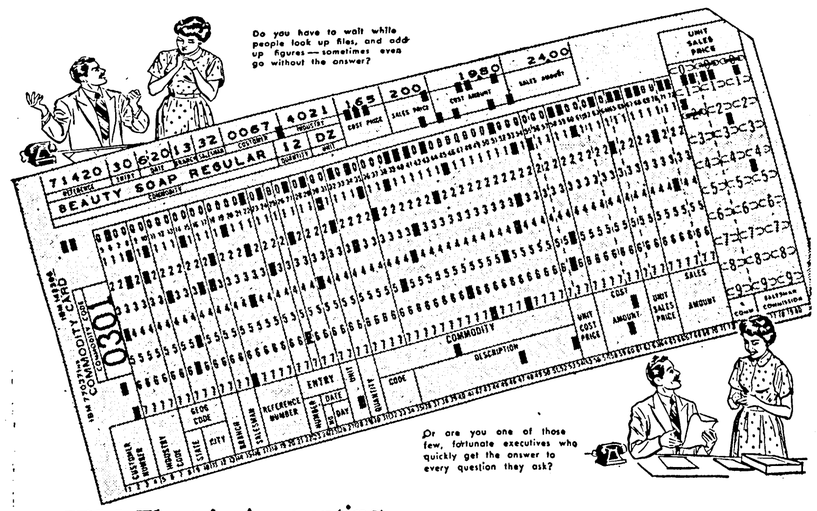
Institutional Set-Up

The last chapter of the Report is devoted to the institutional set-up for national income estimation. Here, the Committee recommends that the National Income Unit should prepare an annual paper on national income analogous to the White Paper on National Income in the United Kingdom. The Committee also suggests that the National Income Unit of the Ministry of Finance should be put on a permanent basis. The Committee is, however, of the opinion that a good deal of work on national income analysis and research could profitably be undertaken in research institutions and universities. For this, the Committee recommends that suitable grants should be provided by the Government for research in the field of national income.

The Committee further recommends formation of an interim Advisory Committee on national income. This Committee should review all current work on national income and advise Government on various matters related to national income. Ultimately, this Committee should be replaced by a non-official National Income Conference which should come into being through private initiative of various research workers in the field of national income, both official and non-official. When such a Conference starts, the work of the Advisory Committee should devolve on the Conference and the Advisory Committee should cease to exist. The Government should give all possible financial support to the National Income Conference once it is formed.

Margin of Error

The main body of the Report is followed by 4 appendices. The first appendix is concerned with an estimation of the movement of real output in the country. The second appendix is concerned with the method adopted for estimating the overall margin of error of the estimates presented. It is interesting to note that the Committee puts the overall margin of error of their estimates of national income at about 10 per cent. or slightly higher. In the third appendix, estimates for 1948-49 as given in this Report are presented side by side with the estimates as given in the first Report of the Committee. The Report concludes with a fairly long bibliography which gives the various publications used by the Committee.



IBM Electric Accounting
can increase your business efficiency

When you ask a question, you want the answer *soon* and you want it *right*. You'd probably agree that quick, accurate answers could save your business a lot of money.

That is why so many organisations rely on IBM Punched Card machines — because they give you, at a moment's notice, all the facts and figures you need.

Not only for 'big business'

Almost every business, large or small, can benefit from IBM accounting. Though varying considerably in their functions and capacities, IBM machines have a single basic characteristic — the ability to save time for the businessman in meeting the complexities of modern business.

Better still, each IBM installation is fitted exactly to your needs — there is no such thing as a 'standard' IBM setup. Experts study your individual problems, and submit a plan for your approval. The enormous flexibility of IBM machines ensures that the final system is tailor-made to your requirements.

IBM Service

Delivery of any IBM equipment marks the *beginning*, not the end, of our customer relationship. For along with the equipment, IBM provides — on a continuing basis — for its maintenance, for training and instruction of operators and supervisors — all the things, in fact, that help the customer obtain maximum value from his IBM equipment.

Saving time in 79 countries — 30 languages

Billing • Payroll • Statistics
Stores Accounting • Accounts Receivable
Financial Statements • Cost Accounting, etc.

For the smaller business

IBM Service Bureaus, located in principal cities, bring the advantages of high-speed, versatile IBM Punched Card Accounting within the reach of almost any business. IBM Service Bureaus are staffed by experienced personnel, and equipped with the latest IBM electronic and electric machines. All work is performed on a confidential basis. The cost is modest.

"Five wonderful years! Time to build, time to create. For my child it will bring health, free schooling. For my family, security . . . may be, with hard work, a home to call our own!"

Nearly a quarter of the funds of the Five Year Plan will be used in increasing, improving and widening the scope of our Social Services. Rs. 425 crores will go to raising the standard of living of the people, training 13,000 new doctors, 20,000 new nurses and midwives. By 1956, more than 60% of all children over six years of age will be in our 2,02,142 primary schools.

This long-range planning makes manifest our faith in the future. Here, indeed, is . . .

a pledge to posterity

Lakhs of tons of Steel will be used to implement the many diverse projects of the Plan. And so, in numerous significant ways Steel will provide the foundations for a richer, more rewarding future for our nation and our people.

DEVELOPMENT OF INDIAN SHIPPING

MR. K. C. REDDY DEFENDS GOVERNMENT POLICIES

READ together, the addresses of Mr. K. C. Reddy, Union Minister for Production, and Mr. N. Dandekar, President of the Indian National Steamship Owners' Association, to the annual general meeting of the Association held on 20th February in Bombay, disclose that the progress of shipping has not been all plain sailing. Mr. Reddy tried to paint a moderately attractive picture of the progress of the industry during the past few years, while Mr. Dandekar presented an almost discouraging one. As was only to be expected, Mr. Dandekar gave a clear account of the views of private *entrepreneurs* on the development of the shipping industry and the Government's policy in relation to that industry. He selected for special comment problems relating to the Centre's aid to shipping, the ascertainment of the U.K. parity price for Indian-built ships, the agreements between the Government and the international oil companies building refineries in India, regarding the transport of oil on Indian coast and the like. These are live issues in the sphere of Indian shipping today. To these might be added the difficulties of the industry in running overseas passenger services which have compelled the leading shipping company, Scindias, to close down the U.K.-India passenger service. Mr. Reddy dealt with every one of these issues in a lucid manner and pointed out how the Government could not, under the existing circumstances, follow a course different from the one it was following.

Rate of Progress

Prefacing his address with a review of the progress of shipping, since the end of World War II, Mr. Dandekar pointed out how deplorably slow was the rate of this progress. He pointed out that the Indian shipping tonnage had increased from about 75,000 tons at the end of the war to only about half a million at the end of 1953. During the same period, Germany has increased its shipping from about 75,000 to 1.7 million tons and Japan from about 750,000 to over 3 million tons. He rightly held that judged by any standard, "the rate of progress continued to be disappointing." Mr. Dandekar ascribed the low rate of progress, among others, to the absence of substantial Government aid and the high cost of shipbuilding at the Vishakapatnam Shipyard and the difficulty involved in ascertaining the U.K. parity price to Indian-built ships. It is true he welcomed the recent attitude of the Centre in liberalising the terms of loans to shipping interests, but regretted the reluctance of the Government to pay direct operating subsidies even in the case of passenger vessels. He characterised the withdrawal of the India-U.K. passenger service—the only two Indian passenger-carrying vessels that operated here—by the Scindias as "tragic." It may be recalled that Mr. Dharamsey M. Khatau, Chairman of Scindias, referred to this problem in his address at the annual meeting of the Company held in Bombay on 24th February and observed as follows:

> "The two passenger ships, the s.s. *Jalzazd* and the s.s. *Jaljawahar*, continued to maintain regular services in the India-U.K. trade during the year under review. But it has since been decided to withdraw them from India-U.K. passenger service and to sell them to the Eastern Shipping Corporation for employment in the India-Africa and India-Malaya passenger services. The decision to withdraw the *Azad* and *Jawahar* from the India-U.K. passenger service was taken with a heavy heart. The prestige and advertisement value of those vessels in that service were not overlooked; nor did we, or the Government of India for that matter, forget for a moment what our continuance in that particular service meant in terms of the prestige and standing they gave to our country. All these and several other relevant factors were weighed with anxious concern before purely commercial considerations were allowed ultimately to prevail. I appreciate how deeply disappointed you all are that the Government of India should have declined to shoulder even the modest share, we suggested, of our heavy burden in continuing to run the U.K. passenger service, and in consequence of which your Directors have felt reluctantly compelled to discontinue that service altogether."

To revert to Mr. Dandekar's address, he called for the grant of a number of concessions by the Centre to overcome the existing difficult problems facing the industry. He said:

> "Shipowners have often put forward the plea that because of the nascent stage of Indian shipping, the industry should be exempt from taxation at least on the profits ploughed back into the industry for the acquisition of ships and that loans should be made interest-free at least until such time as the companies are able to show some profit from the units purchased or built with such assistance. They have also often requested the Government of India to exempt coastal ships' bunkers and stores from the payment of customs duty as is done in the case of overseas ships. These aggregate a heavy bill of expenditure for shipowners; and in addition there is also the burden of State sales taxes on bunkers and stores consumed by coastal ships. It is unfortunate for the shipping industry that Government have not yet appreciated the need for granting these exemptions. When the Government of India themselves have not yet properly appreciated the need for exempting coastal ships from payment of customs duty on bunkers and stores, we wonder with what justification we can go to the State Government with a request to forgo the levy of sales tax."

Mr. Reddy was plainly on the defensive. He emphasised how liberal were the terms of loans to companies going in for new ships. He pointed out that the period of amortisation, for instance, had been increased and it had been possible to agree to provide a larger percentage of the funds, namely, 80 per cent. or even 85 per cent. of the cost of new ships. The substance of his speech was that it was not the lack of financial provision that had held back the ordering or purchase of ships but the problem of how to utilise effectively the financial provision already made, after effecting whatever adjustments were desirable and feasible in the Government's terms for loans. He did not expect that, in practice, any shortfall in the finances provided in the Five-year Plan would be of a substantial order. He did not also anticipate any difficulty in making available the additional funds required as loan in order to ensure that the development of shipping went forward as far and as fast as possible. Referring to the withdrawal of the India-U.K. passenger services Mr. Reddy remarked that the Government could not aid a company unless there was reasonable prospect of its passenger services being placed on an economic footing within a limited period of time. As regards the incidence of customs duty and sales tax on bunkers and other ship stores, he called upon the Association either to reinforce its case with additional arguments or reconcile itself to the fact that it was not possible for the Government to assist in that direction.

U.K. Parity Price

Dealing with the U.K. parity price for Indian-built ships, Mr. Dandekar felt that it was difficult of ascertainment. Besides, as the cost of shipbuilding in British shipyards, as compared with those in other yards in Europe and Japan, had been on the uptrend, he remarked that the U.K. parity price could no longer be considered as a "standard price." He, therefore, appealed for an alternative formula that could be worked easily and at the same time would be fair both to the shipowners and the shipyard.

Mr. Reddy, on his part, admitted that it was difficult to ascertain the U.K. parity price, but rightly urged that it would be much more difficult to ascertain the "world parity price." He said:

> "I must admit that I do not myself see how the task of ascertainment of 'world parity price,' if I may put it that way, i.e., the task of ascertaining the lowest price at which, say, the Scandinavian, German, Japanese, Dutch or British shipyards can deliver a ship of a particular type can at all be anything but much more difficult and troublesome than the task of ascertaining the U.K. parity price."

Justifying the action of Hindustan Shipyard in basing its prices on those at which the U.K. shipyard would deliver similar ships, Mr. Reddy observed:

> "Of all countries of the world, the U.K. constructs the largest number of ships for the requirements of other countries. In spite of the immense fleet of the United States held back partly in reserve, the U.K. fleet still remains the largest active merchant fleet in the world and there has certainly been justification for treating U.K. prices as standard prices. The position is certainly more fluid now and it does seem not unlikely that the U.K. shipyards may find themselves faced with increased building costs but then it does not follow that the British shipyards will not somehow bring themselves to cutting their prices to strictly competitive levels, for shipbuilding plays a very important role in the U.K. There is certainly more than one legitimate point of view to be taken into account and beyond saying that the issues raised today will receive careful attention, I am unable to add anything useful at this stage."

Mr. Dandekar criticised the clause in the agreement between the Central Government and the international oil companies establishing refineries in India which provides that the oil would be carried in tanks owned by the oil companies concerned or by other foreign concerns owning tanker fleets and that even the movement of refined products along the coast of India would would not necessarily be by Indian-owned tankers, unless they were owned by the Government or unless the Government had a substantial financial interest in them. He expressed his difficulty in understanding "the exclusion of Indian-owned tankers from operating even the coastal oil traffic, notwithstanding the general reservation of coastal trade for Indian shipping."

Adverting to this conclusion, Mr. Reddy indicated that just as in the field of coastal shipping, the acquisition of a certain amount of Indian tonnage capable of meeting a substantial part of the requirements of coast-wise movement preceded the formal legal and effective reservation of passenger and dry cargo trade on the coast, a nucleus at least of Indian-owned tankers would obviously be necessary before complete reservation could be contemplated. He assured, however, that the Government would readily consider any specific proposal that might be put forward by the Indian shipping companies for the coast-wise movement of refined products or for the carriage of crude oil from the foreign countries to the Indian refineries. This assurance is heartening. And it is to be hoped that the Indian companies will be able to present such concrete proposals as will facilitate the growth of a tanker fleet in this country.

RIVER VALLEY PROJECTS

The constitution of a committee, with Mr. P. C. Aggarwal, retired Chief Engineer of Uttar Pradesh, as Chairman, Mr. Raunaq Lal, Deputy Chief Accounts Officer of the Bhakra Nangal Project, as member and Mr. G. G. Dhamak of the Bombay Public Works Department as member-Secretary, to evolve a comprehensive schedule of rates for the estimation of the cost of river valley projects accurately, is a step in the right direction. For, latterly, periodic revision of the estimates of cost of construction of river valley projects in the upward direction has presented serious problems. It has, for instance, necessitated the exploration of ways and means of providing the additional finance required, beyond that specifically provided in the Five-year Plan. As a result of the difficulty in finding additional funds needed, the successful implementation of the river valley projects has been delayed. That apart, the wide variations in rates between project and project has created a very anomalous position.

The task before the Aggarwal Committee is by no means an easy one. First of all, it has to examine the causes which have led to the difference in rates at present prevalent on the various major river valley projects. It has then to evolve a comprehensive schedule of rates for manual as well as machinery work to be used as a basic schedule for all projects, with such modifications as may be necessary for zonal considerations. The comprehensive schedule will include an analysis of the rates for the main items of project estimates, so that rates can be worked out for any project with the help of the basic schedule, after allowing for the difference in transportation costs and other local factors. The Committee is expected further to suggest modifications to the P.W.D. forms, so that they can serve the purpose of better cost accounting on all projects. It is to be hoped that the Committee will be in a position to report on the matter within the stipulated period of three months.

TWIN-TWISTED STEEL

A small plant for the production of twin-twisted steel, in working condition, is now on display in the Central Building Research Institute's pavilion at the International Low-cost Housing Exhibition, New Delhi. The process consists in twisting two mild steel bars of equal length and diameter into one twisted unit whereby the strength and other qualities of reinforcing steel are considerably improved. By this process of cold deformation, the yield strength of the ordinary mild steel is raised by 50 per cent. over that of plain mild steel bars. The building regulations of almost all Western countries allow a 50 per cent. increase in the working stresses of this steel. In other words, two tons of the twin-twisted steel do the work of three tons of ordinary mild steel. A saving of one-third of reinforcing steel can thus be obtained.

A capital expenditure of approximately Rs. 50,000 is usually required for the plant producing twin-twisted bars. Introducing a radical simplification in this production process, the Central Building Research Institute, Roorkee, has evolved a small pilot plant of simple equipment made in a local workshop at a cost of less than Rs. 2,000. This has opened up the possibility of making twin-twisted bars with small capital expenditure so that the process could be used on all major construction jobs with a considerable saving of steel.

"CARBON" DEPOSITS IN PETROL ENGINES

Ignition Control Additive And Its Technical Background

(By the Technical Editor, "The Times of India.")

THERE is, at the present time, a great deal of inaccurate thought not only on the part of motorists, but of many automobile engineers, in regard to the so-called "carbon" deposits which form in the combustion chambers of a modern petrol-driven engine.

"Carbon," in this context, really means the products formed by the incomplete combustion of pure hydrocarbon substances such as the straight petrol and the undoped lubricating oils used in early engines, which were of relatively low compression ratio and of low speed.

Development in engine design, resulting from demands for more power, greater economy and, to a lesser extent, reduction in overall weight in units of given capacity, has led to higher and higher compression ratios and speeds which, in turn, have made the use of leaded fuels and doped lubricating oils essential.

The result of this has been that combustion chamber deposits, although still referred to by most people as "carbon" are, in practice far from it and, in fact, consist of lead compounds derived from the fuel, to the extent of 70 to 90 per cent. of the total.

It is, of course, well known that tetra ethyl lead is added to motor spirit to raise its octane value to a level suitable for the requirements of the modern high compression engine and, the difference in combustion chamber deposits resulting from lead compounds and those of carbonaceous origin are clearly seen by visual examination as, while the latter are black, the former are of a greyish colour.

The problems arising from the ill effects of lead compound deposits in combustion chambers first became acute in the case of aero engines where, of course, fuels of a very much higher tetra ethyl lead content are employed than that of Motor Spirit, and plug fouling became so pronounced that it formed the major cause, in the Second World War, of unscheduled delays of aircraft, rapid increase in maintenance and, in some cases dangerous power loss at take-off.

Plug Fouling

The problem was more pronounced in the case of in-line engines than in the radial type, on account of the greater difficulty involved in obtaining uniform fuel air mixture distribution to all cylinders in the former design, and Shell Research Laboratories first gave thought to the possibilities of improving the "scavenger" introduced with tetra ethyl lead which is normally ethylene dibromide.

The purpose of the introduction of a "scavenger" into gasoline along with the tetra ethyl lead is, as its name implies, to combine with it chemically and scavenge it from combustion chambers in a form in which it is readily dissipated.

Very complete investigation of the performance and effect of ethylene dibromide then took place and, although alternative "scavengers" were tried, it was found that as ethylene dibromide was already removing 97 or 98 per cent. of the lead compounds formed during the combustion the remedy did not lie in this direction, as the remaining 2 or 3 per cent. were generally the result of inequal lead distribution between cylinders caused by inlet manifold design features, which could not be eradicated because of general engine layout.

In view of this conclusion, research was then directed towards a thorough investigation of the mechanism of plug fouling in which X-ray analysis was the key technique used to identify deposits, which proved to be complex combinations of lead, bromine, oxygen and sulphur—these compounds constituted 70 to 90 per cent. of the total, the remainder being carbonaceous material.

Cause of Failures

The particular compounds found on plugs were then examined for their physical and electrical properties and it was found they were capable of causing plug failure as a result of three main causes:—

(i) Under operating conditions resulting in high plug temperatures they are capable of causing short circuits, as their electrical resistance diminishes rapidly with temperature. This phenomenon is most likely to be noticed by motorists when accelerating after a spell of traffic driving in the form of a mysterious misfire, which disappears when the engine cools off, only again to reappear on further acceleration.

(ii) Bridging of the plug gap by flying chunks of deposit. This cuts out the plug completely by forming a direct short circuit, and it will not function again at all until it has been removed from the engine and cleaned. This phenomenon may be mistaken for "oiling up" by the motorist although, in practice, it has nothing to do with it.

(iii) The third, more common, is caused by the formation of an electrically conductive track to earth along the inside of the plug insulator. This phenomenon is exceedingly difficult to detect in the modern type of automobile plug which cannot be dismantled for inspection and cleaning and, although its effect is similar to that described under (i) above, it will not respond to sand blasting, whereas the former can be corrected, temporarily, by this means; current aircraft practice is now swinging to chemical cleaning methods to remove such deposits.

In view of the fact that Shell investigators had reached the conclusion that complete eradication of lead deposits from combustion chambers was impracticable, and having acquired data in regard to the particular features of these deposits which were responsible for plug failures, they set about a new line of investigation to find a substance, to be added to the fuel, which would change these deposits chemically into a form in which they would be innocuous.

Combustion chamber and piston head deposits were found to consist mostly of lead bromide, lead oxybromide and lead oxysulphate which have melting points of 370 deg. C., 710 deg. C. and 980 deg. C., respectively. Those on plug insulators were slightly more complex, they too contained a large proportion of lead bromide of the low melting point of 370 deg. C., which also has the undesirable features of losing all electrical resistance at engine operating temperatures and, when combined with carbon, a catalytic effect is obtained. This reduces the latter's ignition temperature from 500 deg. C. to approximately 200 deg. C., a figure which, of course, is well within the operating temperature of a petrol engine.

New Additive

The substance found the most satisfactory for reducing plug fouling was tri-cresyl phosphate which, by forming lead phosphate complexes, raised the general melting point of the deposits from 370 deg. C. for lead bromide to temperatures ranging from 950 deg. C. to over 1,000 deg. C.; furthermore, the lead phosphate complexes so formed have excellent electrical resistance at temperatures as high as 600 deg. C. and still retain resistance at 750 deg. C., which is beyond the range normally encountered in a petrol engine.

In 1930 the average compression ratio of petrol driven automotive engines was slightly less than 5:1 whereas today it is 7:1, and, there are cars on the road with ratios of 8.5:1.

This change alone has meant an improvement in consumption of 15 to 20 per cent., and it has been met by increasing the octane number of Motor Spirit.

There is, naturally, a desire on the part of engine manufacturers to pursue this policy to new levels, but experience has shown that the production of fuels of high octane value to meet the need of still higher compression ratios, is not the only obstacle to development.

Pre-ignition

Pre-ignition which, in the automotive engine, usually takes the form of uncontrolled ignition of the fuel/air mixture by incandescent deposits is a problem quite separate from what is known as "knock", is much less amenable to treatment by increased octane quality and is, to some extent, more serious than plug fouling, as the latter could be corrected by fitting new plugs but, before the introduction of I.C.A., the former could only be corrected by stripping the engine and removing the deposits physically.

Road vehicle engines are generally of in-line construction that is to say, they are generally of straight four-cylinder, straight six-cylinder, straight eight or V-8 design and, as such, they tend to suffer from uneven lead distribution between cylinders with its attendant plug fouling and pre-ignition troubles.

The symptoms of pre-ignition vary considerably and are not easy to define but, generally speaking, mysterious noises, lack of power and rough running which show up when an engine is hot, subside when it cools off only to reappear when full power is again employed, have their basis in pre-ignition.

Another symptom which may have the same cause is "running on", i.e., the engine continues to run when the ignition is switched off but, on the other hand, "running on" is not necessarily caused by incandescent cylinder head deposits, as a hot spot of any kind such as a plug electrode or exhaust valve can have the same effect.

Tri-cresyl phosphate does not, itself, improve the octane value as measured by the Motor or Research Methods on the C.F.R. variable compression ratio test engine, but the actual octane requirement of an engine which has covered many miles in a road vehicle increased appreciably as a result of fouling and tendency to pre-ignition and it is found, in practice, that it is generally possible to advance ignition settings appreciably with a consequent gain in economy and power as a result of its use.

I.C.A. (Ignition Control Additive) now contained in all supplies of Shell and B.O.C. leaded Motor Spirit is Tri-cresyl phosphate, which converts combustion chamber deposits into lead phosphate complexes thereby rendering them harmless is, itself, a major discovery which will be of incalculable assistance in engine development.—*Advt.*

EMPLOYEES' STATE INSURANCE SCHEME

BOMBAY GOVERNMENT AGREEABLE TO BEAR HIGHER COSTS

ACCORDING to the original schedule, the Employees' State Health Insurance Scheme should have been implemented in Greater Bombay some time last year. But the latest information goes to show that it is not likely to take effect before October this year. The delay in the implementation is due to considerable difference of opinion among the Government of Bombay, the Employees' State Insurance Corporation and the Indian Medical Association on the issue of providing medical facilities for industrial workers under the scheme. Thus, the medical practitioners in the city demand a high capitation fee which in the opinion of the Corporation is beyond its ability to pay. Again, the Corporation had suggested that the State Government should contribute one-third of the total cost of the scheme in respect of medical benefits to the workers. It may, incidentally, be mentioned here that many State Governments have agreed to bear this proportion of the costs. But this suggestion is not acceptable to the Bombay Government. The latter's contention is that being a highly industrialised zone, the total expenditure that it will have to incur would be much higher as compared with other less industrialised States in the country. The Bombay Government, therefore, wants its share to be reduced to one-sixth of the total cost.

It is now learned that representatives of the Corporation are busy having a round of discussions with the officials of the State Government as also the medical practitioners in the city. Hopes of reaching some understanding with the Bombay Government are now being entertained, as a result of talks held at a meeting of the officials of the Corporation and Mr. Shantilal Shah, Minister for Labour and Public Health and Dr. Jivraj Mehta, Minister for Finance, Bombay Government, early last week. The Corporation was represented by Lt.-Col. V. N. Albuquerque, and Mr. K. K. Bhargava, the Director-General and the Insurance Commissioner, respectively, of the Corporation. Mr. K. N. Subramanian, Joint Secretary of the Ministry of Labour, also participated in the discussions. It is understood that the Bombay Government is likely to give its consent to bear one-fourth (instead of one-sixth as it originally intended) of the expenses incurred for providing medical benefits to factory workers. While agreeing to this arrangement, the State Government is stated to have urged the Corporation to enter into an agreement with the Indian Medical Association on a long-term basis, for example, of five years. Further, it has demanded an undertaking from the Corporation that, in case the Association decided to terminate the agreement, a reasonable notice period of not less than a year should be given to enable the State Government to make alternative arrangement for conducting the scheme. The Corporation proposes to take up the question with the Medical Association shortly.

Capitation Fee

With regard to the capitation fee payable to panel doctors in Greater Bombay, it is stated that they are demanding Rs. 7-8 per worker per annum plus expenses on costly medicines. The Corporation does not seem to be agreeable to this rate, as it is now paying Rs. 5 in the Punjab and proposes to pay Rs. 6 in Calcutta. It is stated that negotiations with the Medical Association in Calcutta having failed, the Corporation has invited applications from medical practitioners to serve on the Panel, and the response to this seems to have been very encouraging. After the selection of doctors from among these applicants, the Corporation and the State Government would proceed ahead with the implementation of the scheme in that great city of the Far East. In so far as Greater Bombay is concerned, implementation depends on the agreement yet to be reached with the medical practitioners.

Although it was the Madras Government's desire to implement the State Health Insurance Scheme with effect from 1st April, 1954, it was doubtful whether the Government would be able to do so. This was revealed by Dr. V. Krishna Rao, Minister for Industries and Labour, in the State Assembly. He stated that the doctors had finally agreed to work the Scheme. The proposal to introduce medical benefit scheme in the first instance in Coimbatore and its suburbs was under the Government's consideration. If it was approved, it would benefit 36,000 workers in that area. The Government selected Coimbatore first, because there were 12,000 women workers out of 36,000 workers in that area. The Government would introduce the Scheme in Madras and Madurai also, if funds were available. A rough survey made by the Government revealed that there were 30,000 workers, including 8,000 women in Madras and an equal number, including 10,000 women, in Madurai. These were big pockets where the scheme might be profitably introduced. Referring to the financial implications of the Scheme, he said that no amount had yet been sanctioned by the Government. Expenditure on the medical benefit scheme would be shared by the Employees' State Insurance Corporation and the State Government in the ratio of two to one when the scheme was finally introduced. The Minister stated that the share of the Government in implementing the Scheme in Coimbatore would be about Rs. 1 to Rs. 1½ lakhs.

It may be noted that the scheme was first instituted in Kanpur and Delhi on 24th February, 1952. Two years have elapsed since and yet the scheme has not progressed as quickly as one would wish. Ordinarily, this delay would not have mattered much, but the fact that industries in the areas where it has not come into force are required by law to pay contributions at a special rate of ¾ per cent. of their total wage bill without any adequate return either to their employees or to the units themselves, is really a matter for great concern. For these industries cannot afford to incur an unrequited expenditure for an indefinite period. It is, therefore, the moral responsibility of the Corporation as well as the State Governments to see to it that the pace of its implementation is accelerated as quickly as possible.

SOME MARINE UNDERWRITERS' PROBLEMS

This week's foreign mail bag contained the full text of the speech delivered by Mr. A. Glanville Smith, Chairman, Institute of London Underwriters, at the annual meeting of the Association held in mid-January last. The speech is of considerable significance to marine insurers in India, in that it gives briefly the conditions which prevailed in the marine insurance market in 1953. It goes to support the claims of general insurers in India for the need to keep higher reserves to meet extraordinary contingencies.

As regards hull insurance, the underwriters' experience seems to be not quite encouraging. For, in the post-war years, the upward trend in the cost of hull repairs witnessed during the war has, we are reminded, not come to a halt, and a series of major casualties at the end of 1952 and in the early months of 1953 came as a serious shock to hull underwriters. At one time, premiums kept pace with the increasing cost of repairs, but, in recent years, the tendency appears to have been for the cost of repairs to increase more rapidly than the rate of premium. Figures reveal that the first year's settlements on 1952 account were 5 per cent. higher than those for 1951 account. Similarly, the second year's settlements on 1951 account were 8 per cent. higher than those for 1950 account. Consequently, in March, 1953, a 10 per cent. surcharge was levied on the basis of the existing rates of premiums. It was, however, subsequently found that it would not be possible to continue the application of the surcharge to all vessels irrespective of their flags and, as there was no desire to penalise British owners by placing them in a disadvantageous position *vis-a-vis* foreign shipowners, the surcharge was withdrawn in October, 1953.

Marine insurers seem to be worried over the existence of many unclassified vessels of old vintage and much miscellaneous craft that was never built for the carriage of cargo operating on the high seas. Granting too easy terms of insurance to their owners, underwriters are, states Mr. Glanville, unduly prolonging the life of these indifferent vessels which otherwise ought to have been with shipbreakers. Much of the loss and damage could be avoided by diverting the cargo to better fitted vessels. Mr. Glanville suggests that an enquiry should be conducted into the ownership and management of those vessels which are fit to be scrapped.

The question of cover after discharge is another issue which is causing concern among marine underwriters. The insurers are incurring heavy losses arising in respect of cargo after discharge for which no premium is received for additional hazard involved. This question, it may be noted, was discussed at the San Sebastian Conference of the International Union of Marine Insurance and the consensus of opinion was that the existing clause should be revised in order to apply to time limit. The Joint Cargo Committee, however, did not approve of the suggestion. The only course open to insurers is to charge a suitable premium for cargoes destined to ports where delays of transhipment usually occur.

Underwriters have been granting facilities to an insured to insure against inevitable losses even beyond the terms covered by the Institute's All Risks clause. Mr. Glanville considers that this practice has been extended to absurd lengths. He advocates that cover should be limited to "All Risks" clause. Again, theft and pilferage claims are also causing concern, as their total still shows that the hazard is a most serious feature in cargo underwriting.

There is also a growing tendency in certain countries to introduce restrictive measures with the object of curtailing the freedom of their subjects in the placing of their insurance business. This tendency is against the sound principle of spreading risks to as large areas as possible for reasons of stability and safety. Besides, some foreign banks are endeavouring, it is stated, to control the placing of insurance, while some Governments are seeking to confine insurance facilities to the national market. These tendencies check export of premium ignoring the fact that marine insurance is international in character. This important question is now receiving the attention of the International Chamber of Commerce, G.A.T.T. and other international organisations.

CANARA MUTUAL ASSURANCE CO., LTD.

A small but well-managed and growing mutual concern, the Canara Mutual Assurance Company, Ltd. Managing Director: Mr. T. R. A. Pai, Udipi), has consistently shown a steady rate of progress. If the slight fall in premium income which occurred in the year 1952 is excluded, the Company's premium income curve has maintained, since 1947, an encouraging upward trend. During 1953, to which the latest report refers, the income was higher at Rs. 17.94 lakhs as against Rs. 17.56 lakhs in the previous year. The total of new business completed during the year under review was also larger at Rs. 50.04 lakhs as compared with Rs. 44.57 lakhs in the previous year. Although the new business figures have not regularly moved up from year to year, there is no doubt that what really matters is the quality of the business obtained. From this point of view, the management has done well in concentrating on building up the life and other funds of the Company.

The following table shows the progress of the Company during the four years ended 31st December, 1953:

(Rs. in lakhs)

	1953	1952	1951	1950
New business	50 04	44 57	52 11	57 01
Premium income	17.94	17.56	17.72	16.78
Net income from interest and other sources	3 34	2 45	1 90	1 78
Life fund as at end of year	93.80	82 40	71 03	61 91
Expense ratio .. .. %	12	11 57	10 83	10 93

The increasing cost of procuring new business and of running the office is reflected, as will be seen from the table above, in the slight increase which has taken place in the Company's expense ratio, though the ratio itself is at a comfortably low level. The life fund of the Company, which has nearly trebled since 1947, now stands at Rs. 93.80 lakhs. It is gratifying to note that over 70 per cent. of the fund is held in Government and other approved securities. Besides the life fund, the Company has built up from year to year a special fund, namely, the investment reserve fund which amounted to Rs. 3.79 lakhs as at the end of the year under review.

INSURANCE FOR AIR PASSENGERS

The Central Government is, as already indicated in these columns, considering the question of introducing a scheme of compulsory insurance for passengers travelling by Indian Airlines and Air-India International. A reference to the Government's intentions was made recently by Mr. Raj Bahadur, Deputy Minister of Communications, in Parliament. He said that facilities were available at present for passengers to get themselves insured, covering the risk of air travel. After describing the facilities provided in each centre Mr. Raj Bahadur said that the authorities had leased out insurance booths to certain companies at Delhi and Madras airports for providing insurance facilities to air passengers. The question of providing similar booths at other important aerodromes, especially at Calcutta and Bombay airports, was also under the Governments' consideration. He added that the question of utilising the services of Indian insurance companies for the purpose would be considered along with the general question of compulsory insurance.

NEW INDIA ASSURANCE CO., LTD.

During the year 1953, the New India Assurance Company completed Rs. 19.91 crores worth of new life business as against Rs. 18.04 crores in the previous year. The following figures give the number of policies and sums assured in the three years ended 1953:

	No. of policies	Sums Assured (Rs. crores)
1953	57,467	19.91
1952	53,275	18.04
1951	47,639	16.69

The increase in new life business in 1953 has, as will be seen from the figures cited above, been greater than the corresponding increase in 1952 over 1951.

GOVERNMENT OF INDIA'S BUDGET

OVERALL DEFICIT OF RS. 250 CRORES

PROVISION FOR DEVELOPMENT SCHEMES STEPPED UP

A SUBSTANTIAL deficit of Rs. 14.21 crores on revenue account is disclosed in the Central Government's budget for 1954-55 presented to Parliament by Mr. C. D. Deshmukh, India's Finance Minister, on 27th February, 1954. Based on the rates of taxation that prevailed before the presentation of the budget, the revenue budget for the next year showed a deficit of Rs. 26.06 crores, but this has been reduced to the figure mentioned mainly by raising the excise duties on cloth, by subjecting cement, soap, footwear and artsilk fabrics to excises and by increasing the preferential import duty on betelnuts rather steeply. The Finance Minister has stepped up the expenditure on development schemes so sharply that the overall deficit is as high as Rs. 250 crores, after taking into consideration the aid that would be available from friendly foreign countries and the amount he hopes to borrow from the long-term capital market. The whole of this deficit will, therefore, remain uncovered. In other words, assuming that the capital expenditure envisaged in the budget is actually incurred, the Government will be indebted to the Central Banking authority to the extent of Rs. 250 crores.

The following table provides a synoptical view of the revenue and expenditure in 1952-53 (actuals), in 1953-54 (budget, as well as revised) and 1954-55 (budget):

(In crores of rupees)

	1952-53 (Actuals)	1953-54 (Budget)	1953-54 (Revised)	1954-55 (Budget)
Revenue	435.11	439.26	413.60	452.88
Expenditure	396.18	438.81	430.65	467.09
Surplus (+) or Deficit (—)	+38.93	+0.45	—16.96	—14.21

N.B.—The budget figures for 1954-55 are the final figures, taking into account the new taxation proposals made by the Finance Minister.

It will be interesting to note here that, whereas the revised estimates for 1952-53 had shown a deficit of Rs. 3.79 crores the year has actually ended with a surplus of Rs. 38.93 crores. This has been due to an increase of Rs. 16.47 crores in revenue and to a fall of Rs. 26.25 crores in expenditure as compared with revised estimates. Such a wide variation between the revised estimates and the actuals is a striking commentary on the difficulties in preparing the budget even on the basis of actual experience in the first ten months of a year.

1953-54

The revised estimates for the current year also reveal a decline both in revenue and expenditure, but, as the fall in the former has been heavier than in the latter, the nominal surplus of Rs. 45 lakhs has turned out to be a deficit of Rs. 16.96 crores. This is not surprising, considering that, in the revenue estimates budgetted for last year, the Finance Minister had included a sum of Rs. 18 crores due from Pakistan by way of repayment in instalments of its debt to India which almost everybody expected would not be received. It was almost a foregone conclusion even a year ago that the revised budget would end in a deficit of the order now expected. Referring to this point, the Finance Minister mentioned that he had been having discussions with the Pakistan Finance Minister and both hoped that it would be possible to commence repayment in the coming year.

Although the fall in the revised estimates of revenue for this year is due to non-receipt of the debt instalments from Pakistan, it does not mean that, in all other respects, the budget estimates have proved correct. Customs revenue, for instance, is expected to be Rs. 10 crores less than the sum provided in the budget, largely due to the readjustment of export duties made during the course of the year, particularly the export duties on jute, in order to enable India to maintain its position in world markets where there has been a gradual shift from a sellers' to a buyers' market. Union excise duties are expected to show a drop of Rs. 50 lakhs, while income and corporation taxes will bring Rs. 6 crores more. Half of this will, of course, go to the States.

On the expenditure side, the revised estimates show a drop of over Rs. 8 crores. This is made up of a saving of Rs. 1.57 crores in the cost of revenue collections, of Rs. 2.7 crores in the provision for Civil administration and of Rs. 8.73 crores in the provision for "extraordinary charges," which mainly relate to Community Development schemes, partly offset by increases in interest payments, a carry-over of certain payments to sugar factories from the previous year and an unforeseen expenditure by way of subsidy on rice supplied to Travancore-Cochin. It is noteworthy that Defence expenditure is not anticipated to exceed the budgetted level.

1954-55

For the next year, the revenue is expected to go up by Rs. 39.19 crores over the revised estimates for the current year. Of this increase, the taxation proposals made by the Finance Minister account for Rs. 11.85 crores. Details of the new proposals will be referred to shortly. As regards the balance of increase, namely, Rs. 27.34 crores, a glance at the table published in the centre of this page will show the principal heads under which taxes are expected to go up. In this connection, the following extract from the Finance Minister's budget speech will enable one to understand the variations in the main sources of revenue:

"The revenue from customs in the coming year has been placed at Rs. 175 crores, as against the current year's revised estimate of Rs. 160 crores. The improvement of Rs. 15 crores is due firstly to the additional duty expected to be

SUMMARY OF FINAL ESTIMATES

* Effect of Budget Proposals.

collected next year on the increased imports of sugar on Government account, now estimated at between 4 and 5 lakh tons, against 2.5 lakh tons this year, secondly to increased yield from the import of commodities which carry high revenue duties, which may be expected with the easing of our foreign exchange position, and, thirdly, to the normal expansion of revenue. The revenue from Union excise duties is placed at a crore less than in the current year. The yield from sugar will be Rs. 2½ crores less than in the current year, receipts in which were somewhat inflated by the proceeds of the special excise which was withdrawn last November, but this will be partly set off by an improvement of Rs. 1 crore in the receipts from tobacco and about half a crore from the other excises. Under income-tax, I am repeating the revised estimate for the current year. I expect that the progressive drop in the arrears of excess profit and other taxes will be made good by the improvement in normal collections. Revenue from the estate duty, recently levied, is likely to come in for the first time in the coming year. It is a new tax, the yield from which is most difficult to estimate. The administrative machinery for the assessment and collection is being specially assembled and trained and I hope it will be possible to get it in full working in the coming year. I have taken credit for a gross revenue of Rs. 4 crores from this duty nearly the whole of which will be transferred to the States in accordance with the provisions of the Constitution. Under Currency and Mint, following the increase in the gross income of the Reserve Bank from the increased yield on Treasury Bills in the Issue Department, the surplus profits paid to the Government next year are expected to be Rs. 5 crores more than the current year's payment of Rs. 12½ crores. I have also taken credit for the receipt of one instalment of Rs. 9 crores from Pakistan. As I explained earlier, I hope to reach a settlement of this issue in the near future and I am confident that it will be possible to commence these repayments with effect from the coming year."

Expenditure

The expenditure estimates at Rs. 467.09 crores reveal an increase of Rs. 36.44 crores over the revised estimates for the current year. Of this increase, Defence accounts for Rs. 5.78 crores and Civil expenditure for Rs. 30.66 crores, the exact total expenditure under these heads being Rs. 205.62 crores and Rs. 261.47 crores, respectively. The share of Defence expenditure to the total expenditure is just 46 per cent. Practically the whole of the increase in this expenditure reflects the cost of bringing the Navy and Air forces upto reasonable efficiency in men and material. It is gratifying to find that, in spite of the U.S. decision to extend military aid to Pakistan which is likely to affect the balance of power in the area in which India and its vital interests are located, the Government is not embarking on any scheme of expansion of its armed forces. Referring to this aspect of Defence, the Finance Minister declared:

"While the recent developments have underlined the need for continuous vigilance on our part that the country's security is not in any way jeopardised, and the House may rest assured that this vigilance is being kept; it is not our intention to halt or slow down the economic development of the country, on which, in the long term, the country's inherent strength depends, by entering into any race for armaments."

As regards the rise in Civil expenditure, the following quotation from the Finance Minister's speech will provide an idea of the increases in the more important items and the reasons for such variations:

"I must remind the House that the coming year will be the fourth year of the Five-year Plan and it is reasonable to expect a rise in the tempo of developmental expenditure during that year. The bulk of the increase of Rs. 30.5 crores in civil expenditure is due to this factor. For example, the total expenditure on what may compendiously be called the nation-building and developmental services in the coming year is likely to amount to Rs. 33.67 crores, as against Rs. 39.52 crores in the current year. Expenditure on scientific departments, mainly on grants to scientific institutions and outlay on scientific services, is likely to be about a crore more than in the current year. The budget for education, providing for substantial grants for the expansion of basic and social education throughout the country, will be about Rs. 8 crores more than in the current year. Nearly a crore and three-quarters more will be spent on medical and health services and about Rs. 2 crores more on agriculture and allied services.

"Increased provision has also been made for the development of village and small-scale industries, so vital to the balanced development of the country. Community projects and national extension services between them will cost Rs. 8½ crores more than in the current year; about a crore more will be spent on grants for grow-more-food schemes and a crore and a quarter on schemes of social welfare. These increases in developmental expenditure together account for Rs. 25 crores roundly of the total increase of Rs. 30½ crores.

"The increase of Rs. 5½ crores in the rest of the expenditure is mainly due to two factors. A lump-sum provision of Rs. 3.6 crores has been made under grant-in-aid to States for meeting any assistance that may have to be given to the State of Jammu and Kashmir if the scheme for financial integration of that State with the Indian Union, somewhat on the pattern of the former Princely States, which is under discussion with it, materialises. The payment of the States' share of Union excise duties next year will, on the basis of the estimated revenue from the shared excises, be about three-quarters of a crore more than in the current year. Increased provision has also been made under grant-in-aid to States for the welfare of scheduled tribes, scheduled castes and other backward classes. While, obviously, there are bound to be small increases here and there on account of the normal growth of expenditure, I think I could truthfully claim that the increase in expenditure in the coming year is mostly on development in accordance with the approved plan."

The Finance Minister then gave an account of the provision for capital expenditure. According to him, the Revised Estimate has been put at Rs. 63.90 crores, as against Rs. 76.64 crores in the original estimate. The saving of nearly Rs. 13 crores has occurred mainly under Defence Civil Works and Government Trading. For the coming year, the provision for Capital Expenditure has been considerably increased and put at Rs. 145.75 crores. This large increase in expenditure, reflects the rising tempo of development expenditure. "In the first 3 years of the Plan," said Mr. Deshmukh, "developmental expenditure was necessarily somewhat smaller than the proportionate outlay for that period. This is partly due to the essential time taken in the preparatory work on new schemes. It is also partly due to the fact that, in the earlier period of the Plan, Government had to be cautious in going forward with expenditure so as to keep inflationary trends under control. Now that the economic climate is better suited for stepping up investment and the schemes themselves are gathering momentum, and in some cases nearing completion, the expenditure during the last two years is bound to be much more than in the current year."

Answering the question whether it would be possible for the Government to incur additional expenditure of this order, the Finance Minister pointed out that the savings in development expenditure of the current year, as also of the previous years which reflected slower progress of development schemes, had been a matter of some concern to the Government. A senior officer was conducting a quick examination of the existing procedure in regard to the drawing up, sanction and execution of development schemes and the causes leading to the present unsatisfactory position. "Government attach greatest importance," he observed, " to the implementation of the Five-year Plan within the period contemplated in the Plan and it is their intention to take all measures possible to remove the procedural and other impediments to the progress of the development schemes. I hope it will be possible to take early decisions on the findings of this enquiry."

Ways and Means

Discussing the Ways and Means position, the Finance Minister said that the overall deficit in the current year would be Rs. 128 crores, as against Rs. 138 crores in the budget estimates. The opening balance for the year had been Rs. 19 crores more than was expected, the improvement reflecting the lapses in the provision made under various heads of expenditure. The market loan during the year amounted to only Rs. 75 crores, as against the budget anticipation of Rs. 100 crores. But this shortfall had been more than offset by an improvement of Rs. 40 crores in the cash outgo on the repayment of debt, because, of the large holdings of the maturing loan in the cash balance investment account, only Rs. 76 crores had to be paid in cash against the estimate of Rs. 116 crores. The yield from small savings had been "rather disappointing"; the yield might not amount to more than Rs. 40 crores, as against the Rs. 45 crores expected from this source. This had been partly due to certain special causes, but the question of maintaining a continuous and rising flow of small savings was constantly before the Government. Recently, the system of authorised agents had been extended to all the States; the use of village *Panchayats* as authorised agents was being tried as an experiment and steps have been taken to invoke the help of women's and other voluntary organisations in developing the movement.

For the coming year, the Finance Minister expected an overall deficit of Rs. 250 crores, largely due to increased provision for developmental schemes. Two maturing loans with an outstanding of Rs. 48 crores will be paid off. Credit had been taken for Rs. 75 crores from market loans and Rs. 45 crores for small savings. Taking the budget as a whole, he said that it would be necessary to expand the Treasury Bills by Rs. 250 crores to balance the budget overall.

Summarising the position, the Finance Minister pointed out that the Government would have to find next year Rs. 26 crores for meeting the revenue deficit, Rs. 395 crores for financing essential capital outlay and assisting the State Governments, Local Bodies, etc., for financing their development schemes and Rs. 53 crores for the repayment of the matured debt. Against this, it was hoped to raise Rs. 75 crores from the market. Foreign assistance and dollar loan might bring in Rs. 48 crores and small savings Rs. 45 crores. Other miscellaneous debt and remittance transaction would bring in Rs. 56 crores. This would leave a gap of Rs. 250 crores in the available resources to balance the budget. As the cash balance would just provide the necessary till money and could not be drawn down any further, the whole of this gap would have to be met by the issue of Treasury Bills.

Deficit Financing

Can the country stand the deficit financing to the extent of Rs. 250 crores? Answering this poser, Mr. Deshmukh said:

"I have given the most careful thought to this question, and, on a balance of considerations, I am convinced that in the conditions as they now are and are likely to be in the near future, we are not taking any undue risks in going forward in the manner I have indicated. In fact, deficit financing to a moderate extent is necessary under present conditions. The period of inflationary stresses is now well behind us and there are signs that the high levels of production we have attained in various lines—and which we would like to improve upon—cannot be sustained without some increase in money supply in the hands of the public. In judging the economic effects of the budgetary deficit, it has to be borne in mind that part of it might well be neutralised by a balance of payments deficit. For some time past, as I have indicated earlier, we have not, on balance, been drawing upon our sterling balances. This is an indication that the level of economic activity in the country so far is not high enough to create any large demand for external resources; in other words, the optimum level or tempo of development has yet to be reached. A country's balance of payments is subject to many uncertain and unpredictable factors, and there is always need for caution. Nevertheless, so long as the domestic price situation is well in hand, and there are internal reserves which can be drawn upon in case of need, deficit financing for development involves very little risk. Indeed, it can be said that deficit financing, subject to safeguards, has a definite part to play in bringing into use the unutilised resources in the system. It was in view of these considerations and in the context of the recent increase in unemployment in certain sectors that the expansion of the Plan was decided on, and the budget proposals for the next year have been framed in pursuance of this decision. With domestic food production at a satisfactory level, and with the outlook for larger imports from abroad better, should need arise, the budgetary deficit envisaged will, I expect, prove reflationary rather than inflationary. If, however, major changes in the economic situation or climate take place, obviously, Government policies will have to be reconsidered. For the time being, I should say that, in the context of our developmental needs, it is important for us not only to live within our means but also to live upto our means."

Appeal to States

The Finance Minister then made an appeal to the States for greater efforts in raising additional resources. By doing so, they would, he said, help in reducing the amount to be found by recourse to deficit financing and thereby strengthen the country's economy. He also appealed to the public to save more and lend more to Government. In this connection, he said:

"National development is not merely the concern of Governments. In a democracy like ours, it is also the concern of the people and, now that we are having substantial recourse to deficit financing, I would like to make a strong appeal to the public to save more and to lend more to Government. I referred a short while ago to the somewhat disappointing results of the small savings movement this year. It is not merely for support to this movement that I appeal. It is the duty of the people to support it on the widest possible front, if the process of national development has to be carried on, as it must be, over a long period. Development involves sacrifice, and the essence of democratic planning is that the sacrifice should, as far as possible, be evenly spread and should readily and voluntarily be forthcoming. To increase capital formation, which is the agreed objective, firstly, current consumption must be kept within limits, and, secondly, the production potential must be built up through utilisation of idle man-power. This means stinting as well as harder work. So far, in the first three years of the Plan, we have done reasonably well but the stage has now been set for a much larger effort."

New Taxation Proposals

After the above appeal to the public, the Finance Minister proceeded to announce the new taxation proposals. He prefaced this announcement by saying that he approached the problem of dealing with the revenue deficit not so much from the orthodox angle of balancing the revenue budget as from the larger angle of raising the maximum resources. While the economic climate was suitable for a moderate amount of deficit financing, it was obvious that it had to be kept as low as possible and not used to cover any shortfall in resources which could otherwise be currently raised. The Taxation Enquiry Commission was at work and no large-scale change in the present structure of taxation could be made. He added that he was, therefore, confining the changes to a restricted field. He then made the following proposals:

"My first proposal is to increase the preferential import duty on betelnuts by 6¼ annas a pound. Profit margins on betelnuts have for some time been very high, often leading to the payment of premium on import licences. There is little justification for the importer and the middlemen retaining such profit and I am sure the House would welcome this attempt to divert a part of it for the benefit of the exchequer. I do not think that this would in any way affect the available supplies or occasion any significant increase in prices. The additional revenue from this is estimated at Rs. 3 crores.

"In the budget for the current year, the House will remember that certain changes were made on import duties as part of the normal readjustments in these duties. Customs duties cover a very wide variety of goods and the level and incidence of theses duties are under constant review so that readjustments could be made from time to time. The annual budget provides the most suitable occasion for making these changes, except when, during the course of the year, it is found desirable in the public interest to make such changes without waiting for the annual Finance Bill. In pursuit of this policy, I propose to make certain changes in the import tariff. Duties on some articles like plastic and rubber insulated cables, electric fans and electric conduits are being raised. On the expiry of the period agreed under the General Agreement on Trade and Tariffs, the preference given to the United Kingdom on the imports of motor-cars, motor-car parts and batteries is being abolished. The net effect of these and other minor changes, with which I do not propose to weary the House, will be a net increase of Rs. 1.25 crores in revenue.

"The third change I propose to make is to abolish the present import duty on raw cotton. Imported raw cotton enters not merely in the production of cloth consumed internally but to some extent in the exports of Indian cloth. I mentioned earlier the arrangements which have been made for the grant of a rebate of duty paid on imports of raw materials which enter into the manufacture of our exports. The whole problem of regulating the import duty on essential raw materials came under review in that context and, while obviously no final view has yet been taken, it is felt that a move towards the gradual replacement of import duties on raw materials by excise duties on the goods manufactured from them could be made. This replacement seems more or less inevitable, as the country is progressively industrialised; it will also make the export trade simpler by removing the complication involved in the grant of rebates of import duty. I feel that a useful beginning should be made with the import duties on raw cotton. The loss in revenue is estimated at Rs. 4 crores.

"In pursuance of the same policy, the import duty on some varieties of steel—a basic material—is being abolished with immediate effect. They are steel sheets (both black and galvanised) plates and rails. The loss of revenue involved is likely to be Rs. 25 lakhs.

Changes in Union Excise Duties

"With the abolition of the import duty on raw cotton, I propose to raise the excise duty on superfine cotton cloth by 6 pies per yard and on the other varieties of cotton cloth by 3 pies a yard. This is designed partly to replace the revenue lost by the abolition of the import duty on raw cotton and partly to rationalise the existing structure of the excise. The abolition of the import duty will avoid the complications involved in the somewhat cumbrous procedure of giving drawbacks on exports. It will also facilitate the free imports of foreign cotton required by the industry by reducing the amount required to finance it. The increase in excise duties will, to some extent, also reduce the possibility of diversion of manufactures from one tariff category to another by making it less profitable than at present, and will also, I hope, ease the current pressure on Indian cotton. I consider that the changes, taking customs and union excises together, will make the structure of taxation of Indian cloth more rational than at present. The net effect of these changes will be an increase in revenue of Rs. 6.5 crores.

"My next proposal is to levy an excise duty of 1 anna and 6 pies per yard on artificial silk fabrics. The use of artificial silk fabrics is now very widespread and they compete, to some extent, with cotton cloth which has to bear an excise duty.

(*Continued on page 421*)

DISTRIBUTION OF REVENUE AND EXPENDITURE

(In lakhs of rupees)

Year	Tax Revenue	Cost of Collection	Net Tax Revenue	Net Revenue from Commercial Departments	Opium (Receipts less Expenditure)	Currency and Mint (Receipts less Expenditure)	Interest Receipts	Extraordinary Receipts	Other Revenue	Total Net Revenue	Interest on Debt	Reduction or avoidance of Debt	Extraordinary Payment	Defence Expenditure (Net)	Other Expenditure	Net Capital Outlay on Commercial Departments (Posts and Telegraphs and Civil Aviation) Met from Revenue	Total Net Expenditure	+| Surplus / Deficit

CENTRAL GOVERNMENT'S CAPITAL BUDGET

AN INCREASE OF 80 PER CENT. IN EXPENDITURE PROPOSED FOR 1954-55

AS the work on the Five-year Plan progresses year by year, the Central Government's capital budget acquires more and more significance. The Plan, as is well known, provides for a total outlay of Rs. 2,244 crores, inclusive of the recent readjustments which seek to increase the outlay by Rs. 175 crores. In the first three years of the Plan, the expenditure (both by the Centre and the States) will be of the order of Rs. 1,000 crores. This leaves about Rs. 1,200 crores to be spent in the next two years, which will include direct expenditure by the Centre as well as assistance provided by it to the States. It will thus be seen that increased capital expenditure will become necessary in the next two years. Indeed, as the Union Finance Minister, Mr. C. D. Deshmukh, pointed out in his budget speech in Parliament, such an increase in outlay is "inevitable." Emphasising that the Government attached the "greatest importance" to the implementation of the Plan, he observed that "they will strain their utmost to see that the development envisaged in the Plan and provided for in the Budget goes forward."

Against this background, it is worthwhile to take a look at the Government's capital budget. The revised capital budget for 1953-54 consists of receipts at Rs. 285.28 crores and capital disbursements of Rs. 318.10 crores, thereby showing a deficit of Rs. 32.82 crores. The receipts include new loans (Rs. 77.36 crores), net receipts from Treasury Bills (Rs. 80.0 crores) and repayment of loans by States (Rs. 18.69 crores). Capital disbursements (Rs. 318.10 crores) for the year 1953-54 include a capital outlay of Rs. 63.90 crores by the Centre while the rest consists of discharge of permanent debt (Rs. 116.50 crores), advances to State Governments (Rs. 118.37 crores), mainly for development expenditure, and other loans and advances (Rs. 19.33 crores).

The capital budget for 1954-55 envisages receipts at Rs. 433.08 crores and expenditure at Rs. 406.62 crores, thereby showing a surplus of Rs. 26.46 crores. Under receipts, the provision for new loans stands at Rs. 78.28 crores, as against Rs. 77.36 crores in the revised budget for 1953-54 and Treasury Bills at as much as Rs. 250 crores, as against Rs. 80 crores in the revised budget for the previous year. Capital disbursements (Rs. 406.62 crores) include a capital outlay of Rs. 145.75 crores by the Centre, while the rest consists of discharge of permanent debt (Rs. 53.02 crores), advances to State Governments (Rs. 178.79 crores) and other loans and advances (Rs. 29.06 crores). Thus, capital outlay by the Central Government accounts for Rs. 145.75 crores in the 1954-55 budget, as against only Rs. 63.90 crores in the revised 1953-54 budget—that is an increase of nearly 134 per cent. The allocations to State Governments have also been increased from Rs. 118.37 crores to Rs. 178.79 crores. The aggregate capital expenditure by both the Centre and the States has been stepped up from a mere Rs. 182.27 crores to as much as Rs. 324.54 crores, or by about 80 per cent.

The details of capital disbursements in the 1953-54 budget, the revised budget for 1953-54 and the 1954-55 budget are as follows:

(In lakhs of rupees)

	Budget, 1953-54	Revised, 1953-54	Budget, 1954-55
Capital Outlay—			
Railways	18,07	17,78	33,93
Irrigation	40	40	25
Posts and telegraphs	7,60	7,72	11,49
Industrial development	6,75	7,43	24,10
Aviation	2,82	2,17	3,34
Broadcasting	47	32	1,34
Ports	3,25	2,05	5,31
Mint	50	33	72
New capital at Delhi	1,59	1,30	6,07
Multi-purpose river schemes ..	3,80	4,34	3,94
Electricity schemes	45	23	76
Civil works	17,82	13,98	25,05
Commutation of pensions ..	39	30	26
Sterling pensions	—7,16	—7,16	—7,05
Defence capital outlay	15,00	10,36	17,75
Schemes of Government trading	3,52	13	—3,11
Development grants	..	..	16,00
Other civil heads	97	1,58	5,70
Discharge of Permanent Debt ..	1,19,65	1,16,50	53,02
Advances to State Governments..	93,23	1,18,37	1,78,79
Other loans and advances ..	22,72	19,33	29,06
Total ..	3,12,26	3,18,10	4,06,62

Capital outlay on the railways, as the table above shows, is the largest single item of its kind. The details regarding this outlay form part of the Railway Budget. Mr. Deshmukh, however, referred to this item in his budget speech and said that the increased provision—that is, as compared with the provision in the revised 1953-54 budget—has been made partly to meet essential commitments and partly to make good the fall in resources which the railways themselves were expected to provide under the Five-year Plan. The item "Posts and Telegraphs" will absorb Rs. 11.49 crores, of which telephones alone will claim Rs. 8.79 crores.

By far the most significant items is the one with the title "Industrial development." This includes provisions which the Government has made for a variety of undertakings, both Government and quasi-Government undertakings. A total provision of Rs. 24.10 crores has been made under this item. The details of expenditure under this heading include the following. (Figures in brackets refer to the provision in the revised budget for 1953-54):

(In lakhs of rupees)

Grants to the Council of Scientific and Industrial Research (69.10) 55.00; Indian telephone industries (82.00) 85.00; Hindustan Shipyard Ltd. (64.16) 33.78; Penicillin factory (30.00) 39.45; Hindustan Machine Tools Ltd. (50.00) 200.00; National instruments factory (6.50) 32.00; D.D.T. factory (2.00) 13.00; Heavy electrical equipment factory (.30) 50.00; Establishment of iron and steel plant (23.00) —; Hindustan Steel Ltd. (4.00) 10,00.00; Overseas communications service (15.00) 36.97; Housing Corporation, Delhi (12.50) 7.50; Eastern Shipping Corporation (92.50) 92.50; Hindustan Cables Ltd. (50.00) 40.00; Air Corporation (Indian Air Lines) (1,48.00) 4,49.37; Air Corporation (Air-India International) (55.40) 1,60.00; Oil Exploration Scheme (—) 25.00; Synthetic oils (—) 10.00; Civil explosives factory (—) 40.00; National Research Development Corporation (—) 5.00; and Diesel engine factory (0.01) —.

Provision has been made in the capital budget for all civil works estimated to cost Rs. 1 lakh or over. This item will absorb Rs. 25.05 crores. A broad analysis of the sum provided in the revised and budget estimate is given below:

(In lakhs of rupees)

	Budget, 1953-54	Revised, 1953-54	Budget, 1954-55
National highways and other roads	8,55.00	8,47.21	13,82.30
Construction of houses, etc., for displaced persons	4,55.00	3,00.17	3,75 00
Other buildings	4,72 00	2,51.00	7,07 64*
Total ..	17,82.00	13,98.38	25,04.99

* Includes recovery of Rs. 1.95 lakhs from Ford Foundation.

A new item of capital outlay, which used to figure in revenue budgets in previous years, but which is now included in the capital budget, is development grants to States. A provision of Rs. 16 crores has been made for this purpose in the budget for the next year. This represents mainly grants for industrial housing, grants for local works and grants to certain State Governments. But this expenditure does not create any durable asset for the Centre. Hence, the Union Finance Minister has proposed that, although this expenditure will be met from the capital account, it should be written back to revenue over a period of 15 years, so that ultimately all this expenditure is met from revenue.

The next important item of capital outlay is what comes under the title "Other civil heads." This item will absorb Rs. 5.7 crores, as against Rs. 1.58 crores in the revised budget. The large increase in this outlay is mainly accounted for by the fresh provision of Rs. 4 crores which has been made for payment to displaced persons. This item includes Rs. 28.76 lakhs by way of capital outlay on forests and Rs. 125.56 lakhs by way of provision for schemes of agricultural improvement, particularly "Grow-more-food" schemes in Part "C" States.

Apart from the items of capital outlay, described above, the capital disbursements in the 1954-55 budget include, as already stated, loans and advances (Rs. 29.06 crores), advances to State Governments (Rs. 178.79 crores) and discharge of permanent debt (Rs. 53.02 crores).

The details of the advances to State Governments are as follows:

(In lakhs of rupees)

	Budget, 1953-54	Revised, 1953-54	Budget, 1954-55
Irrigation loans	46,27	50,87	66,22
Miscellaneous development loans..	26,22	37,03	45,16
Loans for rehabilitation of displaced persons	10,30	6,49	12,45
Loans for "grow-more-food" schemes including tube-well schemes and agricultural finance	27,86	23,70	41,12
Loans for community development and national extension projects.	11,00	3,87	11,85
Loans for industrial housing schemes	4,84	2,40	6,00
Loans for relief work in natural calamities and improvement in scarcity areas	3,00	7,40	17,00
Loans for development of handloom and small scale industries.	..	1,53	2,30
Other loans	1,71	20,86	12,81
	1,31,20	1,60,20	2,14,41
Less—Amount met from Special Development and other Funds.	—37,92	—41,83	—35,62
Net ..	93,28	1,18,37	1,78,79

The men in the Gilt-edged market will be interested to know that under the item "Discharge of Permanent Debt," the Government has made provision for the discharge of the 2½ per cent. Loan 1954 which falls due for payment in November, 1954, and the 3½ per cent. Loan 1954-59 which the Government has the option of repaying in the current year. The budget also includes a provision of Rs. 3.02 crores from the International Bank for Reconstruction and Development and Rs. 2 crores for the possible discharge of the Centre's share of State Loans.

Debt Position of Government of India

The outstanding public debt of the Government of India is expected to go up by Rs. 275.45 crores during the next year, that is, from Rs. 2,130.63 crores at the end of March, 1954, to Rs. 2,406.08 crores by the close of March, 1955. The major portion of the rise, Rs. 250.00 crores to be precise, will be short-term in the form of Treasury Bills and ways and means advances which, incidentally, indicates the extent to which the Finance Minister proposes to resort to deficit financing with a view to covering the bulk of the deficit on capital account. Current rupee loans and dollar loans are also expected to be higher by Rs. 25.24 crores and Rs. 1.56 crores, respectively. Current sterling loans, however, are placed lower by Rs. 38 lakhs and capital portion of railway annuities (sterling) by Rs. 1.15 crores.

The statement below gives a broad analysis of the debt position of the Centre as on 31st March, 1954 and 1955, as compared with that at the end of 1938-39:

(In crores of rupees)

	As on 31st March		
	1939	1954	1955
Rupee Loans—			
Current loans	437.87	1,308.05	1,891.29
Treasury bills and ways and means advances ..	46.30	405.29	655.29
Treasury deposit receipts ..	..	212 60	212 60
Special floating loan	..	8 76	8 94
Expired loans	.65		
Total ..	484 82	1,992.70	2,268 12
Sterling Loans—			
Current loans	206 50	1 12	.75
War contribution	20.62	20.62	20.62
Capital portion of railway annuities	47.82	4.33	3.18
Expired loans	.01	.05	.05
Total ..	464.95	26.13	24.60
Dollar Loans	..	111.80	113 36
Grand total ..	949 77	2,130 63	2,406 08

The liability for the British war loan remains suspended, while the outstanding railway annuities are covered by an equivalent deposit with the United Kingdom Government, who provide the necessary sterling as the payments fall due. Omitting these items, the total outstanding debt will be Rs. 2,106 crores at the end of the current year and Rs. 2,382 crores at the end of 1954-55. At the end of the budget year, the outstanding debt would, as compared with the figure at the end of 1938-39, have risen by Rs. 1,501 crores.

In addition, the Government is liable to repay the balances in the various provident funds, the post office savings banks, the post office cash and national savings certificates, the depreciation and reserve funds of the railways, posts and telegraphs, etc., and certain other deposits, mainly relating to excess profits tax and income-tax. These balances are estimated at Rs. 786 crores at the end of the current year and Rs. 829 crores at the end of 1954-55, after making a very rough allowance for Pakistan's probable share in them. Taking the regular debt and these liabilities together, the debt position of the Government of India will stand as follows:

(In crores of rupees)

	As on 31st March	
	1954	1955
Regular loans	2,130 63	2,406 08
Other liabilities	785.80	829 21
British war loan and railway annuities	—24 95	—23 80
Total ..	2,891.43	3,211 49

This outstanding debt may be analysed with reference to the purpose for which the money has been utilised or the assets by which it is covered. An analysis is given below:—

(In crores of rupees)

	As on 31st March	
	1954	1955
Railways	875	909
Posts and telegraphs and other commercial departments	88	105
Loans and advances (including outstanding debt due from Burma)	631	715
Purchase of annuities for sterling pensions	176	171
Subscription to the International Monetary Fund and World Bank	213	213
Debt due from Pakistan	300	300
Cash and other investments	109	130
Total ..	2,294	2,543

Allowing for these, the uncovered debt will amount to Rs. 668 crores at the end of the budget year, as against the pre-war figure of Rs. 188 crores. The whole of this cannot, however, be called unproductive debt, for the large grants to States for development in recent years are not entirely unremunerative, and, similarly, the large capital outlay on Central property, the value of which is either not shown at all in the Government's accounts or is shown as non-commercial (such as the capital outlay on New Delhi and Defence capital outlay) is not without value.

Interest-bearing Obligations

Out of the total debt noted above, the interest-bearing obligations of the Government of India are expected to stand at Rs. 3,013.71 crores by the end of 1954-55, as against Rs. 2,694.62 crores (revised) at the end of the current year and Rs. 1,205.76 crores at the end of 1938-39. The major part of this liability is covered by interest-yielding assets, the actual amount of such as on 31st March, 1955 being Rs. 2,251.84 crores. This figure compares well with Rs. 2,003.83 crores (revised) at the end of March, 1954, and Rs 946.38 crores at the end of March, 1939. The most important of these assets are the railways, commercial departments, loans advanced to States, debt due from Pakistan and Burma, and purchase of annuities for sterling pensions. The details of these items are given below:

(In crores of rupees)

	1938-39 (Pre-war year)	1953-54 (Revised)	1954-55 (Budget)
Capital advanced to railways	725 24	875.10	909.14
Capital advanced to other commercial departments ..	27.42	88.24	105 24
Investments in commercial concerns	..	27.14	48.15
Capital advanced to States ..	123 28	422 00	579 89
Other interest-bearing loans ..	20 71	60 76	87.11
Debt due from Burma	49.73	48.15	48.15
Deposits with the U.K. Government for redemption of railway annuities	..	4 33	3.18
Purchase of annuities for sterling pensions	..	178 03	170 98
Debt due from Pakistan	..	300 00	300 00
Total ..	946 38	2,003 83	2,251 84

Besides the above interest-yielding assets, the Central Government has cash and securities on Treasury account. These are expected to be of the order of Rs. 70.71 crores as on 31st March, 1955, as against Rs. 70.44 crores at the end of 1953-54 and Rs. 30.30 crores at the end of 1938-39. The interest-bearing obligations not covered by assets are expected to rise from Rs. 620.35 crores to Rs. 691.16 crores. The corresponding figure at the end of March, 1939, was Rs. 229.08 crores.

Interest Payments

Consequent on the increase in the Central Government's ordinary debt, unfunded debt and other obligations, the aggregate interest charges to be paid by the Government during 1954-55 show a rise of Rs. 6.88 crores to Rs. 83.73 crores as compared with the revised estimates for the current year. The bulk of this rise is accounted for by interest on ordinary debt, which is expected to improve from Rs. 51.95 crores to Rs. 57.98 crores. Interest on unfunded debt and other obligations shows a negligible rise from Rs 24.90 crores to Rs. 25.75 crores.

The following table gives a broad summary of the interest payments on account of rupee, sterling and other debt and the transfers on account of interest charged on commercial departments:

(In lakhs of rupees)

	Budget, 1953-54	Revised, 1953-54	Budget, 1954-55
INTEREST ON ORDINARY DEBT:			
Rupee debt—			
Management of debt ..	22.00	22.01	22.15
Expenditure connected with the issue of new loans and sale of securities held in the cash balance investment account ..	7.60	7.54	6.54
Discount written off to revenue	60 74	60 74	90 40
Interest on temporary loans ..	6,15 22	7,63 47	10,70.00
Payments of prizes in respect of 5-year interest free prize bonds	0 20	0 01	0 05
Interest on all other loans ..	40,60 80	39,76 55	42,83 75
Other items	+ 0 35	0 40	0 40
Sterling debt—			
Interest on loans contracted in England	4 63	4 23	3 50
Interest on railway annuities.	19 17	19.17	15.08
Interest on outstanding liabilities of railway companies taken over on purchase ..	0 16	0 16	0 16
Management of debt	0 04	0 04	0 04
Other items	12 93	12 93	13.56
Other debt—			
Interest on dollar loan from International Bank for Reconstruction and Development	89 10	92 69	96.24
Interest on American wheat loan	2,26 20	2,26 20	2,26 20
Total ..	51,24 14	51,05 19	57,96 07
INTEREST ON UNFUNDED DEBT AND OTHER OBLIGATIONS:			
Bonus on post office certificates	6,07 20	6,01 55	6,75 33
Post office cash & bank deposits	4,22 00	4,21 00	4,41 00
Interest on Ten-year Treasury Savings Deposit Certificates ..	02 24	80 72	1,12 47
State Provident Funds	4,32 74	4,50 01	4,77 03
Service funds	14 24	13 53	13 19
Railway Depreciation Fund ..	3,22 31	3,47 14	3,21 46

Other items	2,80 09	3,58 93	3,45 75
Total ..	24,81 65	24,90 01	25,74 70
Gross Payments ..	76,01 19	76,85 19	83,72 77

Out of the total interest charges, the share (net) of the Government of India during 1954-55 is estimated at Rs. 35.00 crores, as compared with Rs. 33.85 crores in 1953-54. Of the balance of Rs 48.73 crores, the bulk is to be borne by railways, the actual amount being Rs. 28.13 crores, as against Rs. 26.97 crores. The shares of posts and telegraphs, State Governments, irrigation and other heads amount to Rs. 1.98 crores, Rs. 15.55 crores, Rs. 1 lakh and Rs. 3.06 crores, respectively. The corresponding figures for the current year are Rs. 1.73 crores, Rs. 11.35 crores, Rs. 1 lakh and Rs. 2.94 crores, respectively.

GOVERNMENT OF INDIA'S BUDGET

(*Concluded from page 419*)

There is no reason why, when the bulk of the cotton cloth is subject to taxation, artificial silk fabrics should be exempt. The new duty will not be levied on the manufactures of handlooms and small units which have less than 10 power looms. Art silk fabrics will also be placed in the same position as mill-made cotton textiles by the levy of an additional 3 pies per yard, corresponding to a similar levy which is now being made on cotton cloth under the *Khadi* and other Handloom Industries Development (Additional Excise Duty on Cloth) Act, 1953. The proceeds will be appropriated to the Special Fund for the development of the handloom industry. The revenue from this is estimated at Rs. 1.60 crores.

"With the progress of industrialisation, revenue from customs duties is bound to be progressively less stable source of revenue. Even otherwise, the revenue from customs is inevitably subject to the vicissitudes of trade policies and the availability of foreign exchange. It is therefore, necessary to turn increasingly to indigenous industries producing consumer goods for the replacement of a part of the revenue which, in the past, we used to derive from customs duties on such goods. It is also only appropriate that those industries which have in the past developed with the assistance of protectionist policies, for which the consumer paid by way of increased duties, should, when they have reached the stage of full development, make a fair contribution to the country's exchequer. The country's tax structure can be made stable only by broad-basing its excises without affecting the economy of the industries taxed or placing an undue burden on the consumers. We are already levying excises on most of the important commodities produced in the country and the scope for further additions is somewhat restricted, but, even so, I feel that there is room for some expansion in this source of revenue. I, therefore, propose to levy a moderate duty on three commodities, namely, cement, soap and footwear. The duty on cement will be Rs. 5 per ton, that on soap Rs. 5-4 per cwt. on washing soap in bars of one pound and more in weight and Rs. 6-2 per cwt. on other washing soap and Rs. 14 per cwt. on toilet and other soaps and that on footwear at 10 per cent. *ad valorem*. The incidence of taxation on all these commodities will not generally exceed 10 per cent. of the value. In the case of soap and footwear, the products of cottage industry will be exempted either by executive orders or directly by definition in the tariff. From such figures as are available, I expect that the revenue from the excise on cement would amount to Rs. 1.75 crores, that from footwear to Rs. 80 lakhs and that from soap to Rs. 1.20 crores.

Income-tax

"No changes are proposed in the income-tax rates which, for next year, will continue to be the same as at present. Certain formal amendments to the Indian Income-tax Act, intended to continue till 1956 some of the existing concessions like special depreciation allowance, exemption of profits upto 6 per cent., etc., have been included in the Finance Bill. This will maintain the *status quo* until Government have had an opportunity of re-examining the need for these concessions in the light of the Taxation Enquiry Commission's Report. Opportunity is also being taken of making two small amendments, both of the nature of drafting changes, in the Estate Duty Act.

Net Effect of Proposals

"The effect of the above changes may now be summarised. The increased duty on betelnuts will yield Rs. 3 crores and minor readjustments in import duties another Rs 1.25 crores. This will be offset by a drop of Rs. 4.25 crores from the abolition of import duties on raw cotton and some varieties of steel leaving the total revenue from customs duties unchanged at Rs. 175 crores.

"The increase in the excise duty on cotton cloth will yield Rs. 6.5 crores and the new excise duty on artificial silk fabrics Rs. 1.60 crores. The new excises on cement, soap and footwear will together yield Rs. 7.5 crores. The total additional revenue from excise duties will thus amount to Rs. 11.85 crores. This will reduce the prospective revenue deficit for the coming year from Rs. 26.06 crores to Rs. 14.21 crores which I propose to leave uncovered.

"I mentioned that the overall deficit for next year would amount to Rs. 250 crores, which will be met by expansion of Treasury Bills. The taxation proposals will reduce the deficit to about Rs. 238 crores. For the present, I do not propose to change the figure taken in the budget for expansion of Treasury Bills. The actual amount of this expansion will depend on developments during the course of the year. I am, therefore, carrying the effect of these proposals into the cash balances and leaving them about Rs. 12 crores more than would otherwise be the case."

In conclusion, the Finance Minister made a brief review of the achievements of the country since it became politically independent. "Seven years," he said, "are not a long period in the history of a nation, but, in the life-time of a generation, they certainly count for something. One can, therefore, understand the continuous urge for improvement and the frequent criticism that the progress achieved has not been sufficient. Such criticism is always welcome, both as a corrective and as a spur to further effort, but it is apt to obscure the sum of our achievement and place the problem of development out of its proper prospective. In 1947, India inherited a weakened administration, a war-ravaged economy and a country with only the rudiments of a Welfare State. Immense problems of rehabilitation of displaced persons and integration of over 500 princely States of varying sizes and in widely disparate stages of development had to be faced. In these seven years, the country's economy had been strengthened, inflationary stresses eliminated and production expanded. The transport system had been largely rehabilitated and large irrigation and power schemes taken in hand. Vital industries had been started and effective steps taken to step up steel production and assist basic industries like shipping. The rehabilitation of displaced persons was nearing completion, while the integration of the princely States had been completed. A well-knit National Plan was in process of implementation and what was more vitally important, 'the people have been encouraged successfully to co-operate in the fulfilment of this high endeavour.' In this task, the country had received a significant and important measure of assistance from friendly countries for which it was grateful. No idea of the vast upsurge in the national life can be conveyed, by translating all this in terms of money or compressing it into a classified table of estimates and expenditures. The face of the country is changing and changing for the better. We know—and none more than those on the Government Benches—that much still remains to be done. But we can bend our energies to the tasks ahead fortified by the knowledge that, in spite of mistakes and difficulties, we have made progress and, conscious that we are on the right road, however long and arduous it may be, we shall persevere, with a stout heart, with the task of building up a more prosperous India."

BUILDING FOR TOMORROW

A new publication giving the progress of Community Projects during the first year of its operation has just been issued. The Community Projects which were inaugurated on 2nd October, 1952, now cover nearly 23,650 villages in all the States of India with a population of 21.5 millions. In addition, the Government of India decided to launch the more comprehensive National Extension Service from October, 1953, and the Community Programme was integrated into the National Extension Service. Under the Extension Programme about 23,700 villages with a population of 15.6 millions are receiving attention.

The publication entitled, *Building for Tomorrow*, gives details of information on the progress of work in only those Community Development blocks where the operations began between October, 1952 and September, 1953. In 77 development blocks comprising about 7,700 villages, work began on 2nd October, 1952, and in 67 other blocks comprising about 6,700 villages, work began in June, 1953. In these villages the progress of work made during the period is indicated in the brochure.

Apart from physical achievements in the fields of agriculture and allied services, education, health, road construction, formation of village councils and *panchayats* and training programmes, the brochure places particular emphasis on the scope of peoples' participation in the Community Programme. The enthusiastic response from the people received during the first year's working of the Community Projects has to be sustained, and a change of outlook developed which is the most primary aim of the Community Programme. The present availability of trained personnel and the effort that is necessary to produce such personnel in very large numbers are brought out in the publication.

The annexures to the publication bring out briefly the administrative set-up of Community Projects in the Centre as well as in the States, progress in physical terms under various heads of development and the names of areas in various States in which the Community Programme is in operation. The publication is priced at six annas and has been released by the Community Projects Administration, Government of India.

REVOLUTION "MADE IN DETROIT"

DEVELOPMENT OF INDUSTRIAL COMMUNITIES FREE OF OFFICIAL CONTROL WANTED

(By RICHARD W. LINDHOLM, Professor of Economics, Michigan State College, Michigan, U.S.A.)

FASCISM, Nazism and Communism are answers to the problems of the industrial society as it originally developed in the 1840's. But the answers of these three "isms" deny political and economic liberty and justify this denial on the ground that the solutions which they provide to the evils of industrial society are of greater benefit than the harm arising from the loss of nearly all liberties. This justification has received sufficient support in some countries to make it possible for self-appointed leaders to bring about the political changes required by their particular ideology.

A fourth answer to the problems of the industrial society, which also developed around 1840, is democratic socialism. It is a solution that does not require the elimination of political liberty. More will be said later of the problems besetting an industrial society operating under the rules of democratic socialism, but at the outset it is desirable to point out briefly that this answer requires actual management of the industrial units by workers—workers, by the way, who for years have been fighting the management point of view and its emphasis on efficiency and the realisation of a profit.

New Problems in Industrial Society

The other answer, which I prefer to call the experimental solution to the nineteenth century shortcomings of the industrial society, is also a solution that permits the continuation of political and other liberties. However, because it is experimental, it has changed with the development of new problems within the industrial society. The experimental solution is best exemplified in the most advanced capitalist country of the world, the United States of America.

I call the U.S.A. the most advanced capitalist country in the world, because the average value of industrial equipment available to each worker is greater there than in Great Britain, Belgium, Canada, Russia, Brazil or any other nation. The word "capitalist" is used here in its true sense and in the only way it can be used to differentiate industrial societies, so that a person looking only at the productive process can distinguish one society from another. Another way in which industrial societies may be distinguished meaningfully is on the basis of the portion of production set aside for improving the machines of the society—or profit—and, on this basis, Russia perhaps leads the world. It might be added here that profits in some countries—let us take Pakistan, for example—need not be as high and, therefore, current consumption as low as in Russia, because Pakistan has the possibility of investment from foreign countries and thus need not rely entirely on profits from domestic production.

The mid-twentieth century characteristics of the experimental answer provide for the industrial plant remaining largely an antonomous unit within the society with day-to-day management of production carried out by experts and with broad policies established, or at least agreed to, by labour, Government and owners. Community functions of the plant are more and more the sole responsibility of workers.

The old industrial society—that is, the industrial society before the world revolution of mass production with the label "made in Detroit"—and its weaknesses which the "isms" were developed to eliminate are rather accurately described by Marx and by many writers before and since Marx. These people dissected this pre-revolution nineteenth century society, and, on the basis of their dissection, made forecasts of future developments; then, on the basis of their forecasts of future developments, they established a plan of reform. Briefly, the characteristics of the industrial societies prior to the revolution in Detroit (part of the superstructure, as it were, of this revolution in Detroit is the revolution in economic theory, called the Keynesian Revolution) selected as being more undesirable were:

(1) Labour was being exploited; it was being paid only a subsistence wage. Profits were of little benefit to the ordinary citizen, because he did not benefit from increased productivity in higher consumption levels.

(2) Businesses were being concentrated in fewer and fewer hands, and consumers would, therefore, have soon been at the mercy of a few uncontrolled private monopolies.

(3) Severe depressions would continue to arise and would become worse and worse.

(4) To find markets for the products of industry, it would be necessary to intensify the imperialistic policies in effect at the time, and this would cause greater and more frequent wars.

A very brief comparison of these four shortcomings with the basic principles of Fascism, Nazism and Communism clearly shows how they are related to the greatly expanded function allocated to the State by these "isms," particularly the types of functions allocated. In the answers offered by Fascism, Nazism and Communism, the powers that the State must exercise to eliminate these shortcomings have been so great and necessarily so closely associated with the everyday workings of the economy that the State has been given autocratic powers.

Democratic Socialism

Democratic socialism to destroy the shortcomings, must assume that efficiency and profits can arise with management by the workers. The probable outcome is inefficiency until either autonomous management groups arise and are allocated certain powers, in which case democratic socialism would lose its basic unique quality, or autocratic powers are given Government, in which case the workers completely forfeit independence to increase productive efficiency and profits.

Examination of the current scene leads one to conclude that neither Fascism, Nazism and Communism nor Socialism was accepted by large numbers of people until the economic problems to which their answers related had lost their first-rate importance in the most advanced industrial societies. This situation can be illustrated by considering briefly the developments in relation to the four problems outlined.

All readily available wage data of the United States show that exploiting labour, in the sense of a labour supply made up of proletariat, does not exist. In fact, the census data indicate that labour is becoming less important and that technicians—machine fixers and layout experts—are the rapidly expanding wage-earner group. High profits are still opposed but because they necessitate deficit financing when they are too high, and not because they take bread from the starving and the underfed. Also, high profits are still opposed as a carry-over of the old exploitation idea. Their importance here remains largely in the minds of the older labour leaders.

Businesses in advanced industrial societies have continued to grow, but small businesses have also expanded. Also, anti-monopoly legislation, Government control, Government operation, and competition among big businesses prevent most monopoly abuse, and, in addition, labour unions basing wage demands on profits exercise a controlling effect. Finally, the higher incomes of everyone, as the industrial societies have advanced, have permitted large numbers of wage earners to own stock in corporations. In the U.S.A., for example, there are more than six million owners of common stock of corporations. If each owner represents a family of three, about 20 million persons are partially dependent on returns from ownership of capital of corporations. Also, stock ownership by employees has been adopted as an aggressive company policy in a number of instances.

Economists' Confidence

Keynesian economics plus the increased activity of the trade union movement have made most economists confident that modern industrial societies will never have another depression of the seriousness of that of the 1930's. The literature and procedures developed are far too comprehensive to be carefully considered at this time. The basic idea, however, is to maintain aggregate expenditures sufficiently high to remove goods produced at customary prices.

Now the final point—that of imperialism—which is currently being given so much emphasis by the Communists in Asia. The less developed countries are not needed to provide markets for goods of modern industrial nations, because the purchasing power of all producers is necessarily equal to the value of all production; and, with this purchasing power in the hands of workers, it will be spent. If the purchasing power is not used to buy the goods produced, the Government through deficit financing can readily remedy the situation. In fact, the expansion of the industrial revolution has made the whole idea of an industrial nation profitably selling to underdeveloped areas an anachronism. The revolution made in Detroit—or modern industrial society—to function efficiently must have its products largely consumed by its workers and not by people of distant lands.

It is not surprising that the Communist and other solutions are related to economic problems of the past and not of the present or the future. This is typically the situation of economic solutions. Before they receive acceptance sufficient to put them into action and are understood by the politician, they are no longer applicable to current conditions. In fact, the existence of this situation is one interpretation of the social lag. Examples of this sort of relationship are commonplace in the economic-political movements of all nations; the silver movement of the 1930's in the U.S.A. and the anti-foreign investment movement in Pakistan are two that come to mind.

Enough for the problems of the pre-revolution industrial society. Actually, it is the current situation in the post-revolution society of the mid-twentieth century that is of greatest importance.

Basic Tendencies

The basic tendencies of a post-revolution industrial society appear to be the following:

(1) The development of a manager class separate from the owners, whether the owners are Government or private individuals. Malenkov's statements regarding the modernisation of Marxism indicate that he understands this point. It is natural that he should, for he is a production man.

(2) The development of the industrial community providing for social and Government obligations to be met without destroying the economic obligations which, of course, remain paramount. These economic obligations are productive efficiency and profits sufficient to permit the use of the most efficient techniques. The importance of this industrial community is easily as great as that of political parties and the army which are dependent, more or less, on the Government, whereas the industrial community is autonomous.

(3) The individual is not productive, but only the organisation is productive. This destroys the sense of worker productivity. The worker must, therefore, have individual productive activity outside his labour. This can be provided by the social and Government obligations of the industrial community.

(4) The spirit of the post-revolution society is determined by large manufacturers; the small manufacturers function principally as part of development and decay.

(5) There is a reduction in the portion of labourers used in production and an increase of the number of technicians.

It is no doubt somewhat surprising that the development of strong, independent labour unions able to bargain effectively with management, Government social security programmes that assure protection from poverty, the collection of very much higher taxes from the large income receivers than from the low income receivers have not been included. These developments are important, but they are excluded, because they are not intimately associated with Detroit—the mass production revolution—and only secondarily with Keynesian superstructure, or with the determination of whether this revolution will eliminate the political and other liberties or whether it will strengthen these liberties.

Two Unstoppable Drives

I have great confidence in the success of the revolution made in Detroit, which has already changed the world greatly. I believe this because it seems to me that the revolution is backed by two unstoppable drives. The first drive is that for a higher standard of living which the revolution made in Detroit provides. The second is the need for a successful military organisation which the revolution made in Detroit also provides.

If it is permissible to assume, at this time, that the mass production revolution made in Detroit will succeed, and I think this is a reasonable assumption, it is worthwhile to examine the five major aspects of this revolution. The examination will also help to arrive at a conclusion of the possibility of the economies of the world to be free.

Essential Points

The first point—the separation of management and ownership—has been much discussed in the U.S.A. by James Burnham in his *Managerial Society* and by numerous corporate studies. There is also evidence in Russia of the independence and power of the manager group. A major weakness of Western Europe has been the slow development of this manager group.

In regard to the second point, and its related third point, it is well established that the satisfactions of life are mostly related to the job. This requires, under mass production conditions, that the workers of each factory or division establish rules and regulations, pensions, etc. Such, of course, is a major portion of the activity of independent labour unions. Also, experience has shown that these activities are carried out much more efficiently by workers than by management. The other solution is that of the democratic socialists who would have the workers manage economic activity, but their experiments, wherever carried out, have failed. For the worker in a modern industrial society fully to benefit from active participation in industrial citizenship, the group must be on a small enough unit basis, so that each worker actually sees his participation. This basic need obviously mitigates against dictatorship. This force away from dictatorship can only be neutralised in peacetime by an artificially created hysteria.

The third point is related to the second, but, in addition, emphasises plant efficiency. In mass production, the productive process alone does not give the necessary, psychological satisfaction. The use of democratic action in social and Government affairs is the only readily available method of meeting the need.

The fourth point relates to innovation and elimination of the inefficient. Under a private enterprise system, this important organic function of a healthy industrial community can be carried out by enterprises that are not Government-owned and, in this way, avoid involving the prestige of the Government. The fact that this cannot be done either under Communism or democratic Socialism is a serious source of weakness and points to the need for considerable private ownership of productive processes. However, a weakness of democratic Socialism and the experimental method that has not developed in Communism is the tendency through taxation and price control to reduce the profits of industry below those necessary to cover risks.

The development of the fifth point (decrease of labourers and increase of technicians) is likely to reduce the weakness of low profits in the experimental society and in a democratic socialistic society, because the attitude of the majority of the citizens will change as the portion made up of its labourers decreases and the remnants of the attitude of the proletariat are replaced by the attitudes of a citizen of an industrial community. Also, this tendency of labourers to decrease in numbers and importance destroys the basic idea of a dictatorship of the proletariat. The dominant productive group, therefore, is not an exploited mass with nothing to lose but their chains, but rather citizens with a stake in continued operation under conditions of high efficiency.

My conclusion is that the solution to the problems of mass production—outside of war hysteria or some other type of hysteria—points to the development of free political institutions and industrial communities free of minute Government control. This, of course, points to a free economy in a free world. Also, even as the new industrial developments in underdeveloped areas do not use nineteenth century machines but rather mass production techniques, so also will these countries find it worthwhile to utilise the owner, the manager, and the other social relations that have developed in the modern post-revolution industrial communities. If this is done, the following developments will arise with industrialisation of underdeveloped areas:

(1) A separate manager class,

(2) an autonomous industrial community regulated by the State,

(3) the assumption of social and Government obligations of these communities by the workers,

(4) the small manufacturer functioning principally as a part of the organism of efficient production, and

(5) the substitution of technicians and citizens of industrial communities for the proletariat.

MANUFACTURE OF X-RAY APPARATUS

According to Mr. B. B. Bhownik, President of the Engineering and Metallurgical Section of the Indian Science Congress, a major portion of the country's requirements of X-ray diagnostic apparatus can be manufactured in India itself. In his institute at Calcutta, Mr. Bhownik, it is stated, is manufacturing all kinds of X-ray apparatus, except X-ray tubes and high tension cables, which are imported. India is now importing annually about 100 X-ray apparatus and a large number of X-ray machines. It is claimed that X-ray apparatus can be manufactured in large quantities at a cost which is 25 to 30 per cent. cheaper than the imported ones.

(Concluded from next column)

should it be made retrospective out of a Company's current financial year."

The accounts and balance-sheet as at 30th June, 1953, were unanimously approved and adopted. A further and final dividend of 10 per cent., free of income-tax on the ordinary shares, as recommended by the Directors, was declared, making in all a total dividend of 15 per cent. free of income-tax for the year.

SPENCER & CO., LTD.

SPEECH OF MR. S. W. EDWARDS AT ANNUAL MEETING

ADDRESSING the ordinary shareholders of Spencer & Co., Ltd., at their Fifty-sixth Ordinary General Meeting which was held on 26th February, 1954, at the registered office of the Company at Madras, Mr. S. W. Edwards, Chairman of the Company, said:

"On behalf of the Board, I have great pleasure in welcoming you here this morning.

"You have no doubt fully studied the accounts, which have been in your hands some days and which, I believe, you will have found pleasing. To me, they reflect considerable credit to the management and all those who have so conscientiously worked for these commendable results. No requests have been received for more detailed particulars or explanations of what is shown in the accounts, and this, I trust, reflects your satisfaction with the results; if, however, there are any questions you would care to raise, I will endeavour to answer them before proposing the adoption of the accounts.

"There has been, as you will have noticed, an encouraging increase in sales, but, with corresponding increases in expenditure and a reduction in the rate of gross profit, the net trading return remains much the same as in 1952.

"It has always been your Board's policy to try and safeguard the future. How right that policy has been. Legislation and awards which allow for liability with retrospective effect are, I maintain, unwarranted and unjust and must surely negative the managements' endeavours to plan ahead. Recent legislation involves most companies in very heavy contingent liabilities and this Company is no exception. It involves expenditure which, if it had to be met, should have been borne in past years' accounts. The crippling effect of this does not, I think, need enlarging.

"Wars, sooner or later, bring in their wake, periods of economic depression or, as more commonly applied to trade, 'A slump.' Many industries in many countries are already feeling that slump and it is too much to hope that your Company will come out of any such depression unscathed.

"Your Board plans to be in a position to withstand any such eventuality, but it is unreasonable to expect it to visualise contingencies such as I have just spoken of.

"As to the future, I hesitate from attempting to prophesy; it is apparent that the spending power of the general public is diminishing the world over and in common with most concerns your Company is now experiencing a decrease in turnover; the trouble is that it is becoming increasingly difficult to effect economies to counteract such diminishing revenue. Are we overtaxed—beyond the economic level? Perhaps; but I think the real answer lies elsewhere.

"The incidence of the sales tax and its application is now becoming so confused as to be a serious hindrance to trade and is causing heavy increases in administration costs.

"The practice has recently started of States attempting to tax inter-State transactions, thereby causing a great deal of confusion. There are about nineteen States in India today which are levying sales tax under Acts, rules and regulations which are far from uniform. Head offices of business with transactions throughout India are now expected to be familiar with the taxing laws of nineteen different States, and to maintain separate accounts for each of them. During the last few weeks, some action has been taken by the Central Government to overcome the present difficulties, but, unfortunately, the steps taken do not go far enough to achieve the requisite uniformity throughout the country. If a tax on such inter-State transactions is to be continued, I suggest that the only practical way is to tax the purchaser in the taxing State or, in other words, make it a purchase tax and not a sales tax.

"Another direction in which immediate action is necessary is in respect of the demands for payment of the tax on inter-State transactions retrospectively from 1st April, 1953. Some States have decided to collect only from 1st January, 1954, and in urging other State Governments to do likewise—I do so because it would enable your Company to make provision in the current year of account—under no circumstances

(Continued in previous column)

"VANASPATI" INDUSTRY IN INDIA

VIOLENT FLUCTUATIONS IN OIL PRICES IMPEDE PROGRESS

IF the development of the *vanaspati* industry is to be assured, prices of vegetable oils, especially groundnut oil, which accounts for nearly 80 per cent. of the cost of *vanaspati*, should be maintained at reasonably stable levels. Unfortunately, in recent years, the market for vegetable oils has been subject to violent fluctuations. These fluctuations have, to quote from the address of Mr. C. S. Patel, Chairman of the *Vanaspati* Manufacturers' Association of India, delivered at the eighth annual general meeting of the Association held on 24th February, 1954, "so much dominated the production and prices of *vanaspati* that the *vanaspati* manufacturer is more inclined to concentrate on cleverer buying of oil than on securing a larger demand for his product." This, as he rightly remarked, is a very unhealthy development as the industry cannot hope to utilise its idle capacity until the increased consumption of *vanaspati* can be fostered in a context of stable prices.

There is also another reason why prices of vegetable oils should remain reasonably stable. Vegetable oils provide the bulk of fat requirements of the people in India, besides being the raw materials of *vanaspati* and soap industries. It is true that it is difficult, if not impossible, to limit violent fluctuations in prices, because the supply of primary commodities and oilseeds is dependent on the vagaries of nature. But that is no reason why the Government should be complacent and leave things to fate. It is certainly possible to mitigate sharp fluctuations in prices of oils. There are three ways by which this can be done. One is to take positive measures to encourage production of oilseeds. The second is to follow a sensibly flexible export-import policy. And the third is to regulate speculation in oils and oilseeds. Mr. Patel did well in availing himself of the opportunity offered by the annual meeting of his Association to stress all these three methods.

Production of Oilseeds

The need for securing an increase in the production of oilseeds is a long-felt one. Although the Government has been proclaiming from the house-tops that prices of oilseeds should be brought down to reasonable levels, the measures it has taken in that direction are not only woefully inadequate but often inappropriate to the situation. What has the Government done to encourage production of oilseeds? Nothing very much, except to appoint a Central Oilseeds Committee—a body of unwieldy size. On the contrary, by encouraging the inefficient and wasteful village *ghani* industry, it has handicaped the progress of the *vanaspati* industry. Its failure to appreciate the need for bringing about a large increase in production of oilseeds is evident from the low target fixed in the first Five-year Plan. This Plan provides for an increase of only 400,000 tons. This increase, if achieved, will be just sufficient to maintain the present miserably low level of *per capita* availability of edible fats in India, namely, 7 lbs., as against the world average of 22 lbs. and the recommended nutritive requirement of 45 lbs. per annum. But, even the achievement of this target, in the opinion of Mr. Patel, is doubtful, as in the "Grow-more-food" campaigns, the cultivation of oilseeds has received very little attention so far. This is certainly not the way to promote the health and energy of India's manpower.

In his address at the Association's annual meeting, Mr. Patel lucidly explained why high priority should be given to the increased production of oilseeds, especially groundnuts. Thus, he said:

"Fat, providing twice as much energy as carbohydrates, which cereals are, deserves greater attention than hitherto in raising the dietary standards of our people. As the consumption of milk is increasing, which is a healthy development, the production of milk fat cannot be increased substantially. Therefore, only an increase in the supply of edible oils, selling at reasonable prices, can increase the fat consumption in India. As the total supply of edible oils and oilseeds is, at present, just sufficient to meet the minimum requirements of the country, even slight variations in the crop or exports have considerable influence on the price level of those commodities. Thus, the need for increased production of oilseeds, particularly of groundnut, is most urgent. It is, indeed, in the larger interest of the country that the production of groundnuts should be increased substantially, because its yield per acre even on a poor soil is larger and hence brings much larger return to the farmer than the millets grown in its place. Groundnut being a leguminous crop enriches soil. Further, it not only provides oil for human consumption but also protein-rich oilcake for feeding cattle, or for use as manure to increase the yield of other food crops. Even from the viewpoint of increasing supplies of cereals, it would be well if more land is devoted to the production of groundnut and surplus groundnut oil exported, because the foreign exchange earned would enable the country to import larger quantities of millets than what can be grown on the land devoted to groundnuts. I, therefore, suggest that greater attention should be paid to the cultivation of groundnuts in Government campaigns for increased agricultural production."

The supply of edible oils can also be increased significantly if, as suggested by Mr. Patel, crushing of cottonseed is actively encouraged. India produces nearly 12 lakh tons of cottonseed, which can yield one lakh tons of good edible oil. Realising the value of oil, the Planning Commission has strongly recommended the development of cottonseed crushing. But so far the country has made no perceptible progress in this direction. Perhaps, a factory here or a factory there may have been established. That, however, is not adequate. It may be noted here that all the major cotton-producing countries, except India, have taken to crushing cottonseed. In India, however, it is used as cattle feed. Experts maintain that, used in this way, it is wasteful as the cattle cannot digest 15 to 20 per cent. of the oil contained in the seed. They aver that cottonseed cake is more nutritious than the whole cottonseed containing fibrous, difficult to digest, linters. Cottdnseed oil, though not edible in crude form, is as good as any other oil, after it is refined or used in the manufacture of *vanaspati*. It can also replace edible oils at present used in the manufacture of soap.

Export-Import Policy

It was stated earlier that a judicious export and import policy in regard to oils and oilseeds would go a long way towards mitigating the wide fluctuations in oil prices. Explaining this point, Mr. Patel observed as follows:

"The manner in which the Government policy, in regard to exports and imports of edible oils, can influence the price level was effectively shown in 1953, when every announcement of small concessions in the export of groundnut seed and oil led to a substantial rise in their prices. It must be recognised that, at the present level of production, India has little surplus of edible oils for export. However, as groundnut oil fetches attractive prices abroad, it may not be in the interest of the country to lose her established export markets. It is possible to encourage groundnut oil export provided adequate supplies of edible oils within the country are maintained by increased production or by imports of cheaper oils from abroad. For example, palm oil can be imported for use in *vanaspati*, for which it is quite suitable, and a corresponding quantity of groundnut oil released for export. As palm oil is much cheaper than groundnut oil, the country will earn a valuable surplus of foreign exchange. A flexible export-import policy, encouraging imports when oil prices begin to rise owing to a small crop, and encouraging exports when the domestic prices decline heavily, should help to mitigate the price fluctuations."

The violent fluctuations in prices of edible oils are also due to the absence of effective regulation of forward trading in oilseeds and oils. The restriction in the scope of speculation in grain and other commodities due to Government control, according to Mr. Patel, has made the oil market one of the principal centres of speculative interest. This has led to frequent and violent fluctuations in oil prices for no rational reasons. With the Forward Contracts (Regulation) Act now in force, it is to be hoped that the Government will take active steps to check unhealthy speculation in the market.

The increased supply of vegetable oils at reasonable prices will help increase the output of *vanaspati*. There is now a large gap between installed capacity and output. The principal problem of the industry, therefore, is that of securing fuller utilisation of its productive capacity, which, when the factories under construction are completed, will amount to about 389,000 tons. The Planning Commission has recommended increase in the output of *vanaspati* from 152,000 tons in 1950-51 to 300,000 tons by 1955-56. The output in 1953 was no more than 191,182 tons. Apart from what needs to be done by the Government, the industry itself must pay greater attention than is being done at present to achieve sales promotion and marketing, so that the market for *vanaspati* may be expanded and large production made possible.

INDIAN COTTON AND HAIR BELTING INDUSTRY

CLAIM FOR CONTINUANCE OF PROTECTION

FOR nearly six years now, the cotton and hair belting industry has enjoyed protection. It was in the year 1948 that the Government of India, on the recommendation of the former Tariff Board, converted the then existing revenue duty of 7½ per cent. *ad valorem* on cotton and hair belting into a protective duty. Protection was to have remained in force till 31st March, 1950, but it was subsequently extended for a further period of two years, that is, till 31st March, 1952. Subsequently, pending a detailed investigation by the Tariff Commission, the period was extended by another period of 33 months.

Although opinions may vary on the question whether the industry has justified the protection given to it or not, there is no doubt that there has been considerable improvement, both qualitative and quantitative, in the products which the industry is turning out. The industry, however, has not yet attained stability and it is believed that, given a further substantial period of protection, India will be self-sufficient in the products of the industry.

The industry has asked for continuance of protection and the grant of assistance in various forms. The manufacturers have, for instance, requested a total ban on imports of every type of belting. They have based this demand on the score that, in view of the emergence of rubber ply belting industry in India and the consequent increase in the potential capacity of the belting industry in the country, there has been a slump in prices. If, however, imports of leather belting were to be allowed, there should be, according to them, a protective duty at such a rate as would give them a price margin of 31½ per cent. in favour of rubber ply belting of indigenous origin. But it may be mentioned here that the use of import control as a method of protection is strictly not within the purview of the Commission.

Even a cursory glance at the present position of the industry, as revealed by Mr. B. N. Adarkar, member of the Tariff Commission, in his address opening the public enquiry into the industry's claim for continuance of protection, discloses that the industry is not passing through good days. There is considerable lag between the capacity of the industry and the actual output. At the time of the first enquiry by the Tariff Board, that is, in 1947, there were only four units in the industry, with a total estimated capacity of 1,770 tons per annum on two-shift basis. By 1949, when the second enquiry was held by the Tariff Board, two more units had entered the field. Besides, two of the then existing units had increased their capacity. Consequently, the productive capacity had gone up to 2,300 tons per annum. Thereafter, a new unit, namely, Asia Belting and Spinning Mills Ltd., Serampore, came into existence in January 1953, to be precise, thereby raising the total number of manufacturing units to seven. The present estimated installed capacity according to the manufacturers is 1,124 tons per annum, on single-shift basis. The production of cotton belting during January-September, 1953, was 272 tons, as against 394 tons in January-December, 1952, and 372 tons in January-December, 1951. The output of hair belting during January-September, 1953, was 310 tons, as compared with 338 tons in January-December, 1952, and 331 tons in January-December, 1951.

The ability of the industry to utilise its full installed capacity is dependent on domestic demand. The estimates of demand, however, vary largely. The Development Wing of the Ministry of Commerce and Industry has estimated the present demand for cotton belting at about 350 tons and that for hair belting at 500 tons. The Indigenous Belting Association, Calcutta, has placed the demand at 500 tons for hair belting and 700 tons for cotton belting. The British Solid Woven Belting Association, Calcutta, has estimated the demand for hair belting at 650 tons per annum. Messrs. Parry & Co., Madras, are of the considered opinion that the present annual consumption of cotton belting is about 800 tons and that of hair belting at 550 tons. According to this firm, the demand is likely to go up by at least 10 per cent. during the next three years.

Mr. Adarkar revealed that, since the last enquiry by the Tariff Board, there had been a tendency to switch over from the use of cotton and hair to rubber ply belting. It is not, however, clear whether this tendency is peculiar to India alone or whether a similar tendency is evident in foreign countries also. If, however, the trend is peculiar to India, it is necessary to enquire into the reasons for it and to ascertain the extent to which rubber ply belting can satisfactorily replace hair and cotton beltings. Since the substitution of rubber ply belting for cotton and hair beltings would affect the quantum of demand for cotton and hair beltings, this new trend will have to be taken into account in assessing the country's requirements of the latter.

The next important question to be considered relates to the quality of the belting. While, for instance, many of the consumers have expressed satisfaction over the performance of indigenous beltings in power transmission, all importers and a few consumers have offered unfavourable opinions. Amongst the defects pointed out by the latter are poor impregnation and the tendency of the indigenous beltings to stretch soon after their initial use. It is also pointed out that some of the beltings crack and that a high percentage of the belts slip when they are used in high speed machinery.

The principal raw materials for the manufacture of cotton belting and hair belting are cotton yarn and hair yarn, respectively. While sufficient quantities of cotton yarn are available in the country, most of the requirements of hair yarn are met from imports. The Jay Shree Textiles, Ltd., and the Bharat Woollen Mills, Ltd., both situated in Calcutta, have been manufacturing hair and belting woollen yarn. One of these units is stated to have claimed that its yarn is of satisfactory quality and that it has enough capacity to meet the entire requirements of the hair belting industry. Referring to this, Mr. Adarkar observed:

"If indigenous hair yarn is really of satisfactory quality as claimed by the producers, the hair belting industry should continue to use indigenous yarn, as far as possible, and eschew imported raw material; the stable establishment of the raw material industry is vital to the healthy development and eventual security of the consuming industry itself."

It is pointed out, in this connection, that, while hair yarn is allowed to be imported free of duty, camel hair tops are subject to a duty of 31½ per cent. *ad valorem*. The indigenous hair yarn industry has represented that this is a tariff anomaly which requires rectification and that imports of hair tops should be permitted free of duty.

U.N. STATISTICAL YEAR BOOK

The world's industrial production rose by 189 per cent. since 1932 and the value of world trade mounted 250 per cent. since 1938, according to the United Nations 1953 *Statistical Year Book* released last week. This monumental volume of 580 pages, published in French and English, provides international statistics on demographic, economic, financial, social and cultural subjects. These statistics show general increases in agriculture, health and medical facilities, as compared with data for the years just before World War II. Food consumption in some countries, however, was not keeping up with the general increase in food production. In 16 out of 40 countries listed, calorie consumption was lower than just before World War II.

The U.N. Yearbook reveals that world production of coal increased by 34 per cent., petroleum by 229 per cent., electric energy by 294 per cent. and motor vehicles by 199 per cent., during the 20 years up to the end of 1952. In addition, 89 per cent. more goods were carried on the world's seas and 182 per cent. more freight traffic on its railways. The rise in world trade was the result of a 40 per cent. increase in volume and a 150 per cent. increase in world prices. The statistics cover the world outside the Soviet orbit, because Communist regimes follow a pattern of withholding such data. From such statistics as are available, however, it has been calculated that the average Russian works about 38 hours a week to buy the same food he bought in 1928 with about 26 hours of labour.

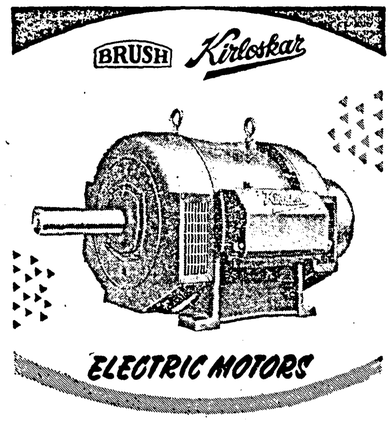
Another known basic figure is the livestock population. Under the last Czar, the Russians had 58,400,000 head of cattle. This figure rose to 66,800,000 in 1928. In 1953, it was 56,600,000 and this included the land and livestock annexations that meanwhile had swelled the Soviet Union by some 280,000 square miles.

TRANSPARENT PAPER

India, it is stated, has become self-sufficient in transparent paper, the annual demand for which is estimated at 1,60,000 reams. This has been made possible by doubling the output of the Travancore Rayons Limited—the only manufacturers of this essential commodity in India today. It is also learned that, from the middle of this year, this Company will commence the production of transparent paper in moisture-proof, heat-sealing varieties needed for specialised packaging requirements of the tobacco, confectionery and other industries.

IMPORT QUOTAS

While referring to the address delivered by Mr. Shantilal M. Shah, President, All-India Importers' Association, Bombay, at the last annual meeting of the Association, it was mentioned in our issue of 20th February last (*vide* page 295) that "Mr. Shah is of the opinion that the (import) quotas should cover the gap between demand and internal supplies for the commodity concerned." Readers will kindly note that it was not Mr. Shah but Mr. R. G. Saraiya who held the views attributed to Mr. Shah in this sentence. The error is regretted.



RANGE up to 200 HP

Sturdy Motors suitable for all HEAVY industrial drives.
Available ex-stock or early delivery.

Manufactured by:
KIRLOSKAR ELECTRIC CO., LTD., BANGALORE-3

THE SASSOON SPINNING AND WEAVING COMPANY, LTD., BOMBAY

NOTICE

THE EIGHTY-FIRST ORDINARY GENERAL Meeting of the Shareholders of the above Company will be held at the Registered Office, Maneckji Wadia Building, 127, Mahatma Gandhi Road, Fort, Bombay, on Monday the 12th April, 1954, at 5 p.m. (S.T.), to transact the following business:—

1. To receive and adopt the Directors' Report, Audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1953.
2. To declare a Dividend.
3. To elect a Director in place of Mr. Arvind N. Mafatlal who retires by rotation and is eligible for re-election.
4. To elect a Director in place of Mr. Hariprasad S. Mahadevia who retires by rotation and is eligible for re-election.
5. To elect a Director in place of Mr. Bhupendra Ehikhabhai who retains office till the General Meeting under the Company's Articles of Association but is eligible for re-election.
6. To appoint Auditors for the current year and fix their remuneration.
7. To pass the following Resolution:—
   "RESOLVED that the Company do become a member of the Bombay Textile Research Association and pay to the Association a sum of Rs. 94,950 as entrance fee and also such sum or sums as annual subscription or as contribution to the Capital Expenditure as may from time to time be determined by the Association and that Mr. Arvind N. Mafatlal, a Director of the Company, be and is hereby authorised to sign the Memorandum of Association of the said Association for and on behalf of the Company."
8. To transact any other business the Chairman may bring before the Meeting.

The Transfer Books of the Company will be closed from Friday the 26th March to Friday the 16th April, 1954, both days inclusive.

By Order of the Board of Directors,
M. G. INVESTMENT CORPORATION LTD.,
N. MAFATLAL,
Director,
Managing Agents.

MANECKJI WADIA BUILDING,
127, MAHATMA GANDHI ROAD,
FORT,
BOMBAY, 1st *March*, 1954.

N.B.—If Dividend, as recommended by the Directors is passed at the Meeting, the payment will be made at the Registered Office of the Company on and after Monday the 19th April, 1954, during Office hours, excepting Saturdays, to those Shareholders whose names are on the Company's Register on 16th April, 1954.

Shareholders are requested to intimate immediately any change in their registered address to the Company.

THE STANDARD MILLS COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Fifty-ninth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, at 29, Rustom Building, Veer Nariman Road, Fort, Bombay, at 2-15 p.m. (S.T.) on Monday, 12th April, 1954, to transact the following business:—

(1) To receive and adopt the Directors' Report and the Audited Balance Sheet and Profit and Loss Account of the Company for the year ended 31st December, 1953.

(2) To sanction the declaration of Dividends on First and Second Preference Shares and Ordinary Shares.

(3) To elect two Directors in place of those who retire by rotation and who are eligible for re-election.

(4) To appoint Auditors for the current year and to fix their remuneration.

(5) To transact any other business the Chairman may bring forward before the Meeting.

The Transfer Books of the Company will be closed from Tuesday, 23rd March, 1954 to Monday, 12th April, 1954 (both days inclusive).

By Order of the Board of Directors,
For THE STANDARD MILLS COMPANY LIMITED,
MAFATLAL GAGALBHAI & SONS,
Managing Agents.

BOMBAY, 2nd *March*, 1954.

N.B.—The Dividends, when sanctioned, will be made payable at the Company's Registered Office on and after Thursday, 15th April, 1954 to those shareholders whose names stand on the Register on Monday, 22nd March, 1954 and the Dividend Warrants will be posted to each shareholder to his last given address.

To the Shareholders of The Standard Mills Co., Ltd., and particularly to:
Omar Latiff, Navazbai D. Cama and Mancherji S. Bilimoria, F. P. Dastur and Alla F. Dastur, Timothy M. Fernandes, Gulamhussein H. Ismail Pahad, Ugni S. S. Jung Bahadur Rana, J. A. Robertson, John Rankine, M. H. Crowder, Rani Luxmi Debi.

THE MAFATLAL FINE SPINNING AND MANUFACTURING COMPANY, LTD.

NOTICE

THE TWENTY-THIRD ORDINARY GENERAL Meeting of the Shareholders of the above Company will be held at the Registered Office, Maneckji Wadia Building, 127, Mahatma Gandhi Road, Fort, Bombay, on Monday the 19th April, 1954, at 2-15 p.m. (S.T.), to transact the following business:—

1. To receive and adopt the Directors' Report, Audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1953.
2. To declare Dividends on Preference Shares and Ordinary Shares.
3. To elect a Director in place of Mr. Arvind N. Mafatlal who retires by rotation and is eligible for re-election.
4. To elect a Director in place of Mr. Yogindra N. Mafatlal who retires by rotation and is eligible for re-election.
5. To elect a Director in place of Mr. Bipinchandra P. Patel who retains office till the General Meeting under the Company's Articles of Association but is eligible for re-election.
6. To appoint Auditors for the current year and fix their remuneration.
7. To pass the following Resolution:—
   "RESOLVED that the Company do become a member of the Bombay Textile Research Association and pay to the Association a sum of Rs. 51,960 as entrance fee and also such sum or sums as annual subscription or as contribution to the Capital Expenditure as may from time to time be determined by the Association and that Mr. Arvind N. Mafatlal, a Director of the Company, be and is hereby authorised to sign the Memorandum of Association of the said Association for and on behalf of the Company."
8. To transact any other business the Chairman may bring before the Meeting.

The Transfer Books of the Company will be closed from Friday the 2nd April, 1954, to Friday the 23rd April, 1954, both days inclusive.

By Order of the Board of Directors,
NAVINCHANDRA PURSHOTAMDAS & CO., LTD.,
N. MAFATLAL,

Shareholders are requested to intimate immediately any change in their registered address to the Company.

THE TITAGHUR PAPER MILLS COMPANY, LIMITED

AT A MEETING OF THE BOARD OF DIRECTORS held on the 26th February, 1954, the following Dividends were recommended to be paid for the half-year ended 30th September, 1953, without any deduction for Income Tax paid by the Company. On 1st Preference Shares—8 per cent. per annum, on 2nd Preference Shares 4½ per cent. per annum, on Preferred Ordinary Shares—10 per cent. per annum, and on 'A' and 'B' Ordinary Shares—As. 12 per Share plus As. 4 Bonus per Share.

By Order of the Board,
F. W. HEILGERS & CO., LTD.,
Managing Agents.

CALCUTTA, 26th *February*, 1954.

Notices

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent, the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

KESORAM COTTON MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Members of Kesoram Cotton Mills, Ltd., will be held at the Head Office of the Company at No. 8, Royal Exchange Place, Calcutta, on Monday the 22nd March, 1954, at 3-30 p.m., to consider and if thought fit, to pass with or without modification, the following resolutions:—

ORDINARY RESOLUTIONS

1. That the Authorised Capital of the Company be increased from Rs. 2,00,00,000 (Rupees Two Crores) to Rs. 2,60,00,000 (Rupees Two Crores Sixty Lakhs) by the creation of 12 lakhs ordinary shares of Rs. 5 each.

2. That a sum of Rs. 35,00,000 (Rupees Thirty-five Lakhs) being part of the undivided profits of the Company standing to the credit of the Reserve Fund of the Company as on 31st March, 1953, and Rs. 5,00,000 (Rupees Five Lakhs) also being part of the undivided profits of the Company as on 31st March, 1953, both aggregating Rs. 40,00,000 (Rupees Forty Lakhs) be capitalised and distributed amongst the holders of the Issued and Subscribed 8 lakhs ordinary shares of the Company of Rs. 15 each on the basis that they become entitled thereto as capital in pursuance of Article 121-A of the Articles of Association of the Company and the said capital sum be applied for and on behalf of the holders of the said Issued and Subscribed 8 lakhs ordinary shares for payment in full for further 8 lakhs ordinary shares of Rs. 5 each and that such further 8 lakhs ordinary shares of Rs. 5 each credited as fully paid-up shall rank in all respects *pari passu* with the existing ordinary shares save and except that they would not participate in any dividend in respect of any period prior to and up to 31st March, 1954, and shall be treated for all purposes as an increase of the capital of the Company held by the holder of each such Ordinary share and not as an income.

3. That pursuant to the above resolution and in satisfaction of the said Capital Bonus, the Directors be and same are hereby authorised to allot and distribute the said 8 lakhs ordinary shares of Rs. 5 each credited as fully paid-up amongst the holders of the existing 8 lakhs ordinary shares of the Company of Rs. 15 each in the proportion of one such newly created share of Rs. 5 each for every existing ordinary share of Rs. 15 each held by them and that the existing issued and paid-up 8 lakhs ordinary shares of Rs. 15 each and newly created and paid-up 8 lakhs ordinary shares of Rs. 5 each in the capital of the Company be consolidated in such a manner that every one of the said existing ordinary shares of Rs. 15 each and every one of the said newly created share of Rs. 5 each together will constitute one paid-up ordinary share of Rs. 20 each, with the proviso that in the case of non-resident shareholders, the allotment and distribution of newly created Bonus shares shall not be made until such time as sanction is obtained from the Reserve Bank of India in this connection.

4. That the unissued existing 4 lakhs ordinary shares of Rs. 15 each and the newly created unissued 4 lakhs ordinary shares of Rs. 5 each be also suitably consolidated in such manner that every one of such unissued share of Rs. 15 each and every one of such unissued ordinary share of Rs. 5 each together shall constitute one ordinary share of Rs. 20 each.

5. That the draft of the Agreement providing for the allotment of the said new ordinary shares in satisfaction of the said capital bonus and submitted to this meeting and signed in the margin by the Chairman by way of identification be and the same is hereby approved and that the Managing Agents be and the same are hereby authorised to affix the seal of the Company to duplicate endorsement of such agreement as and when the same shall have been signed on behalf of the members holding the existing ordinary shares of the Company by some person to be appointed by the Directors in that behalf under Article 121-A of the Articles of Association of the Company.

6. That clause 5 of the Memorandum of Association of the Company beginning from the words "The Capital of the Company" and upto the words "Rs. 15 each" be amended to read as follows:—
   "5. The Capital of the Company is Rs. 2,60,00,000 (Rupees Two Crores Sixty Lakhs) divided into 20,000 Preference Shares of Rs. 100 each and 12,00,000 (Twelve Lakhs) Ordinary shares of Rs. 20 each."

By Order of the Board,
BIRLA BROTHERS LTD.,
Managing Agents.

RESULTS OF INDIAN IRON SATISFACTORY

DIVIDEND MAINTAINED BUT TRANSFERS TO RESERVES INADEQUATE

A STRICT comparison of the financial results of the Indian Iron and Steel Co., Ltd. (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) for the year ended 31st March, 1953, with those for the previous years, is not possible in view of the merger of the Steel Corporation of Bengal Ltd. with the Company with effect from 1st January, 1953, in accordance with the provisions of the Iron and Steel Companies Amalgamation Act, 1952. Further, the financial year of the S.C.O.B. was different from that of the I.I.S.Co. While the latter has been closing its accounts as on 31st March, the former used to close its books as on 31st December. The financial results of the Indian Iron for the year under review include, therefore, the results of the S.C.O.B. for the quarter from 1st January to 31st March, 1953. This is another reason why the results of the merged I.I.S.Co. are not comparable with those for the preceding year. In fact, a direct comparison of the results of the merged companies for two years will not be possible until the year ended 31st March, 1955.

In analysing the accounts of the Company for the year ended 31st March, 1953, one has, therefore, to rest content with merely stating the results. Considering that the Company's production of pig iron during the year under review was affected by one of the blast furnaces going off for a period of 4½ months for the purposes of re-lining, the results appear to be satisfactory.

A broad picture of the Company's working during the year under review against the background of those for the three pre-merger years can be had from the following table:

(In lakhs of rupees)

—	For the year ended 31st March			
	1953	1952	1951	1950

* Approximate.
† For the broken period up to 31st March, 1951.
‡ Excluding the iron used in the Company's own foundries.

The rise in sale proceeds and in expenses largely reflects the effect of the merger. The item "other income" includes a sum of Rs. 28.58 lakhs being the profit from the S.C.O.B. for the year ended 31st December, 1952, which represents an increase of Rs. 11.50 lakhs over the previous year. It also includes a sum of Rs. 54.46 lakhs representing sundry income which shows a decline of Rs. 14.79 lakhs. The provision for depreciation, amounting to Rs. 50 lakhs, comprises the normal allocation of Rs. 40 lakhs as in the previous two years, and an additional sum of Rs. 10 lakhs covering depreciation for the quarter ended 31st March, 1953, on the fixed assets of the S.C.O.B. taken over as from 1st January, 1953. After providing for taxation the net profit amounts to Rs. 88.77 lakhs, a decline of Rs. 5.57 lakhs. But this is more than offset by the receipt of a sum of Rs. 16.47 lakhs being the balance of profit of the S.C.O.B. for the year 1952. This, according to the provisions of the Act, is deemed to be the profit of the Indian Iron. This, together with the unappropriated surplus of Rs. 2.87 lakhs brought forward from the previous year, makes a sum of Rs. 108.11 lakhs available for appropriation.

Out of the aforesaid amount, a sum of Rs. 53.11 lakhs has been provided for repairs and renewals reserve. Expenditure on repairs and renewals incurred during the year and met from this reserve amounts to Rs. 41.27 lakhs, so that the net addition to the reserve is only Rs. 11.84 lakhs. Another sum of Rs. 7.50 lakhs has been transferred to the Kutli blast furnace rehabilitation reserve, in accordance with the orders of the Government of India on the recommendation of the Tariff Board. Last year, it may be remembered, this reserve had received only Rs. 5 lakhs. A further sum of Rs. 3.62 lakhs has been transferred to the steel plant rehabilitation reserve as the allocation for the three months ended 31st March, 1953. This sum has been calculated at the rate of Rs. 14.48 lakhs per annum, on the assumption that the requirements of the Government in this regard will continue to apply under the revision of the sales retention prices of steel as from 1st January, 1953. No sum has been provided for ore mines and collieries development, which had received in the previous year Rs. 10 lakhs. Reserve for taxation contingencies gets Rs. 15.25 lakhs, while in the previous year it had been provided with Rs. 17.50 lakhs. Debentures sinking fund has been provided with Rs. 4.85 lakhs, as against Rs. 4.66 lakhs.

Commenting on the appropriations to the various reserves, the Directors make the following interesting observation:

"From the profits for the period under review, a considerable appropriation to reserve would normally have been made as provision towards the finance of the development and expansion of the Company's undertaking. In the expectation that the retention prices of steel will be increased from 1st January, 1953, this appropriation has, however, been deferred, but it is the intention of your Directors in the accounts for the current year to apply to reserve from the net amount of the price increase for the period 1st January, 1953, to 31st March, 1953, a sum additional to such current reserve allocation as may be made from the actual profits for that year. In this connection, your Directors would stress the fact that on the Company's ability to make adequate reserve allocations from profits now and in the future depends the major expansion of its undertaking that is in prospect, to the finance of which the Company is called upon to make a very substantial contribution. This contribution, which will amount approximately to Rs. 7½ crores, must be financed out of direct reserve allocations in supplement of the utilisation of a part of the annual depreciation provision and on a continuance of such reserve allocations will depend also the repayment of the large amount of additional finance to be provided on loan account by the Government of India and the International Bank for Reconstruction and Development."

The apologetic tone of the above quotation is not surprising. The fact is that, if the Directors were to make adequate provision for reserves, they would not be able to recommend a dividend of 10 per cent. per annum.

The balance-sheet of the Company as on 31st March, 1953, reveals the consolidated position of the merged undertaking on that date. The following is a synopsis of the balance-sheet:

‡ Liabilities	Rs.	Assets	Rs.
Capital	7,88,32,480	Gross block ..	14,51,00,274
Reserves and surplus ..	5,75,81,879	*Less*—Depreciation .	4,84,15,506
Debentures ..	1,52,68,000	Net block	10,16,84,768
Provision for taxation ..	1,43,78,781	Work-in-progress ..	2,99,96,626
Liabilities	9,36,25,290	Payments during construction of S.C.O.B. ..	27,89,057
		Stock-in-trade ..	4,23,40,918
		Stores, spares, etc..	3,19,75,020
		Debts, deposits and advances ..	3,33,16,857
		Investments ..	90,00,803
		Investment realisation account ..	1,11,65,008
		Cash	32,23,883
Rs.	25,95,01,430	Rs.	25,95,01,430

In addition to the various reserves transferred from the S.C.O.B., the capital reserve of the merged undertaking has been increased by the difference between the former ordinary share capital of the S.C.O.B., namely, Rs. 3.29 crores, and the ordinary share capital of the Indian Iron (Rs. 2.63 crores), issued in exchange of the shares of the S.C.O.B., in the ratio of four Indian Iron shares for every five S.C.O.B. shares. The capital reserve now stands at Rs. 1.14 crores. The other reserves include premium on shares Rs. 61.45 lakhs, general reserve Rs. 27.50 lakhs, development and rehabilitation reserve Rs. 62.84 lakhs, repairs and renewals reserve Rs. 1.61 crores and taxation contingency reserve Rs. 83.25 lakhs.

A perusal of the various schedules to the statement of accounts, included in the Directors' report, reveals that, as on 31st March, 1953, the Company had drawn Rs. 2.50 crores from out of the Rs. 5 crore loan granted by the Government of India and that no sums had been received from the World Bank which has sanctioned a loan of $31 million. The Rs. 10 paid-up ordinary shares of the Company are being well favoured by many on the Stock Exchange and on the basis of the current market price of about Rs. 30, the yield works out to no more than 3.3 per cent. per annum.

SHARP DROP IN ALKALI AND CHEMICAL'S PROFIT

DIVIDEND PAID FROM RESERVES

THE decision of the Directors of the Alkali and Chemical Corporation of India Ltd. [Secretaries: Imperial Chemical Industries (India) Ltd., Calcutta] to repeat the dividend on the ordinary shares of the Company at 6 per cent. per annum for the year ended 30th September, 1953—this is the third year in succession for which this dividend is being maintained—does not mean that the Company's performance during the year has been as encouraging as in the previous two years. In fact, the gross profit for the year under review amounts to no more than Rs. 16.33 lakhs, which shows a decline of Rs. 18.53 lakhs, as compared with that for 1951-52 and of Rs. 22.24 lakhs for 1950-51.

This is not surprising. For the Chairman, Mr. N. D. Harris, had told the shareholders of the Company a year ago that earnings were likely to be lower for a year or two, after the sale of the Company's Khewra factory, which had been contributing a considerable portion of the Company's profit in the earlier years, went through. The sale of the Khewra factory was completed in May 1953 and since then the Company has been dependent entirely on the factory at Rishra for its earnings. It was in anticipation of this possibility that the Directors had transferred last year a sum of Rs. 7.50 lakhs to the dividend equalisation reserve, so that they could maintain the dividend at the modest level of 6 per cent. This forethought on their part has now stood them in good stead. Thus, they have drawn a sum of Rs. 5.27 lakhs from this reserve to pay the dividends, as the sum available for distribution is scarcely sufficient to pay even the preference dividend.

The following comparative table clearly brings out the Company's progress during the last three years:

(In lakhs of rupees)

—	For the year ended 30th September			
	1953	1952	1951	1950
Sale proceeds	190.31	168.66	160.59	81.61

* Represents adjustment of provision for taxation for previous years and provision for income-tax on profit out of sale of Khewra fixed assets.
† For eighteen months ended 30th September, 1950.

Sale proceeds show an increase of Rs. 21.65 lakhs and closing stocks of finished goods a drop of Rs. 11.83 lakhs. Expenses, on the other hand, show an increase of Rs. 3.89 lakhs. Commenting on the Company's operations, the Directors observe, in their report to the shareholders, as follows:

"Sales of caustic soda and chlorine were satisfactory and full production was maintained throughout the year. Some difficulties were experienced in selling our production of hydrochloric acid and sales were about the same as in the previous year. The extensions to the chlorine and caustic soda plant have been completed and production has increased. The crude B.H.C. plant did not fulfil expectations; much attention has been paid to its operation and definite improvements have been obtained, though full rated capacity has not been achieved. The water dispersible powder plant operated continuously and the demand for this product was good. Severe competition was met in the sale of benzene hexachloride dust formulations and production had to be curtailed from time to time.

"Keen competition was met with in paints. The addition to the plant of a varnish unit was started during the year and has since been completed. We have leased a site at Rishra to Imperial Chemical Industries (India) Ltd. who have built on it a technical service station for paints which will provide unique customer service.

"The sale of Khewra soda ash factory was completed on 31st May, 1953."

No provision for taxation for the year under review has been made, whereas a sum of Rs. 10.83 lakhs was provided last year. However, a sum of Rs. 2.34 lakhs has had to be set aside towards adjustment of provision for taxation relating to the previous years. In addition, a provision of Rs. 4.44 lakhs has had to be made for income-tax on profit earned on sale of fixed assets of the Khewra factory. The general reserve and dividend equalisation reserve had received Rs. 3 lakhs and Rs. 7.50 lakhs, respec-

Points From The Chair

Tobacco Smoking and Lung Cancer

"THE essential thing is that medical science should discover as soon as possible the true cause of causes of lung cancer. We knew, of course, that medical authorities have been studying various factors that might possibly contribute to the development of the disease, and towards the end of last year the leading tobacco manufacturers came to the conclusion that it was in the best interests of their companies and their stockholders, as well as of the public, that they should help in hastening medical research into this particular problem. We, therefore, jointly decided to establish a fund of £250,000 in aid of research into the cause of lung cancer, and to put that fund at the disposal of an impartial body such as the Medical Research Council to be used in whatever ways seemed to them to be best for the purpose. I recognise the public concern that may have been caused by some of the recent statements. I also recognise our responsibility. It is with full regard to that responsibility that I feel bound first to emphasise that there is no proof that smoking is a cause of lung cancer, and secondly to say that in relation to the present state of scientific knowledge there has been much exaggerated comment about this matter—comment that has appeared to ignore the very important reservations contained in the official statements."

SIR ROBERT SINCLAIR,
Imperial Tobacco Co. (of Great Britain and Ireland) Ltd.

Profits—the Basis of National Welfare

"Increased output would, moreover, provide the only sound means of satisfying the desire for increased earnings. It might also, but with no certainty, lead to higher profits, but this, it should be emphasised, would be wholly to the national good. Apart from the fact that national prosperity—which, like peace, is indivisible—indicates a healthier economy and thus a greater assurance of comfort for all, profits are the basis of our national welfare. They not only, through the taxation, help to sustain our social security system, but they also provide the source of the capital which is constantly needed to maintain our productive machine at the higher pitch. They should, therefore, be encouraged rather than criticised."

SIR HAROLD E. YARROW,
Clydesdale & North of Scotland Bank Ltd.

Life Assurance Without Medical Examination

"It is over 50 years since the Society introduced the system of life assurance without medical examination and we are able to offer assurances under this plan at the ordinary rates of premium and on the same terms as for assurances with medical examination, so that completion of business can be effected with the least inconvenience to the public and with freedom from irritating delays. The Society has a reputation, which we believe to be well deserved, for offering generous terms for assurances on the lives of persons who are under average from the medical standpoint. This factor has for long been of particular importance to individual prospects for life assurance; it is the more so today to employers who wish to arrange pension schemes."

C. G. RANDOLPH,
Sun Life Assurance Society.

Sales Tax on Inter-State Trade

"The practice has recently started of States attempting to tax inter-State transactions, thereby causing a great deal of confusion. There are about 19 States in India to-day which are levying sales tax under Acts, rules and regulations which are far from uniform. Head offices of businesses with transactions throughout India are now expected to be familiar with the taxing laws of 19 different States and to maintain separate accounts for each of them. During the last few weeks, some action has been taken by the Central Government to overcome the present difficulties, but, unfortunately, the steps taken do not go far enough to achieve the requisite uniformity throughout the country. If a tax on such inter-State transactions is to be continued, I suggest that the only practical way is to tax the purchaser in the taxing State or, in other words, make it a purchase tax and not a sales tax."

S. W. EDWARDS,
Spencer & Co., Ltd.

Liberalisation of Trade in Hides and Skins

"Nevertheless, as far as the tanning trade is concerned, we have to recognise that there is, at the present time, subsidisation in one form or another in leather production in almost every country of the Commonwealth, and under Imperial Preference this leather comes into this country free of duty at prices with which it is well-nigh impossible to compete. Furthermore, the fact that the United States —owing to its record domestic kill—has now an exportable surplus of hides, has tended to keep the American price of hides and leather on a very low level and is making it increasingly difficult for us to maintain our exports of leather to the dollar area. These are factors which are due to the abnormal world trading conditions and currency difficulties which have arisen as a result of the war, and the fact that as far as tanning is concerned the war-time controls have been continued in many countries of the Commonwealth and in some countries in Europe much longer than could have been foreseen. We are looking constantly towards the goal of securing the complete liberalisation of trade in hides, skins and leather throughout the world."

GEORGE W. ODEY,
Barrow Hepburn and Gale Ltd.

COMPANY MEETINGS AND DIVIDENDS

MARSHALL SONS AND CO. (INDIA) LTD. Annual General Meeting, Calcutta, 9th March, 1954. Dividend: As. 4 per share. Transfer books remain closed from 2nd to 9th March, 1954, both days inclusive.

BRUSHWARE LTD. Annual General Meeting, Kanpur, U.P., 16th March, 1954. Dividend: Re. 1 per share.

UNITED MOTORS (INDIA) LTD. Annual General Meeting, Bombay, 16th March, 1954. Transfer books will remain closed from 9th to 23rd March, 1954, both days inclusive.

INDIA PAPER PULP CO., LTD. Half-yearly General Meeting, Calcutta, 16th March, 1954. Dividend: Rs. 6 per share. Transfer books remain closed from 2nd to 16th March, 1954, both days inclusive.

CALCUTTA STEAM NAVIGATION CO., LTD. Half-yearly General Meeting, Calcutta, 18th March, 1954. Dividend: Rs. 5 per share. Transfer books remain closed from 4th to 18th March, 1954, both days inclusive.

ORISSA MINERALS DEVELOPMENT CO., LTD. Half-yearly General Meeting, Calcutta, 22nd March, 1954. Dividend: Rs. 2 per share. Transfer books will remain closed from 8th to 22nd March, 1954, both days inclusive.

BENGAL ASSAM STEAMSHIP CO., LTD. Annual General Meeting, Calcutta, 24th March, 1954. Dividend: Rs. 10 per share. Transfer books will remain closed from 10th to 24th March, 1954, both days inclusive.

CENTURY SPINNING AND MANUFACTURING CO., LTD. Final dividend of Rs. 14 per share free of income-tax (making Rs. 22 per share free of income-tax for the whole year) payable on 15th March, 1954. Transfer books will remain closed from 22nd March to 10th April, 1954, both days inclusive.

F. AND C. OSLER (INDIA) LTD. Interim dividend of As. 8 per ordinary share. Transfer books remain closed from 4th to 16th March, 1954, both days inclusive.

NATIONAL RAYON CORPORATION LTD. Dividend of Rs. 9 per ordinary share, for the year ended 31st December, 1953. Transfer books will remain closed from 16th March to 9th April, 1954, both days inclusive.

SHIVRAJPUR SYNDICATE LTD. Dividend of Rs. 8 per share (includes bonus of Rs. 3 per share) for the year ended 30th November, 1953. Transfer books will remain closed from 23rd March to 12th April, 1954, both days inclusive.

AHMEDABAD ELECTRICITY CO., LTD. Final dividend of Rs. 4 per share (making Rs. 6-8 for the whole year) for the year ended 30th September, 1953. Transfer books will remain closed from 9th to 29th March, 1954, both days inclusive.

MADURA MILLS CO., LTD. Annual General Meeting, Tuticorin, 25th March, 1954. Dividend: Rs. 3 per share. Transfer books remain closed from 5th to 25th March, 1954, both days inclusive.

GOKAK MILLS LTD. Annual General Meeting, Bombay, 29th March, 1954. Transfer books remain closed from 5th to 25th March, 1954, both days inclusive.

MAFATLAL FINE SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 19th April, 1954. Dividend: Rs. 17-8 per ordinary share, free of income-tax. Transfer books will remain closed from 2nd to 23rd April, 1954, both days inclusive.

SASSOON SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 12th April, 1954. Dividend: Re. 1-4 per share, free of income-tax. Transfer books will remain closed from 26th March to 16th April, 1954, both days inclusive.

NEW UNION MILLS LTD. Annual General Meeting, Bombay, 12th April, 1954. Dividend: Re. 1-4 per share, free of income-tax. Transfer books will remain closed from 26th March to 16th April, 1954, both days inclusive.

TITAGHUR PAPER MILLS CO., LTD. Dividend of Re. 1 per share (including bonus of As. 4 per share) on 'A' and 'B' ordinary shares for the half-year ended 30th September, 1953.

INVESTMENT AND FINANCE CO., LTD. Dividend of Rs. 2-8 per share (5 per cent. per annum) for the half-year ended 31st August, 1953.

GENERAL INVESTMENT AND TRUST CO., LTD. Dividend of Re. 1-14 per share (5 per cent. per annum) for the half-year ended 31st August, 1953.

(Concluded from previous page)

tively in the previous year, but neither of these could be strengthened further this year. In fact, as already noted, the Directors have had to draw a sum of Rs. 5.27 lakhs for payment of dividend on the preference as well as ordinary shares.

The balance-sheet as on 30th September, 1953, shows that reserves and surplus aggregate Rs. 51.05 lakhs, including Rs. 7.71 lakhs representing reserve for deferred tax liability. Provision for taxation amounts to Rs. 20.272. Current liabilities aggregate Rs. 123.68 lakhs, which show a reduction of Rs. 70.8 lakhs over the year, of which loans account for Rs. 55.5 lakhs. The value of gross block stands at Rs. 174.34 lakhs, on which the depreciation provided amounts to Rs. 23.11 lakhs. Additions to the gross block during the year amounted to Rs. 48.93 lakhs, while sale of machinery, plant, buildings, etc., during the year amounted to Rs. 94.69 lakhs. The current assets aggregate Rs. 116.70 lakhs.

QUESTION HOUR IN PARLIAMENT

Ceylon Citizenship

As many as 27,207 Indian residents of Ceylon have been given citizenship rights upto the end of January, 1954.

—Deputy Minister for External Affairs

Land Nationalisation in Burma

The Burmese Government has assured that Indian landowners in Burma will be treated on a par with Burmese landowners in regard to payment of compensation for land that has been nationalised.

—Parliamentary Secretary to Prime Minister

Bicycle Industry

The demand for bicycles in India is estimated at 400,000 to 500,000 per annum. The estimated production of complete bicycles during the current year was 325,000.

* * * *

Sholapur Mills

It is proposed to hand over the management of the Sholapur Mills back to the old management after necessary steps have been taken to ensure the recovery of more than Rs. 1.84 crores advanced to the Mills. The amount includes Rs. 1.12 crores advanced by the Bank of Baroda, Rs. 47.5 lakhs by the Bombay Government and Rs. 27 lakhs by the Central Government. Until the transfer takes place, the present Board of Directors will continue. The losses incurred by the Mills before the Government took it over were about Rs. 16 lakhs in one year and about Rs. 27 lakhs in the subsequent year. After the Government took over, the gross profits for 1950-51 was Rs. 14.24 lakhs and the net profit Rs. 8,681. The gross profit for 1951-52 was Rs. 18.23 lakhs and the net profit Rs. 6.7 lakhs. In 1952-53, the Mills incurred a loss of Rs. 11 lakhs. The loss incurred from April, 1953, to July, 1953, was Rs. 3.5 lakhs.

—Minister for Commerce

Electronics Factory

The Bharat Electronics Factory which will soon be set up in Bangalore would go into partial production in 1956 and to full production in 1957. The Central Government is likely to invest up to Rs. 7½ crores as capital in the Factory, besides Rs. 2½ crores as working capital. Experts of the Defence Ministry and officials of the Factory have gone abroad to make a selection of the machinery and negotiations are almost complete. Contracts for the supply of machinery are about to be given. It is the Government's intention to utilise to the full whatever facilities exist in the country for the manufacture of radio and electronic equipment. The activities of the Bharat Electronics differ from those of the Radio Electrical Manufacturing Company and other firms. It will manufacture the main electronic equipments, while others are engaged in the production of domestic meters, insulated wires and cables, and assembly of domestic radio receiver sets which are not to be manufactured by the Bharat Electronics.

—Deputy Minister for Defence

Rail Compensation

The amounts paid by the railways during the years 1951, 1952 and 1953 as compensation for goods and parcels lost in transit were a little less than the expenditure incurred on the watch and ward establishments. The amounts actually paid as compensation were Rs. 2,21,24,867, Rs. 2,25,85,342 and Rs. 2,06,38,761, respectively. The expenditure on the watch and ward departments were Rs. 2,52,28,681, Rs. 2,72,39,095 and Rs. 2,92,62,868, respectively.

—Deputy Minister for Railways

Cess on Mill Cloth

The cess on mill cloth yielded over Rs. 5.56 crores in 1953.

* * * *

Cotton Control

The Government of India has decided to continue the control on prices of cotton during the 1953-54 season. It is too early to say anything as to what the Government will do next season. Control means fixing of the floor price as well as the ceiling. If the price of cotton goes below the floor, the Government has an obligation to buy. Since that assurance is given, we cannot take off the control, even if we want, in the middle of a season. The policy in regard to the future will be decided by the middle of this year. The control on the movement of cotton and licensing in regard to grades has been liberalised. But, in respect of allocation of cotton to mills, the control still remains. The trend of price in 1953 followed the usual pattern—lower in the beginning of the season and steady movement upward. The standard variety *jarilla* is well above the floor, ranging between Rs. 700 and Rs. 720. The trend of price is generally upward, but I cannot say if it will pierce the ceiling. We have to encourage the producers to produce more cotton. The country is deficit in cotton in relation to its present needs and we have to import between eight to twelve lakh bales a year. Unless we give a floor price at which the producer can sell, it is felt by the Agriculture Ministry that the production of cotton will fall. Cotton is now under the operation of forward markets. The rise in the price of cotton is a matter of expectation. The moment the Government announced that import of American cotton would be allowed, the prices came down.

—Minister for Commerce and Industry

ORISSA MINERALS TO PAY HIGHER DIVIDEND AND CAPITALISE RESERVES

PROFIT OF CHAMPDANY JUTE DWINDLES

Orissa Minerals Development Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th June, 1953.

Raisings of iron ore at 1,96,606 (3,09,359) tons showed a decrease of 23,767 tons when compared with the previous half-year. Despatches at 1,69,176 (2,85,693) tons showed a small increase over the previous half-year. Exports were 34,362 (51,013) tons compared with 33,060 tons in the previous half-year. The decrease in raisings was due to the steel works order remaining at 25,000 tons per month which is the minimum under the Company's contract with them. In addition, the "go-slow" policy adopted by the workers at Burnpur towards the end of the half-year under review resulted in restrictions on despatches.

Raisings of manganese ore at 46,778 tons, showed a considerable increase amounting to 20,878 tons over the previous half-year. Sales at 30,842 tons also showed a considerable improvement on the previous half-year when the figure was 23,979 tons.

Raisingr of manganese dioxide at 1,009 tons showed a decrease of 968 tons from the previous half-year. This was due to the fact that the quarry floor in the Spencer Deposit had reached a depth where the work had to be concentrated on widening the benches back to ensure against any possibility of landslides into the quarry during the monsoon. Due to restricted mining, sales also dropped and were only 1,555 tons, compared with 4,475 tons in the previous half-year.

The demand for manganese ore, manganese dioxide and iron ore has continued during this half-year and prices have been maintained at almost their previous level. However, competition from other parts of the world, particularly Russia, coupled with lower requirements in the main consuming countries is now causing a fall in prices and lower profits should be expected in future.

In spite of the Company's representations to Government, the wagon position has shown little improvement and it is still unable to utilise its extra capacity for mining and loading manganese and iron ores for export.

The profit and loss account after providing Rs. 1,61,537 (Rs. 1,22,809) for depreciation, Rs. 6,00,000 (Rs. 5,25,000) for taxation, taking Rs. 2,00,000 (Rs. 1,00,000) to general reserve, Rs. 2,25,000 (Rs. 1,50,000) to mechanisation reserve, Rs. 12,117 (*nil*) to workmen's compensation reserve, Rs. 1,15,000 (Rs. 1,00,000) to buildings reserve, Rs. 50,000 (Rs. 50,000) to equalisation of dividend reserve and including Rs. 1,22,922 (Rs. 42,938) brought forward from the previous half-year, shows a credit balance of Rs. 3,38,544 (Rs. 2,24,275) which the directors propose to dispose of as follows:—

In paying a dividend on the ordinary shares at the rate of 40 (30) per cent. per annum, without any deduction for income-tax paid by the Company Rs. 2,00,000 (Rs. 1,50,000) and in carrying forward Rs. 1,38,544 (Rs. 74,275).

The directors consider it important that the issued capital of the Company should be brought more into line with the actual capital employed in the Company's business and they therefore, have authorised the managing agents to make the necessary application to obtain sanction from the Controller of Capital Issues to capitalise reserves to the extent of Rs. 10 lakhs by offering one fully paid bonus share for every share held. It will also be necessary to increase the authorised share capital of the Company and steps will be taken to do this.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Block ...	14,20,860
Reserves ...	33,53,850	Work-in-progress ...	55,201
Provision for taxation ...	23,33,169	Stock-in-trade	8,92,093
Liabilities ...	27,53,846	Stores and spare gear	4,28,805
Profit and loss account ...	1,38,544	Debts, deposits and advances ...	30,12,438
		Investments	35,87,934
		Cash ...	1,82,073
Rs.	95,79,409	Rs.	95,79,409

Champdany Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. James Finlay & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September, 1953.

The accounts after providing Rs. 1,49,642 (Rs. 1,28,313) for depreciation on block and Rs. 1,82,000 (Rs. 4,58,000) for taxation, show a balance at credit of profit and loss account for the half-year of Rs. 1,92,595 (Rs. 8,20,223) to which falls to be added the balance brought forward from the previous accounts Rs. 1,15,020 (Rs. 88,388) making an amount available for distribution of Rs. 3,07,625 (Rs. 6,08,611). This amount, the directors recommend should be dealt with in payment of a dividend of Rs. 3 (Rs. 8) per share absorbing Rs. 1,77 492 (Rs. 4,73,312) leaving a balance to be carried forward of Rs. 1,30,133 (Rs. 1,35,299).

It has been necessary to write off a sum of Rs. 33,056, for which provision was made in previous accounts, in connection with a debt due for market difference on jute purchased in 1946 and 1947, but never delivered by the seller. In conjunction with the Company's legal advisers all possible steps have been taken to recover the amount due and it has now been decided that the cost of pursuing the matter further would be out of all proportion to any amount which might ultimately be recovered.

It is recorded that the managing agents have voluntarily foregone a sum of Rs. 50,000 for the half-year under review from the remuneration accruing to them.

At the commencement of the period under review prices for the Company's manufactures generally improved, but declined once again during the latter few months. There has been a small advance in prices since the accounts were closed, but, on the whole, it has not been possible to secure remunerative prices for the Company's heavy goods.

Buildings and machinery have been maintained in good condition and repair. The retaining wall on the bank of the river Hooghly at Champdany Mill was very largely completed during the half-year under report and this item constitutes the only addition to buildings as shown in the accounts.

The new sacking weft preparing and spinning machinery ordered for Wellington Mill began to arrive during September and good progress has been made with its installation and initial operation since the accounts were closed.

In accordance with the provisions of the Indian Jute Mills' Association, Main and Supplementary Working Time Agreements, 12½ per cent. of the looms remained sealed and the Mills worked only 42½ hours per week throughout the six months under review. The labour have worked moderately well on the whole and production has been maintained at a not unreasonable level.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	59,16,400	Block ...	61,24,497
Reserves ...	1,06,21,511	Machinery-in-transit ...	11,99,397
Provision for taxation ...	23,09,505	Stocks ...	66,01,850
Liabilities ...	11,45,622	Stores, etc. ...	12,75,147
Profit and loss account ...	1,30,133	Debts, deposits and advances ...	29,30,427
		Investments	2,05,737
		Cash ...	17,86,116
Rs.	2,01,23,171	Rs.	2,01,23,171

Bengal Assam Steamship Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st October, 1953.

After providing Rs. 2,83,676 (Rs. 2,00,871) for depreciation and Rs. 9,00,000 (Rs. 9,60,000) for taxation, there is a balance of Rs. 3,44,405 (Rs. 4,75,690) at the credit of the profit and loss account, from which the directors recommend payment of a dividend on the preference shares at the rate of 7 (7) per cent. per annum, Rs. 21,000 (Rs. 21,000), and a dividend on the ordinary shares of Rs. 10 (Rs. 12-8) per share Rs. 2,00,000 (Rs. 2,50,000) leaving to be carried forward a sum of Rs. 1,23,405 (Rs. 2,04,690).

The Company has been assessed to tax in Pakistan for the year ended 31st October, 1950, on the basis of rate of exchange 144-100 although the accounts were prepared at pre-devaluation parity. An appeal has been lodged against this assessment but, as a precautionary measure, Rs. 4,40,000 has been provided on this account.

Shareholders were advised in 1952 of the reasons for the anticipated reduction in freight earnings in the future, and this is reflected in the accounts. On the other hand, expenditure, particularly on salaries and wages, has decreased considerably although the cost of necessary repairs to the Company's fleet still remains high.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	23,00,000	Block ...	1,22,33,490
Reserves ...	1,10,13,536	Stores ...	41,885
Provision for taxation ...	14,69,861	Debts, deposits and advances ...	2,01,307
Liabilities ...	17,12,141	Investments	11,34,928
Profit and loss account ...	1,23,405	Cash ...	30,07,333
	Rs. 1,66,18,943		Rs. 1,66,18,943

India Paper Pulp Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September, 1953.

After providing Rs. 1,40,000 (Rs. 90,000) for depreciation. Rs. 2,50 000 (Rs. 85,000) for taxation and transferring Rs. 1,25.000 (Rs. 2,23,452) to repairs and replacements reserve, there is a balance at the credit of profit and loss account of Rs. 2,26,804 (Rs. 1,63,439). After adding the balance brought forward of Rs. 1,12,120 (Rs. 1,00,750) there remains Rs. 3,38,924 (Rs. 2,64,189) from which the directors recommend the payment of a dividend of Rs. 6 (Rs. 5) per share absorbing Rs. 1,80,000 (Rs. 1,50,000), leaving Rs. 1,58,924 (Rs. 1,14,889) to be carried forward.

Both production and sales were satisfactory and showed an increase in tonnage over the previous half-year but the improved results were largely due to the reduced cost of sulphur. Renewal and improvement of plant is being undertaken which, it is hoped, will help in reducing costs.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	30,00,000	Block ...	26,92,851

Rs.	75,69,018	Rs.	75,69,018

Marshall, Sons and Co. (India) Ltd.

The directors of the above Company (Managing Agents: Marshalls (Direction) Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th June, 1953.

The trading account shows a profit of Rs. 1,66,067 (Rs. 1,79,443). After adding the profit on sale of plant and machinery, furniture and fittings, motor vehicles, loose tools and patterns Rs. 35.225 (Rs. 18,885), unclaimed dividends forfeited Rs. 28,727 (Rs. 43,342) and excess profits tax refunds Rs. 60,460 (*nil*), there is a total of Rs. 2,90,479 (Rs. 2,41,670). Deducting from this general depreciation Rs. 63,915 (Rs. 1,73,372), adjustments in respect of previous years Rs. 86,136 (Rs. 14,882) and payment of forfeited dividends Rs. 475 (*nil*), the year's trading shows a net profit of Rs. 1,39,952 (Rs. 53,416) to which is added the sum brought forward from the previous year of Rs. 1,86,633 (Rs. 1,85,717), making a total of Rs. 3,26,585 (Rs. 2,39,133). It is recommended by the directors that this balance be disposed of in payment of a dividend of 12½ (5) per cent. free of Indian income-tax amounting to Rs. 1,31,250 (Rs. 52,500) leaving a balance of Rs. 1,95,335 (Rs. 1,86,633) to be carried forward.

In view of the provision made in previous years for taxation, and actual assessments recently received, taken in conjunction with the lower level of trading, it is not considered necessary to make any further provision under this heading.

Reference was made in the last report to the serious effect on the Company's trading of the general market recession, particularly the unprecedented crisis in the tea industry which affected the Company's order book very considerably. The position was accentuated to a great extent by import licence restrictions.

The Company's sales of machinery, etc., which were at the peak level of about Rs. 246 lakhs in the year ended June, 1951 fell during the following year to approximately Rs. 199 lakhs, and with the continuance of exceptional trading difficulties throughout the accounting year under review the turnover contracted still further to Rs. 131 lakhs.

This position was foreseen by the directors at an early stage, and prompt measures were taken to reduce working expenditure to such a level as would enable the Company to weather the storm of this recession period. Accordingly economies were effected to the total extent of nearly Rs. 10 lakhs, and in consequence, in spite of the lower turnover, the trading results proved satisfactory. The directors feel justified in recommending the increased dividend of 12½ (5) per cent. free of tax.

The management and staff of the Company at all branches have continued successfully, to deal with the more competitive conditions. Their good work has been recognised in tangible form by grants of ex-gratia remuneration.

Trading is still difficult but the directors feel that the Company is in a position to face the future recently recovered to a very great extent from its already benefited accordingly. Although the business in agricultural and general machinery is still at a lower level there are indications of a better trend, and the Company with its broad ramifications is ready to take full advantage of any improved demand.

Mention was made in the last report of the desirability to increase the trading in indigenous productions, and arrangements to this end have been under active negotiation by the directors for some time. It is anticipated that the successful conclusion of these arrangements will be reached and announced at an early date.

Accounts in brief are as under:—

TREASURY BILL RATE HARDENS

(From Our Own Correspondent)

BOMBAY, *2nd March*

The week under review witnessed no appreciable change in the short-term money market. Supplies continued to be on a moderate scale as the stringency in Calcutta eased considerably, but they were not sufficient to satisfy the demand completely. Interest rates, therefore, were well maintained at the levels reported last week. Thus, inter-bank call money among the Exchange banks and big Indian banks was bid at 3 per cent. throughout the day. The corresponding rate among the smaller Indian banks stayed put at 3 per cent. Short-term deposits were taken at 3 per cent. for periods from 1 to 6 months and 2½ to 2¾ per cent. for longer periods.

A further hardening of the Government of India Treasury Bill rate was noted this week, when the average rate of accepted tenders for the Bills rose from Rs. 2-10-6 per cent. to Rs. 2-11 per cent. per annum. The amount offered was higher at Rs. 151 lakhs, as against Rs. 127.50 lakhs. Tenders for Rs. 1 crore have been invited next week also.

The consolidated statement of position of the Scheduled banks for the week ended 19th February, 1954, as compared with that for the previous week, discloses an expansion of Rs. 8.78 crores in demand deposits and of Rs. 78.9 lakhs in time deposits. Inter-bank borrowings have fallen by only Rs. 14 lakhs. Borrowings from the Reserve Bank reveal a fall of Rs. 3.13 crores and those from the Imperial Bank as much as Rs. 8.59 crores. Advances have not, however, shown any decline. On the other hand, they are slightly higher. Thus, loans, cash credits and overdrafts have risen by only Rs. 78.80 lakhs and bills purchased and discounted by Rs. 2.32 crores. A decline of Rs. 47.34 lakhs is noted in investments. Variations in cash balances are of a small nature. Cash on hand and balances with the Reserve Bank are together lower by Rs. 20.99 lakhs, while balances with other banks in current account are better by Rs. 48.20 lakhs and money at call and short notice by Rs. 97.71 lakhs.

Conditions in the Gilt-edged market continued to be featureless, with prices showing hardly any movements and volume of business remaining very much restricted. The undertone remained steady. 3 per cent. 1957 was listed *ex-voucher* at Rs. 98-5, as against Rs. 98-7 *cum-voucher* last week. 3 per cent. 1958 attracted buyers at Rs. 98-1½, but business done was small. 3 per cent. 1959-61 was wanted at Rs. 96-1½, a shade lower than the quoted rate. 3 per cent. 1963-65 and 3 per cent. 1964 stood at Rs. 92-8, the Reserve Bank's selling rate, 3 per cent. 1966-68 and 3 per cent. 1970-75 were maintained at Rs. 90-4 and Rs. 86-8, respectively, the rates at which the Reserve Bank was offering these securities. There were buyers and sellers in 3 per cent. 1986 Conversion Loan at Rs. 82-10, but not much business was reported done. 3½ per cent. N. P. Bond had buyers at Rs. 98-14¼, 4 per cent. 1960-70 which had been in favour last week were wanted half an anna better at Rs. 102-0½.

The Bombay State Transport Corporation has announced its decision to approach the long-term capital market for a loan of Rs. 1 crore. The list will be opened on the 8th inst. and will be closed on the 13th inst. The loan will bear interest at the rate of 4 per cent. and will be issued at Rs. 99 per cent. It will be repaid in 12 years.

LESS DEMAND FOR TEA DUSTS

(Messrs. Forbes, Ewart & Figgis Ltd.)

COCHIN, *27th February*

2,00,000 lbs. were offered in dust sale 'D' which was held on Tuesday, 23rd February. Following the decline in dust sale 'C', there was once again less demand and the market closed fully As. 2 easier.

London Market.—Sale of 22nd February—One penny to 2d. dearer. Assam brokens strongest feature.

Colombo Market.—Very active demand. Lowgrowns advanced eight cents, mediums 15 cents, and highgrowns 20 to 30 cents. Quality improved.

Calcutta Market—Export.—Strong general demand. Commons As. 1 to As. 2 up; only small quantity on offer.

Dust.—24,000 packages. Strong demand. Market irregularly As. 1 to As. 2 dearer. Black exportable types strongest feature.

Export Quota.—During the week the market strengthened from 51 pies and business was done at 61 pies; thereafter, the market declined to 56½ pies which remains today's quotation.

Forthcoming Auctions.—Dust sale 'E' will be held on Tuesday, 16th March, 1954.

KIPS STEADY

(From Our Own Correspondent)

MADRAS, *1st March*

The local kip market ruled steady during the week under review and, despite restricted U.K. buying, clearances were fair-sized at 1d. over U.K. levels. Sellers were nervous at the lack of enquiries for shipment business, especially for light weight kips, fourths and fifths, and the tone was weak. Inferior grades met with good demand from North Indian merchants and for local water-bucket trade. Buff calf and cow calf were weak, while buff heavies ruled firm.

Arrivals of tanned goat skins were restricted and met with good clearance from shippers to U.S.A. and prices increased by As. 2 per lb. Shippers were steadily buying common sheep at lower prices, anticipating enquiries from Japan.

In the March London public sales, 480,000 tanned goat skins and 890,000 sheep will be offered for sale; and it is expected that prices of common sheep lower ends are likely to suffer serious declines.

SILVER QUIET, GOLD STEADY

(From Our Own Correspondent)

BOMBAY, *2nd March*

Trading on the Bullion Exchange was by and large featureless during the week under review. There were no new factors to cause any wide fluctuations in prices, but the trend was somewhat irregular, being influenced mainly by the day-to-day arrivals and offtake of the metals. The pre-Budget trading was of a cautious nature. The Budget proposals did not have any influence on the business during either the special Budget session or the post-Budget session and prices moved in a narrow groove. However, over the week, silver disclosed a modest decline, but gold was steady with no change on balance.

Silver for forward delivery (22nd March settlement) opened the week at Rs. 164-12 and soon experienced a recession on bull liquidation coupled with bear selling, in which process it came down to a low of Rs. 162-14. The selling pressure having eased after a short-time, forward silver staged a recovery on revival of bull buying and covering by short-sellers and came up to Rs. 165-1 during the Budget session on Saturday. After a decline to Rs. 164-1 yesterday, forward silver once again advanced to Rs. 165-1 today, but a sizable profit-taking erased the earlier gain and the white metal closed at a low of Rs. 163-10.

Ready silver (.996 Mint) was done at a premium of As. 4 over the forward, the opening and closing quotations being Rs. 165 and Rs. 163-14, respectively.

Opening at Rs. 87-6, gold for forward delivery (19th March settlement) dropped early in the week to Rs. 86-2 on expectations of heavier arrivals. The inflow of the yellow metal having remained on a small scale and the demand having been relatively higher than a week ago, forward gold hardened to touch Rs. 88-4 on Saturday. After moving within a narrow range, gold closed today on a quiet note in sympathy with silver at Rs. 87-6.

Ready gold began at Rs. 87-12 and appreciated to Rs. 88-14 on Saturday before winding up the week at Rs. 88-0. The premium over the forward, which was As. 6 early in the week, widened to As. 10 at the close, reflecting the better demand *vis-a-vis* the arrivals.

The following comparative table shows the trend of the market during the week under review:

	2-3-54	Highest	Lowest	24-2-54
Gold	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	88 0	88 14	86 8	87 12
Forward	87 6	88 4	86 2	87 6
Sovereign	87 4	87 12	87 0	87 4
Silver				
Ready (.996 fine Mint) ..	163 14	165 5	163 2	165 8
Forward	163 10	165 1	162 14	164 15
London Ready	73½d.	—	—	73½d.
London Forward	73¾d.	—	—	73¾d.
New York Ready	85¼c.	—	—	85¼c.

COW HIDES BETTER

(From Our Own Correspondent)

KANPUR, *28th February*

During the week under review, conditions in the local hides and skins market were more or less the same as during the previous week. The new supply of cow and buff was considerable. The local tanners were the main purchasers. The Madras dealers were quite brisk in second grade cow. There was a shortage of goat this week, comparatively speaking. The latest quotations are as follows:—Wet salted cow 1st grade at Rs. 350, 2nd grade at Rs. 320 and 3rd grade at Rs. 160 per score; wet salted buff 1st grade at 1 lb. 8 ozs. to 1 lb. 11 ozs. and 2nd grade at 1 lb. 14 ozs. to 2 lbs. per rupee; goat skins 1st grade at Rs. 275 to Rs. 300 and 2nd grade at Rs. 250 to Rs. 300 per 100 pieces.

OUTLOOK FOR PEPPER GOOD

(Messrs. Parekh & Co.)

BOMBAY, *2nd March*

The pepper market during the fortnight since we last reported ruled steady at all primary centres with minor fluctuations, Alleppey moving between Rs. 1,725 and Rs. 1,800. At Bombay, in the A.S.T.A. section, prices moved between $0.80½ and $0.82½ for March shipment. Some of the prominent exporters who have sold a sizable quantity to Russia are reported to have tried their level best to depress the market, particularly at Cochin, with a view to knocking out some concession in the export duty, leviable at the time of shipment on their f.o.b. sales to Russia. Growers in Travancore-Cochin areas having been able to market 40 per cent. of their harvest by the end of February, are now in a comfortable position, and as such, are resisting any fall in the market, though there appears some selling pressure from Tellichery areas. America, having purchased sizable quantity for shipments during February and March, is now reported awaiting development in India, before making fresh purchases. Foreign buyers were withholding their orders in the expectation of a reduction in the export duty in the new Budget proposals, but as there is no change in the export duty, the growers are now expecting sizable orders for March shipment from New York and Continental countries. On the whole, the market in India is reported to be very steady at the present level and there are chances of improvement from now onwards immediately on buying orders from the oversea importers.

In the delivery section, prices are reported fluctuating within a narrow grove as stocks of tenderable pepper are accumulating in Bombay. Following are today's nominal quotations:—Ready Rs. 200-210 per Bengali maund, March Rs. 1,460-80 and April Rs. 1,490-1,510 per candy of 5½ cwts.

DECLINE IN COTTON PRICES

(From Our Own Correspondent)

BOMBAY, *2nd March*

The February contract in the forward market had an inglorious end last Thursday at Rs. 684. Only 12 days ago, it stood at Rs. 747, i.e., Rs. 63 higher. The quantity of cotton tendered on the last two delivery days was comparatively heavy, bringing the total to 19,450 bales in this delivery. This, along with some other factors, affected also the May contract adversely, which now stands at aoout Rs. 678, Rs. 40 lower than the highest peak of Rs. 718 touched only a few days ago. No announcement has been made till the time of writing about the opening date for the August contract. But it is generally believed that it will not be later than the end of next week, while there is just a possibility of its being inaugurated this week.

Many factors have contributed to the recession in cotton prices. While it began with the permission to import cotton in large quantities from abroad, it received a fresh blow by the Government abolishing the import duty of As. 2 per lb. As a matter of fact, this step need have no effect on the offtake of Indian cotton, as, in spite of this, Indian cotton would still be considerably cheaper on parity. The mills have stopped buying this cotton, partly because they are well stocked and partly because they have been told that no fresh licences for this purpose will be issued to them. The real consumers always tend to stay away from a falling market, but they are bound to return, sooner or later, to take full advantage of the licences they have already been given. All the same, the May contract is bound to remain vulnerable, because of large-scale hedging and mill purchases at a later stage might help the August contract more than May. As time goes on, therefore, the gap in favour of August is bound to widen and this is further likely to depress May, inasmuch as part from genuine hedging there will be large-scale straddle operations, with sales in the earlier contract against purchases in the August delivery.

The increase in the excise duties on cloth, though offset against the abolition of the import duty on foreign cotton, will not help the cotton trade, because in the long run this is bound to affect offtake of cloth, though this has not been apparent still in the cloth markets. Prospects for Indian cotton, therefore, are a little uncertain and will depend more on the cloth market than ever before. The stringency in the money market for the next three months is also likely to have its adverse effect on the May contract. Perhaps this would lead to a healthier condition in the market, inasmuch as the range of fluctuations will be narrower than it is at present.

Conditions in the spot market have also been comparatively dull. Perhaps the likely improvement in the offtake of cloth, now that the restraining uncertainty about excise duties in the budget has been removed, might induce some mills to cover a part of their future requirements in the spot market. At present, this is the only bright factor in the situation, otherwise the spot trade is destined to languish and to lock up resources for a considerable time. This, however, does not amount to saying that those who choose to wait and are in a position to invest will not be rewarded sufficiently, because, as observed before, demand for Indian cotton to the full extent that it is available will always be there right till the end of the season. Some of the premia on staple varieties have been paired, but there is hope even here with those who can afford to wait. Even the demand for Bengals has fallen in volume and so has that for imported cotton for the time being, because prices are ruling fairly high.

I.C.C. May opened the week at Rs. 680 and moved up on bull support to touch a high of Rs. 684½ on 27th February. It reacted, on profit-taking, Rs. 671½ on 1st March. On 2nd March, the contract fluctuated within narrow limits, and closed at Rs. 678. The market remained closed on 3rd March, on account of *Shivrathri*. The following is the trend of prices for I.C.C. May during the six days ended 2nd March:

	Opening	*High*	*Low*	*Closing*
I.C.C. May ...	Rs. 680	684½	671½	678

The following are the latest available quotations from the Sewri market: Bengal *Deshi* Rs. 625-50; Berar *Jarillas* Rs. 790; Khandesh Rs. 870; Vijay Rs. 895; Oomra *Deshi* Rs. 720; Moglai Rs. 690.

At Karachi, export demand has remained restricted as before, in spite of rise in the price of cotton in the other world markets, thus reducing the difference between Karachi prices and world prices. On the whole, however, there has been a slight improvement in the situation, which might go further with every price rise in other markets, provided Karachi shippers do not increase their prices simultaneously. Exports from Karachi till 11th February, amounted to nearly half a million bales, which is about two lakh bales lower than for the same period last season.

The following are the latest available quotations from the Karachi cotton market: Sind *Deshi* Rs. 76; Punjab *Deshi* Rs. 72½; 4F Punjab R.G. Rs. 73½; S.G. Rs. 79½; L.S.S. Punjab R.G. Rs. 77½; S.G. Rs. 82½; N.T. R.G. Rs. 77½; S.G. Rs. 82½; 289F Punjab R.G. Rs. 81½; S.G. Rs. 87½.

At Alexandria, the Egyptian Government announced its cotton policy for the next season towards the latter part of the last week. Under this, the selling basis for good Karnak and Menoufi has been raised from 30 to 40 per cent., and for good Ashmouni, Zagora and Giza 30 from 5 to 12½ per cent., over New York features. The authorities have also increased their basic buying prices for Ashmouni, Zagora, Giza 30 and Menoufi by 3 tallaris and for Karnak by 4 tallaris per cantar and for the current season they have announced a bonus of 3 tallaris to those who sold their cotton to Government. Brisk demand on stocks with the Egyptian Cotton Commission have reduced available

supply for the future, with the result that premia in the spot market have gone up considerably. In spite of increase in the selling differentials from time to time, it is expected that all the stocks with the Commission would be fully exhausted by the end of the season. The exports up to 10th February from Alexandria came to 426,026 bales, against 356,557 bales last year, with the U.K. standing highest with 66,020 bales against only 9,974 bales last year when it stood the lowest amongst all the countries importing cotton from Egypt. The next in order are France, Germany and India. Exports to India till this period amounted to 47,380 bales, which was about 15,000 bales higher than those during the corresponding period last year.

It is expected that the Lint Marketing Board at Kampala will resume its sales by auction some time this month, while in the case of the Sudan-Gezira Board at Khartoum, it is likely that the selling policy will be changed once again to open auctions, though this has not yet been finally decided.

At New York, prices have been steady with slight occasional setbacks, in view of the improvement in sales for export and the tightening supply position. The undertone remains very firm and a steady increase in prices is expected, in view of the rise registered at Alexandria, Khartoum and Kampala.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	26-2-54	19-2-54	16-2-54
Spot	35.05	35.20	33.05
March	34.25	34.33	34.33
May	34.30	34.40	34.38
July	34.24	34.30	34.25
October	33.63	33.61	33.58

SUGAR FIRM

(From Our Own Correspondent)

BOMBAY, *3rd March*

Firm conditions prevailed in the Bombay sugar market during the week under review. This was mainly occasioned by depletion of stocks and expectation that no imported sugar would be available in the spot section before the third week of next month. The bullish fervour of the market was fanned further by anticipations of hectic buying spree throughout the month, based on the feeling that the two-point sales tax, together with purchase tax, which is to come into force from 1st April next, would be double the present rate. There was, besides, the Central Food Minister's statement that the sugar output this season would be only 1,200,000 tons. The sharp fall in arrivals too aided the bullish fervour. The Food Ministry's release of 100,000 tons of indigenous sugar—this is understood to represent 71 to 72 per cent. of production up to 7th February, 1954—for sale in the free market was overlooked. Prices forged ahead, with gains spreading over all varieties of sugar in both forward and spot sections.

In foreign sugar in the spot section, the German variety was specially favoured, its quotation advancing by Rs. 2-8 to Rs. 85 per bag of 2 cwts. British refined rallied Re. 1-8 to Rs. 86-8 per bag of 2 cwts. Mexican sugar picked up Re. 1-2 to Rs. 37-14 per 100 lbs. Czechoslovakian sugar hardened from Rs. 82½-87 to Rs. 85-88 per bag of 200 lbs. Cuban sugar put on As. 8 to Rs. 41-4 per 100 lbs. Indigenous sugars were well maintained, small, medium and large grains being quoted at Rs. 90, Rs. 91-92 and Rs. 97-98, respectively.

In the forward section, *Fagan* delivery moved up by Re. 1-2 to Rs. 85 per bag. As the Central Government has still not announced its decision in regard to the handling of imported sugar in future, the question of opening further trading in forward section has been deferred.

As already stated, there was a sharp reduction in arrivals of sugar into the market this week, the quantity actually arriving being 1,800 bags, as against 8,600 bags last week and 7,100 bags two weeks before. Stocks of imported sugar with traders are estimated at not more than 150,000 bags. With the arrival of 2,400 tons of sugar by the s.s. *Finsk* and of 3,200 tons by the s.s. *Schrenkovo*, during the week, the deliveries of Czechoslovakian sugar scheduled for this port have been completed.

It is reliably understood that the Central Food Ministry has concluded purchases of about 25,000 tons of Continental sugar for March shipments. The loading of sugar into the boats is expected to commence by about the 10th or the 12th inst.

As reported last week, the dissident members of the Bombay Sugar Merchants' Association have formed a new association, called the *Shakkar Vyapar Mandal*. This association has already acquainted the Central Government with the fact that it was impossible for any fresh dealer to step into the sugar trade prior to 1947, as the initial Sugar Control Order of 1942 was withdrawn only in November, 1947. Again, it is stated, there was control on sugar in 1949 and, as such, the incentive of free trade was available to the present *bona fide* wholesale traders only in the year 1948 and again, after a break, in 1952-53; in the intermittent period, natural forces of evolution worked in the sugar trade, as in any other trade, and a large majority of the 'A' class members of the old Association has been practically out of business. The interested old clique of a couple of wholesalers intends to snatch away the trading rights of the present wholesalers who have had no say or share in the Bombay Sugar Merchants' Association, owing to the fact that 'A' class membership of this Association has been consistently denied to them under some pretext or other. It would appear from the reports available at the time of writing that the authorities have sized up the situation and that a decision for entrusting the handling of imported sugar through either the proposed syndicate of wholesalers or a modified tender system from approved wholesalers or some sort of quota basis is likely to be announced in the next week, if not earlier.

OILSEEDS BEARISH

(From Our Own Correspondent)

BOMBAY, *2nd March*

Under the impact of a series of bearish factors, the oilseeds market presented a weak tone during the week under review. The long-awaited budget proposals brought disappointment to the market in that they indicated neither a reduction in the export duty on castor oil nor export policy for oilseeds, as earlier anticipated by the market. Later on, however, the export quota for castor oil was announced, but it was considered to be too inadequate to meet the requirements of the market. Besides, weaker advices from Gujerat and Hyderabad, slackness in demand for oilseeds from *vanaspati* factories and crushers, weakness of the copra oil market increased arrivals of seeds and fall in prices of cotton, all cumulatively weakened the sentiment of operators. In the circumstances, sellers dominated and prices all round registered a marked setback.

The notable event during the week was in fact the announcement by the Government of India, on 1st March, of its decision to permit established shippers to export castor oil upto a ceiling of 6,000 tons during the period ending 30th April, 1954. The Press note issued by the Commerce and Industry Ministry says that export allotment will be made at the ports to established shippers for quantities equal to one-third of total shipments effected by them during January-December, 1953. Further, it adds that exports against these allotments will be licensed on shipping bills till the ceiling is reached.

This announcement failed to brighten the sentiment of operators in the castorseed section, as it was felt that at the prevailing prices, it was not possible to do any business with the U.S., although some scattered business was considered possible with the U.K. and the Continent. Consequently, the castorseed section put on a disappointing appearance. The groundnut section ruled bearish, chiefly in the absence of export quotas. The linseed section staged a sharp recession in sympathy with the groundnut section and also due to virtual lack of export enquiries. *Kardi* and *nigerg* proved no exception to the generally easy trend.

The castorseed section came in for bull liquidation during this week, as the bulls were disappointed at the absence of reduction of export duty in the budget proposals and the announcement of a small export quota subsequently. May delivery which opened at Rs. 113 as against Rs. 113-4, fluctuated between Rs. 111 and Rs. 101-8, before closing at Rs. 104. F.A.Q. declined from Rs. 23-4 to Rs. 21-8 and Madras from Rs 23-12 to Rs. 21-8. Oil I Pressure changed hands at Rs. 11-4 as against Rs. 12-10 and Commercials Rs. 10-10 as against Rs. 11-10. Oil B.S.S. lost Re. 1-4 to Rs. 11-12, Castoroil B.S.S. was enquired at Rs. 112 in the Continent. At this level, the profit margin is not more than about £2.

Groundnuts ruled weak on bearish advices from Nizam State markets. There was also lack of support from *vanaspati* interests, as well as from crushers. Consequently, longs tried to liquidate their holdings in the declining market. Bold F.A.Q., as a result, fell from Rs. 33-12 to Rs. 32-6, February-March and April-May deliveries were done lower at Rs. 32-4 and Rs. 32-2, respectively, as against Rs. 33-8 each. Khandesh quality eased from Rs. 34-4 to Rs. 32-14. Groundnut oil ex-mill was down by As. 12 to Rs. 16. March and April deliveries disclosed a loss of As. 13 and As. 12 to Rs. 16-3 and Rs. 16-7, respectively.

On reports of increased arrivals of linseed in Nizam State and poor demand and in sympathy with the decline in groundnuts, the linseed section staged a sharp recession. Bold ready was lower by Rs. 3-12 at Rs. 23-4. February-March and April-May deliveries fell from Rs. 23-12 and Rs. 23-2 to Rs. 22-10 and Rs. 22-2, respectively. Linseed oil ready was lower by Re. 1-4 at Rs. 13-8.

Among other seeds, *kardi* bold was down by Re. 1-8 at Rs. 16-8. February-March and April-May deliveries eased from Rs. 17-4 and Rs. 18-6 to Rs. 16-8 and Rs. 17, respectively.

The following table shows the prices of oilseeds and oil on the 2nd inst., as compared with those at the end of the previous two weeks.

	2-3-54	24-2-54	17-2-54

ART SILK YARN WEAK

(From Our Own Correspondent)

BOMBAY, 2nd *March*

Under a stampede of selling induced by the imposition of an excise duty of 18 pies and an additional excise of 3 pies per yard on artificial silk fabrics, announced by the Union Finance Minister in his budget statement for 1954-55, values in the art silk yarn market suffered a sharp recession in the week under review. The fear that this fresh impost of 21 pies would force the artificial silk fabric manufacturing industry to curtail output drastically and even compel some units to close down and thus curtail the demand for yarn unnerved longs, while bears lost no opportunity to sell short. The nervousness gathered further momentum, following the reported closure of several art silk mills in Ludhiana. Consequently, art silk yarn prices sank heavily with losses spread to all the varieties in both the forward and ready sections.

Art silk yarn (1500) for March delivery slumped from Rs. 790 to Rs. 750 on Monday before finishing a shade better at Rs. 756 per case of 200 lbs. today. The net loss during the week was 24 points. In the ready section, 120 Italy was the worst sufferer, its quotation sliding down by As. 2 to Rs. 3-13 per lb. 120 Japan and 150 Japan dropped an anna to Rs. 4-13 and Rs. 4-8, respectively. 120 Italy, however, received some special buying support and remained fully steady at Rs. 4-8.

Although pre-budget rumours of an increase in import duty on staple fibre and of the imposition of excise duty on Indian-made staple fibre yarn proved baseless, the staple fibre yarn section also witnessed a wave of selling pressure this week. This was, in the main, due to reports that the local mills had sold for forward delivery a large quantity of 2 x 40s yarn at reduced prices and partly to weakness in art silk yarn. Staple fibre yarn (2 x 40) March delivery was hammered down to Rs. 651 today, as against Rs. 695 on the opening day of the week and Rs. 690 last week-end. Towards the close, however, it was slightly higher at Rs. 653 on account of support at lower levels. In sympathy with the forward section, values of 2 x 40 indigenous and foreign yarns also drifted lower. Among the former, Sitaram fell from Rs. 3-6-3 to Rs. 3-4-6. Hirji declined by an anna and a half to Rs. 3-6. City, Hindustan and Sriram lost an anna each to Rs. 3-12-6, Rs. 3-7 and Rs. 3-7, respectively. Among foreign yarns, Suico and Paramount shed an anna each to Rs. 4-4 and Rs. 4-3, respectively. Aurora was done lower at Rs. 4-3-6, as against Rs. 4-4-3, Shinco at Rs. 4-3-6, as against Rs. 4-4, and S. Fuji at Rs. 4-4, as against Rs. 4-4-6.

Despite the enhancement in the rates of excise duty on cotton fabrics, the cotton yarn market did not exhibit any erratic fluctuation in prices. For, while one section of traders felt that enhanced excise duty would bring about a slackening in demand for cloth and, consequently, for yarn, another section was of the opinion that the abolition of import duty on raw cotton would give a fillip to exports. In view of conflicting views, turnover was greatly restricted. However, in sympathy with the fall in raw cotton prices, yarn prices also declined. Among 80s, Elphinstone and Sriram dropped As. 8 each to Rs. 61-8 and Rs. 64 per bundle of 10 lbs., respectively. Sriram among 10s declined by a like amount to Rs. 58-8. Pankaja and Pioneer lost As. 4 each to Rs. 43-12 and Rs. 44, respectively. Among 40s, Madura fell by As. 8 to Rs. 27, Modern by As. 4 to Rs. 26-4 and Gokak by an anna to Rs 26-4. Among 20s, Hind was lower by As. 2 at Rs. 16-13. Among 10s, Golaba eased from Rs. 13-6 to Rs. 13-3. Modern decreased by As. 2 to Rs. 13-6. Podar lost an anna to Rs. 13-4.

The table below gives the prices of art silk, staple fibre and cotton yarns quoted today, as compared with those in the previous week:—

	1-3-1954	24-2-1954
	Rs. a.	Rs. a.
Art silk yarn—		
150 March (per case of 200 lbs.)	756 0	790 0

JUTE GOODS DULL

(From Our Own Correspondent)

CALCUTTA, 3rd *March*

The jute goods market passed through yet another week of dull and uninteresting conditions. Sentiment of operators was adversely affected by a series of unfavourable factors. Thus weakness in raw jute, lack of overseas enquiries for hessians, disappointment caused by absence of the expected reduction in, or abolition of, export duty on hessians, fear of French competition in U.S. markets arising out of the availability of Pakistan jute at rates relatively lower than those for Indian jute, and cumulatively acted as a damper on trading. Operators were, therefore, not inclined to indulge in deals. Early in the week there was some short-covering by bears and prices generally registered a minor rise. After the announcement of budget proposals profit-taking ensued and quotations tended to decline. The undertone, however, remained quietly steady.

B twills opened the week at Rs. 106 per 100 bags. After temporarily declining to Rs. 105-14, the quotation moved up to Rs. 107-4 on the 26th February. At this high level for the week, profit-taking set in and B twills wound up the week at Rs. 106-12. Hessians 40 oz. 40" moved in sympathy with B twills. Opening at Rs. 45-10 per 100 yards, they remained quietly steady at Rs. 45-6 till the 27th February. But due to absence of any mention of export policy of the Government regarding jute goods, the quotation declined and finished the week at Rs. 44-2.

Trading in raw jute remained depressed on frequent unloading by stockists who had waited long for a rise in prices. The feeling that the expected shortage of the raw material at the end of the season might not materialise compelled some of the bulls to tighten their commitments. Consequently, raw jute prices suffered, over the week, a drop of Re. 1-8, with Assam bottoms closing at Rs. 29 per maund as against Rs. 26-8 per maund at the close of last week.

POOR OFFTAKE IN SUGAR

(From Our Own Correspondent)

HAPUR, 1st *March*

Crystal sugar markets remained quiet during the week under review. There was poor offtake on account of the buyers being cautious in view of the Central Government's sugar import policy. Kanpur and other upcountry centres complained of poor enquiries from consuming areas. It is believed that imported sugar is not confined to ports alone; substantial quantities are smuggled to other deficit areas in the South as well. It is also said that traders in upcountry markets had good stocks of last year's carry-over sugar and the same is now being marketed for fear of price fall.

Arrivals of sufficient inland sugar at Calcutta eased the supply position. Bombay also received fresh supplies of Czechoslovakian sugar and was influenced bearishly towards the close. Madras reported steadier conditions, on account of increased buying from stock holders.

The total production of sugar for the season 1953-54, during the period 1st November, 1953 to 15th January, 1954, was 383,000 tons, as against 403,000 tons during the corresponding period of the previous season. Arrivals of foreign sugar up to 15th January, 1954, aggregated 193,000 tons. The Union Government has released a further quantity of 100,000 tons of sugar for sale in the free markets out of the 1953-54 production of all factories.

Gur markets remained steady at the ports. Elsewhere, however, prices either remained stationary or suffered slight decline. There was some improvement in arrivals, due to clear sunny weather, but fresh enquiry from the importing areas failed to keep pace. Despatches from the local station relating to old commitments were fairly satisfactory this week, but Meerut and Muzaffarnagar still complained of uneasy transport position. Even at Hapur, not all the wagons allotted were generally made available. Hapur has so far received approximately 600,000 maunds of *gur* and expects to get another 200,000 maunds.

Swayed by speculative manipulations, *gur* futures remained very active this week. The downward trend in the prices of all agricultural commodities and the Central Government's determination not to let sugar prices go abnormally high induced liquidation to small bulges. Operators seemed disinclined to accept deliveries. Pansera *gur* at Hapur is quoted at Rs. 14-4 per maund today. Futures are: *Fagan* Rs. 14-4 and *Baishak* Rs. 14-6-9. *Baishak* had touched Rs. 15-10-3 earlier this week. There was increased volume of trade.

FOODGRAINS RECEDE

(From Our Own Correspondent)

HAPUR, 1st *March*

Foodgrains markets remained quiet to bearish during the week under review and there was a general fall in prices in both the ready and futures sections. It is now revealed that heavy rains last week in North India have done considerable damage to mustard and gram crops in Rajasthan and ruined the prospects of a bumper wheat crop in U.P. In Vindhya Pradesh, rust is said to have damaged the wheat crop, while, in Madhya Pradesh, rains accompanied by hailstorms have affected the gram crop.

It is very reliably learned that the State Governments may be advised to suspend procurement of rice after a certain figure of procurement is reached. Restrictions on inter-State movements will, however, remain. The decision is being taken in the light of the present encouraging and satisfactory position. Brisk movement of rice from the surplus States of Madhya Pradesh, Orissa, Punjab and Uttar Pradesh to the deficit regions of South India and West Bengal has begun, and the tempo is expected to be maintained in the next few months also.

India has informed the International Wheat Council that it is not taking its quota of one million tons of wheat under the International Wheat Agreement for the first year, namely, July, 1953 to June, 1954. Stocks of wheat in the Central and State Government depots, it is understood, are of the order of 600,000 to 700,000 tons. No estimate of the yield of the *rabi* wheat is yet available, but the area of the winter wheat crop according to the first estimate is 23,149,000 acres, which is 4.5 per cent. higher than the adjusted first estimate for 1952-53. This, it is stated, is due to timely rainfall at the time of sowing in most of the wheat-growing States in the country.

The U.P. Rollers Flour Mills Association has now conveyed its decision to enter into an agreement with the State Government for the purchase of 30,000 tons of wheat stocks. It, however, wants the period to be extended from 31st May to 31st July, 1954. The Association has also requested the Government to expedite orders with regard to mixing of barley *atta* with wheat *atta*. The State Government has allowed the merchants of Calcutta to purchase rice only from Kanpur and Lucknow regions where boiled variety of rice, especially suited to West Bengal, is available. Rice price in U.P. is comparatively high and it is doubtful if any big quantity would be lifted by the traders.

The price structure in the free markets has not been unbalanced, due to crop damage reports referred to above. Prices have continued to decline following increased offerings in the markets by unnerved stockists who are anxious to get rid of their possession before the advent of new crop arrivals. Wheat prices which had resisted the pressure of sales, have now succumbed to downward march so far.

The latest quotations (per maund) are: Wheat Rs. 15-8 to Rs. 16-12, gram Rs. 10 to Rs. 13, barley Rs. 9-8, *bejhar* Rs. 9-4, maize Rs. 9-8 to Rs. 11, *bajra* Rs. 9-8 to Rs. 11, *juwar* Rs. 7-8 to Rs. 10, rice Rs. 29 to Rs. 19, peas Rs. 8-12, *arhar* Rs. 10, *guwar* Rs. 9, *urd* Rs. 14-8 to Rs. 16-8, *moong* Rs. 14-8 and *masoor* Rs. 13-12.

Forward futures: peas *jeth* Rs. 8-10, *arhar jeth* Rs. 9-9-9, *urd baishak* Rs. 14-5-6 and *guwar baishak* Rs. 14-5-6.

BOMBAY SALES TAX

AMENDED LEGISLATION TO BE ENFORCED FROM NEXT MONTH

THE Government of Bombay has decided to bring into force the amended Sales Tax Act, entitled the "Bombay Sales Tax (Amendment) Act, 1953," with effect from 1st April, 1954. The full text of the Act is published in the *Bombay Government Gazette* of 22nd February, 1954, and the rules relating to the enforcement of this Act in the *Gazette* dated 26th February, 1954. We give below a summary of the main features of this amended legislation as it is of special interest to business men not only in the Bombay State but also in other States. The summary is confined only to those sections of the Act which relate to the procedure of tax collection:

Every dealer whose turnover of *sales* or turnover of *purchases* has, during the year ending 31st March, 1954, exceeded the following limits will be liable to pay tax under the amended Act:

	Rs.
(i) In the case of a dealer who brings goods into the State of Bombay or to whom goods are despatched from outside	10,000
(ii) In the case of a dealer who produces, collects, extracts, manufactures or processes any goods for sale	10,000
(iii) In the case of any other dealers	25,000

In cases (i) and (ii), the value of the goods brought or despatched in the State of Bombay or produced, collected, extracted, manufactured or processed should also be not less than Rs. 2,500 in the same period. Any other dealer whose turnover of sales and turnover of purchases have neither of them exceeded the above limits during the year ending 31st March, 1954 shall not be liable to pay tax from 1st April, 1954, but he will become liable if and when his turnover either of sales or of purchases may exceed the above limits in future.

Registration of Dealers

All dealers who will become liable to pay tax with effect from 1st April, 1954, and who are not already registered dealers under the Bombay Sales Tax Act, 1953, must apply in Form A for registration, addressing the applications to the Sales Tax Officers in whose jurisdiction they have places of business, not later than 30th April, 1954. Dealers who are already registered dealers and who are liable to pay tax under the amended Act must apply in Form A for getting fresh registration certificates not later than 30th April, 1954; and meanwhile, their existing registration certificates will be considered to be valid under the amended Act up to 30th June, 1954. Any dealers who are registered dealers under the present system but who are not liable to pay tax under the amended Act must return their certificates of registration to the Sales Tax Officers concerned for cancellation along with an application in Form C not later than 30th April 1954. All dealers who hold licences and authorisations under the present system must also return such licences and authorisations to the Sales Tax Officer concerned for cancellation not later than 15th April 1954.

The dealers who are liable to pay tax as explained above shall have to pay (i) a "sales tax" under section 8 of the Act at rates specified in column 2 of Schedule B to the Act and also (ii) a "general sales tax" under section 9 of the Act at the rates specified in column 3 of the same schedule.

Exceptions

Under section 8, the sales tax is payable on all sales, except the following:

(a) Sales of goods which have been purchased from a registered dealer on or after 1st April, 1954, or on the purchase of which the dealer has paid or is liable to pay the purchase tax under section 10, if the goods have not been processed or altered in any manner after the purchase; and

(b) sales of goods to a dealer who holds an authorisation granted under section 12A and who furnishes a certificate in the prescribed form declaring that the goods sold to him are intended for being despatched outside the State of Bombay by him or by registered dealers to whom he sells the goods.

Authorisations under section 12A can be granted by the Collector of Sales Tax to registered dealers, whose turnover of sales of goods despatched outside the State of Bombay by them or through registered dealers to whom the goods have been sold, has exceeded Rs. 50,000 during the year ending 31st March, 1954 or exceeds that limit in future, subject to certain conditions specified in rule 10 of the Bombay Sales Tax (Registration, Licensing and Authorisation) Rules, 1954. Applications for getting such authorisations should be made in Form G to the Sales Tax Officer concerned.

General Sales Tax

Under section 9, the "general sales tax" is payable on all sales, except the following:

(i) Sales of goods to a dealer who holds a licence granted under section 12 and who furnishes a certificate in the prescribed form declaring that the goods are intended for resale by him; and

(ii) sales of goods other than those specified in entries 1 to 18 of Schedule B to a dealer holding such licence, who furnishes a certificate in the prescribed form declaring that the goods are intended for use by him, in the prescribed manner, in the manufacture or processing of any goods for sale.

In the case of goods specified in entries 9 to 18 of Schedule B, which are sold to a registered dealer who certifies that they are to be used by him in the manufacture or processing or any goods for sale, the rate of "general sales tax" will be three pies, instead of six pies, in the rupee.

Licences under section 12 can be granted by the Collector of Sales Tax to registered dealers whose turnover of sales (excluding any sales where goods are delivered in this State to a person other than a registered dealer) has exceeded Rs. 50,000 during the year ending 31st March, 1954, or exceeds that limit in future, subject to certain conditions specified in rule 8 of the Bombay Sales Tax (Registration, Licensing and Authorisation) Rules, 1954. Applications for getting such licences should be made in Form E to the Sales Tax Officers concerned.

Purchase Tax

Section 10 of the Act provides for the levy of "purchase tax" from dealers liable to pay tax in cases where (a) the goods have been purchased from a person who is not a registered dealer, or (b) a dealer holding an authorisation under section 12A does not show to the satisfaction of the Collector of Sales Tax that the goods have been despatched outside the State of Bombay, within a period of six months from the date of his purchase, either by him or by a registered dealer to whom he may have sold the goods. But in cases falling under clause (a), the dealer can elect either to pay such purchase tax or to pay sales tax on his sales of those goods in due course.

Rules for Granting Set-off

In order that the incidence of sales tax leviable at the first stage of sale under the provisions of section 8 may not become cumulative in cases where goods are manufactured or processed further, it is laid down in section 18(2) that rules will be framed for granting a set-off to manufacturing or processing dealers where any sales tax has been recovered from them or any purchase tax is payable by them on their purchase of goods used in the manufacture or processing, and the goods which are manufactured or processed are also subject to sales tax. The Government also proposes to frame rules for the purpose of enabling dealers whose turnover of sales has not exceeded Rs. 60,000 to compound the general sales tax payable by them (after adjusting the general sales tax recovered by licensed dealers from whom they have purchased any goods). The necessary draft rules for this and other purposes will be published shortly.

All dealers who are required to apply for registration for the first time or for getting fresh certificates of registration and those who wish to apply for a licence or an authorisation are requested to do so as early as possible. Necessary printed forms for the purpose can be obtained from all Sales Tax Officers within a few days.

Notices

JARDINE HENDERSON, LIMITED

NOTICE IS HEREBY GIVEN THAT AN Interim Dividend at the rate of 2½ per cent., less Indian Income-tax thereon, will be paid to the Registered holders as on the 6th April, 1954, of the 50,000 Cumulative Preference Shares of Rs. 100 each in the Company in respect of the year ending 31st March, 1954.

The Share Transfer Books of the Preference Shares will be closed from the 22nd March, 1954, to the 6th April, 1954, both days inclusive.

By Order of the Board,
D. FORDWOOD,
Secretary.

4, CLIVE ROW,
CALCUTTA, 1, *25th February*, 1954.

THE TITAGHUR PAPER MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE One Hundred and Forty-second half-yearly Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 3.00 p.m. on Friday 26th March, 1954 for the following purposes:—

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. a Sales and amount written off. (k) Investments. ‡ For ten months ended 31st December 1951.

(j) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 444 in the debentures section:—

‖ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952 or on any subsequent interest date at one month's notice.

e Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955 on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at 4 per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months' notice.

MARKET GOSSIP

(Concluded from page 395)

insurance etiquette, or code of conduct to which many insurers give only verbal loyalty, is a question which is beyond our province. To some insurers the decision smacks of the attitude that "all is fair in business, love and war." But this is a question which must be left to the insurers themselves to settle. Perhaps, some prior consultation with the other members of the group would have taken the edge off the New India's decision. This, however, is a matter of opinion.

• • • •

A more pertinent question is whether the decision can be justified in terms of strict economic reasoning. And a more urgent question is what will be the effect of the decision. If premium rates are changed all round, as doubtless they will be it will be the second change in recent years. Last time, in 1953-54, when the change was made, it was an upward revision in rates, because, in view of the cheap money policy of the Government, which was carried to the extreme, the earnings of insurers had fallen. Since then, the world has veered round to a different view of money rates. There has been a rise in the Bank rate in most countries of the world. Indeed, the chief justification for the reduction in premium rates is the highest yield which the insurers are able to get on their investments, thanks to the higher level of interest rates. Those who advocate the reduction in premium rates, and, by implication, commend the decision of the New India, which has stolen a march over others, argue that it is only fair that the benefit which the insurers derive through this favourable development in interest rates should be passed on to the prospects. Any measure that cheapens insurance, it is stated, is a step in the right direction in a country where the insurance habit is not so widespread as in the West. Again, the premium rates are so high that many prospective policyholders feel that, apart from the consideration that their policies will cover the risk element, there is no real investment advantage at all in insurance. By lowering the premium rates, the insurers will have demonstrated to the doubting Thomases that insurance combines both protection against risk of death and some investment elements. Yet another reason advanced in favour of a reduction in premium rates is that mortality experience is now more favourable than in the past. It is pointed out, in this connection, that the reduction in premium rates is a reform that should have come earlier than it has.

• • • •

Those insurers who oppose this new development in the sphere of premium rates—their opposition is anyway theoretical, since they will be compelled to toe the line, the other alternative being loss of business—argue that the higher level of interest rates has not yet had time to stabilise itself. If anything, many of the leading countries of the world have effected a downward revision of interest rates. In fact, in financial circles today, people are looking forward to a reduction in Bank rate. This is hardly the time, they argue, to take momentous decisions about premium rates. So far as the argument about favourable mortality experience is concerned, they hold that it is a minor consideration in respect of endowment classes of policies—these are the most popular kind of policies in this country—in which the element of yield on investments plays a mighty role. They further point out that, if the yields have risen temporarily and there are other favourable factors too, it would be much better to allow these factors to be reflected in higher bonus rather than in lower premium rates.

• • • •

While only time will show whether the decision to reduce premium rates is wise or otherwise, there is no doubt that it is a lead which will be followed by other insurers. Some of the leading insurers, it is stated, will also announce a reduction with effect from 1st March, 1954. Perhaps, the Oriental and the Bombay Mutual will be the next to do so. Another development that is likely to take place is an increase in lapse ratio. Many would probably like to allow some of their recent policies to lapse and go in for fresh insurance at the attractively lower rates which are now likely to be offered by most insurers. The New India, which has given the lead, will probably be able to attract much new business from these lapsed policy holders. The insured will not lose much thereby, since, if a drawback is made for the all too common practice of rebating, they will stand to gain, in the long run, by taking out fresh policies.

• • • •

What will happen to the older policyholders who have taken out their policies at the higher premium rates? Surely, their lot is not an enviable one. They have paid higher premiums on their with-profit policies so far without receiving any corresponding benefit in the shape of adequate bonuses. They will now find that they must continue to pay the same rates. Equity demands that they should be treated—as one or two leading insurers are already doing—as a separate class, and be allotted a higher bonus at all future valuations.

DELHI LETTER

(Concluded from page 400)

total cost of the entire scheme is Rs. 35 crores. For financing this scheme, the Company has already secured a loan of $31.5 million from the World Bank under Government's guarantee.

The Government of India has also been encouraging the expansion of the Mysore Iron and Steel Works at Bhadravati. For the forthcoming fiscal year, Rs. 100 lakhs have been provided in the budget for installation of additional plant. It is proposed to install a spun cast iron pipe plant (for the production of about 17,000 tons of spun cast pipes per annum), a sintering plant (for lumping powdered iron ore before treatment in the furnaces) and an alloy tool and special steels plant. The installation of these plants would yield about 50,000 tons of good quality foundry pig iron per year for consumption by Indian foundries. Construction of two electric furnaces (each with a capacity of 100-110 tons of pig iron per day) has already been completed and operations have begun. When they come into full production, an additional quantity of nearly 70,000 tons of pig iron would be available per annum. In regard to the new steel project, a provision of Rs. 27 lakhs and Rs. 10 crores has been made under the revised estimates of 1953-54 and budget estimates 1954-55, respectively, to meet expenditure (both internal and external) likely to be incurred during the period under reference.

The Indian telephone industry has made considerable progress in recent years. The production targets fixed for the Plan period (i.e., 25,000 telephones and 20,000 exchange lines) have already been achieved and new targets (60,000 telephones and 40,000 exchange lines) have now been fixed for the remaining Plan period. For achieving these increased targets, it is estimated that an additional expenditure to the extent of Rs. 2.5 crores will have to be incurred during the three years 1953-54 to 1955-56. A sum of Rs. 85 lakhs has been earmarked for this purpose in 1954-55. During 1952-53 the telephone factory produced 22,444 telephones, as against 21,049 during 1951-52. Manufacture of dials and condensers, the only two remaining items of a telephone instrument have also been taken in hand and it is expected that their production on a large scale will be taken up during the next two years.

Preliminaries in regard to the establishment of the National Instrument Factory at Calcutta have been settled, especially for the purchase of new machinery for the manufacture of optical glass and linen measuring tapes. It may be mentioned that optical glass is one of the important raw materials required for scientific instruments and for ophthalmology. The widespread factory will have an initial capacity of 10 tons per annum, with capacity for further expansion. The provision in the revised estimate for 1953-54 and budget estimate for 1954-55 for the above scheme is Rs. 6.5 lakhs and Rs. 32 lakhs, respectively. The construction of factory buildings in regard to Penicillin Factory, Poona, will be completed by the end of this month. The factory is planned to produce 3.6 million mega units of penicillin per year to start with, rising to 9 million mega units per year. It will start production by July, 1954. The factory for the manufacture of dry core paper insulated telephone cables is nearing completion at Rupnarainpur, West Bengal. A beginning has already been made in the production operations in the drums shop, and cable drums are in process of manufacture. Other sections are expected to go in production shortly. A provision of Rs. 2 crores is made for speeding up the

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. LXXXVIII. No. 2247 BOMBAY, 13 MARCH, 1954 PRICE Rs. 1/8

IN DEFENCE OF PRIVATE ENTERPRISE

ALTHOUGH private enterprise should be its own justification and should need no extraneous arguments to convince others of the importance of its role, the fact remains that suspicion of its motives often dogs its steps in this country. The result is that it has frequently to be defended, its position re-stated and its utility vindicated before the bar of public opinion. Mr. R. G. Saraiya, the outgoing President of the Federation of Indian Chambers of Commerce and Industry, performed this task, in his address at the annual meeting of the Federation held on Saturday last at New Delhi, with commendable clarity of thought as well as of expression. He was conscious at once of the vital importance of private enterprise and its social responsibility. These are the two elements which must go perpetually together. If private enterprise is divorced from social responsibility, it will have to face mass opposition. But for anyone to expect it to discharge social responsibility without giving it the freedom it needs for growth and development is to ask for the impossible. In fact, Mr. Nehru recognised this when, in his speech at the same meeting, he admitted that it "was better to do away with private enterprise than let it exist with its hand and feet bound."

Some critics are unsparing in their attacks on private enterprise. They ask frequently whether it can save the country from the menace of growing unemployment. There is no doubt that it can, provided it is given the facilities it needs. But, before it can offer any definite solution to the problem, it will be necessary to understand the nature of the problem itself and the circumstances under which private enterprise could be expected to provide a solution. It is incorrect to use the word "unemployment" in India in the sense in which it is often used in the West, namely, to denote a departure from the normal state of a fairly comfortable level of employment. Mr. Saraiya rightly insisted that unemployment in India was not of the "cyclical" variety, met with in the West, but was an index of the underdeveloped nature of Indian economy and the growing pressure of population. Even if the persons that seek jobs are taken at only 40 per cent. of the annual growth of population (placed at 4½ million), there would still be as many as 2 million fresh entrants into the market for jobs. He serves the country little who denies the magnitude of the problem or underestimates the need for sustained, patient and hard work that will be necessary to tackle it.

The problem of unemployment is undoubtedly complex. But it is further complicated by wrong policies, often adopted by the Government. Overwhelmed by growing demand for fresh employment and the compelling necessity to reduce surplus employment in certain sections, the Government is trying to follow isolated, haphazard and even contradictory solutions. There have been occasions when industry desired to effect some retrenchment for purposes of rationalisation. But the Government has made such retrenchment difficult or impossible, through omnibus legislation, even when such retrenchment is necessary in the interests of economic working of the concerned industrial units. The legislation against lay-off of workers is a case in point. Again, when the expansion of a particular large-scale industry is likely to affect the small-scale section of the industry, the Government promptly prevents such expansion through special levies on large-scale industry and restrictions on production of certain types of manufactures. This, as is well known, has happened in the sphere of textile industry. It looks as though any technological improvement is suspect in the eyes of the Government, if it is likely to result in some decline in employment. Little does the Government realise that, in a dynamic world, new techniques will continue to be discovered, and that it will for ever be fighting a losing battle, if it sets its face against technological progress.

All this proceeds from two fallacious assumptions which Mr. Saraiya did well to expose. There is a belief, shared by many members of the ruling party, that large-scale industries can create only a small measure of employment, while small-scale industries can employ very large numbers. This is a half-truth. And, like all half-truths, it is more dangerous than a complete untruth. The direct employment which a large-scale industry gives is doubtless small. But it creates a large measure of subsidiary employment. And what is more, it makes a larger contribution to national income than what numerous small-scale units can make. Again, it is argued that large-scale industry displaces people in the small-scale units. This need not necessarily happen, if the small-scale industry is so organised as to supplement large-scale industry. The Government will be backing the wrong horse, if it seeks to buttress the competitive capacity of small-scale units by adventitious aids, often given at the expense of the large-scale industry.

Further, it must not be forgotten that large-scale industry can, by reason of its ability to produce cheaper goods, stimulate consumption and, therefore, help upgrade living standards to yet higher levels. Small-scale units, on the other hand, condemn the workers to longer hours and lower wages and the consumers to foot the bill of a high cost economy. After all, economic progress is indivisible. No country can succeed in organising its industrial economy so as to allow a highly advanced and a technologically backward section to exist side by side. Mr. G. D. Birla did some plain speaking when he said that events would compel the country to adopt modern scientific methods and that India would have to journey along the "same track as other countries have gone, if this country wants to give large-scale employment and raise the standard of living of the people." To think that India can live in economic neutrality by isolating itself from world technological currents is to hug an illusion. Mr. Saraiya struck the right note when he said that, while "it is recognised that there are certain spheres where small scale industries can and must find an honourable place and while the need for giving them encouragement by giving facilities for credit, organisation and marketing is also recognised, it is dangerous to attempt to develop and preserve cottage industries by deliberately penalising large-scale industries in the process."

Although the Government is not hostile to the large-scale industries functioning within the private sector, it now takes the initiative in starting such industries, and in nationalising small enterprises, as, for instance, motor transport undertakings. This is done in the "name of mixed economy," to which it swears allegiance. Surely, mixed economy cannot mean—at least, ought not to mean—one law for the private sector and another for the Government. If the Government starts a large machine tool factory which hits the smaller units, it is open to the Government to defend itself on the ground that its unit is more efficient. When it nationalises motor transport, it can take shelter under the plea that it is guided by economic considerations. If it is open to the Government to start industries and services on the ground that it can run them efficiently, it ought to give the same freedom to the private sector in order to allow the efficient units to justify their existence. After all, mixed economy, as Mr. Saraiya said, "can only function if there is, within the community, a balance of forces, with free enterprise operating as one of the autonomous forces, pulling its weight alongside State enterprise, trade unions and other elements in society." That the private sector is denied freedom of action is clear from the fact that there are still numerous unwanted controls in operation, and that organised industry is subject to special levies.

That private enterprise is also denied resources is borne out by the fact that fresh capital is not flowing freely into the private sector. This is often due to the fact that the Government takes a too narrow view of what an industrial unit should earn on its capital. The Government has, for instance, fixed the rate of return on the gross block of certain controlled industries at 8 per cent. which would leave, after payment of taxation and other charges, only 4 per cent. to the industries concerned. Again, there is the case of electricity undertakings in which the return allowed to the investor is similarly limited to 5 per cent. of the "capital base." Clearly, it is strange that the Government should expect the concerned industries to risk all their capital and employ their time, skill and energy for so low a return on their investments. Mr. Saraiya urged upon the Government the "need to readjust their concept of 'fair return' and the basis for computing it."

Because the return on capital is restricted either directly through legislative action and price control or indirectly through a high level of taxation and compulsory labour welfare measures, beyond what industry can bear, few industrial establishments are willing to undertake expansion and few men are coming forward to risk their savings in new undertakings. Surely, it is a travesty of the concept of mixed economy that the Government should set apart a certain field for private enterprise and then create difficulties in the way of its progress. If the private sector is not enabled to raise the necessary financial resources, it cannot certainly function properly in the sphere allotted to it. Mr. Saraiya quoted figures to show how slow was the rate of development in the private sector. During the one-year period ended September, 1953, the total amount of additional capital required for proposed development, covered by the Industries (Development and Regulation) Act, was about Rs. 82 crores. Of this amount, Rs. 33 crores were for new establishments and the remainder, that is,

Rs. 49 crores, were for expansion in existing undertakings. Again, out of the Rs. 33 crores required for new establishments, Rs. 18 crores were for one of the proposed oil refineries, thus leaving only Rs. 15 crores for new undertakings. In the case of expansion also, out of Rs. 49 crores, over Rs. 31 crores were accounted for by the iron and steel industry alone. In other words, excluding iron and steel and petroleum, there was an investment of only Rs. 15 crores for new undertakings and about Rs. 18 crores on account of the expansion schemes in other industries.

Apart from unwise controls on the rate of return and high level of taxation, there is another reason why the response of private enterprise to the Government's call for initiative and effort has been so poor. It lies in the unimaginative labour legislation. The situation created by a mass of half-considered legislation in this sphere is not conducive to the development of industries. Mr. Saraiya did well to bring out the lack of wisdom in Government's labour policy. He said that the Government, in its attempts to stem temporary unemployment, was lessening the chances of those presently unemployed of securing employment. By imposing a high wage level on industry and a burden of welfare legislation beyond the capacity of the industry to bear, the Government is stifling all attempts at further industrial expansion. He rightly termed the Government's present labour policies "self-defeating." Those who are familiar with the present conditions under which the few that are fortunate enough to be employed are allowed attractive facilities and service conditions, which can be granted only at the expense of further creation of employment opportunities, will readily agree that the Government is sacrificing the future for the present. Because it is politically expedient that the present labour force must remain contented, the Government pampers the existing workers at the expense of wider employment.

It is thus not enough that the private sector should be told that there is a sphere in which it can operate. What is needed is that it should be given the facilities to operate successfully. The Government at present exercises only a negative supervision over the private sector, in that it disallows expansion or investment in certain sectors. This negative policy needs to be supplemented, as was pointed out by Mr. Saraiya, by positive advice and guidance as to the fields in which it wants private enterprise to function more effectively than at present. Mr. Saraiya also suggested that the Government can help the private sector through placing restrictions on imports. This suggestion should not, however, be accepted without some qualification. After all, it is not the purpose of the import control machinery to give protection to industries. If a certain measure of restriction on imports results in protection for some industries, it must be regarded as an incidental consequence of the operation of import controls. The purpose of import control is to conserve foreign exchange. To utilise this machinery for protectionist purposes is to misuse it. Since imported goods often provide a challenge to domestic manufacturers to improve their quality, imports should continue to be allowed. Any overall restrictions on imports will serve only to create artificial shortages within the country and encourage easy selling of inferior goods. This is not to suggest that imports of every conceivable variety of goods should be permitted to flood the Indian markets. What is suggested here is that it is wrong for Indian industries to get protection through the operation of import controls. If Indian industries have to find a permanent market for their goods, then they should utilise the generous protection, often given by the Tariff Commission, to improve the quality of their output.

Indeed, Indian industry will do well to recognise that the days of easy selling have gone beyond recall for this generation. Competition is bound to increase in every branch of industry. The consumer is coming into his own. This is a challenge to all alike, industry, labour and the Government. Industry, on its part, must realise that it has a social responsibility in providing the consumer with quality goods at minimum prices and the worker with tolerable conditions of service. Labour, on its part, should know that there are serious limitations to what industry can bear by way of a higher wage bill and that its own prosperity is inextricably bound up with that of industry. The Government, in its turn, should appreciate that private enterprise can be enterprising, only if it is free to function within its allotted sphere of activity. Industrial progress is thus a co-operative adventure, and no single section should, even if it could, hold any other to ransom.

COST-PRICE DISPARITY IN COAL INDUSTRY

THAT all is not well with the coal industry is evident from its disappointing performance in 1953. Statistics for the full year just released reveal some disquieting trends. From a reference made elsewhere in this issue, it will be noted that production as well as despatches of coal declined slightly during the year. There was also a marked fall in exports, on account of competition from China, South Africa and Australia. These unfavourable trends are only symptoms of a deeper malady. A convincing diagnosis of the industry's ills is provided by the address which Mr. R. Maulik, Chairman of the Indian Mining Association, delivered at the annual meeting of this body, held at Calcutta on the 5th inst. Although he traversed the same familiar ground as did his predecessor last year, the points raised by him are so vital to this basic industry that his address deserves to receive wider attention.

The main problem which seems to be causing concern to the coal industry is the disparity in the cost-price structure. On the one side, the selling prices are under State control. They were fixed in 1947, on the basis of costs of production existing then and of the emoluments granted to labour under the Conciliation Board Award. These controlled prices of coal were, however, not allowed to remain even at that level. They were reduced once in 1949 and again last month. Although prices are thus rigidly controlled, production costs in the industry continue to rise. Since 1947, the costs have advanced steadily and in some cases sharply. An instance of such increase is seen in Mr. Maulik's references to prices of stores and equipment of collieries. He says: "Studying the prices of 44 essential stores items and comparing the prices prevailing in July, 1947 (when the prices of coal were increased as a result of the Conciliation Board Award) with those prevailing in July, 1953, we find that there has been a reduction upto 20 per cent. for only six items, whereas there has been increase in 13 items upto 20 per cent., 22 items upto 100 per cent., and three items over 100 per cent."

The rise in production costs in the coal industry is not limited to stores and equipment alone. More important than the cost of these items is the cost of labour. Labour accounts for, it is stated, as much as 60 to 70 per cent. of the total cost of production. A part of this rise is attributed to higher costs, resulting from a liberal meaning given subsequently to certain doubtful points on which the Conciliation Board Award was not clear and for which no corresponding increase in selling prices of coal was allowed. Again, the Award intended that bonus to colliery workers should be linked to production and that payment should be made on an annual basis. But this intention has not been carried out. Bonus now continues to be linked to attendance and not to production. Consequently, today, the output per man-hour has shown no improvement at all. On the contrary, there has been a setback, in that, while the number of workers employed by the industry has gone up, we are told, by 58 per cent. during the decade ended 1951, increase in the output of coal in the same period has not been more than 32 per cent. And few will deny that the workers enjoy higher wages and better working conditions today than in 1941. For wages and welfare amenities have increased; and the standard of living has risen considerably as a result of the welfare measures initiated by the Coalmines Welfare Organisation. While the industry has thus had to bear the burden of additional labour force and its welfare, there has not been a corresponding benefit to it in the shape of increase in output per man-hour.

And then there is the cost of the distribution of foodgrains to colliery workers at concessional rates. The improvement in the food situation in the country, the decline in foodgrain prices in certain areas and the prospects of full decontrol of foodgrains, as envisaged by the Union Food Minister, are undoubtedly viewed with considerable satisfaction by the industry. But the point is that, ever since the system of foodgrain distribution at concessional rates was introduced, there has been a very wide disparity between the purchase and the issue prices of foodgrains, which has imposed considerable strain on the finances of collieries. The position still seems to be worrying the industry. For Mr. Maulik has emphasised, with understandable bitterness, that the distribution of foodgrains at concessional prices is still the industry's "greatest burden." He observes: "I would repeat that the food distribution system should be abolished and replaced by compensation in the form of an equivalent amount of cash." It may be mentioned here that a similar plea put forward by the tea industry has been accepted by the Government as well as tea plantation workers. In tea estates, cash compensation has now replaced the system of foodgrain distribution. The mining industry has been demanding a similar change. The demand is fully justified; for it would, as has been pointed out by Mr. Maulik, limit and define the industry's financial liability on this account and also eliminate a fruitful cause of discontentment among labour ranks, which is often exploited by political agitators. In the absence of willingness on the part of labour, it will, of course, be difficult to bring about the change. But it is the responsibility of the Government to assist colliery owners in convincing the workers, as it did in the case of the tea industry, that the system of accepting cash, instead of grains, will be to their ultimate advantage. In any case, the industry cannot be expected to bear this unrequited expenditure indefinitely.

The rise in costs is not the only problem which faces the industry. Transport bottlenecks created by inadequate supply of wagons—a chronic disease of the industry—add their share also to its worries. The industry's experience last year was disquieting in that the railways not only failed to improve upon their earlier performances but actually moved less coal than in 1952. The industry is aware that there is a large unsatisfied demand for coal in the country and is vexed at the inability of the railways to carry all the coal that is offered. The fact that the efforts made so far under the Five-year Plan have been confined to replacement of overage rolling stocks has given rise to a genuine fear among colliery owners that the absence of a bold development and expansion of both line and wagon capacity will impede the progress of industrial development under the Five-year Plan. In this context, it is difficult to expect an increase in the output of coal, which is necessary in order to reduce production costs in the industry.

Caught between rising costs and statutorily controlled prices, the coal industry finds itself in a situation in which its profit margin has been cut to the bone. The position, of course, varies from colliery to colliery. Some collieries are living on their past earnings and many are working at a loss, and the general picture is one of gradual decay. What is more, the industry is in need of a large volume of capital for the extension of stowing operations, for the better utilisation of the country's coal resources, for the implementation of the Government's housing programme for colliery workers and for maintaining its capital assets intact. The earnings of the industry have, however, been insufficient to meet this heavy capital expenditure. In this connection, Mr. Maulik's warning is worthy of attention. He says: "We are like a great machine that is slowly running down and though it will probably never come to a complete stop, it will, in time, become obsolete and inefficient, if it is not carefully tended and its components replaced as and when they become worn out."

In order to improve its financial position, the industry has suggested an immediate increase in the price of coal. It is certainly difficult to resist this demand; for, from what has been stated above, it will be clear that there is much force in it. At the same time, the fact cannot be overlooked that coal is the basic raw material on which depends the progress of industries as a whole. Further, it is also the basic raw material of the country's transport system. It is, therefore, obvious that any undue increase in the price of this fuel is bound to have an adverse repercussion on the cost structure of the country's economy as a whole. From this point of view, it will be better to seek a remedy in other directions also. After all, it will avail the industry nothing if the price is raised, while costs continue to rise. Perhaps, it would be more advantageous to assist the industry to increase its efficiency through appropriate tax concessions, freight rebates and wage policy. A determined bid to provide enlarged wagon supplies to the collieries will also enable it to expand its output and to explore new markets. Introduction of the cash system, in place of the system of distribution of foodgrains at controlled prices, will considerably help reduce its burdens. Labour too should be advised to play its part in reducing costs through higher man-hour output. A timely move on the part of the Government in these directions will certainly go a long way towards strengthening the industry's financial position and ensuring its future solvency.

CENTRE LIKELY TO FLOAT RS. 200-CRORE NATIONAL LOAN

TATA DEFERREDS' EXIT—DEVELOPMENT CORPORATION—SUGARCANE PRICES

THURSDAY, 5 P.M.

THE buoyancy in the share market noticed last week-end has since proved to be a short-lived affair. Equity values have suffered sizable drops under persistant selling pressure. The prospect of having to pay heavy *badli* charges in the settlement to take place tomorrow seems to have induced tired longs and weak holders to liquidate their holdings. The over-bought position which is thus correcting itself is welcome in that it not only improves the technical position but revives confidence which at the moment appears to be a bit shaken. Besides long liquidation, several other factors have also been responsible for the downtrend in share values.

MARKET GOSSIP

Thus, advices from Calcutta have been unsteady. Delay in the announcement of the Government's decision regarding retention prices of steel of the Indian Iron and Steel Co., Ltd., appears to have caused considerable disappointment in Calcutta. Easier sentiment in the shares there brought about a sympathetic realising in steel shares here. Tata Deferreds have lost 44¼ points to Rs. 2,132-8 and Ordinaries 6¾ points to Rs. 359-8, Indian Irons are substantially lower at Rs. 28-4 as against Rs. 29-10 a week ago. Sentiment in this section seems to have been considerably subdued by the sad prospect of the elimination of Deferred shares from the ring with effect from Monday next. Consequently, professional operators have been apathetic to do any fresh business. Similarly, cotton mill shares too have remained depressed. There has been considerable unloading in this section on fears of lower mill profits this year, as most mills are understood to have bought cotton when prices ruled high. The sentiment has been generally subdued in the miscellaneous and other sections, in which too quotations have been considerably lower than those a week ago.

• • • •

The end of this week sees the cessation of activity in Tata Deferred shares which go off the board of the Bombay Stock Exchange. For close upon half-a-century now, Tata Deferred has been more than a mere share, even more than a market leader. Nay, it has been an institution. Other Stock Exchanges in the country have their leaders. But none of them, it will be readily conceded, has enjoyed the status of the Deferred shares. It is the only share for which a quotation could be obtained, literally even at midnight. If, in England, it is common to open conversation by a reference to the weather, in Dalal Street, acquaintance even with a stranger could always be established by an enquiry regarding the Deferred quotation. The scrip strode the market like a colossus and inspired many an operator to battle on its behalf. This reflection will bring to mind many great names, names of the stalwart operators who have, in the past, worshipped at the shrine of this titular deity of the Stock Exchange—Manshukh Chhagan, Sangidas Jesiram, Girdharlal Tricumlal (known popularly as Girdhar Tricum), and above all, Govindram Seksaria. Many others have obeyed the call of this god, held command for a period, only to make an ignominious exit. But Deferred continued to reign supreme, calm and serene, undisturbed by the fortunes of its votaries. It will, therefore, be a wrench for operators to part with a share, which many have loved dearly, but not perhaps too wisely. With lachrymose eyes, they watch its exit and say, "There goes a great leader. Whence comes such another?" Perhaps, they will do well to take comfort from the thought that the loss of a speculative scrip is not entirely an event for mourning. After all, what the market needs today is not speculation, certainly not of the type witnessed in the past, but genuine investment support.

• • • •

The popularity of Tata Deferred shares among the investing public and speculators has been due to the privileged position which the small Deferred capital occupies in the massive capital structure of the Tata Iron and Steel Company. Out of the total capital of Rs. 10.46 crores, the Deferred capital amounts to no more than Rs. 14.63 lakhs, made up of 48,750 shares of Rs. 30 each. But the dividend on this capital takes away a little less than 50 per cent. of the total paid on the other classes of shares. The Deferred shares were created at the inauguration of the Company itself, though all of which were not issued at that time. Of the 48,750 shares, 26,250 were issued in 1917 at a premium of Rs. 370 per share. The highest level touched by them on the Stock Exchange during the course of the forty-seven years of their history was Rs. 3,640, that is more than 120 times their face value, and this was in 1946. The dividend earned by them varied between Rs. 7-8 and Rs. 172-10 per share; but for as many as 22 years, they had to go without any dividend. The Conversion scheme, which was originally mooted 12 years ago, was accepted in November, 1953, by an overwhelming majority of the shareholders following the award of the Mediator who fixed the ratio of conversion at six Ordinary shares for one Deferred share, and was sanctioned by the High Court. However, a small section of the dissenting shareholders opposed this, but the Court dismissed its petition. These shareholders, however, filed an appeal and the appeal will be heard on Monday next. It is also stated that they have not offered any fresh ground for getting the Conversion scheme rejected.

• • • •

Replying to the debate on the budget in the Council of States, the Finance Minister, Mr. C. D. Deshmukh, said that the implementation of the remaining part of the Five-year Plan and the second Five-year Plan would be a far more difficult task than problems facing the country. "For one reason or another," he said, "the measure of foreign assistance that will be required, or will be receiving, will be very much smaller and the country will have to rely entirely on its own resources in order to establish a modicum of investment." This statement has a direct relation to the Prime Minister's emphasis on self-reliance. Enquiries made in reliable circles reveal that the Government is contemplating to raise a large loan from the public by appealing to its sense of patriotism. The Prime Minister is said to be strongly of the opinion that, in view of the changed relationship with the U.S., India should not approach that country for any more aid. He is believed to be of the view that the Government must go to the public with the appeal that it should tighten its belt and lend to Government. It is too early to say what form or shape the new borrowing programme will take, but there is enough indication to suggest that it will be a much bigger one than that indicated by the Finance Minister in his capital budget. The figure of Rs. 200 crores is being mentioned as the target aimed by the authorities. The fact that last year Rajaji was able to raise Rs. 10 crores, as against Rs. 5 crores planned by him, seems to have prompted the Prime Minister to feel that there is money in the country and that, given proper approach to the public, it should not be difficult to raise Rs. 200 crores this year. If this view is correct, then it can be inferred that the Government will adopt the same tactics which Rajaji followed. This may mean that the proposed new loan may be given an appropriate name to catch the imagination of the public throughout the country to subscribe to it and that it is not unlikely that, if gentle pressure fails to yield satisfactory results, even compulsion may be invoked.

• • • •

The significance of this drive to the share market is that the major portion of the available surplus savings with the public will be drained away by the Government, leaving very little to be invested in equities. Readers will do well to note that this is just a possibility and that the Government has not yet made up its mind. But this much can be said. Mr. Deshmukh is determined to resort to taxation between the former and the increased retention prices of steel for the three months January to March, 1953." It may be mentioned here that the Company has agreed to shoulder approximately Rs. 7½ crores from its own resources to supplement the loans granted by the World Bank and the Government of India towards the expansion programme. Secondly, the Chairman expressed the hope that the principles by which retention prices were fixed prior to the merger with such modifications as may be necessary in view of the merger of the two companies and other circumstances will continue to be applied to the Company, until the loans by the World Bank and the Government of India to the Company have been fully repaid out of its earnings. He recalled that the Company had agreed to expand its undertaking and to accept the consequent heavy financial liabilities on the understanding that the principles which governed the fixation of retention prices prior to merger would continue to be applied. Thirdly, he referred to the impact of the disastrous strike which occurred in the Company's works last year on the Company's production and finances. He computed that nearly 2,373 total productive hours were lost. This represented nearly one-third of a normal year's activities. In terms of actual output, this meant, taking the year 1952 as the basis of comparison, output losses to the tune of 125,376 tons of coke and 101,795 tons of steel ingots. The loss of approximately 100,000 tons of finished and semi-finished steel to the country, he said, had a very serious effect on trade. The railways too lost a large amount of revenue on the freight of raw materials and finished goods. He estimated the loss of revenue to the Company at Rs. 160 lakhs, the loss to the workers on wages and bonus at Rs. 30 lakhs and the loss to railways at Rs. 70 lakhs. This is a sad commentary on the wisdom of our labour leaders who refuse to realise what a strike means in terms of industrial production. Lastly, he revealed that during the years 1954 and 1955 both the large Hirapur furnaces will be out of commission for several months for relining: one in 1954 and the other in 1955. This will inevitably have a material effect on the production of steel during these years.

• • • •

Yet another instance of the Government of India's irrational sugar policy is provided by the latest move to ask the sugar factories in Western Uttar Pradesh to pay to the cane growers an extra price of As. 4 per maund over and above the minimum price of Re. 1-7. The extra price, according to the Press note issued on Friday last week, will be adjusted against the share of the profit that will be assigned to cane growers when the profit-sharing scheme for the sugar industry in the U.P. is finalised at the end of the current sugar season. The acceptance of the suggestion, we are told,

(*Continued on page 495*)

been responsible for winning the support of many a doubting Thomas in the Cabinet and the Planning Commission for Mr. Krishnamachari's scheme. The fact, however, remains that the Cabinet has now given him the green signal. The Commerce and Industry Minister seems to be a believer in the adage "Strike while the iron is hot." He is evidently anxious to proceed with the implementation of his scheme before the enthusiasm of his colleagues cools down or somebody else puts a spoke in his wheel. He has asked his officials to hurry up with the finishing touches in a few weeks, if not days.

• • • •

The Development Corporation will be registered as a private company owned by the State with an initial capital of Rs. 1 crore. A capital of Rs. 1 crore may appear negligible when considered against the background of the big industrial projects that are going to be taken up by it or of the earlier talks of a development corporation with resources amounting to Rs. 100 or Rs. 150 crores. But the size of capital of the Corporation is not so important when the entire finance required by it is going to be provided by the Government. In any case, capital can always be raised. There is no need for apprehension that the establishment of this Corporation is just the thin end of the wedge for nationalisation of industries. On the contrary, it is, we are assured, a move to give momentum to the economy of the country by taking up those risky, large, capital-consuming projects which the private sector is unable to take up now. A basic feature of the scheme is that the industries started by the Corporation are to be gradually transferred to the private sector. Another feature is that the Corporation should be wound-up after 10 years, the idea here being that, by that time, it will have completed its mission, namely, of bringing about rapid industrialisation of the country. In order to expedite implementation of the scheme, Mr. Krishnamachari has placed Mr. S. Boothalingam, I.C.S., at present Joint Secretary to his Ministry, as officer on special duty. Mr. Boothalingam is known for his efficiency and drive. He is a person who gets things done quickly. He worked with the recent World Bank Mission led by Mr. George Woods and accompanied it when it visited such important centres as Bombay and Calcutta and held discussions with the leading business men and financiers in these centres. Accordingly, he has been intimately connected not only with the Corporation now being promoted by his Department but also with the one the World Bank is sponsoring in co-operation with the private sector. In entrusting the job to him, Mr. Krishnamachari has doubtless made a good choice.

There are four points in the speech of Mr. T. Leslie Martin, Chairman of the Indian Iron and Steel Co., Ltd., at the Company's adjourned annual meeting, held at Calcutta, on the 10th inst. In the first place, he referred to the need for ploughing back, as much finance as possible, to pay off the Company's commitments in order to carry out the expansion scheme. The Chairman said that the Directors had proposed to "carry to reserve the net difference after providing for taxation between the former and the increased retention prices of steel for the three months January to March, 1953." It may be mentioned here that the Company has agreed to shoulder approximately Rs. 7½ crores from its own resources to supplement the loans granted by the World Bank and the Government of India towards the expansion programme. Secondly, the Chairman expressed the hope that the principles by which retention prices were fixed prior to the merger with such modifications as may be necessary in view of the merger of the two companies and other circumstances will continue to be applied to the Company, until the loans by the World Bank and the Government of India to the Company have been fully repaid out of its earnings. He recalled that the Company had agreed to expand its undertaking and to accept the consequent heavy financial liabilities on the understanding that the principles which governed the fixation of retention prices prior to merger would continue to be applied. Thirdly, he referred to the impact of the disastrous strike which occurred in the Company's works last year on the Company's production and finances. He computed that nearly 2,373 total productive hours were lost. This represented nearly one-third of a normal year's activities. In terms of actual output, this meant, taking the year 1952 as the basis of comparison, output losses to the tune of 125,376 tons of coke and 101,795 tons of steel ingots. The loss of approximately 100,000 tons of finished and semi-finished steel to the country, he said, had a very serious effect on trade. The railways too lost a large amount of revenue on the freight of raw materials and finished goods. He estimated the loss of revenue to the Company at Rs. 160 lakhs, the loss to the workers on wages and bonus at Rs. 30 lakhs and the loss to railways at Rs. 70 lakhs. This is a sad commentary on the wisdom of our labour leaders who refuse to realise what a strike means in terms of industrial production. Lastly, he revealed that during the years 1954 and 1955 both the large Hirapur furnaces will be out of commission for several months for relining: one in 1954 and the other in 1955. This will inevitably have a material effect on the production of steel during these years.

Yet another instance of the Government of India's irrational sugar policy is provided by the latest move to ask the sugar factories in Western Uttar Pradesh to pay to the cane growers an extra price of As. 4 per maund over and above the minimum price of Re. 1-7. The extra price, according to the Press note issued on Friday last week, will be adjusted against the share of the profit that will be assigned to cane growers when the profit-sharing scheme for the sugar industry in the U.P. is finalised at the end of the current sugar season. The acceptance of the suggestion, we are told,

TWO NOTABLE SPEECHES

MR. NEHRU STRESSES NEED FOR SELF-RELIANCE —MR. BIRLA'S CALL TO BUSINESS MEN

APART from Mr. R. G. Saraiya's presidential address, the highlights of the twenty-seventh session of the Federation of Indian Chambers of Commerce and Industry, held in New Delhi last week, were the speeches of Mr. Nehru, India's Prime Minister, and Mr. G. D. Birla, who needs no introduction. Both spoke more or less on the same subject and revealed an awareness of the need for closer co-operation between the Government and the private sector. Mr. Saraiya, in his address, indicated the defects in the Government's economic policy which are impeding the country's progress. While assuring the business community's readiness to help the Government in all possible ways to reach the goals set before the country, both political and economic, Mr. Saraiya offered certain constructive suggestions for the speedy development of India's resources. He was also candid enough to draw the attention of the business community to its obligations to the people. "The ultimate test by which we the business men of India," remarked Mr. Saraiya, "will be judged is by the service we render to the Indian people and the reputation we establish for fair dealing and integrity." The same advice was given even more emphatically by Mr. G. D. Birla. Not a single business man present at the meeting resented his sermon, thereby admitting that it was quite pertinent and that it needed to be preached.

Mr. Nehru was in good mood and his speech was couched in friendly language. He referred to the specific issues raised by Mr. Saraiya in a general way. That was not surprising, because it is common knowledge that he does not generally allow himself to be involved in details of the Government's economic policy, which is not his main sphere. But, this year, there was another reason. He seemed to be quite concerned with the larger implications of the U.S. offer of military aid to Pakistan. This was evident from the repeated emphasis on self-reliance which he laid in the course of his speech. While he was firmly opposed to isolation and while he would continue the present policy of friendly co-operation with all countries, he felt that real progress "cannot come if we go about on the crutches supplied to us by others all the time." He declared that, *in the changed international circumstances of today* (italics ours), India would not stretch out its hand in supplication to other countries for any great economic aid. Mr. Nehru repeated this statement on more than one occasion and added: "India and its people must depend on themselves to achieve rapid economic progress and strengthen the country's defences. It is clear that, to achieve these things, every one will have to tighten his belt. We have to conserve all our energy for this task and to consolidate our unity."

Necessity for Self-reliance

Mr. Nehru devoted a considerable part of his speech to what he termed the deleterious effects resulting from a country mainly depending on a foreign country and foreign help. He warned against the danger of a country depending on outside aid. He averred: "No country which depends mainly on other countries for her defence, security, progress and general well-being can hope to go far in achieving anything substantial. Apart from the fact that such a thing completely weakens the country receiving the outside aid, it prevents the creation of that atmosphere in which a country should begin to develop and grow on its own inherent strength."

The foregoing quotation shows that Mr. Nehru is now convinced that foreign economic aid cannot be had without strings. In view of this, it remains to be seen to what extent the Government will alter its approach to the problem of implementing the Five-year Plan. The coming months may be expected to unfold certain interesting developments. In his speech in the Council of States on Monday, the Finance Minister has already endorsed what the Prime Minister said. He too has stressed the necessity for self-reliance and the inevitability of a large dose of deficit financing to the tune of Rs. 600 crores in the next two years. This would mean a total deficit financing of Rs. 760 crores in the five-year period 1950-51 to 1955-56, as against the figure of Rs. 280 crores considered as the safe limit in the Plan. In other words, the Finance Minister is proceeding on the assumption that the gap between the estimated resources and the needs under the original Plan will have to be filled in entirely by deficit financing. The shortfall in expenditure that has already taken place is offset by the additions to the Plan made last year.

In his speech at the Federation meeting, Mr. Nehru made two notable points which deserve to be recorded. One relates to private enterprise and the other to cottage industries *vs.* large-scale industries. On the former, Mr. Nehru went a step further than he did a year ago, when he had categorically stated that he stood by the policy of mixed economy providing a definite place for private enterprise. Thereafter, he made several statements in public which showed that his faith in private enterprise was waning. It was, therefore, refreshing to find that, in the speech under reference, he not only reiterated his observations on private enterprise at last year's annual meeting of the Federation but also admitted that the private sector should have sufficient freedom of action. "It is no good having a private sector and tying it hand and foot," he said. "It cannot function in that way. If you have a private sector, it should be allowed certain obvious freedom of functioning." This is an important pronouncement which, it is to be hoped, will be implemented in actual practice by Mr. Nehru's colleagues not only in the Central Cabinet but also in the State Governments. Mr. Nehru, of course, said that the private sector should function within the national Plan, that any thought of anarchic enterprise doing what it chose was out of place, and that it should work for the well-being of the Indian people as a whole and not of a handful here and there. At no time has the private sector objected to these qualifications. That it is prepared to accept them is evident from Mr. Saraiya's speech.

Cottage *vs.* Big Industries

Mr. Nehru's observations on cottage industries revealed that he was neither opposed to big industries nor in favour of cottage industries on any doctrinaire grounds. He was all for the adoption of latest techniques and introduction of machinery in order to raise the productivity of the country. But that should be done in such a way as not to cause suffering to large numbers of people. In view of the importance of what he said, it is better to quote him:

"I can assure you that no one in our Government is against big industries. We want big industries to develop. We want the latest and highest techniques to develop. We want a far higher technique to develop than most of the people here are used to. You are used to ancient machinery and ancient techniques and you are completely out of date. You talk about higher techniques without even knowing what the latest techniques are. I am going to use atomic energy to upset all your techniques one of these years. We are not against higher techniques. I would prefer, wherever possible, to use higher techniques. It may be that atomic energy will be available for civil use and one can use it then. The only consideration against higher techniques coming in rapidly everywhere—that is a very big consideration—is that it should not upset human beings in large numbers or create large-scale unemployment. Higher techniques would, of course, create more employment, but there may be a gap period for many years and we cannot afford to have a gap period when people are starved and people are unemployed in large numbers. That consideration should always be borne in mind. It should not come in the way of planning. Higher techniques can be used in the types of industry which will add to the employment and will not displace the employed."

In fine, Mr. Nehru maintained that there was no theoretical conflict in his mind in regard to cottage industries *vs.* large-scale industries. He accepted the principle of higher techniques everywhere subject always to the human problem, as the human factor could never be ignored.

Business men are, of course, thankful to the Prime Minister for these clear-cut remarks. But what is their practical utility, so long as the Government pursues a policy which is not conducive to the reduction of the period within which a perfect co-ordination between the large-scale industry and cottage industry can be brought about? The stage for mere verbal assurances has long past. What is required now is action. The techniques of cottage industries must be improved, while the large-scale industries must be allowed to raise their productivity both quantitatively and qualitatively, so that production costs can be brought down. The resulting lower prices would lead to an increase in consumption, which, in turn, would provide scope for increased production and higher employment. The transition stage cannot be absolutely painless, but failure to face it boldly will only lead to stagnation and, ultimately, to retrogression.

Mr. Birla's Speech

Mr. G. D. Birla's speech differed from the speeches delivered by other business men in two important respects. It was, in the first place, addressed more to business men than to Government. And, secondly, it was straight and unambiguous, which is something remarkable considering that he spoke extempore. Only a person who has clear ideas, formed after considerable deliberation, could speak as he did. He showed no hesitation or wavering when he spoke and the audience listened to him with rapt attention. Not only every one who listened to him but also many others who only read his speech in cold print were impressed by his realistic approach to the problem of unemployment—this means, in fact, the problem of economic development—and by the tone of sincerity that marked his address. It is no exaggeration to say that many in the higher circles of Government greatly appreciated his call to business men to co-operate with the Government and to offer constructive suggestions, taking into account the fact that the present Government is a democratic one, answerable to a large mass of the electorate. Mr. Birla seemed to deprecate the tendency of criticising the Government in vague terms. He wanted them to put forward concrete, workable proposals to the authorities for solving their difficulties. He deplored also the tendency among business men to throw the blame on the Government for all their difficulties and to rely too much on the Government. The essence of Mr. Birla's speech was that there was no fundamental difference of opinion between the Government and the private sector on the basic economic issues and that the Government would respond to the suggestions of the latter, provided it could be proved to the satisfaction of the Government that they were in the larger interests of the country and that they would help the nation to reach the goals set before it. Mr. Birla is so confident of the success of this approach that we feel that it deserves to be given a fair trial.

A large number of topics was covered by Mr. Birla. These included, among others, labour legislation, deficit financing, small-scale and cottage industries, profit motive and service motive, outlook for private enterprise, and role of the young men, especially those who belong to the business community. On every one of these topics, he had something interesting and provocative to say. Take, for instance, the subject of deficit financing. Business men in general have welcomed the Finance Minister's proposal to resort to deficit financing to the tune of Rs. 500 to Rs. 600 crores in the next two years. But Mr. Birla seems to be no blind supporter of this method of raising resources, for he wanted the Federation to examine carefully whether it would have the desired effect on the economy of the country. "If we (the Federation) find that it (deficit financing) is not going to have the desired effect," he said, "it will be our duty to point out to the Government in what way they should change their plan."

Place of Small Industries

On the issue of small-scale or cottage industries *vs.* large-scale industries, Mr. Birla minced no words. The small-scale industries, in his opinion, had a place, but that place was one of the subsidiary or feeder to large-scale industry. He had no doubt in his mind that the wealth of the country could not be increased except through establishment of large-scale industry and introduction of improved techniques of production in cottage industry. Placing restrictions on large-scale industry with a view to supporting the cottage industries would not result in increased wealth for the country. He impressed the audience, in this connection, by pointing out that, if the people of this country were to be clothed only with hand-spun and hand-woven cloth, something like 80 million people would have to be employed. Even then, the per capita availability of cloth would be no more than 15 yards. "It is a well recognised principle," he remarked, "that, if you want to raise the standard of living of the people, you must get the devil, the machine, to work for you. It is a very simple thing that, if you work with your hand, you produce less; if you produce with a machine, you produce more; if it is a more efficient machine, you produce still more." Proceeding, he observed:

"There is a great scope for small-scale industry. But small-scale industry will come into existence only as a feeder to large-scale industry. It is not fully realised that, in a country like

(*Continued on page 495*)

NEWS IN BRIEF

THE Andhra Government has exempted handloom cloth from sales tax levy in the State.

Foreign tourists who visited India in 1953 numbered 28,060, representing an increase of about 3,500 over the previous year's figure.

The quantity and value of foreign cotton imported into India, during the first three quarters of 1953-54, were 88,290 tons and Rs. 39.16 crores, respectively.

The Assam Government has introduced the Agriculture Income-tax (Amendment) Bill, seeking to remove taxation restrictions on agricultural income at a rate higher than the Central income-tax.

Indian manufacturers produced 6,564 railway wagons, 785 coaching vehicles and 73 locomotives in 1953. Expected to be delivered in 1954 are 8,500 wagons, 1,050 coaching vehicles and 116 locomotives.

The all-India first estimate of gram for 1953-54 puts the current year's area under the crop at 17,317,000 acres, as against 15,948,000 acres in the adjusted first estimate for 1952-53, thereby showing an increase of 1,369,000 acres or 8.6 per cent. over the area last year.

The Government of India has extended the last date for submitting applications for registration by the industrial undertakings covered by the Industries (Development and Regulation) Act, 1951, and the Amendment Act of 1953, to 31st March, 1954. The original date for submitting applications for registration expired on 28th February last.

The management of General Motors India Ltd. has announced that the Company and its assembly plant in Bombay will be closed on 31st March, 1954. The Company will have completely utilised the materials available to it for the assembly of vehicles and at that time will have finished all related production activities.

The validity of allotments of cotton yarn made to mills on or after 1st January, 1954, and any export licences issued against such allotments will be extended upto 31st March, 1954. All other allotments and export licences will be treated as lapsed on 28th February, 1954, and no extension will be granted.

Sand suitable for glass industry to the tune of about three million tons, is available near Kundi in the Kotah District of Rajasthan, according to an investigation conducted by the Geological Survey of India. The total deposits are estimated at 5.3 million tons and allowing about 40 per cent. as loss, due to washing and screening, the reserve of sand suitable for glass industry works out to 3 million tons.

The all-India final estimate of groundnut for 1953-54 puts the current year's acreage and production at 11,356,000 acres and 3,772,000 tons (nuts in shell), as against the partially revised estimate of 11,850,000 acres and 2,884,000 tons, respectively, for 1952-53. The current year's estimate, compared to last year, shows thus an increase of 30.8 per cent. or 388,000 tons in production, in spite of a decrease of 4.2 per cent. or 494,000 acres in area.

The Government of India has decided to allow the export of a small quantity of hand-picked selected groundnut kernel to the dollar area countries by established shippers. Allocations for export will be made by the licensing authorities at the ports to established shippers for quantities equal to one half of the total shipment of H.P.S. groundnut effected by them during any one of the three calendar years, namely, 1951, 1952 and 1953.

A team of French experts has recommended the development of Pardwip, 35 miles from the capital of Orissa, at the mouth of the Mahanadi river into a potential, medium or major, port, able to handle six million tons of traffic a year. Two schemes are being considered in this connection, one costing an initial expenditure of Rs. 3.8 crores and a recurring expenditure of Rs. 20 lakhs per annum, and the other involving an initial cost of Rs. 6.7 crores and a recurring expenditure of Rs. 10 lakhs.

It is notified for general information that the last instalment of advance payment of tax under section 18A falls due on 15th March, 1954, and all assessees on whom notice has already been served are requested to make payment on or before the due date. Such assessees have the option to send to the Income-tax Officer concerned, before 15th March, their own estimate of tax payable, in which event, only the net amount due on the basis of their estimate (after deducting the advance tax already paid, if any) need be paid. They are, however, reminded that if they exercise this option, and if the tax estimated by them is less than 80 per cent. of the tax determined on the basis of regular assessment, they will be liable to incur the consequences laid down in the Act. Persons who have not hitherto been assessed, and whose incomes are not exclusively made up of salaries or interest on securities, are also required to forward to the Income-tax Officer concerned before 15th March, 1954, their estimate of income and tax, if any, payable thereon, if their total incomes are likely to exceed the limits, (i) individuals, firms and other association of persons—Rs. 6,700; (ii) Hindu undivided families satisfying the usual conditions—Rs. 10,000 and (iii) companies and local authorities—Rs. 2,500.

* * * * *

From Abroad

Private imports into Britain of all oilseeds and vegetable oils, now imported only by the Ministry of Food, will be resumed on 1st June, 1954, after a break of 15 years.

German car factories turned out 47 per cent. more units during the first two months of 1954 than in the corresponding period of 1953. Germany now ranks as the third largest producer of motor cars in the world.

The Australian Government has decided to cut the levy on shipowners for maintenance of the Stevedoring Industry Board, in order that shipowners may reduce the overseas shipping freight rates. The levy is to be reduced from 11d. to 6d. per man-hour with effect from the first pay period in May next.

Free trading in tungsten ore and concentrates will be restored in the U.K. from 1st April next. Private imports will be allowed from all sources except the dollar area, but during the early months of private trading, consumers will continue to receive a substantial part of their requirements from Government stocks.

A Dutch company has built a pilot plant for producing potassium from sea water. The plant will start production in the near future and will produce 1,500 tons per annum. The potassium produced will be treated with nitric acid to obtain potassium nitrate, which is used as a fertiliser. As much as 1,000 cubic metres of sea water yield 450 kilograms (990 lbs.) of potassium.

The Netherlands occupied, at the end of 1953, the fourth place among the world's leading shipbuilding nations, after the U.K., the U.S. and West Germany. The number of ocean-going vessels under construction at the end of 1953 was 141 with a total tonnage of 490,989 g.r.t. This was 7.8 per cent. of the tonnage then under construction in the whole world.

The present corporate tax rate of 52 per cent. in the U.S. will be maintained for one year more until 1st April, 1955. The rate was scheduled to be reduced to 47 per cent. on 1st April, 1954, but President Eisenhower requested the Ways and Means Committee of the House of Representatives to give an extension of the present rate. The extension of the rate for one year is expected to yield an additional revenue of $2,000 million.

The sale of copper by the U.K. Government on the London Metal Exchange will cease on 31st May, 1954. By that time the Government will have sold all that it is willing to dispose of and the balance of the stocks will be retained as strategic reserves. The consumers thus have sufficient notice to make arrangements for obtaining their copper requirements without recourse to Government broker.

The American people, as a whole, were more prosperous in January, 1954 than in the same month a year ago. Compared with January, 1953, both gross and net income figures were higher in January, this year. More money was earned and recent tax cuts aided in further increasing the average worker's "take-home pay." The annual U.S. personal income rate, as computed for January, 1954, was $282,500 million, as against $280,500 million for January of 1953.

THE S.S. "ARCADIA"

True to its great traditions in the art of shipbuilding, the U.K. has again produced a luxury liner, the s.s. *Arcadia*, owned by the P. & O. Steam Navigation Company. The liner, which was in Bombay this week, is a magnificent tribute to British shipbuilding skill and engineering. The liner, which took two years to build, has a gross tonnage of 29,734. It has a service speed of 22½ knots. The overall length is about 718 feet and breadth (moulded) about 90 feet. Built at a cost of £6½ million, the *Arcadia* can carry 2,125 persons—679 first class, 735 tourist class and 711 crew.

Since a steamer becomes the passengers' abode for several weeks in the course of a voyage, modern shipbuilders have increasingly realised the value of providing maximum comfort to those on board. In fine, the *Arcadia* provides a home, and more than a home, a small township in itself, with such amenities as a playground, swimming pool, nursery and library. It is true that other liners provide these amenities too. But what distinguishes the *Arcadia* from the rest of its kind is the colourful and attractive way in which the entire liner is built. Many parts of the steamer, including dining rooms, first class cabins, shop and hairdressing saloons are air-conditioned. There are several air-conditioned ironing rooms as well as drying rooms. The laundry, it is stated, is one of the finest ever designed for a ship and can handle all requirements during the voyage. The galleys are so designed as to save labour and personal handling as far as possible.

PERSONAL

MR. A. C. Clarke, General Manager, Bank of India Ltd., left last week on a tour of inspection of the Bank's branches in East Africa.

Mr. M. V. Veerappa has been elected President of the Mysore Chamber of Commerce for the year 1954, and Mr. V. Sundara Murthy, Vice-President.

Mr. M. C. Thomas, Development Commissioner, Travancore-Cochin State, has been appointed Officer on Special Duty in the Union Ministry of Commerce and Industry.

Mr. M. K. Kripalani, I.C.S., lately Ambassador for India in Thailand, has been appointed Chief Commissioner of Ajmer, *vice* Mr. A. D. Pandit, I.C.S., who has been appointed Chief Commissioner of Delhi.

Mr. H. C. Hose, Assistant Vice-President and General Manager of California Texas Oil Co., Ltd., in charge of the Company's European Division in New York, has been appointed Vice-President, Marketing Section of the Company.

Mr. V. P. Sathi, Sales Supervisor of the Bombay District Office of Caltex (India) Ltd., has left for the U.S. on a training trip, under Caltex's programme of fitting Indian members of the Caltex organisation for more responsible positions.

Mr. Shankar Prasad, I.C.S., Chief Commissioner, Delhi State, has been appointed Chairman of the Indian Airlines Corporation, in place of Mr. B. C. Mukerji, I.C.S., who has gone on leave. Mr. Shankar Prasad will also be a member of the Air-India International Corporation, in place of Mr. Mukherji.

Mr. B. M. Birla, prominent industrialist of Calcutta, has been elected President of the Federation of Indian Chambers of Commerce and Industry for the year 1954-55. Mr. Shantilal Mangaldas has been elected Vice-President, and Mr. Ratilal M. Gandhi, Treasurer. The other members of committee are: Mr. Shantilal Mangaldas (textile mills), Mr. Tulsidas Kilachand (banking and bullion trade), Mr. Bharat Ram (other industries not specified), Mr. Shanti Prasad Jain, Mr. R. Ramanathan Chettiar and Mr. G. M. Modi (other trade and commerce not specified) and Mr. P. D. Singhania, Mr. G. D. Somani and Dr. Indubhai B. Amin (representing associate members).

"COMMERCE" 1929

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *16th March*

India's Industrial Progress

Special emphasis was laid on the Public Safety Bill—when it becomes law—acting as a lever to solve some of Bombay's industrial problems, at the annual general meeting of the Bombay Chamber of Commerce, presided over by Sir Hugh G. Cocke. Sir Hugh said that Bombay's textile trade was being diverted to cheaper ports, and the great need today was for stability, for Indian capital to be devoted to Indian interests rather than to investments abroad. The President pointed out that, if the present textile conditions continue, the outlook for Bombay's future mill industry will be a very poor one. A certain amount of counter-propaganda to "Gandhism" was very necessary to establish public confidence and stability, to ensure capital being retained in the country rather than being driven out. The campaign of disorder promised by Mr. Gandhi and the wholesale fomenting of discontent among the workers would assuredly not earn that confidence but shatter the economic well-being of the country. Sir Hugh Cocke expressed the hope that Bombay millowners would not be deflected from carrying out reforms recommended by the Tariff Board which millowners themselves consider essential to the future interest of the industry. What the trade union leader does not always realise is that measures which are best for the millowner, and for the industry as a whole, are generally those most profitable for the workman. Sir Hugh gave some very impressive figures of the production of cloth and yarn for the seven months ended 31st October last as follows: These figures show that yarn is down from 485 million lbs. to 310 million lbs. and the figures for Bombay Presidency alone are reduced from 300 million lbs. to 121 million lbs. Woven goods show reductions for the whole of India from 339 million lbs. to 209 million lbs. and the yardage reduction is from 1,396 million yards to 892 million yards. Bombay's figures alone are about half what they were last year. Japan uses 62.2 operatives per 100 looms to Bombay's 97.2 operatives; while the Japanese cash wage is given as Rs. 1,554 per 100 looms as against Bombay's figure of Rs. 4,820.

INDO-BURMESE RICE PACT

THE Government of India has entered into an agreement with the Burmese Government to buy 9 lakh tons of rice at an average rate of £48 per ton f.o.b. Rangoon. According to a statement made by Mr. Rafi Ahmed Kidwai, Union Food Minister, in the Council of States, on the 8th inst., the supply of rice will be spread over three years, the option being left to the Burmese Government to supply all the rice even in one year. If the supply is spread over three years, the price will be £50 per ton during the first year, £48 per ton in the second year and £46 per ton in the third year. The average rate of £48 will apply if the whole quantity is supplied in one year. Of the quality to be supplied, 3.5 lakh tons will be boiled rice and the rest will be "small mills specials" (*nagasein*). The quota of boiled rice is being specifically procured to serve the needs of Travancore-Cochin. The first consignment is expected to reach India in the next few days. According to unconfirmed reports, £15 out of £48 paid for each ton of rice, will be adjusted against Burma's outstanding debt of about Rs. 75 crores to India.

The main object of this agreement is to build a reserve stock which would ensure supply of rice even if the crops were to fail in the country. Part of the imported rice will be distributed among deficit States for enabling them to maintain their present scale of rice ration. The balance will be used in the rationed areas of the said States to make supplies to consumers without quantitative limitations. These availabilities will be in addition to whatever quantities the deficit States have themselves procured or will procure and the quantities received by them from the surplus States. The Government is considering the question of advising surplus State Governments to give up their procurement as soon as a certain figure is reached. If, however, there were to arise a tendency for prices to go below the economic level and surplus were to be offered for Government agents, the Government would buy such quantities. The Government is also considering the question of resuming export of finer varieties of rice in order to give an opportunity for those people in foreign countries who were accustomed to use Indian rice in the pre-war years to have their requirements. But the exports will be made by Government.

The agreement has, however, come in for a good deal of criticism. It is criticised on the score that the price agreed upon to be paid, which averages £48 a ton, is very high, as it is claimed that the real value of the rice is £30 to £35 per ton. Besides, it is alleged that the stocks of rice which Burma wanted to sell belonged to the previous year and had deteriorated in quality. They were being repolished for purposes of export. Such rice, it is stated, is unfit for human consumption. It is also held that there was no necessity for importing Burma rice for building up of buffer stocks, for there was enough surplus rice and other grains in many parts of India this year. Andhra State in particular has, it is pointed out, a very large surplus to supply Travancore-Cochin and Malabar, two of the important deficit areas. A section of public opinion in South India and the Indian landowners in Burma seem to have been disappointed with the agreement, as it does not cover provisions for the settlement of the question of Indian-owned property in Burma, which is valued at about Rs. 90 crores.

Nevertheless, certain advantages which the agreement brings with it should not be overlooked. The purchase of 9 lakh tons of rice will fortify the nation's food reserves considerably. the agreement will pave the way for the removal of the last vestige of war-time controls on foodgrains, namely, that on rice, the staple food of the country. With controls off, the consumer can expect to have not only his full requirements but also the quality to which he was accustomed before the advent of food controls. The agreement can also be expected to have a stabilising effect on prices in the country. Furthermore, since it would help reduce the accumulated stocks of rice in Burma, the country would find immense relief and this should add considerably to improve, in future, the economic and political relationship between India and Burma.

WARNING AGAINST OVERTRADING

Not many in this country can claim to possess such a clear insight into, and a deep understanding of, the economic problems of India as Sir Cowasjee Jehangir. He is undoubtedly one of the few enlightened bankers, industrialists, and business men whose advice is generally valued in this country. Presiding over the annual meeting of the Bank of India Ltd. on Thursday last week, Sir Cowasjee called upon the merchants and shippers, for instance, to be on their guard against overtrading and heavy commitments. Evidently, he must have been provoked by the anti-social speculative activities indulged in by a section of the industrial and business community with a view to getting rich quick, as witness his remark that "*many* (italics ours) traders base their ideas on the experience of the war and post-war periods of inflation." Significantly enough, Sir Cowasjee observed: ".... few remember the lean years of the 1930's when heavy business losses were sustained and when cuts in pay and retrenchment were unavoidable. In the conditions of today, the proper policy is one of strict caution and prudence at every stage."

This is, indeed, pertinent and wholesome advice that should be scrupulously followed by everyone connected with the business organisation. After all, it must be remembered that the existence of private enterprise is at stake today and that, if it is to survive, it must raise itself in the estimation of the people.

Sir Cowasjee had also a piece of sound advice to give to the powers-that-be who appear to be all out to strangle industry and trade in their policy of pampering labour. How else can one explain the series of labour legislations that the Central and State Governments have imposed in quick succession of late? Sir Cowasjee could not do better than fully endorse what Sir Jeremy Raisman, a distinguished ex-Finance Minister of the Government of India, said with regard to the Government's labour policy in the course of an interview with him by a representative of this journal recently, the full text of which has been published in *Commerce* dated 20th February, 1954 (*vide* page 291). Describing the existing employer-employee relations as "almost anarchical," Sir Jeremy, as readers are aware, warned that "unless something can be done to cure this deep-seated evil, I am very pessimistic about the future of industrial enterprise in India." Recalling this warning, Sir Cowasjee commended the interview with Sir Jeremy Raisman to the attention of the local Government and the Government of India.

IMPORTANCE OF STATISTICS

In the course of his address to the third Regional Conference of Statisticians of the E.C.A.F.E. region, which is to conclude its 13-day session at New Delhi today, Mr. C. D. Deshmukh, India's Finance Minister, stressed the need to base the collection and analysis of statistics in this region on scientific lines. This required, he said, the pooling of the knowledge and experience of many workers in the field of statistics and evolving new patterns of statistical thinking and analysis. Dealing with the constructive analysis and the interpretation of national income and social accounts, Mr. Deshmukh said that they were of interest not only to statisticians but also to economists. The Government of India, he averred, was fully seized of the importance of national income data and analysis in the formulation of economic policy. During the last few years, India has made, as Mr. Deshmukh pointed out, considerable advance in the direction of strengthening its statistical organisation and improving the basic data.

The significance of Mr. Deshmukh's address needs no emphasis. More so, because statistics is the very basis of economic planning and policy-making. Although far-reaching developments have taken place during the past decade or two in the industrialised West in the field of statistical concepts and methods, similar advance has not been made in this sphere in the countries of the E.C.A.F.E. region, where the need for it is the greatest. A glaring anomaly of the statistics of the region is that the basis for the price index is still the pre-war level. The significance of any pre-war year as a base for price index is negligible. It will certainly be better if economic indices are based on a recent post-war year. This explains the reasons for the reported move on the part of the Government of India to prepare a new price index with 1948-49, a post-war and post-partition year, as the base year to replace the current index of wholesale prices based on 1939 prices. The new index, it is stated, will be more broad-based and, hence, a more reliable guide to economic conditions than the present one. As the wholesale price index is one of the primary economic indicators and provides a guide to economic policy, the Government's move for reorientation of the base is of great significance.

EXCISE ON ART SILK FABRICS

A brief reference to the art silk industry's reaction to the imposition of an excise duty (and cess) of 21 pies per yard of rayon fabric was made in this journal last week. Soon after we went to press, a deputation of the Silk and Art Silk Mills Association (S.A.S.M.A.), Bombay, went to New Delhi with a view to apprising the Union Finance Minister of the grave consequences of the fresh impost. In the course of a detailed memorandum submitted to the Minister, a copy of which has been made available to us, the Association has vigorously put forward the case for the withdrawal of the excise duty on art silk fabrics. The Finance Minister is reported to have assured that the industry's case would be sympathetically considered. Following this assurance, Mr. D. N. Shroff, President of the S.A.S.M.A., has done well, therefore, to call upon the art silk mills not to resort to the closure of mills or curtail output till the Centre announces its final decision.

The chief ground on which the Association has based its case for withdrawal of excise duty is the none too happy position in which the art silk industry is said to be finding itself at present, sandwiched between the rising manufacturing cost and poor demand, both internal and export. As it is, the cost of production is, we are told, unduly heavy. The import duty on art silk yarn alone accounts for as much as 50 per cent. of the cost of the raw material. The wage bill is said to have more than doubled during the last five years, on account of the series of burdens imposed under the Industries Development and Regulation Act, as, for example, provident fund and State insurance, minimum wages, bonus, and compensation for lay-offs and retrenchment—"a burden which even century-old industries with adequate resources are finding difficult to bear." Further, it is stated that the demand for art silk fabrics has considerably decreased of late. Exports has so far not allowed refund of import duty on yarn used in the manufacture of cloth meant for export, although the principle of allowing such a drawback was accepted several months ago. The downward trend in the prices of rayon fabrics is given as an indication of the fall in demand for the cloth. In these adverse circumstances, the Association points out, it is beyond the capacity of the art silk industry either to bear the burden of the fresh impost, or to pass it on to the consumer.

In support of its demand for the withdrawal of excise duty on art silk fabrics, the industry has drawn the attention of the Finance Minister to a series of other handicaps under which it is carrying on its operations. Thus, the industry suffered an overall loss of Rs. 50 lakhs during 1953. The employment situation worsened, resulting in nearly 10,000 workers out of a total of 65,000 being rendered unemployed. The majority of units consists of very small factories which are no better than the cotton powerlooms which are exempted from excise duty. Moreover, the art silk mills have no spinning plant and several of them do not even have bleaching and dyeing plants. The borrowing of the mills amount to nearly two-thirds of the paid-up capital. This has been progressively rendering the position of the industry more precarious. Consequently, several units have been closing down during the past 18 months. As a result of the new excise duty, a factory with 25 looms costing Rs. 40,000, it is stated, will have to pay every year Rs. 41,000 as excise duty.

The Finance Minister, however, feels that the art silk fabrics can bear the excise duty. While proposing to impose the duty, he said: "The use of artificial silk fabrics is now widespread and they compete, to some extent, with cotton cloth which has to bear an excise duty. There is no reason why, when the bulk of the cotton cloth is subject to taxation, artificial silk fabrics should be exempt." It would, therefore, appear that the plea for abolition of duty may not find favour with the Government, although, as the Finance Minister indicated, in the course of his reply to the debate on the budget in the Council of States, that there may be some modifications in the levy of excise duty. In the circumstances, the art silk industry, in all probability, would have to reconcile itself to the new levy and try to bring about reduction in costs by raising the efficiency of manufacture, instead of resorting to closure or curtailment of output. It can also urge the Government to reduce the import duty on art silk yarn and allow the drawback of import duty on yarn used in the manufacture of fabrics meant for export.

TAXATION AND LABOUR POLICIES

The taxation and labour policies of the Central and State Governments came in for some criticism at the hands of Mr. J. K. Srivastava, in the course of his Presidential address to the fourteenth annual general meeting of the Uttar Pradesh Chamber of Commerce, held in Kanpur on 28th February last. Mr. Srivastava contended that these policies were not conducive to the growth of private enterprise. He pointed out that the incidence of taxation in this country was inordinately higher, and that it fell on a smaller portion of the population, than in the industrially advanced countries of the world. He substantiated this statement by stating that the total number of assessees in India was hardly 800,000, as compared with about 20 million in the U.K. and about 60 million in the U.S. In India, the incidence of tax was 75 per cent. on Rs. 5 lakhs, as against 57 per cent. in the U.S., and 53 per cent. in Canada. The President also contended that the effect of legislation in recent years on such diverse matters as fixation of minimum wages, settlement of disputes and the provision of social security measures for workers was that the industry was sandwiched between a high and rigid cost structure on the one hand and the buyers' resistance on the other. He also referred to transport troubles, the difficulty of securing finance on easy terms and the proposed new company legislation which contains proposals which take away the legitimate functions, pertaining to the running of industries, from the managements.

That the growth of industries is being hampered by the taxation and labour policies of Governments is common knowledge. It is true that each of the measures taken individually inflicts only a small burden, but few can deny that the cumulative effect is crushing to a degree. It is high time that the Central and State Governments recognised the need for inflicting no more, if not reducing the existing, burdens which do not match with economic realities. After all, even labour amenities have to be earned. They must be paid for. And somebody—the consumer —must be capable of paying them. In a buyers' market, where the consumers' sovereignty reigns supreme, it will not be possible to pass the burden, even partly, on to the consumer. The result will be that the marginal firms will have to go out of existence which will mean a further increase in unemployment. Mr. Srivastava did well, therefore, to emphasise that "it is disastrous to build a structure of social benefits when the economic foundations are not soundly laid."

(*Concluded from third column*)

India Ltd., from 1st April next. This concern has served the country for over a quarter of a century and provided employment and some kind of technical training to thousands of our countrymen. It has also supplied an economic need, which in a measure, helped us to develop road transport in this land of great distances and vast backwaters, untouched by a great many aspects of civilisation. Even today, road transport is one of the weakest links in the new economic and cultural chain we are trying to forge to promote unity, integration and welfare of thirty-six crores of people. The contribution of General Motors is, therefore, significant.

It is a pity that this concern could not see its way to participate by adopting a manufacturing programme in the perfectly justified new policy of the Government for building up a genuine automobile industry in the country. But this unwillingness for further co-operation cannot and should not lead us either to underrate the services already rendered or to prevent us from saying "thank you" to General Motors, with a word of appreciation and gratitude for a close and mutually profitable association, lasting for as long as twenty-five years. And this duty on us becomes all the more imperative in view of the gracious and generous manner, in which this world-renowned concern has dealt with all its employees in parting from them. It is an object lesson for our industrialists, who today grudge the compulsion laid on them by law, to compensate in some small measure, workers laid off or discharged for some reason or other.—*All Rights Reserved.*

OFF THE RECORD

(*By "ROVER"*)

I WONDER if I am turning cynical in my old age. When I read all the nice speeches delivered at the annual meeting of the Federation of Indian Chambers of Commerce and Industry during the last week-end, I could not help feeling that most of those who participated in this feast of words including the Prime Minister who inaugurated it, were speaking with their tongues in their cheeks. If one were to judge by all the protestations and expressions of exalted sentiments, one would almost be convinced that a miracle had happened and that the hitherto somewhat mercenary business community had been overtaken by a spiritual or ethical revolution overnight. On the other hand, the Prime Minister, who for long had not been known to be very sympathetic to the aims, aspirations and ambitions of this community and what it represented, seemed to have been suddenly convinced of the justice of many of its demands.

Mr. Nehru was unexpectedly apologetic for not being in a position to accept any of these demands, because of the peculiar conditions obtaining in the country just at present, but conceded that, in principle, mechanisation of industry was our goal and that there was no point in having a private sector only to tie it up hand and foot. He also admitted the claim for fair returns for capital and qualified this by advancing a similar claim also for workers and consumers. All this overflow of amiability and agreement in principle led me to believe, for a moment, that my days of gainful employment as a columnist and commentator were over, as there would soon be nothing left for my tribe to criticise and to comment upon.

It surprised me not a little to see that those who had been branded till yesterday, albeit indiscriminately, as self-seekers, appeared all of a sudden to have accepted, of course with some reservations, not unlike those of the Prime Minister in his inaugural address, almost everything which they had opposed or resisted till now. What was unpalatable and regarded as unwholesome was acclaimed as health-giving and swallowed without any show of reluctance. For a while, I got confused and was at some loss to understand whether all these ideas of a Welfare State, mixed economy, emphasis on cottage industries, achievement of an improved standard of living for all, equality of income and opportunities and democracy in industry were not, after all, the basic principles of private enterprise, subsequently stolen or borrowed by the Party and Governments which came into power in 1947. For aught I know, this seeming accord on fundamentals between the authorities and industrialists might be genuine. But my stubborn common sense and my reading of the reservations on either side refuse to countenance this complacent conclusion.

I wish our economic future were based on something more solid and sincere than the shifting sands of hypocrisy and opportunism. There is a basic divergence in some of the aims and methods of the Government and the business community of which neither need be ashamed. Both the politicians and industrialists love the country and want to serve it. But the philosophic content of this love, the logical connotation of the term "country" and the psychological implications of their common desire to serve are dissimilar, though not necessarily contradictory or even contrary. Each has its own universe of discourse and these distinct universes meet only at certain points and can by no stretch of imagination be called identical. It would be more to the advantage of the country, if, instead of trying to disclaim these differences by spreading a carpet of make-believe agreement over them, these were openly recognised and admitted and a convenient working media discovered for co-operative effort within a limited field of agreement.

The danger of such annual exchange of formal courtesy is that the protagonists of the public and the private sector would part and go their own way, without having achieved anything useful and constructive. But methinks there is not much to lament in this lost opportunity. In matters economic, the Government of India has always spoken with two voices, and has always acted like a house divided. Mr. Nehru thinks and speaks like an enlightened progressive, to be drowned in action by the reactionaries, to whom everything Gandhiji held is sacred. On the other hand, the Federation has ceased to be representative of some of the most progressive and courageous elements in private enterprise and so has lost a good deal of its prestige and influence. Any accord or temporary accommodation, even if it had been achieved at this seasonal gathering, would have been of but little practical value to the economic progress of the country.

At this critical phase of our country's history, it is just as much necessary for the Government to reconcile its own conflicting policies and if necessary to drop some for the sake of logical harmony, as for private enterprise genuinely to revise some of its dearly hugged beliefs and to achieve a working unity in its ranks. Sacrifice is the essence of all good compromise, but one party to this tangle is not prepared voluntarily to shed prestige and the other its profits. And all the while, the sands are running out in the hour-glass.

Groundnut Cake

While it is true that a cobbler can think only as a cobbler and not as a king, it is time our leading business men realised that the country's economy is one and indivisible. Why I say this is because I was somewhat unpleasantly surprised by a plea put forward this week to the Government, by the President of the Bombay Oilseeds Crushers' Association, to allow exports of a limited quantity of groundnut oil cake, in view of larger output of groundnut this year. And what was still more surprising was the naive bait he held out to the Government that such export would enable the Government to sell more easily the production of fertiliser in its Sindri factory. This is just the type of argument which would appeal to a business man, and judging the Government by its own modest standards, the head of this body dangled this fly for the official fish to snap at.

As it is, with rapid increase in irrigation facilities, agriculture now finds itself woefully short of manure in the shape of groundnut cake. This, together with the unfair and misguided policies of some State Governments like Bombay, have kept oilcake prices beyond the reach of cultivators of garden crops. We have long been lamenting the poor yield of sugarcane in the country, but we have done little to augment the supply of oilcake at an economic price, to enable the cane growers to use this suitable form of manure in adequate quantity for securing a better crop. What is really wanted is not any permission to export groundnuts or any kind of oilcake, but a liberal export policy for castor oil, to encourage crushers to undertake crushing of castorseed, which they are reluctant to do at present. This will make a large supply of castor cake available to augment the yield from groundnut, with the result that oilcake prices would come down to an economic level. Though it may not benefit the oilseeds crushers directly, the logical thing to do, if we have an excess of fertiliser output, is to seek a market for the Sindri product overseas rather than to send out groundnut cake to feed some foreign industry or to enrich some foreign soil, at the cost of our own land.

Good-bye, General Motors!

That there is no room for sentiment in business is one of those half-truths, which we instinctively know to be untrue, but which at the same time is difficult to controvert. One of the most dangerous things in the world is a crisp telling phrase, which tickles our intelligence and flatters it into laziness and lethargy. I have heard scores of business men often disclaiming any truck with sentiment in their business relations and as frequently or oftener watched them, with no little amusement to myself, being influenced by sentiment in their business without the slightest sense of guilt or shame. They are none the worse business men for this, and I think all the better of them when I find that business men are neither as hide-bound, tough or cynical as they would have us believe. Except for those who are monsters and not men, sentiment is bound to creep in now and then in all their relations—business, official, formal or otherwise. I would go further and suggest that even in our relation to the physical world, as distinguished from that of live things, there cannot but be an emotional fringe to our thoughts and actions.

I am, therefore, not in the least ashamed at the regret I feel at the announcement of the impending closing down of General Motors

(*Continued in first column*)

SHORTFALL IN FIVE-YEAR PLAN INDICATED

"ADVERSE EFFECTS OF DEFICIT FINANCING NEGLIGIBLE," SAYS FINANCE MINISTER

(From A Special Correspondent)

NEW DELHI, *9th March*

THE Council of States has secured greater prominence during the last two weeks than the House of the People. This is because of the fact that the discussions alike on the Railway and the Central Budgets were first initiated in the former and the spokesmen of the Government had to reply to the criticisms of members in the Council of Elders at first. As a result, the speeches in the House of the People on the merits and demerits of the Railway and the Central Budgets have lost their vigour to a large extent, inasmuch as most of them have been mere repetition of the points raised by the Elders.

DELHI LETTER

Generally speaking, the criticisms of many members were ill-informed and prejudiced, some of them even lacking elementary knowledge on public finance and budgets. Most criticisms centred round individual viewpoints. The members were largely critical of new taxation measures, particularly new excise duties, but were unable to show alternatives for financing the development expenditure. They were equally critical in regard to the repercussions of deficit financing. Their speeches appeared to exaggerate largely the possible ill-effects of deficit financing on the economy of the country. It is regrettable that some of the veteran Parliamentarians such as Mr. N. G. Ranga lacked proper perspective and advocated that State Governments should not "raise tax revenues and impose them on the shoulders of agriculturists." It will be better if all these Parliamentarians read and digest the latest report of the Bernstein Mission carefully. One notable feature of the debate, however, was its complete unanimity to the effect that the country should review the development expenditure from the point of view of the latest international development, namely, the U.S. military aid to Pakistan. In fact, there was no criticism about the size of defence expenditure, but what the members emphasised was that the country should manufacture all defence stores within the country, establish all defence industries and should not depend on foreign countries for imports of essential defence equipments.

Manufacture of Defence Equipment

The last mentioned criticism naturally made the Deputy Minister for Defence intervene in the debate. He told the members that the Defence Ministry was already aware of this aspect of the problem and that steps were being taken to strengthen the defence economy of the country. In this connection, the machine tool prototype factory at Ambarnath was being very useful. The Minister informed them that a small arms factory in Kanpur had already begun to manufacture certain types of machine guns and that a new type of ammunition had been developed. When the electronics factory went into production, the armed forces would become more or less self-sufficient in signalling equipment. He assured the Council that the Government was trying to go ahead with regard to the establishment of defence industries and negotiating with some foreign countries for the acquisition of new machinery for the manufacture of more important defence items. The Minister also stated that his Ministry was collaborating with other Ministries of the Government of India and the private sector to ensure that defence requirements, such as transport vehicles, optical glass, and special steel and alloys, were borne in mind in planning general industrial development. He avoided disclosing information on the steps that the Government would take in regard to manufacture of jet planes and tanks, but it is hoped that the Government would be alive to the production of these important defence equipments which are very necessary for modern warfare.

As usual, the reply of the Finance Minister, Mr. Chintaman Deshmukh, to the budget debate was very elucidative and convincing. He admitted that the country was not able to spend money on various development schemes according to schedule and asserted that, even if the present Plan was not fully realised and only 85 to 90 per cent. results were achieved, it would be creditable on the whole. According to the latest available figures, the Central and States expenditure in 1951-52 amounted to Rs. 262.05 crores and to Rs. 271.18 crores in 1952-53, as against the revised estimate of Rs. 323.03 crores. As compared with the budgetted figure of Rs. 413.80 crores for 1953-54, the total would amount to Rs. 411.61 crores. For 1954-55, the figure is placed at Rs. 564.65 crores. Thus, the development expenditure under the Plan during the first three years aggregated Rs. 944.8 crores and not Rs. 1,000 crores as estimated earlier. This leaves a balance of Rs. 1,350 crores to be expended in the next two years of the Plan. "This is indeed a very formidable task," observed the Finance Minister in this connection, and stated that "it is towards the discharge of this onerous duty that I have taken courage in both hands and propose to indulge for the first time in deficit financing to a significant extent."

Mobilisation of Resources

The Finance Minister was optimistic that adverse effects of deficit financing on the economy of the country might be negligible. He estimated that "the actual deficit financing will be of the order of Rs. 500 to Rs. 600 crores, even if we want to complete the Plan during the next two years." In other words, even this quantum of deficit financing is not likely to take place because of the expected shortfall in the total development expenditure which is now computed at about Rs. 250 to Rs. 350 crores during the entire Plan period. According to Mr. Deshmukh, out of the Rs. 250 crores deficit financing envisaged for the forthcoming year (1954-55) about Rs. 100 crores might be in the nature of corrective to deflation—or, in other words, it would go to finance production—and Rs. 75 crores might be obtained by import surplus or a balance of payments deficit. The inflationary potential might thus be of the order of Rs. 75 crores and it would be spread over the whole year and would not be "too large a proportion" of the money supply of Rs. 1,700 crores. The Finance Minister stated that the Government would be carefully watching the whole situation from time to time and take suitable action to maintain stable economic conditions. In regard to new taxation measures, he was of the opinion that the country would have to depend on more taxation in the indirect sphere in the coming years and that Central excise would continue to expand. Their effects on the living costs would be negligible. He declared that the country would have to rely entirely on its own resources in the coming years for financing development plans and suggested that the nation must have to tighten its belt, since the scale of foreign assistance in the coming years might not be of a large scale for one reason or another.

The rice deal with Burma, which was announced by the Food Minister, Mr. Kidwai, yesterday in Parliament, smacks more of politics than economics. As per agreement, India is to get 900,000 tons of rice from Burma as a result of a three-year agreement signed between the two countries. The entire quantity is to be supplied this year at the rate of £48 per ton. The total value of these imports will amount to Rs. 57.60 crores, excluding transport charges. The price paid is considered high, especially, as the ruling rate in the country is about £35 per ton. It is reported that about £15 per ton may be adjusted towards the debt repayment by Burma; on this calculation, Burma will repay Rs. 17.5 crores of its debt which is now calculated at about Rs. 72 crores, including interest. Since India is paying a higher rate for Burmese rice, it can be stated that India will be waiving away a substantial portion of its debt due from Burma.

(Concluded from next column)

the export of motor vehicles has been resumed in all its old vigour. The sterling area as a whole is becoming an increasingly good market for British exports, but we are still left with a query whether the American recession is going to throw a shadow over the trade of the sterling area before long or not.—*All Rights Reserved.*

RESERVES OF STERLING AREA RISE

POSITION WITH E.P.U. BETTER

(From Our Own Correspondent)

LONDON, *6th March*

THE gold and dollar reserves of the sterling area have been creeping upwards for the last three months and have now reached £923 million. The drop in December, as compared with that in November, was due to the incidence of the American and Canadian debt payments, and if these payments had been spread over the previous months, we should have seen a steady rise ever since the low point in the summer of 1952. But there is no doubt that the steepness of the rise has been greatly diminished in recent months. This makes the increase in February of nearly £15 million all the more welcome.

LONDON LETTER

It is, however, difficult to draw from this any positive conclusion as to the strength of the continued improvement in the sterling area's gold and dollar balances. It is well-known that the latter consist of three items: the first, the general trade balance; the second, the settlements made monthly between this country and the European Payments Union—the exact amounts of which are governed by the state of the account between the sterling area and the E.P.U. and do not, in the short term, necessarily reflect the balance of trade—and, finally, the special items such as American Defence Aid. It is the first of these three groups which is most significant, and it is, accordingly, disconcerting to find that the strong favourable balance which ran through all last year has been gradually diminished in recent months.

In the first half of 1953, this balance averaged over $36 million per month and in the second half of the year over $42 million per month. But in January, 1954, the favourable balance was no more than $14 million per month, while in February, it had dwindled to the vanishing point of $2 million. If there is one grain of comfort that can be derived from these figures, it is that they are not inflated by improved terms of trade. The terms of trade of this country have remained fairly stable over recent months—if anything, the more competitive prices that have had to be quoted for British exports balancing out any gains that were formerly made on falling raw-material and foodstuff prices. Thus any favourable balance on general trade account represents a genuine export surplus in physical terms. This holds the further promise, that if export prices can be held there is likely to be further gain to come from the reduced prices for raw materials, etc.

Picture Better

As regards the sterling area's position with the E.P.U., the picture is now slightly better. In the first half of last year, there was a favourable balance of over $20 million per month, but in the second half of last year, we were running steady deficits with Western Europe averaging some $4 million a month. This average deficit continued through January, but February has shown a change with a surplus of $7 million. This is really encouraging and is no doubt in part due to the great concentration which in months past has been paid to the need to increase exports to Europe. Such exports now yield 50 per cent. gold, and will go on doing so, until the sterling account with the E.P.U. has become substantially more favourable to the United Kingdom.

Defence Aid has little new about it. For the first quarter of last year receipts on this account averaged $35 million a month and in February the figure is little less than $31 million. Nevertheless, the income this year, on this account, will not be as great as last year. If January and February are averaged we get the interesting picture of $23 million per month on "special," i.e., Defence Aid, etc., account; $2 million per month from the E.P.U.; and $8 million on ordinary trade account from the rest of the world. The predominant part being played at present by Defence Aid is thus clearly shown, and such Aid accounts for the greater part of the average increase of over £11 million a month in each of the last two months.

As regards the future, the impression gaining ground is that the prospects of trade with America are diminishing with the continued steady fall in the volume of business activity in that country. Nevertheless, the influence of this does not so far appear to have spread outside the U.S. and in the current month, for instance,

(Continued in previous column)

AMERICAN LETTER

PRESIDENT'S APPROACH TO BUSINESS SLUMP HAS SOLID BACKING

CURRENT BUSINESS IS PICKING UP NEW ORDERS

(From Our Own Correspondent)

NEW YORK, *4th March*

SENATOR Joseph R. McCarthy and his investigation, particularly his clash with Army Secretary, Mr. Stevens have not only been a great shock to the United States, but the Senator's behaviour is threatening to split the Republican Party. President Eisenhower himself, in one of his recent Press Conferences, demanded "fair play" in Congressional investigations, but the Senator countered that the Army had been covering up Communists.

Public mail in some radio stations and newspapers is reported running about 50-50 pro and con McCarthy. His supporters maintain, he is doing a patriotic service to the United States and his opponents charge that his motives are strictly political, that he wants to keep himself in the public eye, that he eventually wants to run for President and that he is doing irreparable harm to the spirit of American democracy at home and abroad. His attack on the United States Army has incensed many people especially, because for what it might do to the morale of officers and men at a time when their full loyalty is imperative.

Washington, New York and grass roots reaction to the conference at Geneva, scheduled to meet on 26th April, to settle outstanding Asiatic problems, is mixed, but the possible chance to dispose of the Korean deadlock is welcomed. However, there are some misgivings as to the forthcoming talks on Indo-China. From the standpoint of global strategy, U.S. officials regard Indo-China as more important than Korea. Hence, the U.S. has been steadily increasing its aid to the Indo-Chinese.

The overall American plan has been to train the fighting units there rigorously during the coming months under a U.S. military mission and to encourage them to launch a hard-hitting offensive next winter, lavishly equipped with U.S.-supplied arms and ammunition.

Thus, informed quarters here maintain, the West can hold the strategic Indo-Chinese gateway to South-East Asia. There are real apprehensions, however, that the French who are more than weary of this war, may be inclined to settle for even a bad truce at the coming conference.

Government Spending

In top political and business circles, President Eisenhower's approach to handling the business slump has solid backing. In one of his latest statements on the subject, he said that if employment does not pick up seasonally in March, he will recommend large Government spending for all sorts of purposes. One of the difficulties is, however, that the statistical facts for March may not be available until April and by that time, conditions may or may not have worsened.

Also, if anything has to be done legislatively, the process is tedious and time consuming. The Administration is, however, quite flexible in its thinking and forthright in its conviction that a severe recession has to be avoided under all circumstances for international and domestic social reasons. At this point, the President is criticised for not moving more boldly more rapidly to avoid even a semblance of a real slump.

To a very large extent, this criticism and impatience is motivated by political considerations. The Republicans, with an eye on the forthcoming November elections, are not unaware of the fact that, almost always, the party in power has its margin of seats trimmed in by-elections and in mid-term voting between two Presidential elections.

Some Republicans are quite certain that the surest way to hand control of Congress to the Democrats is to let unemployment rise between now and November. It is generally admitted, on the other hand, that if a business upturn comes, as the President predicts, Mr. Eisenhower's prestige will rise to a new high.

Such relatively narrow political considerations are, of course, a bit silly. President Eisenhower, in the public mind really, is a personality all his own and is not too intimately connected with the Republican Party except that he ran on its ticket.

His liberal ideas draw as much support from liberal Democrats as well as from Republicans without regard of party labels with the radicals of either end opposing him. As a practical matter, therefore, the realisation of his very sound programme does not depend solely on the victory of the Republican Party in November, even though professional politicians may think differently.

February Survey

A bright spot in the current business picture is an indicated pick-up in new orders. The February survey of the National Association of Purchasing Agents states that, while production, prices, inventories and employment continued to decline in February at about equal rates as in January, there was an increase in new orders.

The gains exactly balanced the number of decreases, a condition which has not existed in these monthly reports since March, 1953. Also, the number of concerns showing order gains was a high since January, 1953. In other words, the indication seems to be that much of the adjustment between output—cutbacks in many instances—and orders has been made.

The stock markets continued to give a good account of themselves, despite declining business indices. It can only be concluded from that investors believe the recession will not expand materially and, indeed, will be over shortly.

When such stocks as General Electric and American Telephone and Telegraph Company lead the parade, it can only be decided that investors are in a buying frame of mind. No pools control the market action of such industrial giants in the stock market list.

Moreover, pending orders for essential building equipment may be a better clue to 1954 construction prospects than the opinion of slide-rule forecasters. According to one equipment maker who does not receive orders unless financing plans have reached their final stage, 1954 will be another big building year.

International Steel Company, Evansville, Indiana, reports, for example, an order backlog for entrance installations in office and commercial buildings 24.7 per cent. about that of last year. Its production of industrial and aircraft hangar doors is to be increased 30 per cent., while its structural steel fabricating schedule is the same in 1954 as in 1953. Declining production figures are due almost entirely to the automobile industry which represents about one-sixth of U.S. output. There is nothing to be alarmed about at this time.—*All Rights Reserved.*

PAKISTAN NOTES

INDO-PAKISTAN CANAL WATER DISPUTE

WORLD BANK PRESIDENT'S PROPOSALS

CONSIDERING the thick fog that has been hanging over the political and economic relations between India and Pakistan, the reported specific proposals of the World Bank President for the settlement of the canal water dispute must indeed be greatly welcomed. The sharing of canal waters, it will be recalled, is one of the major unsolved economic issues between the two countries. It was in February, 1952 that the President of the World Bank, Mr. Eugene R. Black, took the initiative with a view to exploring the possibilities of securing an agreed solution. After prolonged discussions with the engineers of India and Pakistan and in consultation with his technical experts, the President is reported to have put forward a specific scheme which is under the consideration of the Governments of the two countries. The sum and substance of this scheme, as described in the American Press, is as follows:

The scheme envisages construction of a huge dam across the River Indus north of Attock where the natural surroundings provide an admirable site. Water from the reservoir is to be taken by means of canals dug in Pakistan territory about 300 miles down, linking the Rivers Jhelum, Chenab, Ravi and Sutlej. Once this is done, the entire canal system in Western Pakistan can be fed by the waters of the Indus, Jhelum and Chenab, thereby making Pakistan entirely independent of supplies from India. For its share, India will be left with the other three rivers, Ravi, Beas and Sutlej, to satisfy its requirements. It is estimated that it would cost something like Rs. 90 crores to build new canals in Pakistan. A suggestion has been made that India should pay about Rs. 60 crores to Pakistan towards the cost of construction of the canals that would be necessary to replace the existing water-supply from India.

As already stated, the scheme is being examined by the Governments of India and Pakistan. In its long-term aspect, the scheme of the World Bank President is considered to be a carefully-thought-out solution. The main difficulty, however, it is stated, will be in regard to the period which Pakistan may take for the construction of the canals and how, in the intervening period, the waters of the Beas and Sutlej are to be utilised. To quote one report: "The scheme may easily take some ten or fifteen years to complete and, if, during that period, India were to continue to supply water to Pakistan on the existing basis, the scope for irrigational development in the northern States of East Punjab and P.E.P.S.U. could be severely restricted. Pakistan is apparently unwilling to embark on a long-range project and seems content at the moment to demand that the existing usage of waters must remain untouched and that only surplus water, if any, could be divided equitably between the two countries."

Taunsa Barrage Project

With the grant of $3.5 million for the year 1954 by the U.S. Government, the stage has now been set for the commencement of work on the Taunsa Barrage Project, a major irrigation scheme included in Pakistan's water and land development programme. This grant is provided in the agreement signed at Karachi recently by the Governments of Pakistan and the U.S. under the F.A.O. Economic and Technical Assistance Programme for 1954. The U.S. contribution of $3.5 million is to be in the form of technical services and equipment; a workshop is to be established in Pakistan for the manufacture of gates, gears, etc., required for the barrage with the equipment and material supplied by the U.S. The Pakistan Government will be spending during the current year a sum of $9 million.

The total sum that the Governments of the two countries will spend on the project during 1954 thus amounts to $12.5 million, against the aggregate outlay of Rs. 30 million. More U.S. assistance will depend on a further agreement between the two Governments.

The Taunsa Project envisages construction of a concrete diversion dam about a mile long across the Indus River at Taunsa near Dera Ghazi Khan in Punjab (P). It also includes the construction of two feeder canals to serve the existing inundation canals and a new canal to serve new lands being brought under cultiva-

(Concluded from next column)

tion. The project also envisages the construction of a railway bridge and a road bridge over the barrage. With the completion of the project, water will be available immediately for the irrigation of 710,000 acres of land. At present, the area to be commanded by the new barrage is served by primitive inundation canals and thus the full productive potential of land remains unrealised. By ensuring supply of water, the total food production in the area will be increased by 132,000 tons.

Jute Output

The long-awaited decision of the East Bengal Government with regard to the areas that should be devoted for jute cultivation during the 1954-55 season was announced on Wednesday last week. According to the decision, the areas to be licensed for 1954-55 will be three-sixteenths of the basic acreage of 1950 in 13 subdivisions and one-fourth in the rest of the Province. The cultivation of *mesta* variety has been "absolutely and totally prohibited." The area now decided upon is substantially higher than the previous season's acreage of 1,907,000 acres. Consequent on the upward revision in acreage, the aggregate yield of jute crop is estimated higher at 4.2 million bales, as against 2.5 million bales in 1953-54.

(Continued in previous column)

WORLD SILVER POSITION DURING 1953

SUPPLIES FREELY AVAILABLE WITHOUT WIDE FLUCTUATIONS IN PRICES

FREE availability of supplies without any significant fluctuations characterised the trend of the world silver market during the year 1953, according to the latest annual review of the market published by Messrs. Handy and Harman, New York, one of the world's leading dealers in precious metals. The forces of supply and demand, it is stated, remained in "unusually close balance" and prices were somewhat higher than in 1952. Thus, the average price of silver quoted in New York during 1953 was 85.188 cents per ounce, as against 84.941 cents in the previous year.

The supply position of silver during 1953 was quite comfortable, despite the fall of 3.2 per cent. in the aggregate world output, the quantity actually produced being 202.5 million ounces, which compares unfavourably with 209.1 million ounces in 1952. This was due to the perceptible decline in consumption, from 250.2 million ounces to 238.6 million ounces, which represents a drop of nearly 5 per cent.

Trend of Production

The statement below gives the trend of world silver production and consumption in 1953, as compared with the previous four years:

World Silver Production
(In millions of ounces)

	1953	1952	1951	1950	1949
Mexico ..	45.0	50.4	43.8	49.1	49.5
United States ..	35.0	40.2	40.0	42.1	34.6
Canada	30.0	25.2	24.2	23.2	17.6
Peru	17.5	17.1	14.2	18.4	10.6
Bolivia ..	7.5	7.1	7.2	6.6	6.6
Other South and Central American Countries	7.5	6.9	6.5	7.2	7.0
Total Western Hemisphere ..	142.5	146.9	136.6	141.6	125.9
Outside the Western Hemisphere ..	60.0	62.2	62.0	50.4	48.1
Grand Total ..	202.5	209.1	198.6	192.0	174.0

World Silver Consumption
(In millions of ounces)

	1953	1952	1951	1950	1949
Arts and Industries :					
United States ..	105.0	95.0	110.0	120.9	90.0
Germany	17.5	11.3	10.0	7.8	6.0
Great Britain ..	11.5	10.4	10.6	12.4	11.5
Japan	9.6	8.5	8.5	..	1.6
Canada	4.4	4.2	4.6	5.2	5.2
Mexico	1.0	1.0	2.2	2.4	1.2
Other Countries ..	13.0	15.5	17.8	9.8	17.0
Total ..	163.8	142.1	163.5	157.4	132.5
Coinage :					
United States ..	42.8	57.8	44.4	24.6	13.5
Saudi Arabia ..	..	23.0	20.8	..	20.6
Germany	..	8.3	.2	..	..
Mexico	14.1	3.3	4.5	3.8	.9
Canada	3.9	4.2	3.1	3.4	1.2
Belgium	8.3	..	5.8	5.7	4.3
China	..	..	..	..	32.5
Other Countries ..	11.7	6.5	11.4	6.7	10.8
Total ..	74.8	103.1	90.1	44.2	83.8
Grand Total ..	238.6	250.2	253.6	201.6	216.3

It will be evident from the foregoing statement that the fall in the world output of silver during the year under review was shared principally by Mexico and the U.S., the world's largest producers of silver. The decline in output in these two countries was of the order of 5.4 million ounces and 5.2 million ounces, respectively. The countries outside the Western Hemisphere also accounted for a fall in output from 62.2 million ounces to 60.0 million ounces. Australia remained the most important single producer. Available reports place that country's production at 11 million ounces in 1953, about the same as the previous year. Estimates regarding Japan indicate production of about 6.8 million ounces as compared with about 7,500 million ounces in 1952. Production also increased in Western Germany which accounted for about 2.6 million ounces in 1953, as compared with 1.9 million ounces in the previous year. Information from other countries, particularly Russia, is meagre. Canada in the Western Hemisphere, on the other hand, accounted for a substantial rise in output to the extent of 5.2 million ounces. Peru, Bolivia, and other South and Central American countries too recorded improvement in output.

The downward trend in the world consumption of silver during the year under review was entirely under coinage, the quantity of silver actually used in coinage declining by as much as 44.5 per cent., thanks to the appreciable fall in the U.S. from 57.3 million ounces to 42.8 million ounces. Consumption of silver by arts and industries, however, was higher by over 15 per cent. The major part of the increase was accounted for by the U.S. and Germany, which consumed 105 million ounces and 17.5 million ounces, as against 950 million ounces and 11.3 million ounces, respectively. Incidentally, it is interesting to note that consumption of silver in the U.S. accounts for 61.5 per cent. of the total world consumption.

As already noted, the arts and industries in the U.S. consumed 105.0 million ounces of silver in 1953, an increase of 10.5 per cent. over 1952. Consumption for silverware and jewellery increased somewhat from the previous year, but the proportion of silver used in this country for industrial purposes, as distinct from the arts, continued to rise, and there is every indication that this trend will become increasingly evident in the future. Developments in the electrical and electronic fields, in particular, as well as expansion in the more established uses of silver brazing alloys, indicate a growing realisation of the unique advantages of silver and silver alloys for many purposes.

Silver Imports into U.S.

Total imports of silver into the United States during the year 1953 amounted to about 102 million ounces. This represents an increase over 1952 of nearly 35 per cent. resulting from substantial receipts of Cuban coin, whereas none had been shipped in 1952, and also from a marked increase in arrivals from Mexico. About 92 million ounces, or more than 90 per cent. of total imports, came from Western Hemisphere countries. Mexico shipped 26.3 million ounces, an increase of over 63 per cent. from 1952. Canada shipped 20.6 million ounces, an increase of 8.4 per cent. over the previous year, and from Cuba 19.5 million ounces were received almost entirely in the form of demonetised pesos. Imports of 14.1 million ounces from Peru were the same as in 1952, and of 4.3 million ounces from Bolivia represented a slight increase. All other Western Hemisphere countries shipped 7.7 million ounces, an increase of 1.5 million ounces over the previous year. From Europe, including the United Kingdom, 5.1 million ounces were received, and from Japan 2.3 million ounces. All other countries shipped 2.1 million ounces. Total exports amounted to 6.2 million ounces, but the major portion represented a shipment to Cuba of approximately 4.2 million ounces in the form of subsidiary coin minted for the Cuban Government at the Philadelphia Mint. The silver for this order was obtained from stocks accumulated in New York out of imports in previous years of demonetised one-peso coins. Based on these figures, net supplies available to the market from foreign sources amounted to about 101 million ounces.

During the first 11 months of 1953, Treasury stocks of silver in bullion and coin declined by 11.2 million ounces to 1,926.4 million ounces. A substantial reduction in free stocks and a small reduction in silver dollars held by the Treasury were offset to some extent by an increase in silver bullion securing silver certificates. This increase resulted almost entirely from purchases of U.S. production. Silver outside the Treasury, that is in the form of coin in circulation or held by banks, increased by 43.6 million ounces. Unobligated bullion in the Treasury, or free stocks out of which sales to industry are permitted, has been declining rapidly over the past several years, due to the requirements of the U.S. for subsidiary coin. On 31st December, 1953, free stocks amounted to 50.4 million ounces, a decline of 28.7 million ounces from the end of 1952. At this rate, these supplies will be exhausted in less than two years.

The stability in the New York silver market witnessed in 1953 has been attributed, to a large extent, to the market policies followed by the Bank of Mexico. For the past six years, Mexico, through its central bank, has bought and sold silver in such a manner as to stabilise the price to the greatest extent possible. In general, the Bank has bought Mexico's own silver production at the rate published in New York when producers have been unable to find buyers in the regular market and has sold out of stocks when trade demand has been strong. For the year 1953, total acquisition by the Bank of Mexico amounted to 38 million ounces. About 30.7 million ounces were obtained through purchases of Mexican production and about 7.3 million ounces through withdrawals of demonetised silver coin, mostly in the form of the old .720 fine one-peso pieces. Total sales were about 19.3 million ounces, which included 10.7 million ounces for New York delivery, 4.9 million ounces for shipment to Western Germany, 2.4 million ounces for France, and the balance of 1.3 million ounces to other countries. Mexico made no sales to Saudi Arabia during 1953, whereas sales to that country during 1952 and 1951 represented one of its most important outlets for silver. In addition to foreign sales, Mexico used about 14.1 million ounces for domestic coinage. This figure consisted of 12.9 million ounces used in the minting of .720 fine five-peso coins and 1.2 million ounces used for .300 fine 25-centavos pieces. On balance, the Bank of Mexico increased its holdings by 4.5 million ounces in the course of the year, and it is believed that its total silver stocks as on 31st December, 1953, ranged from 30 million to 35 million ounces.

The arts and industries in Canada consumed about 4.4 million ounces of silver during 1953, a rise of 4.8 per cent. over the previous year, on account of increased demand for sterling. Consumption of silver in the arts, as opposed to industrial uses, accounted for more than 60 per cent. of the total. For coinage purposes, the Canadian Mint used less silver, being 3.9 million ounces, as against 4.2 million ounces.

London Silver Market

There were two developments of interest in the London market in 1953. One was the announcement by the Bank of England on 11th December, 1953, that silver required for essential industries would no longer be provided from official stocks, but that purchases in the dollar area would be permitted if supplies from soft currency areas were insufficient. The other development, of perhaps greater immediate significance, was the purchase of a very substantial amount of silver from Russia during the last four months of the year. The announcement by the Bank of England represents one step towards a freer market in London, but a step which is definitely limited. In the first place, there has been no relaxation of licensing regulations and no expansion in the category of permitted uses. Secondly, a week before this announcement, the official price in London had dropped 1d. per ounce to 73¾d. indicating that the trade had access to ample supplies without recourse to the Bank of England whose selling price remained at 74d. The steady improvement in Great Britain's foreign exchange position has had the effect of eliminating the premium for silver originating in the sterling area, with the result that some of this silver is currently being sold for internal consumption. No official state-

SUBSTANTIAL FALL IN PROFIT OF CENTRAL BANK OF INDIA

DEPOSITS LOWEST SINCE 1946

THE year 1953 witnessed the return of more stable economic conditions in India than in the previous year, but it can by no means be said to have contributed to the more prosperous working of banks. On the contrary, the year proved to be a strenuous one for these credit institutions, in that it saw the banks inability to employ their resources—which did not show any marked expansion—as fully as possible and that too at a less remunerative return. With the growing tendency for the public funds with the banks to be switched over from current accounts to call and fixed deposit accounts, banks were obliged to pay higher rates of interest on these deposits, without any corresponding rise in interest rates charged on advances in many cases. In addition, administrative costs continued to remain on the high side, with the cumulative result that there was a shrinkage in the earnings of banks in general, the extent of contraction being more marked in the case of bigger banks. A typical example of this trend is provided by the audited accounts of the Central Bank of India Ltd. (Managing Director: Mr. H. C. Captain, Bombay) for the year ended 31st December, 1953.

Deposits of the Bank as at the close of the year under review disclose a contraction of Rs. 5.24 crores over the year and stood at the lowest level for the last seven years. The gross income is lower by over Rs. 8 lakhs, while the outgo by way of interest paid has gone up by Rs. 13.5 lakhs. Similarly, expenses too have staged a further rise of over Rs. 2 lakhs. The profit has, therefore, suffered a marked decline. Thus the profit, before providing for depreciation and sinking fund in respect of lands and buildings, has fallen by more than Rs. 24 lakhs from Rs. 104.51 lakhs to Rs. 80.35 lakhs, the lowest since 1942 when it amounted to Rs. 49.51 lakhs. The necessity to provide as much as nearly a fourth of this profit for depreciation on investments has prompted the Directors to reduce the dividend by 2 per cent., that is, from 14 per cent., a level which the Bank had maintained during the previous six years, to 12 per cent.

The Bank has thus had the unenviable distinction of being the first and only leading commercial bank in India to cut its dividend for 1953. Except in 1946, when the Bank reduced the dividend from 14 per cent. (including a bonus of 1 per cent.) to 6 per cent. on account of the increase in the capital, the Bank had not effected a cut in the distribution to the shareholders since 1936.

A comparative idea of the results of the Bank for the last four years can be obtained from the following table:

(In lakhs of rupees)

	As on 31st December			
	1953	1952	1951	1950
Capital ..	3,14.55	3,14.55	3,14.55	3,14.55
Reserve and contingency fund ..	3,58.28	3,58.28	3,58.28	3,58.28
Sinking fund ..	41.51	40.80	40.08	38.74
Total deposits ..	117,97.85	123,21.18	125,47.88	126,80.73
Borrowings from other banks	5,03.75	39.61	5,64.94	1,27.10
Advances (including bills purchased and discounted) ..	58,81.48	55,36.45	61,17.20	50,67.17
Investments	68,54.80	62,96.25	65,96.05	69,51.85
Cash	16,94.34	16,28.89	17,29.62	17,68.06
Balance-sheet total ..	143,48.02	142,66.58	155,11.83	149,59.89
Ratio to deposits of—	%	%	%	%
Advances	49.4	44.9	48.7	39.9
Investments* ..	45.4	50.4	46.7	53.0
Cash	14.4	13.2	13.8	13.4

* The ratio is arrived at after taking into account the investment earmarked against borrowings from other banks.

The most significant change noted on the liabilities side is the sharp decline in deposits by Rs. 5.24 crores over the year 1952, which is very much greater than that in the previous two years, thus bringing the total decline for the last three years to Rs. 8.84 crores. The tendency to switch over from current deposits to higher interest-bearing deposits is evident from the drop from Rs. 61.69 crores to Rs. 55.64 crores in current, call, and contingency accounts during the year 1953 and the expansion in fixed deposits and cash certificates from Rs. 34.81 crores to Rs. 35.79 crores. Savings bank deposits account for a fall of Rs. 1.16 crores, from Rs. 27.70 crores to Rs. 26.54 crores. Consequent on the fall in the principal resources, the Bank has had to borrow from other banks larger sums to meet the pressure for funds. The outstanding of such borrowings at the close of the year was Rs. 5.04 crores, as against only about Rs. 40 lakhs a year ago. On the assets side, advances have gone up by Rs. 2.95 crores, in distinct contrast to the decline of Rs. 5.81 crores in the previous year. Of this increase, loans, cash credits and overdrafts account for Rs. 1.18 crores and bills purchased and discounted for Rs. 1.77 crores. The rise in advances in the face of a decline in deposits has resulted in the advance ratio going up from 44.9 per cent. to 49.4 per cent. At the end of 1950, it may be noted, the ratio stood only at about 40 per cent. Investments (at book value) have been reduced by Rs. 3.72 crores, mainly on account of the fall in Government and trustee securities, by Rs. 4.23 crores, that is, from Rs. 55.10 crores to Rs. 50.82 crores, and in shares from Rs. 3.88 crores to Rs. 3.74 crores. Investments in debentures or bonds, on the other hand, show a rise from Rs. 70.87 lakhs to Rs. 84.82 lakhs and other investments from Rs. 2.58 crores to Rs. 3.13 crores. The market value of the total investments stands at Rs. 55.41 crores, the shortfall from the book value being of the order of Rs. 3.13 crores, which is entirely accounted for by Government and other trustee securities. It is also significant to note that during the last three years, the Bank's investments have gone down by nearly Rs. 10 crores. Cash balances show a rise of only Rs. 65 lakhs, so that the liquidity ratio has contracted from 63.6 per cent. to 59.8 per cent. At the end of 1950, it stood at as high a level as 68.4 per cent. But the liquidity ratio at the end of 1953 is still at a very comfortable level.

During the year under review, the Bank opened a branch at London. Branches were also opened at Jaipur and Howrah, five sub-branches, four pay offices and two sub-pay offices at various centres. During the year, one sub-branch and three pay offices had to be closed, as they were found to be unremunerative.

The synopses of the Bank's balance-sheets as at the close of the last four years are compared in the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950

Carry forward ..	16.50	17.28	17.66	18.04

† Includes post-war refund of E.P.T.

The drop of Rs. 8.21 lakhs in the gross income is mainly accounted for by the decline of Rs. 10.72 lakhs in commission, exchange and brokerage earned. This is partly due to the fact that last year this item included the post-war refund of E.P.T. deposits. Despite the fall in deposits, interest paid on deposits and borrowings is up by Rs. 13.53 lakhs, because of higher rates of interest paid on deposits and larger borrowings. It will be observed that over the last three years, while deposits and borrowings have declined by over Rs. 5 crores, interest paid on these has risen by over Rs. 57 lakhs. This gives an idea of the extent to which banks with huge turnover have been called upon to nurse the capital borrowed. As regards expenses, items relating to salaries, allowances and contributions to provident fund are lower by over a lakh of rupees, while a rise in other items under this head has contributed to the increase in total expenses. It is, however, gratifying to note that the increase in expenses is very much smaller than that in the previous year and more so than in 1951. The lower provision for investment account is presumably due to the decline in the Bank's investments, particularly those in Government securities.

CHARTERED BANK MAINTAINS DIVIDEND ON INCREASED CAPITAL

The strength of The Chartered Bank of India, Australia and China, which recently attained its centenary, and the success of its operations may be gauged by the further transfer of £500,000 from contingencies account to the reserve fund which now stands at £5,000,000. The Bank has thus transferred £1,500,000 to the reserve fund in the last two years, of which £500,000 was capitalised in April, 1953, bringing the capital of the Bank to £3,500,000.

At the annual general meeting of the stockholders to be held in London on 31st March, 1954, the Court of Directors will recommend the payment of a final dividend of 7 per cent. actual, subject to income-tax, which, inclusive of the interim dividend at the same rate paid in October last, makes a total of 14 per cent. for the year 1953 on the increased capital.

Further allocations are: £125,000 to pensions fund, £20,000 to widows' and orphans' fund, £200,000 to Bank premises, and £75,000 to contingencies.

The balance of profit and loss account, carried forward to next year, amounts to £403,513.

PUNJAB NATIONAL BANK STEPS UP DIVIDEND

An increase of Rs. 5.74 lakhs to Rs. 39.86 lakhs in profit is disclosed by the audited accounts of the Punjab National Bank Ltd. for the year ended 31st December, 1953. The profit for the year is a record for the Bank since 1948. With the sum of Rs. 1.93 lakhs brought in from the previous year, the amount available for appropriation is Rs. 41.79 lakhs, as against Rs. 39.46 lakhs in the previous year. Out of this sum, the Directors have transferred Rs. 12.50 lakhs (as against Rs. 15 lakhs in the previous year) to provision for income-tax, Rs. 10.25 lakhs (Rs. 2 lakhs) to the contingency reserve and Rs. 0.94 lakh (Rs. 1.46 lakhs) to the general reserve. The amount set aside for payment of bonus to staff is Rs. 7.50 lakhs, which compares with Rs. 5.48 lakhs provided last year. Charity account receives Rs. 0.50 lakh, as against Rs. 0.42 lakh. Last year, a sum of Rs. 7.92 lakhs was utilised for scaling down the Bank's assets in Pakistan under the Displaced Persons (Debts Adjustments) Act, 1951, but no similar allocation has been made this year.

The Directors had already distributed an *ad-interim* dividend at the rate of 8 per cent. per annum, free of income-tax, for the half-year ended 30th June, 1953, (as against 6 per cent. per annum for the corresponding half-year of 1952), absorbing Rs. 3.50 lakhs. They have further recommended payment of a final dividend at the rate of 8 per cent. per annum, free of income-tax, for the half-year ended 31st December, 1953, as compared with the corresponding distribution of 6 per cent. per annum last year. Thus, the total dividend for the year 1953 has been stepped up from 6 per cent. to 8 per cent., this being the second year in succession for which the dividend is being raised. Last year, it was increased from 4 per cent. to 6 per cent. The dividend for 1953, however, falls far short of that paid (12 per cent.) for the pre-Partition year of 1946. The final distribution of 8 per cent. per annum for 1953 requires Rs. 3.50 lakhs, leaving a surplus of Rs. 3.10 lakhs to be carried forward to next year's accounts.

"THE SAVINGS HABIT"

In an interesting brochure, *Four Simple Plans to Help You Live a Happier Life*, issued by it, the Palai Central Bank Ltd., Palai, Travancore-Cochin, seeks to describe how savings can be invested wisely. Citing the instance of four persons of different types, the Bank has done well to emphasise the advantages of cultivating the savings habit. The Bank does not stop merely at this emphasis. It further indicates the method of building up savings and investing them profitably. In fact, the Bank offers some attractive plans to the investing public, especially the small investors. Simultaneously with the brochure under review, the Bank has issued a *Family Budget Book* with a view to enabling one to keep an account of his income and expenditure, a periodical examination of which should ultimately lead him to control his expenses and thus to build up his savings.

EASTERN BANK LTD.

The working of the Eastern Bank Ltd. during the year 1953 has resulted in a net profit of £127,612, representing a small increase of £790 over that for 1952. With the surplus of £102,597 brought in from the previous year, the distributable sum stands at £230,109, as against £219,347. The Directors have transferred £30,000 to Bank premises account and £50,000 to the reserve fund, these being the same as in the previous year. The interim dividend for the year under review was raised from 2½ per cent. to 3 per cent., less tax, and with the proposed increase from 4½ per cent. to 5 per cent., less tax, in the final distribution, the total dividend for the year goes up from 7 per cent. to 8 per cent. The dividend for 1952, it may be recalled, was raised to 7 per cent. from 6 per cent. paid for the preceding six years. A sum of £106,109 is proposed to be carried forward.

MERCANTILE BANK OF INDIA

The Directors of the Mercantile Bank of India Ltd. have recommended a final dividend of 7 per cent., less income-tax, for the year ended 31st December, 1953, making a total of 14 per cent. for the year, the same as for the previous year.

NATIONAL BANK OF INDIA

A final dividend of 8 per cent. has been declared by the Directors of the National Bank of India Ltd. for the year ended 31st December, 1953. With a similar interim distribution made earlier, the total dividend is maintained at 16 per cent. for the eighth year in succession.

ROLE OF HANDLOOMS IN COUNTRY'S ECONOMY

LONG-TERM REMEDIES, NOT PALLIATIVES, THE REAL SOLUTION

WITH considerable publicity and propaganda, the All-India Handloom Board has organised a "Handloom Week." An attempt has thus been made, for the first time in textile history, to bring to the notice of the public the status of the weavers in the country's economy and the importance of promoting the production and sale of handloom products. The Handloom Week commenced on Sunday last with a fervent appeal by the Board to the public that the latter should co-operate with the Board's efforts at placing the handloom industry "on a sound and stable footing." The Union President, the Prime Minister, the Central and State Government Ministers and several others interested in the handloom industry have joined hands with the Board in wishing the industry a prosperous career.

Few would dispute the importance of organising the Handloom Week. For, in the present context of the buyers' market for textiles, not merely in India but the world over, there is urgent need for publicising the role which the industry plays in the economy of the country. The industry, it is claimed, provides a living for over 14 million people and meets about 20 per cent. of the clothing needs of the country. It is also a valuable source of foreign exchange, earning on an average about Rs. 5 to Rs. 7.5 crores per annum, the quantity of exports ranging between 40 and 60 million yards. Indian exports of handloom cloth have established markets in East and West Africa, Middle East and South-East Asian countries; Ceylon is the largest importer. The important handloom products exported are kailies, lungis, sarongs and Madras handkerchiefs.

Consumers' Sovereignty

Considering all these factors, many will appreciate the anxiety on the part of the advocates of the handloom industry to better the lot of the weavers which, there is no doubt, has not been quite happy for some time past. The efforts at focussing public opinion on the handloom trade and on its place in the country's economy must, indeed, be considered as welcome steps in the direction of giving impetus to the sale of handloom products. But this should not be stressed so far—as a few over-enthusiastic Congress Ministers are wont to—as to suggest that the consumer should use handloom cloth in preference to mill-made cloth *even though the latter is cheaper*. We have advisedly italicised the words relating to the price differential. It is necessary to point out that it is clearly impossible to ask the consumer to subsidise the handloom weavers at considerable cost amounting to several crores of rupees. What is worse, most of this additional cost will have to be met by the middle class which consumes the major portion of the cloth consumed in the country and the income of which is inelastic. In their anxiety to better the lot of a section of the population, represented by handloom weavers and their dependents, which is no more than 3 per cent. of the total population, the enthusiasts of the handloom industry are oblivious of the misery that their proposal will cause to the vast majority of the people in the country. At a time when utmost emphasis is being laid on the need to protect the interests of consumers throughout the world, it is highly regrettable that, in this country, attempts are being made to suppress or relegate to the background the consumers' sovereignty which, in fact, forms the major plank for ensuring the development of a solid and highly efficient textile industry.

Another Absurd View

Equally absurd is the view expressed by some that the mill sector today is indulging in unfair competition with the handlooms. Despite the steady and marked improvement in the production of mill-made cloth in recent months, the total supply available for domestic consumption has not been so large as to necessitate such unfair or uneconomic competition. On the other hand, the supply of cloth is well below the pre-war *per capita* availability of 16 yards. Further, the handloom cloth enjoys several advantages over the mill cloth. For instance, it is not, and never was, subject to irksome "production control." Again, it is not subject to a heavy excise duty. Nor is it liable to payment of sales tax. Practically every State has exempted the handloom cloth from sales tax, whereas the mill-made cloth is subject to both multi-point and single-point sales taxes, and that, at very high rates. On top of these, the Central Government has levied an additional excise duty of 3 pies per yard on all mill-made cotton cloth and rayon fabrics with the specific objective of giving financial assistance to the development of the handloom industry.

Technical Efficiency

Where then is the question of competition between handlooms and mills? If, in spite of all the aforesaid advantages, conditions in the handloom industry still continue to be none too happy, it is because the cost of its products is unconscionably high and also because the quality and finish are much inferior to mill cloth. This is the bare truth about the handlooms which, as we have ere now pointed out, cannot be camouflaged by any amount of sentimental outpourings or adverse propaganda against mills. Even at the risk of repetition, we wish to emphasise that, if the handlooms are to survive, they must be guided and helped to produce those varieties of cloth which will be bought by people who can afford to buy them. At the same time, steps must be taken to raise their technical efficiency to such an extent as to reduce the cost of production. The Prime Minister of India, Mr. Jawaharlal Nehru, has done well, therefore, to draw pointed attention to this aspect in his message for Handloom Week. Says Mr. Nehru:

"These efforts (to promote the production and sale of handloom products) are necessary and desirable, but they must be backed up by a constant attempt to improve the techniques employed by the handloom industry. I think that this is possible and, indeed, it is inevitable, if we are to stabilise this industry fully and make it progress."

This very aspect was also emphasised by Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, in the course of a talk broadcast from New Delhi on Sunday last. He observed:

"It is very necessary . . . for the weaver to make the fullest use of the latest improvements in the technique of production. Throw-shuttle looms are being gradually replaced by fly-shuttle looms. In many places, even the pedal loom has already come into its own. There is an equal need to adopt new and changing designs to suit the tastes of the consumer. The supply of improved equipment and instruction in new techniques and in the art of designing are also being financed by Government through the medium of such co-operative organisations. With production organised on these lines, the hondloom industry can look forward with confidence to the future. There is enough room in India for both the large-scale and the small-scale producer."

The foregoing account brings out the fact that the real solution to the problem of the handloom industry does not consist in providing palliatives; long-term remedies are needed. The approach to the problem should be not negative, that is, at the cost of the more efficient mill sector or the consumer, but positive. Among the positive and long-term measures, mention may be made of proper co-organisation among weavers, supply of adequate raw materials (including yarn), finance for production activities, improved implements, new designs and finishing, training in improved processes, and proper marketing arrangements.

CLOTH EXPORTS IN 1953

In a written reply to a question in the House of the People the other day, Mr. A. C. Guha, Deputy Finance Minister, said that the total quantity of cloth exported from India during 1953 was about 678 million yards, of which nearly 495 million yards were exported under bond without payment of excise duty and 183 million yards under claim for refund of duty. In respect of about 138 million yards out of the latter quantity, refunds amounting Rs. 54 lakhs had already been made.

TEXTILE WORKERS' RESPONSE TO CALL FOR HIGHER PRODUCTIVITY SLOW

CONCERN OVER PRICE MOVEMENTS IN COTTON

(From A Special Correspondent)

MANCHESTER, *2nd March*

THREE thousand firms throughout the vast industrial belt in North-West England are to have their power bills cut by £63,000 a year under price concessions announced by the North-Western Electricity Board. Mr. A. O. Johnson, Chief Commercial Officer of the Board, said at a news conference in Manchester that the decision had been taken, despite an increase of £335,000 a year in the cost to the Board of buying its power supplies in bulk from the British Electricity Authority.

MANCHESTER LETTER

Explaining that the Board had decided to take a change, since it believed that the next financial year would be a very difficult one for it, Mr. Johnson said that factors influencing the decision were: Greater efficiency and economies by the Board; growing sales of electricity throughout the North-West region; and the fact that many industrial firms were having to face strong competition from foreign rivals in export markets. The Board did not intend to raise prices to the region's 1,200,000 domestic consumers, but the present concessions had been made to industrial consumers, instead of domestic, because the Board felt that the industry had been called on to bear the brunt of price increases in the past. "The Board," said Mr. Johnson, "will certainly face increasing difficulties in continuing to hold down tariffs if the upward trend of prices persists."

The North-West Electricity Board has also announced that it has decided to continue its relief scheme under which industries hit by depression do not have to pay above a certain price for their power. This will cost the Board £70,000 revenue a year.

World Cotton Supplies

According to latest advices from the United States, supplies of raw cotton are likely to be larger than originally estimated, the total available quantity being around 22,150,000 bales. Of this, the Government holds about 8,400,000 bales, including nearly 6,500,000 bales from the current crop.

In the first half of this season, exports of raw cotton from the United States have again declined, being some 1,500,000 bales, as against 1,750,000 bales in the corresponding period a year ago. Despite this indication of a continued lack of interest on the part of overseas buyers, the National Cotton Council in the United States is still confident that American cotton will hold its own with outside growths, whose production, it is estimated, will not expand to the extent anticipated in certain quarters.

Yet, in comparison with the quantities of cotton being produced outside the United States before the war, the latest crops of outside growths are substantially higher, being nearly 2,000,000 bales above the average in 1935-39. Only in India, Pakistan, Brazil and Egypt have there been large reductions in output and these losses have been more than made good by the expansionist growing policies pursued in such countries as Mexico, Turkey, Syria, the Argentine and the Sudan. In addition, the Soviet Union and China are estimated to be producing 900,000 bales a year more than before the war, although very little of this cotton is available for export.

Another important factor is that the yield per acre of raw cotton has improved enormously in the past 15 years or so. A smaller acreage is being planted, but the amount of cotton harvested tends to increase. In the United States, for example, although output last season of 16,500,000 bales compared with 19,000,000 bales in 1937, the area planted was only 24,500,000 acres, as against 34,000,000 acres. The yield improved from 270 lbs. to 325 lbs., per acre, a 20 per cent. increase.

The area under cultivation in other countries last season has been estimated at 55,000,000 acres, as compared with 60,000,000 acres 16 years ago. Production, however, amounted to 20,500,000 bales, as against 20,000,000 bales, the yield being 200 lbs. per acre, as against 170 lbs., an 18 per cent. increase. Farmers not only in the United States but in many other areas are clearly applying better methods of cultivation, buying of seeds and fertilisers and are using insecticides and irrigation wherever possible.

Too Tranquil A Pace

One of the main criticisms made against the Lancashire cotton industry since the war has been that the rate of progress in redeployment of labour—in other words, using the available manpower in the best possible way—has been too slow. Considering the labour shortage which has hampered activity in both the cotton and rayon industries, the introduction of the latest methods of improving output has been less swift than might have been expected.

The Master Spinners' Federation has now indicated that work study principles are being adopted in 184 mills, which represents 38 per cent. of those owned by members of the organisation. This is an increase of 23 on the total at the end of 1952, but it can hardly be regarded as a very satisfactory situation. Granted the opposition to the system, which is more pronounced in some areas than others, and the cost and trouble involved in bringing experts to the task, the state of trade cannot be described as favourable enough to warrant such a slow response to the call to improve productivity.

Already, it seems, output of all types of yarn has settled down to a level some 2,000,000 lbs. weekly below the peak reached at the end of 1951. The intake of labour in spinning is very slowly increasing, but not at such a rate as to bring much hope of a substantial rise in output in a short time.

Nor is the situation any better in the weaving branch. In fact, it may even be said to be worse. Little information has been given as to the extent to which employers have introduced the Cotton Manufacturing Commission's system of linking earnings with production, but it is believed that the number of firms using the method scarcely exceeds one-tenth of the whole. Several years ago, the Commission expressed the outspoken view: "The uniform list must go." The trade, in general, seems to have ignored the idea and continued its traditional systems.

There is always a minority of firms ready to experiment and they have often produced impressive figures to support their contention that the latest schemes bring success in their train. Others are content to see how their more venturesome neighbours fare before carrying out readjustments.

Unfortunately, there is the minority at the other end of the scale, too, which is quite content to stay put. In the prosperous times of recent years, when everyone was making money, there is, it says, no need to experiment and, when conditions deteriorate, it says that they must conserve their resources.

Price and Demand

Future consumption of cotton in Lancashire may well be seriously affected by the different price movements which are at present taking place. The Raw Cotton Commission has given spinners an indication of its attitude towards purchases of certain types of cotton which it obviously considers to be standing at too dear a level for consideration.

The price trend of both Brazilian Sao Paulo and Pakistan cotton—two of the chief non-dollar cottons usually considered as acceptable substitutes for some of the regular American styles—has recently moved sharply upwards, whereas, in the United States, the advance has been much less marked. Brazilian cotton purchases last year were made under the terms of the barter agreement for jet planes at cheaper rates than were ruling at the time. In the past three months, the equivalent price of Pakistan cotton has increased by nearly 6d. a lb. and new crop Brazilian Sao Paulo can only be bought at a substantially higher level than the prices lately quoted for the Commission's stocks, which are rapidly becoming exhausted.

Unless there is a sudden change of plan, the Commission, as a trading organisation, will end its activities during the autumn, but contracting-in spinners have been advised that further supplies of United States cotton are being purchased for deliveries upto and including October. In addition, new crop Mexican cotton will be obtained to meet notified requirements. On the other hand, demand is so small for either new crop Brazilian or Pakistan cotton that the Commission is taking no steps to replenish its supplies of these types.

After a period in which outside growths have been in freer demand, there is evidence that the tide is turning in favour of American cotton. Currency difficulties still remain, but shippers in the United States must be viewing the situation with considerably more optimism.

Raw Cotton Imports

Imports into the United Kingdom last week aggregated 36,553 bales, chief arrivals being 10,998 bales Pakistan, 5,920 bales American, 4,345 bales Egyptian and 3,930 bales Brazilian.—*All Rights Reserved.*

FREE WORLD'S COTTON SUPPLY IN 1953-54

NEW POST-WAR RECORD IN OUTPUT PREDICTED

FREE world supplies of cotton in the current (1953-54) season are now estimated by the International Cotton Advisory Committee, Washington, at 44½ to 45 million bales (478 lbs. each) as compared with 42.1 million bales in the last season. On present indications and assuming normal growing conditions in South Brazil, Argentina and Peru, free world production this season, according to the Committee, will "almost certainly set a new post-war record." The output of cotton in the free world is now estimated at 29.4 million bales in the current season as against 28.8 million bales in the last.

The increase in the overall supply of cotton in the 1953-54 season is entirely due to the much larger availability of U.S. cotton which now constitutes over 51 per cent. of free world supplies. The supply of other growths has, however, dropped slightly. The following table gives the supply of American and other varieties of cotton:

(In million bales)

	1952-53	1953-54(a)
Stocks of U.S. cotton(b)	4.6	6.7
Production	15.2	16.3
Total ...	19.8	23.0
Stocks of other cottons	8.7	8.7
Production	13.6	13.1
Total ...	22.3	21.8
Total supply ...	42.1	44.8

(a) Estimated. (b) Both in the U.S. and in importing countries.

An analysis of the cotton supply position in the current season in different countries reveals that both in the net exporting countries (excluding the U.S.) and in the net importing countries, the supply is smaller than that in the 1952-53 season. In the U.S., however, the supply is very much larger than it was in the last season. The following table gives the cotton supply position in selected countries:

Cotton Supply in Selected Countries

(In 000 bales)

	1953-54			1952-53
	Stocks	Production	Total	Total
U.S.	5,600	16,270	21,870	17,955
Other exporting countries ...	4,737	9,161	13,898	14,694
Of which				
Mexico	170	1,230	1,400	1,500
Egypt	870	1,265	2,135	2,931
Turkey	180	600	780	870
Sudan	240	430	670	510
Uganda	45	345	390	375
Pakistan	400	1,270	1,670	1,905
Brazil	2,000	1,300	3,300	3,000
Argentina	360	550	910	930
Peru	125	430	555	555
Net importing countries ...	5,055	4,003	9,058	9,450
Of which				
India	1,370	3,600	4,970	4,975
Total ...	15,392	29,434	44,826	42,099

The supply of cotton in the U.S. is now placed, as the table above will show, at 22.0 million bales or an increase of about 20 per cent. over the 1952-53 level of 18.2 million bales. This includes 16.3 million bales production and 5.6 million bales stocks and allowance for the usual volume of imports. Mexican output is placed at 1.2 million bales, as against 1.7 million bales in the last season.

In view of the greatly reduced crop, total supply in Egypt during the present season has fallen to 2.1 million bales as compared to 2.9 million bales in 1952-53. In Pakistan, production is now estimated at 1,265,000 bales or nearly 300,000 bales less than in 1952-53. Consequently, in spite of some increase in carry-over stocks at the beginning of the present season, total supply in this country is down by over 200,000 bales. The quality of new crop arrivals is reported to have been affected by adverse weather, particularly in the Punjab district. Reduced supplies in Turkey are entirely due to the lower level of current production, presently estimated at 600,000 bales or 100,000 bales under last season's total.

Cotton production on the African Continent continues to expand. Excluding Egypt, production here has now risen to over 1½ million bales or over 100,000 more than last season. The main increases have occurred in Uganda and Mozambique. A record production of nearly 350,000 bales, according to the Committee, is likely to be achieved in Uganda this season. Early ideas of this season's cotton crop in the Sudan are that production will be approximately in line with 1952-53 if weather conditions remain normal over the next few months. Crop progress in the Gezira, where over 75 per cent. of the total crop in the Sudan is grown, is said to be good. The Tokar crop so far remains comparatively free from pests and diseases.

Cotton acreage in India, the Committee says, is estimated to have been some 5 per cent. to 10 per cent. larger than last season. This, plus the timely arrival of the monsoons, led to the expectation of a substantial increase in cotton production but estimates have been scaled down slightly following generally dry weather in some areas, particularly the Oomra district. It adds: "However, the crop is still expected to show a significant increase over 1953."

Cotton plantings in Sao Paulo, Brazil, are believed to have been retarded somewhat by the uncertainty regarding the future Government policy, particularly with respect to price supports. Private reports indicate a decline in acreage of up to 25 per cent. as compared to last season but, against this, a larger quantity of seed is being planted in many areas.

MAKING THE BEST OF *living*

This man started out for himself many years ago, and soon established a successful one-man business. Then came the problem that after his death his widow might be obliged to sell the business at a loss. Sun Life of Canada Business Insurance solved this. Now the enterprise will be purchased from his widow by senior employees at a figure set during his lifetime.

PLANNED LIFE INSURANCE BRINGS PEACE OF MIND

Without obligation, let me tell you how the facilities of the SUN LIFE ASSURANCE COMPANY OF CANADA can best meet your particular needs in a way that will fit your pocketbook.

MAIL THIS COUPON TODAY

To:
HEMRAJ B. SHINGADA, Representative,
SUN LIFE ASSURANCE COMPANY OF CANADA
(Incorporated in Canada in 1865 as a Limited Company)
Canada Building, P. O. Box 972, BOMBAY - 1.

Without obligation I would like further information about the SUN LIFE BUSINESS INSURANCE Policy.

RECONSTITUTED CENTRAL SUGARCANE COMMITTEE MEETS

STRESS LAID ON NEED FOR CO-ORDINATING DEVELOPMENT SCHEMES

THAT most pertinent but well-worn point, namely, a lasting solution to the ills of the Indian sugar industry lies in raising the per-acre yield of high-sucrose content sugarcane, was stressed, once again, by both Mr. Rafi Ahmed Kidwai, Union Food and Agriculture Minister, and Mr. K. R. Damle, Chairman of the Indian Central Sugarcane Committee, in their respective inaugural and presidential addresses delivered at the first meeting of the reconstituted Committee held in New Delhi recently. As we have so often observed in these columns, the biggest stumbling block which has stood, and is still standing, in the way of a flourishing sugar industry is the inefficient growing of cane, especially in the two major sugar producing States of Uttar Pradesh and Bihar. Although more than eight years have elapsed since the Indian Central Sugarcane Committee was established, no worthwhile progress has been registered in the sphere of cultivation of quality cane. That this statement is hardly an exaggeration is borne out by the frank remarks of Mr. Kidwai himself. Said he: "Though the Committee has been functioning since 1945, there has so far been no appreciable increase in the sugar content of the cane produced in the country." On the contrary, there has been a distinct setback, as will be evident from the figures given below:

		1933-34	1943-44	1952-53
Yield of cane per acre	(tons)	15.20	14.10	12.00
Sucrose content ...	(%)	8.80	10.02	9.98

It will be seen from the foregoing figures that both the yield of cane per acre and the sucrose content have not only not improved but actually suffered a setback. Such clearly brings out the fact that the Committee must not have paid adequate attention—if it has, not on sound lines—to ensure flow of the results of research on cane grown to the worker in the field. We cannot but recall what the former Tariff Board (1950) aptly remarked, namely, the results of research undertaken at the various institutions should reach the cultivator at the farm (and the factory) *without delay*. To quote the Board:

"In view of the importance of the sugar industry, which is the second largest industry in the country, and also in view of the potentialities of research in this country, we consider that the existing organisation for research and development should be strengthened. We realise that, for financial reasons, it may not be possible to support any considerable expansion of this work in the near future; but what is required at the present juncture is greater co-ordination of the work which is already being done and which has been planned for the immediate future. Further, it is equally important to ensure that the results of research undertaken at the various institutions would actually reach the cultivator at the farm and the manufacturer at the factory without delay."

Committee's Responsibility

The Union Food and Agriculture Minister did well, therefore, to emphasise that, if India desired to compete in the world markets and provide sugar to the consumer at a cheaper rate, a good deal more would have to be done. It is needless to add here that the responsibility for developing improved varieties of cane rests mostly on the Committee.

The need for intensifying development of sugarcane is of the utmost significance for two important reasons, among others. First, by raising the per-acre yield of high sucrose-content cane, it is possible to bring about a reduction in the cost of sugarcane cultivation. Secondly, it will reduce pressure of cane cultivation on land, and thus make available more land for production of food crops. Emphasising the former aspect, Mr. Kidwai made the following interesting observations:

"India is importing sugar not because production in the country has gone down but because consumption has gone up. In spite of the heavy duty of a little more than Rs. 8 a maund, the sugar we are getting from foreign countries is cheaper than that produced in India. An effort should, therefore, be made to reduce the price of cane and bring down its cost of production. If we can develop cane that will give a higher percentage of sugar recovery, the production cost is bound to decrease. If the per-acre yield is higher, the producer will be better remunerated even at a lower price. In Northern India, the recovery sometimes comes to only 9 per cent., while in South India, it is comparatively higher; and so it is not fair that factories in the South should pay the same price as those in the North."

There is considerable force in these words of Mr. Kidwai. The remarks emphasise that the present system of linking the sugarcane price to quantity and not quality is defective. India is perhaps the only large sugar manufacturing country in the world where this system is prevalent. Since the price of sugarcane has as much to do as the research itself for the development of better quality cane, it is necessary that this question is tackled in right earnest and in a dispassionate manner. Improvement in the quality of cane can be achieved only if the agriculturist is given a "direct incentive" to grow better quality cane. This can be done, as has been explained by Mr. W. I. Wonfor, a leading sugar producer in the South, in a communication to us published elsewhere on this page, by relating the cultivators' return to the sucrose in the cane (and also to the price at which the sugar has been sold).

Pressure of Cane on Land

The improvement in the quality and yield of cane thus achieved would certainly go a long way towards relieving pressure of cane on land. Mr. Damle's observations in this context are noteworthy. He said: "There is a definite limit to the increase in sugarcane acreage which is possible. Any attempts at producing larger quantities of sugarcane will, therefore, have to be based on increased production per acre." He revealed that the Sugarcane Breeding Institute at Coimbatore had done good work in the past on producing sugarcane varieties which were designed to achieve this end. To quote him again: "In future, our emphasis should be on evolving sugarcane varieties, which will contain larger sugar content, and not merely on increasing the quantity of sugarcane per acre."

It is thus evident that the responsibility of the Central Sugarcane Committee for improving cane cultivation has all the more increased, now that the Committee has been divested of the work connected with technological research in the development of sugar and its by-products, following the Central Government's move to set up a Development Council for sugar. Now one naturally expects that the Committee would concentrate its attention exclusively on problems relating to sugarcane research and development. In fact, this was the very purpose for which the Committee was set up. The spheres which demand the immediate attention of the Committee are:

(1) Improvement of the growing, breeding, and marketing of sugarcane and development of the *gur* and *khandsari* industries in India and all matters incidental thereto;

(2) agricultural research on sugar production, distribution, testing and propagation of improved varieties of cane, and collection of relevant statistics;

(3) improvements in methods of production and storage of *gur* and *khandsari* and other allied matters; and

(4) advice to the Central and State Governments concerned on any points referred to it.

All these require adequate financial assistance. It is unfortunate that the Government of India should have halved the annual grant from Rs. 16 lakhs to Rs. 8 lakhs at a time when more finances are needed by the Committee. The reduction will surely handicap the progress of sugarcane research in the country. Reassuring, therefore, is the statement of the Food and Agriculture Minister that sufficient funds would certainly be made available to finance cane research, if the Committee evolved any schemes for ensuring better production of sugarcane. The Committee has already extended schemes of sugarcane diseases at the Indian Agricultural Research Institute and the Orissa Sugarcane Research Station. It has sanctioned a research station at Palur and a Sub-station in the Trichy area of residuary Madras, besides granting an extension for the Anakpalle station in Andhra. The Committee has before it several other schemes relating to sugarcane development, cane research in Madras, grant of a subsidy for the establishment of a sugarcane germplasm bank, and storage marketing of *gur* in the States of Uttar Pradesh, Mysore and Hyderabad.

CANE GROWERS' SHARE IN SUGAR INDUSTRY'S PROFITS

Apropos our editorial comment on sugarcane prices—*vide* page 289 of *Commerce* dated 20th February, 1954—Mr. H. I. Wonfor, Chairman of Messrs. Parry & Co., Ltd., Madras, has made a few interesting observations, in the course of a communication addressed to us, which we reproduce below:

"I have read the interesting leader appearing in your issue of 20th February and I entirely agree that any profit-sharing scheme, as such, would be bad from the point of view of the industry, the agriculturist, the consumer and, finally, the State. I believe that profit-sharing schemes, in the manner of the recent Government proposal for sharing profits with industrial workers, are bad, because I do not believe it is possible to work out any formula which is equitable to both parties. I believe also that schemes of this nature lead to so much controversy that industrial efficiency is bound to be impaired and industrial relations worsened.

"On the other hand, I think that there is danger that some of your readers may apply your strictures to what has become known as the 'S.I.S.M.A.' formula and not entirely to pure profit-sharing schemes. The S.I.S.M.A. formula has already been explained in your columns, and, in your issue of 3rd October, 1953, you made flattering references to proposals, embodying the S.I.S.M.A. formula, made by my colleague, Mr. Hadfield, at a meeting of the Madras Rotary Club.

"The S.I.S.M.A. formula is not a 'profit'-sharing scheme, but it does attempt to give the agriculturist a return for his cane, directly related to the price at which the resultant sugar has been sold adjusted to the actual mill recovery. I suggest, that the only way in which this great industry can be made economic in India in relation to the rest of the world is to improve the quality of cane. This, I believe, can only be achieved if the agriculturist is given a direct incentive to grow better qualities of cane, and I believe that we only do this when we relate his return to the sucrose in the cane and to the price at which the sugar has been sold. This, the S.I.S.M.A. formula attempts to achieve.

"We have been told by Dr. Van Dillewijn that India is the only large sugar producing country in the world where the payment for cane is still made on the basis of weight. Surely, it is time our Government realised that a change must be made in the basis of payment, so that we encourage the growth of sugar per acre and not merely sugarcane."

SUGARCANE PRICES

Sugar factories in India paid higher prices for their requirements of sugarcane during the month of January, 1954, as compared with the corresponding month of 1953. Thus, the all-India average price of sugarcane (including co-operative societies' commission, transport charges, etc., but excluding cane cess) paid by the factories, during the month under review, was Re. 1-8 per maund, as against Re. 1-6 a year before. The portion of the total price actually received by the grower was Re. 1-6-6, which is As. 2-2 higher than the price received a year before.

The following are the average prices of cane (per maund) paid by the factories and those actually received by the grower during January, 1954, as compared with the corresponding month in the previous season:

	Delivered at factory		Actually received by grower	
	January, 1953	January, 1954	January, 1953	January, 1954
	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
All-India	1 6 0	1 8 0	1 4 4	1 6 8
U. P.	1 6 1	1 8 0	1 4 2	1 6 8
Bihar	1 5 10	1 8 1	1 4 2	1 6 4
Bombay	1 7 7	1 9 0	1 5 0	1 10 8
Madras	1 6 0	1 7 0	1 5 0	1 7 0
Andhra	..	1 7 7	..	1 7 3

The prices of sugarcane paid by factories in Bombay were higher than those in other States. Some factories paid as much as Re. 1-12 per maund, as against the maximum of Re. 1-7 in Madras, Re. 1-9-4 in Bihar, Re. 1-9-9 in Uttar Pradesh and Re. 1-9-10 in Andhra. The sugarcane growers received the highest price, the sum actually received by a few growers amounting to Re. 1-11-7 per maund. The maximum prices received by the cane growers in the other aforesaid States were Re. 1-7, Re. 1-6-9, Re. 1-7-4 and Re. 1-8-4, respectively.

IMPORTS OF SUGAR

The quantity of sugar purchased abroad by the Government of India up to 31st December, 1953, amounted to 250,000 tons. Actual arrivals of the sugar were completed by the end of February, 1954. This information was given by the Central Minister for Agriculture while replying to a question in the Council of States last week. According to the Minister, the landed price of imported sugar on an average works out to about Rs. 20 per maund, excluding import duty. The imported sugar is being sold at a price that would not injure the interests of the cane-growers, but its price is still below the price of Indian sugar.

Answering an interpellation, Mr. Rafi Ahmed Kidwai, Union Minister for Food and Agriculture, said: "The accounts relating to the import of sugar during 1953-54 have not yet been finalised. On the basis of the latest estimates available, the total cost of imported sugar works out to Rs. 17.23 crores, as against the budget provision of Rs. 17.17 crores. Out of the total sale proceeds of about Rs. 20.1 crores, Rs. 19.08 crores have already been finalised. No unsold stock of imported sugar is likely to be carried forward to the next year."

COAL STATISTICS IN 1953

SHARP DECLINE IN EXPORTS

THE latest available statistics relating to coal disclose that the raisings and despatches of coal during the year, 1953, were slightly lower than those in the previous year. Thus raisings during the year under review were 35,846,898 tons, as against 36,301,865 tons, a fall of 454,967 tons. The decline in production in 1953 marks, for the first time, a setback in the upward trend of output starting in 1948. Coal despatches in the year aggregated 30,657,719 tons, as compared with 31,183,666 tons, a decline of 525,947 tons. Stocks of different grades of coal in Bengal-Bihar coalfields stood at about 2,820,000 tons on 31st December, 1953.

The slight decline in coal raisings and despatches noted above, may chiefly be attributed to a sharp fall in exports. The quantity exported in 1953 was 1,991,347 tons, as against 3,302,115 tons in 1952, a drop of 1,310,768 tons. The marked fall in exports, despite abolition of surcharge on exports of coal to Pakistan in March, 1953, and subsequently on exports to all other countries in May, is indeed alarming. The fall is due to the absence in 1953 of the abnormal conditions that existed in the years 1952 and 1951; there was then acute shortage of coal in the U.K. and Europe. Besides, coal transport difficulties also created bottlenecks. Consequently, many countries which needed coal turned to Indian coal for meeting their requirements. But, by about the beginning of 1953, coal producers in China, Africa and even Australia emerged as keen competitors to Indian coal in South and South-East Asian markets, with the result that there was a sharp fall in exports.

At the moment, however, it looks as though the coal export prospects for 1954 are not quite bright. In 1953, India had contracted to sell 700,000 tons of coal to Japan. It is considered likely that Japan's offtake in 1954 may not turn out to be as much as it was in 1953. For Japan is more inclined to buy coal from the U.S. than from India, on account of not only a shortage of sterling with Japan but also a relatively lower quality of coal in India. Again, exports to Burma are also not expected to be encouraging in view of the possibility of that country making its purchases from China. If the present uneasy Korean truce were to lead to permanent peace, China may well satisfy a good quantity of coal required by South-East Asian countries.

As regards wagon position in 1953, it was officially pointed out some time back that the overall demand for railway wagons for transport of coal in the year had not fallen short of the supply of wagons for such transport. In fact, the wagon offerings for down-country and the industrial area from Bengal-Bihar coalfields had risen, it was stated, between September and November, 1953, to a level in excess of current demands. Again, for some time during November, 1953, and the early part of December, 1953, this applied also to the available railway transport capacity *via* Waltair and Ajni. It was, however, pointed out that there was no reduction in the demand for wagons, although there was a slight decline in production.

COAL RESERVES IN M.P.

Now that there is a move to set up a second steel plant in Madhya Pradesh, preliminary investigations needed for the purpose are being commenced. Press reports from New Delhi indicate that the Government of India has approved tentatively a scheme for the extensive survey of Jhimili coalfields in Surguja District of Madhya Pradesh. A team of Union officials, including Dr. S. S. Bhatnagar, Secretary, Ministry of National Resources and Scientific Research, Mr. A. K. Chanda, Secretary, Production Ministry, and Dr. Khedkar, Director, Indian Bureau of Mines, will be shortly leaving for Jhimili to examine the Jhimili coalfield sites and to discuss with the State Government a programme of rapid survey of mineral resources in the area. It will be recalled that one of the chief reasons for which Bhilhai in Madhya Pradesh was rejected in preference to Rourkela for the establishment of the State-sponsored steel project was that iron and coal reserves of the area were not yet fully explored. The present scheme for extensive survey of Jhimili coalfields is a part of an intensive survey, examination and analysis of the mineral resources of the State, with particular reference to coal, to be undertaken shortly and for which preliminary steps are being taken. If the survey of the region discloses fruitful results, it will not be long before arrangements to set up a second steel plant at Bihar will be afoot. Since India's steel needs will not be fully met even after the proposed plant at Rourkela comes into full operation, there is room for another steel plant.

MINING UNDERSEA COAL RESERVES

Addressing the Midland Branch of the National Colliery Managers at Nottingham, England, recently, Mr. E. H. Browne, National Coal Board's Director-General of Production, disclosed that the Board had decided "to carry out a trial with out-to-sea boring" in order to prove undersea reserves. The most important of the undersea reserves occur, it is stated, in Northumberland, Durham, off the east coast of Scotland and under the Firth of Forth. The first experimental boreholes will be drilled off the coast of Fife from a platform similar to that used for sea forts during the war. Such platforms, which will be 170 feet in height and 225 tons in weight, will permit borings to be made at depth of water upto 20 fathoms. They will be floated and removed to the next boring site when one boring is completed.

COAL MINERS' HOUSING SCHEME

Mr. R. L. Malvia, a representative of colliery labour, is reported to have put forward, at the recent Coal Mines Welfare Fund Advisory Committee meeting, a proposal to enhance the rate of cess on coal from As. 6 to As. 10 for the purpose of providing larger finance for building houses for colliery labour. The proposal is absolutely untenable. For any enhancement of the cess rate will increase the burden on consumers. For, at present, it is the consumers who are paying the cess and not the employers. It may be argued that a separate cess may be levied on colliery owners. But, latterly, the profit margins of the collieries have shrunk to very low levels and any further inroads into them will have very deleterious effects on the industry.

BOMBAY COAL AND COKE ADVISORY COMMITTEE

The Bombay State Coal and Coke Advisory Committee has been reconstituted, under the chairmanship of the State Coal Controller. The Assistant State Coal Controller is the Secretary of the Committee. The members of the Committee are chosen from among the interests of consumers, dealers, industries and trade. The Committee will advise the Government on matters relating to grant of priorities, fixation of prices, and general distribution of coal and coke.

IX-G 369

SALE OF QUALITY TEA IN LONDON

PROPOSAL TO INCREASE QUOTA CAUSES CONCERN IN CEYLON

CONSIDERABLE concern over the proposal, submitted by a section of the tea growers in Ceylon to the Government of Ceylon, for increasing the destinational quota of better grades of Ceylon tea sold at Mincing Lane has been expressed by Ceylonese tea growers. In the course of an interview with the Chairman of the Ceylon Association of London and the Chairman of the Ceylon Tea Propaganda Board, the Prime Minister of Ceylon expressed his willingness to increase the quota of the better grades from the present level of 65 million lbs. to 75 million lbs. The increase of 10 million lbs. will be confined to mid-grown varieties. It remains to be seen whether the Prime Minister will implement his promise at all, considering that, in Ceylon, there is much opposition to the suggestion of larger exports of quality tea.

In March, 1953, the Government of Ceylon decided to restrict the direct shipping of grade teas to London auctions during 1953-54 to 30 million lbs. of high-grown teas and 30 million lbs. of mid-grown varieties. No restriction was, however, placed on shipping of the low country teas. The object of the restriction was to prevent the possibility of Colombo being deprived of all top quality teas for direct offer to the world market. It was the first step towards assisting Colombo to develop itself into an important tea centre which would attract foreign buyers. Before this quota was fixed, only 40 to 50 million lbs. went to Mincing Lane. As Colombo handled 214 million lbs. in 1951 and 238 million lbs. in 1952 and as the prices fetched at Colombo were higher than those at London, where the offtake was less than the ceiling, the Government of Ceylon felt that Colombo could be developed into a better market than London for Ceylon teas. If this is the avowed object of the Ceylon Government, it is not known what reason has prompted the Prime Minister of Ceylon to agree to a relaxation of the restriction and an increase in the destinational quota. The proposal has not, however, been finalised and has to be further discussed between the Minister of Commerce and the representatives of sterling tea companies who have asked for an increase in the quota.

In the meanwhile, the Chamber of Commerce of Ceylon (not to be confused with the Ceylon Chamber of Commerce, which is predominantly British) has passed a resolution viewing with great concern the proposal to relax the restriction on the quantity of quality teas permitted to be sent to the London auctions. The resolution says that there is now a considerable trade in quality teas handled by firms in Ceylon with consequent benefit to the country. This trade, it adds, will be lost if the most attractive teas are monopolised mainly by the London market. Further, the prices of low-grown and medium teas will be affected by a dearth of buyers owing to the lack of quality teas for blending purposes.

It is doubtful whether the proposal for increase in exports of quality teas will find support from the Minister of Commerce, Mr. R. G. Senanayake, who is reported to be in favour of discontinuing the existing arrangements under which a large part of the country's tea crop is disposed of at the London auctions. This is evident from his comment on the latest proposal. He is reported to have said that 97 per cent. of the companies which wanted to sell at the London auctions were sterling companies, while rupee companies, with few exceptions, were perfectly happy with the present arrangements. He added that the sterling companies wanted to sell their dust tea in Colombo and ship the best teas to Mincing Lane. They had not produced statistics to prove that the Mincing Lane prices were better that those realised in Colombo.

A Parliamentary Advisory Committee of Ceylon has, in the meantime, urged the progressive reduction of shipments of Ceylon's quality teas to the Mincing Lane auctions, so that within three or four years Ceylon's entire tea output might be sold at Colombo auctions. According to a spokesman of the Committee, Ceylon is losing millions of dollars as a result of the U.K. re-exporting Ceylon tea to the U.S. In this connection, it may be noted, the U.K. doubled its re-export trade last year and any increase in the destinational quota will be of advantage to the U.K.

It is not known whether the Indian Tea Licensing Committee has any such proposal to fix a quantitative restriction on the export of quality teas on a consignment basis to London. The International Tea Agreement, under which the total export quota of each of the participating countries is fixed, is due for revision. The Indian Tea Licensing Committee is said to be engaged in considering a proposal to base the export quota for each estate on the actual crops realised on the respective holdings. It is also proposed to choose the best output of each estate during the last four years as the basic crop for the purpose of issuing export quotas. It is possible that when "standard exports" are fixed some light may be thrown on the Indian policy on fixing destinational quotas.

The question of asking the three producing countries, India, Pakistan and Ceylon, not to restrict the export of quality tea, was raised in the British House of Commons last week. Rejecting the suggestion that the U.K. should make representations to these countries that they should not restrict the export of quality tea from the 1954 crop, subject only to their internal requirements, the Parliamentary Secretary, Ministry of Food, said that there was in practice no restriction of exports of tea from these countries and added that the limit of exports was 125 per cent. above pre-war and that figure was not now being reached.

Since the foregoing lines were written, the Indian Tea Licensing Committee has announced that arrangements are being made for the release of the first instalment of export quota for 1954-55 to the tea estates during the first week of April. The first instalment will be to the extent of 105 per cent. of India's standard export figure which amounts to 348.25 million lbs.

NEW LEVIES ON PLANTATIONS IN MADRAS AND MYSORE

Two State Governments, Madras and Mysore, have decided to impose a new burden on plantation owners, the former in the shape of an agricultural income-tax and the latter a surcharge on land assessment, and these will come into force from April this year. While it was known for some time that the Madras Government were contemplating the levy of an agricultural income-tax in that State, it was thought that the levy would not be made in the near future for a number of reasons. One of the main reasons was that it was only a few weeks ago that the plantation industry throughout India was called upon to implement the provisions of the Plantations Labour Act from April this year and that demand was accepted notwithstanding the fact that it involved considerable expenditure, both capital and recurring. The industry definitely did not anticipate that in Madras and Mysore it would be called upon to bear additional burdens in so short a time.

The Chief Minister of Mysore, who is also the Minister in charge of Finance, and who in his budget speech announced his intention to levy a surcharge on land assessment on plantations in the State, appears to have been well aware of the burdens already imposed on plantations. He said that he did not wish to impose an agricultural income-tax on plantations in the State, because "the owners of these lands are likely to say that income-tax measures will subject them to harrassments and hardships." The Madras Finance Minister probably saw no such possibilities in his State when he announced his intention to levy agricultural income-tax on some plantation crops. He argued that the collection of such a tax would be an easy job because the majority of planters maintained proper accounts of their business!

Perhaps the most objectionable feature of the proposal in Madras is that the levy is only to be made on plantation crops and no other agricultural crops. The proposal is discriminatory in that respect. One may legitimately ask why plantation crops, which already heavily taxed, should be singled out for this treatment, while other agricultural crops are exempted.

COFFEE ESTATE TO BE ALLOTTED TO D.Ps.

The Central Rehabilitation Ministry has decided to allot a big coffee estate situated in the Chickmagalur District of Mysore to displaced persons or groups of displaced persons having verified claims for property in West Pakistan, who have not been allotted land in the Punjab or elsewhere.

The estate is evacuee property and will be allotted with effect from 1st April, 1954, on a quasi-permanent basis. The estate comprises about 150 acres, of which approximately 125 acres are under coffee and the remainder is wet and dry land.

CONSUMPTION OF BURLAP IN THE U.S.

INNOVATIONS NEEDED TO EXPAND SALES

THE U.S. consumption of burlap in January this year was more disappointing than what it was in December, 1953. For consumption in January, at 63 million yards, disclosed a fall of 11 per cent. over that in the preceding month. The fall belies earlier expectations that the January consumption might show some improvement, as, in the same month last year, it was as high as 75 million yards.

The table below gives consumption of burlap in the U.S. during each of the seven months, namely, July-January of the season 1953-54, as compared with the corresponding months of the preceding season.

(In million yards)

	1953-54	1952-53
July	56	72
August	75	86
September	80	92
October	83	88
November	74	71
December	71	75
January	63	73
Total ...	502	557

It will be seen from the table above that consumption of burlap declined steadily from October, 1953. This fall explains the dull conditions prevailing in the jute goods market for some months now. Exports have fallen despite the cut in the export duty on hessian, effected in the middle of September, 1953.

With regard to U.S. stocks of burlap, the position in January appeared to show some improvement, in that stocks amounted to 184 million yards as against 190 million yards in December, 1953. The reduction is attributed to increased offtake of burlap by industrial users in the U.S., while importers of burlap were inclined to curtail their purchases from abroad. It is further reported that in January, the previous experience of Continental offers (with the exception of some French burlap), quoting prices below the Calcutta rates, was conspicuous by its absence.

In this context, it is quite pertinent to refer here to some of the observations on the position of burlap trade in U.S. made by Mr. J. C. Daly, President, Burlap and Jute Association, U.S. He considered that 1953 was a good year for burlap for two reasons. One was that consumption of burlap in the year was the sixth highest in the last 24 years and prices had been fairly stable, the variations confining to a range of less than 2 cents. The other reason was that the consumption showed that burlap was still important in the packaging field.

It was the considered view of Mr. Daly that the growing population of the U.S. offered plenty of scope for expanding the sale of burlap. But in view of the inroads made by paper bags into the uses formerly served by burlap bags, he felt the need for concentrated selling, cost cutting and the introduction of innovations. He emphasised that American markets needed new bag constructions to meet new demands. The markets needed new constructions of burlap to replace the traditional 100-lb. and 50-lb. containers in order to effect price saving and, in this connection, he complained that Calcutta mills were slow to adjust themselves to the new requirements. He said that the responsibility for bringing about a revolution in the types of jute cloth manufactured in India rested on the shoulders of the Indian Jute Mills Association and on the Pakistani Jute Board which should encourage cultivation of more jute. Anything else was, in his opinion, nothing short of suicide. If the industry were to expand, what was needed was plenty of jute and the will on the part of jute manufacturers to "throw off the cloak of tradition." Mr. Daly thought that things had never looked so good but said that there was no room for complacency.

Suggestions such as those put forward by Mr. Daly have been emphasised on several occasions in the past. Unfortunately, they do not seem to have received the earnest attention of the industry. A new jute fabric for purposes of home decoration and the small burlap bag to enable the retail dealer to hand over his wares over the counter to the consumer are only two examples of many which point to the existence of vast scope for expanding consumption of burlap. The merits of jute, such as its ability to be used several times and its consequent resale value together with its ability to withstand the roughest treatment, are completely convincing. What is needed, therefore, is to turn these to the best advantage of the industry through the introduction of innovations.

DEBATE ON RAILWAY BUDGET

CENTRE'S POLICY EXPLAINED

THE debate in Parliament on the Railway budget centred chiefly on the reduction in the surplus earnings of the railways, freight structure and capital development programmes. Some members expressed the fear that the law of diminishing returns was now in operation in the Indian railways and characterised the budget as being "even more dismal than in the previous year," while others expressed considerable satisfaction over the working of the railways. All were, however, in agreement with the view that there was need for accelerating development programmes.

Mr. Lal Bahadur Shastri, Minister for Railways, discounted the fear of some members that the law of diminishing returns was now in operation. He pointed out that the reduction in surplus was not due to any fall in earnings but due to increase in expenditure. The income from passenger fares, he declared, had stabilised itself and goods earnings had gone up, "which would not have been possible if the law of diminishing returns had operated."

Clarifying his reference in the budget to the adjustment in fare and freight structure, the Railway Minister disclosed that it did not mean that there would be a general upward revision of the freight rates in the future. It was only intended to make such adjustments either upward or downward in the freight structure of the commodities as would suit the needs of the developmental economy. General consumers might benefit by reduction in freight of certain commodities, while a commodity like manganese ore, the exports of which accounted annually for about 1¼ million tons and the price of which had gone up by about Rs. 25 per ton, might be able to bear a higher freight rate. But he revealed that no specific case had so far been examined.

New Construction

Explaining the principles on which new railway construction would be undertaken, Mr. Shastri stated that priority would first have to be given to areas where heavy industries were being developed. Then would come areas rich in minerals and which required to be opened up. These areas in most cases were the so-called backward areas and included those producing commodities for export to other parts of the country or overseas. Referring to such alignments as Cape Comorin to Bombay on the West Coast line, Mr. Shastri held that they were not going to be easy propositions, financially or technically. They demanded engineering skill and talent of very high calibre. We need not, however, he said, be unduly pessimistic about the availability of such talent. Proceeding, he added: "I do want, however, that a preliminary examination should be made and I shall advise the Railway Board accordingly."

Mr. Shastri averred that another important question to be considered related to the classification of busy and heavy sections on different railways in the context of the availability of power, as a result of the execution of river valley projects. While electric traction required very heavy initial expenditure, all the same, the railways would have to plan ahead and examine various schemes to be put through on a programmed basis. The railways could, for example, undertake electrification of several sections on the Southern Railway, extend the electrified sections on the Western and Central Railways and also consider electrification of the Amritsar-Delhi route on the Northern Railway and the Kanpur-Lucknow section on the Eastern Railway. He asserted that the Government's intention was to electrify more than one section as early as possible. Dealing with the second Five-year Plan, which is now under preparation, Mr. Shastri declared that it was being drawn, keeping in view the priorities indicated, and observed: "I hope our second Five-year Plan will be much more ambitious and more fully serve the urgent needs of the various parts of our country."

A major bottleneck in the rapid development of the railways is the shortage of steel and other materials, considerable quantities of which will be required for extension of electric and steam tractions. There is also need for skilled personnel. Alluding to this aspect, Mr. Shastri remarked that if the difficulties in respect of material could be overcome adequately, the country would "certainly be able to build substantially more mileage a year during the period of the second Five-year Plan."

On the question of the construction of new lines, the Railway Minister said that a survey of the Mangalore-Hassan line was in progress and Sakleshpur would be a station on this line. The question of constructing a line from Sakleshpur to Kadur via Chikmagalur would be considered, after a decision had been reached on the Mangalore-Hassan line. The survey for a broad-gauge connection to Indore had been completed, while the survey of the Bhil area in Madhya Bharat was still in progress. The Calcutta suburban electrification scheme was already under consideration and it would gradually be extended to the coal belt in Bihar and Bengal. The electrification of the Howrah-Burdwan line had been already included in the next five years' programme. The electrification of the Quilon-Ernakulam section was under active examination. The scheme for extension of electrification from Tambaram to Villupuram on the Southern Railway was also under examination.

The Railway Minister admitted that a single gauge would increase the efficiency of railways. But as the conversion of the present 18,500 miles of metre-gauge track into broad-gauge would mean an enormous cost, it was better not to meddle with it now. Reconciling himself with the existing position, he declared that metre gauge had come to stay, at least for some time to come. But the railways did not want to extend the metre gauge. He added: "We have to consider in due course the conversion of all the existing narrow-gauge lines into broad-gauge."

"Inflated" Mileage

His proposal for the adoption of the "inflated" mileage, the Minister said, was designed to facilitate the further development of the railways. In order to make new lines self-supporting to the maximum extent possible and to reduce the burden on railway revenues and general finances of the country, the present proposal was to charge freight rates and fares over such unremunerative new lines "on the basis of an assumed distance with suitable inflations, which might be 1½ to 2 times the actual distance." The "inflation" would be on goods or passenger traffic or on both, according to the character of the line. It was not intended for the present to apply the inflated mileage basis to those existing lines where it was not operating at present.

While cautioning against complacency, Mr. Shastri told critics that a comparison of the operating ratio of the Indian railways with those in the United Kingdom, France and Germany, which had comparative mileages, showed that the performance of the Indian Railways was the best. The operating ratio of India was 80.8 per cent., the U.K. 90 per cent., France 103.3 per cent. and Germany 100.5 per cent. Mr. Shastri pointed out that the Directorate of the Railway Board had been directed to undertake investigations regarding the use of lignite as loco fuel, when it was produced. The railways were watching with keen interest the development of the production of lignite, which was at present entirely the concern of the Madras Government.

Referring to the availability of wheel sets, Mr. Shastri said that procurement of 24,000 sets was being arranged in 1954-55, while Tata's capacity was 9,600 sets per annum. The difference between the requirements of the railways and the indigenous capacity had necessarily to be met by imports. Tatas, he added, had already been requested to expand their capacity to 13,000 wheel sets per annum.

(Concluded from next column)

An electrolytic process for the production of pure manganese-dioxide suitable for use in dry batteries has been developed at the National Metallurgical Laboratory. Manganese-dioxide finds use in the manufacture of dry cells and as a decolorising agent in the manufacture of glass. Manganese dioxide for these purposes must be very pure and its iron content must be low. India imports yearly about 5,500 tons of high grade manganese-dioxide, of which 4,000 tons are used in the dry battery industry.

The product of the process developed at the National Metallurgical Laboratory comprises 90 per cent. manganese-dioxide with a minute trace of lead as lead-peroxide which is harmless in the manufacture of dry cells. One pound of pure manganese-dioxide is obtainable from every kilowatt-hour of electrical energy consumed.

MANGANESE INDUSTRY IN INDIA

INFERIOR GRADE ORES TO BE UTILISED

THE setting up of a heavy media separation plant at the Dongri Buzurg Manganese Mine in Madhya Pradesh, the opening ceremony of which was performed by Dr. S. S. Bhatnagar, Secretary, Ministry of Natural Resources and Scientific Research, on 28th February last, is symbolic of the commencement of a new phase in the history of Indian manganese industry. For it represents the first step towards utilisation of inferior grades of ore, till now thrown away in dumps.

Manganese ore is mostly used for metallurgical purposes, for the manufacture of pig iron, steel and ferro-manganese. High-grade ore is used in the chemical, ceramic and glass industries and in dry batteries. India has extensive workable deposits of manganese ore distributed in several parts of Bihar, Orissa, Madhya Pradesh, Madras, Mysore, Bombay, Madhya Bharat and Rajasthan. Manganese ore is the most important export mineral of India and accounts for an annual earning of about Rs. 22 crores out of the total of Rs. 50 crores resulting from mineral exports. Indian ore goes to the United Kingdom, Canada, Sweden, Norway, Denmark, West Germany, Netherlands, Belgium, France, Spain, Italy, Austria, Yugoslavia, Japan, the U.S.A., Hong Kong and Burma.

In India, most of the manganese ore is mined by open-cut methods and graded according to its manganese content. The first grade ore contains over 48 per cent. manganese, the second grade between 45 per cent. and 48 per cent., and the third grade below 45 per cent.

In the Indian manganese industry, there has been a long tradition of selecting for the market only high-grade ore which fetches good prices. This has resulted in the growth of huge dumps of low-grade ore, about 3.75 million tons being available in Madhya Pradesh, 1.2 million tons in Andhra and about 200,000 tons in Bihar and Orissa. Because of the limited resources of high-grade manganese ores in the country, the Government of India has been laying great stress on the beneficiation of low-grade ores so as to conserve the high-grade ores. The Indian Bureau of Mines, in collaboration with the National Metallurgical Laboratory, Jamshedpur, has designed a plant for the beneficiation of this low-grade ore for industrial units producing from 10 to 50 tons per day. For smaller units, producing from 5 to 10 tons per day, they have evolved a cheaper method.

Beneficiation of Dumps

These two agencies have been in close touch with the industry in regard to the methods of utilising low-grade ore. Several industrial enterprises have benefited from the research work already done. The plant, which is now set up by private entrepreneurs, will undertake the immediate beneficiation of dumps roughly estimated to contain about a million tons of marketable ore. This plant is perhaps the largest of its type in the East and another similar plant will be set up in the near future in the Bharveli Mine. Madhya Pradesh accounts for 50 per cent. of the total production of manganese ore in India and this development is expected to bring to the State increased royalties amounting to several lakhs of rupees.

Manganese, in the form of ferro-manganese and spiegeleisen, is extensively used in the iron and steel industry. Manganese helps the removal of sulphur, oxygen and phosphorus from iron and imparts a high degree of toughness to the resultant alloy. A number of useful non-ferrous alloys, as, for example, manganese bronze, manganin, high and low expansion alloys, high-damping alloys, etc., contain manganese along with other constituents. In non-ferrous metallurgy, very pure manganese is needed. Alloys prepared from electrolytic manganese are found to be much better than those produced from other forms of manganese.

Though electrolytic manganese is being produced on a pilot-plant scale in foreign countries, the successful reproduction of the processes, as described in literature, has not been possible in India, due to insufficient data. As a first step towards successful production of electrolytic manganese from Indian manganese ore, the optimum conditions for the electro-deposition of manganese from manganous sulphate solutions have been studied at the National Metallurgical Laboratory, Jamshedpur.

RESTRICTIONS ON MARINE TARIFF RATES RELAXED

IMPLICATIONS TO INSURANCE BUSINESS

THE Bombay Regional Council has decided to exempt general insurers from the restrictions in respect of marine tariff rates for textiles, cotton and certain other goods. This decision reflects the world-wide competitive conditions which have come to prevail in the sphere of marine insurance. It also reflects the inherent difficulties involved in trying to control the rates for a service such as marine insurance, which, by reason of its international character, cannot possibly be controlled in any effective manner from any particular country.

For some time past, tariff insurers in this country have found it increasingly difficult to secure marine business, because the schedule of rates, which they were obliged to quote for this class of business, was well above the rates which have come to prevail in many foreign countries. Insurers in the countries which import Indian goods were able to quote lower rates for marine insurance for the goods exported to those countries from India. When the importers in the overseas countries found that they could get the goods insured more cheaply in their own countries, they were naturally less reluctant to get the goods insured at this end. These importers, therefore, began to arrange with their home insurers who had branches in India, to issue to the Indian exporter a certificate under open policy. Thus, as a result, actual insurance, including the payment of charges, came to be effected at the destinations of Indian goods. Foreign insurers thus got the benefit of insuring goods exported from this country. This showed how difficult it is to control the rates for an international service such as marine insurance. Indian insurers, on their part, realised that if the fixation of tariff rates served only to divert insurance business from India, no useful purpose would be served by their being sticklers for tariffs.

Removal of Restrictions

Some time back the question engaged the attention of the Bombay Regional Council. It would appear that the Council tried to elicit information relating to the rates and other conditions of service offered by insurers in the countries to which Indian goods are exported. But the Council could get no accurate information; for, there are many centres, Aden, for instance, where the rates are not fixed but are flexible or move in accordance with voluntary agreements arrived at among the insurers from time to time. The Council, therefore, decided, last month, to exempt the export trade in certain classes of goods, notably textiles, from tariff rates. The removal of restrictions refers only to the complete cover rates, for the basic rates (F.P.A. and W.P.A. rates) continue to be governed by the schedule of tariff. It may be mentioned, in this connection, that the schedule refers, among other countries, to Ceylon, Arabia, Iran, Sudan, Egypt, Hongkong, South, East and West Africa and Madagascar. The Council's decision is similar to the one which it took last year when it removed Burma and Malaya from the scope of the tariff schedule. The Council has also removed, with effect from this month, imports of cotton from the U.S. from the scope of tariff restrictions.

There is no doubt that the Council's decision will enable Indian insurers to quote competitive rates. Already, the rates have slumped by about 50 per cent. There is keen competition for the available volume of business. However, a large part of the marine insurance business which was being diverted to other countries will now be retained within India. This will increase the volume of the Indian insurers' business. It remains, however, to be seen whether it will be economic business or not. If the rates slump too heavily—it is to be feared that they already have—the larger volume of fresh business will be of little avail to the insurers. Already, competition in marine insurance is very keen all the world over. Indian insurers, who have for long been insulated from world trends, should now learn to face world competition. In an article, contributed to a recent issue of *The Review*, Mr. Henry C. Thorn, Resident Vice-President, Insurance Company of North America, New York, summed up the world trends in marine insurance. He said:

"Due to the dropping off of marine premiums because of cuts in rates, dsring up of certain trades, and other causes, competition is becoming keener and keener, to the point that many underwriters have cast all caution to the winds and are underwriting chiefly for premium volume. Such a course is bound to bring disaster to those who pursue it. It has always been so in the past, and it is doubtful that the trend will change soon. The immediate results of an increase in premium volume is a better statement in so far as expenses are concerned, and as some people cannot see further than the ends of their noses, they are content to throw caution to the winds and write on this basis. By throwing caution to the winds, I mean that, irrespective of what the experience has been on an account with the underwriter who has it, whether it is due to faulty packing or generally bad management and faulty shipping arrangements, some new underwriter will blindly quote new rates that are even less than those that have produced a loss to the present carrier."

But there is one factor which may aid insurers. Many textile exporters find that their competitors in the world textile trade sometimes score over them by a very small margin. If insurance rates decline even by a small margin, it will enable the exporters to quote competitive prices. Perhaps, this will enable them to export more than they have done in the past, provided, of course, prices in other exporting countries do not decline further or the prices in this country do not rise further. Naturally enough, exporting interests welcome this development in the sphere of marine insurance. If the volume of export trade increases Indian insurers stand to gain thereby.

BOMBAY STATE INSURANCE FUND

The Government of Bombay constituted, as is well known, a common insurance fund with effect from 1st August, 1951. With the help of this Fund, the Government effects its own insurance for all Government commercial and industrial schemes. This Fund is governed by the following general principles:

(1) Industrial and commercial undertakings including all State Training Schemes, will provide for adequate insurance of their property in accordance with the practice prevailing in all commercial undertakings.

(2) Property held by the Government and not included in clause (1) above will not be insured and any damage to such property will continue to be met from the ordinary revenues to the extent necessary and possible.

(3) The premium in respect of property in clause (1) will be credited to a separate fund and will be included in the working expenses of the appropriate undertaking.

(4) Damage covered by the insurance thus provided will be met from the Insurance Fund.

(5) Government property will not be insured with private insurers. But where the risk involved is too large for the Fund to carry, the officer in charge of the Fund, with the previous approval of the Government, will take out the necessary policy with a private insurance company—this will usually be the Indian Insurance Companies' Association Pool—and pay the premium out of the Fund.

The following table gives receipts and disbursements under the Fund in 1952-53, 1953-54 and the budget estimates for 1954-55:

(In lakhs of rupees)

	Receipts	Disbursements
1952-53 (accounts)	6.10	2.64
1953-54 (budget estimate) ...	6.53	1.95
1953-54 (revised estimate) ...	8.67	4.04
1954-55 (buget estimate) ...	20.48	1.60

At the end of 1952-53, the Fund had Rs. 15.28 lakhs at its credit. The Fund, it is estimated, will stand at Rs. 19.91 lakhs at the end of 1953-54 and at Rs. 38.79 lakhs at the end of 1954-55. The following table gives the relevant details:

(In lakhs of rupees)

	Accounts 1952-53	Revised estimate 1953-54	Budget estimate 1954-55
Opening balance ...	11.82	15.28	19.91
Receipts	6.10	8.67	20.48
Total	17.92	23.95	40.39
Disbursements ...	2.64	4.04	1.60
Total	15.28	19.91	38.79

It will be seen from the table above that the operations under the Fund are increasing. This is reflected in the fact that the Fund has grown in size from year to year.

TAXATION OF TREATY COMPANIES

General insurers in this country, it may be recalled, had been perturbed by the attitude of the income-tax authorities who decided to tax Indian companies in respect of the profits earned by foreign companies on the reinsurance business which the former cede to the latter companies (*vide Commerce* dated 20th February, 1954). It is now learned that the authorities have issued instructions to the concerned officials not to take recovery proceedings in such cases. This is indeed a welcome development. It is to be hoped that the Government will recognise permanently the insurers' plea that such taxation will impede the progress of general insurance in India.

Briefly, the tax authorities sought to treat Indian companies as the statutory agents of foreign insurance companies with whom they have reinsurance treaties and to tax them in respect of profits earned by these foreign companies on the reinsurance treaties on the ground that these companies had business connections with them. It would appear that the matter was examined carefully by the Committee of the Indian Insurance Companies' Association and a comprehensive representation was submitted to the Central Board of Revenue by the Committee pointing out the hardship likely to be caused to insurers by the Government proposals. The Committee also urged the Government, it is stated, to accept the principle that in all cases where the reinsurance transactions are *bona fide* and undertaken for the sole purpose of obtaining protection by means of reinsurance, the present practice of treating the reinsurer as operating from his head office and trading with India and, therefore, not liable to tax in India, should be recognised.

REINSURANCE IN CUBA

In the past few years, a distinct trend has been noticeable, according to *The Review*, towards the establishment of reinsurance companies in countries where no such enterprises existed before. Most of these new companies have been initiated by international insurance and reinsurance concerns, which shows they are accommodating themselves to economic and political realities prevailing in the present phase of world affairs. In the last couple of years not less than four reinsurance companies have been established in the Union of South Africa and three in Canada. No reinsurance companies existed in either countries before. The African companies were established by Swiss, French, British and Dutch interests and the Swiss and British were responsible for the creation of the Canadian companies also. The latest development in this direction is the establishment of two new reinsurance companies in Cuba and one in Venezuela, where no professional reinsurance companies have hitherto existed, and yet another in Mexico.

One of the new Cuban reinsurance companies, the Inter-continental Compania de Reaseguros, S.A., Havana, is an offspring of the Caisse Centrale de Reassurance, with the participation of the nationalised French companies, La Paix, Phenix Incendie, and L'Urbaine et Seine. The capital of the company is $300,000, fully paid. The second Cuban reinsurance company, the Compania Cubana de Reaseguros, Havana, is apparently of the now well-known type of group co-operation, established by 23 Cuban and foreign companies operating in the country. The paid-up capital of the Company is $150,000.

The Union Deputy Finance Minister, Mr. M. C. Shah, stated in the Council of States that the Government did not propose to bring forward any changes in section 27 of the Insurance Act in regard to restrictions on insurance companies investing in equity capital. Mr. Shah said that Government had received representations from various bodies and had considered them but did not propose to bring forward any change.

First of Its Kind in India

COMPANY DATA CARDS

SEPARATE HANDY CARD FOR EACH COMPANY

Useful for multifarious purposes.

Each Card contains in compact form about 14 years' Balance Sheets and Profit and Loss Accounts with much other useful information.

ASSOCIATED CEMENT : BOMBAY BURMAH ;
BOMBAY DYEING : B. I. CORPORATION ;
CENTRAL BANK : CENTURY MILLS ;
INDIAN IRON : KOHINOOR MILLS ;
NEW INDIA ASSURANCE : As. 8 each
SCINDIA STEAM : TATA STEEL : Re. 1-0 each

Postage Annas Two per Card

Complete Set of Cards in Book Form at Rs. 6-8
Postage As. 8

The detailed information which you have supplied in a very handy form is bound to be useful to Investment Brokers like ourselves and to the investing public at large who, at the moment, are deprived of such a service which is a regular feature of Stock Exchanges abroad . . .

Being brokers to large Institutional investors, we have a correct appreciation of the value of the wealth of information that you have embodied in these cards.

STUDIES IN BUSINESS MANAGEMENT

PROPOSED COURSES IN INDIA NEED MODIFICATION

(By Prof. C. N. VAKIL)

[In the sphere of training men for business management, India has made little or no progress. The subject has been engaging considerable public attention for some time now. It was also the theme of an interesting address delivered by Prof. C. N. Vakil, Director, School of Economics and Sociology, University of Bombay, at a meeting of the Commerce Graduates' Association at Greens on the 12th inst. Prof. Vakil has made a special study of this subject and recently visited all the important schools of Business and Industrial Administration in the U.S. His views, therefore, merit careful consideration. The following article which is the substance of the address mentioned above may be read with interest. Readers' attention is particularly drawn to Prof. Vakil's observations on the scheme of the All-India Council of Technical Education for providing courses of study in Business Management.—ED.]

THE efforts at planned development of this country presuppose that we should have adequate arrangements for the efficient working of industries, small and big, whether in the private sector or the public sector. It is common knowledge that there is considerable room for improvement in the management of our industrial concerns which, if attended to, should help us in producing more and better. Managerial work has become specialised in Western countries, and it is accepted that appropriate training should be given to persons who wish to qualify themselves for managerial work in private or public industry. The need for adequate training facilities for this purpose in our country is obvious; it should, however, be remembered that the training should be with due regard to our conditions so that those concerned can have a realistic understanding of the work that they will be called upon to do. In other words, the training should have a practical bias or the state of affairs existing in the country and the nature of the problems that have to be faced should be duly reflected in the work that the trainees are required to do. Though we have a good deal to learn from the theory and practice of management in other countries, we should take care to see that these are duly modified to suit our conditions and requirements.

The All-India Council of Technical Education has decided to arrange for four different types of courses in Management Studies. These courses fall into three distinct groups as under:—

(a) *Industrial and Production Engineering.*—The training being with particular emphasis on the physical control of the organisation and products.

(b) *Business Management.*—The training being with particular emphasis on the financial and economic control of the organisation and the distribution of products.

(c) *Industrial Administration.*—The training being with particular emphasis on the human and financial control of the organisation including public relations.

Institution of National Diplomas

These have to be carried out by the institution of National Diplomas as under:—

Courses	*Duration*	*Admission requirements*
(a) Industrial and Production Engineering	One year (full-time) or 3 years (part-time).	Degree in Engineering or Technology with a minimum of two years' experience in industry.
(b) Industrial Administration.	Do. ..	Do.
(c) Business Management	Do. ..	Degree in Arts or Commerce with a minimum of two years' experience in industry.
(d) Certificate in Foremanship.	Two years (part-time).	Persons who are employed in industry in the supervisory cadre and are sponsored by their employers for training.

The Council is thinking of organising these courses in four different regions in the country, namely, the Eastern Region, mainly Kharagpur and Calcutta; the Western Region, mainly Bombay; the Southern Region, mainly Madras and Bangalore and the Northern Region, mainly Delhi. In each of these cases, scientific and technical institutions have been asked to organise courses in Industrial Administration and non-technical institutions to organise courses in Business Management. For example, the Indian Institute of Technology, Kharagpur (near Calcutta) is expected to organise courses in Industrial Administration, and the Institute of Social Welfare of the Calcutta University is to organise courses in Business Management. Similarly, the V. J. Technical Institute, Bombay, is asked to deal with Industrial Administration, and the Bombay University with Business Management. In the case of Industrial Administration a degree in Engineering or Technology with a minimum of two years of experience in industry is insisted upon as the qualification for admission.

It is easy to appreciate that for the Diploma in Industrial and Production Engineering as well as for the Certificate in Foremanship, the requirements for admission should be of a technical character, and the work of instruction should be in the hands of technical institutions. In view of the object as defined for Industrial Administration, however, it is not clear why the admission to these courses should be confined to persons who have had a degree in Engineering or Technology. Persons with a basic knowledge of Economics or Commerce would be better able to have this training. Nor is it clear as to why the course in Industrial Administration should be entrusted to technical institutions. Most of the work in Industrial Administration as proposed is of a non-technical nature and can be more appropriately handled by institutions which have facilities to do work in Applied Economics.*

American Experience

These and similar courses are developed more fully in the U.S.A. than in any other country in the world. The U.K. is trying to adopt some of these courses. The Graduate Schools of Business and Industrial Administration in the U.S.A. do this work at a high level. They admit, as a rule, students who have had a good liberal education preferably in Economics or Commerce. The School of Industrial Administration attached to the Massachusetts Institute of Technology admits M.I.T. Graduates in Engineering or Technology to its courses. It is, however, quite clear that it does not consider knowledge of engineering or technology as the necessary basis for the study of Industrial Administration. It is accepted only as an intellectual discipline and other intellectual disciplines are considered on a footing of equality for the course.† Whereas this is the situation in this institute which is an offshoot of the M.I.T., all other schools of this type, throughout the U.S.A., admit students with training in Economics or Commerce for these courses; for instance, the Harvard School of Business Administration, the Wharton School of Business Administration (Pennsylvania University), Columbia University School of Business Administration and similar schools in various other universities. Persons holding the M.B.A. (Master of Business Administration), or similar degrees from these institutions are prized in business and industrial houses in India. These schools do not insist on technical training for admission to their courses. They believe that an executive charged with Industrial Administration or Business Management need not have technical training. An industrial or business executive should have a wide background, general training of appropriate subjects and be able to decide important issues with due reference to diverse forces involved in a given problem. If technical considerations are involved in any given problem, he should seek the advice of the technical experts in the concern in question. In the ranks of business and industrial executives either in the U.S.A. or in the U.K., the percentage of persons who have had technical training is comparatively small. A few such persons because of their personal aptitude or capacity have risen to executive positions. The great majority of persons working as business or industrial executives are, however, persons with general training and experience of problems relating to industrial administration and business management.‡ The situation in India is also similar.

It may be noted that in the U.S.A., as a rule, such courses in Business Management and Industrial Administration are taught together in the same institution, obviously because they are closely related and have common ground. The teachers in these subjects have, as a rule, basic training in Economics; some of them have practical experience of having worked in industrial houses. The emphasis in different schools in the U.S.A. varies; each school has developed its own speciality and approach; there is no rigid uniformity as is contemplated in India. This allows different centres to make different experiments suited to local conditions and is conducive to initiative and original work. In any case, there is no artificial division between Business Management and Industrial Administration; they are dealt with under the same roof and under the same control; they are not separated as is proposed in India where Industrial Administration is to be taught by Technological institutes and Business Management by others.

Need for Full-time Courses

It should also be noted that, generally, these courses are given to full-time students who join industry after their training is over. Part-time courses in special subjects are given in some places to those working in industry. But there is no insistence that a candidate for admission should have two years' previous experience in industry. The assumption that persons who are already in industry for several years will be willing to attend evening courses for a Diploma in Industrial Administration or Business Management for three years in succession is likely to prove incorrect. Those already in industry may like to study one or two courses in which they are deficient or in which they wish to specialise. They may like to attend such courses, say two or three times a week, for six months or at the most a year. They will not care for a diploma or appear at an examination for it. Similarly, persons with technical training may profit by having some subsidiary courses in Industrial Administration. These may be given while they are doing their technical studies or later by evening courses as above. To think of giving full and detailed courses in Industrial Administration to Engineering or Technical Graduates is neither consistent with their specialisation nor required by the facts of the situation.

What is desirable is the concentration, in the beginning, on full-time courses in Industrial Administration and Business Management in two centres, say Bombay and Calcutta. These should be open to graduates in Economics or Commerce. It should be limited to a small select number and should have a practical bias. Intensive practical training can be organised for them in co-operation with industry. The resources of institutions which do these courses may be utilised to offer some evening special courses for those in industry who wish to profit by them. The evening courses would thus be a by-product of the full-time institutions. The evening courses need not lead to diplomas. Diplomas or degrees should be given for the full-time courses only. These courses should be spread over a period of two years. The proposal that the courses as framed by the Council can be covered in one year is not sound. The ground to be covered being wide, the work will be superficial if attempted in one year, even allowing for the fact that the candidates may have practical experience and may not have vacations. It is better to concentrate on a few centres for such full-time courses and then develop these studies in the light of experience. Any effort at organising these courses in several centres, and that too mainly for part-time or evening students is not likely to succeed for reasons explained above. It is better to organise a few institutions well than try to do so at several places in a superficial manner.

It is obvious that large amounts of money will be spent on the organisation of these courses. Though the main idea is good and systematic efforts are required to develop the study of Industrial Administration and Business Management in the interests of efficiency, the approach of the Council is highly defective and needs radical alterations. It is borne out neither by the experience of other countries nor by the conditions of our country. It will obviously not be possible for technical graduates to do these subjects at an advanced level. For adequate knowledge of these subjects, the training should be more advanced and for this, a background of Economics or Commerce is essential. Besides, the starting of merely part-time courses of the type suggested above will not lead to the desired results. We would be justified in adopting Western methods of training with modifications to suit our conditions; but the proposed arrangement is borne out neither by logic, nor by experience, much less does it fit into our requirements.

* Details of the proposed courses are as under:—

Business Management	*Industrial Administration*
1. Management Principles.	1. Industrial Accounting and Budgetary Control in Industry.
2. Management Practice.	2. Industrial Economics and Economic Resources.
3. International Trade.	3. Public Economics and Industrial Co-operation.
4. Marketing; Distribution,	4. Industrial Organisation and
5. and Transportation.	Management including labour and
6. Economic Analysis.	Industrial Law.
7. Economic Statistics.	5. Personnel Management.
8. Personnel Management.	6. Economics of Transportation.
9. Higher Business Control.	7. Statistics.
10. Public Finance and Public Utilities.	8. Industrial Plant Operation and Production, Planning and Control.
	9. Time and Motion Study.
	10. Metrology.

Note: No criticism is offered on the proposed courses which can be improved by suitable changes; for example, one wonders whether Metrology should be included in the course in Industrial Administration.

† This is based on a personal discussion with Dean Brooks of this School in November, 1953.

‡ The above account is based on personal discussions with Deans of Graduate Schools of Business and Industrial Administration at the leading Universities in the U.S.A. during October and November, 1953.

STIMULUS TO PRODUCTION AND EMPLOYMENT

WHAT GOVERNMENTS CAN DO

[With a view to stimulating production and employment, various suggestions have been put forward by business and industry in this country as to how governmental policies could be adjusted to allow private enterprise to play its full role. In the U.S. also, similar views are being expressed in order to stem the onset of any possible economic recession, and what is more noteworthy is that the Government has already made a move on the lines suggested. The following article, culled from the February issue of the Guaranty Survey of New York makes, in this context, interesting reading. The views on "deficit financing" contained therein are of particular significance to this country, as the Finance Minister, in his latest budget, proposes to resort to "deficit financing" of the order of Rs. 250 crores in 1954-55.—ED.]

THOSE who believe that political controls can bring sustained prosperity continue to complain of governmental inaction. In fact, they seem to have laid in a new supply of ammunition since the current business readjustment began. If and as the readjustment proceeds, cries for the Government to "do something" will undoubtedly spread. A "positive programme" will be demanded. What are the essential features of a sound "programme"? What can the Government do to limit the extent and duration of the readjustment and to promote firmly based prosperity for the economy as a whole?

In seeking answers to these questions, it is important to bear in mind a few pertinent facts that are too often overlooked. One of these is the meaning of the term "readjustment." As its name implies a readjustment is a corrective process. In a changing economy, rates of production and operating methods must be continually adapted to new conditions. In particular, maladjustments develop in the course of a sustained boom, and these need correction. The correction usually involves some decline in production and employment.

For this reason, continuous full employment is impossible. A reasonably smooth and quick readjustment is a legitimate objective, but a total avoidance of it is not, because the readjustment itself is necessary. Hence, governmental action, if it is to have any chance of achieving success and avoiding damage, should aim at facilitating the readjustment, not at preventing it.

Another consideration is the risk of creating a lasting evil in the effort to relieve a temporary one. Most of the measures that have been taken by Governments in their attempts to stimulate business are essentially inflationary—or, in the current semantics, "anti-deflationary" or "reflationary." Deficit financing, whether it results from tax reduction or increased spending, tends to expand the money supply. Unless contrary action is taken at an appropriate later time, the final result is a permanent dilution of the currency.

Compensatory Fiscal Policy

Under the theory of "compensatory" fiscal policy, deficits incurred at times of reduced business are offset by surpluses in periods of active business. In practice, these offsetting surpluses rarely occur. The political pressure for governmental largess and tax relief is too strong. The "compensatory" theory has been tried and found wanting. The stimulating effect of an inflationary hypodermic is temporary, but the inflation itself is permanent.

A normal business decline is the concern of business, not of Government. A weakening of demand is a sign of maladjustments, and the struggle to regain lost markets is the driving force by which the maladjustments are corrected. Only the buyers and sellers of goods and services can exert this force. "Reflation" from without is no substitute for readjustment from within. Instead of correcting the maladjustments, it tends to perpetuate and aggravate them.

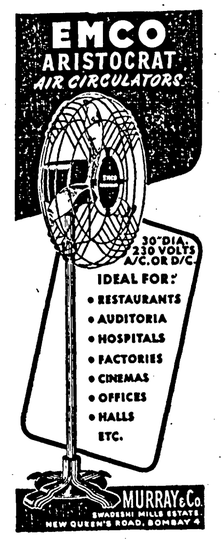
In so far as the decline has been caused or is being deepened and prolonged by unwise governmental policies, the situation and the remedy are quite different. This is the area in which a "positive programme" under political auspices not only can be helpful but may even be indispensable. When business activity turns downward, both the executive and the legislative branches of Government may well ask themselves to what extent the trouble may be of their making, and what they can do to correct it. Is the tax structure conducive to vigorous enterprise, or is it weighted against individual initiative and risk-taking? Are markets free to reflect and react upon underlying conditions, or are their normal movements hampered by laws and regulations? Is management at liberty to act, or is it circumscribed by statutory and bureaucratic restrictions? Is business being given every incentive to expand, or is political intervention subjecting it to needless risk of failure, with the threat of further intervention if it does fail?

Such questions as these have been held in abeyance during the boom conditions of the war and post-war years. Yet those who recall the persistent apathy and stagnation of the late 1930's have regarded the outlook with some misgivings. They have recognised that, sooner or later, the economy would be called upon to test itself under a more rugged set of conditions, and they have not forgotten that some of the politically created obstacles, which inhibited recovery during the pre-war period, are still present today. It is an open question whether the environment that political action has placed around our industrial system in the last two decades is one in which enterprise can permanently thrive. This is the governing question to be considered by public officials and lawmakers in formulating a "positive programme" to keep business healthy.

Genuine Tax Reform

The Government has made a good start toward adopting such a programme. The budget has been reduced by $12 billion in one year, and this saving has permitted scheduled tax reductions to go into effect without incurring a large cash deficit. The so-called excess profits tax, one of the most harmful of all Federal levies, has been allowed to expire, and individual income-tax rates are lower. At the same time, the Administration has refused to yield to demands for deep tax cuts, until such action is warranted by further lowering of expenditures. The House Ways and Means Committee has taken a preliminary step toward genuine tax reform by approving a reduction in the tax on dividends, the device by which corporate earnings are now subjected to double taxation. This proposal is to be included in the general tax reform Bill that is being written by the Committee.

The Government has also taken several significant steps toward restoring free markets. One of these was the abolition of general price control early in 1953. Another was the full support given the Federal Reserve Board in the endeavour to adapt open-market policy to the changing needs of the economy.



The use of central-bank policy as an anti-recession stimulant is less risky than is the use of fiscal policy, partly because it is less direct in its effects and partly because it is less subject to political pressure. Central banks can make more money available, but they cannot force it into use. For this reason, easy money is of very limited effectiveness in a period of reduced business. Moreover, when the time for restraint comes, central banks as well as Governments are exposed to strong opposition, as has been seen in the United States during the past year.

Much remains to be done, however, before a programme embodying adequate economic incentives can come into being. The tax on capital gains continues to act as a deterrent to the flow of venture capital. The same is true of the almost confiscatory rates on individual incomes in the higher brackets. The outlook for rates on corporate income is still uncertain, but even if the scheduled reduction goes into effect at the beginning of April, the 47 per cent. rate will still be a heavy burden, especially to companies of moderate size that are facing more difficult conditions than have existed in recent years. The high and arbitrary excises on certain designated goods and services constitute an unjustifiable discrimination against the industries affected, and in at least one case, namely, that of the tax on distilled spirits, the rate has risen to a level at which it apparently defeats its own purpose as a producer of maximum revenue by driving business "underground."

Outside the field of taxation, probably the most serious threat to market flexibility and individual initiative is to be found in labour-management relations. Over large sectors of the economy, labour costs are frozen. This, in effect, means that prices also are frozen. If the business readjustment proves to be as mild and short-lived as most forecasters apparently expect it to be, this rigidity of prices and costs may not be a serious obstacle to high business activity or a critical factor in unemployment. It is, however, not difficult to imagine a situation in which the failure of labour costs to adapt themselves to downward tendencies in general prices could become a cause of great hardship throughout the economy, and most of all to labour itself.

A situation as deep-rooted as this is not easily changed. For two generations, the public in general, and industrial workers in particular, have been taught to believe that wages can enjoy an exclusive immunity to the market forces that determine the prices of commodities and services in general. This delusion survived the most disastrous period of unemployment in history and now seems to be stronger than ever. It is impossible to predict the sort of situation that will ultimately reveal it for the fallacy that it is. As long as the belief remains imbedded in the popular mind and in political and economic institutions, the economy will continue to face the threat that this particularly harmful form of market rigidity will make business readjustments longer and more severe than they need be.

A "Positive Programme"

Free markets and business incentives are the essential features of a governmental programme to stimulate production and employment. These features exist automatically in a truly free economy. If they are weak now, it is because they have been made so by a type of political action that harks back to the days of mercantilism, the economic system which developed in Europe as feudalism decayed. Mercantilism was characterised by close governmental regulation of industry and trade with a view to promoting nationalistic aims. Prices, wages, occupations, the right to do business—every phase of economic life was subject to control by the authoritarian State—all, of course, in the "public interest."

Mercantilism was superseded by liberalism, the system of free enterprise and free markets, which sought to increase national prosperity by giving each individual the liberty and incentive to increase his own prosperity. Under genuine liberalism the Western world experienced a rise in wealth and welfare never approached before.

Yet in the last thirty years many nations, including our own, have tended to revert to the once discredited aims and methods of the earlier era. Curiously enough, this reversion has masqueraded under the name of "liberalism."

The "positive programme" that business needs from Government today is not a programme of new forms of intervention but a programme for the restoration of the freedoms and incentives that spell *true* liberalism. Fortunately, our own Government is moving in that direction.

THE CENTRAL BANK OF INDIA, LIMITED.

BALANCE SHEET AS AT 31ST DECEMBER, 1953.

CAPITAL AND LIABILITIES.

1. CAPITAL:—					
AUTHORISED CAPITAL—					
(a) 10,50,000 Ordinary Shares of Rs. 50 each		Rs.	5,25,00,000	0 0	
(b) 4,20,000 Ordinary 'A' Shares of Rs. 25 each		,,	1,05,00,000	0 0	
		Rs.	6,30,00,000	0 0	6,30,00,000 0 0
ISSUED CAPITAL					
(a) 10,50,000 Ordinary Shares of Rs. 50 each		Rs.	5,25,00,000	0 0	
(1) 4,72,528 Ordinary Shares of Rs. 50 each issued as paid up to the extent of Rs. 25 without payment in cash in exchange for 9,45,056 shares of the Tata Industrial Bank Ltd.	Rs. 2,36,26,400 0 0				
(2) 5,77,472 Ordinary Shares of Rs. 50 each issued for payment in cash	,, 2,88,73,600 0 0				
	Rs. 5,25,00,000 0 0				
(b) 2,10,000 Ordinary 'A' Shares of Rs. 25 each fully paid up issued as bonus shares for consideration other than cash		Rs.	52,50,000	0 0	
		Rs.	5,77,50,000	0 0	5,77,50,000 0 0
SUBSCRIBED CAPITAL:—					
(a) 10,48,475 Ordinary Shares of Rs. 50 each		Rs.	5,24,23,750	0 0	
Amount called up at Rs. 25 per share					2,62,11,875 0

Note:—1. The above number includes 348 Ordinary Shares of the Central Bank of India, Ltd., which remain to be given against 696 coupons issued by the Central Bank of India Ltd., for a like number of shares of the Tata Industrial Bank, Ltd., which have not yet been submitted for conversion.
2. 35 Ordinary Shares of the Central Bank of India, Ltd., which remain to be given against 70 coupons issued by the Bank, but not yet submitted for conversion.

(b) 2,09,025 Ordinary 'A' Shares of Rs. 25 each		Rs.	52,42,375	0 0	
Amount fully paid up					52,42,375 0 0
		Rs.	5,76,66,125	0 0	3,14,54,250 0 0

Note:—509 Ordinary 'A' shares remain to be given against 2,545 coupons issued but not yet submitted for conversion.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Central Bank of India, Ltd., as at the 31st day of December 1953 and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the audited Returns of 56 Branches and the authenticated Returns of the Pay Offices and other Branches, and report that:—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory;
(b) The transactions of the Bank which have come to our notice have been within the powers of the Bank;
(c) The Returns received from Branch Offices of the Bank have been found adequate for the purpose of the audit;
(d) In our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;
(e) Such Profit and Loss Account shows a true balance of profit for the year;
(f) Such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and explanations given to us and as shown by the books of the Bank; and
(g) In our opinion, books of account have been kept by the Bank as required by Section 150 of the Indian Companies Act 1913.

NATIONAL INCOME OF INDIA

ARE WE GETTING RICHER?

(By Prof. V. G. RAMAKRISHNA IYER)

INDIA'S national income is placed at Rs. 9,530 crores for 1950-51 in the final report of the National Income Committee published recently. The corresponding figure for 1949-50 is Rs. 9,010 crores, while the revised figure for 1948-49 is Rs. 8,650 crores. The *per capita* incomes, at current prices, work out to Rs. 265.2 for 1950-51, Rs. 253.9 for 1949-50, and Rs. 246.9 for 1948-49. The terms of reference to the Committee were to prepare a report on national income and related estimates, to suggest measures for improving the quality of the available data and for the collection of further essential statistics and to recommend ways and means for promoting research in the field of national income. The Committee was also to guide the National Income Unit of the Government of India in the compilation of authoritative estimates of national income. The first report of the National Income Committee, completed in April, 1951, *considered various general questions on national income and presented estimates of* national income for 1948-49.

The question of India's national income has been the subject of investigation for considerable number of years now and official and non-official agencies have attempted to state in quantitative terms the *per capita* income of India. Varying estimates were given in the investigations made in the past by critics of British administration in India who put the *per capita* income of the country at a low figure, while the apologists of British administration put it at a high figure. In recent times, the recognition of a positive economic policy has emphasised the need for a statistical picture of the interrelationship in the working of the Indian economy and not merely for an absolute total providing a doubtful satisfaction to the curiosity as to whether the country is getting richer or poorer. Governments today recognise that national income estimates are a sure guide to current economic events, and they are no longer regarded as a matter of academic or historic interest. In Britain, the Chancellor of the Exchequer has been of late depending upon White Papers on National Income and Expenditure to *frame* Government budget and financial policies.

The immediate cause of the appointment of a National Income Investigation Committee by the Government of India was the demand for a revision of the tax structure. For the estimates of national income are expected to indicate how much of the total attributed to production is in the form of wages, salaries, interest and profits, while that of the national product should show how much of the income is generated in different branches of activity as agriculture, mining and manufacturing. On the expenditure side, the estimate will give an idea of the distribution between capital formation and consumer expenditure and the constituents of each. It should include the composition and distribution of personal income. Consolidated statements of operations, appropriation and reserve accounts of corporations have also to be prepared. The aim thus set forth is laudable, but it is difficult, in a country like India which is at present a statistical vacuum, and much preliminary work will have to be done before we can aspire to present figures sufficiently exhaustive and reliable as in the case of the U.K. and the U.S.A.

Experts' Views

More recently the economic experts, Dr. Bowley and Mr. Robertson, who were invited by the Government of Bombay, observed that the existing data for the measurement of India's national income are hopelessly inadequate and they tentatively suggested the following items for inclusion or exclusion in any measurement of the national income:

(i) The value of the net product of agriculture, mining industry, etc., at the point of production,

(ii) plus the value of the services of transport and mercantile agencies added to domestic goods and imports,

(iii) plus excises on domestic goods and customs on imported goods,

(iv) minus the value of exports (f.o.b.) including gold and silver,

(v) plus the value of personal services of all sorts,

(vi) plus the annual rental of dwelling houses,

(vii) plus the net increments in the holding of balances and securities abroad (after deducting similar increments held in the home country by foreign residents, and

(viii) plus the value of agricultural produce at the *point of production which is* consumed directly by the producer or exchanged by barter.

Since most of these data may not be available in India for some time to come, the experts recommended the compilation of another estimate of India's national income by means of a summation of India's individual incomes both for confirming the results arrived by the census of production method and for correcting certain discrepancies.

The census of income method includes the following items:

(i) The value of all commodities directly produced and directly consumed and of all receipts in kind at the point of production plus the annual rental value of houses in which the owners lived,

(ii) minus all interest payments on loans whether for consumption or production,

(iii) plus the gross money incomes of all individuals including interest on Government loans and pensions of retired Government servants,

(iv) plus the undistributed profits of companies and the net profits of companies and the net profits of Government commercial undertakings,

(v) minus the interest on war and other non-productive Government loans and the net pensions of ex-Government servants, and

(vi) plus receipts *from customs, excise, stamp* and local rates.

For estimating rural incomes the census of production method is more appropriate and for urban incomes the census of income method is more appropriate. In both cases, detailed sample enquiries in selected areas might, in the first instance, be more useful than any attempt at exhaustive surveys covering the whole field.

The foregoing theoretical details might show the complexity of the problem of judging national income and the need for not putting implicit faith in facile conclusions from mere statistical averages. The aggregate income of India for 1947-48 was estimated to be of the order of Rs. 4,972 crores and the population for the same years at 235 millions, and the *per capita* income was, therefore, estimated at Rs. 213. The poverty of the people is evident when compared with similar incomes in the advanced countries in the same year. The average income of an American is estimated to be 23 times more than that of an Indian and that of an Englishman 12 times that of an Indian. If we relate the income of 1947 to prices, we find that, according to the Economic Adviser's Index, the price level in India for 1947-48 (with 1939 as base) was 307, i.e., the price level in 1947-48 was three times that in 1939. Making allowance for this price rise, the *per capita* income in terms of pre-war prices comes to Rs. 70. This shows that there is not much increase in the real income in 1947-48, as compared with the pre-war year which is largely due to the rapid rise in population. Between 1931-33 and 1947-48, the population of the Indian Union has been estimated to have risen from 198 million to 233 million, that is, in 16 years the population increased by 35 million or 18 per cent. But the *per capita income*, in terms of pre-war prices, increased only from Rs. 61 to Rs. 70. In other words, the trend seems to be for population to increase faster than output of goods. The following figures show, at a glance, the national income and population for subsequent years, as given by the recent report of the National Income Committee.

		1950-51	1949-50	1948-49
Population	(Millions)	359.85	354.82	350.33
National income	(Rs. crores)	9,530	9,010	8,650
Per capita income	(Rs.)	265.2	253.9	246.9

The *per capita* incomes when calculated in real terms show no appreciable change during the period.

In this connection, it is necessary to disabuse our minds of a considerable misconception about the scope for distribution of wealth in our country. Any factual survey will show that the

rich are neither so rich nor are there so many of them in the country. Income-tax returns are an indication. In 1940-41, for instance, there were only 79,000 income-tax assessees in the whole of India and the number of persons assessed to tax on the basis of income of one lakh or over was approximately, 2,800 and this means that the total income-tax paying class represented only 0.07 per cent. of the total population and persons in the income brackets of one lakh and over, only 0.0007 per cent. persons with an income of one lakh or above represented roughly one per cent. of the total income-tax paying class. Nearly 50 per cent. of the assessees belonged to the income grades below Rs. 5,000 a year. These figures pertain to India before Partition. For the present, it may be presumed that persons who form such a small proportion of the total population as 0.0007 per cent. have between them far less than even one per cent. of the wealth of the country. The slight improvement caused by the war may be ignored on the ground that it is not likely to alter the picture fundamentally. In India, under present rates of income taxation, a person with one lakh of earned income is left only Rs. 48,000 approximately, a person with an income of Rs. 2 lakhs is left with about Rs. 54,000, that is, an additional amount of Rs. 6,200 only for an additional earning of Rs. 1 lakh; a person with an income of Rs. 5 lakhs is left with about Rs. 64,000 and so on, and it is thus arguable that these are conditions not favourable to saving and under the present rates of income taxation no one can become rich except by tax dodging or black marketing.

Increased Production Necessary

Even in wealthy countries like the U.S., it is said that persons with incomes of 25,000 dollars a year and above had about 6.7 per cent. of the national income in 1947 which sank to 3.4 per cent. in the Hoover regime and to 2.5 per cent. under Roosevelt. In India, if all the wealth of the wealthy people were forcibly redistributed, it would not provide even one meal for 300 million people. In the U.S. it has been said that, progressive income-tax could redistribute only 2 per cent. of the national income, while a slight improvement in business conditions will improve the condition of the masses by anything between 5 and 10 per cent. In India the proportion of the national income which could be redistributed by a progressive income-tax is much less but an improvement in business conditions and production will improve the conditions of the men much better. So the road to wealth in India is not so much by redistribution but by increased production. Estimates of the structure of income go to show that as between 1931-32 and 1947-48, about 52 per cent. of the income was derived from agriculture and allied occupations in the former year, while it was about 56 per cent. in the latter year. The shares of income from industries in the total income in 1931-32 was about 16 per cent., as against about 21 per cent. in 1947-48 and the percentage share of services was about 22 per cent. in 1931-32, as against about 17 per cent. in 1947-48. There does not seem to be a fundamental change in these relative proportions between 1948 and 1953.

We have so far given so much consideration to the figures relating to the size and distribution of national income for the simple reason that it is the only objective index whether we are progressing or declining in our national life and activity. It is only out of the increased income that we can get not only the food and clothing and other necessaries of life but those fruits of the human spirit which make for a balanced life. Our rates of saving and investment also depend on the steady growth of our *real* income which the economist is able to measure only in money terms. We have been led to believe that our money incomes have shown a steady increase and that we are progressing towards a higher standard of living so that we are now getting better in the best of all possible worlds. The mere rise in money incomes is no criterion, for they have to be related to the rise in prices which have inflated the incomes, and the relation of our money incomes to real income measured in terms of the cost of living, shows clearly that our post-war prosperity is artificial and cannot stand for long.

		1939-40	1946-47	1947-48
Total income	(Rs. million)	19,843	44,672	39,421
Population	(Millions)	290	314	340
Per capita income	(Rs.)	67	143	180
Cost of living	(Index No.)	100	242	258
Income adjusted with cost of living	(Rs.)	67	69	62

The figures already quoted from the Report of the National Income Committee recently published do not show any substantial change from those quoted above. It is, therefore, evident that we cannot afford to be optimistic and lay the flattering unction to our souls that we are in the enjoyment of higher incomes and, therefore, of greater prosperity. In one sense, the direction given to our capital assets on account of the war in the form of huge sterling balances has affected the standard of living of the people as reflected in the consumption of food, clothing and other necessaries of life.

Food and Cloth Consumption per head

		1939-40	1946-47	1947-48
Food consumption per head	(lbs.)	388	388	357
Cloth consumption	(yards)	16	12	11

In this connection, a reference may be made to the Five-year Plan for increasing the wealth of the country which is still in the region of possibilities rather than of actual achievements.

		1950-51	1955-56
National Income	(Rs. crores)	9,530	10,000

As against this, we may note the following growth of population.

	Population	*Decennial growth*	
	(Millions)	(Millions)	(Per cent.)
1941	319	40	14
1951	361	42	15

As a matter of fact, the common people are not better fed and clothed than they were even in pre-war periods. If planned production shows a slight increase, it is neutralised by unplanned growth of population and inflated prices. We will do well to remember also that statistical averages, taken as an index of national well-being, have their limitations as they subordinate human values. As a matter of fact, we are not getting richer especially when we relate our money incomes in terms of their real purchasing power, and the prosperity in money terms is pseudo-prosperity and not true prosperity in terms of real income in the form of food, clothing, housing and other essentials of life.—*All Rights Reserved.*

SMALL-SCALE MANUFACTURE OF SALT

CENTRE'S POLICY MODIFIED

THE Government of India has decided to modify the concessions granted to small-scale manufacturers of salt, under its Press note dated 23rd April, 1948, with effect from 1st March, 1955, as follows:

1. Individuals or groups may freely produce salt in any land to which they have lawful access for this purpose and by whatever process they desire, that is, construction of pans and solar evaporation or boiling of brine or scraping or excavation of saline earth or natural formations of salt, provided that the total area of land covered by the salt works set up by any individual or group of individuals does not exceed two and a half acres. No licences will be required for this purpose and no application need be made to any Government authority.

2. The movement of salt manufactured under the concession under (1) above will be restricted, as it is intended for local consumption only, and no facilities will be given for transport by rail in respect of it. The existing unlicensed producers will, however, be allowed one year from 1st March, 1954, to clear their present stocks in case they do not desire to take out licences. At the same time, since the quality of salt has a direct bearing on human health, the Government reserve the right in respect of the salt produced by unlicensed manufacturers as in the case of all other salt production, to take suitable preventive measures against the sale of unwholesome salt for human consumption.

The Government of India has also decided to undertake a survey of all the places where individuals and groups of individuals are now manufacturing salt under the 10-acre concession, with a view to assessing, amongst others, the exact extent to which the concession is being abused. If the survey reveals that there are chances of individuals and groups of individuals continuing to abuse the restricted concessions also, the Government will be constrained to take suitable steps, which might include the further reduction of the concessions.

Considering the harm done by the abuse of privileges granted to small manufacturers, the modifications noted above appear to be very lenient. Further, they do not seem to go a long way towards improving the quality of salt produced on 10-acre plots. It is to be hoped that, while granting licences to those who own plots of more than 2½ acres, the Government will see to it that they adopt such process of manufacture as would ensure the production of quality of salt.

Removal of Restrictions

Meanwhile, it is worthwhile recalling here the events which have led to the Government's decision referred to above. It was on 23rd April, 1948, that the Government, through its Press Note, announced that individuals or groups could freely produce salt by whatever process they desired in any land to which they had lawful access, provided that the total area of land covered by the salt works set up or to be set up was not more than 10 acres. These salt works were exempted from the licensing and other provisions of the Central Excises and Salt Act, 1944. The restrictions imposed under the Gandhi-Irwin Pact regarding transport of salt were also removed. The main intention in extending these concessions was, *inter alia*, to increase the volume of production of salt so that the country could attain self-sufficiency in the commodity.

The modification of the concessions disclosed at the outset is chiefly due to change in the supply position of salt and the low standard of the quality of salt manufactured by small-scale manufacturers. The salt supply position now exceeds demand by a large margin and export of salt abroad has, in fact, become a necessity. The production of salt under the 10-acre concession rose from 300,000 maund's in 1949 to 4,000,000 maunds in 1952. Consequently, it is held that there is no longer any need for special measures or incentives to increase production. On the contrary, the need for improving the quality of salt has become more pronounced both for local consumption and export. It is alleged that a large quantity of salt manufactured by small-scale manufacturers is below the minimum standard prescribed as fit for human consumption. It is pointed out, in this connection, that the concessions have been largely abused. It is stated that there have been numerous instances, where traders have been acting in collusion with direct manufacturers with lands less than 10 acres each and thus obtained salt from areas aggregating as much as 100 acres and sold it in the open market. Cases have also come to the notice of the Government, where hereditary salt workers have been financed by salt traders to set up small concession works in contiguous areas and to concede exclusive rights to the latter to purchase the entire production of the area. Since salt manufactured under the 10-acre concession has been exempt from the levy of cess and is also not subject to quality control —which is enforced in the case of licensed factories—the result has been that unlicensed salt of indifferent quality has forced salt of higher standard into a disadvantageous position and some of the organised factories of licensed producers have been driven out of the business. Besides, the Government's decision to change its policy is influenced by the consideration that, so far as domestic consumption by an individual and his family is concerned, sufficient salt can be obtained from an area very much smaller than 10 acres.

CAUSTIC SODA AND BLEACHING POWDER INDUSTRY

Alluding to the article entitled "Caustic Soda and Bleaching Powder Industry," which appeared in the issue of *Commerce* dated 20th February, 1954, Mr. Charat Ram, Director, Messrs. Bharat Ram Charat Ram & Co., Ltd. Managing Agents, Delhi Cloth and General Mills Co., Ltd., Delhi, (D. C. M. Chemical Works which is manufacturing caustic soda and chlorine is one of the manufacturing sections of the Delhi Cloth and General Mills) writes as follows:

"We feel that some of the conclusions drawn in your article are not quite correct and incidentally unfair to the indigenous industry. These refer to (a) the quality of indigenous caustic soda and (b) the difficulties of the industry.

"In the matter of quality, we would like to mention that this is not affecting the business or the profits of the Indian manufacturers at all. Furthermore, there is nothing wrong with the quality as such and it can be used wherever imported caustic soda can be used without the least inconvenience or affecting the quality of the finished product. The difference in the indigenous product and imported product is that, whereas the former is of 95 per cent. to 96 per cent. strength, the latter is probably of 96 per cent. to 97 per cent. strength. This, as you will yourself see, is nothing substantial and, for this slight difference, the customer does not lose at all, as he pays a little less money for the Indian product.

With regard to the business difficulties of the industry, it is not that the efficiency of production or other costs are high, as compared to any other part of the world; in fact, we can say with confidence that our efficiencies and costs compare extremely favourably, if not actually better, than any other country of the world. The main difficulty in this industry in India is the utilisation of its by-product, chlorine. It is not possible to expand the Indian caustic soda industry further, unless and until the demand for chlorine can be stimulated; it is not the high cost of production or anything else which stands in the way of further development. In fact, there would be no need even for protection, if chlorine could find any outlet at all, let alone a profitable outlet. The consumption of chlorine is going up in India but very slowly. Its consumption can go up rapidly with the development of paper, dyestuffs, explosives and petroleum industries.

"For some years, a price maintenance is essential for the development of this industry further. The record of development of this industry in the last few years is highly creditable, as will be seen from the production figures given below:

Year	Tons	Year	Tons
1947 ...	... 4,110	1951 ...	... 13,080
1948 ...	... 6,150	1952 ...	... 13,010
1949 ...	... 7,360	1953 (upto June)	7,000"
1950 ...	... 10,675		

A reference to the article in the issue of *Commerce* mentioned above will show that the observations about the quality of the Indian product made therein are those of the Tariff Commission.

CHEMICAL PORCELAIN

Chemical porcelain satisfying the specifications laid down by the British and American Standards Institutions has been successfully made by the Central Glass and Ceramic Research Institute, Calcutta. Articles prepared from this porcelain have also been tested by several laboratories like National Chemical Laboratory, Poona, Indian Institute of Technology, Kharagpur, and Department of Chemistry, Calcutta University, and found comparable both in quality and performance to imported ones.

Chemical porcelain a special variety of porcelain, is used for the manufacture of dishes, crucibles special funnels and other porcelain ware extensively employed in scientific and research laboratories for various purposes. This type of porcelain is not being manufactured in India at present and the annual demand, estimated to value Rs. 5 lakhs, is met entirely through imports. Due to the establishment of new technical colleges and scientific institutions and laboratories the demand for these materials is increasing.

The usual equipment used in potteries is employed and can easily be obtained in the country. Production operations are also more or less similar but require careful and precise control, specially on raw materials, compounding of bodies and glass firing schedules, etc. The raw materials, mainly china-clay, felspar and quartz, are all available in the country and a few imported chemicals, required in small quantities, are also available. Commercial production could be taken up by some of the existing potteries. An independent unit with an initial capacity of 10 tons will be economically feasible. The Council of Scientific and Industrial Research is offering the process for commercial exploitation.

CERAMIC COLOURS AND GLAZES

Investigations at the Central Glass and Ceramic Research Institute, Calcutta, have led to the determination of conditions for the successful preparation of a wide range of under-glaze and on-glaze colours suitable for decorating porcelain and earthen ware. An appreciable portion of the 10,000 to 15,000 tons production of ceramic ware in India is decorated with under-glaze or on-glaze colours for producing artistic designs and imparting various shades for decorative purposes. Decorative colours enhance the sale value of articles considerably, and are a great asset to the pottery industry. At present the demand for such colours and glazes is met entirely through imports.

About three dozen colours developed at the Institute have been tested for performance under actual factory conditions. About half a dozen of these, especially the extensively used green, brown, blue, etc., have been prepared in several batches of 20-lb. lots and have shown identical performance particularly in the shade of the finished product. They have been found to compare favourably in tone, gloss and maturity with imported colours from reputable foreign firms and their durability against acid and alkali has been found satisfactory when tested according to American specifications. The manufacture of these colours does not require any special equipment and the chemicals required are available without much difficulty. Rigid control of raw materials and manufacturing operations by trained chemists is, however, essential. The processes involved are simple and commercial production could be taken up by pottery or porcelain manufacturers or be organised as an independent industry. The Council of Scientific and Industrial Research is offering the process for commercial exploitation.

A "FLEXIBLE" LABORATORY FOR PLASTICS RESEARCH

What is called the first "Flexible" Laboratory in Britain, recently opened at Welwyn Garden City, is now the home of I.C.I.'s Plastics Research, the largest of its kind in the country. The three-storey building, costing about £300,000 (Rs. 40,00,000), has been termed "flexible" to describe its architectural style. To suit the work of the Research Centre, it was necessary to design a structure, the interior arrangements of which could be quickly and cheaply altered from time to time as new processes are evolved in the plastics industry and new arrangements must be created to cope with them. The problem was ingeniously solved by a famous architect. Rejecting traditional "wet" methods of building—bricks, mortar, concrete, and so forth—he resorted to a kind of prefabrication technique. The panels for walls and ceilings are devised on what is called a four-foot module, that is, they are four feet in width and multiples of four in length. They clip into place and are held by only two, or at most four, threaded bolts. This means that any panel can be taken out in a matter of minutes and replaced by a door, or a whole set of panels comprising the wall of a room can be picked up and moved to a new location four, eight, or 16 feet away. All that is needed to do this job is a spanner and a screwdriver. This sort of redesigning has already been put into practice. When it came to testing materials for this revolutionary type of building, the teasm of architects and chemists who composed the Planning Committee discovered that plastics was the ideal substance for the fabrication of panels. Thus the new building is a showpiece of the very stuffs which its occupants are engaged in studying.

The metal framework which carries the basic load is erected in the style of an aircraft hangar, so that each of the three floors is really an unobstructed hall 176 feet long, which can be cut up into any required arrangement by partitions.

INDO-NORWEGIAN TRADE

The Indo-Norwegian Trade Agreement, which expired on 31st December, 1953, has been extended for a further period of one year from 1st January, 1954. The agreement provides for normal import and export regulations on trade between the two countries. Further, it provides for according each country by the other the same treatment as is accorded by them to other countries of the same currency group. The Government of Norway has extended to India import licensing concessions granted to member nations of the Organisation for European Economic Co-operation. It will also encourage Norwegian companies and individuals to place their technical experience at the disposal of interested Indian parties and the two Governments will assist in arranging for contracts in various fields subject to foreign exchange and other regulations in force.

EXPORT OF H.P.S. GROUNDNUT

The Government of India has decided to allow the export of a small quantity of H.P.S. groundnut kernel to dollar area countries by established shippers. Allotments for export will be made by the licensing authorities at the ports to established shippers for quantities equal to one-half of the total shipments of H.P.S. groundnuts effected by them during any one of the calendar years 1951, 1952 or 1953.

CANARA INDUSTRIAL AND BANKING SYNDICATE LIMITED

DR. T. M. A. PAI URGES RELIEF IN TAXATION

THE view that the provision for bad and doubtful debts out of a bank's profit should not be subject to taxation was strongly emphasised by Dr. T. M. A. Pai, Chairman of the Canara Industrial and Banking Syndicate Limited, in the course of his address at the Twenty-eighth Annual General Meeting held in Udipi on 7th March, 1954. Citing the instance of the U.S., Dr. Pai stated that such a tax concession might be based either on the average of the previous years' losses or on a certain percentage of the total advances. He expressed the hope that the Taxation Enquiry Commission would concede this reasonable measure of help to the banking system.

The following is the full text of Dr. Pai's address at the meeting:

"GENTLEMEN,

"I have pleasure in welcoming you to this, the 28th Annual General Body Meeting of the Syndicate. You would have already gone through the annual statement of accounts of the Bank. I would very briefly review it here. In the course of the year, the paid-up capital of the Bank increased from Rs. 25,10,526 to Rs. 25,34,158 with the optional calls coming in. With this, the uncalled capital is only Rs. 6,76,829 and I expect substantial amounts of this to be paid in during the year. The number of shareholders holding this capital is about 2,400 and I for one believe that the shareholding of a public utility concern like a bank should be as broad-based as possible. The reserve fund of the Bank, as against this capital, is increased from Rs. 11,00,000 to Rs. 12,10,000 as on 31st December, 1953 after a transfer from the profit and loss account.

"The deposit liabilities of the Bank improved from Rs. 4,01,07,199 to Rs. 4,71,50,624 during the year, that is, nearly an increase of 18 per cent. There has been substantial rise in savings bank deposits which have exceeded the crore mark, thus indicating still a fruitful field in the operations of the Bank. The pattern of deposits, however, has heavily tended towards time liabilities with increasing tendency for banks to offer competitive rates of interest. The ability of the banks to reduce effectively their operational costs depends on this one factor primarily and I do not think that banks should take the initiative in increasing their rates themselves. Your Bank's deposits have come from 1,25,574 accounts showing how widely it has garnered the savings of the people. As against this, the cash-in-hand and with bankers constituted Rs. 72,07,378, being 15 per cent. of the deposits, and investments in Government securities which increased from Rs. 1,29,65,426 to Rs. 1,47,54,283 came to 31 per cent. of the deposits. The demand for money was keen and the advances improved to Rs. 3,08,16,508 from Rs. 2,42,70,718 and this was 66 per cent. of the deposits and, out of these advances, 82 per cent. were fully secured. These advances were made to 56,990 borrowers. Bills for collections, acceptances, etc., increased from Rs. 28,28,703 to Rs. 43,07,495 by nearly 52 per cent.

Gross Income

"The gross income, after making necessary provisions for bad and doubtful debts, had increased from Rs. 25,00,185 to Rs. 27,44,043, but an increase under interest on deposits and establishment has set off this rise and the net profit shows an increase from Rs. 3,52,155 to Rs. 4,00,961. It would be interesting to note that, out of the gross earnings of the Bank, salary and allowances and bonus to staff accounted for 35 per cent. and interest on deposits for 30 per cent., while the dividends to the shareholders was only 5.5 per cent. of the gross income and works out to only 4.7 per cent. over the capital and reserves employed. The total resources of the Bank improved to Rs. 5,93,61,600 with the number of customers increasing to 1,82,564.

"These figures would show you that the year was a very satisfactory one for the Bank from all points of view. In the month of December, you are aware, we took over the liabilities with corresponding assets of the Southern India Apex Bank Ltd. and the Maharashtra Apex Bank Ltd. at their head offices at Udipi, and branches at Palghat, Calicut, Badagara, Tellicherry, Kolhapur, Karad, Sangli and Rabkavi. You know, these Banks were initially founded under the patronage of the Syndicate, were being managed by it for some years and, for some time now, there have been talks that they should be amalgamated with us. Besides the difficulties of valuation of shares to be exchanged, which the process of amalgamation would have involved, it would have meant a very substantial increase in the share capital to the extent of nearly Rs. 30 lakhs of subscribed capital which your Directors were not willing to add on with the contingent liability of increased dividends. I had already pointed out to you last time that experience had shown, whatever in theory one may have to say in its favour, overcapitalisation in banking business brings its own train of difficulties and it would be advantageous instead to rapidly allow the reserves to grow. We shall make a conscious effort in this direction. Steps are being taken, therefore, to return the capital of the Apex Banks to their shareholders.

"Referring to some of the problems that are facing us in this country, I should like to make a few observations as they affect the banking services generally.

Profits of Banks

"The published profits of banks cannot be considered true profits for purposes of taxation with the uncertainties of the economic situation. There is always a contingent possibility of any debt becoming bad and it may not be prudent to wait till it actually becomes bad before it is written off. But, under the provisions of the income-tax law as at present, a bank will have to prove that it has exhausted all possible remedies for recoveries, which, in effect, would mean that it has to spend good money over bad and that the debt has become bad in the very year it is written off. This would mean that, even if a bank makes a provision out of its profits in a good year for bad and doubtful debts, it would not be allowed for purposes of taxation unless it satisfies the above tests.

"Banking in this country requires considerable strengthening not only by legislation but by active and positive assistance from the State. There cannot be a better foundation for an effective credit system than a sound and secure banking system. Even in America, such provisions made are allowed upto certain limits based either on the average of the previous years' losses or on a certain percentage of the total advances. We have been urging this point on the Central Government and we are happy that the Indian Banks Association has taken it up recently and I trust and hope that the Taxation Enquiry Committee will concede this reasonable measure of help to the banking system.

"It has been realised on all hands how necessary it is to develop warehousing in this country. The warehouse receipt as a document of title would prove of great economic value avoiding the actual physical transfer or movement of goods for raising credit. Various State Governments have enacted legislation for this and, in our own State, the Warehouse Act was passed in 1951. And, yet, there seems to be little progress after that. Constructions of huge godowns in producing and collecting centres and the ports require an investment of huge sums of money, which in present circumstances, may not be forthcoming. It would be worthwhile for us to adopt in this country the system prevalent in America popularly known as 'Field Warehousing,' where, instead of the goods being taken to the warehouse, warehousing is taken to the goods, thus obviating new constructions. Licensed Warehousing Corporations with sufficient capital to back up their credit-worthiness are empowered to put up their signboard in any place of storage and, with this act, all the provisions of the Warehousing Act would apply to it. I trust that authorities in this country would concentrate on the developing of warehousing for which something more than legislation has been found to be necessary.

"Now let me turn to the problem of rural banking. Our Bank can claim, with reasonable pride, that its pioneering efforts in this field have borne ample and satisfactory fruits. With its 24 rural branches in places with a population of less than 5,000 in the district of South Kanara, we have not only proved that, if we have schemes to tap small savings and if we adopt methods which are safe as well as economical, these can as well pay their way. In fact, the services rendered by these branches are well appreciated by the villagers and the banking habit is becoming popular and representations for extending these services are being received from villages in other districts. Not only the habit of saving in a class of people hitherto unaccustomed to the saving habit is being inculcated, a better form of utilising their savings is also being popularised, but, even in the matter of bringing down interest rates on borrowings in these villages, these branches have helped a good deal. It is not so much legislation against moneylending as provision by alternate means of sufficient credit facilities in our villages that would ultimately solve their problems. Legislation is always a negative approach in such cases. But to provide banking services in these places, the cost of operation will have to be kept low. The recommendations of the Rural Banking Committee to exempt these places from the various labour laws and awards is quite sound. The Government and the people will have to choose between extension of banking services or their extinction, if these awards and laws are deemed politically expedient.

Small Savings

"Your Bank started the scheme called 'Pigmy' as far back as 1927 and concentrated in popularising its small savings. A man who saves even 2 annas a day is helped by the Bank to allow it to grow to Rs. 350 in seven years by regular payment every day. This scheme has brought the Bank into contact even with a class of people who would not have had anything to do with a modern bank otherwise. The fact that the Bank has over 35,000 depositors under this scheme indicates the great service it has done in the field of small savings. With the diffusion of income and savings having become atomised, sustained efforts to collect them have become necessary.

"Even the Government, both Central and State, have realised the increasing importance of small savings for the national development. The last loan of the Government of Madras was largely subscribed for by a good number of people in bonds of less than Rs. 500. Appeal to this class of people who had no habit of investing in Government securities would definitely broaden the public market for the securities and give them an added element of stability. Banks should be allowed to act as agents of the Government in popularising Government securities by making them attractive to the investors by suitable facilities for borrowing, instalment payment, etc. This would reduce the competition of the Governmental agencies for borrowing for local works with the banking system for the available savings of the community.

"The problem of unemployment is the one largest looming before the country. Rapid industrialisation is a suggested remedy for absorption of all those wanting work. But the existing industries are going under, mainly on account of difficulties in marketing their products. Unless the spirit of *swadeshi* becomes a living faith, we may as well give up talking about industrialisation. State Governments must, through their Departments of Industries, organise surveys of raw materials, detailed information regarding process and technique, and more than that, carry on continuously market research, rather than undertake to run industries in a way which is no model for others. They should also study and change where necessary, in the interest of rapid industrialisation, some of the irksome provisions of the health, municipal, labour and factory laws. The lack of imagination in their enforcement is sufficient to scare away any enterprising industrialist.

"Labour must realise how great is its stake in employment. Their intransigent attitude has been responsible on many occasions for setting up defensive mechanism in many employers. The attitude of the Government in the matter of retrenchment of surplus staff and their unreasonable pampering has made many an employer shut off further employment. The Governments will have to reconsider their attitude in the light of this observation, if employment has to be helped. The need of the hour is hard work and still harder work. Under conditions of competition, increasing efficiency alone will help and, if workers do not realise it, they do so at their own peril.

"Your Bank has, even under these difficult conditions, recruited new staff, as it would have under a normal year. A staff training course has been introduced at the cost of the Bank itself to cover the entire staff in due course. We have realised that only an efficient staff will be able to serve our growing clientele in the matter of providing complex forms of services. In conclusion, let me place on record the continuously good work of Mr. T. A. Pai, his officers and the staff of the Bank."

Notices

MARTIN BURN LIMITED

NOTICE

AT A MEETING OF THE BOARD OF DIRECTORS of Martin Burn, Limited, held on 3rd March, 1954, the Directors recommended the payment of a dividend at the rate of One Rupee Four Annas per share on the Ordinary Shares ranking for dividend for the year ended 30th September, 1953. In addition the Directors have recommended a cash bonus of Annas Two per share on the Ordinary Shares ranking for dividend. These recommendations await sanction by the Shareholders at the Annual General Meeting of the Company to be held on Monday, 29th March, 1954.

The Ordinary Shares Transfer Books of the Company will be closed from the 22nd to 29th March, 1954, both days inclusive, and the dividend, if sanctioned, will be paid on or after the 12th April, 1954.

By Order of the Board,
T. LESLIE MARTIN,
Chairman.

4th March, 1954.

MARTIN BURN LIMITED

NOTICE

THE EIGHTH ORDINARY GENERAL MEETING of the Shareholders of Martin Burn Ltd. will be held on Monday, 29th March, 1954, at 12 Noon at the Registered Office of the Company, 12, Mission Row, Calcutta, to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 30th September, 1953.

(2) To declare a Dividend and Cash Bonus.

(3) To elect a Director.

(4) To appoint Auditors for the current year and to fix their remuneration.

The Ordinary Share Registers of the Company will be closed from 22nd to 29th March, 1954, both days inclusive.

By Order of the Board,
A. G. GIDLEY,
Secretary.

CALCUTTA, 9th *March*, 1954.

Note.—The dividend and Cash Bonus if sanctioned, will be paid on or after 12th April, 1954, to those Shareholders so entitled, or to their mandatees, whose names appear in the Company's books on the 29th March, 1954. No application for dividend warrants will be necessary.

MARTIN BURN LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5 per cent. per annum for the half-year ending 31st March, 1954. The Preference Share Registers will be closed from the 1st April to the 15th April, 1954, both days inclusive. Payment will be made on or after 15th April, 1954, to those Preference Shareholders whose names appear on the Company's Register on the 31st March, 1954, or in accordance with their instructions.

T. LESLIE MARTIN,
Managing Director.

12, MISSION ROW,
CALCUTTA, 10*th March*, 1954.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving the consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

HUKUMCHAND JUTE MILLS, LTD.

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Ordinary Shareholders of the Company will be held at the Registered Office of the Company, 9, Brabourne Road, Calcutta, on Monday, 29th March, 1954, at 4-30 p.m., to pass with or without modifications, the following resolutions as *Special Resolutions*:—

1. Resolved that the Authorised Capital of the Company be increased by Rs. 22,50,000 by the creation of 300,000 new Ordinary Shares of Rs. 7-8 each.
2. Resolved that a sum of Rs. 22,50,000 out of the Company's General Reserve be capitalised.
3. Resolved that the amount thus capitalised be distributed amongst the persons who were on 29th March, 1954, holders of the existing 400,000 Ordinary Shares of Rs. 7-8 each of the Company as Bonus Shares, credited as fully paid, in the proportion of three New Ordinary Shares of Rs. 7-8 each for every four Ordinary Shares held by them respectively.
4. Resolved that these new Ordinary Shares will rank for dividends for the year ended 31st March, 1954, and in all other respects *pari passu* with the existing ordinary shares.
5. Resolved that the number of shares equal to the total of all fractions due to the shareholders as a result of such distribution of Bonus Shares shall be sold by the Directors and that the net proceeds thus realised will be distributed in cash to such of the Shareholders as this Resolution applies in the proportion that the fraction due to them bears to the total number of shares sold as a result of this Resolution.

By Order of the Board,
RAMDUTT RAMKISSENDASS,
Managing Agents.

CALCUTTA, 4th *March*, 1954.

N.B.—The Ordinary Share Register of the Company will be closed from 18th March, 1954, to 29th March, 1954, both days inclusive.

MARTIN BURN LIMITED

ALLEPPEY, 8th *March*, 1954.

MARKED RISE IN PROFIT OF MADURA MILLS

DIVIDEND REPEATED—FINANCES IMPRESSIVE

THE audited accounts of the Madura Mills Co., Ltd. (Managers: Messrs. A. & F. Harvey Ltd., Madura), for the year ended 31st December, 1953, disclose impressive results. The gross profit shows a rise of Rs. 11.65 lakhs from Rs. 90.48 lakhs in the previous year to Rs. 102.13 lakhs—an increase of nearly 13 per cent. The profit for 1953 is by no means higher than that for 1951 when it amounted to Rs. 125.45 lakhs. The provision for depreciation has been more than doubled. Taxation absorbs more than in 1952. The net profit, at Rs. 45.46 lakhs, has been nearly maintained at the previous year's level, namely, Rs. 46.28 lakhs. The allocation to the reserves has, however, been reduced from Rs. 15 lakhs to Rs. 10 lakhs, while the dividend is proposed to be repeated at 20 per cent. per annum, for the third year in succession.

The following comparative table provides an idea of the Company's progress in the last three years:

(In lakhs of rupees)

	Year ended 31st December			
	1953	1952	1951	1950
Sale proceeds (net) ..	15,22.48	16,51.70	18,30.56	14,01.06
Raw material consumed ..	9,72.44	11,36.45	13,05.97	9,92.30
Wages and other expenses ..	4,50.11	4,27.03	4,01.59	3,99.07
Gross profit	1,02.13	90.48	1,25.45	22.11
Provision for—				
Managers' commission ..	7.99	8.79	12.99	1.91
Depreciation	17.98	8.70	8.53	8.74
Taxation	30.69	28.70	44.80	4.79
Net profit	45.46	46.28	59.33	6.67
To reserves	10.00	15.00	25.00	—
Dividend	35.00	35.00	35.00	26.25
	(20%)	(20%)	(20%)	(15%)
Carry forward	9.36	8.90	12.62	13.30

It will be noted that the sale proceeds, after deducting rail fare, steamer, freight, etc., show a decline of Rs. 1.30 crores, but this is more than made good by the decline of Rs. 1.64 crores in value of raw materials consumed by the Company's mills. It may be noted here that the raw materials consumed in 1953 include rayon, while in the previous years they consisted of cotton alone. Wages and other expenses have risen by over Rs. 23 lakhs, of which wages alone account for Rs. 22.31 lakhs and welfare expenses for Rs. 1 lakh. The management entered into an agreement with the workers' unions in April, 1951, for a period of three years, in respect of payment of bonus, with the concurrence of the Madras Government. The agreement related to the bonus for the years 1950, 1951 and 1952. Under the terms of the agreement, the bonus was linked to the dividend paid by the Company on the following scale:

Dividend	*Bonus (Basic wages) Months*
8 per cent.	1
12½ per cent.	1½
15 per cent.	2
17½ per cent.	2½
20 per cent.	3

In accordance with the agreement, the Company had paid for the two years 1951 and 1952 a sum of Rs. 26 lakhs each, the charges thereof being treated against the trading results for the subsequent year. Thus, the bonus for 1952 has been charged to the accounts relating to the year under review. Since the agreement has now expired, the Directors are unable to forecast what bonus, if any, will be payable in respect of the year 1953. They expect that this question will be decided before the forthcoming annual general meeting, in which case, if any bonus is payable, it will be treated as a charge against the trading results for the current year.

The favourable results for the year under review are evidently due to the stable conditions in the cotton yarn market during the year under review. The Company must have been able to maintain its output of yarn at a satisfactory level, following the restoration of power cut in the Madras State. Although the withdrawal of control on prices and distribution of yarn in July, 1953, resulted in a decline in yarn prices, prices were, on the whole, stable during the year. This, coupled with the good reputation which the Company's yarn enjoys, seems to have given a satisfactory trading period.

The increase in the provision for depreciation by Rs. 9.28 lakhs is accounted for partly by the addition to the gross block during the year and partly by the additional provision necessitated by the revaluation of the fixed assets in January, 1953. The rise in the provision for taxation is in consonance with the increase in gross profit. A sum of Rs. 10 lakhs has been added to the general reserve, which had received Rs. 15 lakhs last year and Rs. 25 lakhs in the preceding year.

The Company's financial position is quite sound, as will be seen from the following synopsis of the balance-sheet:

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	1,75,02,480	Gross block	5,45,66,244
Reserves and surplus ...	4,03,17,971	*Less*—Depreciation ...	3,28,28,290
Provision for taxation ...	80,23,153	Net block ...	2,17,37,954
Liabilities ...	1,76,26,698	Stock-in-trade	2,83,32,110
		Stores and spares ...	86,08,469
		Investments	28,21,851
		Debts, deposits and advances ...	1,90,00,178
		Cash ...	29,69,740
	Rs. 8,34,70,302		Rs. 8,34,70,302

The paid-up capital of the Company has been raised from the original level of Rs. 59.16 lakhs to the present level merely by the capitalisation of reserves to the extent of Rs. 115.86 lakhs. The reserves comprise renewal and replacement reserve amounting to Rs. 2.44 crores (including Rs. 1 crore added as a result of the revaluation of fixed assets in January, 1953 and a small sum of Rs. 87,586 being the post-war refund of E.P.T. received from the Government) and general reserve Rs. 1.50 crores. The gross block shows an increase of Rs. 1.30 crores over the year, of which Rs. 1 crore is accounted for by revaluation of assets and Rs. 30 lakhs by additions to the machinery, buildings, etc. Stock-in-trade has declined by Rs. 64 lakhs from that at the close of 1952. Debts, deposits and advances have gone up by Rs. 93 lakhs, while cash balances show a decline by Rs. 14.5 lakhs. The current liabilities and provision for taxation, at Rs. 2.56 crores, are covered by current assets, at Rs. 6.18 crores, by a large margin of Rs. 3.62 crores.

The Rs. 15 paid-up shares of the Company are being currently quoted at Rs. 41-6 *cum-div.* On an *ex-div.* basis, the proposed dividend gives a yield of 7.8 per cent. per annum, free of tax.

MAFATLAL GROUP TEXTILE MILLS SHOW GOOD RESULTS

The year ended 31st December, 1953, has, in general, turned out to be very favourable for the Mafatlal group of textile mills, numbering seven. Except those of the Sassoon Spinning and Weaving Company, Ltd., and the New Union Mills Ltd., the profits of all the other mills have gone up substantially. But it is noteworthy that this favourable trend has not induced the Directors to increase the dividends. They have, on the other hand, maintained the dividends, but strengthened the reserves. The New China Mills Ltd., however, being a holding company of the New Shorrock Spinning and Manufacturing Company, Ltd., has not declared any dividend. The results of the Sassoon Spinning and Weaving Company, Ltd., are not equally encouraging, but the profit has been nearly maintained, while the New Union Mills Ltd. has proved to be the sole exception with a marked decline in profit. However, both these mills have maintained the dividend, the latter having had to draw from the reserves to do so. The results of the Standard Mills Ltd. were briefly analysed in our last issue (*vide* page 396). The results of the other six are summarised below:

New Shorrock

The New Shorrock Spinning and Manufacturing Company, Ltd., has earned a gross profit of Rs. 29.79 lakhs, which shows an increase of Rs. 13.95 lakhs. A sum of Rs. 9 lakhs has been provided for depreciation, as against Rs. 9.75 lakhs in the previous year. No provision for taxation was made last year, but this year a sum of Rs. 4.50 lakhs has been set aside for this purpose. Dividend equalisation fund has been strengthened by the addition of Rs. 5 lakhs, as against nil in the previous year. The dividend has been maintained at Rs. 35 per share which requires Rs. 10.92 lakhs. A year ago, it may be remembered, the Directors had to draw a sum of Rs. 1.50 lakhs from the dividend equalisation fund and Rs. 3.15 lakhs from the general reserve to pay this dividend. The surplus carried forward at Rs. 38,617 compares well with Rs. 1,795 brought in.

Shorrock Spinning

An increase of Rs. 4.84 lakhs to Rs. 17.75 lakhs is noted in the gross profit of the Shorrock Spinning and Manufacturing Company, Ltd. The appropriations of the profits for the last two years are as under:

(In lakhs of rupees)

	1953	1952
Depreciation	7.70	6.05
Taxation	1.00	3.00
Machinery renewal reserve	2.00	—
Dividend equal fund	3.00	—
Dividend	3.90	3.90
	(20%)	(20%)
Carry forward	0.23	0.08

Sassoon Spinning

The gross profit of the Sassoon Spinning and Weaving Company, Ltd., amounts to Rs. 28.63 lakhs, as against Rs. 28.80 lakhs for 1952. The provision for depreciation has been raised from Rs. 3.61 lakhs to Rs. 6.50 lakhs, and that for taxation from Rs. 10 lakhs to Rs. 10.55 lakhs. Special depreciation fund gets Rs. 5.62 lakhs, as against Rs. 5.85 lakhs, and reserve fund Rs. 2.75 lakhs, as compared with Rs. 1 lakh. Whereas a sum of Rs. 5 lakhs was added to the dividend equalisation fund last year, no such allocation has been possible this year. Nonetheless, the dividend is repeated at Re. 1-4 per share or 12½ per cent. absorbing Rs. 3.12 lakhs, leaving to be carried forward Rs. 10,145, as against Rs. 21,950 brought in.

Mafatlal Fine Spinning

The gross profit of the Mafatlal Fine Spinning and Manufacturing Company, Ltd., amounts to Rs. 30.81 lakhs, a rise of Rs. 9.07 lakhs over the year. The following appropriations have been made out of the profits for the last two years:

(In lakhs of rupees)

	1953	1952
Depreciation	13.12	14.30
Taxation	5.70	3.00
Reserve fund	0.50	—
Dividends—		
Preference	1.30	1.30
Ordinary	... 10.15 (17½%)	10.15 (17½%)
Carry forward	... 0.07	0.03

New Union

A steep fall of Rs. 9.60 lakhs, that is, from Rs. 15.56 lakhs to Rs. 5.96 lakhs, is disclosed by the gross profit of the New Union Mills Ltd. The provision for depreciation has, however, been raised from Rs. 2.02 lakhs to Rs. 4.23 lakhs, while that for special depreciation has been reduced from Rs. 4.45 lakhs to Rs. 1.70 lakhs. No provision for taxation has been made, while last year a sum of Rs. 5 lakhs was set apart for that purpose. Dividend equalisation fund, which received Rs. 2.50 lakhs last year, has not been strengthened further this year. The dividend is maintained at Re. 1-4 or 12½ per cent. by drawing a sum of Rs. 1.59 lakhs from the dividend equalisation fund, leaving to be carried forward Rs. 3,072, as compared with Rs. 423 brought in.

New China Mills

The gross profit of the New China Mills Ltd. discloses a rise of Rs. 6.17 lakhs to Rs. 21.43 lakhs. A sum of Rs. 3.31 lakhs has been transferred to the depreciation reserve (as against Rs. 3.10 lakhs in the previous year), Rs. 3.07 lakhs to the special depreciation reserve (Rs. 2.22 lakhs) and taxation Rs. 4.50 lakhs (Rs. 3.95 lakhs). The reserve fund, which had not been provided anything last year, now receives Rs. 6.50 lakhs. The addition to the post-war rehabilitation and development fund has been reduced from Rs. 6 lakhs to Rs. 4 lakhs. The sum left to be carried forward is Rs. 2,272 as against Rs. 7,703.

BENGAL PAPER SKIPS OVER ORDINARY DIVIDEND AGAIN

For the second half-year in succession to 30th June, 1953, the ordinary shareholders of the Bengal Paper Mills Co., Ltd. (Managing Agents: Messrs. Balmer Lawrie & Co., Ltd., Calcutta), have had to go without any return. For the first time, after an unbroken record of nearly 27 years, the Directors had to pass over the ordinary dividend for the six months ended 31st December, 1952, on account of the adverse results witnessed during that half-year. In the subsequent half-year, that is, for the six months ended 30th June, 1953, the Company has had to incur a further loss, as a result of factors beyond the control of the management. The gross loss for the half-year under review amounts to Rs. 3.52 lakhs, as compared with that of Rs. 7.47 lakhs for the previous half-year. The net loss, after providing for depreciation, amounts to Rs. 5.05 lakhs, as against Rs. 9.57 lakhs six months ago. A comforting feature about the results for the half-year under review is that the loss is very much less than that for the previous half-year.

The net loss of Rs. 9.57 lakhs for the half-year ended 31st December, 1952, was covered only to some extent by the surplus brought in from the preceding half-year, other income, and excess tax reserve written back. The Directors did not, however, withhold the dividends on the two classes of preference shares. They paid these by drawing a sum of Rs. 81,000 from the general reserve. In respect of the half-year under review, the Directors have had to draw as much as Rs. 8.37 lakhs from the general reserve, in addition to the sum of Rs. 2 lakhs available from excess provision made for taxation in earlier half-years and other income amounting to about Rs. 42,000, to wipe off the accumulated deficit of Rs. 9.75 lakhs and to distribute the preference dividends. There is still a small surplus of Rs. 23,669 left to be carried over to the next half-year.

The adverse results for the second half-year in succession, as noted above, were not wholly unexpected. For, as the Directors indicated in their report for the previous half-year, the "illegal" strike of workers which began on 9th October, 1952, continued up to 23rd March, 1953, that is, covering a period of nearly three months of the previous half-year of the Company's working and nearly three months of the half-year under review. Although the Company's mill has, since the resumption of work, been running smoothly, the No. 2 sulphate recovery plant has not been functioning efficiently and has, presumably, not yielded any material benefit. The results would have been much worse had it not been for the fact that advantage was taken by the management of the strike period to concentrate on repairs. This concentration on repairs during the strike period is stated to have proved valuable and has materially contributed to the high production achieved since the resumption of work.

Points From The Chair

Restrictions on Textile Mills

"THERE was a general increase in the demand for cloth, and although prices did not appreciate, there was a good offtake. The export market also improved progressively during the year, following the removal by Government of the 10 per cent. export duty on medium count cloth. The duty on coarse cloth was retained, however, and is still in force, but it is to be hoped that Government will now consider the removal of this also. All controls were removed during the year with the exception of the production control to which I referred last year. I cannot see any reason for the retention of this control which is irksome, in that the mills cannot produce certain varieties of cloth which the public are anxious to buy. I must add, however, that Government are fairly reasonable regarding the issue of deviation orders for the production of some fabrics which fall outside their schedules. The *Dhotis* and *Saris* Control Order has already been mentioned in the Report and was in operation during the whole of the year under review. I wonder whether the people who formulated this measure ever thought of the fact that almost all mills have equipped themselves with wide width looms solely for the production of these popular varieties, and that there are very few other fabrics of similar width for which there is a demand."

E. D. SHEPPERD,
Kohinoor Mills Co., Ltd.

Duty on Tin in Malaya

"It is to be hoped that the Government of Malaya will reconsider and modify the present rate of the tin duty. This duty was fixed when there was no income-tax in Malaya; it is levied whether the ore has been produced at a profit or at a loss, and, nowadays, it is in addition to and not instead of income-tax. The duty seems to demand from the tin industry an undue share of the revenue required by the Malayan Government. It is a platitude to say that Malayan tin is a strategic asset of prime importance and a magnificent earner of hard dollars, but it is a wasting asset and present policy is inducing some miners to work their best "patches" first, regardless of future outlook and sound mining practice. If new capital is to be attracted to Malaya, it will require to be given a reasonable prospect of a reasonable return upon money ventured in what must, by its nature, be an uncertain and somewhat hazardous business."

S. H. SMITH,
British Tin Investment Corporation Ltd.

Cost of Staff in Banks

"I may add here that the costs of staff are likely to go up from year to year and in some cases are likely to be a great burden on the banking business of this country. It is difficult to predict the consequences of such increases, but there are signs to show that such increases and such burdens may make banking and the expansion of banking in India most difficult, and especially the opening of new branches in India will not be so easily undertaken in the future as they have been undertaken by some banks in the past. For every bank a new branch opened may mean a certain liability and under those conditions it is for all to consider what should be done for the future of banking in India."

SIR COWASJI JEHANGIR, BART.,
Bank of India Ltd.

(*Continued from previous page*)

The following comparative table of results for the last four half-years gives an idea of the extent of damage caused by the strike.

(In lakhs of rupees)

	For the half-year ended			
	30-6-53	31-12-52	30-6-52	31-12-51
Sale proceeds	46.76	46.21	85.16	86.05

Reserves and provisions written back	10.38	1.52	..	2.75
To reserves	..	..	..	..
Dividends—				
7% preference	0.21	0.21	0.21	0.21
6% preference	0.60	0.60	0.60	0.60
Ordinary	..	..	2.81 (12½% p.a.)	2.81 (12½% p.a.)
Carry forward	0.24	—4.70	8.22	8.08

The balance-sheet of the Company as on 30th June, 1953, discloses that the paid-up capital of Rs. 71 lakhs is supplemented by reserves and surplus amounting to Rs. 20.51 lakhs. Mortgage debenture loan (4½ per cent.) amounts to Rs. 5.39 lakhs, provision for taxation Rs. 17.53 lakhs and current liabilities Rs. 62.37 lakhs. The gross block of the value of Rs. 198.63 lakhs has been written down to Rs. 68.23 lakhs, the depreciation provided so far being of the order of Rs. 130.40 lakhs. The current assets aggregate Rs. 108.57 lakhs and exceed current liabilities and provision for taxation by a margin of Rs. 28.67 lakhs.

The Company's outlook for the current half-year is better, and the Directors anticipate satisfactory results, consequent on the high production achieved as a result of the concentration on repairs during the strike period.

COMPANY MEETINGS AND DIVIDENDS

CHEVIOT MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 18th March, 1954. Dividend: Rs. 6 per share. Transfer books remain closed from 5th to 18th March, 1954, both days inclusive.

PENCH VALLEY COAL CO., LTD. Half-yearly General Meeting, Calcutta, 23rd March, 1954. Dividend: As. 14 per share. Transfer books will remain closed from 16th to 23rd March, 1954, both days inclusive.

TITAGHUR PAPER MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 26th March, 1954. Dividend: Re. 1 per share (including bonus of As. 4 per share) on "A" and "B" ordinary shares. Transfer books remain closed from 13th to 25th March, 1954, both days inclusive.

CALEDONIAN JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 26th March, 1954. Dividend: Rs. 6 per share. Transfer books remain closed from 12th to 26th March, 1954, both days inclusive.

BARAREE COKE CO., LTD. Half-yearly General Meeting, Calcutta, 26th March, 1954. Dividend: As. 11-2/5 per share. Transfer books remain closed from 13th to 26th March, 1954, both days inclusive.

EASTERN INVESTMENTS LTD. Annual General Meeting, Calcutta, 29th March, 1954. Transfer books will remain closed from 15th to 29th March, 1954, both days inclusive.

GOKAK MILLS LTD. Annual General Meeting, Bombay, 29th March, 1954. Dividend: Rs. 12 per share, final (making Rs. 17 for the year), payable on and after 9th April, 1954. Transfer books remain closed from 5th to 25th March, 1954, both days inclusive.

AHMEDABAD ELECTRICITY CO., LTD. Annual General Meeting, Bombay, 29th March, 1954. Dividend: Rs. 4 per share, final (making Rs. 6-8 per share, for the year), payable on and after 7th April, 1954. Transfer books remain closed from 9th to 29th March, 1954, both days inclusive.

BOMBAY DYEING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 8th April, 1954. Dividend: Rs. 12-8 per share (final) plus bonus of Rs. 2-8 per share, (making Rs. 22-8 for the year), free of income-tax. Transfer books will remain closed from 22nd March to 8th April, 1954, both days inclusive.

NATIONAL RAYON CORPORATION LTD. Annual General Meeting, Bombay, 9th April, 1954. Dividend of Rs. 9 per ordinary share, payable on and from 10th April, 1954. Transfer books will remain closed from 16th March to 9th April, 1954, both days inclusive.

STANDARD MILLS LTD. Annual General Meeting, Bombay, 12th April, 1954. Dividend: Rs. 20 per share. Transfer books will remain closed from 23rd March to 12th April, 1954, both days inclusive.

SASSOON SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 12th April, 1954. Dividend: Re. 1-4 per share, free of income-tax. Transfer books will remain closed from 26th March to 16th April, 1954, both days inclusive.

NEW UNION MILLS LTD. Annual General Meeting, Bombay, 12th April, 1954. Dividend: Re. 1-4 per share, free of income-tax. Transfer books will remain closed from 26th March to 16th April, 1954, both days inclusive.

MAFATLAL FINE SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 19th April, 1954. Dividend: Rs. 17-8 per ordinary share, free of income-tax. Transfer books will remain closed from 2nd to 23rd April, 1954, both days inclusive.

WESTERN INDIA TANNERIES LTD. Interim dividend of 6¼ per cent. per annum, free of income-tax, for the year 1953, payable on and after 10th April, 1954. Transfer books will remain closed from 26th March to 9th April, 1954, both days inclusive.

SHORROCK SPINNING AND MANUFACTURING CO., LTD. Dividend of Rs. 20 per share, for the year ended 31st December, 1953.

DHANALAKSHMI MILLS LTD. Dividend of Rs. 20 per share, free of tax, for the year ended 31st December, 1953. Transfer books will remain closed from 18th to 31st March, 1954, both days inclusive.

PERIAKARAMALAI TEA AND RUBBER PRODUCE CO., LTD. Interim dividend of As. 4-4/5 per share, for the year ending 31st March, 1954. Transfer books remain closed from 5th to 15th March, 1954, both days inclusive.

COIMBATORE COTTON MILLS LTD. Interim dividend of Rs. 20 per share, for the year ended 31st December, 1953. Transfer books remain closed from 11th to 25th March, 1954, both days inclusive.

CENTURY SPINNING AND MANUFACTURING CO., LTD. Final dividend of Rs. 14 per share free of income-tax (making Rs. 22 per share free of income-tax for the whole year) payable on 15th March, 1954. Transfer books will remain closed from 22nd March to 10th April, 1954, both days inclusive.

COMPANY REGISTRATIONS

INDIAN DYESTUFF INDUSTRIES LTD. (First Director: Shri Anandlal Hiralal.) Business: Manufacturers, importers and Dealers in Chemical Products of all nature, Dyemakers, etc. Authorised capital: Rs. 30,00,000. Public company. Address: 28, Apollo Street, Bombay 1.

K. T. DONGRE & Co., LTD. (First Director: Mr. R. V. Dongre.) Business: Chemists, Druggists and Dealers in Chemicals, Pharmaceuticals, etc. Authorised capital: Rs. 10,00,000. Private company. Address: 384, Lamington Road, Bombay.

NATIONAL HELICOPTERS LTD. (First Director: Mr. K. S. Cambata.) Business: Establish, Maintain and Operate Air Services, Airlines and other Lines of Conveyances, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Cambata Building, 42, Queen's Road, Churchgate Reclamation, Bombay.

QUESTION HOUR IN PARLIAMENT

Central Government Debt

DURING the period 31st March, 1948, to 31st March, 1951, the interest-bearing obligations of the Government of India increased by Rs. 379 crores. The rupee loan was reduced by Rs. 79 crores, that is, from Rs. 1,517 crores in 1948 to Rs. 1,438 crores in 1951, and the sterling debt by Rs. 13 crores, from Rs. 49 crores to Rs. 36 crores. The floating debt increased from Rs. 87 crores to Rs. 326 crores, the reserve funds and deposits from Rs. 296 crores to Rs. 363 crores, and the dollar debt from zero to Rs. 25 crores in 1951.

—Finance Minister

Capital of Insurance Companies

The Government does not propose to bring forward any changes in section 27 of the Insurance Act in regard to restrictions on insurance companies investing in equity capital. The Government has received representations from various bodies and has considered them but does not propose to bring forward any change.

* * * * *

Relief to Tobacco Growers

The Government of India has received representations from tobacco growers in Rajasthan and Andhra for revising the rate of excise duty. For the last two years, there has been some overproduction of tobacco and the export markets have become rather dull. There is hence accumulation of stocks and the growers are in difficulty. The present difficulties are only a temporary feature. While the position may be more acute in respect of low-grade tobacco, the higher grade tobacco is also not having a good market. Whenever representations have been made to the Government and instances have been brought to their notice of cultivators' personal belongings being attached for realisation of excise duty, orders have been issued to revenue authorities to stop such attachments. The question of revision of excise duty is still under consideration of Government.

—Deputy Finance Minister

Concealed Income

The Income-tax Investigation Commission has recently reported on certain cases referred to it of persons assessed in West Bengal in which large sums of concealed income has been detected. The amount of concealment reported since November, 1953, in such cases is about Rs. 3 crores.

—Parliamentary Secretary to Finance Minister

Coal for Pakistan

The demand placed by the Pakistani Government for Indian coal has shown some decline in recent months. It is reported that the reason for this decline is lessening of the demand from East Pakistan.

* * * *

Imports of Bicycles

The Government of India hopes that the import of bicycles into India will cease in two or three years. According to production reports received by the Government, the number of cycles in the Punjab has increased from approximately 12,500 in 1952 to nearly 45,000 in 1953. The Tariff Commission is at present going into the question of protection to the industry and its report is awaited.

—Minister for Commerce

Post Office Savings Accounts

The system of withdrawal from Post Office Savings Bank accounts by cheques is proposed to be introduced as an experimental measure at the Bombay G.P.O. Certain head post offices in the Bombay Circle will be included in the scheme. It will be introduced as soon as the procedure is finalised. The proposal involves many difficulties, including amendment of the Negotiable Instruments Act, and rules have to be framed. Staff has to be recruited.

—Deputy Communications Minister

Railway Collieries

Every endeavour will be made to complete the abolition of the contract system in railway collieries by 1st April, 1954. The system has already been abolished in nine out of the eleven railway collieries.

—Parliamentary Secretary to Production Minister

Ban on "Vanaspati"

The Government of India has written to the Rajasthan Government suggesting that the ban on import of *vanaspati* into the State be withdrawn. The ban existed before the Constitution came into operation.

—Minister for Agriculture

Family Planning

All the recommendations of the Family Planning Research and Programmes Committee have been generally accepted by the Government of India. The Committee's main recommendation is to make grants from the Centre to the State Governments and to private family planning clinics in the ratio of 4:1. A scheme indicating the detailed terms and conditions on which such grants will be made have been sent to the State Governments and voluntary organisations. It is proposed to provide Rs. 30 lakhs in the Budget for the next two years in this connection.

—Deputy Health Minister

AHMEDABAD ELECTRICITY COMPANY REPORTS SATISFACTORY RESULTS

PROFIT OF PENCH VALLEY COAL SIZABLY HIGHER

Ahmedabad Electricity Co., Ltd.

THE directors of the above Company (Agents: Messrs. Killick Industries Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th September, 1953.

The issue of the second series of 175,000 ordinary shares of Rs. 100 each at par has been fully called up, the first, second and final calls at Rs. 25 each per share having been made on 1st June, 3rd September and 1st December, 1953, respectively. 181 shares remain to be allotted against production of fractional certificates at date of this Report.

There was no change in the rates for supply of electricity during the year. As much as 2,494 new connections were made during the year, bringing the total at 30th September, 1953, to 35,646, of which 89 are large h.t. supplies. The following table shows the progress of sales during the last three years:—

(Kilowatt hours sold)

	For the year ended 30th September		
	1951	1952	1953
Public and private lighting and fans ..	14,555,494	16,189,800	17,478,913
Power	226,742,819	266,864,030	305,938,554
North Gujerat grid ..	7,970,098	38,007,850	62,805,560
Total	249,268,411	323,061,680	386,022,967
Percentage of increase on previous year ..	25·71	30·13	19·48

Plant erection and ancillary work at "C" station of the Sabarmati Power House have considerably advanced, and the station approaches its commissioning into service. The highest peak demand at the "A" and "B" generating stations was 79,600 kw. against the installed capacity of 97,500 kw. Irregular coal deliveries gave rise to anxiety about the middle of 1953, stocks having fallen to about 10 days' burning requirements. The position was, however, retrieved by strenuous approaches to the authorities concerned, and has since continued to be satisfactory. As much as 31 miles of 11 kv. cables and 16¼ miles of low tension cables were laid during the year. 10 new substations for general supply, 13 for rural electrification and 3 for industrial high tension supply were commissioned during the year. The transmission and distribution system operated efficiently. Considerable progress was made with the inter-connection arrangements between "A" and "B" and "C" stations, and with the 66 kv. overhead system designed to transmit power from "C" station to the City. The demand for supply from the Bombay Government Grid Scheme rose by 2,300 kw. to 12,800 kw. during the year. No major dispute with the Union requiring reference to the Industrial Court, arose during the year. In addition to the overseas training for members of the staff and to the training within Industry scheme, a cadet executive scheme was also introduced during the year.

The gross profit for the year amounts to Rs. 41,33,752 (Rs. 40,01,358) after charging depreciation in accordance with the provisions of the Electricity (Supply) Act, 1948, amounting to Rs. 20,42,963. The Company considers that there is no present liability for taxation on the profits for the year owing to income-tax rates of depreciation allowances.

After providing Rs. 1,73,476 (Rs. 1,56,463) for contingencies reserve and writing off Rs. 5,100 (Rs. 5,100) from promotion expenditure, Rs. 16,105 (Rs. 16,105) from stamp duty and brokerage in connection with debentures, and Rs. 3,956 (Rs. 1,887) from new share capital issue expenses, all in compliance with the Electricity (Supply) Act, 1948, it is proposed to take Rs. 1,10,484 (Rs. 1,75,000) to equalisation of dividends reserve and Rs. 48,658 (Rs. 1,00,000) to employees' retiring gratuities reserve. There then remains a balance of Rs. 37,75,973 (Rs. 32,48,271) and this together with Rs. 3,336 (Rs. 3,113) brought forward from last year's accounts makes a total of Rs. 37,79,309 (Rs. 32,51,384). From this sum, an ad-interim dividend of Rs. 2-8 (Re. 1-8) per share, proportionate to the amounts called up for the half-year ended 31st March, 1953, which absorbed Rs. 13,58,703 (Rs. 6,82,223) is to be deducted. The balance thus available amounts to Rs. 24,20,606 (Rs. 25,69,161) which it is proposed to apply as follows:—

To payment of a dividend for the half-year ended 30th September, 1953, at the rate of Rs. 4 (Rs. 5) per share, proportionate to the amounts called up (making 6¼ (6¾) per cent. for the year) Rs. 24,16,919 (Rs. 25,65,842) leaving a balance to be carried forward of Rs. 3,687 (Rs. 3,319).

As the clear profit for the year under review falls short of the reasonable return in terms of the Electricity (Supply) Act, 1948, the balance at the credit of the tariffs and dividends control reserve account at 30th September 1953, has been transferred to the equalisation of dividends reserve account.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,54,78,615	Block ...	5,46,96,578
Debentures ...	1,25,00,000	Capital work-in-progress	3,32,80,800
Reserves ...	75,78,378	Stores ...	64,74,805
Liabilities ...	1,49,43,185	Loose tools, etc. ...	1,67,280
Profit and loss account ...	3,687	Other assets	6,37,506
		Debts, deposits and advances ...	38,13,986
		Investments ...	7,45,761
		Cash ...	6,87,349
Rs.	10,05,04,065	Rs.	10,05,04,065

Pench Valley Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st August, 1953.

The Company's profit for the half-year after the inclusion of the amount brought forward of Rs. 27,404 (Rs. 22,099) is Rs. 5,10,674 (Rs. 3,30,433) and after making provision for taxation Rs. 2,12,888 (Rs. 1,25,000) there remains Rs. 2,97,786 (Rs. 2,05,433). Out of this the directors have placed to development reserve account Rs. 1,37,081 (*nil*) and recommend payment of a dividend at the rate of 17½ (12½) per cent. per annum, free of income-tax, absorbing Rs. 1,37,813 (Rs. 98,438) leaving to be carried forward Rs. 22,892 (Rs. 31,995).

Output and despatch of steam and other grades of coal for the last three half-years are as follows:—

Half-year ended	*Raisings* Tons	*Despatches* Tons
31st August, 1953	2,14,306	2,16,775
28th February, 1953	2,10,704	2,04,748
31st August, 1952	1,97,226	2,00,821

Both raisings and despatches during the half-year reached a record figure.

The heavy capital expenditure on development and mechanisation forecast in the previous report is now under way. Approximately Rs. 1½ lakhs was incurred on this account during the half-year under review and increasing amounts will require to be expended over the next few years.

To provide the necessary finance for this and in particular for the development and equipment of the two new pits now being sunk in the Chandametta area to replace Barkui Colliery, which is expected to be exhausted by the end of 1957, and which at present is responsible for almost 50 per cent. of the Company's raisings, a further sum of Rs. 1,37,081 has been placed to development reserve. In addition the sum of Rs. 12,919 E.P.T. post-war refund has been transferred to the same reserve which now stands at Rs. 2,50,000.

It is proposed to alter the accounting periods of the Company from those ending on 28th February and 31st August to the six monthly periods ending 31st March and 30th September. This will be an administrative convenience and will also bring the Company's financial year into line with the fiscal year. This change will be made in the current period which will therefore be of 7 months ending on 31st March 1954.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,75,000	Block ...	12,85,000
Reserves ...	11,25,000	Stock of coal	78,846
Provision for taxation ...	5,15,000	Stores ...	9,22,034

Profit and loss account ...	22,892	Investments	4,07,240
		Cash ...	93,820
Rs.	47,99,058	Rs.	47,99,058

Caledonian Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th November, 1953.

After bringing forward the balance from the last account there is a balance of Rs. 2,48,535 (Rs. 1,75,228) at the credit of profit and loss account from which the directors recommend payment as follows:—

Dividends on preference shares at Rs. 3-8 (Rs. 3-8) per share Rs. 35,000 (Rs. 35,000), and on ordinary shares at Rs. 6 (Rs. 6) per share Rs. 1,08,000 (Rs. 1,08,000), leaving Rs. 1,05,535 (Rs. 32,228) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills' Association, the mills worked 42½ hours per week with 12½ per cent. of the total looms sealed.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	28,00,000	Block ...	38,26,721

Rs.	76,18,126	Rs.	76,18,126

Cheviot Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th November, 1953.

After providing Rs. 1,25,000 (nil) for taxation, there is a balance of Rs. 2,63,604 (Rs. 1,76,539) at the credit of profit and loss account from which the directors recommend payment as follows:—

Dividends on preference shares at Rs. 3-8 (Rs. 3-8) per share Rs. 35,000 (Rs. 35,000) and on ordinary shares at Rs. 6 (Rs. 6) per share Rs. 95,700 (Rs. 95,700) leaving Rs. 1,32,904 (Rs. 45,839) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills Association, the mills worked 42½ hours per week with 12½ per cent. of the total looms sealed.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	25,95,000	Block ...	25,13,422
Reserves ...	28,39,282	Stocks ...	19,16,400

		Cash ...	5,332
Rs.	63,29,606	Rs.	63,29,606

Birds Investments Ltd.

The directors of the above Company (Secretaries: Messrs. Lovelock and Lewes, Calcutta) submitted the audited accounts of the Company for the year ended 30th September, 1953.

As forecast in last year's report, dividends from jute mills showed a considerable fall and amounted to Rs. 51,779 against Rs. 2,07,521 in the previous year. In addition, there was a fall in dividend in almost all other sections with the exception of electricity, paper and mining other than collieries.

The profit and loss account showed a credit balance of Rs. 4,39,042 (Rs. 5,47,730) including Rs. 1,25,380 (Rs. 93,128) brought forward from last year. The directors disposed of this sum, by paying a dividend of 5½ (5½) per cent. per annum, less income-tax, on the preference shares for the year to 30th September, 1953 Rs. 97,350 (Rs. 97,350), a dividend of 12½ (12½) per cent. on the ordinary shares for the year to 30th September, 1953, without deduction of income-tax Rs. 2,50,000 (Rs. 2,50,000) and carried forward the balance of Rs. 1,11,692 (Rs. 1,25,380).

The following statement shows the distribution of the Company's portfolio:

	Per cent.
Jute Mills	31.88
Electricity	1.04
Iron, Steel and Engineering	4.08
Collieries	21.10
Paper Mills	4.49
Investment Companies	8.76
Tea Companies	2.43
Mining other than Collieries	5.13
Transport	.18
Miscellaneous	19.46
Ceylon Tea Shares	1.45
	100
Summary—	Per cent.
Debentures	6.00
Preference Shares	15.56
Equity Shares	78.44
	100

The Company's portfolio is representative of investments which are quoted on the Calcutta and Colombo stock exchanges, with the exception of certain shares costing Rs. 7,88,644 for which no quotations are available. The total of the market value of the investments for which quotations are available, together with unquoted investments as valued by the directors, exceeds the book value at 30th September, 1953, by Rs. 12,88,313.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	44,00,000	Investments	56,20,371
Reserves ...	7,97,945	Debts, deposits and advances ...	53,27,030

British India Electric Construction Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Balmer Lawrie & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June, 1953.

After providing for depreciation, the loss for the half-year was Rs. 60,775 (profit of Rs. 61,970), to which was added the balance brought forward of Rs. 3,04,091 (Rs. 1,06,631 debit), making a total of Rs. 3,64,866 (Rs. 44,661), at the debit of profit and loss account, which was carried forward.

This result is an improvement on the second half of 1952, despite a further drop in turnover.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	5,56,727
Reserves ...	1,06,358	Work-in-progress ...	6,60,617

N.B.—Figures within brackets relate to the corresponding period of the previous year.

RENEWED STRINGENCY IN MONEY

(From Our Own Correspondent)

BOMBAY, 10th *March*

Conditions in the short-term money market were extremely stringent during the week under review. The volume of floating money was small and there were more borrowers than lenders. Funds were in keen demand for payment of income-tax by big firms. Further, banks have had to repay the fixed period borrowings taken from semi-Government bodies. Moreover, the subscriptions to the Bombay State Road Transport Corporation loan also caused additional pressure on the available funds. There was, as a result, a keen search for funds by most banks. In the absence of adequate supplies, activity in the inter-bank call money sector was very much restricted. Exchange banks had to draw on their foreign offices, while Indian banks sought the aid of the Reserve Bank or the Imperial Bank of India.

Inter-bank call money was bid at 3 per cent. among all sections of the banks. House money was taken at 3 per cent. Short-term deposits were wanted at 3 per cent. for 1 to 4 months and at 2½ to 2¾ per cent. for 5 to 12 months.

After four weeks of successive rise from Rs. 2-8 per cent. to Rs. 2-11 per cent. per annum, the Government of India Treasury Bill rate has slightly receded to Rs. 2-10-11 per cent. this week. The amount offered, against the usual tenders for Rs. 100 lakhs, was Rs. 189.50 lakhs, as against Rs. 151 lakhs last week. Thus, during the last four weeks, the amount offered has steadily risen from Rs. 101 lakhs to Rs. 189.50 lakhs. Tenders for Rs. 100 lakhs have been invited for the next week.

A rise of Rs. 19.14 crores in notes in circulation is disclosed by the Reserve Bank of India Statement for the week ended 5th March, 1954, as compared with that for the previous week. This rise is in refreshing contrast to the successive contractions noted in the previous weeks aggregating Rs. 8.14 crores. With this rise, notes in circulation stand at Rs. 1,190.57 crores, as against Rs. 1,136.12 crores for the corresponding week of 1953. Notes held in the Banking Department have fallen by Rs. 10.28 crores, so that the total notes issued are higher by Rs. 8.86 crores at Rs. 1,149.46 crores Rs. 1,202.57 crores, as against a year ago. The rise in total notes during the week under review has been offset by the addition of Rs. 10 crores to foreign securities and a contraction of Rs. 1.13 crores in rupee coin. In the Banking Department, deposits of the Central Government have gone up by Rs. 8.69 crores, while those of the State Governments have fallen by Rs. 6.99 crores, deposits of banks by Rs. 1.90 crores and those of others by Rs. 21.25 crores. A shrinkage of Rs. 10.40 crores is noted in cash balances and Rs. 12 crores in balances held abroad. Ways and means advances to Governments disclose a rise of Rs. 36 lakhs and other loans and advances Rs. 2.77 crores. There has been a fresh advance of Rs. 7.20 crores to Scheduled banks against issuance licences during the week, but repayments by banks amount to Rs. 6 crores, so that the outstanding borrowings under this head stand Rs. 1.20 crores higher.

The Consolidated statement of position of Scheduled banks for the week ended 26th February, 1954, as compared with that for the previous week, shows a fall of Rs. 1.23 crores in demand deposits and a rise of Rs. 16.12 lakhs in time deposits. Inter-bank borrowings are lower by Rs. 34.62 lakhs. Borrowings from the Reserve Bank are up by Rs. 1.45 crores, while those from the Imperial Bank have declined by Rs. 24 lakhs. Advances have gone down by Rs. 3.94 crores, while bills purchased and discounted have risen by as much as Rs. 7.01 crores. Investments are lower by Rs. 90.77 lakhs, cash on hand and balances with the Reserve Bank are together lower by Rs. 1.56 crores, balances with other banks in current account by Rs. 69.95 lakhs and money at call and short notice by Rs. 21.85 lakhs.

The Gilt-edged market experienced yet another week of dull trading. With the growing stringency in the money market, business continued to remain restricted. 3 per cent. 1957 was held at Rs. 98-5, while 3 per cent. 1958 stood an anna better at Rs. 98-2. 3 per cent. 1959-61, after shading off to Rs. 96-1, came up to Rs. 96-2. 3 per cent. 1963-65 and 3 per cent. 1964 were unchanged at Rs. 92-8. 3 per cent. 1966-68 at Rs. 90-4 and 3 per cent. 1970-75 at Rs. 86-8. 3 per cent. 1986 Conversion Loan had business at Rs. 82-10. 3½ per cent. 1961 N.P. Bond was done at Rs. 98-14½. 4 per cent. 1960-70 was in request at Rs 102-2, as against Rs. 102-0½ last week.

The Bombay State Road Transport Corporation loan which opened for subscription on Monday this week was oversubscribed and the list was closed by noon on that day. Business was reported done at Rs. 99-3.

KIPS RULE FIRM

(From Our Own Correspondent)

MADRAS, 8th *March*

In the kip market, conditions were somewhat firm. There was good clearance of stocks in the local bazar, and sellers were reluctant to offer at lower prices. Lower selections were in good demand for inland trade and prices ruled at one to two pence above U.K. levels for this description. U.K. demand was patchy and was mostly for medium and heavy kips. Top marks continued to obtain good premium over mixed tannage standards. Buff hides ruled firm, while buff calf and cow calf remained dull.

Prices of tanned goat skins ruled steady and of sheep weak. Shippers were steadily buying all arrivals. There was patchy demand for sheep skins from Japan and Continent.

GOLD FIRM

(From Our Own Correspondent)

BOMBAY, 10th *March*

Trading on the Bullion Exchange was listless during the week under review. There were no special factors to affect the sentiment of operators either way. Day-to-day fluctuations in prices were confined to a narrow range. Silver remained steady due to sustained support from bull operators. If, despite this support, the white metal had not made much headway during the week, it was due to the liquidation of a substantial quantity by a leading bull operator from Calcutta and to absence of sufficient offtake during the major part of the week. Though demand in the ready section was said to have improved towards the close, it did not come up to expectations. In the circumstances, prices could stage no more than a fractional rise. The undertone remained steady.

Sentiment in the gold section was relatively brighter on account of paucity of arrivals and good offtake. There was no sale of Mysore gold during the most part of the week and inflow of the metal through smuggling was also small, thanks to the vigilance of the customs authorities. Over the week, forward gold registered a rise of Re. 1 and ready gold Re. 1-5.

Silver for forward delivery (22nd March settlement) began the week at Rs. 164 and staged a small rise to Rs. 164-10 before reacting to Rs. 163-8 on Monday this week. But speculative support at the lower level and reports of an improvement in offtake lifted the forward price to Rs. 165-3 yesterday. Today, however, there was a retreat to Rs. 164-6 at the close due to paucity of demand and profit-taking.

Ready silver (.996 Mint) was quoted at a premium of As. 4 over the forward throughout the week. The opening and closing levels were Rs. 164-4 and Rs. 164-10, respectively. The floating stocks of silver are reported to be 1,100 bars. The daily average offtake was 10 to 15 bars.

Opening at Rs. 87-14, gold for forward delivery (19th March settlement) advanced to a new high for the last several months at Rs. 88-13 on Friday, on shortage of stocks in the ready section and poor arrivals. The higher level, however, attracted profit-taking, consequent on a decline in demand, and the forward price reacted to Rs. 87-10 on Monday. But on renewed support from bulls and covering by short-sellers, forward gold once again firmed up to Rs. 88-9 before closing the week a shade lower at Rs. 88-6.

Ready gold began at Rs. 88-8 and came up to Rs. 89-13. The closing was, however, a shade lower at Rs. 89-5. The floating stocks of gold are estimated at 15,000 tolas. The daily average arrivals were 4,000 tolas, while the offtake averaged 5,000 tolas a day.

The following comparative table shows the trend of the market during the week under review:

	10-3-54	Highest	Lowest	2-3-54
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	89 5	89 13	88 6	88 0

New York Ready	85½c.	—	—	85½c.

TEA PRICES ADVANCE

(From Our Own Correspondent)

CALCUTTA, 9th *March*

During export sale yesterday, offerings amounted to 22,400 chests, and, although the selection was below the average, there was good demand. The one exception to the general upward trend was whole leaf grades, prices of which were hammered down by As. 2 to As. 3. Offerings of clean commons and commonest teas were bought at prices, which were one anna higher. Fannings received moderate attention and prices rose by As. 1 to As. 1½. The rates were: best C.T.C. Assam B.P. Rs. 2-8 (nominal), medium Assam B.P. Rs. 2-7 (nominal), clean common B.P. Rs. 2-6-8, and clean black pekoe (not quotable).

Strong general demand featured last week's sale for domestic consumption, offerings of dusts consisting of 16,000 chests. Prices rose throughout the sale, and at the close the gains were between As. 1½ to As. 2. The C.T.C. varieties and leafy teas suitable for export were the best features. The rates were: best Assam C.T.C. Rs. 2-2-6, medium Assam grainy dusts Re. 1-15-9, and medium Dooars Re. 1-15-3. Offerings of leaf amounted to a small quantity of 2,000 chests which also received the keen attention of buyers. Green tea was in good demand, while the superior varieties of leaf were sold at prices above valuation. The inferior stalky teas were steady.

LINSEED STEADY

(Messrs. A. Bradley & Co.)

CALCUTTA, 8th *March*

In the linseed market, little change is reported during the week and prices are fairly well maintained, whilst activity has been very limited. The undertone of the market is steady. Despite feeble enquiries from local buyers, chiefly for ready goods, the scarcity of supplies from upcountry has helped to maintain the price level prevailing locally. Sellers are reserved for forward delivery, owing to firmer prices at the centres. The oil market is inactive and consumers are still only buying spot on a hand-to-mouth basis. Latest quotations are:—Ready Rs. 20-4 and April-May Rs. 17-8 per maund.

COTTON PRICES RECEDE FURTHER

(From Our Own Correspondent)

BOMBAY, 10th *March*

By all accounts, the cotton market has been demoralised. Such phenomenon is easily understandable in the case of the forward section of this market. What is really strange is the fact that this demoralisation should have started in the spot market at Sewri and spread over to the forward section at Kalbadevi, instead of it being the other way round. Enquiries for ready cotton from the mills seem to have dried up. There has been a good deal of hedge selling from upcountry centres and all these, combined with tight money supply, have conspired to create an atmosphere of vacuum in the cotton market.

The mills had been making heavy purchases during the earlier part of the season, instead of spreading the covering of their requirements, as usual. This, in the first place, pushed up the rates abnormally. To a certain extent, the authorities were also responsible for this debacle. There was no need to issue permits to the mills to the fullest extent so early in the season. They should have known that this would create a scramble in the markets before all the cotton came there. If the permits had been given in suitable instalments, prices would not have run away as they did a couple of months ago. Now the pendulum has swung to the other side and there are no buyers for the cotton which has come into the market later in the season. If the mills had been left free to adjust their programme of purchase, the exaggerated price movements would not have happened. This is one of the worst features of official controls. If they are not administered with wisdom and efficiency, they tend to create more problems than they solve.

It is hoped that the chaotic conditions prevailing in the markets will be of short duration and that the readjustment of values will be as rapid as their dislocation. The present prices, around Rs. 665, would not have looked as abnormal as they do, if they had not been pushed up by artificial causes to as high as Rs. 719. While there is no life in the spot market at present, the forward market is one-sidedly active. People who know nothing about cotton have begun, in large numbers, to dabble in these operations and the slightest rumour, which knowledgeable people would discount, has the effect of creating a stampede either way. It is up to the East India Cotton Association authorities to consider this problem and to devise enough checks to keep trading on a normal track, unless they desire to create conditions prevailing in the bullion markets.

The opening of the August contract was expected to stabilise prices. Though it has failed to bring about this result, it would do so after a time. The gap between the two contracts is normal and this is a hopeful sign of more ordered trading ahead. The future trend of prices will depend more on the quantity of cotton imported from abroad henceforth than on the supply position within the country, which is now fairly well ascertained. The conditions regarding supply outside are not, however, very favourable, except in the U.S.A., and it is likely that imports may not amount to the earlier estimates because of this reason. This would mean a bullish factor for Indian cotton for genuine traders who can hold their stocks.

In the forward section, I.C.C, May contract opened the week at Rs. 680, as against Rs. 678 last week. After improving to Rs. 683 on the following day, the contract reacted to Rs. 661½ yesterday, on account of nervous liquidation induced by weak advices from the spot section and downward trend in values in the Broach section. Lower levels, however, evoked support and, the contract staged a recovery, to-day's closing rate being Rs. 671½. Trading in I.C.C. August contract was commenced on Monday. The contract opened at Rs. 681½ and, after receding to Rs. 671½ yesterday, recovered to Rs. 681½ today.

The following is the trend of prices in the forward section during the week under review:

	Opening	*High*	*Low*	*Closing*
I.C.C May ...	Rs. 680	684	661½	671½
I.C.C. Aug. ...	Rs. 681½	683	671½	681½

Latest available quotations from the Sewri market are: Bengal *deshi* Rs. 625-650; Berar Jarilla Rs. 780; Khandesh Rs. 850; Vijay Rs. 870; Oomra *deshi* Rs. 700; Moglai Rs. 685.

There is nothing of note to report about the Karachi market. Out of a total arrival of a little over a million bales, nearly half the quantity is still unsold. Whether this will all be disposed of or whether there will be a goodly carry-over will depend on the attitude of Japan which is the biggest consumer of Pakistan cotton. With credit facilities being extended liberally to various countries on the Continent, the market for Karachi in these centres will be more limited than usual. Even Japan can obtain more supplies from the U.S., but it chooses to patronise Pakistan cotton to create a market for its textiles in this country. The latest available quotations from the Karachi market are: Sind *Deshi* Rs. 77-8; Punjab *Deshi* Rs. 75-8; 4F. Punjab Roller Rs. 74; S.G. Rs. 80; L.S.S. Punjab Roller Rs. 77-12; S.G. Rs. 83-4; N.T. Roller Rs. 77-12; S.G. Rs. 82-4; 289F. Punjab Roller Rs. 82-4; S.G. Rs. 88-4.

At Alexandria, the tempo has naturally been slower, in view of scarcity of supplies, especially in those varieties which are eagerly in demand from usual customers. To a certain extent, however, demand has shifted from medium grades of Karnak to higher grades of this variety into Giza 30.

Narrow fluctuations have been the feature of the week in the U.S. markets. The daily turnover has gone down considerably since last week, with the result that the price range has been short. In view of the fact that world consumption this year will be higher and that the prices in all other markets are hardening, this is perhaps the best time

for Indian mills to arrange for their supplies of U.S. cotton. A keener demand from the Continent later in the season, after the Liverpool Forward Market starts functioning, might bring about further appreciation in the price of cotton in the U.S.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	9-3-54	26-2-54	19-2-54
Spot	35.15	35.05	35.20
March	34.45	34.25	34.33
May	34.41	34.30	34.40
July	33.79	34.24	34.30
October	33.77	33.63	33.61

ART SILK YARN RECOVERS

(From Our Own Correspondent)

BOMBAY, 10*th March*

The sharp recession in prices in the art silk yarn market, following the levy of the excise duty of 19 pies per yard on rayon cloth last week, was arrested during the week under review. The recovery followed buying support induced by expectation of a modification in the levy of excise duty as indicated by the Finance Minister in the Council of States on Monday last. The directive of the Silk and Art Silk Mills' Association, Bombay, to the mills not to effect closure or curtailment of output also favourably influenced the sentiment of operators. There was, besides, report of smaller arrivals of imported yarn, the quantity actually imported during February, 1954, being 2.10 million lbs., as against 2.68 million lbs. a month before and 2.25 million lbs. two months before. Buying enquiries that ensued, as a consequence, lifted the prices from the low levels touched last week. But the improvement was not so appreciable as to erase the previous week's losses completely. Today's closing quotations, therefore, were very much lower than those prevailing prior to the imposition of duty.

In the forward section, 150D March contract which had slumped to Rs. 750 on the 3rd inst., recovered to Rs. 771 today before finishing a shade lower at Rs. 770. The net rise over the week was to the extent of Rs. 20. April contract improved from Rs. 767 to Rs. 774 but closed a rupee lower. Spot prices were fully steady, 120 Italy and 150 Italy being quoted at Rs. 4-8 and Rs. 3-14, respectively. 120 Japan, after advancing by an anna to Rs. 4-14 yesterday, reacted to Rs. 4-13 today. 150 Japan which remained fully steady throughout the week lost an anna to Rs. 4-7 today.

In sympathy with art silk yarn, staple fibre yarn also staged a recovery in values. Thus, staple fibre yarn (40×2) March contract advanced from the last week's low of Rs. 648 to Rs. 673 today, after touching a high level of Rs. 675. April contract rose from Rs. 668 to Rs. 673, before closing at Rs. 671. Prices of indigenous yarn (40×2) in the spot section also tended to move up. Sitaram advanced by As. 2-6 to Rs. 3-7. Hirjl was higher by half-an-anna at Rs. 3-6½. Hindustan was well maintained at Rs. 3-7. Foreign yarns (40×2), however, proved an exception and continued their downward march. Shinco, Paramount and S. Fuji receded by an anna each to Rs. 4-2½, Rs. 4-2 and Rs. 4-3, respectively. Suico and Aurora were lower by half-an-anna each, the former at Rs. 4-3½ and the latter at Rs. 4-3.

The cotton yarn market ruled quiet with fluctuations in prices confined to a narrow range. Interest among operators in fresh business was lacking, although reports about cloth exports were quite encouraging. Even the extension of the validity of allotments of cotton yarn made to mills on or after 1st January, 1954, and export licences issued against such allotments upto the end of this month passed unnoticed. Operators preferred to await further developments resulting from the recent upward revision in excise duty on mill-made cloth.

In sympathy with the downward trend in raw cotton prices, yarn prices also tended to decline. Among 80s, Finlay and Sriram receded by a rupee each to Rs. 68 and Rs. 63 per bundle of 10 lbs., respectively. Seksaria dropped As. 8 to Rs. 56-8. Elphinstone lost a like amount to Rs. 61. Among 60s, City reacted from Rs. 47-8 to Rs. 46-10 and Finlay from Rs. 59-12 to Rs. 59. Raghuvanshi shed As. 4 to Rs. 53-12. Among 40s, Meenakshi fell by As 7 to Rs. 26-2. Among 20s, Hind, Edward and Madura were done each As. 2 lower at Rs. 16-11, Rs. 16-8, and Rs. 18-8, respectively. Prices of 10 count yarns, on the other hand, were steady. Podar and Colaba gained an anna each to Rs. 13-5 and Rs. 13-4. Modern was sought at Rs. 13-6 and Elphinstone at Rs. 12-12.

The table below gives the prices of art silk, staple fibre and cotton yarns quoted today, as compared with those in the previous week:—

	10-3-1954	1-3-1954
	Rs. a.	Rs. a.
Art silk yarn—		
150 March (per case of 200 lbs.)	770 0	750 0
150 April "	773 0	.. ..

40s Meenakshi	26 2	26 9
60s City	46 10	47 8
80s Elphinstone	61 0	61 8

GROUNDNUTS FIRM

(From Our Own Correspondent)

BOMBAY, 10*th March*

The announcement of export quota for H.P.S. groundnuts on 5th March, sprang a pleasant surprise. As a result, the market reacted sharply to this development. The market witnessed virtually a buying spree. Consequently, the prices of groundnuts shot up and recorded impressive gains over the week. The linseed, *kardi* and *niger* sections also ruled firm in sympathy with groundnuts. The castorseeds section, however, presented a colourless appearance, on discouraging Continental and U.S. advices regarding castor oil.

According to a Press note issued by the Government of India, allotments for export of H.P.S. groundnuts will be made by the licensing authorities at the ports to established shippers for quantities equal to one half of the total shipments effected by them during any one of the calendar years, namely, 1951, 1952 or 1953. It is estimated that the total quantity of exports that can be made, on this basis, would be about 7,500 tons. Following this announcement, Bombay Bold H.P.S. groundnuts shot up from Rs. 38 on the 5th inst. to Rs. 42 today. H.P.S. Bombay Bold is quoted at £106 per ton in Canada, at which rate the profit margin is estimated at about £15 per ton. Bold F.A.Q. advanced from Rs. 32-6 on the 2nd inst. to Rs. 36. February-March and April-May deliveries disclosed a gain of Rs. 3 and Rs. 2-6 at Rs. 35-4 and Rs. 34-10, respectively. Khandesh quality advanced from Rs. 32-14 to Rs. 36-8. Groundnut oil was higher by Re. 1-6 at Rs. 17-6 and railway receipts Re. 1-4 at Rs. 17-4. March, April and May deliveries changed hands at Rs. 17-4, Rs. 17-10 and Rs. 17-14, as against Rs. 16-3 Rs. 16-7 and Rs. 16-4, respectively.

In the linseed section, Bold ready advanced by Re. 1-12 to Rs. 25. February-March and April-May deliveries gained Re. 1-6 and Re. 1-10 to Rs. 24 and Rs. 23-12, respectively. Linseed oil ready was up by As. 12 at Rs. 14-4. Linseed oil which was quoted at £108 per ton c.i.f. in the U.K. and the Continent met with no response at all as the rate worked out to £110 on the basis of Indian quotations

Chances of large business against the recently announced export quota of 6,000 tons of castor oil for the period ending April 1954, appeared bleak, in the absence of reduction in export duty. As a result, the market presented dull conditions. May 1954 which opened at Rs. 105-8, as against Rs. 104, fluctuated between Rs. 106 and Rs. 103-8, before closing at Rs. 104-8. F.A.Q. was unchanged at Rs. 21-8, while Madras gained a rupee to Rs. 22-8. Castor oil B.S.S. and First Pressures gained As. 4 each to Rs. 12 and Rs. 11-8, respectively. Commercials were better by As. 2 at Rs. 10-12. Castor oil B.S.S. (March-April delivery) was offered at £117 per ton, First Pressures at £116 and Commercial at £111 in the Continent, but the response was not satisfactory.

Among others, *kardi* Bold and April-May gained Re. 1-8 each to Rs. 18 and Rs. 18-8, respectively. *Niger* F.A.Q. improved from Rs. 26-2 to Rs. 28-8. Madras quality gained Rs. 2-8 to Rs. 28-8. February-March were done at Rs. 28-8, as against Rs. 26-4.

The following table shows the prices of oilseeds and oil on the 10th inst., as compared with those at the end of the previous two weeks.

	10-3-54	2-3-54	24-2-54
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—			
Khandesh Quality Ready (per cwt.)	36 8	32 14	34 4

Castor Oil—			
Commercial (per quarter) ..	10 12	10 10	11 10

FURTHER RISE IN SUGAR

(From Our Own Correspondent)

BOMBAY, 10*th March*

The bullish fervour that dominated the Bombay sugar market last week continued unabated this week too. Besides depletion of stocks and expected delay in arrivals of imported sugar, the Central Government's directive to sugar factories to pay henceforth an extra As. 4 per maund over and above the minimum sugarcane price of Re. 1-7 imparted considerable strength to the market. The report that purchases of imported sugar from the Union Food Ministry would be subject to the payment of a purchase tax of six pies per rupee under the new Bombay sales tax rules which are to come into force from 1st April next also aided the bullish fervour and prices of sugar, as a result, recorded further handsome gains.

Among foreign sugars in the spot section, German sugar advanced by Re. 1-8 to Rs. 86-8 per bag of 220 lbs. British refined moved up from Rs. 86-8 to Rs. 87-8 per bag of 2 cwts. Cuban sugar spurted by As. 10 to Rs. 38-8 per 100 lbs. Czechoslovakian sugar hardened from Rs. 85-88 to Rs. 86-90 per bag of 220 lbs. Mexican sugar was quoted As. 8 higher at Rs. 41-12. Prices of indigenous sugars were well maintained. Large grains were quoted at Rs. 93-97, as against Rs. 97-98 per bag a week ago. Small and medium grains were fully steady at Rs. 90 and Rs. 91-92 respectively.

In the forward section, *Fagan* delivery changed hands a rupee higher at Rs. 86 per bag. *Chaitra* delivery was quoted still higher at Rs. 86-14, owing to reports that fresh purchases of foreign sugar by the Central Food Ministry would not be reaching Bombay earlier than the third week of April, 1954.

Arrivals of sugar into the market were slightly larger, the quantity actually arriving during the week under review being 4,000 bags, as against only 1,800 bags last week.

As from 1st April next, the Government of Bombay has decided to bring into operation the two-point sales tax together with the purchase tax. Accordingly, sugar will be liable to the payment of a tax of six pies in the rupee each on the purchase in the first and final stages. Consumers will, therefore, have to pay as sales tax Rs. 5-8 to Rs. 6 per bag to the Bombay Government. It is believed that sales of opening stocks of sugar on the 1st proximo and onwards will also be liable to the same rate of sales tax, but with a rebate of the tax which might have already been paid on the opening stocks as on 1st April, 1954. Even the purchases of imported sugar from the Food Ministry, it is stated, will have to pay a purchase tax of six pies in the rupee.

PEPPER PRICES RECEDE

(Messrs. Parekh & Co.)

BOMBAY, 10*th March*

The pepper market ruled quiet during the week under review, owing to paucity of foreign enquiries, and prices drifted lower. Growers in Alleppey area reduced their price from Rs. 1,750 to Rs. 1,675, in order to attract fresh buyings. It is interesting to note that arrivals from the interior are reduced whenever prices pierce through the resistance level of Rs. 1,700. The prices in Tellichery area are comparatively cheaper than those in Alleppey, but there, too, the pressure of arrivals is slowly receding, in spite of continous waterfront tie-up at the port of New York, the dealers there are holding off in anticipation of further reduction in the Indian market, but the general consensus of opinion here is that, if the total shipment to New York during this month turned out to be below 1,000 tons, America would have to buy more during April to maintain the flow of supply among grinders, stores and packers. It is possible that dealers in New York may try to exploit the Indian market by spreading various rumours, right or otherwise, of lower offerings from Sarawak, but the growers in India fully know that the pressure of Sarawak cannot come before August, and hence India has the monopoly of supply until that time.

In the A.S.T.A. section, March and April shipments were done from $0.82½ to $0.80¼, but there is noticeable resistance at rates varying about $0.80. There is an unconfirmed report that Red China is negotiating for a sizable purchase of Malabar pepper, possibly on barter basis.

In the delivery section, prices for March and April deliveries, after going down to Rs. 1,340 and Rs. 1,380 recovered to Rs. 1,370 and Rs. 1,410, respectively. It is reported that there is a tussle between bears and bulls in March delivery business, each manipulating the market to meet his own end. The real picture of the future of the market will therefore, not be available until the close of March *vaida*.

Today's nominal quotations are: Ready delivery Rs. 180-200 per Bengali maund; March delivery Rs. 1,380-1,400 and April delivery Rs. 1,400-1,420 per candy of 5½ cwts.

HEAVY JUTE GOODS STRONG

(From Our Own Correspondent)

CALCUTTA, 9*th March*

The feature in the jute goods market during the week under review was a fair rise in prices of heavy goods, following moderate export enquiries and covering by local shorts. Burma is expected to be in the market for a further quantity of sacking. Ready B. twills advanced from Rs. 105-14 to Rs. 108. Some business was done with West Africa. Rates for deliveries within a month were fractionally higher than the ready price, but other forward quotations kept to their natural level, being quoted below the rate for ready goods. This was not the position until later, but market circles stated that this change to the natural level was a sign of the difficulty in marketing heavy goods for export. In spite of this realisation, it should be noted that there was no tendency for quotations to move down this week. On the other hand, gains were recorded as indicated above. This feature must be attributed to another realisation, namely, that transfer of sacking looms to the production of chances of production of heavy goods in excess of demand have been completely eliminated.

In contrast to heavy goods the hessian section ruled dull and prices receded fractionally. Enquiries were poor, but stockists and mills were confident that orders would soon be forthcoming. It was for this reason that the recession in prices was insignificant. The Argentine, it is reported, would be in the market for April goods, while fresh buying on behalf of the United States is anticipated to replenish stocks. Ready 40" 10 oz. hessian opened at Rs. 44-2 and was for a time better, being quoted up to Rs. 44-6. Lack of buying demand, however, saw the rate recede to Rs. 43-15, towards the close. But, yesterday, a welcome change was noticed and, under speculative support, a smart recovery to Rs. 44-5 was recorded, the f.o.b. rate being Rs. 48-6. 8 oz. hessian was offered at Rs. 38 f.a.s, and at Rs. 41-4 f.o.b.

The fact that prices for raw jute have recorded a progressive decline in recent weeks has again brought to the forefront the fear of competition from Continental mills which are now able to get raw material at cheaper rates. This factor is considered sufficient to neutralise the price advantage afforded to the Indian manufacturers as a result of the reduction of the export duty on hessian in September last. Market circles believe that the time is not far off when New Delhi will have to consider seriously the question of abolishing the existing duty on hessian. The trade demand for such governmental action has been there for a long time, but the revision effected in September last afforded splendid results in the export market and, in such a context, the demand for the withdrawal of the duty has not been as vociferous as that before September. Buyers on behalf of foreign countries hesitate to enter into commitments, in anticipation of a further decline in prices.

Although fair business was done in raw jute, prices did not show any improvement. Mills are not anxious to increase their stocks of raw material, as they have enough in their possession. Moreover, the present trend in the goods market does not enable mills to support even the current prices. Business was done in local packing at Rs. 21 basis bottoms and Assam upper bottoms realised Rs. 24-8 to Rs. 25, with middles quoting Rs. 28. Jat daisee was taken at Rs. 28 and Jungli bottoms at Rs. 23. Moderate interest was shown in Pakistani cuttings at Rs. 60 a bale, while bimli f.a.q. looked down to Rs. 22, as against Rs. 23 a week ago. Western jute was priced at Rs. 23-8 and Murshidabads at Rs. 24. Orissa bottoms gave way from Rs. 27-8 to Rs. 26-8, while middles were wanted at Rs. 29-8. Dubri bottoms were done at Rs. 25-4.

FOODGRAINS IRREGULAR

(From Our Own Correspondent)

HAPUR, 8*th March*

The foodgrains and pulses markets presented a mixed appearance during the week under review. In the ready section, prices of nearly all the cereals that had continued to drift lower for some days past showed resistance to a further fall and were stationary during the week. The stockists who had been liquidating their possessions at any cost showed more reserve. The reasons for this cnange of sentiments were mostly local. Hailstorm and excessive winter rains have affected *rabi* crop prospects in Uttar Pradesh. A bumper crop was expected earlier, but now according to Government sources, *rabi* production is only normal. Early maturing *rabi* crops, such as gram, peas, oilseeds, tobacco and vegetables, have suffered much from winter rains. Damage to wheat crop is less, because it has a subsequent chance of recovery.

It is authoritatively stated that, within a few days, a new policy in regard to rice may be announced by the Government of India. Private merchants are already allowed to import rice for sale in the non-rationed areas. The question of allowing them to import other grains, especially wheat, is under consideration. It is revealed that prices of rice has been stepped up wherever curement of rice are high. The total quantity of rice procured from 1st January to 24th February is 376,400 tons. About 16,700 tons of rice has also been imported since 1st January out of the total of 24,050 tons of foodgrains imported. The Centre has contracted to import 900,000 tons of rice from Burma. The import of Burma rice, it is stated, is not primarily for meeting any food shortage in the country, but involves political considerations. It will also help in further relaxation of controls, including quantitative control and, before long, food control will become a thing of the past. Brisk movement of rice from surplus States of Madhya Pradesh, Orissa, Punjab and U.P. to deficit regions of West Bengal and South India has begun and the tempo is expected to be maintained in the next few months also.

In view of a bumper harvest this year, the Punjab Government is likely to allow free movement of wheat to Delhi and Himachal Pradesh. The Assam Government has decided further to relax control on rice with immediate effect.

The strong westerly winds that blew over wide tracts in North India this week are expected to affect the standing crops adversely. Pulses futures reacted very bullishly in the first instance, but a part of the early gain was later erased, on profit realising and improved weather conditions that followed. There was no spot demand for pulses. The latest quotations in the local market are: Wheat Rs. 15-4 to Rs. 16-12, gram Rs. 10 to Rs. 13, barley Rs. 9-4, *bejhar* Rs. 9, maize Rs. 9-12 to Rs. 11, *bajra* Rs. 9-8 to Rs. 11, *juwar* Rs. 7-8 to Rs. 9, *guwar* Rs. 9, peas Rs. 8-12, *arhar* Rs. 9-8, *urd* Rs. 14 to Rs. 16 and *moong* Rs. 15.

SUGAR RULES DULL

(From Our Own Correspondent)

HAPUR, 8*th March*

Crystal sugar markets remained dull, thanks to lack of consumers' interest in almost all big centres. Calcutta eased considerably following arrivals of foreign and inland sugar which improved the stock position. Madras continued steady, but there was reduced enquiry. Bombay improved, due to demand from Malabar. The U.P. markets remained featureless.

The U.P. Cane growers' strike has now completely fizzled out; it has been withdrawn by the U.P. *Hind Kisan Panchayat*. Following this, the Government of India has written to all the sugar factories in west U.P. suggesting to them that they should henceforth pay an extra As. 4 per maund over and above the minimum sugarcane price of Re. 1-7. The extra price will be adjusted against the share of the profits which will be assigned to the cane growers when the profit-sharing scheme of the sugar industry in U.P. is finalised at the end of the sugar season.

The Indian Food Minister has revealed that six new sugar factories with good capacities are likely to be permitted to be set up in the South. Production from these factories is expected to help meet increased internal consumption.

It is authoritatively stated that 250,000 tons of sugar were purchased by the end of December, 1953, and the entire quantity arrived by the end of February, 1954. The landed price of imported sugar on an average worked out to be about Rs. 20 per maund, exclusive of import duty. The Government of India has made arrangements for the purchase of 35,000 tons of foreign sugar. It is likely that the Government will buy more later. It has been notified that, while the Government preferred polarisation of 99.8 in regard to sugar imports, it will be prepared to accept a lower polarisation also, provided the price and other terms are attractive and the quality is otherwise acceptable to Indian consumers.

It is reliably understood that a scheme for the establishment of a refinery to manufacture various types of refined sugar from raw sugar is under the consideration of the Central Government. The scheme is reported to have been submitted by a group of industrialists. India may get all the varieties of refined sugar needed for domestic consumption and may also regain its lost sugar export trade with the Middle East.

Sugar mills in U.P. crushed 115,235,000 maunds of cane up to 15th February, 1954, that is about 10 million maunds more than the quantity crushed during the corresponding period last year. The figures are based on the weekly returns of each of the 65 factories in the State. The crushing season is now coming to a close and 15 factories have already been closed. It is expected that crushing will be normal.

The latest mill delivery quotations (per maund) in the local market are: Sugar Simbhauli Rs. 30-14, Amroha Rs. 30-9, Bijnor Rs. 30-9, Meerut Rs. 30-12, Mowana Rs. 30-12, Mansoorpur Rs. 31-3, Deoband Rs. 31-4, Rohana Rs. 31-2, Laksar Rs. 31, Mohaddinpur Rs. 30-10, and Sehora Rs. 30-8.

Gur markets remained quiet to steady. Prices in the ready section moved very slowly, but the trend was definitely upwards. In futures, there was a sharp recovery, following strong bull support. Heavy speculative coverings featured this week and the rise was unexpectedly high.

Pansera *gur* at Hapur is quoted at Rs. 14-12 per maund and *Baishak* futures at Rs. 14-13-6.

METALS STEADY

(From Our Own Correspondent)

CALCUTTA, 9*th March*

Although the volume of business that was put through in the metal market during the week under review was lower than the previous week, prices were steady. Stockists anticipated that consumers would show renewed interest in the coming weeks regardless of the fact that they had bought fair quantities in recent weeks. Electrolytic copper was a particular feature, as the price shot up from Rs. 175 to Rs. 178. This improvement was encouraged by higher advices from the United States and other foreign markets. The supply position in India continued to be tight, and this factor sustained the upward movement at each stage. Electrolytic zinc was offered throughout the week at Rs. 53-8, but business that passed was insignificant. Virgin lead at Rs. 59-8 recorded a fractional gain. Opening at Rs. 444, tin gave way to Rs. 441, as the market was under the influence of reports about arrivals in the near future. Quotations on the New York market moved in the upward direction, on the belief that America would participate in the International Tin Agreement, a draft of which is being circulated now among the countries concerned for ratification. Mercury was quoted steady at Rs. 660 per flask of 75 lbs., following speculative support.

ARRIVALS OF HIDES LOWER

(From Our Own Correspondent)

KANPUR, 7*th March*

During the week under review, conditions in the local hides and skins market were more or less similar to those noted in the previous week. The new arrival of the week was slightly less than in the previous week. The Madrasee dealers were lukewarm in their support during the week. The local tanners were the main party to effect transactions over the two main categories of goods i.e., wet salted cow and wet salted buff. The latest quotations are as follows:—

Wet salted cow I grade at Rs. 330 to Rs. 340 and II grade at Rs. 300 to Rs. 160 per score; wet salted buff I grade at 1 lb. 8 ozs. to 1 lb. 11 ozs. and II grade at 1 lb. 13 ozs. to 2 lbs. per rupee; goat skins I grade at Rs. 300 and II grade at Rs. 250 per 100 pieces; and sheep skins at Rs. 250 to Rs. 300 per 100 pieces.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. F=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which class their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. ‡ Sales and amount written off. (k) Investments. ‡ For ten months ended 31st December 1951.

(j) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 4 in96 the debentures section:—

‖‖ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable a par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1970

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952 or on any subsequent interest date at one month's notice.

Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955 on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months notice.

MARKET GOSSIP

(Concluded from page 447)

"will result in more cane being attracted to the factories, making their working season longer and thereby leading to increased production." The objective behind this latest move of the Government, namely, maintenance of a high level of sugar output, is, no doubt, a laudable one. But the point is whether the move itself is a right one. So far as we are concerned, it is certainly not. For an increase of As. 4 in the price of cane means a rise of more than 17 per cent. in the price of sugar. The consumers' expectation of getting his requirements of sugar at an economic price has completely been belied. Viewed thus, the latest move of the Central Government is a retrograde step and will, therefore, be widely deplored. Looked at from the angle of cost involved to the sugar industry also, there is no justification for the payment of extra price for cane. The extra price, as the Government states, will be adjusted against the share of profit. This is indeed admirable. One would, however, ask: "What about the adjustment, if the factories which pay the extra price actually incur a loss, instead of earning a profit?" The Government alone can answer this poser. If it is to invest the cane grower with the right to ask for a share in the profit, it should also make him to share the loss that might be suffered by the factories. Surely, this proposal will be met with a chorus of opposition from cane growers.

* * * *

Be that as it may, the Government of India must be congratulated upon the timely action it has taken with a view to ensuring steady supplies of sugar in the market towards the closing months of the season. The Government is reported to have warned the sugar mills, in a circular addressed to them, that, if any factory does not sell and deliver, within the next two months, the sugar which has so far been released, the stocks would be frozen and taken over by the Government, unless of course, a factory has strong reasons to withhold stocks. The warning is quite timely, in that it will check the anti-social activity indulged in by a section of the sugar industry in the form of cornering of stocks with the sinister purpose of creating scarcity in supplies and rise in prices.

* * *

In the meantime, the efforts of the Government of India to entrust the task of distributing the imported sugar to a syndicate of dealers in Bombay, on the same basis as is being done in Calcutta, would appear to have fallen flat, thanks to the uncomprising attitude of the Bombay Sugar Merchants' Association and the newly formed *Shakkar Vyapari Mandal*. It is now reported that the Central Food Minlstry has advised the Regional Director of Food, Bombay, to arrange fixation of quotas of imported sugar from each ship to all bona *fide* sugar dealers, with a reservation of 10 to 15 per cent, for new comers and interior traders. The proposed system is an improvement over the one now in vogue, namely, acceptance of tenders from all and sundry before each shipload reaches the city and allotment of quotas *pro rata*. Thus, by laying down a condition to the effect that sugar dealers should submit, along with their applications for quotas, certificates from a chartered accountant, showing the turnover during the financial year 1952-53, the Government has safeguarded the interests of the established traders who have lost a portion of their business to outsiders, not to speak of their having to pay a premium for the quota they purchase from the latter. The Food Department will also be avoiding the difficulty of handling a large mass of applications.

BANKING

(Concluded from page 454)

ment has been made by the Bank of England, but it is widely believed that one important reason for its new policy is to conserve official reserves for ultimate repayment against the United Kingdom's lend-lease obligation.

The most significant transaction of the year was the sale in London of about 21.5 million ounces of Russian silver. Most of this silver, it is believed, was taken up by the Bank of England for its own stock. Total imports of silver into the United Kingdom during the first 11 months of 1953, the latest period for which figures are available, amounted to 26.8 million ounces.

In India, the situatlon remained substantially unchanged from that which has existed during the past several years. Some licences were granted for imports of small amounts, but these in total probably were less than 250,000 ounces. Crop failures and reduced purchasing power in agricultural communities restricted the amount of silver taken up by the people in India. Reports indicate that total consumption probably did not exceed 4.0 million ounces for the year. Prices in Bombay for spot delivery ranged from a high of Rs. 172 per 100 tolas on 23rd February, 1953, to a low of Rs. 147-4 on 21st October, 1953.

With regard to lend-lease, India expects to return its full obligation and the Government has on hand 300 million ounces in the form of demonetised coin. This being so, and since India is the largest debtor under the lend-lease silver agreement, it would appear reasonable to expect that a very substantial part of the obligation will be returned to the United States Treasury on schedule.

No payments against lend-lease silver were made during 1953, and the am

INSURANCE TRENDS IN INDIA

THE criticism that the *Indian Insurance Year Book*, published by the Controller of Insurance, Simla, makes its appearance long after the events to which the Book refers, have taken place and that it is, therefore a document of only historic interest has been made so often that it seems futile to repeat it. Nevertheless, this criticism is more apt in the case of the 1953 Year Book than in former years, because it has been published even later than usual. The latest Year Book, which bears the imprint '1953' but refers to the year 1952, was available to the Press last week. Normally, it should have been published in December last year or January this year. The delay is attributed by the Controller to the fact that the date for receipt of accounts and returns was extended from 7th October to 30th November. Prompt publication of the Year Book, as the Controller rightly points out, will be possible only when the insurers co-operate with the Department in submitting their statutory returns within the prescribed time. It is thus obvious that the blame for the delay in the case of this publication has to be laid not at the doors of bureaucracy but at those of private enterprise. It is not clear why insurance offices, which are, if anything, over-staffed, should find it difficult to comply with the Controller's directives. Surely, if banks, with all their onerous duties, can submit numerous returns to the Reserve Bank promptly, the insurance companies cannot plead that they find it difficult to furnish information once a year in the prescribed forms. The Controller, on his part, will be only serving the public cause if he penalises those who do not abide by his instructions.

Despite the delay in its publication, the Year Book has been worth waiting for. A few new features have been added this year. A map, showing the regional distribution of insurance companies, a histogram, depicting the progress of new life business, and another for the distribution of the assets of life insurers are among the features of this publication. An attempt has been made to correct the previous years' returns in the light of the information made available subsequently, and also to give an objective, though, perhaps, too cryptic, comment on the trends in Indian insurance. It is to be hoped that, in future years, these features will be improved and that new ones will be added, so that the Year Book may become not merely a reliable but an interesting guide to Indian insurance which may rank alongside the deservedly popular report on money and banking by the Reserve Bank.

The corrected figures for new life business during the decade ended 1952, given in the Year Book, reveal an encouraging trend. The curve of new life business has tended to look up since 1943, the "year when various forms of control and rationing were clamped down." New business has gone up from Rs. 74.2 crores in 1943 to Rs. 145.7 crores in 1952. The following table shows the new life business in each of the ten years ended 1952:

NEW LIFE BUSINESS
(Rupees in crores)

Year	Indian Insurors	Foreign Insurers	Total
1943	64.2	10.0	74.2
1944	97.0	11.9	108.9
1945	123.7	12.6	136.3
1946	140.9	12.9	153.8
1947	120.5	13.1	139.6
1948	121.7	12.9	134.6
1949	130.0	12.2	142.2
1950	125.8	13.7	139.5
1951	131.4	16.5	147.9
1952	129.3	16.4	145.7

Considering that the figures in the table above represent, for years up to the time of Partition, the new life business for undivided India, it is gratifying to note that the volume of annual life business in the Indian Union in 1952 was only slightly below the peak levels touched in the pre-partition years. The Controller comments that, if allowance were made for the influence of Partition on new life business, it would appear that the "volume of new life insurance business in the Indian Union in 1951 has probably even exceeded the peak level of 1946." It is expected, the Controller says, that the effect of the economic improvement that must follow the implementation of the Five-year Plan and of the reliefs for insurance, granted under the Estate Duty Act, will be to stabilise as well as stimulate new life business. This expectation, it should be clear, can materialise only if the Government's fiscal measures and price policies allow the middle class, the mainstay of Indian insurance, to effect savings.

The total life business in force at the end of the year 1952 was Rs. 916 crores (subject to correction), as against Rs. 873 crores at the end of the previous year. There has been a substantial increase in new life business since 1943 when it amounted to no more than Rs. 378 crores. But, if all

on the other, involve a serious national loss, if it merely ends in lapsed policies. That the lapse ratio continues to be high will be evident from the fact that, although 534,000 policies were placed in the insurers' books during 1952, the actual increase in the number of policies at the end of the year over the previous year was 120,000, thus indicating that the rate of mortality for policies is pretty high. This represents an economic waste for the country. But it cannot be prevented so long as there is, among insurers, a craze for new business—and business at any cost. In insurance, as in all spheres of human activity, the sacrifice of quality at the altar of quantity is fatal to progress.

To turn to general insurance. There was a slight decline in the general insurers' premium income during 1952 when the income amounted to Rs. 21.23 crores, as against Rs. 21.80 crores in the previous year. This decline was shared by fire and marine sections of general insurance, though there was a welcome increase in miscellaneous insurance business. A somewhat disturbing feature of general insurance is that there has been an increase in the expense ratio in each of its three branches—fire, marine and miscellaneous—and in the claims ratio in both fire and marine branches. The following table summarises the trends in general insurance business:

GENERAL INSURERS
(Both Indian and Non-Indian)
(Rs. in lakhs)

	1952	1951
FIRE—		
Premium income	10,44	10,82
Claims ratio	32p.c.	30p.c.
Expense ratio	32p.c.	31p.c.
MARINE—		
Premium income	4,72	5,07
Claims ratio	57p.c.	52p.c.
Expense ratio	27p.c.	24p.c.
MISCELLANEOUS—		
Premium income	6,06	5,90
Claims ratio	49p.c.	50p.c.
Expense ratio	29p.c.	28p.c.

It is encouraging to find that an increasingly larger proportion of the Indian general insurers' premium income is now being derived from their business outside India. Indeed, the net premium income from their business in India has actually declined. Thus, their net premium income from foreign sources increased from Rs. 690 lakhs in 1951 to Rs. 749 lakhs in 1952, while their income from the Indian portfolio declined from Rs. 774 lakhs in 1951 to Rs. 698 lakhs in the following year. Although the improvement in foreign business deserves to be welcomed, in that it constitutes an invisible source of exports for India, it also casts a heavy and special responsibility on Indian insurers to see that they maintain high traditions of fair dealing and prompt service.

MR. GWILT ON INDIAN ECONOMY

A BALANCED account of the state of our national economy is provided by the address which Mr. E. L. C. Gwilt, President of the Bombay Chamber of Commerce, delivered at the Chamber's annual meeting held this week. He painted a picture which, since it was true to reality, concealed neither the bright nor the dark aspects of our economy. India can congratulate itself on its possessing the best organised Government among the South-East Asian countries, and the Bombay State on its having a very efficient Government. Price levels have been held. The balance of payments position is satisfactory. The rising trend in industrial production too has been well maintained. Food position has perceptibly improved, thanks to the good monsoon of 1953.

These are the bright—cynics would probably say, less dark—spots of the economic picture. But there are some disturbing features too. Mr. Gwilt pointed out that, although the "basic fabric" was good, it was necessary to increase the "levels of activity in all directions." He referred to the I.M.F. Report which reached the conclusion that the expenditure planned by the Government in the public sector and in organised industries had been lower than originally contemplated. In this connection, he stated that, if the Five-year Plan were to be completed, it would be necessary to inject an effective measure of finance into the economy. But he wondered whether the country could, without damage to its economy, stand the contemplated measure of deficit finance. He agreed that the measure proposed (Rs. 250 crores of deficit finance) was large, but thought it would, "if absorbed," go a long way to "achieving the results desired." Perhaps the operative part of this sentence is the phrase, "if absorbed." It is difficult to improve upon the happy phrase. This physiological analogy brings out the essence of the problem of deficit finance. If the measure is to be successful, it must be absorbed. The best tonic for an ailing patient is one that is so well absorbed by the human system that the inherent recuperative powers are roused to activity. This applies to economic organism too, for no specific will do it any good, unless it is given in a form and in a way that will facilitate its easy absorption.

Two fundamental questions, however, remain. If the Government finds it difficult to carry out the first Five-year Plan, how will it find the Rs. 7,000 crores needed for carrying out the second Five-year Plan? Also, how does the Government propose to solve the problem of inadequate flow of finance to the private sector? With every passing day, the second of these questions is assuming greater and greater significance. Mr. R. G. Saraiya, President of the Federation of Indian Chambers of Commerce and Industry, quoted, in the course of his address at the recent annual meeting of that body, statistics to show how meagre has been the flow of finance for the private sector. Mr. Gwilt remarked: "It is rare, indeed, in these days, to see a prospectus published in the papers, and it is reasonable to enquire why?" Nay, it is not merely "reasonable," it is urgently necessary to ask this question, and arrive at an answer. Mr. Gwilt summed up the answer, neatly enough, when he referred to the evidence led before the Shroff Committee by witnesses who drew attention to the "burdens arising from labour legislation that are being placed upon industry, the levels of taxation, and the uncertainty and lack of confidence arising from the control of industrial development as factors unpropitious to the climate required to attract capital, both local and foreign."

Mr. Gwilt's analysis of the Government's labour policy makes very interesting reading. He said: "I doubt whether any other piece of legislation placed upon the Statute Book in India has delegated to the individual the very wide powers given by the Industrial Disputes Act to a judge of an Industrial Court." Without meaning any disrespect whatever to these courts, we, too, doubt it. Indeed, we are certain that the civil courts would stand aghast if such powers were conferred on them, for the industrial courts have the powers to make or mar the future of a concern or a whole industry. A miscarriage of justice in a civil court, it seems necessary to emphasise here, may harm an individual or a family. But, when that takes place in an industrial court, it might well cause irreparable damage to national economy. Considering that justice in the economic sphere is more difficult to determine than in other fields, it is to be deplored that men, trained merely in the art of legal wrangling, are often asked to preside over the destinies of business units and are endowed with almost unlimited powers over the fortunes of these units built up patiently through years of self-denial by investors. Indeed, some decisions of industrial tribunals in regard to the workers' rights to participate in the reserves of the companies of which they are employees have a serious import for the future of company finance in India. "If shareholders' money, prudently placed to reserves rather than paid out in dividends, is to be partly handed over to labour, in the event of the winding up of a business," Mr. Gwilt rightly pointed out, "the investor will be more shy than ever of placing his capital at the disposal of industry."

An equally disturbing trend in the sphere of labour legislation is the placing of obstacles in the way of retrenchment of employees. Mr. Gwilt did not dispute the fact that an employee should be protected against the bad employer. But this consideration should not be carried so far as to fetter employers' hands in taking decisions regarding retrenchment of surplus labour. Any legislation preventing such retrenchment will, as Mr. Gwilt said, result in industry being burdened with "inefficient hands, which, in the long run, will have a profound effect upon the industrial economy and industrial well-being of the country." He showed how anomalous the omnibus legislation on industrial disputes was by emphasising that even a leper, whose employment is a penal offence under the Lepers' Act of 1898, cannot be discharged without the previous permission of the Court. Incidentally, this shows what haste, instead of thought, goes into labour legislation in this country.

GOLD MINING INDUSTRY

THE Chief Minister of Mysore, Mr. K. Hanumanthiah, is vexed that the gold mining industry in his State has failed to contribute as much revenue as he thought it would. Under the Gold Duty Act, the State was in receipt of a revenue of more than a crore of rupees per year. Under the Act, the duty used to be levied on every ounce of gold produced. The Government was empowered to claim 75 per cent. of the amount by which the sale price of gold exceeded Rs. 100 per ounce. But this Act imposed a great hardship on the gold mining companies when the costs of mining operations increased, although it benefited the Government in the war and post-war years when the price of gold moved up. After protracted negotiations, the Act was replaced in 1949 by an agreement between the Kolar Gold Mining Companies and the Government. The agreement provided specific allowances for depreciation and other items and for dividend to shareholders at 6 per cent. per annum. Out of the balance, the Companies are expected to pay a contribution to the State which generally amounts to 50 to 75 per cent. of the surplus over 6 per cent. on the paid-up capital.

The earlier Act would have ruined the companies altogether, whereas the 1949 Agreement, by which it was replaced, without being in any way generous to the companies, has at least saved them from extinction. The State Government is, however, wrong in bewailing the diminution in the revenue obtained from the companies. Without such reduction in their contribution to the State, the companies would probably have closed down. The point to remember is that the agreement is in the nature of an excess profits tax which assures the Government of a more than reasonable share in the companies' earnings whenever they exceed a particular limit. If the companies have not been able to contribute as much as they might have done, it is because the price of gold itself has come down. Thus, the average price for gold declined from Rs. 113-3 in 1951 to Rs. 92-3 in 1952 and still further to Rs. 86-11 in 1953. Surely, this steady decline in the price of gold must have had a marked effect on the companies' earnings, and, therefore, in their contribution to the State Government. It is true that even the current price of gold in India is higher than the world price for this precious metal. But, as against this, there is the fact that the cost of extraction in the Mysore gold mines is pretty high, which is not surprising, considering that they have the distinction of being the deepest in the world. In fact, the cost is so high that one of the mines had to be abandoned last year, as it was no longer economic to extract gold from it.

In this context, the Government will do well to allow the industry to continue to operate as hitherto and see that the agreement is fully implemented. It would be deplorable if the Chief Minister tried to carry out his threat, made in the course of a reply to a question in the State Assembly, that he would not hesitate to nationalise the industry. The Government would be well-advised to let the goose which lays the golden eggs be owned by the companies, so long as it lays eggs for the State and the Government in the shape of employment opportunities and a resonable level of revenue. It is needless to add that, if the goose is to lay the eggs regularly, it must be well cared for. And we wonder whether it will be, if the State Government takes it over. One must note, in this connection, that gold mining is a complicated process requiring considerable skill and experience which cannot be easily had. It would appear that the Government has appointed a Committee to inquire whether the agreement is working satisfactorily. The gold mining companies, on their part, will do well to co-operate with the Committee and show that the loss of revenue to the Government has occurred through no fault of theirs.

The importance of the companies to national economy arises from three considerations. First, they mine a commodity which has an anti-inflationary potential. Secondly, they account for 50 per cent. of the gold absorbed by the country, the rest being met from smuggled gold. And, thirdly, they are a source of employment to thousands of workers. In other countries, the governments are so solicitous of the welfare of the gold mining industry that they do not hesitate to subsidise them. The Mysore Government will have done a real service to national economy and served its own long-term interests by encouraging the industry to rehabilitate itself and to strengthen its development, through suitable tax and other reliefs, so that it could work what are at present unremunerative ores.

SHARE MARKETS BULLISH AGAIN

CENTURY'S EXCELLENT PERFORMANCE—SMALL INSURERS' CONCERN—OUTLOOK FOR GOLD

THURSDAY, 5 P.M.

THIS has been quite a gainful week for the Stock Exchanges. All the leading counters both in Bombay and Calcutta have moved forward, most of them more than regaining the ground they had lost a week ago. In the past week, Tata Deferreds had suffered a fall of Rs. 42-8, whereas this week they have gained Rs. 61-4. Similarly, Tata Ordinaries have risen by Rs. 7-12, as against a loss of Rs. 6-12 in the previous week. Indian Irons, which had sustained a fall of Re. 1-6, have staged a rise of Re. 1-4-6. Bombay Dyeings, Kohinoors, A.C.Cs., Belapurs, and Bombay Burmahs, to mention a few more instances, have marked a gain of Rs. 6-14, Rs. 6-12, Re. 1-12, Rs. 6-8 and Rs. 22-8, as compared with a loss of Rs. 16-4, Rs. 5-4, Re. 1-0, Rs. 7-8 and Rs. 11-4, respectively. This recovery shows that the setback noticed last week was only a temporary phase and that the confidence of market is intact. The past week's shake out having eliminated weak holders, the technical position of the market is healthier. It must, however, be mentioned that the improvement in values has been due mostly to professional activity.

MARKET GOSSIP

• • • •

Steel shares have given the lead to other counters. A good part of the rise in Tata Steels must be attributed to short-covering. But there is said to have been some investment buying, too, in Deferreds. The Bombay High Court's dismissal of the appeal filed by the dissident shareholders against the conversion scheme gave unexpected strength to both the Deferreds and Ordinaries. The general impression was that almost everybody had taken for granted that the appeal would be dismissed. So, the Court's decision should have caused no ripple in the market. The fact that it did suggests that some at least must not have been so sure as all that. It seems that, when it was finally known that the conversion was a certainty, some of the shorts who had not covered their sales all along decided to square up their outstandings.

• • • •

The rise in Indian Irons has been due to renewed speculative buying inspired by reports that the Government's announcement regarding the retention prices for the products of the Company is imminent and that it would be quite favourable to the Company. So often the market has been misled by such reports that one cannot readily believe them. The fact, however, remains that the Government's decision on this question has been hanging fire for an unduly long time; it is long overdue. It may, therefore, come at any time. Nevertheless, it is better to bear in mind that, in New Delhi, things move very slowly and in such matters as the one under reference the Secretariat is in no particular hurry. It is also well to remember that, on this question, the Commerce and Industry Minister is over-zealous of the consumers' interests and invariably puts forward a number of conditions before granting an increase in prices. Prudence, therefore, demands that one should not be unduly optimistic about the Government's decision on the retention prices for the I.I.S.Co. and that one should always make an allowance for the prejudices and predilections of the Minister concerned.

• • • •

Reports from Calcutta indicate that operators there have interpreted the defeat suffered by the Muslim League in the recent elections in East Bengal rather bullishly. Evidently, their assumption is that the new party which will soon come to power in East Pakistan will follow a friendly policy towards India and will encourage trade between the two parts of Bengal at least. History shows that it is premature to draw such a comforting conclusion. All Muslims in Pakistan are the same, whether they belong to the League or not, so far as their attitude towards India is concerned. It will be a fond hope to think that Mr. Fazlul Huq and Mr. Suhrawardy are different from the present rulers of Pakistan and will work for bringing about understanding and friendship between the two countries. Even if they want to, they will not be allowed to do so. Further, for all practical purposes, it is the West Pakistan that counts and there has been no change in its attitude towards India. All competent political observers are of the view that, encouraged by the support given by the U.S., the present rulers of Pakistan will continue to bully India and provide plenty of pinpricks. The results of election in East Bengal have in no way lessened the chances of the present cold war between the two parts of this sub-continent being intensified. If anything, Indo-Pakistan relations will be the main bugaboo of the share market in the next six months or one year. Indeed, it is this factor that prevents one from taking a clear view of the market.

• • • •

To return to Tata Deferreds. The appeal filed by the dissident shareholders of the T.I.S.Co. before the Chief Justice of Bombay failed to carry conviction and was dismissed. Thus, the merits of the award given by Mr. M. C. Setalvad have won the approval of three learned judges, Justice Tendolkar, who first sanctioned the conversion scheme, rejecting the contention of the small minority shareholders, Justice Chagla, Chief Judge of Bombay, and Justice Shah who sat on the Bench with Mr. Chagla to hear the appeal. This is a great tribute to Mr. Setalvad. It is a happy thing, indeed, that the conversion of Tata Deferreds has been brought about through the normal laws of the country and that it has not been necessary for invoking the emergency powers of the Government to achieve this desirable objective. The success of this move is due not a little to the realisation by all fair-minded persons that the Deferred shares constituted an eyesore and that it, therefore, deserved to be eliminated. It is also a convincing indication that, where a move is morally sound and materially correct, it is unnecessary for the Government to use its emergency powers.

• • • •

It was stated by mistake in these columns last week that trading in Tata Deferreds would cease from Monday this week. Activity in this scrip will continue till almost the end of this month. To be precise, no business in it will take place on the Stock Exchange from Monday the 29th inst. The search for a successor to this scrip has been a favourite theme of market scribes for some months past. It is as futile as it is unnecessary to dwell on this subject. For no scrip can replace the Deferred. If there is one, the entire object of abolishing this scrip, namely, avoidance of a gambling counter, will be defeated. In fact, we will even go to the extent of saying that it is the duty of Stock Exchange authorities and managements of the companies concerned to see that no scrip or group of scrips takes the place of Deferred.

• • • •

The financial results of two leading cotton mills for 1953 were published this week. These mills are the Century Spinning and Manufacturing Co., Ltd. and the Bombay Dyeing and Manufacturing Co., Ltd. Both the mills have reported better profits for the past year than for 1952 and both have decided to pay slightly higher dividends. Of the two, the performance of Century has been excellent; indeed, it has beaten the record of all the mills in Bombay at least. Its profit (before depreciation and taxation) at Rs. 96.81 lakhs is even higher than that of the Bombay Dyeing and exceeds its last year's profit by as much as Rs. 45.64 lakhs. The management of the Company has wisely decided to conserve the major portion of the increase in profit. Thus, the increase in dividend from Rs. 20 per share (of Rs. 100 each) to Rs. 22 per share takes up an additional sum of Rs. 2.19 lakhs only. Whereas no provision for reserves could be made from out of the profit last year, a sum of no less than Rs. 20.24 lakhs has been provided now. Of this amount, the dividend equalisation account gets nearly Rs. 10 lakhs, Rs. 9.78 lakhs to be precise, the balance being added to the reserve fund proper. The transfer to depreciation has been stepped up by Rs. 1.50 lakhs to Rs. 12.50 lakhs. Quite a big slice of the rise in profit has been knocked off by taxation, for which the Directors have earmarked Rs. 32.50 lakhs, as against Rs. 15 lakhs a year before. Even after all these allocations, the carry forward at Rs. 12.81 lakhs is Rs. 7.50 lakhs higher than the amount brought in. After the aforesaid appropriations, the reserves of the Company stand at record high levels. The Reserve Fund alone appears at Rs. 70 lakhs. Besides this, there is a dividend equalisation fund of Rs. 65 lakhs of which Rs. 18.24 lakhs represent the E.P.T. refund received in 1952. Then there is an insurance fund of Rs. 22.6 lakhs and an extension fund of Rs. 1.55 lakhs. The market has been so impressed with the results of the Company for 1953 that the value of its shares has appreciated during the last few days to a much greater extent than any other scrip in the textile section. In the past, for instance, Centurys always used to be quoted a few rupees below the Kohinoors, but now they are commanding a premium over the latter.

• • • •

Market circles were expecting the Bombay Dyeing to show a profit of about a crore of rupees. But the published profits are well below these expectations. After providing for all expenses, including agents' commission, but before depreciation and taxation, the profit of this Company for 1953 works out to Rs. 73.84 lakhs, an increase of about Rs. 12 lakhs as compared with that for 1952. The provision for taxation has taken up Rs. 23 lakhs, same as that in the previous year, while that for depreciation is Rs. 1.32 lakhs higher at Rs. 14.06 lakhs. A sum of Rs. 14 lakhs has been credited to dividend equalisation fund. The dividend has been kept unchanged at Rs. 20 per share (of Rs. 250 each) but a bonus of Rs. 2-8-0 in commemoration of the 75th year of the Company has been proposed. The Directors have, in fact, made it clear that this special bonus does not form part of the normal dividend. In other words, they want the shareholders to note that this bonus may not be repeated next year. The market circles are very much disappointed at this extremely conservative dividend policy of the Company's directors.

• • • •

The directors' report of the Company for 1953 are notable for two striking features. One is the disclosure that the Company has undertaken a major reorganisation scheme. The exact cost of this scheme is not revealed, but it is stated that, as a part of the programme, orders for new machinery of the value of Rs. 90 lakhs have already been placed. The other feature relates to the proposal to establish a factory for the manufacture of hydrogen peroxide. The exact statement of the Directors, in this connection, is as follows:

"The Directors have pleasure in informing the shareholders that, as a result of negotiations conducted by the Chairman with Messrs. Laporte Chemicals Ltd., London, an agreement has been entered into by the Company with them to start a new company in Bombay to be known as the National Peroxide Ltd., for the manufacture of hydrogen peroxide, a heavy chemical used in the process of bleaching, for which there is a good demand in the country, and is at present being imported. The necessary licence and permission has been obtained from the Government of India, to form the new Company, the National Peroxide Ltd., with a subscribed capital of Rs. 36 lakhs divided into 36,000 shares of Rs. 100 each, out of which 15,000 shares would be subscribed by the Company. The factory, as well as the staff quarters would be erected on the vacant site to the rear of Spring Mills.

• • • •

The smaller life insurers have, as was only to be expected, been perturbed by the decision of the leading insurers to reduce their premium rates for life policies. It would appear that, at a recent meeting of the Indian Life Assurance Offices' Association, they succeeded in getting this body to send a telegram to the Controller of Insurance, expressing their concern over the leading insurers' decision. This communication, it is understood, emphasised that the recent reduction in premium rates by leading companies would compel the rest to reduce the rates at a time when they are consolidating their position. It has also stressed, it is learned, the consideration that it is inopportune to reduce the premium rates now. Presumably, the Executive Committee of the Life Insurance Council, which is scheduled to meet at the end of this month in the city, will also discuss this question in an informal manner. In informed circles, it is, however, felt that the Government will not possibly be stampeded into any action designed to prevent insurers from doing what is demonstrably in the interest of the insuring public.

• • • •

At least one insurer has lucidly explained how it was possible for them to reduce the rates. The New India Assurance Co., Ltd., the first company to reduce the premium rates, has, in a Press note, set out, in a most convincing manner, the reasons which prompted its Board of Directors to take the decision on premium rates. After referring to the cheap money policy of the Government, which caused the Company to increase the premium rates with effect from 1st January, 1947, the note points out that conditions have "radically" changed since then. Thus, mortality experience for the period 1946-52 was only 60 per cent. of what was expected on the basis of Oriental's Mortality Experience (1925-35). The experience of the years 1951-53, it is stated, indicates that further improvement is "possible and likely." Again, expense ratio has stabilised at about 90 per cent. of the first year's premiums, and at about 14 per cent. of the renewal premiums. These expenses, it is stated, are not likely to exceed the maximum percentages allowed at present under the Insurance Rules. Yet another favourable factor is the improvement in the gross yield on Life Assurance Fund. The gross yield has gone up during the interval by about ½ per cent., the yield in 1952 being 4.46 per cent. It is further stated that there is "definitely an increase of about ½ per cent. in gross yield on the new investment, and about 1 per cent. in the net yield." The Company has written down its investment to the 1952 level of values. In conclusion, the note says:

"Having regard to these favourable changes in mortality experience and rate of interest earned on investments of life assurance funds, the Board of Directors of the New India Assurance Co., Ltd. has decided to substantially reduce the rates of premiums under all life assurance plans, with a view to passing on the benefit of these favourable changes to the prospective policyholders. It is to be expected that this will serve to encourage savings in the private sector of the national economy. The New India has taken this opportunity to offer specially attractive terms for whole life policies which would be in demand for Estate Duty purposes. The new rates become effective from 1st March, 1954, and will apply to all proposals completed on and after that date. There is reason to believe that the experience of practically all the leading offices as regards improvement in the yield on investments and actual mortality in recent years has been similar. It is, therefore, to be expected that other offices will also revise their rates sooner or later."

• • • •

It should, therefore, be clear that the Company's decision to reduce premium rates is backed by weighty reasons. Only, it is to be hoped that this decision will lead to a realignment of premium rates in the entire field of life assurance at a level more attractive for the insuring public.

• • • •

Complete and reliable statistics of world gold output during 1953 have just become available. According to the leading bullion brokers, Messrs. Samuel Montagu, London, the world output of gold aggregated 26.50 million fine ounces, which is only a shade less than the 26.56 million fine ounces produced in 1952. Included in these production figures is the Russian output, estimated at 2 million ounces. It may be mentioned, in this connection, that the figures relating to the stocks and production of gold in Russia are a closely guarded secret. The Union of South Africa leads all countries of the world with an output of 11.9 million ounces to its credit in 1953, as against 11.8 million ounces in 1952. This country is followed by Canada with 4.23 million ounces (4.47 million in 1952) and the U.S. with 1.99 million ounces (1.93 million in 1952). Australian gold output exceeded the one million mark, its exact output being 1.05 million ounces in 1953, as against 0.98 million ounces in the previous year. India occupies a minor place in the world's gold map; its share was a mere 212,000 ounces in 1953, as compared with 243,000 ounces in 1952. The British Empire is still the major producer of gold in the world; it accounts for nearly 72 per cent. of the world's gold

EQUITIES BUOYANT

TATA DEFERREDS TOUCH NEW PEAK

(From Our Own Correspondents)

BOMBAY, 18th *March*

AFTER last week's break in values, the Stock Exchange once again presented this week a buoyant note. There was a revival of buying enthusiasm, which enlarged during the closing days of the week, in almost all the leading counters of the market. Much of the buying fervour was purely of a speculative nature. Feverish covering by short-sellers also helped the rising trend, with the result that smart advances were recorded over the week in most counters.

The operators' enthusiasm was touched off by a feeling that there would be closer co-operation between the private enterprise and the Government and the former could expect a better deal from the Government. This belief was further strengthened by the Commerce and Industry Minister's assurance, in his address to the Punjab and Delhi Chamber of Commerce in New Delhi yesterday, that the Government was prepared to allow industrialists to expand and make more profits, if they co-operated with it. Revival of hopes of better prospects for textile industry during 1954, and better advices from Calcutta where steel shares were boosted by reports of an imminent announcement regarding a sizable increase in the retention price of steel for the Indian Iron and Steel Co., Ltd., and by the election results in East Bengal, were the other factors which enlivened activity in the market.

In the steel section, Tata Deferreds put up a bright show. This being the penultimate week of its existence on the list, operators seemed to have farewell deals in these scrips at rising rates. As a result, they advanced from Rs. 2,132-8 to Rs. 2,165 on Monday. After a short lived decline to Rs. 2,157-8 on Tuesday, they resumed their upward trend to touch a high of Rs. 2,195—a fresh record since July, 1947—before closing at Rs. 2,193-12. The proximity of the exit of Tata Deferreds seemed to have induced operators to give more attention to Tata Ordinaries which appreciated from Rs. 359-8 to Rs. 368, but closed at Rs. 367-4. After an early rise from Rs. 28-4 to Rs. 28-13, Indian Irons shaded off to Rs. 28-7½ on Tuesday; but revival of speculative support for reasons stated at the outset, pushed up the rate to Rs. 29-10. The closing was, however, a fraction lower at Rs. 29-8½.

The textile section was cheerful and fair gains were recorded all-round. The publication of the financial results of prominent textile mills fanned the enthusiasm of operators. The most impressive rise was recorded by Century which advanced from Rs. 314-4 to Rs. 327, the peak for the current year so far. It may be noted here that this scrip has gone up by over Rs. 50 during the last 2½ months, a record not achieved by any other textile scrip so far this year. They have also gone far ahead of Kohinoors, in recent weeks, while early in the year it was the other way about. Bombay Dyeings scored a rise of Rs. 6-14 to Rs. 419-6, the highest level touched for the week being Rs. 421-14. Kohinoors put on Rs. 6-12 to Rs. 307, Central India Rs. 6 to Rs. 180, Finlays Rs. 5 to Rs. 265, Gokaks Rs. 5-8 to Rs. 265-8 and Morarjis Rs. 5 to Rs. 210. Standards moved up by Rs. 5-10 to Rs. 323-12, Svadeshis by as much as Rs. 9-8 to Rs. 299-8, Simplex by Re. 1 to Rs. 151, Tata Mills by Rs. 2 to Rs. 51 and Vishnu by Re. 1-4 to Rs. 145. Sholapurs appreciated by Rs. 5 to Rs. 1,805.

Bank shares were on the whole steady, though not much activity was reported. Centrals were a fraction lower at Rs. 57-2, while their new shares gained As. 4 to Rs. 60. Imperial Fully Paids were put up by Rs. 7-8 to Rs. 1,772-8, while Contributories showed no change at Rs. 425. Indias changed hands Re. 1-8 higher at Rs. 154-4. Barodas were unchanged at Rs. 110. United Commercials were a shade easy at Rs. 42.

In the insurance section, a rise of Re. 1-8 to Rs. 45-8 in New Indias was a feature. Orientals were unchanged at Rs. 7,500. Industrial and Prudentials gained As. 12 to Rs. 37-12. Vulcans were, however, a fraction down at Rs. 12-12.

Barring the Tata Hydro Group, electricity shares were quiet. Andhra Valleys were taken up by Rs. 11-4 to Rs. 1,301-4, Tata Powers by Rs. 5 to Rs. 1,397-8 and Tata Hydros by As. 8 to Rs. 140. Ahmedabad Electrics were under pressure to lose As. 15 to Rs. 114-11 and their new shares by Re. 1-4 to Rs. 112. Surats declined by As. 15 to Rs. 126-14. Bombay Suburbans were unchanged at Rs. 120-10.

The downward trend noted last week in the miscellaneous section was reversed this week and several industrial scrips were concerned in brisk rally. The most prominent among these were Bombay Burmahs which received excellent support on prospects of a joint venture with the Burma Government for the expansion of tea production in Burma. As a result, the shares rallied from Rs. 396-4 to a high of Rs. 421-4—a level not seen since July, 1952—but closed at Rs. 418-12. Associated Cements advanced by Re. 1-12 to Rs. 154-12 and Digvijays by Re. 1-8 to Rs. 114-8. Alcocks spurted by Rs. 11-4 to Rs. 358-12. Belapurs picked up Rs. 6-8 to Rs. 258 and Phaltans by Rs. 2-8 to Rs. 93. B.I.Cs had a rise of As. 7 to Rs. 9-2. On sustained enquiries from Calcutta, B.B. Petrols put on As. 3½ to Rs. 3-3½. Indian Coppers were better by As. 1½ at Rs. 3-1. National Rayons revived from Rs. 151-8 to Rs. 157. Polsons, which were recently promoted to the forward list, had a gain of Rs. 5 at Rs. 127-8. Premier Constructions were up by only As. 12 at Rs. 115-12, on reports that the dividend might not come up to market expectations. Scindias came in for enquiries and put on As. 10½ to Rs. 17-12½. Shivrajpurs rose by Re. 1 to Rs. 72-8. Tata Chemicals were up by As. 10 to Rs. 13-9½ and Tata Oils by Re. 1-4 to Rs. 37-8. On good working results, Walchandnagars gained Rs. 2-8 to Rs. 170. Wimcos were better by Re. 1-14 at Rs. 209-6.

Calcutta Stock Exchange

CALCUTTA, 17*th March*

A slightly improved trend was in evidence on the Calcutta Stock Exchange during the week under review, although operators continued to be cautious and the volume of transactions remained restricted. Weak holders preferred to take profits, leaving the market open to operators interested in long-term commitments. For the latter type of investors, present prices are considered more than attractive, as it is felt that, as the prospects for increased industrial and trading activities are likely to be good this year, share prices are bound to rise.

Jutes were dealt in at lower levels and such a trend was not a surprise, in view of the lower prices for jute goods. Here again, benefit can be derived by the long-term investor, as working results of mills are better this year than last in view of the increase in exports. Although there is the fear of competition from Continental mills, the immediate future of Indian jute goods is by no means bleak as orders from Argentina and the United States are expected soon. Teas were again in the limelight this week, as due notice was taken of the increasing demand for Indian tea from foreign countries, especially, the United Kingdom and the United States. Prices would have improved further, had it not been for the decision of the Government of India to implement the Plantations Labour Act 1951 from 1st April which, to quote the chairman of the Indian Tea Association at the annual meeting last Friday, does not give the industry breathing space to recover from the recent crisis.

In the Engineering section, Indian Irons were caught up in easiness. Last Thursday the rate touched as low as Rs. 28-1, and since then moved at about Rs. 28-8 for most part of the week. Jessops were quiet at Rs. 27 and Texmacos were put through at Rs. 10-9. Braithewaites at Rs. 14-7 lost one point, while Kumardhubis were fractionally lower at Rs. 9-2. Indian Standard Wagons changed hands at Rs. 63-8 as against Rs. 66 previously, and Burns at Rs. 170 as against Rs. 174.

The feature in the Jute section was that, although prices moved following offers, there were anxious investors to buy good counters coming at lower levels. Indias were done at Rs. 129, while Fort Glosters at Rs. 504 added four more points. Orients were taken at Rs. 154, Howrahs being priced between Rs. 24-1 and Rs. 24-8. After declining to Rs. 143, Baranagores recovered to and maintained Rs. 145. Similarly, Anglo-Indias were passed over to Rs. 194 from Rs. 187.

Among Teas, Patrakolas were maintained at Rs. 180, while New Dooars impressed the market with a spurt to Rs. 426 from Rs. 415. Oodlabaris were supported at Rs. 26-8, Tezpores at Rs. 20-10, and Sonai Rivers at Rs. 8-2. Hasimaras were fractionally lower at Rs. 34, as were Ethelbaris at Rs. 7-15. At Rs. 14-2 Dhelakhats put up As. 9. Hoograjulis met with business at Rs. 33-10.

Again this week only sparse interest was shown in the Coal section. At Rs. 8-10, Burrakurs did not show any change, and East Indians were maintained at Rs. 26-4. Khatras Jherriahs were raised fractionally to Rs. 43-10 in transactions of small lots, while Central Indias gave way to Rs. 6-2 from Rs. 6-6. New Beerbhooms were crossed at Rs. 17-6.

One of the features in the Miscellaneous section was Rohtas Industries which, on interested buying, were raised to Rs. 14-8 from Rs. 13-4. Jardine Hendersons after declining to Rs. 115 recovered to the earlier rate of Rs. 117, while Martin Burns were unchanged at Rs. 21-2. Indian Cables were crossed at Rs. 19-14 and today came to business at Rs. 20-1. F. & C. Oslers were lower at Rs. 12-6. Rallis were hammered down to Rs. 56 from Rs. 58-4, and buyers for Birds Investments paid Rs. 15-6. B.I. Corporations were steady at Rs. 8-10 as were India Steamships at Rs. 8-6. Titaghur Papers were easy at Rs. 37-3, but rumours of Government efforts towards settlement of the strike were noted. British Burma Petrols were in demand at Rs. 3-6.

Madras Stock Exchange

MADRAS, 16th *March*

The Madras Stock Exchange presented a generally mixed trend this week. The textile section came in for selective enquiry on continued encouraging export demand for cloth. The higher dividend announcements by Buckinghams and Bangalore Woollens were also a contributory factor. Among plantings, teas met with scattered enquiry, while rubbers were steady. Coffee scrips were somewhat in demand. Miscellaneous scrips were mostly uninteresting. Except in a few selective shares, fluctuations in the rest were generally limited to a narrow range. The list, on balance, showed a sprinkling of gains and losses in equity values. The undertone remained steady.

A notable development in the textile section was the declaration by the Buckinghams of a final making a total of 10 per cent. on ordinary shares thereby 31st December, 1953, as against 4 per cent. in the against 15 per cent. in the previous year. It is also proposed to capitalise a sum of Rs. 81 lakhs out of reserves for the issue of two bonus ordinary shares for each ordinary share held, subject to the approval of the Government of India. Consequently, the scrip shot up from Rs. 345 *ex-div.* to Rs. 435 *cum-div.* The Directors of Loyals have failed to declare any dividend for the year ended 30th June, 1953, as against a 4 per cent. in the previous year. The scrip was, however, quiet at Rs. 19. But Lakshmis Rs. 50 paid up and Rs. 25 paid up 'A' gained Rs. 2 each to Rs. 108 and Rs. 54, respectively. Metturs were higher by Re. 1 at Rs. 229. Vasantas put on Rs. 4 to Rs. 196. Radhakrishnas Rs. 100 paid-up, however, lost Rs. 3 to Rs. 163.

Except for a few scrips which came in for considerable enquiry, the rest among teas were generally dull. The most important among them was Peermades which improved from Rs. 31-8 ex-div. to Rs. 34 *cum-div.*, on the declaration of a final dividend of 27½ per cent, thereby making a total of 37½ per cent, for the year ended 31st December, 1953, as against 25 per cent. in the previous year. Kilgiri Kotgiris (tea and coffee) gained As. 5 to Rs. 7-2. The Directors of the Company have applied to the Controller of Capital Issues for permission to issue bonus shares in the proportion of one share for every two shares held, by capitalising a sum of Rs. 2½ lakhs out of reserves. Devasholas and Parksides, however, lost As. 4 each to Rs. 21 and Rs. 16-4, respectively. Twyfords were also lower by a similar amount at Rs. 15-4. Nilgiri Tea and Highland Produce were down by As. 2 each at Rs. 13 and Rs. 12-8, respectively.

Rubbers were generally steady. Anandams rallied As. 6 to Rs. 9-6 and Thamarapallys As. 8 to Rs. 16-12 and Mercaras by As. 3 to Rs. 3-15. Cochin Malabars were higher by As. 2½ at Rs. 6-9½. Teekoys, however, lost As. 2 to Rs. 7 and Thirumbadis an anna and a half to Rs. 3-1½. Pullangodes and Rajagiris were fractionally lower at Rs. 3-0½ and Rs. 11-3, respectively.

Among coffees, Cons. Coffees gained As. 3 to Rs. 16-2 and Mysore Coffee an anna to As. 13. Coffee Lands, however, lost an anna to Rs. 8-9. Savamalais were done quiet at Rs. 23-14 *cum-div.* The Directors have declared a final dividend of 20 per cent. making a total of 30 per cent. on the ordinary shares for the year ended 30th November, 1953, as against 35 per cent. in the previous year.

In the miscellaneous section, Rallis lost Rs. 2-8 to Rs. 57-8 and Spencer As. 4 to Rs. 16-4. Mysore Tobaccos were down by As. 3 at Rs. 10-13 and Mysore Chemicals and Fertilisers by As. 2 at Rs. 9-12. Indian Steel Rolling Mills eased from Rs. 12-10 to Rs. 12-6. Binnys, however, gained Rs. 2 to Rs. 124 *cum-div.* India Cements (ordinary) were higher by As. 2 at Rs. 18-8 and Mysore Chromes As. 5 at Rs. 7-1.

NEWS IN BRIEF

ITALIAN Airlines propose to link Italy with India by regular air service from the middle of this year.

On a request from the Hyderabad State Bank, the Reserve Bank of India has granted a licence to the former to deal in foreign exchange.

The Delhi State Government has decided to set up a financial corporation. A scheme has been drawn up and submitted to the Government of India for approval.

The Council of States passed on 9th March the Bill to amend the Factories Act, the State Acquisition of Lands for Union Purposes (Validation) Bill, 1954, and the Barsi Light Railway (Transferred Liabilities) Bill, 1954.

The Government of India has decided to suspend the operations of Section 12 of the Coir Industry Act, 1953, pending the setting up of Coir Board. Section 12 lays down that no coir and coir products may be exported except under a licence issued by the Coir Board which is to be constituted under the Act.

The inaugural ceremony of the new Tea Board in Calcutta will be performed by Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, on 3rd April. The personnel of the Board will be announced shortly. The Tea Act, which was passed in Parliament in May last, is expected to come into operation by 1st April, 1954.

Consequent on the decision of the Government of India to levy excise duty on cement, the Government of Bombay has directed that an additional charge of Rs. 5 per ton of cement is chargeable, on supplies made after 28th February, 1954, by dealers in cement in Bombay State as excise duty on all supplies of cement on which excise duty is recovered or is recoverable from them by producers.

The Federation of Indian Chambers of Commerce and Industries, in its evidence before the Stores Purchase Committee, has suggested, among others, that advisory panels of industrialists should be set up to assist the Government of India in the purchase of large-scale demands of the Ministries of Railways and Defence, as well as the river valley and industrial projects.

Tatas have entered into an agreement with Daimler-Benz Company of the U.K. for the manufacture of trucks in India. The agreement which is subject to the approval of the Government of India, is for a period of 15 years. Under the agreement, the German firm will contribute 30 per cent. of the capital outlay and will also provide technical assistance. The agreement, it is stated, also provides for a technical tie-up for the production of other automotives in India.

The Railway Board has sanctioned the construction of a metre gauge line from Khandwa to Hingoli *via* Akila, a length of approximately 187 miles, on the Central Railway. The Khandwa-Hingoli line is estimated to cost Rs. 8,90,00,000. The new line will provide a connecting link between the northern and southern metre gauge systems. By providing an alternative route, it is expected to afford relief to the surrounding broad gauge main line routes, which are at present hard pressed for line capacity.

A 15-day seminar on *Organisation and Administration of Public Enterprises in the Industrial Field*, jointly sponsored by the Government of Burma, the Economic Commission for Asia and the Far East, the United Nations Technical Assistance Administration and the International Institute of Administrative Science, is being held in Rangoon since 15th March. The Indian Delegation to the Seminar consists of Mr. K. K. Chettur, Indian Ambassador to Burma, Leader, and Mr. S. K. Guha, I.A.S., Under Secretary, Ministry of Production, Alternate.

According to the returns received by the Department of Commercial Intelligence and Statistics, the total gross sea and land customs revenue collected in India during the month of December, 1953, amounted to Rs. 1,416 lakhs, as compared with Rs. 1,478 lakhs in the corresponding month of the previous year. The total gross collection of Union excise duties amounted to Rs. 829 lakhs, as against Rs. 698 lakhs. During the nine months, April to December, 1953, the grand total of gross customs and Union excise revenue realised was Rs. 1,88.88 lakhs as compared with Rs. 1,99.05 lakhs during the corresponding period of the preceding year.

The Government of India has under consideration a proposal to send a trade delegation to the Middle East countries including the Arab States to explore the possibilities of expanding India's export trade. There is no intention at present to negotiate or conclude trade agreements with any particular Arab State. India has, however, already entered into trade agreements with Egypt and Iraq. A treaty of friendship and commerce with Syria also exists. It has diplomatic relations with Egypt, Iraq, Syria, Jordan, Lebanon and Libya. It has also a Consulate-General, in Saudi Arabia, which is proposed to be raised to a Legation shortly. Treaties of friendship have been concluded with Iraq and Syria.

The second session of Industrial Committee on Cement will be held at Hyderabad on 24th and 25th March, under the Chairmanship of Mr. Abid Ali, Deputy Labour Minister, Government of India. The Committee will review the action taken on the suggestions made at its first session. It will examine the problems of standardisation of wages, the conditions of work in the cement industry and the abolition of contract labour. The question of having a tripartite agreement in the cement industry on the standards, in compliance with the provisions of the Factories' Act, 1948, will also be considered. The Industrial Committee, which is a tripartite body, consists of 24 members, twelve representatives of the Central and State Governments and six each of employers and workers.

The Government of Bombay has, in consultation with the Government of India, decided to remove the movement restrictions, as well as all other controls, on rice outside the eleven rationed cities of Bombay State, namely, Bombay, Ahmedabad, Poona, Sholapur, Baroda, Surat, Nasik, Ahmednagar, Kolhapur, Belgaum and Hubli, with effect from tomorrow the 21st March, 1954. In these eleven cities, rice will continue for the present to be under statutory rationing. The present restrictions on movement will also remain. It is, however, proposed, with effect from 21st March, 1954, to allow the ration card and permit holders in these cities to purchase their full quantum of ration of 40 *chhataks* in rice. Further steps towards relaxation of controls in these cities will be considered after renewing the stock position of rice with the Government and the arrival of Burma rice.

The Government of India has decided, in consultation with the Capital Issues Advisory Committee, to levy a fee of Rs. 50 with effect from 1st April, 1954, on all applications for (i) the consent of the Central Government to the issue of capital under the provisions of the Act; (ii) any alteration in the terms and conditions of a consent previously given by the Central Government or any extension of the period of validity for which such consent was given; (iii) the regularisation of the issue of any capital made without the prior consent of the Central Government; and (iv) the consent of the Central Government under the Act in respect of any matter not specifically mentioned in the foregoing. This decision is in accordance with the amendment to section 12 of the Capital Issues (Continuance of Control) Act, 1947, made by Parliament in February, 1952, while extending the duration of the Act upto the end of March, 1956, authorising "the levy of fees on applications made to the Central Government for its consent."

From Abroad

The Paris International Trade Fair will be held from 22nd May to 7th June.

The United States, according to Mr. Ezra Benson, Secretary of Agriculture, will not sell its surplus cotton below world prices.

The United States has agreed to buy 18,000 to 20,000 tons of tin from Indonesia in the next 12 months. The price would be based upon New York market averages.

Plans proposed for the expansion of Malayan industries provide for an expenditure of $6 million (£700,000) this year and over $10.75 million (£1.25 million) next year.

The Steyr-Daimler-Puch company of Austria has reduced its car prices by 5 to 20 per cent. This closely follows 6 per cent. reduction in prices announced by Volkswagen recently.

Research in insect control in the last 100 years has doubled livestock production and the annual yield of land. Despite this advancement, insects still cost the United States alone $4,000 million a year and make useless millions of valuable acres of land.

The Central Bank of Argentina has announced the extension from 30th April to 30th December, 1954, of the period within which holders of funds constituted by accumulated but unremitted earnings from earlier foreign investments in Argentina may opt for their reinvestment under the provisions of the new Foreign capital Investment Law.

The United States Steel Export Company has reduced export prices of eleven steel products including bars, sheets, wires, nails and staples. The reduction ranges from $1 to $10 per ton. These cuts are aimed at making the U.S. steel prices more competitive with foreign steel in export markets.

Egypt, Russia and Rumania have entered into a £3,090,000 cotton-for-petroleum barter agreement. Russia and Rumania will supply Egypt with 350,000 tons of petroleum products at prices which are 16 per cent. below those in the world market. They will use the proceeds to buy Egyptian cotton in the free market.

Five species of wasps that act as parasites upon the pink bollworm (Pectinophora gossypiella), considered one of the most destructive cotton pests, which were introduced into the United States from India some time back, are now being used in conjunction with other methods, to control that insect on U.S. cotton.

World production of leaf tobacco in 1953 is estimated by the U.S. Department of Agriculture at 7,324 million pounds. This is slightly above the quantity harvested in 1952, despite the large decline in U.S. production from 2,255 million pounds to 2,046 million pounds. The total production in Asia in 1953 is estimated at 2,923 million pounds, about 4 per cent. above that in 1952.

France's second Five-year Plan (1954-59), which aims at an overall increase of 25 per cent. in the production of industrial and agricultural products, provides for a total investment of about Frs. 7,250,000 million (£7,394 million). The second Five-year Plan envisages greater efforts in manufacturing, housing and agricultural sectors, whereas the first Five-year Plan was primarily concerned with the development of basic industries.

PERSONAL

MR. Pattom Thanu Pillai, Praja Socialist Party, has been sworn-in as the Chief Minister of Travancore-Cochin State.

Mr. K. D. Jalan has been re-elected Vice-President of the Indian Central Jute Committee for 1954-55.

Dr. A. Ramaswamy Mudaliar left Bombay on Tuesday last for Geneva en route to New York to attend the meeting of the International Civil Services Board.

Mr. P. S. Rau, formerly Adviser to P.E.P.S.U., is likely to be appointed Chairman of the Damodar Valley Corporation.

Dr. El Sayed Abdel Moneim el Tanamli of Egypt has been unanimously elected as Chairman of the U.S. Technical Assistance Committee.

Mr. H. R. Bhatheja, Principal of Patna College, has been appointed by the Government of India as a member of the All-India Industrial (Colliery Disputes) Tribunal.

Mr. H. J. Saunders and Mr. R. H. Pitman have been elected Master and Deputy Master, respectively, of the Bombay Presidency Trades Association for the current year.

Dr. S. Radhakrishnan, India's Vice-President, is expected to pay a goodwill visit shortly to Brazil, Mexico, Chile, Argentina and other Latin-American countries, this autumn.

Mr. T. Prakasam, Chief Minister of Andhra and Mr. K. Koti Reddi, Revenue Minister are likely to fly to Japan in April next on a study tour of economic development of that country relating to land reforms and cottage industries in particular.

Dr. B. Natarajan, former Economic Adviser to the Government of Madras, has been appointed Development Commissioner and Economic Adviser to the Andhra State. He will also perform such duties as might be entrusted to him from time to time.

OBITUARY

We regret to record the death of Mr. M. Ct. M. Chidambaram Chettyar, a prominent business man of Madras, in an air accident at Singapore on 13th March, 1954. He was the Chairman of the Indian Overseas Bank Ltd., the United India Life Assurance Co., Ltd., United India Fire and General Insurance Co., Ltd., and the Travancore Rayons Ltd., besides being a Director of several industrial concerns.

"COMMERCE" 1929

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

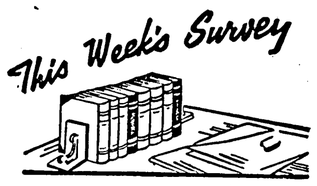
CALCUTTA, 23rd *March*

Competition in Textile Trades

A year or two ago, the Bombay Millowners' Association passed resolutions denouncing Japan for all manner of unfair trade practices. The picture revealed by this campaign was remarkable. India is one of the great cotton producing countries of the world, with a protected home market of 350,000,000 consumers capable of absorbing all the yarns and the textiles, its numerous mills and handloom industries can turn out. The Japanese, in their quest for raw materials, purchased one-third of the cotton crop of India, carried it to Japan where they spun it into yarns or wove it into cloth, shipped the finest product back to India, paid the 11 per cent. import duty, excise taxes and other dues levied for the protection of the home industry, and undersold the Bombay mills in their own territory. In addition, the Japanese invaded and exploited our nearby and profitable export markets in Africa and the Near East. The Indian millowners had a plausible grievance. Although Japan had accepted the convention adopted by the International Labour Conference at Washington in 1919, regarding hours of work, she had failed to ratify it or put it into operation. The Japanese were working their cotton mills twenty-two hours out of the twenty-four in day and night shifts. Eighty per cent. of the millworkers in Japan are female, and the Japanese male considers that spinning and weaving is essentially a feminine task and beneath his dignity. The textile industries of Japan are, therefore, entirely dependent upon female labour for their successful operation.

A Shell Refinery with a rated capacity of 1.75 million tons was opened at Geelong, Australia, on 18th March by Field Marshall Sir William Slim, Governor General of Australia. The refinery is designed to be one of the largest and most modern oil refineries in the Commonwealth. Petrol and Diesel Oil for Melbourne, 36 miles away, will flow *via* an 8-inch oil pipeline, the longest yet to be laid in Australia. This will be capable of delivering 28,500 gallons of petrol an hour.

The U.S. Agriculture Department has forecast the world's largest rice crop in history during the year 1953-54. According to it, the production of rough rice will be 263.896 million 800,000 lbs. This is higher by 9,317 million tons over the previous record breaking crop of 254,579 million lbs. in 1952-53. This estimate does not, however, include the production of China, North Korea and the Soviet Union. The rice harvest of Asia (excluding China, North Korea and the Soviet Union) this year, it is stated, will represent 89 per cent. of the total world output.



NEW TEA BOARD TO BE INAUGURATED SHORTLY

BY the time these lines appear in print, the Ministry of Commerce and Industry will have announced the establishment of the new Tea Board in Calcutta and the personnel of that Board. It is announced that the Minister for Commerce and Industry, Mr. T. T. Krishnamachari, will inaugurate the Board on 3rd April, 1954.

The Tea Rules drawn up under the Tea Act of 1953 were published for general information on 7th January, 1954 and it is thought that these have been approved in subsantially the same form as in the draft. Some of the provisions in the draft rules are worthy of note. The Board is to consist of 38 members, of whom one each will represent the Governments of Assam, West Bengal, Tripura, Madras, Punjab and Travancore-Cochin, two will represent Parliament, 12 will represent owners of tea estates and growers of tea, six will represent employees on tea estates, three will represent dealers, two manufacturers who pack in containers of up to 12 lbs., three consumers and four other interests. The nature of the "other interests" is not indicated. It is provided that the Central Government may make such consultations as may be necessary before appointing members of the Board. This is presumably in accordance with the Minister's statement in Parliament that the various growers' associations and other interests will be consulted before their representatives are appointed. It is learned that the Government has, in fact, asked the Associations to submit panels of names of suitable representatives for Government's consideration. The manner of choosing "consumer representatives" is, however, not known. Incidentally, it is provided in draft Rule 5 that a member of the Board shall hold office for three years. The draft rules also make provision for one other promise made by Government in the House of the People, namely, that the Vice-Chairman of the Board shall be elected from among the members of the Board itself.

There are to be three principal Standing Committees of the Board, namely, the Executive Committee, two Licensing Committees, one each for North and South India, and one Propaganda Committee. It is learned that representations have been made by some interests that there should be two Propaganda Committees, one each for North and South India.

Since the Tea Act of 1953 incorporates the provisions of the Indian Tea Control Act, 1938 (which stands repealed), the draft Tea Rules include various provisions connected with the control over new plantings, exports, etc., hitherto included in the Tea Control Act. It is provided in Rule 22 that any tea estate shall, on application to the Board, have the right to receive an export quota. There is, however, a proviso to the effect that, if any tea estate ceases production for three or more seasons since the commencement of the Act, it cannot subsequently get an export quota, unless it has resumed production. The general feeling in the industry appears to be that such a provision is very necessary in order that estates not in production shall not be given any export quota.

An important rule is Rule 24 which prescribes the new method of calculation of crop basis of an estate. According to this rule, the crop basis of an estate for any financial year shall be the best crop in any of the four calendar years previous to the preceding financial year. This method is more rational than the present one whereby the crop basis is calculated on the quantity of crops harvested many years ago. The manner of calculation of export quota, that is, the total quantity of tea which may be exported by a tea estate, however, remains as before.

Under Rule 27, the Board is given powers to appoint Inspectors or Assessors for the purpose of assisting in the determination of the crop basis and in the discharge of its other duties. Some bodies have represented that provision should be made specifically for the appointment of checking unlawful extensions of tea areas, adulteration of tea and such other malpractices.

The fee leviable by the Board for every export licence or permit has been fixed in Rule 28 at Re. 1 for thousand pounds or part thereof.

Provision has been made to restrict expansion of cultivation in the case of large estates. Under Rule 30, permission for extension shall not be granted to any estate if the area planted with tea in that estate exceeds 500 acres, without the previous sanction of the Central Government. The necessity for such a definite restriction is not understood, especially in the light of the fact that, under present day conditions, it is only the larger estates that seem to have the necessary resources and equipment to undertake any extension.

In respect of financial powers, it is seen that, under Rule 35(4), the Board is not permitted to incur any expenditure outside India in excess of Rs. 20,000 on any one item without the previous sanction of the Central Government. The Board may, with the previous sanction of the Central Government, borrow on the security of the Tea Fund or any other of its assets for meeting its expenses.

During the debate on the Tea Bill in Parliament, some criticism was made of the Government's proposal that the proceeds of the cess on tea exports should be credited to the Consolidated Fund of India in the first instance, and that the Government may, thereafter, pay to the Board from out of such proceeds such sums of money as it may think fit. This proposal has, in fact, been given effect to in the Act itself. The rules, however, now provide that an amount equivalent to the proceeds shall be credited to a Fund, named, the "Tea Improvement Fund" and that the licence fees levied by the Board shall also be credited to this Fund. It is thus clear that the entire proceeds of the cess on exports and the licence fee are to be earmarked for the benefit of the tea industry, though they are credited to the Consolidated Fund of India in the first instance.

It will be interesting to note that it is provided in Rule 39 that the Board shall not send any officer of the Board or any member of the Board to places outside India without the previous sanction of the Central Government.

INDUSTRIAL RESEARCH

The two-day session of the Council of Scientific and Industrial Research, which concluded on the 11th inst. at New Delhi, under the presidentship of Mr. Jawaharlal Nehru, Prime Minister, adopted a few important proposals. The most important among them was that an organisation should be set up to design and construct pilot plants to the specifications of the national and other laboratories and of the National Research Development Corporation. A number of research schemes in progress at the various national laboratories and other centres have already reached or will shortly reach a stage where they will have to be developed further on a pilot plant scale to determine and establish conditions for efficient and economic operation of the processes, before they are offered for commercial exploitation. Besides, design and construction of pilot plants and prototypes require considerable knowledge of engineering and production methods. In America and other industrialised countries, there are consultant and specialised engineering firms which design and build pilot plants. Such facilities do not exist in this country now. In order to meet this important need, it is necessary to establish an organisation to serve the needs of national laboratories and other research bodies.

Another important proposal accepted by the Council is to set up a pilot plant for the production of iron without the use of coking coal. The Council recommended to the Planning Commission to provide Rs. 15 lakhs in the Five-year Plan for undertaking this project. This proposal is of considerable interest to India, because it is held that coking coal deposits in this country will be exhausted before the reserves of iron ore are fully exploited. A number of experiments in this regard has already been conducted in Japan and they can be studied with profit. The importance of the use of coking coal to Asia and the Far East in general is greater, for the known reserves of coking coal are extremely limited.

The Council proposed to set up a section in the National Metallurgical Laboratory and in the proposed Government steel plant for production of special alloys and pure metals required for research and developmental purposes in this country. This need arises from the fact that these alloys and pure metals are to be imported at present and the inordinate delay that sometimes occurs in importing them has been causing difficulty to scientists and engineers.

Among other proposals, mention must be made of the Council's decision to set up a plant for the manufacture of synthetic anti-malarials of the 8-amino-quionoline group, namely, chemaquin, chloroquin, etc., and the necessary intermediate chemicals. The Council also suggested that facilities should be provided at the penicillin factory, D.D.T. factory and at the Central Drug Research Institute, Lucknow, for experimental work on pilot plant scale, with a view to establishing the manufacture of the various essential drugs in the country. Finally, it sanctioned, on the recommendation of its Advisory Board, a number of new research projects to be undertaken in various research laboratories in the country.

POOLING OF BONUSES

The Employers' Federation of India has, in a memorandum to the Government of Bombay, strongly criticised the Bill to amend the Bombay Industrial Relations Act 1946, regardless of the wishes of the Labour Advisory Board. It has characterised the Bill's provisions authorising the Industrial Court to frame a scheme for pooling of bonuses and for distribution thereof among all the workers of the industry concerned in a local area as being "unfair and illegal," inasmuch as they encroach on the rights of the companies distributing bonus. It has held that, so long as bonus is considered a deferred wage, it would be wrong in principle to pay it to workers in units where there are no profits from the money snatched from prosperous units. Further, the pooling of bonus would, in effect, mean that the efficient and prosperous units in an industry will be called upon to subsidise the weaker and inefficient units in the same industry. In other words, the workers in prosperous concerns will have to sacrifice their legitimate share of bonus.

The Federation has also taken strong objection to the proposal which seeks to bind employees of the industry concerned in a particular area to the registered agreement, settlement, submission or award to which a "representative union" is a party. It has pointed out how unrepresentative a "representative union" can be by citing the instance of the recent experience in the textile industry in which the workers took the allotted bonus, despite the propaganda carried on against such acceptance by the "representative union." It even visualises the possibility of a "representative union" not having even a single member in certain units of an industry and yet claiming the status of a representative union in that industry. The Federation has, therefore, rightly urged that the Government should not proceed with the draft Bill. The Bill will, as the Federation points out, "do considerable harm to the maintenance of good industrial relations in the State."

TEXTILE INDUSTRY

Problems confronting the Indian cotton mill industry figured prominently in the addresses of both Mr. E. L. C. Gwilt and Mr. R. L. Coghlan, the outgoing and the incoming Presidents, respectively, of the Bombay Chamber of Commerce at the Chamber's annual general meeting held at Bombay on Wednesday last. This is not surprising, considering the critical times through which this premier Indian industry has been passing. The industry today suffers from a rigid cost structure, thanks to the weight of excessive tax burdens and other restrictions imposed by the powers-that-be, on the one hand, and high labour costs and low productivity, on the other. That there is no exaggeration whatever in this view is forcibly brought out by the following remarks of Mr. Gwilt:

"The industry continues to press for the removal of the ban on imports of ring frames and automatic looms, which is severely hampering the rehabilitation of mills. The industry, too, is suffering from an over-rigid cost structure, and the attitude of both Government and labour towards rationalisation is likely, in the long run, to have unfortunate repercussions, as the industry will find itself priced out of the export markets and faced with diminishing domestic sales, because of its high wage costs."

Viewed thus, the additional burden of Rs. 3 to Rs. 3.5 crores lately imposed by the Central Government by way of enhancement of excise duties is regrettable. When the consumer is coming into his own, the mill industry will surely find it difficult to pass on the entire incidence to the consumer; it has to bear the major pact of the incidence itself. As Mr. Coghlan rightly stated, in the present buyers' market, there is not much doubt that most, if not all, of the added burden will have to be borne by the mills, only the balance, if any, falling on the Indian consumer.

The prospects for exports of mill-made piecegoods are not very bright, what with the growing competition in world markets, especially from Japan. Alluding to this, Mr. Coghlan made a few pertinent observations. He said that low productivity of Indian textile operative, combined with the Government's ban on installation of modern, up-to-date machinery, such as automatic looms, which improve the efficiency by reducing labour costs, would make it "impossible" for India to compete in world markets to any extent, unless it had (as it has now) an advantage in the cost of raw material. He further pointed out that India could not at all compete with its leading foreign rivals in regard to cloth manufactured from imported cotton, since the latter did not enjoy any price advantage.

Mr. Coghlan singled out for special comment the abolition of import duty on cotton. In his opinion, the result of this measure was that a further burden had been imposed on the already overburdened composite mills, while those which only spin and the handloom industry would benefit. To quote him:

"This no doubt was the Finance Minister's intention, and it is depressing evidence that the industry's representations to Government have carried no weight at all, backed up though they were by proof that many mills are now working at a loss, and that even the most prosperous are unable to set aside adequate provision for the replacement of plant. One feels that the official attitude towards the industry is that the old cow may be losing condition, but she still gives milk; and as long as she gives milk, she will be milked to capacity regardless of the effect on her constitution."

The Government, Mr. Coghlan urged, should remove restrictions on installation of machinery and production of different varieties of cloth. Some of the latter restrictions, he said, had nothing to do with the protection of the handloom industry and were introduced originally for the sake of administrative convenience in connection with price control. Now that the latter had been abolished, they no longer served any real purpose. These observations of Mr. Coghlan are in line with what we have been urging ere now. After all, it must be remembered that, in the present context of the buyers' market for textiles the world over, there is imperative need for according full flexibility of production to the mills. In other words, the mills should be made to manufacture not what the Government wants but what the consumer wants. It is unfortunate that the Government should have overlooked this simple concept of consumer's sovereignty.

MYSORE BUDGET

The financial position of the Government of Mysore, like that of the Governments of most other States, has been none too comfortable. A clear testimony to this is borne by the budget for the year 1954-55, which Mr. K. Hanumanthaiya, Chief Minister of Mysore, presented to the State Legislative Assembly the other day. The budget discloses a sizable revenue deficit of as much as Rs. 3.09 crores, which is Rs. 71 lakhs more than the deficit of Rs. 2.38 crores (revised) for the current year. It is no doubt true that the merger of the Bellary District has added to the liabilities of the Mysore State. But the deficit on account of this merger is estimated at not more than Rs. 40 lakhs. Again, the revenue receipts also are expected to be substantially higher at Rs. 21.21 crores, as against Rs. 19.66 crores (revised) for 1952-54. What then is the cause for the sizable deficit? It is the marked rise in expenditure, the estimate for the coming year being placed higher at Rs. 24.30 crores, as against Rs. 22.04 crores (revised) for the current year.

In view of the rising trend in expenditure and the depletion in the cash balances, one wonders if the Government of Mysore could not have revoked prohibition which has denied to the Exchequer considerable revenue. Instead of doing so, it is regrettable that the Mysore Chief Minister should have thought of extending prohibition, now in force in six districts and two taluks, to a few more taluks. Surely, none is so blind as he who refuses to see.

Be that as it may, the Mysore Chief Minister proposes to cover the revenue deficit of Rs. 3.09 crores partly by fresh taxes (Rs. 1 crore) and partly by covering expenditure on Food Department by receipts in the capital account (Rs. 24 lakhs). The balance of Rs. 1.85 crores in the deficit is to be met out of loans for specific schemes to the extent of Rs. 40 lakhs and the rest from the opening cash balance. The new tax proposals contemplated in the budget are as follows:

(1) Levy of surcharge on land revenue at the rate of 12½ per cent. of the dry assessment, 50 per cent. of the wet assessment and 66⅔ per cent. on *bagayet* assessment;

(2) enhancement of the assessment on coffee and other plantation lands to Rs. 10 per acre;

(3) enhancement of water rate levied under the Mysore Irrigation Act by 50 per cent.;

(4) increase in the rate of surcharge on electricity from 10 to 20 per cent.;

(5) enhancement of the rate for supply of power to irrigation pumps to nine pies in the case of food crops and to one and half annas in the case of non-food crops;

(6) rise in the stamp and registration fees to the level of the rates in Madras;

(7) levy of sales tax in the case of hotels at 10 per cent. on a turnover of and above Rs. 7,500; and

(8) levy of sales tax on mill and power-loom cloth, other than coarse cloth, at As. 2 per rupee at a single point.

Considering the tight financial jacket of the Mysore Government, the foregoing tax measures should certainly offer fruitful sources of revenue. It is not that the Chief Minister has not realised that, as it is, the tax burdens on the community are heavy. But it only indicates the utter helplessness of the Minister who is compelled to raise resources by other methods in order to push through the development schemes. He said: "I am fully conscious of the additional burden which these measures of new taxation will throw upon the people of the State. My sole justification for asking our people to accept it, and to accept it willingly, lies in the imperative need to go forward with the plans of the State's future development with undiminished vigour and in a spirit of determination not to stop at any cost until we reach the objects we have set out for ourselves."

(*Continued on page 547*)

OFF THE RECORD

(By "ROVER")

I DO not disclaim my fair share of human vanity. But I am not vain enough to claim all the credit for the more or less harmless way in which a great storm, which emerged suddenly from a clear blue sky in the sugar trade of Bombay about the end of last month, appears to have spent its force and then subsided. It should not be difficult to recall that, owing to certain difficulties experienced by the Ministry of Food and Agriculture about the distribution of imported sugar at the port of Bombay, when the first consignment of sugar from Czechoslovakia was diverted to Bombay from Madras, the authorities, possibly in sheer exasperation, unearthed the idea, which had died an unmourned death and had been buried deep, of entrusting this highly lucrative work to a trade body in the State's capital as they had done, perhaps, for some good reasons, at Calcutta.

This would undoubtedly have relieved the Ministry's senior officials in Bombay of a good load of heavy, complicated and thankless work and responsibility. But the Government and the administrative machinery are there to shoulder responsibility, which arises from the need to straighten out and regulate the conflicting and criss-cross entanglements of human relations and not to shift it to other shoulders. But, when the officials were just playing with the idea and idly examining its possibilities, certain elements in the badly organised sugar trade in this great city saw in his temporary difficulty, a great opportunity of regaining their lost power and prestige. They, therefore, put forth certain proposals to the officials in Bombay and New Delhi, forgetting the schism which had invaded the body and laid bare some of its weaknesses and its unrepresentative character. The path of wisdom lay in lying low under such circumstances and to utilise the time profitably in setting one's house in order.

In a sense, this crisis in the trade and the effort of some of its leading personalities to turn it into a source of selfish gains at the cost of consumers, new comers in the trade, small traders in the city and in the mofussil and all those industries which use sugar as raw materials, brought the many running sores and scarcely concealed rivalries in the trade on the surface and opened the eyes of the authorities to the risk involved in seriously considering any proposals emanating from a not fully representative body. The inauguration and registration of a new and rival body to appropriate, and, if necessary, to share in this likely looking loot within a matter of hours and the submitting of more attractive looking proposals as an alternative to those already under consideration, is now an episode of history. The spontaneous agitation in the Press, always vigilant in safeguarding the interests of the citizen at large against entrenched private interests, practically exploded this idea into little splinters, which it would be difficult for any one now to put together.

The Press, however critical it might vex on appropriate occasions, has never grudged the credit wherever and whenever it is deserved and due. It must be admitted that, while the top officials both at the Ministry and in the Regional Food establishment in Bombay did examine for a while the purely theoretical and hypothetical possibility of this idea of relieving themselves of the onerous task of distributing large and recurrent consignments of imported sugar at various ports, they were at no time seriously enamoured of this idea. They soon realised the undesirable implications and the injustice and hardships to many implied in this move. And for once the bureaucracy, whom it is easy to assail because of its vulnerable position, rose not only above all considerations of prestige but above the temptations of taking the line of least resistance.

Mr. Gopalakrishnan, Joint Secretary and Sugar Controller at the Central Secretariat, recently came down personally to Bombay and examined the whole problem with care and thoroughness, with the help of Mr. P. K. Samal, the Regional Director of Food. They gave a patient hearing to all the interests concerned both in Bombay and later at New Delhi. While no decision on this issue has yet been announced, according to knowledgeable circles in the sugar trade, the idea of creating an additional intermediary interest between the importing authorities and the consumers has been given up. What the saner elements in the trade, however, desire is that now this issue has been reopened, the Ministry should take this opportunity of removing some of the glaring anomalies in the arrangements in vogue so far and put them on a more rational basis. This also seems to be the aim of the authorities.

The real remedy for bringing down sugar prices to a realistic level lies, as suggested repeatedly in this journal, in removing the present controls and throwing open the import trade to the cleansing effect of competition, especially now when the import duty on sugar has been suitably increased. The Government should not now aim at making profit from imports over and above the additional income it has secured from this source. Even the one excuse that it had to keep the price of imported sugar above a certain level so as not to injure the industry in the country is now gone. The additional levy by way of enhanced tariff will give this protection. Besides, the price of sugar abroad has risen sufficiently during recent weeks to obviate the need for this consideration. But if the policy of imports only on Government account is to be retained for any reason, some of the legitimate grievances of the trade should receive a sympathetic consideration and removed in the revised scheme which is believed to be almost finalised.

The trade is within its rights in demanding that the policy of granting small quota of imported sugar to anybody who comes forward with his deposit, whether he be from the trade or be an utter stranger to it, should, in any case, be discontinued forthwith. It was this fact which demoralised the whole procedure of distribution and brought about difficulties for the executive machinery. As imports are likely to be of some duration, a small portion may be set aside for genuine new comers in the trade. Similarly, definite shares for allocation from imports should be provided both for up-country traders served by the port of Bombay and for certain industries requiring sugar. And, finally, the lion's share, which will still remain for the city, should not be given to existing traders equally or arbitrarily, but on some fair basis of previous turnover.

In the past, whenever distribution of sugar stocks to trade was undertaken under official supervision, or through a trade agency, as on one or two occasions by the State Civil Supply authorities, it gave rise to genuine dissatisfaction on the part of this interest or that. If the reports which are current are to be credited as authentic, for the first time in the history of this trade in Bombay, the Central Secretariat appears to be keen on devising a system which will be fair to all. All I would say at this stage is "all's well that ends well", provided that it does and well in all reality. In any case, the officialdom deserves all the credit, in this instance, for cutting all entanglements of white tape and readily resiling from an earlier position, which would have meant revival of some of the controls of dread memory in a different garb. Bombay has now made it sufficiently clear to the Food Ministry that it does not want controls over price and distribution, even for the advantage of lower prices, because they can breed nothing but corruption all round in the long run.

And having devoted so much of my meagre allotment of space to a consideration of the problem of distribution of imported sugar, I can do no more than just refer to another storm, which is about to assail Bombay and the sugar industry in the country, built up with great care and sacrifice. This is a proposal for establishing a sugar refinery in Bombay to process imported raw sugar. This step, in my opinion, is a serious one, both for the industry and for our plans for securing self-sufficiency in sugar at the earliest possible date. It is not impossible to implement these plans without in any way affecting an adequate output of *gur*. All that we need do is to pay reasonable attention to the improvement in cane cultivation, for, as Sir Joseph Kay, one of the oldest manufacturers of sugar, once put it epigrammatically, "sugar is made in the fields and not in the factories."

This is the only right and rational line of tackling the problem of sugar. Imports must, therefore, be regarded as a purely temporary phase. Establishing a refinery is like running away with one's tail between one's legs from a difficult situation. The day we succumb to this lure, held out by certain interested parties, which amounts to nothing short of an admission of dispair, we shall toll the knell of self-sufficiency and of cane cultivation on a scientific basis in our country. The authorities had better take sufficient time to examine this question, instead of deciding to scuttle the ship of sugar in a moment of panic. Why not refer this question both to the newly created 21-man advisory body and the statutory Development Council for the Sugar Industry for examination and advice? It shall still be possible to establish a refinery a year hence, if it is ascertained to be advisable to do so. It shall not be easy or possible to scrap one, after it has been established.—*All Rights Reserved.*

STERLING AREA MEMBERSHIP ADVANTAGEOUS TO INDIA

GOVERNMENT REACTION TO CANAL WATER DISPUTE AWARD FAVOURABLE

(From A Special Correspondent)

NEW DELHI, *16th March*

DELHI LETTER

THERE has been a lot of misinformed criticism from time to time even from well read people about India's association with the Commonwealth, the sterling area, the continuance of the Imperial Preference, etc. Some of these questions came up for discussion yesterday in Parliament, particularly, India's link with sterling. One should be grateful for Dr. Lanka Sundaram who initiated a discussion on the Sydney Conference of Commonwealth Finance Ministers, which brought Mr. C. D. Deshmukh, Finance Minister, to give a clear and lucid exposition of the whole problem from a number of angles. Himself a good economist, it is inconceivable how Dr. Lanka Sundaram could make some loose statements on the subject which show a lack of proper appreciation of the implications of the entire question. His idea of a rupee area in the present state of economy of India and South East Asian countries is, to say the least, highly impractical and Mr. Bansal, an M.P. from the Punjab, was right when characterised this idea as "mere moonshine."

The sterling area, in its present form, is a product of the last war and post-war period. The term "sterling area," it will be recalled, came into use in 1940. Since the shortage of dollars had been the main problem in the war and post-war period, the sterling area countries had been pooling their dollar resources, each drawing upon the pool according to need, the circumstance and in conformity with agreements with the U.K. which were fairly flexible. According to the Finance Minister, India's interest in the sterling area has arisen from the following: Over 50 per cent. of its import trade is today with sterling area countries. Again during the last few years, India has been experiencing an adverse balance of payments position with Western European countries and India's membership of the sterling area has been a source of advantage, facilitating the financing of this deficit through the European Payments Union in sterling. India is holding at present about Rs. 745 crores and in consequence, the stability of sterling as an international currency is of paramount interest to this country for many years to come. Banking and financial relations with or through London have been an important part of the mechanism of India's foreign trade. India's membership of the sterling area might thus be said to be a matter of trade and banking convenience rather than of monetary policy. It is a well known that although India has a pooling arrangement in respect of dollars, it has, over the last several years, particularly during the post-war period, been drawing more from the pool than it has been contributing to it. Further, India has also been able to secure dollars whenever it requires this currency for essential development schemes. Membership of the sterling area does not impose any limitations on the country's freedom to pursue its own monetary policy. The accumulation of sterling during the last few months by India has been the result of improvement in the supply position of food and raw cotton. It is expected that during the coming months the Government of India will use increasing quantity of sterling by heavy imports of essential raw materials and machinery to improve industrial production with a view to fighting any possible inflationary spiral consequent on the proposed deficit financing.

According to the Finance Minister, the rate of interest earned by India's sterling balances has of late gone up to a moderate extent, owing to the tight money conditions. India's membership of the sterling area has not been any deterrent in its conclusions of bilateral trade agreements or in developing new alignments in its export and import trade. For example, India's trade with the U.S.A. and Canada before the war was only eight to ten per cent. of the total, while it is now more than 20 per cent., excluding the exceptional circumstances caused on account of the large-scale food and raw cotton imports. The main handicap of sterling at present is lack of free convertibility, but it is of theoretical interest to this country since it has been able to secure dollars whenever it needs them.

The reactions of the Government of India to the proposals of the President of the World Bank regarding the sharing of the Indus basin water resources between India and Pakistan are not altogether unsatisfactory. Whatever be the ultimate solution of the problem, the Government of India now feels that Pakistan will not justifiably carry virulent propaganda abroad that the Indian Union is tampering with the supply of canal water to Pakistan and bringing about the ruination of its crops, commercial and food. Pakistan can have no grievance over the recommendations of the technical experts of the World Bank, for by this award it will still have more than 70 per cent. of the water resources of the Indus basin. The fact is that this award leaves for Pakistan exclusively the entire waters of the three rivers, namely the Indus, the Jhelum and the Chenab which carry substantially larger volume of water than the three rivers that have fallen to the share of India. In other words, India will be left with the other three rivers, namely, the Ravi and the Beas which are smaller rivers, while the quantum of water carried by the Sutlej during the non-season is not large.

At present water is supplied to Pakistan from the Indian side through the Madhopur works on the Ravi and the Ferozhpur embankment on the Sutlej. The Sutlej water is also utilised for purposes of irrigation in the Bahawalpur State. In case Pakistan were to abide by the recommendations of the World Bank, India can utilise fully the waters of the three rivers that have fallen to its share. It is with moderate cost that India could easily divert the waters of the Ravi and the Sutlej. The Harike project that has now been under construction can easily divert the waters of the Beas and the Sutlej to the Indian side while the Ravi also could be diverted towards India. When these are done, it will be possible for India to bring in at least another five to six million acres of land under irrigation. Apart from the Punjab and P.E.P.S.U., it is Rajasthan that will be the biggest beneficiary when the decision of the World Bank takes a practical shape. More lands could be irrigated, particularly, in the Bikaner and Jodhpur divisions of Rajasthan, as also in the northern parts of the former Jaipur State. The present Bhakra Dam is expected to command six million acres although the actual area to be irrigated is estimated at about 3.4 million acres. When all the irrigation projects are fully developed both the Punjab and Rajasthan will become a heavy surplus area not only in food but also in good staple cotton.

The jubilation, not to speak of the personal satisfaction, caused to the present rulers of Pakistan by reason of the proposed military help by the U.S.A. to their country, must have received a setback as a result of the decision of the World Bank. It is likely that Pakistan will be trying to evade as far as possible to implement the recommendations. On its part India should not again adopt a wavering attitude. It should give a clear notice to Pakistan that within another three years' time, it will be gradually reducing the water supply from the Indian side and at the same time plan from now onwards how to increase the irrigated land in the Punjab and Rajasthan through the diversion of the waters of the Sutlej and other rivers.

The protracted negotiations between the two countries through the guidance of the President of the World Bank should have brought home to the intelligentsia in the U.S.A. that it will be extremely difficult for Pakistan to give up advantages in its disputes with India, much less to work in co-operation for the prosperity of both. The payment of compensation to the extent of Rs. 40 to Rs. 60 crores to Pakistan by the Government of India may or may not be fair, but the World Bank Chairman should not, in fairness to India, insist payment in cash since Pakistan has to pay a few thousands of crores of rupees to India, as compensation to the enormous evacuee property by the Indians, not to speak of the public debt which it has to pay to this country.

PREVIEW OF BUDGET

LITTLE SCOPE FOR REDUCTION IN TAXES

(From Our Own Correspondent)

LONDON, *13th March*

LONDON LETTER

THE exercises by the different Departmental Ministers of estimating how much they will want for the coming financial year have now been completed and it is thus possible to build up a picture of the spending side of the United Kingdom budget for the year that will begin on 6th April.

First, however, one must take a look at the way that spending has worked out in the year just closing, which needed a number of supplementary estimates, principally because of the agricultural subsidies requiring more money as world prices had fallen more than had been anticipated. In the end, however, the failure of other Departments, particularly the Defence Ministries, to spend all that had been approved, balanced the excess expenditure and the year is likely to end with a small saving on what the Chancellor had estimated on last Budget Day, i.e., a global figure of £4,500 million.

But, although the Government is committed to a policy of reducing expenditure, particularly by eliminating food subsidies and saving administrative costs, they have found in practice that the task is beyond their powers for two reasons: first, that, as fast as food subsidies have been reduced, they have had to be replaced by rising subsidies to producers; and, secondly, as fast as economies have been made in other directions, the needs of the Defence Departments have more than swallowed up the savings; so that the provisional estimates for the coming year are likely to work out at £60 or £70 million more than in the year just closing.

If one breaks down this overall estimate, one can see how these factors have militated against the Government's aims. Taking the Civil Departments: Food and Agriculture on a conservative estimate may cost some £160 million more in producer subsidies than the estimated cost a year earlier, though if market prices are better maintained there may be some saving on this; other Departments are likely to show in respect of social services and education additional costs of £75 million. The final bill is only £17 million more than a year ago but £235 million more than the original estimates of last year which have had to be so substantially exceeded. The Defence Departments show, at first sight, a saving of some £3 million on a total estimate of nearly £1,640 million, but against this the American Counterpart Aid has been reduced by some £55 million, so that the final cost for the coming year will be some £50 million more than a year ago. The complete account for the British spending budget now looks as follows: The figures below making comparison between this year's spending and that estimated for the coming year:—

(In millions of £)

Expenditure	1953-54	1954-55 (*estimated*)
Civil	2,264	2,281
Revenue collection ...	54	47
Defence *net* ...	1,497	1,554
Consolidated fund* ...	673	673
Total ...	4,488	4,555

* This is mainly interest on the National Debt.

There is only one artificial element in the above figures and that is that some of the civil spending is on food stocks which are likely to be realised as the Government goes out of trading. This may bring in, in the coming year, anything up to £40 million, unless there is a substantial upswing in prices.

So far as revenue is concerned, it is difficult to see much gain except from the natural buoyancy of tax returns under the present-day conditions of reasonable prosperity. The question is whether such an anticipated buoyancy is, in view of the increased expenditure shown above, likely to leave much scope for tax reductions. It is certain in any event that the margin will not be large.— *All Rights Reserved.*

PAKISTAN NOTES

CENTRAL BUDGET FOR 1954-55

TAX RELIEF AMOUNTING TO RS. 2.21 CRORES ANNOUNCED

TWO factors which usually account for the popularity of a budget are absence of a deficit and absence of fresh tax burdens. Looked at from either of these angles, the Government of Pakistan's budget for 1954-55, presented by its Finance Minister, Mr. Mohammed Ali, to the Pakistan Parliament on Monday last, must certainly claim to be a very popular one. Thus, the budget not only does not disclose a deficit but actually reveals a sizable surplus of Rs. 2.31 crores. Again, it does not include any fresh burdens of taxation. On the contrary, it provides for numerous tax relief measures amounting to as much as Rs. 2.21 crores.

The surplus of Rs. 2.31 crores (before taking into account the contemplated tax measures) anticipated for 1954-55 compares favourably with the budget estimate of Rs. 5.74 crores deficit and the revised estimate of Rs. 9 lakhs surplus for the current year (1953-54). This improvement in the budgetary position has been rendered possible despite the rise of Rs. 3.44 crores in expenditure, the estimate for the coming year being Rs. 111.37 crores, as against Rs. 107.83 crores (revised) for the current year. It is due to the appreciable increase of Rs. 5.66 crores in revenue receipts, that is, from Rs. 107.92 crores (revised) to Rs. 113.68 crores (budget). Thanks to such improvement, the Finance Minister of Pakistan has been able to provide a series of tax concessions to trade and industry amounting, as already stated, to Rs. 2.21 crores. After making provision for these, the surplus for 1954-55 is estimated at Rs. 10 lakhs. The tax reliefs include the following:

(1) Reduction of duty on petrol by As. 8 per gallon;

(2) reduction of duty on coconut oil, copra and spices to the extent of 10 to 15 per cent;

(3) abolition of export duty on tea;

(4) a 20 per cent. rebate on component radio parts;

(5) special reduction in telephone and trunk telephone charges and money order fees; and

(6) sales tax relief to small manufacturers.

Defence Expenditure

In the absence of detailed official figures relating to the financial accounts of the Pakistan Government, it is rather difficult to assess the actual amount that the Government will be spending on nation-building and development activities during the coming year. If the defence expenditure were to be taken as any guide, it would be seen that the development expenditure could not be a large figure. The Pakistan Government proposes to spend during 1954-55 as much as Rs. 80 crores on defence; this excludes the amount to be spent out of the proposed U.S. military aid. The amount represents more than 70 per cent. of the aggregate revenue receipts of the Government. This is, indeed, a huge amount, considering the size of the country and the more urgent need for accelerating the pace of economic activity in the country. That apart, the estimates of defence expenditure for 1954-55 are placed at Rs. 64 crores under revenue account and Rs. 16 crores under capital account, as against the revised estimates of Rs. 60 crores and Rs. 20 crores, respectively, for 1953-54.

In the course of his budget speech, the Finance Minister of Pakistan claimed that the country was going in the right direction and that the efforts of the Government at strengthening the country's economy and augmenting resources had borne fruit. In support of this claim, he observed:

"There has been a remarkable increase in industrial investment last year. The cotton and jute industries have made considerable progress. . . . I am confident that, in view of the rise in production, the shortages experienced in the country will be overcome and that consumer goods will be available at reasonable prices. . . . Price control will be abolished or relaxed in about a year's time. . . . The food situation has also improved. The area under *kharif* food crops has increased by 2 million acres as compared with the previous year. As regards *rabi* crops, the area under wheat in 1953-54 was 6.5 million acres, as compared with 5.6 million acres in 1952-53."

Reviewing the foreign trade position, the Finance Minister indicated that that the efforts of the Government to maintain an equilibrium in balance of payments had been met with success. According to him, Pakistan had favourable balance of payments to the extent of Rs. 12 crores in 1953, as against a deficit of Rs. 87 crores in 1952. The surplus in the current calendar year, however, is expected to be smaller, being Rs. 2 crores. This is due to a reduction in export earnings from Rs. 135 crores to Rs. 150 crores and an increase in payments from Rs. 143 crores to Rs. 148 crores. In the case of jute and cotton, which constitute 90 per cent. of the country's exports, a steep decline in prices had occurred in 1952. This trend had been arrested in 1953 and the prices had recovered. The acreage under jute was curtailed in 1953-54 to facilitate the disposal of accumulated surpluses of the earlier years. By the end of December last, 2.8 million bales had been exported, as against 2.5 million bales in the corresponding period in the previous year.

Proceeding, Mr. Mohammed Ali declared that the objective of his Government's policy was to maintain equilibrium in the balance of payments position. He said: "Pakistan is making every effort to promote exports and earn larger foreign exchange earnings by foreign aid and loans. . . . It is hoped that foreign aid to the extent of Rs. 15.5 crores will be made available to the Government by the U.S., Canada, Australia and New Zealand during 1954-55."

I.L.O. Mission Report

Several recommendations of far-reaching importance have been made by the I.L.O. mission, in its report submitted to the Government of Pakistan recently. The mission, it will be recalled, visited Pakistan sometime ago at the invitation of the Government to conduct a first-hand survey of the labour conditions in the country. After a six months study, during which the mission visited several industrial establishments and discussed the questions relating to labour with representatives of Governments, industry, commerce and labour, the mission submitted its report. The full text of the report is not available. From the Press version of the report, it is gathered that the report first deals with general considerations, including economic development, and proceeds next to the study of labour efficiency, payments by results and contract labour, occupational safety and hygiene, including discussion on enforcement of labour laws, working conditions in industry, and commerce plantation labour welfare, and labour relations.

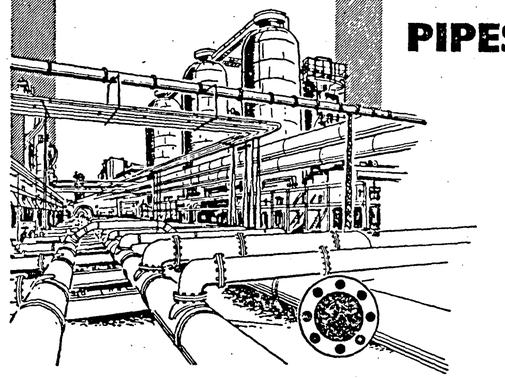
One of the major recommendations relates to the establishment, by legislation, of at least a permanent industrial court as part of the judiciary. The proposed court should have jurisdiction to determine minimum rates of wages for all occupational classifications in any industry covered by claims submitted by recognised trade unions. It should be vested with special jurisdiction to determine a simple code of minimum rates of wages for adult males and females employed in the lowest form of unskilled work in any industry. The chief consideration which has weighed with the I.L.O. mission in stressing the need for minimum rates is that "good industrial relations in industry in general cannot be anticipated until there is some system in operation for expeditious fixation of minimum rates." The mission has not favoured the idea that the Government should undertake the task of fixing minimum rates of wages.

The other important recommendations of the I.L.O. mission are: (1) opportunities should be enlarged for women to take part in the economic life of the country through increased facilities for education, training and employment; (2) legislation should be enacted to prevent victimisation of members of trade unions in accordanre with I.L.O. provisions concerning application of principles of the right to organise and bargain collectively; (3) children under 12 years should be prohibited from working not only in places coming under the Factories Act but also in shops and commercial establishments; (4) the levy of a cess to provide funds for the welfare of workers—this is at present based only in coal industry—may be extended to other industries under the control of the Central and Provincial Governments; (5) more conciliation officers to enable the Ministry of Labour to keep in touch with industry, so that industrial troubles can be anticipated or action taken to initiate conciliation before the issue of strike notices "which usually intensify antagonism between the parties."

Fish Harbour at Karachi

The Government of Pakistan will, with American F.A.O. assistance, soon begin construction at Karachi of the most modern fish harbour in South-East Asia. Plans have already been made, and some of the major equipment already ordered for the million dollar project which, upon completion in about three years, promises to revolutionise the Pakistani fishing industry and improve Pakistani living standards. The Government of Pakistan is contributing Rs. 1,263,000 for the first year's construction and the U.S. Foreign Operations Administration is contributing $750,000 (approximately Rs. 2,500,000).

CAST IRON FLANGED PIPES



Cast Iron Pipes with flanged joints are impervious to rust and corrosion and particularly suitable for pumping and high pressure mains as well as for conveying acid, sugarcane juice and other liquids of commercial value. They are manufactured at Kulti to British Standard Specification.

ECONOMIC CONDITIONS IN SOUTH-EAST AND FAR EAST ASIA

VIEWS OF CHARTERED BANK CHAIRMAN

A NOTE of subdued optimism characterises the latest annual statement of Mr. V. A. Grantham, Chairman of the Chartered Bank of India, Australia and China, the full text of which is published elsewhere in this issue. "In certain countries," says he, "the economic outlook is undoubtedly better. In others, there is a more settled political outlook. Some countries have a very difficult road to travel, but they have passed through the worst of the storm." The position of Japan, in his opinion, however, is a matter for some concern not only for the Japanese but to all in South-East Asia and the Far East; for the well being of Japan is vital to this region as a whole. Although Mr. Grantham is thus somewhat optimistic about the economic outlook for South-East Asia and Far East, he is not hopeful of the profits of banks going up. On the contrary, the prospects are for a reduction in bank profits as the upward trend in costs persists.

The reactions of Mr. Grantham to the developments in India on the economic front deserve wide attention. He recognises the need for revising the Five-year Plan designed to reduce unemployment. The emphasis laid on raising a part of the outlay by internal borrowings by the Planning Commission is welcomed but the move to explore the possibilities of using short-term funds for purposes of long-term needs of private enterprise does not meet with his approval. He says: the whole of our business is based on liquidity and, therefore, we are not in a position to provide long-term finance. I am sure that it is essential to the stability of the Indian economy that commercial banks should continue to function on strictly orthodox lines. Commenting on the scheme for discounting usance bills, he says that it marks an important stage in the development of the Indian bill market and enables banks more easily to obtain funds from the Reserve Bank at need. He is of the opinion that deficit financing on a further substantial scale may be inflationary in its effects. Expressing satisfaction at the improved food situation and the raw material supply position of jute and textile industries, Mr. Grantham fears that, following the recent Anglo-Japanese payments agreement, Indian textiles may be expected to meet Japanese competition in a number of overseas markets.

Pakistan

For Pakistan the year 1953 was, according to Mr. Grantham, a difficult one, owing to the fall in price levels of cotton and jute which caused a fall in the country's export income. The setback has since been further affected by a fall in food production. The strain on foreign exchange has, however, been relieved to a certain extent by the American wheat aid, and loans from Britain and the U.S. On a deferred payment basis, Britain and Japan have shipped to Pakistan machinery and plant to help promotion of industries in Pakistan. In view of the balance of payments difficulties import restrictions have continued on a substantial scale. Although the immediate prospects for jute, cotton, tea and hides and skins are good, export income in respect of these commodities is not likely to increase significantly.

Burma's main concern last year appeared to be the disposal of its rice stocks. On the import side, the country withdrew from the Ottawa Agreement and terminated the Indo-Burma Trade Agreement. A new tariff schedule was introduced last October, abolishing Imperial Preference and placing all goods and commodities, irrespective of their origin, on a uniform basis. As a result, Japanese manufactures are now competing in Burma on more favourable terms with British and Indian goods. Politically, the country seems now more settled and the rebel groups gave less trouble in 1953.

Ceylon

The fall in the values of Ceylon's staple exports, namely, tea, rubber and coconut products involved Ceylon in a period of economic re-adjustment. Vital reserves fell by more than a quarter. Excess of imports also affected adversely its balance of payments position. Certain budgetary measures and control over credit by the Central Bank have since been initiated to meet the situation. The country has entered into long-term contracts with China and Burma for the supply of rice at advantageous prices. Economic development schemes have also been undertaken and assurances have been given to encourage the flow of foreign capital into Ceylon.

In Malaya, considerable success has been achieved in keeping the terrorists on the defensive. On the economic front, its overseas trade has registered a fall in value on account of the low prices for tin and rubber. The future outlook remains uncertain.

In North Borneo not only has there been a fall in prices of rubber, as in other rubber growing countries, but both output and exports of the same commodity have registered a decline. But tobacco exports, which were disappointing last year, have turned out to be promising this year. Reconstruction and development plan initiated in 1948 is stated to be making progress.

Budgetary position in Sarawak has been sound, with a surplus of revenue over expenditure. This is due to exceptional yield of the export duty on pepper. This has enabled the country to provide large sums for development schemes.

As in the case of Malaya, the economies of both Indonesia and Thailand were adversely affected by the fall in the prices of tin and rubber last year. In the former country, political considerations have prevented the present Government from coming to grips with labour whose demands have again become so unreasonable that they threaten the economic survival of the Republic. In Thailand, the Government is faced with the problem of accumulated rice stocks.

A clear assessment of the position in Viet Nam is rendered difficult by political disturbances. Inflation, however, seems to have been checked to a certain extent by devaluation in May, 1953, of the Piastre and by a series of taxes and restrictions designed to decrease consumption. But a lack of purchasing power in the hands of the local population makes trade prospects anything but bright.

In the Philippines, efficient handling of import controls taken over by the Central Bank in June, 1953, coupled with a system of exchange control through the commercial banks, has speeded up the economic progress. This has enabled the Bank to hold its target of U.S. $300 million in foreign currency reserves. The Central Bank's action to reduce the ratio (from 70 per cent. to 50 per cent.) which commercial banks are required to maintain in certain specified assets against their total outstandings under letters of credit has been a welcome concession to banks.

Japan's economic position, according to Mr. Grantham, cannot be regarded as sound. The country would not have been able to pay for its imports but for the U.S. dollars accruing from goods supplied and services rendered as a result of the war in Korea and from the presence of U.S. forces. Acute shortage of sterling has been a dominating feature of the Japanese economy. The country's economic problems are too deep seated to be righted by aid from abroad or by the payments agreement with the U.K. The inability of industry to reduce production costs to meet international competition is particularly ominous, as the standard of living for the working people is already low. The Bank of Japan took steps to correct inflationary tendencies by tightening credit conditions. Notwithstanding this, the position of leading Japanese banks, all of whom were heavily overlent at the beginning of the year, showed a further deterioration.

Commenting on the question of convertibility, Mr. Grantham advocates a cautious approach. He admits that there is greater pressure for convertibility both internally and from abroad, but feels that, in view of the heavy internal liabilities and external responsibilities, the country should "think very carefully before taking the next step." As bankers to the sterling area, Britain cannot, he says, risk the credit of its friends who bank with it. He feels that the surpluses on the country's balance of payments are not substantial and fears that they might be dissipated soon, if the country embarked upon convertibility, without studying the problem in all its aspects.

BARODA BANK'S RESULTS SATISFACTORY

NOTABLE RISE IN ADVANCES

THE financial results of the Bank of Baroda Ltd. (General Manager: Mr. Mathew S. D'Souza, Baroda) for the year ended 31st December, 1953 are in conformity with the general trend of bank earnings for that year. Thus, a decline in earnings, coupled with higher outgo by way of expenses, has contributed to a shrinkage of Rs. 2.64 lakhs in the profit. Though the fall in profit is not serious, the fact that the profit is down for the second year in succession—the contraction amounts to Rs. 5.61 lakhs for the past two years—indicates that the days of mounting profits for banks are over. It also means that, with the rising trend in expenses, banks can at least maintain their profit margin only through expansion in their services to customers. It may be interesting to note here that the profit of the Bank for 1953 is the lowest since 1943. The setback in its profit as noted above has, however, not necessitated any cut in the distribution to the shareholders, which is kept unchanged at 12 per cent. per annum, including a bonus of 2 per cent. This has been feasible because of a substantial reduction in the provision for depreciation on investments.

The salient features of the Bank's accounts for the year under review are presented against the background of those for the previous three years in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950
Interest and discount	1,03.24	1,08.43	97.82	87.41
Commission and exchange	15.59	13.08	13.08	7.62

Cash	12.5	19.8	11.5	14.7

* Unsecured borrowings.

It will be seen that, despite a smart rise in the Bank's advances (including bills purchased and discounted), interest and discount earned are lower by Rs. 5.19 lakhs. There is, however, nothing surprising about this inasmuch as the increase in advances might have taken place just at the fag end of the year and the average advances during the year as a whole might have stayed at a lower level than in the preceding year. It may be noted that interest and discount earned in 1953 are higher than those in 1951 by Rs. 5.42 lakhs, notwithstanding a decline in the level of advances in 1953 from that in 1951. Commission and exchange earned on the other hand, are higher by Rs. 2.51 lakhs, which is accounted for by the substantial increase in the Bank's bills business, so that the gross income has suffered a drop of only Rs. 2.63 lakhs. There has been a saving of Rs. 2.66 lakhs in interest paid, though there has been a sizable net increase in fixed deposits over the year. But this has been offset by the rise of Rs. 2.68 in expenses. In short, the fall in earnings has been the combined result of lower income and rising expenses.

The rise of Rs. 1.69 crores in deposits is mainly accounted for by an increase of Rs. 1.84 crores (to Rs. 15.51 crores) in fixed deposits. Savings bank deposits, on the other hand, are lower by Rs. 4 lakhs, at Rs. 5.47 crores, and current accounts, contingency accounts, etc., by Rs. 12 lakhs at Rs. 9.87 crores. The total deposits, however, are still lower than those at the end of 1951 and 1950. The sharp rise of Rs. 3.42 crores in advances (including bills purchased and discounted) is shared by loans, cash credits and overdrafts, which have

(*Continued on page* 547)

SMALL CONTRACTION IN PROFIT OF CHARTERED BANK

LIQUIDITY RATIO AT HIGHER LEVEL

A CONTRACTION of £4,984 in the profit, that is, from £698,782 to £693,798, is disclosed by the audited accounts of the Chartered Bank of India, Australia and China (Chief General Manager: Mr. W. R. Cockburn, London) for the year ended 31st December, 1953. With this decline, the upward trend in the Bank's profit noted since 1942 has not only been broken but reversed. This fall in profit is in distinct contrast to the tiny increase of £1,685 noted in the previous year, but this is neither surprising nor unexpected. For the Bank's Chairman, Mr. Vincent Alpe Grantham, had been warning in recent years, in his annual statements to the shareholders, about the general deterioration in working conditions in almost every Eastern country in which the Bank operates. In fact, he had explicitly stated that it would be foolhardy not to be prepared for some reduction in profits. It is, however, comforting to note that the decline in profit is not as large as would have been warranted by the substantial reduction in the Bank's turnover, as witness the fall of £21.5 million in the balance-sheet total.

The Bank's profit for the year under review (after providing for taxation and after making allocations to contingency accounts, out of which accounts full provision has been made for diminution in value of assets) amounts to £693,798. This profit, along with the undistributed surplus of £399,215 brought in from the previous year, has been utilised (*a*) to apply £200,000, as in the previous year, towards writing down Bank premises and furniture account, (*b*) to repeat the allocations made in each of the previous three years to the officers' pension fund and widows' and orphans' fund of £125,000 and £20,000, respectively, (*c*) to transfer of £75,000 (as against £100,000) to contingency account and (*d*) to distribute £269,500 to the shareholders at the rate of 14 per cent. per annum, leaving a surplus of £403,513 to be carried over. It must, however, be noted that this dividend of 14 per cent. per annum, though same as that paid for the previous year, is on an increased capital raised in March last by capitalising £500,000 out of the reserve fund. Thus, the hope expressed by the Chairman last year that it would be possible to maintain the dividend at 14 per cent. has been fully realised.

The following synopsis of the Bank's balance-sheet as on 31st December, 1953, as compared with that at the end of the previous three years, provides an idea of the Bank's progress in recent years:

(In thousands of £'s sterling)

	As on 31st December			
	1953	1952	1951	1950
LIABILITIES (MAIN)				
Capital	3,500	3,000	3,000	3,000
Reserve fund	5,000	5,000	4,000	4,000
Notes in circulation	2,765	2,564	2,550	3,000
Current deposits and other accounts	147,925	160,609	169,145	150,205
Fixed deposits	17,112	19,480	18,606	16,038
Bills payable	926	1,372	2,531	1,864
Acceptances	9,185	15,935	11,884	13,757
Loans payable	..	..	1,401	1,235
Undistributed surplus	403	399	397	366
ASSETS (MAIN)				
Cash	31,495	31,788	33,804	31,431
Investments—				
Government and other securities	58,787	66,300	62,102	55,867
Securities against note issue	2,679	2,670	2,929	2,947
Advances	67,249	69,243	86,779	67,158
Bills of exchange	11,235	15,110	12,887	14,244
Bank premises, etc.	1,061	1,845	1,913	1,843
Remittances in transit	3,587	4,833	548	5,569
Balance-sheet total	186,963	208,515	213,633	193,603

The balance-sheet at the end of 1953 reflects the slight recession that characterised economic trends in several countries of South-East Asia where the Bank's activities are largely concentrated. Mainly on account of the fall in world prices of the basic Eastern commodities, there was a fall in the demand for the Bank's facilities for loans, bills of exchange and acceptance credits. The cumulative effect of these was a drop in the balance-sheet total by £21.5 million to £187 million, the lowest total to be seen since the close of 1949. On the liabilities side, the current and other accounts have dropped by about £12.68 million. This decline is far greater than that of £8.54 million in the previous year, so that the end of account total is the lowest figure for the last four years. Fixed deposits have declined by £2.37 million, in contrast to the rise of £0.87 million in 1952. For the second year in succession, bills payable have gone down and stand at the lowest figure since 1949. The substantial reduction of £6.75 million in acceptances, according to the Chairman, is largely due to the drop in commodity prices already mentioned, which in turn reflects increased competition from other banks in Japan, chiefly American, for this class of business.

On the assets side, advances have gone down by £2 million. This is the second year in succession to experience a fall in advances, but the decline in the year under review is not as serious as that of £17.53 million noted in the previous year. However, the trend is significant, in that it "follows the tendency shown by bank lending generally and is an additional indication of the deflationary trend which has persisted during the year." The drop of £7.51 million in Government and other securities (apart from those lodged against note issue) reflects a part of the drop in current and other accounts. Cash balances do not show any marked drop. The ratio of cash and call money to the Bank's demand and time liabilities, excluding notes in circulation against which security has been lodged, is very nearly 19 per cent., as against 17.6 per cent. a year ago. It will thus be seen that, in spite of a decline in balance-sheet total, there has been no diminution in liquidity; in fact, the position is more liquid than a year before.

WORLD BANK LOANS TO AUSTRALIA, BRAZIL AND TURKEY

Three recent recipients of World Bank loans are Australia, Brazil and Turkey. Australia has been granted a loan of $54 million for imports of capital goods and equipment needed for the development of agriculture and forestry, road, rail and air transport, electric power, and various other industries. This is the third loan made by the Bank to Australia. The loan of $100 million granted in August, 1950, has been completely disbursed. Three-fifths of the second loan of $50 millions made in July, 1953, has been disbursed.

Brazil has been granted $18.79 million for the establishment of a thermal electric power plant by the Brazilian Traction, Light and Power Company, Ltd. This loan is part of the total capital outlay of $35 million. The project envisages the doubling of the present power capacity of 500,000 kw. by 1956. The new plant, scheduled for completion by the close of 1954, is expected to alleviate the power shortage in the Sao Paulo area, an important centre of industrial production.

Turkey has been granted a loan of $3.8 million for port development. This will supplement a loan of $12.5 million made by the Bank in July, 1950, to finance the foreign exchange cost of a series of port improvement and construction projects.

The loan to Australia bears interest of 4½ per cent. per annum, including the 1 per cent. commission which will be allocated to the special reserves, while that to Brazil and Turkey bear a slightly higher rate of interest, being 4¾ per cent. per annum, including the 1 per cent. commission which will be allocated to the Bank's special reserve. The Australian loan is for a period of 15 years, whereas the latter two loans are for a period of 20 years and 21½ years, respectively. The amortisation of the three loans commences from 1st March, 1957, 1st September, 1955 and 1st April, 1956, respectively.

(*Concluded from next column*)

Apart from these gains, there are other points too which need to be taken into consideration. According to the Finance Minister, no limitations are imposed on India's freedom to pursue its own monetary policy. An independent monetary policy means some fixity of exchange, and it cannot be said that the British pound is an unstable currency and that the link with it is of no value. Even an independent currency has to have some relationship with major world currencies. Again, any country in the area can vary its exchange rate as and when it so desires, consistantly with the obligations arising out of its membership of the International Monetary Fund. If India has not withdrawn its sterling balances, such is due to improvement in the production of foodgrains and cotton, the imports of which have dwindled latterly. And the old complaint that the sterling balances earned too low a rate of interest has been rectified now, "because rates of interest in Britain," to quote Mr. Deshmukh, "even for short-term money, have gone up and today we are earning a reasonable rate of interest on our sterling balances there. The Treasury rate itself is two and a half per cent." Further, if India wants to be an independent currency country, it should have to hold some foreign exchange reserves. These reserves have to be held in various currencies, some of which may fluctuate a great deal. Finally, the membership of the sterling area has not prevented development of new lines of trade or new alignments in exports and imports. It will thus be seen that India has nothing to loose but everything to gain by continuing its association with the sterling area.

INDIA AND STERLING AREA

ASSOCIATION QUITE BENEFICIAL

THE Finance Minister's lucid exposition of the reasons why India set at rest all unnecessary doubts that might have been created by the statements made in Parliament by some of the opposition members. Although on several occasions in the past, the Government's policy had been outlined, never was such explanation so comprehensive, convincing and complete as the one that followed the two-hour debate on the Commonwealth Ministers' Conference at Sydney in Parliament on the 15th inst. The debate revealed that those members of Parliament who were unduly critical of the Government's stand did not base their criticism on solid facts or on a careful study of the problem in all its aspects. Mr. Deshmukh was not a bit exaggerating when he said that most of the members who participated in the debate indulged in misconceived criticism and even "wild ranting." Consequently, there is no need to go into the views expressed by members.

Before dealing with the implications of India's membership of the sterling area, Mr. Deshmukh gave a brief history of its origin and development. The sterling area, according to him, is the product of a long history. Prior to the First World War, sterling was known to be the dominant international currency. It was convertible into gold, and since it was used internationally as a medium of exchange and as a store of purchasing power, it came to be said that gold itself was on the sterling standard. During the inter-war period, currency systems and exchange rates all over the world were subject to pressures and the old gold standard became unworkable. The U.K. went back to gold bullion standard in 1925. The experiment proved short-lived, as, in 1931, it went off the gold standard. It then became a managed currency. India continued to link the rupee with sterling, as the country had very little choice. Other Dominion Governments and other independent countries followed the British example. Thus, Australia, New Zealand, South Africa, Egypt, Iraq, Portugal, Norway, Sweden, Denmark, Iran, Japan, Argentina, Uruguay, Yugoslavia and Greece came to form what is known as the sterling area bloc.

The sterling area in its present form is the product of the Second World War. It is a smaller and somewhat tighter group. The term came to be used by about 1940 when it began to operate as a single monetary area within which, with few exceptions, freedom of payment was preserved, while, at the same time, import restrictions were applied by the various members in their relations with outside countries. The area includes at present, besides the U.K. and colonial territories, India, Pakistan, Ceylon, Burma, Australia, New Zealand, South Africa, Ireland, Iraq, Iceland, Jordan and Lybia, Canada, though a member of the Commonwealth, is not a member of the sterling area. Thus the area now covers about one-fourth of the world's population. The total trade of the sterling area countries, amounts to 25 per cent. of the world's trade. The bulk of all sterling area trade, as also the portion of the trade not belonging to the area, is financed in sterling from London.

The sterling area countries constitute the largest group of countries within which there is a large measure of freedom in the matter of exchange transactions. Although it had its vicissitudes and the gold value of the sterling area currencies has gone down, the area has a long record of comparative monetary stability.

Positive Gains

India's interest in the sterling area arises out of the following positive gains:

(1) Over 50 per cent. of India's import trade and about 38 per cent. of its export trade are today with sterling area countries.

(2) India has normally a balance of payments deficit with the O.E.E.C. (Organisation of European Economic Co-operation) countries and India's membership of the sterling area facilitates the financing of this deficit from the E.P.U. (European Payments Union) in sterling.

(3) India holds sterling balances of the order of Rs. 745 crores; the stronger the British pound, the better it is for India.

(4) Banking and financial relations, with or through London, are, again for historical reasons, an important part of the mechanism of India's trade. India's membership is thus a matter of trade and banking convenience rather than of monetary policy.

(5) Although India has a pooling arrangement in respect of dollars and it contributes its dollar earnings to the Pool, it has, over the last several years, drawn more from the Pool than it has contributed.

(*Continued in previous column*)

HUNDRED YEARS OF COTTON TEXTILE INDUSTRY

AN ANALYTICAL OUTLINE OF BASIC CHANGES IN PATTERNS

(By S. D. MEHTA, M.Com., L.L.B., Ph.D.)

ON 7th July, 1854, the agreement between the shareholders of the Spinning and Weaving Company, later known as the Bombay Spinning and Weaving Company, was signed. In several quarters, the flotation of the first Indian enterprise in the cotton mill industry was viewed with cynicism. The cynics argued with some amount of justification, for, though three cotton mills had come into existence in India between 1817 and 1830, none of them had succeeded in the sense of setting up a precedent for a more expansive pattern of development. Moreover, it was also felt in some quarters that Cowasjee Davar should have postponed the flotation of his venture until after the results were finally known of the efforts of James Landon in Broach. Landon, after years of protracted negotiation with different parties, had succeeded in floating a company to start a cotton mill at Broach.

A hundred years have elapsed since James Landon, Cowasjee Davar and Maneckjee Petit put in the first efforts that may be truly regarded as the foundation of the cotton mill industry in India. In the course of these hundred years, ignoring for the present purposes the developments from year to year, vast changes have come over the mill industry. It is to a statement of the most important of these that this article is directed. By far the most impressive fact on first reading, as Table I serves to show, is the vast growth of the cotton mill industry in the course of these hundred years. Equally impressive are the developments in the volume of equipment that a Table of this type does not reveal—the growth of bleaching, dyeing, printing mercerising and other finishing sections, as also the growth of newer types of spinning and weaving equipments in place of the older mechanical alignments. Thirdly, the Indianisation—almost total Indianisation—of the managerial and technical cadres commands a place of pride in our understanding of the changing phase of the mill industry in the course of 1854-1954.

TABLE I

1854 to 1954—A Bird's Eye-view

	Mills*	Spindles (in 000)	Looms (in 000)	Workers† (in 000)
1854 ..	1	30	*Nil*	0.50
1855 ..	2	47	*Nil*	0.75
1866 ..	3	64	*Nil*	1.20

§ Adjusted for employment on second and third shifts.

Significant Developments

With these changes are connected others of a different type. The ownership of the cotton mill industry has shifted from a few score individuals of ample means to lakhs of shareholders, distributed between the widest extremes of regional affiliation and income categories. The growth of labour consciousness and the allied organisation of a trade union movement, coupled with the place presently assigned to labour legislation and Governmental machinery in the field of labour policy, are among the important themes from the point of view of the coming years. In the field of finance, apart from the change in the ownership to which we have referred, there have come about several other developments, such as the increasing reliance on bank finance and the greater integration of large sections of the mill industry with the running of financial institutions. On the side of marketing, wholesaler domination continues to persist, but is of necessity more compatible with an identification of the manufacturer with his product in the eye of the consumer. These do not, by themselves, exhaust the most significant developments in the mill industry, but it may not be disputed that they are among the most important in a structural sense. Equally relevant would be a statement of the relationship between handlooms and mills, but such is not attempted here in view of its controversial and complicated character.

Widely dispersed geographically, the cotton mills of India have recorded a larger proportion of their growth only during the twentieth century. Thus, in terms of absolute growth in the number of workers, the two decades spanning 1933 and 1953 are more significant than the entire period from 1854 to 1913, at the end of which only 250,000 workers found employment in the mill industry, as compared to an addition of nearly 300,000 during the former period. Inasmuch as the main time series in the matter of equipment—spindleage and loomage—have not shifted in the same measure, this reflects an increasingly greater use of equipment through working of additional shifts. Presently, out of a daily average employment of 750,000, 420,000 are employed on the first shift; another 250,000 are employed on the second shift and 66,000 find employment on the third shift. It is worth noting that, in recent years, the employment on the first shift has remained more or less stationary, while the employment on the second and third shifts has tended to increase.

Working Hours

Looked at from another angle, the increase in shift working is not equivalent to a proportional increase in the number of hours worked. For the number of hours that can be worked per shift have declined over the last hundred years, with the significant exception of the first decade of the present century. When matched against the increase in wage rates, except during 1923 to 1937, this has had a remarkably different result in terms of man-hour earnings, which may be broadly said to reflect the increasing cost of labour to the cotton mill industry.

There cannot be any doubt that, considered by themselves, without reference to the changes in the production structure and the distribution of the work force according to wage categories, either the number of hours worked per shift or the mere statement of man-hour earnings has limitations. But their general utility should be equally obvious.

Until 1891, the daily hours of work averaged 12, seasonal fluctuations notwithstanding. 15 to 20 holidays on account of religious festivals intervened, giving the industry an average of a little more than 80 hours per week. From 1891 to 1904, the latter date being only a convenient land-mark, the hours of a working week came down to 72 without affecting the daily average. During the next seven years, a 13-hour day became the normal feature, a 15-hour day not being altogether unusual. The Factory Act of 1911 legally remedied the situation by fixing the daily maximum at 12 hours. In the early 1920's, the workday was reduced to 11 hours, and, in the next decade, the daily hours were limited to 9 and the weekly hours to 54. Minor adjustments during the Second World War years apart, this remained the position until 1945. Thereafter, the 8-hour day has come into operation, with the exception of workers on the third shift, who usually work only 6½ hours in a six-day week.

Against this more or less secular reduction in the hours of work should be juxtaposed the level of man-hour earnings which has shifted from being between 2½ to 3 pies per man-hour in 1856 in Bombay city to 140 pies in the Centenary Year. During the 1860's and the 1870's, man-hour earnings moved upwards from the levels of 1856 and varied between 5 and 6 pies. An upward trend brought them to being between 7 and 8 pies at the close of the nineteenth century. The rapid expansion of the first decade of the present century sustained the progressive tendency to rise and, on the eve of the First World War, man-hour earnings in Bombay mills stood between 9 and 10 pies. The impact of the First World War and the boom following raised the level in the early 1920's to 20-25 pies. By 1937, that is, prior to the award of an interim increase on the basis of recommendations made by the Textile Enquiry Commission, man-hour earnings fell to 18-23 pies. In the years following, more gradually at first and rapidly thereafter, wages shot up to 100 pies by 1948. The level rose further by 30 pies in the course of the next three years. In the hundredth year—1953—man-hour earnings in Bombay mills stood in the neighbourhood of 140 pies.

Real Rise in Wages

This upward progression, which to a very large degree reflects a real increase in wages, has been associated with a sharp increase in the levels of labour deployment that are permissible. Without going into details, it should be emphasised that management has become increasingly conscious of the need for higher men: machine ratios. To quote the two most outstanding contrasts. In the first thirty years of the mill industry in Bombay, a worker minded on an average only 40 mule spindles. Today, the average for the country is ten times as high, while in isolated cases, it is thirty times as high. Nearly a quarter of the loom-shifts worked presently are based on more than two looms to a weaver systems, while at least in one isolated case 32 automatic looms are being successfully minded by an Indian worker, who has belied the lack of faith that many have displayed in the past about his capacity to mind more machines. Of course, his willingness to mind more machines, and the existence of the necessary organisational consciousness and drive are different matters.

Coinciding with the increasing wages, there has come about another significant change in wage rates. Until a decade back, wage levels used to vary by as much as 800 per cent. although as between important centres the difference was only of the order of 300 to 400 per cent. Various standardisation awards and the grant of dearness allowance at high rates has closed this gap to the extent that presently the margin would appear to be only of the order of 100 to 125 per cent. (See Table 2).

TABLE II

Variations in monthly earnings (in rupees) of selected categories of workers—1952)

	Minimum	Maximum
Drawing tenter	53	108
Slubbing tenter	57	109

Two looms	67	108
Four looms	76	143
Six looms	89	141
Mazadoor—		
Men	50	103
Women	38	103

The net result of this tendency in the disappearing seller's market of the years 1951 and 1952, and the buyer's market of 1953 and 1954, has been to intensify the competitive character of normal operations in the cotton mill industry. Not only has the range of competitive contacts been extended, but external aids to marketing—such as consistent advertising which has become an important feature of the trade only in the last five years—have come increasingly into prominence. Stated briefly, consumer following has never been cultivated more assiduously and more directly by the component units of the cotton mill industry in India than is the case in 1954. Whatever the position of the consumer in the 1940's, there is not the slightest doubt that today he has once again become the king.

Financial Position

Increasing size of unit operations has worked as a structural factor, while price and cost trends have worked more directly on a short-term basis to make the financial balance of the mill industry a more complex affair than ever before. For one, the holding of stocks in the buyer's market of today is not an easy thing, as may be seen in the fact that the stock levels of today are nearly a hundred per cent. higher than either 1946 or 1947 in the case of cloth. Equally significant is the sharp decline in the volume of liquid resources available with India's cotton mill companies. This decrease has been of the order of nearly 50 per cent. from the levels of 1946, which, of course, were higher to some extent in anticipation of substantial expenditure on machinery and replacements in the post-war years. Nonetheless, the fact that bank advances have hovered between 50 and 60 crore rupees during 1951 to 1953, as against a mere 4 or 4½

(Continued on page 547)

COTTON INDUSTRY'S STRUGGLE AGAINST LABOUR SHORTAGE

MORE EXTENSIVE USE OF WORK STUDY METHODS IN MILLS

(From A Special Correspondent)

MANCHESTER, *9th March*

DURING the last week or two, the cotton trade has become somewhat unsettled and, to some extent, the flow of business to spinners and manufacturers has been interrupted. A fair amount of buying has continued to be done in both yarn and piecegoods, but buyers have shown rather less disposition to place orders to follow on current contracts. To a large extent, this state of affairs has risen, owing to developments in prices and future supply of fine qualities. The sensational auction sale of Sudan cotton in the middle of February had a most disturbing effect upon traders on this side. The opinion was held that such an important rise in prices could only be achieved by speculation and there was considerable comment on the fact that 21,000 bales, out of the 30,000 bales offered, had been secured by one buyer. The proposal to dispose of further supplies by tender was abandoned and there is uncertainty as to when the auction sales will be resumed.

MANCHESTER LETTER

Whatever may be said with regard to the action of the Egyptian Government in controlling the Alexandria market, the methods adopted from its point of view have been decidedly successful. Exports so far this season aggregate 497,000 bales, as against 388,000 bales in the same period a year ago. Although some short positions have had to be covered, the effect of these developments has been to quieten down business in fine yarns and cloths.

American Cotton

In the American section of the industry, the general tone of the market has continued firm and very full prices have had to be paid for yarn and piecegoods. There are indications of the price of American cotton in the United States being stabilised. It is significant that the amount of material being withdrawn from the Government loan is now larger than the entries and failing unexpected Government action, it does not look as though American cotton will be cheaper in the near future, despite the very large surplus of world supplies.

To an increasing extent, spinners and manufacturers are struggling against the disadvantages of the shortage of labour. In some districts, the position appears to be becoming more pronounced than ever. Spinners of yarn have satisfactory contracts on the books and cloth manufacturers continue to extend their order lists.

Taking a broad view, there seems to be very little ground for expecting lower values just at present. The home trade is likely to benefit from a further increase in spending power, as a result of wage advances, increased pensions for survivors of the 1914-18 war and higher rates of pay for certain sections of the military forces. There is, in fact, every appearance of increased inflationary tendencies.

Spinners' Review

Working conditions and amenities in the Lancashire cotton trade are the best they have ever been and have shown a remarkable improvement since the war, according to the annual report of the Master Cotton Spinners' Federation. Wages paid, it is stated, are well up in the list of all industries for comparable jobs.

The industry recovered substantially from the 1952 slump last year, the report continues. Yarn production rose to 88 per cent. of the 1951 total and, at the end of the year, the rate was by weight only eight per cent. below the peak rate of 1951. A substantial decrease occurred in the average fineness of yarns produced. Output of spun rayon yarns is now running at a rate 40 per cent. higher than in 1951 and production of mixture yarns has been more than doubled.

Reviewing the current state of trade, the report says: "Sales are good; order books are reasonably well filled and increasing; delivery periods are tending to lengthen and, with few exceptions, mills have to regulate their production according to the operatives available to tend the machines."

A further considerable extension in the use of work study methods in the mills is reported. There are now 184 mills using these methods, as compared with 84 six years ago. The present total represents 38 per cent. of mills owned by Federation members. "These figures," it is stated, "would be more satisfactory, if it were not for the fact that union opposition at local level prevents more experiments in the use of work study being undertaken in some areas. By the installation of labour saving machinery, staffed economically, members are showing that they can increase production from the available operatives, whilst keeping costs down to levels which give a surer foundation for higher earnings and better job security."

Dealing with the reopening of the Liverpool Cotton Futures Market in May, the Federation observes that the Raw Cotton Commission will gradually pass out of existence and it is expected that all purchases will be on private account by the end of 1955. It is realised that some members in the finer section of the trade may "view the removal of their lifeline with justifiable anxiety at a time when there will be only an American futures contract."

Lancashire cotton mills—some of them running at 95 per cent. of their full production again—are now winning as many fresh-from-school recruits as they did before the slump. Unemployment and short-time in the industry are almost gone. Because of this, youngsters are again looking on cotton as an industry offering a safe career. A survey taken by the Cotton Board in all the Lancashire cotton towns shows that, out of 9,927 boys and girls who left school at Christmas, 1,642—equivalent to 16.5 per cent.—took jobs in the mills.

Not since 1950 has the industry attracted a bigger percentage of Christmas school-leavers. Then, with the mills approaching their busiest post-war period, the percentage entering cotton was 17.8. Recruitment, on a percentage basis, was exactly equal to that at the end of the Christmas term 1951, but compared with 10.6 last year when the industry was still struggling out of the slump. A cotton leader said: "Although the mill labour force is still 30,000 below our strength before the recession, the greater intake of school-leavers is an encouraging indication of returning confidence in the future of the industry." Out of the 1,642 juveniles recruited since the end of the last school term, 1,134 were girls, the Cotton Board returns show.

Output Up

Cotton and rayon cloth ouput from Lancashire weaving mills rose by close on 4,000,000 yards a week during January, according to Cotton Board figures. The operatives produced a weekly average of 54,940,000 yards of cloth during the month, as compared with 51,090,000 yards in the previous month. Production was over 8,000,000 yards a week higher than in January last year, when output averaged 46,640,000 yards.

The weaving mills had a net gain of 790 full-time and 100 part-time workers in January, bringing their total labour force up to 141,800.

Latest returns from all sections of the cotton industry show that manpower has risen to 289,960. This represents an increase of over 15,000 in twelve months.

The outstanding feature of the labour situation in the city of Manchester at the present time is the pressing need for more women workers. For every unemployed woman in the city, there are three outstanding vacancies. Latest Ministry of Labour figures, presented to Manchester Employment Committee, show 3,517 outstanding vacanies for women workers. More than 1,700 of them are wanted in the clothing industry alone, while textile mills want another 326 and the distributive trades 310. Hundreds of women workers are also needed in a wide range of miscellaneous occupations. Women registered as unemployed in the city aggregate 1,214.

The acute shortage of women workers in the clothing industry is reflected in the vigorous recruitment campaigns upon which many clothing firms have embarked. The extent of the shortage is indicated by the recent innovation of evening part-time "housewives' shifts" by some clothing firms, an arrangement which has been fairly widespread for some time past in the cotton industry in Lancashire as a whole. The labour situation among men workers in the city of Manchester contrasts sharply with the position affecting women workers. There are notified vacancies for 836 skilled men and 88 labourers, against an unemployed total of 4,437 men.

COTTON IN BRAZILIAN ECONOMY

AN IMPORTANT FOREIGN EXCHANGE EARNER

THERE are two features which strike any one who turns to a study of Brazilian economy —the rapid increase that has taken place in the cultivation of cotton in that country, and the increasing dependence of that predominantly agricultural country on exports of cotton. In Brazil, cotton owes its origin to the economic crisis in the thirties when it was thought that this commodity could be a good corrective to the country's dependence on coffee. Although cotton was thus adopted as a mere expedient crop, the expansion in its cultivation has been so remarkable in the last two decades that Brazil now ranks as one of the world's major producers of raw cotton. Exports, too, are considerable ranking second only to coffee exports. As a source of foreign exchange, it is no less important than coffee and accounts for some 30 to 40 per cent. of Brazil's sterling earnings. Those features of Brazil's cotton economy have been clearly brought out in the relevant section of the report entitled "Brazil" published by the U.K. Board of Trade (priced at 5s.). The Report points out that great attention has been paid in recent years to the treatment of seed and to educating farmers in the use of insecticides.

Although cotton has long been planted in the north-east which grows a somewhat longer staple than the South, the Southern crop (cultivated principally in Sau Paulo and Parana), as the Report says, far exceeds the north-eastern. It may be mentioned, in this connection, that the average area under cotton was 5.5 million acres, during the pre-war period 1935-39 and is now estimated at lower than 4.8 million. The output in the current year is placed at 1.3 million bales of 478 lbs. each, as against 1.5 million bales in the 1952-53 season. Brazil has a higher per-acre yield of cotton than India, the Brazilian yield being 164 lbs. of lint per acre as against India's 80 lbs.

No Positive Effor

To revert to the Report, mentioned at the outset, it says that "although, in the past, much governmental encouragement has been given to the growing of cotton, no positive efforts are being made to this end in view, except in so far as the support given to prices by the minimum price guarantee and the purchase of the Sau Paulo crop in 1952 provide such encouragement."

The cultivation of cotton, according to the Report, has received considerable encouragement from the "powerful local manufacturing industry." During the war, Brazil also sent important quantities of cotton goods abroad. It would, however, appear that its "costs are now too high to enable it to compete in world's markets." The industry has several times expressed its concern at the high level of its raw material prices. Consumption by the local industry which takes the major part of the north-eastern crop and which was compelled because of the partial failure of that crop in 1951 to import a quantity of Egyptian cotton, was estimated at 188,000 tons altogether in 1951. It may be added here that there has been no appreciable change in the consumption of cotton in Brazil since that year.

Cotton exports, as already stated, account for 30 to 40 per cent. of Brazil's sterling earnings. Exports in 1948 were 258,700 tons but declined to 139,800 tons in 1949 and 128,800 tons in 1950, rising to 143,400 tons in 1951. The shortage of world supplies of raw cotton which developed at the end of 1950 and early in 1951, consequent upon the short crop in the U.S. and the limitation of exports from that country, worked to the considerable advantage of Brazil's southern crop, which can be substituted not only for American middling but has the further advantage of becoming available in the early part of the year. Since prices later fell sharply in 1952, and the availability of cotton in the world markets also increased, Brazil has, in the last two years, found it increasingly difficult to dispose of its surplus cotton. The following table gives the trend of cotton exports from Brazil during the three years ended 1952:

Brazil's Cotton Exports

(In metric tons)

Country	1950	1951	1952
U.K.	56,890	54,351	27
Japan	9,320	9,575	10,268
France	18,078	18,353	7,602
Germany	2,168	14,034	3,190
Spain	10,560	8,421	2,555
Chile	2,242	453	1,883
Poland	..	388	380
Sweden	4,701	3,541	577
Austria	118	1,004	883
Australia	6,596	6,589	406
Hong Kong	..	6,144	400
Other countries	17,572	24,529	460
Total	128,845	143,462	28,131

Since 1952, the course of Brazil's cotton economy has been interrupted and deliberately diverted by official policies designed to support the prices of domestic cotton at well above world parity. Brazil could not dispose of its cotton even through barter deals except at considerable loss. The question arose as to how the cotton stocks could be disposed off and as to whether the Bank or the Government had to shoulder the loss. After discussion of several alternatives, the rejection of one of which involved the resignation of the President of the Bank of Brazil, the decision was taken early in 1953 to sell the stocks at "whatever price could be obtained."

An attempt was made in January, 1953 to dispose of cotton by inviting tenders. But this system too did not work. Eventually, a special Cotton Questions Commission was set up in April, 1953, charged with the responsibility of disposing of the Bank of Brazil's stocks. Since then, the Government has been willing to sell its cotton at a discount under the New York prices. Cotton stocks at the beginning of the current season aggregated nearly 2 million bales. But the Government sales programme has been successful in reducing the volume of stocks. The total supply of cotton in the current season is, however, larger at 3.3 million bales (stocks of 2 million bales together with the output of 1.3 million bales) as against 3.0 million bales in the 1952-53 season. Some changes have been made in the exchange arrangements, according to which an exporter of cotton can claim a bonus in terms of dollar or other foreign currencies, at a specified rate related to domestic currency surrendered. On this basis it would appear that "Brazilian cotton should once again be available at competitive prices."

INDIAN INSECTS TO CHECK U.S. COTTON PEST

The U.S. Agriculture Department officials are turning to parasitic insects from India to try to help American farmers control the spread of the destructive pink bollworm, a cotton pest now threatening cotton crops in Southern States. Entomologists are working on the theory that India, known to be the original home of the pink bollworm, will also be the home of its natural enemies —those parasites which feed on or otherwise destroy the worm. Mr. George W. Angelet, a Department of Agriculture entomologist now in India, has already sent to America species of parasites known to attack and destroy the pink bollworm. If these parasites can survive and multiply in sufficient numbers under American climatic conditions, this may help to check the spread of the pink bollworm, which in 1952 did nearly $35,000,000 worth of damage to U.S. cotton.

Recently, the Department of Agriculture released some 250,000 of these parasites in Texas cotton fields to test their ability to survive and destroy the pink bollworm. The outcome of this experiment will be available in planning future research on the pink bollworm. So far, five species of parasites, aggregating more than 60,000 have been shipped from India for use in the pink bollworm experiment. A specie belonging to the Apanteles group has been among the most successfully reared under laboratory conditions. This wasp-like insect destroys the pink bollworm by laying its eggs in the worm's body. The eggs then hatch into larvæ and devour the worm.

CAMBODIA COTTON

The yield of local varieties of cotton in the Madras State, particularly Cambodia cotton, will be adversely affected owing to unfavourable weather conditions which prevailed during the fortnight ended 28th February, 1954. This is disclosed by the Bulletin issued by the Cotton Coordination Committee, Coimbatore. The Bulletin states that a downward revision of about 25,000 bales is anticipated in the crop estimate of the Madras B Zone area for 1953-54. It is further apprehended, the Bulletin adds, the quality and class of Cambodia cotton have also been adversely affected this season. It would appear that the mills have purchased so far a total of about 188,695 bales of cotton since 1st January, 1953, of which about 39,018 bales are against their current year's allocations. The Bulletin states that a large number of mills in the South have practically no stock of local cotton and that, owing to keen demand cotton prices are firm in the neighbourhood of the ceiling levels.

The Indian Central Cotton Committee has invited the well-known scientist, Dr. S. C. Harland, to visit Madhya Bharat and report on the cotton research work in progress at the Institute of Plant Industry at Indore and the schemes financed by the Committee in various States. Dr. Harland, it is stated, will be assisted by a Committee of botanists, which will include Mr. Kalidas Sawhney, Agricultural Adviser, Planning Commission and Mr. B. P. Pal, Director, Indian Agricultural Research Institute.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the above Balance Sheet of the Bank of Baroda, Ltd., as at 31st December, 1953, and also the above Profit and Loss Account of the Bank for the year ended on that date, in which are incorporated the audited returns from Bombay, Calcutta, Ahmedabad, Coimbatore, Madras and Surat branches, and the authenticated returns from the other branches and report that :—

(a) We have obtained all the information and explanations we have required, and have found them to be satisfactory ;
(b) in our opinion, the said Balance Sheet and the Profit and Loss Account are drawn up in conformity with the law ;
(c) such Balance Sheet exhibits a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us and as shown by the books of the Bank ;
(d) in our opinion, the books of the account have been kept by the Bank as required by law ;
(e) the transactions of the Bank which have come to our notice are within the powers of the Bank ;
(f) the returns received from the branch offices of the Bank have been found adequate for the purpose of our audit ; and
(g) the profit and loss account shows a true balance of Profit and Loss for the period covered by the accounts.

TASK BEFORE DEVELOPMENT COUNCIL FOR SUGAR INDUSTRY

PRODUCTION TARGET TO BE RAISED

AT long last, the constitution of the Development Council for sugar industry, as envisaged in the Industries (Development and Regulation) Act of 1951, has been announced by the Government of India. The Council consists of 21 members representing the Central and State Governments, sugar industry, employees, traders, technologists and consumers. Mr. P. A. Gopalakrishna, I.C.S., Joint Secretary, Union Food and Agriculture Ministry, is its Chairman. The Council is entrusted with the following functions:

(1) To fix targets of production, co-ordinate production programmes and review the progress of development from time to time;

(2) to suggest to the Government norms of efficiency, with a view to eliminating waste, obtaining maximum output, improving quality and reducing costs;

(3) to recommend to the Government steps to be adopted for achieving the fullest utilisation of the industry's installed capacity and for improving the working of the industry, particularly of the less efficient units;

(4) to promote and undertake an enquiry into materials and equipment, methods of production, management and labour utilisation;

(5) to suggest measures for better marketing and distribution of sugar; and

(6) to advise the Government from time to time on matters relating to standardisation, technical training, scientific and industrial research, study of consumer psychology, measures for raising labour productivity, improvement of working conditions in factories, and expansion of amenities and incentives for workers.

The formation of the Development Council for the sugar industry will be welcomed only in so far as it signifies the firm determination of the powers-that-be to set this industry, which produces what has aptly been described "the commodity to sweeten the tongues of one and all," on a firm basis. Because the Council cannot, by itself, solve the peculiar problems of this industry which arise from its agro-industrial character. The sugar industry thus covers two stages, namely, primary stage—that is, sugarcane cultivation—and secondary stage—that is, manufacture of sugar. Generally, the primary stage lags far behind the manufacturing stage, as a result of which the industry has not been able to make as much progress as one would wish, in spite of the protection granted to it two decades ago, in 1932, to be precise.

Cane Development

If, therefore, the Development Council is to succeed in fulfilling the onerous task of setting the sugar industry on sound and solid footing, it is of the utmost importance that the progress of the manufacturing stage should be preceded by a vigorous drive on the part of the Indian Central Sugarcane Committee to intensify development of sugarcane. The Council, however, can expect much of its task lightened by the determined support lent to the work of improving the quality as well as the quantity of the cane by Dr. Punjabrao Deshmukh, Minister for Agriculture, Government of India. In the course of his inaugural address at the annual meeting of the Indian Sugar Mills' Association held in New Delhi on Friday last week, Dr. Deshmukh emphasised how rise in sugar production could be achieved by raising the per-acre yield of high sucrose-content cane. In this connection, he observed:

"I have had many times thought of touring the intensive sugarcane growing areas and finding out the causes which contributed to the ridiculously low average production of sugarcane. I have now decided to give this matter my most immediate and earnest attention and I feel confident that raising the average production in U.P. and Bihar by at least ten to fifteen per cent. should not be impossible. I have an instinctive feeling that what we have been able to achieve in the course of a bare six or eight months without hardly any cost to the Government in the case of the Japanese method of paddy cultivation, may, in all probability, also be repeated in the case of higher sugarcane production. I also propose to examine the spare capacity of the sugar mills, so that larger sugarcane production may not only give us more sugar, but also enable us to reduce the cost to the consumers."

This was also the aspect on which Mr. D. R. Narang, President of the Association, laid considerable stress. As he very aptly remarked, "our standard should be not sugarcane per acre but sugar per acre."

Considering the steady rise in population, the migration of people from the rural to urban areas, and the improvement in the general standard of living, the scope for the development of the sugar industry is vast. But the target of 1.55 million tons in the rated capacity of the industry fixed for 1955-56 by the Planning Commission falls short of the actual consumption estimated at about 1.8 million tons by the Minister. To quote the words of Dr. Deshmukh: "It seems now reasonable to assume that the normal consumption level of crystal sugar in the country has exceeded 1,500,000 tons and is not likely to fall short of this figure in future years. On the contrary, with the progress of the Five-year Plan, consumption is likely to increase further and may reach the level of 1,700,000 to 1,800,000 tons by 1956."

In view of the gap between internal production and consumption requirements and considering the need for preventing any spiralling of prices, imports of foreign sugar, as Dr. Deshmukh pointed out, may be "inescapable." But sugar imports, it must be pointed out, do not at all offer a lasting solution to the disquieting sugar situation confronting the country; at best, it is merely a palliative. What is required from the long-term point of view of the country's sugar economy is the expansion of the size of the sugar industry. It is indeed gratifying that the Government should have realised the need for such expansion, as witness its latest decision to grant permission to the establishment of six new sugar factories. The Government is also considering proposals to effect an upward revision in the target for sugar production under the Five-year Plan. An indication of this is provided in the statement of Dr. Deshmukh that his Ministry was examining, in consultation with the Planning Commission, the question of raising the target of sugar production. He hoped that the Government would be in a position shortly to announce also the method which should be adopted to achieve the higher target.

Rehabilitation

Simultaneously with the expansion of the size of the sugar industry, the technical efficiency should also be stepped up. Drawing particular attention to this question, Mr. Narang made a few pertinent observations on the present handicaps, which need reproduction. Said he:

". . . practically all the factories in U.P. and Bihar commenced crushing operations nearly 20 years ago. Their actual daily crushing has been much more than the rated capacity specified by the makers of the plants. This has entailed heavy wear and tear and the plants are now due for large-scale replacements and modernisation. During the war and the period following it, even the normal replacements could not be carried out, as machinery parts were not easily available. Even now, the prices are ruling high and factories need considerable funds to carry out the backlog of replacements. Funds are also needed for adding new devices for improving the efficiency of production. Factories can also go in for fuel economy schemes. They can also organise better transport of cane by laying down tramway lines. Factories also need building up of large-scale cane farms wherever conditions permit."

All these require considerable finance which is said to be too large to be met out of the industry's own resources. To quote again Mr. Narang's words:

"The capital expenditure of this nature is beyond the existing resources of the factories. The depreciation and the general reserve funds available with most of the factories are not sufficient for carrying out any such programme. The unrealistic price policy followed by the Government during the control period has prevented the factories from building adequate reserves. In the control rates, the gross profit allowed was only 10 per cent. on the block which is taken to be Rs. 18 lakhs for an average factory, as recommended by the 1937 Tariff Board. While there could be some justification for allowing this profit margin during the pre-war years, when taxation accounted for only 20 per cent. of the gross profit and the balance was available to a factory for reserves and dividends to shareholders, there could be no justification for continuing the same basis when taxation was much higher and absorbed about 40 per cent. of the gross profit. Further, about 20 to 25 per cent. of profits were absorbed in payment of bonus to labour which was not paid in pre-war years. What was actually left was not sufficient to pay even a small return to the shareholders. The factories thus have not been able to build up reserves to renovate and modernise their plants. Moreover, much of the earnings of the factories in the recent years has been utilised for providing the additional working capital, that is, as margin money for the advances which they take from the banks against sugar stocks for payment of cane price and other expenses."

There is considerable force in these observations of Mr. Narang, which merits the study of the Taxation Enquiry Commission. Surely, it is to be hoped that, in its report to be submitted to the Government in the course of the next few months, the Commission will make suitable recommendations, keeping in view the need for liberalisation of depreciation allowances and reduction in taxation. The Commission should also lay down, as Mr. Narang rightly emphasised, definite principles for the guidance of the Central and State Governments in the matter of taxation. Otherwise, all the advantages expected to accrue from the centralisation of the industry would, as Mr. Narang warned, be lost, if the State Governments and local bodies were to continue to follow independent and divergent policies with regard to taxation.

SUGARCANE PRICE

The U.P. Government proposes to hold shortly a tripartite conference to evolve a formula, according to which excess profits made by sugar mills can be shared by the cane-growers. Disclosing this in the course of his reply to a question in the House of the People the other day, Dr. P. S. Deshmukh, Minister for Agriculture, said that the question of setting up a machinery to implement the formula would be considered after a decision was taken in the matter. The Minister explained that the raising of the cane price by As. 4 per maund had not been done by the Government notification. The Government of India had written to all factories in West U.P. suggesting that they might pay Re. 1-11, instead of Re. 1-7 per maund of sugarcane delivered to them, because it was expected that these sugar mills would operate for a longer period, thus making additional profits which the Government wanted them to share with the cane-growers.

SUGAR CANDY IMPORTS INTO CEYLON

The Ceylon Government has taken over all imports of sugar candy and banned private traders from dealing in it. This decision has been taken to prevent sugar candy from becoming a "serious competitor" to sugar. Private traders imported sugar candy, processed it locally and sold it as sugar thus reducing Government's profits on the commodity which are used to offset subsidy on rice. Within the last four months alone, the Government's profits from sugar sales which amount to Rs. 9.5 crores annually, had declined by Rs. 15 lakhs. Future imports and distribution of sugar candy would be handled by the food department which is the sole purchaser and distributor of sugar.

INDIAN CONFECTIONERY INDUSTRY

PLEA FOR BAN ON IMPORTS NOT JUSTIFIED

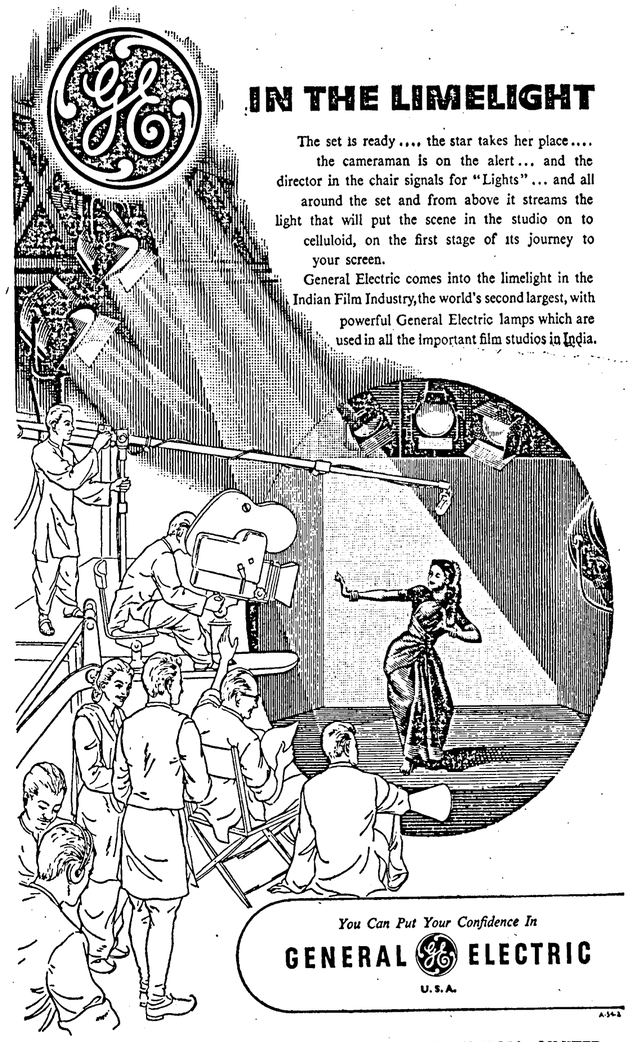
THE presidential address of Mr. Khanchand J. Pamnani, delivered at the eighth annual meeting of the Indian Confectionery Manufacturers Association held in New Delhi on Saturday last, was no more than a mere echo of what his predecessors had stated in previous years and to which pointed attention was drawn in these columns on appropriate occasions. Perhaps, Mr. Khanchand could not but repeat the same once again. So pressing have been the problems of the confectionery industry and so inadequate is the attention that they have received at the hands of the authorities that one need not be apologetic for referring to them again. The cost structure of the industry, for instance, is unduly heavy, thanks to high prices of raw materials and packing materials. Another disquieting factor is loss of export trade on account of foreign competition. Even in the internal market, there is severe competition not merely from imported confectionery products but also from the low-priced sweets of inferior quality.

Indeed, the Indian confectionery industry is passing through difficult times. This is fully reflected in the considerable gap between the installed capacity and the capacity actually utilised. The production of machine-made confectionery amounted to a bare 6,624 tons in 1953 which is hardly 12.5 per cent. of the production capacity of 52,800 tons. This compares very unfavourably with even the production of 9,240 tons at times when the industry had been starved of sufficient supplies of sugar, the basic raw material. Surely, something must be done to alleviate the problems of the confectionery industry. After all, it must be remembered that this industry plays a significant role both as a subsidiary to the sugar industry and as a producer of nutritive products.

Mr. Khanchand has suggested two remedies for the ills of the confectionery industry, namely, tax concessions and ban on imports. With regard to the former, Mr. Khanchand wants abolition of excise duty on sugar used in the manufacture of confectionery and refund of cess on sugarcane used in the manufacture of sugar supplied to confectionery industry. This plea is quite justified, considering the fact that the heavy cost structure of the industry has been due largely to the tax burdens. Thus, on every maund of sugar consumed by it—sugar accounts for 40 per cent. of the total cost of confectionery production—the confectionery industry pays as much as Rs. 2-12 by way of excise duty and Re. 1-14 by way of cess on cane. This, indeed, it a heavy impost which has been responsible for keeping down the level of confectionery consumption. In most countries where the confectionery industry is flourishing, we are told, no excise duty is levied on sugar consumed by the confectionery industry. After all, by abolishing the excise duty on sugar and the cane cess, the Government will only be removing tax on raw material.

There is also considerable justification in Mr. Khanchand's plea for granting the drawback of import duty on glucose, cellophane paper, essences, etc., used in the production of quality confectionery meant for exports. Although several months have elapsed since the Central Government was invested with statutory powers to grant drawback of import duty on raw materials used in the manufacture of goods which are subsequently exported, no drawback has still been granted to this industry.

It is, however, difficult to agree with Mr. Khanchand when he urges imposition of ban on imports of foreign confectionery. True, the Indian manufacturers, at least some of them, have the equipment and technical knowledge to produce quality confectionery. But, on that score alone, the plea for a complete ban on foreign products cannot be justified. For the quality of indigenous products remains yet to be improved. And such improvement can hardly be expected under conditions of monopoly created by a total ban on imports. There will be little incentive on the part of the indigenous industry to produce high quality confectionery at competitive prices which is necessary for encouraging consumption of sweets. And, surely, consumers' interests cannot be disregarded. If, however, the confectionery industry feels that foreign competition is injuring its interests, it would be justified in asking for higher tariff protection.



REVIVAL OF TEA INDUSTRY

IMPLEMENTATION OF PLANTATION LABOUR ACT PRESENTS COMPLEXITY

THE Indian tea industry is, undoubtedly, in more favourable circumstances than it was in 1952 and early 1953. But it can by no means be contended that it has completely overcome the ill-effects of the slump which overtook it in 1952 and that the loss suffered by the industry in that year has been completely made good. This is clearly evident from the speech of Mr. S. H. Davies, the retiring Chairman of the Indian Tea Association, Calcutta, at the annual general meeting of the Association held last week. In this speech, Mr. Davies gave a clear description of the events that have contributed to the recovery of the industry, thereby enabling one to view the present position of the industry in its proper perspective. As Mr. Davies rightly put it, the credit for arresting the slump and bringing it back to a fair measure of prosperity belongs goes to all concerned, namely, the planters, the labour and the Government. The planters, particularly of Northern India, decided to readjust the production just enough to cover the demand by saying greater emphasis on quality. The labour readily agreed to make some sacrifice by accepting cut in wages and by agreeing to the postponement of the application of the Plantation Labour Act to the tea industry. The Government assisted the industry by giving guarantee to banks on behalf of those estates which were in need of financial accommodation and by agreeing to defer the collection of excise duty.

It is gratifying to find that Mr. Davies made a generous acknowledgment of the helpful attitude taken by both the labour and the Government towards the industry when it was passing through difficult days. In fact, his address was in refreshing contrast to the speeches of many a spokesman of private enterprise, in that he used no harsh language either against labour or Government; even where he was critical, he showed restraint. This attitude of friendliness and understanding of the other fellow's difficulty will go a long way towards harmonious relationship between all the parties concerned. Lest the change in fortunes of the industry should give an impression that all is well with the industry, Mr. Davies sought to impress upon the critics that there were many companies which were still loaded with debt and fighting for survival. He also recounted the difficult tasks that lie ahead of the planters in the implementation of the Plantation Labour Act.

First Step Towards Recognition of Difficulties

The appointment of the Rajaram Rao Committee to enquire into the conditions of the tea industry was the first step by the Government towards the recognition of the planters' difficulties. It is true that the Committee's recommendations did not lead to any reduction in the burdens on the industry, but they were at least helpful in deferring the imposition of further burdens. Further, as Mr. Davies admitted, the Government of India's appreciation of the seriousness of the crisis had a salutary effect upon many thoughtless critics and made financiers less averse to advancing money to the planters.

The improvement in the demand for tea from the U.K. which is India's biggest customer for this beverage, was the dominant factor in the industry's recovery. The initial results of the derationing of tea in that country in October, 1952 was disappointing, in that the demand fell off considerably for several weeks, while domestic consumers used up the stocks which they had hoarded in the course of a decade. Fortunately, this trend proved to be a short-lived affair and demand again revived and has now become keener. The third factor which helped the industry improve its fortunes was the decision of the North-East Indian planters to regulate their 1953 crop, so that supply would be more in line with demand. But, actually, the task of regulation was taken out of the planters hands by climatic conditions. A sympathetic nature, to quote Mr. Davies, so devised things that the crop which they were able to produce was 21 million lbs. less than the target at which they had aimed under their regulation scheme. Thus, if the adverse weather conditions had not intervened, the crop would have been 21 million lbs. more than what has been harvested and tea prices also would not have been as high as they are now. Thus, in the words of Mr. Davies, "this short-fall has given far greater prominence to the 1953 scheme than the scheme's working perhaps deserved." But significantly enough, the mere news that the North Indian planters were trying to equate supply with demand had an excellent effect. Mr. Davies revealed that, from the time that Indonesia was over-run in 1942, until 1952, their aim had been to produce an even greater crop; but, in December, 1952, they announced what was in effect their intention to increase production no more.

Crop to be Regulated in 1954 Also

Replying to the criticism in some quarters to the effect that the regulation in North-East India alone gave an unfair advantage to tea producers in other areas and in other countries, Mr. Davies said that the planters in North-East India had no intention of regulating their crops to enable others to produce tea without consideration of market requirements. He hoped that others would realise the danger of unplanned production and that no one would be so foolish as to jeopardise their position and his own by an injudicious scramble to produce more tea. Vigorously defending that the regulation policy was not aimed at creating artificial shortages, he remarked:

"The line of demarcation between a genuine desire to produce just what the consumer requires and a rather wicked wish to produce slightly less is difficult to draw, and difficult to observe. As a result, the accusation of restrictive practices is an accusation easily made. Nevertheless, we have a duty to our shareholders and to our workers to do everything in our power to avoid selling our teas at a loss; and we have seen both in 1933 and in 1953 that the regulation of crop provides the necessary corrective to the buyers' belief that the supply of tea is inexhaustible. It is, therefore, our intention, and the intention of our sister associations in North-East India, to regulate crops in 1954; but I will take this opportunity of assuring you all that the aim of our regulation is not to keep the markets short of supplies, but to make certain that, so far as lies in our power, everyone can get as much tea as he wants, if he pays a fair price. And it should never be forgotten that the price of tea has not risen so much since 1939 as have the prices of other commodities."

Mr. Davies greatly appreciated the sacrifice made by labour in agreeing to a reduction in the statutory minimum wages and the approval given by the State Governments for such a cut. "There can be no doubt," he said, "that the acceptance by State Governments and by employees of the need for wage cuts had an effect which seems to have justified the sacrifices, heavy though these were." However, during the last five months, wages were restored to the level at which they existed in 1952, save in Cachar, where an agreement is stated to have been reached with labour. According to this agreement, certain low yielding estates have been permitted to pay As. 2 per day less than the old level of wages, but all other gardens are to return to the level that existed in 1952.

The crop regulation and wage reductions alone could not have brought so great a change in the industry's fortunes, had not the demand for tea increased. But for the revival of demand and the consequent rise in price, Mr. Davies observed, no sacrifice by employees, agency houses and shareholders, and no economies, however drastic, would have enabled some of the planting companies to remain in business. Projecting his thoughts to the immediate future, he pointed out that the wholesale stocks were at present lower than usual and that demand would not greatly slacken until 1954 teas became generally available.

Problems that Attend on Prosperity

Though it is gratifying that markets are now in favour of the industry, Mr. Davies is fully aware that prosperity brings its problems as well as adversity. Thus, he said that violent fluctuations like those which were noted in the last two years were undesirable and extremely dangerous. "We prefer steady prices which give us a modest profit," he added, "rather than prices which one year do not cover our wage bill and the next year make us the objects of envy and suspicion." In the second place, in many gardens, the average earnings per pound of tea in 1952 and in 1953 are said to have just covered the average cost of production. In the case of some others, even the record profits of 1953 have not wiped out the record losses of 1952. Thirdly, the present level of prices seems to have caused dissatisfaction among some of the customers, though, as Mr. Davies reminded them, they forget that, in 1952, they paid very low prices for teas of identical quality.

Three important decisions were taken at the recent session of the Industrial Committee on Plantations, which have thrown a heavy burden on the industry. The first one was that the lay-off provisions of the Industrial Disputes Amendment Act should be extended to plantation industries. Commenting on this, Mr. Davies said that though there were misgivings based on legitimate grounds, he hoped, that the decision might prove to be a fair one; in any case, if the provisions of the Act were found to be unsuited to the tea industry, the necessary modifications could always be made. Only experience could show the wisdom of the decision.

Implementation of Plantation Labour Act

The next important decision was the conversion of wages in kind into wages in cash in the Assam Valley. The third decision was that steps should be taken to implement the Plantation Labour Act, which was passed two years ago. It is estimated that to carry out the provisions of the Act, it would cost the industry a sum exceeding the industry's present paid up capital. Mr. Davies, therefore, felt that phasing was inevitable, but the preparation of a phased programme would be one of the most difficult and delicate tasks which the industry had undertaken. Because, in the first place, the Act provides for the exemption of areas and classes of estates from some or all of the Act's provisions. Secondly, programmes will have to be prepared for commodities as diverse as tea, coffee, rubber and cardamoms; for units most prosperous and for units most poverty-stricken and for plantations in the mountains and in the valleys.

The Act has cast on the industry two other duties, namely the construction of houses for the workmen, in accordance with an agreed specification, and the provision of educational facilities. As regards the first duty, the tea industry has always housed its labour, but the task before the industry is to re-house the workers whose present quarters do not comply with the approved standards. Mr. Davies was not opposed to providing houses to labour in accordance with the agreed specification, but he called upon the Government to give sufficient encouragement and make available steel and cement at fair prices. As regards the provision of education facilities, Mr. Davies said that he knew of no other industry which was expected to educate the children of its workers.

Be that as it may, whatever programmes are decided upon, their fulfilment would be dependent upon the continuation of trading conditions no worse than which existed when the programmes were made. Mr. Davies emphasised that this fact must clearly be recognised, as must the fact that increase in taxation, whether State or Central, and modifications in the wage structure might necessitate a complete revision of everything that had been planned.

COMPETITION BETWEEN STEEL AND ALUMINIUM

NEW METAL AGE IN THE OFFING?

MANY people foresee steel age yielding place to aluminium age. Evidently, the discovery of new uses to this versatile metal and the extreme lightness of the metal which gives it a great advantage in all forms of transportation is responsible for such an optimistic outlook. The main obstacle, however, is the higher cost of production of aluminium, as compared with that of steel.

Viewed against this background, the report of the Industry Division of Economic Commission for Europe, entitled *Competition between Steel and Aluminium* makes interesting reading. A significant feature of the report is that, as the ramifications of the aluminium industry go far beyond any single country or even a continent, the problem is discussed on a world-scale, with attention, however, being focussed on Europe.

The relative rates of expansion of aluminium and steel industries disclose that competition offered by aluminium is steadily increasing, although it is bound to remain limited for a long time to come as world production of aluminium still constitutes hardly 3 per cent. of the world output of steel and is expected to increase to not more than 5 per cent. by 1960. The rate of growth of aluminium industry reveals that, since the beginning of the century, the production of aluminium has increased only by 10 per cent. a year, so that the output has doubled by seven years; this rate of growth is expected to be maintained in the next decade. The development of the aluminium industry is comparable to that of the steel industry during 1880 and 1910, when the output of steel also doubled. Since then, however, the output of steel has increased less rapidly and has taken more than twenty years to double itself.

On the assumption that a high and growing level of activity continues, the real limiting factor on the consumption of aluminium appears to be the slow rate of growth of production facilities. A number of factors are attributed to this slow rate of growth. First, the capital cost per ton of aluminium to be produced is more than ten times as great as the capital cost per ton of steel. Secondly, it takes three to fours years to build a fully integrated steel works with a capacity of 1 million tons, but almost twice as long to build a similar integrated aluminium plant. Thirdly, aluminium-smelting, to be economic, must be done on an increasing scale in countries with rich but underdeveloped hydro-power resources, mainly in the far North or in the tropics, far away from the main consuming centres; this is the reason why a significant expansion of aluminium production in western Europe is unlikely, except in Norway and Yugoslavia. Steel output, on the other hand, is not limited to such an extent by any of these three factors, and in fact small-scale works, for example in underdeveloped territories, can be economic under certain conditions and productive capacity can be built up within a short period. In addition, in industrialised countries, the growth of steel capacity seldom takes place on entirely new sites and generally comes through the development and modernisation of existing capacity.

Prices

A significant feature to be noted in this connection is that the rates between the price of steel and that of aluminium has steadily narrowed down during the last thirty years and is now about 2:1 on equal volume basis. There appears to be, according to the report, some prospect of a little further narrowing of the ratio in the years to come but probably not at the same rate as in recent years. Electric energy is a significant element in the cost of aluminium production and there is a marked spread of electric energy costs. Producers enjoying low-power costs are already, or are likely to become, the dominating factor in the market and the effect of this factor should be to reduce the cost of aluminium.

It is not merely the expansion of primary aluminium industry, but also of the secondary industry, that is to be reckoned in considering questions relating to competition between aluminium and iron and steel. The secondary industry, working on aluminium scrap, competes almost entirely with the iron casting industry. It is highly probable that secondary aluminium will be an increasingly formidable competitor to iron castings, in view of development of high-duty alloys and the easy machining properties of aluminium as compared with those of cast iron.

A large part of the growth in aluminium consumption has been in new applications (for instance, aircraft) and as a replacement for other non-ferrous metals (for example, copper in electric cables), rather than as a replacement for steel. Nevertheless, about half the aluminium consumed throughout the world is in direct competition with steel. Competition in the fields of packaging, containers, ships and railways is limited, but it is of growing importance in building, civil engineering, household equipment, road transport and mechanical engineering. Most of the steel so far displaced by aluminium has been in the form of sheets, where aluminium is competing to the extent of 4 per cent. of world production of thin steel flat products, on a volume basis. With the rapid development of the wide-strip mill by the steel industry, however, there is every prospect of a fall in steel sheet prices. Relatively minor competition is offered in the form of tubes, light structural shapes, steel castings and forgings; so far, aluminium is competing in these fields to the extent of only 1 to 1.5 per cent. of production, on a volume basis. Moreover, in this field, new methods of construction and usage of steel are being developed. In addition, distinction should be made between commercial grade steel and steel alloys. In many fields of application, competition is between aluminium and steel alloys, particularly stainless steel, rather than between aluminium and commercial grade steel. Here again new steel alloys and new methods of using steel alloys are being developed.

Need for Imaginative Approach

Although competition of aluminium to steel is bound to remain limited for a long time in view of the fact that the expected output of aluminium will be hardly 5 per cent. of the expected output of steel by 1960, the steel industry cannot afford to ignore aluminium as a competitor in certain fields. In other fields, however, the two industries may be partly complementary and could develop side by side without serious hindrance to each other's progress. The report says that, in order to protect its position, it is necessary for the steel industry also to adopt an imaginative approach and to concentrate particularly on new designs for using smaller quantities of steel in a given structure. Much more could be done, for example, to educate consumers in the weight reduction possibilities of using flat products instead of rolled sections. Considerable efforts are now being made, for example to reduce the amount of steel used in railway rolling stock by better design and the use of higher quality steel products. In the building and civil engineering industry, on the other hand, it would appear that much more could be done to save weight by avoiding the use of unnecessary steel.

Dealing with the prospects for aluminium under the title *Aluminium versus rest*, Mr. Oscar R. Hobson, City Editor of News Chronicle, London, observed recently as follows:

"In the past decade, as scientists discovered new uses for this versatile material, many people foresaw the dawning of another epoch in the metallic history of man, the Steel Age giving way to the Aluminium Age. Last year, however the phenomenal progress of the metal was sharply checked and today aluminium may truly be said to stand at the cross-roads. The enormous developments in the use of aluminium were greatly helped by shortages of other metals, and now, with improved steel supplies and freed and cheaper copper, lead and zinc, aluminium has to stand on its own feet. Whatever the future of aluminium may be there is no doubt that science has assured a huge potential demand for the metal. Its extreme lightness gives it a great advantage in all forms of transportation where it increases speeds and lowers fuel costs. Experiments in the use of aluminium in railway rolling stock have proved highly encouraging, and, afloat, the new luxury liner United States contains no less than 2,000 tons of aluminium. Copper has increasingly felt the competition of aluminium, especially for the conducting of electric current, and recently underground cables have even been laid with aluminium in place of the traditional lead sheathing. The main battle, however, will be fought with steel. The new aluminium strip mills now under construction in this country (the U.K.), Canada and the U.S. will turn out such products as corrugated sheets, roofing sheets and sheets for the canning industry and so compete head on with steel. Such competition is already quite marked in the United States. The Paley Commission's report on America's raw material requirements envisaged a large and continued rise in the demand for aluminium. But demand is necessarily dependent upon price and if aluminium is to seize the vast opportunities laid before it by science it will need to be cheaper. Not much cheaper, perhaps, as its advantages seem to be so great that a small reduction in its price would probably lead to a very great increase in its use. Until such a reduction in price occurs aluminium will probably not make very much more headway, as manufacturers feel that at twice the price of steel most of its advantages are outweighed. The future of aluminium is thus now solely a matter of price. Technically its future is assured. The price of the metal is particularly difficult to predict at the moment. On the supply side capacity is expanding at a tremendous rate. The United States has several plants under construction and in Canada, Aluminium Ltd., Britain's chief supplier, has a mammoth project under way in British Columbia. Farther afield there is the great Volta River project on the Gold Coast which, if the plans are implemented, should eventually produce over 200,000 tons per year—roughly equal to four-fifths of Britain's present consumption. The sponsors of that project have in recent months been showing signs of getting cold feet. On the demand side, of course, the immediate prospect depends upon what happens in America."

The future course of the prices of these two metals will be watched with interest. For, the mere fact that there are immense technological possibilities for aluminium to replace steel will not, by itself, ensure, as Mr. Oscar Hobson points out in effect, the former's success. Much will depend on the relationship between the prices of the two metals.

IRON-ORE DEPOSITS IN SALEM AND TRICHINOPOLY

A Bulletin entitled *The Iron-ore deposits of parts of Salem and Trichinopoly districts* has just been published by the Geological Survey of India, under the joint authorship of Dr. M. S. Krishnan and Mr. N. K. N. Aiyengar. It gives detailed description of the different groups of iron-ore deposits in these districts together with notes on geology, analysis of samples, reserves of ore, etc. It provides useful data to those who are interested in the development of the mineral deposits of the Madras State.

The Bulletin discloses that a number of important bands of iron-ore composed of a mixture of magnetite and quartz traverse the eastern part of the Salem district and the north-western districts. Some of the individual bands can be traced over a length of more than 20 miles. The best known deposits are those of Kanjamalai about five miles west-south-west of Salem town. The others occur in the Godumalai, Perumalai, Chitteri Hills, Tirthamalai, Attur Valley near Namakkal, etc. The total reserves of all the ores, which contain a minimum of 25 per cent. of magnetite, and within a depth of 100 feet from the surface of the outcrops, has been estimated at 305 million tons. The average ore contains 35 to 40 per cent. iron, about 50 per cent. silica, up to 0.19 per cent. phosphorus, 1.5 to 2.5 per cent. alumina, very low sulphur and low titania. The ore being magnetic, it is amenable to crushing and electro-magnetic separation. Laboratory experiments have proved that it is possible to obtain concentrates containing 55 to 65 per cent. iron. The major obstacle to the smelting of these ores is the lack of coal and cheap power in the Madras State. The question of smelting these ores will have to be studied in all its aspects before any proposal can be seriously considered.

IRON AND STEEL SCRAP PRICES

The Government of India has decided to revise the statutory selling prices of iron and steel scrap with effect from 22nd March, 1954. The proposed revision will be made with a view to rationalising the prices of different classes of scrap with reference to the prices of corresponding categories of standard material, the uses to which they can be put and their availability in relation to the demand. The prices of certain categories will be reduced, while the prices of certain others will be increased. In the case of melting scrap prices, the change proposed is only in respect of the basis of sale, i.e., from f.o.r. main ports basis as hitherto to ex-site basis which means that the freight will have to be borne by the buyer. Another change proposed is that, while the place extras in force for standard steel will apply to fresh unused defectives and cuttings only, all other varieties of scrap (except melting scrap) will be subject to the lower place extras in force for pig iron. As a result of this revision, it is expected that the availability of scrap, particularly for re-rollers and for electric furnace owners, will improve.

INDIAN IRON AND STEEL COMPANY, LIMITED

MR. T. LESLIE MARTIN'S SPEECH AT ANNUAL GENERAL MEETING

ABILITY TO CONSERVE RESOURCES DEPENDS ON FIXATION OF APPROPRIATE PRICES

ADDRESSING the shareholders of the Indian Iron and Steel Co., Ltd. at their adjourned Annual General Meeting held at Calcutta on 10th March, 1954, the Chairman, Mr. T. Leslie Martin, explained why the Directors could not transfer to the reserves any sums other than the stipulated provisions against the rehabilitation of the plant. This was because, he said, of the pending adjustment of the income from the sale of steel for the three months, January, February and March, 1953, on the basis of the proposed revision of steel retention prices from 1st January, 1953. The future ability of the Company to maintain the dividend at a reasonable level, to provide the Company's contribution towards the cost of expansion and to repay the loans in the stipulated instalments also depended, according to Mr. Martin, upon the new retention prices to be announced by the Government. Mr. Martin also referred to the recent strike in the Company's works and explained its impact on the Company's production and finances.

The following is the full text of Mr. Martin's speech:

"GENTLEMEN,

"The most outstanding events during the last financial year were the completion and coming into effect of the merger and the finalisation of our loan agreements with the World Bank and the Government of India. In my speeches at the last annual general meetings of the Indian Iron and Steel Company and the Steel Corporation of Bengal, and in the circular letters addressed to the shareholders of the two Companies in 1952, the history of the merger and the loans, their implications and their effect on the immediate and future prospects of the great scheme of extensions, which thereby became possible, were fully explained to you. In the Directors' report which has been in your hands for some days, we have portrayed the actual consequences of these two events on the financial structure of the Company and the trading results. It is, therefore, not necessary for me to dilate on these topics at any length.

"The previously issued capital of Rs. 1,50,00,000 in preference shares and Rs. 2,55,25,960 in ordinary shares has now been increased to Rs. 2,69,95,400 in preference shares and Rs. 5,18,37,080 in ordinary shares by the issue of Rs. 1,19,95,400 preference shares and Rs. 2,63,11,120 ordinary shares to the shareholders of the Steel Corporation of Bengal in exchange for their holdings.

Profit and Loss Account

"The profit and loss account may possibly present some difficulty to you in its full understanding and it will perhaps help if I point out that it is necessary to bear in mind that up to the 31st December, 1952, the Indian Iron and Steel Company and the Steel Corporation of Bengal were trading as entirely separate entities, their relationship being governed by the 1937 Agreement which provided for the supply of hot metal and services by the Indian Iron and Steel Company on the basis of cost plus a margin of profit. From the 1st January, 1953, this Agreement ceased to be operative following upon the merger and, therefore, all such supplies from that date also ceased to constitute inter-company trading transactions carrying a profit element, and became instead inter-departmental transfers at cost as between the steel and iron sections of the amalgamated concern. You will accordingly find that there is included in the profit and loss account the Indian Iron and Steel Company's normal 20 per cent. share of profits of the Steel Corporation of Bengal to the 31st December, 1952, but nothing in respect of the quarter ended 31st March, 1953, since the full gross income and expenditure and, hence, the entire profits of the post-merger Steel Corporation of Bengal from the 1st January, 1953, are incorporated directly in the account under the appropriate heads. Similarly, the item 'sundry income' which consists primarily of the value of the services provided under the 1937 Agreement records a decrease from the previous year, since in the present account it covers not a full year, but a period of nine months only from the 1st April, 1952, to the 31st December, 1952.

"The Steel Corporation of Bengal accounts for the year 1952 are appended to the Directors' Report and have, of course, been prepared on the pre-merger basis. After providing for depreciation and the rehabilitation allowance as recommended by the Tariff Commission, the Indian Iron and Steel Company's 20 per cent. share of profits under the 1937 Agreement, taxation and other commitments and the payment of the full dividend for the year on the preference shares and a 2½ per cent. interim dividend on the ordinary shares, the balance of net profit of the Steel Corporation of Bengal for the year 1952 has been transferred to the Indian Iron and Steel Company Account in accordance with the provisions of the Iron and Steel Companies Amalgamation Act, 1952.

Depreciation Charge

"From the foregoing you will appreciate that the profit and loss account is of necessity by reason of the merger a very composite affair comprising: firstly, twelve months' activities of the pre-merger Indian Iron and Steel Company to the 31st March, 1953; secondly, the profit margins to the 31st December, 1952, receivable from the Steel Corporation of Bengal under the 1937 Agreement which are, of course, offset by reason of the fact that they have been charged in the 1952 accounts of the Steel Corporation before arriving at profits for that year taken over; and, thirdly, the trading results in steel of the Indian Iron and Steel Company for the post-merger months of January, February and March, 1953. Since the trading in steel for these three months is additional to the previous activities of the Company, certain additional provisions in respect of the quarter have had to be made. The former normal depreciation charge of Rs. 40 lakhs is accordingly increased to Rs. 50 lakhs by the inclusion of Rs. 10 lakhs being one quarter of the Rs. 40 lakhs' previous annual allocation of the Steel Corporation of Bengal and a sum of Rs. 3,62,000 is set aside for the rehabilitation of the steel plant at the stipulated rate of Rs. 14,48,000 per annum.

"Finally, to the net profit as above determined is added the balance of the net profit of the Steel Corporation of Bengal for the year 1952 taken over and after allowance for the dividend payable on the preference shares, we arrive at the amount of profits available for distribution on the amalgamated ordinary share capital.

"An *ad-interim* dividend of Re. 1 per share has already been paid to you. Though this has been described as an *ad-interim* dividend, we made it clear at the time of declaration and have again referred to this point in the Directors' report that no further recommendation in respect to dividend will be made for this year.

Rehabilitation of Plant

"As has been mentioned in your Directors' report, the realisations on the sale of steel for the months of January, February and March, 1953, have been based on the prices fixed for 1952, since the question of the revised prices to apply as from the 1st January, 1953, is still under the consideration of Government. Pending the adjustment of the income from the sale of steel for those months, it has not been possible, having regard to the rights of the shareholders to a reasonable return upon their investment, to place to reserves any amounts other than the stipulated provisions against the rehabilitation of the plant.

"The Directors are of the opinion, which I am sure you will share, that it is imperative, in view of the tremendous liabilities of the Company has to shoulder in order to carry out the expansion scheme, to set aside as much as possible out of earnings to pay off its commitments as quickly as possible and also to provide for the large sum of finance, approximately Rs. 7½ crores which it has agreed to contribute from the Company's own resources to supplement the loans granted by the World Bank and the Government of India. As a commencement and with this object in view, we propose to carry to reserve the net difference after providing for taxation, between the former and the increased retention prices of steel for the three months January to March, 1953. Until we are informed of the decision of the Government of India in the matter we are, of course, unable to compute what this is likely to be.

Retention Prices

"In the terms and conditions on which the loans by the World Bank and the Government of India have been granted and in their respective amounts, there has been no material departure from what was conveyed to you in my last two speeches and as set forth in the circular letters addressed to you during the course of negotiations. As regards our ability and desire to maintain dividends at a reasonable level, provide the Company's contribution towards the cost of the expansion and to repay the loans in the stipulated instalments, this will depend wholely upon the revised retention prices recommended by the Tariff Commission and sanctioned by the Central Government. So far as we know, no final decision in the matter has as yet been taken. The continued liquidation of our financial commitments will, also, be governed by the retention prices which are fixed after the scheme of expansion has been completed and brought into economic operation. We hope that the principles by which retention prices were fixed prior to the merger, with such modifications as may be necessary and as may be appropriate and justified by later circumstances, will continue to be applied until both these loans and our other loans have been fully repaid out of earnings. It was on this understanding that the Company agreed to expand its undertaking and was willing to accept the consequent heavy financial liabilities. The Company feels that it is entitled to assume that the Government will, during the continuance of the repayment period of the loans, adhere to the principles laid down in the Report of the Tariff Commission, 1952, and accepted by the Government, viz.:

"'I.I.S.C.O. and S.C.O.B. may be informed that should the Hirapur Iron Works be amalgamated with S.C.O.B., the retention prices of steel produced by the amalgamated concern will be calculated on exactly the same principles as have been applied in the case of Tatas.'

which imply that there shall be no departure, to the disadvantage of the Company, from the principles that applied in the case of Tatas prior to the merger.

Labour Unrest

"I shall now refer to the intolerable conditions under which we have had to work during the year 1953. You will all be familiar, from what was published in the Press, with the attitude labour adopted at the Burnpur Works during the major portion of the year, a full eight months to be exact. At first, a 'go-slow' strike in the sheet mills was resorted to and this eventually developed into a virtual cessation of work in all departments. This started in January of last year and, as time went on, it became evident that the root cause of the trouble lay in a contest between rival unions, one sponsored by the Behar Provincial Congress and the other by the West Bengal Provincial Congress. It was, further, manifest that the management were outside the orbit of the dispute but were freely used by both sides when circumstances were favourable. The management were in constant and, at times, daily touch with the Central Government and the State Government of West Bengal throughout the whole period and we are not unmindful of their earnest endeavours to bring about a settlement of the dispute. When this failed after every possible means had been explored, it was finally decided with the concurrence of the Central and West Bengal Governments to declare a lock-out on the 24th of August and I would here express our appreciation of the help so readily afforded by the Military Authorities and the West Bengal Armed Police in the precautionary measures that had of necessity to be taken to ensure the personal safety of the staff and the prevention of damage to the plant. The lockout lasted for some three and a half weeks and apparently brought labour to their senses. It became evident that the contending parties were losing interest in a continuance of the battle and steps were immediately taken by the management gradually to re-establish normality in the works and offices at Burnpur. Since then, and up to the present moment, all has been fair sailing.

"It is difficult to assess accurately the loss sustained by the nation as a result of this unfortunte dispute, but a revealing picture can be drawn from a scrutiny of facts and figures which, to say the least of them, are thought-provoking.

Estimated Loss

"From the time the 'go-slow' action commenced at Burnpur in the sheet mills on the 18th January, 1953, to the time the lockout was lifted and normal working conditions restored, no less than 2,373 total productive hours were lost. This represents nearly one-third of a normal year's activities. The resultant output losses in the productive departments, taking the year 1952 as the basis for comparison, are as follows:

	Tons
Coke	125,376
Steel ingots	101,795

"Whilst the 'go-slow" strike in these departments was effective from the middle of June, the trouble in the sheet rolling mills started from the 18th January and the loss of production in the finishing mills on the same basis as above was as follows:

	Tons
34" mill	52,422
18" mill	45,728
Sheet mills	41,256
Galvanising plant	25,317

"In addition, heavy losses in production were sustained in the by-product departments. The loss of approximately 100,000 tons of finished and semi-finished steel to the country had a very serious effect on trade generally and brought about great hardship amongst large and small steel fabricators, small traders and cottage industries throughout the country. The railways were deprived of a large amount of revenue on the freight of raw materials and finished products.

"Having dealt with the loss in production tonnage under various heads, I will now turn to an approximation of the financial losses involved.

"The loss of revenue to the Company amounted to Rs. 1,60,00,000; the loss to workers on wages and bonus Rs. 30,00,000, and the loss to railways on inward and outward freight Rs. 70,00,000.

"Such is the reign of labour at present and, I would say, political expediency. India's future and prosperity demands an immediate review of the whole system of its handling of the labour question and the institution of laws and regulations which will provide a full day's work for a fair wage. Another point I would like to stress, and a matter greatly to be deplored, is the capture of various unions in the country by divergent political parties. This tends to make the existing confusion more confounded and can only result in a widening of the gap in the relationship between management and labour. If a solution is to be found to correct this state of affairs, it rests with Government.

"A moment ago, I referred to the loss of revenue incurred by the Company as a result of these unfortunate happenings. The Company has strongly represented their side of the case to the Government and at the close of the current financial year, when a proper assessment can be made as to the actual damage entailed, it is to be hoped that the Government will not turn a deaf ear to our claims.

"The trading results as described in the accounts and the Directors' report for the year 1952-53 will, I hope, be considered by you as satisfactory. I would, again, draw your attention to the fact that the accounts include, in addition to the normal activities of the Company for the year, the trading of the former Steel Corporation of Bengal for the quarter from the 1st January, 1953, to the 31st March, 1953. In accordance with past practice comparative figures for the previous year are shown, but since these refer to twelve months' pre-merger working no true comparison can be drawn and it will not be until the year ending 31st March, 1955, that it will be possible to compare two full years' detailed trading results of the merged undertaking. The comparative figures shown in the balance-sheet, however, indicate the effect of the merger on the capital structure of the Company.

Hirapur Furnaces

"As regards the production of pig iron for the year, this has been somewhat less than that of 1952 owing to the fact that one blast furnace at Kulti was off for re-lining for a period of four and a half months. During the years 1954 and 1955, both the large Hirapur Furnaces will be out of commission for several months for re-lining; one in 1954 and the other in 1955. This will inevitably have a material effect on the production of steel during these years.

"I am glad to be able to record that all railway transport facilities have been efficiently maintained by the authorities in spite of the difficulties of the year under review, but there is one feature in rail transport of raw material which deserves the serious attention of the Railway Administrations. There is not a shadow of doubt that the pilferage of pig iron in transit is on the increase and, at times, runs to a high figure. As you can understand this unauthorised 'offtake' is a matter of considerable consequence, not only from the point of view of a loss of revenue, but also to the enablement of unfair competition with our Kulti foundry products. Such nefarious practices are, admittedly, difficult to eradicate entirely, but perhaps measures could be designed to keep this unhappy practice at a minimum.

"In concluding, I would take the opportunity of expressing on your behalf and on behalf of your Directors our appreciation of the services rendered by your General Manager, Mr. J. McCracken, and his executive and supervisory staff throughout the year and particularly during the troubled conditions that prevailed in 1953. It is perhaps not realised how greatly in these days is the attention of the managerial staff diverted from a proper productive effort by the ever-present problem of labour relations and at a time when the national progress demands the highest possible level of production, it will be appreciated how easily could a sense of frustration be engendered by conditions such as have been experienced. It is greatly to their credit that they have not allowed this to happen as figures of current production evidence, and our thanks are due to them for their loyal service and unabated efforts."

WORLD WOOL CONSUMPTION RISES

World consumption of virgin wool in 1953 is provisionally estimated to have been 11 per cent. above 1952, according to a Commonwealth Economic Committee announcement issued in London. In 1953, production of wool tops set up a new post-war record. The provisional total world consumption of virgin wool amounted to 2,600 million lbs. clean, the second largest total since the war and only three per cent. less than the record reached in 1950. British consumption was 29 per cent. above the previous year, while substantial increases were recorded by most other West European consumers. U.S. consumption rose by only 3 per cent. and consumption in Japan is estimated to have improved by about 27 per cent. to a new post-war peak.

The annual figures, however, mask trends during the course of the year, the Committee warns. To quote it: "The rate of wool consumption was rising during the first two quarters of 1953, but it flattened off during the third quarter and declined quite noticeably in the final three months—the first significant fall for two years. The main reduction occurred in the United States, but there was decline also in a number of other countries, including the U.K. World consumption in the fourth quarter, in fact, is estimated to have been a shade lower than in the corresponding period of 1952."

Consumption by the wool textile industry of materials other than virgin wool (for example, waste, recovered and reprocessed wool, and artificial fibres) increased by some 6 per cent. during 1953 as compared with the previous year. But it was below the peak figure of 1951, when high wool prices greatly encouraged use of these materials as substitutes.

INCREASE IN EXPECTATION OF LIFE IN INDIA

CENSUS ACTUARY'S REPORT

THE recent decision of the leading Indian insurers to cut the premium rates for life assurance is partly based on the significant increase in the yields on their investments and partly on the welcome improvement that has taken place in their mortality experience. This latter factor is of profound significance to the future of insurance in India; for, unless there is a progressive improvement in expectation of life, it would be difficult to render a cheaper insurance service. Fortunately, the Actuarial Report (Census of India Paper No. 2 of 1954) on the investigations into 1951 Census, conducted by Mr. S. P. Jain, the Census Actuary on the 1951 census data confirms the leading Indian insurers' experience about mortality rates in this country in an indirect way since the Report shows that the expectation of life in India is 32.45 for males and 31.66 for females, as against the last official estimate of 26.91 for males and 26.56 for females, made by Mr. L. S. Vaidyanathan of the Oriental Life Office on the basis of the 1931 Census. Thus, the latest figures record an increase of a little over five years as between the two estimates, which relate to periods separated by two decades.

No official estimate of the expectation of life based on the 1941 Census was made, but Professor Kingsley Davis in his book, *Population of India and Pakistan*, has estimated the expectation of life at 32.09 for males and 31.37 for females. The latest estimates show an increase in the Indian expectation of life by practically one-third of a year over the 1941 figures. A significant departure in the 1951 Census was the single-year age tabulation of a 10 per cent. systematic sample of the entire population. It facilitated a detailed study of the peculiarities of the Indian age returns and the adoption of methods appropriate to the features shown. This could not be done on the previous occasions, as the information on age was compiled in predetermined age groups for the entire population, and the Actuary had to make the best use of it in conjunction with the single-year age distribution shown by the population of small representative tracts. The Paper gives the latest Indian life tables. The rates of mortality in the tables are compared with those obtained by Professor Kingsley Davis from 1931 and 1941 Census data and by Mr. Vaidyanathan in his Oriental Ultimate Experience (1925-35) based on carefully recorded data relating to insured lives.

Comparison With Other Countries

Although there has thus been a notable improvement in the expectation of life, India occupies a very low place in the list of countries, arranged according to the latest available figures of expectation of life at different ages. Even Egypt, India's nearest neighbour in this respect, is considerably better than this country at all ages. The percentage of Indian males surviving to age 20 is now 58 as against nearly 45 in the beginning of the present century, but the figure compares very unfavourably with the level of over 80 per cent. for the better developed countries. The same idea may be otherwise expressed by saying that now 50 per cent. Indian males survive to age 32, as against to 14 previously, whereas this age is 65 to 70 for other important countries. These figures show that there has been a reduction in the Indian mortality, in the early years, but the position is very unsatisfactory when compared to other countries.

Indian mortality tables show some peculiar features, due partly to the social customs in this country and partly to the high rate of infant mortality and of mortality of women during maternity. Thus, the Report points out that in countries with a low infant mortality rate, e.g., United Kingdom, the expectation of life decreases with an increase in age, but in India it is not so. The Indian expectation of life at age 5 exceeds that at birth by a little over 8 years. Similarly, the expectation at age 20 exceeds that at birth. Males attaining age 21 and females reaching age 22 may on the average expect to live as long as a new born child. These features are due to the hazards of life in India being heavy in the early years. The English life tables show the lowest rate of mortality at about the age of 12 or 13, but in India the process of reduction in mortality from its very high level in the early years continues longer and the lowest mortality rate is recorded at about the age of 17 or 18. In the adult age period upto 45, say, the mortality goes on increasing though rather slowly but thereafter it increases rapidly. Women show, as compared to men, a slightly lower infant mortality but a distinctly heavier mortality during the rest of the childhood ages upto the age of 11. This feature is attributed to the social custom of bestowing better care on boys than on girls. Female mortality upto age 20, say, after which it becomes higher due to the extra maternal risk. The impact of maternal mortality is the heaviest on the age group 30-39. It is in this group that there is the greatest divergence between the male and female mortalities. After the reproductive period, say near about age 50, the female mortality again becomes lighter than the male mortality and continues to run like this for the rest of life.

Zonal Variations

The Report has also made an attempt at compiling life tables on a regional basis. But the investigator's attempt has not been altogether successful owing to factors beyond the control of the authorities. It may be recalled that the authors of the Census Report divided the country into six zones. The Census Actuary gives the corresponding estimates of expectation of life for the zones, except the North Western zone which was omitted because the population of Punjab was disturbed by migration on a large-scale and hence was not amenable to the method of tracing cohorts adopted for the construction of the life tables. This factor, along with the non-availability of age distribution in 1941 for some areas, led to the decision to exclude North Western Zone. Similarly, Bengal, which was seriously affected by the events following partition, was not included in the data for the East Zone. These decisions resulted in leaving out the two States of Punjab and Bengal, where the Census figures for 1951 are unreliable, having been substantially inflated. Formerly, the regional life tables were prepared for the various political units, the "Provinces" as they were then called and, therefore, it is not possible to state precisely the increases in the expectation of life for the various zones. The levels of expectation of life, however, show that the mortality experiences of the Central and the East Zones are heavier and those of the North and and the South Zones lighter than for the whole of All India, as also that the mortality experience of the West Zone is slightly lighter than that of the country, taken as a whole.

The Report is notable for the light it throws on certain technical aspects of the subject of estimating expectation of life. An important contribution, made by Mr. Jain, is the method for deriving the rates of mortality at the infant and childhood ages. Mr. Jain has also calculated expectations of life on the basis of the maximum and minimum infant mortality rates that may be adopted. Thus, the Indian expectation of life for males is shown to lie between 33.67 and 29.87 and for females between 32.85 and 29.62. The figures of 32.45 for males and 31.66 for females, as indicated at the outset, may thus vary either way by a year or two, at the most.

Again, Mr. Jain has discussed the problems encountered in any study of Indian age returns. In India, as in many other parts of the world, there is a tendency to return age ending in certain preferred digits, such as 0 and 5. This distorts the table of age distribution. The headache of the actuaries in the past has been to correct the age data for this distortion. Mr. Jain has prepared the age tables for 1951 and 1941 Censuses, which are published in the Census of India Paper No. 3 of 1954. This Paper contains the methods adopted for correcting biases in the age returns. These discussions form an integral part of the actuarial report and deserve to be studied for a proper appreciation of the method adopted in the preparation of the present life tables. In Paper No. 3, certain important osculatory inerpellation formulæ parallel to those due to King have been developed. These formulæ have been applied in obtaining the mortality rates for the present life tables.

Although the Census Actuary's Report will be widely welcomed for breaking much fresh ground in this field, any significant improvement in the reliability of the conclusions regarding expectation of life, mortality tables and other related subjects can be expected only when the State Governments, especially the subordinate branches of these Governments, show a lively appreciation of the significance of vital statistics. It is gratifying to note that the State Governments are becoming alive to the importance of the subject. Even so, the position of vital statistics in India is far from perfect. It is to be hoped that the Governments will impress upon the authoritics in the Taluqs, and divisions of Taluqs, the need for being prompt as well as accurate in the collection of data relating to births, deaths, incidence of diseases and causes of deaths in their respective territories.

REVIVAL OF POSTAL LIFE POLICIES

The Government of India has received representations to the effect that the holders of some Post Office Insurance Fund policies who came over to India from Pakistan failed to pay certain premiums on these policies in India in time and that it would be a hardship if these policies were considered as lapsed merely on the ground of such failure. In order to give relief to the holders of these policies, an official Press Note says, it has been decided that the policies may be revived at any time upto 31st March, 1954, without any medical certificate, even if the premiums on these policies which fell due during the period from 15th August, 1947 to 31st March, 1948, were not paid anywhere, or were paid in Pakistan, either in whole or in part.

This decision, it is stated, is subject to the provisions that (a) the policies were in force on 15th August, 1947; (b) the Government of India has assumed liability in respect of these policies; (c) the arrears of premiums which fell due during the period from 15th August, 1947, to 31st March, 1948, but were not paid anywhere are paid in India on or before 31st March, 1954, together with interest at 3½ per cent. per annum compounding yearly; and (d) all premiums due after 31st March, 1948, have been paid and if some of these premiums have been paid in Pakistan, they are paid over again in India on or before 31st March, 1954, together with interest at 3½ per cent. per annum compounding yearly. If any of these policies has become or becomes a claim at any time during the period from 15th August, 1947, to 31st March, 1954, the claim will be paid in full after the deduction of premia referred to in clause (c) and (d) above, together with interest at 3½ per cent. per annum compounding yearly and of other charges, if any. An application for the revival of a policy may be made to the Director of Postal Life Insurance, Calcutta.

The Press Note adds that the concession is granted purely ex-gratia and that the Government reserves the right to withhold this concession in any case or in any class of cases on any ground which, in its opinion, is sufficient.

During the year 1953, the Empire of India Life Assurance Co., Ltd., issued 11,489 policies assuring a sum of Rs. 3.22 crores, as against 10,058 policies for Rs. 2.81 crores in the previous year.

WORKING OF INDUSTRIAL DISPUTES ACT IN UTTAR PRADESH

STATE GOVERMENT'S TIMELY STEP BRINGS DOWN NUMBER OF DISPUTES

(By S. P. MEHRA)

INDUSTRIAL Disputes Act, 1947 has been criticised more than once by industrialists, trade union leaders and Judges of the Industrial Courts as being responsible for weakening the trade union movement in the country and having bred a litigious mentality among workers. Mr. K. C. Sen, President of the Bombay Industrial Court, not long ago, said: "There is little doubt that compulsory adjudication in this country has bred a litigious frame of mind and to a certain extent lessened the sense of responsibility of trade unions." A well known trade union leader of U.P. recently stated: "Industrial relations are getting a complicated business, more and more dependent upon results of litigation which appears to have become a regular feature of industrial life. Though one outcome of the frequent litigation is an extraordinary decrease in the number of strikes and lockouts, it has not ensured industrial peace. The way to peace is settlement by mutual negotiation, a very rare phenomenon of industrial life." The truth of these observations is amply borne out by the increase in the number of industrial disputes in Uttar Pradesh after the passing of the Industrial Disputes Act.

Industrial relations in the Uttar Pradesh, specially that aspect of it which relates to the settlement of industrial disputes, are governed by the U.P. Industrial Disputes Act, 1947, which came into force in February, 1948, and by the various orders of the U.P. Government passed under the powers vested in it under the above Act.

Wide Powers

Power to prevent strikes, lockouts, etc., has been taken by the Uttar Pradesh Government under section 3 of the U.P. Industrial Disputes Act, 1947. According to it:

"If, in the opinion of the Provincial Government, it is necessary or expedient so to do for securing the public safety or convenience, or the maintenance of public order or supplies and services essential to the life of the community or for maintaining employment, it may, by general or special order, make provision (a) for prohibiting, suoject to the provision of the order, strikes or lockouts generally, or a strike or lockout in connection with any industrial dispute; (b) for requiring emp.oyers, workmen or both, to observe for such period, as may be specified in the order, such terms and conditions of employment as may be determined in accordance with the order; (c) for appointing industrial courts; (d) for referring any industrial dispute for conciliation or adjudication in the manner provided in the order; (e) for requiring any public utility service, or any subsidiary undertaking not to close or remain closed and to work or continue to work on such conditions as may be specified in the order; (f) for exercising control over any public utility service, or any subsidiary undertaking by authorising any person (hereinafter referred to as an authorised controller) to exercise, with respect to such service, undertaking or part thereof, such functions of control, as may be specified in the order, and, on the making of such order the service, undertaking or part, as the case may be, shall so long as the order continues be carried on in accordance with any directions given by the authorised controller in accordance with the provisions of the order; and every person having any functions of management of such service, undertaking or part thereof shall comply with such directions; (g) for any incidental or supplemental matters which appear to the Provincial Government necessary or expedient for the purposes of the order, etc."

Section 3 of the U.P. Industrial Disputes Act goes much farther than similar legislation in other States and by the Centre in so far as it empowers the State Government to exercise powers similar to those contained in the Ordinance relating to the taking over of the Sholapur Mills by the Government of India, which has now been held by the Supreme Court to be *ultra vires* the Constitution of India, and the Industrial (Development and Regulation) Act of the Government of India, whose validity, in view of the recent Supreme Court ruling, has been held to be doubtful. The U.P. Government, however, in several instances, has already exercised the power of taking over industries and placing them under its authorised controllers. As the Government, however, was not able to run these industries, they were returned to their owners. No one in U.P. challenged the right of the State Government to take over the control of these industries, as has been done in Bombay.

Apart from the foregoing, the machinery for conciliation and adjudication of industrial disputes, set up by the U.P. Government in pursuance of the provisions of its Industrial Disputes Act, has the qualification of increasing industrial disputes instead of lessening them. The drawback, it appears, has been driven home to the Government and it recently took action to remedy it.

According to an official publication of the U.P. Government, "the first attempt at establishing an automatic machinery for taking cognisance of, and settlement of, industrial disputes was made in the year 1948 in which year orders were passed by Government for constitution of Works Committees in factories employing more than 200 workers and for the establishment of Regional and Provincial Conciliation Boards for important industries such as textiles and hosiery, sugar, leather and glass and electricity and engineering. Industrial Courts having appellate jurisdiction were also established at Kanpur, Agra, Allahabad and Lucknow for these four important groups of industries. The machinery set up in 1948 continued to work satisfactorily upto the year 1950 when it was felt necessary that some improvement in its working was needed."

A New Order Issued

A new set up for the settlement of industrial disputes was, therefore, introduced by the Government by issuing an order on 15th March, 1951, under the U.P. Industrial Disputes Act, 1947. With the passing of this Order, the Regional Conciliation Boards and Industrial Courts, constituted in 1948, were replaced by Conciliation Boards and an Industrial Tribunal for the whole of the State. It was laid down that on receipt of complaint regarding industrial disputes, the Conciliation Officer of the area concerned will constitute a Conciliation Board consisting of one representative each of the employers and employees nominated by the party concerned. There were to be no more informal conciliation proceedings which had no statutory backing, as under the new set up, all cases were to be taken up by the Conciliation Board. The Conciliation Boards, as constituted now, were merely required to take steps to conciliate in a dispute and explore the possibility of settlement between the parties. They were not authorised to give a decision themselves but merely to send a report to the Labour Commissioner and Government for further suitable action, such as reference of a case to adjudication, if conciliation failed.

Under the old order, it was not possible to hold any meeting of the Conciliation Board without the presence of all the three members, but after 15th March, 1951, no such restriction existed. Under the machinery set up in 1948, Industrial Courts were established which had appellate jurisdiction and before which appeals could lie from the awards of Regional Conciliation Boards. But under the new set up, this appellate authority was abolished, consequent on the setting up of the All-India Labour Appellate Tribunal by the Government of India under the Industrial Disputes (Appellate Tribunal) Act, 1950. Now appeales from the awards of Industrial Tribunals and Adjudicators on matters specified in the said Act are heard by the All-India Labour Appellate Tribunal. Another important feature of the new machinery was the establishment of an Industrial Tribunal for the whole of the State consisting of an I.A.S. Officer as President and two retired District Judges as members.

Increase in Disputes

Although designed to make improvements in the set up of the machinery for conciliation and adjudication in the U.P., the Government Order of 15th March, 1951, has caused serious damage to the Industry in that it has promoted industrial strife, encouraged litigious frame of mind among workers, weakened trade unions, and has generally embittered industrial relations. For under the new set-up the non-officials, that is, the parties concerned, were completely eliminated. The conciliation proceedings, which were supposed to be in the nature of mutual-negotiation with the aid of the official (Conciliation Officer) could now be conducted without even the presence of the representatives of parties concerned. The initiative passed from the parties to the officials, the Conciliation Officer and the Labour Commissioner. Again a notable feature of the order of 15th March, 1951, was that "*any* workman could now make an application in writing regarding the settlement of *any* dispute by conciliation," and it was obligatory on the Conciliation Officer to set up a Conciliation Board and commence proceedings on it.

The evil effects of 15th March, 1951, order soon became manifest. Whereas there were only six industrial disputes referred for conciliation in the period, 1st January, 1951, to 15th March, 1951, in the remaining 9½ months of the year, as many as 960 disputes were referred for conciliation. In 1952, the number of disputes referred for conciliation rose to 3,302 and in 1953 it reached the figure of 5,307. But for the order of 7th December 1953, to be discussed later on, the figure for 1953, would have been even greater.

There was thus over 500 per cent. increase in the Conciliation Board cases, or in industrial disputes, as a result of the changes introduced by the Government order of March, 1951 in the official set-up for conciliation and adjudication proceedings. This increase in references of industrial disputes could not have been achieved, had the Government also not commenced referring disputes which could not be settled in conciliation board proceedings more liberally to adjudication. The workers could not have been tempted to make more and more applications for settlement of industrial disputes, before the Conciliation Officers, had the Government's policy in regard to reference of adjudication proceedings remained unchanged. This change in policy was ensured by the Government passing an order on 24th September, 1952, whereby they transferred to the Labour Commissioner the power of deciding what cases would be sent to adjudication. The Labour Commissioner was already the head of the conciliation machinery. Where conciliation proceedings failed, he used to recommend to the Government which cases, in his opinion, were fit to be sent up to adjudication. Now he became the authority to decide the cases to be sent up for adjudication. There could be now no independent and impartial examination of his recommendations. As against 222 cases sent for adjudication in 1951, as many as 504 were sent in 1952, and this number rose to 983, in 1953. Besides, in 1953, as many as 120 cases were sent to the State Industrial Tribunal for adjudication, as against only 73 in 1952 and 19 in the period of 9½ months, beginning from 15th March, 1951, when it was set up.

Increase in Adjudications

The Labour Commissioner has thus very liberally been referring industrial disputes for adjudication. More and more trade union officials have begun taking interest in these conciliation and adjudication proceedings, and this has become an easy source of bread and butter for many of them. Practising lawyers cannot appear in these Courts, and several Union officials now command a roaring practice in these Industrial Courts. The workers, not infrequently have to foot the entire bill of pleadings, and several of them have also to pay a percentage of the spoils received at the end in case the workers succeed.

After observing the working of the new set-up for about two years, the U.P. Government found itself much perturbed. The steady decline in the number of industries was noticeable. Unemployment was continuing. More industries were closing down or were thinking of closing down. The relations between workers and managements had become extremely bitter. An unpleasant feature of the new set-up was the unhealthy growth in the numbers of a new bureaucracy. More and more officials had to be employed to deal with the increasing number of labour disputes. Thus the number of employees of the Labour Commissioner's office which was 440 in 1947 had risen to 1,161 in 1952. This figure went upto 1,233 in 1953 and demand for more hands in 1954 is, it is stated, pending before the State Government at present.

As a result of the orders of 15th March, 1951, and 24th September, 1952, the entire organised industry of U.P. (including management and workers, employers and trade unions) was placed completely in the hands of the Labour Commissioner. While suffering much as a result of his actions, none would dare criticise his acts, specially the employers, for fear of having to spend hours in Industrial Courts in the event of any worker deciding to make a complaint regarding any industrial dispute. There was no bar of time; the same complaint could be

REPORT OF THE CENTRAL BOARD FOR THE YEAR ENDED 31st DECEMBER, 1953

The Directors report that, the usual and necessary provisions having been made, the net profit of the Bank for the half-year ended the 31st December 1953, amounted to Rs. 63,71,870-10-9 which, with Rs. 37,39,076-1-8 brought forward from the half-year ended the 30th June, 1953, makes a total of Rs. 1,01,10,946-12-5.

This sum the Directors of the Bank have disposed of as follows :—

		Rs.	a.	p.
1.	In payment of a Dividend to the Shareholders at the rate of 16 per cent. per annum	45,00,000	0	0
2.	Transferred to Pension Funds	2,85,000	0	0
3.	Bonus to Staff	20,00,000	0	0
4.	Balance carried forward to the Profit and Loss Account	33,25,046	12	5
	Total .. Rs.	1,01,10,946	12	5

The Balance Sheet of the Bank as at the 31st December, 1953, and the Report of the Auditors are annexed, together with a statement of the Profit and Loss Account for the year ended the 31st December, 1953 (wherein the figures for the past half-year have been shown separately).

By Order of the Central Board,
S. K. HANDOO,
Managing Director.

CALCUTTA, *5th February*, 1954.

ALKALI AND CHEMICAL CORPORATION OF INDIA, LIMITED

SPEECH OF MR. N. D. HARRIS AT ANNUAL MEETING

PRESIDING over the Seventeenth Annual General Meeting of the Alkali and Chemical Corporation of India Ltd., held at Calcutta on 12th March, 1954, Mr. N. D. Harris, Chairman, observed:

"GENTLEMEN,

"The audited Accounts and Directors' Report for the year ended 30th September, 1953, have been in your possession for some time and, with your permission, I propose to take them as read.

"During the year, the transfer of the Khewra factory was completed and shareholders were advised of this by a letter dated 4th June, 1953.

"Our Calcutta (Rishra) factory had a fairly satisfactory year. Sales of caustic soda and chlorine were maintained and the extensions to this manufacturing unit increased our production. Our turnover of hydrochloric acid was maintained at the same level as in the previous year, although some difficulty was experienced in selling the production.

B.H.C. Plant

"The crude benzene hexachloride (B.H.C.) plant failed to fulfil our expectations, owing to certain technical difficulties, and production was below the plant's rated capacity. A definite improvement in the working of this small plant has since been obtained, although full rated capacity has not yet been achieved. Our 'Gammexane' (B.H.C.) water dispersible powder was in demand and the unit has operated continuously. The market for insecticides is extremely competitive and the announcement to erect a 1,500-ton per annum B.H.C. plant by Tatas must be taken into account in making our future plans.

Paints Sales

"Paints sales were satisfactory, in spite of a competitive market. Customers appreciate that, when they buy our 'Duco', 'Dulux' and 'Necol' brands of paint, they obtain first-rate products which fully justify their relatively high cost. During the year, a varnish unit was completed which makes raw materials previously imported. Our selling agents, Imperial Chemical Industries (India) Ltd., have installed a technical service station in our factory area at Rishra. I am confident that this will render a valuable service of which customers will take full advantage in solving their technical problems and will prove an important adjunct to our agents' sales efforts.

Profits

"The Company made a net profit of Rs. 8,14,151, as against Rs. 26,64,063 last year. This fall in profit was foreshadowed in my speech last year and is due partly to the fact that the Company received the profits from the Khewra factory for only eight months of the current year and also to the fact that the new extensions at the Rishra factory had not reached full earning capacity. This profit for the year of Rs. 8,14,151, with the balance brought forward from the previous year of Rs. 2,51,870 and a profit on exchange of Rs. 15,214, gives an available surplus of Rs. 10,81,235.

"Because of the substantial initial depreciation allowances, which it will be possible to claim on the new plant extensions installed at Rishra, there should be no liability to taxation on the profits for the year. On the other hand, your Directors have considered it prudent to transfer a sum of Rs. 3,00,000 to the reserve for deferred income-tax liabilities due to initial allowances. After providing Rs. 2,33,925 for additional liability to tax for previous years and Rs. 4,44,000 for taxation liability, arising out of the sale of Khewra fixed assets, the balance of Rs. 1,03,310 available for distribution is insufficient to cover a dividend on the share capital at the same rates as last year.

Dividend on Preference Shares

"You will recall that, last year, to meet this possibility, we transferred Rs. 7,50,000 from profits to a dividend equalisation reserve. We have paid the dividend on the preference shares and have drawn Rs. 5,27,000 from this dividend equalisation reserve to maintain a dividend of 6 per cent. free of income-tax on the ordinary shares, leaving a balance of Rs. 2,23,000 in this reserve for future use. A balance of Rs. 1,03,510 has been carried forward in the profit and loss account.

"During the year, we lost the services of Sir Syed Maratib Ali who had been on the Board of this Company since its formation. He rendered the Company invaluable service by looking after our affairs in Western Punjab. His resignation, along with that of Mr. W. E. Wilkie-Brown, was consequent on the sale of our Khewra factory. Mr. B. R. Goodfellow was appointed a Director in the place of Mr. R. A. Banks and Mr. D. B. Marsland was appointed his alternate and Mr. G. Wilkinson was appointed an alternate for Mr. K. W. Young. Two additional Directors were appointed during the year, namely, Dr. E. C. Fairhead, who had served the Company as a Technical Adviser, and Mr. E. Martley, who has been for several years Works Manager and subsequently General Manager of our Rishra factory. Dr. Fairhead retires automatically under Article 113 and is recommended for re-election. Directors retiring by rotation are Sir Bijoy Prosad Singh Roy and Mr. K. W. Young who are recommended for re-election.

"The Auditors, Messrs. Lovelock and Lewes, also retire and you are requested to re-appoint them for the current year at a fee of Rs. 6,000."

REPORT OF THE AUDITORS TO THE SHAREHOLDERS OF THE IMPERIAL BANK OF INDIA

We, the undersigned Auditors of the Imperial Bank of India, elected under Section 58 (1) of Schedule II of the Imperial Bank of India Act, 1920, do hereby report to the shareholders upon the Balance Sheet as at 31st December, 1953, and the Profit and Loss Accounts for the half-year and the year ended 31st December, 1953.

We have examined the above Balance Sheet (which contains the particulars prescribed by the Imperial Bank of India Act, 1920, and the Bye-laws of the Bank) and the Profit and Loss Accounts, and the Accounts relating thereto of the Central Office and of the Local Head Offices in which are incorporated the Returns submitted and certified by Branch Agents and report (i) that we have obtained all the information and explanations we have required and that they have been found to be satisfactory ; (ii) that the transactions of the Bank which have come to our notice have been within the powers of the Bank ; (iii) that the Returns received from Branch Agents have been found adequate for the purposes of our audit ; (iv) that in our opinion the Balance Sheet and Profit and Loss Accounts are drawn up in conformity with the law ; (v) that in our opinion the Balance Sheet is a full and fair one and is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us and as shown by the Books of the Bank ; (vi) that in our opinion the Profit and Loss Accounts show a true balance of profit for the period covered by the accounts ; and (vii) that in our opinion Books of Account have been kept by the Bank as required by law.

The audit of the Books and Accounts for the six months to 30th June, 1953, was carried out by Messrs. A. K. Josselyne, B. S. Billimoria and J. Deavin. The accounts for that period have been accepted and incorporated for the purpose of the accounts for the year to 31st December, 1953.

The audit of the Books and Accounts of the Local Head Offices at Calcutta, Bombay and Madras, has been carried out by Messrs. K. J. H. Hartley, B. S. Billimoria and J. S. F. Gibb respectively.

K. J. H. HARTLEY,
B. S. BILLIMORIA,
J. S. F. GIBB,
Auditors.

CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA

A CENTURY OF SERVICE TO TRADE AND INDUSTRY

MR. V. A. GRANTHAM REVIEWS ECONOMIC CONDITIONS IN THE EAST

THE One Hundredth Annual General Meeting of the stockholders of the Chartered Bank of India, Australia and China will be held in London on 31st March, 1954. In his statement accompanying the Directors' report and audited accounts of the Bank for the year ended 31st December, 1953, the Chairman of the Court of Directors, Mr. Vincent Alpe Grantham, draws the attention of the stockholders to the fact that the accounts for the year fully reflects the success that has attended the Bank's endeavours all these years in the countries in which it is operating. Despite the general deterioration in working conditions during recent years in almost every Eastern country in which the Bank operates, and a rise in working costs during 1953, Mr. Grantham, it is gratifying to note, regards the future to be more hopeful than what it appeared to be last year. "Speaking very generally," he says, "I think, we may all have to work harder for less profit, but I believe that the possibilities of making profits, even if smaller profits, are more assured than they were."

The following is the full text of Mr. Grantham's statement:

"The year 1953 was doubly auspicious for the Bank. By the happiest of coincidences the centenary of Queen Victoria's granting to the Bank a Royal Charter of Incorporation was celebrated in the coronation year of her great-great-granddaughter, Her Gracious Majesty Queen Elizabeth II. During the month of June, the British Commonwealth communities in the East held festivities in celebration of Her Majesty's coronation and many of the Bank's buildings were beflagged by day and illuminated by night. Later in the year, our Branch Managers invited friends of the Bank to join them in commemorating the one hundredth anniversary of the foundation of the Bank. These functions evoked many public tributes to the services rendered by the Bank to trade and industry. We all have been deeply moved by the warmth of felicitations extended to the Bank, on the occasion of its centenary, by a very large number of banking and commercial institutions throughout the world. Charter Day, 29th December, 1953, was commemorated in London by a Service of Thanksgiving held in St. Helen's Church, Bishopsgate, attended by the Court of Directors, the Head Office Executives and a large company of the staff.

"The summoning of the One Hundredth Annual General Meeting of the Stockholders might be regarded as affording an opportunity to speculate on the future of British banking in the East, but the temptation to do so is one which I must resist. In all the statements I have made to the stockholders as Chairman, it has been emphasised that the Chartered Bank, established as it is throughout Southern and South-Eastern Asia and the Far East, has given many hostages to fortune and this is no less true at the present time. Two years ago, I explained how policy and organisation have been adapted to swiftly changing political conditions in the East, and I described the steps we have taken to preserve, so far as it lay in our power, the goodwill of the Bank in situations which had become revolutionary in character. The success which has attended our endeavours so far is reflected in the accounts which accompany this statement and I must point out that the satisfactory results achieved have been largely due to the ability of the General Managers in London, the skill displayed by the Branch Managers in the East and the devotion to duty shown by the Bank's staffs everywhere.

The Court of Directors

"I record with deep regret the death, on 23rd August last, of Mr. Arthur d'Anyers Willis, who joined the Court of Directors in 1929 and was elected Chairman in 1933. Mr. Willis retired from the chair in 1940, but he remained a Director until his death, and I acknowledge with gratitude the services he rendered to the Bank.

"Sir Paul Benthall accepted an invitation to join the Court of Directors on 1st July last and the stockholders will be invited to confirm his election at the approaching general meeting. Sir Paul brings to the deliberations of the Court a wide experience of Indian commerce and industry.

The Bank's Balance-sheet

"Compared with last year, there is a reduction of approximately £21,000,000 in the total of the Bank's balance-sheet. The smaller figure this year is mainly due to the continued fall which has taken place during the year in world prices of the basic Eastern commodities.

"On the left hand, or liabilities side of the balance-sheet, current and other accounts, fixed deposits and bills payable show decreases of £12,683,484, £2,367,130 and £446,244, respectively.

"The substantial reduction of £6,750,644 in the figure for acceptances is largely due to the drop in commodity prices already mentioned: it also reflects increased competition from other banks in Japan, chiefly American, for this class of business.

"On the right hand or assets side, cash in hand, at call and at bankers, remains at practically the same figure as last year.

"Government and other securities (apart from those lodged against our Note Issue), bills of exchange (including United Kingdom, Colonial and Foreign Treasury Bills) and advances to customers and other accounts are down by £7,512,730, £3,875,312 and £1,999,074, respectively.

"The reduction in Government and other securities reflects part of the drop in current and other accounts shown on the other side of the balance-sheet.

"The further contraction in advances follows the tendency shown by bank lending generally and is an additional indication of the deflationary trend which has persisted during the year.

"The ratio of cash and call money to our 'demand and time' liabilities, excluding notes in circulation against which security has been lodged, is 18.98 per cent.

"It will thus be seen that although the total of the balance-sheet is less than it was a year ago, there has been no diminution of liquidity; in fact, the position is more liquid.

"Considerable expenditure continues to be incurred in meeting the cost of extensions and renovations to Bank premises and in the provision of houses for our officers in the Eastern branches; consequently, after allowing for £200,000 written off this year, the net figure for Bank premises and furniture shows an increase of £115,793 over that of last year.

"I now turn to the Bank's reserve fund. Last year, we augmented this fund by a transfer of £1,000,000 from contingencies, subsequently capitalising £500,000 of that amount. This year, we have transferred a further £500,000 from contingencies to reserve fund, thereby replacing the amount capitalised during the year and bringing our published reserve fund up to £5,000,000.

"You will have understood from my more recent annual statements that we have been at pains, so far as is possible, to restore a reasonable relationship between our issued capital and reserve fund and the total of our balance-sheet.

"Considered as a whole, I submit that our accounts display a well-balanced distribution of the Bank's resources.

Profit and Loss Account

"The net profits for the year amount to £693,798, a decrease, from those of last year, of £4,984.

"I have referred in recent years to the general deterioration in working conditions in almost every Eastern country in which the Bank operates and have stated that it would be foolhardy not to be prepared for some reduction in profits. These conditions have persisted during 1953 and there has also been a further rise in working costs.

"In the circumstances, therefore, I trust that the results achieved will be regarded as very satisfactory.

"We paid an interim dividend in October last of 7 per cent., less income-tax, absorbing £134,750, and it is proposed that, out of the balance now available, a final dividend of 7 per cent. less income-tax, should be paid, costing £134,750 making the total distribution for 1953 14 per cent.

"It is probably unnecessary to remind stockholders that these dividends are paid upon an increased capital.

"We propose to repeat the allocations made in each of the past three years to the pension fund and widows' and orphans' fund of £125,000 and £20,000, respectively.

"We have again applied £200,000 towards writing down Bank premises and furniture account.

"It is proposed to transfer £75,000 to contingencies account and to carry forward to next year the slightly increased balance of £403,513.

"I trust the stockholders will approve of all our proposals.

Introductory

"I felt bound last year to preface my review of the various countries in which the Bank operates, in somewhat pessimistic vein and you will have observed that in dealing with the profit and loss account I have again referred to a deterioration in working conditions in almost every Eastern country, which has been accompanied by a further rise in working costs.

"Let me make it plain, therefore, that notwithstanding these factors, I think, we can regard the future with rather more hope than we did when I last addressed you.

"In certain countries the economic outlook is undoubtedly better. In others there is a more settled political outlook. Some countries have still a very difficult road to travel, but they may have passed through the worst of the storm. It is the position of Japan that causes me more concern than that of any other country for it is well to recognise that her well-being is vital to South-East Asia as a whole.

"Speaking very generally, I think, we may all have to work harder for less profit, but I believe that the possibilities of making profits, even if smaller profits, are more assured than they were. We must always be prepared for the natural emergence of nationalism, but on the whole those countries in which we work are realistic in their outlook and we can be grateful for the friendly relationship that exists between us and their Governments.

Aden

"For many years past the Bank has been represented in Aden by Messrs. Cowasjee Dinshaw Brothers, a much respected firm of private bankers. Since 1945, the port and colony of Aden have become of increasing economic importance and, as is well known, further extensive developments are in prospect. Business with Aden initiated by our branches further East is expanding rapidly, and it has now become desirable for the Bank to set up its own establishment in the territory. A branch was opened in the Crater district of Aden on 25th February and a second office will be opened at Steamer Point in due course.

India

"Last year, I emphasised the importance to India's future of the Five-year Development Plan, first drawn up in 1951, and finally endorsed by the Indian Government in December, 1952. The country's most immediate economic problem is the necessity for an expanding production of foodstuffs to meet the needs of an everincreasing population, and with this in view a substantial proportion of the investment proposed under the Five-year Plan is being devoted to agricultural development by such means as irrigation and improved methods of husbandry. The census authorities have recently estimated that at the present rate of increase India's population, now approximately 360 million, will reach some 450 million by 1969. Although this estimate is based upon assumptions which may be modified in the intervening years, it is clear that the continued growth of the population underlines the urgent necessity for rapid economic development in India.

"The poverty of the Indian masses is such that of the entire population less than one million are in a position to pay direct taxation or, it may safely be assumed, to accumulate savings. For this reason the Planning Commission has been modest in its estimates of India's capacity for capital formation and it is reckoned that about half the 10 per cent. increase in the national income which it is hoped will accrue from the Five-year Plan, will be automatically absorbed by the increase in the population. With the country's savings potential relatively low, the financing of the Plan presents considerable problems; the more so since new schemes extending the Plan and designed to reduce unemployment were agreed in principle in October, 1953.

"The Planning Commission's original estimates took into account the possibilities of increased taxation, but tax revenue is likely to be lower now that a number of customs duties have been reduced or abolished. From the inception of the Plan it has been the Commission's intention to raise part of the projected outlay by internal borrowing. It was, therefore, heartening to see the success that attended the first issue last June of 3½ per cent. National Plan Bonds, Rs. 75 crores being offered. This loan, which is redeemable in 1961, adds to the selection of medium-dated securities available to the investor in Indian Gilt-edged stocks and also indicates that the investing public is fully alive to the importance of supporting Government loans designed to assist the progress of the Five-year Plan. Following this issue by the Central Government a number of States have successfully floated loans to finance their own development schemes within the framework of the Plan.

"The Five-year Plan envisages a considerable expansion in the private sector of the Indian economy and the problem of financing this projected development has recently been the subject of investigation by a Government committee. Save only for the statutory reserves which we are required by the Reserve Bank of India to maintain, we already fully utilise our local resources in financing India's foreign trade and in providing finance for jute and cotton mills, tea estates and other export industries. The whole of our business is based on liquidity and, therefore, we are not in a position to provide long-term finance. I am sure that it is essential to the stability of the Indian economy that commercial banks should continue to function on strictly orthodox lines.

Facilities to Banks Widened

"During the course of the past year, the Reserve Bank has widened the facilities available to the Scheduled banks to discount their usance bills. This marks an important stage in the development of the Indian bill market and enables banks more easily to obtain funds from the Reserve Bank at need. The most urgent task in the banking sphere is to promote an increase in deposits by encouraging the population to entrust their savings to the banks rather than keeping their money idle at home. In Great Britain, people are accustomed to make payments by means of cheques and in consequence total bank deposits are four times larger than the aggregate note circulation in India, on the other hand, the use of banks and cheques is not widespread and total bank deposits are less than the currency in circulation.

"It seems apparent that the increasing expenditure that is necessary in connection with the Plan will entail a larger degree of deficit financing than was originally envisaged. During the first two years such deficit financing as was necessary was offset by an import surplus, but the latter is now likely to be smaller and, therefore, deficit financing on a further substantial scale may be inflationary in its effects.

"The agreement signed in New Delhi in July, 1953, between the British and Indian Governments relating to the sterling balances was a reminder that these balances are an important component in the financing of the Five-year Plan. The new agreement consolidates the provisions embodied in the letters previously exchanged by the two Governments at intervals since the original agreement was made in 1947. In 1951, £310,000,000 was transferred from India's blocked account to its free account, but with a proviso that this sum was to be used as a reserve for the Indian currency. The remaining balances are being released at the rate of £35,000,000 per annum and will thus be freed completely by 1957.

"During the early part of 1953 an upward movement in wholesale prices caused some uneasiness, but the rise had run its course by August and since then prices have fallen steadily. The reaction was partly due to seasonal influences, but was nevertheless welcome, particularly in respect of food prices. It is pleasing to report that during the past year the food situation has shown marked improvement and, with crop prospects favourable, grain imports should be much smaller in 1954. Food crops were larger in 1953, mainly on account of a good monsoon, but also because the acreage sown with grain had been increased following the fall in price of cotton and jute. With increased supplies of food available the authorities have been able to make progress in dispensing with rationing and in abolishing price controls.

"India continues to have a trade deficit, but this was more than offset in the first half of 1953 by invisible items such as foreign aid, so that the country's balance of payments was favourable. Towards the end of last year India's gold and exchange reserves had risen above the level at which they had stood at the end of 1952, an encouraging sign of growing economic strength. but it should be remembered that the improved food situation within the country, which had the effect of reducing food imports, helped to conserve external currency reserves. Furthermore, investment in the public sector of the Five-year Plan has so far made slower progress than originally planned and to that extent the external reserves have been utilised less than expected. Under the circumstances, there is likely to be an expansion of imports on private account during the present year, but this will, doubtless, take the form of capital rather than consumer goods.

"The staple Indian industries have derived benefit from the progress of the Five-year Plan and from the improvement in business which became apparent late in the year following a period of some difficulty. The Government found it necessary to assist the cotton industry by an adjustment of customs duties and by the end of the year sales, both at home and abroad, had improved and stocks had been reduced. It is probable, however, that following the recent Anglo-Japanese payments agreement Indian textiles may be expected to meet Japanese competition in a number of overseas markets.

"The jute industry, too, was stimulated by the abolition or reduction of export duties during the course of the year and prospects are reasonably favourable for 1954, provided that supplies of raw jute are adequate to meet current demand at reasonable prices. Present indications are that supplies of raw jute during the current season will be sufficient to satisfy world demand. Meanwhile, at the end of 1953 stocks of jute goods in India were lower than at any time during the previous twelve months, while foreign demand had improved considerably.

"The situation of the Indian tea industry has greatly improved and the voluntary restriction of output scheme contributed considerably to this improvement, although, in fact, whilst the scheme remained in force, no regulation has had to be brought into practice because there was a shortfall in crop, due to climatic conditions. Only some four-fifths of the producers in Northern India participated in the restriction scheme, but the existence of such a scheme has had beneficial results and the industry has decided to retain crop regulation as a permanent measure. There is no intention, however, of attempting to secure a high price level by creating an artificial scarcity of tea. Prices have been remunerative and demand in Great Britain and the major overseas tea markets has increased.

"After an unpromising period at the beginning of 1953 Indian trade and industry recovered the lost ground in the second half of the year. Following two good harvests and with adequate exchange reserves in hand economic prospects seem reasonably favourable and it is to be hoped that substantial progress will be possible in implementing the Five-year Plan on which India's future is so vitally dependent.

Pakistan

"The past year has been one of extreme difficulty for Pakistan and the country has passed through a severe economic crisis. A year ago, I drew attention to the fall in the international price levels of cotton and jute, Pakistan's export staples, which by causing a reduction in the country's export income compelled the Government to curtail imports by cancelling the open general licence. It was particularly unfortunate that this setback coincided with a disastrous fall in food production, which forced the authorities to import considerable quantities of wheat in order to avert famine.

"This imposed a severe strain on Pakistan's reserves of foreign exchange, but the situation was transformed by gifts of wheat from the United States, in particular, and also from the Commonwealth. The American gift had the effect not only of solving the immediate shortage of food but also of presenting Pakistan with a substantial development fund inasmuch as the proceeds of the sale of the wheat in Pakistan are being placed to a special counterpart fund for use in connection with development schemes. Additional financial aid has also been received from abroad in the shape of loans from the United States and a credit for £10,000,000 from Great Britain. The sterling credit, which was announced last July, is intended to finance the purchase in Great Britain of capital goods which will assist in solving Pakistan's food problem.

"If the supply of food is at present adequate, the shortage of imported consumer goods remains extreme. Internally, prices of such goods have soared despite the imposition of a limited measure of price control. During the first half of 1953 virtually the only goods that the country was in a position to import were those of an essential nature such as machinery and raw materials for the new industries. Goods, such as textiles, were completely banned and imports of every description from all areas continue to be subject to import licensing. During the second half of the year bilateral trade agreements with France, Italy and Japan revived the import trades slightly, but the imported goods covered by these agreements were not of the type to relieve the prevailing scarcity of consumer goods.

"During the year, suppliers of capital goods both in Great Britain and Japan offered to ship machinery to Pakistan on a deferred payment basis. In most cases payment was to be spread over a period of five years and the Pakistan authorities published regulations outlining the procedure under which importers might take advantage of these offers. To obtain the appropriate forward exchange, however, it is first necessary for importers to deposit with the commercial banks the full rupee value of the goods to be imported, and so far few transactions of this nature have been recorded.

"It is clear that until such time as substantial holdings of foreign currencies are accumulated there is little scope for any relaxation of import restrictions, but the measures taken by the present Government have gone a long way towards restoring the country's economy and it is satisfactory that following the previous year's substantial deficit on its balance of payments, Pakistan accumulated a surplus in 1953.

"It is the Government's intention to change the basis of the country's economy, which is at present exclusively agricultural, by pressing forward a policy of industrial development. Very reasonably emphasis has been laid upon the need to manufacture goods, the raw materials for which are already available within the country. Pakistan has little coal or oil and no iron ore, although the recent discovery of natural gas may possibly provide an important source of power, and any large-scale development of industry will inevitably be dependent not only for its plant and equipment but also for some of its raw materials on supplies from abroad.

"Priority in the import programme for the first half of the present year has necessarily been given to industrial and agricultural equipment, spare parts and essential raw materials. Although the range of consumer goods on the import trade control schedules has been extended, only a small proportion of the exchange available for imports as a whole will be devoted to merchandise of this nature. The State-sponsored Industrial Development Corporation is greatly increasing its scale of investment during the present year and particularly rapid progress has been made in the development of the textile industry.

"The country already manufactures sufficient jute goods for its own requirements and this year it should have a surplus for shipment abroad. New cotton mills are coming into production in such numbers that it is claimed that within two years two-thirds of the country's production of raw cotton will be consumed in its own mills. By the end of this year there should be an exportable surplus of coarse and medium cotton cloth, but it will still be necessary to obtain the finer qualities from abroad. Import control and the development of industries within the country can save foreign exchange, but to earn such foreign exchange as she will continue to need, Pakistan will still need to sell some raw cotton and jute abroad. These two commodities between them have up to now accounted for approximately nine-tenths of Pakistan's oversea earnings. Although prospects in the immediate future are reasonably good for both jute and cotton as well as minor exports such as tea and hides and skins, export

income in respect of these commodities is not likely to increase significantly.

"Jute output is much lower this season and even allowing for the heavy stocks carried forward from last season, the quantity available for export will be very small. Moreover, Pakistan is now using more of its production of raw jute in its own jute manufacturing industry which will tend to reduce still further the volume of raw jute to be shipped abroad. The Government is maintaining its control over the production of raw jute and, while allowing a reasonable increase in output, will avoid an excessive surplus. The prospects in the world's markets for Pakistan's raw cotton are more promising than last year and surplus stocks in Pakistan itself have been reduced by the rising requirements of the domestic industry. The establishment last year of the Lancashire-Pakistan Cotton Committee to encourage the use of Pakistan cotton in the United Kingdom will, doubtless, assist in securing a larger and more stable market for such cotton as Pakistan still has available for sale.

"There is always a danger, of course, that industries built up behind a protective barrier, whether of tariffs or import control, may be uncompetitive internationally. If its economy is to be no longer predominantly agricultural, Pakistan will naturally be relying on its ability to sell manufactured goods abroad. But it will still be necessary to earn foreign exchange and the most effective way of doing so must be the continued exportation of agricultural products, of which at present cotton and jute are of outstanding importance. I do not doubt that the authorities will watch very carefully the gradual switch-over from agriculture, in view of the fundamental importance of being always in a position to earn foreign exchange.

Burma

"The bulk of Burma's export income is derived from rice and, in common with Thailand, Burma has inevitably been affected by the change that has occurred in the international rice market during the past year. It is well known that since the war world rice production, although it has increased, has been insufficient to feed the vast rice-eating population of Asia. Inevitably, countries dependent for their food requirements on imported rice have had to pay high prices and the rice-exporting countries have enjoyed the benefit of secure and remunerative markets. Prices remained high all last year, although they recently declined and, for the first time since the war, producers are finding that rice no longer enjoys the benefits of a seller's market. Buyers are also tending to be more particular as to the quality of the rice.

"A number of factors have helped to bring about this change in the situation. The general fall in purchasing power caused by the decline in the value of the staple exports of the East during the past three years has caused most Eastern countries that are importers of rice to increase production of this commodity within their own borders in order to reduce their imports and so ease the strain on their foreign exchange reserves. Rice harvests in these territories have been good and, in consequence, stocks have been tending to accumulate in Burma and Thailand.

"Furthermore, the high prices prevailing for rice have stimulated production elsewhere in the world and the fall in shipments, as compared with pre-war years, from Burma and Indo-China has been partially offset by the emergence of the United States and Italy as rice exporters. Foodgrains, such as wheat and barley, have become freely available and are far cheaper than rice. Hence the consumption of such substitutes has tended to rise in many rice-eating countries.

"Burma's exportable surplus has now reached a level at which it is equivalent to approximately half the pre-war average. Stocks are high and with the new crop coming forward shortage of storage facilities is presenting some difficulty. The improvement in the food situation in India reduced Burma's rice exports in that direction during the year and it was doubtless the need to expand markets elsewhere that induced the Burmese to offer to sell rice to Ceylon at a price lower than the cost of Chinese supplies. The Government also felt it necessary to despatch trade missions abroad in an effort to expand exports, and it has recently been reported that India has now agreed to purchase virtually the whole of Burma's surplus stocks.

"On the import side, the most important event during the past year was the Government's decision to withdraw from the Ottawa Agreement and to terminate the Indo-Burma Trade Agreement. A new tariff schedule was introduced last October abolishing imperial preference and placing all goods and commodities, irrespective of their country of origin, on a uniform basis. As Government had given six months' notice of its intentions, stocks of imported goods, especially textiles, were increased in the interim and the ultimate effects of the new tariff on Burma's import trade are still not clear. However, Japanese manufactures, in particular, will now complete on more favourable terms with British and Indian goods.

"In January, it was announced that the Burmese Government had signed an agreement with three British oil companies for a joint oil venture to be called Burma Oil Company (1954). The new venture, in which the Burmese Government will have a substantial share-holding, aims in the first place to make the country self-sufficient in petroleum products and subsequently to restore the profitable pre-war export trade. This agreement follows the same principle as the arrangement, to which I referred last year, between the Government and the Burma Corporation concerning the Burmese lead and silver mines.

"Politically, the country now seems more settled and the rebel groups have given less trouble during the past year. The country continues to have a comfortable export surplus and in an endeavour to accelerate the progress of its plans for economic development feels sufficiently confident to budget for a greatly increased deficit. During the course of the year, Burma decided to forgo aid from the United States and will now, therefore, finance its development schemes from its own resources.

Ceylon

"The adverse shift in Ceylon's terms of trade following the collapse of the Korean War boom and the fall in the export values of its staple exports, tea, rubber and coconut products, have involved the country in a period of painful economic readjustment. During the past year, there has been some improvement in the situation inasmuch as the trade deficit has been substantially reduced from the high level it had reached in 1952. Nevertheless, the drain on the external assets still continues and over the whole of last year these vital reserves fell by more than a quarter. Towards the end of the year they reached their lowest level since 1943 and they were still being reduced at a rate as high as that at which they had been accumulated during the Korean War boom.

"The fundamental cause of this persistent decline is the continued excess of imports. With this in view, in the budget introduced last July the increased tariffs imposed in 1952 were confirmed and import duties on what are considered luxury items were raised. By means of a further and drastic reduction in food subsidies and also increases in taxation the budgetary deficit is to be substantially reduced during the current financial year, but the deficit has, in fact, already been covered by the issue of a public loan. These measures were reinforced by raising the Bank rate from 2½ per cent. to 3 per cent.

"The success of the budget will be gauged by the effect it ultimately has on the level of the country's external assets. The continued reduction in the food subsidies has already been the major cause of a contraction in Government loans and advances from the Central Bank, which is an encouraging sign for the future. The considerable rise in the price of rice as a result of the budget provoked disturbances in the country, but the Government took firm action to regain control of the serious situation created by the strike last August.

"As foodstuffs and rice, in particular, account for so large a proportion of Ceylon's imports, the Government has negotiated long-term contracts with China and, during the past year, with Burma for rice supplies at advantageous prices. Price negotiations for this year's shipments of rubber from Ceylon and rice from China in terms of the agreement between the two countries were successfully concluded last September. Although the agreed prices of both commodities are lower than for last year China is still paying a price for Ceylon's sheet rubber that is well above the prevailing international price level, while Ceylon is obtaining Chinese rice on favourable terms. The new agreement with Burma was announced last October and under its terms Ceylon Undertakes to buy an annual minimum of 200,000 tons of Burmese rice for the next four years. The price for the basic variety of rice covered by the agreement will be reduced from £50 per ton this year to £44 in 1957.

"Of the country's exports, tea, which accounts for approximately half the aggregate export income, has found ready markets during the past year. At the end of October, the Government abolished the sliding scale of export duty on tea and imposed a fixed rate. Although the Indian export duty on tea is lower, the Ceylon product, because of its relatively high quality, should not suffer any serious disadvantage, while prices remain at their present level. Owing to the trade agreement with China, sheet rubber exports have been satisfactory, but the Ceylonese industry is fast reducing production of crepe rubber in favour of sheet and there is a prospect of over-production of the latter. Producers of coconut products have had a satisfactory year and with prices firm, prospects for exports this year are promising.

"Economic development schemes have been reduced to a minimum for the time being owing to a shortage of funds and the Government is in process of drawing up a new development plan. In their deliberations the authorities will have the benefit of the comprehensive report on this subject prepared in 1952 by the International Bank Mission after its visit to Ceylon. Meanwhile, it was reported in January that the International Bank has agreed to make a loan to Ceylon, sufficient to provide the necessary foreign exchange for the second stage of its hydro-electric scheme and provision has also been made for the issue of internal loans for the same purpose.

"During the coming months, Ceylon's major task is to achieve a trade surplus and thus arrest the drain on its foreign exchange reserves. In the long run, the Government recognises that an inflow of foreign capital is essential to the country's continued economic progress. In a speech made in January, 1954, before the E.C.A.F.E. Committee on Trade and Industry, Ceylon's Finance Minister, while admitting that some Asian countries when they first achieved independence had adopted policies tending to discourage investment from abroad, pointed out that the importance of foreign capital and enterprise in the task of raising Asian living standards was now more widely acknowledged. Recognising that the International Bank can only hope to satisfy a small proportion of Asia's total capital needs. he made a plea for the establishment of some form of State insurance in Western countries, designed, by underwriting some of the political and economic risks, to stimulate private foreign invcstment in the East. The Prime Minister has, subsequently, given a specific assurance that foreign capital and enterprise will be welcomed in Ceylon and reaffirmed the Government's interest in attracting investment from overseas.

Malaya

"The improvement in the security situation in Malaya, which I mentioned last year, has continued, and the measures instituted by General Templer during his term of office as High Commissioner for the Federation have been successful in keeping the terrorists well on the defensive. Nevertheless, the end of the Emergency is still not in sight and any slackening of the security measures in force would soon be followed by a renewed outburst of terrorist activity. Banditry has been checked along the coastal plain, but is still active inland.

"It is unfortunate that at a time when Government expenditure on the Emergency necessarily remains high, Malaya's overseas trade should continue to fall in value owing to the lower prices prevailing in the international markets for the peninsula's staple exports, rubber and tin. Malaya ended 1952 with a small trade deficit and the overseas trade figures for 1953 show that the total trade has fallen in value and that the deficit for the year has increased substantially. The full figures for the two years were:—

	1952	1953
Exports ...	M$3,794,500,000 (£442,691,667)	M$3,019,000,000 (£352,216,656)
Imports ...	$3,848,000,000 (£448,933,333)	$3,228,000,000 (£376,600,000)
Total trade ...	$7,642,500,000 (£891,625,000)	$6,247,000,000 (£728,816,666)
Deficit ...	$53,500,000 (£6,241,666)	$209,000,000 (£24,383,334)

"Whereas rubber prices declined sharply in 1952 and tin remained comparatively firm, last year both commodities suffered from the fall in demand which ensued from the easier conditions that prevailed when there were prospects of an armistice in Korea. The table which follows shows the extent of the changes in price of rubber and tin during the past year:—

	Lowest	Highest	Closing
Spot rubber ...	16½d. (28-10-53)	26½d. (2-1-53)	17½d. (31-12-53)
Cash tin ...	£568 (27-7-53)	£979 10s. (4-2-53)	£656 5s. (31-12-53)

"The downward trend of prices has caused the prospects for natural rubber to remain uncertain. An increasing number of small-holders have found difficulty in covering their costs and plantation companies, on the whole, can only work to the present price level provided that their costs are not increased by further direct or indirect taxation nor by an unrealistic level of wages. Although world production has exceeded aggregate consumption over the whole of 1953, the surplus was not only lower than originally expected but also substantially lower than in 1952.

"The United States is still by far the most important market for natural rubber and in 1952 was responsible for approximately a third of total world consumption of this commodity. American industry has continued to use a progressively higher proportion of natural rubber and less synthetic during the past year.

The prospect of a more satisfactory balance between supply and demand strengthened the case of those who contended that the formation of an international buffer stock pool for natural rubber would be both untimely and unnecessary, in view of the projected transfer of the synthetic rubber industry in the United States to private control. This industry, at present owned by the Government, is to be sold to private interests during the course of 1955. By last August the higher cost synthetic plants administered by the Reconstruction Finance Corporation on behalf of the United States Government had been closed down and the productive capacity of the industry thereby reduced to approximately 600,000 tons of general purpose synthetic rubber per year.

"Malayan rubber production fell only slightly from 582,000 tons in 1952 to 572,000 tons last year. Once again production on the small-holdings has fallen, while plantation output has remained steady. Rubber shipments from Malaya fell from 910,420 tons in 1952 to 847,211 tons last year, but these figures include a substantial proportion of re-exported rubber emanating mainly from Indonesia. The reduction last year of this entrepôt trade accounts for the fall in Malaya's aggregate rubber exports.

Malaya's Tin

"Malaya's output of tin at 56.254 tons last year was only slightly lower than in 1952, but exports fell from 64,117 tons to 61,753 tons. Between April and July, 1953, the price fell by over £350 per ton, although it recovered to a certain extent later in the year. Prospects of an armistice in Korea and the announcement that the Reconstruction Finance Corporation, which largely determines United States purchasing policy in respect of tin, was to go out of business in June, 1954, helped to weaken the markets and it followed that there was support for a plan to create a buffer stock to stabilise the tin market. The draft scheme provides for a buffer stock of 15,000 tons in metal or its equivalent in cash to be expanded, if necessary, to 25,000 tons. Producing countries are allotted quotas according to their output, and export control will come into operation when the buffer stock reaches 10,000 tons.

"It is proposed that the agreement should should come into force after June, 1954, for a period of five years provided that sufficient Governments, representing producers and consumers, ratify it in the meantime, but the working of such a pool would largely depend on the attitude of the United States, which is by far the world's largest consumer of tin. The Malayan share of the buffer stock would be 36.61 per cent. and, subject to parliamentary approval, the British Government has agreed to finance the Federation's contribution to the extent of approximately M$50,000,000 (£5,833,333). This loan would be recovered by instalments by means of a levy on the Malayan producers, so that eventually the industry itself would own the Federation's share of the buffer stock.

"The contraction in Malaya's purchasing power caused by the fall in the overseas earnings of rubber and tin is reflected in the currency figures. Notes in circulation on 1st January, 1954, amounted to $740,923,669, as compared with $786,797,438 at the beginning of last year.

"Under these circumstances, the import trade again suffered and the piecegoods market has experienced a difficult year. Although there has been a further fall in the entrepôt trade, particularly with Indonesia, foreign demand has been sufficiently good to reduce surplus import stocks in Malaya. Nevertheless, there have been some failures in the textile trade, although the situation has recently shown some improvement. It is significant that the import quota for Japanese textiles has not been taken up in full. The situation seems to call for a cautious policy in assessing the potentialities of the import market during the coming year.

"The original Budget figures for 1953 have had to be substantially revised because of the fall in price of both rubber and tin. The revised estimate for Federal Government revenue in 1953 is $573,000,000 and with expenditure at $719,000,000 the budget shows a deficit of $146,000,000. In 1954, the total revenue is estimated to reach $654,000,000, inclusive of various grants from the British Government and expenditure is expected to total $826,000,000, so that there is a budgetary deficit estimated at $172,000,000 for the present year. Last year, the deficit was mainly financed by the issue of the Security Loan, but the Government does not consider it possible to raise another loan for this purpose in 1954. It is proposed, on the other hand, to finance future capital expenditure on development schemes and capital works by raising loans instead of charging it to budgetary revenues.

"During the past two years, Malaya has been passing through a trying phase, in which it has been necessary to readjust the territory's whole economy to the fall in price of rubber and tin and it is a fair measure of the resourcefulness of the business community that this process has been accomplished rather less painfully than might have been expected. Meanwhile, a mission from the World Bank is visiting Malaya and will examine long-term development projects both in the Federation and Singapore. The Mission may also be of great value if in its overall assessment of the economy of the country it shows the need for restraint in expenditure, especially on social services, at a time when such a course seems essential in view of the budgetary position.

North Borneo

"North Borneo's major export is rubber and, therefore, the further fall in price of this commodity during the past year has been a matter of considerable concern to the Colony. Under the circumstances, it is not surprising that both production and exports were lower in 1953 that in the previous year. The Government is fully aware of the importance of encouraging more efficient production and, with this in view, is sponsoring a scheme to assist extensive replanting and new planting with high yielding stock.

"Action on these lines is clearly necessary for nearly half the rubber in North Borneo was planted before 1925 and it is estimated that at the present time less than 10 per cent. of the Colony's rubber production is of really good quality. Since nearly all the large estates are exempt from the rubber export duty until 1955, it is hoped that they have made adequate financial provision for replanting in the meantime, but in many cases shortage of labour has hindered the carrying out of the work.

"With rubber shipments lower and less remunerative, the Colony's adverse trade balance in 1953 showed a substantial increase over the previous year's deficit. Of the Colony's other export commodities, timber, hemp and cutch shipments increased in volume, while copra exports fell slightly. The timber industry, in particular, has made some progress and, although labour costs remain high, the recent introduction of modern equipment should assist in increasing production. Tobacco exports were disappointing, but prospects are more promising this year. On the import side, the considerable volume of machinery, equipment and building materials which has been brought into the Colony from abroad has been essential to the Government's reconstruction and development schemes.

"One of the principal imports in recent years has been rice, for North Borneo has not been self-sufficient in food. It is, therefore, encouraging to report that the paddy harvest during the 1952-53 season was excellent and prospects good for the coming crop. In any case, the Colony should benefit from the easier conditions now prevailing in the international rice market.

"Government funds which can be devoted to development schemes are necessarily limited and this, in conjunction with the acute shortage of labour, tends to make economic progress in North Borneo slow. Nevertheless, progress has been made with the Reconstruction and Development Plan, which was initiated in 1948 for a period of seven years. To assist in implementing the Plan the Colony has received generous grants from the British Government under the Colonial Development and Welfare Scheme. This Scheme is due to expire in 1956, but it has already been announced that Parliament will be asked to extend it for a further period, and the Government of North Borneo is, therefore, preparing a new development plan to cover the years 1955-60.

"Meanwhile, the programme for 1954 includes drainage and irrigation schemes, road and airfield works. With the exception of the road programme, the Colony this year is in sight of the end of post-war reconstruction, so that it should be possible in the future to concentrate all available resources on schemes of economic and social development. During the period 1949-53, the Colony has spent $45,000,000 (£5,250,000) on reconstruction, which, except for grants-in-aid amounting to $6,642,800 (£775,000) from the British Government, has been contributed from local sources. Financially, the Colony has had a satisfactory year and budgetary revenue for 1953 was higher than originally estimated. It has not proved possible to carry out the whole of the development programme scheduled for the year and to this extent budgetary expenditure has been less than expected. Taking into consideration the funds in hand at the beginning of the year, the budgetary deficit for 1953, instead of being $4,800,000 (£560,000) as anticipated, was only $500,000 (£58,333). For the present year the budgetary estimates as originally drafted showed a deficit of $5,423,093 (£632,694), but with the assistance of grants-in-aid from the British Government and allowing for the issue of a loan for £250,000 ($2,142,800) to finance development expenditure it was finally estimated that there would be a small surplus. The Government did not find it necessary to exercise the powers it already held to raise a loan of £500,000 until early this year when the loan was taken up in whole by the Government of Brunie, a heartening start to a year which it is to be hoped will prove satisfactory for North Borneo.

Sarawak

"Sarawak's trade during the past year suffered a further fall in both volume and value largely owing to the lower prices obtainable for the Colony's rubber exports. With future prospects remaining uncertain, replanting of rubber is proceeding but slowly, despite the fact that supplies of seed and planting material are adequate. The sago industry has also had an unsatisfactory year, but pepper exports, mainly black, have risen to record heights. The bulk of Sarawak's timber shipments continue to go to the United Kingdom and Hong Kong and exports of timber have shown an appreciable increase.

"The budgetary position remains sound with a surplus of revenue over expenditure during 1953, which was mainly due to the exceptional yield of the export duty on the record pepper crop. As in 1952 the sum $12,000,000 (£1,400,000) was appropriated last year to the development fund and by the end of the year some $26,000,000 (£3,033,333) had been expended by the Colony on development schemes. The plan itself is now being revised and, meanwhile, it is proposed to spend nearly $29,000,000 (£3,383,333) during the present year on such items as communications and wharf facilities. It is estimated that during 1954 revenue from customs and excise is likely to fall further, but, nevertheless, no compensating increases of taxation have been imposed and a small overall surplus in anticipated.

"Last year's paddy harvest was above average, but the Colony still needs to import a proportion of its rice requirements. The Government continues to encourage production of this important foodstuff and cultivators should derive benefit from the creation of the Sawarak Co-operative Central Bank. This institution was registered last October and is already functioning. It is a non-commercial bank and its business lies solely with the registered co-operative societies, which are proving of conspicuous assistance to the Colony's rural economy.

"The Government has stressed the importance of aviation to the Colony by the creation of a separate department of civil aviation. An aviation development plan is envisaged and it is intended to initiate a bi-weekly air service operating within Sarawak itself and linking a number of the leading places. With this in view existing air strips are being improved and the construction of new ones considered.

Republic of Indonesia

"It is still customary for contributors to the Press to predict an early collapse of Indonesia and it is with regret that I have to report a further deterioration in conditions during the year. Although it is seemingly impossible to be very hopeful about the future, to be completely pessimistic is to strike the wrong note, for not all the portents are discouraging. Disappointment must necessarily be felt that political considerations have prevented the present Government coming to grips with labour, whose demands have again become so unreasonable

that they threaten the economic survival of the Republic.

"A Government composed of a weak coalition dependent upon the votes of the left was always at a disadvantage in tackling this vital problem and the very gravity of the situation may be its salvation, if it forces a more moderate party to emerge which could secure a broader backing. Unless something like this happens in the not-too-distant future, it is easy to visualise further dissension in the outlying parts of the Republic, such as South Sulawesi and the province of Atjeh in North Sumatra, whilst lack of control even in Djawa could make it difficult for the country to produce sufficient exports to preserve a balance in its trade.

"The sales of gold during the year and the manner in which the foreign balances have run down suggest that the fall in the price of rubber and tin was more serious than trade figures indicated. Nor do I think that the various artificial means, such as export-inducement certificates and pre-deposits by importers, introduced by the Government to redress the situation, will have any appreciable effect, unless the fundamental weaknesses of internal inflation and irresponsible labour are overcome.

"On the brighter side is the commendable increase in rice production and, when it is realised that in 1954 Indonesia will probably be self-supporting, whilst only two years earlier it was necessary to import six to seven hundred thousand tons of rice, it will be clear that the country has taken a big step forward towards a soundly based economy. Thanks for this tremendous improvement are to a great extent due to the work of the experts seconded from the United Nations' organisation and it is an interesting thought that the position has been created where the import and distribution of perhaps two hundred thousand tons of rice might bring down the cost of living to an extent that would balance Indonesia's trade position by making its rubber, tin, coffee and sugar more than competitive in world markets.

"Indonesia has an urgent need of foreign capital and, although individual ministers have made it clear that the country can only hope to attract foreign investment by providing satisfactory conditions for the earning of profits and their remittance abroad, the Government has so far hesitated to make a pronouncement on these lines. Unfortunately, uncertainty on this count has hindered expansion generally and, in particular, in the oil industry which is of prime importance to the country's future prosperity.

"Whilst every sympathy is felt with the nationalistic policy of bringing Indonesians into trade, it is certainly not in the best interests of the country that its import system should be based on non-trading licence holders, the re-sale of licences and consequent high prices to consumers. The Government is aware of the situation and I trust that it will soon take steps to remedy it.

Thailand

"Thailand, fortuitously placed at the end of the war as a granary for stricken South-East Asia, was quickly able to place its economy on a comfortable basis.

"Receipts from tin and rubber at the high prices resulting from the Korean War extended a comparatively luxurious standard of living, but in 1953, for the first time, the country found itself in a position, unfortunately all too common in the world today, of having to face the realities created by a fast diminishing foreign exchange reserve.

"Although the near-panic conditions which were so disconcerting for exporters to the country did not arise until the last quarter of the year, the writing had been on the wall for many months previously and the trade balance had in fact been adverse since February, 1952.

"Faced with an actual shortage of foreign exchange, particularly sterling, in the middle of the year, the Government deferred its allocation of cover for imports at the preferential rates and endeavoured to remedy the position by classifying as non-essential an increased range of imports. The result, as might be expected, was a weakening of the tical, and an uncertain and panicky exchange market prevailed to the end of the year, notwithstanding efforts by the Bank of Thailand to exert from time to time a steadying influence in one way or another.

"To restore equilibrium between exports and imports the Government has introduced import control, but it is doubtful if this measure will be continued rigorously once the proceeds of next season's rice begin to accumulate; for it is rice, of course, which will continue to dominate Thailand's economy.

"The Government's policy of using its monopoly of the rice trade to build up stocks inside the country to keep domestic prices low, has prevented the country in the last two years from taking advantage of its unique position as a supplier in a deficit area. Thailand's best customers have, in the interests of their own economies, increased their own domestic production and the lessened demand to be expected, coupled with the technical position in Burma, suggests a more competitive market and lower prices.

"With the unsold balance from last season, much of which has unfortunately deteriorated, plus the new season's crop, the tonnage shipped in 1954 could considerably exceed the very poor results for last year, but, as I have indicated, it may be very difficult for the Government to find markets in line with its idea of prices and considerable relief must have been felt at the successful conclusion of an agreement for substantial sales to British territories at a very favourable price.

"One can be reasonably optimistic about the future of Thailand provided that the resources of the country are wisely exploited, for rice, tin and rubber provide, even at the present prices, a sound basis for a stable economy.

"It must not be forgotten, however, that the presence of a hostile army in Laos on its northern borders is bound to continue to have a disquieting effect on the population and its productivity and trading. Nor can one but deprecate the continuance of a form of multiple exchange rates which tend to disguise the real strength and weaknesses of the economy, create inflation and possibly place a fictitious external value on the unit of currency.

Vietnam

"A clear assessment of the position in Vietnam is rendered extremely difficult by the bewildering cross-currents of internal dissension, nationalistic aspirations and a prolonged war. Many good servants have been lost to the Administration because of a feeling in certain circles that although Franco-Vietnamese cooperation has always been stressed, certain influenial Vietnamese officials were too openly pro-French, thus delaying the complete and absolute independence of Vietnam. The French, whilst gradually relinquishing their authority, still hold a strong position by their control of the Office des Changes and the distribution of American aid.

"The devaluation by France of the value of the piastre from 17 francs to 10 francs without consultation in Vietnam did not help an already strained position and the repercussions have been noticeable in business and official relationships. It is clear that the masses of the people are just as sick of politics as they are of war and want nothing more than a chance to return to the life they enjoyed before the coming of the Japanese.

"In the north, the military situation has not changed materially although there have been sporadic attacks in the Red River delta by the Vietminh and large-scale counter-attacks, including parachute descents, by the Franco-Vietnamese forces. The recent drive by the Vietminh in Laos is perhaps more spectacular than serious, for although it extends the area of the war, it is difficult to see what the Vietminh have to gain in their operations in a region largely mountainous and unproductive.

"Contrary to expectations, the authorities were able to keep inflation in check after the devaluation of the piastre in May by measures preventing increases in the prices of local goods and by a series of taxes and restrictions designed to decrease consumption of imported goods. These new rules and regulations have made business increasingly difficult for both merchant and banker and cannot be helpful in the long run.

"In the meantime, a lack of purchasing power in the hands of the local population makes trade prospects anything but bright and in addition to this the Government has issued a warning that austerity will be the order of the day. There is still large military expenditure and the note issue is again beginning to rise sharply. There are signs of a possibility that rice exports, on which the country was formerly so dependent, will continue to rise, but it is a sad thought that Vietnamese rice may only be available to the world in large quantities at a time when prices have fallen and supplies from other territories are making up the deficit that has existed since the end of the war.

"It is impossible to speak very hopefully of a territory so beset by difficulties.

Republic of the Philippines

"In October, the Republic of the Philippines elected a new President. The publicity given to the election campaign and the overwhelming victory of Mr. Magsaysay tended to overshadow the steady progress being made on the economic side. The new President's assurance that he intends to deal severely with graft and corruption has been warmly welcomed; so too has his statement, supported by the Governor of the Central Bank, that any revaluation of the peso will be strongly opposed.

"I have referred to economic progress, and the encouraging trade figures for 1953 are due in no small measure to the efficient handling of import control, which was taken over by the Central Bank last June and is now operated by a system of exchange control through the commercial banks. The new procedure which overnight eliminated the malpractices seemingly inseparable from previous forms of control, places a considerable strain on the senior officers of the commercial banks and involves duties not normally associated with banking. The banks are, however, very pleased to assist the Government in this manner, although the recompense is hardly adequate.

"The remedying effect of strict import control would not have allowed the Central Bank to hold its target of U.S.$300,000,000 in foreign currency reserves had it not been for high sugar exports and a recovery in the price of copra and coconut oil. Hemp shipments were slightly less than the previous year and gold mining is in the doldrums. A further factor invaluable in the country's bid to balance its trade has been its increased rice production and the present self-sufficiency in rice is a sound basis for the economy. This is one of the first visible signs of the benefits to be reaped from Foreign Operations Aid (formerly M.S.A.) and, in addition to the distribution of fertiliser, various irrigation projects have been completed, whilst roads and schools have been built and technical aid given. An indirect result of this international betterment has been stability in prices and the Philippines is one of the few countries in the East where inflation seems to have been successfully halted.

"The future trade of the country is to a great extent bound up in the negotiations for the revision of the Bell Trade Act, but so far little progress has been made in the repeal of the provisions which call for the gradual imposition of duties on some imports into the United States from the Philippines and the gradual reduction of quotas for others. At the moment, it seems probable that the Bell Act will be extended in the present form for at least another year, but there is no doubt that, before entering into a further long-term agreement, the United States would like some concessions, particularly in respect of remittances of capital invested in the Philippines and of a gradual elimination of the seventeen per cent. exchange tax. On the other hand, opinion in the Philippines is by no means unanimous that it is desirable to continue a position whereby the country's economy is so completely dependent upon trade with the United States. So far, there has been very little evidence of a switch to other markets, such as those of the sterling area, and barter business with Japan seems likely to be held up by the vexed question of reparations.

"The Central Bank's action in reducing from seventy per cent. to fifty per cent. the ratio which commercial banks are required to maintain in certain specified assets against their total outstandings under letters of credit is a welcome concession which has eased our operations in the Philippines. It is good to know that the Government feels that the country is strong enough to allow for certain relaxations, but I must admit to a certain amount of apprehension when I view the list of Bills to be submitted to Congress, such as the Social Security Act, 1954, for, I doubt, if the economy is yet strong enough to stand the cost of further nationalisation and extended benefits to employees which their adoption would create.

Hong Kong

"The meticulous manner in which Hong Kong has endeavoured to carry out the United Nations' embargo on the export to China of what are termed strategic goods and commodities (a position verified by United States officials on the spot) has imposed a severe strain on the Colony's economy; the value of the external trade of Hong Kong in 1953 was H.K.$72 millions less than in 1952. In recognising this and in further relaxing its restrictions on trade with Hong Kong, the United States of America has helped local industry to some extent. Little can be done, however, to help those merchants having trade connections with the China mainland as long as the Peking Government is determined to use Hong Kong only when it is short of sterling and other channels do not conveniently exist, and furthermore imposes upon imports into China terms of payment which do not appeal to banks of standing.

"Notwithstanding these adverse factors and the lack of benefit to Hong Kong from the visit of the unofficial British Trade Delegation to Peking, a quiet confidence in the future prevails and this is depicted, for example, by the cotton mill interests who are erecting two more mills and increasing the total number of spindles to 255,000. It is perhaps difficult to justify the expansion of the spinning and weaving industry in the face of the lack of certain and traditional markets for its yarn and cloth and recent events have shown how vulnerable this industry is in its dependence upon the vagaries of the Indonesia and Pakistan markets. However, Hong Kong as a trading centre has a wonderful resilience and the blocking of trade in one direction inevitably leads to increased business elsewhere. This changing pattern has been much in evidence of late.

"Hong Kong must remain acutely interested in the Korea peace talks, but even if a favourable settlement is made there is as yet no indication that the Chinese authorities will be prepared to allow the port to function in its natural capacity as an outlet for the mainland and to handle the entrepôt trade for which it is so eminently fitted. It is not even certain that a peace settlement would ensure a resumption of the flow of food supplies from the mainland for the Colony's vastly increased population and here it is apposite to mention the commendable way in which the Government has countered the loss of the Colony's main food supply by arranging and controlling rice imports from overseas and encouraging the growth of fresh vegetables in the leased territories. The Government and the citizens of Hong Kong are also to be commended upon the efficient and helpful steps which were taken when the disastrous squatter-settlement fire on Christmas night rendered sixty thousand homeless.

"The recently concluded Anglo-Japanese Payments Agreement is of interest to Hong Kong, inasmuch as further entrepôt trade is permitted, and it remains to be seen whether this will have a stimulating effect on local imports and exports.

China

"Two years ago, I informed the stockholders that our usefulness in China as an exchange bank appeared to be at an end and that we had, therefore, sought permission of the People's Government to close our Tientsin office. Shortly afterwards, we were reluctantly compelled to take similar steps in Shanghai. I regret to report that, notwithstanding every effort to co-operate on our part, little, if any, progress in the liquidation of our affairs has been made.

Japan

"Judged on figures alone, Japan's economic position cannot be regarded as sound. The country has been unable to pay for its imports without the U.S. dollars accruing from goods supplied and services rendered as a result of the war in Korea and from the presence of large United States garrison forces.

"The foreign trade position at 31st December, 1953, excluding military procurement, showed a deficit of U.S.$944,000,000, and the decrease of nearly U.S.$200,000,000 in foreign currency holdings during the year, is attributable to this cause and in particular to inactive export trade with the sterling area. In fact, an acute shortage of sterling has been a dominating feature in the economy, and the steps taken to overcome this handicap, and to provide funds for the payment of sterling imports, included drawings from the International Monetary Fund to the full extent of the country's quota and the arranging of U.S. dollar/sterling swaps. In other words, Japan had to borrow heavily to meet its current sterling commitments, and the agreement recently signed in London, providing for an increase in 1954 of Japan's exports to the sterling area to a level at which they might be expected to balance imports from the same source, should help this aspect of the country's troubles.

"Japan's problem is, however, too deep-seated to be righted by small trade concessions here and there, and the inability of industry to reduce production costs to meet international competition is particularly ominous as the standard of living for the working people is already low.

"Perhaps, the blame for high production costs may be placed on the superficially favourable economic conditions giving large domestic consumption and high commodity prices. The result of those conditions was, of course, an ever-growing inflation which was accentuated by a budget which, for political reasons, was inflationary and proved harmful to the nation's entire price structure. There is now an indication, however, that the very gravity of the situation will bring about more responsible action.

"The Bank of Japan took steps in September to correct the dangerous inflationary trend by introducing a tight-money policy and setting a limit on the total advances it was prepared to make to commercial banks at normal interest rates. Notwithstanding this, the position of the leading Japanese banks, all of whom were heavily overlent at the beginning of the year, showed a further deterioration.

"Although we can hope that the country will be spared such national calamities as the typhoons and floods which caused such widespread damage to the rice crop in 1953, there seems little doubt that the Japanese people will be called upon to accept a degree of austerity hitherto unknown in the country's peace-time history. Our knowledge of the Japanese people suggests they will shoulder this burden in a spirit which should mean the ultimate resurgence of the country as a first-class industrial power possessing a basically sound economy.

"The pressure of an increasing population and the lack of natural markets, however, cannot but provide an uneasy undercurrent in a country which should be the greatest stabilising influence in the Far East, and it is for these reasons that the thoughts of many Japanese, besides the merchant community, turn to trade with North China. The practical advantage gained from the recent Mission to Peking was so disappointing that it served as an anti-climax after the high hopes held for an expansion of trade with the People's Government, and it must not be forgotten too that in many parts of South-East Asia memories of the occupation still linger and the recapturing of pre-war trade in these countries may be a very slow process.

New York

"Our New York office is an indispensable part of the international organisation maintained by the Bank. It continues to develop and consolidate our many and longstanding connections in both the United States and Canada and plays an important part in facilitating the business of our branches in Europe and the East.

"Last year, I emphasised the importance of the United States as a market for the products of the Eastern territories in which the Bank is established and the international interest aroused by comparatively slight fluctuations in the volume of commercial activity in that country is a measure of the preponderant influence of its economy in the modern world. This influence has been demonstrated by the widespread publicity given to the recently published report of the Randall Commission on the foreign economic policy of the United States. Here it is sufficient to say that the report contains many recommendations whose adoption would assist the development of international trade, a matter of prime concern to this Bank, but we must remember that the Commission's suggestions, however admirable, will not necessarily be accepted by the United States Government or put into effect.

"During 1953, American economic activity reached record levels and the United States Government appears to be proceeding on the assumption that no serious setback need be apprehended in 1954. I hope that this expectation will be fulfilled. The prosperity of the Eastern territories in which the Bank operates, no less than that of Western Europe, depends very largely upon the continued expansion of the American economy.
