"In face of increased competition our Hamburg agency has provided useful financial facilities in connection with the overseas trade of the Federal German Republic. During the past year, Western Germany has achieved a substantial rise in industrial production accompanied by a further expansion of exports. Imports were slightly lower than in 1952 and with the terms of trade moving further in the country's favour, the surplus on the balance of payments once again showed a striking increase, a clear indication of the growing strength of the German economy.

"One of the most difficult problems that has confronted German industry since the war has been the shortage of capital and the rise during the past year in medium and long-term bank credit extended to industry indicates that the capital market is still very narrow in comparison with those in other industrial countries. With the shortage of capital at home, it is on the face of it surprising to find Western Germany allowing extensive credit abroad, but if exports are to be maintained, the granting of such facilities may be increasingly necessary, particularly where capital goods are supplied.

Manchester and Liverpool

"The Bank's branches at Manchester and Liverpool continue to assist the flow of trade between Lancashire and the East and the services they provide will be of considerable benefit to merchants and manufacturers in the North of England in the more competitive international trading conditions which may be expected to ensue from the recent Anglo-Japanese Payments Agreement.

West End, London

"The banking facilities provided by our West End, London, branch were much appreciated by our many customers from the East who took the opportunity of visiting London during Coronation year.

Convertibility of Sterling

"In my annual statements I have frequently referred to the question of convertibility of sterling, and while I have been insistent upon the need for Great Britain, as banker to the sterling area, to have such convertibility I have advocated caution in any approach to the problem.

"Today, we are under greater pressure than ever before, both internally and from abroad, to see that convertibility is speedily reached, and it is, therefore, only right that we should take stock.

"In the first place, we must bear in mind that those countries in Western Europe that are nearest to fulfilling the conditions necessary for a return to full convertibility have problems entirely different from our own. Some of these nations neither have the internal liability of a

heavy national debt nor external responsibilities in the sterling area. We, on the other hand, have heavy internal liabilities and heavy external responsibilities, and it is these external responsibilities in particular that must make us think very carefully before taking the next step. If we had no such responsibilities we could afford to take greater risks, knowing full well that as failure would end in inflation of the currency in this country, the penalty for failure would be borne by ourselves. But as bankers to the sterling area we cannot risk the credit of our friends who bank with us, and we certainly dare not gamble on the possibility of inflation in this country being acceptable to other countries within the sterling area that are faced with conditions quite different from our own. So, though the truth may be unpalatable, we must realise that unless our own position is assured, we cannot afford to take risks that will involve others, and for our own position to be assured we must have a substantial surplus on our balance of payments and must be able to put into the common fund as much as we take out of it.

"It goes without saying that we all require a steady growth of world trade and world investment, and that we shall not fully get this until we have a proper system of free and stable exchanges, first and foremost amongst which must be a stable and convertible sterling, and it is all to the good that we have seen in this country some reduction in taxation and a considerable step towards freedom from controls, both of which factors must help to encourage that private enterprise and those private savings, without which we cannot hope to restore our position in the world. If we in this country could feel more sure that our resources, which we have so patiently built up, would not again be dissipated, we might feel that we were well on the road to convertibility.

"In any event, we must have the full co-operation of the U.S.A. in any steps that we take, and while the report of the Randall Commission shows that our friends in America are fully alive to our needs, it also shows that we are not likely to get a quick remedy for our trouble from that quarter. Nor, as I said last year, do I feel that it would be easy to apply convertibility to so-called current sterling only.

"While our first problem must be to ensure the stability of the purchasing power of the £ at home, so that there may be an end to the constant demands for higher wages that can only lead to our exports becoming uncompetitive, it must be clear that a policy embracing full employment and retention of all the benefits of a Welfare State under all circumstances, cannot be compatible with complete convertibility and a fixed rate of exchange for the £ unless production within this country increases. In other words, however desirable these benefits may be, this country cannot have them unless it is prepared to work hard enough to pay for them.

"As we are so dependent upon our friends in the Commonwealth and as a fixed rate of exchange is essential if we are to keep faith with them and retain the faith of the world in sterling as a world currency, we must operate in this country with this always in mind. I believe that our first steps must be to encourage private enterprise, ability and inventiveness by removing controls and reducing taxation. If this is done, we may hope both for a better standard of living and a surplus in our balance of payments, and shall be able more confidently to proceed to the next step towards full convertibility. This next step may well be a determined effort to provide greater freedom of exchange within the sterling area."

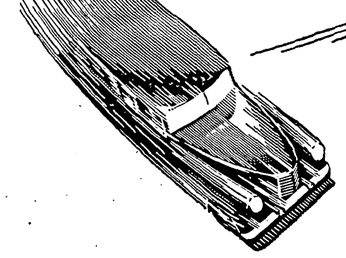
(IGNITION CONTROL ADDITIVE)

"LICENSED UNDER 'SHELL' PATENTS"



A short story of the greatest petrol development in 32 years: *How it solves two problems that had everybody beaten.*

A little over a year ago it looked as if motor car engine manufacturers were running hard up a dead-end street. The more horse-power they added to their engines, the more it seemed to simmer away after a modest few thousand miles of driving.

In 1946 the maximum horse-power in mass-produced cars was 150; by 1953 it had been boosted to 210. In order to make that gain, engine makers had raised compression ratios from an average of 6.5:1 to an average of 7.5:1. The tighter they compressed the fuel gas in the cylinder, the more power they obtained.

Fine. But higher compression ratios demand higher anti-knock qualities in petrol. In spite of improved refining methods, the whopping demands for higher octane fuels could be met only by adding more tetraethyl lead—almost 40% more between 1946 and 1953.

And that's where the trouble really started. Thirty-two years before tetraethyl lead had solved the problems of knocking in petrol. By 1953 it was apparent to everybody in the business that TEL, the anti-knock hero—along with more critical engines—had raised a couple of other problems that had not been there before.

1. Spark Plug Fouling. Lead deposits on spark plug porcelains act as conductors and short-circuit the plugs. Results: no spark to the affected cylinder; waste of the fuel/air mixture; loss of power; uneven performance; end of plug's usefulness.

2. Pre-ignition. Lead deposits in the combustion chamber, mixed with other deposits left by burning fuels, heat up rapidly and sometimes ignite the fuel/air mixture before the spark gets a chance to do its job. Results: the jittery vibration known as "wild ping"; loss of power; petrol waste; uneven performance.

Both these problems had everybody beaten until Shell developed the additive tricresyl phosphate to cope with spark plug fouling in aeroplane engines. It worked by making the lead deposits non-conductive. It works now in motor car engines as nothing has ever worked before:

1. I.C.A. stops pre-ignition
2. I.C.A. stops spark plug fouling

That is the story of I.C.A. (Ignition Control Additive)

THE BANK OF INDORE, LIMITED

(INCORPORATED IN INDORE, 1920)

REPORT OF THE DIRECTORS TO BE SUBMITTED TO THE SHAREHOLDERS AT THE THIRTY-FOURTH ORDINARY GENERAL MEETING

GENTLEMEN,

Your Directors have the pleasure to lay before you the Balance Sheet and Profit and Loss Account of the Bank for the year ended the 31st December, 1953, duly audited by Messrs. A. F. Ferguson & Co., Chartered Accountants.

	Rs.	a.	p.
The Net Profit for the year including the sum of Rs. 63,199-13-1 brought forward, amounts to	5,49,936	15	6
An ad-interim Dividend was paid for the half-year ended 30th June, 1953, at the rate of 12 per cent. per annum on 61,215 shares absorbing	91,822	8	0
Amount transferred to Reserve Fund (bringing that Fund upto Rs. 25,00,000)	1,00,000	0	0
Amount transferred to Contingency Fund	1,00,000	0	0
Bonus paid to the Bank's Staff	92,791	5	0
	Rs. 3,84,613	13	0
Your Directors now recommend :—			
To pay a Final Dividend at the rate of 12 per cent. per annum on 61,215 Shares for the half-year ended 31st December, 1953, amounting to	91,822	8	0
To transfer to Gratuity Fund	10,000	0	0
To donate to the Holkar State Red Cross Fund	500	0	0
To carry forward to the next account	63,000	10	6
Rs.	5,49,936	15	6

The Directors deeply regret the death on 22nd November, 1953, of their esteemed colleague Raj Bahadur Rajya Bhushan Seth Kanhaiyalal Bhandari.

Last year a Branch of the Bank was opened at Dhar (Madhya Bharat).
The Directors hope that you will find the progress of the Bank satisfactory.

By Order of the Board of Directors,
N. D. JOSHI,
Manager.

THE BANK OF INDORE, LTD.,
INDORE CITY, 27th February, 1954.

(Continued in next page)

IMPERIAL BANK'S PROFIT SHRINKS

CASH BALANCES LOWEST SINCE 1941

A DROP of Rs. 6.53 lakhs in profit, that is from Rs. 133.35 lakhs to Rs. 126.82 lakhs, is disclosed by the audited accounts of the Imperial Bank of India (Managing Director: Mr. S. K. Handoo) for the year ended 31st December, 1953. By this shrinkage during the year, the upward trend in the Bank's profit noted during the previous years has been reversed. This is not surprising because it is only in consonance with the general trend of bank profits for the past year. For the year, while witnessing the consolidation of the process of transition and adjustment to the new monetary and credit policy inaugurated towards the close of 1951, proved to be less remunerative for banks. During this year of consolidation, banks have had to exercise more caution in their lending policy, while at the same time, they have had to pay higher rates of interest on their deposits which, in turn, was the result of the new monetary policy. Thus in the case of Imperial Bank of India there has been a decline in turnover, as is seen in the fall in the balance-sheet total from Rs. 239 crores to Rs. 224 crores and a rise in expenses and these together account for the decline in profit. The contraction in turnover is rather surprising because it took place despite the opening of 26 new branches and convertion of 8 of its treasury pay offices into full branches during the 12 months ended 30th June, 1953.

Results for the Last Four Years

The following comparative table of the Bank's financial results for the last four years shows how the upward trend in the Bank's profit noted in recent years has been reversed in the year under review:

TABLE I
(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950
Gross income	7,23.90	7,60.54	6,92.38	6,48.88
Interest and discount	5,49.82	5,52.10	4,98.21	4,79.05
earned	1,70.68	2,05.29	1,91.23	1,62.58
Commission, exchange, etc.	1,34.71	1,70.13	1,20.08	1,20.91
Interest paid	4,49.66	4,43.53	4,20.11	3,90.26
Expenses	12.71	13.53	13.11	11.22
Depreciation and repairs	1,26.82	1,33.35	1,30.07	1,29.46
Profit				
Transfer to—				
Reserve fund	5.65	5.44	2.89	2.50
Pension fund	40.00	39.00	37.50	35.50
Bonus to staff	90.00	90.00	90.00	90.00
Dividend	(15%)	(15%)	(15%)	(15%)
Carry forward	33.25	42.08	43.17	48.73

The gross income shows a fall of Rs. 36.64 lakhs during the year under review, thus reversing the upward trend noted in the previous two years. The gross income, at Rs. 7.24 crores, is, however, much higher than that for 1951 or 1950. The decline in gross income for 1953 is accounted for by the drop of Rs. 2.28 lakhs in interest and discount earned and of Rs. 34.61 lakhs in commission and exchange and brokerage earned. The decline in the above sources of income has been offset to a large extent by the contraction of Rs. 35.42 lakhs in interest paid on deposits and borrowings. This substantial savings in outgo is due to the sizably lower level of borrowings from other banking companies and agents. A perusal of the Bank's weekly statements shows that there has been practically no borrowings in the latter half of 1953, while there were outstanding borrowings throughout 1952 and at a higher level. The reduced volume of borrowings during 1953 has evidently formed part of the cautious policy followed by the Bank in its own lending operations. The rising spiral of the Bank's expenses, noted in the last few years, has reached a further stage during the year under review, with an increase of Rs. 6.13 lakhs, thus rising the expenses by nearly Rs. 60 lakhs during the last three years. But it is comforting to note that the rise during 1953 is not of the same order as that in the previous two years.

For the second year in succession the reserve fund has not been strengthened, while pension fund has been allotted a little more than it received last year and the "bonus to staff" account has received Re. 1 lakh more. The dividend is being maintained at 16 per cent. for the fourth year in succession.

In refreshing contrast to the steep decline noted in the previous year, there has been a small rise in deposits during the year under review. A break up analysis of deposits reveals that in distinct contrast to the general trend the Bank's fixed deposits have declined from Rs. 36.06 crores to Rs. 35.11 crores. Savings Bank deposits are also lower at Rs. 27.97 crores, as against Rs. 28.74 crores, while current accounts, contingency accounts, etc. show an increase from Rs. 141.28 crores to Rs. 144.12 crores. The decline in advances by Rs. 7.04 crores is of a lower order than that noted a year ago. This is partly due to the fact that the general level of advances was at much lower during the year than in the previous one. Thus, even during the busy season of 1953, Imperial Bank's advances stood at no higher than Rs. 135.78 crores, as against a peak of Rs. 163.83 crores touched in the corresponding season of 1952. Of the total advances at the close of 1953, loans, cash credits and overdrafts account for Rs. 90.56 crores, as against Rs. 105.83 crores a year ago, and bills purchased and discounted for Rs. 14.28 crores, as compared with Rs. 6.05 crores.

Again, in sharp contrast to the rise of Rs. 11.98 crores noted at the close of 1952, the Bank's investments at the end of the year under review disclose a decline of Rs. 3 crores, of which a large part, namely, Rs. 2.91 crores, consists of Pakistan and other Government securities. Cash balances have shrunk by Rs. 5.64 crores to a low of Rs. 21.11 crores. It may be interesting to note that not since the close of 1941, the Bank's cash balances have stood at such a low level. The cash coverage to deposits stands at 10.2 per cent. which is less than the average for all Scheduled banks in India.

Balance-sheets Compared

The main assets and liabilities of the Bank as at the close of the last four years are compared in Table II:

TABLE II
(In lakhs of rupees)

	As on 31st December			
	1953	1952	1951	1950

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Bank of Indore, Ltd., as at 31st December, 1953, and also the foregoing Profit and Loss Account for the year ended upon that date, in which are incorporated the audited returns of the Branches, and report that :—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory ;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank ;

(c) the returns received from the Branch Offices of the Bank have been found adequate for the purpose of the audit ;

(d) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law ;

(e) such Profit and Loss Account shows a true balance of profit for the year ;

(f) such Balance Sheet exhibits a true and correct view of the state of affairs of the Bank according to the best of our information and the explanations given to us and as shown by the books of the Bank; and

(g) in our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

EXPANSION OF EXPORT TRADE

INDIA'S MEMBERSHIP OF G.A.T.T. UNDER REVIEW

A NOTE of optimism about the outlook for Indian economy was struck by the Union Minister for Commerce in his inaugural address at the first annual meeting of the Indian Council of Foreign Trade held at Bombay on the 12th inst. He said: "After a period of varying vicissitudes following the close of war, we have now arrived at a period of relative stability. The food situation has shown positive improvement, the supply of capital goods and raw materials to all industries has been fairly satisfactory." There was also improvement in the value of the rupee. At one time, he said, the Indian rupee used to be quoted at a much lower price than the official rates of exchange whereas for some time past the difference hardly existed. Few would deny the importance of the improvement, inasmuch as such indicates the elimination of certain handicaps in the sphere of Indian economy. But there yet remains much to be done. That the Minister was conscious of this fact is evident from his emphasis that the country's attention should now be diverted towards achieving positive results, among others, in two directions, namely, (*a*) to attract greater resources by expanding exports and (*b*) to make available all necessary imports for meeting the needs of internal development and consumption.

The Minister thought that private enterprise had a lot to do in the work of building up India's export trade. In fact, he called upon the trading community to establish contacts, develop goodwill and create a name for integrity and reliability in world markets. The Minister pointed out that, with the change in the pattern of our foreign trade, it was essential that India should not only maintain its existing markets but also develop exports both qualitatively and quantitatively. "The *sine qua non* of developing our exports," he said, "is a close study of, and constant touch with, conditions in the importing markets. Our foreign missions both on the diplomatic and trade sides are doing their best in this regard, but, in a country like India, where the preponderant section of industry and trade has been left to private enterprise, much of our success depends upon the enterprise of these directly engaged in commerce and industry." He further pointed out that increasing participation by India in exhibitions held abroad would help expand the country's foreign trade. He hoped that those engaged in industry and trade would take a larger interest in such exhibitions.

Participation In World Fairs

In this context, we are told that so far only cottage industry products formed the bulk of the exhibits at international exhibitions. The lack of interest shown by private industry and trade in world fairs is rather an unhappy feature of India's export promotion drive. The causes for this lapse are worth studying. Of course, participation in world fairs involves a large measure of time, energy and expense. All this is worth in view of the need for expanding the markets for Indian manufactures outside the country. The assistance by the State in the form of freight concession in respect of rail as well as shipping, will also go a long way towards encouraging the participation of Indian manufacturers in fairs held abroad. This problem is worthy of attention of a body such as the Indian Council of Foreign Trade.

Mr. Karmarkar also referred to the controversial issue, namely, whether India should continue to be a member of the Geneva Agreement on Trade and Tariffs. This question is hanging fire ever since the Federation of Indian Chambers of Commerce and Industry counselled, some time ago, the Government of India to consider seriously the advisibility of terminating this agreement. The Federation seems to be of the view that under the Agreement, India has not been able materially to improve its export trade and that certain concessions given in respect of its import trade have not been in the general interests of this industrial development of the country. In view of these views held by this apex body of business men, Mr. Karmarkar did well in revealing that the working of the G.A.T.T. organisation would be coming up for review in the course of the next twelve months and that the Government was making a close study of the subject in order to formulate its future attitude. He, however, observed that, at present, it was very difficult to point out that any "tangible benefits" accrued to India from this agreement.

We do not know on what grounds Mr. Karmarkar has come to this conclusion, with which we do not agree. The one way of looking at the benefits of the G.A.T.T. is to imagine the possible effects on India's foreign trade of the absence of this international agreement. In this connection, it will be pertinent to mention here briefly some of G.A.T.T.'s contributions to promote international trade. It has made a valuable contribution to securing reductions in Tariffs by introducing a new negotiating technique. It has brought about a far greater stability in customs tariffs. It was helpful in settling the dispute between India and Pakistan in respect of the latter country's discrimination in regard to export duty on raw jute. These advantages apart, India has lost nothing by being a member of the G.A.T.T. There has so far been no evidence of any adverse effect on the Indian economy as a result of the country being a member of the G.A.T.T. It has not in any way handicapped India's programme for establishing new industries. No complaint has been heard from protected industries that the concessions given under the G.A.T.T. have affected their interests. Nor have these concessions resulted in any loss of revenue to the Government. These considerations as also the fact that certain abnormal conditions created by Korean war did not offer full scope for the G.A.T.T. to play its role need to be borne in mind, while judging the advisibility or otherwise of withdrawing the membership of India from this world organisation.

Another question which received the attention of Mr. Karmarkar in the speech referred to above related to the refund of import duty paid on raw materials used in manufactured goods exported from India. Mr. Karmarkar pointed out that this question had been under consideration for some time and that the main difficulty was the determination of the amount of imported raw material utilised in the manufacture of many goods such, for instance, as silk. In a way this explains the reason for the abolition of the import duty on cotton proposed in the Budget for 1954-55.

STATE INDUSTRIES UNDER PRODUCTION MINISTRY

A review of operations of the Ministry of Production, Government of India, during 1953-54 discloses some notable progress in the performance of various state-owned enterprises. In the sphere of shipping under the management of Hindustan Shipyard Ltd., two ships of 8,000 D.W.T. each were launched during the year. Keels were laid in the Visakhapatnam Shipyard for three diesel ships of 7,000 D.W.T. each. Orders have also been received for the construction of several ships from Indian shipping companies, the Navy and the Lighthouse Department. It was decided also to undertake the construction of a dry dock at the shipyard. Work on it will begin next year.

The Sindri Fertilisers and Chemicals Ltd. reported a gross profit of Rs. 2.71 crores for the period 16th January, 1952 to 31st March, 1953. A sum of Rs. 1.6 crores has been set apart towards depreciation and Rs. 48 lakhs for repairs. Rs. 35 lakhs were paid to Government as interest on loan and Rs. 26 lakhs were written off on account of development expenditure. The net profit stood at Rs. 95,000.

Production of ammonium sulphate during 1953 amounted to 265,704 tons, as compared with 172,519 tons in 1952. The factory could not, however, reach its rated capacity of production on account of certain plant troubles. A catalyst plant has been installed at a cost of Rs. 3.5 lakhs with a view to avoiding imports of iron-oxide catalyst. The cost of catalyst produced is about Rs. 2,500 per ton, as compared with Rs. 10,000 per ton of the imported product.

The factory of the Hindustan Cables Ltd. is now nearing completion. The drum shop for the manufacture of cable drums was, however, completed and went into production in the middle of December, 1953. As the requirements of the P. and T. Department have increased largely since the original plan was drawn, it is now proposed to work the factory on double shift.

Among the oil refineries, Stanvac is expected to go into production in July, 1954, about six months ahead of the original schedule. Burmah-Shell may commence production early in 1955. The year 1954-55 will thus see the start of operation of the two refineries, with a total capacity of 3.2 million tons of crude oil.

Work on the Caltex refinery at Visakapatnam may start early in 1955.

The Hindusthan Housing factory has commenced the manufacture of woodwork against orders received. The production of cement concrete pipes is also proceeding apace.

Production at the National Instruments Factory, Calcutta has been rising, it is stated, since 1949-50. In the first nine months of 1953-54, the value of production, including repairs, amounted to Rs. 12.09 lakhs. In 1952-53, it aggregated Rs. 18.15 lakhs.

(*Continued on next page*)

WOOD SCREW INDUSTRY

PRICES AFFECTED BY JAPANESE IMPORTS

IN the course of his presidential address to the fourth annual general meeting of the Screw Manufacturers Association held on 8th March at New Delhi, Mr. K. L. Sakhuja put forward a vigorous plea for a complete ban on imports of wood screws into the country. He declared that the position of the industry which was already worse would deteriorate still further, if such a step was not taken immediately. A chief point to be noted in the case of this industry is that a large part of the installed capacity remains idle, on account of competition from imported goods. Thus, the installed capacity at the time of the Tariff Commission's enquiry into the continuance of protection in 1953 was 3,328 tons, on the basis of single shift, and 6,656 tons on double shift. The capacity has since increased, while, according to Mr. Sakhuja, the country's estimated requirements are no more than 2,500 tons only. The actual production, as estimated by the Tariff Commission on the basis of figures supplied to it by the factories at the time of enquiry, was 312 tons in 1950, 488 tons in 1951 and 504 tons in 1952. As a result of this wide disparity between installed capacity and the actual production, the industry is stated to be in a very difficult situation. In fact, its present position has been brought out clearly by Mr. Sakhuja as follows:

"All the units in the indigenous industry are working on only one shift basis and they are not able to utilise their full capacity. Owing to imports, the market has been overfed for the last two years and the indigenous manufacturers are experiencing great difficulties in selling their products. Even this limited output, they are not able to market in the country, due to cut-throat foreign competition and the manufacturers are producing far less than what they can, because they do not find enough scope for sales. As a result of heavy imports and glut in the market, the indigenous manufacturers are selling their products in the range of As. 12 to As. 14 per gross inch, as against the average fair ex-works price of Re. 1-2-6 per gross inch assessed by the Tariff Commission for the year 1953-54, and thereby incurring heavy financial losses. Since the factories are selling below their cost and losses are mounting up, they must, sooner or later, close their doors, thereby throwing out of employment a large number of workers."

Mr. Sakhuja made particular reference to the import of lath pointed wood screws which is 100 per cent. of the best year's imports, as against 5 per cent. in the case of other screws. He alleged that the importers had been taking advantage of this opportunity by offering the lath pointed wood screws as a good substitute for gimlet pointed wood screws, the imports of which have been restricted to 5 per cent. Consequently, he held that the effect of protection granted to gimlet pointed wood screws by the restriction of their imports to 5 per cent. had been defeated.

Of the imports of wood screws, those from Japan have been a problem, especially because of their lowest c.i.f. price. Imports from Japan, which were 0.7 per cent. of total imports in 1951-52, were 18-1 per cent. in 1952-53 (April to October). During November-July, 1953, they were 27.2 per cent. Mr. Sakhuja pointed out that, the prices of indigenous screws and those of the Japanese screws were almost on the same level, while the prices of imported Nettlefolds, Swedish and Continental screws were about 70 to 80 per cent. higher than those of Japanese and indigenous screws. In this context, he remarked: "It is solely due to the low landed cost of Japanese screws that the market price of indigenous screws is below the cost price."

It will be recalled that the Tariff Commission had observed that "the lowest c.i.f. price relates to wood screw imported from Japan" and, as their imports formed a very small proportion of total imports, the Japanese prices had not affected the prices of indigenous screws. That this observation of the Commission has lost its significance is evident from the developments which have taken place since then, as was pointed out by Mr. Sakhuja. The President of the Screw Manufacturers Association complains thus:

"In view of the Japanese imports, the indigenous manufacturers have to sell their goods at a loss. It is, therefore, necessary to link the scale of protection to the level of prices of Japanese screws and I would suggest that either the minimum duty should be sufficiently raised, so as to enable the indigenous manufacturers to sell their products above the cost determined by the Tariff Commission in the face of the Japanese competition, or the imports should be completely banned."

In addition to ban on imports, Mr. Sakhuja made the following suggestions to enable the industry to achieve maximum production.

(1) The industry should be given adequate quantity of steel wire for production on two shift basis.

(2) Export possibilities should be explored.

(3) Protection should be granted in other allied lines of manufacture, so that the screw factories could profitably take up these lines. The allied lines of manufacture are: (*a*) Tinmen rivets can be manufactured with the same machinery as is used for wood screws, but, because of competition from Japan, it is uneconomical to manufacture goods locally. (*b*) Manufacture of iron and steel bolts, nuts, set screws machine screws and machine studs as well as bifurcated rivets and other kind of rivets, cotter pins, washers, tacks, panel pins, hooks and eyes should also be entrusted to wood screws factories, so as to reduce the overhead cost, even though the manufacture of these items may necessitate their buying additional machinery specially suited to these purposes. The technique, however, is so identical that the screw factories are in an advantageous position to take up these lines of manufacture.

The plea of Mr. Sakhuja for a total ban on imports is rather untenable. For private industry can thrive only when there is some competition. A complete ban will take away the initiative to improve efficiency and reduce prices to the consumer. All that is needed, therefore, is that the industry should put forward its claims for higher tariff protection before the Tariff Commission in order to save itself from Japanese competition. Mr. Sakhuja, however, has not mentioned why this course has not been adopted by his Association. The suggestions of the President regarding the provision of adequate quantity of steel wire on two shift basis, exploration of export possibilities, and protection to allied uses of manufacture deserve the attention of the Government.

BRITISH INDUSTRIES FAIR

Two epics of contemporary British adventure will form the background for unique features at the 1954 British Industries Fair, to be held simultaneously in London and Birmingham from 3rd to 14th May. They are the ascent of Everest last summer and the long and lonely Arctic research of the British North Greenland expedition, both of which were made possible by the industrial enterprise of British manufacturers who supplied the material and equipment necessary. Behind the Himalayan and Arctic exploits lies a dramatic story of ingenuity and design by British scientists and workers. The spotlight will be turned upon these "back-room boys" of discovery for the first time by their special representation in Britain's "shop-window." Topicality is added by the fact that the Greenland team does not end its two-year vigil until next August.

At both Everest Court (at the B.I.F.'s Earls Court, London, centre) and North Greenland Court (at the Olympia, London, centre), there will be exhibits—ranging from scientific, radio, and medical supplies to provisions and cooking utensils—from over 30 firms. The exhibits will surround a central area containing realistic models of the terrain over which the explorers have worked, and many articles of equipment depicted as though in use. Atmosphere will be lent to the reproductions by appropriate scenic backcloths.

It is now estimated that by the close of the 1954 Fair the number of oversea visitors who have sought British goods at successive B.I.F.'s since 1947 will be 125,000—more than twice the total number at all the Fairs held before World War II. An average of well over a thousand new arrivals daily is expected to be maintained at this year's B.I.F.

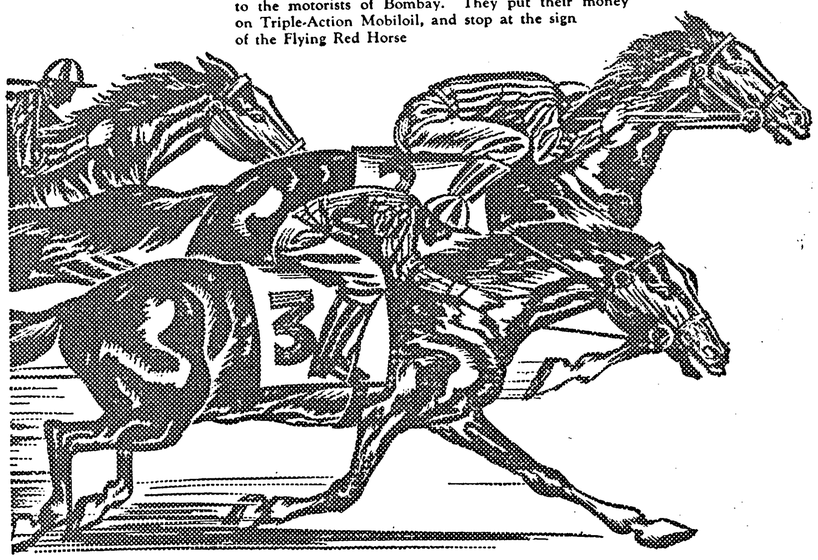
(*Concluded from previous page*)

In regard to the factory to make penicillin, work is progressing with the construction of the factory buildings. Several of the buildings having been completed, installation of machinery has commenced. The same is the case with the Hindusthan Machine Tools Ltd. Production, however, is expected to commence in the middle of this year. The construction of D.D.T. factory building at New Delhi started in November, 1953 and may be completed by June, 1954. The Nahan Foundry in Himachal Pradesh is manufacturing sugarcane crushers, sugar boiling pans and other miscellaneous articles required for *gur* manufacture.

Bombay

The populace of Bombay is delightfully gregarious. It turns out in vast numbers to picnic at Juhu Beach, take the evening air at Marine Drive, attend meetings at Chowpatty Sands. It also loves to cheer itself hoarse at the races.

On the road too, efficient horse power means much to the motorists of Bombay. They put their money on Triple-Action Mobiloil, and stop at the sign of the Flying Red Horse



Like motorists throughout the world, they know that Triple-Action Mobiloil

Saves on Wear
Saves on Repairs
Saves on Petrol

Mobiloil

STANDARD-VACUUM OIL COMPANY (The Liability of the Members of the Company is Limited)

Notices

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

ORIENT PAPER MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the above named Company will be held on Monday, the 29th March, 1954, at 3 p.m., at 8, Royal Exchange Place, Calcutta, to consider and if thought fit to pass with or without modification the following ORDINARY RESOLUTIONS:—

1. That a sum of Rs. 1,04,87,500 (Rupees one crore four lacs eighty-seven thousand and five hundred) being part of the undivided profits of the Company standing to the credit of the Reserves consisting of General Reserves, Repairs and Renewals and Dividend Equalisation Accounts, as on the 31st March, 1953, be capitalised and distributed amongst the holders of Ordinary Shares in the Company on the footing that they become entitled thereto as capital and that the said capital be applied on behalf of such Ordinary Shareholders in payment in full for 10,48,750 New Ordinary Shares of Rs. 10 each in the Company and that such 10,48,750 New Ordinary Shares credited as fully paid up shall rank in all respects *pari passu* with the existing Ordinary Shares save and except that the holders thereof will not participate in any dividend in respect of any period ended on or before the 30th September, 1953, and that the same shall be treated for all purposes as an increase of the nominal amount of the Capital held by each of such Ordinary Shareholders and not as income.
2. That in pursuance of the above resolution and in satisfaction of the interest of the said Ordinary Shareholders in the capitalised sum the Directors be and they are hereby authorised to issue, allot and distribute the said 10,48,750 New Ordinary Shares of Rs. 10 each credited as fully paid up amongst the holders of Ordinary Shares in the Company, whose names are registered as such in the books of the Company as on the 29th March, 1954, in the proportion of two and a half such New Ordinary Shares for each Ordinary Share held by them on that date with full powers to the Directors to make such provision for the issue of fractional certificates or otherwise, determine eligibility and/or mode of payment of dividend in respect of such fractional shares and all other matters relating thereto, as they think proper in their discretion provided that no allotment of shares issued as aforesaid shall be made to non-resident shareholders till approval of the Reserve Bank of India is obtained for same.
3. That the draft of the Agreement providing for the allotment of the said New Ordinary Shares in satisfaction of the said capitalised sum and submitted to this meeting and signed in the margin by the Chairman by way of identification be and the same is hereby approved and that the Directors be authorised to affix the Common Seal of the Company to duplicate engrossment of such agreement as and when the same shall have been signed on behalf of the members holding the existing ordinary shares in the Company on the 29th March, 1954, by some person to be appointed by the Directors in that behalf under Article 179 of the Articles of Association of the Company.

The Share Transfer Books of the Company will remain closed from the 22nd to 29th March, 1954, both days inclusive.

By Order of the Board,
BIRLA BROTHERS LIMITED,
Managing Agents.

8, ROYAL EXCHANGE PLACE,
CALCUTTA, 8*th March*, 1954.

By Order of the Board,
A. J. ELKINS,
Managing Director.

CLIVE BUILDINGS,
NETAJI SUBHAS ROAD,
CALCUTTA, 11*th March*, 1954.

BUCKINGHAM AND CARNATIC MILLS' BUMPER PROFITS

DIVIDEND RAISED—FINANCES SOUND

THE audited accounts of the Buckingham and Carnatic Co., Ltd. [Managing Agents: Messrs. Binny and Co. (Madras) Ltd., Madras] for the year ended 31st December, 1953, make pleasant reading. The gross profit of the Company amounts to a bumper figure of Rs. 124.59 lakhs, which is more than six times that for the previous year's profit of Rs. 20.73 lakhs. The gross profit for 1953 is the highest for the last five years, and falls short of the previous highest of Rs. 145.84 lakhs for 1948. The comparison of the profit for the year under review with that for 1952 is not, strictly speaking, correct, because the Company had worked at a loss for nine months in 1952 for reasons beyond the control of the management, and was able to make good the loss and show a profit for that year only in the last three months.

Nevertheless, the gratifying results achieved in 1953 have enabled the Company to strengthen the reserves, to make a substantially larger provision for payment of bonus to workers and to distribute a higher dividend to the shareholders. The dividend, which had to be pruned last year from 7½ per cent. (paid for the year 1951) to 4 per cent., is now proposed to be raised to 10 per cent. Even this enhanced dividend is short of the modest record of 12½ per cent. paid by the Company from 1941 to 1947, except for the half-years ended 30th June, 1942 and 1947.

The highly favourable results of the Company for the year under review have been rendered possible by the more favourable trading conditions that prevailed during that year than in 1952. Adverting to these, the Directors observe in their report to the shareholders thus:

"There was a good demand for the Company's products throughout the year, both in home markets and from overseas. The progressive removal of price controls enabled the Company to adjust their internal selling prices for some cloths to more reasonable levels, but always with due regard to the purchasing power of the consumer. The Company was assisted in its established export trade by the reduction, in January, 1953, of the export duty on coarse and medium cloth from 23 to 10 per cent., the duty on medium cloth was abolished in October.

"The Company has an India-wide trade and many complications have arisen as a result of the Supreme Court's judgment to the effect that each receiving State is entitled to collect sales tax on goods entering from another State. It is to be hoped, however, that as a result of the recent discussions between the Union Government and the States' representatives, a satisfactory solution will be found for the present chaos."

The salient features of the Company's results of working during the year under review are presented against the background of those for the previous three years in the following comparative table:

(In thousands of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950
Sale proceeds	8,56,07	8,32,85	8,85,60	7,58,28
Other income	5,04	7,47	6,54	5,45
Stocks of process and finished goods	84,53	95,43	67,53	78,62
Expenses (including raw materials and stores consumed)	7,25,63	8,47,49	8,02,92	6,87,03
Gross profit*	1,24,59	20,73	78,23	83,10
Provision for—				
Managing Agents' commission	9,77	90	6,17	6,44
Depreciation	17,65	11,70	11,53	11,05
Taxation	37,25	..	25,00	27,00
Net profit	59,68	8,13	30,54	37,99
Excess provision for taxation written back	..	20,00	..	..
To debenture redemption fund	3,00	3,00	..	..
,, discount on debentures issue	..	3,00	..	..
,, provision for increased replacement costs	8,98	..	5,00	7,00
,, general reserve	6,00	5,50	..	..
,, work people's housing reserve	1,50	..	..	..
,, bonus to employees	19,58	7,75	13,68	16,46
,, officers' superannuation fund	1,07	14	67	65
Dividends—				
7½% cum. preference	1,60	1,60	1,60	1,60
Ordinary	17,85	7,14	13,39	12,27
	(10%)	(4%)	(7½%)	(6¾%)
Carry forward	2,58	2,40	2,39	1,18

* Gross profit has been arrived at before setting aside for bonus to employees.

It will be seen that the rise in gross profit has been of a higher order than that in sale proceeds which is up by only Rs. 23 lakhs. This is due to the saving of Rs. 1.21 crores in expenses, of which raw materials and stores consumed account for Rs. 1.18 crores. The provision for depreciation has been increased by over Rs. 6 lakhs, in order to cover the charge on the additional capital expenditure on buildings and machinery brought into use during the year. Nearly a third of the gross profit has been set aside for taxation which did not receive anything last year. Out of the net profit of Rs. 59.68 lakhs, debenture redemption fund has been provided with Rs. 3 lakhs as in the previous year, under the terms and conditions of Trust Deed and an equivalent amount has been deposited with the Trustees in a special investment account. A sum of Rs. 8.96 lakhs has placed to reserve for increased replacement costs of buildings and machinery, as the Directors have thought it prudent to build up this reserve, as far as possible, in view of the considerable capital commitments entered into by the Company. In consonance with the increase in gross profit, bonus to employees has been stepped up from Rs. 7.75 lakhs to Rs. 19.58 lakhs.

The financial position of the Company is quite impressive, as will be seen from the following synopsis of its latest balance-sheet:

Liabilities	Rs.	Assets	Rs.
Capital	1,99,78,000	Gross block	3,99,61,612
Reserves and surplus	1,47,33,163	*Less*—Depreciation	3,09,15,105
Debenture	94,00,000	Net block	90,46,507
Provision for taxation	29,54,086	Capital works-in-progress	1,91,93,597
Liabilities	1,10,79,267	Stock-in-trade	1,70,18,571
Special liabilities	8,03,329	Stores, spares, etc.	76,27,327
		Debts, deposits and advances	40,30,595
		Investments	9,07,530
		Investments against special liabilities	7,53,126
		Cash	3,68,592
Rs.	5,89,47,845	Rs.	5,89,47,845

Of the above reserves, general reserve accounts for Rs. 35 lakhs, dividend equalisation fund for Rs. 10 lakhs, fire, accident and insurance reserve for Rs. 18.03 lakhs, work people's housing for Rs. 15 lakhs, raw materials fluctuation for Rs. 9.25 lakhs and provision for increased replacement costs of buildings and machinery for Rs. 57.50 lakhs. The gross block, which includes an addition of Rs. 73.33 lakhs during 1953, has been well written down. The current assets, at Rs. 2.99 crores, cover the current liabilities and provision for taxation twice over.

The Rs. 100 paid-up ordinary shares of the Company are being currently quoted at Rs. 148-8 *cum-div.* On *ex-div.* basis, the dividend for 1953 gives a yield of 7 per cent. per annum, free of tax.

(*Concluded from next column*)

These favourable trends have been offset to a small extent by the rise in expenses by some Rs. 6 lakhs, so that the gross profit, as already stated, is up by over Rs. 22 lakhs.

Referring to the trading conditions that prevailed during the year, the Directors observe that the rayon yarn market was steady practically throughout the year and that the prices of the main raw materials also remained almost steady.

The balance-sheet of the Company as on 31st December, 1953, underlines the need for conserving the resources. The paid-up capital stands at Rs. 3.33 crores, as against which there is no reserve, except the sum of Rs. 22 lakhs provided for deferred taxation, which really speaking is a future liability and not a reserve, a sum of Rs. 2.40 lakhs set aside as provision for bad and doubtful debts and a sum of Rs. 5.01 lakhs being the unappropriated surplus. Provision for taxation stands at Rs. 51,427. The current liabilities aggregate Rs. 1.45 crores, of which the liability to the I.F.C. of India amounts to Rs. 44.75 lakhs and to the Company's bankers Rs. 36.45 lakhs, these having been reduced from Rs. 50.83 lakhs and Rs. 47.09 lakhs, respectively, as at the close of 1952. The gross block of Rs. 4.94 crores includes additions to the tune of Rs. 62.09 lakhs made during the year under review, in accordance with the Company's expansion programme. As against this block, the provision for depreciation amounts to Rs. 1.10 crores. The current assets aggregate Rs. 1.24 crores and fall short of the current liabilities.

Referring to the Company's expansion programme on hand, the Directors observe as under:

"The increase in the capital block of the Company from the figure of Rs. 4,27,10,526 standing as at 31st December, 1952, to the figure of Rs. 4,93,70,648 is mainly due to the expansion programme already in hand and also due to the expenses incurred during the current and previous years for the construction of a few additional staff and labour quarters. Construction of a building for the duplication of the entire plant also has been taken in hand. The Company's plant has been working smoothly and satisfactorily. The new machinery and equipment ordered out for the expansion of the Company's plant has already arrived and is under erection. It is expected that, after completion of this expansion programme, the capacity of the plant will increase by about 25 per cent. The Back Pressure Turbo-Alternator Set which was ordered out year before last is already in operation and will supply the extra power required for the expansion in hand."

The Company's Rs. 100 paid-up ordinary shares are being currently quoted at Rs. 154 *cum-div.* On an *ex-div.* basis, the proposed dividend gives a yield of 6.2 per cent. per annum, free of tax.

MAIDEN DIVIDEND OF NATIONAL RAYON

NO ALLOCATION TO RESERVES

THE second full year of working of the National Rayon Corporation Ltd. (Managing Agents: Messrs. Chinai & Co., Ltd., Bombay), since it commenced production in March, 1951—namely, the year ended 31st December, 1953—has proved to be more favourable than the previous one. The gross profit amounts to Rs. 93.17 lakhs, as compared with Rs. 70.72 lakhs for 1952 and Rs. 58.35 lakhs for 1951. This impressive performance of the Company was not unexpected, as witness the steady advance in the value of the Company's equities on the Stock Exchange during recent months. Thus, in the third week of February, the share stood at a high of Rs. 173, as compared with Rs. 72 a year before, though they are currently being quoted at Rs. 154. Market circles had anticipated that the maiden dividend would be Rs. 10 per share. Consequently, the proposed dividend of Rs. 9 per share somewhat falls short of their expectation. But this does not mean that this dividend is such as to cause a feeling of dissatisfaction. On the contrary, it is a very handsome return, considering that the industry is a relatively new one for this country. It must be said to the credit of the managing agents and the directors that they have been remarkably successful in making this project a paying proposition within a short period.

A perusal of the appropriation account for the year under review shows that the Directors have declared an impressive maiden dividend without creating a reserve fund by allocating a slice of the profit. Whether the Directors have been prudent in following such a policy is not beyond dispute. After all, this is a new industry in which a large amount of capital has been invested. A beginning ought to for the rainy day. An ideal dividend policy in the case of a Company of this nature would be to start with a modest return and then raise it by stages. To begin with such a liberal dividend as 9 per cent. is to court the envy of many, not excluding the workers and the Finance Minister. There are some in the market who believe that the Directors have deliberately decided on the policy of high dividend, in order to ensure sufficient response for the issue of new capital which they are believed to be contemplating. The Directors may have their own reasons for proposing a higher dividend, but they are silent over it in their report to the shareholders. It is, however, to be hoped that the Chairman will throw some light on the Company's dividend policy when he addresses the shareholders at their forthcoming annual general meeting.

Another aspect of the dividend policy on which the Directors have not enlightened the shareholders is regarding the doubt that were being expressed by some over the possibility of the Company declaring the higher rate of dividend than 6 per cent. The doubt arose in view of the fact that, being indebted to the Industrial Finance Corporation of India, the Company could not declare more than 6 per cent. It is common knowledge that, under the Industrial Finance Corporation Act, a loanee company cannot pay a dividend higher than 6 per cent. without the special sanction of the Corporation, so long as the loan taken from the Corporation remains unpaid. The accounts of the National Rayon show that the loan remains unpaid, except for a small portion of it, on 31st December, 1953. The Directors have not stated whether the loan has since been repaid or they have obtained the special sanction of the Corporation.

The salient features of the Company's results, which are, undoubtedly, creditable, are compared with those for the previous two years in the following table:

	For the year ended 31st December		
	1953	1952	1951
Sale proceeds	Rs. 2,85,13,433	Rs. 2,11,20,717	Rs. 1,25,55,102
Stocks of finished yarn and stock-in-process	15,85,051	59,60,503	43,50,571
Other income	1,34,584	1,13,821	87,263
Raw materials, stores, etc., consumed	96,54,562	1,16,51,848	79,67,241
Expenses	47,08,921	41,20,258	31,90,447
Gross profit	93,17,135	70,72,986	58,35,248
Managing Agents' commission	5,92,247	3,57,237	2,34,117
Depreciation	40,00,000	35,00,000	35,00,000
Taxation	14,202	54,833	..
Net profit	53,02,233	31,60,296	21,01,131
Underwriting commission written off	..	..	94,354
Preliminary and other expenses written off	3,50,000	3,50,000	3,27,882
Reserve for bad and doubtful debts	..	..	2,69,600
Deferred taxation reserve	22,00,000	..	..
Dividends—			
5% preference	..	..	..
Ordinary	8,70,030	32,39,193†	8,55,198*
	14,18,004 (9%)	..	..
Carry forward	5,01,242	89,033	4,66,206

* For the years 1947 and 1948. † For the years 1949 to 1952.

It is noteworthy that the sale proceeds have gone up by about Rs. 74 lakhs during the year under review and by nearly Rs. 1.60 crores in the last two years. Stocks of finished yarn and stock-in-process show a decline of about Rs. 44 lakhs during 1953. The value of raw materials, stores, etc. consumed has recorded a drop of Rs. 20 lakhs.

(*Continued in previous column*)

Points From The Chair

Tax Allowance on Provision for Bad Debts

"THE published profits of banks cannot be considered true profits for purposes of taxation with the uncertainties of the economic situation. There is always a contingent possibility of any debt becoming bad and it may not be prudent to wait till it actually becomes bad before it is written off. But under the provisions of income-tax law as at present, a bank will have to prove that it has exhausted all possible remedies for recoveries which, in effect, would mean that it has to spend good money over bad, and that the debt has become bad in the very year it is written off. This would mean, even if a bank makes a provision out of its profits in a good year for bad and doubtful debts, it would not be allowed for purposes of taxation unless it satisfies the above tests. Banking in this country requires considerable strengthening not only by legislation but by active and positive assistance from the State. There cannot be a better foundation for an effective credit system than a sound and secure banking system. Even in America such provisions made are allowed upto certain limits based either on the average of the previous years' losses or a certain percentage of the total advances. We have been urging this point on the Central Government and we are happy that the Indian Banks Association has taken it up recently and I trust and hope the Taxation Enquiry Committee will concede this reasonable measure of help to the banking system."

DR. T. M. A. PAI,
Canara Industrial & Banking Syndicate Ltd.

Retention Prices on Steel

"As regards our ability and desire to maintain dividends at a reasonable level, provide the Company's contribution towards the cost of the expansion and to repay the loans in the stipulated instalments, this will depend wholely upon the revised retention prices recommended by the Tariff Commission and sanctioned by the Central Government. So far as we know, no final decision in the matter has as yet been taken. The continued liquidation of our financial commitments will, also, be governed by the retention prices which are fixed after the scheme of expansion has been completed and brought into economic operation. We hope that the principles by which retention prices were fixed prior to the merger, with such modifications as may be necessary and as may be appropriate and justified by later circumstances, will continue to be applied until both these loans and our other loans have been fully repaid out of earnings. It was on this understanding that the Company agreed to expand its undertaking and was willing to accept the consequent heavy financial liabilities. The Company feels that it is entitled to assume that the Government will, during the continuance of the repayment period of the loans, adhere to the principles laid down in the report of the Tariff Commission, 1952, and accepted by the Government."

T. LESLIE MARTIN,
Indian Iron and Steel Co., Ltd.

Need for Free Exchanges

"It goes without saying that we all require a steady growth of world trade and world investment, and that we shall not fully get this until we have a proper system of free and stable exchanges, first and foremost among which must be a stable and convertible sterling, and it is all to the good that we have seen in this country some reduction in taxation and a considerable step towards freedom from controls, both of which factors must help to encourage that private enterprise and those private savings without which we cannot hope to restore our position in the world. If we in this country could feel more sure that our resources, which we have so patiently built up, would not again be dissipated, we might feel that we were well on the road to convertibility. In any event, we must have the full co-operation of the U.S.A. in any steps that we take, and while the report of the Randall Commission shows that we are not likely to get a quick remedy for our trouble from that quarter. Nor, as I said last year, do I feel that it would be easy to apply convertibility to so-called current sterling only."

V. A. GRANTHAM,
Chartered Bank of India, Australia and China.

Financing of Five-year Plan

"One of the Government's problems is the provision of finance, first to balance the Budget and secondly for the Plan. This has resulted in high taxation, both direct and indirect. High direct taxation, both personal and corporate, may be anti-inflationary, but it inevitably removes a great deal of surplus income which would otherwise become available as investment and risk capital. Thus, the financing of the Five-year Plan is, undoubtedly, causing the Government some concern. On the one hand, revenue from duties on imports and exports is declining and, on the other hand, the attainment of the target of investment for the private sector under the Plan seems unlikely fully to succeed. Risk capital is shy of high taxation and the passing of the Estate Duty Act in 1953 has not improved the climate either for foreign or Indian investment."

SIR KENNETH W. MEALING,
Mercantile Bank of India Ltd.

COMPANY MEETINGS AND DIVIDENDS

TRAVANCORE SUGARS AND CHEMICALS LTD. Annual General Meeting, 23rd March, 1954. Dividend: *Nil.*

LOTHIAN JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 26th March, 1954. Dividend: Rs. 15 per share. Transfer books remain closed from 16th to 26th March, 1954, both days inclusive.

BUCKINGHAM AND CARNATIC CO., LTD. Annual General Meeting, Madras, 26th March, 1954. Dividend: Rs. 10 per share (including interim-dividend of Rs. 4 per share). Transfer books remain closed from 9th to 26th March, 1954, both days inclusive.

BRAITHWAITE AND CO. (INDIA) LTD. Annual General Meeting, Calcutta, 26th March, 1954. Dividend: Re. 1 per share. Transfer books remain closed from 11th to 26th March, 1954, both days inclusive.

SHREE SITARAM SUGAR CO., LTD. Annual General Meeting, Calcutta, 26th March, 1954. Transfer books remain closed from 16th to 26th March, 1954, both days inclusive.

DEORIA SUGAR MILLS LTD. Annual General Meeting, Calcutta, 26th March, 1954. Transfer books remain closed from 16th to 26th March, 1954, both days inclusive.

LOYAL TEXTILES LTD. Annual General Meeting, Madras, 27th March, 1954. Transfer books remain closed from 20th to 27th March, 1954, both days inclusive.

TITAGHUR JUTE FACTORY CO., LTD. Dividend of 10 per cent. on the ordinary shares (including the interim-dividend) for the year ended 31st December, 1953, payable on 26th March, 1954, less income-tax at 9*s.* in the £. Transfer books remain closed from 12th to 26th March, 1954, both days inclusive.

VICTORIA JUTE CO., LTD. Dividend of 10 per cent. on the ordinary shares (including the interim-dividend) for the year ended 31st December, 1953, payable on 26th March, 1954, less income-tax at 9*s.* in the £. Transfer books remain closed from 12th to 26th March, 1954, both days inclusive.

WALCHANDNAGAR INDUSTRIES LTD. Dividend of Rs. 14 per ordinary share, for the year ended 30th September, 1953, payable on 19th April, 1954. Transfer books will remain closed from 3rd to 17th April, 1954, both days inclusive.

COMPANY REGISTRATIONS

INDIAN ESTATE AND FINANCE CORPORATION LTD. (First Director: Mr. Vadilal Chatrabhuj Gandhi.) Business: To acquire by purchase, lease, exchange or otherwise, land, buildings, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Kasar Buildings, 1st Floor, Princess Street, Bombay.

M. B. CHABLANI, LTD. (First Director: Mr. M. B. Chablani.) Business: Importers, Exporters and Manufacturers of Minerals, Alloys, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 27, Ananda Nivas, "A" Road, Churchgate Reclamation, Bombay.

QUESTION HOUR IN PARLIAMENT

No Decontrol of Cement

THERE is no chance at all of decontrol of cement either this year or next year.

• • • •

Returns from Foreign Firms

Representations have been received from certain foreign firms requesting more time to furnish information regarding the number of foreigners employed by them. The Federation of Indian Chambers of Commerce and Industry has also made a similar representation. As a result, it has been decided to extend the time-limit for the submission of returns to 15th April, 1954.

—*Minister for Commerce and Industry*

Tea Adulteration

The Government proposes to issue shortly necessary rules preventing the admixture of tea with tea waste. It has come to the Government's notice that adulteration of loose tea is prevalent, but, under the present law, it is a matter to be dealt with by the State Governments or the local authorities.

—*Minister for Commerce*

State Trading

There are 11 schemes in which State trading operates. The schemes include purchases by the Food and Agriculture Ministry, purchase of foodgrains by local administrations, purchase of fertilisers, land reclamation scheme for rehabilitation, medical stores depots and factories, purchase of quinine, cinchona cultivation by the Russian method, scheme for the supply of consumer and other stores in the Andamans, purchase of stores and reserve stocks of equipment for the training of demobilised service personnel, imports of steel and bulk procurement of road rollers. The scheme for export of coal and coke has ceased to function. The accounts pertaining to those schemes which have ceased to function have not been finally closed, owing to various reasons including non-receipt of accounts from States, non-adjustment of certain receipts in customs duty, and non-settlement of claims and accounts with the Pakistan Government.

—*Deputy Finance Minister*

Central Loan

Except for a sum of Rs. 1.72 crores, the entire 3 per cent. Government of India loan 1953-54 amounting to Rs. 114.61 crores has been discharged. The undischarged amount represents securities held in Pakistan and unclaimed amount internally. Over Rs. 51.8 crores, have been converted into a new loan.

• • • •

Capital Issues

Permission was granted in 1953 to the issue of capital shares to non-residents of India to the extent of Rs. 4.23 crores. The number of industries involved was 21. During the year, Rs. 43.17 lakhs were remitted to foreign countries on account of royalty payments.

—*Parliamentary Secretary to Finance Minister*

Indian Airlines Corporation

The Indian Airlines Corporation has under examination proposals for the invigoration of the services now operated under the "lines system." It may take another three months before the "lines system" can be reorganised. It is expected that the loss of Rs. 30.44 lakhs incurred during the first four months of operation of the Corporation will go down progressively during the next two years. The revenue earned by the Corporation during the first four months is Rs. 204.62 lakhs and the expenditure in the same period is Rs. 235.06 lakhs. A proper assessment of the financial results of the Corporation can be made only on the basis of its operation for a full year. It is not possible to obtain comparative figures for revenue and expenditure of private companies for the corresponding months of 1952.

—*Deputy Minister for Communications*

Rice Procurement

From 1st December, 1953 to 27th February, 1954, in terms of rice, a total quantity of 900,000 tons rice and paddy had been procured within the country. In terms of rice up to 30th June, 1954, another 800,000 tons are proposed to be procured.

—*Minister for Food and Agriculture*

Fertiliser Purchase

The total amount of loans granted to States for the purchase of fertiliser during 1953-54 was Rs. 526.61 lakhs and, in the next year, it is to make a provision of Rs. 10 crores. I expect that a substantial portion of these loans has been utilised by the State Government. So far as the next year is concerned, a conference of officials concerned will be held shortly to decide distribution. Fertiliser is given as loan and the cash for it is realised a few months later. The Central Government expects that State Governments will, in their turn, give fertiliser to the cultivators on a loan basis and realise the value later.

—*Agriculture Minister*

Labour Welfare Funds

Employers' response to the Government's suggestion for setting up labour welfare funds in industrial undertakings has not been satisfactory on the whole. The steps to be taken by the Government to make the scheme successful are under consideration.

—*Deputy Labour Minister*

A DIFFICULT YEAR FOR BRITISH INDIA CORPORATION

LOTHIAN JUTE MAINTAINS DIVIDEND

British India Corporation, Ltd.

THE directors of the above Company (Chairman and Managing Director: Sir Robert Menzies, Kt., O.B.E., V.D., C.A., Kanpur, U.P.) submit the audited accounts of the Company for the year ended 31st December, 1953.

Including income from investments, and after making all the usual allowances, including the sum of Rs. 6,50,000 (Rs. 6,50,000) for depreciation, providing for a gratuity to employees, and setting aside a sum of Rs. 25,00,000 (Rs. 30,00,000) being the estimated possible liability to taxation, the profit for the year amounts to Rs. 40,57,621 (Rs. 34,93,950). To this sum there has to be added the amount brought forward from last year, namely, Rs. 1,99,112 (Rs. 4,13,662) making the total sum available Rs. 42,56,733 (Rs. 49,09,612). The directors recommend that this sum should be disposed of in the following manner:—

Dividend, for the year to 31st December, 1953, on the 8 per cent. cumulative preference shares, free of income-tax Rs. 6,48,000 (Rs. 6,48,000), dividend, for the year to 31st December, 1953, on the ordinary shares at As. 8 (As. 10) per share, free of income-tax Rs. 32,50,000 (Rs. 40,62,500) and carry forward to next account Rs. 3,58,733 (Rs. 1,99,112).

As indicated to the shareholders by the Chairman in his address to the thirty-third annual general meeting, the sum of Rs. 40 lakhs which stood at the credit of dividend equalisation account has been transferred by the directors to the credit of the general reserve account.

The year 1953 was a difficult one for the Corporation in more than one direction, but the directors are pleased to report that certain products of the woollen branches found a ready sale among the public. The market price of wool and tops was more stabilised during 1953 than in the two previous years, but the price still remains high, with the result that the demand for the former popular lower priced heavy woollen and coarse worsted goods has dwindled very materially, and during the past year little in the way of Government business, particularly on the heavy side, was placed with the Corporation's woollen branches.

The Corporation's cotton branch again experienced an unfortunate year, and it is little comfort to the directors and management, or the shareholders, to think that most of the cotton manufacturing units in Kanpur shared this undesirable state of affairs. In recent months, the demand for the manufactured goods of the cotton branch has been most disappointing, and prices available have at times been below the cost of manufacture. This was particularly the case in the branch spinning mill known as the Juhi Mill, which was equipped with old fashioned mules, purely for the production of yarn for handweavers; the results obtained from this branch mill were such that the directors had no option but to close the mill down on 31st January, 1954, as, recently, it had been a definite drain on the Corporation's resources.

The leather and footwear branches again suffered from a serious shortage of raw material, and from an almost complete lack of Government orders. Extensive boot machinery of considerable strategic value to the nation has, accordingly, been virtually unemployed during the past year, and unless orders can be received to keep this plant going, it is for consideration whether it should be maintained in the future, or whether it should be disposed of.

For the last year or two, reference has been made in the directors' report to the considerable additional finance required in connection with raw material purchases; the demand on available resources continues to be heavy, with the result that during the year considerable accommodation from the Corporation's bankers had to be obtained. The directors consider that the amount reserved against the Corporation's liability to taxation, is sufficient for the purpose.

As a result of the policy adopted by the Government of India in regard to the manufacture, assembly and importation of motor vehicles in, or into, India, the future prospects of the Corporation's Motor Subsidiaries, The Peninsular Motor Corporation Ltd., and G. McKenzie & Co. (1919), Ltd., are at present a little obscure, but the position is being carefully studied by the Directors of these concerns.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,06,00,000	Block ...	59,56,832
Reserves ...	95,09,044	Stock-in-trade	3,56,57,814

Profit and loss account ...	3,58,733	Investments	2,37,75,588
		Cash ...	18,13,031
	Rs. 8,75,50,445		Rs. 8,75,50,445

Lothian Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th November, 1953.

After providing Rs. 1,93,000 (Rs. 4,15,000) for taxation, transferring Rs. 1,00,000 (Rs. 3,00,000) to general reserve, there is a balance of Rs. 2,31,684 (Rs. 2,49,167) at the credit of profit and loss account, from which the directors recommend payment as follows:—

Dividends on preference shares at Rs. 3-8 (Rs. 3-8) per share Rs. 35,000 (Rs. 35,000) and on ordinary shares at Rs. 15 (Rs. 15) per share Rs. 1,50,000 (Rs. 1,50,000), leaving Rs. 46,684 (Rs. 64,167) to be carried forward.

During the whole of this accounting period the mills remained leased to Albion Jute Mills Co., Ltd.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Block ...	15,13,504
Reserves ...	37,51,301	Debts, deposits and advances ...	12,22,688
Provision for taxation ...	18,40,944	Investments	27,24,771
Liabilities ...	4,22,123	Cash ...	26,00,089
Profit and loss account ...	46,684		
	Rs. 80,61,052		Rs. 80,61,052

Eastern Investments, Ltd.

The directors of the above Company (Secretaries: Messrs. Bird & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1953.

The profit and loss account after paying an interim dividend on the cumulative preference shares at the rate of 2½ per cent. per annum less tax, amounting to Rs. 46,094 (*nil*), and after transferring Rs. 2,50,000 (Rs. 2,50,000) to general reserve, shows a credit balance of Rs. 8,19,307 (Rs. 8,69,017) including the sum of Rs. 3,15,489 (Rs. 2,43,195) brought forward from last year. The directors propose to dispose of this as follows:—

In paying a final dividend of 2½ (5) per cent. per annum making the total dividend at 5 per cent. for the year, on the 25,000 issued preference shares less income-tax at 48 pies per rupee plus 5 per cent. surcharge on income-tax Rs. 46,094 (Rs. 92,188), in paying a dividend of 9 (9) per cent. per annum on the 51,260 issued ordinary shares, without any deduction for income-tax paid by the Company Rs. 4,61,340 (Rs. 4,61,340) and in carrying forward Rs. 3,11,873 (Rs. 3,15,489).

The Company's portfolio is representative of investments which are quoted on the Calcutta Stock Exchange, with the exception of certain shares costing Rs. 1,04,553 for which no quotations are available. The total of the market value of the investments for which quotations are available, together with unquoted investments as valued by the directors, exceeds the book value at 31st December, 1953, by Rs. 33,48,214 (Rs. 42,01,406).

An amount of Rs. 1,43,873 (Rs. 214) have been added to the general reserve account representing profits made on sales of investments during the year, together with Rs. 2,50,000 (Rs. 2,50,000) set aside out of profits.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	76,26,000	Investments	1,29,31,258
Reserves ...	51,50,934	Debts and advances ...	4,54,113
Provision for taxation ...	3,00,165	Cash ...	5,55,973
Liabilities ...	5,52,372		
Profit and loss account ...	3,11,873		
	Rs. 1,39,41,341		Rs. 1,39,41,344

General Investment and Trust Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Bird & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st August, 1953.

Including the sum of Rs. 4,584 (Rs. 1,590) brought forward from the previous half-year, and transferring Rs. 1,448 (nil) to general reserve, there is an available balance of Rs. 16,393 (Rs. 13,275). It is proposed to dispose of the available balance as follows:—

In paying a dividend on the 1st cumulative preference shares at the rate of 5 per cent. per annum, without any deduction for income-tax paid by the Company Rs. 2,500 (Rs. 2,500), in paying a dividend on the 2nd cumulative preference shares at the rate of 6 per cent. per annum, less income-tax at 48 pies plus ¼ per cent. surcharge on income-tax Rs. 2,212 (Rs. 2,212), in paying a dividend on the ordinary shares at the rate of 5 (5) per cent. per annum, without any deduction for income-tax paid by the Company Rs. 5,625 (Rs. 5,625) and in carrying forward Rs. 6,056 (Rs. 2,938).

The market has remained quiet during the entire period under review, with occasional interest shown in certain sections, especially in tea shares. There has been a general fall in the level of prices, due more to lack of business than to any serious selling pressure. The Company's portfolio continues to stand at a conservative figure.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,25,000	Investments	5,00,928
Reserves ...	3,000	Debts, etc. ...	1,630
Provision for taxation ...	20,151	Cash ...	10,354
Liabilities ...	58,705		
Profit and loss account ...	6,056		
	Rs. 5,12,912		Rs. 5,12,912

Investment and Finance Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Bird & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st August, 1953.

Including the sum of Rs. 4,862 (Rs. 14,239) brought forward from the previous half-year, and transferring Rs. 1,175 (nil) to general reserve and Rs. 7,500 to revaluation of investments reserve, there is an available balance of Rs. 28,536 (Rs. 33,579). It is proposed to dispose of the available balance as follows:—

In paying a dividend on the 1st cumulative preference shares at the rate of 5 per cent. per annum, without any deduction for income-tax paid by the Company Rs. 5,000 (Rs. 5,000). In paying a dividend on the 2nd cumulative preference shares at the rate of 6 per cent. per annum, less income-tax at 48 pies plus 5 per cent. surcharge on income-tax Rs. 4,425 (Rs. 4,425), in paying a dividend on the ordinary shares at the rate of 5 (5) per cent. per annum, without any deduction for income-tax paid by the Company Rs. 12,500 (Rs. 12,500) and in carrying forward Rs. 6,611 (Rs. 11,654).

The market has remained quiet during the entire period under review, with occasional interest shown in certain sections, especially in tea shares. There has been a general fall in the level of prices, due more to lack of business than to any serious selling pressure. The Company's portfolio continues to stand at a conservative figure.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,00,000	Investments	11,53,475
Reserves ...	1,37,000	Debts, etc. ...	2,367
Provision for taxation ...	8,331	Cash ...	18,748
Liabilities ...	1,22,598		
Profit and loss account ...	6,611		
	Rs. 11,74,590		Rs. 11,74,590

Central Distillery and Chemical Works Ltd.

The directors of the above Company (Chairman: Mr. Hansraj G. Gupta, Meerut Cantt.) submit the audited accounts of the Company for the year ended 30th September, 1953.

The working during the year under review has been satisfactory and in spite of the falling demand and keen competition amongst the distilleries, the net profit during the year, after providing for taxation, depreciation, etc., amounts to Rs. 64,478 (Rs. 1,01,995). Adding to this, the amount of Rs. 16,783 (Rs. 5,857), the brought-forward of the preceding year, there is a total of Rs. 81,262 (Rs. 1,07,852) at the credit of the profit and loss account. The directors recommend the following dividends free of income-tax for distribution, amongst the shareholders, out of the above amount as follows:—

On ordinary shares at As. 12 per share (Re. 1), on preference shares at Rs. 7-5-9 (Rs. 9-3-1) per share, and on deferred shares at As. 14 (Rs. 2-5-2) per share. To meet this a sum of Rs. 48,230 (Rs. 66,070) may be taken out from the above amount. It is further recommended that a sum of Rs. 25,000 (Rs. 25,000) may be taken to the general reserve account and the balance of Rs. 8,032 (Rs. 16,782) may be carried forward to the next year.

The directors have under consideration, the starting of a pharmacy. The preparations are well in advance and the necessary licence is expected to be issued soon by the Ministry of Industry and Commerce.

The economic disposal of spent-wash is still a problem to the Company. However, the preliminary experiments to use it as a field-manure are very promising and successful. As usual the Company's products, being quality products are continued to be in demand all over the country.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,42,310	Block ...	2,38,119
Reserves ...	2,28,340	Stock-in-hand	2,99,972
Provision for taxation ...	3,29,032	Loose tools and equipment ...	3,592
Liabilities ...	1,26,132	Debts, deposits and advances ...	5,72,854
Profit and loss account ...	81,262	Investments	74,933
		Cash ...	2,17,606
	Rs. 14,07,076		Rs. 14,07,076

Brushware Ltd.

The directors of the above Company (Managing Agents: Messrs. Begg, Sutherland and Co., Ltd., Kanpur, U.P.) submit the audited accounts of the Company for the year ended 30th November, 1953.

The results for the year, after making the usual charges, show a profit of Rs. 5,510 (Rs. 38,950) from which has been deducted depreciation amounting to Rs. 3,000 (Rs. 7,500) leaving a sum of Rs. 510 (Rs. 21,450 excluding Rs. 10,000 transferred to investment reserve). To this has to be added the carry forward from the previous year of Rs. 19,003 (Rs. 17,553) leaving at credit of profit and loss account Rs. 19,513 (Rs. 39,003). This balance, the directors recommend, should be disposed of in payment of a dividend of Re. 1 (Rs. 2) per share, free of income-tax, for the year ended 30th November, 1953, absorbing Rs. 10,000 (Rs. 20,000) and carry forward Rs. 9,513 (Rs. 19,003). The dividend on the ordinary shares complies with the requirements of Section 23A of the Indian Income-tax Act, 1922. The Company's property has, as usual, been maintained in good repair.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,00,000	Block ...	20,157

ACUTE STRINGENCY IN MONEY

(From Our Own Correspondent)

BOMBAY, 17*th March*

The stringency in the short-term money market noted for several weeks past became more acute during the week under review. The volume of floating funds in the market was very small, smallest perhaps, for the past several years. The usual withdrawal of funds on trade account, payment of income-tax and end of account requirements of semi-Government bodies, all combined together to cause this stringency. Almost all banks had, as a consequence, to seek the aid of the Reserve Bank or the Imperial Bank.

Due to extreme paucity of floating funds, activity in the inter-bank call money sector dwindled considerably. Money rates remained unchanged at 3 per cent. for inter-bank call among all banks, as well as for house money at call. Short-terms deposits were bid at 3 per cent. for 1 to 4 months and at 2½ to 2¾ per cent. for over 4 months.

After a break of a week, the Government of India Treasury Bill rate once again hardened from Rs. 2-10-11 per cent. to Rs. 2-11 per cent. per annum this week. The response to the usual invitation for Rs. 1 crore also had a change this week, in that the upward trend in the amount offered noted for the past four weeks was reversed. The amount offered was no more than Rs. 127 lakhs, as against Rs. 189.50 lakhs last week and Rs. 151 lakhs two weeks back. Tenders for Rs. 1 crore have been invited for next week also.

An increase of Rs. 3.43 crores in notes in circulation is disclosed by the Reserve Bank of India's statement for the week ended 12th March, 1954, as compared with that for the previous week. With this rise, the notes in circulation have gone up to Rs. 1,194 crores, representing an increase of Rs. 56 crores over those in the corresponding week of 1953 and Rs. 14 crores over even the peak of Rs. 1,179.81 crores touched last year (in the week ended 8th May, 1953). Notes held in the Banking Department are lower by Rs. 3.72 crores at Rs. 8.27 crores. Total notes issued have, as a result, gone down by Rs. 29 lakhs to Rs. 1,202.27 crores, as against Rs. 1,149.27 crores for the corresponding week of 1953. The small contraction in total notes issued has been covered by suitable variations in rupee securities and rupee coin. In the Banking Department, deposits of the Central Government have gone up by Rs. 4.31 crores. This rise follows the increase of Rs. 8.69 crores noted in the previous week. Deposits of other Governments show a fall of Rs. 16 lakhs, while those of banks have risen by Rs. 1.93 crores. Cash balances show a contraction of Rs. 3.69 crores, while balances held abroad are better by Rs. 3.11 crores. Ways and means advances to Governments have risen by Rs. 5.6 lakhs and other loans and advances by Rs. 4.40 crores. Outstanding advances to Scheduled banks against usance bills show an increase of Rs. 5 crores and the total advances made to them against these bills since 1st January, 1954 have risen by Rs. 6.25 crores.

The Scheduled banks' statement for the week ended 5th March, 1954, discloses an increase of Rs. 1.41 crores in demand deposits and a decline of Rs. 57.49 lakhs in time deposits. Borrowings from banks have shown an increase of Rs. 53.34 lakhs. There has been an increase of Rs. 3.09 crores in borrowings from the Reserve Bank and a negligible rise in those from the Imperial Bank. Advances have gone up by Rs. 2.78 crores and bills purchased and discounted by Rs. 3.41 crores. The total advances stand at Rs. 527.80 crores, which are nearly Rs. 17 crores more than those in the corresponding week of 1953 and fall short of the peak of Rs. 539.86 crores touched in the last busy season by only Rs. 12.26 crores. Investments are lower by Rs. 46.42 lakhs. Cash on hand and balances with the Reserve Bank together show a contraction of Rs. 71.97 lakhs. Balances with other banks in current account show no notable increase.

The Gilt-edged market remained dull and featureless almost throughout the week under review, reflecting the investors' apathy in view of the stringency in the money market. However, towards the close, the market brightened up a little, not due to any increase in activity, but on account of upward revision of the selling rates of some of the medium dated loans by the Reserve Bank of India. This action of the Reserve Bank following the announcement of the Government of India's borrowing programme for the year is generally taken to mean that the Bank is taking steps to prepare the market for the new issue. The raising of the selling prices of medium dated loans is also taken as an indication that the new issue will be a medium dated one.

3 per cent. 1957 remained unchanged at Rs. 98-5, but some business was done at Rs. 98-5½ also. There were buyers in 3 per cent. 1958 at Rs. 98-2. 3 per cent. 1959-61, which the Reserve Bank is stated to have stopped selling today, rose by an anna to Rs. 96-3. Some deals are reported to have been put through even at Rs. 96-4. 3 per cent. 1963-65 and 3 per cent. 1964 rose by As. 2 to Rs. 92-10, following the Bank's stepping up of the selling rates of these by a similar extent. 3 per cent. 1966-68 changed hands at Rs. 90-6, a rise of As. 2 over the week. The Reserve Bank raised the selling rate of this loan also by As. 2. 3 per cent. 1970-75 was wanted at Rs. 86-8. 3 per cent. 1986 Conversion Loan was placed at Rs. 82-8 *ex-voucher*. 3½ per cent. National Plan Bond put on an anna to Rs. 98-15.

The new Bombay State Road Transport Corporation Bond attracted some attention during the week. There were buyers at Rs. 99-2 and sellers at Rs. 99-2½. Some small business was reported done at Rs. 99-1½. With reference to this new loan, which was over-subscribed, it is announced that allotment in respect of application for Rs. 3 lakhs and below will be made in full and for applications over Rs. 3 lakhs partial allotment will be made. Allotment letters will be sent by the Imperial Bank of India, Bombay, only to subscribers for over Rs. 3 lakhs. Others get full allotment.

NARROW MOVEMENTS IN BULLION

(From Our Own Correspondent)

BOMBAY, 17*th March*

The bullion market displayed an irregular trend in both silver and gold during the week under review. Fluctuations were, however, narrow in the absence of any large-scale speculative manipulations. The undertone remained steady. Though the offtake in silver did not come up to expectations, it was fairly moderate and hopes of an increase in demand kept sentiment intact. In gold, the decline in unauthorised arrivals, satisfactory offtake *vis-a-vis* the arrivals and reports of strike in Kolar gold mines were responsible for the steady undertone.

Silver for forward delivery (22nd March settlement) opened at Rs. 164 and was marked down to Rs. 162-14 on Friday. But replacement buying at lower levels by earlier sellers lifted up the price to Rs. 164-10 on Monday. After a mild setback to Rs. 163-14 yesterday, forward silver revived today to Rs. 165, on reports of good offtake, before closing at Rs. 164-14. Forward silver for delivery in April settlement began at Rs. 164-5, the carry forward charges being against bulls and closed at Rs. 165-6, the carry forward charges having widened to As. 8.

Ready silver (.996 Mint) was done at a premium of As. 4 over the forward rate for the current settlement. The floating stocks of silver are placed at 2,100 bars. The daily average offtake was estimated at 20 bars.

Opening at Rs. 88-4, forward gold (19th March (settlement), moved down to Rs. 87-11, for a short while, but, on active buying by a professional operator inspired by a good offtake, and on short covering, looked up to Rs. 89 on Monday. Profit-taking at the higher level and a small increase in arrivals during the last two days pruned the rate to Rs. 88-11 at the close. Business in the April settlement began on Friday at Rs. 87-10 and closed for the week at Rs. 88-8, the carry forward charges against bears having narrowed down from As. 6 to As. 3.

Ready gold opened at Rs. 88-13 and closed the week at Rs. 89-1. The floating stocks of gold are reported to be 15,000 tolas. The daily average arrivals and offtake were 5,000 tolas each.

The following comparative table shows the trend of the market during the week under review:

	17-3-54	Highest	Lowest	10-3-54
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	89 1	89 8	88 4	89 5
Forward	88 11	89 0	87 11	88 6
Sovereign	58 3	58 4	57 12	57 12
SILVER				
Ready (.996 fine Mint) ..	165 2	165 4	162 2	164 10

VERY STRONG DEMAND FOR ALL TEAS

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 13*th March*

The offerings in Sale No. 5 which was held on Tuesday, 9th March, amounted to approximately 7,56,000 lbs. There was a very strong general demand for all teas and particularly for low and low medium teas which recorded advances of one to two annas. High-grown teas showed improvement in quality and prices advanced As. 4 to As. 8. There was a revival in the demand for whole leaf teas which showed advances of two to three annas over valuation. The following were the quotations:—

	1954	1953
	Rs. a. p.	Rs. a. p.
Low-grown Travancore B.O.P.	2 8 0	1 9 6
Medium Travancore B.O.P. ...	2 9 6	2 1 0
Anamallais B.O.P.	2 12 6	2 5 0
Best liquoring Nilgiri B.O.P.	3 13 0	4 1 0
Well made black leaf O.P. ...	2 8 6	2 2 6

London Market—Sale of 8th March.—Commons fully firm. Better liquoring half to one penny dearer.

Sale of 10th March.—Commons advanced by half penny. Better liquorings by half penny to one penny.

Colombo Market.—Active demand. Low-grown firm to dearer. Mediums advanced five to eight cents. High-grown substantially dearer, following quality.

Calcutta Market—Export.—23,000 packages. Except for whole leaf grades strong demand. Usually one anna dearer for clean types.

Dust.—15,000 packages. Good general demand. Market irregularly half to one and half annas dearer. Black leafy types and commonest strongest feature.

Export Quota.—At the beginning of the week, the market was 36 pies and thereafter strengthened to 40 pies, at which price business was done, but has since declined to 24 pies which remains today's quotation.

Forthcoming Auctions.—Dust Sale "E" will be held on Tuesday, 16th March and Sale No. 6 will be held on Tuesday, 23rd March, 1954.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd. wire as follows:—

"*Dust Sale E.*—2,15,000 lbs. Very strong demand. Prices have advanced irregularly three to four annas for all grades."

COTTON STEADY

(From Our Own Correspondent)

BOMBAY, 17*th March*

With the return of the mills to the spot market, confidence among operators in the cotton market has been restored. A further decline in the premia on Broach and Surat is not likely. On the other hand, it is possible that the premia rates for these desirable varieties will begin to creep up, as the unsold stocks are being gradually absorbed. The position in the cloth trade is at present not very encouraging. But there are enough signs of a good revival after the *Holi* holidays and, as soon as offtake in cloth improves, mills will once again begin a scramble for Indian cotton of gold staple. The statistical position is bound to remain in favour of holders right till the end of the season, except for a short interval in May when the bears in the forward market might press some deliveries on unwilling buyers. But, in the end, it is the statistical position that wins and, in spite of the usual tantrums of the forward section, a steady progress in prices in both the sections might be justifiably expected.

The sudden spurt in the turnover in the spot market has lent considerable strength to forward trading at Kalbadevi, though the operators are inclined to be cautious, which is a good sign, in view of profit-taking by nervous longs from time to time. There is a feeling of steadiness in the trading. The improvement in prices from Rs. 661 for May delivery, which was the lowest point touched to about Rs. 680 within a short space of time, may invite offerings, but active support can now be expected at the level of Rs. 670. The hedge sales, as a result of the Surat-Broach cottons coming into the market, may not prove as heavy as they appeared at one time, though the forward market will certainly have to cross this hurdle some time or other. This will offer opportunities to sound parties to pick up bargains at Kalbadevi at remunerative rates.

Another significant factor in forward trading is the arrest in the rapid rise of the margin in favour of August delivery over May. This is a proof of revived confidence in May, which looked at one time as if it would sink like a heavy stone. Any further rise in this difference would also lead to the straightening of the large volume of straddle trade entered into at and prior to the opening of regular business in August delivery when this difference was small, though, on the whole, August is bound to remain at a good advantage over May, in view of the statistical position.

Amongst imported styles, the early enthusiasm for Egyptian and East African cotton seems to have subsided to a certain extent, following steady increase in price and shortage of supplies of these varieties. The mills are now more reconciled to U.S.A. cotton, though a search for alternatives still continues and, in this respect, Mexicans are the most favoured. Now that the programme for auctions and offerings at Kampala and Khartom has been authoritatively announced, some supplies from these sources may also be expected, though this will depend mainly on the ruling prices at these auctions. Perhaps in the beginning, prices might rule high with many buyers, but it is possible that, during the subsequent auction days, there may be some easing in the demand and Indian mills might do well to wait a little, instead of rushing in during the opening stages. On the export front, there is a protracted lull and the Bengals were practically neglected during the week under review.

Fluctuations in prices in the forward section were irregular during the week under review, due to alternate bouts of bull support and bear selling. Over the week, however, prices recorded an improvement, following continued enquiries in the spot section. I.C.C. May opened the week at Rs. 670 and receded to Rs. 665-8 on the 12th inst. But it recovered to Rs. 678-8 on Monday. After declining again to Rs. 672 yesterday, the Contract gradually rose to Rs. 676-4 towards the close today. I.C.C. August moved up from Rs. 680 to Rs. 686-8 on the opening day. After falling to Rs. 678-8 on Friday, it recovered to Rs. 690-9 on Monday. It again receded to Rs. 684-8 yesterday, but finished the week higher at Rs. 688-8.

The following is the trend of prices in the forward section during the week under review.

	Opening	*High*	*Low*	*Closing*
I.C.C. May ...	Rs. 670	678½	665½	676½
I.C.C. Aug. ...	Rs. 680	690½	678½	688½

Latest available quotations from the spot market are: Bengal *Deshi* Rs. 625-640; Berar *Jarilla* Rs. 785; Khandesh Rs. 860; Vijay Rs. 880; Oomra *Deshi* Rs. 710; Moglai Rs. 700.

At Karachi, the impending budget and the rumours connected with it brought about a good revival of activity. There were expectations of an increase in the rates of export duty on cotton. This, together with the rumour that the Japanese authorities were raising their price ceilings for cotton imports with immediate effect, gave a good feeling to the price levels. The budget has not made any change in the export duty on cotton, while it is doubtful if the Japanese would be in a hurry to offer better prices for Pakistan cotton at this stage of the season, when they know that Karachi has to depend a good deal for the disposal of its stocks of cotton on Japan. The heavy rise in prices, amounting in some cases to more than Rs. 100 per candy recorded early this week, is, therefore, not likely to prove permanent and, so long as it lasts, it will almost make cotton unsaleable. While the market has been very active, a greater part of the turnover has been only amongst local dealers, though some good business seems to have been effected last week for export. China and Spain have been the main buyers. Exports from Karachi up to 4th March, 1954, are shown at 632,780 bales, as against 821,966 bales during the same period last year. Latest available quotations from Karachi market are: Sind *deshi* Rs. 84-85; Punjab *deshi* Rs. 82; 4F Punjab roller Rs. 84-4;

S.G. Rs. 90-4; L.S.S. Punjab roller Rs. 86-8; S.G. Rs. 91-8; N.T. roller Rs. 86-12; S.G. Rs. 91-12; 289F Punjab roller Rs. 90; S.G. Rs. 96.

At Alexandria, dwindling stocks and high prices have at last affected the volume of enquiries. But this has not had any appreciable effect on prices because of the sound statistical position. The Cotton Commission's stocks are now being placed at about 40,000 bales, while the total sales by the Commission up to 2nd March amount to about a million bales, of which a little more than half is accounted for by exports. Eastern Europe is still a keen buyer in the Alexandria market and it is likely that a good deal of the remaining stocks will go in the form of barter trade with these countries against supplies of petroleum products.

At New York, the same condition of narrow trading has continued for another week with a slight downward trend in prices, as a result of profit-taking in the nearby positions. The undertone, however, has remained firm because of unfavourable weather reports from certain producing areas. It may be repeated once again that this is the most favourable time for Indian mills to secure their supplies at every technical dip in prices.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	16-3-54	9-3-54	26-2-54
Spot	35.25	35.15	35.05
March	—	34.45	34.25
May	34.48	34.41	34.30
July	34.58	33.79	34.24
October	34.03	33.77	33.63
December	34.01	—	—

FURTHER RECOVERY IN ART SILK YARN

(From Our Own Correspondent)

BOMBAY, 17*th March*

The recovery in values of art silk yarn witnessed last week moved further ahead this week. The recovery was aided by buying support induced by reports that a high-ranking official of the Central Government would be visiting Surat to study the conditions in the art silk mills in the wake of the imposition of excise duty on fabrics. Nevertheless, turnover remained greatly restricted, as traders preferred to await the Centre's final decision in regard to the country-wide demand for abolition of the excise duty. The market remained closed today as a mark of respect to the demise of a member of the Bombay Yarn Merchants Association and Exchange Ltd.

In the forward section, 150D March contract picked up Rs. 10 to Rs. 880, but finished a shade lower at Rs. 778. April contract advanced by Rs. 8 to Rs. 781. Spot prices also recorded improvement. 120 Japan and 150 Japan were quoted each an anna higher at Rs. 4-14 and Rs. 4-8, respectively. 120 Italy rose by an anna to Rs. 4-9. 150 Italy was better at Rs. 3-14-6, as against Rs. 3-14.

In sympathy with the art silk yarn market, the staple fibre yarn section also registered a further rise in prices. Staple fibre yarn (40×2) for March delivery rallied Rs. 9 to Rs. 682. April contract rose by Rs. 13 to Rs. 684. In the spot section, prices of indigenous yarns (40×2) were steady, while those of foreign yarn tended to decline. Among the former, Sitaram was half-an-anna higher at Rs. 3-7-6. Hindustan was a shade better at Rs. 3-7-3. Hirji was steady at Rs. 3-6-6. New Great was quoted at Rs. 3-10 and City at Rs. 3-12. Among foreign yarns, Suico, Shinco, S. Fuji and Aurora were all half-an-anna less at Rs. 4-3, Rs. 4-2, Rs. 4-2-6 and Rs. 4-2-6, respectively. Paramount, however, was unaltered at Rs. 4-2.

Following the Central Government's announcement that no more export quotas would be granted for cotton yarn during the current half-year, the cotton yarn market exhibited easy conditions during the week under review and prices tended to move downwards. The decline would have been more pronounced but for the excellent demand from consuming centres and enouraging advices from raw cotton market. Among 10s, Colaba dropped As. 4 to Rs. 13 per bundle of 10 lbs. Mapern receded by As. 2 to Rs. 13-4. Podar lost an anna to Rs. 13-4. Among 20s, Madura fell by As. 2 to Rs. 18-6 and Hind was lower by an anna at Rs. 16-10. Among 30s, Madura shed As. 2 to Rs. 24-4. Among 60s, Sri Ram and Rajalakshmi suffered a loss of Re. 1 each to Rs. 57 and Rs. 44, respectively. City slided down from Rs. 46-10 to Rs. 45-12. Raghuvamshi declined by As. 12 to Rs. 53. Among 80s, Finlay dropped a rupee to Rs. 67. Sri Ram was done As. 8 lower at Rs. 62-8.

The table below gives the prices of art silk, staple fibre and cotton yarns quoted yesterday, as compared with those in the previous week:—

	16-3-1954	10-3-1954
	Rs. a.	Rs. a.
Art silk yarn—		
150 March (per case of 200 lbs.)	778 0	770 0
150 April ,, ...	781 0	773 0
120 Japan (per lb.)	4 14	4 13
150 Japan (per lb.)	4 8	4 7
120 Italy (per lb.)	4 9	4 8
150 Italy (per lb.)	3 14½	3 14

40s Meenakshi	45 12	46 10
60s City	67 0	67 0
80s Finlay		

GROUNDNUTS EASY

(From Our Own Correspondent)

BOMBAY, 17*th March*

The oilseeds market was eventless during the week under review. The groundnut section put on an easy trend, on profit-taking at the higher levels touched at the end of last week. Operators were hesitant to commit themselves on conflicting rumours about the possibility of announcement of export quota for 1,300 tons of refined oil. The linseed section ruled almost dull, presumably in sympathy with groundnuts. In fact, it had no strength of its own. The castorseed section was also colourless. Export business in castoroil is virtually not possible, without an appreciable reduction in export duty. *Kardi* seeds proved no exception to the generally easy trend, while *niger* seeds were quiet.

After the brisk short covering last week for H.P.S. groundnuts, there was a lull in the market. This caused a slight scare among sellers and consequently, there was a mild wave of selling pressure. Bold F.A.Q. declined, therefore, from Rs. 36 to Rs. 35. April-May was down by As. 12 at Rs. 33-14. Khandesh quality disclosed a loss of As. 4 at Rs. 36-4 and Coromandals ready As. 8 at Rs. 35. Groundnuts ready was down by As. 2 at Rs. 17-4, while ex-mills, after narrow fluctuations closed at Rs. 17-4, the same as the last week. April and May deliveries were done lower at Rs. 17-4 and Rs. 17-9, as against Rs. 17-10 and Rs. 17-14, respectively.

With steady arrivals of linseed as well as linseed oil for sometime past and lack of demand, there was no enthusiasm among operators to trade in this section. Bold ready which opened at Rs. 25-2 as against Rs. 25, after witnessing minor fluctuations closed the week at Rs. 25. April-May delivery lost As. 4 to Rs. 23-8. Linseed oil was lower by As. 10 at Rs. 13-10.

Fluctuations in the castorseed section were also limited to a narrow range, as there was very little enquiry from overseas buyers of castoroil. Continental quotations between £98 to £100 for castoroil commercial quality and £106 to £108 for castoroil B.S.S. were discouraging. May delivery which opened at Rs. 103-12, as against Rs. 104-8, fluctuated between Rs. 104-14 and Rs. 102, before closing at Rs. 104-12. F.A.Q. and Madras were dull at Rs. 21-8 and Rs. 22-4, respectively. Castoroil B.S.S. eased from Rs. 12 to Rs. 11-12. I Pressures from Rs. 11-8 to Rs. 11-4. Commercial quality was uninteresting at Rs. 10-12.

Among others, *kardi* Bold and April-May delivery lost As. 2 to Rs. 17-14 each. *Niger* F.A.Q. and Madras were quiet at Rs. 28-8 each.

The following table shows the prices of oilseeds and oil on the 16th inst., as compared with those at the end of the previous two weeks.

	16-3-54	10-3-54	2-3-54
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—			
Khandesh Quality Ready (per cwt.)	36 4	36 8	32 14

SUGAR STEADY

(From Our Own Correspondent)

BOMBAY, 17*th March*

Steady conditions prevailed in the Bombay Sugar Market during the week under review. The steadiness was due principally to confirmation of reports that no foreign sugar purchased by the Central Food Ministry would be arriving in Bombay earlier than the last week of April or the first week of May. There were, besides, encouraging demand from Deccan and Gujrat backed by bullish advices from the South Indian markets.

Prices of indigenous sugar in the spot section were fully steady, with small, medium and large grains quoted at Rs. 90, Rs. 91-92 and Rs. 93-97 per bag, respectively. Among foreign sugars, British refined improved by As. 8 to Rs. 88 per bag of 2 cwts. Mexican and Czechoslovakian sugars were fully maintained, the former at Rs. 41-12 per bag or 110¼ lbs. and the latter at Rs. 96-90 per bag of 2 cwts. German sugar, however, receded by a rupee to Rs. 85-8 per 220 lbs. for want of support. Cuban sugar also was easy at Rs. 38 per 100 lbs., as against Rs. 38-8.

In the forward section, prices moved erratically. *Fagan* delivery, which had dropped to as low as Rs. 80 per bag early in the week recovered to Rs. 85-8 at the close. Last week's quotation was Rs. 86. *Chaitra* delivery was As. 2 better at Rs. 87. The *budla* charges ranged from Re. 1-8 to Re. 1-12 per bag. Higher *budla* rate is attributed to the fact that buyers in *Fagan* delivery would have to pay sales tax, while the purchaser in *Chaitra* delivery will not be paying any such tax, as a result of the introduction of the two-point sales tax from 1st April next.

Arrivals of sugar into the market during the week were larger, the quantity that actually arrived being 6,000 bags, as against 4,000 bags a week before and 1,800 bags two weeks before.

It is reported that the Union Food Ministry has purchased a further quantity of 22,000 tons of Continental sugar at £35 per ton c.i.f. Indian ports for March-April shipment.

PEPPER QUIETLY STEADY

(Messrs. Parekh and Co.)

BOMBAY, 17*th March*

The pepper market during the week remained quiet but steady, with small turnover at all terminal markets, Alleppey moving between Rs 1,700 and Rs. 1,650 and Tellichery between Rs. 1,750 and Rs. 1,700. Arrival has decreased in Alleppey area the average being hardly 50 candies daily. Pressure at Tellichery is also small, and prices there are fairly steady. New York was conspicuous by its absence as a serious buyer; it bought occasionally small quantities of Malabar black for March shipment at prices ranging from $0.81 to $0.79½. The trade in India generally expects a rise of 2 to 3 cents, as soon as either New York buyers commence their purchases or the Indian exporters start covering against their previous sales to Red China. There are reports that some exporters from Singapore sold in New York some quantity of Lampong black at $0.81 per lb. c.i.f. New York n.l.w., but this sale is believed to be from tired longs and, therefore, it is interpreted in our market as a passing phase. There was some selling pressure for Sarawak from Singapore too, but the price quoted for c. and f., New York, is reported to be comparatively still higher than that of Malabar black. Though the Indian growers in general are holding back from selling, when the price goes below Rs. 1,700 yet there are some who are anxious to sell before the beginning of the competition from Sarawak or Lampong.

The election in Travancore-Cochin has placed the Praja Socialist Party in power, and it is believed that this Ministry will fight for the benefit of growers, as the economy of Travancore-Cochin is predominantly agricultural and, consequently, pepper prices will not be allowed to reach an uneconomic level.

In the delivery section, prices are fluctuating within a narrow range of Rs. 20 only. There are speculative sellers for July-August-September at $0.78 per lb. c. and f. New York but so far no business is reported.

Following are today's nominal quotations: Ready dealivery Rs. 180-190 per Bengali maund, March delivery Rs. 1,330-50, and April delivery Rs. 1,370-90 per candy of 5¼ cwts.

RAW JUTE DECLINES

(From Our Own Correspondent)

CALCUTTA, 16*th March*

Although prices did not move up, quotations for jute goods were held steady for most part of the week under review following speculative support on a moderate scale. Subsequently, however, prices were hammered down. Earlier B. twills were taken to Rs. 108-12 from Rs. 108-4. But on selling pressure they declined to Rs. 106-10. Yesterday, the rate went even lower to Rs. 105-8. However, speculative support was available at the lower level and there was covering business too. D.W. flour-bags gave way to Rs. 127-8 from Rs. 128-8, and heavy cees plain to Rs. 112 from Rs. 113-8. At Rs. 131, A. twills were lower by two points.

Rumours of a reported lower consumption of burlap in the United States in February held sway for sometime. However, by the week-end, these reports proved baseless and American consumption in February was higher than in January. All the same, the fact that the market lacked enquiries from shippers resulted in a recession in the quotation for hessians. Thus ready 40″ 10 oz. lost to Rs. 42-12 from Rs. 44-4, the f.o.b. rate declining to Rs. 46-13, as against Rs. 48-6 a week ago. The 8 oz. 40″ hessians were offered at Rs. 36 f.a.s. and at Rs. 39-4 f.o.b., the fall in both cases being by Rs. 2 each.

Prices for raw jute also registered a decline, although earlier in the week a steady trend was in evidence. There was no lack of offers, and this factor coupled with the increase in new arrivals made buying support meagre. Mills were not at all anxious to enter into the market in view of the dullness prevailing in the prices of jute goods, and also in view of plenty of jute in the market. As at present, those who had anticipated earlier an impressive rise in prices before the new crop came into the market are going to be disappointed. There are signs that the reverse is going to happen actually. Supervised daisee bottoms after being quoted at Rs. 29 receded to Rs. 28. On the other hand, Indian Northern bottoms at first declined to Rs. 24-12 from Rs. 26, but latter made a partial recovery to Rs. 25-8, middles being offered at Rs. 28-8. Upper Assam bottoms and middles were priced at Rs. 24-8 and Rs. 25-8 respectively, as against Rs. 25 and Rs. 28 previously. Western jute was marked at Rs. 23 for bottoms, *jungli* at Rs. 22-8 and Murshidabad at Rs. 23-8.

FOODGRAINS BETTER

(From Our Own Correspondent)

HAPUR, 15*th March*

Foodgrains markets remained quiet to steady. Prices which had tended to slump for many weeks have now developed stability and have improved in some cases. Wheat prices have generally remained stationary, except in Punjab and Madhya Pradesh where excellent crop prospects have induced a fall in prices. Prices of maize and other millets, increased slightly this week in the local market and in many other centres. Confidence has been restored to a large extent and no precipitate fall in prices is now anticipated, even if the earlier dreams of a bumper crop are realised. There is no panicky sales now, as trade stocks are very small, and there has been an apparent fall in the inflow of coarse grains from terminal markets.

The overall food position in the country continued to maintain a promising outlook. The Government of India's contract to buy 900,000 tons of rice from Burma was finalised this week and the Union Deputy Food Minister hoped that the Centre would bring down the high price of rice all over the country very shortly. The Indian Food Minister has authoritatively stated that, in view of the good crop prospects for 1953-54, India hoped to be self-sufficient during the current year, in rice and coarse foodgrains.

The downward trend in foodgrains prices in U.P. has been arrested. The bumper *rabi* crop prospects are no longer entertained. There is a possibility of large quantities of rice from U.P. carried to Delhi, now that the Central has allowed the Delhi traders to do so. Besides, the inflow of coarse grains from Punjab and P.E.P.S.U. has been curtailed. With the absence of panicky sales, offerings are more reserved.

The latest quotations (per maund) are: Wheat Rs. 15-6 to Rs. 16-8, gram Rs. 10 to Rs. 13-8, barley Rs. 9-4, *bejhar* Rs. 9-4, maize Rs. 10-8 to Rs. 11-12, *bajra* Rs. 9-4 to Rs. 10-8, *jowar* Rs. 7-8 to Rs. 10-4, *guwar* Rs. 9-2; rice: *basmati* Rs. 28, *sela* Rs. 22 and coarse Rs. 19-8, peas Rs. 8-12 to Rs. 9, *arhar* Rs. 9-12, *urd* Rs. 13-8 to Rs. 16-8, *moong* Rs. 15 and *masoor* Rs. 14. Futures, peas *jeth* Rs. 9-3 touched low Rs. 8-8-3; *arhar jeth* Rs. 10-2 touched low Rs. 9-6-9; *urd baishak* Rs. 14-11, touched low Rs. 14-2-6, *guwar baishak* Rs. 8-4 touched low Rs. 7-8.

Several State Governments are busy removing restrictions on inter-district movements and quality control of rice within the States. Outside India, though world commodities have staged a recovery since the beginning of the year, the buyers' market in foodgrains is developing rather rapidly. In its latest issue, the *Corn Trade News* of Liverpool has poignantly pointed out that the experience of the present season and the general trend of the world production and demand may well bring the International Wheat Agreement to its grave. It was announced this week that the International Wheat Council has been informed by the Government of India that it is not taking the quota of one million tons of wheat for the first year of the I.W.A. which ends on 31st July, 1954. It is revealed that, though the United Kingdom is the only country which had actually resigned from the Agreement, several others have, apparently, not yet bought a single bushel under the new terms. Such countries include Austria (9.2 million bushels) Brazil (13.2 million bushels), Denmark (1.8 million bushels) Italy (31.2 million bushels), and Jordan, Korea and Sweden (combined import quota of 5.3 million bushels). Other importers have bought only negligible portions of their respective quotas. The outstanding example is India. Of a total quota of 36.7 million bushels, India has taken to-date a negligible 345,000 bushels. Ireland has purchased only 2.2 million bushels out of 7.9 million bushels. Even though the I.W.A. sales and purchases as a whole have accounted for a third of the general overall quota in 6 months of the season, the takings of many individual countries are substantially less than this.

RISE IN SUGAR PRICES

(From Our Own Correspondent)

HAPUR, 15*th March*

Crystal sugar markets remained steady this week and there was further rise in prices in almost all the centres. There was increased offtake, reserved offerings and no further receipts of foreign sugar consignments at the ports. Speculators were fairly active in the mill delivery. It is complained that no sooner a free sale quota is released by the Government, speculators cover a fair share of the same and sit tight to force an upward trend. Bombay was very steady, due to active demand from Malabar and Gujarat and tight supply position. It is said that no more consignment of foreign sugar may reach the port during the rest of the month. Activities of stockholders and improvement in demand from consuming areas steadied the outlook at Madras and Calcutta. Kanpur reported of slack demand from out-stations, but despatches from mills were still satisfactory. The Central Government's suggestion to West U.P. sugar mills to pay a higher price for cane delivered to them hereafter also had a bullish reaction. As was suggested by the Union Agricultural Minister, it was expected that these sugar mills would operate for a longer period, thus making additional profits which the Government wanted them to share with the cane growers.

A 21-member Council has been set up by the Government of India to recommend measures for the development of sugar industry. The Council will fix targets for production, co-ordinate the production programme and review the progress of development from time to time. The Union Minister for Agricultural told the Indian Sugar Mills Association this week that, in order to meet the increased demand for *gur* and sugar, it was absolutely necessary to raise the production of sugarcane without in any way seriously affecting the relative position of acreage under various crops.

The latest quotations (per maund) are: Hapur mill delivery Simbhauli Rs. 31-2, Amroha and Bijnor Rs. 30-8, Mowana and Sehora Rs. 30-12, Rampur Rs. 33, Mansoorpur Rs. 31-6 to Rs. 31-12, Deoband Rs. 31-12, Laksar Rs. 31-6, Muzaffarnagar wholesale Rs. 30-12 to Rs. 32-14, Calcutta Rs. 30-6, Madras British refined Rs. 87-9, German beet Rs. 86-7, Bombay British refined Rs. 88-4, Indian D-28 Rs. 91 to Rs. 95, Agra Rs. 32-12, Meerut Rs. 29-8 to Rs. 31-8, Amritsar Rs. 32-12, Moga Rs. 31 to Rs. 32.

Gur markets remained very steady and there was a general rise in prices both in the North and in the South. Arrivals in the terminal markets were moderate. There was excellent demand from the importing areas although actual despatches were restricted due to wagon shortage. As already reported, there have been only small stock accumulations in the surplus West U.P. *mandies*. Hapur has now a spot stock of 40,000 maunds. *Gur* stocks at Meerut and Muzaffarnagar are comparatively higher, but they are not regarded as burdensome.

Gur futures recorded a sharp rise in prices on heavy speculative covering activity stimulated by apprehensions of reduced yield this year. *Phagan* contract deliveries were affected at Hapur, Punjab and East U.P. operators accepted unexpectedly heavy offerings. This not only raised *phagan* contracts but also pulled up *baishak*. A rise of about Re. 1-8 per maund has been recorded in case of futures, whereas ready prices advanced by about As. 12 per maund. *Pansera gur* at Hapur is quoted at Rs. 16-2 today. *Phagan* is quoted at Rs. 15-12-6, as against Rs. 14-0-9 touched low this week. *Baishak* is quoted at Rs. 16-3-6, as against Rs. 14-6-6 touched low this week.

More than 3,800 maunds of quality *gur* were produced by cane growers under the *Gur* Development Scheme of the U.P. Cottage Industries Department during the first half of February. Over 500 fuel saving furnaces were also constructed during the period. Arrangements are being made to introduce improved *kohlus* among cane growers on *taqavi* system. The U.P. Government has received a grant of Rs. 5 lakhs for sugarcane development in the State under the Five-year Plan of the Cane Development Department. The aid which covers a period of three years has been made by the Central Sugarcane Committee. The State Government is also considering proposals for the development of sugarcane growing areas, especially in the eastern districts.

TIN ADVANCES

(From Our Own Correspondent)

CALCUTTA, 16*th March*

Steady conditions were in evidence in the metal market during the week under review. The most impressive feature was provided by the rise in the price of tin from Rs. 443 to Rs. 447, although even this improvement has not brought the price to the replacement cost. Local stocks are running on a low scale, but fresh arrivals are expected to reach the country soon. Stockists noted with enthusiasm the strong advices coming from Singapore and London, despite the reported decision of the U.S. Government to refrain from the International Tin Agreement. In contrast with tin, the sentiment in mercury was affected greatly by the Central Government announcement not to allow exports of mercury salts and compounds. The price gave way to Rs. 580, recording a fall of more than Rs. 100 as compared with the rate ruling just prior to the Government announcement. Stocks in the country are believed to meet consumption demand for about three years more, but the Government's decision is due apparently to speculative support which had recently pushed the price up.

Electrolytic copper was quoted on the basis of wire bars, as the ingots materials stood exhausted. The rate was held steady at Rs. 177. There was also good demand for scrap. More imports of ingots are called for to ease the supply situation. Virgin lead was in moderate demand, the quotation gaining from Rs. 59-8 to Rs. 62. Lead scrap, however, was in better demand, in view of the price concession for the same as compared with the virgin material. In conformity with the general sentiment, electrolytic zinc improved from Rs. 52-8 to Rs. 53-4. Stocks are, however, heavy and consumers do not desire to buy more than what is required for carrying on day-to-day work.

LINSEED SUPPLIES SCARCE

(Messrs. A. Bradley & Co.)

CALCUTTA, 15*th March*

The undertone of the linseed market remains steady and prices have been firm, whilst the main feature has been shortage of ready supplies. Activity has been on a very small scale. Keen enquiries from local millers for ready goods, have met with little response from sellers. Owing to poor local demand, the oil section has been rather inactive although prices are fairly steady in sympathy with the seeds price. Latest quotations are: Ready Rs. 20-8 and April-May Rs. 17-10 per maund.

HIDES FEATURELESS

(From Our Own Correspondent)

KANPUR, 14*th March*

During the week under review, the conditions of the local hides and skins market were rather featureless. The major factors were more or less the same as in the previous week. There was a slight fall in new arrivals of wet salted cow due to transport difficulties. The local tanners were the main parties behind major transactions of wet salted cow and buff. Madrasi dealers were quite active over goat and sheep. The main undertone of the market was static.

Latest quotations are: Wet salted cow, 1st grade, Rs. 270 to Rs. 310 and 2nd grade, Rs. 200 to Rs. 290 per score; wet salted buff 1st grade, 1 lb. 13 ozs. and 2nd grade, 2 lb. 6 ozs. per rupee; goat 1st grade, Rs. 300 and 2nd grade, Rs. 275 per 100 pieces; sheep 1st grade, Rs. 300 and 2nd grade Rs. 275 per 100 pieces.

KIPS FIRM

(From Our Own Correspondent)

MADRAS, 15*th March*

Despite restricted inflow of orders for kips from the U.K., prices have held firm in the local market. U.K. importers have paid on certain lines half to 1*d.* advance in prices and shippers have been active in the local *bazaar*. There was good call from the U.K. for fifths and inferior fifths, but sellers were few due to good inland demand at 2*d.* to 3*d.* over U.K. levels. Demand for cow calf and buff calf was small, while that for buff heavies good.

Shipment business in tanned skins was slow. Tanned goat superior tannages were taken up at 12*s.* for 11/12 lb. run and 8/9 lb. at 12*s.* 6*d.* and light weights were easier. There was good clearance of market goat and lining sheep and stocks in the *bazaar* have been negligible.

Shipments (in bales) during the month of February, 1954, were: To U.K.: 2,800 td. cow, 238 td. cow buff, 100 td. buff, 412 td. buff calf, 633 td. goat, 717 td. sheep and 1 td. snake skins; to the Continent: 11 td. cow, 2 td. buff calf, 333 td. goat and 79 td. sheep; to the U.S.A.; 42 td. cow, 4 td. cow calf, 78 td. buff, 30 td. buff calf, 136 td. goat and 391 drysalted goat; and to Japan: 25 td. sheep skins.

WORKING OF INDUSTRIAL DISPUTES ACT IN UTTAR PRADESH

(Concluded from page 521)

agitated again and again. Highest business executives could be summoned before these courts, and snubbed and insulted, and made to spend hours. The Conciliation Board Chairman, instead of asking the parties to sit down round a table for promoting understanding and settlement, would keep the parties standing before him, while he seated himself on a chair behind a raised table, with a bar and railings before him, creating the atmosphere of a court room, and the parties to the dispute appearing as accusers and accused.

The Trade Union leaders preferred to suffer some inequities of the Labour Commissioner, as they found themselves winning more and more cases. The Employers of Kanpur who had won 69 per cent. cases in 1949 and 59 per cent. in 1950 and 1951 each, found in 1952 that they had won only 38 per cent. of the cases while as many as 45 per cent. had been decided against them. They became so frightened of the Labour Commissioner—of his powers over the organised industry—that instead of criticising him, the Chairman of the Employers' Association at the Association's last annual general meeting, proclaimed: "It is mostly due to his (Labour Commissioner) good offices that relations between employers and employees generally have been tolerable during the year under review."

Government Action At Last

The State Government, however, did not fail to notice how the extraordinary powers it vested in the Labour Commissioner had been abused. And the first step to curb his powers was taken by the Government on 7th December, 1953, when it issued a notification amending clause 4 of the Government order of 15th March, 1951. As a result of this amendment, any worker bringing forward complaint of a dispute is required to make a solemn affirmation and give details about the time of the dispute, if any previous reference of the same was made before any authority, and satisfy that he had made a direct approach for its settlement, etc. Thanks to this order, indiscriminate cognisance of complaints has endcd now. As very few complaints can stand the test of the conditions laid down now, there has been a startling fall in the number of cases being sent up before conciliation boards since 7th December, 1953. The average monthly figure of these complaints which had risen to about 250 in 1953 for Kanpur had fallen to about 60 in January, 1954. So far as the members of Employers' Association are concerned, the average monthly figure of disputes had fallen from 50 in 1953 to 8 in January, 1954.

Welcome Relief

All this means a welcome relief for the industry as a whole. As there are fewer Conciliation Board cases, there will be naturally fewer adjudication cases, and less industrial litigation. The industry has been promised greater peace, and this would help both the management and the worker.

Bureaucracy, once it gets used to certain powers, does not easily surrender them. Though industrial litigation has declined for the time being, the number of officials continues unchanged. Trade Union leaders, specially those who have got used to litigation, are there to mislead the Government, and plead for the return of conditions which existed before 7th December, 1953. Industry has won a temporary and precarious battle. Its position is still not quite happy. Its own house is not in order. A detailed enquiry into the working of Labour Office in Kanpur under the Labour Commissioner is necessary in the larger interests of industry and the working class. Only then it may be possible to take suitable steps to remove the many defects in the working of labour laws in U.P. which, in many ways, harm good employers and good workers, and benefit bad employers and bad workers.

The output of gold, as in fact of any other commodity, depends partly on the prices which the yellow metal commands in world markets. It is the pay line, that is the cost at which it just pays the producer to mine the ore and refine it, that determines whether the gold ore could be allowed to remain as rock or gold recovered from it. In the early post-war years, there was a good deal of discussion as to whether the official gold prices should be increased or not. At that time, gold commanded a very attractive premium in the free gold markets where the metal was bought at high prices to serve as a hedge against inflation which prevailed in most parts of the world. South Africa, the leading gold producer, was always vociferous in its demands for an increase in gold prices. It also used to be said that an increase in official prices for gold would mean an addition to the sterling area's dollar earnings. This question has now receded to the background, thanks to the change in the world economic conditions, and also to the decline in free market prices for gold. The world free market price for gold in terms of U.S. currency now stands at about $34.95-35.05. Discussing the future of gold prices, in the light of the annual review of the go.d market by Messrs. Samuel Montagu, "Lambard" writes in the *Financial Times* as follows:

"As with the sterling balances question, however, the the gold price issue has now faded into the background. The man who played the biggest part in launching the crusade for a change in the late 1940's, Mr. Havenga, the South African Finance Minister, has continued to emphasise its desirability. But even his utterances on the subject have been in a minor key. Moreover, he did not attend the annual meeting of the International Monetary Fund last autumn to press his case, as he had done on so many previous occasions. Does this mean that the campaign for an increase in the price of gold has failed and has been abandoned? To imagine this, says the annual Bullion Review of Messrs. Samuel Montagu, the London bullion brokers, would be a mistake. Their theory would seem to be that those who favour the change have come to the conclusion that propaganda at this stage serves only to irritate the American people and embarrass those in the U.S. Administration who might be in sympathy with the idea—making it advisable to let the subject drop. It is an attitude the Review approves. Far better than the tactics previously adopted, it suggests, is the "constructive approach" made by Mr. Butler, the Chancellor of the Exchequer, to the American Government last year, when he put the question of a higher gold price—not as the panacea for all international economic ills—but as a necessary part of the comprehensive Commonwealth plan for the restoration of sterling convertibility. So far, the Butler approach to the gold price question does not appear to have carried any more weight with the American authorities than that associated with Mr. Havenga. But Samuel Montagu calls attention to the fact that, last year, the International Monetary Fund sponsored the publication of Mr. Hartrod's paper on the 'Imbalance of International Payments,' in which the disadvantages of leaving the gold price at its present level were stressed. And they suggest that this must mean that the Fund has some sympathy with this argument. Altogether, they say, they see no reason to change the opinion they have previously expressed that 'sooner or later' the U.S. will join in an international agreement to raise the world price of gold.' At the moment it looks as though it will be later rather than sooner.

* * * *

"The review, incidentally, sets out once again the market's complaint against the continuance of the official ban on free gold dealings in London imposed in July, 1947. It is pointed out that the slight concession by the Bank of England in 1952 still permits London houses to act as agents for the sale of newly mined gold from the Commonwealth and the Colonies to buyers outside the sterling area against payment in U.S. dollars. Thus, it is said, London retains its traditional position as an important, perhaps the predominant, clearing house for the physical movement of free gold to and from various places outside the sterling area. And that, it continues, makes it all the more mortifying for those concerned that the actual dealing which impels and directs this flow of gold continues to be banished from the London market. All the gold-producing countries of the Commonwealth have long since been granted access to the free gold markets. Thus it would seem that the ban on free gold dealing in London—which the British authorities originally imposed in deference to the International Monetary Fund's one-time embargo on the traffic in free gold—would appear to have ceased to have any logical basis."

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. LXXXVIII. No. 2249 BOMBAY, 27 MARCH, 1954 PRICE Rs. 1/8

RISK CAPITAL, RATIONALISATION AND SALES TAX

THE recurring theme of the addresses of chairmen of commercial bodies is the ebb in the flow of private capital to industry. This is hardly surprising, considering how few new industrial units have been established in the last three or four years, apart from those for which plans and blue-prints had been ready and capital collected in the war or early post-war years. But this is not the only disturbing symptom of the country's industrial *malaise*. Even established undertakings find it difficult to expand themselves. Indeed, they are satisfied if they can just pay their way. Now, this is a prospect which no person who has the rapid economic development of the country at heart can contemplate without a feeling of disappointment. Mr. H. I. Wonfor, Chairman of the Madras Chamber of Commerce, did well, therefore, to discuss the problem, when he addressed the Chamber's annual meeting this week. The main theme of his address was that risk capital was not forthcoming, because the tax burdens on industry and the Government's labour policy were not calculated to provide the right climate for private enterprise. Although Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, who was present on the occasion and addressed the meeting, did not entirely agree with Mr. Wonfor's diagnosis of the causes for this investment *malaise*, he was compelled to recognise that the malady did exist. Mr. Krishnamachari, who is himself the originator of the idea of an industrial development corporation, to aid the private sector, has apparently realised, more than any other Government spokesman, that private capital today is more shy than at any time in the recent past.

Mr. Wonfor rightly held that the investment 'climate' in India was not such as to invite fresh capital. Direct taxation is high—higher than in any country in the world, except the U.K.—despite the fact that there are only 0.8 million assessees in India, as against 20 million in the U.K. and 60 million in the U.S. Again, direct taxes have risen much higher than indirect taxes. As compared with the tax levels in 1938-39, the Centre's tax revenues have increased by 550 per cent. The increase in indirect taxes is only 400 per cent. whereas that in direct taxes is 1,000 per cent. The top rate of personal tax is higher by As. 3¼ in the rupee than it was in 1939, and the income limit, to which this rate is applicable, has been reduced from Rs. 5 lakhs to Rs. 1¼ lakhs. Also, limited liability companies pay a special rate of super-tax on their total incomes; there is no rebate or set-off in respect of any dividend which may be included therein. Mr. Wonfor explained the mournful significance of this measure for the future of corporate enterprise when he said: "In other words, these dividends, in the hands of a limited liability company, might pay company super-tax two or three times over and it will be readily appreciated that this acts as a complete break to the development of subsidiary and sub-subsidiary companies which have played such an important part in the industrial development of the West."

Although Mr. Krishnamachari agreed that the investment climate had not been favourable in the last five or six years, he was not prepared to accept the statement that it was due entirely to the defective tax structure. There is some truth in this contention, in that a setback in economic growth is always an inevitable outcome of inflation of the type witnessed in the war and early post-war years. As any impartial economic adviser will readily admit, the shyness of investors has also been due to the mush-room growth of joint-stock companies in the war years. Several crores of rupees of hard-earned savings of middle class investors have been lost as a result of the failure of numerous companies floated during this period. Mr. Krishnamachari seemed to take some comfort from the appreciable fall in the disinvestment by foreign firms in the country which was an outstanding feature in the early post-war years. In saying this, he was not unaware of the fact that, even now, the tendency for repatriation of foreign capital persists in such centres as Calcutta and Bombay. But the point he wished to make was that it was not as strong as it used to be six or seven years ago. This he took as evidence of the revival of foreign business men's confidence in the Government of India today.

Be that as it may, he admitted that investment in the private sector should be encouraged. He declared, in this connection, that, at no time during the past two years he was a Minister, he found any antipathy or distrust on the part of the Government towards the private sector. It is hard to stomach this unqualified statement, for he seems to have conveniently forgotten the observations made by the Prime Minister himself in Madras some months ago. Some of his own actions and pronouncements in the recent past showed that he, too, lacked confidence in the private sector. Nevertheless, his latest statement is reassuring to a degree and it is to be hoped that he will substantiate it by his actions in future at least. We are constrained to make this remark because there is no gainsaying the fact that, even if the Government has not been antagonistic to private capital, it has not been positively helpful either.

Rationalisation

The case for rationalisation of industry was ably argued by Mr. Wonfor, who pointed out that, while the sellers' market had gone and the buyers' market had emerged, industry found it extremely difficult to adjust itself to new conditions, thanks to the rigidity of its costs. Industrial managements, as Mr. Wonfor said, are unable to take advantage of the latest technical appliances, which reduce cost and improve efficiency, since this involves retrenchment which the Government has rendered well-nigh impossible. In this connection, he did well to remind the authorities not to overlook the fact that new, efficient and competitive industries themselves create fresh demand, generate new subsidiary industries and eventually provide more employment. The fact that this elementary aspect of modern economic development fails to win the appreciation of most of our Ministers is, indeed, amazing, more especially because we have a Planning Commission manned by some of our ablest administrators and economists. Apparently, these specialists in the Planning Commission have either failed to make the Ministers view the problem in its proper perspective or have made no endeavour to convince them on this point, lest they should incur the displeasure of the Ministers.

Mr. Wonfor, however, won at least partial recognition for his case at the hands of Mr. Krishnamachari, for the latter admitted that they could not afford to keep their industries in a moribund condition merely because, if they modernised, unemployment would result. But the Minister was not prepared readily to accept the logical solution for this problem. Instead, he stressed two considerations. In the first place, he seemed to feel that the threat of a buyers' market, the compelling reason for modernisation and reduction in costs, was not a grave one. He cited textiles and sugar as instances of commodities the offtake of which had increased. He thought that the rigour of the buyers' market might be softened by the increase in demand. This attitude bespeaks, in our view, undue optimism, though it may be a welcome corrective to those who are over-apprehensive about the buyers' market. Further, it may be doubted whether such a view is applicable to all goods.

The other consideration which he stressed was that unemployment, which rationalisation might bring in its wake, would create a political problem. He admitted that it might be that the Government was "always alive to the determining nature of the ballot box." He warned that, if unemployment increased "even by an iota," one could not have stable Government in the country. The choice before the country, he said, was between unemployment and stable Government. He did not, therefore, agree that the modernisation which brought about retrenchment was an ideal solution. In describing the picture thus, Mr. Krishnamachari has, we venture to suggest, overdrawn the picture. It is true that unemployment causes some political tremors. But the Government's present policy is calculated only to prevent those who are already employed from being thrown out; it does not take cognisance of the people who are still to find jobs. Even on purely political grounds—on ballot-box considerations—the latter category of men, the seekers of jobs, especially the young men who have to find some avocation for the first time, far outnumber the men who are likely to be thrown out by retrenchment that might be caused through modernisation of existing industries. Viewed thus, it will be appreciated that the Government's attitude towards this problem is a very shortsighted one. It is needless to add that continued failure to face the problem of modernisation, as we have stressed elsewhere in this issue, will only mean

the perpetuation of the disease of high costs, low productivity and low living standards. In other words, it is a delusion to think that, by not facing the problem of modernisation right now, stability of the Government can be ensured. On the contrary, the outcome of this policy may be exactly the reverse, in that the stability would soon be undermined by the failure of the economy to grow or to grow fast enough. The learned Commerce and Industry Minister will do well to remember that there is a world of difference between rigidity and stability, even though the former may resemble the latter.

Sales Tax

Another subject which figured prominently in Mr. Wonfor's address was sales tax on inter-State trade. After describing the difficulties of inter-State traders, who have to be conversant with the laws and regulations in all the 15 States wherein sales tax is in force, Mr. Wonfor made out two important points. In the first place, he stressed that the original intention of the authors of the Constitution was to prevent sales tax on inter-State trade. Indeed, this is true, since States generally commenced collecting sales tax on inter-State trade only after the recent Supreme Court's judgment on the subject. Secondly, he emphasised that it was wrong to suggest that the State Governments could not give up the small additional revenue which sales tax on inter-State trade brings, inasmuch as they were content, prior to the Supreme Court's judgment, to do without this additional revenue. This again seems to us to be a correct appraisal of the problem. If the States decide to do away with the collection of sales tax on inter-State trade altogether, or convert this into a purchase tax, it will only mean the restoration of the *status quo ante*.

But Mr. Wonfor was not on firm ground when he pleaded for the centralisation of sales tax, with provision for the distribution of the revenue among the States, and uniformity in rates of tax as well as in the tax system. After all, the States differ greatly in their economic levels. And it would be wrong to compel a State Government to reconcile itself to a lower level of taxation than what the State's economy can stand, or to force a backward State into a higher level than what it can bear. Moreover, things have gone so far that it is almost politically impossible to make sales tax a Central subject, even if it is clearly meant to be for the benefit of the States. Business men of the country will, accordingly, do well to reconcile themselves to sales tax being a State taxation and strive for getting their grievances redressed by appealing to the good sense of State Governments and by seeking the friendly intervention and assistance of the Central Government. The very demand for centralisation of sales tax naturally antagonises the State Governments against business men, for it amounts to asking them to surrender a substantial part of their power. And, as all who know human psychology will readily admit, nobody likes to give up power.

The views of Mr. Krishnamachari on this vexed question were refreshingly candid. Besides, he threw a few sensible suggestions which, if adopted, would go a long way towards making sales tax an acceptable burden. He was opposed to the demand for making sales tax a single point tax, to be levied by the Centre. He gave a reason which adds to the list of reasons cited by us above. He said that, if the Central Government took over the responsibility for levying the tax, the States Finance Ministers would only budget for expenditure. He, therefore, thought that this tax should continue to be the responsibility of States. The Press version of Mr. Krishnamachari's speech does not indicate whether or not he expatiated on the significance of this statement. But it is obvious to us. The significance is this. The State Finance Ministers will not know the value of money. They will become spendthrifts, greater than they are now. The present tendency of throwing the blame on the Centre for lack of resources will receive a fillip. If the State Governments are to realise that money is not easily come by, their responsibility for raising resources should not be whittled down.

It is, unfortunately, true that most of the States are exploiting their right to impose sales tax by levying the tax at exorbitant rates and by administering it in such a way as to cause severe hardship, both physical and financial, to business men. Indeed, some States have actually started misusing this right. A typical example of this is provided by Madras and Mysore. The Governments of these two States are using this instrument of taxation for protecting the handloom industry against the mills by increasing the rate of sales tax on mill-made cloth to fantastically high levels. Surely, at no time was this tax intended to be used for this purpose; it was meant to be a purely revenue measure. By departing from this original purpose, the States are actually infringing the rights of the Centre. If other States, too, were to copy Madras and Mysore, there would be financial anarchy in the country. An immediate check to this tendency is, therefore, essential and the Centre should not be a silent and helpless spectator.

That Mr. Krishnamachari more or less appreciates our contention is evident from his admission that there ought to be a ceiling on sales tax. We are glad he said it, because he was principally responsible for helping Rajaji to discover this *Kamadhenu* (milch cow) soon after Provincial autonomy was introduced in this country and the Congress decided to take up office. Not only did he say that there must be a ceiling on this tax but went further to indicate what it should be. Giving his personal opinion, he observed that, where sales tax was collected at single point, the ceiling should be 6¼ per cent. and, where it is cumulative, the ceiling should be 2 per cent. The States, he added, could raise or lower the sales tax within that range. He further advocated the conversion of sales tax into purchase tax so that the complications arising from inter-State trade could be avoided. He believed that there was enough common sense, wisdom and statesmanship among State Governments to evolve a suitable formula. The intransigence of State Governments in the past one or two years on this question does not give room for entertaining this belief. Nevertheless, we still hope that Mr. Krishnamachari's faith will be vindicated and that an acceptable solution to this admittedly difficult problem will soon be found.

LAND NATIONALISATION IN BURMA

PROTESTS from the interests affected have not prevented the Burmese Government from placing on its statute book the Land Nationalisation Act, 1953. The Act seeks to nationalise all land and gives power to the State to distribute it among certain categories of people. Being a sovereign nation, Burma is, of course, fully entitled to adopt any policy it thinks best for its people. India, however, has reasons to feel alarmed about the Act, because it dispossesses, at one stroke, the Indian owners of Burmese land. For over one-half of a century, the Indian settlers, mostly bankers from the South, have given the best years of their life and their savings in the cause of Burmese agriculture. Indians own, it is computed, about three million acres of land in that country. Not only do they now find that their ancient profession is gone, but even the properties they had built up are to be taken away from them. This is by no means a pleasant prospect for those men who faced untold hardships in World War II and hoped that, at the end of it all, they would be able to come into their own. If there is any section of the hardworking commercial people that did not share the war-time prosperity which came so easily to others, it is the Indian bankers in Burma.

The sting of the Burma Land Nationalisation Act lies in its tail—in its appendix which prescribes what is euphemistically termed, compensation for landowners. For the first 100 acres of land taken away from the landowner, the Government will give compensation at the rate of 12 times the land revenue. Since land revenue in the case of these categories of land is only Rs. 2 to Rs. 3 per acre, a person owning 100 acres will receive scarcely Rs. 3,000 as compensation. The compensation provisions are even more ungenerous in the case of persons who hold more than 100 acres. Compensation will be paid at a rate which varies successively from 11 times to twice the land revenue for land which varies in extent from 200 acres to 1,100 acres. For land in excess of 1,100 acres, compensation will be only equivalent to the land revenue.

To call these amounts "compensation" is to invest the word with a meaning which it does not possess. This is not all. There is one section in the Act which makes it even more obnoxious, as it gives a complete moratorium on all agricultural debts, even against collectors of land revenue. This section prevents the sale of land or attachment of land for recovery of arrears. In fact, it takes away the jurisdiction of the civil courts over land. Hence, the persons who have lent their money against land as security are prevented from proceeding against the debtors. Again, those who own land are compelled to pay the revenue they owe to the Government from their other assets, as the State cannot attach the land for non-payment of revenue. Since conditions in Burma continue to be chaotic, the Indian landholders in Burma have no easy access to their property, on which they still pay revenue, and of which they are soon to be dispossessed.

That Indian interests should be perturbed by these developments which, in one sense, are worse than *apartheid*, is only natural. It would appear that the Government of India, to which the Indian interests appealed for intervention on their behalf, has already made representations to the Government of Burma on this issue, but it is not known as to what would be the outcome of this representation. It will be recalled, in this connection, that the Burmese Government agreed to hear an Indian delegation before it decided the quantum of compensation and actually met, in December last year, a delegation sponsored by the Indian Government. But this has had no effect on the Burmese Government, for, it is learned that an amendment Bill, which is shortly being introduced in the Burmese legislature, carries the same provisions for compensation as the original Act. The Indian demand is for compensation at a flat rate of 12 times the land revenue, or, alternatively, for 15 to 8 times the land revenue, in 1,000 acre blocks. This would work out, on the basis of current land revenue rates, to Rs. 45 to Rs. 24 per acre, depending upon the extent of the land taken over. The Indian demand is modest to a degree. In fact, it is less than what Burmese landholders themselves are demanding by way of compensation; the latter have asked for a flat rate of 30 times the land revenue or 35 to 25 times the land revenue on a sliding scale in 1,000-acre blocks. Again, if the Indian demand is conceded, the Burmese authorities would still have made a good bargain, for it would cost the Government only Rs. 10 crores to buy their land which would normally cost about Rs. 90 crores.

It is to be hoped that the Burmese Government will be able to work out a solution that will be acceptable to all the interests affected. The Government will do well to remember that, apart from the fact that nationalisation of land is no panacea for the country's economic ills—this, however, is entirely a domestic matter—it would be a shortsighted policy to run down the Indian bankers. Their services, which have been useful in the past, might prove useful again. Indian bankers could be trusted to resume their traditional role as financiers for the rice trade. After all, the sellers' market in rice, which brought rich dividends to the Burmese Government in post-war years, is coming to an end.

Even if this consideration does not weigh with the Burmese Government in arriving at a satisfactory solution, it is to be hoped that at least considerations of equity and international law will make the Government see the folly of its ways towards Indian owners of Burmese land. The Government of India will, on its part, be failing in its duty towards Indian nationals in Burma if it did not effectively impress upon the Burmese authorities the need for granting equitable compensation. International law clearly recognises that, when an alien property is taken over, compensation at a reasonable rate should be paid to the dispossessed interests. When the U.S. was confronted with a similar problem in Mexico in 1938, it pressed the case of its subjects, who had acquired property in Mexico and who were threatened by the Mexican Government's scheme of over-ambitious agrarian reforms. The Mexican Government was compelled to concede the American Government's claim for full and adequate compensation. The Indian case is even stronger than the American. After all, Indian settlers went to Burma and acquired property at a time when that country was not only a member of the Commonwealth but also a part of India itself. The idea that such property rights could be unceremoniously set aside is repugnant to all canons of equity and international usage. Further, if India fails to protect the interests of its subjects in Burma, it will cause considerable alarm among many Indian traders abroad, who, in the course of their normal business activities, have acquired, and continue to acquire, landed and other properties.

TATAS TO PARTICIPATE IN VOLKART BROTHERS' BUSINESS

GOLD—SUGAR REFINERY—SHIPPING

THURSDAY, 5 P.M.

THERE have been no outstanding developments in the city markets this week, except for a slight flutter in the gold section of bullion caused by the reopening of the London gold market after an interval of 15 years. In the share market, the only feature was the firmness of Tata Steel shares following bear covering and some fresh buying. Other counters, however, remained neglected. If there was any change in their values, it was generally in a downward direction. Among commodities, cotton was erratic but the underlying trend reflected the strong statistical position of Indian varieties. Over the week, values were somewhat higher. Towards the close, some of the prominent millowners bought a sizable amount of ready cotton, while a few of them preferred to go long even in the futures section. Oilseeds were fully steady, with castorseeds, in particular, staging a smart advance on reports of stray export enquiry and absence of fresh selling. Groundnuts were a shade higher in value, but trading was a colourless affair.

MARKET GOSSIP

• • • •

London sprang a surprise on financial circles in India by announcing two important measures affecting the sterling area. One was the reopening of its gold market, from Monday the 22nd inst., and the other was a large extension of the sterling transferable area. The significance of these two measures is clearly explained by our London Correspondent in his despatch, published elsewhere in this issue. It is, therefore, unnecessary to refer to it here at any length. Suffice it to say that these two measures are designed to help sterling area exports, encourage the use of sterling in international trade and assist the re-establishment of London as a financial centre. The extension of the transferable account system—previously limited to 18 countries—to all countries outside the dollar and sterling areas means the removal of restrictions on the use of transferable account sterling for capital transactions. This will enable all countries in the group to use sterling in financing trade and other transactions with any other member of the group. It will also greatly simplify exchange formalities for sterling area traders. The reopening of the London gold market will encourage those who have hitherto bought and sold gold in terms of the dollar to transact their business in sterling. Sales of metal in the London market will be unimpeded, but there will be certain restrictions on purchases, because it is considered inadvisable at present to allow the market to afford an additional element of convertibility for sterling.

• • • •

The price of gold in London is now determined by supply and demand, but the market will operate under the general supervision of the Bank of England. Anyone will be permitted to sell gold there, but purchases will be restricted to: (1) Those with sterling on dollar accounts; (3) residents of the sterling area with special licence from the Bank of England to buy to the same limited extent as they had bought hitherto for trade and manufacturing purposes; (3) those who have "registered sterling." The last mentioned is a new kind of sterling account which can only be acquired against U.S. or Canadian dollars or against gold by someone who is resident outside the sterling and dollar areas—for example, a Frenchman, a Japanese, etc.

• • • •

The reopening of the London gold market is of no consequence to the bullion markets in India, as no gold is allowed to be imported. Yet, the value of gold in Bombay lost more than a rupee on receipt of this news, though later there was a substantial recovery, the closing rate for gold over the week showing a net gain of Re. 1-3 per tola. The initial setback was due to expectations that India, too, might follow suit. In a letter to us, a leading bullion dealer—Mr. Shantilal Sonawala—for instance, suggests that the Reserve Bank should sell gold in India to non-residents of the sterling area against payment in dollars to be resold by them in India. The Reserve Bank can replenish its stocks of gold by buying it from foreign countries with the dollars obtained from the non-residents. The latter, in his opinion, will be tempted to enter into such transactions, because in India, the price of gold is at a premium of 12 to 13 dollars per fine ounce over the world price. Mr. Sonawala says that the adoption of his suggestion will provide quite a few benefits to India. First, smuggling of gold will practically die down. Secondly, the Government can get some revenue by way of import duty on gold, as well as by income-tax on the profits made by the non-resident dealers on their transactions in India. Thirdly, as these non-resident dealers can remit the rupee proceeds arising from the sale of gold in India only in the form of goods, India's export trade will receive a stimulus. And, finally, the Government can save the heavy expenditure it is now incurring on customs vigilance. The suggestion seems attractive, but it is doubtful whether it will appeal to our conservative-minded Finance Minister, who is against encouraging speculation and investment in unproductive wealth.

• • • •

For some days past, there have been rumours in the city that a change was imminent in the ownership of Messrs. Volkart Brothers, a Swiss firm having extensive import-export business in India. Our enquiries revealed that these rumours were not without some foundation. We, however, refrained from referring to them in these columns, as we thought it would be premature to do so. But now that reports to this effect have appeared in a section of the daily Press, it has become necessary to cover the subject. According to our information, it is incorrect to say that the House of Tatas are buying up Volkart Brothers or part of Volkart Brothers' business in India. We, however, understand that negotiations and discussions are now proceeding between the Tata Industries Ltd. and Volkart Brothers to form, jointly, a new public limited company which will take over Volkart Brothers' present import and engineering activities, with a view to expansion as well as to the possibility of increased manufacture of machinery, equipment, etc., in this country. We are told that no details have yet been settled and that application to Government is yet to be made.

• • • •

Market circles are wondering as to why Volkart Brothers, who have been in this country for over a century—the firm was established in 1851—should be anxious to repatriate even a part of their investment in India by forming a public limited company and allocating a part of the capital of that company to Tatas. No reliable answer to this poser is yet available, but the reasons can be easily conjectured. In the first place, taxation of private limited companies in India is very high. Secondly, the Government of India's policy seems to be not in favour of allowing purely trading activities to be in the hands of foreigners. At any rate, it has clearly stated that it will not allow foreign capital to come in merely for doing export-import business. Thirdly, the Government of India may refuse permission to a foreign partnership firm to convert itself into a public limited company, unless at least a part of the capital is allotted to Indian investors. These considerations may have prompted Volkart Brothers to take the step mentioned above.

• • • •

The next question which is the subject of talk in city circles is: Why are the Tatas interested in Volkart Brothers' business which is mostly of a trading nature? It obviously means that Tatas have savings to spare and they are looking out for fresh fields in which these savings could be invested. This is not surprising, for, in recent years, they have scarcely started any big industrial ventures, while their income from the companies managed by them must have been steadily accumulating. This is also evident from their readiness to undertake manufacture of automobiles—heavy trucks to begin with, in co-operation with the world-renowned German motor car manufacturers, namely, Mercedes. It would appear that the deal with this German concern has almost been finalised. There are also reports that Tatas propose to take over the activities of the General Motors India Ltd. as a going concern. These reports have gained some credence because of the presence of Mr. J. D. Choksey of the House of Tatas in the U.S., to which country he has proceeded after negotiating the deal with the German automobile manufacturers. Be that as it may, the investible resources of Tatas must have expanded following the sale of Messrs. Kettlewell Bullen & Co., Ltd., Calcutta (to Bangur Bros.), in which they had a substantial share. The primary object of Tatas in taking an interest in Volkart Brothers seems to be to manufacture, in course of time, some of the machinery and equipment such as the famous "Carrier" air-conditioning plant, for which this firm are the sole selling agents in India. It is not yet known as to what will be the share of Tatas in the proposed public limited company that will, as already mentioned, take over Volkart Brothers' business. According to knowledgeable circles, it may be anything between 50 and 60 per cent.

• • • •

Ever since a private party suggested to the Government of India that it would be advantageous to set up a sugar refinery in Bombay to refine imported raw sugar, the proposal has been the cause of some controversy in sugar circles. Those who favour the proposal see in it a new trend in sugar manufacture, the prospect of reaching a higher stage in this industry. They also welcome it, because it will provide some employment to technical personnel and even to unskilled workers and an opportunity for learning a new process in sugar-making. Since Indian sugar production has fallen short of consumption and India is compelled to import sugar from abroad and since this state of affairs is expected to continue for some years to come, they see no reason why India should not import only raw sugar and refine it here, so that some portion of foreign exchange could be saved thereby.

• • • •

If, on the other hand, India becomes self-sufficient in sugar, the refinery could be utilised to make a valuable contribution to India's foreign exchange earnings, since the refined sugar could be sold abroad at rates higher than the rates at which raw sugar is bought from the producers of this raw material. It is pointed out, in this connection, that the geographical position of this country gives it a special advantage, in that India can export refined sugar to Middle East and other neighbouring countries more advantageously than other producers of refined sugar, the U.K., for instance. This assumes, of course, that the sugar refined in India should not be allowed to flood the Indian markets, since that would affect the fortunes of the domestic sugar factories which are equipped well enough to take care of the domestic market. The enthusiasts of the refinery idea agree that the refinery, if it is set up, should be meant only for refining sugar for export when India becomes completely self-sufficient in this commodity. They empnasise that it will be a valuable export industry. Such are the arguments by which the refinery idea is supported.

• • • •

There is, however, another section which is opposed to this proposal. This section's views are the same as what are contained in a communication addressed by the Deccan Sugar Factories Association to the Government of India, last week. The Association points out that the existing installed capacity of the sugar factories is not at present fully utilised due to insufficient supplies of cane. But efforts are being made to increase cane production. And, when cane supplies improve, it would also be possible to increase sugar production. The Association says: "There is, therefore, no justification for permitting the installation of a raw sugar refinery and, if such refinery is at all permitted, it will be detrimental to the interests of the indigenous sugar industry and there would be little scope or incentive to the sugar factories to produce sugar to their fullest capacity."

• • • •

The Association contends that, if raw sugar must be refined in India at all, there is no need for setting up a refinery for that purpose, since the factories themselves could undertake this work. All that will then be needed is to make certain adjustments in the present equipment in their factories and to install some new equipment. This, according to the Association, could be done, if reasonable facilities are given to the factories by the Government. Two advantages are claimed for this proposal. In the first place, the Government could import raw sugar when it is needed by the country and stop such imports, when they are not needed. But, if a refinery were established, it would hardly be open to the Government to regulate imports, since any abrupt stoppage of imports would throw the refinery workers out of their jobs and the capital invested in the industry would earn no return. Secondly, if the factories are permitted to refine imported sugar, it will enable them to employ many of their workers who remain idle in the off season. Finally, the Association says: "If the country could get over the grave crisis of food shortage with such prominent success, it is not understood why the Government should adopt a pessimistic attitude in the matter of sugar shortage, and think of permitting the installation of a raw sugar refinery, as if the Government held the view that the country could never attain self-sufficiency in this commodity and that raw sugar would have to be imported for years to come." These, then, are the arguments by which the refinery idea is opposed by a section of sugar opinion. It will be interesting to watch the Government's decision on this matter.

• • • •

The latest reports about shipping freights make encouraging reading. There has been an all-round increase in rates for all destinations, following keen demand for available tonnage. Rates for coal, grain, sugar and ore have all improved, though there has been a fall in those for timber and esparto. The volume of world trade is steadily expanding and more cargo is available. No longer is international trade confined only to a few selected routes. It is a multi-way traffic now, following the revival of commercial intercourse with the Communist countries. Thanks to a perceptible improvement in the balance of payments position of Australia, of India and a number of other Asian countries and of Europe, there has been a perceptible relaxation in import restrictions, resulting in an increase in the variety of goods flowing into the world trade. Ships of all nations are, therefore, well engaged, though it must be stated that available cargoes are still not in excess of the liners' handling capacity. Apart from these reasons, the rates for tramp shipping have gone up, because, owing to an increase in the number of dock labour disputes in many parts of the world, there has been a slow-down in the turnround of ships belonging to the liner companies, thereby forcing the latter to use an increasing amount of tramp tonnage.

• • • •

Nearer home, the prospects for domestic shipping have improved somewhat, following the Government of India's decision to buy 900,000 tons Burmese rice and to allow larger imports of a variety of other goods in order to create a definite import surplus as a set-off against the large volume of deficit financing now contemplated. The volume of exports also is expected to be well maintained at a somewhat higher level than in the previous year. The expected competition in coastal trade is unlikely to materialise, as continuous efforts are being made not to disrupt the Indian Coastal Conference. It will be recalled that, some seven months ago, the Scindias had given notice to other members of the Conference to withdraw from it, as they complained of unfair competition through heavy rebating. Although the notice period expired on the 1st inst., the Scindias have not yet left the Conference, as they were requested by other members to give a month more to consider the issue in all its details and arrive at an amicable settlement. But, since not much progress has been made in this direction, the Scindias have agreed to wait for another month. This means that they would not implement their decision to quit the Conference before 1st May, 1954. Meanwhile, talks are going on among the concerned parties. A sub-committee of the Conference has already been constituted to resolve the differences between the Scindias and some of the other members and hit upon a method of allocating the available coastal traffic among the fleets of different members, with a view to avoiding the malpractices complained of by the Scindias.

• • • •

It would appear that the Scindias have proposed a system of quotas for member-lines, based on the tonnage of each member and the average

COLOURLESS TRADING IN EQUITIES

TATA STEELS, HOWEVER, FIRM

(From Our Own Correspondents)

BOMBAY, 25*th March*

BARRING renewed strength displayed by steel shares, particularly Tata Steels, trading in equities on the Bombay Stock Exchange was, as a whole colourless during the week under review. As the end of trading in Tata Deferreds drew nearer—tomorrow being the last day for transactions in this scrip—speculative interests freely indulged in lifting both Deferred and Ordinary shares to fresh high levels. Besides, there was also some liveliness in Indian Irons on renewed expectations of a substantial increase in retention prices of steel. The activity in the steel shares had, however, no effect on trading in other sections. The textile section, for instance, after last week's spirited advances engendered by expectation of good working results, received a check this week by a lack of follow-up support either from speculative interests or from investors. The approaching fortnightly settlement tomorrow was not congenial to enlarged trading on fear of having to pay heavy *badli* rates. Miscellaneous industrials, therefore, failed to arouse any enthusiasm and leading counters in this section could not but disclose minor losses under selling pressure. The undertone of the market was, however, quietly steady.

In the steel section, Tata Deferreds opened on a quiet note at Rs. 2,188-12, but soon crossed the Rs. 2,200-mark on fears about backwardation charges being enforced on the scrips at the forthcoming settlement. After a dip to Rs. 2,197-8 on Monday on heavy profit-taking, they once again resumed their upward trend occasioned by speculative support and touched a high of Rs. 2,237-8 today before winding-up at Rs. 2,232-8. Tata Ordinaries were favoured and were marked up from Rs. 367-4 to Rs. 374, but closed at Rs. 372-12. After advancing from Rs. 29-84 to Rs. 30-2, Indian Irons shaded off to Rs. 29-11 at the close.

Textile shares failed to evoke interest and were virtually neglected. Selective scrips, however, managed to finish with modest gains. Bombay Dyeings made an initial advance from Rs. 419-6 to Rs. 421-4, but finished lower at Rs. 413-12. Kohinoors were unimpressive, having been marked down from Rs. 307 to Rs. 304-4. Centurys which were very conspicuous last week were done, Re. 1-8 lower, at Rs. 325-8. Central Indias had a loss of Rs. 2 at Rs. 178. Finlays reacted from Rs. 265 to Rs. 261. Gokaks dropped Re. 1-8 to Rs. 264 and Standards fell back from Rs. 323-12 to Rs. 322-8. Svadeshis shed as much as Rs. 4 to Rs. 295-8 and Swans Rs. 3-12 to Rs. 351-4. However, there were a few exceptions, and among these, Sholapurs were prominent with a rise of Rs. 35 to Rs. 1,840. Edward Textiles picked up Rs. 5 to Rs. 245, Indore Malwas Rs. 4-6 to Rs. 108-2, Morarjees Rs. 2-8 to Rs. 212-8, Podars Re. 1-4 to Rs. 141-4, and Simplex As. 12 to Rs. 151-12.

Bank shares were steady, but business was rather restricted. Central Banks were done at Rs. 55-8 *ex-div.*, dividend Re. 1-8), as against Rs. 57-12 *cum-div.* last week, and their 'A' shares at Rs. 59-8 *ex-div.*, as against Rs. 60 *cum-div.* Imperials Fully Paids had business, Rs. 10 higher, at Rs. 1,782-8 and Contributories were Rs. 6-4 better, at Rs. 431-4. Indias were a shade quiet at Rs. 153-12. Barodas were unchanged at Rs. 110. United Commercials lost As. 8 to Rs. 41-8.

Activity in insurance shares was highlighted by the demand for Orientals which rallied from Rs. 7,500 to Rs. 7,760. New Indias advanced by Rs. 3 to Rs. 48-8. All-India Generals were a fraction better at Rs. 3-2 and Indian Mercantiles at Rs. 41. Industrial Prudentials were marked down by Re. 1-10 to Rs. 36-2 and Jupiters by As. 14 to Rs. 7.

Among electricity shares, Tata Hydro group attracted good support and made headway. Other shares were in the background with small losses. Andhra Valleys improved by Rs. 6-4 to Rs. 1,307-8 and Tata Powers by Rs. 10 to Rs. 1,407-8. Tata Hydros were well held at Rs. 140. Ahmedabad Electrics showed no change at Rs. 114-11, while their new shares were a shade better at Rs. 112-8. Bombay Suburbans shaded off by As. 10 to Rs. 120 and Surat Electrics by a similar extent to Rs. 126-4.

Miscellaneous shares followed the general declining trend of the market. A.C.C. moved narrowly and finished at Rs. 154-12, disclosing no change over the week. Digvijays were a fraction better at Rs. 115. Bombay Burmahs, after last week's smart rise, failed to consolidate the gain and receded by Rs. 4-12 to Rs. 414-6. Belapurs were a dull feature at Rs. 257-8, as also Phaltans at Rs. 94-8. Scindias were well fancied at one time and moved up from Rs. 17-12½ to Rs. 18, but drifted lower to Rs. 17-8½. Premier Constructions were taken down by Re. 1-12 to Rs. 114. B.I.Cs. were steady at Rs. 9-2½, while B.B. Petrols shed As. 2 to Rs. 3-1½. Indian Coppers were steady at Rs. 3-1½. National Rayons were apathetic, despite the relief in excise duties on rayon fabrics, and were a fraction lower at Rs. 156-4. Shivrajpurs held ground at Rs. 73. Tata Chemicals advanced from Rs. 13-9½ to Rs. 14-2, but eventually closed at Rs. 13-15½. Tata Oils were a fraction lower at Rs. 37. Walchandnagars drifted downwards by Re. 1-4 to Rs. 168-12. Wimcos lost Rs. 4-6 to Rs. 205. Hindustan Motors were steady around Rs 7-2, while Tata Locomotives picked up Rs. 2 to Rs. 106.

Calcutta Stock Exchange

CALCUTTA, 24*th March*

Since our last report, the Calcutta Stock Exchange remained closed for three days on account of *Holi* and reopened on Monday. Since then a steadier trend has been in evidence, with moderate attention being shown to speculative counters and with an increased volume of transactions. The chief reason behind this improvement was the low levels at which favourite counters were offered by weak holders. The Finance Minister's gesture in giving some relief from the excise duties on footwear, soap and art silk fabrics is noted, and market circles have interpreted this as the willingness of the Finance Minister to consider the genuine grievances of industry. Greater attention for speculative Indian Irons, at improving rates, followed renewed expectations of an imminent announcement, from New Delhi, granting higher retention prices. These rumours have been repeated during recent months, and as such it would have been a surprise, if another repetition was taken notice of by the market. However, this was not so, as this matter has been kept pending for an unduly long time in New Delhi and a decision is long overdue.

Although the jute industry is facing some uncertainties regarding (i) the extent of demand for hessian from Argentina, and for sackings from Australia and (ii) the prices at which the U.S. would buy current hessians, if there were to be a recession in that country, jute shares were active. For a fall in raw material prices is foreseen, and the impending change of Government in East Bengal may well mean that Indian mills may be able to get as much jute from East Bengal as they want at prices prevailing there and not at prices predetermined at Karachi.

In trading, speculative Howrahs were pushed to Rs. 25-7 from Rs. 24-12, and at Rs. 247 Deltas gained by eight points. Barnagores advanced to Rs. 149 from Rs. 148, Indias to Rs. 131-8 from Rs. 129, Nationals to Rs. 24-7 from Rs. 23-14, and Orients to Rs. 171 from Rs. 164. On the other hand, Anglo-Indias were brought down to Rs. 200 from Rs. 213, and Reliances to Rs. 14-1 from Rs. 14-4. Belvederes realised Rs. 207, as against Rs. 200 previously and Lansdownes Rs. 152, as against Rs. 150.

Fractional advances were recorded in certain counters in the coal section, while others were maintained at around previous levels. Thus Equitables, at Rs.-34-2, were better by As. 2. Bengals were talked around Rs. 515, as against Rs. 514 previously. Central Indias were accorded moderate support and at Rs. 6-6 added As. 4. East Indians were unchanged at Rs. 26-4, but Pench Valley declined to Rs. 24-8 from Rs. 25-8 and Raneegunges to Rs. 10-4 from Rs. 10-8. Bharat Collieries were traded at Rs. 6-8.

The centre of attraction in the engineering section was speculative Indian Irons, which were, as stated, under the influence of encouraging advices from Bombay. From Rs. 29-4 the rate advanced impressively to Rs. 30-3 on Monday and in subsequent trading the rate was well maintained, although today it was fractionally lower at Rs. 29-15. Indian Standard Wagons continued to be bought with renewed interest and gained further to Rs. 63-8 from Rs. 63-8. From Rs. 10-9 Texmacos were taken up to Rs. 11-2 and Burn & Cos. at Rs. 176 added six points. Another feature was Braithwaites which were raised to Rs. 19-10 from Rs. 14-7. Jessops were supported steadily at Rs. 27-8.

In the paper mills section, Titaghurs were pushed to Rs. 39-8 from Rs. 38, as the news of the calling off of the six-month old strike was received by the market with enthusiasm. Shree Gopals were picked up at Rs. 21-12, as against Rs. 20-14 previously. Bengals were, however, lower at Rs. 59.

Among the miscellaneous counters, Dunlop Rubbers were shown moderate interest, the rate gaining to Rs. 33-9 from Rs. 32-14. Another feature was the advance in Dalmia (Bnarat) Cements to Rs. 9-12 from the previous rate of Rs. 7-10. Indian Cables were steady at Rs. 20-6 as were Rontas Industries at Rs. 14-9. India Steamships changed hands at the higher rate of Rs. 8-11. F. & C. Osiers had buyers at Rs. 12-13 and Metal Boxes, at Rs. 16-11.

Teas met with good support with Hantapparas being among counters in the forefront. At Rs. 209, the gain amounted to Rs. 5. A further rise in Patrakolas to Rs. 184 from Rs. 180 was recorded and New Dooars strengthened to Rs. 425 from Rs. 422-8. Gungarams hardened to Rs. 245 from Rs. 240 and Tezpores were steady at Rs. 20-12.

* * * * *

Madras Stock Exchange

MADRAS, 23*rd March*

Restricted volume of business and generally narrow movement in prices characterised trading on the Madras Stock Exchange during the week under review. Despite extension of the licensing period for cotton piecegoods exports up to the end of September next, textile scrips failed to evoke much interest. In the planting section, tea shares were generally easy, while rubber shares were inactive, but coffee shares encountered good buying support. Investment buying was visible in sugar scrips. Cement shares were quite active even at higher rates. The undertone remained steady.

Trading in the textile section was of a mixed nature, buying enquiry being visible in certain selected scrips, while certain others suffered losses on selling pressure. Lakshmis were keenly sought after and were taken up by Rs. 6 to Rs. 114. Lakshmi As, Metturs and Dhanalakshmis rose by Rs. 3 each to Rs. 57, Rs. 232 and Rs. 225, *cum-div.*, respectively Coimbatore Cottons rallied Rs. 2 to Rs. 222 *cum-div.* Virudunagars gained Rs. 1-8 to Rs. 15. Janardanas rose by a rupee to Rs. 76. On profit-taking, Bangalore Woollens, however, slumped by Rs. 20 to Rs. 415 *cum-div.* Vasantas also suffered a severe break from Rs. 196 to Rs. 180. Buckinghams lost Rs. 2-8 to Rs. 145 *cum-div.* Rs. 43-8. Camoodias were easy at Rs. 13, as against Rs. 13-13.

Among tea shares, Kalasas dropped As. 14 to Rs. 12-2. Devasholas shed As. 6 to Rs. 20-10. Non-such Teas declined by As. 4 to Rs. 33. Highland Produce, Nilgiri Teas, Twyfords and Parksides were down by As. 2 each to Rs. 12-6, Rs. 12-14, Rs. 15-2 and Rs. 16-2, respectively. Blue Mountains were done at Rs. 2-10 *ex-rights*, as against Rs. 3-12 *cum-rights*.

Quotations of rubber shares moved within a very narrow range. Anandams and Tamaraipally's advanced by As. 4 each to Rs. 9-10 and Rs. 17, respectively. Midlands gained As. 3 to Rs. 12-14, Cochin Malabars As. 2-6 to Rs. 6-12 and Vaikundams As. 2 to Rs. 16-14. Be Bes were higher by an anna at Rs. 2-13. Shevaroys were a shade better at Rs. 1-7-6. Travancore Rubbers were steady at Rs. 15-4 and Teekoys at Rs. 7.

Coffee shares evoked good buying enquiries and recorded improvement in values. Coffee Lands put up a bright show, the quotation advancing by As. 11 to Rs. 9-4. Consolidated Coffees picked up As. 8 to Rs. 16-10. Puthutotams rose by an anna to Rs. 3-4. Mysore Coffees were better by half an anna at As. 13-6. Rajendras and Sevamalais were fully steady at Rs. 8 and Rs. 23-4 *cum-div.*, respectively.

The values of sugar scrips forged ahead under the support of investment buying. K.C.P. Deferreds Rs. 5 to Rs. 65. India Sugar Rs. 5 Paid-ups moved up by Rs. 3-8 to Rs. 16 and Rs. 10 Paid-ups hardened by As. 8 to Rs. 26-8 *cum-div.* Travancore Sugars gathered As. 2 to Rs. 4-8. Mysore Sugars, however, proved an exception and were neglected at Rs. 44-10, as against Rs. 44-12.

In the miscellaneous section, cement shares tended to look up. Dalmia Cement Fully-paids firmed up by Re. 1-10 to Rs. 9-4, Deferreds by Re. 1 to Re. 1-8 and Rs. 2-8 Paid-ups by As. 5 to Rs. 2. India Cements were transacted As. 2 higher at Rs. 18. Andhra Cement Bs put on an anna to Rs. 11-1, while As were maintained at Rs. 111. Bangalore Transports were sought at Rs. 12-2, as against Rs. 11-8. Spencers and Stanes Motors were raised by As. 4 each to Rs. 16-8 and Rs. 12-4, respectively. Binnys were done at Rs. 120 *ex-div.*, as against Rs. 124 *cum-div.* Indian Aluminiums, on the other hand, were subjected to selling pressure and receded by Rs. 7 to Rs. 125. Rallis also fell by As. 8 to Rs. 57 and Bruntons by As. 6 to Rs. 3-6. Mysore Chemicals and Mettur Chemicals were lower at Rs. 9-10 and Rs. 6-3-6, as against Rs. 9-12 and Rs. 6-3, respectively.

NEWS IN BRIEF

THE quantity of smuggled silver seized in 1953 was nearly 163,450 tolas, as against 297,950 tolas in 1952.

The Government of Hyderabad will increase, with effect from 1st April next, the cess on sugarcane crushed by sugar mills to Rs. 4 per ton, as against the present levy of Rs. 2 per ton.

The Government of India has sanctioned a sum of Rs. 5 lakhs out of the Cotton Textiles Fund for the promotion of textile exports, subject to the Export Promotion Council being registered as a society.

An operational agreement providing for U.S. economic aid to the project for training Indian personnel in the operation and maintenance of heavy earthmoving and other construction equipment used in the multipurpose river valley schemes in India was signed between the Governments of India and the U.S. in New Delhi on the 20th inst.

The Government of India has under consideration proposal to undertake manufacture of engines and boilers for ships in the Hindustan Shipyard, Visakhapatnam. The proposal is to be discussed at an inter-Ministerial meeting to be convened by the Planning Commission. A note on the subject has already been circulated to the Ministries concerned.

The earths obtained at Srirangpur and Gingurti in the Deccan have been tested at the Central Laboratories for Scientific and Industrial Research, Hyderabad. The tests have revealed that the earths can be activated and used for refining vegetable oils. Active earths, generally known as Fuller's earth, are now entirely imported from outside at a cost of Rs. 800 to Rs. 1,000 per ton.

The Mysore Government has decided to request the Union Government to treat its holdings in the share capitals of the Hindustan Aircraft Factory and the Indian Telephone Industries as preferential shares carrying dividend at 5 per cent. payable annually. The State Government's share capital in the Aircraft Factory and the Telephone Industries is Rs. 30,08,300 and Rs. 31,25,000, respectively.

The Government of India has announced that the Tea Act, 1953, will come into force from 1st April, 1954. The Tea Board consisting of 35 members, set up under the Act, will function from the same date. The first meeting of the Board will be held in Calcutta on 3rd April, 1954, when the Vice-Chairman of the Board, and the members of the Executive Committee and Licensing Committees for North and South India will be elected.

The Government of India has authorised the district organisers, as well as lady organisers, in the National Savings Organisation to receive from investors, with effect from 1st April, 1954, money for the purchase of Post Office National Savings Certificates and Ten-year Treasury Savings Deposit Certificates. This facility will enable the organisers to canvass business for small savings on the lines of the authorised agents of the National Savings Commissioner.

The Travancore-Cochin Budget for 1954-55, presented to the State Assembly, on the 23rd inst., by Mr. Nataraja Pillai, State's Finance Minister, discloses a revenue deficit of Rs. 1.32 crores. Revenue for the year is estimated at Rs. 17.28 crores and expenditure on revenue account at Rs. 18.60 crores. While the revenue records an increase of Rs. 24.65 lakhs over the revised estimate for the current year, revenue expenditure exceeds the revised estimates by Rs. 2.45 crores. There are no new taxation proposals.

At a Conference of the Chief Minister, the Industries Minister and officials of the Madhya Pradesh Government, with Mr. F. C. Bhadwar, Chairman of the Railway Board, mining experts and geologists of the Government of India, held at Nagpur recently, it was decided that Bilhai was the ideal site for the next steel plant. The Government of India experts were satisfied that no further survey of the area was necessary. The experts had earlier studied the raw material position and other relevant factors, including water supply. They will shortly submit their report to the Government of India.

The Standard-Vacuum Oil Company, Ltd., is expanding its training programme by arranging for visits of specialists from overseas to conduct training courses in India on various phases of the oil industry. These courses supplement the training programme under which promising Indian executives are sent overseas for advanced training. In recent years, 25 Indians have been sent to the United States for this purpose. Mr. Geoffrey C. Hazard, the Company's Chief Technical Adviser on Lubrication, has already arrived in India to give advanced training to technical engineers and salesmen.

A Bill seeking to amend the Bombay Drugs (Control) Act, 1952, has been published in the Bombay Government *Gazette* dated the 19th inst. The object of the Bill is to regulate the sale, possession and use of such preparations as tinctures and spirits. Accordingly, there will be only two categories of persons selling drugs, namely, wholesalers and retailers. Medical practitioners will have to purchase their requirements of drugs from wholesalers or retailers. Similarly, retailers will have to purchase their requirements of drugs from wholesalers only. It is also proposed to permit the sale of drugs under licence only and to fix maximum limits for possession and sale of drugs by wholesalers and retailers.

The Governments of India and Rumania have signed a trade agreement which provides full scope for strengthening trade relations between the two countries on the principal of equality and mutual advantage. The agreement, which came into operation on the 23rd inst., will be valid till the last day of this year. If, however, neither party expresses its intention to terminate the agreement, it will remain in force for another year. Among the goods that are available for export from India to Rumania are jute manufactures, tea, coffee, spices, wool, hides and skins, textiles, handicrafts, and Indian films (exposed). Among the goods available for import from Rumania are foodgrains (wheat and rye), petroleum products, timber, chemicals, dyestuffs, paper, Rumanian films (exposed), industrial plants and equipment, etc.

From Abroad

Vast resources of gold are reported to have been located along the valley of the Koryma River in East Siberia, Russia.

The U.S. has agreed to buy 18,000 to 20,000 tons of Indonesian rubber within the next twelve months. The price of this rubber will be based on New York market averages.

The number of persons unemployed in the U.S. was 3.67 million in February, 1954, as against 1.79 million in the corresponding month last year and 4.68 million in February, 1950.

The Netherlands Bank has issued a new foreign exchange measure, under which non-residents of both foreign and Dutch nationality in the Netherlands will be accorded the same treatment.

The Netherlands leads all other European countries in attracting U.S. investments. Since the end of the Second World War, about $40 million of U.S. capital have been invested in this country.

Following continued drift in finances, the Government of Japan is planning to curtail imports from the open account currency area. The trade in this area is said to absorb more dollar credits than does direct settlement in the dollar account area.

A 50-million Swiss franc World Bank loan, which opened for public subscription in Switzerland on the 23rd inst., will close on the 29th inst. The loan is issued at par. It is redeemable after 18 years and carries interest at 3½ per cent. per annum.

The four large basins discovered in the Kalewa coalfields of Burma are said to contain rich deposits of coal sufficient to meet the Country's need for several years. In addition to these, several other basins have also been discovered and samples of the coal have been sent to Germany for test.

Among the large overseas insurance contracts arranged recently by British insurance companies is the new $16 million Granville Bridge in Vancouver. Equipment on the Sir Adam Beck Niagara Generating Station (No. 2 Project) has also been insured with British offices. Total cost of the scheme is nearly £80 million, but a considerable part of this is in respect of tunnelling and open cuts. In South Africa, British insurance offices have covered the plant and contract for a £2 million project on the Wemmershoek Dam Scheme. The contract forms the first stage of an overall £6 million scheme to supply Cape Town with water.

An air survey of over 1,000 square miles of territory in Ceylon has just been started by a London firm under the Technical Co-operation Scheme of the Colombo Plan. Under the Scheme, Ceylon is also to receive the assistance of a British expert in its grow-more-food drive. The aerial survey covers territory containing Ceylon's most valuable timber resources, agricultural lands for which flood-control projects are planned, and tea estates. In response to a Ceylonese Government request for an expert in tractor operation, servicing and maintenance, the British Government is making available the services of Mr. John Dickins.

Imperial Chemical Industries has plans for large-scale production of a range of rubber-like polymers based on butadiene. Using butadiene produced in I.C.I.'s oil cracker at Wilton, it is intended to manufacture copolymers with the help of a variety of second components, including acrylonitrile and styrene. These copolymers will cover a range from oil-resisting substances of the Perbunan type to hard, reinforcing resins. The resins, it is said, will be particularly useful for use in shoe-soling compositions, besides being used in the form of latices for the production of emulsion paints. Pilot-plant quantities of the new plastics are expected to be available later this year. The full-scale plant of 10,000 ton capacity per year that is proposed to be set up at Wilton will commence operation only after 1956.

PERSONAL

MR. Ivor Bull, a leading coffee planter, Coorg, and Managing Director of the Consolidated Coffee Estates (1943) Ltd., sailed for the U.K. this week on retirement from India.

Mr. H. A. Twist, O.B.E., has been appointed Deputy High Commissioner for the U.K. in Bombay, in succession to Mr. G. Kimber.

Mr. K. C. Basak, I.C.S., has been appointed Chairman of the Tea Board set up under the Tea Act, 1953, which will come into force from 1st April, 1954

Mr. G. J. Gardner has been re-elected Chairman of the Indian Jute Mills' Association for the year 1954. Mr. J. G. Walton and Mr. D. P. Goenka have been elected Deputy Chairman and Vice-Chairman, respectively, of the Association.

Mr. J. R. D. Tata, Chairman, Messrs. Tata Sons Ltd., Bombay, has been elected President of the Indian Institute of Science, Bangalore, for the unexpired period of the quinquennium 1951-55, following the resignation of Dr. John Matthai.

Mr. P. M. Lad, I.C.S., Secretary, Legal Department, Government of Bombay, has been appointed Secretary, Central Ministry of Information and Broadcasting, *vice* Mr. P. C. Chaudhri who has taken over charge as Secretary to the States Reorganisation Commission.

Mr. F. H. Hayne, of the Midland Bank, will be arriving in India shortly to take over charge as the Principal of the College for training supervisory staff for commercial banks which the Reserve Bank has established in Bombay. The services of Mr. Hayne are being provided by the British Government under the Technical Co-operative Scheme of the Colombo Plan.

Mr. R. R. Saxena, High Commissioner for India in Canada, will be the leader of the Indian delegation to the seventeenth session of the U.N. Economic and Social Council which is due to commence at New York on the 30th inst. The other members of the delegation are Mr. S. N. Mishra, M.P., Mr. G. R. Kamat, I.C.S., Minister-Counsellor, Indian Embassy in the U.S., Mr. A. S. Lall, I.C.S., Consul-General for India at New York, and Mr. P. Narayan Prasad, Executive Director for India on the I.M.F.

Dr. Malcolm Eugene Campbell, Dean of the Textile School, North Carolina State College, Dr. Burt Johnson, Cotton Technologist of the National Cotton Council of America, and Dr. Thomas E. Kerr, Col. William Martin and Mr. R. J. Cheatham of the U.S. Department of Agriculture, arrived in Bombay on Sunday last. The visit to these cotton technologists, which has been sponsored by the National Cotton Council of America and the U.S. Department of Agriculture, is designed to bring about an exchange of ideas on the latest cotton growing and processing techniques in the U.S. with Indian textile experts. Besides holding discussions and exchanging views with prominent private industrialists and Central and State textile officials, the technologists will also visit some of the textile mills in the country.

"COMMERCE" 1929

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 30*th March*

The Wagon Pool

One of the multitude of ills with which the "sick trade of India" is afflicted is the periodical paucity of wagons for the transport of the "black diamond." The shortage became so acute early this year that a great hue and cry was raised by the coal industry and the Government of India issued a *communique* on the 8th inst. The trouble, we were told, was due to the abnormal imports of wheat, rise and sugar into Calcutta for destinations in the United Provinces during the early months of the year, which resulted in great congestion of traffic on the East Indian Railway. But the position has since sensibly improved and the Government of India has, with the laudable object of allaying public anxiety, issued another *communique*. We are now told that the stocks of wheat, rice and sugar at the docks have been substantially reduced and as the prices of foodstuffs in the United Provinces have fallen, either owing to heavy importations or the improved prospects of the *rabi* harvest, there is no longer the same pressure and rush for imports upcountry and the demand for wagons at the docks has consequently fallen off. The number loaded there daily is only about one half the number loaded at the time when the pressure was most severe. Fewer train-loads of foodstuffs have now to be moved upwards over the congested sections of the Chord and Grand Chord lines between Asansol and Moghal Sarai and the upward movement of coal traffic has not been impeded to the same extent as formerly. From March 8 to March 17 the average daily loadings of coal on the East Indian and Bengal-Nagpur Railways amounted to 3,233 wagons, against 3,123 wagons during the first seven days of the month and 63,065 during the whole month of March, 1928.

TOURIST TRAFFIC

THE need for the development of travel agency business along "sound and healthy" lines was stressed by Mr. N. M. Ayyar, Secretary to the Ministry of Transport, Government of India, in the course of his inaugural address to the Convention of the All-India Travel Agents Association, held last week at New Delhi. He pointed out how, in certain countries, the Governments sought to achieve this development by exercising rigid control over such business, first, by limiting the number of travel agencies so as to avoid the growth of uneconomic competition from mushroom organisations and, secondly, by enforcing rigid standards for the grant of recognition, including the deposit of adequate securities for the due discharge of responsibilities. He pertinently held that, if the need for control were to be obviated, it was essential that the industry should itself endeavour to develop healthy conventions and take all possible steps to see that the interests of tourists were looked after properly. Assuring the travel agents fullest co-operation by the Government of India, he said: "The tourist industry can only be built up by the joint efforts of official and non-official agencies and I am sure that the Government can count on your fullest co-operation in building up such an industry in this country."

The importance of the development of tourist agency in India needs no special emphasis. In the first place, it has immense economic advantages, in that it increases invisible income. Secondly, the encouragement of visitors to India will lead to better understanding of its people, its history and culture. It must, however, be remembered that a travel agent's work has, as pointed out by Mr. Ayyar, assumed a "creative aspect" and the "modern travel agent," as aptly held by him, "has to be an expert." It is to be hoped that the travel agents in India will devote some attention to Mr. Ayyar's suggestion that they should consider the question relating to technical training of personnel who will man this growing industry.

DEFENCE ACCOUNTS

Since Defence absorbs as much as 44 per cent. of the total Central revenue expenditure, it is clear that the accounts relating to this Department should be properly maintained. The mere fact that large amounts are being spent on Defence is no guarantee that security arrangements are perfect, if there is wastage of funds through misdirection of effort and gross negligence. From this point of view, it is deplorable that in 1951-52, the latest year for which Audit Report is available, the Department had to write off losses amounting to Rs. 3.19 crores. In the previous year, too, such losses amounted to Rs. 3.33 crores. In 1951-52, as in the previous year, cash losses formed only a minor part of these losses but the loss resulting from theft, fraud, neglect and other causes aggregated Rs. 3.01 crores. The main causes for these losses are easily enumerated. They are improper accounting and stock-checking procedure, neglect of stores, failure to follow strict tender procedure and absence of that elusive quality, "commercial" sense. If goods had been properly checked, the losses might have been averted in good time. That military stores suffered heavy damage due to grievous neglect is evident from the fact that fire destroyed Rs. 36 lakhs worth of stores and the loss through deterioration and defective storage amounted to Rs. 28 lakhs. Even now, engineering stores, at one centre, valued at several crores of rupees, are "stacked in the open exposed to sun and rain." It is a pity that the authorities should have flouted tender rules in certain cases. In the purchase of tinned milk and milk products, for instance, a firm which had quoted a lower tender was rejected on the ground that it was a small and unreliable firm, although the same firm had been favoured in the previous year as a large and reliable firm!

Two instances, out of many more that might be quoted, will show how absence of commercial sense lands the Government in serious losses. One relates to the Hindustan Aircraft Ltd. which suffered losses to the tune of several lakhs of rupees, because its bills for repairs of aircraft sent to certain airways companies were dishonoured on technical grounds. In each of these cases, the Hindustan Aircraft was compelled to take less than what was due to it. The other relates to a highly diverting incident about purchase of mules. It occurred to someone in the Defence Department that mules were wanted by the Indian Army and that they were available in Iraq. Negotiations were expeditiously completed with an unreliable contractor in Iraq, shipping space reserved for carrying mules from that country to India, and a veterinary doctor despatched to Iraq to examine the animals for their fitness. When the doctor arrived in Iraq, he found no mules whatever and, on enquiry, he found that there was no mule-breeding industry worth the name. This mulish adventure—or misadventure—cost the Government a few thousands of rupees, for it was compelled to pay compensation to the shipping company which had reserved its shipping space for these worthy animals. Nor could action be taken against the defaulting contractor, because legal opinion warned the Government that the contract deed was too faulty to permit the Government to proceed against the contractor.

The point is whether anything is being done to prevent these losses in the future. The Audit Report says: "From an analysis of the financial irregularities brought to light in audit during the year, however, it is observed that, in a number of cases, the irregularities could be attributed to a lack of knowledge of rules and orders and of accounting procedure on the part of individual military officers." It is necessary that military officer's training should include knowledge of at least elementary rules of financial procedure. At the same time, it seems necessary to utter a warning. It would be wrong to saddle a military officer with too high a responsibility for financial procedure. This is best looked after by a different set of civilian officers whose guidance the military officers should be compelled to take in purely financial matters.

KOLAR GOLD MINES

Last week, we referred editorially to the charges that were made by members of the Mysore State Assembly and the Chief Minister of the State, Mr. K. Hanumanthiah, against the Kolar Gold Mining Companies, and held that the threat of nationalisation, which the Chief Minister held out, was greatly to be deplored. The companies have lost no time in rebutting the charges. And the statement which the Management has issued, makes convincing reading. The main charges that were made either explicitly or by implication were: (1) The 1949 Agreement, concluded between the companies and the Government, was not being implemented by the companies in a satisfactory manner. The Government Director, appointed in pursuance of the Agreement, was denied opportunities to acquaint himself with the companies' finances. (2) No satisfactory progress had been made in the Indianisation of the staff, (3) Expenditure had been inflated, so that the companies' contribution to the Government was a mere fraction of what the Government used to get under the Gold Duty Act which was replaced by the 1949 Agreement.

In its statement, the Management has rebutted all these charges. Thus, the Management states that the Chairman of the companies has "always scrupulously insisted" that every member of the Board, especially the Government Director, is provided with all information relating to the companies' business. It would appear that the present Government Director on the Board has himself "been good enough to confirm that he had been given all the information and papers he had asked for." Referring to the charge of inadequate progress in the Indianisation of the staff, the Management points out that the number of Indian covenanted officers has risen from 9 in 1940 to 134 today. These figures, which speak for themselves, bear out the Management's claim that the progress in Indianisation "has been and will be rapidly accelerated." Considering that gold mining is a highly technical industry, the fact that Indianisation has been as rapid as these figures suggest is a tribute at once to the fairmindedness of the Management and to the intellectual calibre of the Indian staff. The Management has further promised that progress in this sphere will be even more rapid "as more and more non-Indians in the existing staff retire on the Pension Scheme sanctioned in 1951."

From the figures of production costs, released by the Management, it is clear that the charge of inflating expenditure is unfounded. The working costs, it is stated, have been reduced from Rs. 73 per ton of ore treated in 1949 to Rs. 67 in 1952. This reduction is the more remarkable, because it has been achieved in the face of a 40 per cent. increase in wages and of over 25 per cent. increase in the cost of explosives and other materials. Production has at the same time been stepped up from 161,000 ounces of gold in 1949 to 243,600 ounces in 1952. If the companies' contribution to the Government has fallen despite all this, it is because the rising cost of labour and materials has coincided with the fall in gold prices. Illustrating the extent of the fall in these prices, the Management states that the price of gold fell from Rs. 306 per ounce in 1949 to Rs. 228 per ounce in 1953. The fall in the companies' contribution to the Government cannot certainly be traced to imperfect implementation of the Agreement. The Management claims, in this connection, that it has "conscientiously implemented every one of its terms both in letter and spirit."

It is, therefore, clear that it is wrong for the Government to harp upon the decline in its revenues. If the Gold Duty Act had been continued, neither the Government would have received revenue nor the mines would have been worked. It would have rendered gold mining an uneconomic proposition. The Agreement, which replaced the Act, has at least kept the mines working, providing employment to thousands of workers. Given sufficient encouragement, the Management could be relied upon to continue and even extend its operations. It would appear from the Management's statement that a new reef has been discovered in the Nundydrug mine, which is capable of being developed into a "large new mine." Here is a golden opportunity for the State Government to stimulate gold mining operations through grant of sufficient incentives to the Management in order to induce the latter to go ahead with its schemes. Threats of nationalisation of the industry are hardly likely to promote the cause of gold mining in the State.

IMPLEMENTATION OF PLANTATION LABOUR ACT

In pursuance of the decisions reached at the meeting of the Industrial Committee on Plantations on 31st January last, the Government of India has now announced that the Plantation Labour Act, 1951, will be implemented with effect from 1st April, 1954. Although the Government notification does not say so, the provisions of the Act, in so far as they apply to welfare, will not be implemented now, but only at a later stage after the draft rules are finalised by the Government in consultation with the industry.

Among the provisions that will immediately come into operation are those under Chapters V and VI which refer to hours of work, weekly holidays, prohibition of employment of young children, annual leave with wages, sickness and maternity benefits, and the provision of drinking water (section 8). Section 19 of the Act prohibits any adult worker from being allowed to work in excess of 54 hours a week. No exemption can be permitted under this section except when a State Government wishes to do so and, even here, the previous approval of the Central Government is necessary. Section 20 of the Act dealing with weekly holidays permits a worker to work on any day of rest which is not a closed holiday, provided that, by so doing, he does not work for more than 10 days consecutively without a holiday intervening. Under section 24, no child, who is below the age of 12, shall be allowed to work in any plantation.

The provisions regarding annual leave with wages are contained in section 30. Every adult worker should be granted one day's leave with pay for every 20 days worked, and every young person, below the age of 18, should be granted one day's leave with pay for every 15 days worked by him. From the point of view of the plantation employer, this may be considered the most important provision of the Act that is made applicable from 1st April. Under section 32, every worker is entitled to sickness benefit, and it is proposed under the draft rules prepared by Government that this shall be at the rate of two-thirds of the daily wage, including dearness allowance. Women workers are to be granted maternity benefit and the draft rules propose a rate of Rs. 5-4 per week for a total period of 12 weeks.

So far as the provision of drinking water is concerned, it is understood that the rules in this regard have not been finalised. Meanwhile, it is proposed that every worker should be supplied with good drinking water in a bottle of 2 pints capacity before he proceeds on his work.

SOIL CONSERVATION

Dr. Punjabrao Deshmukh deplored, in his presidential address to the Central Soil Conservation Board, held on 18th March at New Delhi, that steps towards conservation of soil fertility in India had not made much headway. This, he pointed out, was due to the inordinate delay in constituting the Board. He, however, hoped that there would be no more delay in tackling the problem which was holding up agricultural progress. Soil conservation in its widest sense includes not only control over erosion but also those measures like correction of soil defects, application of manures and fertilisers, crop rotations, irrigation, drainage, etc., which aim at maintaining the productivity of the soil at a high level. In this sense, soil conservation is closely allied to improvement of land use in general.

A significant feature of Mr. Deshmukh's address was his statement that the so-called advance of the Rajasthan desert seemed to be "an exaggerated fear, generated by vague and sometimes unfounded assertions." Disclosing that he had not been able to get any evidence from Rajasthan persons to indicate that the desert was encroaching upon good land, he said:

"In fact, after having been to Rajasthan, we have often been confronted with the question as to where the desert was, because, in the heart of the desert, like Jaisalmer, there are good crops growing and some trees flourishing and also grass striving to grow. It is more the result of overgrazing and lack of attention to what can naturally grow than a matter of the desert walking deliberately with a sort of a slogan *'Chalao Delhi.'*"

He, of course, admitted that his description might not be altogether correct but stated that, if calculations were to be based on sound foundations, steps should be taken to ascertain the facts. This did not mean, he said, that the Government was less anxious to control soil erosion and to seek ways and means of expediting every manner of soil utilisation. While Dr. Deshmukh's anxiety to place the Rajasthan desert problem in its proper perspective is understandable, it is to be hoped that his aforesaid statement will not lead to any complacency among those officials who are charged with the responsibility of arresting the spread of the desert in Rajasthan.

NEW RAILWAY TECHNICAL TRAINING SCHOOL

The technical training school at Perambur, which is an adjunct to the coach building factory at this centre, is designed to impart theoretical and practical training in several aspects of coach building. The establishment of this school, which was formally inaugurated by Mr. O. V. Alagesan, Deputy Minister for Railways and Transport, last week, is a step in the right direction. The Perambur Coach Factory itself is expected to go into production only in 1955. But the school, now set up, will provide a considerable number of technically trained workers and supervisory staff needed by the factory initially. Although designed to accommodate 300 trainees at a time, it is expected to train 600 men annually during the initial four years. It will thereafter switch over to a regular scheme of training 150 students annually, the course extending over a 3½-year period, and give intensive training for these men. Established at a cost of about Rs. 35 lakhs, the school has its own satellite workshops where modern technique is employed at all stages.

The establishment of the School is in line with the general policy of the railways to depend on their own training schools for recruiting and training of the staff required by railway workshops. Almost all the existing workshops have their training institutions for both workmen and supervisors. So far as the Perambur school is concerned, the authorities have taken advantage of the Industrial Training Scheme initiated by the Central Government. Boys who have put in 12 months of practical training under the scheme will undergo a course of training in the school where they will be taught the specialised trades required for the manufacture of the integral coaches.

Mr. Alagesan rightly stressed, in his speech, the need for efficient work. The school, he insisted, was being set up for training men to do such work. The school will thus be a valuable aid to the factory. The message, which Mr. C. Rajagopalachari, Chief Minister, Madras State, sent for the occasion, is worth quoting. He said: "The factory without a school attached to it is useful but barren. With a school attached, the factory becomes a living and procreative organism like every fruit of nature that carries a seed with it for multiplication."

OFF THE RECORD

(By "ROVER")

I THANK Heaven for lifting, in some small measure, the smog off the cotton textile industry. I also welcome the Textile Centenary Celebrations for providing a very fitting occasion for this partial clearing of the air and for the authorities to define their approach to some of the most important problems making the running of the cotton mills a severe headache and the future of the industry an irritating uncertainty. Perhaps, this state of affairs would now continue for ever. This industry, or, for the matter of that any other major industry in the private sector, is bound to have to work under a condition of friction and misunderstanding with the powers-that-be in the future, till each one of them is nationalised or the Government makes a completely sorry mess of its ventures in the industrial field and brings the country's economy to the brink of ruin, by its rigid and unimaginative direction of the private sector, and is so led to abandon its present policy of driving the car from the back seat as some domineering women and nervous men are known to do.

The worst feature of the so-called mixed economy, which, private enterprise, after some futile kicking against it, has now reconciled itself with, is that nobody is ever certain about the proportion of the ingredients going in to make up the mixture. Often the element of control and direction is unilaterally and unexpectedly increased not as prescribed in some generally accepted economic formula, but according to political tempers and exigencies. It is amazing how a Government, which swears by planning, works in a singularly unplanned and temperamental manner, forgetting that only fools will build solid, heavy and tall structures in an area known to be rocked at intervals by earthquake. In some measure, the change in the attitude of certain shrewd promoters of industry from that of leisurely but sound building up of industrial edifices, secure in the knowledge of reaping more fruits with the passing of time, to one of jerry-building and extracting what one can in a hurry and leaving the wreck on the dunghill, has been due to the failure on the part of the Government to know its own mind or to have a preplanned extension or relaxation of controls.

For some time now, the general tendency has been to go easy on controls both in commerce and industry. So far as the textile industry is concerned, practically all controls have been relaxed except with regard to those on production. Even in the case of these, the official policy has been to make liberal exception in individual cases. Mr. T. T. Krishnamachari's emphatic announcement about the possibility of increase in official control and direction in the private sector, while addressing the Punjab-Delhi Chamber of Commerce, and his confirmation of this in Bombay last week while inaugurating these celebrations, must have caused quite a little flutter in industrial circles in the country. There is, however, some solace in the fact that the millowners have been forewarned and they know what the Government's policy is going to be like in this respect. The Industries Minister, however, appeared to be a little confused about the nature of control he wanted to exercise. It is one thing to want to retain power to set right the evils of bad management and quite another to exercise this power for giving a shape to the normal running of industry in the matter of prices, raw materials, production, distribution, expansion, etc. I for one would be the last to want to quarrel with him for pulling up or penalising anti-social industrialists. But I am not so sure if I would welcome officials to strangle management, just when it is awakening to and displaying a new sense of responsibility both to the workers and to the community at large.

It is all very well for Ministers to talk of holding the reins in their hands, as Mr. Krishnamachari did at Bombay. But there are riders and riders and in my time, I have known some inept and easily panicked riders, who were unfit to have anything but a hard-mouthed mule as a mount. Many a sensitive and high-spirited horse has been driven crazy and vicious and ruined for life by bad, cruel and clumsy handling. Who would say with any certainty that, in the past, the reins were not pulled too tight by the officials or Ministers who had somehow managed to get on a horse's back, when it would have been the path of wisdom to give the horse his head. Just as there are good mounts and bad, there are good horsemen and those who deserve nothing better than Shank's mare and, till horsemanship has become a usual accomplishment amongst politicians, one would always be nervous about entrusting a good animal to an indifferent rider, just as much out of consideration for the rider, as for the poor beast and the traffic on the roads. But now that the Government seems determined to ride, all I would suggest is that it is a part of a good rider's training to trust, when beset with uncertainty or hesitancy, to the steed's uncanny sense of direction and danger.

Apart from this unfortunate tendency to make a display of the powers and the authority of the Government, when there is no inclination on the other side to challenge or question it, I welcome Mr. Krishnamachari's candid address at the All-India Textile Conference. Frankness is a desirable quality amongst statesmen in these days, when public speaking has become not an instrument of revealing thoughts but of hiding them in an adroit and evasive manner. Suavity may be a virtue amongst diplomats, but there are occasions when plain speaking helps to clear the atmosphere and to prepare the ground for useful activity. In addition to his usual refreshing frankness, Mr. Krishnamachari, on this occasion, was moved by a sincere desire to transcend the many conflicts which have emerged in this industry during the last two or three years, largely as a result of certain arbitrary official policies. While one may not agree with a good deal of what the Industries Minister said on this occasion, one cannot but help appreciating his effort, first, to explain the Government's reasons for some of these policies, and next, to seek, if possible, a higher synthesis with the help and co-operation of those engaged in these conflicts. In vivid contrast to the form of his address, the spirit underlying it was surprisingly conciliatory and I have little doubt in my mind that the Minister's appeal "to think kindly of handlooms and *khadi*" so that the conflict could be removed will not go in vain.

To my mind the real conflict between the two wings of the textile industry lies in the basic attitude of the Congress Party to the large mechanised industries and their counterpart in the shape of small cottage industries, such as handlooms. It is difficult, almost impossible, to resolve this conflict, so long as the oft-vaunted ideological preference based on the size of the units operates. This would mean that the former were doomed and would be hounded out of existence as the latter grew in strength and that, during the interval, they would be tolerated in an increasingly circumscribed form, but made, at the same time, to sacrifice their substance for building up what is ultimately designed to replace them. What Mr. Krishnamachari revealed was something altogether different. The handloom industry has to be encouraged not because handloom cloth was the only right type of cloth for the country to use, but because it provided work to a large number of people. This would mean that if, as a result of industrial and agricultural expansion, it became gradually possible to find alternative work to keep these large numbers suitably and profitably engaged, the emphasis on handlooms, as such, would go. Similarly, there was clear recognition by the Minister that it was wrong to say that the mills should be closed to help the handloom industry or that the latter could ever hope to supply all the cloth required by the country. With regard to *khadi*, the Minister was even more explicit. It was intended to put a little more money into the hands of people whose income was insufficient and who had no work to last throughout the year. I take this to mean that, when agriculture is so organised, through irrigation and other means, as to keep the farmer fully engaged, at least the official preference for *khadi* will automatically disappear.

The emphasis thus shifts itself from the spiritual and political significance of the size of the industry to the purely economic issue of providing employment to a large number of people. I also take this to imply that the sacrifices demanded or the discrimination exercised against the textile mills is only a temporary phase of the country's economy, to tide it over the crisis of unemployment and not a matter of permanent basic policy. The handlooms will seek for a proper and suitable media of operation, which would be distinct from that of the mills and only till then they would require spoon-feeding and sacrifice on the part of the more firmly established section of the textile industry. It may be difficult to dissuade the present generation of fanatics in the Congress Party away from the uncompromising position they have taken about this question, but there is enough in the Government's programme of industrialisation and scientific research, to reassure hard-headed realists like the readers of *Commerce* that the aim of the Government is not to revert to the bullock-cart economy. If my reading of the implications inherent in Mr. Krishnamachari's speech be not very wide of the mark, I see that there is a good deal of force in his appeal on this important occasion.

If this more fundamental conflict in this industry could somehow be resolved, it should not be difficult to find an accepted solution for the present difference of opinion on the question of modernisation and rehabilitation of the industry. It was obvious from the speeches of both Mr. H. P. Mody and Mr. Krishnaraj M. D. Thackersey that they were greatly concerned about the likely competition abroad and the need for reducing prices even for home consumption if it was to expand. This is possible only if the mills were allowed to have the best available equipment and to avail themselves of the latest technique. The only difficulty, apart from finance, for this is the short-sighted fear on the part of workers that this step might throw some of them out of employment. Mr. Krishnamachari was, however, right in saying that "I cannot as a Minister, turn down the fears of labour as something which is meaningless." But it is equally his duty as that of the millowners to remove these fears.

In this respect, his frank admission that labour-saving devices were in the long run beneficial to workers and that they had to depend for increased employment on industrial expansion rather than on stagnation in the existing units, would gain considerable force, if he and his Government were to tell this to the leaders of the workers instead of encouraging them indirectly in their policy of obstruction. There are a number of alternative approaches besides that of increasing shifts and reducing the hours of work suggested by him. Real statesmanship lies in exploring these and deciding on one or two most likely to overcome the present deadlock, without adding so heavy a burden on the industry as would neutralise the economy in the cost of production which might be effected as a result of it. The thing to rejoice over in Mr. Krishnamachari's address is the indication that the authorities are no longer on the war path but in search of ways of peaceful progress.—*All Rights Reserved.*

MORE INDIRECT TAXATION LIKELY IN PLAN PERIOD

FINANCE MINISTER ON DEFICIT FINANCING

(From A Special Correspondent)

NEW DELHI, 23rd *March*

TWO important speeches delivered this week, one by the Minister for Commerce and Industry at the Punjab and Delhi Chambers of Commerce and the other by the Finance Minister to the Government of India on the floor of Parliament, indicate, in broad outlines, the development policies that the Government would be pursuing during the next two years of the Plan. Apparently, Mr. T. T. Krishnamachari was in his usual form when he addressed the Delhi and Punjab merchants. He spoke to them of their responsibilities in building up the industries of the country. When he hinted that during the next five years the country would witness intensive economic activity, he must have had in his mind that the proposed two Industrial Corporations would play an increasing role in establishing new industries. Perhaps he was conscious of the fact that the economic progress of India would be helped to some extent by the talk of a business recession in the U.S.A. which might make available larger quantities of plant and machinery and the necessary technical know-how at relatively competitive prices. The Minister pointed out that the Government would have to retain a certain amount of control over industries with a view to directing the industrial development of the country through proper channels. The very fact that the Government had proposed to resort to deficit financing meant, according to him, greater governmental controls and regulations in order to prevent the consequent inflation, as also to maintain a certain amount of economic stability, during the Plan period. He was also of the opinion that some import surplus was necessary with a view to mopping up excessive money supply in certain sectors of society as a result of deficit financing. Referring to the criticism that the Government had been allowing imports of manufactured goods into the country, the Commerce and Industry Minister reminded the members of the mercantile community that India was having one of the highest tariffs in the world. If certain industries were not satisfied with these, he asserted, they did not deserve to exist.

DELHI LETTER

The Minister also referred to the trend of taxation now obtaining in the country at present. He was against taxing industries heavily and against direct taxation beyond a certain limit. He showed a preference to indirect taxation and quoted the example of Soviet Russia where indirect taxation occupied a predominant share in Government's total revenue. From the trend of his observations on the subject, it is possible that the range of indirect taxation will become wider in the fiscal system of the country in the coming years. It is not also unlikely that the Taxation Enquiry Commission might show a greater bias towards indirect taxation, since it has to frame its recommendations bearing in mind the developmental economy of the country. Since the Government is now committed to ideals of a Welfare State, it must have to find out new sources of revenue with a view to financing many of its social welfare schemes, and as such, if anyone who thinks that the Taxation Enquiry Commission will recommend lower levels of taxation, he will be greatly disillusioned. Since direct taxation beyond a certain limit becomes oppressive and positively discourages risk-bearing capital, it is but natural that indirect taxation will have to play a greater role in the tax system of any modern country.

Total Resources and Expenditure

The Finance Minister's speech on the floor of Parliament was elucidative from the point of view of the extent of deficit financing that the country would have to undertake during the next two years. According to him, the total expenditure on the Plan by the Central and State Governments during the first three years was estimated at Rs. 945 crores. The internal resources raised for meeting this outlay worked out at Rs. 600 crores. External assistance taken as credit for this period amounted to Rs. 120 crores. Thus the total resources available were placed at Rs. 720 crores, as against the expenditure of Rs. 945 crores. The balance of Rs. 225 crores was met by drawing down of cash balances, by sale of securities held in reserve and by an increase in the floating debt. The Centre's expenditure over the three-year period was placed at Rs. 492 crores. The domestic budgetary resources available to the Centre in this period were Rs. 260 crores, which, with the external assistance of Rs. 120 crores, made a total of Rs. 380 crores. The balance was being met by drawing down of the cash balances.

Mr. C. D. Deshmukh further emphasised the fact that deficit financing on the scale envisaged during the coming months would not involve any risk outside the limits of prudence and quoted certain figures in support of his contention. He stated that the outlay on the Plan was now estimated at about Rs. 2,244 crores. The difference between the original Plan and the domestic resources had been estimated at Rs. 811 crores. Now this figure was likely to be Rs. 1,121 crores, that is to say, it would be larger by Rs. 310 crores. This was made up of a shortfall of Rs. 135 crores in the budget resources over the five-year period on the original plan and Rs. 175 crores which the Government had since added to the Plan. So on the one hand there would be a shortfall in resources and, on the other, to meet the unemployment situation, they had added to the size of the Plan. So far as external assistance was concerned, for the four years of the Plan, the figure was estimated at Rs. 165.5 crores. Of these, grants would be Rs. 79.9 crores and loans Rs. 85.6 crores. Taking some credit for further loans from the International Bank, as against Rs. 521 crores which was, at one time, the expected external assistance, Government would be receiving Rs. 231 crores by the end of the Plan period. According to the Finance Minister, "this leaves a difference of Rs. 290 crores. That Rs. 290 crores, added to the Rs. 310 crores (shortfall in domestic resources) is Rs. 600 crores" and "Rs. 600 crores is the measure of our increased difficulty, so to speak, in implementing this Plan." Therefore, continued Mr. Deshmukh, as a result of the above, whereas under the original Plan the Government had to undertake deficit financing to the extent of Rs. 290 crores, at present, it had to resort to deficit financing to the extent of Rs. 890 crores for the whole of the Plan period. In this connection, he observed: "Already for the first four years we have—or we shall have—incurred a deficit of Rs. 495.5 crores. And that means that for 1955-56, other things remaining equal, we shall have to have deficit finance of the order of Rs. 395 crores. That is a tremendous task. It means that you will have to create money almost to the extent of the size of our revenue budget."

No Cause for Anxiety

From the array of figures mentioned above, it may be feared that deficit financing to the level of Rs. 890 crores might create considerable inflationary pressures in different sectors of the Indian economy, despite the robust optimism displayed by the Finance Minister. A little reflection will, doubtless, dispense with the above apprehensions for more reasons than one. First, during the first three years of the Plan period, the economy of the country has shown considerable stability. In fact, the inflationary pressure has not only been curtailed, but there has actually been a sizable disinflation during this period. The Finance Minister stated, in this connection, that the supply of money with the public had recorded a notable recession, Government securities with the Reserve Bank have come down by Rs. 94 crores during the first three years of the Plan period. He argued that the sales of Government securities (Central and State Governments) exercised some disinflationary effect. On a previous occasion, he told the Members of Parliament that there would be a shortfall in the expenditure of the Plan by about 10 to 15 per cent. In other words, it is not likely that Government will be able to spend Rs. 2,244 crores to the full. In case the targets under the Plan fell short by about the above percentage, the total expenditure will decline by about Rs. 300 crores. Until now the absorbable capacity of the Plan has fallen far short of the allocated expenditure, and it is doubtful whether the Government will be able to spend Rs. 1,350 crores during the remaining two years. The inflationary pressure on the economy of the country will become less to the extent this expenditure on the Plan falls short of the original allocations. If the Government's total expenditure comes down by about Rs. 300 crores, the extent of deficit financing will be only Rs. 590 crores and not Rs. 890 crores, as stated by the Finance Minister. There is another factor that should be borne in mind in considering the effects of deficit financing on the economy of the country. In a country like India where nearly 80 per cent. live in villages and where food and clothing constitute the main determining factors, it is the food position that will be the most influencing thing in checking up the inflationary pressure. Now that food prices in rural areas are appreciably lower than those a year ago, it is held here that the country can withstand large dose of deficit financing now envisaged.

MORE REHABILITATION LOANS

During 1953-54, the Rehabilitation Finance Administration Act was amended with a view to increasing the ceiling limit of loans to be given by the Administration. As against Rs. 10 crores previously made available to the Administration, the ceiling has now been raised to Rs. 14.5 crores. Of this amount, Rs. 12.5 crores are to be disbursed as direct loan, while Rs. 2 crores have been provided for disbursement through banks with the stipulation that this amount will also be made available for direct disbursement, in case the facilities of assistance through banks are not utilised. The period of repayment of loans by the borrowers has been extended from ten years to 15 years. The Government has also recently reduced the rate of interest on these loans.

STERLING MOVES FORWARD

TRADING IN GOLD ALLOWED

(From Our Own Correspondent)

LONDON, 20th *March*

THE Chancellor of the Exchequer, addressing a Party meeting towards the end of this week, drew attention to the continued strength of sterling and the increase in gold and dollar reserves at a time when the U.S.A. was going through a slight recession. He has not only got the evidence of the gold and dollar reserves but the general evidence of the foreign exchange markets that the demand for sterling probably exceeds the supply and that the various kinds of transferable account sterling are sought after and no longer bear the name of "cheap sterling" to be used for unauthorised exchange transactions.

LONDON LETTER

The Chancellor's decision to restore the free London bullion market is designed to improve still further the international standing of sterling. The free gold market will replace the official Bank of England price and the six London bullion dealers will, as before the war, meet daily to determine, in the light of offers and demand, what the price shall be. But though the bullion market will be able to buy from all comers, it will only sell its gold freely against dollars including sterling held in dollar accounts and "registered sterling"—sterling which has itself been acquired against dollars or (outside the sterling and dollar areas) gold. Within the sterling area, it will still be necessary to have a licence from the Bank of England to purchase for trade and manufacturing purposes. To go further than this would be to move towards convertibility. But even though the range of buyers must remain limited, to allow the London brokers their full freedom to deal with such as may buy and sell will be to restore a free market in gold as fully as practicable. In other words, the people who cannot buy gold in the London bullion market would not be able to buy that gold anywhere in a normal transaction.

As regards prices, the very nature of the transactions will mean that they are likely to be quoted at international levels, the American price of $35 per ounce, less allowance for transport and insurance, making the market floor.

Another welcome indicator of the present strength of sterling is seen in the decision to remove a great number of restrictions on transferable sterling as between one holder and another. The removal of these restrictions will make all transferable sterling one and the same thing and no longer distinguished by the country in which it is held, and the world so far as sterling is concerned will then be divided into three parts: the sterling area; the dollar area in which sterling may be held on dollar accounts or as registered sterling (incidentally, this area is now confined to North America down to the northern half of South America); and the non-dollar non-sterling area or the transferable sterling area.

All transferable sterling will now be freely exchangeable between holders of such sterling and with sterling in the sterling area. It will not, of course, become exchangeable with dollar area sterling, because to do this would be to make sterling convertible. Capital transactions will be as free as current business transactions.

The sweeping away of the controls on transferable account sterling involved two concessions; first, that the rate of exchange of such sterling becomes free (a measure of the Treasury's confidence that freeing the rate will not mean official quotations of "cheap sterling"); and, secondly, a removal of the obligation on the countries concerned to accept transferable account sterling from other countries. This step is encouraging, in the sense that, even though convertibility may be as far away as ever, it means that sterling held outside the sterling area can now stand on its own feet. As far as the British exporter is concerned, it will simplify his life, as all transferable account sterling is as good as any other.—*All Rights Reserved.*

AMERICAN LETTER

BUSINESS TREND IN U.S. UPWARDS

UNEMPLOYED CAN STILL FIND JOBS

(From Our Own Correspondent)

NEW YORK, 18th *March*

THE odds are growing that the business trend in the United States will be up rather than down in a few months hence. One of the indices which says so is the stock market which has been firm for some time. What is happening, of course, is that funds are pouring into the investment markets at the rate of $5 million a week, or about $2,000 million a year from statutory pension funds alone. In other words, whatever bearish influences may prevail among small investors, they are being swamped by the wholesale pressure for investment. It has been a strange sort of recession, so far—very well advertised, too. In addition to the stock market upward trend, wage rates too are up, not down. Prices are stable, not declining. Business failures are few.

Banks are not calling loans, and mortgage foreclosures are very few. Farmers are not losing their property and home-owners are not having their houses taken away in big numbers. The unemployed can still find jobs of one kind or another. In fact, while the so-called blue-collar employment is off, it is virtually impossible to hire a secretary or stenographer in any of the large cities of the United States. White-collar employment is as tight as ever. Employment agencies complain that they do not even receive replies to advertisements for jobs. This cannot possibly be called a recession. Besides, the spending rate of the Government will step up somewhat. Actual spending has been at a much lower rate than projected by the last budget.

Spending by the Public

In theory, all this is fine. Individual income taxes have been reduced, the excess profits tax for corporations has been eliminated and excise taxes on various goods are being pared in half, according to current proposals. All this is stimulating, but it cannot make the public spend money as intended. There is a large area of psychology—the public has to be convinced that spending is the proper thing to do. It is really quite simple. In times of rising prices, the average householder wants to get in his bid for a new washing machine or automobile, because he believes it will cost him more a few months hence. In periods of stationary or declining prices, the buyer is apt to wait with the thought he may be able to buy whatever his heart desires cheaper if he waits long enough.

What the Eisenhower Administration has accomplished so far is the stabilisation of prices. The inflationary upward movement of prices has been eliminated. At the same time, it has killed the buying incentive which prevailed during the many years of rising prices. Future tax policy, if enacted, will be encouraging to business. Rail, air and bus tickets will be 5 per cent. less than heretofore. Furs, jewellery, luggage will get a 10 per cent. cut. Theatre tickets and those to sports events will be cut 10 per cent. Telephone bills will be lower, too. It all helps in raising the take-home pay of individuals and corporations.

A boom continues in building. Construction contracts awarded are up sharply from a year ago. Even home building increased in February after an earlier dip. Commercial construction is high, too, and gaining. Thus, another big year in building seems assured.

The glut in used automobiles is being removed gradually as well. From many areas come reports of a revival of sales. This is fairly important, because, for some time, the large backlog in used cars has been regarded as a barrier to expanded sales of new cars. As yet, stocks of new cars remain heavy, but the hope is that the movement in second-hand vehicles foreshadows that inventories may be worked down before long and production might be stepped up again.

Beyond that, retail trade is the key to business conditions. Householders are enjoying a little more income than they did a year ago, owing to lower taxes and prices have come down, too, as goods backed up on the shelves. Television set sales, spurred by price cuts, are reported in a strong upturn in many parts of the U.S., for example. Smaller appliances have been selling recently much better than a few months ago. One producer reports sales up 25 per cent. in the first two months of the year.

As usual, demand has responded when prices are reduced and buyers believe they get a bargain. Spring, normally, brings with it some upturn in jobs on farms, in construction and industry, generally. This year should be no exception.

In the monetary field, the fiscal and credit authorities are doing everything to keep money easy. This week, the major banks in the U.S. reduced their lending rates. Prime rates for first class borrowers went down from 3½ to 3 per cent.

Rates for borrowers with a lesser credit standing dropped as well. The reduction in the prime rate followed the decline in commercial paper and other forms of borrowing, but the pattern is by no means clear. Business loans by banks this last week had their sharpest rise in history. While this was, obviously, for annual tax payments, it is an anomaly to have rates go down when the demand for loans goes up. Somehow, an adjustment will have to be made.

Security of Jobs and Income

However, a return to war-time boom conditions is not looked for here. Instead, it is much more likely that a mild upturn is just ahead in American business and industry which will be followed by a period of flexible stability. Should such conditions prevail at the time of the Congressional elections next November, voters will cast their ballots in relative security of jobs and of income. There should be no major upset, unless the East-West situation should deteriorate further and lead to renewed outbreak of fighting somewhere on this planet.

So far, President Eisenhower, personally, seems well entrenched in the affection of the American people, despite all the national and international controversy which has been caused by Senator McCarthy and his investigations. For some strange reason, the Senator now enjoys more popular domestic support than he did in 1951, according to reliable public opinion polls, although unfavourable opinions about him and his methods have also increased from 22 per cent. of those questioned in August, 1951, to 36 per cent., now queried by *U.S. News and World Report*. The Senator may be pretty difficult to understand abroad, but he is a particular example and exponent of U.S. "democracy."—*All Rights Reserved.*

PAKISTAN NOTES

MORE ABOUT CENTRAL BUDGET

CONTROL IMPOSED ON MILL CLOTH

MORE details regarding the several tax relief measures contained in the Government of Pakistan's budget for 1954-55, presented by Mr. Mohammed Ali, Finance Minister, a few days ago, are now available. A look at these details reveals that Mr. Mohammed Ali has sought to afford relief to as wide a section of economic life as possible; the industry, trade and consumer interests have all benefited from relief in taxation. Encouragement to industrial production, for instance, is sought to be given by three notable tax relief measures. In the first place, machinery and spare parts required for the industry will not be taxed at more than 5 per cent. Secondly, they will be exempted from payment of sales tax. Thirdly, unilateral relief equal to 100 per cent. of Pakistan tax or foreign tax, whichever is lower, is to be made admissible to persons resident in Pakistan in respect of their foreign income. Besides, no changes are proposed to be made in rates of income-tax, super-tax and business profits tax. With a view to stimulating inflow of capital into public industrial projects (approved), the Finance Minister has decided to continue income-tax and super-tax exemption on investments in share capital of such projects for a further period of one year, subject to existing limits.

Encouragement is also sought to be given to boost the export trade, in tea, one of Pakistan's chief earners of foreign exchange. This commodity will continue to be exempted from payment of export duty for one more year. The consumer too will be benefited by tax reliefs, for, the tax relief measures include reduction in import duty on coconut oil, copra or coconut kernels and spices to 30 per cent., reduction in import and excise duty on motor spirit from Rs. 2 to Re. 1-8 per gallon, and 20 per cent. rebate of import duty on radio parts imported for purposes of assembling radio sets in Pakistan. Excise duty on printed and dyed cloth is also proposed to be lowered. These, together with the rise in the exemption limit of income liable to tax from Rs. 3,600 to Rs. 4,200, will surely provide much relief to the consuming public.

Control on Mill Cloth

The Textile Commissioner to the Pakistan Government announced on Saturday last imposition of controls on prices and distribution of indigenous mill-made cloth. This decision indicates the desperate attempt of the authorities to hold in check the prices of cloth which have soared to dizzy heights. Evidently, the Government's move to import, on its own account, crores worth of Japanese textiles and the undertaking given by the millowners that they would take every possible step to arrest any upward tendency in prices must have failed to bring about the desired effect. That this conclusion is not at all unfounded is clearly borne out by the recent statement of Pakistan's Industries Minister, Khan Abdul Qaiyum Khan, that the cloth situation in the country had been worsened by the exorbitant prices of locally produced cloth. Addressing a conference of Pakistan textile and trade representatives at Lahore the other day, the Minister criticised the method of cloth distribution and warned that, failing immediate relief to the consumer, control would be imposed on cloth manufactured within Pakistan. In this connection, he observed:

"A 'gentleman's agreement' was entered into in December last year between the Government, textile industrialists and cloth traders. While the Government has adhered to the 'gentleman's agreement,' response from industrial quarters is not encouraging. The Government will not remain an idle spectator where the interests of the common man are involved. Prosperity for a few at the cost of austerity for the millions will not be tolerated. The success of the textile industry will be determined by its capacity to offer good quality cloth at cheap rates. Millowners have not co-operated with the Government in supplying vital data to formulate a practical policy regarding cloth prices."

These observations of the Minister are in line with the views generally expressed by traders. Thus, at the Lahore conference, the representatives of the traders are reported to have complained that millowners had deprived the trade of its normal requirements. Be that as it may, the Textile Commissioner, as referred

(Continued in previous column)

(Concluded from next column)

to at the outset, has announced measures designed to control cloth prices.

Four more agreements providing for U.S. economic aid to Pakistan have been signed between the Governments of Pakistan and the United States. The agreements cover, respectively, agricultural workshop project, agricultural organisation project, range and pasture management in Baluchistan, and extension of sailaba cultivation in Baluchistan. These agreements bring the total number of agreements so far signed during the fiscal year 1953-54 to 14, the total amount committed being $17,325,000 out of the $22 million offered as aid for the year ending June, 1954.

The agricultural workshop project involves an outlay of $500,000 by the U.S. and Rs. 19.40 lakhs by Pakistan. The project envisages establishment of two workshops, one in Sind and the other in Baluchistan, which will serve as centres for training, demonstration and development in farm machinery, improved agricultural practices, soil and water conservation, and reclamation of fallow lands. The purpose of the agricultural organisation project is to strengthen the Central and Provincial Departments of Agriculture. The Government of the U.S. will contribute towards this project a sum of $435,000, while the Government of Pakistan will spend Rs. 19,50,000. The range and pasture management project provides for practical demonstration of range management methods in Baluchistan. Range management methods will be demonstrated in an area of about 115,000 acres, extending from 30 miles west of Quetta. The Government of the U.S. will make available for this project a sum of $55,000, while the Government of Pakistan will spend Rs. 2,00,000.

* * * *

The N.W.F.P. budget for 1954-55 discloses a deficit of Rs. 24.63 lakhs, the estimated revenue and expenditure being Rs. 6.51 crores and Rs. 6.75 crores, respectively.

TWO MORE EXCHANGE BANKERS SPEAK

MIXED BANKING NOT DESIRABLE FOR INDIA

THE Chairmen of two more Exchange Banks operating in India and the Far East, namely, Sir Kenneth W. Mealing of the Mercantile Bank of India, Ltd. and Mr. J. K. Michie of the National Bank of India Ltd. have given an account of their impressions of economic conditions in these areas in their customary annual statements to shareholders. Both have looked at the economies of these countries against the background of world conditions in 1953. They see that the world in that year continued to struggle towards a more natural balance in the conduct of international commerce, assisted by gradual but slow increase in freedom from war-time shortages and restrictions, especially in the democratic countries. But there is yet "one greatest remaining obstacle," to quote Mr. Michie, "to the free flow of international trade," and that is the absence of free convertibility of currencies. He considers that, if the powers-that-be are shy of committing themselves to convertibility, it is due to the fact that the balance in gold and dollars is precarious. Says Mr. Michie: "I also believe that convertibility, unless it is total, is of little use to us. I do not believe that a currency—any more than a *man*—can function happily or effectively half-slave and half-free, and currencies have a way of escaping when there have to be bars; for money has a liquid character and, like water, somehow contrives to find its own level. My belief is that we shall get convertibility at no early date; my hope is that it will be possible sooner than I expect."

Referring to India, Sir Kenneth admits that the schemes of national development included in the Plan are "clearly of vital importance" and considers that the Government deserves credit for trying to do its best to carry them through for the benefit of the country in the context of growing population. But he feels that the problem of providing finance for balancing the budget and for financing the Plan has resulted in high taxation. Although the taxation may be anti-inflationary, it has removed, he says, a great deal of surplus income which would otherwise become available as investment and risk capital. "On the one hand revenue from duties on imports and exports," to quote him, "is declining and, on the other, the attainment of the target of investment for the private sector under the Plan seems unlikely fully to succeed. Risk capital is shy of high taxation and the passing of the Estate Duty Act in 1953 has not improved the climate either for foreign or Indian investment."

On the same subject of providing finance for the Five-year Plan Mr. Michie makes some well considered observations. He welcomes the move to establish a Development and Finance Corporation with the assistance of the World Bank, on the ground that it will help develop industries for which sufficient capital is not forthcoming. Ventures such as these, he says, are welcome when capital is shy, and they fill a distinct gap. He is, however, opposed to the move to make commercial banks finance long-term projects on the lines of the German system. In Germany, banks invest directly in industry and have nominees on company boards. Commenting on this type of banking, Mr. Michie remarks: "I do not think the experience of the German banks was particularly happy and the position of being simultaneously part owner and banker is a distinctly invidious one, not only in itself, but *vis-a-vis* other constituents, but the overriding objection is that a bank's deposits are largely 'at call' and for that reason alone, it is quite wrong to commit them to long-term capital investment." Thus, it will be seen that this British Bank Chairman, too, as Mr. Grantham of the Chartered Bank of India, to whose statement a reference was made in these columns last week, is convinced that it is not in the interests of sound banking to make commercial banks finance long-term needs of their clients.

Both Sir Kenneth and Mr. Michie have taken note of the strenuous efforts that are being made in Pakistan to develop industries. The former reveals that by 1955 nine jute mills will be in operation in Pakistan and that their total production is expected to be 225,000 tons of jute goods per annum. Again, by the same year, seven cement factories are scheduled to produce one million tons of cement which is expected to make Pakistan self-sufficient in this important building material. Mr. Michie notices difficulty regarding food supplies though the position in 1953 was better than in 1952. Both the Chairmen are anxious that there should be freer flow of goods between India and Pakistan. They are keen on both the countries settling the Kashmir dispute at an early date.

The review of the economic position of Burma, Ceylon, Thailand, and Malaya by Sir Kenneth discloses how their economies were affected by the fall in prices of primary commodities such as rice, rubber, tin, etc. Restriction on imports, bilateral trade agreements for sale of their products and implementation of the development plans are some of the measures adopted by these countries to stave off dangers of inflation.

The statement by the Chairman of the National Bank of India contains a brief account of the economic conditions in East Africa, especially in Kenya, Uganda and Tanganyika where the Bank has a number of brances. In Tanganyika, first a drought, and then, fall in prices of sisal, caused considerable concern. The area suffers from poor communications. In Uganda, however, a record cotton crop, high prices for coffee, continued activity in the development of mineral resources, and steady progress in the production of electric power are all contributing to the progress of the economy, the outlook for which appears to be bright. In Kenya, Mau Mau 'emergency' seems to have obstructed progress and life is stated to be far from comfortable. For East Africa as a whole, however, the general outlook appears to be none too discouraging. "As has been said many times," remarks Mr. Michie, "the development of ports, railways and roads and water conservation on a large scale are two of the keystones of economic progress in East Africa. These are being energetically tackled and I believe we shall see a steady and progressive movement."

PROGRESS OF STATE FINANCE CORPORATIONS

An idea of the progress so far made in setting up State Finance Corporations is provided in the report of the Ministry of Finance for the year 1953-54. Out of the 10 Part A States including Andhra, two States, namely, Punjab and Bombay have already established Finance Corporations. West Bengal is expected to issue a notification shortly. Detailed schemes of Assam and Bihar are under examination by the Reserve Bank of India. Madhya Pradesh and Orissa have detailed schemes under preparation. Madras and Andhra are considering the conversion of the existing Madras Industrial Investment Corporation Ltd. into separate State Finance Corporations. Uttar Pradesh is the only State which has not yet sent in its formal proposal.

Out of the seven Part B States (excluding Jammu and Kashmir), Saurashtra and Travancore-Cochin have started their Corporations. Hyderabad has just issued the prospectus, inviting subscriptions to the share capital. Action to start Corporations has been initiated in Mysore and Rajasthan, P.E.P.S.U. and Madhya Bharat are considering the question of establishing them.

Delhi, among the 10 Part C States, has taken up the question for consideration. Bhopal and Ajmer have been advised to draw up detailed schemes. It is felt that it would be advisable for some of the Part C States to join their neighbouring States for setting up Corporations, and three States are willing to do so. This requires an amendment to the Central Act, and the Central Government is examining this aspect of the question.

A sum of Rs. 2½ crores has been earmarked by the Central Government for assisting the States to set up Corporations. Out of this sum, loans will be granted to the States which are in need of them.

The delay in setting up the Corporations will certainly hamper the work of expansion and development of industries in States. As these Corporations are intended to help small and medium-scale industries—the very ones which are handicapped by lack of financial assistance—it is all the more essential that the State Governments would expedite work in connection with the establishment of these Corporations.

LLOYDS BANK LIMITED — INCORPORATED IN ENGLAND

LB-IC/56—1954

HIGH DENOMINATION NOTES

High denomination notes will once again be introduced by the Reserve Bank from 1st April, 1954, after a lapse of about seven years. A Press note issued by the Reserve Bank of India says that notes of the denominations of Rs. 1,000, Rs. 5,000 and Rs. 10,000 will be issued on 1st April from the offices of the Bank at all centres. These notes will be completely different in design, watermark and colour scheme from the old high denomination notes.

The old high denomination notes were demonetised under the provisions of the High Denomination (Bank Notes) Demonetisation Ordinance of 1946 and ceased to be legal tender.

Another Press note issued by the Reserve Bank says that demonetised notes will not be accepted at the offices of the Bank even after 1st April, 1954, and persons dealing in them will continue to be liable to punishment as provided under law.

The banking and business community in India will heartily welcome the issue of the high denomination currency notes, for it will save them a good deal of time and energy which they were hitherto expending on counting large parcels of small denomination notes tendered at the counters. Before the withdrawal of these notes in 1946 with a view to eliminating hoarding and tax evasion, the receiving and paying cashiers in banks had invariably to count only 100 notes of the denomination of Rs. 1,000 each at the time of receiving or paying a sum of Rs. 1 lakh. But, since the withdrawal of the 1,000-rupee notes, for discharging the same transaction, these cashiers have been spending ten times their own time and that of their customers, as they have to count a thousand notes of Rs. 100 each. Besides, the high denomination notes enables the owner conveniently to carry large sums of money in small covers without attracting the attention of bad characters, robbers, etc. Realising these inconveniences we urged upon the Government of India the necessity of authorising the re-issue of currency notes of higher denomination as early as possible. It has taken the Government four years since then to take a decision in the matter, get the necessary legislation passed, arrange the printing of the notes, and issue them to the general public.

SILVER REFINERY PROJECT

The Government of India has executed an agreement with the German firm, Demag, for the supply of the requisite plant and equipment for the projected silver refinery in Alipore. The required machines are now being manufactured in the firm's workshops in Germany and are expected to be shipped to Calcutta in three instalments, the first in May, the second in July and the last in September, 1954. The erection work of the project is to be entrusted to another firm, viz., Messrs. Sepulchre Bros. (India). A contract agreement, in this connection, is expected to be executed with this firm very shortly and work will be started as soon as the equipment is received from Germany. The plant is expected to go into commission early in 1955.

IMPERIAL BANK BRANCHES

The Imperial Bank of India has agreed to open 80 new branches in the next phase of its expansion programme for the three years commencing from 1st July, 1954. In the first two-year period ended 30th June, 1953, the Bank opened branches at 27 places, besides converting nine Treasury Pay Offices into branches. The opening of new branches is in accordance with an understanding reached between the Bank and the authorities of the Reserve Bank of India regarding extension of credit facilities to rural areas. It may be noted that legislation has already been passed to enable the Reserve Bank to extend such facilities.

DOLLAR TRADE GAP DWINDLING

The "dollar gap" in trade between the U.S. and other countries outside the Soviet bloc was smaller in 1953 than at any time since World War II, the Commerce Department reported the other day. The dollar gap is the difference between what the United States sells to friendly nations and what it buys. In 1953, this dollar gap amounted to $400 million—the difference between U.S. exports of $17,000 million and U.S. imports of $16,600 million. The dollar gap in 1952 was $2,300 million. U.S. exports last year amounted to $21,300 million. Of this, $4,300 million was in military supplies and services under U.S. military aid programmes.

SATISFACTORY RESULTS OF NATIONAL BANK OF INDIA

PART OF RESERVES TO BE CAPITALISED

IF the year 1952 was a period of adjustment and difficulty for banking companies, particularly for those operating in the East, consequent on the slump in commodities, the succeeding year has proved to be an uneasy one, because of the painful struggle by many countries towards a more natural balance in the conduct of international commerce. Banking companies serving the areas most affected by the previous year's slump have had, therefore, the onerous task of exercising, during the year 1953, more caution in their activities than in the previous year. If, in this process, such banks' turnover and profits record a contraction, it is a natural thing. The National Bank of India Ltd. (General Manager: Mr. N. W. Chisholm, London) belongs to this category of banks. Its accounts for the year ended 31st December, 1953, bear evidence of the difficult trading conditions under which it had to work. The Bank, with India as its largest and oldest field of activity, has shared the general decline in turnover and profits suffered by Indian banks in general.

The balance-sheet total of the Bank at the end of 1953 shows a fall of £7.32 million, which is more marked than that of £1.84 million noted at the end of 1952. It is, however, heartening to find that the 1953 total of £116.14 million is still much higher than that (£109.97 million) at the end of 1950. On the liabilities side, deposits show a fall of £7.37 million over the year, while, on the assets side, loans and advances show a drop of £7.46 million. The profit also has, in consequence, fallen, albeit slightly.

The consolidated profit of the Bank (that is, including the profit of its subsidiaries), after providing for taxation and transfers to staff pension funds and contingency reserves, amounts to £387,644, a decline of £24,032 over the year. This is the second year in succession when the profit of the Bank has shrunk, the fall in the previous year having been £29,781. The allocation to the premises account has been maintained at £75,000 as the Bank's programme of rebuilding outdated and inadequate banking premises at some of its main branches continues and as it is the intention of the Directors to continue a steady policy of depreciation. Contingency reserve account gets £115,000, as against £140,000, of which the share of the National Bank of India alone amounts to £100,000, as against £115,000. The dividend is proposed to be maintained at the rate of 16 per cent. per annum, less tax, but the net cost to the Bank amounts to £200 750, as compared with £191,625 for 1952, the increase being due to the reduction in the rate of income-tax from 9s. 6d. to 9s. in the £. The unappropriated surplus is £320,597, of which a sum of £275,496 is on account of the National Bank of India and the balance of £45,101 is retained in subsidiary companies' accounts.

The Bank has been paying an annual dividend of 16 per cent. from 1946 onwards. This unchanged dividend, despite the expansion of business and increase in profit over these years, prompted a shareholder to ask the Chairman at the last annual general meeting as to when the shareholders would be given tangible benefit from such expansion since the present rate of dividend was established. In reply, the Chairman assured the questioner that this part of the responsibilities of the Board had not been forgotten. Now that the Bank has a proposal to increase the capital by drawing upon the reserves, to which we shall presently refer, the Chairman, Mr. J. K. Michie, alluded to this assurance in his statement accompanying the accounts for 1953, and, observed:

"As you know, the expenses of running a business continually tend to rise; then competition in all our areas is steadily increasing; and lastly, in this uncertain world it would be most injudicious of me to make any firm prophecy of what will be done or of what will be possible some months from now; but in putting before you these proposals in regard to our capital, we do it in the hope that there will be some increase in the amount to be distributed to the shareholders. I do not, however, encourage any expectation of the same rate being maintained on the increased capital."

The following synopsis of the Bank's balance-sheets for the past four years shows the Bank's progress in recent years:

(In thousands of £'s sterling)

	As on 31st December			
	1953	1952	1951	1950
LIABILITIES (MAIN)				
Capital	2,281	2,281	2,281	2,281
Reserve fund	3,675	3,675	3,675	3,600
Current accounts and deposits ..	103,563	110,932	106,060	101,576
Bills payable	1,985	1,584	1,780	1,507
Loans payable	871	741	4,000	..
Acceptances for customers ..	938	1,010	1,903	452
ASSETS (MAIN)				
Cash balances	16,778	20,345	17,370	21,887
Investments—				
British Government and other securities	11,320	11,484	11,780	14,772
Other Government securities and unquoted investments	12,060	10,868	9,944	11,799
Bills of exchange (including Treasury Bills)	25,886	23,722	16,863	15,452
Advances and loans	45,864	53,318	65,476	63,351
Fixed assets	1,705	1,262	952	724
Balance-sheet total	116,140	123,458	125,298	109,971

The upward trend in the Bank's deposits and other accounts noted in the past several years, touching a record level of £110.93 million at the end of 1952, has been reversed in the year under review. Loans payable and acceptances for customers also have further declined, though this has been offset to some extent by the increase in bills payable.

For the second year in succession, advances and loans have declined, the total decline over these two years being of the order of £19.62 million. Nonetheless, the ratio of advances to deposits at the end of 1953, at 44.3 per cent., though lower than that of 48.1 per cent. at the close of 1952, is much higher than the corresponding ratio of 42.7 per cent. for 1950. The upward trend in bills of exchange noted in earlier years has been maintained. Investments, shown at under market value, have gone up by £1.03 million, due to the rise in holdings of Indian, Pakistan and Ceylon Government and other rupee securities by £1.11 million and in East African Government securities by over £79,000. Cash balances have, on the other hand, shrunk by £3.56 million. However, the combined total of investments and cash balances gives a slightly higher liquidity ratio of 38.8 per cent. than that of 38.5 per cent. a year before.

As already indicated, the Directors of the Bank propose to make a change in its capital structure. They propose to sub-divide the 182,500 shares of £25 each, of which £12 10s. is paid-up per share, into 4,562,500 shares of £1 each, of which 10s. will be paid-up. The 10s. paid-up shares will then be made into 12s. 6d. paid-up by the capitalisation of a sum of £570,314 out of the reserves. According to Mr. Michie, the proposals have two purposes. One is to take the shares out of the "heavy" category and so encourage the small investor to take an interest in the Bank's share capital and the other is to bring the capital more into line with realities, while maintaining an adequate reserve fund.

(*Concluded from next column*)

The most arresting feature of the balance-sheet for 1953 is the rise of Rs. 6.84 crores in deposits to Rs. 37.72 crores, at which level they fall short of the record touched at the end of 1943 by Rs. 52 lakhs. This rise, which is in refreshing contrast to the general banking trends in this country, is shared by all classes of deposits, though the bulk of it has been in fixed deposits. Thus fixed deposits have gone up by Rs. 4.21 crores to Rs. 13.96 crores, savings bank deposits by Rs. 36 lakhs to Rs. 3.34 crores and current and other accounts by Rs. 2.28 crores to Rs. 20.43 crores. The sharp rise in borrowings from other banks suggest that the Bank must have experienced a very heavy demand for funds during the closing months of the year.

At Rs. 19.79 crores, advances of the Bank constitute a record high (so far as can be judged from the year-end figures). Loans, cash credits and overdrafts account for an increase of Rs. 2.88 crores and bills purchased and discounted for Rs. 2.72 crores. There has, therefore, been a smart rise in the advances ratio from 45.9 per cent. to 52.5 per cent., at which level it is very much less than 60.6 per cent. seen at the end of 1951. The sharp increase in advances has not necessitated any reduction in investments. They have, on the other hand, been raised by Rs. 3.07 crores, of which Central and State Government securities (including Treasury Bills) account for Rs. 1.76 crores, foreign Government securities for Rs. 1.08 crores and debentures or bonds for Rs. 22 lakhs. The investments have been shown at market value. The unencumbered portion of the investments having shown no notable increase, their ratio to deposits has dropped sizably from 45.8 per cent. to 38.5 per cent. Cash balances also have gone up by Rs. 23 lakhs, but, in the face of the sharp rise in deposits, the cash coverage has fallen from 21 per cent. to 18.2 per cent.

UNITED COMMERCIAL BANK LTD.

BUSINESS EXPANDS

DESPITE difficult trading conditions, the United Commercial Bank Ltd. (General Manager: Mr. B. T. Thakur, Calcutta) has been successful in registering an all-round improvement in business during 1953. Thus, there has been a substantial increase in its deposits, as compared with the previous year, the year-end figure showing a near-record total; advances (including bills purchased and discounted) have staged a smart rise to stand at a record high level; investments, too, show an impressive increase and, at the same time, cash balances also are moderately higher. Another item to record a notable improvement is bills for collection and acceptances, thereby indicating that the Bank has been making swift progress in financing India's foreign trade.

Reflecting all this expansion, the Bank's total earnings have gone up by nearly 11.5 per cent. to a record level. Despite this, the profit has not gone up at all; it has, on the other hand, suffered a small shrinkage. The profit, after providing for all known and anticipated charges and expenses of opening branches and depreciation and repairs on the Bank's property, amounts to Rs. 23.01 lakhs. This discloses a fall of Rs. 1.79 lakhs as compared with that for the previous year. A gratifying feature of this decline is that it is not as large as in the case of a few other leading Scheduled banks and very much smaller than the drop in its own profit in 1952. If the Bank has escaped a much larger recession in its profit for 1953, it is obviously due to the expansion in business. It must, however, be noted that the profit, at Rs. 23.01 lakhs, for the year under review is the lowest to be recorded since 1945.

The fall in profit has been occasioned, as in the case of other banks, by the larger outgo by way of interest paid on deposits and borrowings and expenses, as will be seen from the following comparative table, showing the salient features of the Bank's profit and loss accounts for the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950
Interest and discount earned	127.42	107.04	105.04	97.45
Commission and exchange	59.46	60.40	53.27	88.96
Interest paid	63.33	49.69	38.12	20.00
Expenses	95.43	90.00	81.83	94.98
Loss on sale of Government securities ..	...	..	..	5.50
Depreciation and repairs	5.27	5.24	4.37	3.86
Profit	23.01	24.80	35.03	34.07
Taxation	9.80	10.00	8.00	11.50
Reserve fund	5.00	7.50	7.50	7.50
Investment account ..	...	...	15.00	5.00
Dividend	8.00	8.00	8.00	8.00
	(4%)	(4%)	(4%)	(4%)
Carry forward ..	1.02	1.01	1.71	5.18

The Bank's gross income has gone up by Rs. 19.31 lakhs to a record total of Rs. 188.04 lakhs, following the rise of Rs. 20.38 lakhs in the main source of income, namely, interest and discount, to Rs 127.42 lakhs, also a record. The upward trend in interest and discount earned noted since 1949 has thus not only been maintained during 1953 but perceptibly accelerated. This means that the Bank was highly successful in expanding its advances.

On the expenditure side, interest paid and expenses have also gone up to record levels. The abnormal rise of Rs. 14.64 lakhs in interest paid is the result of the increase in deposits and borrowings from other banks, coupled with higher rates of interest. Of the rise of Rs. 5.43 lakhs in expenses, salaries, allowances and provident fund account for Rs. 2.69 lakhs. The balance of Rs. 3.64 lakhs is accounted for by the item termed "other expenditure," the latter being presumably due to expenses connected with opening of branches. The appropriations out of the profit are clearly shown in the foregoing table and, therefore, need no further elaboration.

The notable expansion in the Bank's business during the year under review is fully reflected in the following synopses of the balance-sheets for the past four years:

(In lakhs of rupees)

	As on 31st December			
	1953	1952	1951	1950
Capital	2,00 00	2,00 00	2,00 00	2,00 00
Reserve fund ..	80.00	75.00	67.50	60.00
Deposits and other Accounts ..	37,72.48	30,87.73	29,86.10	33,28.48
Borrowings from other banks ..	8,35.13	65.25	2,21.40	3,11.70

* After taking into account the investments earmarked against borrowings from other banks.

(*Continued in previous column*)

PROFIT OF MERCANTILE BANK OF INDIA WELL MAINTAINED

SHARP FALL IN DEPOSITS

THE audited accounts of the Mercantile Bank of India Ltd. (Chief Manager: Mr. R. N. Drake, London) for the year ended 31st December, 1953, reflect the difficulties experienced by the Bank in keeping the tempo of its trading activities at the same level as in the previous year in the face of drastic import and export restrictions imposed in some of the areas in which the Bank operates and lower commodity prices. Thus, the Bank's balance-sheet total as on 31st December, 1953, which gives a fair indication of the turnover, shows a drop of over £10 million, as against only a fractional decline noted at the end of 1952. The Bank's deposits have suffered a decline of over £9 million, which is reflected on the assets side by a contraction of £6.85 million in investments and of £1.51 million in cash. Loans and advances, however, as seen from the year-end figures, have suffered only a decline of £1.65 million and the net profit earned has been nearly maintained at the previous year's level.

The net profit (after providing for taxation thereon and after allocations to contingency accounts, out of which full provision has been made for bad and doubtful debts and any other diminution in the value of assets) amounts to £194,167, which shows a decline of a mere £501, as compared with the profit of £195,188 for 1952. With the sum of £200,143 brought in from the previous year, as against £200,130, the Directors have maintained the allocation to the officers' pension fund at £13,000 and written off the Bank's premises and property by £50,000, same as in the previous year. The additional allocation to contingencies account has, however, been reduced from £55,000 to £50,000. The dividend has been maintained at 14 per sent. per annum less tax, to which level it had been raised last year from 12 per cent. per annum paid for four years from 1948 to 1951. However, there has been a change in this. Last year, an interim distribution of 6 per cent. and a final one of 8 per cent. were made, but this year, the interim dividend was raised to 7 per cent., while the final one is proposed to be reduced to 7 per cent. The amount required for the total distribution is £80,850, as against £77,175 last year, the increase being due to the cut in the rate of income-tax from 9*s.* 6*d.* to 9*s.* in the £. The undistributed surplus left to be carried over is £200,980, as against £200,143.

The progress of the Bank in recent years is indicated in the following comparative table:

(In thousands of £'s sterling)

	As on 31st December			
	1953	1952	1951	1950
LIABILITIES (MAIN)				
Capital	1,050	1,050	1,050	1,050
Reserves and surplus	1,701	1,700	1,700	1,500
Notes in circulation	279	278	229	282
Deposits and other accounts	59,382	68,510	67,396	62,018
Loans payable	...	...	403	...
Bills payable	927	1,729	2,890	1,828
Acceptances	211	299	408	246
ASSETS (MAIN)				
Cash	13,696	15,208	15,621	13,024
Investments	13,804	20,651	14,228	14,533
Securities against note issue	371	371	371	371
Bills receivable	14,870	14,880	18,850	15,804
Loans and advances	20,296	21,646	23,027	22,458
Fixed assets	620	644	695	550
Balance-sheet total	63,634	73,655	74,154	67,042

A notable feature disclosed by the accounts for the past year is the decline of over £9 million in deposits and other accounts, in distinct contrast to the increases noted in earlier years. In fact, this is the first time in the past fifteen years that a contraction in deposits and other accounts has been noted and, at £59.38 million, they are the lowest since 1949. For the second year in succession, bills payable show a marked contraction, as also acceptances on account of customers.

As against these changes on the liabilities side, the assets side discloses a fall of £1.64 million in loans and advances, following the drop of £2.08 million noted at the end of 1952. This fall of £3.72 million over the last two years is neither surprising nor serious in the context of the declining commodity prices. No doubt, the ratio of advances to deposits has gone up from 31.9 per cent. to 34 per cent., but it is less than that of 35.5 per cent. at the end of 1951 and much less than the average advances ratio of Scheduled banks in India. The decline in advances has been offset to a small extent by the rise in bills receivable (as compared with the fall of £4.27 million noted a year ago), which again reflects the efforts made by the Bank to maintain its level of trading activity. Investments, excluding the British Government securities deposited against note issue, are lower by £6.85 million. Cash balances too have shrunk by £1.51 million. Consequently, the liquidity ratio has dropped from 52.3 per cent. to 46.3 per cent.

CANARA INDUSTRIAL'S PROGRESS SATISFACTORY

The year 1953 proved to be a favourable one for the Canara Industrial and Banking Syndicate Ltd. (General Manager: Mr. T. A. Pai, Udipi). The total resources of the Bank went up by nearly a crore of rupees, which were well utilised to meet the increased demand for funds, without any marked decline in the liquidity, and to improve the earnings of the Bank. Despite higher expenses, the gross profit for the year under review shows an advance from Rs. 3.52 lakhs for 1952 to Rs. 4.01 lakhs, which is the same as that earned for 1951. Thus, the shrinkage in profit, noted in the previous year, has been made good in the year under review, in refreshing contrast to the general trend of bank profits for 1953. Consequent on this improvement, the reserves have been strengthened further and the dividend on ordinary shares has been comfortably maintained at 9 per cent. on a slightly increased capital.

The following comparative table giving the salient features of the Bank's accounts for the last three years shows the Bank's progress in the last two years:

(In lakhs of rupees)

	For the year ended 31st December		
	1953	1952	1951
Gross income	27.44	25.00	23.69
Interest and discount	23.15	21.04	19.28
Commission, exchange and brokerage	3.12	2.87	3.19
Interest paid	8.61	8.19	7.16
Expenses	14.96	12.89	12.14
Depreciation, etc.	0.46	0.40	0.88
Profit	4.01	3.52	4.01
Taxation	1.00	0.65	1.15
To reserves	1.10	1.00	1.00
Bonus to staff	0.40	0.37	0.37
Dividends	1.52	1.50	1.46
Carried forward	0.05	0.07	0.07
	As on 31st December		
	1953	1952	1951
Capital	25.84	25.10	24.88
Reserves	12.10	11.00	10.00
Deposits	471.51	401.07	361.71
Borrowings from banks	0.88	0.15	46.85
Advances	308.16	242.71	252.53
Investments	148.59	130.69	128.69
Cash	72.37	76.97	77.18
Balance-sheet total	503.62	499.64	517.98
Ratio to deposits of—	%	%	%
Advances	65.4	60.5	70.0
Investments†	31.4	32.5	23.6
Cash	15.2	19.2	19.2

† Ratio arrived at after taking into consideration securities lodged against borrowings from other banks.

It will be observed that the rise in gross income has been shared by interest and discount earned and commission and exchange. This has, however, been offset to a large extent by the increase in interest paid and expenses. The various allocations made out of the profit is clear from the foregoing table. In this connection, readers' attention is invited to the Chairman's speech (published in our last issue, *vide* page 478) wherein he points out that out of the gross earnings of the Bank, while salary and allowances and bonus to staff account for 35 per cent. and interest on deposits for 30 per cent., the dividends to the shareholders amount to only 5.5 per cent. of the gross income and work out to only 4.7 per cent. on the capital and reserves employed.

During the year under review, the paid-up capital of the Bank was raised with the coming in of optional calls. With this, the uncalled capital of the Bank is only Rs. 6.77 lakhs, a substantial part of which is expected to be paid this year. A break down of the deposits shows that, in consonance with the general trend, fixed deposits have gone up by Rs. 35 lakhs to Rs. 2.79 crores. The rise in current accounts to Rs. 90.09 lakhs is only Rs. 7.62 lakhs. There has been a substantial increase in savings bank deposits from Rs. 84.93 lakhs to Rs. 102.63 lakhs, indicating how this fruitful field is being successfully tapped by the Bank.

The Bank's advances as on 31st December, 1953, at Rs. 308.16 lakhs, constitute a record in the history of the Bank, having gone up by Rs. 65.45 lakhs over the year. They form about 66 per cent. of the deposits. At the same time, the investment portfolio also has been strengthened, by the addition of Rs. 17.89 lakhs, to Government and other trustee securities which, at Rs. 147.54 lakhs, represent 31 per cent. of the deposits. The investments have been shown at cost. Cash balances are a little lower, but the cash coverage is still at the satisfactory level of 15 per cent., that is much higher than the all-India average.

The number of shareholders of the Bank is 2,400. The Bank's deposits have come from 1,25,574 accounts and the number of customers is 1,82,564.

BANK OF INDORE LTD.

In refreshing contrast to the downward trend in the earnings of many Scheduled banks for 1953, the profit of the Bank of Indore Ltd. (Manager: Mr. N. D. Joshi, Indore City) has been well maintained at the previous year's level of Rs. 4.87 lakhs, to which it had risen from Rs. 4.75 lakhs for 1951 and Rs. 4.62 lakhs for 1950. No doubt, as in the case of most other banks, the outgo by way interest and expenses has been on the high side, but the Bank has been able to meet it without any setback in profit on account of the improvement in earnings. The other features of the audited accounts of the Bank for the past year are a moderate expansion in deposits to a record level in the history of the Bank and a similar rise in advances, which show that the improvement in the Bank's resources have been well utilised.

The following table shows the salient features of the accounts of the Bank for the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950
Interest and discount earned	22.02	20.73	19.08	16.79
Commission and exchange	2.10	1.97	2.02	1.44
Interest paid	9.62	8.58	7.84	5.77
Expenses	9.70	9.33	8.42	7.77

Investments	33.3	36.7	31.0	41.1
Cash	9.5	11.8	15.2	16.1

The upward trend in the main source of income, namely, interest and discount earned, noted in the previous years, has been kept up with a further rise of Rs. 1.29 lakhs in 1953. A fractional increase is also noted in commission and exchange earned. Offsetting these are the increases of Rs. 1.04 lakhs and Rs. 0.37 lakhs in interest paid and expenses, respectively. Out of the profit of Rs. 4.87 lakhs, the Directors have transferred, as in the previous year, a sum of Rs. 1 lakh to the reserve fund and a like sum to the contingency fund. The addition to the gratuity fund has, however, been reduced from Rs. 15,000 to Rs. 10,000. The distribution to the shareholders has been maintained at 12 per cent. for the ninth year in succession.

The Bank's reserve fund stands at the impressive level of Rs. 25 lakhs, as against a paid-up capital of Rs. 15.30 lakhs. Besides this, it has built up secret reserves year after year. In consonance with the general trend, fixed deposits have gone up by Rs. 43.82 lakhs to Rs. 3.32 crores. Saving bank deposits show an increase of Rs. 4.74 lakhs to Rs. 53.18 lakhs and current accounts, etc., Rs. 2.16 lakhs to Rs. 1.60 crores. Of the rise of Rs. 54.66 lakhs in advances, loans cash credits and overdrafts account for Rs. 50.15 lakhs and bills purchased and discounted for Rs. 4.51 lakhs. Investments (at below market value) have been well maintained, but the rise in deposits has brought down their ratio to deposits from 36.7 per cent. to 33.3 per cent. With a drop of Rs. 6.71 lakhs in cash balances, the cash coverage has gone down considerably; but the total liquidity ratio at 42.8 per cent. is quite satisfactory.

SPINNERS RAISE YARN QUOTATIONS

FUTURE OF RAW COTTON COMMISSION

(By A Special Correspondent)

MANCHESTER, *16th March*

MANCHESTER LETTER

STIMULATED by the probability of a higher price level, trade in cotton goods in Lancashire has shown a sharp expansion during the past few days after something of a lull during which business slackened to some extent. Rumours began to circulate in the Manchester market at the end of last week that a further advance in American yarn prices was imminent. This trend was confirmed when spinners raised their quotations in line with the recent upward movement in the basis for the raw material.

Dearer rates are now ruling for many types of cotton comparable with the main American staple. In particular the cost of Pakistan varieties has been increased by the Raw Cotton Commission and the values of outside growths have been moving upward for several weeks. A substantial amount of covering took place by consumers on the assumption that they would be unable to obtain goods at cheaper rates in the near future. Many decided that their recent cautious attitude could no longer be maintained in the face of advancing charges despite the extended delivery terms which are now being widely quoted.

Although this particular development affected only American type yarns the finer qualities have also been in keen request due to the expectation of more advances in this direction. The situation concerning Egyptian and Sudan cotton remains very obscure and a shortage of supplies is by no means out of the question. A great deal of interest is being taken in Lancashire at the attempts to distribute Sudan cotton by auction sales and it is recognised that the events in this territory are likely to have an important effect upon future trading.

Although most of the activity in cloth has been in sales for home consumption there has been a fair amount of re-stocking by overseas customers. Australia and South Africa have bought fair quantities of dress materials and standard makes, while modest lines have been put through for East and West Africa and some of the minor Colonial markets.

The call for supplies of goods for home use has slackened a little but the mood of inflation caused by an increase in spending power following further wage advances is likely to result in more demand before long.

Manpower Problem

Manpower for Lancashire mills remains the recurrent problem which is always in the background whatever other difficulties raise their heads affecting raw cotton supplies, export prospects and other developments which occur from time to time. Slowly the industry has struggled back until some 290,000 operatives are available for employment in spinning and weaving. Very few mills, however, have their full complement of workers and machinery continues to stand idle through want of labour.

Some small encouragement, however, can be gained from the response of school-leavers entering the trade after the Christmas holiday period. Details now released by the Cotton Board show that the proportion of juveniles enrolled this year was appreciably higher than twelve months ago and exactly the same as in 1951-52.

The following table shows the position at the Christmas period for the past four years, indicating total school-leavers in cotton towns in the North-West region and the precentage entering the cotton industry:—

	1950-51	1951-52	1952-53	1953-54
School Leavers				
Boys	4,249	4,566	4,845	5,019
Girls	4,092	4,347	4,814	4,908
Total	8,341	8,905	9,659	9,927
Entered Cotton				
Boys No.	512	423	266	508
Per cent.	12.1	9.3	5.5	10.1
Girls No.	970	1,042	760	1,134
Per cent.	23.7	24.0	15.8	23.1
Total No.	1,482	1,465	1,026	1,642
Per cent.	17.8	16.5	10.6	16.5

The increasing number of school-leavers each year has resulted in the recruitment on this occasion of a larger total than at any comparable period since the war, although the proportion is not as high as three years ago. The readiness of youngsters to start their careers in the mills, however, is a more favourable sign and it is to be hoped that many will continue in this employment and not drift into other jobs.

From week to week the overall intake is barely sufficient to exceed inevitable wastage of older workers. Despite the progress made it will take years at the current rate of enrolment to bring the industry anywhere near the labour available before the 1952 slump.

Raw Cotton Commission

Spinners can justifiably be a little mystified as to how their supplies of raw cotton will be obtained in the latter stages of the year. Although it has been officially stated that the Raw Cotton Commission will cease to trade after the end of August its outstanding commitments will be fulfilled and it now appears that these may be somewhat prolonged.

Already contracting-in firms have been notified that most growths of cotton will be available from the Commission's stocks for delivery up to and including October, while certain special types can be purchased as the new crops arrive next year. So it is evident that the system of dual buying will continue for some time to come, although the vast majority of supplies will be obtained through private sources, either direct from producing countries or through raw cotton merchants.

The Commission is soon to introduce a cover quotation for October delivery but index prices will cease to exist in their present form at the end of August. Subsequently there will be a choice of two call bases. One will be calculated on the present system and the other on the quotations for Liverpool futures.

Yet another indication that the Commission is to continue part of its functions for a considerable time is that it has contracted to take the total production of the Aden cotton crop until 1957. The quantity involved is very small but so long as the organisation has these commitments it will presumably continue in being.

Plans for the formal reopening of the Liverpool futures market by Lord Derby are now being completed. The timing of the function has been arranged to coincide with the International Cotton Congress and many foreign spinners will be present. Further changes in the rules of the Liverpool Cotton Association are to be considered at a special meeting at the end of this month, the most important proposition being that daily price fluctuations in cotton futures transactions shall be restricted to a maximum range of 1d. per lb.

More Money Lost

Little surprise has been caused by the disclosure made by Lord Woolton, Minister of Materials, that the accounts of the Raw Cotton Commission covering the last cotton season will show a further deficit of £22,000,000, after the loss of £25,000,000 in the previous twelve months. Another big excess of expenditure over income was inevitable in a year when world prices for the raw material moved steadily downwards.

The unhappy financial record of the Commission has had an important effect on the arguments which have taken place over the re-establishment of the Liverpool futures market. People outside the industry in particular have been startled by the magnitude of its losses, which have now whittled away the profits made in earlier years when prices were rising. The Commission itself has never made any secret of the fact that it would gain money in a rising market and equally lose it on the downward gradient.

Sponsors of the new arrangement are expressing their confidence that Lancashire's resource and enterprise to trade in cotton amid the free and stimulating atmosphere of competition will compensate for any loss sustained by the removal of the facilities provided by the Commission. Despite some forebodings in certain quarters this is the general attitude with which the trade contemplates the future. Conditions may not be easy, particularly, in the transitional stage, but as the system becomes more widely used the opportunities it offers will not be missed by competent traders.

Soviet Cloth Bought

The first consignment of Russian cotton grey cloth to be imported into Britain since the war has arrived in Lancashire. It will undergo finishing processes and then be re-exported to Lancashire's customers in West Africa. It is understood the consignment aggregates hundreds of thousands of yards.

A Manchester merchant with extensive interests in the West African market said the amount of Soviet-made cloth involved in this post-war deal was not great. "It is only a feeler to see what the cloth is like," he declared. "It compares well in quality with cloth produced in other parts of the world, including Lancashire and Japan, and the price is competitive or the cloth would not have been brought in," he said.

The importation of Soviet cotton cloth is believed to be a move to offset long waits by merchants for deliveries of Lancashire cloth. Manpower difficulties are retarding the rate of production in Lancashire mills. Delivery dates quoted to merchants for some types of cotton cloth are often six to nine months ahead.—*All Rights Reserved.*

MODERNISATION OF TEXTILE INDUSTRY

MR. T. T. KRISHNAMACHARI ELUCIDATES GOVERNMENT'S ATTITUDE

ALTHOUGH quite a long time has elapsed since the Planning Commission clearly emphasised the need for modernising and rationalising the cotton textile industry, no marked progress has been visible in this direction. For, thanks to the unhelpful attitude of labour and the powers-that-be, the industry has not been able to discard its worn-out and outmoded equipment, 90 per cent. of which is said to be 25 years old, at the same pace at which such has been done by the other countries of the world with whom the Indian mills have to compete. With the emergence of the buyers' market for cotton textiles the world over, the industry is naturally concerned greatly with the problem of increasing its efficiency and thereby raising its competitive strength. Whenever, therefore, any spokesman of the cotton textile industry speaks today, one can with certainty expect a pointed reference to the question of rehabilitation. It is not surprising that Mr. H. P. Mody, one of India's leading industrialists and President of the Textile Association (India), pin-pointed this aspect of the industry's problems in the course of his address at the Textile Industry Centenary Celebrations, held at Bombay on Thursday last week. He thus said: "In an era of technological progress, it is essential for the textile, as it is for every other industry, to employ the latest equipment and processes and to produce as economically as possible. Anything that would stand in the way of this would, in my opinion be in the nature of a reversion to the bullock-cart economy in an age in which revolutionary changes are taking place from decade to decade." Mr. Mody was confident that the industry could greatly improve on the existing production if it were allowed to function with reasonable freedom to modernise and expand its output and maintain its productive capacity.

In administering this warning, Mr. Mody was evidently provoked by the way in which the policies of the Government have been interfering with the task of modernisation and rationalisation. Apart from the hurdles provided by the intransigence of labour leaders, the depreciation allowances permitted to the mills are not adequate, inasmuch as they are based, not on the actual replacement costs of the machinery and equipment, but on the historic or original costs. It is also alleged that the Government's policy in regard to imports of machinery is not conducive to speed up the rehabilitation of the industry. All millowners, however, do not share this view. The more enlightened among them concede that the domestic manufacturers of textile machinery deserve to be encouraged, provided they are prepared to produce high quality precision machinery, incorporating all the latest developments in the field.

Government's Attitude

The Government's attitude towards this problem was clearly elucidated by Mr. T. T. Krishnamachari, Minister for Commerce and Industry, in the course of his inaugural address at the Centenary Celebrations. Remarking that *it was a serious problem and that it was no use* casting the onus on the Government, he said:

"I may as well ask the industry, in turn, as to what it is going to do about it. I am quite prepared to discuss this question with both industrialists and labour leaders. As far as I can see, an important aspect of the question is that of surplus labour resulting from modernisation or rationalisation. But we should not forget that we cannot modernise overnight. For we have first got to find the money and the required machinery. In other words, rehabilitation takes time. It is a gradual process. Looked at thus, the problem of dealing with surplus gets relatively simplified. As a Minister, I have also to consider the labour's point of view. It is the fear of losing the job that explains the resistance of labour to modernisation. Labour also perhaps fears that any expansion may mean an addition to its work-load. Therefore, there must be some rational approach to this problem."

Mr. Krishnamachari's anxiety to protect the interests of labour is understandable, for a Minister in a democracy is more a politician than an administrator. He has always to look over his shoulders and see that nothing that he says or does affects his or his party's chances in the next election. But this cannot be the attitude of a brave politician who looks ahead and who is concerned not with the interests of a few vocal personalities representing only a fraction of the population but with those of the larger interests of the country as a whole. Mr. Krishnamachari realises the importance of modern machinery. He knows that, in the long run, it will be advantageous to the country, including the working class. This is evident from his observation that labour-saving devices were in the long run beneficial to labour and that labour had to depend on industrial expansion for increased production and for a rise in its own standard of living. Yet he does not seem to have the courage to act by his convictions, for, while he does not hesitate to lecture to the industrialists or to admonish them, he is not prepared to do the same thing to workers. All that he had to say to employers was that, "provided you can satisfy labour, you can go ahead with rationalisation."

This kind of empty statements do not take one very far. The financial limitations are such that the Minister is not far wrong in saying that rationalisation could not be effected within a short period. But the real point is whether or not circumstances demand speedy rationalisation. If the answer is in the affirmative, as it undoubtedly is in our opinion, then ways and means must needs be found to remove the obstacles in the way. It is the duty of the Government, of which Mr. Krishnamachari is a vital part, to co-operate with the industry to achieve this object. If the Government feels that the approach of labour to this problem is short-sighted, it must say so bluntly and cease pampering the workers. It is true that modernisation would lead to a displacement of labour, but this kind of unemployment would be of a frictional nature, that is, it would last only for a short period. It is common knowledge that no economic *malaise* could be cured without some pain to the affected parts of the economy. Fear of facing it would only result in perpetuation of the disease.

Shorter Working Hours

In the context of the need for higher productivity by labour, Mr. Krishnamachari threw out a suggestion for the consideration of employers. This suggestion aimed at shortening the hours of work and raising the number of shifts. "We can even think of four shifts of six hours each, *provided the increased cost is offset by higher efficiency and higher production* (italics ours). In a tropical country like India, a day of eight hours may mean only six hours of effective work." At the same time, he hastened to add that shortening of the hours of work should not lead to a corresponding reduction in wages. "For our labour, (basic) wages," in his view, "are deplorably low." This suggestion is not worth considering, because it is extremely doubtful whether a reduction in working hours would be accompanied by increased productivity to such an extent as to offset the increase in cost. Past experience does not support the theory underlining his suggestion. If the cotton mill workers were to do only six hours a day and get the same wages as those for eight hours a day, the rest of the community, which is working much longer hours than mill workers, would have to foot the bill.

There will be no two opinions that labour wages in the country are deplorably low, as compared with the standards in other countries. But what does it avail of to make such comparisons, except to encourage the workers to nourish a feeling of discontentment? The amount of wages cannot stand at a level which is beyond the capacity of the rest of the community to bear. Even as it is, a part of the wages which the mill worker gets is being borne by the cotton grower who toils the whole day, from sunrise to sunset. As all those who are intimately connected with the textile industry know full well, the industry would not be able to pay the present level of wages but for the control on cotton which is keeping the prices of the raw material at well below the world levels. The industry will, of course, be in a position to pay somewhat higher wages, provided it is allowed to install labour-saving devices such as automatic looms. But neither the Government nor the labour leaders are willing to agree to such a procedure. Surely, Mr. Krishnamachari must be aware of these elementary facts of the problem. It is a pity, therefore, that he too has chosen to talk in the same vein as some of his colleagues in the Cabinet who are ignorant of them.

Handloom and *Khadi* Industry

Mr. Krishnamachari's reference to the handloom and *khadi* industry was sentimental and candid. It reflected a sense of helplessness on his part. In a way, it was also in the same vein as the one on the subject of rehabilitation. Speaking about *khadi*, for instance, he said:

"The problem of *khadi* is well known. *Khadi* could never replace the handloom or the mill industry. *Khadi* was only intended to put a little more money into the hands of the people who needed it and who did not have enough work to do all through the year, a sort of a supplementary source of income. We, as a Government, want to believe in this theory of the Father of the Nation. We, as a Government, tried to take away, to some extent, the political significance and stress the economic importance of *khadi*."

The foregoing statement of the Minister will be correct, even partially, only if *khadi* is being actually produced in villages by those who need part-time employment. One should like to know whether that is really so.

Stressing that mills and handlooms were complementary to each other, the Minister observed:

"It does not seem possible that the handloom can produce all the cloth needed, but, all the same, it has to stay, for it provides employment. If the handloom weaver is being kept alive, the mill interests ought not to think that we are trying to harm them. Similarly, it is wrong to say that the mills should be closed down to help the handloom industry. I want you, on this occasion, to think kindly of the handloom and khadi *industries, so* that the *conflicts may* not be there any more."

These are frank observations indeed. But there is no place for sentiment in economics and business. We do not know in what way the mills can help the handlooms. We wish Mr. Krishnamachari had been a little more businesslike and indicated the specific lines on which the mills can improve the utility of the handloom sector. Further, the appeal is rather out of place, for, as everyone knows, it was not the mill industry that started the controversy but the protagonists of the handlooms who wield enormous power. The Minister must, therefore, direct his appeal to the latter and dissuade them from subjecting mill-made cloth to penal rates of taxation. If he fails to do so, he has no moral right to continue the restrictions on the production of *dhotis* and *saris* by mills.

Analysing the prospects for the expansion of the cotton textile industry, Mr. Krishnamachari made a few interesting observations. He said:

"There is enough scope to raise the per capita consumption of cloth from 15 to 20 yards. ... Not merely clothing needs but other indications of a better standard of life require more cloth. Bedclothing, curtains, towels, etc., *mean* additional requirement of cloth ... the target of 7,200 million

AUDITORS' REPORT TO THE SHAREHOLDERS OF THE TRAVANCORE BANK, LTD.

We have audited the Balance Sheet of the Travancore Bank, Ltd., as at 31st December, 1953, and the Profit and Loss Account for the year ended that date as above set forth, with the Books of Account at the Head Office and the certified returns received from the Branches of the Bank and have obtained all the information and explanations we have required, which were found to be satisfactory.

In our opinion, such Balance Sheet and Profit and Loss Account are drawn up in conformity with the Law and the Balance Sheet exhibits a true and correct view of the state of affairs of the Bank as at 31st December, 1953, and the Profit and Loss Account shows a true balance of profit and loss for the period covered by such account according to the best of our information and the explanations given to us and as shown by the books at the Head Office and the certified returns from the Branches.

We are further of the opinion that the Bank has maintained the Books of Account as required by Section 150 of the Indian Companies Act, 1913, the transactions of the Bank which have come to our notice are, in our opinion, within the powers of the Bank and the certified returns received from the Branch Offices of the Bank have been found adequate for the purposes of this audit.

FREIGHT RATES ON SUGARCANE TOO HIGH

SUGAR MILLS URGE FOR REDUCTION

ONE of the important resolutions adopted by the Indian Sugar Mills' Association at its recent annual general meeting at New Delhi related to the revision of freight rates on sugarcane supplied to the mills. The resolution assumes special significance in the present context of the *imperative need* to step up output of sugar, on the one hand, and to bring down cost of production, on the other. It will be recalled that the Railway Board enhanced, with effect from July, 1953, the basic freight rate on cane from 0.25 pie to 0.33 pie per maund per mile. It also withdrew the concession of a minimum charge of Re. 1-12 per ton applicable up to a distance of 49 miles. In addition, the Board levied a terminal charge of one anna per maund on the basis of half an anna each at loading and unloading stations.

This is the second time that an upward revision in freight charges on cane has been effected. It was only in October, 1948, that is, when the entire structure of freight rates of Indian railways was standardised, that the Railway Board increased the freight rates. Thus, as against the previous rate of 5½ pies per maund, the basic freight rate was fixed at 0.25 pie per maund per mile, subject to a minimum charge of Re. 1-12 per ton up to a distance of 49 miles. On this basis, the actual incidence of freight worked out to 21 pies per maund, as against 5½ pies prevailing before October, 1948, which represented a rise of as much as 282 per cent. As though this was not enough, the freight rates were raised further, as already stated, in July last year.

The upward revision in freight rates on cane has led to a further rise in the cost of sugar production. Taking average freight rate of As. 2-9 (that is 33 pies) per maund of cane into account and assuming that the aggregate quantity of cane crushed by sugar mills in India during the current season would be 12.0 million tons, the total amount paid by way of cane freight may be estimated at Rs. 5.63 crores, which is several crores of rupees larger than what the factories had been paying prior to October, 1948. Considering the heavy incidence of taxation under which the sugar industry is already groaning, not to speak of the high level of sugarcane cost, it is, indeed, unfortunate that the Railway Board should have enhanced the freight rate on cane, the predominant raw material of the sugar industry, thus ignoring the fundamental need for reducing the cost of sugar manufacture, which is high in all conscience. The Indian Sugar Mills' Association has done well in urging the authorities to revise the freight rates in a downward direction. This was also one of the aspects which Mr. D. R. Narang, the Association's President, chose for special comment in the course of his address at the last annual meeting of the Association. Mr. Narang cited some figures to explain how the revised freight rate on cane introduced in July, 1953, had a restrictive effect on sugar production. According to his calculations, the actual incidence of the new rates, which include the terminal charge of one anna, works out, on an average, to As. 2-9 per maund of cane which represents an increase of 62 per cent. and 500 per cent. over the rates prevailing in July, 1953 and September, 1948, respectively. Further, as a result of the discontinuance of the minimum rate up to 49 miles, the difference between the old and the new rates rises with the increase in distance. On the Northern Railway, for instance, the difference between the two rates varies from 51 per cent. for a distance of 20 miles to 130 per cent. for a distance of 49 miles. The following table indicates how the revised freight charges on sugarcane affect stations situated at various distances from the sugar mills.

Comparative Statement of Railway Freight per Wagon of Sugarcane

(One wagon=21 tons)

Distance in miles	Rate per wagon as prevailing in Sept., 1948	Revised rate per wagon in October, 1948	Increase percentage over Sept., 1948	New enhanced rate per wagon from 1st July, 1953	Increase percentage over Sept., 1948
	Rs. a.	Rs. a.		Rs. a.	
1 to 20 ..	11 4	37 0	229	58 0	398
21 to 24 ..	11 4	37 0	229	59 0	424
25 ..	11 4	37 0	229	62 0	451
26 to 27 ..	12 6	37 0	199	62 0	401
28 to 29 ..	12 6	37 0	199	65 0	425
30 to 33 ..	12 6	37 0	199	66 0	449
34 to 35 ..	12 6	37 0	199	70 0	466
36 to 37 ..	13 8	37 0	174	70 0	418
38 ..	13 8	37 0	174	75 0	441
39 to 42 ..	13 8	37 0	174	76 0	468
43 to 46 ..	13 8	37 0	174	79 0	485
47 to 48 ..	13 8	37 0	174	82 0	507
49 ..	13 8	37 0	174	85 0	529
50 ..	13 8	38 0	181	85 0	529

The foregoing table clearly shows at a glance the extent of increase in freight rates. In view of the increase, the sugar mills are said to have been compelled to confine themselves, as far as practicable, only to cane delivered at the gates. For the crushing of cane supplied from distant areas has become an "uneconomic proposition"; the sugar produced out of cane supplied, say, from areas lying at a distance of about 49 miles from the mills, is about Rs. 2-9 per maund costlier than that produced from gate cane and about Re. 1-0-6 costlier than that produced from cane obtained from a range of 30 miles or within. The natural propensity of the industry under conditions thus created would be to confine its crushing only to cane grown in adjacent areas and to leave the cane in distant centres uncrushed. The repercussions of the increased freight on sugarcane is thus very detrimental to the interests of the country, as it will very adversely affect sugar production owing to the purchase of cane becoming prohibitive beyond a certain range. Alluding to this point, Mr. Narang stated:

"It will be realised that the availability of rail cane to the factories is an important factor in determining the quantum of production. Gate cane is normally available to them; but they can augment these supplies by drawing cane from distant places and by opening new centres. But this is possible only if the crushing of rail cane is not uneconomic. The increased freight charges also adversely affect the growers at out-stations. Therefore, in a matter of this kind, the Railway Board should not have been guided by mere revenue considerations or by the conditions obtaining in other commodities regardless of the peculiar conditions of the sugar industry and the interests of the millions of growers involved. Moreover, at a time when the country is required to import sugar from foreign countries, any step which restricts production is not in the national interest."

CANEGROWERS' SHARE IN SUGAR INDUSTRY'S PROFITS

Our leading article on sugarcane prices, published in our issue of 20th February, 1954, has evoked one more reaction. Thus, in a letter to us, Mr. M. R. Morarka of the India Sugars and Refineries Ltd., Hospet, observes as follows:

"I have read with interest your thought-provoking leader on the above subject in the issue dated 20th February, 1954. The points made in it have great validity in the present context.

"While on this subject, I wish you had examined the solution proposed in the form of a profit-sharing formula, by the South India Sugar Manufacturers Association. I feel strongly that the principles embodied in it are fraught with grave possibilities and should be actively discouraged before it is too late.

"The first difficulty is, of course, that, while sugarcane prices are already very high (either on the basis of the cost of production of the sugarcane, or the comparative returns got on other crops in the country), the formula seeks to give an additional price for the cane while *guaranteeing* to the ryot the minimum notified price. This policy of 'heads you win, tails I lose' will stand against any lowering of the price of sugar to the consumer.

"Secondly, the formula takes no notice of the fact that the average sucrose contents of sugarcane vary from region to region, and to pay a bonus based almost on the lowest sucrose content cane in the country would be manifestly unfair to everyone concerned.

"Thirdly, the bonus is paid in the area of a factory to all growers on the same basis, so that a producer of inferior cane gets just the same as one who produced the best grade.

"Fourthly, the formula assumes that *all* the efficiency in sugar-recovery is due to the cane and that the sugar manufacturer does not contribute to the efficiency of production. This trend, if encouraged, puts a premium on inefficient-crushing mills, for whatever advantages the more efficient units get by increased diligence and industry are taken away by means of a penalty in the shape of correspondingly increased raw materials costs. The formula apparently proceeds on the assumption that 9.6 per cent. is the ideal recovery figure. It is easy to visualise that, if this is accepted generally, every sugar mill will, in its own interests, so work as to achieve only this recovery and lose any interest in getting higher recovery.

"But the biggest drawback of all is that the cane price each season is linked both to the recovery and the average sale price realised by the factory. It is not difficult to understand that, therefore, each sale invoice of the company is subject to examination and challenge by the ryots. Not only will sugar mills lose whatever latitude they have in adjusting their sales, not only will sales to nominee middlemen be encouraged to defeat the effect of the formula, but also a foundation will be laid for perpetual quarrels between the ryots and the sugar factory on this score. In fact, the formula will create more problems than it seeks to solve.

"Already, the accounts are now critically scrutinised by sales tax and income-tax officials, labour leaders and shareholders. To add one more group of persons to this long list will make sugar manufacture the most thorny occupation in the country.

"I should like to see it suggested that the price to be paid for cane should be arrived at after renewed enquiry as to the costs of producing it and, in the context of falling prices of other commodities, I should like to see it suggested that, by carefully controlled imports, the price of sugar should be influenced downward so as to maintain a proper level in comparison to other foodstuffs. And I should like to see it suggested that tall talk about providing incentive to canegrowers by pampering them and allowing them to hold poor consumers at ransome should be deprecated.

"There are a hundred other arguments against the proposal, notwithstanding the 'theoretical' proposals attributed to Dr. Van Dillewijn (who at most only recommended a *trial* in paying for sugarcane by rendiment value and maintained a meaningful silence over paying on sale price realisations), even as there are arguments in favour of evolving a practical and workable formula which will include a small factor to provide incentive for attention to quality. But these must be canvassed and examined carefully by a competent committee, before doctrinaire theorists are allowed to have their way."

SUGARCANE PRICES

The extra payment of As. 4 per maund for sugarcane supplied by the growers to the sugar mills in Western Uttar Pradesh, as suggested by the Central Government, does not in any way prejudice the general scheme of profit-sharing which will also be applicable to factories in Eastern Uttar Pradesh. This was the view expressed by Dr. P. S. Deshmukh, Union Minister for Agriculture, in the course of his reply to a question in the House of the People the other day. According to the Minister, the amount so paid to the sugarcane growers in Western Uttar Pradesh would be adjusted against the year's share of extra profit which may eventually be fixed for the cane-growers of the factories concerned and does not involve an increase in the statutory minimum price of cane. Pending finalisation of the scheme for profit-sharing, the incidence of additional payment of As. 4 per maund of sugarcane is likely to result in cane-growers supplying more cane to sugar factories and the Central Government agrees to the proposal of the factory representatives. As most of the factories in Eastern Uttar Pradesh and North Bihar have already closed down for the season, the procedure followed in the case of Western Uttar Pradesh factories has not been made applicable to them.

THREE NEW SUGAR FACTORIES FOR MADRAS

The Central Government has granted licences for the establishment of three new sugar factories in Madras State. This information was given by Dr. N. Krishna Rao, Madras Minister for Industries and Labour, in the State Legislative Assembly last week. Of the three units, one factory with a daily cane crushing capacity of 800 tons will be established at Pettavathalai in Tiruchirapalli district. The other two units will be established at Namakkal (Salem District) and Tiruvannamalai (North Arcot District). The daily cane crushing capacity of these units is 600 tons and 400 tons, respectively.

WORLD COAL STATISTICS

SHARP DROP IN OUTPUT

THE trend of world production, consumption and exports of coal since 1951, the most active year in the history of coal, has been downward. According to a Press version of the latest monthly bulletin of statistics of the United Nations, just released to the public in New York, the world output of coal dropped from 1,475 million tons in 1951 to about 1,445 million tons in 1952, the latest year for which statistics are available in full. An analysis of the trend of production discloses that there was some increase in the output of coal in the non-North American countries, but this was more than offset by a sharp drop in the output in North America. Thus, the output of coal of North America was 470 million tons in 1952, as against 535 million tons in 1951, a drop of 65 million tons. Consumption in that region was lower by 50 million tons at 451 million tons.

The main factor responsible for the decline in output was the strike in the United States steel industry in the middle of 1952. The "dieselisation" of railways and the rapid extension of natural gas networks were also contributory factors to the decline in the output of coal. Improvements elsewhere in the coal situation, especially in Europe, as a result of the incentives given to increase output, led to further cuts in the import of United States coal in 1952.

Consumption of coal, generally, in the non-North American world either increased slightly or was held in 1952 at the previous year's level. Inland consumption of coal outside East Europe and the Soviet Union, the mainland of China and North America in 1951, the latest year for which full data are available, aggregated 1,146 million tons. Of this, eight million tons were consumed in industry and/or converted into coke.

The relative rates of changes in production and consumption in 1952 disclose that Latin America, Oceania, and Western Europe were able to reduce their net imports of coal significantly; in fact, the latter two areas were able to increase, at the same time, their stocks of coal appreciably.

The total international trade in coal and briquettes in 1952 was 120 million tons, as against 127 million tons in 1951, a decline of seven million tons. Of these, shipments between countries within the same region accounted for 84 million tons. Another eight million tons moved out of East Europe and the Soviet Union to West Europe. Exports of coal from North America were lower by about 10 million tons.

REVISION OF STOWING POLICY

Reports from Calcutta indicate that the Coal Board has revised its stowing policy. In response to a request from collieries in the Jambad-Kajora and Jharia coalfields for clarification of the policy regarding stowing, the Coal Board has declared that it would confine itself hereafter to rendering assistance in the installation of stowing machinery through loans and subsidies, thereby absolving itself of the liability to supply stowing materials. It is stated that the Board has expressed its inability to supply stowing materials because of non-availability of sand in sufficient quantities and various other financial and administrative difficulties. It has asked the collieries to carry on stowing with materials other than sand that will be available easily and in sufficient quantities at the site of collieries themselves and change the method of stowing in such a way as would be suitable to the peculiar conditions of the collieries concerned.

The Coal Board has also shifted the responsibility, from its shoulders, for carrying out protective works against fires and other accidents primarily on to the collieries themselves. It has declared that, generally, protective works should be undertaken by the collieries themselves. The Board would, however, assist the collieries to the extent of 75 per cent. of the actual cost, subject to a maximum assessed on the basis of contract rates for protective works, where stowing, blanketing or other kinds of protective works are involved. In other cases of stowing, blanketing and trench cutting, where there is no extraction of coal, the Board would bear 85 per cent. of the actual cost, subject to a maximum assessed on the basis of contract rates for protective works. The full cost of protective works will, however, be borne only in exceptional cases or where no colliery exists.

The reactions of the colliery interests to this proposal are not yet available to us. But it is obvious that colliery owners would be critical of the Coal Board absolving itself of the responsibility of supplying stowing materials and shifting the burden of responsibility for carrying out protective works against fires, etc., primarily on themselves. Few will, however, deny the need for practising stowing with materials other than sand which are available very near the collieries concerned. For stowing by sand is very costly. The cost of transport of sand is so heavy that, at times, it makes stowing totally uneconomic. Sand is mostly available at river beds and the sand used for stowing is replaceable only by floods. The rate at which it can be replaced is beyond human control. This explains the cause for the shortage of sand in sufficient quantities.

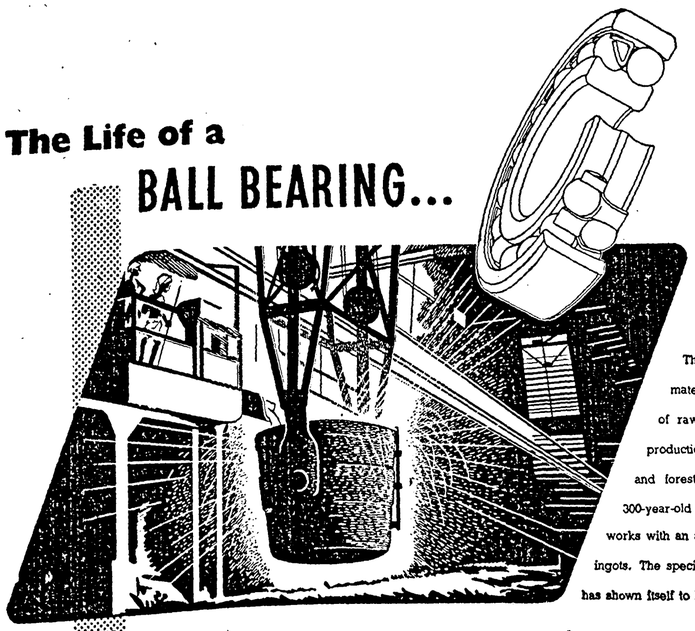
PEGGING OF METALLURGICAL COAL

The Coal Board has warned the collieries producing metallurgical coal against exceeding the ceilings fixed for the year 1954 in anticipation of the Board's approval. This is a sequel to an appeal by 100 out of the 197 collieries (for which targets are fixed) for an increase in their individual targets. It is stated that the targets fixed represent the maximum quantity that could be allowed on the basis of the overall production ceiling for each grade of coal prescribed by the Government of India for 1954.

The warning is timely. This will avoid the recurrence of an unpleasant situation that occurred last year in the case of certain collieries which exceeded their targets, in anticipation of sanction of the Coal Board. But, as sanction was not given, the collieries had to close their working during the end of the year for two to three months, leading to labour unrest and other avoidable consequences. There is, however, another side to this picture.

It is pointed out that, during 1952, the output of metallurgical coal fell short of the overall target of 7.9 million tons for selected grade coking coals by 200,000 tons. The cut in 1953 also fell short of the overall target of 7.86 million tons by 690,000 tons. It is stated that this was because targets in the case of certain individual collieries were fixed at levels which they could not reach. In other words, the officials concerned did not exercise sufficient care while fixing the targets for these collieries. Before fixing the target for a colliery, care should have been taken to see whether it was in a position to reach the target. In any case, while disposing of the appeals for an increase in target, the Coal Commissioner should take into consideration the progress made by other collieries and, if he finds that the overall target for the industry as a whole will not be reached as a result of some falling behind their individual targets, permission may be given to others to raise their output to the extent necessary to cover the gap.

The Life of a BALL BEARING...



...and the material used

The life of a ball bearing depends mainly on the material from which it is made. To ensure the supply of raw material and obtain control over the steel production, SKF acquired Hofors Bruk with its mines and forests, in 1916. Under SKF's management this 300-year-old works has developed into a modern steel works with an annual output exceeding 150,000 tons of steel ingots. The special ball-bearing steel produced at Hofors Bruk has shown itself to be unequalled.

EXPANSION OF MARKETS FOR JUTE GOODS

SUCCESS DEPENDS ON THREE FACTORS

FROM the point of view of exports, 1953 was a disappointing year indeed for the Indian jute industry. For the total exports, at 743,100 tons in that year, were more or less the same as in 1952 at 743,800 tons, although the year under review witnessed two substantial reductions in export duties on both sackings and hessians. The position would have been "disastrous had it not been," as was pointed out by Mr. G. J. Gardner, Chairman, Indian Jute Mills' Association, Calcutta, in his presidential address delivered at the annual meeting of this body held on the 15th inst., "for the fortuitous aid given by the great revival of demand from Argentina." This disappointment in the field of exports would appear to have prompted Mr. Gardner to look at the performance of the industry during the past few years, and here, too, he was disappointed. For he observed: "When production and commodity movements have been at extremely high level, it has been difficult for the Indian mills to sell, even at a loss, the reduced production which is turned out by the industry, working only 42½ hours per week and with 12½ per cent. of the looms sealed, and this, at a time when jute goods have compared most favourably with those of other fibres and commodities entering world trade." If thus the industry was not in a position to enjoy prosperity even during a boom, it can hardly be expected to survive a depression. Mr. Gardner's conclusions in this context are disquieting indeed. He observed:

"The repercussions of a depression or even a sharp recession on the offtake of jute goods in foreign markets and, in turn, on the level of activity of the mills, would be of a nature to cause the gravest misgivings about the ability of the industry, or at least a substantial section of it, to survive."

In order to meet this fundamentally weak situation, Mr. Gardner called for collective action. He thought that the first objective should be retention and expansion of the existing markets for jute goods. As readers are doubtless aware, the I.J.M.A. has already been making vigorous efforts to reach this objective. Explaining these briefly, Mr. Gardner stated that in 1953 a good deal of publicity was given to the propaganda campaign initiated by the I.J.M.A. in the U.S. in 1952. Delegations were sent to Australia, New Zealand and Singapore. In America nearly $110,000 were spent last year, and it is now learned that activity on a similar scale will be undertaken this year. The campaign is stated to have attained its object of emphasising the natural advantages of burlap to the final consumer, particularly in farming areas. According to Mr. Gardner, the activities in America have been "well worth the money" and, therefore, it is felt essential that they should be continued.

But propaganda alone will not solve the problem of the jute industry, namely, competition from other jute goods producing countries in markets formerly served by Indian mills. This most serious threat is, as was stressed by Mr. Gardner, from Pakistan, where ready access to high quality raw jute, the use of the most modern equipment and favourable labour laws make a formidable combination. There are, besides, the established jute industries in the U.K. and on the Continent, many of which, through rationalisation and installation of modern machinery, are now highly efficient. In order to fight this threat, Mr. Gardner suggested three important remedies.

Quality Raw Jute

The first of these remedies relates to the supply of quality raw jute in ample quantities. Although the mills have not experienced any acute shortage of raw jute, the fact is that there has been a drastic fall in output. This fall indicates the dangers inherent in a too rapid expansion of jute cultivation without due regard for such vital factors as yield, quality and suitability of area. Mr. Gardner's observations, in this connection, are quite appropriate. He said:

"According to official figures, the jute crop of India fell from 46 lakh bales in 1952 to 31 lakh bales in 1953. The greater part of this reduction is admittedly due to the abandonment of large areas of marginal lands whose use for jute cultivation can be justified only at an exorbitant rate for their crops. Their disappearance in the more realistic price levels existing today is, therefore, economically desirable. From the point of view of the industry, however, it is dangerous that there should be such fluctuations in the production and the cost of the basic raw material, since this must cause equally undesirable fluctuations in the price of manufactured goods. Equally, from that of Government, the effects on the cultivators of this large movement in jute production and prices are serious and to be avoided. It is satisfactory to observe that the agitation which at one time was very vocal for the fixation of prices by law has died down. The industry and all concerned had bitter experience, as recently as 1950 and 1951, of the inevitable results of any attempt to determine prices by this artificial means and no one desires a repetition of those disastrous times. In the view of the industry, whose stake after all in this matter is vital, the only way of dealing with this problem is to get down to essentials, and to embark on a vigorous campaign through the State agricultural organisations and other channels to ensure that the cultivation of jute is concentrated in areas which are capable of producing high quality, and that every assistance is given by Government in these areas in stimulating the production of high yielding crops of good quality. I am glad to say that the Report of the Expert Committee on the Quality of Jute was much in accord with these proposals and the Association now sincerely trust that, having been accepted by Government, every effort will be made to implement their recommendations at an early date. It is vitally necessary for the jute mill industry, in this country, that the production of quality jute should be expanded and not less important that the yield obtained should be sufficient to provide the cultivator with an adequate return for his labour. We, in the industry, believe that this can be done more satisfactorily by the types of assistance to which I refer rather than by the dangerous degree of interference with the movement of the crop and encouragement to malpractice which any attempt at legislative control of prices involves."

Centre's Aid

That those in authority responsible for the encouragement of quality jute are aware of the problem of encouraging quality jute on the right type of lands is evident from the address of Mr. K. R. Damle, Additional Secretary, Union Ministry of Food and Agriculture, at the meeting of the Governing Body of the Indian Central Jute Committee held at Calcutta on the 17th inst. He said that, in future, stress would be laid more on improving the quality than on increasing the quantity of raw jute, and on stepping up the yield per acre. As this depended on the supply of good seed, there was need, he said, for the jute-growing States Governments to go ahead with the work of setting up seed production farms towards the cost of which the Centre had already sanctioned the necessary finances. He considered that as a corollary to the establishment of seed multiplication farms was the enactment of necessary legislation to empower the State Governments to get growers in the protected areas to utilise the improved seed from the seed farms and spread its use. Apart from the improved seed, provision of adequate retting facilities was also important, he said, to improve the quality of jute. Here too the Centre had allocated to State Governments the necessary funds for the construction of new, and the re-excavation of old, silted-up tanks for retting. In view of the importance of line-sowing, the Centre had also undertaken to purchase, for the State Governments, 1,000 each of jute seed-drills and wheel-hoes. The first consignment is expected to be delivered to the Governments this week.

These remarks of Mr. Damle suggest that an effective solution to the problem of encouraging good quality jute rests with the Governments of the jute-growing States. Past experience does not encourage one to believe that State Administrations are alive to the problem. Something effective must be done to shake off their complacency and get down to the job.

Prices of Raw Jute

While on the subject of raw jute, it is necessary to draw the attention of the authorities to one more pertinent view of Mr. Gardner on raw jute policy of the Government. He states that the industry should not be compelled to subsidise an inefficient agriculture or be forced by Government policy to pay prices which are out of line with supply or with the levels at which the world markets are prepared to take jute goods. It is needless to add that every effort should be made to avoid such a contingency, as it is only then that the industry will be free to compete with jute mills abroad which have access to high quality jute grown in Pakistan.

The second remedy suggested by Mr. Gardner concerns modernisation of the jute industry. As there is some difference of opinion on this question, Mr. Gardner's views needs to be quoted in full. He remarked:

"The Association and Government are at one in their desire to ensure that the technical equipment of the jute mills in this country is, and shall be, as advanced as anywhere else. This is a question on which it sometimes appears there is misunderstanding. I have seen Press comments from which one might get the impression that the whole of the mills here are completely obsolescent and that nothing short of full re-equipment can enable them to produce competitively. This, of course, is utter nonsense. There has already been a considerable degree of modernisation of preparing and spinning machinery which are, broadly speaking, the only parts of conventional mill processes in which any substantial advance in design has taken place. Approximately, one-sixth of the finance required for this purpose has already been provided and most of the machinery so purchased has been installed. Bearing in mind the size of the Indian industry, the very large number of units to be dealt with and the limitations in the output of machinery makers, this is a considerable achievement. It is one, moreover, which has been financed by the mills entirely out of their own resources. The mere physical task of re-equipping the remainder of the industry is a massive one, and it is thought it will take from 10 to 15 years to complete. The more immediate problem, however, is that of finance, for the inroads of taxation and the effects of several years in which the industry has gone through lean times make it impossible for some units to contemplate modernisation without external financial assistance. I am glad to say that the Government of India have, in informal discussions with us, given us hope that a practical scheme can be devised to secure long-term loans for such mills as require this form of help. The Association's finalised proposals will shortly be submitted to Government for consideration. I think I should add that, while everyone admits the desirability of modernisation, it is entirely wrong to get the impression that the balance of the industry which is not modernised is inefficient. Jute mill maintenance is of a very high order and the main difference between a modernised mill and one running with the older preparing and spinning machinery is that the former can, if it is so permitted, take advantage of the considerable labour economies which follow from the smaller degree of manual supervision required in the new machines. To achieve this reduction in personnel, however, presents under present conditions very great practical difficulties and this leads me on to the question of labour policy."

Labour Policy

Alluding to labour policy, Mr. Gardner tried to remove the belief that jute mill workers were badly paid. He pointed out that the wage structure of the industry had been the subject of public review twice in recent years. The basic pay and dearness allowance had been increased and, since the Tribunal award, the industry had had to face heavy additions to its wage bill as a result of the Provident Fund Act, the Employees' State Insurance Act and new sections of the Industrial Disputes Act. "We do not cavil at this, nor do we begrudge our operatives the greater prosperity which is now theirs," declared Mr. Gardner, and added: "We accept it as right and proper that they should be freed of the worries of want and uncertainty as to their future. We wish them to be as well paid as the industry can afford but—and this is a big but—we cannot give away money which we do not earn." His experience of productivity of jute mill workers appears to be not quite different from that of others in other industries. For he regrets that "the vastly better service conditions now prevailing should not have stimulated amongst all sections of the operatives that greater measure of productivity which could easily be attained and which would in itself do much to enable a hard-pressed industry to lower its overall costs."

Referring to the specific issue of labour rationalisation, Mr. Gardner stated that the industry was still suffering from the presence of excess labour engaged of necessity during the war years. Unfortunately, the industry was unable to reduce the number of workers employed, which should necessarily follow installation of modern machinery. Mr. Gardner was of the view that this reduction must come about, if the industry's economic efficiency were to be maintained. He, however, hoped that, as far as possible, it would be done by natural wastage.

SEED MULTIPLICATION FARM AT BURDWAN

The Agricultural Research Sub-Committee of the Indian Central Jute Committee, which met in Calcutta on the 13th inst. with Mr. K. R. Damle, I.C.S., Additional Secretary, Union Ministry of Food and Agriculture, in the chair, decided to take advantage of the current jute sowing season in the setting up of a nuclear seed multiplication farm under the I.C.J.C., as recommended by the Quality Expert Committee of the Government of India. With that end in view, arrangements are being made to secure a 200-acre block of land at Panagarh, Burdwan, from the Ministry of Defence, Government of India.

The Sub-Committee also recommended that the Government of West Bengal be approached to make available to the I.C.J.C. 50 acres of low land adjoining the Jute Agricultural Research Institute Farm at Nilgunge, Barrackpore, so that the Institute can carry out rotational and double-cropping experiments with jute and paddy.

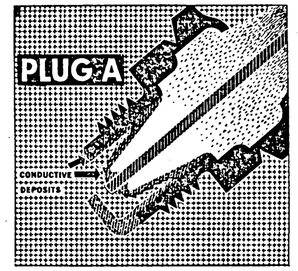
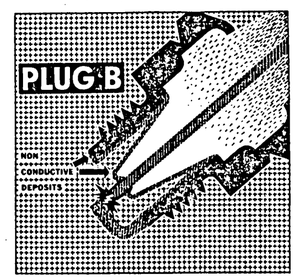
foul play!
a tale of two sparking plugs



Here's the secret sin of plug A. The lead deposits on the porcelain are electrically conductive. The electrical charge short-circuits across the porcelain, missing the spark gap where it should belong. This plug will not fire the fuel/air mixture.



This plug defies its lead deposits—because the additive I.C.A. (incorporating tricresyl phosphate) in Shell and B.O.C. petrol has made those deposits non-conductive. The result: a fat spark where it belongs, at the right time; full power from burning of fuel/air mixture.
That is I.C.A. (Ignition Control Additive)
Would you believe it?
We heard the other day of a motorist who thought that he had to buy I.C.A. separately and put it in his petrol, in the same way as upper cylinder lubricant can be added. This, of course, is not the case. The petrol you buy at Burmah-Shell sales points *from Shell and B.O.C. pumps* already contains I.C.A. It is added *at source*, which means that you get all the benefits of I.C.A. *at no extra cost*.

WORLD STEEL INDUSTRY

LOWER RATE OF INCREASE IN OUTPUT LIKELY

NOW that India has embarked upon a programme for increasing its steel-making capacity, the importance of gaining knowledge of conditions of the world steel industry needs no emphasis. Further, steel is the key metal for all sorts of activity, especially for the engineering industry. An account of the performance of the world steel industry in 1953 and the prospects for 1954 will, therefore, be of great interest to business men in this country. According to the latest information available, the world steel production reached in 1953 a record total of 230 million tons. an increase of 22 million tons or 11 per cent. over the 1952 total and nearly twice the 1937-38 average. The production of steel in many of the European countries, however, fell appreciably or stagnated, while that in the U.S., the U.K. and the U.S.S.R. continued to increase and attained new record levels.

On the face of it, this performance of the steel industry appears to be encouraging. But, as the latest monthly *Bulletin* of the British Iron and Steel Federation points out, the figures are misleading, to some extent, since the large increase reflects mostly the recovery of loss of American production in 1952 rather than "the growth of requirements" in 1953. It may be noted here that, owing to a labour strike, the loss of steel output in the U.S. in 1952 was about 17 million tons. In fact, for the first time since early 1950, signs of oversupply in the world at large began to make their appearance last year. During the earlier months of the fear, the trend of output was definitely upwards, as the backlog of demand was large. But, once the arrears were eliminated by the summer of 1953, the rate of steel production fell. Consequently, the *Bulletin* of the Federation holds that it was "an unusual set of circumstances which raised world production to so high a level as 230 million tons." The world output would have, it is stated, increased had there not been a decline of 5 per cent. in the output of the European Coal and Steel Community induced by the fall in demand.

Changing Balance of Production

Referring to the prospects for the world steel industry, the *Bulletin* observes that while the world total rose by 77 million tons between 1948 and 1953, during the next five years—1954 to 1959—it is not expected to grow much more than 48 million tons to 278 million tons, subject to unforeseen contingencies. Thus, the expansion in the next five years is anticipated to be at a slower pace than in the past five years. Regional forecasts of production in 1948, based on the plans for expansion published by individual countries, demonstrate the changing balance of production between East European countries and the rest of the world. The former, comprising more than a tenth of the world's population, is expected to account for nearly a quarter of the world's steel output in 1958, as compared with just over one-fifth in 1953, while the share of the U.S. may decline slightly. The U.S. has now completed its major post-war expansion programme and possesses 111 million tons of steel-making capacity, probably more than sufficient to meet the needs of the immediate future. The U.K. has fixed a target, under the second development Plan, of 20.5 million tons to be reached by 1958. The target of the European Coal and Steel Community is 49 million tons.

East Europe and Russia are also planning to expand their production. The U.S.S.R. hopes to produce 44 million metric tons in 1955 and 60 million in 1960; the production in 1958 is expected to be about 52 million tons. The satellite countries have also plans to increase their collective output to 11.89 million tons by 1958. The newer producing countries of the Commonwealth are, in some cases, still in the process of completing expansions, planned some years ago, but further extension of existing plants are likely with the growth of national income and it seems probable that, by 1958, the Dominions will be producing in the aggregate 11 million tons. There are expansion plans in Latin America, too, where an aggregate increase of one million tons by 1958 is not unlikely.

In the inter-war years, Europe enjoyed the lion's share of overseas markets, accounting as it did for 80 to 90 per cent. of the total world exports. In the immediate post-war years, its share is again approaching the pre-war level. The report of the Economic Commission for Europe on the European Steel Market in 1953. published recently and priced at $.07 (U.S.), indicates that competition from the U.S. for export markets may increase in force in the coming years. The development of steel production in the U.S. both on the Eastern seaboard and on the West coast, has put producers in a better position to compete, especially in South and Central America as well as in the Far East. If Europe were to retain its position as the dominant exporter, then it should, the report opines, aim at greater efficiency and reduction in prices through lower costs.

Price policies constitute the most important factor that determines the trend of exports. Unfortunately, until now, there had been reluctance on the part of European producers to consider the possibility of arranging long-term contracts for supply of steel to overseas countries on the basis of stable prices. In fact, according to the E.C.E. report, the European steel industry had probably stimulated to a certain extent the growth of steel production in overseas countries by following a short-sighted policy of charging the maximum that the market could bear in times of high demand. An inevitable outcome of such a policy is low and uneconomic prices in times of surplus. In view of this, the report emphasises that "a policy, which shows a willingness to stabilise supplies and prices in good times is of major importance as a means of maintaining and developing overseas exports."

Market Research

Market research also appears to have been seriously neglected by the European steel industry. In export markets especially, there appears to be scope for improving the information available to steel exporters and for more positive sales promotion both by commercial means and by the organisation of technical advice to steel users.

The prospects for achieving a substantial and growing volume of international trade in steel depends, in the first instance, on the general economic policies of both exporting and importing countries. The demand for steel is closely related to the level of economic activity of steel importing countries. Steel imports, for instance, are influenced by development projects in importing countries and these projects, in turn, are partly dependent on the investment of capital by the more industrialised countries together with mobilisation of domestic capital. A further factor is the growth of steel-making facilities in those countries which have been traditional importers. But these are all factors which are, to a great extent, unpredictable. Herein lies the snag in indicating the prospects for steel exports with any degree of accuracy.

KHANDWA-HINGOLI RAIL LINK

CONSTRUCTION INAUGURATED

THE inauguration of the construction of the 187-mile Khandwa-Hingoli rail link on the Central Railway by Mr. Lal Bahadur Shastri, Union Minister for Railways, at Khandwa, on 17th inst., is a great step forward in the development of the Indian Railway system. This is so because the line, when completed, will link the northern and southern metre-gauge systems of the country, thereby providing a through metre-gauge connection from as far as Bhatinda in the north to southernmost centres in the country, such as Trivandrum and Tuticorin. In the sphere of railway transport, this means elimination of transhipment at a number of points. At the same time, it will provide an East-West metre-gauge link without transhipment from Mormugao in the west to Tinsuki in the east on the North-Eastern Railway. The operating advantages of the proposed link will thus be considerable. The creation of an all-India metre-gauge wagon pool on lines similar to the broad-gauge wagons pool, which will follow the construction of the Khandwa-Hingoli link, in place of the present northern and southern pools, will result in considerable overall saving of wagon space on one gauge or the other, besides reducing transhipment.

History

It will be recalled that attempts to provide a north-south connection dates from as far back as 1882, when a proposal for constructing a railway line between Akola and Hingoli—this line, to be called "Berar Light Railway"—was first considered. This idea was kept in abeyance till 1899, when the Government of India ordered a preliminary survey for connecting the metre-gauge systems of Southern and Central India with the Hyderabad Godavari Valley Railway, owned by the Nizam. A survey was then carried out for a line from Khandwa to Basim. Actually, in 1900, earthwork in places of alignment was started, but no progress was made in subsequent years. The need from a strategic point of view to provide a link between the northern and southern metre-gauge systems was emphasised very strongly in 1903 by Lord Kitchener, the then Commander-in-Chief.

The next stage in the history of the link was in 1911, when the final location survey for the route from Khandwa to Hingoli was carried out, under the orders of the Government of India. The proposal was again considered by the Central Government in 1924 and 1927, but, owing to lack of finance, no concrete step was taken. The acute transportation problems during the last world war again focussed attention on the proposed link between the northern and southern metre-gauge systems. In 1942, a rapid survey of the alternative routes was undertaken, but again no start was made on the construction of any of the routes surveyed.

The proposed alignment between Khandwa and Hingoli is the result of the fresh engineering and traffic surveys, conducted recently at the instance of the Railway Ministry. The Railway Board announced its sanction to the construction of the metre-gauge line from Khandwa to Hingoli *via* Akola on the Central Railway on 10th March. The cost of the project is estimated at Rs. 8.90 crores. It passes through Nimar and Akola districts of Madhya Pradesh and Parbhani district of Hyderabad State. It will run through some of the most fertile areas

(Continued in previous column)

(Concluded from next column)

in Berar. The Satpura mountain ranges constitute one of the main engineering obstacles, as it requires deep cuttings and high embankments. Various rivers and hill streams will have to be crossed and major bridges constructed across the rivers Tapti, Purna and Penganga. It is to be hoped that the railway engineers, who have been noted for engineering feats, will not be wanting in overcoming these obstacles and that they will bring the 71-year-old dream of providing the "missing link" in the Indian metre-gauge railway system into the realm of reality, as early as possible.

JUST PUBLISHED!

LAW OF INCOME TAX IN INDIA

By V. S. SUNDARAM (Late of I. A. & A. S.)

SEVENTH (1954) EDITION

This book of a class by itself and familiar to those concerned with Income Tax matters as a comprehensive and dependable book of reference of unique value, has not been available for some years. The last edition was issued in 1947. The author has brought the book up-to-date and re-arranged and re-written the book extensively. This edition will therefore be found even more valuable than the previous editions.

SMALLER INSURERS RESENT REDUCTION IN LIFE PREMIUM RATES

SHOULD GOVERNMENT INTERVENE?

ANOTHER version of the now familiar controversy between small-scale industry *versus* large-scale industry, which is giving strange twists to Government's industrial policy, seems to be developing in the insurance field. It would appear that smaller insurers have been trying—a reference to this was made in this journal last week—to influence the Government, in order to arrest the trend towards lower premium rates for life assurance, initiated by the well-established life offices. It would be deplorable if the healthy trend initiated by bigger insurers, which is in the interest of the insuring public, were halted and high rates of premium maintained in utter disregard of the urgent need for expanding the insurance habit.

The chief justification for the movement towards lower premium rates lies, as has been pointed out in this journal ere now, in the fact that, of the three principal elements which constitute the basis of premium rates, namely, net interest rates earned on life funds, mortality experience and expense ratio, the first two have been favourable to insurers while the last element, expense ratio, is likely to be held in check, thanks to the statutory restrictions on expenses. Thus, during each of the five years ended December, 1952, the net rate of interest realised on mean life insurance funds by Indian insurers was 3.02 per cent., 3.05 per cent., 3.16 per cent. 3.33 per cent., and 3.43 per cent. respectively. The increase in the net rate of interest earned by insurers is due to the abandonment of the cheap money policy by the Government. There are two circumstances which suggest that this factor will continue to be favourable to insurers. In the first place, as new funds begin to be invested in securities which carry a higher rate of interest than the insurers' earlier investments, the net rate of interest earned will move up even further. Secondly, the relief in income-tax, which the Government has given to insurance companies, will tend to increase the net yield on insurers' investments. The tax-free proportion of the surplus of life offices has been increased, as is well known, from 50 per cent. to 80 per cent. by the Income-tax Amendment Act, 1953.

The second element, mortality experience, has also been favourable to insurers. Most valuations show that the ratio of actual to expected mortality of insured lives is distinctly advantageous to insurers. Last week, we referred in these columns to the Census Actuary's Report, according to which, the expectation of life in India has, since the last official estimate was computed, increased from 26.91 to 32.45 for males and from 26.56 to 31.66 for females. So far as the third element, namely, expense ratio, is concerned, it is true that it has shown no significant decline. But it has not gone up significantly. In fact, in the case of smaller insurers, there has been a healthy decline in the expense ratio. The net effect of all these favourable factors is that insurers are now able to offer a cheaper service than they have been able to do in the recent past. "It is but proper and equitable," as a Press note, issued by the New India Assurance Company, Ltd., says, "that the benefit of these developments should be passed on to the insuring public, who have long been complaining of the uneconomic rates they were called upon to pay."

That the Indian trend towards lower premium rates is part of a world-wide movement is evident from the fact that many leading insurers in the West have recently attempted to make insurance cheaper than it was during the war and early post-war years. What is even more remarkable about some Western insurers is that not only have premium rates been reduced but also bonus rates have been stepped up. In this connection, a reference deserves to be made to the remarks of the Chairman of the Sun Life Assurance Society (U.K.), Mr. C. G. Randolph, who, in the course of his statement to the shareholders of the Society, said:

"Our rates of premium for new assurances have been reduced several times since the war to give effect to improving mortality experience and to the higher yields obtainable on new investments. I am glad to be able to inform you that the Directors have been able to announce further reductions in recent weeks in the rates for whole-life and endowment assurances without participation in profit and these are a reflection of the Society's endeavour to remain highly competitive. Also, substantial reductions have been made in the rates for policies to cover building society mortgages; these policies provide that if the death of the borrower should occur during the currency of the mortgage, a sum assured sufficient to repay the outstanding balance shall be payable. . . . It is hardly necessary to point out that the improvement in the rate of interest earned on the funds, the continued favourable mortality experience and the reduction in the expense ratio have a most important bearing on the profit-earning capacity of the Society. These encouraging features have made it possible to increase substantially the rates of interim bonus in respect of 'with-profit' policies becoming claims by death or maturity, or terminating by surrender after 31st December last."

It should, therefore, be clear that Indian insurance cannot possibly stand aloof from world currents. If Indian insurers do not reduce their premium rates while premium rates are revised downward by non-Indian insurers, whether in India or abroad, there will be a public demand for similar action by Indian insurers. The insuring public will naturally ask why the Indian insurers rates for life assurance should be pitched at a high level. Again, there is the competition from governmental quarters to be reckoned with. Already, the Postal Insurance authorities are taking pride in the fact that they are able to quote attractively low rates for insurance. It is true that they are able to do so because there is a certain non-commercial element in their insurance. Nevertheless, the fact remains that competition from that quarter is bound to increase. And the only way in which it could be met by Indian insurers is to quote rates which do not suffer by comparison with those quoted by the Insurance Departments of the Central and State Governments.

It is true that small insurers, who might find it difficult to face competition from the larger insurers, deserve sympathy and guidance. Only, it would be wrong for the Government to show such sympathy in a form that will seriously interfere with the healthy trend towards lower premium rates, so long as these rates are consistent with the security of the companies which offer them. If the Government were to place obstacles in the way of the insurers who want to give the benefit of favourable developments in the field to the insuring public, it would only be interpreted as an encouragement of monopolistic practices in the field.

Smaller insurers will do well to realise that they should seek to stabilise and improve their position. There are several ways of doing this other than by merely fighting the trend towards lower premium rates. In the first place, there are too many of them. Although the number of insurers is not very large for this country of continental size, it is certainly large in relation to the available quantum of business. Some insurers hardly do a lakh of rupees worth of new business. There is room for some healthy mergers. Secondly, they should try to give *more efficient service, more personal service*, which will make up for the slightly higher rates of premium that they might be compelled to quote. In any case, it is scarcely likely they will receive public support for any fight they might put up for the retention of high premium rates.

INSURANCE DEPARTMENT IN MYSORE STATE

In a recent issue of our journal (*vide Commerce*, dated 5th December, 1953), we summarised the recommendations of the Committee appointed by the Mysore State Government to suggest measures for improving and expanding the service rendered by the Insurance Department of the Government. A reference to this subject was made by the State's Chief Minister, Mr. K. Hanumanthiah, in the course of his last budget speech, at the State Assembly. He stated that, with a view to placing the working of the Mysore Government Insurance Department on a sound footing and attracting business in a larger measure than at present, the Government constituted a committee for the reorganisation of the Department under the chairmanship of Mr. J. Appaji Gowda. He revealed that the Government had accepted some of the Committee's recommendations, such as those relating to clearance of the heavy accumulated arrears in the Department, enhancing the rate of interest on insurance funds, and the decentralisation of powers

(*Continued on page* 593)

PENSION PLANS IN U.S.

MORE THAN TEN MILLION WORKERS COVERED

MORE than 10,000,000 workers of the United States are covered by some 15,000 retirement pension plans, which business firms have adopted for the protection of their employees. Pension payments under these private plans will supplement the old-age insurance payments which the employees will receive under the Government social security system. Since the end of World War II, the number of these pension plans has doubled. It is estimated by the Federal Reserve Bank of New York that their funds have now accumulated to more than $17,000 million, with a current net growth of more than $2,000 million a year.

During and after World War II, the efforts of U.S. business enterprises to attract and retain employees increasingly took the form of favourable pension arrangements, especially in view of the wage limitations imposed by the national wage stabilisation policy. A ruling by the National Labour Relations Board in 1949 that pensions are an appropriate subject for collective bargaining in labour contracts gave further impetus to industry pension plans. But, doubtless, the basic factor in the growth of industrial pension plans has been the interest of corporation directors in the future security of their employees, as a matter of social responsibility, partly stimulated by the Government social security programme.

The Federal Government's old-age insurance system now covers more than 66,000,000 persons, while another 7,500,000 are covered under retirement plans for Federal, State and Local Government employees. In the report of a study made by the National Planning Association, a non-profit research organisation, it is estimated that the total of private pension funds would rise to $35,000 million to $40,000 million in the next decade.

Private pension plans are of two general types. One is the cumulative insured fund placed in the hands of an insurance company, which invests the money as a part of its regular investment portfolio. Under various State Laws, insurance companies are restricted in their investment. Spreading faster in dollar value among the pension plans is the trustee fund, usually administered by a bank or a special body of trustees. Such plans have more leeway, because they are bound only by common-sense rules of investment rather than rigid State laws. As a result, trusteed plans, on the average, show a greater return on investment than insured plans.

The vast Sears, Roebuck fund, which the world's largest retail merchandising company holds for its employees, buys almost nothing but its own capital stock. Thanks to the unusual growth and earnings of this company, benefits under the fund have been spectacular. Many a $50-a-week employee has retired with stock worth $25,000 or more. A $3,500-a-year woman clerk recently retired with $98,000 worth of Sears stock after 35 years' participation in the plan—and personal contributions totalling only $2,700. The largest private pension fund in the United States is that of the American Telephone and Telegraph Company, administered by the Bankers Trust Company of New York. According to its last report, the fund's assets were $1,700 million, owned by 700,000 employees.

There is a growing trend, notably in labour contracts, for the employer to pay all the costs of the pension plan. Under most plans now in effect in the United States, a worker is entitled to pension credits or benefits only after he has attained a certain age (usually 65 years) or has completed a specified period of employment or participation in the plan. The labour unions are beginning to press for "portable pensions"—that is, the right of workers to take their pension credits from one company to another instead of forfeiting them, as at present, when their employment with one company ends. The unions contend that pensions are earned, like wages. Opponents argue that such a provision will increase labour turnover and raise the cost of the pension plans. Thus far, such rights have been granted only under the Toledo Industries Retirement Income Plan which has been in effect since 1st November, 1950. By agreement between the United Automobile Workers and certain companies in the Toledo (Ohio) area, workers do not lose their pension credits if they change jobs from one participating company to another.

COFFEE INDUSTRY IN INDIA

ITS IMPORTANCE TO NATIONAL ECONOMY

(By Messrs. PEIRCE, LESLIE AND CO., LTD.)

COFFEE growing in India was established on a commercial scale in the second half of the 19th century and, by the end of the century, about 300,000 acres had been opened. Adversity then fell and the depression of the 30's saw about a third of the entire acreage go out of cultivation. The establishment of the Indian Coffee Board and its careful husbanding of market operations and encouragement of research restored stability and confidence to plantation owners and about 35,000 acres of abandoned coffee have been brought back into production and other considerable areas have been opened.

Only two per cent. of the estates are above 100 acres in extent. Coffee is essentially a small holder's crop, grown usually in conjunction with other crops, particularly paddy, and thus it plays a useful part in diversifying the agriculture of the monsoon hills of the South. More than that, it is maintaining soil fertility, conserving rainfall and preventing erosion by requiring a canopy of shade trees to be grown along with it. Many of the original clearings are still in production and this is testimony enough of the maintenance of a high level of fertility in the soil.

Coffee is grown from seed and comes into full bearing in from six to eight years. The prudent owner would aim at replacing it after about 50 years, as it is then apt to become uneconomic. Of the two main types grown—Arabica and Robusta—the former is delicate, a prey to many fungus and insect enemies and expensive to keep in full health. Robusta is hardier and grows better at lower altitudes and in poorer soils.

Capital Outlay

Capital outlay on opening land under coffee is high, about Rs. 1,200 to Rs. 1,600 per acre being required to bring to bearing. Thereafter, persistent and often expensive cultural operations have to be applied to keep the estate in full yield and any neglect quickly leads to often irreparable deterioration.

Mechanical aids are extremely limited and much of the work on coffee estates requires hand labour and hence the organisation of a large labour force. This is usually recruited in families who are agreeably housed and cared for on the estates themselves. Altogether, some 200,000 workers are employed on the estates alone and, in addition, the transport of produce to curing works and its curing and despatch give employment to a not inconsiderable number of persons.

The industry's wage bill aggregates half the crop proceeds and it must, of course, be the case that a large proportion of these earnings supports the general trade and commerce of the villages and towns of the coffee-growing areas where alternative employment would be hard to find.

Large acreages on the hills of South India, suitable for coffee, are lying fallow and could give employment to many. One hundred acres of coffee employ approximately 75 labourers. Indian coffee production is small. It is only one per cent. of the world's total. Despite this, it is unrivalled in quality and high grown Mysore and Nilgiri coffee commands a premium in world markets.

Before the war, production was in the region of 17,000 tons, of which 9,000 tons were surplus to internal needs and were exported. With the advent of the war in 1939, European markets were lost and shipping became difficult. Coffee growers in India were thus faced with the problem of finding a market for the surplus production. In September, 1940, the first coffee conference was held and, from this and succeeding conferences, a workable scheme was arrived at for the controlled marketing of coffee on co-operative lines, ensuring a fair price to the consumer, while conferring the maximum benefit to the grower.

Coffee Board Steps In

The Indian Coffee Board now assumes full control over the disposal of the entire crop produced each year in India. Part of the crop is released on the internal market for India's own requirements in such a way as to ensure a guaranteed minimum return to the grower, calculated on the grower's cost of production as ascertained by application of a formula evolved by the Government's Cost Accountant.

Subject to the home demand being met, a surplus may be available for export to world markets. The world price of coffee being more than double that of the internal price, a useful revenue from export sales is available for return to the grower over and above the minimum guaranteed by the Board. In addition to marketing, the Board has aimed at stimulating home demand and, since this has more than doubled since the Board came into existence, one can say that its policy here has been one of remarkable success. Along with increased demand, the Board has established a Research Department which has made notable progress in evolving disease-resistant strains and new methods of combating coffee pests and diseases.

The Indian Coffee Board has been the model for many of the other commodity boards in India set up to study, understand and solve the problems peculiar to each product. Its success has been mainly due to the willing co-operation of all its representatives—Central and State Governments, coffee growers, coffee traders and labour—and to the confidence which Government placed in it and which radiated outwards from the Board to the entire trade.

Exports

Unhappily, the tenuous thread by which confidence ever hangs has been broken and in place of co-operation between Board and Government has appeared mistrust. The Board's advice against exports in 1952 was overruled and exports created local shortages and an increase in consumer prices for which the Board is blamed and growers are penalised. The emphasis then shifted from maximising exports to cheapening internal prices and the local market was flooded with supplies which it could not absorb. The Board's advice to export this surplus coffee went unheeded for seven months, during which time stocks deteriorated and heavy losses accrued. Large stocks of old crop remain, even though the current season's crop, which is likely to approximate 30,000 tons, has begun to be delivered to the Board and further losses threaten.

A policy of pegging the return to the grower was announced in October last and, under this policy, the figure has been arbitrarily fixed at Rs. 2-4 per point, as against the Coffee Board's own carefully assessed estimate of Rs. 2-7-7. Recently, an export duty of Rs. 62-8 per cwt. has been imposed, representing 50 per cent. of the value to the grower of the Robusta coffee earmarked for export. The Exchequer thus becomes the chief beneficiary of the high export prices, and not the consumer in whose names the Board's policy has been challenged, even less the grower, that is the owner of the goods exported.

The Board has fallen into serious financial straits. Payments to growers are delayed and this is bound to create difficulties for the weaker units of the industry who rely upon the prompt payment of their instalments for the working expenses of the next crop.

Arising out of these circumstances, growers have asked that the entire position of the industry should be reviewed by the Tariff Commission. They feel that it is not a matter purely of prices or of profits. The coffee industry has many natural advantages in India which it is to the interest of the nation to exploit. Whether in finding jobs for many thousands of the jobless, or in contributing toward sound utilisation of jungle lands, or in channelling off to Government revenues potential wealth from export duties, cesses and taxes, coffee can be made to play a significant part in the national economy.

INDIAN RUBBER BOARD

It is understood that, during the six months ended 31st December, 1953, the Indian Rubber Board issued 179 licences to manufacturers authorising them to purchase a total quantity of 18,071 tons of raw rubber. The quantity of indigenous raw rubber of all grades acquired by manufacturers of rubber goods during this period was 11,474 tons, as compared with 8,840 tons in the corresponding period of 1952.

The number of new planting licences issued during the period was 80, covering an area of 755 acres. During the period, no applications from manufacturers were received for import of raw rubber, while 33 tons of sole crepe were exported, as against the export quota of 200 tons sanctioned for the whole year.

Stocks of raw rubber held by estates, dealers and manufacturers at the end of December, 1953 were 2,063 tons, 3,051 tons and 2,788 tons, respectively.

CO-ORDINATION OF TRANSPORT

UNITED STATES EXAMPLE

THE maintenance of an efficient, adequate and economical transport system has always been recognised as vital to a nation's industrial life. This implies maximum co-ordination in transport policies in the entire country. A glaring defect of India's transport policy is the absence of proper co-ordination between rail, road and water transport on a nation-wide level. These and many other related causes were responsible for the Centre's decision, taken at the end of last year, to reconsider the entire transport policy and the Planning Commission's recommendation, early in the year, to set up a study group to enquire into the questions relating to transport facilities and make suitable suggestions. Developments since then, are, however, not available.

Be that as it may, the need for efficient and co-ordinated transport is long overdue, especially for the successful implementation of the Five-year Plan. In this connection, the experience of the Western nations can be studied with profit. Of the Western countries, the United States stands as one of the foremost country in the maintenance of an efficient transport system. This important job is done by a special agency, the Inter-State Commission. The Commission was created in 1887 by an Act of Cosgress. It controls the operations of all companies engaged in inter-State commerce, whether by rail, motor vehicle or pipeline. Sleeping cars, bus and express companies as well as rail-roads follow the Commission's rulings. Originally, the jurisdiction of the Commission was confined to common carriers engaged in inter-State transport wholly by rail-road or partly by rail-road and partly by water. Later, its authority was extended to all important modes of transport. To a limited extent, even carriers by airplane, engaged in the transport of airmail, come within the jurisdiction of this body. The Commission has now five divisions each of which has been assigned a designated function. The action of each group is subject to the appeal to the Commission as a whole.

Quasi-legislative Functions

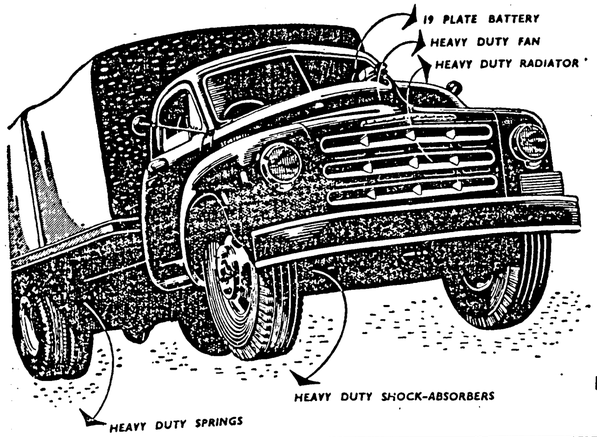
Besides engaging in the task of promoting safe, adequate, economical and efficient transport service, the Commission also looks after fostering economic conditions in the transport industry, encouraging the establishment and maintenance of reasonable charges without destructive competitive prices and ensuring fair wages and equitable working conditions. The Commission exercises both quasi-legislative and quasi-judicial functions. In prescribing rates for the future, for example, it acts in the former capacity. In awarding reparation for damages, it acts in a quasi-judicial capacity.

The Commission makes an annual report to the Congress. The Commission also makes recommendations to the Congress with respect to changes in legislation concerning inter-State commerce which it deems desirable in public interest. On the initiative of the Congress itself, the Commission furnishes valuable data on transport problems to its legislative committees. Because of the growing amount of work which these congressional reports and hearings have involved, a special committee, consisting of four members, was created by the Commission. This body prepares all written reports in response to requests from the Congress and, through it, the committees of the Senate and the House confer with the Commission.

A significant feature of the Commission's set-up is that its membership is kept free from partisan political control. The Commission consists of 11 members appointed by the President. Not more than six members are appointed from the same political party. Any commissioner may be removed by the President for inefficiency, neglect of duty or malfeasance in office. Persons having any official relationship to any common carrier under its jurisdiction or those who have any pecuniary interest in such carriers are barred from membership of the body. Members of the Commission are also not expected to engage in any other business, vocation or employment.

The Commission is often referred to as an "independent" governmental agency, but, in the strict meaning of that word, it is not independent. It has no power to initiate nor to determine new policies of Government. It is in fact an integral part of the governmental mechanism directed by a statute to perform only special duties. The Commission has, throughout its history, held a high standard of responsibility.

BUILT FOR EVERY LOAD AND ANY ROAD-NEW STUDEBAKER TRUCKS 2R 28



The New Studebaker Trucks fitted with 120 B.H.P., V8 Engine are specially designed and equipped for operation under Indian weather and road conditions. These are becoming more and more popular because experience has proved to the owners that Studebaker is the only real heavy duty truck available at the price of other lighter vehicles.

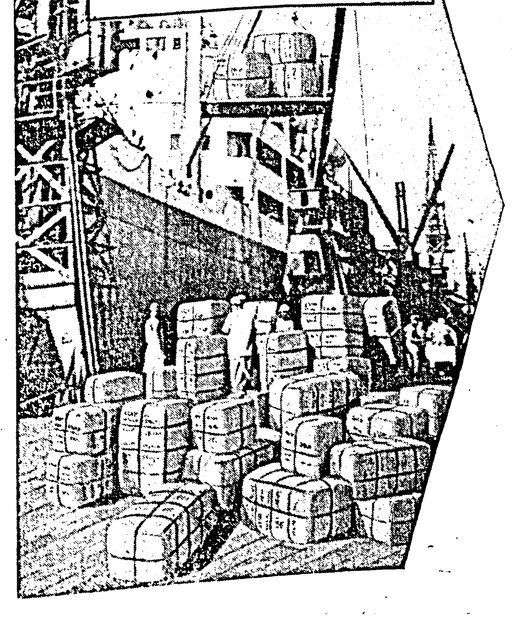
GOOD BALING helps India's textile exports

Good baling is of utmost importance to enable India's textile industry to improve its position in foreign markets. The Hon'ble Minister for Commerce and Industries has himself pointed out to the trade the importance of good packaging.

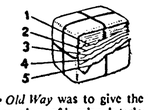
Many of India's leading textile mills are already using the amazing, new packaging material—'Alkathene' Film. 'Alkathene' Film, which is now made in India, is helping them to produce first-class waterproof bales.



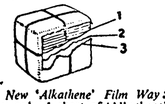
If you have not already done so, give 'Alkathene' Film a trial. 'Alkathene' Film combines superior physical properties with eye appeal. It will ensure that your textile bales reach their destination exactly in the same excellent condition in which they left your mills.

- 'Alkathene' Film is transparent, tough and resilient. It successfully withstands baling pressures, and the strain encountered in transit due to rough handling.
- 'Alkathene' Film is impermeable to moisture and will protect your bales in transit even during monsoon conditions.
- 'Alkathene' Film has been approved by the Textile Commissioner.

And finally, 'Alkathene' Film, though it costs no more than any waterproof packing material, effects substantial savings. It cuts packaging costs, simplifies baling operations, reduces operational time and saves on freight charges. This is how 'Alkathene' Film does it:



The Old Way was to give the bale 2 wrappings of hessian interlayered with a double-sheet of tar-laminated paper, plus 1 extra sheet of kraft paper to protect the textiles from staining.



The New 'Alkathene' Film Way: Now, only 1 sheet of 'Alkathene' Film and two hessian wrappings are enough to provide *complete protection* against exposure and rough handling in transit. There is absolutely *no* danger of staining.

the revolutionary new protective packaging material

'ALKATHENE' Film

MADE IN INDIA

TOUGH • WATERPROOF • INEXPENSIVE

Surely you will want to know more about 'Alkathene' Film! Write, phone or call for free detailed literature and samples. Our Technical Service Department will be glad to help you put 'Alkathene' Film to best use.

THE NATIONAL BANK OF INDIA, LIMITED

SATISFACTORY RESULTS FOR AN "UNEASY" YEAR

MR. J. K. MICHIE ON CONVERTIBILITY OF CURRENCIES

THE Annual General Meeting of the shareholders of the National Bank of India Ltd., will be held in London on 6th April, 1954. In the course of his customary statement to be submitted at the meeting, Mr. J. K. Michie, Chairman, expresses the view that, throughout the year 1953, the world continued to struggle, if haltingly and painfully, towards a more natural balance in the conduct of international commerce. The absence of free convertibility of currencies is, in his opinion, the greatest remaining obstacle to the free flow of international trade. In his review of the economic conditions in the various countries in which the Bank operates, Mr. Michie makes pointed reference to the proposed Development and Finance Corporation in India with the support of the World Bank and welcomes sound ventures of this kind, for "particularly when capital is shy, as it is in India at the moment, they fill a distinct gap."

The following is the full text of Mr. Michie's statement:

"Throughout 1953 the world continued to struggle, if haltingly and painfully, towards a more natural balance in the conduct of international commerce and, in this country, the movement has been assisted by the decontrol of certain imports, the gradual derationing of consumer goods, and the reopening of terminal markets.

"On the other hand, some primary producer countries still hold the view that by bulk selling through Government-controlled bodies rather than by using marketing systems through which sellers and buyers would be in daily touch, they can sell their produce more effectively and at the same time ration their sales in accordance with their views of international values. Generally speaking, bulk selling flourishes only in a sellers' market and temporarily anyhow these conditions have disappeared. But the greatest remaining obstacle to the free flow of international trade, undoubtedly, is the absence of free convertibility of currencies. Without that background international markets, including terminal markets, cannot function fully or to the best advantage of buyer and seller; to have differing values in one currency for the same goods simply because 'A' is produced in the dollar area and 'B' in the sterling (or some other) area is not only superficially wrong, it is dangerous, and that is one of the problems of adjustment which will concern merchants and bankers when free convertibility is possible and does happen.

An Uneasy Year

"1953, therefore, was an uneasy year, though with certain bright spots in our particular geographical field, and I am pleased that we are able to show figures which, while reduced both in respect of balance-sheet totals and of profits, are, nevertheless, satisfactory.

"Turning to the accounts for 1953, the total of the consolidated balance-sheet shows a reduction of £7,014,168 to £136,452,974.

"The figure relating to the National Bank of India, Ltd. alone has fallen by £7,318,127 occasioned entirely by a drop in total deposits which was accompanied by a corresponding fall in outstanding advances.

"After making full provision for taxation and other necessary reservations net profits are £376,266, a reduction of £5,178 as compared with 1952 results.

"Our programme of rebuilding outdated and inadequate banking premises at some of our main branches continues and will not be completed until 1956. Our fine new offices in Kampala and Karachi, we hope, will be occupied in June of this year. Aden and Daressalaam are now being tackled and apart from an addition to our Nairobi building, these will be the last of the major building projects we foresee. We are again allotting £75,000 to properties account and intend to continue a steady policy of depreciation on these lines.

"Contingencies reserve account gets £100,000, as against £115,000 last year, the net cost of our dividend having been increased by the reduction of the rate of income-tax.

"We decided to continue for 1953 our recent rate of dividend distribution of 16 per cent. I wish to point out, however, that on a pre-profits-tax basis this costs practically 20 per cent. While over the war years our shareholders suffered less than most in fluctuating dividends and, consequently, in temporarily reduced share values, we are, nevertheless, very conscious of their loyal acceptance of our dividend policy since then. We are also aware that certain aspects of our capital structure are out of line with modern needs and practice, and as you have seen, we are proposing at an extraordinary general meeting which will immediately follow the annual general meeting to ask you to pass certain resolutions.

"These measures have two purposes the first to take our shares out of what is known as the 'heavy' category and so encourage the smaller investor, the second to bring the capital more into line with realities, while maintaining an adequate reserve fund.

"At our last meeting I was asked when shareholders are to be given tangible benefit from the expansion of our business and our earnings since the present rate of dividend was established and I assured the questioner that this part of the responsibilities of your Board had not been forgotten.

Future Dividend

"As you know, the expenses of running a business continually tend to rise; then competition in all our areas is steadily increasing; and lastly, in this uncertain world it would be most injudicious of me to make any firm prophecy of what will be done or of what will be possible some months from now; but in putting before you these proposals in regard to our capital we do it in the hope that there will be some increase in the amount to be distributed to the shareholders. I do not, however, encourage any expectation of the same rate being maintained on the increased capital.

"Grindlays Bank Ltd. shows a smaller profit for 1953. They are opening in the Rhodesias and that means an increase in expenses which will not be balanced by revenue until the new branches are more firmly established.

"Our Finance and Development Corporation continues to expand its business on sound lines.

"A special feature of our expansion has been the long delayed opening of our West End Branch at 13, St. James's Square, which started business on 7th December. I understand the improved facilities thus afforded to our Trustee and Income Tax Departments are appreciated by our customers and a steadily increasing number of our overseas clients will, doubtless, use St. James's Square for their ordinary business. Our staff will welcome any shareholder or customer who wishes to see this fine office.

India

"The outstanding achievement by India in 1953 was the increase by five millions of tons in her food production. This has been the result of nation-wide efforts begun some years ago and pursued with vigour, coupled with the end of a series of poor monsoons, particularly in Southern India. This does not mean she has achieved self-sufficiency, for it is estimated that this increase hardly meets the needs of her present population on the basis of 1939 consumption *per capita*, but buttressed by her purchase of rice from Burma, it at least puts her in a position in which she can buy her further requirements at her own time.

"Generally speaking, India has had a satisfactory year, above all in the remarkable change for the better in the fortunes of her tea industry. A year ago it was just emerging from a crisis and prices were rising. Since then the rise has been almost continuous and, as I write, Indian 'common' teas are being sold in London at 4*s.* 4½*d.* per lb. against 2*s.* 9½*d.* a year ago and a depression 'low' of 1*s.* 6*d.* (in September, 1952). As the statistical position appears to be strong there is good reason to be quietly confident of a continuance of good returns, though costs of production are on the upgrade. As is not unnatural, this condition of semi-scarcity has benefited common and medium quality teas much more than it has the higher grades.

"Amongst Government projects, it has been announced that a Development and Finance Corporation is shortly to be formed and, it is understood, the Corporation will be supported by the International Bank for Reconstruction and Development. Its function will be to develop industries for which sufficient private capital is not forthcoming.

"We welcome sound ventures of this kind, for particularly when capital is shy, as it is in India at the moment, they fill a distinct gap.

"At times, it has been suggested that banks should undertake finance of this nature and the original German system, whereby the banks invested directly in industry and had nominees on company boards, is sometimes quoted as a pattern. I do not think the experience of the German banks was particularly happy and the position of being simultaneously part owner and banker is a distinctly invidious one, not only in itself, but *vis-a-vis* other constituents; but the over-riding objection is that a bank's deposits are largely 'at call' and for that reason alone it is quite wrong to commit them to long-term capital investment.

"The Finance Minister has just presented his Budget, in which he proposes no new direct taxes, but takes the bold step of budgeting for a deficit of £187,500,000 (capital expenditure is estimated at £296,250,000) partly because, in his words, 'the period of inflationary stresses is now well behind us.' This is a welcome reassurance.

Pakistan

"Most recent figures show that Pakistan, after some travail, has again achieved a favourable balance of trade. Because the effort was somewhat long delayed the methods perforce had to be drastic. Imports were cut to the bone and duties on luxuries much increased. Conhold from world markets supplies of her available products, principally cotton and jute, and her available resources have continued to be invested in textile and jute mills and other industries which are now steadily going into production. In manufactured jute goods Pakistan aims at a total production of 200,000 tons by 1956. They also hope to replace by local production their present considerable imports of textiles.

"A better monsoon should ease Pakistan's food position which is her principal pre-occupation on the economic side. Altogether the picture is a brighter one than it was possible to present a year ago.

"Unfortunately, the flow of trade between India and Pakistan remains weak and there are many mutual questions still awaiting settlement.

Burma

"Burma had a somewhat mixed year. The Government has made great strides in extending 'law and order' and deriving from that the cultivation of rice increased considerably. 1953 also saw the initiation of many capital projects which, over a period of years, will cost large sums in foreign currencies. These projects are largely designed to increase production and generally to make the country more self-supporting. It is good to see that the improvement of Rangoon and other ports and of inland water and other transport is high on the list, for these are urgent measures, if her increased surpluses are to be exported.

"The source of the money needed to finance these schemes must come mainly from Burma's rice exports for which, until a year ago, she was realising high and increasing prices. Since then, however, the trend of world rice markets has been reversed, and until quite recently Burma was the possessor of an unsold balance from the 1952-53 crop of about 750,000 tons. The bulk of this has now been sold to India though much of it has still to be shipped.

"A post-war record harvest in 1953 has given her an estimated surplus of 1,500,000 tons; so her problem is no longer one of how her exports can be rationed amongst the claimants. But to find buyers for this large quantity. Deficit countries are shy of committing themselves to large purchases, particularly as her neighbour Siam also has a considerable quantity to sell, while, in Europe, Italy has a large surplus. So far, Burma has sold limited quantities to Ceylon and Japan at £50 per ton, which marks a big drop on the prices obtainable a year ago.

"An agreement on what is known as the 'Joint Oil Venture' was recently signed between the Government and the three British oil companies and finalisation of the financial provisions is all that is required to make Government the owner of 33⅓ per cent. of the industry, with rights to increase that share.

"Generally, the policy of Government is directed to increase the share of Burmese nationals in the trade and commerce of the country individually, through co-operatives or through Government-owned corporations.

Ceylon

"The Government has grappled manfully with the twin problems of her external balance of payments and her internal budget solvency and in 1953 had the help of buoyant tea prices and a steady yield from rubber under her barter agreement with China, but prices of her other main products, copra and coconut oil, have fallen steeply. Indirect aid will come this year through the fall in the cost of rice imports, a saving which may well total over £5 millions over the year.

"Economic help in the form of loans is likely to be afforded from both the U.S.A. and the U.K. to assist Ceylon to complete certain capital projects on which she has embarked, and a continuance of a sound budgetary policy will, I am sure, bring back her finances to equilibrium.

"As India is doing, Ceylon also hopes soon to have a Development Corporation, from which funds will be available for sound industrial development; but as with India, Ceylon's major problem is a rapidly rising population and a much less rapidly increasing food production.

"To the benefit of all four countries which I have mentioned the 'Colombo Plan' continues to function with growing momentum and increasing sums are being spent, supplied partly by the countries themselves and partly by the U.K., the U.S.A., Canada, Australia and New Zealand.

"Very rightly, agriculture and electric power are two first priorities and encouraging progress has been made in both fields, but much more is wanted both in money, i.e., internal savings and external aid, and in human effort including considerable technical assistance from outside sources, if the programme is to achieve and maintain the required momentum and results.

East Africa

"Shadows of different kinds and different intensities have affected our three main territories, Kenya, Uganda and Tanganyika.

"In Tanganyika, one was temporary, a drought fortunately now over; the second, serious enough, but now halted, was a sharp fall in the price of sisal; but, on the whole, Tanganyika continues to make sound economic progress and her production rises steadily, while the somewhat belated opening of the port of Mtwara will, I believe, encourage a healthy expansion of agriculture in the Southern Province. Poor communications continue to be the principal deterrent to faster development.

"Economically, Uganda is prospering and making great strides. A record cotton crop, high prices for coffee, continued activity in the development of mineral resources and steady progress in the production of electric power through the Owen Falls Scheme to be opened by Her Majesty the Queen at the end of April are all contributing, and that side of her future is bright. The shadow lies over the province of Buganda caused by the need to remove the Kabaka from his throne. I have every hope that this incident will prove to be but a temporary cloud in an otherwise clear sky.

"In Kenya, the Mau Mau 'emergency' is by no means ended or in sight of a solution; the most encouraging sign is the growing resistance to the dark and odious power of the Mau Mau 'oath' by the Kikuyu themselves. Though only a part of Kenya is directly affected, the economic results must be shared by the whole Colony. Life in the areas where the Mau Mau movement is active including the capital city of Nairobi is far from comfortable and it is indeed creditable to all concerned that production has been held so high and that industrial development has continued to make progress. I think it is a legitimate hope that the defeat of Mau Mau in a military sense will be largely accomplished by the end of this year, but settlement in a wider sense is a different, larger and longer task about which I will not speculate.

"As has been said many times, the development of ports, railways and roads and water conservation on a large-scale are two of the keystones of economic progress in East Africa. These problems are being energetically tackled and I believe we shall see a steady and progressive improvement.

"Over the past three years three banks which had not previously operated there have opened branches in East Africa, but we are satisfied both with our progress and our prospects.

"Since writing, my last address we have opened two branches and one sub-branch in East Africa, and it is our intention to continue to meet the banking needs of the territories.

"Zanzibar has had a successful year and though the cause of 'sudden death disease' which attacks the clove trees has not been diagnosed, it is apparent that a sensible policy of regeneration can go far to counter it.

Aden

"The trade of Aden has been stimulated by, and in a long-term sense will benefit greatly from the refinery being built at Little Aden by the Anglo Iranian Oil Company which is likely to be completed within a year from now. The activity in the coffee market has also contributed to Aden's prosperity. Four banks have opened branches in the past two years and the Colony certainly does not suffer from a lack of such facilities.

Somaliland Protectorate

"Our operations show a steady, if small, expansion. We have recently opened a branch at Berbera, the port of the Protectorate, and

REPORT OF THE AUDITORS TO THE MEMBERS.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank so far as appears from our examination of those books and proper Returns adequate for the purposes of our audit have been received from Branches not visited by us. We have examined the above Balance Sheet which is in agreement with the books of account and Returns. In our opinion and to the best of our information and according to the explanations given to us the said Balance Sheet gives the information required by the Companies Act, 1948, in the manner thereby authorised for Banking Companies and on such basis the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1953.

We have also examined the annexed Consolidated Balance Sheet and Consolidated Profit and Loss Account of the Bank and its Subsidiaries dealt with thereby with the audited accounts of those Companies. In our opinion such Consolidated Balance Sheet and Consolidated Profit and Loss Account have been properly prepared from such accounts in accordance with the provisions of the Companies Act, 1948, in the manner thereby authorised for Banking Companies and, on this basis, give a true and fair view of the state of affairs and of the profit ascertained in the manner therein indicated of the Bank and its Subsidiaries so far as concerns members of The National Bank of India, Limited.

SIXTY-FIRST ANNUAL REPORT OF THE BOARD OF DIRECTORS TO THE SHAREHOLDERS

The Directors submit to the Shareholders of the Bank the General Balance Sheet and Statement of Profit and Loss Account for the year ended 31st December, 1953.

The Balance of Profit and Loss Account for the year after providing for Taxation and after Allocations to Contingency Accounts out of which full provision has been made for Bad and Doubtful Debts and any other diminution in the value of Assets, amounts to £194,687
to which has to be added the balance brought forward from last account .. 200,143
making the amount available .. £394,830
out of which the following appropriations have been made:—

To Interim Dividend of 7 per cent. on the "A", "B" and "C" shares less Income Tax at 9s. in the £, paid on 29th September, 1953	£40,425	
To Officers' Pension Fund	13,000	
To Amount written off Freehold Banking Premises and Property	50,000	
To Additional Allocation to Contingencies Account ..	50,000	
		153,425
leaving a sum of ..		£241,405

from which the Directors recommend:—

A Final Dividend of 7 per cent. on the "A", "B" and "C" shares, less Income Tax at 9s. in the £ (making 14 per cent. for the year) payable 30th March, 1954	40,425
Balance to be carried forward to next Account	£200,980

A sub-agency of Osaka Branch was opened at Semba on 23rd October, 1953.

Sir Charles Alexander Innes, K.B.E., has been appointed to a seat on the Board and under Article 101 of the Articles of Association offers himself for re-election.

The following Directors retire by rotation under Articles 120 and 121 of the Articles of Association but, being eligible, offer themselves for re-election:

Sir John G. Hay.
Mr. E. J. Bunbury.

Special Notice under Sections 142 and 185 of the Companies Act, 1948, has been received by the Bank of a resolution for the re-election as Director of Sir John G. Hay, who has attained seventy years of age.

Messrs. Cooper Brothers & Co. and Messrs. W. A. Browne & Co., the present Auditors, will continue in office pursuant to Section 159 (2) of the Companies Act, 1948.

By Order of the Board,
R. N. DRAKE,
Chief Manager.

THE MERCANTILE BANK OF INDIA, LIMITED

LEVEL OF TRADING ACTIVITIES WELL MAINTAINED

SIR KENNETH MEALING REVIEWS AN EVENTFUL YEAR

THE statement of Sir Kenneth W. Mealing, Chairman of the Mercantile Bank of India Ltd., to the shareholders at their Sixty-first Annual Meeting to be held in London on 30th March, 1954, reveals that the level of the Bank's trading activities during 1953 remained unaltered, notwithstanding the difficulties created by drastic import and export restrictions imposed in some of the areas where the Bank operates and by lower commodity prices. The year 1953 has proved memorable, he says, not only in the international field but, particularly, to the United Kingdom. The cessation of hostilities in Korea, the improvement in the world food situation and the diminishing fears of a third world war consequent on the build-up of the forces of N.A.T.O., all these, give him hopes of better times ahead.

The following is the full text of Sir Kenneth's statement:

"Sir Charles Innes, K.B.E., whose father served you as Chairman of this Bank for fourteen years, retired from India in 1953 after many years' experience, culminating as President of the Associated Chambers of Commerce of India. On 28th April, 1953, he was elected to the Board and you will be asked to confirm his election.

"Turning to the accounts, the balance-sheet total shows a reduction from the previous year, due to a decrease in special and temporary deposits, and this reduction is reflected in our holding of Government securities at nearly £7 million lower than last year. Despite difficulties, due to drastic import and export restrictions imposed in some of the areas where the Bank operates and to lower commodity prices, the level of the Bank's trading activities remained unaltered, with bills receivable slightly higher and loans and advances showing a small decrease. At £194,687, the net profit is slightly lower than for the previous year and your Directors recommend a final dividend of 7 per cent. If this recommendation is approved, the dividend for the year will be 14 per cent., the same as last year, and I trust you will agree that the results of the year's working are satisfactory.

"The year 1953 has proved memorable not only in the international field but particularly to the United Kingdom. The cessation of hostilities (I regret, I can put it no higher) in Korea; the improvement in the world food situation; the build-up of the forces of N.A.T.O. resulting in diminishing fears of a third world war; all these provide hope of better times ahead. In this island the happy and glittering pageant of the Coronation; the further improvement in the stability of sterling, and of the gold and dollar reserves of the sterling area; the further freeing of the people from rationing, and of trade and industry from restrictions; a return to a policy of incentives by a small, but welcome, degree of tax relief and a reduction in the food subsidies, these events leave happy memories of 1953, and, I trust, give us renewed hope and determination to meet the problems which lie ahead.

Competition From Germany and Japan

"The acute world shortages resulting from the war and the consequent 'sellers' market' no longer exist. Two great industrial countries, Germany and Japan, are competing increasingly in world markets and a bracing disinflationary wind is beginning to blow which only hard work and efficiency can temper. On the other hand, the world population is rising and with it commodity consumption should also rise; but the resultant trade will go to those nations producing most efficiently and cheaply. The world continues to be divided by the Iron Curtain, but the Western world's increasing freedom from war-time shortages and restrictions in showing results which must create increasing envy in those countries suffering in the cruel grip of despotic enslavement. The constant flow of refugees from Eastern Europe and the periodical liquidation of top party members in Iron Curtain countries bear evidence of this.

"The enormous industrial potential of the United States has been largely employed in preparations for the armed defence of herself and the free world; but the cessation of hostilities in Korea and the greater preparedness of N.A.T.O., together with less urgent need for economic help to other countries, has resulted in a business readjustment in recent months in the United States which, if developed, could have serious repercussions on other countries. However, President Eisenhower's Republican Government have made it clear that they have the resources and the intention of seeing that this recession shall not be allowed to develop into a slump, and it is to be hoped that the transition from an inflationary 'boom' to stability of production and consumption can take place without incurring the rigours of a sharp trade depression. Perhaps the greatest single cause for anxiety and unrest since the war has been the shortage and rising prices of foodstuffs, particularly in South-East Asia with its increasing populations. It is, indeed, satisfactory to be able to report considerable improvement in the outlook for food crops throughout the world, including South-East Asia.

India

"India's import of just over 2 million tons of foodgrains in 1953, compared with 3.9 million tons in 1952 and 4.7 million tons in 1951, coupled with a particularly good monsoon assuring bumper crops of all kinds in the immediate future, should ease the food situation and greatly reduce the need for importation of foodgrains into India during the coming year.

"It is greatly to be hoped that this improvement may be reflected beneficially in the cost of living index, which for November, 1953, stood at 361 compared with 347 in November, 1952, and 333 in November, 1951 (1939=100) and thus prove an effective check on the inflationary trend. The Government of India, under the leadership of Pandit Nehru, are fully alive to the importance of food production and have concentrated on irrigation and hydro-electric projects some of which have been completed, some are nearing completion and a number of others are in hand. In view of India's growing population and the fact that in some years the monsoon fails with serious results to food supplies, such schemes are clearly of vital importance.

"Another anxious factor in the Indian scene is the increase of unemployment, to which the growth of population inevitably contributes. The Five-year Plan now under way is designed, by the creation of hydro-electric power, new industries, better transport facilities, improvement and extensions in agriculture not only to make India less dependent on imports from abroad but to provide employment and raise the standard of living of the people. The inevitable time lag before this Plan can come to fruition and the rising unemployment in the interim have provided opportunities for opposition (particularly Communist) criticism of the Government and the Congress Party, but there is no doubt that any fair and unbiassed assessor would give great credit to the Government for the vast undertakings it has projected and is doing its best to carry through for the benefit of the country.

Financing of the Plan

"One of the Government's problems is the provision of finance, first, to balance the Budget and secondly, for the Plan. This has resulted in high taxation, both direct and indirect. High direct taxation, both personal and corporate, may be anti-inflationary, but it inevitably removes a great deal of surplus income which would otherwise become available as investment and risk capital. Thus the financing of the Five-year Plan is, undoubtedly, causing the Government some concern. On the one hand, revenue from duties on imports and exports is declining and, on the other hand, the attainment of the target of investment for the private sector under the Plan seems unlikely fully to succeed. Risk capital is shy of high taxation and the passing of the Estate Duty Act in 1953 has not improved the climate either for foreign or Indian investment.

"In general, the year 1953 has seen a steady turnover of business, albeit on a lower level than in previous years. Cotton textile mills have been moderately active throughout the year and there has been a welcome increase in demand for Calcutta jute products by overseas buyers. The tea industry started the year in the throes of an almost unprecedented slump with prices well below cost of production, and finished the year with prices yielding substantial profits to set off the heavy losses which many companies suffered in 1952. To what extent tea companies will be able to replenish their working capital to a figure commensurate with their crop and inter-crop expenditure remains to be seen, but in many cases this is of great importance, if they are to be in a position to weather any future slump, should one occur, as severe as, or of longer duration than, the last one.

"The past year has been notable for the successful working of the cotton futures market, which was reopened in December, 1952, and the increasing consumption of Indian cotton by Indian mills which reached a record figure. The export quotas for certain varieties of cotton was fixed at 250,000 bales for the 1952-53 season, but total exports amounted to about 345,000 bales, the balance being made up of exports allowed against unutilised quotas for the previous season. The trade was disappointed with the Government's attitude to export duties, being of the opinion that further reductions for certain varieties were necessary for the fulfilment of export quotas. Early in the 1953-54 season the mills were keen buyers of new crop cotton as soon as it became available, owing to the improved demand for export. The abolition of the export duty on medium cloth stimulated foreign sales, whilst coarse cloth, although still dutiable, has been selling well in competitive overseas markets.

"In the first half of the year, Indo-Pakistan relations appeared to be improving. In March, a three-year Trade Agreement was reached providing for the annual supply of 1.8 to 2.5 million bales of Pakistan jute to India and 80,000 to 85,000 tons of Indian coal to Pakistan, reductions in licence fees, export duties and surcharges on these commodities were mutually agreed. In August, a conference was held between the Prime Ministers of India and Pakistan in New Delhi on the vexed question of Kashmir, at which it was agreed that a Plebiscite Administrator should be appointed by the end of April, 1954. Later in the year relations deteriorated sharply on the issue of American military aid to Pakistan and it remains to be seen whether the Kashmir problem is any nearer solution; what is certain, however, is that the high military expenditure in both countries is unlikely to be materially reduced nor any lasting improvement in the relations between the two countries come about until the problem of Kashmir is resolved.

Pakistan

"The principal event of the year in Pakistan was the change in the Government last March. The Governor-General appointed Mr. Mohammed Ali to be Prime Minister and he and his Finance Minister were faced with an exceedingly difficult task, for the financial position of the country was grave and serious food shortages, if not famine, in some parts of the country were imminent. The free gift of one million tons of wheat from the U.S.A. arrived just in time, for it not only relieved the immediate risk of famine but averted a major outlay of foreign exchange for the purchase of cereals which would have increased the gravity of the financial crisis. The new Government took drastic measures to curtail the imports of all but the minimum quantities of vital necessities, which has turned an adverse trade balance (from June, 1951, to end of 1952 of Rs. 94 crores) to a surplus of Rs. 29.4 crores in 1953. This welcome improvement has, however, resulted in an inflationary trend caused by the increase in price of commodities in short supply as a result of the import restrictions, whilst this rising price-trend has spread to indigenous commodities, resulting in a general rise in the cost of living. Clearly the only solution in the long term must be an increase in Pakistan's income from exports—not easy to achieve in the face of lower world prices—and a great improvement in food production. In March, 1951, N.T.R. cotton was quoted at Rs. 148, in March, 1952 Rs. 91 and by March, 1953, Rs. 65, whilst the present price is quoted at Rs. 74½. In order to maintain prices for raw jute, the acreage under cultivation in East Bengal has been reduced from 1.87 million acres to

.79 million acres for an estimated crop of 5¼ million bales.

"Industrial development in Pakistan is proceeding. By the end of 1954 six jute mills will be operating and three more mills are to be added in 1955 and when all nine mills are in operation they are expected to produce 225,000 tons of jute goods yearly. This will complete the first phase of development of the jute manufacturing industry in Pakistan. Self-sufficiency in cement production is expected to be attained by 1955, as there will be seven factories producing more than a million tons of cement in that year. A new paper mill to produce 30,000 tons of paper a year commenced production in October, 1953. Several new textile mills are projected with the intention of making Pakistan self-sufficient in the cheaper lines of cotton textiles within the next few years.

"Considerable progress has been made in the Rs. 11-crore development scheme for Chittagong Port, which is now expected to be completed by the end of 1955. Eighteen ships can now berth compared with six in 1947 and the average 'turn-round' has been reduced to about ten days.

"It is proposed to remove the Chalna anchorage some 15 miles downstream to Mangla and to provide five mooring buoys. It is believed that some 1,800,000 bales of jute have been exported through Chalna in 1953, but it seems clear that the construction of a proper port to serve the hinterland of East Bengal through Khulna is likely to be a long-term project.

"In general, it may be said that Pakistan has retreated from acute financial crisis and is slowly and steadily moving in the right direction. Progress has been made in framing the new Constitution which, in due course, will result in new elections. There are to be elections in East Pakistan early in 1954 on the basis of adult franchise with an electorate of some 20 millions. This will be the first election since Pakistan came into existence and may provide an indication of the future political trend of the country.

"The heavy burden of military expenditure rendered the proposal of American military aid attractive to Pakistan, as the biggest drain on her limited foreign exchange earnings is the cost of imported armaments. Settlement of the Kashmir problem would, undoubtedly, bring welcome financial relief to Pakistan, and it would also open the door to friendship and mutual trade with India.

Ceylon

"Ceylon's trade deficit for 1952 proved to be Rs. 200 million—greater by Rs. 90 million than was estimated when I last addressed you. It is now estimated that the deficit for 1953 will be in the neighbourhood of Rs. 40 million; a very great improvement over the previous year. This improvement has come about as a result of better prices for an increased production of tea and higher prices for copra, coconut oil and other coconut products, coupled with a lower overall volume of imports at cheaper prices.

"Ceylon is now importing rice at the rate of 500,000 tons yearly. Of this, 260,000 tons is to come from China at £49 per ton and a further 208,000 tons is expected from Burma. The Finance Minister, Sir Oliver Goonetilleke, is reported to have stated that Ceylon needs £75,000,000 over the next five years in order to increase the production of rice on which Ceylon's economy so largely depends. The foreign exchange now needed to pay for the import of 500,000 tons of rice yearly could then be used to stabilise Ceylon's economy.

"The Budget deficit in the current year ending June, 1954, is estimated at between Rs. 82 and Rs. 90 million compared with a deficit of Rs. 226 million (according to present figures) in the previous year). A factor in this improvement was the reduction of the subsidy on rationed rice in July which resulted in an increase in cost to the consumer from 25 cents a measure to 70 cents and was followed by mass protests and a state of emergency, including military intervention, which lasted until the end of August. Subsequently, assisted by a slight reduction in the world price of rice, the price of rationed rice was reduced to 55 cents a measure.

"The five-year agreement with China under which Ceylon will purchase 260,000 tons of rice in 1954 also provides for the sale by Ceylon to China of 50,000 tons of sheet rubber at approximately Rs. 1.55 per lb. f.o.b. Colombo out of a total estimated production of 90,000 tons of rubber of all grades. Thus, Ceylon has been partly shielded from the world-wide slump in rubber prices by its agreement with China.

"Tea is, however, Ceylon's major export, on which much of the economy of the Island depends. It has been a good year for the industry and the total estimated crop for 1953 is 330 million pounds. Fears of a heavy world surplus early in the year brought about a fall in prices of common grades to below the cost of production but, largely owing to the restricted output in Northern India and Indonesia, prices were progressively higher throughout the remainder of the year. Highly satisfactory sales to the U.S.A. greatly assisted the trade and compensated for the reduced Egyptian offtake. The average price obtained for all grades at Rs. 1.91 per lb. was 18 cents higher than in 1952, and the market, which brightened steadily throughout the year, finished on a firm note. The future is considered to be quite bright with increasing demand in all consuming countries.

"In October, Mr. Dudley Senanayake resigned the Premiership owing to ill-health and Sir John Kotelawala replaced him. There has been no relaxation of exchange control; indeed, in respect of personal remittances there are somewhat greater restrictions. The 'sliding scale' export duties on tea and coconut products were found to work unsuccessfully and have been replaced by fixed duties, on tea of 45 cents a lb., on copra Rs. 260 a ton, coconut oil Rs. 208 a ton and desiccated coconut Rs. 156 a ton.

Burma

"The state of emergency in Burma still continues, but it seems that in the Delta and Central Burma, which are the main strongholds of the Communist insurgents, the situation has considerably improved. The Prime Minister of Burma has said that 1954 will see the end of the emergency, but the general opinion is that it will take longer than this. In September last villages within twenty miles of Rangoon were raided by Communists and People's Volunteers in strength. Buses running between Rangoon and Pegu are still frequently attacked and although provisional arrangements for the evacuation of the 12,000 Chinese Nationalist (K.M.T.) forces from Burma commenced on 7th November, so far less than 2,000 have been evacuated.

"In 1953, Burma exported, in the first nine months of the year, 852,869 tons of rice. The carry-over from 1953 to 1954 is expected to be between 750,000 and 1 million tons and, in addition, it is anticipated that there will be an exportable surplus grown in 1954 of 1,800,000 tons. At one time it looked as though Burma's failure fully to market her 1952-53 crop would present the Government with the need to find storage for something like 1½ million tons of paddy, but early in February this year the Government of India agreed to purchase 700,000 tons of this surplus. This was fortunate as storage accommodation is severely taxed and delays in paying the growers for the new crop now coming forward would not only slacken trade, but could cause unrest in the countryside which, in present circumstances, would be most unfortunate. On the other hand, Burma still has a favourable balance of trade, which we estimate at some K93½ million against K342 million for the previous year and the Government have considerable cash reserves in hand at present, largely due to the inability, owing to the state of emergency, of Government departments to spend the sums budgetted for them. These reserves may stand Burma in good stead in dealing with the rice surplus which may develop.

"Burma's plans for progress include the expansion of Rangoon to meet the needs of a population of 1½ million people, a joint venture with the Burmah Oil Company, a factory for medical supplies, two more spinning and weaving factories (making three in all), two coastal passenger vessels and two freighters. An Agricultural Bank has been formed and it is proposed to form a State Commercial Bank. Trade agreements were concluded with Jugoslavia, India, Ceylon and Japan. Settlement of Burma's debt to the U.K. under the 1947 Treaty of £27½ million has been effected by payment (or acceptance of liability) of a total of £7.3 million to the U.K. Burma is no longer a recipient of Marshall Aid.

Malaya

"It is satisfactory to be able to report a further improvement in the state of emergency from which Malaya has suffered since 1948. The recrudescence of incidents in Johore and Negri Sembilan bears witness to the fact that the Communist menace is not yet eliminated, but there are indications that the Communist territorists are losing ground and co-operation by the general public which, in the past, has been almost entirely lacking is improving and this goes a long way to strengthening the hands of Government. This improvement has in no small measure been brought about by the untiring efforts of General Sir Gerald Templer, the High Commissioner and Director of Operations.

"Malaya's economy, and that of Singapore, is principally dependent upon the prosperity of the rubber and tin industries. Of both commodities America is the largest consumer. Both commodities came into urgent demand with resultant high prices during the Korean campaign. Both have suffered from heavy falls in 1953. From S$1.42 at the beginning of 1952, rubber fell to 85 cents by the commencement of 1953 and to 57 cents by the end of the year. At this price few producers can operate profitably. The principal price-determining factor in rubber is the quantity and price of subsidised synthetic substitutes produced in the U.S.A.

"Tin prices quoted on the London market at £975 per ton in January, 1953, fell to £630 per ton at the end of the year. Production of both rubber and tin declined somewhat in 1953. As a result, the value of exports declined severely in 1953, and it is estimated the figure will be in with $3,918 million in 1952 and $5,990 million in 1951—a decline of approximately 50 per cent. in two years. Imports have also declined, but it is estimated that for 1953 the figure will reach $3,180 million, resulting in the first unfavourable trade balance since 1949.

"On the other hand, 1953 has seen a recovery in Malaya's paddy crop, whilst reports from the chief rice-growing countries of South-East Asia are of good crops. Whilst this is only now beginning to be reflected in selling pressure and lower prices from producing countries, it seems likely this will in due course effect reductions in the cost of living for the masses in Malaya.

"Revised estimates for 1953 show revenue at $566 million and expenditure at $805 million; a deficit of $239 million. Part of this can be met from the special reserve of $85 million to which I referred last year and the remainder by depleting the accumulated general reserve balance brought forward from 1952 of $332 million, probably to about $100 million. The U.K. donated £6 million sterling in 1953 and has promised further financial aid in 1954. It is proposed to raise $100 million by loans in Malaya and a further loan of $50 million will be sought in London. Nevertheless, the outlook is not free from anxiety, for it is certainly of vital importance to the free world that the good progress which has been made to meet the Communist menace in Malaya should not be jeopardised by economic impairment by circumstances outside Malaya's control.

Hongkong

"Hongkong's exports showed a decline from $2,899 million in 1952 to $2,733.7 million in 1953, whilst her imports rose from $3,779½ million in 1952 to $3,872.7 million in 1953. In the past, Hongkong's economy has been based entirely upon the entrepôt trade, of which, until three years ago, a substantial portion (some 70 per cent.) was with China. Since the embargo on all strategic goods to China, Hongkong has developed its trade with other countries including the U.K., Africa, Central America, the South Seas and Australia. Moreover, the pattern of Hongkong's economy is changing. There are now an aggregate of 210,000 cotton spindles and a further 40,000 shortly to be added. Shipbuilding continues to expand. The enamelware and electric torch industries employ 8,000 workers in 38 factories, and the footwear, cotton clothing, lace-work, embroidery and knitting industries are growing and exporting their products. Indeed, the products of local manufacturers now represent some 22½ per cent. of the Colony's total exports.

"Trading conditions during the year were, however, difficult and the export trade had a difficult year so the overall decrease of only $163 million must be considered not unsatisfactory when it is realised that reductions in shipments to Indonesia, Formosa and Malaya combined totalled $338 million and to the U.S.A. by $51 million.

Thailand

"The year 1953 saw the change-over from a 'sellers' to a 'buyers' market in rice; Thailand's principal export. The result was a falling off in rice exports during the last quarter of the year and the total for the year amounted to 1,352,610 metric tons compared with 1,428,400 tons in 1952, and would have been lower but for the floods and storm damage to Japan's own crops which caused Japan to purchase 493,691 tons from Thailand, some 200,000 tons more than in the previous year. Prices also fell, as they did in the case of rubber, tin, teak and wolfram. Thailand's other principal exports in order of importance. It is generally believed that Thailand's current rice crop will be a bumper one and that there may be an exportable surplus of 2 million tons in 1954, but the marketing of this surplus must be affected by the increasing crops in other rice-producing countries.

"The value of exports for the year 1953 must be considerably lower than the previous year and although imports must also be less through increased import duties and the re-introduction of import control, it seems probable that an overall trade deficit occurred for 1953.

"The Budget Estimates for 1954 provide for a deficit of Tcs. 1,485 million, an increase of Tcs. 387 million over the estimate for 1953. The note circulation has increased by 5 per cent. during the year, but the note issue is backed to the extent of 80 per cent. by gold and foreign exchange. Thailand has received considerable assistance from the United States including equipment and materials to assist in developing the economy of the country and the Thailand Government has itself set aside large sums for railways, highways and power projects, whilst social security schemes are being considered, land reform is under discussion and sums are being provided to improve health and educational facilities.

"The political situation in Thailand appears to be stable, there was no serious internal trouble during the year, but the events in the neighbouring State of Laos and the general situation of the Communist-inspired war in Indo-China must be a source of anxiety to Thailand and those interested in the welfare of the country, including its close neighbours, Malaya and Burma.

Mauritius

"Mauritius enjoyed another prosperous year in 1953. The principal industry, sugar, produced a record crop of 512,000 metric tons and, under the International Sugar Agreement, their export quota for 1954 will amount to 470,000 long tons, of which 351,000 tons will be purchased by the British Ministry of Food at £41 per ton. Provided there is no heavy fall in world prices, the balance of the export quota (119,000 tons) may be sold to the U.K. and Canada and the total sale proceeds, although likely to be lower than last year, should still be profitable. The Cyclone and Drought Insurance Fund now totals approximately Rs. 61 million and should provide a useful cushion should either of these disasters occur.

"General trading conditions in Mauritius were good throughout the year. The cost of living index rose during the first half, but declined in the second half to about the same as at the beginning of the year. The population is rising and is now put at 517,000, an increase of 72,000 or over 16 per cent. since 1949. General elections were held in August and the Legislative Council now includes 19 elected members out of 35. Of the elected members 13 are Labour. The general standard of living is good and since 1948-49 with a revenue not quite doubled, expenditure on health has doubled, on education has increased threefold and on public assistance and old-age pensions has increased fivefold. Thus, expenditure on social services has risen to 35.9 per cent. of the Budget.

"The present attitude of the Mauritius elected legislators may be regarded as somewhat extravagant bearing in mind that the entire prosperity of the island depends upon the sugar industry and that a cyclone or serious fall in world prices for sugar could plunge Mauritius into serious financial difficulties. There was a revenue deficit of Rs. 4 million in 1952-53 and allowing for an expected deficit of Rs. 8 million in 1953-54 the Colony's reserves will stand at about Rs. 23 million in June, 1954, by no means excessive considering the present commitments on social services and the dependence of the island on one industry open to world-wide competition and the vagaries of the weather.

Japan

"Japan's economic situation has not improved during 1953. On the contrary, when the Korean cease-fire was signed on 27th July, purchases in Japan for 'special procurement' for the Korean war declined from U.S. $79 million in July to under $14 million in August. Japan's imports exceeded the value of her exports by nearly 100 per cent. in 1953, her population continued to grow (by 1,180,000 last year) and the population-density of cultivable land is believed to be the highest in the world.

"A General Election was held in Japan on 12th April, 1953, as a result of which Prime Minister Yoshida, the Liberal Party Leader, was re-elected. Unfortunately, a split developed in the party which was only healed after a period of brilliant political manœuvring by Mr. Yoshida. The present political outlook in Japan may, therefore, be considered as stable provided the present inflationary trend is checked. The economic situation of the masses in Japan is so very low that should the external purchasing value of the yen be seriously depreciated a social and economic disaster could ensue. There is little doubt that the 'offshore' purchases or 'special procurement' by the United Nations for the Korean war have shielded Japan from a grave economic crisis. This is now largely gone, and although it may to some extent be replaced by contracts for the rehabilitation of Korea, this must be regarded as fortuitous and no solution to Japan's long-term economic problem. The Yoshida Government may be able to take steps towards remedying the situation. Import controls on non-essentials and a period of austerity to take the place of what has been excessive spending not in any way justified by national earnings, the balancing of the Budget and tightening of credit control are among the measures in hand.

Competition from Japan

"The problem of introducing austerity and stopping the inflationary spiral, of increasing productivity and exports and reducing imports until a favourable trading balance is regained, is indeed a difficult task which can only be achieved by sound trading conditions. Clearly, the Western world cannot sell to Japan unless they are willing to buy from her, for Japan must export in order to buy food and raw materials and stabilise her economy. Although her competition will be felt by other countries in the free world, any refusal to trade equitably with her may drive her to look elsewhere with results more serious to the West than any which could flow from trade competition, however severe. Our two branches, in Tokyo and Osaka, continue to make good progress in establishing a tradition of service to the country.

"Our thanks are due to Mr. Drake, our Chief Manager, Mr. Hawkins, his Deputy, to the Managers and staff in London and to all our officers and staff at branches throughout the world. Their work calls for constant care and vigilance in the face of changing legislation and controls and fluctuating values and conditions, and our thanks are due to them for the satisfactory results which are being maintained."

NATIONAL BANK OF INDIA

(*Concluded from page 575*)

hope this additional service will assist local merchants and exporters.

General

"A subject and a query never far from the minds of bankers and business men is convertibility of sterling—when and how—and the possibilities have had considerable discussion for about the desirability there is no divergence of opinion. In my opening remarks I said something of the advantages that would accrue to international trading. Every shipowner, every merchant and every banker, I am sure, wishes to see convertibility, and every primary producer should wish to see it.

"We are told we are creeping nearer to the goal by achieving a more favourable balance in gold and dollars, but the 'power-that-be' are shy of commiting themselves beyond that—why? I believe, it is because our balance is precarious. I also believe that 'convertibility', unless it is total, is of little use to us. I do not believe that a currency—any more than a man—can function happily or effectively half slave and half free, and currencies have a way of escaping when there have to be bars; for money has a liquid character and like water somewhat contrives to find its own level. My belief is that we shall get convertibility at no early date, my hope that it will be possible sooner than I expect.

"Again, I wish to express sincere thanks to a loyal and enthusiastic staff. I personally have met a great many of them and know they have a keen interest and great pride in the Bank.

"Finally, with such a management and staff and our resources and organisation behind them, I look forward to the immediate future with confidence."

SIR HOMI MODY'S SPEECH AT ANNUAL GENERAL MEETING

GOVERNMENT URGED TO STIMULATE TEMPO OF ACTIVITY IN PRIVATE SECTOR

"IT might be safe to hazard a guess that 1954 will see a decline which, whatever its proportions, is not likely to be in the nature of a sizable recession," observed Sir Homi Mody, Chairman, the Central Bank of India, Limited, in the course of his speech at the annual general meeting of the Bank on Friday, 19th March, 1954. "It was clear," continued Sir Homi, "that the inflationary phase of the post-war period was over and the sellers' market had ended. This called for an adjustment everywhere and, as a result of various measures undertaken in Europe and the countries of the Commonwealth, it was possible to maintain their economy on an even keel."

Sir Homi mentioned that many competent authorities combated the view, recently advanced by Mr. Colin Clark, the well-known economist, that there would be a heavy slump in the U.S. —which dominates the economy of a greater part of the world—and held that the activity in the construction and capital goods industries were likely to be sustained at a high level and would provide, among other things, a balancing factor.

Summing up the situation in India, Sir Homi mentioned that there was a notable improvement recorded during the year. Industrial production was the highest in the post-war period and the supply of foodgrains had definitely improved leading to gradual decontrol. Although the volume of trade was smaller, the demand for some of the principal exports of the country which had slackened in the earlier months of the year had shown signs of revival towards the end.

Unemployment, however, was the one aspect of Indian economy which overshadowed these favourable developments. This was indicated by the number on live registers becoming heavily inflated, rising from 438,000 in December, 1952 to 522,000 in December, 1953. "Apart from a fall in the volume of foreign trade, a curtailment of internal trade, on account of the raising of the Bank rate and restriction of credit by the Reserve Bank," observed Sir Homi, "the basic cause of unemployment was the insufficiency of investment."

Expansion in Private Sector

Referring to the revised decision of the Planning Commission to raise the total volume of expenditure to be incurred under it by Rs. 175 crores, Sir Homi pointed out that this was calculated to step up the volume of expenditure in the public sector, but, if there were to be increases in opportunities for employment, it was equally essential to stimulate the tempo of activity in the private sector. He was happy to note that, for this latter purpose, the Government had under consideration two schemes for the establishment of Industrial Development Corporations. "All these measures", continued Sir Homi, "are directed towards the fulfilment of the targets laid down in the Five-year Plan and arresting the spread of unemployment. The joint stock banks, which constitute the main source of short-term finance, will have an important responsibility to bear in sustaining the activity generated by a large volume of investment."

Sir Homi commended the initiative taken by the Reserve Bank in appointing a Committee under the chairmanship of Mr. A. D. Shroff, to examine how the banks could extend a greater measure of assistance to the private sector.

Turning to the Directors' report and statement of accounts, Sir Homi said: "It is to be regretted that the results of the year's working should have been so disappointing when compared with those of the previous year. While the gross earnings of the two years remain the same, if we take into account the inclusion in the earnings of 1952 of a little over Rs. 8½ lakhs —being the post-war refund of E.P.T. and interest on E.P.T. deposits received during the year from the Income-tax Office—the net profits record a substantial decline. Due to various causes, our working funds could not be as profitably employed as we would have desired and, in the face of keen competition, the rates of interest on our advances could not be sufficiently raised so as to cover the increased cost of such funds and the rise in expenditure under different heads, including establishment charges. Your Board is doing what it can to retrieve this position.

"Taking the item of interest paid on deposits, borrowings, etc., there was an increase of Rs. 13¼ lakhs. This reflects not only a change in the pattern of deposits, but also a general rise in the rates paid for working funds. The Bank had, in addition, to resort to borrowings from the Reserve Bank at their comparatively high rates for advances, in order to finance the requirements of its constituents. The Board is fully alive to the significance of this unfavourable trend and is taking every step to ensure that the general increases in the rates which have to be paid for deposits are balanced by more remunerative uses for the funds at its disposal."

Establishment Charges

"So far as establishment charges are concerned," Sir Homi stated, "the position is one which must cause increasing concern. During the year under review, they went up by something like Rs. 12 lakhs, in spite of every effort to avoid an increase in the number on the rolls. Continuance of the scales of salaries and allowances as prevailing on 31st March, 1951, coupled with annual increments in accordance with the time scales in force—factors over which the Bank has no control—accounts for this heavy increase in charges. Some of the awards which have been made have resulted in throwing an intolerable burden on banks, without any corresponding benefit by way of harder work and increased efficiency, and the long-drawn proceedings before Adjudication Tribunals, of which there seems to be no end, are keeping alive an atmosphere of uncertainty and strife. I shall say no more at this stage than that a situation has been reached where banks may have to consider a curtailment of their activities, to the lasting detriment of trade and industry in the country.

"While on the subject of the relations between the staff and the management, I may inform the shareholders that the appeal filed before the Labour Appellate Tribunal has not yet been decided. In the meantime, it is heartening to find a realisation on the part of the Central Government of the fact that the heavy burden of establishment charges is acting as a great drag on the banks and making their functioning in rural and semi-urban areas uneconomic and extremely difficult. It was in recognition of this fact that the Government very recently presented an application to the Labour Appellate Tribunal praying for exemption, under certain conditions, of all bank offices at places having a population of 30,000 and under, from the operation of the Award. The Appellate Tribunal has, however, rejected the application, as counsel for Government informed the Tribunal that they did not wish to pursue it in view of the order of the Tribunal restricting its scope to the employees of that bank alone which had specifically raised the issue."

Bonus to Staff

Referring to the subject of distribution of bonus to the staff, Sir Homi said: "Having regard to the substantial drop in the profits of the first half of 1953, as compared with those of the corresponding period of the previous year, the Board was compelled to pass over the payment of bonus after the half-yearly results were examined and disbursements under different heads were determined. This decision proved fully justified when the final results were available. In the light of the experience we have had of the results of 1953, and in the altered conditions of today, it would be advisable to fall in line with the system prevailing in other banking institutions and defer the sanctioning of bonus till after the year's profits and disbursements therefrom are finally determined. After making the usual provisions, and they were no more than were absolutely essential, and recommending a reduction in the final dividend to be paid to the shareholders, the surplus in the hands of the Bank was not sufficient to enable the payment of a higher bonus than 1/12th of the basic salary earned by each member of the staff, amounting in all to a sum of Rs. 13 lakhs. I trust the members of the staff will accept my assurance that, if the position had warranted it, nothing would have pleased the Board better than to sanction a larger amount by way of bonus. In support of that, I would point to our record in the past when, without any pressure from anybody, we granted bonuses on quite a generous scale out of the surplus at our disposal. It is my hope that the staff will appreciate the circumstances and accord their fullest co-operation to the management, so that the institution can march towards greater prosperity in the future, from which they could legitimately expect to benefit.

"As a result of the lower profits, the Board has been compelled to recommend the payment of a reduced dividend to the shareholders. This it has done with great reluctance, but the circumstances did not warrant a higher distribution and the Board would have been failing in its duty to the institution if it had acted otherwise. It is hoped that the natural disappointment of the shareholders, particularly those with small holdings, will not prevent them from realising that it is in their own interests that the resources of the Bank should be carefully husbanded."

Investments

Turning to the item of investments, Sir Homi drew the attention of shareholders to a reduction of nearly Rs. 3,72,00,000 in the investment portfolio. "This action," observed Sir Homi, "was considered advisable in order to enable the Bank to cater to the increased needs of its constituents, and at the same time to avail itself of the advantage of such improvements as have taken place in the market price of some of the securities of a comparatively lower yield. The difference between the book value and the market value of our investments has been reduced to a little over Rs. 3,13,00,000, as against a figure of Rs. 3,54,00,000 in the previous year. As stated on other occasions, if it were possible to continue to hold all the securities right up to the respective dates of maturity, the present difference would be wiped off and there would remain a surplus in hand. It will, however, be realised that, by the very nature of the business, it can never be definitely stated when the Bank would be required to sell off some of the securities to meet unforeseen demands and contingencies or to employ the proceeds in more profitable channels. Although, by a recent notification, banks have been exempted from showing the market values of investments in respect of 'securities of the Central and State Governments', your Directors have not considered it advisable to depart from the usual practice—at any rate for the year under review—and have shown the book and market values as before.

"As regards advances, owing to the late commencement of the busy season, demands for funds was somewhat slow and poor. However, towards the close of the year, the figure of advances and bills made a better showing. All efforts are being made to increase this side of the Bank's business.

Branches

"During the year, a branch of the Bank was opened in London with a view to according better facilities to constituents, on the one hand, and enlarging the Bank's participation in foreign trade, on the other. It is too early to express any opinion about its working, but there are indications of an increase in our foreign exchange transactions, apart from any question of the desirability of the Bank establishing itself in the centre of the world's money market. The opening of this branch has naturally cost a substantial amount by way of preliminary expenses and has, to that extent, affected the figure of profits, but it is hoped the future will justify the decision that has been taken after careful consideration and investigation of the business possibilities of the venture.

"During the year, Mr. Maneklal Premchand resigned his position as a Director of the Bank. His advice and experience had always been found very useful and the Board has placed on record its appreciation of the services he had rendered."

Sir Homi referred then to the serious loss suffered by the Bank by the passing away of

(Continued on page 593)

THE UNION BANK OF INDIA, LIMITED

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Union Bank of India, Limited, as at 31st December, 1953, and also the foregoing Profit and Loss Account of the Bank for the year ended on that date, in which are incorporated the audited Returns of Kalbadevi, Rajkot, Mandvi (New), Surat Branches and the certified Returns from Jetpur, Jamnagar and Veraval Branches, and report that :—

(a) we have obtained all the information and explanations we have required and have found them to be satisfactory;
(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;
(c) the balance to the credit of Mandvi (Old) Branch has this year been adjusted to the Miscellaneous Account in the Head Office Books of Account. The Returns received from Branch Offices of the Bank have been found adequate for the purpose of the audit;
(d) subject to the remarks in para (c), in our opinion the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;
(e) such Profit and Loss Account shows a true balance of profit for the year;
(f) such Balance Sheet exhibits a true and correct view of the state of the Bank's affairs according to the best of our information and explanations given to us and as shown by the books of the Bank, and
(g) in our opinion the books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

THE UNITED COMMERCIAL BANK, LIMITED.

(INCORPORATED ON 6TH JANUARY, 1943)

AUTHORISED CAPITAL	Rs. 8,00,00,000	PAID-UP CAPITAL	Rs. 2,00,00,000
SUBSCRIBED CAPITAL	Rs. 4,00,00,000	RESERVE FUND	Rs. 80,00,000

ELEVENTH REPORT OF THE BOARD OF DIRECTORS

The Directors submit to the shareholders the Audited Balance Sheet of the Bank as on, and the Profit and Loss Account for the year ended, 31st December, 1953.

The net profit for the year, including Rs. 1,01,119-2-0 brought forward from the previous account, after providing for all known and anticipated charges and expenses of opening branches, and for donations of Rs. 55,305-0-0 referred to hereunder, amounts to .. .. Rs. a. p. 24,02,320 7 3

The Directors have made the following appropriations out of the net profit:

1.	Transfer to Reserve Fund	5,00,000	0 0
2.	Provision for Taxes	9,50,000	0 0
3.	Balance	9,52,320	7 3
		Rs. 24,02,320	7 3

Out of the balance of Rs. 9,52,320-7-3 the Directors recommend to the shareholders payment of Dividend at Rs. 2-0 per share, free of Income-tax, which will absorb Rs. 8,00,000 leaving Rs. 1,52,320-7-3 to be carried forward to the next year's account.

During the year under report, your Bank paid Rs. 55,305 as donations including Rs. 25,000 each to the Pagoda Building Fund of the Prime Minister of Burma and the Building Fund of the Federation of Indian Chambers of Commerce and Industry.

The title deeds for the properties purchased by the Bank and mentioned in the last report have not been completed on account of delay in legal formalities.

The Bank's business shows improvement and there is considerable increase in the Bank's deposits at the end of 1953 as compared to the corresponding figure for 1952. Looking to the monetary, credit and trade conditions in 1953 in the countries in which your Bank works, and to the onerous effect of labour laws, and awards made thereunder, and profit of the Bank for the last year as satisfactory. The Bank's investments appear in the balance sheet at below market value.

During the year, the Bank opened a branch in London.

The Directors are thankful to the shareholders and the clients of the Bank for their continued support. They also express their gratitude to the members of the Bank's Local Boards and Advisory Committees for their able help and guidance.

The Directors place on record their appreciation of the high sense of, and devotion to, duty of your General Manager, Mr. B. T. Thakur, and thank him for his ceaseless and untiring efforts in the Bank's interests. The Directors also thank the staff of the Bank.

Under Article 95 of the Bank's Articles of Association, four of your Directors,

Shri M. R. Ruia — Shri R. G. Saraiya
Shri M. L. Tapuriah — Shri B. N. Jalan

retire by rotation, and, being eligible, offer themselves for re-election.

The shareholders are requested to appoint auditors for the current year and to fix their remuneration.

By Order of the Board,
G. D. BIRLA,
Chairman.

CALCUTTA, 10th March, 1954.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the United Commercial Bank, Limited, as at 31st December, 1953, and also the foregoing Profit and Loss Account of the Bank for the year endod on that date, in which are incorporated the Branch returns audited by the Statutory or Local Auditors, and report that:—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) the returns received from branch offices of the Bank have been found adequate for the purpose of the audit;

(d) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;

(e) such Profit and Loss Account shows a true balance of profit for the year;

(f) such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and the explanations given to us and as shown by the books of the Bank, and

(g) in our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

SOME FACTS ABOUT LAC INDUSTRY

CULTIVATORS' APATHY TO NEW METHODS

ALTHOUGH the Annual Report of the Indian Lac Cess Committee for the fiscal year 1952-53 relates to developments which took place a year ago, it makes interesting reading inasmuch as this is the only latest publication to provide authoritative statistics on economics of lac industry in India. According to the Report, during the year, the industry passed through a period of stress and strain on account of heavy fall in prices of shellac. Thus, prices of T.N. shellac, which stood at Rs. 151 per maund in December, 1952, dropped to Rs. 92 per maund in March, 1952. This fall was in line with that of other commodities affected by world recession, following the slow down of the pace of U.S. rearmament and abatement of stockpiling. But the price-decline in shellac did not halt as it did in the case of other commodities; for, subsequently in the year, it touched a level lower than even the controlled price of Rs. 64 per maund during the war. This fall was brought about by speculative tendencies in the trade, and competition from synthetic resins and Siamese seedlac. Representations were made by different associations to the Government of India suggesting remedial measures to deal with the disquieting situation. These suggestions included:

(1) Imposing a ban on speculation, especially by closing the Calcutta Shellac Exchange;

(2) fixation of maximum and minimum prices for lac;

(3) fixation of quota for the export of seedlac and the banning of export of sticklac;

(4) enforcement of the quality control scheme by the Government of India;

(5) encouragement of shellac consumption in India;

(6) the formation of a fact finding committee at Government level for advising on the measures required to import shellac trade; and

(7) formation of a Lac Control and Marketing Board.

After examining in detail the aforesaid remedial measures, the Indian Lac Cess Committee resolved as follows:

(i) That the Committee recommends to the Government of India that measures be taken to ban the Calcutta Shellac Exchange Ltd. as its activities are speculative and detrimental to the interests of trade in shellac. It further recommends that after the Forward Contracts Regulation Bill has been passed, forward contracts in seedlac and shellac be regulated on the basis of specific delivery contracts through the agency of the Calcutta Shellac Trade Association which is a representative body of the trade and be recognised under the provisions of the aforesaid Act.

(ii) That the Committee recommends to the Government of India that the export of sticklac be banned altogether. It does not consider it desirable at present to recommend any ban or fixation of quota for the export of seedlac.

(iii) That the Committee does not consider the statutory fixation of maximum and minimum prices to be feasible at present.

(iv) That the scheme for Quality Control at the export stage be introduced and that a laboratory for testing samples of seedlac and shellac be opened by the Government of India at Calcutta, but for the first three years the choice of getting samples tested either at the Government laboratory or at commercial laboratories be optional.

(v) That all possibilities should be explored for increasing the home consumption of shellac.

(vi) That the formation of a Fact-finding Committee at Government level to investigate the problems relating to shellac and suggest ways and means for improving trade is not necessary.

(vii) As regards the scheme for the formation of a Lac Control and Marketing Board, the Committee does not consider it feasible to adopt the scheme, as huge capital would be required, and there are practical difficulties in running the scheme.

The Lac Cess Committee considered the report of the Director of Lac Research Institute on his visit to the U.K. and the U.S.A. during June-July, 1952. It decided to give wider publicity in the home market and abroad, in order to increase the utilisation of lac. It approved the appointment of a utilisation officer to be in charge of publicity work. The Ministry of Food and Agriculture was requested to approach the Ministries of Railways and Production to encourage the use of shellac-based linseed oil paints and other materials.

Considerable progress was noticed in research work in the Indian Lac Research Institute, Namkum. The work falls into two broad sections: chemical and entomological. On the chemical side, several tests on lac-linseed oil paints showed that these paints have come to be regarded as generally satisfactory for purposes of indoor use. The Central Standards Office, Ministry of Railways, found satisfactory the paints containing shellac, linseed oil, lime and cashew-nut shell-liquid-formaldehyde resin in the respective proportions of 20, 100, 3, 100 and 15, respectively. Research continued on D.U. moulding powders. On the entomological side, research was carried on improving crop production on palas by partial defoliation and on determining the most suitable pruning methods and seasons for kusum lac.

Dissemination of the Institute method of lac cultivation among lac cultivators was further pursued during the year under review. A study of the results of work so far done revealed that the cultivator had not yet been able fully to appreciate the beneficial effects of couping and partial defoliation. Artificial infection in the month of July was considered in many places an irksome additional task, as it clashed with the main agricultural operations. There was also a tendency to allow self-infection in October to produce *Ari* crop in the following April and this undermined the very basis of the coupe system which aims at giving sufficient periodic rest to the trees. The need for research in the field to evolve a modified procedure which would be readily acceptable to the cultivator was considered very necessary.

The table below gives estimates of production of sticklac in 1952-53 as compared with those in the preceding four years.

(In lakh maunds)

Year	Baisakhi	Jethwi	Katki	Aghani	Total
1952-53 ..	9.29	0.29	1.56	0.89	11.53
1951-52 ..	9.57	0.09	2.67	0.64	12.97
1950-51 ..	7.44	0.05	2.83	0.41	10.73
1949-50 ..	6.91	1.02	3.50	1.23	11.66
1948-49 ..	5.36	0.10	1.99	0.82	8.27

The *Baisakhi* crop during 1952-53 was almost the same as that in 1951-52, but better than the crop during each of the years 1947-51. The other crops, *Jethwi*, *Aghani* and *Katki*, were very poor. This affected the total annual production, estimated at 11.53 lakh maunds, as against 12.97 lakh maunds in 1951-52.

Exports of different kinds of lac from India in 1952-53 amounted to 9.13 lakh maunds, valued at Rs. 7.42 crores, as compared with 9.72 lakh maunds worth Rs. 14.84 crores in 1951-52; and 9.01 lakh maunds valued at Rs. 11.87 crores in 1950-51. The U.S. retained the first place and the U.K. the second in point of total offtake of lac, as in previous years. Germany, which had gone to the fourth place in 1951-52, regained the third position from Japan which ranked as the fourth customer.

Summarising the main trend of shellac prices in the financial year 1952-53, the Report observes:

"The financial year 1952-53 opened with shellac prices on T.N. basis at Rs. 92 per maund. All grades were receiving attention from U.K. and U.S.A. But due to heavy arrivals of the *Baisakhi* crop after the second week of April, the prices came down to Rs. 80 per maund on T.N. basis. At this time, it was felt that prices would not decline further; but, due to a subnormal demand and shipment delays, there was a moderate accumulation of stocks in Calcutta which pushed the prices down to Rs. 66 per maund on T.N. basis by the end of the month. The demand position improved in June, though the arrivals of sticklac in assembling markets were poor and the prices went up to Rs. 80 per maund on T.N. basis on the 10th June, 1953. For the rest of the month, the prices fluctuated within very narrow limits and the month closed with T.N. at Rs. 76. Good overseas demand continued up to the first week of July and pushed the prices to Rs. 85 per maund on the 8th July. But, after this date, the demand was low and the month closed at Rs. 66 per maund. During August and September, the market was steady and, as seedlac was more in demand than leaflacs, the price difference between seedlacs and corresponding grades of shellac diminished, resulting in reduction in production of shellac. In October, though the demand was better, the stocks of the *Baisakhi* crop were sufficient to meet it and reports of poor *Katki* and *Kusmi* crops did not have much effect on the prices and the month closed on a quite tone. Throughout the period August to October, the price moved between narrow limits, i.e., Rs. 67 to Rs. 72 per maund on T.N. basis. In November and December, there was good overseas demand, specially for seedlac from U.S.A. From the Eastern markets, there was demand for orpimented shellac, but, in spite of all these, the maximum price attained in this period was Rs. 75 per maund on T.N. basis. In January and February, good overseas demand continued for seedlac but the prices again moved within narrow limits and the month closed with T.N. shellac at Rs. 72 per maund. In March, trading was on a restricted scale and dealers in Calcutta were interested in holding stocks, as there were reports of the following *Baisakhi* crop being 50 per cent. below normal. Throughout the year, the prices were confined to narrow limits and ranged between Rs. 66 to Rs. 92 per maund on T.N. basis. A special feature of the lac trade during the year was very high demand of seedlac, which was better in some months than that of leaflacs."

In terms of prices, the year 1953-54 now drawing to a close was relatively more favourable for shellac than the preceding year. After fluctuating narrowly between Rs. 63 and Rs. 73 in the months of April-May, 1953, T.N. pure shellac improved by stages to Rs. 94 (per maund) in June. It remained remarkably steady in July in the neighbourhood of Rs. 95. In the subsequent two months, it ruled very firm, touching a high of Rs. 113 in September, 1953. Thereafter, there was a slight setback and a low of Rs. 95 was recorded in October. In the months of November and December, 1953, however, it looked up again to Rs. 109 and still further to Rs. 113, the closing rate for 1953 being Rs. 110. There was a perceptible fall in January this year, from Rs. 112 to Rs. 96. In February, it fluctuated between Rs. 94 and Rs. 100 and closed steady at Rs. 96. It will be noted that during the eleven months ended February, 1954, the highest and the lowest levels touched by T.N. pure shellac were Rs. 113 and Rs. 63, as against Rs. 92 and Rs. 66 in the whole of 1952-53. Further, the highest levels were seen in the latter part of the year, whereas this was the other way about in the previous year. Again, the closing rate for February, 1954, at Rs. 98, shows a net gain of Rs. 26 over the corresponding month of 1953, but the year 1952-53 ended with a loss of Rs. 20. In terms of shipments, however, 1953-54 was not so favourable as in 1952-53. Thus, total shipments in the 11 months ended February, 1954, according to *Price Current*, published by Messrs. J. Thomas & Co., Calcutta, were only 298,653 packages, as against 385,053 packages in the corresponding period of the preceding year.

ANGLO-JAPANESE PAYMENTS AGREEMENT

INDIA'S POSITION UNAFFECTED

THE debate on the Sydney Commonwealth Conference held in Parliament on 15th March, 1954, focussed attention on two issues, namely, implications of the Indo-Japanese Payments Agreement and the question of Imperial Preference. A number of points was raised in regard to these issues and to all these the Finance Minister gave a convincing reply.

One of the members complained that, soon after the Commonwealth Conference at Sydney, the U.K. entered into a trade and payments agreement with Japan, and asked the Finance Minister whether India was consulted by the U.K. or taken into its confidence. He agreed that no one should jump to any conclusion about India's attitude to the sterling bloc without knowing fully its terms of trade *vis-a-vis* the U.K. and other Commonwealth countries. The same member, speaking about the future of the G.A.T.T., stated that countries like the U.S. and the U.K. gave the cold shoulder to India's request for release from certain agreements which it had entered into. India was merely told that its request for re-negotiation in regard to these items would be favourably considered by the Inter-session Committee. He wanted to know, if India was free to evolve its own independent policy.

The Finance Minister explained the position of India in relation to the Anglo-Japanese Payments and Trade Agreement for the year 1954. He disclosed that the Government of India was informed in November, 1953, by the U.K. Government that, as the existing agreement with Japan was expiring on 31st December, 1953, it had asked the Japanese Government to send a representative to London to discuss the payments arrangement for 1954. The U.K. Government had also asked the Government of India to furnish estimates of likely payments by India for imports from, and likely receipts from exports to, Japan during 1954. The Government of India was, Mr. Deshmukh said, informed before hand that negotiations were to be undertaken for the extension of the Payments Agreement. It would thus be seen that the U.K. did consult India before concluding an agreement with Japan.

Providing further information, the Finance Minister stated that the Payments and Trade Agreement was actually signed on 29th January, 1954. This was the second agreement. It did not raise any new points affecting India. There was, therefore, no need to consult India before it was actually signed. During the negotiations leading to the new agreement which took place in Tokyo, India's representatives in that capital were fully kept in the picture by the U.K. negotiators. The Government of India was also informed from time to time. There was, therefore, no question at all of India not having been consulted by the U.K.

Main Features

The main feature of the Anglo-Japanese Payments Agreement was that all payments between residents of the sterling area and residents of Japan would take place as before in sterling. Japan would be permitted to utilise its sterling for financing direct current transactions with certain non-sterling area countries and both parties would consult together in order to keep Japan's sterling balance within reasonable limits. The old convertibility clause, under which any excess over specified limits of sterling held by Japan at the end of the agreement period had to be converted into dollars, was abolished. The Agreement was, therefore, welcome to all the sterling area countries, as it enabled them to trade more freely with Japan without fear of its ultimately being involved in dollar payment. Prior to this Payments Agreement, there used to be annual trade negotiations between Japan and sterling area countries with a view to balancing estimated payments during the ensuing year. India used to be associated with these annual trade negotiations. With the signing of the Payments Agreement of August, 1951, it was no longer necessary to balance payments meticulously by each country with Japan.

Continuing, the Finance Minister stated: "The new Payments Agreement for 1954 departs very little from the Agreement of 1951. In view of Japan's shortage of sterling during 1953, Japan has been permitted certain additional credit facilities in the nature of sterling for dollars. Moreover, the U.K. Government has agreed, on behalf of the U.K. and the Colonial Governments from Japan so as to enable her to earn more sterling. This does not affect the right of the independent sterling area countries like India to determine their own trade policies *vis-a-vis* Japan.

"So far as India is concerned, Japan is being treated as a soft currency country of the sterling area countries since 20th October, 1951. Most other countries, however, treat Japan as a hard currency country. The new Trade and Payments Agreement does not, therefore, affect India's trade policy with respect to Japan."

Replying to the question whether the new Trade Agreement signed by the U.K. with Japan which liberalised imports from Japan would not affect Indian textile exports to the sterling area, and consequently, whether the U.K. should not have consulted India before signing the Trade Agreement, Mr. Deshmukh stated that the U.K. itself being interested in cotton textile exports to the colonies, India must presume that the danger of Japanese competition in textiles had been taken into account by the U.K. In any case, just as the U.K. Government did not interfere with the individual trade policies of the independent sterling area countries, India could hardly be expected to be consulted by the U.K. in its bilateral trade agreements with other countries on behalf of itself and the colonies.

Flatly denying the allegation that the Commonwealth Ministers' Conference considered the question of Imperial Preference, Mr. Deshmukh stated that the Government had made a thorough study of the question and that, at the appropriate moment, the Minister for Commerce and Industry would inform the House of the Government's policy. "As far as we can discover today," he remarked, "there is no Imperial Preference which is hurting us, and it is possible to establish that, on the whole, we are deriving advantage from the present system of Imperial Preferences which is now restricted by the Agreements arrived at at the G.A.T.T."

AGHANI (KUSMI) AND BYSAKHI LAC CROPS

According to the preliminary estimates given by the Indian Lac Cess Committee, the Bysakhi Lac Crop in India (excluding Assam) for the year, 1954 is expected to be 6,45,000 maunds, as compared with the final estimates of 4,26,000 maunds for this crop for the previous year.

The final estimates of the Aghani (Kusmi) Lac Crop for the year 1953 are put at 51,000 maunds for the whole country, as against the preliminary estimate of 50,000 maunds estimated earlier.

(*Concluded from next column*)

Notice has been issued, it is stated, for changes in terms and conditions of employment, which may involve an extra expenditure of Rs. 100 lakhs a year. Consequently, a rise in the cost of production is expected, even granting that all the demands are not granted by the management. The consumers' capacity to pay higher prices, too, is stated to have gone down considerably, as sales have dropped steadily during the past few months. Besides, it is considered difficult to undertake plans of expansion and development in order to open up new opportunities for employment, as envisaged in the Five-year Plan. If further levies are imposed, such would affect progress and prevent the maintenance of even the present level of production and hit hard subsidiary industries, supplying raw materials for the manufacture of footwear. The Finance Minister has, therefore, been requested by the Association to withdraw the excise duty on footwear.

[Since writing the above, the Finance Minister has announced in Parliament his decision to raise, with immediate effect, the exemption limit in the case of the non-power operated section of the industry to factories employing up to 45 workers per day. This will provide some relief to small factories engaged in the manufacture of footwear, but the position of bigger factories will remain unchanged.—ED.]

EXCISE DUTY ON FOOTWEAR

MANUFACTURERS' PLEA FOR WITHDRAWAL

PLEADING for the abolition of the 10 per cent. excise duty on footwear, introduced by the Finance Minister in his Budget for 1954-55, the Association of Rubber Manufacturers, Calcutta, has, in the course of a memorandum submitted to the Government, explained the dangers to which the industry would be exposed consequent on the imposition of the levy. At the outset, the Association refers to four main reasons put forward by the Finance Minister for imposing the excise duty. These are: (1) to replace part of the revenue which used to be derived from customs duties, (2) to obtain a fair contribution to the country's exchequer from industries (which in the past developed with the assistance of protectionist policies) when they reached a stage of full development, (3) to make stable the country's tax structure by broad-basing its excise without affecting the economy of the industries taxed or placing an undue burden on the consumers, and (4) indirect taxation where the profit margin has for some time been high. The Association contends that on none of these four grounds is the imposition of duty on footwear justified.

Explaining its case for sympathetic consideration, the Association draws the attention of the Finance Minister to the fact that, with regard to footwear, there was no case of losing import duty at all by the exchequer, as the country hardly earned any customs duty from imports of footwear. On the other hand, the country has not only gained by saving foreign exchange, but has earned a substantial amount of foreign exchange, including some hard currency, through exports. This has been possible not because of any policy of protection given to this industry but because the shoe industry has been keeping its prices low and has, by its efforts, kept foreign competitors out of the Indian market. Consequently, the profits made by the industry cannot, it says, be taken as high, while, in the case of one big manufacturer and of a number of small manufacturers, the balance-sheets have shown losses.

The Association has also dealt with the present position of the leather and rubber footwear industries to show how the 10 per cent. excise levy would adversely affect them. The organised units are manufacturing, at present, 28.5 million pairs comprising 5.5 million pairs leather footwear and 23 million pairs rubber footwear. This figure compares with 70 million pairs, estimated to be the production of leather footwear by the cottage industry sector. It is pointed out that, as a result of the levy, many small organised establishments would split themselves up into still smaller units in order to escape falling within the scope of the duty. In that event, the few organised units left in the field would have to compete even more seriously than hitherto with hand-made shoes, and their very existence will be seriously jeopardised. In the sphere of rubber footwear, most small rubber factories in India are not operating at present on a sound economic footing owing to low level of prices, as there has been a recession in the footwear market. In this context, the attention of the Ministry is drawn to the resolution passed by the Rubber and Canvas Shoe Manufacturing Association, Calcutta, consisting of small units, to close down their factories for a week from 8th March, 1954, in order to avoid accumulation of stocks.

Various methods are stated to have been adopted by the organised units to avoid losses resulting from accumulation of stocks and drop in sales. In order to keep its factory working in full strength, one manufacturer, for instance, introduced new lines at sacrificial prices and opened a few more wholesale and retail stores. The factory was closed for a fortnight to dispose of stocks of 1951. He sold through his shops other articles such as umbrellas, toys, singlets, socks, polishes and brushes. The total net profits thus derived on both internal sales and export, approximate, it is stated, one-third of the total excise duty it would be called upon to pay, if the duty were to remain in force.

Again, labour demands are stated to be on the increase. In the case of the manufacturer referred to above, who employs 15,000 workers, a demand for *Puja* bonus is under negotiation and it may amount to Rs. 45 lakhs a year.

(*Continued in previous column*)

DIVIDENDS AND EXEMPTION UNDER SECTION 15C

NEED FOR SUITABLE AMENDMENT OF THE ACT

(By R. K. DALAL, B.Com., F.S.A.A., F.C.A.)

OFTEN the object of enacting a section with a view to giving relief is frustrated by some technical flaw in the wording of the section. This is well illustrated by section 15C, enacted in 1949.

The scope and object of the section at the time it was enacted was to encourage the establishment of new industrial undertakings. The profits of such undertakings were to be exempt from tax to the extent of 6 per cent. per annum on capital employed in the undertaking. Further, the tax is not payable by a shareholder in respect of so much of any dividend paid by such industrial undertaking as is distributed out of that portion of the company's profits and gains which is exempted under this section. Exemption under this section is in respect of income-tax as well as super-tax, though the sums exempted are to be included in the total income for the purpose of determining the rate of tax payable on the assessee's taxable income.

This is the brief outline of the concession. Now this relief does not operate, it seems, in the case of a company which, by reason of large unabsorbed depreciation, is not assessed to tax, but which declares a dividend out of its profits to its shareholders. In that event, since the company's profits were not assessable, the question of exemption under section 15C does not, it is argued, arise. For purpose of exemption under section 15C, profits are to be computed in accordance with the provisions of section 10. Therefore, profits which attract exemption must be taxable profits which emerge as a result of computation under section 10. If, under section 10, profits do not result by reason of the operation of reliefs thereunder, there are no profits to which section 15C can apply. The relief under section 15C, is called for only where there are taxable profits. In short, section 15C, does not extend to book profits of a company. A position may, therefore, arise in which there are profits as per company's profit and loss account but, as a result of computation under section 10, these may be reduced to an actual loss by reason of carry forward of arrears of depreciation. What happens when such profits are distributed as dividends? Are the shareholders exempt from tax?

Section 15C (4) reads as under:

"The tax shall not be payable by a shareholder in respect of so much of any dividend paid or deemed to be paid to him by an industrial undertaking as is attributable to that part of the profits or gains on which the tax is not payable under this section."

Now this section provides that exemption is available to the shareholder only on so much of the dividend as is attributable to that part of the profits or gains on which the tax is not payable under this section. Therefore, the condition precedent to exemption to shareholders is that the dividend must be attributable to that part of the profits on which tax is not payable under section 15C. If, therefore, the company earns exemption or relief under any other section, the exemption to the shareholder would not apply. Therefore, recipients of such dividend, although declared by an industrial undertaking which completely satisfies the conditions mentioned in sub-section (2) of section 15C, are not eligible to get the relief. Section 15C (2), it may be added here, applies to any industrial undertaking which:—

(i) is not formed by the splitting up, or the reconstruction of, business already in existence or by the transfer to a new business of building, machinery or plant used in a business which was being carried on before the 1st day of April, 1948;

(ii) has begun or begins to manufacture or produce articles in any part of the taxable territories at any time within a period of six years from the 1st day of April, 1948, or such further period as the Central Government may, by notification in the official *Gazette*, specify with reference to any particular industrial undertaking;

(iii) employs 10 or more workers in a manufacturing process carried on with the aid of power, or employs 20 or more workers in a manufacturing process carried on without the aid of power.

Now the question raised may be viewed from this aspect. Is there a relief to shareholders if the company itself pays no tax? No, because the company has already earned relief by reason of liberal and generous rates of depreciation allowance. If, in spite of these liberal allowances, the company still makes taxable profits the question of relief would arise under section 15C, which really means that section 15C, is not attracted where there is no taxable profits as a result of computation under section 10. If so, section 15C, cannot be invoked for the benefit of the shareholders; for in the words of sub-section (4) condition precedent to exemption is "that only so much of dividend as is paid to the shareholder is attributable to that part of the profits or gains in which tax is not payable *under this section.*"

Therefore, exemption depends on the condition precedent, namely, that dividend paid to the shareholders by the industrial undertaking must be attributable to the profits which are exempted under section 15C and not under any other section. If exemption is earned under section 10, relief is not earned under section 15C (4).

This little lacuna has resulted in the shareholders of a company earning profits and getting an exemption under section 10 being denied the benefits intended to be given to new pioneering undertakings. The result is that, although the company pays no tax on such profits, the shareholders continue to pay the same, a position which was possibly not envisaged by the framers of the section when the section was introduced in the Act in 1949.

If the idea was to encourage investment in such new industries, it is not fulfilled by this legislation. This defect, therefore, must be set right by an early amendment of the Act. Meanwhile, the dividends should be exempted through executive instructions issued by the Central Board of Revenue. Will the Central Board of Revenue review the question at an early date and bring in an amending legislation?

DEPOSITS FOR PAYMENT OF ESTATE DUTY

The Estate Duty Rules have now been finalised. Rule 19 of the Estate Duty lays down the procedure for making deposits for payment of the duty. Under this rule, any person wanting to make deposit for the purpose of payment of estate duty that may accrue after his death may pay the money by delivering a crossed cheque or a bank draft on a Scheduled bank to the Controller or by depositing the amount in cash to the credit of the Central Government at any treasury or at any branch of the Reserve Bank or the Imperial Bank, accompanied by a statement showing the net assets existing on the date of making the deposit and the principal value thereof on the basis of which the deposit has been calculated.

It should be noted that under section 33(1) (g) of the Estate Duty Act, a deposit made towards the payment of Estate Duty is exempt up to the amount of the duty payable or Rs. 50,000, whichever is less. The amount so exempt is, however, to be aggregated for the purpose of determining the rate applicable to the principal value of the property.

PROFIT OF STANDARD MILLS SHOWS IMPRESSIVE RISE

DIVIDEND REPEATED FOR THE THIRD YEAR

THE financial results of the Standard Mills Ltd. (*Managing Agents:* Messrs. Mafatlal Gagalbhai and Sons, Bombay), for the year ended 31st December, 1953, provide further proof of the fact that the past year was more favourable for cotton mills than the previous one. The gross profit of the Company for 1953, at Rs. 42.91 lakhs, represents an increase of nearly Rs. 9 lakhs over that for 1952. This improvement in profit does not mean that the Company had a very prosperous period, for the profit falls short of that for 1951 (at Rs. 61.41 lakhs) by as much as Rs. 18.50 lakhs and more so as compared with those of Rs. 62.93 lakhs and Rs. 68.40 lakhs for 1948 and 1945, respectively, despite the fact that the sale proceeds for the year under review were much higher than for the earlier years under comparison. Such a comparison may not be strictly correct, for the trading conditions were not uniform in all these years. However, it shows how the profit-margin of such an efficient unit as the Standard Mills has shrunk. An explanation for this is to be found in the substantial rise in expenses over these years.

Be that as it may, the increase in the profit of the Company has resulted in (1) higher commission for the Managing Agents than for the previous year, (2) larger receipts by the Exchequer, if the transfer to the taxation reserve is any indication of it, and (3) sizable additions to depreciation reserves. If the reserves of the Company have not been strengthened further, despite the larger profit, it is no reflection on the Directors' prudence. It is because the net profit, after making larger allocations for the above purposes, is actually lower than that for the previous year. Further, the Company's reserves are already at an impressive level, even after the capitalisation of as much as Rs. 24 lakhs in 1947. So far as shareholders are concerned, they have not received any additional benefit from the improvement in the gross profit, for the dividend on ordinary shares is being merely maintained at 20 per cent. This is the third year in succession that the dividend has been repeated thus.

The following comparative table clearly brings out the salient features of the results of working of the Company for the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950
Sale proceeds	856.57	805.72	998.53	197.14
Other income	3.49	8.70	24.68	7.09
Stocks	33.17	43.88	31.92	31.95
Expenses*	806.44	292.70	261.36	175.37
Gross profit	42.91	33.98	61.41	29.48
Managing Agents' commission ..	3.74	2.94	5.72	2.53
Depreciation†	15.70	8.00	7.37	8.81
Taxation	11.00	7.50	24.50	9.00
Net profit	11.97	15.54	23.82	9.14
Reserves	..	4.00	12.11	1.00

4% Preference	0.48	0.48	0.48	0.48
Ordinary	11.20	11.20	11.20	7.80
	(20%)	(20%)	(20%)	(15%)
Carry forward	0.33	0.03	0.17	0.13

* Approximate.
† Includes special depreciation reserve amounting to Rs. 10 lakhs for 1953, Rs. 3.30 lakhs for 1952, Rs. 2.95 lakhs for 1951 and Rs. 4.56 lakhs for 1950.

Of the expenses, cost of cloth purchases account for a fall of Rs. 2.60 lakhs and cotton for Rs. 19.38 lakhs during 1953, whereas salaries, wages, provident fund, etc., show an increase of Rs. 23.39 lakhs and stores and spare parts of Rs. 11.05 lakhs. The provision for depreciation includes Rs. 10 lakhs set aside for special depreciation reserve, as against Rs. 3.30 lakhs for the previous year. As already noted, no addition to the reserves has been made, while, a year ago, the dividend equalisation fund was strengthened by Rs. 3 lakhs and general reserve by Rs. 1 lakh.

The balance-sheet of the Company as on 31st December, 1953, presents a strong and sound picture of its financial position. The reserves and surplus aggregate Rs. 120.20 lakhs, representing nearly 174 per cent. of the paid-up capital of Rs. 68 lakhs. The reserves include Rs. 16.87 lakhs representing premium on shares, Rs. 3.46 lakhs capital reserve, Rs. 56.28 lakhs reserve fund, Rs. 10 lakhs dividend equalisation fund, Rs. 31.40 lakhs rehabilitation and development reserve and Rs. 1.86 lakhs employees' benefit and welfare reserve. Provision for taxation stands at Rs. 18.54 lakhs. The gross block of the value of Rs. 155.61 lakhs includes Rs. 43.37 lakhs added during the year, on account of extensions and purchases of new machinery under the modernisation programme. As against this gross block, a depreciation reserve amounting to Rs. 79.91 lakhs and a special depreciation reserve aggregating Rs. 23.82 lakhs have been built up. The current assets amount to Rs. 199.92 lakhs, of which stock-in-trade accounts for Rs. 71.98 lakhs, stores, spares, etc., for Rs. 19.08 lakhs, debts, deposits and advances for Rs. 44.83 lakhs, investments for Rs. 4.81 lakhs and cash balances for Rs. 59.23 lakhs. Though cash balances show a decline of Rs. 22.21 lakhs, they cover more than adequately current liabilities amounting to Rs. 45.06 lakhs.

The Rs. 100 paid-up ordinary shares are being currently quoted at Rs. 325 *cum-div.* On an *ex-div.* basis, the proposed dividend for the year under review gives a yield of more than 6.5 per cent. per annum, free of income-tax.

TITAGHUR PAPER'S RESULTS SATISFACTORY

A reduction of Rs. 3.81 lakhs in the trading profit, that is, from Rs. 63.90 lakhs to Rs. 60.09 lakhs, is disclosed by the audited accounts of the Titaghur Paper Mills Co., Ltd. (Managing Agents: Messrs. F. W. Heilgers & Co., Ltd., Calcutta), for the half-year ended 30th September, 1953, as compared with those for the previous six months. This decline in profit seems to have become "seasonal," for, during the last three years, the Company's profits for the half-years ended 30th September have invariably been lower than those for the six months ended 31st March. It is, however, gratifying to note that the drop in the profit for the six months under review compares favourably with those of Rs. 5.94 lakhs and Rs. 5.53 lakhs noted in the corresponding half-years of 1952 and 1951, respectively. The net profit for the half-year under review, at Rs. 29.30 lakhs, on the other hand, shows an increase of Rs. 1.68 lakhs over that for the previous half-year, on account of the lower provisions made for taxation and depreciation. The distribution to the shareholders has been maintained at the rate of 20 per cent, per annum, made up of a dividend of 15 per cent. and a bonus of 5 per cent.

The following comparative table shows the Company's progress in the last three half-years:

(In lakhs of rupees)

	For the half-year ended			
	30-9-53	31-3-53	30-9-52	31-3-52
Sale proceeds	281.31	284.32	269.86	273.28
Stocks	5.71	4.56	6.61	5.43

To other funds*	14.40	14.75	22.75	15.70
To commission to Managing Agents on E.P.T. refund	..	..	1.26	..
Dividends—				
Preference and preferred ordinary	1.02	1.02	1.02	1.02
Ordinary	11.20 (D.15% +B.5% p.a.)	11.20 (D.15% +B.5% p.a.)	11.20 (D.15% +B.5 % p.a.)	11.20 (D.15% +B.5% p.a.)
Carry forward	5.12	5.44	5.00	4.75

* Includes tax contingency reserve.
D = Dividend. B = Bonus.

The Directors report that production during the six months under review was well maintained, even exceeding slightly that in the previous half-year. If this has not been reflected in sale proceeds, it is due "chiefly to restrictions on bookings imposed from time to time by the railways to different destinations." This is also reflected in the increase in value of stocks of paper at the end of the half-year under review. Expenses have gone up by Rs. 4.17 lakhs, of which manufacturing expenses account for Rs. 0.69 lakh, and trading expenses for Rs. 3.48 lakhs. The rise in manufacturing expenses is due to higher production. The Directors add that deliveries of raw materials and coal were satisfactory, stocks at the mills being maintained at a satisfactory level.

Out of the net profit, the transfer to the general reserve has been maintained at Rs. 3 lakhs, to the reserve for plant replacements and development at Rs. 9.50 lakhs and to the dividend equalisation reserve at Rs. 1 lakh. The reserve for labour quarters and labour welfare gets Rs. 2 lakhs, as against Rs. 2.50 lakhs, and that for taxation contingencies Rs. 1.90 lakhs, as compared with Rs. 1.75 lakhs.

The Company's financial position, as seen from its latest balance-sheet, is very impressive. The reserves and surplus aggregate Rs. 293.58 lakhs, which is more than double the paid-up capital of Rs. 142.92 lakhs. The provision for taxation amounts to Rs. 42.91 lakhs; current liabilities aggregate Rs. 96.52 lakhs. The gross block of the value of Rs. 494.98 lakhs has been written down to Rs. 195.76 lakhs. In addition to the above gross block, there is a block suspense of the value of Rs. 26.65 lakhs. The current assets aggregate Rs. 353.58 lakhs, of which stock, stores, etc. amount to Rs. 138.33 lakhs, debts, deposits and advances to Rs. 93.35 lakhs, investments to Rs. 72.51 lakhs and cash balances to Rs. 49.39 lakhs. The current assets thus exceed the current liabilities and provision for taxation by a large margin.

The Rs. 10 paid-up ordinary shares are being currently quoted at Rs. 38 *ex-div.*, at which rate and on the basis of the latest dividend, the yield works out to 5.3 per cent. per annum, free of tax.

PROFIT OF GOKAK MILLS MORE THAN DOUBLED

The working of the Gokak Mills Ltd. (Agents: Messrs. Forbes, Forbes Campbell & Co., Ltd., Bombay) during the year ended 31st December, 1953, has resulted in a marked improvement in its earnings over those for the previous year. The gross profit has jumped up from Rs. 7.94 lakhs to Rs. 18.15 lakhs. This improvement is in full conformity with the general pattern of earnings of mills for that year. The distribution to shareholders has not, however, been stepped up; on the other hand, it is only proposed to be maintained at the previous year's level of 17 per cent. per annum, to which level it was enhanced successively from 10 per cent. for 1930.

An explanation of the Directors' decision not to raise the distribution to shareholders is, therefore, necessary. It may be recalled that the Directors had enhanced the distribution last year from 14 per cent. to 17 per cent. notwithstanding a substantial shrinkage in the gross profit from Rs. 20 lakhs to Rs. 7.94 lakhs. This they did because there was a fortuitous income of Rs. 6.19 lakhs being the post-war refund of E.P.T. But the Directors took care to split up the distribution into a dividend of 12 per cent. and a bonus of 5 per cent. Thus, the dividend for 1952 was actually lower than that of 14 per cent. paid for 1951. The entire distribution for 1953 represents dividend, of which 5 per cent. was paid as an interim one during the year and the balance of 12 per cent. is proposed to be paid as the final one. While thus there has been no increase in the return to shareholders, there has been a significant change in its character which is in consonance with the true nature of profit.

To revert to the accounts. The following comparative table presents the salient features of the Company's financial results for the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950
Sale proceeds (net)	109.00	103.51	100.98	170.07
Cotton and staple fibre consumed	105.58	110.81	120.27	120.56
Expenses	45.75	44.93	41.90	41.03
Gross profit	18.15	7.94	20.00	8.96
Agents' commission	1.79	0.89	2.00	1.06
Depreciation	3.50	2.50	3.25	1.65
Taxation	6.25	1.75	7.50	1.25
Net profit	6.61	2.80	7.25	4.35
Post-war refund of E.P.T.	0.21	6.10	8.25	..
Reserves	0.23	1.08	1.71	0.23
Staff gratuity fund ..	0.13	0.27	0.67	0.85
Dividend	6.64	6.64	6.43	3.80
	(17%)	(17%)	(14%)	(10%)
Carry forward	0.85	1.04	0.99	0.54

The sharp rise in profit is mainly accounted for by the increase of Rs. 5.49 lakhs in sale proceeds and the saving of Rs. 5.23 lakhs in cotton and staple fibre consumed, though this has been offset, to a small extent, by the rise in expenses. Out of the net profit, the Directors have transferred to the general reserve Rs. 22,947, as against Rs. 48,336. The dividend equalisation fund which received Rs. 1.50 lakhs last year has not been augmented further this year.

The balance-sheet of the Company as on 31st December, 1953, reveals a satisfactory financial position. The reserves and surplus aggregate Rs. 44.10 lakhs, as compared with the paid-up capital of Rs. 39.05 lakhs. Provision for taxation amounts to Rs. 6.11 lakhs and current liabilities to Rs. 17.09 lakhs. As against a fixed capital expenditure of Rs. 81.87 lakhs, the provision made for depreciation amounts to Rs. 62.09 lakhs. The current assets amount to Rs. 86.57 lakhs, of which cash balances alone come to Rs. 21.90 lakhs and more than adequately cover the current liabilities.

The Rs. 100 paid-up shares of the Company are being currently quoted at Rs. 266 *cum-div.* On an *ex-div.* basis, the dividend for 1953 gives a yield of about 6.7 per cent. per annum, free of tax.

ORIENT PAPER'S BONUS ISSUE

The decision of the Directors of the Orient Paper Mills Ltd. (Managing Agents: Messrs. Birla Brothers Ltd., Calcutta) to capitalise a part of the Company's reserves, details of which were published in our last issue, is the happiest news of the year so far, inasmuch as the issue is the biggest of its kind and perhaps the largest issued in recent years by any company. The Directors have decided to capitalise as much as Rs. 1,04,87,500, being part of the undivided profits standing to the credit of the general reserve, repairs and renewal reserve and dividend equalisation fund as on 31st March, 1953, and issue 10,48,750 new ordinary shares of Rs. 10 each as capital bonus to the holders of the existing ordinary shares as on 29th March, 1954. There are at present 4,19,500 ordinary shares of Rs. 10 each, so that, under the proposed capitalisation scheme, the holder of each of such shares will receive 2½ shares for every share held by him. The new shares will rank in all respects *pari passu* with the existing shares, except that they will not participate in any dividend declared in respect of

Points From The Chair

Outlook for World Economy in 1954

"IT is difficult to forecast the course of events in the current year. There have been divergent views expressed about the position of the United States which dominates the economy of a greater part of the world. The well-known economist, Colin Clark, basing his conclusions on a contraction in export, Government and capital goods demands, forecasts a heavy slump. Most of the authorities combat this view and hold that activity in the construction and capital goods industries are likely to be sustained at a high level and would provide, among other things, a balancing factor. In the United Kingdom, too, while the Chairmen of some of the big banks have been sounding a note of caution, the view of the Chancellor of the Exchequer, based upon an improvement in the external payments position, seems charged with a certain measure of confidence in the future. I think, it might be safe to hazard a guess that 1954 will see a decline which, whatever its proportions, is not likely to be in the nature of a sizable recession."

MR. HOMI MODY,
Central Bank of India Ltd.

Convertibility of Currencies

"... some primary producer countries still hold the view that by bulk selling through Government-controlled bodies rather than by using marketing systems, through which sellers and buyers would be in daily touch, they can sell their produce more effectively and at the same time ration their sales in accordance with their views of international values. Generally speaking, bulk selling flourishes only in a sellers' market and, temporarily anyhow, these conditions have disappeared. But the greatest remaining obstacle to the free flow of international trade, undoubtedly, is the absence of free convertibility of currencies. Without that background international markets, including terminal markets, cannot function fully or to the best advantage of buyer and seller; to have differing values in one currency for the same goods simply because 'A' is produced in the dollar area and 'B' in the sterling (or some other) area is not only superficially wrong, it is dangerous, and will concern merchants and bankers when free convertibility is possible and does happen."

J. K. MICHIE,
National Bank of India, Ltd.

Newsprint Industry in the U.K.

"The British newsprint industry is presently producing at the rate of some 650,000 tons annually, of which, as I have pointed out, 400,000 tons are earmarked for the daily and weekly newspapers, 100,000 tons for other users, such as magazines and periodicals, and 150,000 tons is earmarked by the Government as being the target set by it for export, in the main, to the Commonwealth countries and the British Colonies. It is my belief that the quota for the British newspapers will be stepped up next year and still further in the years to follow and will, I hope and expect, reach 500,000 tons annually in the foreseeable future. In my opinion, which is in opinion I know to be shared by others engaged in both the newsprint and publishing industries in the United Kingdom, it is vital, and indeed essential, in the interests of the publishers, especially newspaper publishers, that there should continue to exist in this country a flourishing and prosperous newsprint industry."

SIR ERIC VANSITTART BOWATER,
Bowater Paper Corporation Ltd.

(*Concluded from previous page*)

any period ended on or before 30th September, 1953.

The amounts standing to the credit of the aforesaid reserves as on 31st March, 1953, were: general reserve Rs. 56.50 lakhs, repairs and renewal reserve Rs. 45 lakhs and dividend equalisation fund Rs. 20 lakhs, making in all Rs. 121.50 lakhs. Besides these, the Company had on that date a capital reserve of Rs. 100.70 lakhs. This is the second occasion in the history of the Company that a part of the reserves is being capitalised. Three years ago, in March, 1951, to be precise, the Company had capitalised Rs. 20,97,500 and issued 2,09,750 ordinary shares of Rs. 10 each to the then existing ordinary shareholders in the ratio of one new share for every ordinary share held.

The Company has been able to make such a liberal issue because of the huge resources conserved year after year, without in any way affecting the distribution to the shareholders who have been getting a very decent return. The following table shows the net profits and the main allocations made thereof during the last seven half-years:

(In lakhs of rupees)

Half-year ended	Net profit	Reserves	Dividend on Ordinary shares
			Per annum
31st March, 1950	11.59	8.00	7.80 (15%)
30th September, 1950	16.61	15.00	15.60 (30%)
31st March, 1951	17.19	18.00	*4.19 (20%)
30th September, 1951	21.05	14.00	4.19 (20%)
31st March, 1952	23.19	15.00	4.19 (20%)
30th September, 1952	26.19	20.00	4.19 (20%)
31st March, 1953	26.32	20.00	4.19 (20%)

* On the increased capital raised by capitalisation of Rs. 20,97,500 in March, 1951.

COMPANY MEETINGS AND DIVIDENDS

MARTIN BURN LTD. Annual General Meeting, Calcutta, 29th March, 1954. Dividend: Re. 1-6 per share (including cash bonus of As. 2 per share). Transfer books remain closed from 22nd to 29th March, 1954, both days inclusive.

GOKAK MILLS LTD. Annual General Meeting, Bombay, 29th March, 1954. Dividend: Rs. 17 per share (including *ad-interim* dividend of Rs. 5 per share, already paid), payable on and after 9th April, 1954.

GANGES ROPE CO., LTD. Half-yearly General Meeting, Calcutta, 30th March, 1954. Dividend: Rs. 10 per share. Transfer books remain closed from 24th to 30th March, 1954, both days inclusive.

BRITANNIA ENGINEERING CO., LTD. Annual General Meeting, Calcutta, 31st March, 1954. Dividend: Re. 1-8 per share.

OOCHTERLONY VALLEY ESTATES (1938) LTD. Annual General Meeting, Kozhikode, 31st March, 1954. Dividend: As. 3 1/5 per share (10 per cent). Transfer books remain closed from 19th March to 1st April, 1954, both days inclusive.

JENSON AND NICHOLSON (INDIA) LTD. Annual General Meeting, Calcutta, 31st March, 1954. Transfer books remain closed from 24th to 31st March, 1954, both days inclusive.

PEERMADE TEA CO., LTD. Annual General Meeting, Alleppey, 7th April, 1954. Dividend: Rs. 2-12 per share (final). Transfer books remain closed from 22nd March to 9th April, 1954, both days inclusive.

BOMBAY DYEING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 8th April, 1954. Dividend: Rs. 22-8 per share (including interim dividend of Rs. 7-8 and a bonus of Rs. 2-8 per share), payable on and after 21st April, 1954. Transfer books remain closed from 22nd March to 8th April, 1954, both days inclusive.

WALCHANDNAGAR INDUSTRIES LTD. Annual General Meeting, Bombay, 9th April, 1954. Dividend: Rs. 14 per ordinary share, payable on 19th April, 1954. Transfer books will remain closed from 3rd to 17th April, 1954, both days inclusive.

CENTURY SPINNING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 10th April, 1954. Dividend: Rs. 22 per share (including interim dividend of Rs. 8 per share), payable on and after 15th April, 1954. Transfer books remain closed from 22nd March to 10th April, 1954, both days inclusive.

SHIVRAJPUR SYNDICATE LTD. Annual General Meeting, Bombay, 12th April, 1954. Dividend: Rs. 8 per share (including bonus of Rs. 3 per share), free of income-tax, payable on and after 20th April, 1954. Transfer books remain closed from 23rd March to 12th April, 1954, both days inclusive.

JAY SHREE TEA GARDENS LTD. Annual General Meeting, Calcutta, 19th April, 1954. Transfer books remain closed from 25th March to 19th April, 1954, both days inclusive.

INDUSTRIAL INVESTMENT TRUST LTD. Annual General Meeting, Bombay, 20th April, 1954. Dividend: Rs. 4-8 per share, payable on 30th April, 1954. Transfer books will remain closed from 29th March to 22nd April, 1954, both days inclusive.

INDIAN ALUMINIUM CO., LTD. Annual General Meeting, Calcutta, 23rd April, 1954. Transfer books will remain closed from 5th to 23rd April, 1954, both days inclusive.

SAVAMALAI ESTATES LTD. Final dividend of Rs. 2 per ordinary share, for the year ended 30th November, 1953. Transfer books remain closed from 24th to 31st March, 1954, both days inclusive.

KALEESWARAR MILLS LTD. Annual General Meeting, Coimbatore, 2nd April, 1954. Transfer books remain closed from 19th March to 2nd April, 1954, both days inclusive.

NEW BEERBHOOM COAL CO., LTD. Half-yearly General Meeting, Calcutta, 2nd April, 1954. Dividend: As. 8 per share. Transfer books remain closed from 22nd March to 2nd April, 1954, both days inclusive.

CENTRAL DISTILLERY AND CHEMICAL WORKS LTD. Annual General Meeting, Meerut Cantt., 3rd April, 1954. Dividend: As. 12 per ordinary share and As. 14 per deferred share. Transfer books remain closed from 21st March to 3rd April, 1954, both days inclusive.

RAVALGAON SUGAR FARM LTD. Annual General Meeting, Bombay, 6th April, 1954. Dividend: Nil. Transfer books remain closed from 25th March to 13th April, 1954, both days inclusive.

SRI RAMALINGA CHOODAMBIKAI MILLS LTD. Annual General Meeting, Tirupur, 7th April, 1954. Transfer books remain closed from 23rd March to 7th April, 1954, both days inclusive.

COMPANY REGISTRATIONS

NATIONAL CLOTHING INDUSTRY LTD. (First Director: Mr. Manibhai, K. Desai). Business: Dressmakers, Clothiers, Silk Weavers and Dealers in Ready-made Clothes and Uniforms, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Shirin Villa, Three Bungalows, Sayaji Road, Navsari.

QUESTION HOUR IN PARLIAMENT

Sale of Foreign Concerns

DURING the period April to December, 1953, Rs. 58.47 lakhs were remitted on account of sale of foreign concerns.

* * *

National Sample Survey

The National Sample Survey work is at present being conducted in 960 villages and 444 urban blocks selected to form a random sample throughout the Indian Union (except Jammu and Kashmir). The urban blocks are situated in 53 towns and four cities (Delhi, Madras, Bombay and Calcutta).

* * * *

Interest on Government Loans

The average rate of interest paid by the Government on their total interest-bearing obligations was 2.57 per cent., 2.46 per cent., 2.55 per cent., 2.66 per cent., and 2.67 per cent., respectively in each year from 1948-49 to 1952-53. The average rate of interest received by the Government on their total interest-yielding assets during the same period was 1.89 per cent., 1.88 per cent., 2.08 per cent., 2.03 per cent., and 2.54 per cent., respectively.

—*Finance Minister*

Industrial Finance Corporation

On 31st December, 1953, there were defaults in the payment of instalments of principal to the Industrial Finance Corporation in 22 loan accounts involving 17 companies and in the payment of interest in 16 loans involving 10 companies.

—*Deputy Finance Minister*

Canadian Aid

There is a proposal that the Umtru Hydro-Electric Project in Assam may be financed by Canadian aid under the Colombo Plan. The proposal is still under consideration. Such aid, if received, will be treated as a loan to the State Government. The actual execution of the Project will also be the responsibility of the State Government.

—*Parliamentary Secretary to Finance Minister*

Short Landing of Foodgrains

About Rs. 225 lakhs were lost by the Government on account of short landings in foodgrains during 1949-50 and 1950-51. These losses were due to natural phenomenon on account of evaporation during voyage and different methods of weighment at the ports of loading and unloading.

—*Deputy Minister for Food*

Coach-building Factory

The Integral Coach-building Factory at Perambur, (Madras) is likely to start functioning in 1955. The total estimated cost of the factory is Rs. 7.47 crores and it is expected to turn out 350 B.G. bogie coaches every year when in full production.

—*Deputy Minister for Railways*

Trade Mission to Middle East

A proposal to send a trade delegation to the Middle East countries, including the Arab States, to explore the possibilities of expanding India's export trade is under consideration. There is no intention at present to negotiate or conclude trade agreements with any particular Arab State. The Government have already entered into trade agreements with Egypt and Iraq and a treaty of friendship and commerce exists with Syria. India has diplomatic relations with Egypt, Iraq, Syria, Jordan, the Lebanon and Libya, while the Consulate-General in Saudi Arabia is proposed to be raised to a Legation shortly. Treaties of friendship have been concluded with Iraq and Syria.

—*Deputy Minister for External Affairs*

Air Services

Air-India International proposes to start two new air services from 1st July, 1954. These are Bombay-Calcutta-Bangkok-Hong Kong-Tokyo, and Bombay-Colombo-Singapore. The routes and the dates are tentative and are subject to all preliminary arrangements being completed before that date. Two officers of Air-India International went to various places which these new services would touch and examined various facilities in regard to aerodrome, fuelling and booking. They have come to this particular conclusion about the route, keeping in view the places available to the Corporation. Super-Constellations which the Government proposes to buy will replace Skymasters on the European route and these Skymasters will be used on the Eastern routes.

—*Deputy Communications Minister*

I.L.O. Convention on Motor Transport

The Government of India is likely to adopt the International Labour Convention on road transport so far as it related only to motor vehicles. The scope of the Convention is too extensive to be implemented with any reasonable prospect of success in practice in the immediate future. The Convention prescribes hours of work and weekly rest periods for all persons employed on road transport vehicles, whereas the Indian Motor Vehicles Act, 1939, seeks to regulate hours of work and rest periods only in respect of drivers of transport vehicles. The question of amending the Motor Vehicles Act is being considered in this context.

—*Labour Minister*

Textile Spindles

The number of spindles installed in cotton textile mills in the country is estimated at 11,423,000. Of these, 11,227,000 are reported to be in working order. The average number of spindles worked daily is about 10.2 million and the balance of 965,000 is generally idle for various reasons. The quantity of yarn that can be produced by these idle spindles is 300 bales.

—*Minister for Commerce and Industry*

BANGALORE WOOLLEN PAYS RECORD DIVIDEND—BONUS SHARES TO BE ISSUED

MARTIN BURN MAINTAINS PROGRESS

Bangalore Woollen, Cotton and Silk Mills Co., Ltd.

THE directors of the above Company (Agents, Secretaries and Treasurers: Messrs. Binny & Co., (Madras) Ltd., Bangalore) submitted the audited accounts of the Company for the year ended 31st December, 1953.

The result of the Company's working for the year ended 31st December, 1953, after allowing Rs. 12,92,041 (Rs. 12,71,222) for depreciation and transferring Rs. 4,00,000 (*nil*) to additional depreciation based on replacement costs, but before providing for taxation and bonus to Employees is a profit of Rs. 41,61,592 (Rs. 22,42,335) to which is added the unappropriated profit brought forward Rs. 2,49,801 (Rs. 2,47,495) making a total of Rs. 44,11,393 (Rs. 24,89,830). The directors have paid a dividend of Rs. 3 (Rs. 3) per share on the 6 per cent. cumulative preference shares for the half-year ended 30th June, 1953, Rs. 18,000 (Rs. 18,000), interim dividend of Rs. 10 (*nil*) per share on the ordinary shares for the half-year ended 20th June, 1953 free of income-tax Rs. 4,05,000 (*nil*), and dividend at Rs. 3 (Rs. 3) per share on the 6 per cent. cumulative preference shares for the half-year ended 31st December, 1953, Rs. 18,000 (Rs. 18,000) leaving a balance of Rs. 39,70,393 (Rs. 24,53,829). The directors disposed of this amount as follows:—

To provision for taxation Rs. 15,50,000 (Rs. 7,00,000), bonus to employees for the year, 1953 Rs. 10,10,000 (Rs. 6,10,400), general reserve Rs. 3,50,000 (Rs. 1,23,629), workpeople's housing fund Rs. 1,50,000 (Rs. 1,25,000), payment of a final dividend of Rs. 15 (Rs. 15) per share on the ordinary shares for the year ended 31st December, 1953, free of income-tax Rs. 6,07,500 (Rs. 6,07,500), and to officers' retiring fund Rs. 62,500 (Rs. 37,500) leaving to be carried forward a sum of Rs. 2,40,393 (Rs. 2,49,801).

The removal of internal price controls which began towards the end of 1952 was completed by July, 1953, and enabled the Company to adjust to levels acceptable both, to itself and to the consumers, the prices of a number of cotton cloths which they had hitherto been obliged to sell unremuneratively.

In the overseas markets, the Company experienced active competition from Japan and other countries, but they were helped in their efforts to withstand this opposition by the reduction, in January, 1953, of the export duty on coarse and medium cloth from 25 to 10 per cent., the duty on medium cloth was abolished in October, 1953.

The demand for the Company's woollen and silk products was maintained and sales were generally satisfactory despite keen competition. It became evident during the year that "Cotswol," the Company's well-known union fabric, continues to earn the appreciation of a wide public.

The varying attitude of the different States towards sales tax on inter-State trading has presented the Company with many problems, but it is to be hoped that, as a result of the recent discussions between the Union and State Governments, no unreasonable barriers will remain to obstruct the Company's own India-wide trade.

It has now been possible to ascertain with reasonable accuracy the Company's total liability for taxation and the surplus provision made in the past amounting to *Rs. 26,00,000 has been transferred* to general reserve.

It has been the policy for many years, to adopt a conservative valuation for raw material, process and finished stocks, but the directors now feel that, *in order to bring the accounts* into line with modern accounting practice, it is desirable to show the value of the stock on hand at the lower cost or market value. The value of the closing stocks has, therefore, been increased by the amount of *these reserves* and a similar *amount has* been transferred to general *reserve.*

The balance-sheet of the Company shows that the *issued and subscribed* capital falls far short of the effective capital employed by the Company and *in order to bring* the two more into line the directors propose, subject to the approval of the Government of India and of the shareholders, to capitalise Rs. 81 lakhs of the general reserve by the issue of two ordinary shares for each ordinary share held.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	46,50,000	Block ...	87,46,882
Reserves ...	1,74,49,038	Stock-in-trade	1,16,92,199

Liabilities ...	68,91,323	Other assets	1,32,348
Profit and loss account ...	2,40,393	Debts and advances ...	25,87,363
		Investments	27,84,004
		Cash ...	65,084
Rs.	3,05,90,604	Rs.	3,05,90,604

Martin Burn Ltd.

The directors of the above Company (Chairman: Mr. T. Leslie Martin, Calcutta) submit the audited accounts of the Company for the year ended 30th September, 1953.

The profit and loss account shows a profit on the year's working of Rs. 51,55,783 (Rs. 50,15,561) to which is added the balance brought forward from the previous year of Rs. 2,31,092 (Rs. 2,35,698) making a total of Rs. 53,86,874 (Rs. 52,51,257). From this there has been provided for taxation Rs. 24,50,000 (Rs. 22,75,000), capital redemption reserve fund Rs. 2,00,000 (Rs. 2,00,000), investment reserve Rs. 3,50,000 (Rs. 6,00,000) and general reserve Rs. 2,00,000 (nil) leaving a balance available for disposal of Rs. 21,86,874 (Rs. 21,76,227). The directors have declared as interim dividends, the *dividend payable on the preference shares* for the half years ended 31st March, 1953, and 30th September, 1953, amounting to Rs. 1,50,000 (Rs. 1,50,000), and now recommend payment of a dividend, on the ordinary share capital of the Company at Re. 1-4 (Re. 1-4) per share, absorbing Rs. 16,32,531 (Rs. 16,31,969) plus a cash bonus (special payment) of As. 2 (As. 2) per share absorbing further Rs. 1,63,253 (Rs. 1,63,197) leaving a balance to be carried forward to the next *account* of Rs. 2,41,090 (Rs. 2,31,092).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,60,60,250	Block ...	11,45,216
Convertible notes ...	38,79,500	Work-in-progress ...	1,16,81,503

Liabilities ...	2,99,21,779	Goodwill at cost ...	25,17,685
Profit and loss account ...	2,41,090	Debts, deposits and advances ...	1,75,27,516
		Investments	1,55,31,257
		Cash ...	10,84,583
Rs.	5,74,69,210	Rs.	5,74,69,210

New Beerbhoom Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st October, 1953.

After providing Rs. 2,00,000 (Rs. 1,50,000) for depreciation and Rs. 54,000 (Rs. 36,800) for cesses and taxation and after transferring Rs. 2,56,824 (nil) to capital reserve and Rs. 75,000 (Rs. 75,000) to development reserve, there remains a balance at the credit of profit and loss account of Rs. 2,08,159 (Rs. 1,55,421) from which the directors recommend:—

A dividend of 7 per cent. per annum on 20,000 preference shares for the half-year ended 31st October, 1953, Rs. 7,000 (Rs. 7,000), and a dividend of As. 8 (As. 8) per share on 1,77,623 ordinary shares Rs. 88,812 (Rs. 88,812) leaving to be carried forward Rs. 1,12,347 (Rs. 55,799).

Raisings for the half-year ended October, 1953, totalled 2,48,113 tons as compared with 2,69,616 tons in the previous half-year, and 2,46,202 tons in the half-year ended October, 1952. Despatches, which included purchased coal, totalled 2,53,069 tons as compared with 2,49,219 tons in the previous half-year, and 2,91,745 tons in the half-year ended October, 1952.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	19,76,230	Block ...	30,93,344
Reserves ...	17,03,824	Stock of coal	3,23,659
Provision for taxation ...	1,93,763	Stores ...	7,09,201
Liabilities ...	28,47,960	Debts, deposits and advances ...	25,76,981
Profit and loss *account* ...	1,12,347	*Investments*	4,447
		Cash ...	1,26,492
Rs.	68,34,124	Rs.	68,34,124

Ganges Rope Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill and Barry Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th September, 1953.

The profit for the half-year amounted Rs. 2,04,868 (Rs. 2,04,572) to which was added the surplus on sale of capital assets Rs. 4,200 (nil) and the balance brought forward at credit of profit and loss account Rs. 9,689 (Rs. 49,599) making a total of Rs. 2,18,757 (Rs. 2,90,793). And after deducting provision for taxation Rs. 52,000 (Rs. 1,00,000), there was available for distribution a sum of Rs. 1,66,757 (Rs. 1,90,793), which the directors disposed of by payment of a dividend at Rs. 10 (Rs. 10) per share Rs. 1,40,000 (Rs. 1,40,000) leaving to be carried forward to next account Rs. 26,757 (Rs. 50,793).

The general level of production was again satisfactorily maintained during the period covered by these accounts.

Consumer resistance to price levels profitable to the Company has been marked throughout the six months, and with the exception of the better qualities of manila and sisal ropes, the profit margins continue to decline. This trend has been most apparent in sales of coir rope, where "back yard" manufacturers, making hand-made ropes with casual labour are able to undercut the Company's rates with impunity. While this can only be done in the case of coir ropes due to the fact that *no machine* spinning of the fibre is necessary, the results of such competition can be seen in the continued decline in sales. Buildings and machinery have been maintained to the usual high standards.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	14,00,000	Block ...	14,46,036
Reserves ...	9,97,000	Stock and work in progress ...	21,29,947
Provision for taxation ...	1,08,593	Goods-in-transit ...	2,56,789
Liabilities ...	39,02,861	Stores and spare gear	6,96,258
Profit and loss account ...	26,757	Debts and advances ...	18,80,895
		Cash ...	25,286
Rs.	64,35,211	Rs.	64,35,211

Lansdowne Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September, 1953.

After providing Rs. 2,48,000 (Rs. 85,000) for taxation, Rs. 20,000 (Rs. 12,000) for reserve for taxation contingencies and Rs. 85,198 (Rs. 87,222) for depreciation, the profit and loss account shows a profit of Rs. 3,23,264 (Rs. 1,13,045) to which has been added the amount brought forward from previous half-year Rs. 22,044 (Rs. 53,319) making a total of Rs. 3,45,308 (Rs. 1,66,364). From this the directors have transferred to general reserve Rs. 75,000 (*nil*) and to jute stock reserve Rs. 50,000 (*nil*) leaving an available balance of Rs. 2,20,308 (Rs. 1,66,364).

The directors propose to dispose of this in paying a dividend on the preference shares at the rate of 7 per cent. per annum, without any deduction for income-tax paid by the Company Rs. 52,500 (Rs. 52,500), in paying a dividend on the ordinary shares of Rs. 5 (Rs. 3) per share, without any deduction for income-tax paid by the Company Rs. 1,22,325 (Rs. 73,377) and in carrying forward Rs. 45,483 (Rs. 40,421).

Stocks of jute have been valued at market value and manufactured goods at contract or market rates.

In accordance with the Factories (Amendment) Act, 1946, and the Working Time Agreement of the Indian Jute Mills' Association the Company's mill worked 42½ hours a week with 12½ per cent. of total looms sealed during the period under review.

The labour complement at the Mill was maintained at full strength throughout the period under review, but 8½ hours were lost in September when the labour demanded the payment of a Puja bonus.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	39,48,000	Block ...	61,74,014
Reserves ...	50,32,314	Stock ...	35,46,284
Provision for taxation ...	1,22,123	Stores ...	12,83,117
Liabilities ...	39,89,656	Debts, deposits and advances ...	18,86,378
Profit and loss account ...	45,483	Investments	1,53,370
		Cash ...	94,213
Rs.	1,31,37,576	Rs.	1,31,37,576

Bararee Coke Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Jardine Henderson, Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September, 1953.

The profit and loss account shows after making provisions for depreciation, etc., a balance of profit of Rs. 1,40,735 (Rs. 1,53,953) to which has to previous half-years of Rs. 58,826 (Rs. 37,055) making a total of Rs. 1,99,561 (Rs. 2,43,662). Out of this sum there has been provided for taxation Rs. 65,000 (Rs. 53,381) leaving a balance available for disposal of Rs. 1,34,561 (Rs. 1,50,294). This sum the directors recommend should be dealt with, as follows:—

In payment of a dividend on the share capital of 7 (7½) per cent. without any deduction for income-tax paid by the Company, absorbing Rs. 84,000 (Rs. 90,000) leaving a balance to be carried forward to the next account of Rs. 50,561 (Rs. 60,294).

Manufacture and despatches during the half-year were as follows:—

	Manufactured	Despatched
	Tons	Tons
Coke	31,938	29,791
Tar and pitch	1,309	1,495
Sulphate of ammonia ...	369	503
	Gallons	Gallons
Benzol	6,407	3,094

The directors consider the results for the half-year satisfactory under present-day conditions. Relations between management and labour at the works were satisfactory. Foodstuffs were still being issued to the workers at concession rates. The wagon supply position was not up to expectations. Working during the current half-year has been satisfactory so far.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,00,000	Block ...	3,50,740
Reserves ...	8,45,617	Stocks ...	16,32,081
Provision for taxation ...	2,06,190	Debts, deposits and advances ...	15,07,498
Liabilities ...	12,86,127	Investments	800
Profit and loss account ...	50,560	Cash ...	97,375
Rs.	35,88,494	Rs.	35,88,494

N.B.—Figures within brackets relate to the corresponding period of the previous year.

DEMAND FOR FUNDS GROWS

(From Our Own Correspondent)

BOMBAY, 24th *March*

With the financial year-end drawing nearer, the stringency in the short-term money market became more acute during the week under review. The volume of floating funds was negligible, while the demands for funds broadened further. The banks, therefore, had to rush to the Reserve Bank of India or the Imperial Bank of India for augmenting their lendable resources. There was hardly a bank which was not in either of these two banks. All available funds were fully used up, with practically no surplus left with the banks for lending in the inter-bank call money sector. Consequently, activity in this sector was almost at a standstill. However, stray transactions in overnight funds of small magnitude were reported done after clearing hours at the self-same rate of 3 per cent.

Short-term deposit rates also remained unchanged at 3 per cent. for 1 to 4 months and at 2½ to 2¾ per cent. for longer periods.

There was no change in the Government of India Treasury Bill rate, too, this week, the average rate of accepted tenders having stood at Rs. 2-11 per cent. per annum. The amount offered, however, was lower at Rs. 1.01 crores, as against Rs. 1.27 crores last week, this being the second week in succession when the decline in offerings has been noted. Tenders for Rs. 1 crore have been invited for next week also.

A study of the latest weekly statements of the Reserve Bank of India and the Scheduled banks suggests that the pressure on banks' resources during the current busy season has been on a much greater scale than in the previous season and it looks as though it may even exceed that noted in the 1951-52 season. An idea of this can be gained from the latest figures, as compared with those for the previous two seasons:

(In crores of rupees)

	12-3-54	13-3-53	14-3-52
Advances of Scheduled banks	530.34	512.79	584.90
Cash balances	93.63	99.77	106.65
Outstanding borrowings from Reserve Bank ...	28.73	9.99	62.03
Outstanding borrowings from Imperial Bank ...	11.65	8.36	—
Total borrowings from Reserve Bank against usance bills from 1st January	32.69	7.74	—

It may be noted here that the peak level of bank advances for 1953 was Rs. 539.86 crores touched on 8th May and for 1952 Rs. 584.90 crores touched on 14th March.

To revert to the customary analysis of the weekly bank statements. The Reserve Bank of India's statement for the week ended 19th March, 1954, as compared with that for the previous week, shows a contraction of Rs. 3.89 crores in notes in circulation and an increase of Rs. 4.12 crores in deposits of the Central Government and an increase of Rs. 41.04 crores in those of State Governments are the most outstanding features. These variations evidently reflect the Centre's year-end financial allocations to States. Deposits of banks have dropped by Rs. 2.32 crores. Balances held abroad have risen by Rs. 3.95 crores. Ways and means advances to Governments are lower by Rs. 1.53 crores, while other loans and advances have increased by Rs. 5.05 crores. Outstanding advances to Scheduled banks against usance bills show a rise of Rs. 1.80 crores and total advances availed of by Scheduled banks against usance bills since the beginning of the year by Rs. 4.55 crores. Investments show a decline of Rs. 4.60 crores.

An increase of Rs. 2.90 crores in demand deposits and a decline of Rs. 1.13 crores in time deposits are disclosed by the Scheduled Banks' statement for the week ended 12th March, 1954, as compared with that for the previous week. Inter-bank borrowings show a meagre increase. Borrowings from the Reserve Bank and the Imperial Bank have gone up by Rs. 4.36 crores and Rs. 43 lakhs, respectively. There has been an increase of Rs. 4.58 crores in advances and a fall of Rs. 2.13 crores in bills purchased and discounted. A fall of Rs. 73.56 lakhs is noted in investments, while there has been an enlargement of Rs. 2.43 crores in cash on hand and balances with the Reserve Bank, accompanied by an increase of Rs. 64.51 lakhs in balances with other banks in current account and of Rs. 68.20 lakhs in money at call and short notice.

The Gilt-edged market displayed a distinctly better tone during the week under review with the prices of medium dated issues marked up further. Business done was, however, poor, due to extreme stringency in the money market and absence of floating stocks. The Reserve Bank of India suspended the sale of two more loans this week, the prices of which were put up by them last week by As. 2. These were 3 per cent. 1963-65 and 3 per cent. 1964. This resulted in a further hardening of the rates of these loans.

The 3 per cent. 1957 loan was placed at Rs. 98-2. 3 per cent. 1958 at Rs. 98-5 and 3 per cent. 1959-61, the sale of which by the Reserve Bank was suspended last week, advanced by As. 2 to Rs. 96-5. 3 per cent. 1963-65 and 3 per cent. 1964 each rose by As. 2 to Rs. 92-12. 3 per cent. 1966-68 was unchanged at Rs. 90-6. 3 per cent. 1970-75 had business As. 2 higher at Rs. 86-10. 3 per cent. 1986 Conversion Loan was unchanged at Rs. 82-8. 3½ per cent. N.P. Bond was fancied at Rs. 99-2, a rise of As. 3 over the week. State loans were neglected. Small business was reported in the new Bombay State Road Transport Corporation Bonds at Rs. 99-2½.

GOLD RECOVERS AT CLOSE

(From Our Own Correspondent)

BOMBAY, 24th *March*

The outstanding development of international importance during the week under review was the reopening of the London gold market on Monday, the 22nd inst. after a break of 15 years. Though the Indian markets in gold are completely isolated from international markets, including the newly opened London market, by a ban on imports of gold, the news of the reopening of the London market caused a flurry in the gold section of the Bombay Bullion Exchange. Speculation on the possibility of the Government of India relaxing the import ban brought forth nervous selling in the yellow metal, but this proved a short-lived affair, for, towards the close, gold once again displayed a hardening tendency, induced by the good offtake in the ready section during the past two days.

Barring a mild sympathetic reaction caused by the nervous selling in gold, silver manifested a very steady undertone, establishing a fresh peak after a year. The small offerings in the ready section and some bear pressure from Calcutta engendered by the setback in gold were well absorbed by sustained short-covering. Better offtake in the latter part of the week was an additional sustaining factor.

Silver for forward delivery (22nd March settlement) opened on a buoyant note at Rs. 165-5, as against the previous closing of Rs. 164-14, and advanced to a high of Rs. 166-12, the highest since 14th May, 1953, on Monday this week, before the settlement ran out on that day at Rs. 166-10. The business for the next settlement (20th April) began the week at Rs. 165-14 and firmed up to Rs. 167-6, a level not seen since 12th March, 1953. After a recession to Rs. 166-7 today, forward silver recovered to Rs. 166-14 at the close.

Ready silver (.996 Mint) began at Rs. 165-9 and came up to Rs. 167-3 before winding up at Rs. 166-14. The floating stocks of silver are placed at 2,000 bars. The daily average offtake was 25 bars.

Opening at Rs. 88-12, gold for forward delivery (19th March settlement) hardened to Rs. 88-14 on reports of good offtake before the settlement ran out on Friday. Forward gold for the next settlement (19th April) opened at Rs. 88-8 and made small initial gains. The nervous selling initiated by speculation over the possibility of a relaxation of the ban on imports of gold forced it down to Rs. 87-3 yesterday. Eventually, the pressure was lifted and revival of demand paved the way for a smart recovery in the rate to Rs. 88-7 today, before closing at Rs. 88-3.

Ready gold moved up from Rs. 89 to Rs. 89-6 and, after declining to Rs. 88, closed at Rs. 89-2. The floating stocks of gold are estimated at 15,000 tolas. The daily average arrivals were 6,000 tolas and the offtake was 7,500 tolas on an average.

The following comparative table shows the trend of the market during the week under review:

	24-3-54	Highest	Lowest	17-3-54
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	89 2	89 6	88 0	89 1

New York Ready	89½c.	—	—	89½c.

GOOD OFFTAKE IN KIPS

(From Our Own Correspondent)

MADRAS, 22nd *March*

Arrivals of kips have been moderate with good offtake. Prices have ruled at 1d. above U.K. levels, despite U.K. buyers' great price resistance. Shipment business has, therefore, been difficult. Demand centres round medium and heavy weights in cow hides and buff heavies. Business in cow calf and buff calf has been patchy.

In the London public sales last week, tanned goat skins good marks realised 3d. up and others up to 3d. less as compared with January levels. Nearly 150,000 skins remained unsold, due to high ilmits placed on them. Prices in the local market have remained steady for goat and dull for sheep.

Some importers are trying to revive tanned hides auction sales in London through Messrs. Flack Chandler & Co. This type of business will be detrimental to trading on outright sale basis and should not be encouraged in the interest of the tanning trade.

With a view to finalising the specifications for compulsory grading of raw goat skins exported from India, a meeting of Government officials and trade interests will be held in New Delhi on the 25th and 26th Inst.

HIDES QUIET

(From Our Own Correspondent)

KANPUR, 22nd *March*

The hides and skins market ruled quiet during the week under review, owing to paucity of foreign enquiries, and prices drifted lower. Volume of business put through was less than in the previous week.

Today's closing quotations are:—wet salted cow hides 1st grade Rs. 320 to Rs. 330 and 2nd grade Rs. 260 to Rs. 300 per score; wet salted buffalo hides 1st grade 1 lb. 8 ozs. to 1 lb. 11 ozs. and 2nd grade 1 lb. 13 ozs. to 2 lbs. per rupee; goat skins 1st grade Rs. 300 and 2nd grade Rs. 250 per 100 pieces; sheep skins Rs. 250 to Rs. 300 per score.

COTTON ERRATIC

(From Our Own Correspondent)

BOMBAY, 24th *March*

The forward market still continues to be oversensitive to temporary influences. The operators seem to be divided more or less equally on two sides. A bout of selling brings a sizable drop in the price, but at lower levels, there is good support forthcoming and prices once again revert back to the Rs. 675 level. This has been more or less the feature of trading in the market at Kalbadevi during the last week. The working of the spot market also from day to day and even hour to hour has some influence in the upward and downward fluctuations in the forward market. In spite of this good front put up in forward trading, there is a lurking feeling of diffidence for the future and this prevents either party from being aggressive in sales or purchases. The May contract is known both for heavy hedge selling during its duration and for substantial deliveries at the end. It is this knowledge in the background which has kept fluctuations within a narrow range. At the same time, the very sensitive nature of the market referred to at the outset might bring about unexpectedly either a big rise or a heavy slump in prices some time during April and operators would be well advised to be cautious in view of this contingency.

Rumour-mongering forms a part of the technique of forward trading, perhaps all over the world, and Kalbadevi is no exception to this. It seems that some interested parties in the Bombay market have been trying to rig up prices, by circulating a rumour that the revised official estimates placed the cotton crop for the current season at 4 million bales, instead of 4.2 million which was the official estimate in October last. The Textile Commissioner had, therefore, to issue a statement contradicting this rumour and explaining that no revised estimates had been put out from any official source, after the meeting of the Cotton Advisory Board held in Bombay about the middle of February. The Textile Commissioner states that, as a matter of fact, since this meeting, reliable trade interests have been of opinion that there might be a slight increase in the size of the crop over the official estimate. He supports this view by revealing that the Broach-Surat area has done better than was expected previously and the total outturn for the season might go up a little in view of this fact. But, strangely enough, after saying all this, the Textile Commissioner says that "the latest official estimate is a certainty of 4.1 million bales, with the possibility of a small increase over this figure." Whatever the final outcome, it is certain that the statistical position is very satisfactory and the consumption continues to be equally so. In the long run, therefore, prices are more likely to maintain themselves than to give way, though they might do so now and then for technical reasons.

In the spot market, the turnover naturally has been restricted. Upcountry advices, especially from the South about Lakshmi and Jayadhar, are encouraging and enquiries in Vijaya and staple Jarilla continue fairly satisfactory. Good business is also being recorded in the Surat varieties. But, on the whole, the mills are now not very active in their purchases, naturally awaiting the demand in the cloth market to materialise. Once this expected demand is in evidence, the mills might be more active in their purchases and, considering the firmness in prices abroad, this might then lend strength to local prices in the spot market also. Another reason for the hesitancy in the spot market is the postponement of the auctions at Kampala by another week. On the whole, there has been a slight improvement in the premia for Vijay and other staple varieties. There is no movement in the short-staple section and Bengals have been practically neglected during the period under review.

Values of cotton in the forward section moved irregularly, and, over the week, they suffered some minor loss. I.C.C. May, which opened the week Re. 1-8 higher at Rs. 678, receded to Rs. 669-8 early on Monday for want of support. Lower levels evoked some buying enquiries and prices recovered to Rs. 675-4 towards the close. After fluctuating between Rs. 675 and Rs. 670-8, the Contract finished the week at Rs. 673. The net loss over the week was Rs. 5. I.C.C. August began at Rs. 690 and declined to Rs. 682-8 on the 22nd inst. Thereafter, it recovered to Rs. 689 yesterday, but receded again to Rs. 686-8. The spread between the two contracts narrowed down from Rs. 12 on the opening day of the week to Rs. 6-8 at the close.

The following was the trend of prices in the forward section during the week under review:

	Opening	High	Low	Closing
I.C.C. May	... Rs. 678	678	669¼	673
I.C.C Aug.	... Rs 690	690	682¼	686¼

Latest available quotations from the spot market are: Bengal *deshi* Rs. 610-620; Berar, Jarillas Rs. 785; Khandesh Rs. 860; Vijay Rs. 890; Oomra *deshi* Rs. 735; Moglai Rs. 700.

At Karachi, prices continue to rule firm in the hope that China will be a big buyer this year. It is believed that already China has contracted for one lakh bales and, if it continues to do so, the *market at Karachi may not have to rely so heavily* as at present on the keenness of Japan for Pakistan cotton. The statistical position at Karachi showing receipts at 935,850 bales and exports of 632,780 bales up to 6th March is considered as quite *satisfactory* and, though the *present prices* are regarded as very much above the world parity, there may not be any appreciable decline, at least till after the effects of the Kampala auctions are known. On the other hand, the prices realised by the Gezira Board in Sudan have been higher than prices of similar varieties elsewhere and this is bound to have a bullish effect in the price trend at Karachi.

Latest available quotations from Karachi market are: Sind *deshi* Rs. 78-8; Punjab *deshi* Rs. 77-8;

4F Punjab R.G. Rs. 76-6; S.G. Rs. 82-4; L.S.S. Punjab R.G. Rs. 79; S.G. Rs. 84; N.T. R.G. Rs. 82-8; S.G. Rs. 87; 289F. Punjab R.G. Rs. 79-4; S.G. Rs. 84.

At Alexandria, while demand has slackened, as reported in the last issue, the prices and premia asked by shippers in response to foreign enquiries still continue to rule high. While others appear to have been somewhat scared away by the high prices, India, Japan and France still show sufficient interest in Giza 80 and medium grade Karnaks.

At New York, narrower fluctuations with a steady trend has been the order of the week's trading. There has been good support against hedge selling and occasional liquidation. The interest in the market seems to have shifted, however, more to distant deliveries and most of these have gained during the period, because of unfavourable weather reports from Texas.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	23-3-54	16-3-54	9-3-54
Spot	35.20	35.25	35.15
March	34.02	—	34.45
May	34.40	34.48	34.41
July	34.53	34.58	33.79
October	33.92	34.03	33.77
December	33.89	34.01	—

ART SILK YARN RECEDES

(From Our Own Correspondent)

BOMBAY, 24th *March*

The reduction in the excise duty on art silk fabrics from 18 pies per yard to 12 pies per square yard, announced by the Union Finance Minister in the House of the People on Monday last, failed to sustain this week the recovery in values of art silk yarn witnessed in the previous two weeks. On the contrary, values of yarn tended to recede, as offtake in the ready section was very slow. Traders thought that the relief was insufficient to bring about an improvement in the conditions of the rayon industry, particularly the smaller units. In the absence of support, the undertone of the market was a shade easy.

Art silk yarn (150D) for March delivery, which opened the week Rs. 2 higher at Rs. 780, moved down to Rs. 773 per case of 200 lbs. today for want of support. April delivery dropped from Rs. 782 to Rs. 775. In the spot section, 120 Japan declined by an anna to Rs. 4-13 per lb. 150 Italy was half an anna lower at Rs. 3-14. 150 Japan and 120 Italy, however, were steady at Rs 4-8 and Rs. 4-3, respectively.

At an extraordinary general meeting held in Bombay on Monday last, the Silk and Art Silk Mills' Association urged the Union Government to license freely imports of all varieties of art silk yarn, except 120D and 150D bright viscose plain yarn which should have a suitable quantitative ceiling to protect the indigenous industry. Such a free licensing policy, the Association said, was necessary, because the present import quota for rayon yarn was totally inadequate and was hardly sufficient for two months' normal working of two shifts of the country's manufacturing units. The normal requirements of art silk yarn should be assessed on the accepted basis of four lbs. per loom per shift per day for the normal two-shift working. The Association also urged the Government to come to an immediate decision regarding the import duty drawback on rayon yarn used in the art silk fabrics exported from India. Delay was causing incalculable harm to the industry and the lack of drawback facilities had lost India its markets in South-East Asian, Middle Eastern and African countries where Indian art silk fabrics had gained a satisfactory footing in the past. The import duty on art silk yarn, it was stated, should be calculated on invoice value and not on market value as at present.

Values of staple fibre yarn also drifted lower in sympathy with the art silk yarn market. Stable fibre yarn (40 x 2) for March delivery fell by Rs. 8 to Rs. 674 and April delivery lost Rs. 9 to Rs. 675 per case of 200 lbs. Spot prices of indigenous and foreign yarns (40 x 2) too suffered losses. Among the former, Century receded by an anna and a half to Rs. 3-8-3 per lb. City and Vasanta lost an anna each to Rs. 3-11 and Rs. 3-8-6, respectively. New Great was slightly easy at Rs. 3-9-6 and Kohinoor at Rs. 3-10-6. Among foreign yarns, S. Fuji dropped As. 2-6 to Rs. 4. Aurora were done lower at Rs. 4-1, as against Rs. 4-2-6. Suico and Shinco shed an anna each to Rs. 4-2 and Rs. 4-1, respectively.

The easy conditions noted in the cotton yarn market last week were somewhat arrested during the week under review and there was a recovery in values of yarn. The recovery was aided by buying support induced by good demand from consuming centres and extension of time limit to exporters of yarn to ship the balance of their unshipped quantities against previous licences. The upward trend was in marked evidence in yarns of finer counts. Thus, among 40s, Meenakshi rallied a rupee to Rs. 27-4 per bundle of 10 lbs. Madura rose by As. 6 to Rs. 27-8 and Gokak by As. 4 to Rs. 26-8. Among 60s, City advanced from Rs. 45-12 to Rs. 46-14. Raghuvamshi, Rajalakshmi and Finlay gained a rupee each to Rs. 54, Rs. 45 and Rs. 60, respectively. Among 80s, Elphinstone improved by As. 8 to Rs. 61-8. Seksaria was fully maintained at Rs. 56-8, Finlay at Rs. 67 and Sri Ram at Rs. 62-8. Among 30s, Madura was higher by As. 4 at Rs. 24-8. Crown was better at Rs. 21, as against Rs. 20-14. Among 20s, Hind and Seksaria gained an anna each to Rs. 16-11. Among 10s, Colaba rose by an anna to Rs. 13-1. Podar was a shade higher at Rs. 13-4-6.

The table below gives the prices of art silk, staple fibre and cotton yarns quoted yesterday, as compared with those in the previous week:—

	24-3-1954	16-3-1954
	Rs. a.	Rs. a.
Art silk yarn—		
150 March (per case of 200 lbs.)	773 0	778 0
150 April ,,	775 0	781 0
120 Japan (per lb.) ,,	4 13	4 14
150 Japan (per lb.)	4 8	4 8
120 Italy (per lb.)	4 3	4 9
150 Italy (per lb.)	3 14	3 14½
Staple fibre yarn—		
40 s/2 March (per case of 200 lbs.)	674 0	682 0
40 s/2 April ,,	675 0	684 0
Suico (per lb.)	4 2	4 8
New Great (per lb.)	3 9½	3 10
Cotton yarn (per bundle of 10 lbs.)—		
10s Modern	13 4	13 4
20s Hind	16 11	16 10
30s Madura	24 8	24 4
40s Meenakshi	27 4	26 4
60s City	46 14	45 12
80s Elphinstone	61 8	61 0

CASTORSEED FIRM

(From Our Own Correspondent)

BOMBAY, 24th *March*

The oilseeds market remained closed on the 19th and 20th inst., owing to the *Holi* festival. The notable feature during the remaining sessions was the firm trend in castorseeds, evidently on renewed hopes of early reduction in export duty on castor oil. Rumours that business to the extent of about 200 tons in castor oil, First Pressure, was done with the U.S. at 11.75 cents per lb. also accounted for the firmness. Consequently, values made headway and recorded sizable gains over the week. The groundnut and linseed sections, however, ruled slightly easy. Lack of support by *vanaspati* interests, as well as crushers, was mainly responsible for it. Prices, as a result, were generally downward and sustained minor losses, over the week.

Fresh bull support was predominantly in evidence in the castorseed section. May delivery which opened at Rs. 105, as against Rs. 104-12, fluctuated between Rs. 104-4 and Rs. 109-4, before closing at Rs. 107-12. Madras quality was higher by As. 12 at Rs. 23. Castor oil B.S.S. put on As. 8 to Rs. 12-4, I Pressure As. 10 to Rs. 11-14 and Commercial As. 8 to Rs. 11-4.

Activity in the groundnut section was limited to a narrow range this week. Bold F.A.Q. lost As. 4 to Rs. 34-12. Khandesh quality was down by a similar amount at Rs. 36. Bold April-May delivery, however, gained As. 2 to Rs. 34. Groundnut oil ex-mill and railway receipt were quiet at Rs. 17-4. But April and May deliveries lost an anna each to Rs. 17-8 and Rs. 17-12, respectively.

The area sown with groundnut in the Madras State upto 25th December, 1953 is estimated at 1,872,000 acres. As compared with the area of 1,851,500 acres estimated for the previous year, the present estimate reveals an increase of 1.1 per cent. The estimated area for the current year is more than the average area of 1,831,400 acres, calculated for the five years ending with 1951-52, by 2.2 per cent. The increase in area this year is due mainly to timely rains at the time of sowings. A decrease in area is estimated in the district of Chingleput and an increase in the other districts of the State except in North Arcot and Tiruchirapalli where the area was the same as that of last year. The acreage under the crop in the South Kanara and the Nilgiri districts is little or negligible. The variation is marked in Salem district (10,000 acres).

The linseed section lacked strength of its own. It moved irregularly in sympathy with the groundnut section. Bold ready eased from Rs. 25 to Rs. 24-10 and Sutna from Rs. 23-10 to Rs. 24-4. February-March was dull at Rs. 24-8. April-May, however, gained As. 4 to Rs. 23-12. Linseed oil was colourless at Rs. 14.

Among others, *kardi* Bold lost As. 6 to Rs. 17-8 and April-May delivery As. 2 to Rs. 17-12. *Niger* Madras, however, gained As. 8 to Rs. 29.

The following table shows the prices of oilseeds and oil on the 23rd inst., as compared with those at the end of the previous two weeks.

	23-3-54	16-3-54	10-3-54
	Rs. a.	Rs. a.	Rs. a.

SUGAR BULLISH

(From Our Own Correspondent)

BOMBAY, 24th *March*

Uncertainty regarding arrival of imported sugar and persistent buying enquiries from up-country markets imparted considerable strength to the Bombay sugar market during the week under review. Smaller arrivals of sugar was another bullish factor. There was, therefore, a perceptible rise in prices in both forward and spot sections.

In the spot section, small grains were in keen demand and hardened by Rs. 2-8 to Rs. 92-8 per bag. Medium grains advanced from Rs. 91-92 to Rs. 93½-94. Large grains were higher at Rs. 95-97, as against Rs. 93-97 a week ago. In sympathy with indigenous sugar, prices of imported sugar also moved up. German sugar was keenly bid at Rs. 89 per 220 lbs., as against Rs. 85-8 last week. British refined spurted by Rs. 2 to Rs. 90 per bag of 2 cwts. Czechoslovakian sugar was quoted higher at Rs. 89-92, as against Rs. 86-90 per bag of 2 cwts. Cuban sugar gained a rupee to Rs. 39 per 100 lbs. Mexican sugar rose by As. 12 to Rs. 42-8 per bag of 110½ lbs.

In the forward section, *Pagan* delivery was squared up at Rs. 85-12, as against the last week's closing rate of Rs. 85-8. *Chaitra* delivery firmed up from Rs. 87 to Rs. 88-4.

As already stated, arrivals of sugar into the market this week were smaller, the quantity actually received being 1,800 bags, as against 6,000 bags in the previous week and 4,000 bags two weeks before.

It is stated that the President of the Kanpur Sugar Merchants' Association has telegraphically informed the Food Ministry of the sharp rise in the ex-mill price of sugar and requesting that at least a release of 200,000 tons must be immediately effected to meet the shortage felt in the interior centres.

The sugar import programme of the Central Food Ministry would appear to have slowed down of late. Out of the old contracts for Spanish sugar, only about 15,000 tons, bought at a price of £35 17s. per ton, are expected to be unloaded in Bombay next week. No further consignment is expected to reach earlier than the end of next month. In the meantime, it is reported that the Central Food Ministry has purchased 20,000 tons of British refined sugar for April shipment at £39 2s. per ton c.i.f. Indian ports, 22,000 tons of French and/or East German sugar at £35 per ton for April-May shipments, and 10,000 tons of Czechoslovakian sugar at £35. In all, therefore, about 67,000 tons of foreign sugar have been purchased for March-April and May shipments and it remains to be seen whether there will be a steady and satisfactory flow of imported sugar into the terminal markets of Bombay, Madras and Calcutta.

It is understood that the Government of India's Regional Director (Food), Bombay, who has been entrusted with the work of arranging an equitable distribution of imported sugar among *bona fide* wholesale sugar merchants in the city, will be announcing the basic formula for determining the quota before the week is out. Under the reported formula, the old-established dealers, who are presently out of business, will also be given a fair deal along with the present dealers. The Regional Director will, it is said, invite certified turnover figures from all the wholesale dealers in Greater Bombay, regardless of their membership or non-membership of any association, for any of the years 1949, 1952 and 1953. It is further understood that the percentages reserved for wholesalers is reduced to 85, the remaining 15 per cent. being earmarked for newcomers, co-operative and consumers' societies and ration shops under the aegis of the Civil Supplies Department, Bombay.

PEPPER WEAK

(Messrs. Parekh & Co.)

BOMBAY, 24th *March*

During the week, Malabar black pepper ruled weak at all terminal markets, owing to absence of buying from New York where the market was reported to be in a demoralised state on account of distressed sellings, both by Lampong and Sarawak in competition with Malabar. Enquiries from Europe were also said to be poor, for buyers seemed to have adopted the attitude of "watch and wait." Holders in Lampong are reported to be somewhat nervous, in view of the absense of buying on barter basis for Hongkong by the Chinese-Indonesian exporters. Sarawak is also reported weak in sympathy with Lampong and is pressing sales both in nearby and long forward shipments in anticipation of larger new crop. Absence of demand in India from New York, at this time of the season, is slowly telling upon the Indian growers, and some of them are anxious sellers but without result. In Alleppey, sales were done at as low as Rs. 1,550. Bulls among the growers prefer to wait till the development of foreign buying, but it appears that they may not be able to hold longer, if New York refuses to come, very soon to the market and take sizable quantity, because the last year's unpleasant experience is still green in their memory when they were forced to sell at lower prices in competition with Sarawak.

In the A.S.T.A. section, April shipment was done at price ranging from $0.76 to $0.74, while May/June shipment was done from $0.73 to $0.71½.

In the delivery section turnover was poor and April was sold as low as at Rs. 1,230.

Following are today's nominal quotations:— Ready Rs. 180 per Bengali Maund; April Rs. 1,245-60, and May Rs. 1,270-90 per candy of 5¼ cwts.

TEA DUSTS ADVANCE

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 20th *March*

The quantity on offer in dust sale "E" which was held on Tuesday, 16th March, amounted to approximately 2,15,000 lbs. From the outset there was a very strong general demand and prices advanced irregularly As. 3 to As. 4 for all types.

London Market.—Very strong demand. Prices ½d. to 1½d. dearer. Strongest feature Assam fannings.

Colombo Market.—Strong general demand. High-growns dearer, following quality. Mediums steady. Low-growns slightly easier.

Calcutta Market—Export.—No sale this week.

Dust.—19,700 chests. Very strong general demand. Market irregularly one anna dearer,

Black exportable types, Darjeelings strongest feature.

Export Quota.—The market at the beginning of the week was 27 pies, thereafter, appreciated to 30 pies and then 33 pies as ready quantities were sought by shippers. Since then the price has stayed firm at 33 pies, which remains today's quotation. At the beginning of the week small business was done in 1954-55 export quota at 33 pies.

Forthcoming Auctions.—Sale No. 6 will be held on Tuesday, 23rd March, and dust sale "F" will be held on Tuesday, 30th March, 1954.

As we go to press, Messrs. Forbes, Ewart and Figgis, Ltd., wire as follows:—

"*Sale* 6.—5,00,000 lbs. Very strong general demand. Prices have advanced for all grades, low and low medium As. 1 to As. 2, medium and good medium As. 3 to As. 4, best liquoring considerably dearer following quality."

RAW JUTE IDLE

(From Our Own Correspondent)

CALCUTTA, 23rd *March*

Uninteresting conditions prevailed in the jute goods market during the week under review. On Saturday, however, a speculative spurt in quotations was in evidence, but the advances thus made were partially lost in the course of business yesterday. The market remained closed on Friday on account of *Holi*. Traders and stockists were afforded the benefit of the lucid analysis of the prospects of mills, made by Mr. G. J. Gardner in his address to the annual meeting of the Indian Jute Mills Association last Thursday. Last year, after the reduction in the export duty on hessian, the Argentine surprised the market by purchasing heavy quantities of hessian. It was mainly on account of this that jute mills were just able to stave off a crisis. Although it is rumoured that this year also, Argentina would require a moderate quantity, definite signs are not yet available. If this rumour, however, materialises, the market expects that purchasers on behalf of Argentina will be active only after September. Another uncertainty is about purchases by the United States; and if the feared slump comes about, it can be certain that jute goods in America can be sold only at lower prices. If current duties remain as they are and prices move down, such sales would be uneconomic to mills. Still another uncertainty relates to Australian demand for sacking goods. It has been known for some time that stocks are running low in that country and that Australian buyers are likely to show greater interest in the Indian market. So far they have been extremely cautious.

In spite of these uncertainties facing jute goods, it is unfortunate that the Government of West Bengal should examine the balance-sheets of jute mill companies with a view to revising the wage structure. Any increase in the labour bill without a proportionate reduction in duties and/or taxes would be harmful to the industry. All the money that mills can save, if there are any savings, is required for modernisation of plants and machinery.

Ready 40" 10 oz. hessians were quiet at Rs. 42-12 last Tuesday, and there being no enquiries from shippers, business was confined to small quantities. On the following day, a decline to Rs. 42-4 occurred, and mills kept out of the market. Subsequently, a recovery to Rs. 42-12 was reported, with speculative support taking up the price to Rs. 43-2 over the week-end, following moderate business with North America. However, lack of business, yesterday, took down the rate to Rs. 42-13, with the f.o.b. price lower at Rs. 46-14. The eight oz. hessians were quoted at Rs. 35-12 f.a.s. and at Rs. 39 f.o.b. A similar trend was also in evidence in the course of prices in sackings also, and over the week-end, B. twills picked up strength to Rs. 106-15 from Rs. 105-12 last Tuesday. This followed reports of Australian interest in the market and of business having taken place with New Zealand. The gain was lost to Rs. 106-8 yesterday. It is generally believed that shipping of sacking this month would record a satisfactory figure.

An unfortunate development this week was the dissatisfaction expressed by certain American buyers regarding the standard of commercial morality among shippers of jute goods in Calcutta. The old-established shippers, it would appear, are not involved in these accusations, and it was unfortunate that American buyers should have been persuaded to buy from new-comers by virtue of the low prices they offered rather than depending on the already developed and established connections. Since the accusations are general in character, these have caused great resentment among shippers, and the country's trade would be advanced if the Commerce Ministry at New Delhi invites American buyers to make specific accusations against specific shippers. On receipt of these, an official enquiry should be made and steps taken to prevent malpractices.

With plenty of jute in balers' godowns, in the market and in the godowns of mills, idle conditions were in evidence in the raw jute market. Mills were cautious buyers. Prices were, however, fractionally better yesterday with Indian northern bottoms quoted at Rs. 26, and Assam lower bottoms being priced at Rs. 25. Mills have noted the recent estimate of the East Bengal jute crop by the Pakistani Finance Minister, according to which the outturn would come to 35 lakh bales, as against 25 lakh bales officially anticipated previously. Trade circles agree that the present estimate is more realistic and do not at all anticipate any shortage in the coming season. The impending change of Government in East Bengal would well bring about unrestricted border trade, for which the United Front leaders have often spoken during electioneering.

BLACK LEAFY TEAS HARDEN

(From Our Own Correspondent)

CALCUTTA, 23rd *March*

The best feature during last week's sale for internal consumption was the black leafy varieties suitable for export, prices of which were raised by As. 2 to As. 2-4. Dusts offered accounted for about 19,200 chests, for which there was a strong general demand. Prices for Darjeelings crossed brokers' valuations, while best C.T.C. Assams picked up strength by moving up by As. 1 to As. 1½. The poorer varieties were, however, easy by about half an anna. The rates were: best Assam C.T.C. Rs. 2-3-6 to Rs. 2-4, medium Dooars Rs. 2-1, and medium Assam grainy dusts Rs. 2-2. There was also strong demand for leaf, offerings of which aggregated 2,500 packages mostly of residue types. Prices for the better kinds and fannings improved by As. 3, while generally there was an irregular price increase by As. 2.

LINSEED EASY

(From Our Own Correspondent)

CALCUTTA, 22nd *March*

The linseed market which had displayed a firm tendency earlier is now exhibiting a generally easier trend, following small arrivals from the Bengal area. Crushers are fairly keen buyers for ready goods and there has been a fair daily turnover. Sellers for forward delivery are reserved, owing to very poor despatches from the main centres, and trading has been very limited. The oil market is inactive. Although prices are considerably easier, local consumers are buying spot to cover their immediate needs only. Latest quotations are: Ready Rs. 19-12 and April-May Rs. 17-12 per maund.

WOOL TOPS STRONG

(Messrs. J. Hardacre and Co.)

BOMBAY, 24th *March*

The Bradford top market is one of the strongest yet seen this year, and the fact that most qualities of tops are quoted 1d. per lb. dearer than on Monday is only part of the evidence.

The real strength lies in the close relationship which now exists between quotations and selling prices, for most concerns today are unwilling to consider concessions on quoted rates, and there is a distinct improvement in the level of selling prices. Current quotations are probably a closer pointer to the basis for business than for the past three months.

A definite improvement in trading conditions has shown itself in the past few days. In the Merino section of the market, the dull conditions of recent weeks have been succeeded by a remarkable larger volume of orders. Merino combing wool in Australia is dearer on the week by an average of 2d. per lb. clean and it would appear that many worsted spinners both here and abroad feel well advised to effect a further cover in tops in case the raw material market moves further against them.

INSURANCE

(Concluded from page 570)

at gazetted and non-gazetted level in the Department. Other recommendations, he stated, were under the consideration of the Government.

Mr. Hanumanthiah drew the attention of the Assembly to the Committee's proposals for improving the agency system with an eye to the development of new business and correlated lines of activities in the years to come. He revealed that the Government has, in co-operation with the Indian Council of Agricultural Research, under consideration a pilot scheme of cattle insurance, which could serve as preliminary to a State-wide insurance scheme, covering not only cattle but agricultural crops also. He hoped that the accounting practices would be greatly improved by the adoption of the mechanised scheme which has been introduced in the office. Particular mention, he said, might be made of the efforts at bringing about more cordial relationship between the Department and its clientele.

From the figures of new line business, which Mr. Hanumanthiah cited, it is clear that the State Government's Insurance Department is making steady progress. Thus, the total number of policies issued during the year 1952-53 (official year) was 6,997 assuring a total sum of Rs. 94.59 lakhs. During the year 1953-54, the corresponding figures were 7,422 policies and Rs. 101.91 lakhs. The Insurance Fund stood, as on 31st December, 1953, at Rs. 642.03 lakhs. The total premium income from official and *public branches* is, on an average, Rs. 82 lakhs per year. The valuation report for the quinquennium commencing from 1st July, 1948, the Chief Minister stated, was receiving the attention of the Department.

There is no doubt that the Insurance Department has made notable progress in recent years. But there is one criticism which private insurers make in regard to all State-Government-managed insurance. It is that these enterprises are able to work at a lower level of expenses, because no rigid distinction is made between the Insurance Department, as such, and the other departments of the Government. Also, they have the additional advantage, in that they are free from taxes, and even from investment expenses.

The Mysore State Insurance Department, in particular, enjoys yet another advantage, in that the Government enables the Department to get an attractive level of interest on its funds. Thus, the Chief Minister stated that, since a need was felt to strengthen the insurance funds so that the divisible surplus out of which the policyholders get their bonus might be improved to the maximum extent possible, the Government had "ordered the revival of the old rate of four per cent. interest on insurance balances at the credit of the Department, with retrospective effect for the entire quinquennium to enable the Department to declare a competitive rate of bonus both in the official and public branches." This is a very high rate of interest indeed, considering that private insurers are able to earn only about 3.4 per cent. on their funds. The favourable treatment accorded by the Government to its Insurance Department, it must be clear, is a charge on the taxpayer.

CENTRAL BANK OF INDIA

(Concluded from page 580)

Mr. Bapuji D. Lam and to the very valuable services rendered by him to the Bank as Director and Solicitor. "His knowledge, experience and judgment," said Sir Homi, "had greatly helped the Board in its deliberations and his personality had endeared him to his colleagues and to the members of the staff who had come in contact with him. On your behalf, I desire to convey an expression of our deepest sympathy to Mrs. Lam and the other members of the family.

"I would end by expressing our acknowledgments to all who are engaged in the service of the Bank. The Managing Director, Mr. Captain, has continued to devote himself to his duties with unstinted energy and, as shareholders have been informed, the Board have thought it, in the interests of the Bank, to renew his appointment for a period of three years. Mr. Karanjia, the Manager, Branches, and Mr. Cooper, the Secretary, have also been carrying a heavy burden. To them and to all members of the staff at the head office and at the branches, as also to the local committees at the various centres, I would like to convey an expression of our appreciation of their services."

TEXTILES

(Concluded from page 562)

yards for internal consumption and 1,500 million yards for exports is not high, against the current overall production of about 6,300 million yards."

Few would dispute the line of reasoning behind those observations. But the point is whether the target can be achieved what with the heavy tax imposts and some of the artificial restrictions that continue to be imposed by the Central and State Governments. Moreover, much also depends on the availability of adequate supply of raw cotton, the principal raw material. Mr. Krishnamachari, however, felt that the target of 5 million bales of cotton need not despair one, as "we have got more irrigation schemes all of which will also produce more cotton." We fully agree with him on this point, for, when more irrigation facilities are made available, it should be possible for the country to produce a crop of 5 million bales through both intensive and extensive cultivation.

Notice

HINDUSTHAN MERCANTILE BANK LIMITED

NOTICE IS HEREBY GIVEN THAT THE Tenth Ordinary General Meeting of the Shareholders of the Bank will be held at its Registered Office at No. 10, Clive Row, Calcutta on the 12th day of April, 1954 at 4 p.m. to conduct the following business:

(a) To receive the report of the Directors and Audited Accounts for the year ended 31st December, 1953.

(b) To elect Directors.

(c) To appoint Auditors for the current year and to fix their remuneration.

(d) To transact any other business that may be brought forward with the permission of the Chairman.

By Order of the Board,
S. S. PURI,
Manager, Head Office.

CALCUTTA, *Dated 23rd March*, 1954.

N.B.—The Transfer Books of the Bank will be closed from Saturday, the 27th March, 1954, to Monday, the 12th April, 1954 both days inclusive.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nom in quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. ‡ Sales and amount written off. (h) Investments. § For ten months ended 31st December 1951.

(i) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 4 in96 the debentures section:—

(a) Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking und of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(b) Option of repayment at any time at 3 per cent. premium

(b) Bearer bonds of Rs. 1,000 each repayable a par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952 or on any subsequent interest date at one month's notice.

e Redeemable on or after 31st July, 1950, at Rs 102-8 or at par after 31st July, 1955 on six months' notice in each case.

(f) Bearer bonds of Rs 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium afte 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March 1957.

(g) Option of redemption on or after 1st July 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months notice.

MARKET GOSSIP

(Concluded from page 551)

traffic carried during the three years ended 1952. They argue that, under such a quota system, there would be no restriction on the expansion of tonnage, for, in practice, the supply of tonnage for coastal trade would adjust itself almost automatically to trade requirements, albeit in the long run. Further, this system is also expected to facilitate rationalisation of berthings which is essential for offering a better, more regular, frequent and reliable service to the public. All this, it is claimed by the Scindias, will facilitate more economic employment of available tonnage. The Scindias further feel that any underground scramble for cargo by offering rebates would be suicidal to the future development of the Indian nascent shipping industry. They want the freight rates to be fixed at reasonable levels which will not permit of unfair competition through rebating. The rates should be based not merely on the principle of "what the traffic can bear" but also on a basis which would ensure an uninterrupted flow of shipping service throughout the year. In short, the freight rates should be such as to ensure sufficient tonnage to meet all the traffic at peak periods of the year. This would, of course, mean a surplus tonnage during periods of low activity, but this is inevitable.

• • • •

Although it is stated that the majority of the members of the Conference is agreeable in principle to the quota system, there appears to be some difficulty in working out the details. It is stated, for instance, that some want the year 1953 also to be included in the base period for determining the quotas. There are, however, some who are totally opposed to the system of quotas, because it would mean perpetuation of the existing disproportion in the size of the various companies. It would mean, they argue, that the Scindias would continue to hold the dominant share in coastal trade and deny the other companies the freedom to expand in the manner they like. They are, therefore, for the retention of the existing system, but subject to a stricter check on malpractices. A few of them feel that companies with bigger fleets and greater experience should branch out to overseas trades, giving more scope on the coast for the smaller, infant companies. Coastal trading should, according to them, be a nursery in which the new small companies can develop and, after acquiring the necessary experience, can extend their activities to competitive overseas trades.

• • •

It is admitted by the other companies that the Indian Coastal Conference can exist without the Scindias but only in name. For the Scindias own nearly 50 per cent. of tonnage on coastal trade. After all, a coastal conference, if it is to be effective, must be fully representative, with a place for all companies, and must be the result of mutual understanding of a nature, under which modern shipping can develop on a rational basis. There can thus be no conference worth the name without the Scindias in it. If the Scindias decide to quit, it would mean rate-war again in the coastal trade from which some of the smaller companies might be extinguished. This, however, does not mean that the Scindias should use their predominant position in the trade to bargain in a manner which would be disadvantageous to others. Failure among the shipping companies to reach a mutual understanding among themselves with due regard for the interests of shippers may force the Government to intervene.

• • • •

Contrary to earlier expectations, the Government of India has extended the time limit for the constitution of State Electricity Boards, under the Electricity Supply Act, by one more year from 31st March, 1954.

• • • •

Although many Americans—politicians, rather than economists—condemn those who speak of a recession in the U.S. as "pedlars of gloom and doom," there are some signs which indicate that American economy is not as healthy as it was till recently. Steel output has declined to 70 per cent. of capacity. Unemployment has increased to 6 per cent. of the labour force. Industrial production is 10 per cent. below the peak levels touched in May last year. It is perhaps too early to say whether these signs represent a merely temporary phase of readjustment in American economy or a shadow, cast by a full-scale recession that is bound to follow these signs. Among those who see the grim prospect of a recession in the present state of American economy, Mr. Colin Clark, the well-known economist, is one. In an article, contributed to the *Financial Times*, London, he has given the reasons which prompt him to think that a "serious and dangerous recession is going to develop during 1954." In the first place, money is scarce, when it is "gauged against the size of the labour force and the average hourly wages." Secondly, the prices as well as physical volume of inventories are high. Thirdly, there is a surplus of fixed plant and equipment, of producers' goods. Fourthly, constructional costs are high. Until these costs fall," we must expect a rapid and serious decline in the constructional industry." Finally, there is the tendency for a downward movement to perpetuate itself by a sort of chain reaction. This is a bald summary of Mr. Colin Clark's thesis and does no justice whatever to the many subtle arguments by which he supports his views.

• • •

In official quarters, these fears are discounted. In a recent nation-wide radio and television speech President Eisenhower said there was no depression and the Government would make sure "we don't have one." He admitted that some unemployment had developed in different parts of the country but the nation, as a whole, continued to be prosperous.

• • • •

A similar note of optimism has been struck by the Committee for Economic Development, which consists of prominent business men. The Committee stated that, in the past, depression had been caused by contraction of credit, fall in income (causing a drop in demand, in production and again in income) and psychological chain reaction of spreading pessimism and fear. But the country, the Committee said in effect, knew how to meet such a situation, if it developed.

• • • •

The Committee stressed the improvements in the banking system that have resulted in establishing adequate machinery to supply additional liquidity to the economy, if needed. Pressure for credit liquidation would be less than in the past. Business and farm debts had not advanced as far, relative to assets and earnings, as in past booms. The U.S. did not now have a large volume of debt incurred for

RETENTION PRICES FOR STEEL

FOR the third time, the Government of India has disagreed with the Tariff Commission on major issues. The first occasion was in respect of the fair ex-works retention prices for the steel produced by the Tata Iron and Steel Co., Ltd. The second was in respect of the prices of cement. The third occasion, which is only a few days old, is in respect of the retention prices for steel manufactures of the Indian Iron and Steel Co., Ltd., the second largest steel-making company next to the Tata Company. It is noteworthy that all the three instances relate to the question of determining the fair price for the output of pivotal industries, on the progress of which depends the country's economic growth. This is, therefore, a serious development, deserving of greater attention of all those who are interested in the economic progress of this country than it has received so far. It is true that the Tariff Commission is only an advisory body and that the Government is not bound to accept its verdict in all cases. But the Commission is an autonomous body and not a department of the Government, subject to the whims of the Ministers concerned. Its status is equal to that of a quasi-judicial body and, if its advice were to be often turned down by the Government, it would cease to inspire confidence in those who seek justice from it. This will be particularly so, where the Government is an interested party, as it happens to be in the case of the three commodities in question. The Government's reasons for differing from the Commission in all these three instances are not, in our opinion, quite convincing.

In the case of the Indian Iron and Steel Co., Ltd., the difference of opinion between the Government of India and the Commission is on three counts: (1) the extent of increase in the retention price for the Company's steel, (2) the size of the block, and (3) the period for which the revised price is to be in force. The Tariff Commission's enquiry revealed that an increase of Rs. 66 per ton of saleable steel produced by the Company would be a fair one. The Government has differed from the Commission on this point. It is of the view that an increase of Rs. 59 per ton would do. An important point that needs to be mentioned here is that, in arriving at the figure of Rs. 66 per ton, the Commission did not depart from the Government's decision in regard to the rate of return on the gross block of the Tata Iron and Steel Co., Ltd. It will be remembered that the Commission had recommended in the case of this Company a return of 10 per cent., but the Government allowed only 8 per cent. The same thing happened in regard to the cement industry, too. Apparently, in deference to the Government's views on this subject, the Commission did not venture to stand by its conviction again and get a rebuff. This is rather unfortunate, in that it may give rise to the impression that the Commission is chary of incurring the Government's displeasure by asserting its independence. If the Commission had felt that, in the larger national interests, a return of 10 per cent. was the proper rate, it should have persisted in advocating that rate.

Even though the Commission determined the price on the same basis as the one adopted by the Government in regard to the T.I.S.Co., by the Government has not accepted its suggestion in full. Two reasons are mentioned for doing so. One is that, in estimating the average production for the four years, 1953 to 1956, the Commission should not have made allowance for the low production in 1953. The second reason is that, for reasons to which we shall presently refer, the Government has chosen not to allow any return on the gross colliery block (that is, the capital expenditure incurred by the Company in developing its own collieries, which some have chosen to describe as "captive" collieries), while the Tariff Commission had allowed the same rate of return on that asset as on other block items. As the value of colliery block is Rs. 20 lakhs only, the reduction made by the Government in the price suggested by the Commission could be no more than Re. 1 per ton on this score. This means that the Government has disallowed an increase of Rs. 6 per ton solely on the ground that the Commission had taken into account the low level of production in 1953 and made an allowance for it. But competent circles feel that the cut of Rs 6 per ton is more than that warranted by this factor alone. They surmise that the Government must have estimated the possible level of the Company's production at a much more liberal level than the Commission. As the Government's resolution and the Press note on this subject is not quite communicative, it is not possible for us to be dogmatic on this question. It is a pity that the Government's *communique* should be very brief and vague, instead of being comprehensive and informative, as, indeed, it ought to be, especially when the authorities differ from the Commission's conclusions. In the absence of fuller details, how do they expect the Press to build a well-informed public opinion? It is needless to add that the Government's case would have been strong, if it had explained in detail as to why it was not in a position to agree with the Commission's estimates.

In so far as the Commission is concerned, it has explained in a fairly convincing manner the reasons for estimating the Company's production of finished steel at 280,000 tons. The actual production in 1952, a normal year, was 312,542 tons. But, owing to the dislocation that will be caused in the normal operations of the Company by the implementation of the expansion programme, which is scheduled to be completed by the end of 1956, the production may not average more than 280,000 tons per annum. It may be mentioned here that, in the case of the T.I.S.Co., the Commission estimated the loss of production arising in similar circumstances at about 20,000 tons; that is, this Company's production is expected to decline from 780,000 tons to 760,000 tons by 1956. But, in the case of the I.I.S.Co., although its total output is less than half of the T.I.S.Co's production, the fall is expected to be greater, because the expansion aimed at is more than double its present productive capacity of steel. Thus, whereas the T.I.S.Co's programme provides for an increase of only 150,000 tons, from 780,000 tons to 930,000 tons, the I.I.S.Co's scheme envisages an increase from about 310,000 tons to 700,000 tons. The production of the I.I.S.Co., is, therefore, expected by the Commission to suffer a larger amount of dislocation than that of the T.I.S.Co., in the next three years.

Is the Government justified in not taking into account the loss of production sustained by the Company in 1953 on account of labour disturbances? On the surface, the Government's stand appears to be perfectly right. For to recognise the loss of production caused by strike and give a weightage for it in the quantum of price increase would tantamount to rewarding the intransigence of workers and encouraging acts of indiscipline among them. But, in this case, there are other factors that deserve to be taken into consideration. The strike was due purely to political reasons and the Company's management was in no way responsible for it. Why then should the Company be penalised for it? If the Government wanted to see that the workers got no benef

price as recommended by the Commission, it could have granted the full increase in price for 1953, subject to some suitable conditions.

The Government's decision to apply the revised retention prices only up to 31st March, 1955, instead of up to 31st December, 1956, as recommended by the Commission, is understandable in the light of its explanation, referred to elsewhere in this issue. The only criticism to which it is open is that the Government should have thought about this even at the very outset and given precise instructions to the Commission to that effect. It is true that, in asking the Commission to fix the price for as long a period as possible, the Government had stated that a common date might be adopted for both the I.I.S.Co. and the T.I.S.Co. and that the Commission should be sure that, during the period chosen by it, there was no likelihood of any major change in the Company's production. But this advice contained no specific directive and clearly left the matter to the discretion of the Commission. In the present context of disagreement with the Commission, the announcement that the principles of price fixation hitherto followed themselves require revision is likely to be interpreted as an act of censure against the Commission. Moreover, it does not redound to the credit of the Government itself, for it is an indication of lack of forethought and consistency in Government's policies.

That the present method of relating depreciation and return on investment to gross block is defective has been known for a long time. These defects were lucidly explained by Mr. Padamji Ginwala in a series of articles contributed to this journal as early as in August last. Why did it take such a long time for the Government to discover them? The main consideration on which Mr. Ginwala pleaded for a change in the method of determining prices was that the present system allowed a very low return to producers. "It is of vital importance," he said, "to discontinue the practice of calculating the depreciation and return on the historical value of the block account, for it is obvious that an allowance on this basis would be wholly inadequate to any new units coming into an industry which already comprises several old units. Also, unless it is the intention of the Government that every industry should remain indefinitely the monopoly of the units in existence, they must take courage in both hands and allow a special rate of depreciation and return on capital to all the units on the present-day cost of a new unit. If they cannot muster as much courage as this, then they must give up the talk, which may be regarded as idle, of encouraging the development of industries in the private sector. They must, at the same time, be prepared to continue the burden on the producer or the consumer, as the case may be, indefinitely, because the gap in the supply and the demand which justifies protection or control cannot be closed."

If it is the foregoing consideration that has led the Government to the decision it has now taken, then its move is welcome, belated though it is. But, if it has been motivated by the feeling that the steel producers have been getting a generous return and that, therefore, the basis should be changed in such a way as to see that they get less than they do at present, then the move would cause consternation among the companies concerned, which, in turn, might have an adverse effect on their enthusiasm to increase their output. In view of the fact that the Government has been parsimonious even in accepting the recommendations of the Tariff Commission, could they be blamed if they were to fear that the move might be for a change for the worse? By not stating clearly the exact reasons for its present move, the Government has thus needlessly introduced an uncertain factor. Are such steps in consonance with the era of economic planning in which we are supposed to be? We wonder.

An important question that arises from the Government's latest move is: who is to conduct the proposed enquiry into the question of determining the principles of price fixation? Surely, it is no use referring the matter again to the Tariff Commission, inasmuch as the latter's findings and recommendations have failed to win the approval of the Government. A departmental enquiry will not satisfy the producers, especially in the present context of lack of confidence by the Government in whatever they say. It will be quite pertinent to recall here that it was because there could be no mutual agreement between producers and the Government through departmental enquiries in the past that the whole question was referred to the Tariff Commission. A departmental enquiry would not, therefore, be a satisfactory way of deciding the issue. The only alternative is to appoint an independent commission which will have the assistance of some impartial experts. In this connection, we would commend for the consideration of the Government the following suggestion which Mr. Ginwala made in the course of his series of articles to *Commerce* already referred to:

". . . . All public bodies, like individuals such as lawyers, doctors, engineers or arm-chair doctrinaires who specialise in one particular subject as experts, develop, what may be called, a single-track mind. I do not claim that I or other members of the earlier Tariff Boards did not suffer from this common human infirmity. But we were concerned only with helping to administer the policy of protection which the baneful influence of the single-track mind may have some time affected. But we were not called upon to fix, as part of our duties, the retention prices also of controlled industries for the simple reason that there were none such in our time. Where, as I have explained, there is a fundamental difference between the two classes of industries by which the burden of the sacrifice is reversed, the single-track mind is not conducive to accomplish very satisfactory results.

"My suggestion, therefore, is that, for fixing the retention prices of controlled industries, an entirely separate body, called the Price Fixing Board, as in other countries, should be appointed. Such a body should, where possible, consist of an independent chairman and representatives of the producers, the consumers and labour. It may be advisable to have a separate *ad hoc* Board for each important industry. Such a body should not only fix the retention prices of industries in the private, but also in the public sector, such as the Sindri Fertilisers, the machine tool industry, public utility services, electrical and irrigational undertakings, etc. It is only thus that Government enterprises can be properly controlled in the same way as the industries in the private sector, and prevented from charging whatever prices they like to the consumer, and from deteriorating into preventible inefficiency. The Auditor General and the Public Accounts Committees of Parliament only carry out belated post-mortem examinations which seldom do much good. It is necessary that investigations should take place from time to time to regulate the selling prices of Government enterprises and to minimise the waste of public money through incompetence, ignorance, corruption, want of experience or any other similar cause."

As the suggestion is self-explanatory, any comment on it will be superfluous. All that is necessary to add is that the value of the suggestion has gone up since it was made, in view of the fact that, in four years from now, a Government-owned steel factory will come into existence in Orissa.

This article will be incomplete without a reference to the decision of the Government to postpone consideration of the question of return on the colliery block until the whole issue of retention prices is considered *de novo*. This means that both the steel companies will earn no return on this asset till the end of March, 1955. While the consequent loss of revenue to the I.I.S.Co. may not be appreciable, it will be quite substantial to the T.I.S.Co., as the value of its colliery block is fairly heavy. In taking this decision, too, the Government has changed its mind without advancing any convincing explanation. As readers are aware, in the case of the T.I.S.Co., the Government had referred this question to the Tariff Commission for reconsideration. We are not even told by the Government as to what are the recommendations of the Commission in this regard. But, in the light of what the latter has stated in regard to the I.I.S.Co. colliery block, it is obvious that it must have reiterated its earlier stand and recommended a return of 8 per cent. on the T.I.S.Co. colliery block. The unceremonious manner in which the Government has dismissed this question is, to say the least, not conducive to higher productivity in industry.

BIHAR'S FISCAL VIEWS

The first flush of post-independence idealism, which pervaded the State Governments' fiscal policies, is apparently yielding place to a more realistic appraisal of financial requirements. We recently welcomed the note of realism in the Rajasthan Government's memorandum to the Taxation Enquiry Commission. A similar note has now been struck by the Bihar Government. In its reply to the Commission's questionnaire, the Government has made certain observations which deserve wider notice. The Government thus recognises the need for capital formation; it says "when India is badly in need of capital for her development, a tax on capital would discourage rather than encourage capital formation." This is welcome, though it might be asked whether the Government is consistent when it demands that higher incomes should be more heavily taxed. Although this demand is put forward to satisfy the valid criterion that those who are able to pay more should be asked to pay more, it is necessary to bear in mind that, in this country, the higher income groups—the only class that sustains capital formation—are strictly limited in numbers. The Government is, however, on firmer ground when it argues that the incentive to save and to invest will be less affected, if the levy is for works of immediate local benefit, and goes on to advocate greater use of betterment levies and special assessments.

The Government's sense of realism is nowhere better seen than in its attitude to foreign capital, salt duty and prohibition. The tax rate on foreign capital, the Government says, should not be materially higher—the Government might as well have said, it should be materially lower—than what obtains in countries which compete with India for securing such foreign capital. Double taxation should also be reduced to a minimum by international agreements. It advocates the reintroduction of the salt tax, for it is a "very convenient way of making the rural class, who pay very little taxes, contribute their proper share to the revenues of the State." It reinforces its case for the salt tax by arguing that there "should be no objection to the introduction of this tax, since we have now taken to imposing sales tax even on foodgrains." Surely, if a tax on salt is unholy, a tax on foodgrains is sacrilegious in the extreme. The fact is that sentiment clogs right thinking on this issue. The Government is equally outspoken on the question of prohibition. It admits with refreshing candour that it is very difficult, in the context of the undeveloped nature of the country's economy, to find alternative sources of taxation to make good the loss of revenue through prohibition. It rightly urges the postponement of this issue till better days arrive.

Among other notable points made out by the Government in its memorandum, mention must be made of the suggestion that the net surplus earned by the State undertakings should be utilised mainly for financing capital projects and not for day-to-day expenditure. It adds: "Whether the surplus should be reinvested in the particular undertaking where it has accrued or whether it should be pooled into a fund for financing projects of development generally, should be decided upon the merits of each case." Again, the Government suggests that the local bodies should have ampler and more certain financial powers, so that they may not depend too much on grants. Although there is a great deal to be said for widening the financial powers of local bodies, it may be wondered whether these institutions, faction-ridden as they are, are properly utilising the powers they already possess. For fear of offending the taxpayers, the representatives on these bodies seldom support new tax proposals.

The Bihar Government's suggestion for a tax on newspapers and advertisements, to be administered by the Centre and distributed among the States, is a retrograde step. A tax on newspapers, it cannot be too strongly reiterated, is a tax on knowledge. And it is doubtful whether this young democracy can ever have too much of this useful commodity—knowledge and information. A tax on advertisements may, of course, appear to stand on a different footing. But, really speaking, it is not so. With the arrival of the buyers' market, the tax on advertisements will have to be borne by the newspapers themselves, in which case it is in no way different from the tax levied direct on newspapers. In any case, a newspaper already pays taxes in many ways, such as sales tax on paper, ink, pen, pencils, typewriters, printing machines, besides income-tax and corporation tax on its profit, if any. Further, in view of buyers' resistance, what is needed to stimulate economic activity is wide publicity through advertisement. It would be wise, therefore, to leave advertisements severely alone. A Government with some foresight will readily recognise that more advertisements will mean more sales of the goods advertised, on which a larger revenue will accrue to the Government through sales tax.

MOVE TO CONTROL CALL DEPOSITS

MORE ABOUT MUTUALISATION OF ORIENTAL—LIFE INSURANCE PREMIUM RATES

THURSDAY, 5 P.M.

THE week now drawing to a close has been a fairly active, though not an exciting, one on the Stock Exchange. Industrial equities have staged an all-round improvement, with textiles taking the lead. Gilts also have hardened, in the absence of sellers and due to the open market activity of the Reserve Bank. It was expected that, with the exit of Tata Deferreds from Friday last and with the certainty of a marked increase in the supply of Tata Ordinaries in the very near future—consequent upon the conversion and the issue of bonus shares—there would be selling pressure in the Ordinaries. But this expectation did not materialise. On the contrary, there has been sizable buying in this scrip by influential parties. The technical position of the scrip is also said to be in favour of the bulls. It is stated that the volume of floating scrips is not large and that the outstanding short-sales are still quite substantial. Perhaps, it is these factors that have been responsible for the smart recovery in this share even in the face of the Government's decision in regard to the retention price for steel produced by the Indian Iron and Steel Co., Ltd., not being quite favourable. As will be seen from our leading article in this issue, the Tata Iron and Steel Co., Ltd., will not get the once-hoped-for increase in the price of its steel by way of return on its colliery block. Further, the price of steel, after 31st March, 1955, will be revised on a new set of principles which are yet to be determined. It is not known whether these new principles would be more favourable or less favourable than those on which the existing prices have been determined. At the moment, however, the market does not seem to be worried by this future uncertainty. Evidently, it draws comfort from the fact that, in the accounting year 1953-54, the Company has done better than anticipated and that it should be possible for it to maintain, if not increase, the dividend at the previous year's level. Reports that the Company has been making good progress in implementing its expansion programme have also contributed to the buoyancy of the share.

* * * *

On cheerful reports from the cloth and yarn market, textile shares, which had remained rather neglected last week, have looked up once again. Prominent among these are Bombay Dyeings, Centuries, Kohinoors, and Gokaks. There have been no new developments in regard to the first two scrips, their appreciation in value being due to the renewed recognition of their intrinsic merits. As regards Kohinoors, there have been reports that the management has decided to reduce the production of art silk in No. 3 of the Company's mills, as the profit-margin on this commodity has dwindled in view of the imposition of excise duty and the difficulty in getting sufficient quantity of art silk yarn, and devote the capacity, thus released, to produce cotton goods, especially sanforised and anti-crease cloth. The spurt in Gokaks is due to the announcement by the Company's Chairman at its annual general meeting, held early this week, that the Directors propose to capitalise a part of the reserves and issue one bonus share for every four shares. The gradual rise in the price of sugar has revived interest, albeit scattered, in Belapurs. The fancy for Bombay Burmahs is being maintained and so also that for Scindias. Selective buying, based on favourable dividend expectations, has been a feature of miscellaneous shares.

* * * *

The persistent reports that Mr. C. D. Deshmukh, Finance Minister, Government of India, has tendered his resignation to the Prime Minister, have been practically ignored by the market, because it is confident that, ultimately, Mr. Deshmukh will yield to the persuasion of common friends and withdraw his resignation, if he has already resigned, or refrain from doing so, if he has decided upon it. That there have been serious differences of opinion between him and other members of the Cabinet, not to mention the Congress Party on a number of subjects is not denied. One of them is said to be rationalisation of industry. His remarks on this subject, as will be observed from the extracts from his speech published on page 659, cannot be said to break any new ground. They are just a rehash of the position that has already been accepted by the Government and the Planning Commission. Be that as it may, the consensus of opinion in City financial circles is that it would be very unfortunate if Mr. Deshmukh were to leave the Government at this crucial stage of the country's economic development.

* * * *

The stringency in the short-term money market persists and banks are keen bidders of both call and term deposits. The demand for accommodation is so strong that banks are prepared to pay 3 per cent. even for small amounts repayable on demand. Now that the tendency for current account holders to switch over to call deposits has more or less come to stay, some of the banks, especially the big ones, are complaining that the burden of interest rates is increasing beyond all reasonable limits. For all practical purposes, almost all current accounts, having more than Rs. 25,000 and earning ½ per cent. per annum, have automatically become call deposits, receiving 3 per cent. per annum. This development and its implications were fully described by Mr. Pranlal Devkaran Nanjee at the last annual meeting of the Indian Banks' Association, of which he is Chairman. A reference to his speech on this occasion appears in the appropriate section of this issue. It will be seen, therefrom, that he feels that something must be done by all banks collectively to end this trend at an early date. It would appear that the matter is already receiving the attention of the monetary authorities and that very soon the opinion of all the leading banks on this question will be sounded. Informal discussions at the highest level between some of the leading Indian banks and the monetary authorities are reported to have taken place during mid-week. A committee of bankers may be appointed to study the problem and suggest ways and means of solving it. The co-operation of Exchange banks will be solicited in this matter. It must, however, be made clear that the move is still at the preliminary stage, though it is being vigorously pursued.

* * * *

Both gold and silver have been presenting a firm front. In gold, arrivals have slowed down, stocks are modest and the demand is good. In view of the cordoning of Pondicherry and the tightening of security measures all round the small foreign pockets in the country which are the ports of entry for smugglers, market circles expect a decline in the arrival of contraband gold. This possibility has encouraged a certain amount of bullish activity. In silver, the floating stocks are negligible, while there has been moderate revival of demand.

* * * *

Reports about the newly opened London market indicate that the price of gold is quite steady at about 248s. 4d. per fine ounce, as against the initial fixing of 248s. 6d., though the turnover has been small after the initial burst of enthusiasm. Commenting on the first day's trading in gold on the London market, Oscar R. Hobson, City Editor of the *News Chronicle*, observes as under:

"After its Rip Van Winkle slumber for fifteen years, the London gold bullion market made quite an auspicious debut yesterday (22nd March). The six firms of refiners and bullion brokers duly met at Rothschilds' office as they always did before the war and 'fixed' the price. They fixed it on the basis of such buying and selling orders as had arrived in their respective offices prior to (or even during) the fixing—each firm first 'marrying' its own buying and selling orders and appearing at the fixing either as a net seller or net buyer.

"For this reason no aggregate volume of turnover is ascertainable—though turnover was described as 'moderate or good.' One certain fact about the business is that Rothschilds were, on balance sellers of gold, for Rothschilds act for the Bank of England and the Bank of England acts for the South African Reserve Bank which handles the newly mined South African gold. South Africa, some years ago, undertook to sell a minimum of four million ounces a year (say £1 million worth a week) of her current output to London and this gold will now be sold in the open market and will beyond question form the great bulk of the metal handled there.

"The buyers yesterday were the Middle East and the Far East, where there are still unsatisfied 'hoarders' willing and able to pay dollars for gold. Gold, it must be noted, can only be bought on the London market with dollars or (which comes to the same thing) American or Canadian account sterling, or with the new 'registered sterling' which can only arise from previous gold or dollar sales and cannot, therefore, yet exist. The price 'fixed' by the six firms yesterday morning was 248s. 6d. per fine ounce. Gold can be sold without limit in New York at $35 an ounce. This at the official exchange of $2.80 to the £ is equal to 250s., but, as it costs about 3s. an ounce to transport and insure the gold to New York, the 'parity' price is about 247s. (or less if the dollars have to be bought at the present rate of exchange). Yesterday's London price—and a good deal of business was transacted among brokers and banks after the fixing at about the same price—thus represents a small premium over shipping parity. Should the hoarding demand subside and gold have to be sold at the shipping parity, it will probably be moved by air. There was discussion on the Baltic Exchange yesterday about the potentialities of this new air freight business, which would, of course, save interest on the gold while in transit."

* * * *

Remarking that the elasticity for the bullion market may be the harbinger of similar elasticity in the foreign exchange market, the *Economist* says:

"The shipping parity is the 'floor' below which the sterling price of gold cannot fall so long as the U.S. Treasury buys at the present official price and so long as the sterling dollar rate remains anchored to the present parity. The London market price could go higher than the mint parity; theoretically, indeed, there is no determinable ceiling to it since there are no monetary authorities in the world that are now prepared to sell gold at a fixed price and without restrictions as to destination or amounts. It is, however, difficult to conceive conditions in which the London price of gold would rise to a substantial premium on the mint parity, now that hoarding demand is at such a low ebb and now that the potential supplies, including those that may come from Soviet Russia, are known to be considerable. It is significant, however, that the British monetary authorities are prepared to allow the re-opening of a market in which the value of sterling in terms of gold can be measured day by day within a range of prices that is not directly limited."

* * * *

The move by the Directors of the Oriental Life Company to convert it into a policyholders' company would appear to be entering the last stage. Although there is no statutory obligation on the part of the Directors to obtain the prior consent of the Government, they have done so informally. An understanding has also been reached with the Government in regard to the rate and mode of compensation payable to the shareholders. The compensation is believed to be of the order of Rs. 8,500 per share. This will be paid in the form of debentures repayable in instalments in five years. The rate of interest on the debentures will be either 4 or 4½ per cent. The interests of debenture-holders will be safeguarded by retaining on the Board the existing shareholders' Directors as trustees, but their number will be progressively reduced as and when the debentures are repaid and the representation for policyholders will be increased proportionately. When all the debentures are repaid, the Board will consist entirely of policyholders' representatives. There is, however, one point on which the Government and the Directors are not agreed and it is this hitch that is holding up the scheme. The Government, it is learned, wants to avail itself of this opportunity to have representation on the directorate of the Company. It is insisting that there should be a few of its nominees on the Board of the mutualised company, in order to ensure sound management. Apparently, the Government apprehends that all sorts of people might get elected to the Board as policyholders' directors and the vast resources of this biggest life office in Asia might be mismanaged. The Directors of the Company are, however, unable to appreciate this novel demand and do not know in what capacity the Government could be accommodated on their Board. The matter is still under discussion with the Government, but an early understanding is expected.

* * * *

The Executive Committee of the Life Insurance Council (Chairman: Mr. K. G. Ambegaokar, Secretary to the Finance Ministry, Government of India), which met this week in Bombay, it is learned, considered the situation created by the drastic reduction in premium rates by leading insurers. Since this issue cannot obviously be brought within the scope of the Code of Conduct, the Committee presumably considered the matter only in a general way. The Committee felt, however, that, to the extent that reductions have been brought about by increasing the minimum sum to be assured under policies and/or by reducing the rate of commission customarily payable on such policies, the insurers concerned have offended against the spirit of the principles laid down by the Committee. As insurers have, therefore, been requested to revise, before 30th April, 1954, their rates so as to eliminate these features. Other insurers, who may be contemplating reduction, have also been requested to refrain from introducing such features in their new tables.

* * * *

The objectionable features, referred to by the Committee, are thus increases in the minimum sum that might be assured and reduction in the agents' commission. This refers to certain whole life policies, in which the insurers concerned have both increased the minimum sum of assurance to Rs. 10,000 and reduced the agents' commission. This higher figure was prescribed for these policies, because it was believed that such policies would appeal only to the rich or to those who are liable to pay estate duty. The rates were laid down with an eye to investment element which would appeal to this class of persons. And the rate of commission was lowered, because the agents, it was thought, would easily be able to secure business for large sums under the new plan without having to part with a part of their commission. Since these features have been declared objectionable, the insurers will have to step up their premium rates if they decide to heed the directive of the Committee. Although the precise extent by which the premium rates will have to be stepped up is difficult to calculate, it is believed that it might be of the order of 10 to 12 per cent., as against the 25 per cent. cut effected originally, so that the rates for these whole life policies would, even after the Committee's requirements have been met, still be 12 to 13 per cent. below the level of rates which prevailed previously.

* * * *

Yet another decision taken by the Committee was to appoint a sub-committee to examine to what extent the premium rates, as they existed on 1st January, 1954, could be reduced on the basis of actual underwriting experience of life insurers in India. It would appear that the sub-committee will consist of three actuaries of three leading life insurance offices in India, besides Mr. C. A. Pandit, the well-known consulting actuary. This four-man sub-committee is expected to submit its report before the end of May, 1954. The findings of this sub-committee of leading professional actuaries will, naturally enough, be awaited with interest.

* * * *

Since the Committee could do no more about the complex issues arising from the reduction in premium rates than ask for slight readjustments in certain whole life policies and appoint a sub-committee to go into the question, the insurers, who had hoped that the Committee would intervene more strongly in the matter, would now appear to have practically reconciled themselves to the new era of lower premium rates. About four or five insurers have, therefore, come out with their premium rates drastically reduced. Many more are likely to follow the lead. It now looks as though lower rates of premium have come to stay.

* * * *

Although the reduction in premium rates should encourage, rather than discourage, all

BULLISH TREND IN EQUITIES

TEXTILES WELL FAVOURED

(From Our Own Correspondent)

BOMBAY, 1st *April*

THE most notable event of the week under review was, as indicated previously, the elimination of the Tata Deferred shares from the trading ring. After a momentous career extending over 47 years, these shares were taken off the list from Monday, 29th March. The general expectation that after the elimination of this leader of the market, activity in the market would be dull was belied by the market's performance in the last four days. For, under a spell of speculative support and nervous short-covering, strong bullish fervour prevailed over the Stock Exchange during the week under review. Though no individual scrip took the place of Tata Deferreds, textile shares as a group took the lead and gave a stimulus to the market as a whole.

The announcement of the increase in the retention price of steel for the Indian Iron and Steel Co., Ltd., did not have any cheering effect on the Company's shares. As often happens, the value of the shares had already been raised several weeks previously in expectation of the news. However, there was an element of disappointment in the announcement, in that the increase in retention price at Rs. 59 per ton was below the market's expectation of Rs. 65 per ton. Presumably on account of this disappointment, there was some tired liquidation from Calcutta interests. The selling wave, which was also due to end-of-account consideration, however, did not last long and there was again a recovery on revival of support.

The resumption of business in the new account witnessed colourful trading, with operators' interest focussed on textiles. These shares scored handsome gains on a widespread scale on heavy short-covering prompted by technical considerations as well as reports of broadening demand for textile shares. Under their leadership, the whole market forged ahead. Rumours of devaluation of the Pakistan rupee and buoyant commodity advices sustained speculative buying. There was, however, occasional profit-taking, but this was readily absorbed and the main body of shares finished with a firm undertone.

Steel shares were very steady, though relatively less active than textile shares. Trading in Tata Deferreds opened with a drop of about 28 points at Rs. 2,205, but retrieved a good part of the loss and ended its career at Rs. 2,220 on 26th March. Tata Ordinaries opened the week at Rs. 369 and moved up to Rs. 372-8 before closing on the same day at Rs. 370-12. On Monday (29th March) these shares were listed *ex-right*. Starting at Rs. 186-4 *ex-right*, they advanced to Rs. 189 yesterday. After a drop to Rs. 187 today, the shares closed better at Rs. 189-4. In spite of the announcement of the increase in retention price, Indian Irons came under pressure and dropped from Rs. 29-11 to Rs. 28-15 on Monday. Fluctuating narrowly in subsequent trading, they recovered to close at Rs. 29-13.

Textile shares were buoyant with impressive gains all round. After an initial drop from Rs. 413-12 to Rs. 410, Bombay Dyeings advanced to Rs. 427-8 yesterday, but a brief spell of profit-taking brought them down to Rs. 420-10 today. The closing was, however, better at Rs. 423-12. Kohinoors rallied from Rs. 304-4 to Rs. 317-12, but finished at Rs. 315-8. Centurys staged a marked rise from Rs. 325-8 to Rs. 335-8, before closing at Rs. 333. Central Indias were lifted by Rs. 6-8 to Rs. 184-8 and Finlays by Rs. 5 to Rs. 266. Gokaks gained Rs. 9 to Rs. 273, following the announcement of a bonus issue of one share for every four shares. Indore Malwas also participated in the general upward movement and picked up Rs. 11-14 to Rs. 120.

Bank shares were featureless with subdued activity. Barodas were unchanged at Rs. 110. Centrals were quiet at Rs. 56-4 and their new shares at Rs. 59. Imperial Fully Paids were a shade better at Rs. 1,785, while the Contributories were a fraction lower at Rs. 430.

Electricity issues were in the limelight and smart gains were recorded in almost all counters. Ahmedabads were wanted Rs. 2-8 higher at Rs. 117-3. Bombay Suburbans were in demand and rose by Re. 1-14 to Rs. 121-14, Poona Electrics by Re. 1-4 to Rs. 128-12 and Surat Electrics Re. 1-4 to Rs. 127-8. Tata Hydros put on Rs. 3-8 to Rs. 143-8, Tata Powers Rs. 43-12 to Rs. 1,451-4 and Andhra Valleys Rs. 32-8 to Rs. 1,340.

Several bright features were noted in the miscellaneous section, which proved no exception to the general market trend. A.C.C. came in for good support and moved up from Rs. 154-12 to Rs. 158-12, before profit-taking brought them down to Rs. 157-4. Belapurs appreciated from Rs. 257-8 to Rs. 263. Phaltans put on Rs. 3 to Rs. 97-8. Bombay Burmahs came up from Rs. 414-6 to Rs. 425, but closed lower at Rs. 422-8. Alcocks advanced by as much as Rs. 11-4 to Rs. 358-12. B.B. Petrols were steady at Rs. 3-2½. B.I.Cs. were done at Rs. 8-8½ *ex-div.* as against Rs. 9 *cum-div.* Indian Coppers were steady at Rs. 3-1½. Killick Industries rose by Rs. 2-8 to Rs. 173. Premier Constructions were heartened by the announcement of a higher dividend of Rs. 6 per share, as against Rs. 4-8 last year and rose sharply by Rs. 16-12 to Rs. 130-12. National Rayons were again in the limelight with a rise of Rs. 8-4 to Rs. 164-8. Scindias rallied from Rs. 17-8½ to Rs. 18-5 on the announcement of an increase in the paid-up value of the share from Rs. 15 to Rs. 20.

* * * *

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, 31*st March*

Conditions on the Calcutta Stock Exchange during the week received a setback, as the announcement of the Government decision to grant an increase of Rs. 59 a ton in the retention prices of steel produced by the Indian Iron and Steel Company, Ltd., for the period from 1st January 1953 to 31st March, 1955, caused some disappointment. For, the market had anticipated an increase of Rs. 66 a ton in accordance with the recommendations of the Tariff Board. This anticipation had been earlier discounted fully, and as such, the loss in the quotation by one point following the announcement was no surprise. With this increase in the retention prices, the Government has also announced small increases in the selling prices of steel; the difference between these two will be met from the steel equalisation fund. In the case of production from 1st January, 1953, upto the end of March, the entire increase in retention prices will have to be met from this fund. For the 1953 production, which amounted to 244,000 tons, this increase works out to Rs. 144 lakhs, which will be returned to the Company from the equalisation fund.

When thus the leading scrip in the market staged a decline, the general sentiment was affected, and the selling which resulted thereby cut recent gains in several counters. However, teas and sugars were in the forefront, and in selected buying gains were recorded. Jutes were shown only nominal interest, as prices of jute goods remained unchanged. Although jute goods were the subject of moderate enquiries for export, buyers offered only low prices. Coal shares continued easy, and no change is anticipated when cost of production in collieries continues high, producers are demanding an increase in selling prices, exports are not expanding, and transport from collieries is deteriorating.

During the last two sessions, however, there was witnessed a revival of speculative interest with engineering and miscellaneous scrips being in the forefront.

Last Thursday Indian Irons were traded at Rs. 29-13, but for the reason already stated, declined to Rs. 29-9 on Friday and since then touched a low of Rs. 28-14. Fresh support both today and yesterday resulted in a recovery to Rs. 29-7. Burn & Cos. for most part of the week were maintained at Rs. 176, but today spurted to Rs. 179.

Activity in jutes was restricted. Anglo-Indias eased to Rs. 195 from Rs. 201, and speculative Howrahs to Rs. 24-2 from Rs. 24-7. The latter scrip was, however, better today at Rs. 24-5. After the recent spurt in Fort Glosters, a reaction took the rate down to Rs. 461. Gourepores declined to Rs. 288 from Rs. 302.

Shares of sugar mills received the keen attention of operators for a time, and although rates did not pick up impressively the number of transactions was higher.

A mixed trend was in evidence in the miscellaneous section. Dunlop Rubbers scored to Rs. 36-2 from Rs. 33-9. Another feature was the rise in F. & C. Oslers to Rs. 14 from Rs. 12-15. Rohtas Industries, after being fractionally lower at Rs. 14-4, recovered to close at Rs. 14-6. B.I. Corporations were quiet at Rs. 8-9, as were Indian Cables at Rs. 20-3. Martin Burns declined to Rs. 20-4 from Rs. 20-6, Angelo Bros. to Rs. 17 from Rs. 17-3 and Rallis Indias to Rs. 55-4 from Rs. 56. After giving way to Rs. 38-8 from Rs. 39-8 Titaghur Papers recovered to Rs. 39-6.

Teas continued to enjoy moderate support. At Rs. 326 Choonabhutis scored 11 points, and Hantaparas were lifted to Rs. 221 from Rs. 210. Hoograjulis hardened to Rs. 39-2 from Rs. 33-10. Support was afforded to Teliapara at Rs. 145, Bormahjans at Rs. 13-1 and Hansquas at Rs. 18-5.

A feature in the coal section was the advance to Rs. 45-4 from Rs. 43-8 in Khatras Jherriahs, Bengals were likewise better at Rs. 518. Other counters were weak.

* * * *

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, 30*th March*

The most notable development in the Madras Stock Exchange, during the week under review, was the firmness in tea scrips, following encouraging enquiries for tea leaves from the U.K. and the Continent. Coffees also came in for good demand, presumably on professional support. But rubbers witnessed some slight selling in selective scrips. Consequently, among planting shares, teas and coffees recorded generally sizable gains, while rubbers disclosed minor losses. Among others, the performance of textiles was not encouraging, as profit-taking caused losses in the values of some popular counters. Miscellaneous scrips were out of shape. Banks ruled almost dull.

In the textile section, Bangalore Woollens were done at Rs. 402 *ex-div.*, as against Rs. 415 *cum-div.* and Buckinghams Rs. 140-8 *ex-div.*, as against Rs. 145 *cum-div.* Coimbatore Cottons changed hands at Rs. 207 *ex-div.*, as compared with Rs. 222 *cum-div.* Maduras were enquired at Rs. 39-8 *ex-div.*, as against Rs. 42-4 *cum-div.* Metturs put on Re. 1 to Rs. 233. Vasantas were in demand at Rs. 176 *cum-div.*, as against Rs. 180 *ex-div.* The Directors have maintained the dividend of 12 per cent. on the ordinary shares for the year ended 31st December, 1953.

Teas came in for brisk enquiry, among plantings, as stated at the outset. United Nilgiri Teas put on Re. 1 to Rs. 197. Peermades were higher by As. 12 at Rs. 34-12 *cum-div.* and Devons by As. 8 at Rs. 13. Taiyar Tea gathered As. 6 to Rs. 10-1 and Blue Mountains As. 4-6 to Rs. 2-14-6. Twyfords advanced by As. 6 to Rs. 15-8. Hafleyburias were quiet at Rs. 16-4. The Directors have proposed to increase the authorised capital from Rs. 10 lakhs to Rs. 25 lakhs by the issue of 150,000 ordinary shares of Rs. 10 each.

Rubbers met with selective enquiry. Thamaraipallys improved by As. 6 to Rs. 17-6. Cochin Malabars advanced by As. 3 to Rs. 6-15. Thirumbadis were up by As. 2 at Rs. 3-4. But for these, almost the rest were either easy or quiet. Vaikundams, however, lost As. 2 to Rs. 16-12. Kailas was fractionally lower at Rs. 4-4½. Be Bes were dull at Rs. 2-13 and Malankaras at Rs. 37-4. *Cum-div.*, as against Rs. 8-12 *ex-div.* The Directors have declared a final dividend of 7½ per cent., thereby making a total of 10 per cent., for the year ended 31st December, 1953, as against 6 per cent. in the previous year.

Coffees ruled bright. Coffee Lands and Consolidated Coffees gained As. 14 each to Rs. 10-2 and Rs. 17-8 respectively. Mysore Coffees and Puthuthottams advanced by an anna each to Re. 0-14½ and Rs. 3-5, respectively.

In the miscellaneous section, Dalmia Cements gained Rs. 5 to Rs. 9-9 and Andhra Cement 'B' As. 2 to Rs. 11-4. Aluminium Industries rallied As. 2 to Rs. 13-6.

Notices

THE DURBHANGA SUGAR COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Forty-second Ordinary General Meeting of The Durbhanga Sugar Company, Limited, will be held at the Maharaja's Office (Raj Secretariate) at Darbhanga, on the 26th day of April, 1954, at 9 a.m., for the following purposes:—

(1) To receive and adopt the Directors' Report and Accounts for the year ended 31st August, 1953, and the Balance Sheet and Report of the Auditors thereon.
(2) To declare a Dividend.
(3) To elect a Director in the place of the retiring Director.
(4) To elect Auditors for the ensuing year and to fix their remuneration.
(5) To transact the ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 17th April, 1954, to 26th April, 1954, both days inclusive.

By Order of the Directors,
W. F. MALDEN,
Secretary.

LOHAT,
DISTRICT DARBHANGA, 19*th February*, 1954.

THE STANDARD-VACUUM REFINING COMPANY OF INDIA LIMITED

NOTICE IS HEREBY GIVEN THAT THE Register of the Company's 5½ per cent. Debentures 1964-68 will be closed for transfers from 17th April, 1954, to 30th April, 1954, both days inclusive.

C. W. MIDDLETON,
Secretary & Treasurer,
Imperial Bank of India,
Agents for the Standard-Vacuum Refining Co. of India Ltd., for the management of the Debentures.

IMPERIAL BANK OF INDIA,
MUNICIPAL LOANS SECTION,
APOLLO STREET, FORT,
BOMBAY, 1, 30*th March*, 1954.

NEWS IN BRIEF

THE Government of Travancore-Cochin has made it clear that sales tax, under the interim arrangement announced by it recently, will be assessed only on tractions, which have taken place on or after April 1953.

A plant for the manufacture of silver from lead ore has been installed at a place near Katrasgarh by the Metal Corporation of India. The plant has an installed capacity of manufacturing 30,000 ounces of silver per month. So far nearly 10 maunds of silver have been produced.

The All-India Congress Committee has appointed an advisory committee to discusss *kisan* problems. The members include, among others, Mr. Gulzarilal Nanda, Union Minister for Planning, Irrigation and Power, and Mr. Ajit Prasad Jain, Union Minister for Rehabilitation.

It is learned that the *gur* and *khandsari* Association, Lucknow, has arranged to hold demonstrations of an improved process of *khandsari* sugar manufacture. The process, it is stated, gives a yield of about 7.5 per cent. sugar on cane—25 per cent. higher than that obtained by the usual *deola sajji* process.

The revised Five-year Plan of Madras includes four new irrigation and two new power projects. The irrigation projects are the Amaravati (Rs. 149 lakhs), Vaigai (Rs. 137.50 lakhs), Krishnagiri (Rs. 50 lakhs) and Sathanu (Rs. 75 lakhs). The power projects are Periar Hydro-electric scheme (Rs. 136 lakhs) and Kundha hydro-electric scheme (Rs. 50 lakhs).

The Government of India has announced that the packing charge for cement for the quarter commencing from 1st April, 1954, will be Rs. 11-15 per ton, as against Rs. 11-9 for the previous quarter. This maximum charge is applicable to cement packed in new bags only. Packing charges for cement packed in old bags will be a matter for settlement between the buyer and the seller, subject to the maximum indicated above.

The cut imposed by the Assam Government early last year on the minimum wages to tea gardon workers in the State to help the recovery of the tea industry from slump, has been restored in the Assam valley gardens and those gardens in Cachar yielding 7½ maunds tea per acre or more. In the case of the Cachar gardens producing less than 7½ maunds per acre, the cut has been partly restored.

The Government of Andhra has exempted *kalsons* who deal exclusively in handloom cloth from sales tax, with effect from 1st April, 1954. The tax is one and a half pies for every rupee on the turnover in such cloth, if sales are not exempt under section 5 ("1i) of the Madras General Sales Tax Act, 1939. The Government has also exempted sale of meat, fish, vegetables, fruits, flowers and eggs from the sales tax, with effect from 1st April, 1954.

The All-India Handicrafts Board has appointed a survey sub-committee, consisting of Mr. Nityanand Kanungo, M.P., Mr. S. V. Krishnamoorthy Rao, Vice-Chairman Council of States, Mr. C. M. Sukhia and Mr. L. C. Jain to study the reports so far submitted by the team constituted some time back by the Indian Co-operative Union, which is carrying out a nation-wide survey of Indian handicrafts. The sub-committee is assisted by an economist. The survey is being conducted under the auspices of the All-India Handicrafts Board of the Ministry of Commerce.

An agreement was signed on 30th March in New Delhi between the Governments of the United States and India providing funds for the Rihand River Valley Project (U.P.) The total joint cost of the first phase of the project, which is expected to be completed by 31st March, 1957, is estimated at a little more than Rs. 22 crores, of which the dollar expenditure under the agreement will be 11 million and rupee expenditure 16.69 crores. The dollar expenditure will be the U.S. contribution under the India-U.S. Technical Co-operation Agreement and includes a provision of 2.5 million dollars from the technical assistance funds for making technical services available, if needed. The rupee expenditure, which will be incurred by the Government of India, is towards the cost of construction, equipment, supplies and services.

The Government of India has now decided to release a further quantity of raw wool for export for the period ending 30th September, 1954. Export allotments will, on application, be given to past shippers upto 50 per cent. of the shipment effected by them during any one of the six half-years (January-June or July-December) in the three calendar years 1951, 1952 and 1953. Shippers who do not wish to change their basic period will be given allotments on application without production of evidence of past exports. Shippers who wish to select a period other than that already chosen by them for shipment for the period ended March, 1934 are advised that revised allotments will only be made after verification of their past exports during the period chosen by them for which they should produce documentary evidence of exports with the application.

The Industrial Committee on Cement, which met last week at Hyderabad under the chairmanship of Mr. Abid Ali, Deputy Central Labour Minister, agreed that steps should be taken to so reduce contract labour as ultimately to effect its complete abolition not later than June 1956. On the abolition of the contract system, labour employed on such work would be paid on the piece rate system, which will take into account the element of dearness allowance. Pending abolition of contract labour, the workers should receive wages and other facilities on the same basis as workers employed directly. It was also agreed that standardisation of wages was desirable and that Tripartite Central and State Wages (Standardisation) Boards should be set up, *inter alia*, to prescribe basic minimum (standard) rates of wages and dearness allowance and also to determine the formula for the payment of bonus. It was further decided that, in regard to matters on which agreement was reached by the Central Board, no dispute shall be referred by Government for adjudication within a period of two years from the date of the agreement. As regards enforcement of the Factories Act, it was agreed that Central and State Tripartite (Technical) Committees should be set up to draw up an agreement on the standard of compliance with the provisions of the Factories Act relating to safety, health, welfare and general working conditions.

* * * *

From Abroad

The U.S. Senate passed, on 25th March, a Bill cutting excise taxes by 1,034 million dollars. This is the first general slashing of such taxes in the past 30 years.

U.S. business and industry propose to spend, according to Government estimates, $27,200 million for plant and equipment this year. This represents a decrease of $1,200 million or 4 per cent. over the last year's high.

The Sinhalese Merchants' Association, at its annual general meeting held last week, adopted a resolution urging the Government not to allow non-Ceylonese to start new business ventures in Colombo and in all important provincial centres.

The Standing Finance Committee of the Pakistan Parliament approved, on 28th March, the setting up of an organisation to collect data regarding the Lilienthal proposal for the united development of waters of the Indus Basin.

Hungary is switching over its engineering factories to production of consumer goods. As a result, it is expected that eight times as many pots and pans will be produced this year, as compared with the previous year.

A trade agreement was entered into between Egypt and the Soviet Union on 27th March. Under the agreement, Egypt will receive from the Soviet Union tools, petroleum products, cereals and chemical and medical products. The commodities which Egypt will supply are not yet known.

Reports from Istanbul indicate that Turkey may receive from the U.S. a supplementary grant of $30 million (£10.7 million) by June, 1954 for the rehabilitation of its economy. This brings the total of such aid for the current financial year to $106 million (£37.7 million).

The U.K. Ministry of Materials has increased the selling prices for tungsten ores of standard 65 per cent. grade and of ordinary quality from 120*s.* to 130*s.* per unit for wolfram and from 115*s.* to 125*s.* for scheelite. These prices are per long ton unit delivered at consumers' works. This is the first increase in official prices after a long series of reductions.

Motorists in Britain are now paying a penny less for gallon of petrol. This is the result of the reduction in the price of standard grade fuel announced by the major petrol firms. Diesel fuel is reduced by one eighth of a penny. Premium grade petrol is not reduced. In November last, the price of standard grade petrol was cut by a half penny to 4*s.* 1½*d.* a gallon and of diesel fuel by half a penny.

It is learned that the U.K. companies have contracted to purchase from Russia several hundred thousand yards of grey cloth for finishing and re-exporting to West Africa. The first shipment of this cloth has already reached the U.K. The quality of this cloth, is comparable to that of the British and Japanese makes. Nothing so far is known about the price at which the cloth has been bought.

Special shipments of American wheat to Afghanistan to help that nation overcome threatened food shortage will begin by about 10th April. The initial shipment will be in the form of 3,000 tons of flour—equivalent to 4,000 tons of wheat. A total equivalent of 12,000 tons of wheat will be made available to Afghanistan under an agreement announced on 23rd March. Afghanistan will pay for the wheat in local currency which will then be used for Afghan economic development.

Over 450 delegates from more than 30 countries are expected to attend the International Railway Congress to be held in London from 19th to 26th May, 1954. The Congress will be the first international gathering of its kind to be convened in Britain since 1925. Indian Railways have accepted the invitation to send a delegation. The International Railway Congress will discuss a wide range of current problems and latest techniques, including maintenance, finance, electrification, staff recruitment, communications, participation in road transport, and modernisation of buildings. A great deal of international data has been gathered for the delegates' consideration by leading British officials. In addition to taking part in seven business sessions and sectional discussions, overseas delegates will be taken to see important railway centres in Britain where they will inspect recent technical developments. There is to be a special exhibition of British Railways and London transport locomotives, rolling stock, and civil and signal engineering equipment.

PERSONAL

MR. K. P. S. Menon, India's Ambassador at Moscow, has been concurrently appointed India's Ambassador to Poland.

Mr. E. J. Pakes, Chairman of Messrs. Mackinnon Mackenzie and Co., Ltd., left for England on retirement

Mr. I H. Anderson, a Managing Director of Mackinnon Mackenzie and Co., Ltd., has retired from service.

Mr. W. Jenkins, Director, Messrs. W. H. Brady & Co., Ltd., returned to Bombay this week after a short holiday in Australia and New Zealand.

Mr. H. I. Wonfor, Chairman and Managing Director of Messrs. Parry and Co., Ltd., Madras, is retiring from the Board of Directors of the Company.

Mr. S. M. Mistry has been elected President of the Association of Merchants and Manufacturers of Textile Stores and Machinery, India for the year 1954.

Dr. A. Laxmanaswami Mudaliar, Vice-Chancellor of the Madras University, returned from Paris last week after attending a meeting of the Executive Board of the U.N.E.S.C.O.

Mr. B. P. Patel, I.C.S., Municipal Commissioner of Ahmedabad, is to be appointed General Manager of the Bombay Electric Supply and Tramway Undertaking, *vice* Mr. J. P. L. Shenoy.

Mr. Jerzy Grudzinski, Assistant Director, Department of Press and Information, Ministry of Foreign Affairs, Government of Poland, has been appointed Poland's Ambassador to India.

Mr. Surottam P. Hutheesingh and Mr. Jaykrishna Harivallabhdas have been elected President and Vice-President, respectively, of the Ahmedabad Millowners' Association for the year 1954-55.

Mr. H. G. Treverton, until recently Regional Manager of the British Tabulating Machine Co., Ltd., for the Middle East, has succeeded Mr. D. W. H. Nelson as the General Manager of Hollerith (India) Ltd.

Mr. P. M. Lad, I.C.S., until recently Secretary, Legal Department, Government of Bombay, has taken over charge as Secretary to the Central Ministry of Information and Broadcasting from Mr. P. C. Chaudhuri, I.C.S., who has already been functioning as Secretary to the States Reorganisation Commission.

Mr. T. H. Harvey, a tutor in the Midland Bank training department, will be arriving in India shortly to take over the post of Instructor and Lecturer at the Indian Government's newly-established Banking Staff Training College in Bombay. He will join Mr. F. H. Hayne, also of the Midland Bank, who will be Principal of the new College. The services of Mr. Harvey have been made available by the U.K. Government under the Colombo Plan Technical Co-operation scheme.

Mr. Pranlal Devkaran Nanjee of the Dena Bank, Mr. H. C. Captain of the Central Bank of India, and Mr. P. S. Nayak of the Canara Bank have been re-elected Chairman, Vice-Chairman and Honorary Secretary, respectively, of the Indian Banks' Association for the year 1954. The other members of the Committee are: Messrs. A. C. Clarke (Bank of India), Mathew S. D'Souza (Bank of Baroda), R. G. Saraiya (United Commercial Bank), M. S. Captain (Union Bank of India), Shriyans Prasad Jain (Punjab National Bank), S. Krishnaswamy Iyengar (Indian Bank), Sanjiban Banerji (United Bank of India), S. L. Kothari (Bank of Jaipur), and C. V. Joag (Bank of Maharashtra).

"COMMERCE" 1929

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 6*th April*

Copper Mine Romance

A feature of the metal market two weeks ago was the further rise in the price of copper to £97 11*s.* 3*d.* per ton. This represented an advance of £7 3*s.* 9*d.* in one day and compares with £75 at the beginning of the year. It is the highest price since 1920. At one time in 1927 the price was down to £52. The price of best English selected, U.K. ports, rose at the end of last week to £100 12*s.* 6*d.* This continued increase in the price of copper since the beginning of the year has been based on the steady development of trade demand, especially from America and the Continent. The improvement in market values will, we anticipate, be agreeably reflected upon the financial position of the companies that are working the copper deposits of the Bawdwin mines, Northern Shan States, and those of the Singbhum District of Chota Nagpur. The upward movement spread also to lead and spelter. Foreign lead jumped £5 13*s.* per ton, the highest price since 1926. Today it is quoted at £26 12*s.* 6*d.* Spelter rose £2 2*s.* 6*d.* to £29 per ton, which is the best since 1927. One wonders, by the way, whether the managing agents of the Indian Copper Corporation, which was once known as the Cape Copper Company, are making any effort to re-establish themselves in South Africa, for the sensational reports that are now being received from the copper region of Northern Rhodesia are calculated to reawaken the firm's latest interest in that part of the world. Only a handful of people realise what is happening in Northern Rhodesia.

BOMBAY LABOUR POLICY

THERE is apparently a significant change in the Bombay Government's labour policy. A new and realistic note was struck by Mr. Shantilal Shah, Bombay Minister for Labour, last week, in the State Assembly. He announced that the Government had decided to withdraw the Bill providing for pooling of the amounts of bonuses and distributing them equitably among the employees of both profit-making and non-profit-making mills. This will be widely welcomed. Equally welcome is his remark that the condition of workers cannot be improved at the cost of the consumers, whose interest must reign supreme over the interests of both labour and capital. Other notable features of his statement are that it would be wrong to oppose rationalisation in industries totally and his warning that the Government would, in no circumstances, tolerate "go-slow-tactics" by workers. The Labour Minister also stated that the Government was alive to the problem of improving the working conditions within factories and that it would take steps in this regard when the recommendations of the Textile Research Association, which had been asked to investigate into the effects on the human body of heat, humidity and flow of air, submitted its findings. Further, he stated that the Government was making an earnest effort at introducing the Employees' State Insurance Scheme and that it would be put into force in Bombay on 2nd October this year and in Ahmedabad on 26th January, 1955, provided the doctors agreed to the scale of fees proposed by the Government.

The Labour Minister's statement makes refreshing reading. The Government's decision to drop the Bill relating to pooling of bonuses and its recognition of consumers' interest in determining the quantum of emoluments and other benefits to capital and labour is a surrender to reason. In this connection, the assertion of Mr. Shah that the disparity in income between the rich and the poor had been reduced in the last few years needs to be particularly noted. In support of his contention, he stated that the income of a textile worker in the State had increased four-fold since 1938, while the highest business emoluments had not even been doubled. Before the war, the average monthly income of a textile labourer was Rs. 32-8. Today his average income is Rs. 132-8. The emoluments of business executives have risen from Rs. 5,000 to Rs. 9,000. Similarly, the disparity between the income of the lowest and the highest employees of the State Government have been reduced from 174 times in 1938 to 30 times today. It is noteworthy that Mr. Shah said that rationalisation could not be opposed entirely, although he added that "while enforcing rationalisation in industries care ought to be taken to see that there was not large-scale unemployment and that the amount of the profits and savings made by the employer were shared among the employer, labour and the consumer."

CENTURY MILLS' HOUSING SCHEME

At a brief but impressive ceremony in Bombay, on Thursday last week, Mr. Morarji Desai, Chief Minister of Bombay, laid the foundation-stone of the tenements for the workers of the Century Spinning and Manufacturing Co., Ltd., under the management of Messrs. Birla Bros., Ltd. The ceremony marks the beginning of the ideal cherished by the Directors of the Company, namely, to provide housing for the workers. At first, eight buildings will be built at an aggregate cost of Rs. 12 lakhs which will accommodate 256 families. It is intended to charge low rents on the basis of a return of 3 to 3¼ per cent. The entire capital outlay on housing is to be met out of the Company's own resources; no assistance has been taken from the Central Government. Besides the residential quarters, provision has been made for recreational and other amenities of civic life.

Although the number of workers to whom houses are now proposed to be provided forms a negligible part of the total of 13,000 workers employed in the Mills, it is certainly more than a modest beginning. Considering the woefully inadequate housing facilities available to workers in the city's cotton mills, the endeavours of the Directors of the Century Mills to embark on the scheme for housing workers within such a short period as two years since the management of the Mills came into the hands of Messrs. Birla Brothers are, indeed, commendable. Incidentally, it may be noted that, out of the 113,420 persons employed in the cotton mills in Bombay City, not more than 16,000 are provided with quarters by the mills. Drawing particular attention to the housing problem, Mr. R. D. Birla, Chairman of the Board of Directors, stated, in the course of his welcome speech, that "it has been our constant aim to provide housing for workers." Mr. Birla added: "The primary necessities of life are food, clothing and shelter. Remuneration of workers has increased during the past few years and it has been possible up to now to meet their increased needs of food and clothing. This cannot, however, be said about their housing requirements. Both the Central and the State Governments are, however, doing their best to relieve the housing shortage. Similar endeavours are being made by the Mills."

Surely, these words signify the attitude of an enlightened employer. With such an outlook on the side of management, one naturally expects the workers also to be equally enlightened in their outlook. In the present context of the buyers' market for cotton textiles, a heavy responsibility devolves on the workers. There is much truth in Mr. Birla's statement that, although our workers are no less skilled than foreign workers, we cannot yet assert that their efficiency is on par with them. He doubtless frankly admitted that social conditions and the manner and method of work were responsible for this state of affairs, but hastened to warn that, unless the standard of efficiency in the Indian textile industry was raised, India could not retain its present competitive capacity in the world textile market. This warning is not only quite timely but also very sound. As Mr. Birla rightly remarked, if our textile prices were to be higher and the quality of the goods is poor, it would be difficult for us to maintain the present export market.

Availing himself of the occasion, Mr. Birla sought to expatiate on the duties of managing agents. Significantly enough, he remarked: "... the managing agents are the servants of the mills in the same sense as the workers are servants. Just as the workers have become conscious of their rights, the shareholders too have become more vigilant about their interests. If the managing agents do not work satisfactorily, the shareholders, with the help of the Government, can remove them." If this spirit were to permeate all managing agents in the country, there would be much less public demand for the abolition of the managing agency system.

MR. IVOR BULL ON COFFEE

If there is one person whose name is practically synonymous with coffee, it is Mr. Ivor Bull, who, after giving to this country the best years of a very strenuous life, spent in South Indian plantations, left for England last week. The Indian plantation industry owes a great deal of its present pre-eminent position to the European pioneers who made the hills their homes and brought prosperity to lands inaccessible to civilisation. Mr. Ivor Bull was one of those men to whom plantation was not so much an occupation or profession as a way of life. As Chairman of the Consolidated Coffee Estates (1943) Ltd., a leading plantation company of the South, and of the Indian Coffee Board, and Adviser to the Government of India for Coffee (1948-52), Mr. Ivor Bull did much to promote the cause of Indian coffee, without sacrificing either the growers' or the consumers' interests.

Before his departure from Bombay, Mr. Ivor Bull stated what might well be called his "final summing up" on coffee. He was confident that proper attention to the industry and to the problem of coffee exports, together with encouragement from Government, could enable the commodity to rank as the fourth largest item on India's list of exports. Already, India's coffee output has reached a record level. The 1953-54 cotton crop, estimated at 25,500 tons by him (some place it as high as 30,000 tons), is the "best for this century." The reasons for this good crop in India this year, according to Mr. Bull, are the favourable weather conditions which prevailed in the last season, and the fact that "money had been invested in the industry with more courage." This crop, together with the large carry-over from the last season, gives a comfortable supply position.

Last year, the industry was allowed to export only 2,000 tons of coffee, as against a crop of 23,120 tons and internal consumption of about 18,500 tons. Indian coffee fetched good prices abroad. Even so, they were Rs. 100 less than what exports would get now, the current prices being Rs. 430 per cwt. for Plantation A, as against the internal price of Rs. 230, including an excise duty of Rs. 21 per cwt. and Rs. 9 being the cost of operating the Indian Coffee Board. The current high prices in world markets, it may be mentioned here, is due partly to the shortfall in the Brazilian crop, affected by frost and the tight world supply position. World coffee consumption is now running at an annual rate of 33 million bags, of which the U.S. alone accounts for 20 million bags, as against a world supply of 32 million bags. No decision has yet been taken by the Government of India about the quantum of coffee exports to be permitted this year. Apart from the fact that the Government will derive sizable revenue through export duty (Rs. 61½ per cwt.), the urgency of a decision on coffee exports arises, as Mr. Bull pointed out, from two considerations: (1) any delay in coffee exports beyond February-March results, as it happened last year, in deterioration of the crop held for export; and (2) it is necessary to capitalise on the high prices now ruling in international markets. It is to be hoped that the Government will take an early decision on this issue.

A less immediate but far more important problem is that of increasing the output of coffee. Indian conditions, Mr. Bull said, were "perfect" for coffee. And yet, Indian coffee, though fancied highly in world markets, forms only a small part of the world output. India has many regions which answer the climatic and soil test for coffee cultivation—lands with 50 inches to 90 inches of rainfall, fertile soil and elevation of 2,000-5,000 feet. The area under coffee now is only 2,35,374 acres. The yield is the lowest in the world, about 1.91 cwts. per acre. The problem deserves, as Mr. Bull suggested, to be tackled on both fronts; it is necessary to increase the land under coffee as well as to improve the methods of cultivation. Mr. Ivor Bull was confident that, in the Malnad region alone, about three lakh acres of fresh land could be brought under coffee. Much of this land was formerly devoted to coffee but abandoned in the economic crisis which the industry, along with other industries, faced in the thirties. As regards improving methods of cultivation, it will perhaps be necessary to consolidate the small uneconomic holdings. About two-thirds of the area under coffee consists of estates of less than 200 acres.

Although a large part of the coffee estates in India was originally opened by Europeans, five-sixths of the land under coffee is now owned or controlled by Indians. Indian planters will do well to emulate the more scientific methods of cultivation and management practices adopted by the European planters. By improving cultural practices and by extending the land under coffee, the planters will be only augmenting the employment opportunities in the country. The industry now employs about 200,000 workers. Robusta coffee requires two-thirds of a labourer per acre and arabica coffee one labourer per acre. Expansion of this 80-year old industry, Mr. Bull pointed out, could help relieve the unemployment situation in the country. But this depends on the adequacy of the return to the coffee grower. That it is at present not adequate is clear from Mr. Bull's statement that the arabica grower now gets a return of only Rs. 180 per cwt. as against an estimated cost of production of arabica parchment at Rs. 195. This is a problem to which the Government must pay immediate attention.

INDUSTRIAL DEVELOPMENT

Once again, Dr. M. Visvesvaraya, President of the All-India Manufacturers' Organisation, deprecated, in the course of his address at the fourteenth session of the Organisation held at Calcutta on Saturday last, the none too helpful attitude of the authorities towards industry and business. The Government of India, Dr. Visvesvaraya said, had failed to pursue policies which would have enabled private enterprise to play its appropriate role in the Five-year Plan. According to him, the popular expectation that there would be great opportunities with the emergence of a national democratic Government had not been realised; on the other hand, general dissatisfaction among industrialists and the business community remained. There is no exaggeration whatever in this view.

Any dispassionate review of the economic history in recent years will clearly reveal that, if the progress in the sphere of industries has not been maintained at the desired level, it is due, in large measure, to the unrealistic policies pursued by the Governments, Central and States. Dr. Visvesvaraya minced no words when he said that threat of nationalisation, lack of close contact with the business community, heavy taxation and unsuitable labour legislation were the factors responsible for the inadequate progress in the industrial development of the country.

Apart from the Government's unhelpful attitude towards private enterprise, as noted above, the lack of adequate attention to the development of steel, automobile and aircraft industries, industrial education and statistics has also been responsible for the slow tempo of industrial activity. Dr. Visvesvaraya characterised this as the "weakness of the present *industrial system.*" To quote his own words: "The retardation of these industries and allied developments hitherto had had a prejudicial effect on industrial progress in general, and a decidedly adverse effect on the prosperity and safety of the country as a whole. The first three alone had been responsible for draining the country of hundreds of crores of rupees during the past decades."

The A.I.M.O. President also deplored the tendency of excessive dependence on foreign technicians. In his opinion, this must be discouraged, in the interests of its future; foreign experts and other technical personnel, whenever necessary, should be obtained for six months or a year at a time on short contracts. In this connection, he put forward three specific suggestions. First, the Government should keep a list of a couple of hundred competent men—business men and technologists—and induce them to take up work under the Government. Secondly, firms of local consulting engineers and chemists should be encouraged and established. Finally, the important requirements of the country's industry should be specially studied in the several research and vocational training institutions within the country.

Dr. Visvesvaraya's plea for encouraging indigenous firms and talent in the development of industries will certainly be widely appreciated. But the point is whether the requirements of technical knowledge can be fully met out of indigenous sources. There are no two opinions on the view that the number of experts and trained technicians, with experience in setting up as well as running new industries in the country, is too small to meet the growing demands of industrial development. If, therefore, the pace of industrial development is, as Dr. Visvesvaraya emphasised, to be hastened, it is imperative that reliance must continue to be placed on the services of foreign experts and technicians. But, at the same time, vigorous attempts should be made to train Indians to take their place.

Pleading for quickening the tempo of industrial activity, the eminent engineer-cum-industrialist put forward a number of suggestions. These are:

> The first move should be to teach the people to work hard. Every healthy adult should work eight hours every day and 48 hours every week. The century-old administration should be modernised, so that industry could be compelled to march ahead. Industrial statistics should be maintained according to modern standards, as in Canada and Australia. Every State should formulate a development plan every year to suit its special needs and in consonance with the Central Government's Five-year Plan. Heavy mechanical industries, such as the steel, automobile and aircraft industries, should receive preference and a steady rate of progress should be maintained in these spheres. Every State should prepare a progress report *every year* showing the number of establishments, capital invested, salaries paid, cost of materials used, gross value of goods produced and *per capita* value of the output. Liaison committees with a small accounts staff and a specialised efficiency audit staff should be formed. Special plans and implementation programmes should be prepared for underdeveloped areas in the country. For each such area, a watch-dog committee of three persons should be appointed to help maintain a steady rate of progress. Efforts should be made to manufacture defence machinery in India itself. Towards this, confidence must be reposed in trusted local firms of contractors to the extent practised in Western countries. In each State, a committee consisting of the Industries Minister and three industrialists or business men should be empowered to keep watch over this scheme. Details of *per capita* income from every industry in every region should be made available from time to time for ascertaining the rate of progress and for comparison with other regions and progressive countries.

These are, indeed, very pertinent suggestions which deserve the most careful consideration not only of the Central and State Governments but also of our business men. The fact that they have been made before by Dr. Visvesvaraya himself does not in any way lessen the importance of these suggestions, especially as they have not been fully implemented.

OILSEEDS PRODUCTION

An outstanding feature of the progress of oilseeds in India in recent years is the contrary trend in the area devoted to five major oilseeds and in their output. The following sets of figures clearly bring out this feature:

Year	*Area* (In 000 acres)	*Production* (In 000 tons)
1949-50	24,885	4,128
1950-51	26,681	4,072
1951-52	28,386	3,097

It will be seen from the above table that, while the area sown to all oilseeds has steadily increased from 24.9 million acres in 1949-50 to about 28.1 million acres in 1951-52 or an increase of 13 per cent., their output has dropped from 4.1 million tons to 3.9 million tons or a fall of over 5 per cent. Taking the whole group of oilseeds, the yield per acre has declined, it is stated, from 370 lbs. in 1949-50 to 310 lbs. in 1951-52. Although unfavourable weather was responsible for the decrease in output, other long-term factors such as uneconomic methods of cultivation, small plots, inadequate manure, etc., were also contributory factors. Published figures for 1952-53 relating to the area and production also do not indicate any encouraging position as compared with those of the preceding year. For while the acreage sown to oilseeds declined by about 2.8 per cent. from 28.3 million in 1951-52 to 27.5 million in 1952-53, the yield dropped by as much as 5.1 per cent., that is, from 3.9 million tons to 3.7 million tons. The point is that instead of producing more and more oilseeds on less and less area, by raising the yield per acre, India has been producing smaller quantity of seeds over larger area of land. The crux of the problem of oilseeds production is, therefore, to arrest this disquieting trend and place the utilisation of land on a more sound footing than it is at present. Judged from this angle, the decisions reached at the thirteenth ordinary meeting of the Indian Central Oilseeds Committee held at Bombay on the 27th March last have to be welcomed, for, if they are implemented on right lines, the country can expect to increase the output of oilseeds without devoting more land to them.

With a view to increasing the yield per acre, the Committee has decided to strengthen the existing regional research centres and establish new stations in the States of Bombay, Bihar, Madras, Madhya Pradesh, Orissa, Hyderabad, Madhya Bharat, Mysore, Rajasthan, Saurashtra and West Bengal. Another decision, calculated to serve the same end, relates to the opening of training centres for research workers on oilseeds on the same lines as those of the centre at Cuttack for rice research. About 30 trainees are to be trained at each centre, the course lasting for three months. A scheme for the control of pests and diseases of castorseeds in Hyderabad and another for increasing the production of oilseeds in the Madras State under the Five-year Plan have been sanctioned by the Committee.

With regard to research on oilseeds, there would appear to be considerable difference of opinion among the members of the Committee. One section seems to feel that a central research institute for oilseeds should be established on the lines of the technological laboratories for cotton research in Bombay and the Sugarcane Research Institute in Kanpur. Another section —an expert committee of scientists—is reported to have felt that, instead of starting a new institute, the present practice of referring the problems to the existing research centres to which grants were being made would achieve the objective in view. After a lengthy discussion, the question was referred to the expert committee for further examination of the scheme with special reference to its financial implications.

The Committee has sanctioned a technological research scheme on utilisation of non-edible vegetable oils as lubricants at the National Chemical Laboratory, Poona, and the National Physical Laboratory, New Delhi. It has also recommended that the movement of oilseeds, oils and oilcakes by rail should be given higher priority by placing them at least on a level with cotton.

Speaking at the meeting, Mr. K. R. Damle, Vice-President, Indian Council of Agricultural Research and Additional Secretary, Union Ministry of Food and Agriculture, stated that the Committee would be called upon to prepare a second Five-year Plan for increasing the production of oilseeds. In the first Five-year Plan, no specific programmes were drawn up by the Government and no funds were allotted to achieve the small target fixed in the Plan, namely, an increase of 400,000 tons by 1955-56. He was, however, glad that the target fixed had been achieved during 1953-54. But he was not complacent about it, as the comfortable position had arisen, he said, as a result of a good monsoon in the year. The picture could easily change drastically in a period of bad monsoons, or it might be, he observed, the Planning Commission had fixed the target very low. Since definite targets would be fixed for the second Five-year Plan, he was keen that definite schemes should be drawn in consultation with the State Governments.

IMPROVING THE UTILITY OF BANKS

MR. PRANLAL DEVKARAN NANJEE'S SUGGESTIONS

THREE years of the Five-year Plan are now over. Frequent reviews of the progress of the Plan have emphasised the widening gap between expenditure and available resources, and the authorities are looking to every sector of the economy to do its best for implementing the Plan. Accordingly, banks in India are expected to make available, in the form of working capital, Rs. 150 crores for industrial development in the private sector. Banks would cheerfully undertake not only this burden but much more, provided they have the resources and the facilities for playing their role fully and effectively. Unfortunately, they are facing many difficulties, and it is only in the fitness of things that Mr. Pranlal Devkaran Nanjee, Chairman of the Indian Banks Association, should have drawn pointed attention to these handicaps in his address at the seventh annual general meeting of the Association held in Bombay on 29th March last. He said: "To enable them (banks) to do so, firstly, it is necessary to increase their resources and to strengthen them so as to make the public feel complete confidence in them, and, secondly, it is necessary to take such steps as would enable them to make a larger part of their resources available to industrial development in the private sector."

If banks in India have not been able to do more than what they have done to assist the implementation of the Plan, such, in large measure, is due to the adverse effects of Industrial Tribunal awards. As a result of these awards, not only has expansion of branch banking been arrested, but a decline has taken place in the number of existing branches of banks. According to Mr. Pranlal, the number of offices of Indian Scheduled banks has dropped from 2,961 in 1947 to 2,647 in 1951. On account of heavy burdens imposed by the award, banks are reluctant to open new offices and mobilisation of rural savings has come to a standstill to the detriment of the country's interest. Banks have also been prevented from retrenching their surplus staff by the tribunals. To quote Mr. Pranlal: "While, on the one hand, the awards have increased the emoluments of bank employees, on the other hand, labour legislation, which has provided too elaborate a procedure for dealing with cases of indiscipline and has paid no attention to the question of adequate output on the part of the employees, has resulted in laxity of discipline and disaffection among the employees and a lack of application and keenness for work on their part." This disquieting tendency, which has manifested itself in spheres wherever labour laws have come to be applied, has not proved an exception in the sphere of banking also. Mr. Pranlal felt that banks would be prepared to open new banking offices on a much larger scale, if they were allowed to remunerate their employees according to their capacity to pay and if restrictions which fetter their discretions were removed.

Two Suggestions

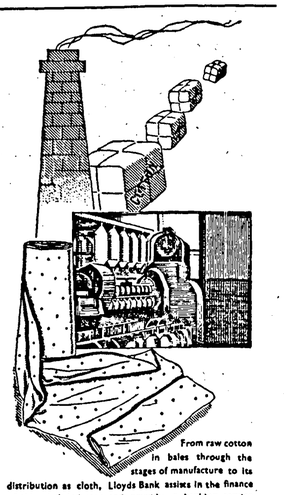
With a view to softening the effect of the laws relating to employees, Mr. Pranlal made two suggestions, which deserve careful consideration. One is to allow the adjudication of disputes to be carried out by the Reserve Bank of India instead of by Industrial Tribunals. Being in possession of all the facts concerning each bank, the Reserve Bank can settle, he says, these disputes to the satisfaction of both the parties. Although the suggestion has some force in it, it is doubtful whether the employees would accept it, for they will regard the Reserve Bank as part of employers. The best course for the banks would be to reach an understanding with their own employees. This they can do only if they can win the confidence of the latter. Are the managements of banks so bereft of talents and ideas as not to be able to reach this goal? Unlike industrial workers, bank employees are not illiterate. The vast majority of them is highly educated, a significant number of them know the fundamentals of economics. They cannot, therefore, be easily misled by professional labour leaders. It is a matter for serious consideration as to why they are so unreasonable as they are made out to be. The employees of insurance companies and banks should be the proud champions of private enterprise, instead of being the supporters of socialist or communist ideologies. There is something fundamentally wrong somewhere in the employer-employee relations of credit institutions. Perhaps the banks will do well to avail themselves of the services of psychologists trained in these matters to find a way out.

The speech of Mr. Pranlal is also notable for exempt from the awards of Industrial Tribunals offices of banks situated in towns having a population of less than 50,000. Even in this respect the move made by the Government to get a similar ruling from the Appellate Bank Tribunal has not been successful. The only course left to achieve this object is to have a legislation passed in Parliament. But this procedure involves many political issues. In view of this, our suggestion in the previous paragraph seems to be the only alternative open to banks.

Augmenting Resources

Tht speech of Mr. Pranlal is also notable for a number of measures to augment the resources at the disposal of commercial banks so that they may increase their role in financing development plans. With regard to direct participation of commercial banks in what is generally known as mixed banking, personally Mr. Pranlal appears to be in favour of the orthodox practice of banks confining their lending operations to short-term credit. But he does not overlook the demand from certain quarters that, in the present undeveloped state of India, commercial banks should adopt a broader and more national outlook and give medium and long-term loans to industrial concerns. He says that, if ultimately the Shroff Committee were to approve of this demand, it would be necessary to widen "the definition of paper eligible for being advanced against by the Reserve Bank to Scheduled banks, so as to include this type of industrial paper." This by itself, he thinks, will not be adequate, for the situation requires a more positive policy of helping banks to strengthen themselves and to expend their resources. The following extracts from his speech will give one an idea of the important suggestions made by him in this connection:

"That there is great scope for increasing the resources of our banks is seen from the fact that the deposits of our Scheduled banks are only about two-thirds of our total currency, whereas the deposits of banks in the U.K. are about four times the currency in that country. To achieve this aim, our people should be made to feel, by suitable educative propaganda, that, in the underdeveloped state of our country and the low standard of living of the people, it is anti-national and anti-social to keep their savings in hoards instead of keeping them with banks, which would be able to utilise them for the economic development of the country. At the same time, banks should be strengthened, and steps should be taken to inspire the fullest confidence of the public in the stability of licensed banks. The failure of a bank means loss of public confidence even in sound banks.



From raw cotton in bales through the stages of manufacture to its distribution as cloth, Lloyds Bank assists in the finance of this vital industry and provides a banking service which has world wide connections through its Agents and Correspondents.

Let LLOYDS BANK look after *your* interests

Lloyds Bank Limited · Incorporated in England.

"The minimum requirement for paid-up capital and reserves of Rs. 5 lakhs in respect of Scheduled banks, and Rs. 50,000 in respect of Non-scheduled banks, was probably adequate in 1934, when the Reserve Bank Act was passed and when our bank deposits were less than one-fourth and our currency less than one-sixth of the present figures but, considering later developments, I think that the minimum requirement for the paid-up capital and reserves for a Scheduled bank and a Non-scheduled bank should be adequately increased. I think also that in the larger interest of banking, the question of Non-scheduled banks being linked to, or associated in some effective manner with, Scheduled banks may be considered.

"I think that a more positive policy for helping licensed banks to strengthen themselves and to expand their resources should be adopted, and steps should be taken to remove impediments that stand in the way of the expansion of resources of banks, such as prohibition on Government Departments and quasi-Government bodies keeping their funds on deposit with banks without pledging by the latter of Government securities of sufficient value, non-acceptance of bank guarantees by Government Departments unless backed by pledging of Government securities, prohibition of keeping of the deposits of provident funds of joint-stock companies with banks, enactment of legislation imposing onerous responsibilities on the directors even of large and sound banks on account of the failure of a few banks largely Non-scheduled, and the probings into, and the demands for information regarding, the accounts of customers by the tax authorities, destroying thereby the sanctity of the relations between banker and customer. The unfortunate result has been that a number of customers have either minimised their operations with banks or ceased to deal through them. Although these probings have resulted in the collection of some more revenue for Government, I believe, they have proved harmful to the larger economic interests of the country.

"Another way of strengthening the Indian banking system would be to remove unhealthy competition between banks in the matter of interest on deposits and advances and commission or discount on bills, and other forms of wasteful competition. The banks have often tried among themselves to come to certain agreements in respect of the above, but somehow they could not succeed in maintaining them beyond a short time. I feel, therefore, that the Reserve Bank of India should take the initiative in this matter and bring banks together to fix their scales, rates, charges, etc., because experience shows that, without such help, any understanding arrived at among banks, being without sanctions, is difficult to be observed. At a time when ever-increasing burdens of the establishment charges are causing a good deal of anxiety to banks, I think, steps like the above for increasing the profits of banks deserve the careful consideration of the banks as well as the central banking authority. It has also been suggested that banks should co-operate with one another and pool together for entertaining large propositions, in respect of deposits, advances, investments, underwriting, etc. In this regard, too, I think, the good offices of the Reserve Bank of India would be helpful. I feel that such steps would increase the scope of their service to the public as also their profits and consolidate their position."

From Current to Call Deposits

Incidentally, Mr. Pranlal expressed great concern over the tendency among depositors to switch over from current to call deposit accounts, as this has led to an increase in the cost of deposits. Here is exactly what he said on this subject:

"During the busy season, banks have to pay up to 3 per cent. interest on call deposits, sometimes even for sums of Rs. 25,000. The considerably higher rate of interest on call deposits has naturally led the large depositors to take their moneys from the current accounts earning ½ per cent. and to place them on call earning 3 per cent. This burden of higher interest on moneys withdrawable on demand has now become heavy and I think the time has come for banks to join hands for taking the necessary steps to check the above tendency. In this connection, it would be pertinent to note that the clearing banks in Great Britain pay interest on call deposits only if they are allowed to use such deposits for a minimum period of three weeks."

Welcoming the establishment of foreign branches by some Indian banks, Mr. Pranlal stated that, apart from the profits which these banks would, in due course, be making through the establishment of these branches, they were benefiting the country by raising its prestige and reducing its dependence on foreign banks. He appealed, in this context, to the public and the Government of India to extend their full support to these enterprising banks. He suggested that with a view to encouraging this trend and enabling the foreign branches of Indian banks to establish themselves firmly, the Government should exempt profits of foreign branches from Indian income-tax. Under the recently amended section 49D of the Indian Income-tax Act, profits of foreign branches of banks are liable to the higher of the two taxes payable in the foreign country concerned and in India, and, if there is no income-tax in the former, then Indian tax is payable in full. This amendment, the bankers feel, does not go far enough to encourage Indian banks to establish more branches abroad. Hence their suggestion that foreign profits of Indian banks should be fully exempt from Indian income-tax.

INDIAN OVERSEAS BANK EARNS RECORD PROFIT

NOTABLE EXPANSION IN BUSINESS

THE audited accounts of the Indian Overseas Bank Ltd. (General Manager: Mr. C. P. Doraikannu, Madras) for the year ended 31st December, 1953, make pleasant reading, in that the profit for the year has registered a rise from Rs. 12.87 lakhs for 1952 to Rs. 13.25 lakhs. The increase is no doubt small, but it stands in refreshing contrast to the experience of many other Scheduled banks. What is more striking is that the profit is a record in the history of the Bank and it is creditable that this record profit has been achieved in a year which proved to be a none too prosperous one for banking. Another notable feature of the accounts is a small increase in deposits to a record level, which has been well utilised to improve the Bank's earnings without in any way affecting the liquidity. The dividend to the shareholders has been well maintained at 6 per cent. per annum, free of tax, after allocating more than a fourth of the profit to the reserve fund.

The creditable achievement of the Bank during the last three years is fully portrayed in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950
Gross income	67.19	66.87	49.43	37.48

* After providing for depreciation on investments.
† After taking into account the investments earmarked against borrowings from other banks.
‡ After taking into account the balances with foreign correspondents earmarked against borrowings from other banks.

There has been a progressive rise in the Bank's gross income during the past several years, except for a break in 1950 when it tended to decline. Thus, from Rs. 5.35 lakhs in 1943 the Bank's gross income has grown in the past ten years to a record of Rs. 67.19 lakhs. However, the pace of increase in 1953 was very much smaller than in earlier years, as will be seen from the foregoing table. Both the main sources of income, namely, interest and discount earned and commission and exchange earned have contributed to the rise in earnings. No doubt, as in the case of other banks, there has been an increase in the outgo by way of interest paid and this has more than offset the improvement in earnings. However, a welcome decline of about Rs. 1 lakh in expenses has enabled the Bank to show a better profit, thus maintaining the upward trend in the net earnings noted since 1949. It is also noteworthy that the Bank's profit has, in the course of the last four years, risen by over 150 per cent. The profit for 1953 has been arrived at, as in the previous three years, after providing in full for depreciation in the market value of the securities as at the end of the year.

The fractional rise in the Bank's capital in 1953 is due to the receipt of a portion of the calls unpaid. The increases in the Bank's paid-up capital and deposits over the last three years are indicative of the expansion in its activity. Commensurate with the increase in business, the reserves also have been considerably strengthened during these years. The rise in deposits over the year under review is less marked than that noted a year ago, but even this rise is due to the increase in savings bank deposits from Rs. 1.44 crores to Rs. 1.48 crores and in current and other accounts from Rs. 5.01 crores to Rs. 5.05 crores. Fixed and staff security deposits, on the other hand, show a fractional fall from Rs. 3.48 crores to Rs. 3.43 crores. Loans from other banks represent those borrowed outside India. Bills for collection and acceptances have together accounted for an increase of Rs. 53.14 lakhs, in refreshing contrast to the marked fall of Rs. 4.14 crores noted at the end of 1952. This rise reflects the extent to which the Bank has been successful in financing trade, both internal and overseas, in the face of the decline in commodity prices, particularly in South-East Asia where the Bank is well represented.

On the assets side, advances (including bills purchased and discounted) disclose a rise of Rs. 12 lakhs. Of these advances, loans, cash credits and overdrafts account for a decline from Rs. 2.95 crores to Rs. 2.52 crores, while bills purchased and discounted account for an increase from Rs. 2.26 crores to Rs. 2.81 crores. The rise in advances is reflected in the shrinkage in cash balances at the close of the year. Investments (at or below market value), on the other hand, reveal a rise of Rs. 35 lakhs, and this has strengthened the total liquidity ratio which stands as at the close of 1953 at 57.7 per cent., as against 56.2 per cent. a year ago.

(Concluded from next column)

from the year-end figures) and exceed the previous record of Rs. 2.96 crores at the end of 1951. Investments, which are shown at or under market value, are practically unchanged, but cash balances have shrunk by Rs. 28.14 lakhs, presumably due to the sharp rise in advances. Nevertheless, the cash coverage to deposits, at 12.5 per cent., is higher than the all-India average.

MR. BLAKER ON DEVELOPMENT OF EAST

Elsewhere in this issue is given yet another interesting and authoritative survey of events in the East by another banker, the Honourable C. Blaker, Chairman of the Hongkong and Shanghai Banking Corporation. In this survey Mr. Blaker emphatically observes that the ambition of the countries of the East to industrialise themselves in order to raise the standard of living of their people must be recognised. And what is more, he lays stress on the fact that merchants and bankers from the West operating in these countries cannot afford to isolate themselves from these ambitions. To quote Mr. Blaker:

"Asia is undoubtedly on the move. All the way from Ceylon to Tokyo, there is an intense desire for speedy economic progress, as is shown by the development plans which most Asian countries are now attempting to put into effect. Coupled with this, there is a widespread realisation that the raising of low standards of living must come as part and parcel of agricultural and industrial development. British merchants and bankers established in the East cannot insulate themselves from these events. They too have a part to play in the further development of Asia."

This positive attitude towards the economic development in the East on the part of foreign exchange bankers is an indication of their readiness to move with the times.

Mr. Blaker is in full agreement with the basic principles of the plans of all the countries in South-East Asia, namely, agricultural development first and industrial development next, as outlined in the Colombo Plan and in the various reports on underdeveloped countries prepared by the U.N. organisations. He draws attention to the fact that the Colombo Plan had laid down that the central problem in these countries was still the supply of food which, in its turn, was related to that of transport. Next come other basic industrial activities, particularly electric power. Not satisfied with quoting the views expressed in the Colombo Plan, Mr. Blaker quotes other authorities also. He points out, for instance, that the Director-General of the I.L.O. had stated that "industrialisation in its wider sense will largely come to East Asia in the second stage of economic development. In the first stage, development planning has little choice but to concentrate primarily on expansion of food production and on the development of basic resources such as power and transport."

As economic development is closely related to capital for financing them, Mr. Blaker proceeds to deal with the position of private capital in countries of the Far East. In this context, he quotes the instances of India, Japan and Burma where there is a reluctance to permit foreign concerns acting independently but where participation between foreign and domestic capital in new industrial projects is permitted. In many countries, thought is being given to ways of mobilising larger accumulation of domestic capital through savings without which developments will be handicapped. This is important because of the comparatively small amount of foreign capital which is finding its way to South-East Asia. Mr. Blaker, however, observes, and that very rightly in our view, that improvement in the quantity of savings can hardly be great, until more general prosperity reduces the overwhelming poverty.

SMALL DROP IN PROFIT OF UNION BANK

ADVANCES AT A RECORD LEVEL

THE results of working of the Union Bank of India Ltd. (General Manager: Mr. F. K. F. Nariman, Bombay) during the year ended 31st December, 1953, are in consonance with the general pattern of bank earnings for the past year. The gross income of the Bank has again gone up, but a rise in interest paid and expenses has reduced the profit margin. The Bank's profit for 1953 shows a decline of about Rs. 39,000 to Rs. 6.79 lakhs, this being the second year in succession in which the Bank has experienced this trend. The fall in 1953, however, compares well with that of Rs. 1.74 lakhs sustained in the previous year. Nevertheless, the dividend has been comfortably maintained at 6¾ per cent. per annum, free of tax, a rate which the Bank had paid for the previous two years.

The following comparative table, giving the salient features of the Bank's accounts for the last four years, shows its progress.

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950
Gross income	27.00	26.28	25.20	20.74

Cash	12.5	17.7	15.4	14.2

* Ratio arrived at after taking into account the investments earmarked against borrowings from other banks.

The upward trend in total earnings of the Bank noted in the past few years has been kept up in the year under review also, though not to the same extent as in the earlier years. Interest and discount earned, which showed a small decline in 1952, have risen by a good extent to stand well above those earned in 1951. This rise is evidently due to the sharp increase in the Bank's advances. The increase in receipts from exchange and commission is much more than that noted last year. There has been an increase in interest paid on deposits and borrowings, but it is of a much lesser extent than that in the previous year. However, even this small rise, coupled with the increase in expenses, has been more than sufficient to offset the improvement in earnings and reduce the profit. The provision for taxation has been maintained at Rs. 1 lakh, while the transfer to the reserve fund and the contingency account has been reduced from Rs. 1.75 lakhs and Rs. 1 lakh to Rs. 1.50 lakhs and Rs. 50,000, respectively.

A notable feature of the balance-sheet as at the end of the year under review is the sizable increase of Rs. 11.18 lakhs in deposits. Thus, the Bank has recovered, albeit in part, the fall of Rs. 40.02 lakhs suffered in 1952. The improvement in 1953 has mainly occurred under current and other accounts from Rs. 2.98 crores to Rs. 3.44 crores. Fixed deposits and cash certificates have, however, recorded a drop from Rs. 2.08 crores to Rs. 1.78 crores and savings bank deposits from Rs. 60.30 lakhs to Rs. 56.35 lakhs. The demand for funds which the Bank must have experienced towards the close of the year is reflected in the borrowings from other banks. Of these borrowings, Rs. 9 lakhs are secured by part of the Bank's investments, while the balance of Rs. 5.50 lakhs are unsecured.

Another noteworthy feature of the Bank's balance-sheet is the rise of Rs. 51.89 lakhs in advances, almost the whole of which is accounted for by loans, cash credits and overdrafts, the rise in these being of the order of Rs. 51.63 lakhs. Bills purchased and discounted, too, have risen but by Rs. 0.26 lakh only. At Rs. 3.06 crores, the total advances constitute a record in the history of the Bank (so far as can be seen

(Continued in previous column)

RESULTS OF HONGKONG AND SHANGHAI BANK SATISFACTORY

HIGH LIQUIDITY RATIO MAINTAINED

AS readers are aware, 1953 was not a happy year economically for most of the countries in South-East Asia. The downward trend in trade that commenced in 1952 continued, mainly occasioned by the fall in commodity prices. Though some progress was noted in other directions, such as national development programmes, so far as banking companies operating in these areas were concerned, the less active trading conditions called for cautiousness on their part in financing the trade and, in this process, had to experience a contraction in their turnover and earnings. The Hongkong and Shanghai Banking Corporation (Chief Manager: The Hon. Michael W. Turner, Hong Kong), one of the largest banks operating in these areas, can, however, be said to have succeeded in producing satisfactory results, despite the difficult trading conditions which prevailed throughout the past year.

The profit of the Bank for the year under review does not show any notable deviation from that for the previous year. After providing for taxation on profits earned and after making transfers to inner reserves, out of which provision has been made for all known bad and doubtful debts and contingencies, it amounts to H.K.$17,294,235, representing a negligible fall of only H.K.$27,170 from the record profit of H.K.$17,321,405 earned in 1952. It is, however, gratifying to note that the profit for 1953 stands a little over the previous record of H.K.$17,283,671 for 1951 and thus constitutes the second best in the history of the Bank since 1930. The increase in the profit over that for 1951—albeit small—is indeed notable in the face of a marked fall in the Bank's deposits as well as advances over the last two years.

The undistributed surplus brought in from 1952 amounts to H.K.$9.49 million, which is H.K.$1.41 million more than the corresponding sum of the previous year, so that the distributable amount, at H.K.$26.78 million, is higher by H.K.$1.38 million. The Directors have allotted out of this sum H.K.$4 million to write off Bank premises, as against H.K.$3 million set aside last year. The larger allocation to write down Bank premises is due to the expenditure incurred during the year on new banking premises. The dividend has been maintained at £5 per share, made up of an interim distribution of £2 and a final one of £3 per share, and this has absorbed H.K.$16.92 million, leaving to be carried forward H.K.$9.86 million. Referring to the Bank's dividend policy, the Chairman, the Hon. C. Blaker, says: "As in the case of other organisations with interests in China, the cost of maintaining our offices there and of complying with the requirements of the Chinese authorities has been a considerable drain on the year's profits and this and other factors have been taken into consideration by your Directors in recommending an unchanged dividend for the past year."

An idea of the Bank's progress in the past three years can be gained from the following comparative table:

(In thousands of H.K.$)

	As at 31st December			
	1953	1952	1951	1950
Capital	20,000	20,000	20,000	20,000
Reserve fund	90,000	90,000	90,000	90,000
Note issue	755,742	755,742	755,742	755,742
Current deposits and other accounts	2,636,471	2,639,319	3,134,136	2,558,660
Acceptances	10,557	12,861	52,000	11,572
Cash*	430,317	421,889	374,211	446,436
Money at call	680,630	654,597	800,635	341,600
Securities against excess note issue	725,883	725,483	721,883	718,783

In gilt-edged and other securities†	388,213	387,435	414,817	521,160
In subsidiary companies	2,135	2,135	2,137	2,137
Advances	645,653	699,841	803,109	770,154
Bills receivable	622,581	615,913	823,316	623,213
Premises	21,817	21,754	21,859	21,637
Balance-sheet total	3,536,687	3,541,413	4,074,059	3,456,602

* Includes cash in transit.
† Include sums deposited as security for authorised note issue.

The sharp decline in the balance-sheet total noted at the close of 1952 has considerably slowed down as at the end of 1953, the fall in the year-end figure being of the order of only H.K.$4.7 million, as against H.K.$532.6 million noted at the end of the previous year. This only reflects that the world-wide recession in trade was of a smaller order in 1953 than in 1952. The fall in the balance-sheet total reflects partly the drop of H.K.$2.8 million in current and other accounts and partly the decline of H.K.$2.3 million in acceptances on behalf of customers. "Various factors," the Chairman says, "have contributed to these small decreases which are in general due to the continuation of less active trading conditions." The principal change on the assets side is the decrease of H.K.$54.2 million in advances. "This decrease," the Chairman again explains, "arises mainly as a result of the low prices for primary products which have continued throughout the year, but it also reflects the general slowing down of trade in the territories in which we operate." It may be noted, in this connection, that the Bank's advances as at the end of 1953 are the lowest since 1947. Bills receivable, on the other hand, show an increase of H.K.$6.7 million, the rise being mainly accounted for by the increase of H.K.$37 million in the Bank's holdings of Government Treasury Bills. The rise in Government Treasury Bills has been offset by the decline in trade bills to the extent of over H.K.$31 million, which is an indication of the fall in trade. The Bank's investments (at under market values) do not show any notable increase, but cash balances and money at call disclose an expansion of H.K.$43.86 million, reflecting the "funds which have become available as a result of the repayment of advances during the year," with the result that the cash coverage to deposits and other accounts is higher at over 42 per cent., as against about 41 per cent. a year ago. The ratio of the Bank's readily realisable assets, namely, cash, money at call, Government Treasury Bills and trade bills, to the total liabilities to customers, stand at 65 per cent., indicating a high and very satisfactory degree of liquidity.

LOAN TO HYDERABAD STATE BANK

The Hyderabad State Government has advanced a loan of Rs. 5 crores to the Hyderabad State Bank. This sum represents part of the cash balance of Rs. 9.86 crores held by the State Government at the time of appointment of the Reserve Bank of India as sole bankers to the State Government from 1st April, 1953. This sum will be repaid by the State Bank in suitable instalments over a period of five years.

TRAVANCORE BANK'S MAIDEN DIVIDEND

After a period of slow but steady progress extending over seven years, the Travancore Bank Ltd. (Managing Director: Mr. R. F. Wishart, Trivandrum) has been able to join the dividend list with a very modest maiden distribution of 2½ per cent. for the year ended 31st December, 1953. This has been rendered possible by a perceptible improvement in its profit for the year. At Rs. 8.05 lakhs, the profit shows an increase of Rs. 1.17 lakhs over that for 1952, and constitutes a record in the Bank's history. The improvement in profit for 1953 follows that of Rs. 1.12 lakhs noted in 1952 and of Rs. 1.49 lakhs in 1951. In fact, the profit of the Bank has been steadily advancing year after year, albeit in small measure, from Rs. 1.44 lakhs in 1946, the first year of its operations, to Rs. 8.05 lakhs in 1953. Apart from the rise in profit for 1953, the declaration of a maiden dividend has been enabled by a considerable saving in the provision for depreciation on investments.

The following comparative table provides an idea of the Bank's progress in recent years:

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950
Interest and discount	19.11	18.41	15.81	12.87
Commission and exchange	3.78	3.55	3.47	1.85
Interest paid	6.20	6.79	6.20	4.22
Expenses	8.29	7.97	7.05	6.75
Depreciation and repairs	0.36	0.33	0.28	0.24
Profit	8.05	6.88	5.76	4.27
To taxation	2.00	1.00	0.80	0.25
To reserves	2.25	2.00	4.25	3.50
To depreciation reserve on investments	0.50	5.00	..	..
To dividend	2.50	..	..	..
	(2½%)	..	..	..
Carry forward	0.93	0.38	1.50	0.79

	As on 31st December			
	1953	1952	1951	1950
Capital	100.00	100.00	100.00	100.00
Reserves	19.75	17.50	15.50	13.65
Deposits	377.35	380.62	402.85	309.40
Borrowings from other banks	..	..	1.50	..
Advances	103.53	183.61	230.60	166.97
Investments	233.56	236.00	246.96	242.38
Cash and money at call	111.05	90.92	52.74	73.88
Balance-sheet total	569.16	577.62	615.04	553.03
Ratio to deposits of—	%	%	%	%
Advances	43.3	48.2	57.2	45.2
Investments	61.9	62.2	61.3	65.6
Cash	29.4	23.8	13.1	20.0

The increase in interest and discount earned during 1953 has not been as marked as that in the previous two years. Receipts under commission and exchange are also better only by a small amount. In refreshing contrast to the general trend, the outgo under interest paid has been smaller. As in the case of other banks, expenses, however, have remained on the high side, but it has not increased to such an extent as to offset the entire expansion in income. The rise in profit has naturally meant a larger provision for taxation. The transfer to the reserve fund has been reduced from Rs. 2 lakhs to Rs. 1.79 lakhs, but the contingency reserve has been credited with Rs. 50,000, while, a year ago, this reserve did not receive anything. The allocation to depreciation on investment account has been reduced from Rs. 5 lakhs to Rs. 50,000. A sum of Rs. 25,000 has been set aside for payment of bonus to staff, as against nil in the previous year.

The maiden dividend of 2½ per cent. has been declared only after consolidating the Bank's reserves and bringing them to a decent level. At Rs. 19.75 lakhs, they are nearly a fifth of the paid-up capital. Deposits show a drop of only a little over Rs. 3 lakhs, as compared with the decline of Rs. 22 lakhs in the previous year. Advances, which had declined by Rs. 47 lakhs in 1952, have receded further by Rs. 20 lakhs. Consequently, the advances ratio has come down from 48.2 per cent. to 43.3 per cent. Investments (at or below cost) at Rs. 233.56 lakhs, after providing for depreciation, do not show any material fall, while cash balances are better by Rs. 20 lakhs, with the result that the total liquidity ratio has risen from 86 per cent. to 91.3 per cent., a level not, perhaps, held by any other Scheduled bank.

NAS 851

It's time you realised..

that after a certain age you will have to retire and your age will keep any profitable occupation away from you.

In which case, would your savings be sufficient to enable you to enjoy a comfortable retirement?

Or would you regret that you did not put by enough when you had the strength and the means to do so?

Think now and choose your future. The Bombay Mutual agent will be glad to show you how you could draw a neat regular income when you retire!

SLIGHT FALL IN COTTON GOODS EXPORTS

PLEA FOR SHORTER WORKING HOURS

(From A Special Correspondent)

MANCHESTER, *23rd March*

MANCHESTER LETTER

WITH the publication of the latest statistical review by the Cotton Board, more details have become available of the trend of exports last year in comparison with 1952. World trade in cotton cloth according to the survey expanded by about 15 per cent. between the third and fourth quarters of 1953, this being the first substantial increase since the recession. The main improvement occurred in France, India and Japan, but nearly all the other main exporters shared in the increase.

The table below shows the combined and individual shipments of cotton and rayon cloth in 1953, as compared with the previous year:

(In million yards)

	1953			1952		
	Cotton	Rayon	Total	Cotton	Rayon	Total
U.K.	708.0	172.4	880.4	710.8	148.4	859.2
U.S.	628.2	195.3	821.5†	773.5	221.4	994.9
Japan	914.9	423.1	1,338.0	752.5	360.7	1,113.2
India	701.3	..	701.3	591.6	..	591.6
Holland	209.6	29.4	239.3*	244.2	25.2	267.4
France	345.5	97.3	442.8‡	540.4	115.2	655.6
Germany	207.7	147.6	355.3*	272.7	97.4	370.1
Italy	126.5	158.2	284.7*	170.1	110.4	280.5
Belgium	162.8	26.0	188.8*	176.2	18.3	194.5
Hong Kong	168.7	8.0	176.7*	165.0	18.8	183.8

* Eleven months. † Eleven months for rayon only. ‡ Nine months.

The further advance in shipments of rayon goods is clearly illustrated in these figures, the improvement being most marked in the final quarter of the year, when record levels were again achieved. As in the case of cotton goods, Japan leads the field, its exports of rayon cloth being about twice as much as its nearest rival, the United States. A substantial increase in shipments from Germany occurred towards the end of last year and an improvement in sales of rayon cloth, abroad was noted in both Italy and France.

No False Optimism

No false optimism about Lancashire's export prospects is voiced by the Cotton Board. The report declares: "The performance of the industry in the final quarter of 1953 gives no grounds for complacency, in view of the progress made by most other countries." While on Japan, the report states: "By December, new post-war record levels of output had been established in all categories of yarn and cloth. The number of spindles installed increased by 150,000 in the last three months of 1953, indicating no lack of confidence in future demand for Japanese cotton textiles."

Reports from India suggest that domestic demand for cotton goods remain strong, the review continues, while the removal of the export duty on medium cloth has had the desired effect of stimulating exports. Most of the increased trade towards the end of 1953 was with British East and West Africa, the United Kingdom and Australia. "India," to quote the Board, "will benefit in 1954 even more than the United Kingdom from the continuation of the restrictions on Japanese cotton goods in East Africa."

Trade Prospects

Lancashire can still sell cotton goods to Pakistan, despite the growth of Pakistan's own textile industry, Sir Percival Griffiths, economic adviser to the India-Pakistan-Burma Association, said during a visit to Manchester. Pakistan, he observed, was moving towards self-sufficiency in coarse textiles, but that still left a fine opportunity for Lancashire in the field of high quality cloth. "Pakistan has neither the means nor the intention to manufacture this for herself." But, Sir Percival warned, Lancashire would have to expect strong competition in the market from Japan.

In India, there was a need for certain classes of capital goods, including textile machinery, which Britain was well fitted to supply. The market for textile machinery, however, was smaller than it was ten years ago. In Karachi, too, it was still the accepted view that textile machinery from Britain was better than from anywhere else.

Shorter Hours Plea

Delegates representing all the Lancashire cotton trade unions are to be urged to support a call for a reduction in the industry's working week from 45 hours to 40 hours, with an increase of 12½ per cent. in current wages to compensate for the shorter hours of work. A resolution to this effect, tabled by the Twisters and Drawers Amalgamation, will come before the 1954 annual conference of the United Textile Factory Workers' Association to be held at Morecambe next month.

Another resolution for the conference, drawn up by the Association's Legislative Council, expresses "profound dissatisfaction" at the passing of the Cotton Act, 1953, dealing with raw cotton buying methods. The view is expressed that the Raw Cotton Commission, now to be wound up, has provided the industry with its raw materials more advantageously than could have been done by private merchants. The resolution requests the National Executive Committee of the Labour Party "to examine the position created by the passing of this act with the object of instituting at the appropriate time a more effective system of securing supplies of raw cotton to the industry."

The Legislative Council's annual report states that the cotton industry, is still 20,000 below its post-war manpower peak recruited in 1951. "The inability to operate more spindles and looms during periods when trade is available may be mainly attributed to the shortage of key workers and the failure to recruit sufficient new male entrants in the past." The present trend would have to be considered and action taken by the employers to attract the right type of new male entrants in the future.

Exports: No Change

Little needs to be said about last month's export returns which merely confirmed the industry's general assumption that overseas trade was steady, but entirely unspectacular. Actual shipments of cotton goods earned £9,540,000 in February, a drop of £450,000 on the previous month, but £670,000 more than in February, 1953. Cloth exports, at 55,092,000 square yards, brought the total for the first two months of the year to 112,979,000 square yards, valued at £14,331,088, as against 116,823,000 yards worth £14,831,907 a year ago.

Shipments of yarn were reduced last month as compared with recent figures, but at 3,562,000 lbs., were around last year's average. For the two months, the total was 7,740,027 lbs., valued at £3,279,212, as against 6,756,272 lbs. worth £2,862,984 in 1953.

Imported Cloth

Mill-girls of nearly ten overseas countries are now sending cloth to Britain to help Lancashire mill-girls working in labour-starved factories which cannot produce fast enough to cope with export orders.

When the foreign cloth comes to Lancashire, it undergoes finishing processes and then most of it is exported again to British markets overseas. In one month this year, according to Board of Trade returns, more than 13,000,000 yards of cotton cloth sailed into Britain from overseas mills. It included 358,000 yards produced by Soviet mill-girls, 466,000 yards from the Irish Republic, 474,000 yards from Holland, 468,000 yards from Japan. Biggest suppliers were Western Germany, Belgium and France. And Indian operatives supplied more than 5,600,000 yards of cotton fabrics which will not be re-exported but used in Britain.

Cotton Policy Declaration

Leaders of all the cotton trade unions are being summoned to a special meeting in Manchester next Monday to decide the steps to be taken following the completion of the union's new policy declaration, the first for ten years. The 25,000-word document, outlining the union's views on many different problems confronting the cotton industry, has been drawn up by Mr. Harold Wilson, M.P. for Huyton and former Socialist President of the Board of Trade, at the request of the unions.

Mr. William Roberts, President of the United Textile Factory Worker's Association, said, after a meeting of the Association's Legislative Council in Manchester, that the next step would probably be the submission of the document to the Policy Committee of the Labour party and the T.U.C. for approval. A delegate conference representing cotton workers would also be called. The new policy declaration, details of which have not been officially released, is understood to urge among its recommendations that there should be closer Government control over the cotton industry, particularly in the buying of the industry's raw materials.

Raw Cotton Imports

Imports into the United Kingdom last week aggregated 42,261 bales, chief arrivals being 16,666 bales Egyptian, 8,243 bales American, 4,443 bales Pakistan and 3,424 bales Brazilian.—*All Rights Reserved.*

PROMOTION OF TEXTILE EXPORTS

SOME REFLECTIONS BY MR. T. T. KRISHNAMACHARI

THERE are few industries in India that can claim such a proud record of achievement as the cotton textile industry. So remarkable has been the progress of the industry that it enjoys today the unique distinction of being the biggest and most productive industry in the country, besides occupying a conspicuous position on the world textile map as one of the leading exporters of cotton textiles. These achievements should not, however, induce a sense of complacency, what with the emergence of a buyers' market for textiles the world over. The future of the industry lies in its ability to meet, in a competitive market, the clothing needs of consumers in respect of quantity, quality and prices. This is especially the case with regard to exports which are of vital importance to the future prosperity of the cotton textile industry. This aspect is ably brought out by Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, in the course of an informative article contributed to the Textile Industry Centenary Supplement to the *Hindu* of Madras. Says Mr. Krishnamachari:

"The work that is before us in this connection (that is exports) is one that needs a lot of concentration, patience and patriotism. It is not a case of securing profits for individual units or groups of mills or, groups of traders, but of securing lasting benefits for the country as a whole, and for the industry in particular."

A remarkable feature of Mr. Krishnamachari's article is his candid recognition of the defects in the Government's policy in regard to exports of cloth, as will be evident from the following quotation:

"We are not, generally speaking, a very advanced country and our economic perception is not highly developed. Often-times, we proceed to deal with maladies as they appear, on the basis of trial and error; and, in unduly restricting exports, we did not take into account the fact that there were competitors in the field and that one of them was very rapidly growing from a comparatively weak position to a position of strength. I refer to Japan. Our export duties and control measures acted as double checks and had opened the markets for Japan to a certain extent, though Japanese competition in the ultimate analysis was inevitable."

Positive Action Wanted

It is, however, gratifying that the Government of India has recognised, albeit belatedly, the need for stimulating exports of cloth. Export controls, for instance, have been practically abolished. Again, export duties have been reduced and, on some varieties, abolished. Import duty on foreign cotton has been removed. But those, in themselves, will not bring about the desired improvement in cloth exports. What is urgently required is more positive action, that is, a regular drive to popularise Indian textiles in overseas markets through a perceptible improvement in quality and a scientific study of the exact needs of these markets. Mr. Krishnamachari has emphasised this aspect in the following words:

"There is now a growing awareness in the trade and industry, as well as in the country as a whole, of the importance of exports and the need to promote them—not in the negative sense of removing restrictions and reducing duties but in a positive way by raising quality and improving services. A critical examination of our own mistakes led us to take serious notice of the complaint, often made by consumers both in this country and elsewhere, about the quality of some of our goods. It also came to be recognised that there was an element of truth in the criticism that our trade practices have left some room for improvement. Finally, we came to realise, even though the resistance from the industry to this realisation was considerable, that many of our mills produced goods of sub-standard quality."

Mr. Krishnamachari then proceeds to describe the role of the Cotton Textiles Fund in the promotion of exports. As readers are aware, this Fund has two objectives, namely, promotion of exports and promotion of textile research. While on the former, he points out:

"The need for organising our exports and stimulating them, for studying the markets to which we exported our textiles and for having at the disposal of the industry, trade and Government a machinery to give adequate information in regard to the quantum and nature of competition that existed in the external markets—all made me feel that we should set up some kind of export promotion organisation. When this idea emerged, I felt that it would not be difficult to link up with this idea the question of export quality control. Any active promotion of the export of textiles inevitably meant standardisation of the quality of goods. Nor could any organisation composed of the various interests advertise or do propaganda for any particular brand of goods. Our textiles would have to be pushed in the name of Indian textiles and, naturally, that name must carry with it some assurances of quality. It was with this idea that I suggested, at the informal meetings we had in this regard under the auspices of the Cotton Textiles Fund Committee, that we should popularise a mark denoting the Indian textiles of quality and get it registered under the I.S.I. (Certification of Marks) Act, 1952."

Now all this is old news. Several months have passed since Mr. Krishnamachari initiated this idea. What progress has been made? When will the export drive start? How is the quality of goods exported going to be controlled? We have no information to answer these questions. Mr. Krishnamachari, however, seems to be satisfied that the good work is being done by those to whom the task was entrusted. He says that a provisional committee is now hard at the work of examining all the issues relating to cotton textile export promotion. According to him, "we have, after all, come to the stage of setting up not merely an Export Promotion Council but have also got near to some kind of standardisation of the export quality of Indian textiles. These efforts, *if they bear fruit* (italics ours), would necessarily mean that we would not be very far from achieving our export target of 1,000 million yards." Hoping that the Textile Export Promotion Organisation would become a fact before long and an asset to the country (past experience in this direction does not induce us to share this optimism), Mr. Krishnamachari is confident "that India can establish a reputation for quality of textiles—a reputation which luckily the products of some Indian mills now maintain."

Research

In the second part of his article, the Minister refers to the other function of the Textiles Fund, namely, the promotion of research, and reviews the progress that has been made in this direction. He recalls the proposals for the establishment of two cotton textiles research institutes, one at Bombay and another at Coimbatore, in addition to the already existing Ahmedabad Textile Industry Research Association (A.T.I.R.A.). Alluding, in particular, to the question raised as to what should be the relationship among the three aforesaid textile research institutes, he has made a few interesting observations which bear reproduction. Says he:

"There is room for specialisation and, if there is more than one institution doing this type of work, each institution can specialise in one branch of research. In certain basic fundamentals, all textile research institutions cannot escape a similarity in equipment and methods of work. But in regard to the choice of the direction of research, the field is wide. The A.T.I.R.A., for instance, has undertaken research work in some directions. It would obviously be wise for other institutions that are created not to duplicate the work done in the A.T.I.R.A. It might be that there are two or three institutions in Bombay in which some research is being done, which is analogous and complementary to textile research. It is best to take into account the work of these institutions in determining the programme of research for any of the new institutions to be set up. Some basic similarity between the textile research institutions cannot be altogether avoided, but that does not mean that, in specialised research, this cannot be done. My belief is that there need be no material conflict in the programme of work between two or three institutions of this kind. The scientists who would be in charge of these institutions could certainly be expected to rise above narrow considerations of prestige and keep in mind the main objective which is the basis of all such institutions, namely, national advancement. While it is recognised that there is a great deal to be done in the direction of textile research in India, I cannot see why it cannot also be recognised that this great deal can be shared by two or more institutions."

There is considerable force in these observations of Mr. Krishnamachari. The sponsors of the institutes will do well to take note of them and, instead of continuing the controversy over the respective roles of the institutes, they should proceed to function on the lines indicated by him. If that is done, there is no reason why the functioning of a plurality of textile research institutes should result in overlapping of research work done and a waste of talent and resources.

Explaining the attitude of the Government towards these institutes, Mr. Krishnamachari has made it very clear that the position cannot be judged from the point of view of a body which dictates, because, primarily, these institutions will be privately owned bodies and what the Government does is to afford them some financial half. He admits that the influence that the Government can exert on this account has its limitations, but points out at the same time that the Government has undoubtedly an overriding duty to see that there is no waste of national resources. To quote him: "It cannot be said that we have a plethora of scientific talent which can be harnessed to textile research. It may even be necessary for us to import some foreign talent in the critical stages. Such being the case, unnecessary duplication and waste has to be avoided and, if it is necessary, Government may have to use their influence to avoid such waste."

With the constitution of the proposed Export Promotion Council, the question of the future of the Cotton Textile Fund Committee naturally arises. Alluding to this question, Mr. Krishnamachari maintains that, though the progress was tardy in the beginning, the Committee is now performing a useful function. He admits that the resources available with the Fund might progressively be used up, but he is not in a position to say now whether the Government would pump more money into the Fund or resort to some other method of financing the institutions, in the creation of which the Fund played an important part. He has no doubt in his mind about the future of the Textiles Fund Committee, as witness his remark: "The function of a committee such as the Cotton Textiles Fund Committee, as a body which advises Government and also directs the work that has to be undertaken, has to be carried on and I can see no reason why that Committee, in this form, or in some other form for that matter, need not continue to exist."

CLOTH EXPORTS FROM INDIA, JAPAN AND U.K.

That Japan has become India's most formidable rival in some of the markets for Indian cotton textiles is clearly borne out by the detailed figures relating to exports of mill-made cloth from India, Japan and the U.K. The exports of Japanese cloth to Indonesia during the year 1953, for instance, were considerably larger, being 303.26 million yards, as against 125.84 million yards in 1952, while exports from India during the same year amounted to a bare 34.92 million yards, as against 2.68 million yards. Japanese cloth exports to Malaya, Siam, Iran and Sudan were also higher, in distinct contrast to the decline in exports from India. Thus, the offtake of Japanese cloth by the abovementioned four countries in 1953 was higher by 3.67 million yards, 44.93 million yards, 36.50 million yards and 11.07 million yards, respectively, while that of Indian cloth was lower by 27.59 million yards, 0.09 million yards, 4.13 million yards and 6.91 million yards.

The following statement shows the trend of mill-made cloth exports from Japan, India and the U.K. during the year under review, as compared with 1952:

(In million yards)

To—	From India		From Japan		From U.K.	
	1952	1953	1952	1953	1952	1953
Aden	58.84	76.94	18.69	5.80	5.58	4.68
Australia	8.58	32.50	10.02	21.70	72.90	90.34
British East Africa ..	63.70	63.93	23.49	0.14	21.14	31.07
British West Africa ..	16.88	54.07	41.31	27.19	175.04	145.06
Burma	69.96	89.60	9.74	40.52	11.49	16.57
Ceylon	16.56	19.20	16.85	21.25	8.76	13.78
Hong Kong	8.58	9.57	57.19	49.52	3.97	4.74
Iraq	8.44	9.62	10.24	13.26	7.45	8.90
Iran	7.09	2.87	6.64	43.10	6.45	2.51
Indonesia	2.68	34.92	125.84	303.26	8.03	8.16
Malaya	90.95	63.86	33.88	97.55	33.80	20.49
Persian Gulf Ports ..	15.84	26.53	2.68	6.56	..	..
Philippines	..	..	8.84	20.78	..	..
Siam	1.80	1.80	40.59	85.52	..	..
Sudan	33.04	46.19	0.64	11.81	11.47	6.65
U.K.	5.99	20.35	63.86	33.10	..	..
U.S.A.	0.14	0.20	6.23	27.87	9.31	12.88
South Africa	..	..	10.32	86.00	59.41	85.79
Other countries ..	129.50	100.28	269.73	128.08	280.00	249.94
Total ..	548.54	652.24	751.73	915.23	710.80	709.09

It will be seen from the foregoing statement that Japan exported 16.94 million yards more cloth to the Philippines in 1953, whereas India and the U.K. do not figure at all. Among the other countries to which Japan exported larger quantities of cloth are Australia, Ceylon, Persian Gulf ports, South Africa and the U.S. India's exports to Aden, British East and West Africas, Hong Kong and the U.K., however, registered improvement, while those from Japan suffered losses.

LICENSING POLICY FOR CLOTH EXPORTS

The Government of India has extended the period of the free licensing of cotton textiles upto the end of September, 1954. Accordingly, the licences for exports of cotton piecegoods, which are due to expire on 30th June next, will remain valid for a further period of three months. This decision of the Government is a sequel to the surfeit of cloth supplies, consequent on the steady and perceptible improvement in output in the past few months. With the extension of the period of free licensing, exporters of cloth will be in a position to enter into forward commitments with overseas buyers well in advance. This, in itself, may be expected to act as one of the helpful factors for promoting exports of cloth.

U.S. COTTON MISSION'S VISIT TO INDIA

ADVANTAGES OF MUTUAL COLLABORATION

THE members of the American Cotton Technological Mission, led by Dr. Malcolm E. Campbell, Dean of the Textile School, North Carolina State College, attended, last week, a conference in the city at which cotton breeders from States, representatives of millowners, cotton technologists, technicians from the mill industry and prominent members of the cotton trade were present. The conference, which had been sponsored by the Indian Central Cotton Committee and which was presided over by Mr. Chimanlal B. Parikh, Vice-President of the Committee, discussed a wide range of problems. Although it was a purely informal gathering, and no decisions were reached—indeed, they were not expected to reach decisions—the conference provided an excellent opportunity for mutual exchange of ideas on problems of cotton cultivation and marketing of cotton, in which both India and the U.S. are vitally concerned.

Object of Mission

The Mission, which is, perhaps, the first of its kind, consists of cotton technologists. Besides Dr. Campbell, who is the leader, the Mission consists of Dr. Thomas E. Kerr, Geneticist in charge of Cotton Breeding, U.S. Department of Agriculture; Col. William Martin, Cotton Research Specialist, U.S. Department of Agriculture; Mr. R. J. Cheatham, Cotton Processing Division, U.S. Department of Agriculture, and Dr. Burt Johnson, Cotton Technologist of the National Cotton Council. The object of the Mission, as Mr. Campbell explained at the conference, is to increase the consumption of cotton. This is an object in which India is also interested, for India is next only to the U.S. as a major producer of cotton. The output of cotton in this country is bound to move up when the many irrigation projects, contemplated in the Five-year Plan, are completed and more land, particularly irrigated land, is brought under cotton. Any significant increase in the consumption of cotton will, however, depend on improvement in textile production which, in its turn, is affected by many factors, the most prominent of which is the increase in living standards. Even so, much could be done to promote increased consumption of cotton through research in the utilisation of this commodity. In this connection, it is gratifying to note that Mr. Campbell laid stress on the importance of cotton research and development of new uses and marketing services for cotton.

Among the subjects which figured prominently in the discussion, mention must be made of cotton breeding for improved fibre quality and spinning performance, new harvesting and ginning practices, testing methods adopted by the U.S. Department of Agriculture and Marketing Administration. In connection with breeding for fibre quality, mention was made of the evolution of a single variety for large tracts and of the evolution of American-Egyptian cottons and other varieties. Another subject which evoked considerable interest was neppiness in cotton. Now, neppiness is partly an inherent feature of cotton varieties, depending generally on the maturity and fineness and also, to some extent, on fibre length. By improving these factors, neppiness could be reduced. Again, if boll-size were increased, it would be possible to reduce neppiness, since it would prevent the jamming of the fibres in a narrow space, which causes neppiness. At the manufacturing end, too, it is possible to reduce neppiness. This was explained, it is learned, by members of the visiting Mission, who pointed out that, by the use of improved card settings recommended by the U.S. Department of Agriculture, mills were able to obtain yarn which, from the point of view of neppiness, made a better showing.

Other topics discussed at the conference included the maintenance of purity of cotton and the role of machines in the cultivation and harvesting of cotton. It would appear that large firms in the U.S. distribute, in co-operation with the U.S. Department of Agriculture, pedigree seed over large areas, with a view to maintaining the purity of the crop. The use of mechanical processes in the cultivation and harvesting of cotton, according to the Mission, had resulted in lowering the cost of production, particularly because of the high cost of labour involved in hand-picking. The Mission also explained, with the aid of suitable lantern slides, the procedure adopted by the U.S. Department of Agriculture in regard to grading and testing of fibre properties.

Advantages of Contact

There is no doubt that more frequent contacts between Indian and American cotton men will mean a great advantage to this country, and, perhaps, some advantage to the U.S. as well. The maintenance of purity of styles of cotton is a problem, towards the solution of which India can learn a great deal from the U.S. The measures, adopted in the U.S., to prevent admixture of varieties and deterioration in quality, might be studied with profit by this country. Again, breeding, and manuring of cotton are spheres in which India has to learn a great deal from the U.S. Cotton yields in the U.S. are very high, as compared with India; American yield of lint per acre is 268 lbs. as against India's 80 lbs. The U.S., it is stated, is using anhydrous ammonia as manure. The question here is whether it is better than ammonium sulphate.

The U.S. makes an increasing use of scientific instruments in estimating the quality of cotton—that is, fibre length, fibre fineness and fibre strength. Whether the instruments used in the U.S. give more reliable results than those used in India is a question that might well be studied. Since all studies of cotton must necessarily be directed towards increased knowledge about its textile qualities, the precise relationship between spinning quality and fibre properties of cotton is a field in which considerable work has already been done both in India and the U.S. The work in the two countries could be compared and the results of that study might conceivably lead to better knowledge about cotton as a textile fibre.

Ginning Problems

Some technical problems are, of course, peculiar to each country. Thus, the ginning problems in India differ greatly from those of the U.S., since cotton is roller-ginned in India while it is saw-ginned in the U.S. Here, the question is whether it is profitable and technically feasible to introduce saw gins in preference to roller gins. Again, gins are unceremoniously scrapped in the U.S., when they prove obsolete and uneconomical. In the last 25 years, the number of gins in the U.S. has declined from 17,000 to 8,000. Can India adopt a similar procedure? This is one aspect of the ginning problem that deserves to be studied in the light of American experience. It is needless to add that a fall in the cost of ginning would mean a higher price for the farmer.

Finally, what is the place of machines in the cultivation and harvesting of cotton? Should India adopt mechanisation to the same extent as the U.S.? In harvesting operations, the principal reason which makes for the use of machines in the U.S. is the high cost of labour. There is no such urgency in this country. Moreover, manual harvesting is superior to mechanised harvesting in the sense that the former ensures the picking of dirt-free cotton. Indeed, the use of machines in the harvesting of cotton necessitates the adoption of special processes, at the ginning stage, to remove the excess of dirt that is collected by the machines. It will not, therefore, be desirable for India to use, at this stage, machines for harvesting cotton.

The U.S. Secretary of Agriculture has announced that the U.S. will not sell its surplus cotton below world prices and that there will be no two-price plan for U.S. cotton. Recent trade estimates place the requirements of cotton for the current season at 14.55 million bales—domestic consumption (8.75 million bales), exports (3.30 million bales) and a minimum end-season carry-over stocks (2.50 million bales). As against these requirements, the net free supply of U.S. cotton (excluding 8.42 million bales in Government hands) is only 13.10 million bales. It would thus appear that substantial repossessions from the Loan would be needed by July, 1954. If the season's exports were to reach 4 to 4½ million bales, such repossessions from the Loan would be still larger.

The Egyptian Cotton Commission announced, on 22nd March, 1954, that it would sell its stocks at the daily official selling prices plus weekly average spot premiums as fixed by the Spot Market Committee each Thursday, for the following week. The raising of the sale prices of Government stocks to spot levels, it is stated, has diverted export interest in Karnaks from the Government to the free market.

ACHIEVING STABILITY IN SUGAR INDUSTRY

STRESS LAID ON NEED TO FOSTER INTEGRATED AGRONOMIC RESEARCH

AMONG the several factors which have contributed to the evolution of a highly developed and most efficient sugar industry in the world's leading sugar producing countries, progress in the sphere of cane cultivation stands out most prominently. Sugarcane, as readers are aware, is the most important raw material of the sugar industry, accounting for as much as 60 per cent. of the cost of sugar manufacture. But, unfortunately, India has gained scarcely any significant benefit from a substantially long period of 18 years' protection, because not enough attention has been paid to improve the production of sugarcane in those areas which account for the largest quantity of cane grown in the country. But the per-acre yield and the sucrose content of cane in India are the lowest in the world (with the exception of Louisiana in respect of sucrose content), the yield being not even one-fourth of that in Hawaii and recovery being just two-thirds of that in Australia.

It is obvious that, if the sugar industry in India is to be stabilised and placed on a sound footing, cultivation of cane must be improved. Efforts must be made to produce not only more cane per acre but also more of cane with higher sucrose content. It is here that the agronomic and physiological research in cane has to play a vital part. It is the job of scientists to evolve new suitable varieties and find out such methods of cane culture as would be within the easy reach of the cultivators and which would enable them to produce high-yielding cane at lower costs. In this context, Mr. S. Harbans Singh, Economic Botanist, Sugarcane-*cum*-Cane Commissioner, Punjab (I), put forward, in the course of his presidential address at the last meeting of the Sugarcane Agronomy and Physiology Section of the Second Biennial Conference of Sugarcane Research and Development workers in the Indian Union held at Jullundur, several valuable suggestions.

Selection of Cane Varieties

By far the most valuable of these is the one relating to regional selection of cane varieties to augment work in progress at the Sugarcane Breeding Institute, Coimbatore. This suggestion is based on the view that, although the Institute, with a wide range of parents for breeding of new varieties, is one of the best institutes of its kind in the world, the rate of introduction of new varieties superior to those evolved in the post has not been to the desired extent. This naturally raises the question whether the existing system of varietal selection cannot be improved upon, in order to evolve better varieties for different soil and climatic conditions within a reasonable period. Answering the poser, Mr. Singh observed:

"At present, with exceptions here and there, the preliminary selection of new seedlings is made at Coimbatore and, after 3-4 years, the planting material of the promising varieties is sent to regional stations for testing and final selection. It is an admitted fact that selection of new types, suitable for a particular region, should be made from the very beginning under the conditions where a type has ultimately to establish. Unlike other crops, in the case of sugarcane, the selection work starts from the single stool stage in the seedlings raised from hybridised seed. In Australia and in the U.S.A. (Canal Point), the crossing work is done at the breeding stations and fluff (hybridised seed) is sent to the testing stations in the different cane-growing regions for raising seedlings and selection of promising varieties under the soil and climatic conditions obtaining in such areas. With this end in view, certain foreign countries had also been getting sugarcane fluff from the Coimbatore Institute.

"To accelerate the rate of selection of new suitable varieties, raising of a large number of seedlings at the testing stations and sub-stations from the fluff of different crosses, issued by the Coimbatore Institute, holds out a great promise for future work and, therefore, calls for special consideration. This, however, should not aim at supplanting the work being done at Coimbatore, but should be taken up to augment the work already in progress. There should also be close co-operation with the Coimbatore Institute, as, without such co-operation, the regional stations may remain abortive in their objective. In this way, chances of some varieties escaping selection at Coimbatore due to its having different soil and climatic conditions would be minimised. This approach looks fundamentally sound and is sure to deliver the goods in the shortest possible time."

While evolving new varieties of cane, due consideration should be given, according to Mr. Singh, to selection of such varieties as would give more sugar per unit area. For any attempt at pushing out canes as may possess only high sucrose for obtaining high recoveries in the factories will not be a sound policy for the industry or the cane growers. Incidentally, Mr. Singh points out that high sucrose and high yield of cane seldom go together. An indication of this is provided by the examples of Hawaii and Queensland (Australia). Thus, by concentrating on improvement of yield of cane, Hawaii has increased the total sugar per acre by 53 per cent., against a rise of only 23 per cent. in Queensland which has been concentrating its work on improving recovery.

Manurial and Irrigation Practices

High yield of sugar per unit of area depends on several other factors too, such as manurial and irrigation practices. In this connection, Mr. Singh makes the following suggestions:

The response of nitrogen in cane yields is universal in all the cane growing tracts of the Union, while that of phosphorus and potassium is rather differential. In Northern India and even in the tropical South, doses of nitrogen higher than those generally recommended have not shown significant increase in yield, even when phosphorous and potassium were not the limiting factors. The 'why' of this has not so far been investigated. For working out balanced nutritional schedules, non-response of higher doses of nitrogen calls for an early answer, as, without such knowledge, it is not possible to evolve new manurial schedules for obtaining economic yields. The knowledge of soil types under different manurial experiments and uptake of nutrients by the plant, under such conditions, also calls for greater and active pursuit on the part of sugarcane research worker.

Irrigation is another important factor contributing to high yield. The wilting co-efficient is different soil types and, when such limit is reached, the plants are bound to show physiological distress. Such work is receiving considerable attention in Hawaii. Irrigations on soil moisture basis, therefore, need immediate attention, particularly in view of the fact that, in different States, irrigation projects are under way and the work on the water requirements of different crops in the different soils is a necessity for the agricultural economy in the country. More work is also called for on the rotations of crops suiting intensive and extensive conditions of cultivation.

All these require a proper understanding of the varying phenomena of sugarcane crop growth under what is called a "cost of environmental conditions," for which the laws of agro-biology provide the basis. This division of agricultural science, it is said, has not received due attention at the hands of sugarcane agronomists and physiologists. To quote Mr. Singh again: "To understand low plant (sugarcane) growth balances with factors of growth, detailed and precise work on plant bionomics is called for. We need, therefore, have constant approach to understand the plant behaviour throughout its life cycle, as it would be obviously illogical to expect a single isolated measurement to reveal adequately the impress of soil and environmental conditions in the final growth of the plant." There is the need, too, for supplementing the work of research stations, besides understanding the reaction of different soil and climatic conditions to cane growth. This, in the opinion of Mr. Singh, will be possible, if zonal trials on the cane cultivators' lands form an integral part of agronomic research.

SUGAR PRODUCTION AND STOCKS

The total production and despatches of sugar during the current sugar season (up to 15th February, 1954) amounted to 682,000 tons and 344,000 tons, as against 722,000 tons and 406,000 tons, respectively, in the corresponding period of the previous season. Arrivals of foreign sugar upto 15th February amounted to 241,000 tons. The sugar supply position during the fortnight ended 15th February, 1954, as compared with that obtained a year before, is indicated below:

(In thousands of tons)

	1953	1954
Opening stocks	720	448
Production	143	138
Arrivals of foreign sugar ...	—	23
Despatches	76	53
Closing stocks	802	533

SUGAR IMPORTS

It is understood that the Union Food and Agriculture Ministry has made arrangements to import 116,000 tons of sugar from abroad. The purchase of another 60,000 tons is expected to be finalised shortly. The major portion of the sugar purchased is scheduled to arrive in the country before the monsoon starts.

SUGAR INDUSTRY IN PAKISTAN

SELF-SUFFICIENCY AIMED AT

SELF-SUFFICIENCY in sugar is the goal towards which Pakistan is now working. The industry has been accorded an honoured place in the Six-year National Development Plan of Pakistan. This is hardly surprising, considering the yawning gap between the production and consumption requirements of sugar. The output of sugar is now at the rate of only 70,000 tons, as against the estimated consumption of 265,000 tons. In view of the wide gap, Pakistan has been importing considerable quantities of sugar from abroad at the cost of much precious foreign exchange. Incidentally, it may be recalled that, out of the 158 sugar factories in undivided India, Pakistan got as its share only nine factories with an aggregate daily cane crushing capacity of about 5,000 tons. Although Pakistan accounted for as much as 17 per cent. of the total area under sugarcane in undivided India, its share in the number of factories was to the extent of only 6 per cent. Whereas India produced 1,075,000 tons of sugar in 1947-48, Pakistan produced a bare 29,587 tons.

Forced by the need to meet the great deficiency in sugar supply and with a view to saving foreign exchange, the Pakistan Government's Industrial Advisory Committee for Food Industries recommended the establishment of 10 new sugar factories with a total annual production capacity of 135,000 tons. The first of these factories to be set up was the Premier Sugar Mills at Mardan in the N.W.F.P. with a production capacity of 50,000 tons. This factory, it is claimed, is the biggest and the most modern in the whole of Asia.

The establishment of the remaining nine sugar mills is undertaken by the Pakistan Industrial Development Corporation (P.I.D.C.). Of these nine mills, work on four has already commenced. The Jauharabad Mills in the Thal area is scheduled to go into production by the end of this year. The factory is being jointly sponsored by the P.I.D.C. and the Thal Development Authority, the respective shares in the capital being Rs. 70 lakhs and Rs. 30 lakhs. The daily cane crushing capacity of the factory is said to be 1,000 to 1,200 tons. On this basis and assuming the duration of the crushing season at 120 days, the factory may be expected to crush about 130,000 tons of sugarcane and produce 10,000 to 11,000 tons of sugar per annum. A notable feature of this factory is that half the cane requirements will be met by its own cane farms. Of the remaining five factories, two will be in Sind, two in the Thal area and one in the N.W.F.P.

Cane Cultivation

These efforts of the authorities and industrialists in Pakistan to achieve self-sufficiency in sugar supplies will be watched with great interest. If the expansion scheme for the sugar industry is to be implemented successfully, it is imperative that utmost attention is paid to cultivation of sugarcane, the principal raw material. The importance of this factor will become clear when it is realised that not only the yield of cane per acre is very low, being 12 tons, but the sucrose content in cane also is poor, amounting to no more than 11 to 12 per cent. Among the drawbacks of Pakistan's sugarcane economy, mention may be made of small and scattered bits of land on which sugarcane is cultivated, primitive methods of cultivation, lack of adequate transport facilities, poor marketing facilities, and absence of any sugar technological institute to devise ways and means of improving the quality of cane. These are problems which the Pakistan Industrial Development Corporation must tackle in right earnest, if it should succeed in producing sugar at economic prices.

SUGAR INDUSTRY IN BIHAR

Latest reports from Bettiah aver that the sugar industry in Bihar is faced with a difficult situation, due to an unusually short season in 1953-54, lasting for 75 days only, as against 121 days of the last crushing season (1952-53). During the last season, 28 sugar factories of Bihar crushed 74,052,000 maunds of cane with a recovery of 10.02 per cent., whereas only 30,654,163 maunds of cane were crushed this season with a recovery of 9.85 per cent. Except the Mothiharl Mill, the other 27 sugar factories of Bihar closed by the beginning of March, 1954, due to scarcity of sugarcane. The cause of the scarcity is said to be untimely rains, heavy floods, red rot and diversion of cane for producing gur, the price of which was attractive during the beginning of the season.

EXPLOITATION OF NATURAL GAS IN PAKISTAN

ITS EFFECTS ON IMPORTS OF COAL

THE economic exploitation of natural gas reserves at Sui in South-East Baluchistan (Pakistan) is receiving urgent attention at the hands of the Pakistan Government. For, by supplementing the indigenous reserves of fuel and power resources, it will reduce Pakistan's dependence on the outside world for the supply of coal and petroleum. Now that relations between India and Pakistan have once again deteriorated, following the decision of the United States to extend military aid to the latter country, Pakistan must naturally be anxious to step up its arrangements for bringing under use the natural gas found in Baluchistan.

Some idea of the extent to which utilisation of natural gas will replace coal can be had from the fact that the benefit of the discovery is estimated to be equivalent to about 1.6 million tons of imported coal per annum. Observers say that the effect of this discovery on the industries in West Pakistan is likely to be very considerable.

It is too early to say to what extent the use of this gas will tell on imports of coal into Pakistan, for the development of gas may coincide with a general expansion of industries requiring more fuel. Anyway, whatever the reduction in imports of coal, India will be the largest sufferer, for it is the principal supplier of coal to that country. Exports of Indian coal would be affected still more, if the contemplated project to exploit lignite reserves in East Pakistan were also to fructify. Besides, Pakistan is increasing the output of coal itself. In fact, in 1953, Pakistan is believed to have hit the target of 800,000 tons of coal, originally proposed to be reached only by the end of 1957. Pakistan's current annual requirements of coal are said to be a little more than 2 million tons, taking into consideration the various industrial projects that have been implemented in the last two years. It may be interesting to note here that India's exports of coal to Pakistan in 1953 was of the order of 760,000 tons per annum, of which nearly half went to West Pakistan.

The Sui gas project is estimated to cost £9 million. The Commonwealth Development Corporation has already granted a loan of £1 million to the Sui Gas Transmission Co., Ltd., the Company which has been formed to implement the scheme. The Company is expecting a World Bank loan of £5 million. The remaining £3 million equity capital is to be provided equally by the Pakistan Industrial Development Corporation, the Burmah Oil Company and private investors. Under a long-term contract, the Burmah Oil Company has assumed responsibility for the management of the Sui Gas Company.

The reserves of natural gas in Baluchistan, although not inexhaustible, is estimated to be considerable and, therefore, beyond anxiety of early exhaustion. The proved reserves so far is estimated at 2,280,000 million cubic feet. There are still vast reserves which are not proved. On the basis of proved reserves, the gas fields are expected to supply 100 million cubic feet per day for 60 years. Sui gas can be usefully employed to generate electricity. As compared with imported fuels, such as coal and petroleum, the gas is expected to be substantially cheaper.

The Sui Gas Company proposes to transmit the natural gas from the fields by a pipeline over some 350 miles to Karachi, through the lower valley of the Indus. The latest reports from Baluchistan indicate that the field survey required for the purpose is almost complete. The economic exploitation of this gas is expected to accelerate the agricultural and industrial development and thereby help raise the standard of living of the masses of Pakistan.

During the month of December, 1953, there were 437 coal-cutting machines. Of these, only 430 were in operation. The number of mines having machines was 130, including 57 in Raniganj, 33 in Jharia and 23 in Madhya Pradesh. Of the chain type of machines, Raniganj had 210, Jharia 89 and Madhya Pradesh 56. The amount of coal cut by different types of coal-cutting machines was 710,584 tons. The break up of the figures is as follows: coal cut by chain-type machines 707,723 tons, bar-type machines 378 tons and percussives 2,483 tons. The coal cut by machines accounted for 22.4 per cent. of the total output.

Three mechanical loaders were in use, which loaded 4,272 tons. There were 62 conveyors (13 at Jharia, 39 at Raniganj, six at Hyderabad, one at Vindhya Pradesh and three at Karanpura), which carried 89,975 tons of coal.

The Government of India has imposed, with effect from March, 1951, a cess of six annas per ton on despatches of coal, including soft coal, from Assam collieries, under the provisions of the Coal Mining (Conservation and Safety) Act. Till now, Assam collieries were exempted from this cess, collected from all collieries in India, for assisting stowing operations for safety and conservation in coal mines. A cess of nine annas per ton will be collected on despatches of hard coke. The total amount of cess collected in 1953 was Rs. 1.23 crores.

PRODUCTION OF QUALITY JUTE

CENTRE TO AID ADOPTION OF IMPROVED METHODS

IN view of the emphasis laid on the need for paying adequate attention to yield, quality and suitability of location in respect of cultivation of jute by the mill industry, the statement placed before the Union Parliament by Dr. Punjabrao Deshmukh, Minister for Agriculture, on methods to improve the production of jute acquires considerable significance. He stated that, as a result of the recommendations of the Expert Committee on the quality of jute, jute development work in all the jute-growing States, especially in West Bengal and Bihar, was being reorientated and that the emphasis now was on growing better quality jute.

The action taken on the recommendations relates to, we are told, the construction of 3,000 new retting tanks and the re-excavation of 3,000 old tanks in West Bengal. This work is expected to be completed within a period of three years. Fifty per cent. of the cost of digging these tanks will be met by the Central Government and the balance by the State Government. In Bihar, 4,000 new tanks and 500 old tanks will be excavated in the same period. The basis of the financial assistance will be the same as that adopted for West Bengal. In addition, it is proposed to supply, at the expense of the Central Government, 550 seed drills and 550 wheel hoes to West Bengal and 150 seed- drills and 150 wheel hoes to Bihar for use by jute cultivators under arrangements to be made by the State Governments. The two State Governments have been asked to establish three State farms each for the multiplication of jute seeds of good quality. They will be given loans, it is stated, for setting up these farms and the Central Government will share equally with the State Governments the actual losses incurred on the supply of good quality seeds to the cultivators.

It will be interesting to refer here to the work that is being carried on by the Indian Central Jute Committee in regard to the intreduction of improved methods of jute cultivation. An idea of this work can be had from the latest report of the Economic Research Section of the Committee, which though it relates to the year 1952-53, also contains some observations on the Committee's efforts in 1953-54. In this year, the output of jute was only 3.1 million bales, as compared with 4.6 million bales in 1952-53. This fall was due partly to bad weather conditions and partly to switch-over from the cultivation of jute to that of rice on account of the steep fall in the price of jute and the relatively higher prices which rice fetched in 1952-53. The latter factor is reflected in the table below which gives the prices of raw jute and rice prevailing in Monoharpur in West Bengal and Purnea in Bihar.

(Per standard maund)

Season 1952-53	Monoharpur		Purnea	
	Price of raw jute	Price of rice	Price of raw jute	Price of rice
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
July	32 0	36 6	..	24 15
August	15 15	38 2	22 6	29 6
September	22 3	35 8	24 15	32 6
October	23 3	34 4	20 2	29 10
November	20 15	31 5	16 15	23 0
December	19 1	26 14	..	20 12
January	20 7	21 0	..	20 0
February	20 7	19 13	..	19 7
March	19 11	19 0	..	18 0
April	14 14	22 10	..	19 12
May	20 6	24 6	..	24 7
June	21 0	24 6	..	26 0

It is seen from the table that jute (unassorted) prices were lower than the prices of rice in both the centres. Roughly 1½ maunds of jute had to be sold in order to buy a maund of rice. Such position obtained till November, 1952. As, however, *aman* rice was available in the market in the following month, its price declined rather sharply, though the trend was reversed towards the last quarter of the jute season. A similar trend was noticed in two other centres, namely, Belakoba in West Bengal and Nowgong in Orissa. Further, in sympathy with the Calcutta market, price of jute at the mofussil centres again fell much below the price of *aman* rice during March and April, 1953, and touched the lowest levels of the season—a trend which did not appear to favour the expansion of jute acreage in 1953-54. The Report mentioned above, however, states: "As growers had disposed of the major portion of their marketable surplus, before the onset of the last slump, only a fraction of them was affected by it."

The investigations of the Research Section of the I.C.J.C. revealed that, in 1953-54, improved methods of jute cultivation were under demonstration under the fourth year in the same five centres, namely, Monoharpur, Belakoba, Purnea, Kendrapara and Nowgong. Acreage under the line-sowing method was also the same as in the previous year. Apart from farmyard manure, compost and chemical fertilisers were procured and applied in each centre. But manuring was inadequate at Nowgong, because the practice of cowdung manuring was practically absent there and there was prejudice against the application of night soil compost. Improved seeds were obtained from the Jute Agricultural Research Institute. Two new strains of seeds, namely, C39-212 and O40-753, were introduced in some of the centres. Some of the old seed drills were replaced by renovated ones. Plots too were sown according to improved methods but the crops in certain areas were affected by drought. In Nowgong, however, incessant rains after drought encouraged thick growth of weeds, allowing no facility for weeding in the moisture soaked earth. As weeds grew equally high with jute plants, crops were damaged heavily. This is an additional explanation for the fall in the jute crop in 1953-54.

DUNDEE SPINNERS APPOINT COMMITTEE

A committee has been appointed by the jute spinners in Dundee to help in the liquidation of the stocks of raw jute held by the Jute Control. Various problems have yet to be solved for the change-over to spinners importing their own requirements direct, instead of purchasing from the Jute Control as hitherto.

A broad outline of the steps to be taken to effect the transfer of raw jute buying from Government-trading to private enterprise, in accordance with the announcement made in the House of Commons last month, was given on the 15th inst. by Mr. W. H. Valentine, Jute Controller. Addressing a meeting in Dundee, he said that no specific "D"-day had been fixed for the transfer. He envisaged a period later this year when a dovetailing programme would be carried out in order successfully to bring in the new jute bought from private channels by spinners and to liquidate the present Jute Control stocks.

Mr. Valentine said he contemplated carrying on talks on the Government scheme with a number of specially chosen committees, such as the recently formed Spinners' Raw Jute Committee. He did not foresee any major obstacles to a speedy agreement. He was most anxious to avoid making the transitional period unduly protracted, and hoped to be in a position to begin negotiations soon after he had spoken to the whole of the industry.

NEW VARIETY OF JUTE IN U.P.

Reports from Lucknow go to show that a new variety of jute will be introduced in areas where floods are an annual feature. This variety was evolved at the jute research station run by the Government of India at Calcutta. This jute, called C. 47, can be grown in water three feet deep.

During the next rainy season, the Jute Development Department is to introduce this variety in the flood districts. The jute fibre is stated to be of a better quality. The Jute

FEBRUARY JUTE STOCKS UNCHANGED

OUTPUT SLIGHTLY UP

THE Indian Jute Mills' Association's monthly returns for February, 1954 disclose no notable change in the stocks held by the mills. At the end of the month, the total stocks amounted to 95,383 tons, as against 95,729 tons in the preceding month. This means that despatches in the month were confined more or less to the extent of the goods manufactured in the month. Hessian stocks, at 21,996 tons, were about 600 tons higher than those at the end of January, 1954. Sacking stocks, however, were slightly lower at 71,828 tons, as compared with 72,730 tons. Other varieties of fabrics held by mills revealed a slight decline from 1,643 tons to 1,559 tons.

The table below gives the position of stocks of various types of jute goods as at the end of February, this year as compared with the two preceding months as also in the same month a year ago:

(In tons)

	As on			
	28th Feb., 1954	31st Jan., 1954	31st Dec., 1953	28th Feb., 1953
Civil—				
Hessian	21,751	21,125	23,734	37,786
Sacking	71,160	72,101	72,103	92,228
Others	1,559	1,643	1,690	2,340
Total	94,470	94,859	97,527	1,32,354
Government—				
Hessian	245	231	442	846
Sacking	668	639	619	2,772
Others	*Nil*	*Nil*	4	134
Total	913	870	1,065	3,752
Grand total	95,383	95,729	98,592	1,36,106

The more or less no change position of stocks during February, 1954, reflects dull conditions which prevailed in the jute goods market. The offtake of goods was poor and prices generally fluctuated within narrow limits. There was also hesitation on the part of dealers to enter into fresh commitments in view of the expectation of a reduction in export duties on jute goods in the Central budget. Shipments of goods in the month were confined mostly to previous bookings.

The output of jute goods during February, 1954 was, however, about 900 tons more than that in the previous month. To be precise it amounted to 68,261 tons, as against 67,327 tons in January. On the basis of this production, consumption of raw jute during the month may be placed at 395,914 bales, as compared with 397,967 bales in the same month a year ago.

With the February output, the total for the eight months of the season, 1953-54, amounts to 568,772 tons which compares with 597,540 tons in the same period of the preceding season, namely, 1952-53. Consumption of jute during the eight months of the current season, 1953-54, based on the output of jute goods, may be put at 3,298,877 bales, as against 3,465,732 bales, in the first eight months of the 1952-53 season.

The table below is a summary of the various types of goods produced in February, 1954, as compared with those in January, 1954, and December, 1953 and in February last year.

(In tons)

	As on			
	February, 1954	January, 1954	December, 1953	February, 1953
Civil—				
Hessian	31,702	31,447	36,681	26,846
Sacking	32,404	33,204	27,013	36,079
Others	2,450	2,510	2,858	2,419
Total	66,046	67,191	77,347	65,244
Government—				
Hessian	24	21	300	2,165
Sacking	191	119	202	192
Others	*Nil*	*Nil*	*Nil*	14
Total	215	136	502	2,371
Grand total	66,261	67,327	77,849	66,615

The increase in the output of jute goods during the month under review was shared by both hessians and sackings. Output of hessians rose from 31,468 tons to 31,816 tons and those of sackings from 33,349 tons to 33,995 tons. There was, however, a slight decline in the manufacture of other varieties from 2,510 tons to 2,450 tons.

(*Concluded from previous column*)

Development Department of U.P. is sending a batch of experts to the Research Station at Calcutta for further training in the technique of jute development. The field staff is proposed to be trained at the Department's own research farm, so that development workers may demonstrate improved methods of jute cultivation to farmers.

EAST INDIA DISTILLERIES AND SUGAR FACTORIES LTD.

FIFTY-SIXTH ANNUAL GENERAL MEETING

MR. H. I. WONFOR HOLDS OUT BRIGHTER OUTLOOK FOR SUGAR

THE Fifty-sixth Annual General Meeting of the East India Distilleries and Sugar Factories Limited was held at the Head Office of the Company in India, "Dare House," Madras, on Friday, 26th March, 1954. Mr. H. I. Wonfor, Chairman of the Company, presided and addressed the meeting as follows:

"First of all, it is my sad duty to record the death, in an aeroplane accident at Singapore on 13th March, last, of my colleague on the Board of this Company, Mr. M. Ct. M. Chidambaram Chettyar. Mr. Chidambaram Chettyar had been a Director of the Company since the transfer of control to India in 1948. We are indebted to him, individually and collectively, for his wise counsel and he was always ready to exert himself in the Company's affairs. He will be greatly missed on this Board—as elsewhere in India—and, on behalf of all members of the Company, I extend my deepest sympathy and condolences to his relatives.

"The Directors' Report and the Company's Accounts for the year ended 30th September, 1953, together with the Auditors' report thereon, have been in your hands for a period longer than is required by statute and, with your permission, I propose to take them as read.

Sugar

"The Company's main activity is the manufacture of white sugar from sugarcane. During the crushing season 1952-53, covered by these accounts, the Nellikuppam factory worked for 172 days; it crushed 308,000 tons of sugarcane and produced 27,552 tons of white sugar. The recovery at 8.91 per cent. showed a slight improvement on the figure recorded for the previous season.

"Payment for sugarcane in India is controlled by the Central Government and, for several years now, we have been pressing for a basis of payment which takes into account the sucrose in the cane sold to us and not only the weight of the cane. I am glad to report that, for the 1952-53 season—and, again, for the current season—the Government has permitted us to pay for sugarcane at Nellikuppam factory on the basis of a special sucrose recovery formula, prepared by the South Indian Sugar Mills' Association and subject to a minimum of the price fixed by the Central Government. As a consequence, the growers who supplied cane to Nellikuppam factory during the 1952-53 season, received a bonus of Rs. 5-1-1 per ton, in addition to the Government minimum price of Rs. 35-11-8. The payment of this bonus has done much to cement the cordial relations existing between the factory staff and the local agriculturists, who supply cane to the factory. The advantages of the formula are generally understood by the cane growers and I believe that it is generally welcomed. We have, of course, only made a start with the application of the principle of payment on sucrose content in cane and there are obvious disadvantages to payment for all cane on the average recovery of the whole crop for the whole season. Growers who continue to produce more weight than sucrose are still paid the same as good farmers, by reason of the overall recovery applying to all.

Zonal Division of Cane Area

"It is hoped, therefore, to extend the application of this formula by the division of the factory's cane area into zones. The cane in each zone would then be crushed separately and the recovery figure for each zone thus ascertained. Payment can then be made separately to the agriculturists, included in each zone, and prices will, of course, vary, according to the recovery figures ascertained from each. Later, it is hoped that we shall be able to divide the zones more or less into villages and, finally, our object is to pay for each agriculturist's cane separately on the basis of its sucrose; I must say, however, that, on account of the large number of growers owning very small holdings, this sets an enormous problem which it will take a long time to overcome. However, we have made a start by getting away from the principle that cane is to be paid for on weight alone and I am sure that this is to the benefit of your Company and of the industry in India as a whole.

Sugar Trading Conditions

"Sugar trading conditions during the year under review have been as difficult as any I can remember. The official sugar year started with a carry-over from the previous crop and there was some talk of exports. During the year 1953, however, the sugar stock position in the country changed drastically. It become obvious that the consumption of sugar was increasing, that the carry-over of stocks to 1953-54 would be lower than for previous years, and that plantings of sugarane for the 1953-54 crushing season were also less than for the previous years. The position now is that the country is short of sugar and the Central Government has found it necessary to effect some imports. The outlook for the future, is, however, much brighter, because, on account of improved monsoons all over India in 1953, plantings of all crops, including sugarcane, have increased considerably, with the result that a heavy crop is expected for the 1954-55 crushing season. The Company has continued to receive a reasonable price for its sugar, but, in my view, the price of this commodity in India is still too high. We can only get it down by improving the yield of sugar (not sugarcane) per acre and this, as I have already pointed out, can only be achieved by encouraging the agriculturist to produce sucrose and not merely weight of cane.

"As a result of the improvement in the demand for sugar in India, it will undoubtedly be necessary to increase production. More factories will be required and I am sure you will agree with me that this Company, with its strong financial structure and its valuable experience, must be prepared to play its part.

Working of Distillery

"The Company's distillery worked satisfactorily throughout the year under review and the financial results show some improvement over those of the previous year. Before the next annual general meeting, the new distillery, now in course of erection, will be in production and the Company should reap the benefits of the greater efficiency in working which this will ensure.

"Profits from the manufacture of carbonic acid gas are, unfortunately, down, because of heavy competition from other suppliers. We have been forced to reduce prices, but, with lower costs of production from our new fermentation plant, we should still be able to record a reasonable return in the future.

"Our Chemical Works at Ranipet experienced a more profitable year, owing to a sustained demand for the Company's products of acid and heavy chemicals. The acid contact plant, which commenced working only in the previous financial year, completed a successful year's working.

"The repairs and reconstruction of the acid chamber plant made considerable headway during the year of account and, early this month, this plant was brought into production and is now making a very useful contribution to the Company's chemical production.

Pottery Factory

"In our pottery factory, also at Ranipet, attention was concentrated on the development of sanitaryware in which product we are now producing a satisfactory standard quality. The factory will not be able to go into full production of sanitaryware until later in the current year, owing to the need to reconstruct the tunnel kiln, which was specially built for this purpose, but which is shortly to be modified in the light of experience. Acid is used in the manufacture of fertilisers, which are in increasing demand for food and other crops. Pottery (including sanitaryware) is catering for an expanding market, so that, for both of these products, the future is promising.

Confectionery

"Last year, I told you that the Board had in mind the formation of a separate confectionery company to take over the assets of the Company's present confectionery department. I am pleased to tell you that the Board has now decided to proceed with this scheme and a detailed communication in this regard will shortly be sent to shareholders. As soon as the assets to be transferred have been properly and independently valued, it is proposed that the Company shall subscribe for the whole share capital in the new confectionery company. Subsequently, the Board proposes to distribute the majority of the Confectionery Company shares, as a dividend in specie, to the holders of the Company's "B" ordinary shares in the proportion of one share of one rupee in the Confectionery Company for each "B" ordinary share held. There will also be a small cash distribution to cover any super-tax liability. All these suggestions are, of course, subject to approval by the shareholders at meetings which will be convened in due course.

Profit

"Turning now to the accounts, I am sure you will have noticed that the trading profit shows an improvement over the figure for the previous year. This is due not only to sugar but to all the Company's other varied interests also. In view of this increase and the Company's very strong reserve position, the Board have recommended a special extra dividend for 1952-53 on the "B" ordinary shares of 5 per cent., making 20 per cent. in all for the year. The balance-sheet reflects the Company's intrinsically strong financial position and again shows an improvement in the balance of liquid assets over liquid liabilities of not less than £83,000, as compared with the previous year. Stocks in trade and sundry debtors are considerably lower than on 30th September, 1952, and we have been able still further to improve our reserves, which, as you will see, now stand at considerably more than the Company's issued capital.

Disposal of Income

"As usual, I give you the disposal of the Company's gross income for the year 1952-53. The figures are as follows:

"63.8 per cent. was spent on raw materials, fuel and maintenance of plant.

"9.1 per cent. was spent on wages, salaries, dearness allowance, bonus to labour, provident fund, pensions and other staff benefits.

"5.7 per cent. was used in defraying overheads, including depreciation.

"11.3 per cent. went in taxation.

"3.3 per cent. represents the profit retained in the business.

"2.8 per cent. is the amount of dividend proposed to be distributed to shareholders.

"These figures are very similar to those of the previous year and continue to reflect the relatively meagre return received by the proprietors of the business.

Prospects for Current Year

"Prospects for the current year are satisfactory and I believe that, with the certain industrial development of South India under the Five-year Plan and with the improvement in the general standard of living, the future of this Company can be faced with confidence.

"I wish to take this opportunity, on your behalf, of thanking all our executive staff at our offices, branches and factories for their continued co-operation and conscientious application to the Company's interests."

The Directors' report and the Accounts for the year ended 30th September, 1953, were unanimously adopted and dividends of 10 per cent. free of Indian Income-tax on the 'A' shares and 15 per cent., together with a special additional dividend of 5 per cent., both payable free of Indian Income-tax, on the "B" shares were declared. Mr. S. G. H. Davis and Mr. G. N. Noel-Tod were re-elected to the Board. The Auditors, Messrs. Lovelock and Lewes, Chartered Accountants, Madras, continue in office.

ALLOTMENT OF SUGAR TO STATE GOVERNMENTS

The Government of India has started allotting sugar to the State Governments from out of the reserve of 25 per cent. of the production of each factory during the current season for controlled distribution at fair prices.

The reserve sugar is already on its way to Calcutta and allotments of sugar have also been made to the Governments of U.P., Vindhya Pradesh, Rajasthan, Himachal Pradesh, Madhya Bharat, Orissa and the Punjab.

Inquiries have been made from the Governments of Delhi, Bombay and Madras whether they require any requisitioned sugar for distribution.

These steps have been taken to prevent rise in sugar prices.

INDIAN MINING FEDERATION MEETS

MR. SHIV RAM PODDAR PLEADS FOR REVISION OF COAL PRICES

SERIOUS factors such as accumulation of coal stocks at pitheads for want of demand, rising prices of colliery stores, and increasing cost of labour, were enumerated by Mr. Shiv Ram Poddar, Chairman, Indian Mining Federation, in his address at the Annual General Meeting of the Federation held at Calcutta on 26th March, 1954, as being responsible for upsetting the cost-price structure of the coal industry in India. He pleaded, therefore, for the restoration of coal prices to the levels at which they stood in 1947. He registered his protest not only against the price-cut effected in February last, but also against the manner in which the cut was imposed. He was of the opinion that there was no case for a cut in prices at a time when conditions actually warranted an increase.

The following is the full text of Mr. Shiv Ram Poddar's speech delivered at the meeting:

"GENTLEMEN,

"I have great pleasure in welcoming you all to this annual general meeting of the Federation. On behalf of the Federation, as also on my own behalf, I thank the distinguished guests who have made it convenient to give us the pleasure of their company this afternoon. Before we proceed to consider the formal business of the meeting, I should like to say a few words on the present position of the coal industry.

"While the industrial production in most commodities in India recorded new high levels during the year 1953, there was a slight drop in the production of coal. Incidentally, coal production of the world, as a whole, declined during the last year, according to a recent United Nations report. While the fall in production need not cause undue worry, I feel that the handicaps under which this industry has been working must be removed forthwith to arrest a further decline in production.

Shortage of Wagons

"Persistent shortage of wagons for the movement of coal has become almost a permanent feature of this industry. Year in and year out, it is the same dismal story. Inevitably, short supply of wagons has resulted in heavy accumulation of stocks. At present collieries mining selected 'B' and lower grades of coal in the Raniganj area are burdened with heavy stocks which take up nearly their entire stacking space. As you all know, Raniganj coal is subject to spontaneous combustion. As the hot season advances, collieries in this area face a serious risk of destruction of their stocks by fire. Obviously, heavy accumulations of stocks and the consequent risk of fire would slacken the pace of production in this area.

"The scheme for rationalisation of movement of wagons introduced by the railways has created further difficulties, particularly for collieries in the Raniganj area. The idea of this rationalisation scheme to do away with cross movement and to supply coal to consumers from the nearest source appears quite attractive on paper. In practice, however, this scheme has actually retarded movement of coal. Not only that, but it has also disrupted long-established links between the consumers and the producers, particularly in the Raniganj area. Raniganj coal is especially suitable for use in boilers, and there is no reason why the industries in India should be prevented from buying this coal, if they so desire. While industrial consumers are willing, even eager, to obtain Raniganj coal, which is admirably suitable for their needs, permission to move Raniganj coal to different parts of India has been withheld on the ground that such movement would entail cross traffic. You will thus realise that the scheme of rationalisation with its restrictions on the movement of Raniganj coal has resulted in heavy accumulation of stocks which are mounting day by day. Accumulated steam coal turns into slack coal which is so difficult to market.

"If stocks continue to increase in this manner for some time more, collieries in the Raniganj field, I am afraid, will be compelled to restrict their output considerably with consequent reduction in employment of labour force. I need not dilate on the effects of retrenchment of labour, particularly in these difficult times. Already the problem of unemployment in the country has assumed serious proportions. We are all agreed that such a course should be avoided by all possible means. To arrest the decline in coal output, it is essential that the accumulated stocks are moved quickly, restrictions on movement in different directions are withdrawn and offtake of coal from the Raniganj area is increased by all possible measures. I suggest that allotment of selected 'B' Raniganj coal be increased to consumers such as, cement and iron factories, cotton and jute mills, electricity plants and others. Larger allotment of selected 'B' grade coal will, at once, serve to conserve the meagre reserves of selected 'A' coal in Dishergarh and Poniati seams and improve the offtake of selected 'B' coal which has accumulated in large quantities partly because of the scarcity of wagons and the artificial restrictions on movement in different directions and partly because of a heavy fall in the demand from overseas customers. I earnestly hope that the restrictions on movement to different parts of the country will be withdrawn as quickly as possible. I believe it would not be disputed that a drop in output would not be in the national interest.

"I would now pass on to the consideration of coal prices. About seven years back, the Commodities Prices Board fixed the prices of coal at a level just allowing the collieries to operate as economic units. Thereafter, in 1949, the collieries agreed to a voluntary cut in prices of coal on certain assurances from the Government which have not been fulfilled. Moreover, the prices of coal were originally fixed on the assumption that the whole, or nearly the whole, output of collieries would be disposed of. This assumption, as you know, has proved incorrect. On the contrary, the major problem of the collieries has been their inability to dispose of their output or even a substantial part of it. This seriously upsets the basis of the cost-price structure. Moreover, increasing costs of labour and the rising prices of colliery stores have further added to the cost of coal production. Considering all these circumstances, the coal industry has a very strong case for restoration of prices to the 1947 level, if not higher.

"While a rise in the prices of coal is not only justifiable but essential as I have stated earlier, there has been, strangely enough, a price cut affecting grade II collieries which are perhaps the least able to bear it. I consider it to be my duty to register a strong protest not only against this cut in prices but also against the manner in which the cut has been imposed. It has been a convention to consult the industry before the Government decide on any policy or action affecting it. This convention has been ignored in the case of the recent price-cut. The Government have excused themselves on the ground that circumstances justified the cut. As I stated earlier, circumstances not only do not justify the price-cut, but actually warrant an increase in prices.

"On account of increasing costs of production, it would be very difficult for an average colliery to make two ends meet. The prices have to be fixed at levels which are economic for average collieries. Moreover, coal is a wasting asset, a fact which calls for a more liberal provision for depreciation in the case of collieries than in the case of other industrial units. I hope the authorities will consider all these facts carefully and revise the prices of coal suitably so that the industry is allowed to operate at an economic and efficient level.

"With progressive depletion of their main assets, with a large part of their liquid resources locked up in mounting stocks of coal and with costs rising all round, colliery owners are in a none too happy financial position. Some collieries, especially the smaller ones, are badly in need of financial accommodation, and I hope the collieries in West Bengal will receive due consideration, if they apply for assistance to the Industrial Finance Corporation, recently set up in the State, for granting financial aid to the medium-sized and small industrial units. But, apart from financial accommodation, collieries are prevented from deploying to the best advantage even their existing resources on account of the meagre banking facilities available in the coalfields. Both my immediate predecessor and the one before him drew pointed attention to this fact. But the collieries situated in areas at a distance from important towns still operate under conditions of almost primitive economy so far as banking facilities are concerned.

Conservation of Coal

"I now turn to the question of conservation of coal resources. Inclusion of collieries mining grade II coal in the Jharia field in the scheme of conservation for metallurgical coal is unwarranted, as emphasised by my predecessor in his address last year. In the first place, this coal is not good enough for use as a high-grade metallurgical coal; secondly, there is not the remotest chance that free exploitation will lead to the exhaustion of the seams which contain this type of coal in the foreseeable future. The restriction placed on the output of this type of coal is, therefore, a clear case of unrealistic application of a policy that is basically sound. The grade II collieries in the Jharia fields should be forthwith released from the strait-jacket of conservation.

"Moreover, Jharia grade II coal is eminently suitable for conversion into soft coke. While there is a vast untapped market for soft coke, the supply at present is limited only to a small fraction of the population of the country. Every effort should be made to expand the market for soft coke and thus utilise grade II coal.

"You might be aware that the Coal Washeries Committee, set up under the chairmanship of Mr. J. N. Mukherji, a past Chairman of the Federation, had submitted an interim report on the subject. As I, however, understand that this interim report has been withdrawn for revision, I feel that we should defer discussion of this subject till the proposals of the Committee have been finalised.

"I am happy to assure you that the relations of your Committee with the representatives of the Government have always been excellent. We have in Mr. Ramadhayani, the Coal Commissioner, a staunch friend of the industry. Although we have occasional differences of opinion, Mr. Ramadhayani has always considered our representations with imagination and sympathy.

"I should like to express my sincerest thanks to my colleagues on the Central and Branch Committees, but for whose kind co-operation and assistance, it would have been difficult for me to discharge my duties as your Chairman during the year. I should also like to express my appreciation of the able and faithful services rendered by the Secretary and the staff of the Federation."

UTILISING PROVIDENT FUND FOR PAYING INSURANCE PREMIA

GOVERNMENT URGED TO RELAX RESTRICTIONS

EVER since the Provident Fund Scheme was published (in September, 1952), following the adoption of the Act by Parliament in February, 1952, insurers have continued to evince keen interest in the Scheme and to examine the possibility of inducing the employees to take out life policies and to pay the premium for these policies from the provident fund amounts at the employees' credit. From the point of view of the insurers, the importance of the Scheme arises from the fact that the total contributions of employers and employees, as now computed, will aggregate Rs. 12 crores. There is no doubt that this sum, if converted into life policies, would make a significant difference to the total life business, considering that the annual premium income of Indian insurers is of the order of Rs. 38 crores which pays for the total life business of Rs. 790 crores.

Delay in Payment

The Provident Fund Scheme, as is well known, applies to factories employing 50 or more persons in six major industries—textiles, iron and steel, cement, engineering, paper and cigarettes. All persons with salaries upto Rs. 300 are brought under the Scheme. Employees contribute 6¼ per cent. of the basic wages plus dearness allowances and employers contribute an equal amount. Now, insurers have welcomed the provisions made in the Scheme permitting the employees to utilise their provident fund for paying premiums on their life insurance policies. For such an arrangement is beneficial and advantageous to the employees concerned, as, in the event of their premature death, their families would derive a much larger benefit than what they would get out of their provident fund. But insurers do not like the procedure laid down under the Scheme for this purpose, since it would involve, according to them, unconscionable delay in the payment of premia. The scheme lays down, in this connection, three restrictions. In the first place, the policy should be assigned, within six months of the first withdrawal by the employees, to the appropriate Board (contemplated in the Act) as security for the payment of the amount withdrawn. Secondly, the policyholder should apply to the Provident Fund Commissioner for payment of insurance premium each time the premium falls due. Thirdly, no permission for payment of premium out of provident fund will be granted, unless there is sufficient amount lying to a worker's credit to warrant payment of premium for full three years. Alternatively, the Commissioner should be satisfied that the policy would be kept in force for full three years by payment of premia from the private resources of the worker.

Insurers have felt that the last two of the above conditions are unnecessary and irksome. They have urged the Government to modify the Scheme so as to provide that premiums in respect of policies of employees assigned to the Board should be paid by the Commissioner direct to the insured. Since the Commissioner will have a list of insurance policies of the employees which are assigned to the Board and also information relating to the amount of provident fund contributions of the employees, he will be able to pay the premiums for which notices will be periodically sent to him by insurance companies. Such a procedure, according to insurers, will ensure the continuation of life assurance protection to employees. It would avoid the risk of policies lapsing for want of prompt payments, which might occur if the employees failed, at any time, to apply to the Commissioner for permission for payment of premium.

Government's Views

It would appear that the Government is unwilling to accept the insurers' suggestions for the modification of the Scheme. The Government's view seems to be that any relaxation of the present restrictions would take away the incentive of the workers to save and pay for their life policies. The Government is not averse to the conversion of provident fund amounts to premia for policies. But, if the worker could himself save for payment of premium, he should be encouraged to do so. Such additional savings are more likely to take place if the worker is made to apply to the Commissioner each time the premium falls due. The Government's view is certainly well-intentioned, in the sense that it prevents the depletion of provident fund and also compels the worker to save money for the payment of premium. But it might conceivably mean some harm to workers. If the worker fails on a certain occasion to apply to the Commissioner for permission to pay the premium out of the provident fund in the belief that he will be able to save the money himself, and is prevented from paying it through unforeseen circumstances, his policy will lapse.

Three-year Restriction

The last condition, namely, the restriction that no payment of premium will be allowed, unless there is sufficient amount lying to the credit of the worker to warrant payment of premium for full three years, or the Commissioner is satisfied that the policy will be kept in force for full three years from the private resources of the worker, has also come in for some criticism at the hands of insurers. They point out that, since the Scheme came into force only at the end of 1952, no worker will have sufficient amount to his credit to warrant payment of premia for full three years. It will also be difficult for a worker to produce proof that his private resources are adequate to pay premia for full three years. Presumably, the Government's view is that this restriction is necessary, for it will enable the Board, in the event of a worker ceasing to contribute to the provident fund, to make a policy paid-up; in many insurance companies, a policy can be converted into a paid-up one, only on payment of premium for three years. From this point of view, the Government is certainly justified in insisting that either the worker should have resources enough to pay the premiums over a three-year period or that the provident fund account should be large enough to pay premiums for a three-year period.

INSURANCE DEPARTMENT IN 1953-54

A review of the working of the Department of Insurance of the Government of India, during the years 1953-54, is given in the report of the Finance Ministry for the year, just published. During the year under review, 20 public limited companies carrying on life insurance business in India submitted schemes for reconstruction of their capital structures. It may be mentioned, in this connection, that section 6B(1) of the Insurance Act lays down that the capital of a company should consist only of ordinary shares, having a single face value, while section 6B(1) states that companies, which do not conform to section 6B(1), should submit a suitable capital reconstruction scheme to the Controller of Insurance after obtaining the approval of their shareholders. Out of the 20 capital reconstruction schemes submitted by the companies, the Government sanctioned 12 schemes with necessary modifications; the remaining schemes are still under the consideration of Government. Eight schemes, which were under consideration at the end of the previous year, were also sanctioned during the year under review. In respect of the schemes sanctioned during the year, the shareholders of three companies, it is stated, have preferred appeals to the High Court. Section 6B(2) of the Act, it may be noted, provides that any shareholder or other person aggrieved by the decision of the officer sanctioning a scheme of capital reconstruction may, within 90 days of the order sanctioning the scheme, prefer an appeal to the High Court within whose jurisdiction the registered office of the company is situated.

Eight companies were, as on the date of the report, under the management of administrators. All the administrators act under the directions and control of the Controller of Insurance. Consolidation of investments and curtailment of expenses were actively pursued in all cases. Civil and criminal cases, it is stated, have been filed against the past managements of five companies. In three instances, the alleged accused were committed to sessions.

During the year under review, the Life Executive Committee of the Insurance Association of India held three meetings, and the General Executive Committee of the Association four meetings. These committees have evolved two Codes of Conduct to be observed by the life and general insurers, respectively. Since it appeared that the general insurance side warranted greater vigilance, an administrative machinery, which was set up during the year, started functioning with effect from July, 1953. To start with, the machinery has set itself the task of screening the field organisation of the insurers, to weed out dummy appointments which enable insurers to pay excessive commission and illegal rebates.

CREDIT INSURANCE IN U.K.

The U.K. Government provides, as is well known, insurance cover against major risks of export trade through its Export Credits Guarantee Department. In recent years, the Department was unwilling to insure the risk of selling to East European countries such as Poland, Hungary, Bulgaria, Rumania, Czechoslovakia and East Germany, unless payment was assured by a confirmed irrevocable letter of credit. The Department has relaxed these restrictions. It is now prepared to cover exports settled by a credit of up to 90 days. The Department, however, stipulates that it may require an unconditional guarantee, by the appropriate central bank, of payment in sterling at the due date. The Department is also resuming insurance cover on exports to Persia. It will be remembered that facilities for insurance on exports to Persia were withdrawn in September, 1951, in view of the general disorganisation of British trade with that country following the ending of oil shipments from Abadan. These relaxations presumably stem from a more hopeful view which the Government takes of possibilities of trade with East European countries and Persia.

CO-OPERATIVE INSURANCE IN U.P.

In order to meet the life assurance needs of the rural population, the 30,000 co-operative societies in Uttar Pradesh will, it is stated, launch a life assurance scheme designed to provide life policies for less than Rs. 1,000. The State Co-operative Development Federation is at present negotiating with the Controller of Insurance to start a co-operative insurance company. The Federation has asked the Planning Commission and the State Government to allot Rs. 2 lakhs and Rs. 1 lakh, respectively, in order to enable it to implement its insurance scheme.

PROVINCIAL INSURANCE CO., LTD., U.K.

Readers will recall that, while reviewing the history of the Provincial Insurance Co., Ltd., U.K., in *Commerce* dated 20th February, 1954, it was stated: "From £5,107 in 1925, the premium income has grown to over a million and a half pounds." We are now informed by the Company that the latter figure relates to an earlier period and does not represent the position as it stands today. The Company's premium income now is nearly £5 million and the Company's assets exceed £8 million.

HONGKONG AND SHANGHAI BANKING CORPORATION

SATISFACTORY RESULTS IN SPITE OF DIFFICULT TRADING CONDITIONS

THE HON. C. BLAKER SURVEYS SOUTH-EAST ASIA'S ECONOMIC NEEDS

THE latest Ordinary Annual General Meeting of the Hongkong and Shanghai Banking Corporation was held in Hong Kong on 5th March, 1954. In the course of the customary statement to the shareholders of the Corporation, the Hon. C. Blaker, M.C., E.D., the Chairman referred to the immense economic needs of South-East Asia and drew the attention of the powers-that-be of this region to the need for a favourable climate for capital investment without which there could be no satisfactory progress of industrialisation in this area. He said that the requisite climate could, to some extent, be created by Governments which had it in their power to make conditions attractive for investors. The climate was, however, determined to a large extent by the stability, or lack of stability, of the political and economic structure of a country. He also sounded a note of warning to the effect that, where climate was unfavourable, the injection of capital on a large scale might be "indigestible, or even damaging to that country's ultimate good."

Opening the proceedings of the meeting, the Hon. Mr. Blaker said:

"LADIES AND GENTLEMEN,

"In the past, the whole of the Chairman's annual survey of events in the East was read by the occupant of this chair. This year, however, we have decided to modify the procedure and to distribute copies of the statement at the meeting, as we feel that you will find it more convenient to have the written text in your hands than to listen to it being read out to you. In making this change we are to a certain extent following the procedure adopted by many other banks and well-known companies who now issue their statements in printed form and only deal with routine matters on the actual day of the meeting. We hope that you will approve of the innovation.

"I will now proceed with my formal duties and will call upon the Chief Manager to read the notice convening the meeting."

The notice convening the meeting having been read by the Chief Manager, the Hon. Michael W. Turner, and the Auditors' report by a representative of the auditors, the Chairman continued:

"The net profit for the year amounts to $17,294,235 which is some $27,000 less than last year. As in previous years, this profit has been arrived at after providing for taxation and after making transfers to inner reserves, out of which provision has been made for all known bad and doubtful debts and contingencies. The balance of profit brought forward from last year is $9,489,174 and the total available for appropriation accordingly amounts to $26,783,409. In view of the expenditure which has been incurred during the year on new banking premises, it is proposed that a sum of $4 million should be appropriated to write down bank premises, and, after allowing for this amount and the interim dividend of £2 per share, it is recommended that the final dividend should again be £3 per share, leaving a balance of $9,859,542 to be carried forward to next year. As in the case of other organisations with interests in China, the cost of maintaining our offices there and of complying with the requirements of the Chinese authorities has been a considerable drain on the year's profits and this and other factors have been taken into consideration by your Directors in recommending an unchanged dividend for the past year.

Balance-sheet

"A comparison of the balance-sheet with that of the previous year shows that the totals of our assets and liabilities have remained virtually unchanged.

"On the liabilities side, the amount of Hong Kong currency notes in circulation has remained unaltered throughout the year. Current, deposit and other accounts show a relatively small decrease of some $3 million and acceptances on behalf of customers a fall of just over $2 million. Various factors have contributed to these small decreases which are in general due to the continuation of less active trading conditions.

"The principal change in our assets has been a decrease of just over $54 million in advances. This decrease arises mainly as a result of the low prices for primary products which have continued throughout the year, but it also reflects the general slowing down of trade in the territories in which we operate. This decrease in trade is further demonstrated by a drop of over $31 million in our trade bills which, however, is offset by a rise of $37 million in our holdings of Government Treasury Bills, resulting in the figure for bills receivable in the balance-sheet showing a net increase of some $6 million. The increase in money at call, in cash in hand and in balances with other banks reflects the funds which have become available as a result of the repayment of advances during the year. In this connection, it is interesting to note that the ratio of the Bank's readily realisable assets—that is cash, money at call, Government Treasury Bills and trade bills—to the total liabilities to customers now stands at a figure of 65 per cent., which indicates a high and very satisfactory degree of liquidity.

"Difficult trading conditions have prevailed throughout the year in the territories in which we are interested and under the circumstances our results can be regarded as satisfactory, but the outlook, at present, shows little signs of improvement. Your Directors, therefore, feel that they are justified in continuing to pursue a cautious financial policy and that, in the interests of all, their first concern must be the security and strength of the Bank.

"Before I formally propose the adoption of the report and accounts I would like to say how much I appreciate the honour of serving as your Chairman in succession to Sir Arthur Morse, who, as you know, held this post from the time when our head office was transferred to London in the war until he retired on 3rd March, 1953. He also held the more arduous one of Chief Manager. I am glad that only the lighter part of his duties has devolved upon me and that I have had at my elbow the vigorous and keenly perceptive personality of our new Chief Manager, Mr. Michael W. Turner, who has throughout the past year handled with great ability the many problems with which he has had to deal.

"I must also take this opportunity of thanking the Bank staff as a whole and especially our branch managers, for the effective way in which they have worked for the interests of the Bank in the past year.

Properties in China

"Shareholders will, no doubt, want to know what is the position with regard to our offices and valuable properties in China and how our foreign personnel are faring. The latter are well and living conditions are reasonably good, but I am sorry to say that we have not yet been able to complete the closure of our offices which, as you know, we have been trying to liquidate for considerably more than a year. Some progress has, however, been made in Peking where we have sold our office building, and also in Swatow and we hope that our Swatow Agent will be repatriated in the near future. As to the main problem, we have made proposals direct to the local authorities, working in concert with the other British banks, and Her Majesty's *Chargé d'Affaires* has made representations to the Chinese Government on our behalf. In order to get a speedy and overall settlement we have offered concessions involving very considerable sacrifices, but negotiations have proved difficult and progress has been painfully slow. However, so far as we are concerned, the Chinese have nothing to gain by prolonging our complete liquidation and we are, therefore, hopeful that progress will be accelerated in the near future. Mr. Yoxall, our Shanghai Manager, is acting on our behalf in the negotiations proceeding there. He has our full support and confidence.

"Various changes in our London Committee must be mentioned next. Sir Arthur Morse joined the Committee on 3rd September, 1953 and became Chairman on 1st January, 1954, in succession to Mr. S. A. Gray who has done us good service in that capacity since July, 1948 and is now fully occupied with the increasingly onerous work of Senior London Manager. Mr. Gray, however, remains on the Committee. Mr. C. A. Campbell retired from the Committee—on which he had served since the days of Sir Newton Stabb—on 30th June, 1953, and we are very grateful to him for his valuable services over such a long period of time. He was succeeded by Mr. J. A. F. Binny, a Director of the Westminster Bank.

"There are also changes in the Board of Directors, but I will not comment on these at this moment, as they will be dealt with as the next item on the agenda.

"On 1st September, we opened our new office in Paris, at No. 22, Place Vendôme, but our Lyons office has not yet been finally wound up. On 3rd October, we also opened a new building at Osaka where previously we had operated from a small rented office, and, on 2nd January of this year, we opened a new building at Mongkok on the Kowloon side of the harbour.

"That I think, covers all the matters which I should bring to your attention, so I now beg to propose the adoption of the report and accounts as presented. After the proposal has been seconded I shall be pleased to answer to the best of my ability any questions which shareholders may wish to ask."

The resolution having been seconded, the report and accounts were adopted.

Chairman's Statement

The following is the Chairman's statement circulated at the meeting:

"No survey of the year 1953—not even an Eastern Bank Chairman's review of events in East Asia would be complete without mention of the memorable occasion of the Coronation of Her Majesty Queen Elizabeth which was celebrated in an unparalleled way by all British subjects and by very many local residents of all nationalities here in Hong Kong, as well as in every other town, where we have active agencies. There have been frequent expressions of loyalty to our Royal Family in the past, but never before have such widespread and genuine demonstrations of popular affection for the Monarch been shown by the British peoples throughout the world as were displayed last year on Coronation Day.

"Although Coronation year did not, unfortunately, bring with it any noticeable abatement of the world-wide cold war, it did eventually see the cessation of open hostilities in Korea and the inception of an optimistic feeling that an improvement of the world political situation would gradually develop as the Korean problem became less menacing. In any case, we can fairly claim that British influence in the Far East and in the countries of South-East Asia has gained in prestige. Moreover, although last year trade has again fallen off somewhat, national development programmes have everywhere in the East made progress and the way in which many of the countries in this area have co-operated in the interchange of ideas and of technical assistance will, undoubtedly, prove to be a matter of considerable importance and give greater cohesion when more stable conditions permit greater economic activity in this uneasy sector of the world.

South-East Asia's Economic Needs

"In each of the past four years, my predecessor, Sir Arthur Morse, in his annual statement referred in one connection or another to the immense economic needs of the countries in which we operate. Their requirements were, he stated, higher standards of living, more extensive food and other agricultural production and, indeed, general development, such as the Colombo Plan prescribed, and which in most of these countries is gradually being put into effect through national development plans. These plans have, as is well known, stressed the importance of agriculture, together with basic economic progress, such as the expansion of power, of transport and of communication systems. The latter are prerequisites for coping with any large-scale output of agricultural products, minerals and the primary materials which these countries provide. Last year, Sir Arthur referred to many aspects of this same problem and quoted an important phrase of the Paley Commission relating to the needs of a higher standard of living in the free world. In stating his view, that the Governments of the East should necessarily play their part, he urged that 'no attempt should be made to introduce industrialisation on a rapid or large scale' as 'it would be far wiser to concentrate all available capital and energies on food and agricultural production and on those ancillary industries which depend upon the raw materials available in the country concerned.' It was surprising to us to find that in a recent book which received considerable notice in the Press, the first part of this quotation was picked out and used in isolation from the second part to support a dogmatic assertion that 'already voices are being raised in the City against full-scale development in South-East Asia.' This is surely a misrepresentation of the City's attitude to the needs of South-East Asia just as it is of ours. Sir Arthur was, of course, dealing with immediate and short-term plans, not with more distant developments when opportunities for large-scale industrialisation may well arise.

"What was said last year seems perfectly in line with the plans of all countries in South-East Asia. The Colombo Plan, in which most of these countries are partners, from its start emphasised the basic economic needs of the underdeveloped countries. It stated that 'the central problem has been and still is the supply of food' and that 'related to the problem of food is that of transport.' Next came other basic industrial activities, particularly electric power.

"Other authorities can be quoted. For instance, the Director General of the International Labour Organisation, in a recent report stated that industrialisation in its wider sense would largely come to East Asia in the second stage of economic development. In the first stage, he said, development planning had little choice but to concentrate primarily on expansion of food production and on the development of basic resources, such as power and transport.

Investment Climate

"It is obvious that in the second stage of development when a wider form of industrial progress will be introduced, capital will be the paramount requirement but as the President of the International Bank pointed out last September, 'the availability of capital cannot by itself be expected to remove some of the most important obstacles to economic growth.' Such obstacles are often referred to as the 'unfavourable climate', which deters or scares off capital investment. Climate in this sense can to some extent be manufactured by Governments, who have it in their power to make conditions attractive for investors. But to a large extent it is determined by the stability, or lack of stability, of the political and economic structure of a country. Where climate is unfavourable the injection of capital on a large scale (if it proves possible as a result of international action) may be indigestible, or even damaging to that country's ultimate good.

Private Capital

"As regards private capital, tendencies in certain Eastern countries show a reluctance to permit its introduction by foreign concerns acting independently, but encourage or even obligate joint participation between foreign and domestic capital in new industrial projects. Examples of this can be seen notably in India, Japan and Burma, but also elsewhere. Where Governments favour widespread nationalisation of industries there is, of course, no stimulant to foreign investment. In many countries, and particularly in India, much thought is being given to ways of mobilising larger accumulations of domestic capital through savings, without which development plans will be handicapped. This is important because of the comparatively small amount of foreign capital which is finding its way to South-East Asia. However, the low standard of living is an obvious handicap and improvement in the quantity of savings can hardly be great until more general prosperity reduces the overwhelming poverty. But prosperity in the East is circumscribed by the exasperating problems of the wide fluctuations of prices of foodstuffs and of the raw materials produced in those areas.

Prices

"There are few people interested in world trade who are not aware of the fact that economic progress in the East cannot proceed steadily without steady prices for its main primary commodities. An advisory committee on underdeveloped areas, in a report to the Director of the United States Mutual Security Administration last May, rightly stated that the objective should be 'not rigidity of prices or demand, but an ironing out of wide fluctuations.' But one step further is desirable: that these countries should be able to obtain their essential imports both of food and of consumer goods at prices reasonably in relation to the prices of their exports.

Hong Kong-China Trade

"So far we have dealt in general terms with a problem which not only affects the East but also is a world-wide one. However, it has very special application to present trends and developments in the countries where we have offices. We must next direct attention to these countries severally and to some of the problems which face British bankers and merchants who operate there.

"First of all, we propose to take Hong Kong and the vexed problem of trade with China. The facts about what is loosely termed 'East-West trade' are well known to shareholders of The Hongkong and Shanghai Banking Corporation, but others are not so well informed. During the past year, fantastic complaints have been heard about alleged British perfidy in trading with China. A great deal of this talk has been based on uninformed or misinformed premises. There are those who either do not know or who ignore the fact that, quite apart from the United Nations embargo on strategic goods, the British and United States Governments have agreed that there is nothing injurious to the allied cause in East-West trade being conducted in non-strategic commodities. This applies both in regard to trade with the Soviet bloc and with China. Sir Roger Makins, H.M. Ambassador at Washington, mentioned this understanding in a speech delivered at Los Angeles on 5th October last. I may say that Sir Roger did not omit to refer to Hong Kong's special position and to its needs. Our Governor here in Hong Kong has also spoken emphatically and made the position of the Colony crystal clear, particularly in a speech last November. Moreover, the prominent American official, Mr. Harold E. Stassen, Director of the Foreign Operations Administration, has taken up the cudgels on behalf of East-West trade in non-strategic goods on more than one occasion.

"Hong Kong has suffered more from the United Nations embargo than any other country in the world. But her trading difficulties are not due to the embargo alone. They have also been caused by restrictions on obtaining certain materials imposed by the United States and by import controls enforced by some of our neighbouring countries. However, most of the difficulties with the United States have now been cleared up, thanks to the excellent co-operation of American officials stationed in Hong Kong, and from time to time there has been some relaxation of the controls imposed by our neighbours. But the United Nations embargo still remains in force.

"During the past months, Foreign Office spokesmen have reiterated that the policy of H.M. Government is to encourage trade with China in all permitted goods. British firms have never deviated from their desire to sell more of such goods to China. They have been, and are still willing to negotiate details here in Hong Kong, in the United Kingdom, in Peking, in Shanghai or wherever is most suitable to prospective Chinese customers. But the prevailing political tension is a serious handicap.

"Official Chinese pronouncements have stressed the desire of the Chinese People's Government to develop international economic relations under peaceful conditions with any country irrespective of divergent political, social and economic systems. Naturally, we look forward to trade relations on normal lines as thus projected, but, unfortunately, until a political settlement is reached in regard to Korea, and the matter of 'recognition' of diplomatic representatives is settled, it is hardly practical to expect the establishment of commercial relations on a basis satisfactory to both sides. The Geneva Conference to be held next month will, we hope, set the stage for bringing diplomatic, commercial and financial relations between our two countries back on to a regular basis, but it would be unwise to expect rapid developments. The Chinese Minister of Foreign Trade, in a recent speech to some British merchants, mentioned the importance of 'normal conditions.' Let us hope that before long both parties will agree on the interpretation of these two words.

"It is a moot question as to what scope there is for the expansion of trade with China. Differing views are held, but we must not do any wishful thinking: a great deal depends on unforeseeable factors and future trends in international affairs. It is, however, obvious that when the embargo has been removed there should be a considerable increase in trade and no doubt there will be keen competition amongst business men of all nationalities.

China's Development Plan

"From this point of view a very interesting step was taken during the past year in the announcement by the Chinese Government that a Five-year Development Plan was being launched. Actual details have not been published, but it seems clear that the greatest importance is attached to the expansion of heavy industries and the most important industrial development, it seems, will continue to be concentrated in the North and North-East provinces. It was also announced last September that Soviet aid would play a 'key role' in the case of 141 important industries. A further point, which, in the past at any rate would have been of interest to British investors, is the rapid progress being made with railway construction, particularly across the Szechuan Province and in North-West China in the general direction of the Russian Turkestan-Siberian Railway. To subsidise the new industrial plan an issue of the equivalent of £95 million of Economic Construction Bonds at 5 per cent. is now being raised throughout the country under a quota system. Much more could be said about China, but reliable information is scarce; so I will revert to the subject of Hong Kong.

Hong Kong

"This is a suitable moment to express our gratification that Sir Alexander Grantham's term of office as Governor of Hong Kong has been extended to July, 1955. We were pleased when Sir Alexander's term was previously extended to July, 1954, and we are now doubly pleased at this further extension because the whole community has the utmost confidence in His Excellency and knows that he will support the Colony's best interests whether commercial, social or political, to the fullest extent of his great abilities.

"Hong Kong has so often been the target of attack by certain individuals that last November we especially welcomed the visit of Vice-President Richard Nixon and we wish to place on record here the very friendly attitude which he took in his speeches and interviews. It is good to know that there are not a few influential persons in the United States who understand our problems and realise the importance of our maintaining our position.

"Last year was a quiet one for the Colony, but it cannot be said that it was a satisfactory one from all points of view, although considering the handicaps imposed by the embargo and other difficulties about which I have already commented, things proved better than many expected. Imports, which increased 2 per cent. amounted to the equivalent of about £242 million. Exports decreased 6 per cent. and were about £171 million.

"As compared with 1952, there was only a very small drop in the recorded tonnage of commercial cargoes discharged and loaded in the port, while shipping tonnage entered and cleared actually increased more than 2½ million tons. It is significant that this was largely due to the increase in Japanese ships from 56, which entered in 1952, to 359 in 1953. However, we must not forget that 2,620 British ships of nearly 5½ million tons entered Hong Kong in the same year.

"I will not discuss the details of the trade of the year, but I will remind you that our prosperity is largely tied up with the prosperity of the surrounding countries and if—say Indonesia and Thailand—are forced to restrict imports for balance of payments reasons as they were during the past year, then there will inevitably be adverse reactions on neighbouring countries such as Hong Kong. The causes of such restrictions are well known, but they are often not easy to eliminate: they arise from low prices of basic commodities, high defence expenditures and administrative weaknesses. However, apart from the disappointments caused by the above mentioned restrictions and the big handicap relating to China, Hong Kong has no reason to be unduly depressed. Although much more trade was done with China in 1950 than in 1953 yet, excluding China, the 1953 trade figures were slightly better than 1950 when trade seemed prosperous and many Hong Kong records were broken. The exports of locally manufactured goods, taking the year 1953 as a whole, improved no less than 31 per cent. over 1952 and textile exports were two-thirds of the whole. Electricity production has continued on the up grade. The building industry and property transactions have been buoyant and there has been great activity on the Stock Exchange. On balance, additional capital appears to have come into the Colony and bank deposits have increased. No doubt owners of such funds only await the pro-

pitious moment when they can profitably employ them in trade or industrial operations.

Hong Kong's Finances

"This statement was prepared before the Budget Meeting of the Legislative Council which took place on 3rd March; so it was not possible to take account of the Financial Secretary's speech in presenting his Estimates of Revenue and Expenditure for the year ending 31st March, 1955. However, knowing what a conservative policy is followed by every Financial Secretary in this Colony, I am sure he has every intention of keeping us on a safe and steady course. But expenditures are mounting. We cannot afford to have any more fires of the magnitude of that at Shek Kip Mei which, I believe, cost the Colony nearly £1 million, and Mr. Clarke must be worried about the heavy disbursements which the Colony has ahead in connection with already approved Public Works and the badly needed enlargement of Kai Tak Airport. Our Medical and Educational Departments (including particularly the University) bring heavy recurrent expenditures which, as the Financial Secretary hinted last year, may have to be given a limit if we want to avoid increased taxation.

"Two matters which directly affect Hong Hong's status as one of the important cities in the world are the airport and the resettlement of squatters or refugees. The need for an airport suitable for the landing of 'Comets' and other large modern commercial aircraft is indisputable and we hope that a final decision will soon be taken to proceed with a suitable scheme as quickly as possible. We must not forget that H.M. Government have offered us an interest-free loan of £3 million for this purpose.

"As regards squatters, the Governor's views on the importance of this matter are well-known. No one can question the fact that the Government have done exceedingly well in the way they have tackled the problem and it was pleasing that Vice-President Nixon made special reference to the 'far-sighted, humanitarian and generous' way the squatter situation had been faced in Hong Kong. Refugees and others, such as those living in squalid and overcrowded tenements, are also a vast problem. These classes are estimated to number at least 100,000 families and the Government aim at resettling these large numbers in low-cost flats in permanent multi-storied apartments. Some progress is being made, but only the fringe of the problem has so far been touched.

"In a small way, we are ourselves attempting to ease the housing problem by building forty small flats for the Chinese employed in our head office. This is a tentative experimental idea which we shall have to watch carefully.

Anglo-Japanese Agreement

"The Anglo-Japanese Payments Agreement has proved a controversial subject ever since its signature at the end of January. One important and somewhat obscure factor at the moment is to what extent Japanese cotton goods will be able to compete in price with Lancashire goods in the Colonial territories and their entrepot markets. Hong Kong and Singapore's internal markets are not likely to be much affected. The entrepot trade as a whole is another matter and it is possible that there will be Japanese competition with Hong Kong export products, although Japanese cotton goods should not seriously compete with the Hong Kong industry. However, there may well be benefits to be gained, if Hong Kong and Singapore are used as marketing centres for a great variety of Japanese goods. The number of registered factories of all kinds in Hong Kong continues to increase and interesting developments are taking place. There are signs that new investors are realising that, in spite of occasional checks, there is still scope for the employment of capital in light manufacturing projects. There is ample labour in Hong Kong and there has been practically no labour trouble throughout the past year.

Japan

"Having just referred to the Anglo-Japanese Payments Agreement it seems apt to turn next to a consideration of affairs in Japan during the past year. The Payments Agreement was warmly welcomed in Japan as a definite help towards checking the serious sterling trade imbalance of nearly £109 million in 1953 and towards assisting the very difficult trading situation with which the country is faced. But Japanese business men are aware that their country's main problem is still by no means solved. The Government Economic White Paper published last July and a further one issued in November faced the facts squarely when it was acknowledged that owing to the trade gap the Japanese economy could not maintain itself on its present basis without United States special procurement orders, which last year provided over U.S. $785 million. As a result, strenuous efforts are now being made to keep the 1954-55 budget under rigid control and a movement for retrenchment is well under way. At first, demands were such as to bring the budget up to the equivalent of £2,000 million, but latest reports are that it is being debated at a level just under £1,000 million.

"The need for strong action to cope with the inflationary situation is shown by statistical figures indicating gradual rises, for instance in bank advances, the note issue, cost of living and price levels, as well as an increase in production figures. Moreover, the Chief of the World Bank Survey Mission to Japan, on leaving Tokyo on 19th December, issued a statement which neatly hammered home the following points: that inflation was one of Japan's most serious problems and required immediate solution by resolute action: that official plans to maintain a balanced budget and to correct the overloan situation deserved applause: that there was a great need for capital investment, but particularly for an increase in the volume of domestic savings: that an increase in the food supply was a basic problem and that support for agricultural development merited at least as much attention as industrial modernisation.

"Japanese difficulties deserve serious consideration. Japan has a population of some 88 million people in a country restricted since the war to an area half as big as the United Kingdom with only 17 per cent. of the land arable. It would be impolitic not to try and ease their problems in the way the extended Payments Agreement has done and from the British point of view it is surely wiser to expand than to contract sterling area trade.

Indonesia

"Indonesia is another country which is, I am afraid, also suffering from economic maladies but of rather a different kind. Her Government, like Japan's, is struggling to put the financial house in order, but her considerable adverse balance of trade has no compensating windfall. Moreover, Idonesia, being a new State, has far more serious internal problems and her people have not yet developed a strong sense of discipline, as is shown by the widespread disorders in the interior and the unsettled labour conditions. Then again, Indonesia's economy is predominantly agricultural with important oil resources and mineral deposits. The country's potential wealth is immense but to exploit this properly much administrative skill and experience is needed. These are well-known facts. Many of them were enlarged upon in a recent report by the President of the Java Bank who is now Governor of the newly formed Bank Indonesia, which replaced the former bank on 1st July, 1953 as the central bank of the country. The Governor particularly drew attention to the dangers of the large deficit in the budget which for 1953 was estimated to be Rupiahs 1,800 million (£56 million). He called for economies and a recognition of the realities of the situation. By increasing the margin required from all importers from 40 per cent. to 75 per cent. it was hoped to check inflation and cut down imports, but, unfortunately, the final deficit in the budget account appears to have been higher than was anticipated and the adverse trade balance will also be serious. The Bank Governor recently stated that on 3rd February the Bank still held cover of gold and foreign exchange equivalent to 24 per cent. of its demand liabilities—a somewhat small margin above the statutory minimum of 20 per cent.—and that in the past six months the cover had fallen over 11 per cent. He urged corrective action by increasing production, by stricter import controls as well as by measures to prevent exchange losses through the export inducement schemes.

"While the Indonesian Government are thus preoccupied with their serious financial problems, it is hardly likely that the import trade from neighbouring countries will improve, but their desire to increase this trade was shown in the preliminary discussions which the Singapore Director of Commerce and Industry recently held in Djakarta with senior Indonesian officials.

Indo-China

"Like Indonesia, Indo-China is another country containing great natural wealth, but suffering from internal troubles which in this case have been much to the fore in world discussions during the past year. Let us hope that the Geneva Conference will bring a solution of the deadlock which has already lasted some eight years. Indo-China is a vital point in the strategic situation in South-East Asia and the United States Government have thrown in an immense amount of aid, not only in the form of warlike materials but also in connection with road-building, waterways, airfields, port facilities and for technical training. Some of these things may outlast the present conflict, but, at the same time, 70 per cent. of the revenue of the country is being earmarked for war expenditure to the detriment of its economy.

"The sudden devaluation of the piastre by the French Government last May from 17 to 10 francs, caused much resentment in official circles of the three States, but this was perhaps counterbalanced in the following month by the offer of more or less complete autonomy within the French Union. The export trade naturally benefited by the lower rate of exchange and rubber and coal exports have increased. On the other hand, there has been a serious fall in the general purchasing power of the people owing to the fact that wages have not increased proportionately to the prices of consumer goods. Yet there is little doubt that, if political troubles subsided, there would soon be a rapid trade recovery in this country.

The Philippines

"If we next move in an easterly direction, we shall find ourselves once again in a more stable locality. The Philippines is a country which is dependent on agriculture for considerably more than half its gross national production and for some 80 per cent. of its export earnings. It is, therefore, very satisfactory and hardly surprising that a man who knows the agricultural scene and whose reputation for probity is high should have been elected President of the Philippine Republic last year. President Magsaysay has, however, set himself an ambitious target in the very inspiring programme which he revealed in his address at the opening of Congress on 25th January. The programme is far too long to quote, but its theme was to help and encourage farmers, to put into effect a co-ordinated plan of economic development, to straighten out the finances and to secure a Government of integrity and efficiency. All who are concerned with the progress of this fertile country will watch with interest and sympathy the steps taken by the President to carry out this great task. The election result has been called the greatest victory against communism so far seen in Asia. If the President can accomplish his programme, or the major part of it, this bold assertion may prove to be literally true.

"One of the first steps of the new Government was to introduce proposals covering a five-year programme for the rice industry with a view to ensuring reduced prices and adequate output to feed the nation. Already, in fact, a great deal has been done in this direction by the American Foreign Operations Administration and indeed rice supplies adequate for internal needs were produced in 1953.

"During the past year, the Philippine Administration made representations to the United States Government for the revision of the Bell Trade Act which will, otherwise, come into force on 4th July next, and a special Executive Committee has been set up in Washington to examine certain detailed proposals submitted by the Philippine Government. An important one relates to the currency question which the Philippines claim the right to control and administer, including also the determination of the rate of exchange. However, decisions as to this and the other proposals made to the United States Government seem unlikely to be reached in the immediate future.

"As regards trade, the final figures are not available, but it seems likely that the adverse balance will be at least Pesos 100 million (£18 million) less than in 1952 when it was around Pesos 147 million (£26 million). Export figures are likely to be Pesos 90 million (£16 million) higher owing to an improvement in some of the leading exports such as sugar, copra and timber. Sugar exports were only 35,000 tons short of the United States quota of 952,000 tons.

"The National Budget for the fiscal year ending 30th June, 1955, shows a very small surplus which it is hoped will be attained by increased income as a result of strict supervision over tax collections. There is a General fund deficit of Pesos 304 million (£54 million) which President Magsaysay hopes to liquidate by setting aside an annual amortisation.

Malaya

"We now move down the South China Sea to Malaya which cannot look back on 1953 with much regret at its passing, largely because the lingering slump in rubber and tin prices gradually spread gloom through a large section of the country. I will refer to these particular problems later. However, the emergency situation certainly improved. The personality and inspiration of General Sir Gerald Templer has been felt throughout the whole territory and has brought definite progress in the operational field. It is not surprising that there should be widespread regret at General Templer's forthcoming departure on promotion to an even more important assignment. But it is reassuring to know that the Templer plan of campaign has been thoroughly tried out and has already shown excellent results. It only remains for his successors to press onward with determination, perseverance and energy to a successful conclusion of the campaign. This will surely come, but it will come quickly only if the peoples of Malaya give full-hearted co-operation.

"In speaking of General Templer's campaign I do not refer to the field operations alone, where his success has been most pronounced, but also to the activities aimed at obtaining the support of the 'hearts and minds' of the people, where progress is slower but is sure. Then there is the political arena in which the High Commissioner has had to face troublesome problems of a very different nature needing careful and statesmanlike handling. The overriding problem has been that of attempting to fuse the various peoples of Malaya into a Malayan nation end of ensuring that the framework of the future State is based on sound foundations and that its structure will be built on realistic and efficient lines. General Templer himself pointed out the importance of the various steps which must, he said, be taken to ensure that 'self-government is not a substitute for good government'. Citizenship, elections, civic and administrative responsibilities—these are stages each of which needs time for digestion: otherwise, stability will be endangered and the interests of the new country will suffer in the way we can see others around us are suffering at the present time. I need hardly stress how important that word 'stability' is, from whatever angle you may consider it. These political problems mainly affect the Federation and will soon be the burden of Sir Donald MacGillivray who will have the support and good wishes of all who have at heart the future well-being of Malaya.

Singapore

"Singapore is, of course, directly concerned with the outcome of the political developments in the Federation and the Colony can confidently rely on the Governor, Sir John Nicoll, to see that their interests are fully safeguarded. Two bodies have been exploring important matters relating to the future of the Colony. The one is a Joint Co-ordination Committee set up under the chairmanship of Mr. Malcolm MacDonald who, we are glad to know, will be staying in his present post of Commissioner General for South-East Asia at least until the end of this year. The other is a Commission under Sir George Rendel which has been considering the question of Singapore's constitution and has just issued its report. We all realise that much depends on the outcome of these deliberations. Constitutional and other relations between the Federation and Singapore must come up for reconsideration in the near future and greater co-ordination is undoubtedly desirable.

"I must next refer to the financial condition of Singapore and the Federation. The Colony is fortunate in that the revised accounts for 1953 are expected to show a surplus of M.$33 million (£3¾ million). The budget for 1954 allows for a deficit of about the same amount, but last year the Colony felt able to give £1 million to H.M. Government and this year it has loaned M.$30 million or about £3¼ million to the Federation. Moreover, a special reserve fund of M.$100 million has been set up and a Development Fund of M.$50 million, but there still remains about M.$130 million in the general revenue balance of the Colony. The emergency has necessitated heavy expenditures by the Federation and it is only right that Singapore should bear part of the burden, but as the Governor pointed out when he announced the loan, the Colony has its own heavy commitments and in ordinary times every dollar will be needed to provide more schools, hospitals, houses and other services.

The Federation

"The Government of the Federation of Malaya, on the other hand, are less fortunate, but they started 1953 with a good revenue surplus and they have reliable friends who can come to their help. Their deficit for 1953 is expected to be about M.$146 million (£17 million) and for 1954 the estimated deficit is M.$222 million (£26 million). On the other hand, their surplus on 1st January, 1953, was M.$332 million (£39 million) a part of which was, however, not readily realisable. They raised M.$100 million by the Security Loan floated last year and H.M. Government have promised a contribution of £6 million as well as additional help, if the financial situation should deteriorate in 1954. In addition to this they have received from Singapore the 25-year loan of M.$30 million, without interest for the first 10 years, and the State of Brunei provided a loan of M.$40 million so as to ensure that the development programme was not interrupted.

"The Financial Secretary, Mr. Himsworth, in his Budget Speech showed that the Federation could get through to the end of the present financial year without increased taxation. In fact, he stated that the Government did not propose either now or in the immediate future to make any increase in the Company rate of income-tax, because it would be inflationary in an underdeveloped country, and would tend to frighten off investment capital which was what the country required more than anything else. Mr. Himsworth also announced that in order to pay for important capital development projects it was intended to raise locally a loan of M.$100 million (£11¼ million) in 1954 as well as one of about £6 million on the London market. The Financial Secretary made no bones about the need for stringent economy which we agree is certainly a matter of the very greatest importance. He further said that the main plank of Government's financial policy was 'to get rid of this deficit and to bring the budget back into balance.'

Tin and Rubber

"By the fall in the prices of tin and rubber during the year the Financial Secretary estimated that the Federation's revenue had been reduced by 20 per cent. We need not intervene in the controversy and argue as to the best way to deal with these two commodities in regard to which the specialists themselves hold such widely differing views. But from a banker's point of view, as indeed must be the case from almost any point of view, except that of the speculator, stability of prices is of the utmost importance. If the majority agree that stability can only be obtained by international agreements, then such agreements deserve the fullest support from the industries and Governments alike. The Randall Report to President Eisenhower has, unfortunately, cast cold water on commodity agreements. Yet there is strong sympathy and support, on the part of individual Americans of prominent and influential standing, for the countries so critically concerned with these problems. For instance, Vice-President Nixon, who of course could not commit his Government, showed his understanding of the fact that Malaya's prosperity and its problem of dealing with communism were both bound up with rubber and tin. He realised too that other countries were also involved in a very similar way.

"The trade of Malaya in 1953 naturally suffered from the recession in rubber and tin prices; imports dropped 16 per cent., but exports fell 23 per cent. being M.$880 million (£103 million) lower than in 1952. However, in volume, rubber and tin exports were fairly well maintained throughout the year and it is interesting to note that the Singapore Harbour Board returns for 1953 show that the net registered tonnage of vessels berthed at the wharves was a record at over 10,700,000 tons.

"The Mission to Malaya sent by the International Bank for Reconstruction and Development arrived in Singapore in January and will make recommendations regarding future economic plans and developments. For this reason, I will not refer to the important subject of the diversification of production, whether agricultural, mineral or industrial. One of the subjects with which the Mission will deal is, no doubt, that of rice in regard to which the attitude of the Government in continuing to handle the trade is giving rise to both questioning and opposition in the Federation.

North Borneo and Brunei

"After Malaya, it is natural to consider North Borneo which has often been called a land of promise, as it indeed is. But so it will remain unless some dynamic action is taken to find the labour needed to turn the Colony's promise into practical value. The State of Brunei is fortunate in having profitable oil wells in its territory and the revenue resulting from oil production will be able to finance an ambitious Five-year Plan of Development, but many problems arise when revenue is four times higher than expenditure. The loan to the Federation of Malaya of M.$40 million which was provided last November was a timely gesture to help in the struggle against communism.

Rice

"I have referred to the doubts in Malaya about Government control of rice, but when we look at Thailand and Burma it seems likely that Government monopolies of the rice export trade have come to stay. Both countries are very dependent on their large production of rice for their well-being. In the case of the former 90 per cent. of farmland is estimated to be given up to paddy and 60 per cent. in the latter. As a result of several unforeseen occurrences during the past year, a buyers' market developed and both countries found themselves considerably overstocked and, therefore, anxious about the financial outcome. One reason for this situation was a good rice crop in India which led to a decision not to enter the rice market until prices were lower. The Philippine Islands were also able to supply their own needs. Indonesia bought considerably less than in the past few years and Ceylon obtained considerable quanties from China. However, towards the end of the year Japan became short of rice owing to damage to her crops by floods and she then made contracts with both Thailand and Burma which somewhat eased the situation, and recently within the last few weeks a contract between India and Burma has at length been concluded. Total exports in 1953 are believed to have been about 1,300,000 tons from Thailand —the lowest figure for some years—and about 1 million tons from Burma. It is expected that in 1954 Thailand will have a disposable surplus of about 1,800,000 tons of rice and Burma about the same figure. Rice production is, of course, subject to wide fluctuations owing to crops being dependent on weather conditions. Prices, therefore, vary greatly from season to season and the holding of large Government stocks may at one moment seem likely to cause a serious loss and at another to be a wise policy, but the consensus of opinion outside official circles urges that Governments should relax their control over the trade and take the present opportunity of more plentiful stocks to revert to pre-war practice. This is not a simple problem and the facts need thoroughly ventilating before a decision is reached.

Thailand

"On the financial side, the future of the year for Thailand has been the drop in the free market rate of the Tical from about Ticals 45 to about Ticals 58.50 to the pound. Exchange regulations and imports were tightened up and, eventually in November, full-scale import controls were introduced: however, the adverse trade balance for 1953 is likely to be large. Sterling balances of the Bank of Thailand have fallen off during the year, but U.S. dollar balances have increased. The note issue is well covered, but the considerable deficit in the public finances which continues from year to year gives rise to anxiety. An unusual type of loan has recently been authorised whereby the Government has borrowed foreign exchange equivalent to Ticals 1,200 million (£27 million at the official rate) from the Bank of Thailand against 10-year Bonds at 3½ per cent. This is to be used for capital outlay. It is reported that requests have been made to the International Bank for a number of loans, but no new agreements have been concluded. Meantime, the United States Special Technical Economic Mission continues its activities in the country and the army and air force are being modernised with American advice and help.

Burma

"The political situation in Burma has changed little in the past year. Internal security has improved in some areas, but in others there is considerable guerilla activity not unlike the situation in Malaya; but in the case of Burma the communist affiliation seems more uncertain. The activities of the so-called Kuomintang forces unfortunately pinned down Burmese troops and so prevented their employment in the task of establishing order elsewhere. The ill-feeling aroused against the United States by the latter's connection with the matter resulted in the Burmese Government rejecting further United States aid—a loss of some U.S.$13 million to Burma. The finances of the Government show that there was a small surplus in the year 1952-53, but the budget for 1953-54 provides for a deficit of Kyats 380 million (£28½ million) to be met out of cash balances. Social welfare and economic development are again heavily emphasised and the budget deficit is regarded by the Finance Minister as an

'investment for prosterity and better standards of living.' On 3rd November, a settlement was reached of financial questions arising out of the Anglo-Burmese Treaty of 1947. H.M. Government in fact accepted £7,300,000 against a debt of £26,700,000 payable by Burma. This was 'a magnificent gesture,' as a Burmese newspaper put it.

"On Burma's National Day, the Prime Minister made an important speech on the subject of an 'Interim Economic Plan'—called 'interim' because of the expressed intention ultimately to organise all trade and industry into a socialised economy operated by the consumers and workers.

"On 1st October, the tariff preferences granted under the Ottawa Agreement of 1932 and the Indo-Burma Trade Agreement of 1941 came to an end and a new tariff came into effect. The distinguishing features are high rates on luxuries and nominal rates on essentials. Heavy imports were made prior to the introduction of the new tariff and rice shipments fell off towards the end of the year; consequently the foreign trade balance for 1953 seems likely to show a reduced surplus of exports as compared with 1952 when the surplus was about Kyats 342 million (£26 million).

"Burma has rich potentialities and grandiose plans. As their Minister of Finance has himself stated—their aims should be 'ambitious but feasible.'

India

"In regard to India, a few of the features of the year from our point of view are the following. First and foremost, there is the deplorable friction with Pakistan which has in recent months become more intense as a result of the offer of United States' aid in equipping Pakistan's military forces. Whether this additional dispute will delay the appointment of a Plebiscite Administrator for Kashmir remains to be seen. The problem is intensely involved. Secondly, there is the Five-year Plan which is undergoing some revision in order to speed up the tempo of expenditure. Already a new Five-year Plan is being discussed. However, an additional sum of Rs. 1,750 million (£131 million) is to be allocated to the original plan which is only half-way through its course. Mr. Nehru has said that the Plan is to be revised because of the question of unemployment which is increasingly serious. Indeed, this is an ever-growing problem. The continued disturbances in Calcutta seem to emphasise this and it is stated that, as the population of the country increases, additional employment is required each year for 2 million adults. The Director General of the International Labour Office has recommended that urgent steps should be taken for the expansion of rural industries and the growing of supplementary crops. Food crops were excellent last year and are estimated to have increased 11.8 per cent. above the previous year, but it will be a long time before India can grow too much food. Prices of food and the cost of living index in Calcutta, after rising in the summer, began falling towards the latter part of 1953 and ended at about the same level as the beginning of the year. One unfavourable feature is the stagnation of private capital investment in industry during the past year. In this connection, an interesting memorandum on foreign investment in India shows that foreign capital is not being encouraged for purely trading activities, but that it is in the sphere of industrial development that India is proclaiming her need for foreign investment. As I stated in an earlier paragraph, it appears that joint ventures are likely in future to meet the requirements of the present situation in India rather than direct foreign investment. In fact, such a system was recommended in the Planning Commission's original report on the first Five-year Plan.

"Discussions with Ceylon on the problem of the Tamils in that country have improved relations between the two countries and the proposed meeting in Ceylon of the Prime Ministers of a number of Asian countries appears to be a good move.

Ceylon

"One of the main events in Ceylon during the past year was the financial crisis which came to a head in July and was followed by riots and arson. The dangers of the situation had become apparent by the end of 1952 when an austerity programme was introduced and the rice ration was reduced. But this programme proved inadequate. External assets continued to fall and the trade deficit continued to grow. In July, drastic measures were introduced: the food subsidies were virtually abolished, direct taxes were increased and additional duties were levied on luxuries. At the same time, the Central Bank rate was raised from 2½ per cent. to 3 per cent. By the end of the year the adverse balance of trade had been considerably reduced as compared with 1952, but external assets had continued to fall in a way which must be causing anxiety to the Government. A change of Government took place in October when Sir John Kotelawala replaced Mr. Dudley Senanayaka as Prime Minister and Sir Oliver Goonetilleke then became Minister of Finance. Sir Oliver has realised the need to raise foreign capital to assist Ceylon's Development Plan. Feelers have been put out in London and it has been announced by the Minister that the International Bank is about to provide a loan of Rs. 104 million (£7¾ million) for a hydro-electric scheme. But despite this I may say that Ceylonisation shows no sign of diminution and trade operations with a number of countries are confined to Ceylonese nationals. However, an important and impressive speech which the Minister of Finance made at the opening of the E.C.A.F.E. Conference at Kandy on 26th January last gave indications of a possible broadening of policy to attract foreign private investment.

Notes:—1. There are contingent liabilities on bills re-discounted amounting to H.K. $8,621,492 ($5,760,936) and commitments in respect of Confirmed Credits, Guarantees and Forward Exchange Contracts.

2. Foreign Currency Balances have been converted into Hong Kong Dollars at approximately the rates ruling at 31st December, 1953. The Sterling equivalents of the figures shown in the above Balance Sheet have been converted at the rate of H.K. $1=1/5d.

MICHAEL W. TURNER, *Chief Manager.* G. O. W. STEWART, *Chief Accountant.* C. BLAKER, H. D. BENHAM, J. A. BLACKWOOD } *Directors.*

REPORT OF THE AUDITORS TO THE MEMBERS OF THE HONGKONG AND SHANGHAI BANKING CORPORATION.

We have examined the above Balance Sheet with the books of the Corporation kept in Hong Kong, with the audited accounts of the London Office and with the returns received from the other offices which have been signed by the Branch Managers. We have obtained all the information and explanations we have required and in our opinion such Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Corporation's affairs at 31st December, 1953, according to the best of our information and the explanations given to us and as shown by the books kept in Hong Kong and by the returns received from the other offices.

HONG KONG, 15th *February*, 1954. LOWE, BINGHAM & MATTHEWS, PEAT, MARWICK, MITCHELL & CO. } *Chartered Accountants, Auditors.*

PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDED 31st DECEMBER, 1953.

1952 Hong Kong Dollars			Hong Kong Dollars	1952 Hong Kong Dollars		Hong Kong Dollars
$5,163,025	Interim Dividend of £2 per Share, free of Hong Kong Corporation Profits Tax, paid 10th August, 1953, £320,000 @ 1/2-7/8		$ 5,163,025	$ 8,075,332	Balance brought forward from 31st December, 1952	$ 9,489,174
3,000,000	Appropriations recommended by the Directors: Amount to be written off Bank Premises	$ 4,000,000		17,321,405	Profit for the year, after providing for taxation on profits earned to date and after making transfers to the credit of Reserves for Contingencies, out of which Reserves provision has been made for any diminution in value of current assets	17,294,235
7,744,538	Final Dividend of £2 per Share, free of Hong Kong Corporation Profits Tax, £480,000 @ 1/2-27/32	7,760,842				
			11,760,842			
9,489,174	Balance carried forward to next year		9,859,542			
$ 25,396,737			$ 26,783,409	$ 25,396,737		$ 26,783,409

Special Administrative Expenses, including Chief Managers' emoluments, Directors' Fees and London Committee Fees amounted to H.K. $317,960 (H.K. $764,911).

ANTIMONY INDUSTRY

DEMAND FOR CONTINUANCE OF PROTECTION

THE Tariff Commission is enquiring into the question of continuance of protection and assistance to the antimony industry which is due to expire on 31st December, 1954. The industry has asked for continuance of protection until such time as domestic sources of ore are fully explored and worthwhile deposits of ore discovered. It has also asked for certain specific types of assistance, such as imposition of complete ban on imports of antimony metal for the next few years, continued Government purchases at fair selling prices, determined by the Tariff Commission every six months, and proper planning of Government indents to enable production to be regulated accordingly.

Although the industry has been enjoying protection for nearly the past seven years, it has not yet attained stability. But the industry claims that, given a further substantial period of protection, it can be expected to acquit itself creditably. The main cause for its present state of affairs is its dependence on imported ore. The cost of this ore, it is stated, is not only high but also fluctuates widely from one consignment to another, with the result that the price of indigenous antimony metal also has to be revised periodically. As regards other raw materials, it is stated that the industry is not obtaining sufficient supplies of soda ash in adequate quantities from indigenous producers. Besides, in most of the cases, the supply is irregular.

A significant feature of the antimony industry in India is that it is a single-unit industry, the only unit engaged in the production of antimony being the Star Metal Refinery, Ltd., Bombay. A brief glance at the history of the industry, as given by Mr. B. N. Adarkar, Member, Tariff Commission, while opening the public enquiry on 25th March, discloses that there is a large gap between output and installed capacity. The installed capacity is estimated at 600 tons per annum on three-shift basis by the Star Metal Refinery Ltd., while the Development Wing of the Ministry of Commerce and Industry places it at 700 tons. As against this, actual production in 1953 was 130.19 tons. An unfortunate feature to be noted in this connection is that the trend of output is steadily downward. Thus, it was 180.87 tons in 1952, 328 tons in 1951 and 376 tons in 1950.

The question of utilising fully the installed capacity, however, requires an accurate estimate of demand. At present, there are no correct estimates. The Star Metal Refinery has put it at about 300 tons and has indicated a variation of 10 per cent. in demand for the next three years. The estimates of importers vary from 400 tons to 1,000 tons; their expectation of the future demand is even more than 1,000 tons per annum. The consumers' representatives have estimated the demand at about 600 to 700 tons. The Tariff Commission will have to determine first the basis for the estimation of demand, both current and future, and then work out the actual figures.

The Commission will also have to enquire into the quality aspect of antimony metal. Although the general opinion seems to be that the quality is satisfactory, some of the importers and consumers have pointed out that there has been no improvement for some time past. The standard of purity of the indigenous product, according to them, is not as high as that of the imported product. Further, the quality, it is considered, is also not consistent. The Star Metal Refinery, on the other hand, contends that it is producing metal of 99.25 per cent. purity, which is as good as that of the imported product and that it is in a position to produce metal of 99.6 per cent. purity.

In his opening address, Mr. Adarkar points out that one of the consumers has expressed, that it is not now economical for the country to import ore and have it smelted in the country. This consumer is further of the view that, even from the strategic angle, the benefit of having the industry in the country at any cost is not fully established, because, in times of crisis, the supply of ore will not be less liable to interruption than that of antimony metal. On the question of existence of ore in India, Mr. Adarkar says that he has been given to understand that the Department of Geological Survey is investigating the reported occurrence of antimony ore in Madhya Pradesh.

BRITISH INDIA CORPORATION LIMITED

THIRTY-FOURTH ANNUAL MEETING

SIR ROBERT MENZIES DISPELS FEARS OF LABOUR ON RATIONALISATION

IN the course of a comprehensive and thought-provoking address to the shareholders of the British India Corporation Ltd. at their Thirty-fourth Annual General Meeting held in Kanpur on 27th March, 1954, Sir Robert Menzies, Chairman of the Corporation, made an interesting analysis of world conditions which affect, directly or indirectly, the industries in India, generally, and the Corporation, in particular. Referring to labour conditions, he sought to clarify the misunderstanding over the meaning of the word "rationalisation" and to dispel the fears that rationalisation would mean retrenchment of workers. He reviewed also the difficult conditions under which the various branches of the Corporation have had to work during the past year. The recent "blows" introduced by the Hon'ble Minister of Finance, he said, had changed the outlook for the worse, unless, of course, there was a marked improvement in demand which would affect the selling prices and enable the Corporation to pass on the impositions to the buyer.

The following is the full text of Sir Robert's address:

"It has been my custom on these annual occasions to make some brief reference to world-wide conditions which may not immediately appear to have any close impact on the business of the Corporation, but which, directly or indirectly, often do affect it. I think, generally speaking, the world position today is a little easier than it was at this time last year, though, to my great regret, I am unable to record that peaceful conditions obtain throughout the world. The fighting in Korea was halted during 1953, and protracted negotiations then took place in regard to the repatriation of prisoners. India may well take pride in the performance of her armed detachments which held the balance in Korea during the questioning and repatriation of prisoners of war released by both parties to the conflict. The General Officer who presided over the deliberations of the Neutral Committee set up to supervise this repatriation, and the troops sent from India have now returned to this country, so that we can say that one important phase towards peace has now been completed in Korea. Let us hope and trust that other negotiations will be fully successful, and that, at no distant date, the confusion in Korea will have been finally settled to the mutual satisfaction of both parties. Fighting still goes on in Indo-China, although here again, India has endeavoured recently to induce both the warring elements to consider terms which would end the fighting, and we can only hope that these efforts will be crowned with success. In Malaya, the terrorist position would appear to be less serious than a year ago, and, in Burma, Government troops are still endeavouring to enforce the evacuation from Burmese territory of Chinese Nationalist troops. We have not heard a great deal during the past year about Tibet, and it seems as if the troubles in Nepal, at least for the moment, have been composed. In Kenya, strenuous efforts have been made to bring the Mau Mau disturbances to an end, and while the places I have mentioned would appear to embrace the lands in which blood war is being waged, there is unrest in the Sudan, in Egypt, and in many other countries of the East. Is it too much to hope, however, that, in a short space of time, the nations involved will realise the futility of continuing even guerilla or cold warfare, and will endeavour amicably to settle their differences? The Western powers are still zealously endeavouring to arrive at agreement in numerous directions with the Government of Soviet Russia, but most of these efforts continue to end in frustration.

"It is with the utmost regret that I am unable to indicate any real improvement in the relations which exist between India and her nearest neighbour, Pakistan. At one time, in 1953, it seemed as if these two neighbouring sister countries were gradually coming together, but a recent request by Pakistan for military aid from the U.S.A. has given a severe setback to any negotiations which may have been in hand, and a solution of these difficulties, the principal among which is that of Kashmir, certainly does not seem any nearer.

Food Situation

"Last year, I made reference to the fact that certain parts of India had suffered from famine conditions, although the food position then generally was decidedly better. I am glad to be able to say that there has been a still further improvement in the food situation, notwithstanding continued drought in parts of Southern India and, on the other hand, the great damage caused by floods in Northern India, particularly in Bihar and the East of Uttar Pradesh. Notwithstanding this, India is gradually becoming self-sufficient in the matter of food, despite the ever continuing increase in her population.

"Commodity values throughout India during the year 1953 were certainly more stable than in the two previous years, but fluctuation in the value of raw materials is certainly still prevalent, thus making the lot of the manufacturer a difficult one; and here again we must conclude that these markets have not returned to the levels of natural trading.

"Government controls on industry, during the past year, have gradually been further relaxed, and, in so far as the great cotton textile industry is concerned, control now exists only as to the allocation and purchase of raw cotton and on production. It is hoped that, in the near future, it may be possible to remove any semblance of control from this industry.

"Control of the sugar industry has been to some extent relaxed, but still exists, and it is unfortunate that this important industry, in so far as Bihar and East U.P. are concerned, should have suffered from flood conditions. These, and the diversion of sugarcane to the manufacture of *gur*, have led to very marked reductions in the amount of cane tendered to the sugar mills in that area during the season which is now ending. It has, accordingly, been deemed necessary by the Government of India to arrange for the importation of a considerable quantity of sugar from abroad, in order that India's requirements for the current year may be met. It is perhaps an indication of a steady improvement in the general standard of living that official estimates of the consumption of white sugar continually lag behind actual demand. Record plantings of cane for next season show that the grower, despite some recent local agitation, is satisfied with the price which was fixed last year for two years.

Labour Conditions

"In 1953, labour conditions showed little change and, happily, there were no serious happenings as regards the branches of this Corporation. The very frequent references to Conciliators, Adjudicators, State Industrial Courts, and the Labour Appellate Tribunals continued throughout the year on a scale for which there was little or no real justification. I am pleased to report, however, that recently the State Government has ruled that no case which has been referred to a third party, and on which a decision has once been given, may be re-agitated. This order further laid down the conditions under which such references may be made, and it is no longer possible for an individual worker to take action on his own to such an end, although he may still achieve this through the medium of a trade union. In order to restrain the employers' powers of dismissal, there is a continued spate of references to adjudication, and while such hearings are pending, employers are still legally unable to dispense with the services of any worker without special sanction.

"For the past two years I have mentioned to you that our Cawnpore Woollen Mills branch had on its books approximately 1,000 surplus workers, and as the Mills had not been able, up till then, to obtain sanction to retrench these workers, a continuous play-off had resulted. These conditions still obtain, however unsatisfactory they may be, but, in the matter of retrenchment, I should record that towards the end of 1953 the Government of India introduced rules which granted workers a retrenchment gratuity on such a scale as was apparently deemed to act as a deterrent on employers.

Rationalisation

"I regret to say that our schemes for rationalisation are no further forward. Seven of the cotton mills of Kanpur submitted schemes to Government which had been put forward on a basis recommended by outside experts, who were appointed by Government. These schemes were referred by Government to a newly constituted Efficiency Section in the office of the Labour Commissioner, U.P. Initial reactions from that section are unsatisfactory, and it would certainly appear that the reasons for rationalisation are not yet properly understood in certain directions and have, so far, only resulted in delay. As I explained to you last year, there has been a great deal of misunderstanding as to the meaning of the word 'rationalisation,' and, frequently, and erroneously, this word is regarded as being synonymous with retrenchment. This is not so, as rationalisation is merely a means of reducing production costs by increased efficiency and, at the same time, of increasing workers' earning capacity. Perhaps, it might be well to clarify, once and for all, the meaning of the word 'rationalisation.' Reference to a dictionary will show that rationalisation is derived from the word 'rational,' the meaning of which is 'pertaining to reason, endowed with reason, agreeable to reason, sane or intelligent.' Rationalisation itself is described in the dictionary as 'subjection to rational principles,' or, in other words, the introduction of reasonable methods. So far as the branches of your Corporation are concerned, any schemes of rationalisation which have been considered by the management do not contemplate that there will, as a result, be any retrenchment of permanent workers. It is with regret, therefore, that I have to report that no real progress to this most desirable end has as yet been made, despite the fact that it is in the national as well as the workers' interests that rationalisation should, wherever possible, be installed without delay.

"It can truthfully be said that trade unionism in India is growing, if this can be judged by the number of trade unions which are being established. Unfortunately, however, many of these are being brought into being purely for political purposes rather than in the true interests of the workers, and until such time as the trade union leaders realise that their unions cannot function efficiently until divorced from politics, there is little chance of real progress being made. I can only repeat once more what has so often been said by responsible employers in India, and that is, that they would welcome the growth of real trade unionism on the lines of those unions which exist in Britain or other advanced countries. The subject of unemployment has attracted much notice lately. There is unquestionably a great deal of underemployment in Indian industry, which results from the retention of redundant labour. This is bad both for labour and for the productive efficiency of industry, and is perhaps more serious, in its retarding effect on expansion and prosperity, than a temporary increase of unemployment, which is occasionally unavoidable in all industrial countries when trading conditions are such that manufacturers cannot readily sell their production and must reduce their output. Unfortunately, that is the position in at least several industries in India.

Retirement Gratuity

"The management have recently given very considerable thought to a retirement gratuity scheme, whereunder some compensation for retirement will be offered to elderly workers and clerical staff. Retirement on account of age or ill health is, of course, quite distinct from retrenchment. At the moment, the Corporation carries on its books many employees who are old or infirm, and it would seem to be in the best interests of the Corporation that many of these men should be assisted to retire, thereby increasing efficiency and also, most importantly, lessening unemployment.

"In the Directors' report it was stated that the market price of the raw materials required by the Woollen Branches were more stabilised during 1953 than in the two previous years. The prices are, however, still high, and presumably will so remain, so long as a strong demand for this commodity from both sides of the Iron Curtain continues. Many man-made synthetic fibres have been placed on the market as substitutes for wool, but there always appears to be one or more objectionable features in these man-made imitations, and perhaps the slogan that there is no substitute for wool is nearer the truth than many people think. It is most unfortunate that the price of the raw material has made the lower-priced goods still beyond the reach of the poorer classes' pockets, with the result that the heavy plant in the Corporation's Woollen Branches is now not fully occupied, as it would be futile to make goods which could not be readily sold. On the finer side, however, the Corporation's products have met with a ready response from the market, and it is hoped still further to improve the quality of these finer goods in the years to come. I claim, with, I think, every justification, that the finer products now produced by our Woollen Branches are in every way equal to the imported fabrics which controlled the market before the last war.

Cotton Textiles

"As regards the cotton side of your business, the picture, as indicated in the Directors' Report, is not a happy one. It is true that the production of cotton textile goods in India is steadily increasing, but the same can apparently not be said of the demand. Prices are higher than they were some years ago, but this is unavoidable, having in view the increased price of the raw material, though it is to be noted that prices which are now being paid in India for indigenous raw cotton are still below world parity. This is a feature which assists those mills which are equipped or well placed to export their products, and it is, perhaps, unfortunate that opportunities for the Corporation's Cotton Branch to enter the export market are somewhat restricted. The demand for the coarse and medium cloths which this branch produces was, particularly in the latter half of 1953, most uncertain, and at times, as stated in the Directors' report, the prices available were below the cost of manufacture.

"For many years the Corporation has maintained a spinning mill at Juhi, Kanpur, for the manufacture of yarn for handloom weavers, but in the last few years it has not been possible to operate this unit at a profit, particularly in view of the fact that it was equipped throughout with mule spinning frames, the cost of production on which is considerably in excess of that from ring frames. It will be remembered that, about two years ago, endeavours were made to sell this unit, but these negotiations fell through, and, in the continued lack of profitable demand, your Directors felt it incumbent upon them to close down operations in the said unit. It was, however, necessary, in view of the resulting unemployment, to obtain Government's sanction to this end, and this took a considerable period of time to secure. The Branch Mill, however, was closed down as at the end of January, 1954, and the workers were paid off under the terms laid down by Government in the Industrial Development (Amendment) Act of 1953, which became operative on 24th October last.

"The cost of the retrenchment gratuity under that measure plus the necessary allowance for leave with wages was slightly more than Rs. 7½ lakhs, but that amount was of course only disbursed during the current year, and is, therefore, not included in the accounts for 1953.

"It is significant that, during the year 1953, the burden imposed on the Cawnpore Cotton Mills Branch by State Insurance, the Employees' State Provident Fund, and the U.P. Electricity Duty, exceeded Rs. 6 lakhs.

"I have already clearly indicated that the cotton textile industry is meantime encountering a buyers' market, and it is, accordingly, particularly unfortunate that, in the Budget recently introduced by the Honourable Minister of Finance in the House of the People, a further additional excise duty of 3 pies per yard has been imposed on the types of cloth produced by the Cotton Branch; this increases the excise duty to 9 pies per yard. As things are at the moment, it seems unlikely that it will be possible to pass this extra imposition on to the buyer, though it is hoped that the market will later improve and will enable this to be done. Meantime, however, the cost of meeting this additional excise imposition is approximately Rs. 4½ lakhs per annum.

Levy on Footwear

"You are already aware of the difficulties as regards suitable raw materials which confront our Leather and Footwear Branches. Sales by these branches in 1953 showed a considerable fall from the previous year. This fall was occasioned by the virtually total lack of Government orders for footwear for the Defence Services, and by the difficulty in securing hides of the proper quality to meet export demands for leather. The continued prohibition of cow slaughter in India and the impossibility, on a price basis particularly, of purchasing hides from Pakistan, have affected the operations of the Leather Branches, and it is, accordingly, particularly galling that the Hon'ble Minister for Finance should have seen fit, in his recent Budget, to impose a 10 per cent. *ad valorem* excise duty on footwear produced in organised factories. This measure may bolster up the making of shoes as a cottage industry, but organised industry was already burdened sufficiently to have made this imposition quite unnecessary, and, in fact, most unfair. Here again, we are living meantime in a buyers' market, and it is problematical to what extent, if any, this new excise duty can be passed on to the purchaser; certainly this is not immediately possible. It is estimated that the cost to the Corporation may well be in the vicinity of Rs. 14 lakhs per annum. This burden has certainly come at an unfortunate time when our production of civilian footwear showed no margin of profit owing to competition from the cottage industry, which has thus been further protected. It will be recognised by the shareholders, therefore, that the imposition of this *ad valorem* excise duty on footwear, and the additional excise duty on cotton cloth, are severe blows to the Corporation.

Financial Position of Manufacturers

"Before I come to an actual examination of the accounts which are before the meeting today, I feel that it is both opportune and imperative that I should say something to the shareholders in regard to the financial position of manufacturing businesses generally, and of the Corporation in particular. In this respect, when addressing you last year, I made reference to the fact that while a reserve had been set up for the equalisation of dividends, the bald fact remained that the sum thus set aside had eventually been utilised for the purposes of the Corporation's business, inasmuch as we were (and are) still indebted to our bankers. I then stated that, in modern accounting practice, it was wrong to continue to describe a reserve as for the equalisation of dividends, if the money was not actually available for that purpose, and I hinted that your Directors might find it advisable, before the accounts for 1953 were published, to transfer this reserve to the more omnibus heading of general reserve. As you are aware, action to this end has been taken, and you will probably have observed also that the advances received from the Corporation's bankers at the end of 1953 were in excess of the figure at the end of the previous year by fully Rs. 50 lakhs. This, of course, is reflected in the increase in stocks held at the end of 1953, as opposed to those at the beginning of that year, and while it is not the Directors' intention that the branches should be over-heavily stocked, there has been a marked appreciation in the cost of certain of the raw materials which we use, which accounts largely for this increase.

"We are still suffering from world-wide inflation, and India is, in this connection, certainly no exception. Wages are now a good many times what was payable before the war, and as regards capital expenditure, it is sad to say that the cost of plant and machinery now exceeds three and a half times what it did, and that, generally, capital expenditure is approximately four times what it was in 1939. It stands to reason, therefore, that the capital of a business which was sufficient some years ago is now insufficient, and it is for this reason that the Corporation has had occasion to take advantage of the financial accommodation provided by its bankers. There is only one way in which the position can be in any way ameliorated without the issue of fresh capital (which would merely increase the Corporation's liability under capital account and reduce the liability to the bank) and that is by conserving available finances. It would seem, therefore, that meantime it is in the shareholders' interests that the present method of financing the Corporation's requirements should be continued, but, at the same time, I must emphasise most strongly that the time has come when the Corporation must strengthen its financial position by retaining in the business a greater percentage of profits earned than has been the case in the last few years.

"Those of you who have been shareholders for some years may remember that during the war years the Corporation adopted, for a matter of six years, a conservative policy as regards the dividend payable annually, which was then restricted to As. 4 per ordinary share. In these days considerable profits were earned, but at the same time very large sums had to be paid away in taxation, but during these years we were, as a result of the conservative attitude adopted, able to improve the position of the Corporation's reserves by retaining the balance of profits in the business. There was considerable dissatisfaction expressed by some shareholders towards the end of the war regarding this dividend policy, and I can remember that, at that time, I asked the shareholders to have patience, and indicated that should profits warrant a greater distribution in the post-war years, it would then be reasonable for the shareholders to expect more generous treatment. You are well aware that the dividend was increased in 1946, and was thereafter gradually increased, until in 1950 and 1951 a dividend of As. 12 per share was paid, and even in these days it was possible to plough back into the business a respectable, though perhaps inadequate, percentage of the profits. That position, however, did not obtain last year, for reasons which were then made amply clear, and the position is exactly the same in respect of 1953. In fact, in respect of 1952, it was necessary, in order to pay a 10-anna dividend, to utilise Rs. 10 lakhs of the reserve for stocks and stores, and while no inroads have been made in respect of 1953 into the balance-sheet reserves, the fact remains that practically the entire profits after taxation are being dissipated by way of dividends to the shareholders. In taking this sympathetic attitude for some years, your Directors have been fully aware that the individual shareholder is just as much hit by inflation as is any corporate body, but the time has now come when I must issue a note of warning to the shareholders that the procedure which we have adopted in the last year or two, while perhaps being fully acceptable to the shareholders, has not been altogether in their own best interests, if one takes a view beyond the present.

Disposal of Taxed Profits

"It is perhaps appropriate that I should here give you a comparison of the disposal of taxed profits by the Corporation in the 1920's during the war period, and since the war. From 1921 to 1929 there was dissipated by way of dividends 79 per cent., while the remaining 21 per cent. was retained in the business. (I exclude from these comparisons the decade immediately prior to the war, as conditions then were exceptional). During the war period, from 1940 to 1946, only 53 per cent. was dissipated and 47 per cent. was retained. Since then, in the period 1947 to 1952, 81 per cent. has been dissipated and only 19 per cent. retained in the business, and as I have explained, in the last two years the dissipation has been excessive and little has been ploughed back into the business. The comparable average figures, for four successive post-war years, of 138 Indian companies, as published by the Employers' Association of Calcutta, are that of the taxed profits only 45 per cent. was dissipated by way of dividends, while 55 per cent. was retained in the business. These figures are very different to those which apply to the Corporation in the same period.

"I should perhaps here make it clear that in deciding to recommend a dividend of As. 8 per share in respect of 1953, your Directors felt that, with ordinary luck, it might be possible for the Corporation to maintain or stabilise that rate of dividend, and at the same time reasonably augment the Corporation's reserves. The recent blows introduced by the Hon'ble Minister of Finance, to which I have already referred, and which were only announced after the Directors' report had been approved, have, undoubtedly, changed the outlook for the worse, unless, of course, there is a marked improvement in demand which will affect selling prices, and might permit of the impositions, to which I have referred, being passed on, as they should be, to the buyer.

"It is, as I have stated, my duty to place these facts fairly and squarely before the shareholders so that there may be no misunderstanding in future. The shareholders may, however, rest well assured that the Directors and the Management are doing everything possible within their power to restrict expenditure where this can reasonably be avoided, and to practise the utmost economy wherever possible.

"It must be clear to all concerned that any struggle for existence results in the survival of the fittest. It is being impressed on each member of the Corporation's staff that he is expected to do his utmost to fit the Corporation for any

struggle which may lie ahead. While there is no need for any of the shareholders to be unduly alarmed regarding the present position, it must be recognised that it will be very necessary to lay out further capital in the near future on the maintenance or replacement of the plant in the branches, so that this may be fully modernised and be placed in a position to compete with all comers.

"In the last year or two, the Corporation has been put to considerable revenue expense in furthering the social welfare schemes for employees which have been introduced by Government and to which I have already referred. This must be borne in mind by our employees who must also realise that while the level of the dividend to ordinary shareholders has been steadily reduced, it cannot reasonably be expected that the quantum of annual gratuity which they have enjoyed for a good many years, can be maintained.

"As stated in the Directors' report, it is considered that the amount set aside for taxation is sufficient for this purpose, and it will probably have been observed by the shareholders that advance payments for taxation amounted as at 31st December last to nearly Rs. 119 lakhs. It is hoped that certain back assessments will shortly be closed so that the position may be brought more up to date.

"I presume that the shareholders have had ample opportunity of considering the Directors' report and accounts which were, as required by law, issued on 9th March along with the accounts of the Corporation's four subsidiary companies. There are one or two items, however, in the accounts on which perhaps you would expect me to comment.

Balance-sheet

"Under the heading of current liabilities and provisions, the main difference from last year is in the amount borrowed from the Bank and on deposit with the Corporation. I have already explained that the additional stocks held largely account for this difference.

"As regards fixed capital expenditure, additions during the year amounted to nearly Rs. 18 lakhs, so that a start has at least been made in the rehabilitation to which I have just referred. The total fixed capital which has cost nearly Rs. 373 lakhs, now stands in the Corporation's books at under Rs. 60 lakhs, but this was only possible by allocations from reductions of capital in the years 1929 and 1932. The result, however, is that the Corporation's block account now stands in our books at a figure far and away below its current value or cost of replacement, which, on today's figures, would amount to an astronomical figure.

"Investments show an increase of approximately Rs. 14 lakhs. This covers solely the purchases of shares either in a subsidiary company or in companies under the management of a subsidiary. It is satisfactory to note that the book figure is considerably less than the market value or Auditors' fair valuations.

"There is a small item of approximately Rs. 1½ lakhs on the assets side against the heading 'Provident Fund Investments.' The comparative item on the liability side is little more than Rs. 33,000 and, accordingly, it will now be possible to release part of these investments as the result of withdrawals from the Fund.

"On the assets side, perhaps the only items to which I need refer are stores and spare parts, and also stock-in-trade. These together show an increase of Rs. 50 lakhs over the relative figures for last year, as I have already mentioned. Other items show little change.

"In regard to the profit and loss account, raw materials and manufacturing charges show a substantial increase of over Rs. 1 crore, as compared with the previous year, but this, of course, is at least partly reflected in the increased stocks held.

"Salaries and wages show a slight increase, and it is significant that State Insurance, and the Employees' Provident Fund, which is meantime applicable only to certain branches, have absorbed over Rs. 7 lakhs during the year.

"The amount allowed for depreciation is the same figure which has been allowed for a good many years, but with the purchase of new plant on which the benefit of initial depreciation is available, the amount is actually less than the statutory depreciation which it is expected will be allowed for income-tax purposes. The amount mentioned in the accounts, however, represents approximately 11 per cent. on the book figure of depreciable assets.

"Sales, for reasons which I have already enumerated, are down by a matter of Rs. 65 lakhs, and the income from investments is over Rs. 1 lakh less than during 1952.

"Interest appears on both sides of the profit and loss account, but the net figure for 1953 bears a strong relation to the figure for 1952.

"For the last two years I have informed the shareholders how the income applicable to the year has been utilised; the sum available in 1953 was utilised as follows:

On raw materials and manufacturing charges	52.8%	as against	58.0% last year
On salaries and wages	28.7%	,,	24.2% ,,
For expenses of production and selling	9.3%	,,	7.6% ,,
For depreciation	0.9%	,,	0.8% ,,
For taxation	3.3%	,,	3.7% ,,
Dividend to shareholders ..	5.0%	,,	5.7% ,,
	100.0%		100.0%

Subsidiary Companies

"You will have observed that attached to the Corporation's accounts are the balance-sheet and accounts of the four subsidiary companies, and perhaps I need only refer to the position of the Corporation's motor subsidiaries which are mentioned in the Directors' report.

"The Government of India have decided that the importation of motor vehicles in completely knocked down condition, or of parts for motor vehicles, shall be confined to five concerns in India, to which the Government of India is entrusting the future production of motor vehicles in India. Despite the fact that, first of all, G. McKenzie & Co. (1919) Ltd., and, latterly, the Peninsular Motor Corporation Ltd., have been engaged for very many years in the assembly of cars and motor trucks, neither have been included among the five concerns indicated inasmuch as the Directors of these subsidiaries were not prepared to recommend the expenditure of a vast sum of money to lay down plant for the manufacture of motor vehicles. The offtake of motor vehicles in India, for a country of this size and with such a large population, is surprisingly small, and, in the view of your Directors, it would be impossible for either of these subsidiaries to take up the manufacture of motor vehicles in India profitably. In these circumstances, the subsidiaries have had to face the withdrawal of import facilities. Steps are being taken gradually to close down the Peninsular Motor Corporation, and it is anticipated that, in due course, that subsidiary will go into voluntary liquidation, and that the Corporation, now the sole shareholder in that concern, will receive back the capital invested in full. No decision has yet been come to in regard to the future of G. McKenzie & Co. (1919) Ltd., as it is necessary to continue that Company in being meantime while there are still considerable stocks of vehicles and spare parts for disposal. The position is, however, being closely watched.

"Only the Peninsular Motor Corporation was unable to pay a dividend in respect of its last financial year. The other three subsidiaries maintained the same dividends as in the previous year.

"Members of the management are closely associated with the management of the Corporation's subsidiaries, and serve on the Boards of all four units. They have reported to the Board their satisfaction with the performance of the staff of these subsidiaries, to whom the Corporation's thanks are due.

"It is mentioned in the Directors' report that the Board of Directors were in negotiation for the appointment of a suitable successor to the vacancy on the Board created by the lamented death of Mr. A. Hoon, B.A., Barrister-at-Law. I am pleased to report that Colonel Sir Kameshwara Singh, K.C.I.E., Maharajdhiraja of Darbhanga, who is himself a considerable shareholder in the Corporation, has accepted the Directors' invitation to become a Director of the Corporation. It is the intention that, at a meeting of the Directors, which will be held later in the day, he should be appointed a Director. The correspondence with the Maharaja Sahib unfortunately had not been concluded when the Directors' report was approved for printing, otherwise intimation of the intention to put forward his name for a seat on the Board would have been made therein, and his election by the shareholders would have been placed before the meeting today. This, however, is not possible, as due notice of the intention could not be given; the alternate method of appointment by the Directors would, however, appear completely to meet the case, and will, no doubt, have the tacit approval of the shareholders.

Staff

"And now a word in regard to the staff. I have placed before the shareholders earlier today certain comments regarding finance now, and in the future. I have mentioned the difference between present-day costs and those which operated in pre-war days. I have also mentioned the necessity of maintaining our plant and our staff at a high pitch of efficiency. For this purpose, it is most essential that the staff should be content with their lot, and that we should attract to the service of the Corporation and retain, staff of the highest quality. For some years, the Directors have felt that the basis of remuneration which has been adopted for the senior staff since the outbreak of war has been by no means commensurate with the cost of living index figures as these obtain, certainly in Kanpur and at Dhariwal, and the Board has been keenly alive to the fact that the only provision which has been made in the past against retirement, after long and faithful service, lies in the provident fund, the proceeds of which for a man retiring after, say, 25 or 30 years' service with the Corporation, are quite insufficient, at present-day costs, to provide for the expenses of even a simple life on retirement. For these reasons, and also because it is essential in these difficult days to have a happy and contented staff who will give of their best in the interest of the shareholders, the Directors have recently had under consideration proposals to introduce limited pensions schemes by the medium of insurance policies. These proposals are still under consideration, but it is not considered that the cost to the Corporation, should these proposals be adopted in their entirety, will be more than is required to attract staff of the best calibre to our employment. In this respect, however, the subsidiaries based at Calcutta were able, some years ago, to take advantage of the provisions for superannuation funds included in the Income-tax Act, and they are, accordingly, not concerned with the present proposals.

"I mentioned to you last year that the Corporation continued the policy of recruiting Indians to senior posts wherever possible, though in certain instances the requisite senior staff for supervision and also for training purposes was not available indigenously. This matter continues to receive careful consideration.

"I would like to conclude my remarks today by once more expressing my grateful thanks to my colleagues on the Board of Directors and on the management, and to the staff generally, for their continued loyal support during the past year. I can assure the shareholders that the staff have worked well, and that, without their loyal support, the Corporation would not be, despite my earlier remarks, in the position which it enjoys today, and I am sure that the shareholders would wish me to associate them in this expression of gratitude.

"It is now my pleasure to move that the Directors' report be adopted, and that the accounts for the year 1953 be passed, but before this resolution is seconded, I shall answer to the best of my ability any questions on the Directors' report and the accounts now before the meeting, which may be put by any of the shareholders present."

(Concluded from page 632)

"The foregoing survey of events in the East does not claim to do more than pick out a few of the highlights of political and economic affairs which seem to deserve the special attention of our shareholders. Asia is, undoubtedly, on the move. All the way from Ceylon to Tokyo there is an intense desire for speedy economic progress, as is shown by the development plans which most Asian countries are now attempting to put into effect. Coupled with this, there is a widespread realisation that the raising of low standards of living must come as part and parcel of agricultural and industrial development. British merchants and bankers established in the East cannot insulate themselves from these events. They too have a part to play in the further development of Asia."

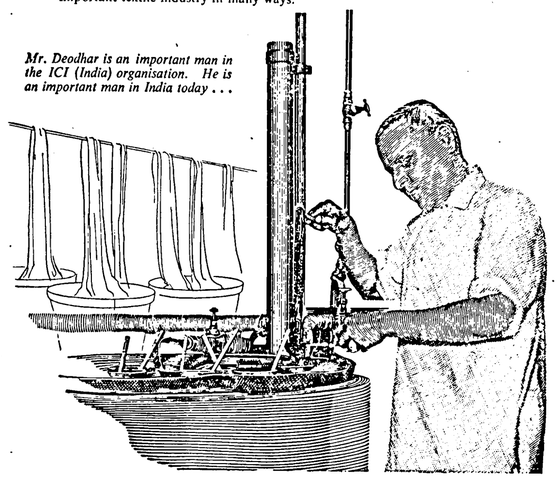
Chemistry and Colour

Seldom do we stop to think how much we owe to Chemistry for the gorgeous colours of modern fabrics. Only unceasing research in laboratories creates such a wide range of brilliant, fast dyes that are otherwise unobtainable from natural sources. These wonderful colouring substances enable textile makers to turn out those rich, vivid fabrics which we have grown to expect as a matter of course. But there are problems too in the use of chemical dyes—problems that must be solved to ensure efficient performance and profitable production.

Meet Mr. D. H. Deodhar, an expert in the application of dyestuffs, who has been working in the Dyestuffs' Industry for over 30 years. His job is to help customers to solve their dyeing problems, to guide them in the correct use and application of dyes and to demonstrate new dyestuffs and new methods of dyeing. His work is of real, vital help to our important textile industry in many ways.

Mr. Deodhar is an important man in the ICI (India) organisation. He is an important man in India today . . .



. . . contributing to India's progress and prosperity

FINANCES OF UTTAR PRADESH

CAPITAL OUTLAY STEPPED UP CONSIDERABLY

THE picture of the financial position of the Uttar Pradesh Government, as depicted in the budget for 1954-55 presented by Hafiz Mohammad Ibrahim, U.P. Finance Minister, resembles that of other State Governments. The budget discloses a revenue deficit of Rs. 3.91 crores, although the receipts anticipated during 1954-55 stand substantially higher at Rs. 77.16 crores, as against Rs. 73.54 crores (revised) in 1953-54. The deficit is solely the result of a marked rise in expenditure, the estimate for the coming year being placed at Rs. 81.07 crores, which is Rs. 7.52 crores more than the revised estimate of Rs. 73.55 crores for the current year. The rise in expenditure is expected mainly under debt services (+Rs. 5.20 crores), civil administration (+Rs. 2.55 crores) and civil works (+Rs. 1.20 crores).

Despite the sizable deficit of Rs. 3.91 crores, the Finance Minister of Uttar Pradesh, it is gratifying, does not propose any revision of tax measures. Perhaps, he must have realised that, since taxes are already loaded up to the last straw, any additional burden will result in the operation of the law of diminishing returns which means loss of revenue receipts to the Exchequer. How then will the deficit be covered? The Finance Minister's explanation for this is that, to the extent this deficit cannot be met by increasing the resources or by effecting economies, a withdrawal may again have to be made from the Revenue Reserve Fund. "This," to quote him, "will be the third year in succession during which such a withdrawal will have been made; and this fact is indicative of the strain upon the State finances caused by the implementation of the development programme undertaken by the Government."

An idea of the budgetary position of the U.P. Government during 1954-55, as compared with 1953-54, can be had from the figures given below:

(In crores of rupees)

	1953-54 Budget	1953-54 Revised	1954-55 Budget
Opening balance	1.95	7.56	2.33
I. *Consolidated fund:*			
(a) Revenue head—			
Receipts	74.38	73.54	77.16
Charges	78.80	73.54	81.07
	−4.42		−3.91
(b) Capital expenditure	7.09	8.27	20.22
(c) Net receipts from public loans	+3.00	+5.40	+6.00
(d) Other debt and deposit head (net)	+6.26	+7.80	+20.01
II. Contingency fund		−0.05	
III. Public accounts (net)	+1.66	−10.11	−2.56
Net results of all the transactions in the year	−0.59	−5.23	−0.68
Closing balance	1.36	2.33	1.65

A striking feature revealed by the foregoing statement is that the capital outlay (excluding that met from revenue) is proposed to be considerably stepped up by Rs. 11.95 crores to Rs. 20.22 crores in 1954-55, as compared with the revised estimate of Rs. 8.27 crores in 1953-54. This indicates the Government's keen desire to implement the State's Five-year Plan within the scheduled period. The bulk of the Rs. 20.22 crores capital expenditure, amounting to Rs. 9.33 crores, is taken up by electricity schemes, followed by irrigation works which account for Rs. 8.73 crores. The capital expenditure will be met partly out of loans from the Central Government and partly out of public loans. The actual sum that will be spent by the Government for the implementation of the Five-year Plan in 1954-55 amounts to Rs. 30.00 crores which brings the total that will have been spent by the end of the year to Rs. 100 crores out of the aggregate outlay of Rs. 130 crores. Explaining how he has been able to raise resources to implement the Plan, the U.P. Finance Minister said:

"By stringent measures of economy, by some taxation and by obtaining large loans from the market, we have succeeded fully in discharging our commitment to the Planning Commission in respect of the additional resources which we were to raise through our own efforts for financing the Plan . . . the Government of India have also been persuaded to take a more sympathetic view of our requests for loan assistance."

Proceeding, the Finance Minister expressed the confidence that, with a little more Central assistance and with a little increase in the help which the State is already receiving from the people in the shape of *Shramdan* and by way of investment of savings in State development loans and the small savings schemes, the still larger expenditure which would be required in 1955-56 would also be met and the State Plan completed well in time.

Be that as it may, as a consequence of the heavy capital expenditure, the indebtedness of the State has been going up very fast and the burden of repayment is becoming heavier each year. The total indebtedness of the State as on 31st March, 1955, is expected to stand as high as Rs. 195.51 crores, as against Rs. 94.61 crores (revised) on the 31st of this month and Rs. 77.23 crores (actuals) a year before. Despite this, it is comforting to be told by the U.P. Finance Minister that the Government is "making the fullest provision for the repayment of these debts, so that, in spite of the spectacular increases in developmental expenditure, the financial soundness of the State is fully safeguarded." It is said that, even though it is not obligatory to create sinking funds in respect of many of the loans which have been taken, the Government has opened sinking funds for them and, what is more, is crediting those sinking funds with the full amounts needed for liquidating the loans on the due dates. Moreover, the interest charges on the State development loans, it is stated, are fully covered by the interest earned from the existing State projects of public utility.

(*Concluded from next column*)

the implementation of expansion programmes will lead to a certain amount of disturbance in the operations of the Company which will reduce its output further. The Government evidently feels that the Commission's estimated output is rather low.

After a detailed analysis of the block account and after making due allowances for the underutilisation of a part of the Company's capacity, the Commission has arrived at the figure of Rs. 19.22 crores as the average block of the Company, including the colliery block estimated at Rs. 20 lakhs. It has allowed on this amount a return at 8 per cent., that is, at the same rate as was allowed by the Government in the case of the Tata Iron and Steel Company, Ltd. The amount of return works out to Rs. 153.76 lakhs. The Commission has estimated the working capital at Rs. 3.82 crores and allowed interest on it at 4½ per cent. Allowing for expenses, depreciation margin for contingencies, etc., as well as for return on capital invested, the net amount of overheads works out to Rs. 367.11 lakhs per annum, made up as follows:

Lakhs of rupees

1. *Depreciation*—			
(a) Normal		69.00	
Add on additions inclusive of collieries, i.e., Rs. 2.33 crores		14.56	83.56
(b) Special provision for depreciation including taxation on the amount in excess of normal allowance			93.00
Gross	93.00		
Tax	41.00		
Net	52.00		
2. Interest on working capital			17.19
3. Return on block			153.76
4. Head office expenses			17.00
5. Selling expenses			5.60
6. Margin for contingencies			15.00
Total			385.11
7. Deduct for profits on surplus coke and pig iron			18.00
Net			367.11

The Commission has allocated the total overhead charges as determined above over the net annual quantity of saleable steel estimated for four years from 1953-56, that is, the quantity of saleable steel (280,000 tons) *minus* the quantity for maintenance purposes, which is taken at 276,000 tons. On this basis, the Commission has arrived at the conclusion that the overall increase in the fair ex-works retention prices for 1953-56, as compared with the prices for 1952, works out to Rs. 66 per ton of saleable steel.

FAIR RETENTION PRICES FOR I.I.S.CO.

INCREASE OF RS. 59 PER TON

THE long-awaited increase in the retention prices payable to the Indian Iron and Steel Company, Ltd., was announced shortly after we went to press last week. According to a Press note issued on 25th March, 1954, the Government of India has allowed an average increase of Rs. 59 per ton, as against Rs. 66 per ton recommended by the Tariff Commission, over the average retention prices for the year 1952, namely, Rs. 319 per ton. The increased prices will be in force for 27 months, beginning from 1st January, 1953 to 31st March, 1955, as against for four years, from 1st January, 1953 to 31st December, 1956, suggested by the Tariff Commission.

The Government has also increased the selling prices of steel (that is, the price payable by consumers), with effect from 29th March, 1954. In the case of bars and structurals, the increase varies from Rs. 7 to Rs. 14 per ton; in the case of plates, rails and fish plates, the rise is Rs. 25 per ton; and it is somewhat lower at Rs. 20 per ton in the case of sheets. The difference between the price of tested and untested materials has been raised by Rs. 5 per ton.

So far as the increase in the retention prices for the I.I.S.Co. is concerned, the Government has accepted the recommendations of the Tariff Commission generally. It has, however, made a significant departure, in that it has disallowed an element of Rs. 7 per ton, thereby reducing the increase from Rs. 66 per ton, recommended by the Commission, to Rs. 59 per ton. The Government has not adequately explained its reasons for making this cut. But the following extract from the Government's resolution throws some light on the issue:

"The Government of India generally agree that the recommendations of the Commission flow from the application of the principles of price fixation already adopted for determining prices of steel produced by the Tata Iron and Steel Company for the period up to the 31st March, 1955. But they consider that, in assessing average production, allowance should not be made for the low production in 1953. They are also unable, for reasons stated in the next paragraph, to include return on the gross block of the collieries as part of the retention prices of the steel. Subject to these modifications, the Government of India accept the recommendations of the Tariff Commission regarding the retention prices of steel which will now be fixed, on an average, at Rs. 59 per ton more than the retention prices announced for 1952.

"The Tariff Commission has recommended that retention prices to be fixed now should prevail until the end of 1956. While Government agree that it would ordinarily be desirable to fix prices for as long a period as possible, they are of the view that the principles of price fixation hitherto followed, in particular the method of relating depreciation and return on investment to gross block, themselves require revision and that revised principles should be applied to the whole industry from the earliest possible date, viz., 1st April, 1955, the date up to which the existing principles have already been applied for fixing the retention prices for the Tata Iron and Steel Company. They also consider that the treatment to be accorded to gross colliery block could most appropriately be dealt with at that stage. For these reasons, the Government of India have decided that the retention prices specified shall be applicable from 1st January, 1953 to 31st March, 1955."

It will be seen from the above extract that the Government has given its reason for not accepting the Commission's other recommendation, too, namely, the one relating to the period for which the increased prices should be in force.

The Tariff Commission has estimated the annual rate of output of the Company for the years 1953-56 at 280,000 tons. In arriving at this figure, it has taken into account two factors. First, on account of relining, two blast furnaces out of the four will be out of production during the next two years, one each year, and this would result in a loss of about 40,000 tons of iron in the Company's output. And, secondly,

PROBLEMS OF STATE-OWNED ENTERPRISES

E.C.A.F.E. SEMINAR EXAMINES ISSUES

HAVING won their political freedom, many nations in the region of Asia and the Far East are now applying their energies to achieve rapid economic development for securing high standards of living and fuller employment. But, in this task, they are facing innumerable difficulties. As a general rule, the underdeveloped nations of the region lack resources. The standards of education and training of the masses are low. Economic initiative to improve their standard of living is at a low ebb. Incomes are low and savings for investment are negligible. Frequent changes in Government policies and personnel and unsound economic and financial policies dictated by political exigencies in some countries have made private enterprise shy.

In the circumstances, the State has to give a momentum to economic activity by taking a lead in establishment of industries. Many Governments in the region are undertaking these development tasks, in spite of the pressing claims of maintenance of law and order and lack of trained personnel. They are thus facing many difficult problems such as modification of existing administrative set-up to suit the tasks of economic administration, determining the types of organisations suited to public enterprises, financing of public enterprises, etc. As solutions to these problems have to be found in order to ensure successful implementation of the economic development programmes, the question of studying them in all their aspects has been taken taken up by the various bodies of the United Nations, such as the World Bank, Economic Commission for Asia and the Far East, etc.

Agenda

The latest effort at studying the problem of public enterprises in the countries in Asia and the Far East in detail was the seminar held at Rangoon from 15th to 20th March last. This Seminar was jointly sponsored by the Government of Burma, the E.C.A.F.E., the U.N. Technical Assistance Administration and the International Institute of Administrative Sciences. The principal questions discussed by the Seminar included, (1) trends in the developments of public enterprises in the E.C.A.F.E. region, (2) types of organisation suitable for public industrial undertakings, (3) organisational relationships within the Governmental structure, (4) financing of public enterprises, (5) commercial aspects of public enterprises, (6) problems of internal administration, and (7) public understanding.

Representatives from Burma, Ceylon, China, Cambodia, France, India, Japan, Pakistan, the Philippines, and the U.K. participated in the Seminar. It was attended by a number of U.N. consultants drawn from several countries outside the region, namely, Australia, Canada, France, Sweden, Turkey, U.K. and the U.S. In order to facilitate discussions, more than 100 documentary papers and information memoranda were prepared by the Governments, the E.C.A.F.E. and other U.N. organisations and individuals. The papers describe the conditions of growth, problems and difficulties of public enterprises.

Heavy Agenda

The final decisions reached at the Conference are, however, not available yet. But the remarks, in this context, of the Executive Secretary of the E.C.A.F.E., Dr. P. S. Lokanathan, in his opening address, are worth noting. He said: "The agenda for the Seminar is admittedly a very heavy one and none of us will feel at the end that we have done it full justice. Nevertheless, it is to be noted that the entire question of relative merits of public and private enterprises for the promotion of economic development was not included in the original proposal of the Committee on Industry and Trade. It has been left out of the present agenda. The focus of our discussion is upon the ways by which the organisation and administration of public enterprises can be improved. Your efforts will be amply rewarded as a result of the discussions during the next two weeks. The delegates can return to their respective countries with knowledge for improving the management and operation of public industrial enterprises with which they are concerned. No doubt the Seminar will wish to make recommendations concerning the handling of organisational and administrative problems as also concerning further steps which can be usefully taken under the auspices of E.C.A.F.E. to assist its member States in dealing with these problems."

After thus explaining the possible outcome of the Seminar, Dr. Lokanathan made some general observations on the position of public enterprises in Asia and the Far East. The State-owned enterprises ranged, he said, from small clay-pugging mills in villages to giant multi-purpose projects, covering large areas of land, and from small 20-loom shops to large fertiliser plants. They covered also a wide variety of manufactures such as locomotives, chemicals, cigarettes, textiles and services including hotels. They were being managed, he said, under different forms varying from corporations of the Tennessee Valley Authority type to a department or a Ministry. Some of them were self-supporting and making reasonable profits; others were running at a loss. The study of the these enterprises revealed both the weaknesses and the potentialities of such enterprises. Dr. Lokanathan further pointed out that there was a fear that any inefficiency on the part of Government enterprise might lead to miscarriage of development problems and thereby halt the economic development. It was also feared that any failures might create an adverse climate for private enterprise to play its role. These anxieties existed in Burma, Ceylon, India and the Philippines. This fear found itself expressed in the appointment of public committees and independent consultants to examine the position of State enterprises in these countries.

Scientific Information Available

That fears such as the above will not persist for long was indicated by Mr. W. H. C. Laves, Secretary General of the Seminar. Mr. Laves has wide enterprise and knowledge in both international and national administration as one associated with the International Institution of Administrative Sciences. This expert in his statement at the Seminar stated that there was no need to proceed on the basis of guesses, chances, political opportunism or of merely traditional assumptions about human nature while finding solutions to the problems of industrial enterprises. For the I.I.A.S. had sought, he said, to bring the results of scientific study of the problem involved in the organisation and management of State-owned industries to the Seminar. As a result of these studies, human energies could now be most effectively released and mobilised towards the attainment of common purposes in industry.

The outcome of the deliberation of the Seminar will be awaited with interest in India. For the Central and State Governments in this country own big enterprises and still no principles have been evolved as to their management, finances and control, etc. The country's anxiety regarding these enterprises found full expression in the course of a debate on parliamentary control over State-owned concerns in December last. The Finance Minister's reply to the debate clearly revealed that the Government was alive to the problems of these industries and was taking decisions as they arose in the light of the experience gained by it in administering them. There was no hard and fast rule in managing the concerns. Some industries such as Railways and Posts and Telegraphs were managed by Ministries of the Government. A few industries were registered as joint-stock companies, while a few others were in charge of statutory corporations. Referring to these two varieties of control, the Finance Minister stated: "We have not yet made up our mind as to which of these two forms is superior or whether one should be chosen to the exclusion of the other. That is a matter of convenience. So far as Government are concerned, I believe that there will be advantages in both."

MATHEW S. D'SOUZA, *General Manager.*

DEVELOPMENT OF COTTONSEED OIL INDUSTRY IN INDIA

Some notable suggestions for the development of the cottonseed industry have been put forward by Mr. N. D. Sirur, Managing Director, Sundatta Cottonseed Utilisation Ltd., Bombay, for consideration by the Central Ministry for Commerce and Industry. The present annual production of cottonseed oil is estimated at 8,000 tons, while the output of linters is barely 10,000 bales. The oil content of *deshi* cottonseeds is lower than that of the American-type cottonseeds. The yield of linters—the only indigenous raw material for the manufacture of high grade rayon—is also stated to be low, as the methods adopted for delinting operations in India are inefficient. Again, while *deshi* cottonseeds are used for purposes of cattle feeding on a large-scale, the American-type cottonseed is known to be unpopular for this purpose, because of their fuzzy outer covering of lint. Consequently, the suggestions of Mr. Sirur aim at encouraging American-type cottonseed crushing, while allowing the *deshi* cottonseed to be used for cattle feeding.

Based on the total American-type of cottonseed crop in India, the yield of cottonseed of this variety is estimated at 40,000 tons cottonseed oil, and about one lakh bales of linters, if modern equipment is fully employed. The average yield of semi-refined cottonseed oil and linters can be, it is stated, as high as 15 per cent. and 8 per cent. respectively. Thus, by concentrating on American-type cottonseed, crushing of cottonseed can be increased four or five times the present production, without drawing upon *deshi* seeds. Besides, about 70 per cent. of the American-type seed crushed will also be available for cattle feeding.

American-type cottonseed is grown in India in the East Punjab, Madhya Bharat, Madhya Pradesh, North Hyderabad, South Bombay State, Andhra, Mysore State and Central Madras State. It is suggested that new plants for cottonseed crushing should be located at convenient centres in these States where this type of cotton is grown and that permission for establishment of such factories should be freely given under the Industries (Regulation and Development) Act. In order to encourage cotton crushing, the suggestions made by Mr. Sirur are as follows:

(1) the freight rate on *deshi* cottonseeds should be lowered to the level of that on other cattlefeed such as oilcakes;

(2) the freight rate on American-type seeds, more suited for crushing, should be raised to the same level as groundnuts with shells;

(3) with a view to encouraging the use of cottonseed oil by *vanaspati* factories, a rebate in excise duty on *vanaspati* should be given in proportion to the percentage of the cottonseed oil used by *vanaspati* factories;

(4) considering the much higher cost of crushing cottonseeds (1½ times that of groundnuts, because of the machinery required for delinting), the freight rate on cottonseed oil should be reduced by 33⅓ per cent.;

(5) the policy of free import of cottonseed oil should not be revived, since the demand for cottonseed oil from the *vanaspati* factories in India is hardly adequate to absorb even the present small output;

(6) exports of cotton seed hulls (coverings) to Arabia, where American petroleum companies pay in dollars a higher price than the fuel value of these hulls in India, since they have a specialised demand for these hulls in drilling operations, should be freely allowed;

(7) in view of the very limited scope for export of linters, considering the substantial domestic requirements of the acetate rayon industry, there does not appear to be any further necessity for an export duty on linters;

(8) foreign linters should be allowed to be imported under preferential tariff, so that the prices of Indian linters could be regulated at between their legitimate export prices and the cost of imported linters;

(9) cottonseed oil should be exempted from the cess, if any, imposed on expeller produced oil as a means of helping the *ghani* industry; and

(10) if *kardi* seed crushing is to be restricted, it should be restricted to the *ghanis* and cottonseed oil mills only, particularly in South India, where the only alternative to cottonseed which is suitable and feasible at the same time of the year is *kardi* seed. Export of *kardi* seed should be stopped.

Encouragement of the use of cottonseed oil by *vanaspati* factories would help release groundnut oil for domestic consumption.

INDIA DEFICIT IN BETELNUTS

IMPORTS AFFECT PRICES OF INDIGENOUS PRODUCTS

BETELNUTS, also widely known as arecanuts, have now come into prominence as an important source of revenue to the Central exchequer. They were, in fact, the first target of the Finance Minister's budget proposals for 1954-55 in which he sought to raise the preferential import duty on betelnuts from As. 9½ per pound to as much as Re. 1 per pound. Announcing this proposal, the Finance Minister stated that profit margins on betelnuts had gone so high that it resulted in the payment of premium on import licences. The importer and the middleman retained such higher profits which justified the Minister's decision to divert a part of it for the benefit of the exchequer. He estimated the additional revenue from the increase of As. 6½ a pound in the import duty at Rs. 3 crores. Again, while announcing, subsequently, certain tax reliefs relating to soaps, art silk fabric and footwear, Mr. Deshmukh stated in Parliament that there was no case for reducing the duty on betelnut.

The importance that is thus attached to betelnuts by the Ministry of Finance makes the role played by this commodity in the country's economy a subject worthy of close study. Betelnut is the fruit of the areca palm. Besides being one of the commercial crops in India, it is an article of domestic consumption with special significance at ceremonial and auspicious functions in Indian homes. Says Mr. N. M. Bhargava, in his article on "Arecanuts in India," contributed to the *Agricultural Situation in India* published by the Ministry of Food and Agriculture: "Along with betel leaf and a little lime, it forms the common masticatory and chewing *pan supari* is as typically Indian in popular conception as chewing gum is American." In this article, Mr. Bhargava throws considerable light on the position of this commodity, which in the absence of any other authoritative information, may be taken as the latest on the subject.

The areca palm grows in a variety of soils. The best suited soil is the one capable of thorough drainage and able to retain optimum moisture. The plant requires cool and moist atmosphere and flourishes well in regions of heavy rainfall. In regions of low rainfall, it grows well, provided adequate irrigation is given. In the early stages of its growth, it requires plenty of shade and so it is usually planted as a mixed crop amidst plantations, coconuts, mango, etc. Being thus a tropical plant, its cultivation is confined to the South-East Asian countries such as, India, Pakistan, Ceylon, Malaya, Straits Settlements, Indonesia, etc. Recently, its cultivation has also been extended to Madagascar and East Africa.

In India, arecanut cultivation is carried on in two zones. One is Southern zone, consisting of the valleys in the western ghats and the west coast plains and the other is the Eastern zone, comprising the Gangetic delta and parts of Assam. The areca plant is rain-fed in Travancore, North Malabar, and West Bengal, while it is irrigated in South Malabar, Cochin, Mysore, North Kanara and South Kanara.

A Six to Ten Year Plant

The palm begins to bear in about six to ten years after planting. Tender nuts are harvested between July and December and ripe nuts between October and April. In West Bengal and Assam, where the nuts mature late, harvesting takes place during May-July.

Statistics of areca and production of betelnuts are not being regularly collected in India. A survey conducted in 1945-46 by the Marketing Adviser to the Government of India estimated the area under arecanuts in Undivided India at 5.13 lakh acres, yielding 48.11 lakh maunds. Of this total yield, Bengal accounted for 26.57 lakh maunds. After the Partition, the share of West Bengal in the output dropped to 2.61 lakh maunds. On the basis of this survey, the output of the Indian Union is estimated at 24.2 lakh maunds.

A more recent estimate has been framed by the Indian Central Arecanut Committee. According to this estimate, the area sown to arecanuts in the Indian Union is 2.62 lakh acres, yielding about 21.79 lakh maunds. Statewise break up of these figures is as follows:

Name of State	*Area* (In 000 acres)	*Annual* (In lakh maunds)
Assam	25.5	2.61
Bombay	21.2	3.36
Coorg	0.8	0.12
Madras	107.0	7.70
Mysore	37.1	2.78
Travancore-Cochin	64.4	4.72
West Bengal ...	5.5	0.50
Total ...	261.5	21.79

It is clear from the table above that Madras is by far the largest producer of arecanuts, accounting for about 40 per cent. of the area and about 35 per cent. of the production. Travancore-Cochin is the second largest producer, with a share of 25 per cent. of the area and about 22 per cent. of the output. The share of Bombay in the output is 15 per cent. of Mysore about 13 per cent., Assam 12 per cent., West Bengal 2.4 per cent., and Coorg 0.6 per cent.

About 95 per cent. of the output of betelnut constitutes the marketable surplus, the balance of 5 per cent. being retained by the producers for purposes of seed.

Every Part is Useful

Every part of the areca plant is economically useful. Thus, its stem is used for poles, rafters, beams, etc., for constructional purposes; leaf sheaths are used for caps and for making buckets for drawing water, leaves are used for thatching hutments; and husks of the nuts can be utilised for the manufacture of cardboards. The fibre, too, can be used as insulatory material for electrical installations, but, in India, this by-product is simply wasted.

India is deficit in the supplies of arecanuts. The gap between domestic demand and the local supply is covered by imports. Imports in each of the five years ended 1952-53 were as follows:

Year	*Imports* (In lakh maunds)
1948-49	10.66
1949-50	13.00
1950-51	16.06
1951-52	13.78
1952-53	10.17

The quantity imported in 1948-49 does not take into account imports from Pakistan, as reliable data are not available. Imports in 1949-50, which include those from Pakistan, amounted to 13 lakh maunds. They shot up to 16.06 lakh maunds in 1950-51 but, subsequently, staged a gradual decline to 13.78 lakh maunds in 1951-52 and to 10.17 lakh maunds in 1952-53. The average annual imports during the quinquennium ended 1952-53 was of the order of 12.73 lakh maunds, which represents 55 per cent. of the indigenous output, estimated at 21.79 lakh maunds.

Countrywise Imports

An analysis of the origin of arecanut imports discloses that they are received mainly from Malaya, Ceylon and Pakistan. The table below gives the quantity of imports from the various countries during each of the three years ended 1952-53, as also the annual average.

(In lakh maunds)

Source	1950-51	1951-52	1952-53	*Annual Average*
Ceylon ...	1.33	2.07	1.54	1.65
Malaya ...	10.19	8.21	6.73	8.38
Pakistan ...	3.97	1.56	0.57	2.03
Others ...	0.57	1.94	1.33	1.28
Total ...	16.06	13.78	10.17	13.34

Thus Malaya is by far the largest supplier of arecanuts to India. During the triennium ended 1952-53, the average annual imports amounted to 13.34 lakh maunds. Of this, imports from Malaya accounted for 8.38 lakh maunds or about 63 per cent. of the total. Imports from Pakistan represented 14 per cent. and those from Ceylon 12 per cent.

India is the only market for arecanuts grown in the exporting countries mentioned above. In Malaya, the soil is very favourable to the cultivation of the areca plant. The cost of cultivation is lower than that in India where higher wages for labour, measures to fight the *Kole roga* disease and low productivity render cost of production high. Owing to this difference in costs of cultivation, the quantum of imports determine the prices of indigenous arecanut in Indian markets. The quality of nuts and the type of nuts, namely, whole ripe sun-dried, whole boiled and sliced boiled, also influence the level of prices. The quality is determined by the maturity of the nut when picked, by the manner of slicing and by the method of processing.

Trend of Prices

Areca prices underwent considerable fluctuations during the past three years. The behaviour of internal prices as described by Mr. Bhargava makes interesting reading. He writes:

"The heavy imports made during 1950 and 1951 affected the Indian markets adversely and the price of indigenous arecanuts declined sharply towards the close of 1951. The price of indigenous variety at Shimoga ruled well above Rs. 110 per maund, during the months of April to August, 1951 and was generally about Rs. 33 per maund, higher than the price of the imported variety at Calcutta. But, in September, 1951, the price of the local variety began to decline and towards the close of that year fell by about Rs. 30 per maund to the level of Rs. 85-9-3 per maund. Near about that time, there was also accumulation of stocks in the producing areas and as a result, the price differential between the indigenous variety of Shimoga and the imported Singapore variety at Calcutta had been completely wiped out.

"In order to arrest the declining prices of indigenous nuts, the Government decided to adopt a more restricted import policy and during the calendar year 1952 imports were permitted only up to 50 per cent. of half of best year's imports. As a result of this measure, the imports during that year remained lower than in the earlier years. But the depressing effect on prices of excessive imports and accumulation of stocks in producing centres which took place in 1951 persisted throughout the year 1952. The price of the indigenous nuts at Shimoga declined steadily from Rs. 85-9-3 in January, 1952, to Rs. 40-6-0 per maund in June, 1952. The price of the imported nuts, at Calcutta, also declined from January to March, 1952, but it gained the lost ground in the next three months of April to June, 1952. During the months of July to September, 1952, the price of the local nuts at Shimoga remained slightly higher than the price in June, 1952. But in October, 1952, it again declined to Rs. 46 per maund and stood at the same level in the remaining two months of that year. The price of the imported variety, on the other hand, increased more or less steadily during the second half of 1952. Thus, a striking feature of the course of prices in 1952, was that, for the first time, the price of the local nuts ruled at a level well below that of the imported variety.

"In the first half of 1953, the level of permitted imports was further reduced to 33.3 per cent. of half of best year's imports. Besides, the import duty was enhanced from As. 0-7-6 per lb. to As. 0-9-6 per lb., with effect from the 28th February, 1953. These changes in the Government policy kept the imports low, as a result of which prices of indigenous nuts showed steady improvement. While the price of the imported Singapore variety at Calcutta increased by about 20 per cent., that of the indigenous variety at Shimoga improved by about 44 per cent. No doubt the restricted imports helped the local prices to improve, but the increase in the prices of imported variety began to cause hardship to the consumer. With a view to affording some relief to the consumer, the level of permitted imports during the half-year, July to December, 1953, was restored to the level of 50 per cent. of half of best year's imports. Over the five months, July to November, 1953, the price of imported variety at Calcutta declined steadily from Rs. 124-4 per maund in July, 1953 to Rs. 109 per maund in November, 1953, that is, a fall of about 12 per cent. The price of the indigenous variety at Shimoga was quoted at Rs. 75-11-3 per maund in July, 1953, and in September, 1953, it rose to Rs. 84-12 per maund. However, in October, 1953, the price fell to Rs. 79 per maund. There was further decline in the subsequent two months. In December, 1953, the price of the indigenous variety was ruling at the low level of Rs. 65-9 per maund, there being a fall of about 20 per cent. when compared to the price in September, 1953.

"Apart from the quantum of imports, lack of proper facilities for distribution of the supplies in the country also affects the price received by the indigenous grower. During the first eight months of the calendar year 1953, the average monthly c. and f. price of the imported Singapore variety landed at Calcutta stood at about Rs. 32-3 per maund, being half of the corresponding average price of Rs. 64-5-9 per maund of the indigenous variety at Shimoga. During the same period, the average monthly price of the indigenous variety at Calcutta was about Rs. 99 per maund. Adding the import duty of As. 9-6 per lb. or about Rs. 48-14 per maund, the cost price of the imported variety at Calcutta worked out to Rs. 81 per maund. But the actual market price was about Rs. 119-7 per maund, being about 86 per cent. higher than the price of the indigenous variety at Shimoga and about 20 per cent. higher than the price of the local nuts at Calcutta. The difference between the prices of the imported variety and the local variety at Calcutta market may be partly due to consumer's preference for the former. The low prices of the local nuts at Shimoga would appear to be largely due to difficulties in the movement of the indigenous supplies from the producing areas in the south to the main consuming centres in the north."

Three Problems

The indigenous arecanut grower is faced today with three problems. One is the high cost of production. This is due to small holding and to damage caused by plant diseases. In some years, as much as 40 to 50 per cent. of the crop is lost on account of disease. Secondly, statistics of the area under areca palms are in-

(*Continued in next page*)

IMPLEMENTATION OF MINIMUM WAGES ACT

CENTRAL ADVISORY BOARD TO DISCUSS THE ISSUE NEXT WEEK

THE second session of the Central Labour Advisory Board, set up under the Minimum Wages Act, 1948, scheduled to be held at Bombay on 8th and 9th April, 1954, will provide an occasion to discuss problems relating to the implementation of the Act. The main issues are: principles for fixation of minimum wages, difficulties in the way of the implementation of the Act, payment for weekly days of rest and overtime work.

The importance of this conference is obvious enough. For, as the Central Advisory Board is tripartite in character, representing Governments, employers and employees, the discussions and the findings of the conference will have an important bearing on changes in the Government's labour policy. If the Act is to yield any benefit, it is necessary that there should be clear ideas in regard to the principles which govern the fixation as well as the implementation of minimum wages.

It will be recalled that the Minimum Wages Act, which came into force on 15th March, 1948, required the appropriate Governments to fix minimum wage rates in industries mentioned in Part I of the Schedule by 15th March, 1950, and in agriculture, mentioned in Part II of the Schedule, by 15th March, 1951. The Act was later extended to include Part B and Part C States also. But, in view of the difficulties pointed out by the State Governments, the Act could not be enforced by the due dates. It was, therefore, amended so as to provide for the last date for implementation in respect of industries upto 31st March, 1952, and of agriculture upto 31st December, 1953. But even this time limit proved insufficient. Consequently, a Bill extending the time limit upto 31st December, 1954, in respect of both industry and agriculture, and validating the wage rates fixed in employment mentioned in Part I of the Schedule after 31st March, 1952, is before Parliament.

Definition of Minimum Wage

One of the chief obstacles in the way of implementation of the Act is the absence of any definite provisions in the Act as to the definition of and content of minimum wage. As a result, the various committees in the different States have adopted different principles and emphasised different aspects. The result has been that today one finds a bewildering variety of minimum wage rates. It is true that absolute uniformity either in the principles or practices adopted or in the wage rates fixed is neither desirable nor practicable. Nevertheless, it is imperative that there should be some co-ordination and a modicum of uniformity at least in basic principles, such as the content of the minimum wage, the importance to be attached to various considerations like the standard of living, the size and composition of the family, etc., which should be borne in mind by the minimum-wage fixing authorities in the various States.

So far as the content of the minimum wage is concerned, the various committees have adopted the interpretation given by the Fair Wages Committee that "the minimum wage must provide not merely for the bare sustenance of life, but also for the preservation of the efficiency of the worker by providing for some measure of education, medical requirements and amenities." They have tried to ascertain the money cost of such a wage on the basis of family budgets. But, as the minimum wage fixed on this basis, in many cases, was beyond the financial capacity of the employments under consideration, it had to be scaled down. To quote the words of a committee in Bombay: "For all our industries, it can be said that the legal minimum should be fixed at as high a point as the industry can hope to bear in normal times."

The determination of the size of a family is an important problem incidental to minimum wage fixation. In India, most of the industrial tribunals and committees of enquiry, including the Central Pay Commission, Bombay Textiles Labour Enquiry Committee and the Fair Wages Committee have recommended the adoption of a standard family of three consumption units, comprising a man, his wife and two dependents, who would ordinarily be children under 14. To put it in the words of the Fair Wages Committee, "the standard family should be taken as one requiring three consumption units and providing one wage earner." The various wage committees have accepted the view that a standard family consists of three consumption units.

In the case of certain employments such as plantations and local authorities, however, the "three consumption units-and-one-earner" basis has not been adopted by the committees, in view of the fact that, in these employments, generally, work is done on a family basis (as in plantations) or, generally, the wife also is employed (as in local authorities), and also because of the fact that the composition of the families, etc., as determined by certain recent enquiries undertaken at the instance of these committees, was found to be different. Most of the minimum wage committees have recommended different minimum wages for different workers in different localities in the same State. The main consideration underlying the demarcation of localities has generally been that certain localities are cheaper than others and, consequently, a lower minimum wage would ensure the standard of living contemplated by wage-fixing authorities. The basis of classification of areas in different groups has, however, been different. In some cases, it has been population; in others, differences in cost of living; in certain other cases, financial considerations, as in the case of local authorities; and in still others, the relative industrial development of various localities.

Different Rates of Wages

Clause (a) (ii) of sub-section (3) of section 3 of the Minimum Wages Act provides for the fixation of different minimum rates of wages for different classes of work in the same scheduled employment. Where minimum wages have been fixed in certain employments, no uniform practice has been followed by any of the State Governments. In some employments, wage rates have been fixed only for manual workers, while in some others, clerical employees also have been covered. In some States, in some employments, workers have been classified into a few broad categories, while, in some others, a detailed categorisation has been made; others still have contented with fixing the minimum wage rates for the unskilled *mazdoors* only, leaving alone the other categories.

There has also been a wide divergence in the practice adopted by the various Governments and even by the same Government, in respect of different employments, in the matter of fixing the minimum wage rates. The Governments of Madhya Pradesh, the Punjab, Bombay and Bihar have generally fixed all-inclusive wage rates, while the States of Assam, Madras and West Bengal have generally provided for the payment of a separate dearness allowance, in addition to the basic wage rates. In Delhi, a wage rate inclusive of dearness allowance is fixed, but, at the same time, provision has been made to vary the wage with a rise or fall in the Delhi cost of living index number. From the available information, it would appear that the question of an all-inclusive wage rate *versus* a basic rate plus dearness allowance has been decided on the basis of the existing practice in the industry concerned as also the availability or otherwise of proper cost of living index numbers applicable to the employments concerned.

Another important question is whether the dearness allowance should be linked to a cost of living index number and if so, the extent to which the rise in the cost of living should be neutralised. The question of linking dearness allowance to cost of living index has been decided on the basis of the availability or otherwise of proper cost of living index numbers. On the question of neutralisation, opinions have varied and the decision, in many cases, has been somewhat arbitrary. Thus, in West Bengal, the percentage of neutralisation is 31.5 in rice mills, 44 in flour mills and 45 in tanneries and leather manufacturies, while the Committee for plantations arrived at the figure of dearness allowance by deducting the basic wage from the proposed total minimum wage.

Thus, it is evident that the principles and practices adopted in the fixation of minimum wages vary not only from State to State but also, in some cases, within the same State. In order to ensure co-ordination and a certain measure of uniformity, the Central Board will have to evolve some directive principles for the guidance of the committees appointed or which may be appointed for fixing minimum wages or the revision of such wages. In this connection, the Board will have to consider the following issues:

(1) What should be the content of the minimum wages that should be fixed? If the definition of the minimum wages as given by the Fair Wages Committee is accepted (as, in fact, it has been by many committees), what should be the procedure to be adopted for ascertaining the money value of the goods and services that make up the minimum wage? Would it not be desirable that the minimum wage should be based on standard family budgets constructed for the purpose?

(2) Whether, in the interest of uniformity, it is desirable to adopt the "three-consumption-units-and-one-earner" basis for a family for working out the minimum wage? Whether it is necessary to make exception to this rule in the light of any special circumstances prevailing in particular industries, as, for example, plantations and local authorities.

(3) Having arrived at a figure of a minimum wage, should that be allowed to be altered in the light of any other circumstances or factors, such as capacity of the industry or a particular unit to pay, rates obtaining in the same region and/or similar employments? If so, what importance should be attached to them. A problem that arises, in this connection, is whether fixation of minimum wages at the existing rates could be justified on the plea of inability of an industry to pay more when it is found that the existing wage rates are unconscionably low from the point of view of the minimum requirements of the workers' family.

(4) Whether it is necessary to specify the types or categories of workers in respect of whom minimum wages should be fixed.

(5) Whether, in view of the practical difficulties involved in the dearness allowance being linked to cost of living index numbers, it is not desirable to fix dearness allowances at a flat rate, at the same time making provision for its revision at specified intervals.

(6) In cases where a separate dearness allowance is fixed, what should be the percentage of neutralisation that should be provided for the rise in the cost of living over that for the base period?

Agriculture

So far as the implementation of the Act relating to agriculture is concerned, the pace of progress is very slow. A committee appointed by the Planning Commission had recommended that the scope of the Act should be restricted, in the first instance, to low wage areas. The Act was accordingly amended to permit the State Governments to fix minimum wages for such portion of the territories or for such classes of employment as they might consider feasible. This has been taken advantage of and some State Governments have fixed minimum wages for a part of the State only and some States have excluded farms below a certain size. The work that has been done in States in the sphere

(*Continued on page 659*)

(*Concluded from previous page*)

complete. In order to supplement the domestic production, imports are allowed. The cheap imports have generally a depressing effect on prices of indigenous nuts and discourage production. While protection has been afforded to the indigenous producer, through the regulation of quantum of imports and tariff changes, output in the country has been increasing or decreasing. Thirdly, owing to the uneconomic holding, the marketable surplus which a grower offers has to be small and curing becomes uneconomical. Besides defective methods of boiling, colouring and drying also affect the quality adversely.

These problems could be solved by the encouragement of better methods of cultivation, manuring and by the adoption of effective measures to fight the plant diseases. This would be possible, if research were to be organised on a large scale. Schemes should be drawn for setting up curing and marketing societies to help the small producers.

This work has, however, been taken up by the Indian Central Arecanut Committee appointed by the Union Government in 1949. Under the auspices of this Committee, regional research stations for undertaking research on anti-*mahali* measures, better methods of manuring, etc., have been set up. Attached to these stations are nurseries for raising improved seedlings. There is before the Committee a proposal to establish a Central Research Station. The Committee is also persuading the States where areca palm is grown to make arrangements for the collection of data relating to area, production, prices, etc. In certain parts, processing and marketing societies of producers have been organised on a co-operative basis.

Notices

THE ANDHRA BANK, LIMITED

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE 30TH Annual General Meeting of the Shareholders of the Bank will be held at the Registered Office of the Bank, Cantonment Road, Masulipatnam, on Sunday the 18th April, 1954, at 4 p.m., to transact the following business.

BUSINESS OF THE MEETING

1. To receive the Report of the Directors and the audited Balance-sheet as at 31st December, 1953, and Profit and Loss Account for the year ended 31st December, 1953.
2. To declare a Dividend.
3. To elect four Directors in the places of Messrs. Dara Visweswararao, K. Subrahmanya Dutt, B.Sc., Batchu Venkateswarlu, who are retiring under Article 94 and Sri Repaka Satyanarayanamurty from among the next longest in office, who has volunteered to retire., The retiring Directors are eligible for re-election.
4. To appoint Auditors for the current year and to fix their remuneration. Messrs. Brahmayya & Co., and Ch. V. Lakshmiah & Co., the retiring Auditors, offer themselves for re-appointment.

Notice is hereby given that the Register of Members of the Andhra Bank Ltd., will remain closed from Monday the 12th April, 1954, to Saturday the 24th April, 1954, both days inclusive, during which period no transfer of shares will be registered.

By Order of the Board,
E. RAMACHENDRAMURTI,
General Manager.

MASULIPATNAM, *24th March*, 1954.

N.B.—The dividend warrants for the half-year ended 31st December, 1953, will be despatched to the shareholders to their registered address on or before the 26th April, 1954. Shareholders are requested to intimate the Bank any change of address immediately.

THE TRAVANCORE RUBBER AND TEA COMPANY, LIMITED

(Incorporated in Travancore)

NOTICE IS HEREBY GIVEN THAT THE Tenth Ordinary General Meeting of the Company will be held on Monday the 26th April, 1954, at the Registered Office of the Company in Alleppey at 2-30 p.m., to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Accounts and Balance Sheet for the year ended 31st December, 1953.
2. To declare a Dividend.
3. To elect Directors.
4. To appoint Auditors.
5. To transact any other competent business which may be brought before the meeting.

The Transfer Books of the Company will be closed from 10th April 1954, to 28th April, 1954, both days inclusive.

By Order of the Board,
THE TRAVANCORE RUBBER & TEA CO., LTD.,
Per Pro ASPINWALL & Co. (TRAVANCORE) LTD.,
H. SUTTON,
Managing Agents.

ALLEPPEY, *24th March*, 1954.

CAREW AND COMPANY, LIMITED

THE BOARD OF DIRECTORS HAS DECIDED to recommend to the forthcoming Ordinary General Meeting of Shareholders the following Dividends:—

(a) The arrears of Dividend on the 6½ per cent. Cumulative Redeemable Preference Shares for the years ended 30th June, 1951, and 30th June, 1952.

(b) Dividend on the 6½ per cent. Cumulative Redeemable Preference Shares for the year ended 30th June, 1953.

By Order of the Board,
GLADSTONE LYALL & CO., LTD.,
Managing Agents.

4, FAIRLIE PLACE,
CALCUTTA, *26th March*, 1954.

CAREW AND COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, 4, Fairlie Place, Calcutta, on Tuesday the 20th day of April, 1954, at 11-30 a.m., for the purpose of:—

1. Receiving the Directors' Report and passing the Accounts for the year ended 30th June, 1953.
2. Declaring Dividends on the 6½ per cent. Cumulative Redeemable Preference Shares.
3. Electing Auditors for the current year and fixing their remuneration.
4. Transacting such other business as may be brought before the Meeting.

The Transfer Books of the Company will be closed from 10th April, 1954, to 20th April, 1954, both days inclusive.

Preference Shareholders and holders of Preference Shares under Blank transfer should note that upon the declaration of the Dividend the Dividend Warrants will be posted to Registered Preference Shareholders or their Mandatees. No application for payment will be necessary.

GLADSTONE LYALL & CO., LTD.,
Managing Agents.

4, FAIRLIE PLACE,
CALCUTTA, *26th March*, 1954.

To the Shareholders of Messrs. Carew & Co., Ltd., and in particular to:

S. A. Ali, Esq., W. Allan, Esq., P. H. Antrobus, Esq., B. W. Bagshawe, Esq., Capt. W. F. Byrnes, F. W. C. Biallo Blotzky, Esq., Mrs. M. B. Blotzky, P. H. Compton, Esq., Brigadier G. E. Collins, Mrs. A. F. Cowdrey, Mrs. E. F. M. Cockburn, T. C. Donald, Esq., Miss Mona Daly, B. P. Dave, Esq., Lt.-Col. D. L. Graham, Mrs. Emily Kinsey, P. S. E. Jackson, Esq., Miss H. Lyall, Miss M. Lyall, Miss D. H. D. Lyall, R. A. Lloyd, Esq., H. E. Rodrigues, Esq., E. H. Marshall, Esq., Messrs. Mis and Sons Ltd., Miss M. E. Mia, K. L. Palit, Esq., Lt.-Col. H. P. Rudolf, Mrs. A. M. Garowara, A. N. Sassoon, Esq., Mrs. Hilda Sykes, Mrs. W. E. Slade, E. S. Tarlton, Esq., Baber S. S. J. B. Rana, Miss Aileen Ward, Major A. G. White, W. W. Winlaw, Esq., Mrs. L. B. Majumdar, Dr. J. K. Dave, J. B. Patel, Esq., I. A. Shaik, Esq., I. B. Wyndham Scott, Esq., Mrs. Margaret Jupp, Guy F. E. Elmslie, Esq., Frank Gore-Hinds, Esq., Eric J. Higher, Esq., James Weir McKay, Esq., Mrs. Saida Jacob, Miss Evelyn Gore-Symes, Mrs. A. M. Adam, H. H. Cunnington, Esq., Gulam Faludia, Esq., James Wilkie, Esq., C. H. Heape, Esq., Pandit K. A. Dikshit, Mrs. N. A. Cama, Mrs. L. M. Stanley, John Massie, Esq., Mrs. Mah Tai, Khan Sahib Dr. Ghulam Mohammad, H. H. Major Genl. Mrigendra S. S. J. B. Rana.

THE RAMNUGGER CANE AND SUGAR COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Seventeenth Ordinary General Meeting of the Shareholders of the Ramnugger Cane and Sugar Company Ltd., will be held at the Registered Office of the Company, 7, Wellesley Place, Calcutta, on Wednesday, the 28th April, 1954, at 12 noon, to transact the following business:—

1. To receive the Report of the Directors and to pass the Audited Accounts for the year ended 31st August, 1953.
2. To declare a Dividend on Preference Shares.
3. To declare a Dividend on Ordinary Shares.
4. To elect Directors.
5. To appoint Auditors and to fix their remuneration.
6. To transact any other business which may properly be brought before the Meeting.

NOTICE is also given that the Share Transfer Registers will be closed from the 12th April to 28th April, 1954, both days inclusive.

By Order of the Board,
ANDERSON WRIGHT LTD.,
Managing Agents.

CALCUTTA, *24th March*, 1954.

GOVERNMENT OF INDIA
MINISTRY OF RAILWAYS
(RAILWAY BOARD)

NOTICE

CAST IRON SLEEPER PLATES FOR RAILWAYS

TENDERS ARE INVITED FOR THE SUPPLY of Cast Iron Broad-gauge Sleeper Plates upto total tonnages of—

(a) 5,000 tons
or
(b) 10,000 tons
or
(c) 20,000 tons
or
(d) 30,000 tons

} to be supplied in the period ending 31st March, 1955.

2. Tenders are being invited from established foundries in India only, for manufacture from 25 per cent. Graded Pig Iron, 50 per cent. Ingot Moulds and 25 per cent. Railway Cast Iron Scrap supplied f.o.r. nearest station or works siding at Rs. 75 per ton.

3. Applications for copies of tender documents should be made to the Director, Civil Engineering, Railway Board, New Delhi. Tender documents embodying conditions of supply and contract will be supplied at Rs. 10 per set and will be available for sale from 1st April, 1954, except on Sundays and holidays.

4. Tenders will be received up to 13.00 hours on 26th April, 1954, and opened in the office of the Railway Board, New Delhi, at 15.00 hours on the same day.

(Sd.) H. K. L. SETHI,
Director, Civil Engineering,
Railway Board.

NEW DELHI, *24th March*, 1954.

THE BOMBAY FIRE AND GENERAL INSURANCE COMPANY, LIMITED

(Incorporated in India)

NOTICE IS HEREBY GIVEN THAT THE Nineteenth Ordinary General Meeting, of the above Company will be held at the Registered Office of the Company, 14, Jamshedji Tata Road, Churchgate Reclamation, Bombay, on Thursday the 22nd April, 1954, at 3 p.m. (S.T.), to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Revenue Accounts, Profit and Loss Account and Balance Sheet for the year ended 31st December, 1953.
2. To sanction the declaration of a Dividend.
3. To elect Directors in place of Mr. Manoobhai Doongursee and Mr. M. A. Fazalbhoy who retire under Article 95 of the Articles of Association of the Company and being eligible, offer themselves for re-election.
4. To appoint Auditors for the current year and to fix their remuneration.

The Share Transfer Register of the Company will be closed from 8th April to 22nd April, 1954 (both days inclusive).

By Order of the Board,
B. H. REPORTER,
Manager.

BOMBAY, *18th March*, 1954.

OUCHTERLONY VALLEY ESTATES REPORT BETTER RESULTS

TEA CROP AT A RECORD

AFTER a very unfavourable year of trading in 1951-52, the Ouchterlony Valley Estates (1938) Ltd. (Managing Agents and Secretaries: Messrs. Peirce Leslie & Co., Ltd., Kozhikode, Malabar), has been able to show a slightly better performance in the subsequent year, that is, the one ended 31st October, 1953. The net profit, after providing for depreciation on property, amounts to Rs. 1.91 lakhs, as against Rs. 1.43 lakhs for the previous year and Rs. 17.60 lakhs for 1950-51. The improvement in profit for the year under review is not very marked, for the profit, at Rs. 1.91 lakhs, is the second lowest in the past five years. The Directors have, therefore, not been able to set aside more than a small sum of Rs. 22,990 to the reserves and to pay more than a 10 per cent. dividend, a rate which they paid for the previous year on a capital which had been doubled by the capitalisation of a part of the reserves.

To a large extent, the recovery in the Company's fortunes in 1952-53 has been due chiefly to the improvement in tea prices from the beginning of 1953. There have been other factors also which have contributed to the higher profit, the more notable among them being a substantial increase in the Company's tea crop. The Company's output of tea in 1952-53 amounted to 8,28,640 lbs. which is a record in its history and represents an increase of 1,24,948 lbs. over that in the previous year and 47,712 lbs. over the previous record reached in 1950-51. The output was well above the estimate of 7,46,000 lbs. too. Consequently, the cost of production was lower at 126.30 cents per lb., as compared with 139.69 cents per lb. in 1951-52 and the estimated cost of 136.5 cents per lb. for the year under review. The average price realised was 170.19 cents per lb., as compared with 156.46 cents in the previous year. There was also a marked rise in the coffee crop harvested, such having amounted to 8,449 cwts., as against 7,084 cwts. in 1951-52. However, the 1952-53 output of coffee was less than half the record crop of 17,060 cwts. harvested in 1950-51. That apart, the higher output in 1952-53 as compared with that in 1951-52 could not have made a worthwhile contribution to the improvement in the earnings of the Company, because of the lower prices realised. The Directors state that, upto the time of their signing the report, that is 24th February, 1954, payments received for the above harvest, which was delivered to the Coffee Board, amounted to Re. 1-15 per point or Rs. 152.68 per cwt., as against Rs. 212.83 per cwt. received in the corresponding period of the previous year. For purposes of accounts closing, however, the entire stock has been valued at Rs. 2-4 per point, but even this is much lower than that of Rs. 2-11 per point for the previous year.

The following table presents the salient features of the Company's results for 1952-53, against the background of those for the previous three years:

(Value in lakhs of rupees)

	For the year ended 31st October			
	1953	1952	1951	1950
Tea crop (in lbs.)	8,28,640	7,03,692	7,80,928	5,10,222
Coffee crop (in cwts.)	8,449	7,084	17,060	11,419
Sale proceeds of tea	14.03	11.13	14.00	9 27
Sale proceeds of coffee	15 54	15.53	31.15	20 49
Other income	0.37	0.49	0.72	0 22
Estate expenditure	24.71	22 93	24.05	19 22
Other expenses	1.06	0.91	2.33	1.41
Managing Agents' commission ..	0.44	0.43	0.70	0.43
Depreciation	1.81	1.41	1.20	1.06
Net profit	1.91	1.43	17.60	7.75
Depreciation on investment ..	0 01	0.08	..	..
To reserves	0.23	..	14.00	5.11
Dividend	1.95	1.95†	3.89	2.43
	(10%)	(10%)	(40%)	(25%)
Carry forward	0.93	1.26	1.78	2.07

† On an increased capital.

Expenditure on tea has gone up from Rs. 9.83 lakhs to Rs. 10.47 lakhs and that on coffee from Rs. 13.08 lakhs to Rs. 14.23 lakhs. The provision for depreciation has been raised on account of the additions to the fixed capital expenditure.

The latest balance-sheet of the Company shows a satisfactory financial position. Even after the capitalisation of a sum of Rs. 9.73 lakhs in 1951-52, the reserves and surplus stand at Rs. 20.48 lakhs and exceed the paid-up capital of Rs. 19.46 lakhs. The reserves include a debenture-stock redemption reserve of Rs. 6 lakhs, a general reserve of Rs. 8.50 lakhs and a development reserve of Rs. 5 lakhs. The debenture-stock amounts to Rs. 4.59 lakhs. During the year under review, the Company bought back debenture-stock worth Rs. 44,800 of the first series, thus completely redeeming the entire issue of Rs. 6 lakhs of 6 per cent. stock. It also bought back stock worth Rs. 8,500 of the second series (Rs. 5 lakhs 5½ per cent. stock), thus bringing the total stock of this series redeemed so far to Rs. 41,000, the balance outstanding being Rs. 4.59 lakhs, as stated above. The first instalment of Rs. 1 lakh to be redeemed out of this falls due on 30th June, 1954. The Company has been redeeming its debentures out of the current earnings, so that the entire debenture redemption reserve of Rs. 6 lakhs is left unutilised. There is a taxation reserve of Rs. 12,342. The current liabilities amount to Rs. 3.52 lakhs. The gross block of the value of Rs. 35 lakhs (including an addition of Rs. 2.61 lakhs made during the year) has been provided with depreciation of Rs. 8.32 lakhs. The current assets amount to Rs. 21.49 lakhs and represent more than six times the current liabilities.

The Rs. 2 fully paid-up shares of the Company are being currently quoted at Rs. 4-2- *cum-div.* On an *ex-div.* basis, the dividend for the year under review gives a yield of 5.1 per cent. per annum free of tax.

INDUSTRIAL INVESTMENT TRUST LTD.

The audited accounts of the Industrial Investment Trust Ltd. (Secretaries: Messrs. Premchand Roychand and Sons, Ltd., Bombay) for the year ended 31st December, 1953, disclose that the Trust has had a satisfactory year of business. The profit for the year under review shows a small recession, but this is not surprising, for the Trust's fortunes being dependent upon the experience of industrial concerns during the preceding year, the fall in dividends of industries for 1952 has been responsible for the drop in profit. The earnings, however, are sufficient to maintain the dividend for the third year in succession at the modest level of 4½ per cent.

The Trust's gross income for the year amounts to Rs. 6.27 lakhs, a decline of Rs. 0.42 lakh from the previous year's income. Almost the whole of this income has been earned from interest on securities and dividend on shares. Expenses have gone up slightly and there has also been an increase in the loss on sale of investments from Rs. 1,708 to Rs. 5,270. After providing Rs. 27,763 (as against Rs. 30,205) for Secretaries' commission, the profit, subject to provision for taxation for 1949, 1950, 1951, 1952 and 1953, amounts to Rs. 5.18 lakhs, as against Rs. 5.65 lakhs for 1952. The loss on sale of investments has been written off, as in the previous year, from the general reserve. After taking into account the refund of income-tax and the unappropriated surplus of Rs. 1.85 lakhs from the previous year, the distributable sum amounts to Rs. 7.11 lakhs (as against Rs. 7.35 lakhs a year ago). From this, the Directors have set aside Rs. 50,000 towards investment reserve, as compared with Rs. 1 lakh set aside last year. After paying the dividend at 4½ per cent. the sum left to be carried over, at Rs. 2.11 lakhs (subject to taxation for the aforesaid years) is a shade higher than that of Rs. 1.85 lakhs brought in.

The following is a summary of the Trust's latest balance-sheet:

Liabilities	Rs.	Assets	Rs.
Capital ..	99,99,250	Investments	1,27,94,592
Reserves and surplus ..	20,91,180	Debts, deposits and advances ..	3,528
Liabilities ..	7,55,718	Furniture and fittings ..	6,417
		Cash ..	41,611
Rs.	1,28,46,148	Rs.	1,28,46,148

The Trust's investments shown at cost are higher by a small extent. The market value of the investments is lower than the book value by 4.54 per cent.; a year before the gap was as large as 9.75 per cent. A break-up of the investments shows that holdings of Government securities and preference shares are unchanged at Rs. 3.33 lakhs and Rs. 19.05 lakhs, respectively. Holdings of equities show an increase from Rs. 96.72 lakhs to Rs. 97.39 lakhs, while those of debentures have declined from Rs. 7.72 lakhs to Rs. 7.69 lakhs.

The Directors of the Company propose to amend clause 143 of the Trust's Articles of Association, so as to give wider scope for investing the Trust's funds and also to enable it to take up new issues of shares which are generally offered on advantageous terms to existing shareholders.

GOKAK MILLS TO ISSUE BONUS SHARES

The Directors of the Gokak Mills, Ltd., Bombay, propose, subject to the sanction of the Controller of Capital Issues, to capitalise a sum of Rs. 9.76 lakhs out of the amount standing to the credit of the reserve fund (which amounts to Rs. 13.76 lakhs) and issue bonus shares in the ratio of one share for every four shares held at present. If the proposal is carried out, the paid-up capital of the Company will be increased from Rs. 39.05 lakhs to Rs. 48.81 lakhs.

COIMBATORE COTTON RAISES DIVIDEND LEVEL

NOTABLE RISE IN PROFIT

A GROSS profit of Rs. 14.42 lakhs is disclosed by the statement of accounts of the Coimbatore Cotton Mills Ltd. (Managing Agents: Messrs. R. Bheema Naidu & Co., Singanallur, Coimbatore District) for the year ended 31st December, 1953. This compares very favourably with the loss of Rs. 1.18 lakhs suffered in the previous year; incidentally, this was the first time the Company had reported a loss in the last two decades. Though the profit for 1953 is encouraging as compared with the results for 1952, such is lower than that of Rs. 16.87 lakhs for the year 1951. Nevertheless, the improvement in the fortunes of the Company has enabled the Directors to strengthen the reserves which did not receive anything in the previous year and pay a handsome dividend of 20 per cent., as against 9 per cent. paid for the previous year.

Last year, the Company's dividend was reduced to 9 per cent. from 12½ per cent. paid for the preceding four years. But even the reduced dividend of 9 per cent. was not paid out of the current earnings, but out of the dividend equalisation fund. Even though it was a generous one for a deficit year, it was relatively small considering the age of the Company and the size of its mills. It is not, therefore, surprising that the Directors should have thought it fit to step up the dividend for 1953 to 20 per cent., the highest rate in the last seven years. Though this rate falls short of the previous highest of 25 per cent. (paid for 1945), it should be noted that it is on a higher capital, doubled in 1946 by the capitalisation of reserves. It represents, therefore, 40 per cent. on the original capital and is equal to the record rate of 40 per cent. paid for 1943 on the old capital. It may appear somewhat incongruous that the Directors should have distributed to the shareholders for the year 1953 the same amount as they did for 1943 when the profit for the latest year is less than half of that 11 years ago. But, really speaking, it is not so, if the decline in the purchasing power of the rupee over these years is taken into consideration. Moreover, the Company's financial position is sound enough to permit the payment of such a dividend.

To revert to an analysis of the Company's accounts for 1953. The salient features of the Company's results for the year under review are presented against the background of those for the previous three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950
Yarn sales and stocks	67.18	74.65	98.65	63.51
Other income	0.35	0.52	0.26	0.21
Opening stocks of yarn and cotton consumed	42.43	66.54	69.84	45.03
Expenses	10.70	9.81	10.79	9.55
Gross profit (+) or loss (—) ..	+14.42	—1.18	+16.87	+9 13
Managing Agents' remuneration	1.86	0.67	2.20	0.98
Depreciation	4.35	..	2.30	1.67
Taxation	1.97	..	5.40	2 75
Net profit (+) or loss (—) ..	+6.42	—1.85	+6.91	+3 79
To reserves	2.69	..	4.50	2.50
To bonus to staff	..	1.00	..	..
Dividend	2.40 (20%)	1.05† (9%)	1.50 (12½%)	1.50 (12½%)
Carry forward	..	—1.33	1.52	0.61

† Paid out of dividend equalisation reserve.

It will be noted that the sale proceeds of yarn and the value of closing stocks are clubbed together and shown in the Company's accounts, as also the value of opening stocks of yarn and consumption of cotton. Nevertheless, both these items show a declining trend in the last two years. Last year, the Directors had stated that the loss for 1952 was mostly due to valuing the closing stocks of cotton at the market rates prevailing on 31st December, 1952. They have not, however, stated in their report for 1953 how they have valued the stocks of cotton. Nevertheless, the decontrol of yarn during the year must have contributed to the better trading results for the year under review.

Out of the net profit of Rs. 6.42 lakhs, the Directors have replaced the sum of Rs. 1.08 lakhs which they had withdrawn from the dividend equalisation reserve last year for payment of dividend. They have also provided Rs. 1.60 lakhs for contingencies, in addition to setting aside a small sum of Rs. 1,056 for reserve for doubtful debts.

The Company's financial position, as seen from its latest balance-sheet, is satisfactory. As against a paid-up capital of Rs. 12 lakhs, the reserves aggregate Rs. 19.85 lakhs, even after capitalising a sum of Rs. 6 lakhs in 1947 and drawing a sum of Rs. 4.80 lakhs from the reserves for payment of a cash bonus of Rs. 40 per share after the above capitalisation. Provision for taxation stands at Rs. 1.71 lakhs and current liabilities at Rs. 9.35 lakhs. The gross block of Rs. 28.95 lakhs has been well written down to Rs. 7.36 lakhs. The current assets amount to Rs. 35.55 lakhs and exceed the current liabilities and the provision for taxation by a very wide margin.

The Company's Rs. 100 paid-up shares are being currently quoted at Rs. 227 *cum*—div. On an *ex*-div. basis, the latest dividend gives a yield of 9.6 per cent. per annum, free of tax.

Points From The Chair

Electricity Boards

"THERE are a number of undertakings in the electric supply industry whose situation is so circumscribed by adversity that even though Government may come to permit them the slightly higher rate of basic return for which we have been pressing, they would be unable to approach its attainment. For these their main hopes must be fastened upon the early formation in all States of the statutory Electricity Boards envisaged in the 1948 legislation. These Boards are charged with the authority to afford loans to licensees, and could reasonably afford to do so in the knowledge that they possess adequate statutory powers of guidance and control of the borrower. I am pleased to see that in addition to Madhya Pradesh and Delhi, the Saurashtra Government is now constituting such a Board, and I have heard that the Bombay Government may be contemplating to follow suit as soon as certain amendments to the law have been carried out."

K. G. MILNE,
Ahmedabad Electricity Co., Ltd.

Foreign Private Investment

"As regards private capital, tendencies in certain Eastern countries show a reluctance to permit its introduction by foreign concerns acting independently, but encourage or even obligate joint participation between foreign and domestic capital in new industrial projects. Examples of this can be seen notably in India, Japan and Burma, but also elsewhere. Where Governments favour widespread nationalisation of industries there is, of course, no stimulant to foreign investment. In many countries, and particularly in India, much thought is being given to ways of mobilising larger accumulations of domestic capital through savings, without which development plans will be handicapped. This is important because of the comparatively small amount of foreign capital which is finding its way to South-East Asia. However, the low standard of living is an obvious handicap and improvement in the quantity of savings can hardly be great until more general prosperity reduces the overwhelming poverty. But prosperity in the East is circumscribed by the exasperating problems of the wide fluctuations of prices of foodstuffs and of the raw materials produced in those areas."

THE HON. C. BLAKER,
Hongkong and Shanghai Banking Corporation.

Prospects for Malayan Rubber

"For the natural rubber producer in Malaya the immediate prospect is particularly bleak. He has to compete with a Government-owned synthetic industry in America which pays no taxes and is not regarded as being altogether free from the taint of subsidisation. He has also to compete with other natural rubber producers, such as Indonesia and Ceylon. The Indonesian Government, recognising the need for assisting the natural rubber producer, has for the time being suspended all charges for export duty, while Ceylon is sheltered from world prices through the medium of a barter agreement with China, under which she enjoys for a considerable proportion of her rubber a price which is the equivalent of nearly double the present market price. For the Malayan producer there is no relief. On the contrary, his burden is made heavier by a savage increase in land rents—in our case to the extent of 85 per cent. If he has the misfortune to be registered in this country he has to continue to pay taxes at over 67 per cent."

SIR JOHN HAY,
Linggi Plantations Ltd.

More Resources For Private Sector

"Excessive draft of taxation, on the one hand, and underspending on public investment, on the other, means that the capital lost to the private sector is not fully utilised in the public sector; and also that the people are called upon to bear a burden of taxation that is not commensurate with the benefits obtained by way of development. Excessive draft of taxation and borrowing inhibit the flow of savings and lower the scale of investment in the private sector, and governmental underspending reduces the monetary flow to the private sector. The combined effect of these two factors is to reduce the resources available to the private sector from which the public sector can draw again. This vicious circle can be broken only by allowing the private sector to retain more resources for re-investment purposes, which would increase its productivity and enhance its capacity to provide increasing doses of financial transfusion to the public sector in the form of more taxes and more loans, without injuring its own functional efficiency."

TULSIDAS KILACHAND,
Bank of Baroda Ltd.

COMPANY MEETINGS AND DIVIDENDS

AGRA ELECTRIC SUPPLY CO., LTD. Half-yearly General Meeting, Calcutta, 5th April, 1954. Dividend: Rs. 5 per share. Transfer books remain closed from 30th March to 5th April, 1954, both days inclusive.

QUESTION HOUR IN PARLIAMENT

Interest Paid to I.M.F.

A SUM of $1,516,029 (Rs. 72,31,740) was paid by the Government of India as interest to the International Monetary Fund during 1952-53 in connection with the purchase of dollars from the Fund. No service charges were paid.

—*Finance Minister*

Loans to States

According to the agreed arrangements, every State receives by way of loans the amount collected (National Savings Scheme) in its area in excess of the target fixed for it. Against the collections during 1952-53, a sum of Rs. 2.5 crores had accordingly been sanctioned as loans to the States which had exceeded their targets. Similar loans will be sanctioned during 1954-55 on the results of the current year's collections.

* * * *

Reserve Bank

The Reserve Bank of India has decided to continue to have its branch at London. The work carried out by the Bank's London branch consists, *inter alia*, of management of the Government of India's rupee debt enfaced for payment in London, maintaining accounts of the High Commissioner for India in London, work relating to drafts drawn on the London branch by the Bank's offices in India and providing remittance facilities in favour of Indian embassies, Government delegations, Government scholars, etc.

* * * *

Economy Drive

The total economy effected to date in the Central Government's expenditure, following the implementation of the first four reports of the Estimates Committee, is approximately Rs. 51 lakhs, including Rs. 43.3 lakhs recurring.

—*Deputy Finance Minister*

Penicillin Plant

The Government penicillin factory in Bombay State is expected to go into production by September this year. The estimated cost of the building for the factory is Rs. 56 lakhs and the cost of the plant Rs. 78 lakhs, including equipment worth Rs. 40.46 crores contributed by the U.N.I.C.E.F., cost of various services and erection.

—*Parliamentary Secretary to Production Minister*

Rectification of Benzol

The Government of India is setting up a 600,000-gallon capacity plant for rectification of benzol to meet the requirements of the Government D.D.T. factory.

—*Commerce and Industry Minister*

Prospecting for Gold in Orissa

The prospecting for gold in a strip of land measuring about 40 miles in length and approximately one mile in width in Champua Sub-division of Keonjhar District in Orissa is being carried out by the Indian Bureau of Mines. The prospecting was started in July, 1953, and is in progress. The results of manual washing of the rock material has so far established an incidence of three to four grains per ton. These results are reported to be encouraging and it is expected that, with improved methods of washing, the recovery of gold might improve.

—*Minister of Natural Resources and Scientific Research*

Aircraft Manufacture

The number of trainer aircraft manufactured in India during 1953 was 20 and these will be put into use by the I.A.F. in June or July. The Hindustan Aircraft Factory has planned to manufacture 54 aircraft of this type this year.

—*Deputy Defence Minister*

Research on Turmeric

The Indian Council of Agricultural Research has sanctioned a research scheme for the improvement of turmeric in Guntur District in Andhra State. Its exact location has not yet been intimated by the Andhra Government.

—*Food and Agriculture Minister*

Indian Investment in Nepal

The total investment by Indians in Nepal is estimated at Rs. 15 crores. No authoritative statistics, however, are available. No restrictions have been placed by the Nepal Government on Indian undertakings in that country. But the permission of the Government of Nepal is necessary before any new enterprise can be started. There is no trouble about investment by Indians. Most of the Indian investments are in the cloth, jute, sugar, oil and oilseeds and cereals trade.

—*Deputy Minister for External Affairs*

Declaration of Assets

The recommendations of the Planning Commission in regard to the declaration of assets by Government servants will be taken into account while formulating new rules for Central Government employees and all-India services. The new rules are being framed at present. The existing rules require the officers of the Central Government services to submit returns of immovable property only at the time of their initial appointments and subsequently whenever fresh property is acquired. The degree of relationship covered by the rules include very near relations and dependent relations.

—*Deputy Home Minister*

Refugee Rehabilitation

The total amount spent on relief and rehabilitation of displaced persons up to 31st March, 1953, was Rs. 1,74,08,55,000. Of this sum, Rs. 76,54,04,000 were on account of revenue expenditure and Rs. 97,54,51,000 on account of capital expenditure.

—*Rehabilitation Minister*

HIGHER OUTPUT AND BETTER PRICES HELP SHIVRAJPUR MAINTAIN PROFIT

RAVALGAON SUGAR PASSES OVER DIVIDEND

Shivrajpur Syndicate Ltd.

THE directors of the above Company (Managing Agents: Messrs. Killick Industries Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th November, 1953.

This is the 50th report of the Syndicate and so marks 1954 as the Golden Jubilee Year.

Output.—As reported last year, considerable development work was carried out in all sections of the mines and as a result of steady progress in mining operations, production during the year amounted to 100,347 tons as against 81,232 tons in 1951-52. Steps have also been taken to re-open the Pani Mine which will assist in maintaining the present high level of production.

Shipments, mainly to the U.S.A., totalled 101,350 tons as against 122,310 tons during the previous year which latter figure included 41,000 tons from old stocks. The figure of 101,350 tons shipped in the year under review included only 1,000 tons from such old stocks, but mainly due to higher prices obtained profits have been maintained at approximately the same level as last year.

In order to take advantage of the prevailing trend of the market and following the usual policy of making forward contracts, a few further sales were concluded at favourable rates for deliveries extending into the financial year 1955-56, thus bringing the total outstanding commitments to 179,350 tons at the close of the year.

Development work.—The progress on ore and tram drives in shaft No. 2 at the 200 feet level, underground, continued throughout the year, the total advance west and east being 3,796 feet and 2,035 feet, respectively. The remaining 700 feet of ore drive and 900 feet of tram drive are expected to be completed by about October, 1954. The tonnage raised in development work during the period amounted to 6,648 tons as against 4,968 tons during 1951-52. Further applications for the grant of prospecting licences in areas adjacent to the existing leases have been made.

The scheme for the conversion of the power plant from direct current to alternating current, referred to in the last report, made substantial progress during the year under review and is now expected to be completed in about two months' time.

Construction of a wall around the workshop and power house, modification to the Mines main office building and renovation of old labour quarters were carried out during the year. In addition, one block of junior staff quarters and one of senior staff quarters, and a club house were completed during the year; construction of two blocks of labour quarters of 12 units each, further junior staff quarters, dispensary and magazine at Bamankua and extensions to other buildings at the Mines were in progress during the year under review.

The labour situation has been generally satisfactory. In February, 1953 the Union submitted a series of demands. A settlement was reached with the help of the Regional Labour Commissioner (Central), Bombay, on the 1st of July, 1953. The agreement is to remain in force for two years ending 2nd of July, 1955.

Satisfactory advance in the mechanisation and expansion programme at the Mines combined with continuation of the happy relationship which exists between the management, the labour and the Union should ensure a steady progress in outputs. Thus with the prospects of maintaining production at the present high level and with forward business already booked, the Syndicate's working for the ensuing year should prove satisfactory. The prospects of future years, however, must depend on the trend of the market, which is showing a tendency to recede from the high levels of the past two years.

The income-tax authorities have been requested to expedite the finalisation of the Company's assessments on the profits for the years ended 30th November, 1950, 1951 and 1952 which have not yet been completed.

The trading profits for the year amounted to Rs. 33,47,279 (Rs. 34,24,742) after deducting depreciation of Rs. 2,32,341 (Rs. 1,50,855). To this has been added Rs. 9,113 (Rs. 1,754) being profit on sale of assets and Rs. 13,913 (Rs. 3,444) being the balance brought forward from last year's accounts which includes an adjustment of Rs. 16 in respect of over provision of dividend and bonus last year. After providing Rs. 11,26,000 (Rs. 12,66,500) for income-tax and super-tax setting aside Rs. 3,665 (Rs. 4,272) to workmen's compensation reserve, Rs. 7,02,522 (Rs. 5,42,809) to staff welfare reserve, Rs. 5,92,000 (Rs. 6,00,000) to mine development and prospecting reserve, Rs. 50,000 (Rs. 4,00,000) to general reserve, Rs. 2,00,000 (Rs. 1,35,000) to equalisation of dividends reserve, and Rs. 1,00,000 (nil) to retiring gratuities reserve, the balance available for distribution is Rs. 5,92,118 (Rs. 5,03,597) which it is proposed to appropriate as follows:—

To payment of a dividend for the year ended 30th November, 1953 at the rate of Rs. 5 (Rs. 5) per share, free of income-tax (proportionately on new shares) Rs. 3,49,850 (Rs. 3,49,780) and to payment of a bonus to shareholders for the year ended 30th November, 1953 at the rate of Rs. 3 (Rs. 2) per share, free of income-tax (proportionately on new shares) Rs. 2,09,910 (Rs. 1,39,920) leaving to be carried forward Rs. 32,358 (Rs. 13,897).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,00,000	Block ...	14,42,758
Reserves ...	36,45,000	Work-in-progress ...	3,95,729

Ravalgaon Sugar Farm Ltd.

The directors of the above Company (Managing Agents: Messrs. Walchand & Co., Ltd.) submit the audited accounts of the Company for the year ended 30th September, 1953.

During the year, the Company has made a profit of Rs. 21,020 (Rs. 7,06,601) only after providing Rs. 5,40,000 (Rs. 5,40,000) for depreciation. The drop in the profit was mainly due to reduction of about 500 acres in the area under plantation owing to failure of monsoons and consequent scarcity of irrigation water. The balance available for disposal comes to Rs. 2,10,533 (Rs. 8,87,513) including the sum of Rs. 1,89,513 (Rs. 1,80,913) brought forward from the last balance-sheet. The directors recommend that the following appropriations be made:—

For dividend on preference shares at 5½ per cent. (less income-tax) Rs. 1,10,000 (Rs. 1,10,000) leaving to be carried forward a sum of Rs. 1,00,533 (Rs. 1,89,513 after providing 18 per cent. dividend on ordinary shares, free of tax, 7 per cent. on deferred shares less tax and setting aside Rs. 2,00,000 to reserve fund).

The factory commenced crushing on 15th December, 1952 and the same was stopped on 7th April, 1953. Sugarcane crushed during the season was 70,750 (1,25,471) tons while sugar manufactured was 79,666 (1,25,180) bags with a recovery of 10.98 (9.97) per cent.

During the year, the confectionery plant at Ravalgaon produced about 269 (363) tons of confectionery and about 13,000 (10,000) maunds of sugarcandy. The factory continued to produce wax from cane mud. About 9,000 (14,400) lbs. of wax was produced during the year. The area of land taken on lease by the Company is 2,608 acres and 23 gunthas, while the area of land owned by the Company is 6,541 acres and 22 gunthas.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	44,00,000	Block ...	80,59,224
Debentures	20,00,000	Stock-in-trade	11,67,062
Reserves ...	73,62,013	Stores and spare parts	26,28,443
Liabilities ...	21,75,967	Other assets	1,43,809
Profit and loss account ...	2,10,533	Plantation-in-progress ...	18,90,722
		Debts, deposits and advances ...	2,56,419
		Investments	16,22,138
		Cash ...	3,80,676
Rs.	1,61,48,513	Rs.	1,61,48,513

Agra Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts for the half-year ended 30th September, 1953.

Normal development has been maintained inasmuch as that the demand for electricity shows progressive increase. There has been a slight recession in revenue during the half-year under review but subsequent earnings show that the position has been fully retrieved.

The following table gives the details of units sold and revenue earned over the past five half-years:

Half-year Ended	*Units Sold*	*Revenue* Rs.
31st March, 1951	8,746,660	13,23,102
30th September, 1951 ...	10,513,757	12,53,521
31st March, 1952	9,703,497	14,04,904
30th September, 1952 ...	11,463,384	14,97,507
31st March, 1953	10,713,328	14,32,952
30th September, 1953 ...	12,152,915	14,79,566

After complying with the provisions of the Electricity (Supply) Act, 1948 and making adequate provision for liabilities, and setting aside Rs. 50,000 (Rs. 50,000) towards development and extensions under progress, there remains a balance of Rs. 1,49,410 (Rs. 1,42,938), including Rs. 49,489 (Rs. 44,463) brought forward from the previous half-year available for distribution, and this the directors recommend be disposed of in payment of a dividend at the rate of 10 (10) per cent. per annum free of income-tax Rs. 99,920 (Rs. 99,920) and in carrying forward to next half-year Rs. 49,490 (Rs. 43,018).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	19,98,500	Block ...	41,78,598
Debentures ...	10,00,000	Stores, etc. ...	11,73,788
Reserves ...	24,81,026	Plant under construction	1,458
Provision for taxation ...	2,12,112	Other assets	42,271
Liabilities ...	22,30,941	Debts, deposits and advances ...	9,10,875
Profit and loss account ...	1,49,410	Investments	12,60,830
		Cash ...	4,98,169
Rs.	80,71,989	Rs.	80,71,989

Walchandnagar Industries Ltd.

The directors of the above Company (Agents: The Premier Construction Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th September, 1953.

During the year, the Company has made a profit of Rs. 23,03,244 (Rs. 25,51,935) after providing Rs. 12,00,000 (Rs. 11,00,000) for depreciation so that this together with the sum of Rs. 2,07,926 (Rs. 1,94,491) being the balance brought forward from the last balance-sheet comes to Rs. 25,11,170 (Rs. 27,46,426) which amount is available for disposal and the directors recommend that the following appropriations be made therefrom:—

For dividend on preference shares at Rs. 7 (Rs. 7) per share (free of income-tax) Rs. 24,500 (Rs. 24,500), for dividends on ordinary and "A" ordinary shares at Rs. 14 (Rs. 14) per share (free of income-tax) Rs. 14,14,000 (Rs. 14,14,000) for debenture redemption fund Rs. 4,00,000 (Rs. 4,00,000) and for reserve fund Rs. 5,00,000 (Rs. 7,00,000) leaving to be carried forward the balance of Rs. 1,72,670 (Rs. 2,07,926).

The sugar factory commenced sugarcane crushing on 20th November, 1952 and the crushing stopped on 13th March, 1953. Sugarcane crushed during the season was 1,63,107 (1,84,892) tons while sugar manufactured was 1,87,326 (2,19,598) bags with a recovery of 11.61 (12.01) per cent. The distillery produced 3,22,218 (2,59,518) gallons of rectified spirit during the year.

The area of land taken on lease by the Company is 10,513 acres and 15½ gunthas while the area of land owned by the Company is 6,295 acres and 4½ gunthas.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,04,50,000	Block ...	1,80,88,459
Debentures	45,00,000	Stock-in-trade	18,92,679
Reserves ...	1,39,55,627	Stores and spare parts	48,42,198
Liabilities ...	26,12,731	Cane plantation in progress ...	43,47,944
Profit and loss account ...	25,11,170	Other assets	6,39,901
		Debts, deposits and advances ...	10,16,898
		Investments ...	2,35,702
		Cash ...	29,65,747
Rs.	3,40,29,528	Rs.	3,40,29,528

Britannia Engineering Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod and Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1952.

The results of the Works department for the year showed a profit on trading account amounting to Rs. 16,36,133 compared with Rs. 11,86,765 for the preceding 12 months. The Agency department showed a profit of Rs. 1,32,748 compared with Rs. 21,989 for 1951.

After charging interest and debenture interest and providing for taxation which it is estimated will be payable on the year's profit, commissions and depreciation and taking into account the carry forward from 1951, the profit amounted to Rs. 8,25,185 (Rs. 6,02,825). This would permit the distribution of a dividend at a higher rate than was paid for the year ended 31st December, 1951, but, as stated in the last report, the directors are negotiating for the purchase of new machinery and buildings, etc., required for the manufacture of modern types of jute mill and other machinery and a sum of Rs. 3,50,000 (Rs. 3,90,773) has therefore been transferred to machinery reserve, and Rs. 2,50,000 (nil) to general reserve leaving a balance of Rs. 2,25,185 (Rs. 2,12,052), out of which the directors made payment of a dividend on 1,60,000 ordinary shares at 15 (15) per cent. per annum per share, for the year. This absorbed Rs. 1,50,000 (Rs 1,50,000) leaving Rs. 75,185 (Rs 62,052) to be carried forward.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Block ...	14,72,917
Debentures ...	5,00,000	Stocks ...	4,57,102
Reserves ...	25,85,000	Stores ...	8,72,951
Provision for taxation ...	8,82,000	Work-in-progress ...	16,26,375
Liabilities ...	27,46,088	Debts, deposits and advances ...	32,56,481
Profit and loss account ...	75,185	Investments ...	2,300
		Cash ...	1,00,147
Rs.	77,88,273	Rs.	77,88,273

N.B.—Figures within brackets relate to the corresponding period of the previous year.

MONEY RATES UNCHANGED

(From Our Own Correspondent)

BOMBAY, 31*st March*

The short-term money market experienced during the week under review no relaxation in the stringency noted in the past several weeks. If anything, it became a little more acute, with a further diminution of floating funds. The demand for funds continued to be on the high side, but inadequacy of supplies forced banks to seek aid from the Reserve Bank or the Imperial Bank of India. Some of the municipal funds were available and were taken up by a few Indian banks, but such were not enough to ease the situation. Turnover in the inter-bank call money sector was very small. Call money rate among all sections of banks remained unchanged at 3 per cent. House money continued to fetch 3 per cent., as also short-term deposits for one to four months. For longer periods these deposits were bid at 2½ per cent.

It is felt in market circles that the demand for funds has reached its peak and, that in a few weeks from now, there will be some relaxation in the stringency, as the funds now lent out will be flowing back into the banks. But doubts are expressed whether even in the off-season there will be a surfeit of funds, if the Government of India resorts to Treasury Bill borrowings on a large scale. Moreover, the profit margin of business men having dwindled considerably, they may not have surplus funds to keep them with banks to the same extent as in the previous years.

The persistent stringency in the money market is reflected in the poor response to Government of India Treasury Bills, for which there was an offer of Rs. 101.50 lakhs this week. Though this amount was Rs. 50,000 more than in the previous week, it would be admitted that the margin between the amount invited and that offered was negligible. The average rate of accepted tenders was unchanged at Rs. 2-11 per cent. per annum. Tenders for a further sum of Rs. 1 crore have been invited for next week also.

For the second week in succession, the notes in circulation show a contraction, the Reserve Bank statement for the week ended 26th March, 1954, showing a fall of Rs. 4.18 crores, following the drop of Rs. 3.89 crores in the previous week. Notes held in the Banking Department have risen by Rs. 4.83 crores, with the result that the total notes issued show an increase of Rs. 65 lakhs, which is adjusted by a corresponding increase in rupee coin. In the Banking Department, deposits of the Central Government show a rise of Rs. 1.75 crores. Deposits of other Governments do not show any notable variation, but those of banks and others have gone up by Rs. 3.52 crores and Rs. 97.54 lakhs, respectively. On the assets side of the Banking Department, cash balances have appreciated by Rs. 4.90 crores and balances held abroad by Rs. 2.94 crores. Ways and means advances to Governments are practically unchanged, while other loans and advances have dropped by Rs. 3.14 crores.

A sharp decline of Rs. 6.99 crores in demand deposits and of Rs. 2.43 crores in time deposits is disclosed by the Scheduled banks' statement for the week ended 19th March, 1954. Borrowings from the Reserve Bank have risen by Rs. 5.18 crores and those from the Imperial Bank by Rs. 80 lakhs. Loans, cash credits and overdrafts have gone up by Rs. 4.33 crores and bills purchased and discounted by Rs. 2.35 crores. Investments have dropped by Rs. 93 lakhs and cash balances and money at call by Rs. 3.07 crores.

The Gilt-edged market presented a cheerful appearance, with a revival of demand in almost all loans and paucity of sellers. Though the volume of business was a little greater than in the previous week, it was still restricted, due to paucity of sellers. Institutional investors, particularly insurance companies, showed considerable interest in the market. There was an all-round rise in values, the upward trend having gained momentum by the action of the Reserve Bank of India in putting up the rates of two more loans during the week. The Bank stopped selling 3 per cent. 1966-68 at Rs. 106 *cum-voucher* on Tuesday this week, but offered to sell today at Rs. 90-8 *ex-voucher*, the net increase in the rate being As. 4. The Bank's selling rate for 3 per cent. 1970-75, which had been raised by As. 2 last week was raised further by As. 2, during the week under review, the Bank selling it at Rs. 86-12.

3 per cent. 1957, which had remained stagnant at Rs. 98-5 till last week, was in request and moved up to Rs. 98-7 and 3 per cent. 1958 gained an anna to Rs. 98-3. 3 per cent. 1959-61 advanced by As. 2 to Rs. 96-7. 3 per cent. 1963-65 put on As. 2 to Rs. 92-13. Rs. 92-14 and 3 per cent. 1964 an anna to Rs. 92-13. 3 per cent. 1966-68 was offered As. 2 better at Rs. 90-8. 3 per cent. 1970-75 was keenly bid on at Rs. 86-12, a rise of As. 2 yield considerations at Rs. 86-12, a rise of As. 2 over the week. 3 per cent. 1986 Conversion Loan had a rise of As. 4 to Rs. 82-12. 3½ N.P. Bond was in keen demand and appreciated by As. 2 to Rs. 99-4. Among State loans, 4 per cent. 1963 Bombay had small business at Rs. 100-15½ and U.P. Bombay had sellers at Rs. 99-11. Bombay State Road Transport new bonds had sellers at Rs. 99-3.

HIDES ARRIVALS CONSIDERABLE

(From Our Own Correspondent)

KANPUR, 28*th March*

During the week under review, the hides and skins market remained steady. New arrivals were considerable and the demand for upper grade wet salted buff was brisk.

Latest quotations are: Wet salted cow, 1st grade Rs. 240 and 2nd grade Rs. 160 per score; grade Rs. 240 and 2nd grade Rs. 160 per score; grade wet salted buff, 1st grade 1 lb. 14 ozs., 2nd grade 2 lb. 4 ozs. and 3rd grade 2 lb. 8 ozs. per rupee; goat skins, 1st grade Rs. 300 and 2nd grade Rs. 250 per skins, 1st grade Rs. 300 and 2nd grade Rs. 250 per 100 pieces; sheep skins, Rs. 250 to Rs. 300 per score.

BULLISH TREND IN BULLION

(From Our Own Correspondent)

BOMBAY, 31*st March*

Firm conditions prevailed in the bullion market during the week under review, with values of both silver and gold recording an appreciable improvement. The shortage of floating stocks of silver, coupled with the seasonal increase in demand and short-covering, helped the white metal to advance to new high levels not seen since February, 1953. The recovery in gold, after the mild shake out last week caused by the reopening of the London gold market, was fully kept up during the week under review, the rise in values gathering momentum towards the close. The main inspiring factor for this was the dwindling arrivals and better demand, as reflected in the widening of the premium of the ready position over the forward from As. 15 at the close of last week to Re. 1-1 today.

Silver for forward delivery (20th April settlement) began the week at Rs. 167 and soon advanced to Rs. 168-4. After a reaction to Rs. 167-9 on Friday due to selling from some bull operators, the forward silver, once again, resumed its upward trend and briskly advanced to Rs. 168-15 on Saturday. Reports of arrivals of *kutcha* silver brought about a set-back to Rs. 167-14 on Monday, but this recession was a short-lived affair. For prices once again picked up and touched a high of Rs. 169-9 today, the highest level since 28th February, 1953. The closing was, however, substantially lower at Rs. 168-5, on heavy profit-taking.

Ready silver (.996 Mint) firmed up from Rs. 166-14 to Rs. 169-13 before finishing at Rs. 168-9. The floating stocks of silver are placed at 1,900 bars. The daily average offtake was estimated at 25 bars.

Opening at Rs. 88-3, gold for forward delivery (19th April settlement) moved narrowly for some time between Rs. 88-7 and Rs. 88-3, but gained strength on active support induced by the decline in arrivals. In the result, forward gold rose to Rs. 90-7 today, the highest level seen since 26th June, 1953, before winding up at Rs. 89-12.

Ready gold improved by Re. 1-11 over the week, having gone up from Rs. 89-2 to Rs. 90-13, the highest level touched being Rs. 91-8.

The floating stocks of gold are reported to be 15,000 tolas. The daily average arrivals were 4,500 tolas. The offtake was estimated at 5,000 tolas on an average.

The following comparative table shows the trend of the market during the week under review:

	31-3-54	Highest	Lowest	24-3-54
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	90 13	91 8	89 0	89 2
Forward	90 12	90 7	88 0	88 3
Sovereign	59 2	59 2	58 12	58 12
SILVER				
Ready (.996 fine Mint)	168 9	169 13	167 3	166 14
Forward	168 5	169 9	166 15	166 14
London Ready	73¼d.	73¼d.	73¼d.	73¼d.
London Forward	73¼d.	73¼d.	73¼d.	73¼d.
New York Ready	89c.	—	—	89c.

PEPPER WEAK

(Messrs. Parekh & Co.)

BOMBAY, 31*st March*

Weakness in Malabar black pepper reported in our last, developed into a slump during the earlier part of the week. There was nervousness all round, both among growers and dealers. Alleppey and Baliapatam sold as low as Rs. 1,350. At one time, it seemed that a further fall of Rs. 100 to Rs. 200 was imminent, but fortunately in mid-week there was some small buying from New York at $0.70 to $0.72 for March shipment, which was responsible for a favourable reaction, though of a temporary nature, in all primary centres. Alleppey improved. Small business was done at Rs. 1,500. In the later part, however, New York staged a complete withdrawal and dealers there, instead of giving firm bids, began to give almost every day lower indications than what was offered firm from here. They refused to meet Indian sellers. This created a further panic. April shipment was done at as low as $0.67 with few buyers and more sellers. Trade here is rather surprised at the reappearance of both Sarawak and Lampong as competitive sellers in the New York market at prices which are much lower than what they were during the peak of their season. This attitude of Sarawak and Lampong sellers seems to have put fright into Indian growers who are now anxious to sell as much as they can before the harvesting seasons of Lampong and Sarawak. Russia is reported to have bought a further 500 tons but the market is technically so weak that such a large single purchase failed to create any favourable effect on the declining morale of the growers. Tendency at the time of writing is still weak and further deterioration in the situation is feared. If New York does not come into the market within the next week. The existing competition between India, Sarawak and Lampong for selling in the New York market is responsible for the present absence of U.S. buyers, who, being shrewd, seem to be marking time in order to make the best bargain out of the present nervousness among the growers and dealers in the producing countries.

In the A.S.T.A. sections, April shipment was done from $0.72½ to $0.67. May and June shipments were traded at $0.67 and $0.65 respectively. In the delivery section, April and May were done as low as Rs. 1,030 and Rs. 1,070 per candy respectively.

Following are today's nominal quotations:—Ready Rs. 150 per Bengal maund, April Rs. 1,060-80, and May Rs. 1,090-1,110 per candy of 5¼ cwts.

COTTON FIRM

(From Our Own Correspondent)

BOMBAY, 31*st March*

Healthy conditions appear to have returned to the cotton trade in Bombay. The sentiment in both forward and spot markets is constructive. In spite of increasing arrivals in the Broach and Surat areas, the price trend remained bullish and demand for Vijay was better during the week. One of the reasons for this concentration on Vijay was the comparatively lower premia for it. The spot market changed its pattern of trading, with activity diverted from imported cotton to Indian varieties, and this is likely to be the case in the near future.

Except for U.S. cotton, prices of imported cotton are standing at unduly high levels. The demand from the Continent which sustained this high price level is now being withdrawn and, once again, spinners in that area have adopted the policy of buying only against their immediate needs. The reason for the change in sentiment has been the decision of the U.S. Government to dispose of a large stock of accumulated cotton through the Credit Corporation. Even though the U.S. authorities are known to have declared that they would not try to undersell other cotton producing countries, the pressure of these stocks on the market is bound to be felt sooner or later. Another reason for the loss of confidence in the maintenance of the present world prices of cotton is likely competition between Sudan and Egypt. Sudan appears to be in a hurry to dispose of a bulk of its crop and proposes, therefore, to hold frequent auctions. This is bound to have an effect on the price of Egyptian cotton with other varieties following suit. It is possible that this might enable Indian mills to secure supplies of imported cotton of non-U.S. origin at lower rates towards the fag end of the season.

The forward market has benefited from this diversion from imported to Indian cotton and prices have been steadily going up, more noticeably for the August contract which has crossed the Rs. 700 limit. The difference between the two contracts has widened again from Rs. 12 to Rs. 14-8 to Rs. 15 and, in the opinion of shrewd market men, this is likely to widen further by the time the May contract matures. Active short-covering was a feature of the trading this week. Another reason for the change of sentiment in the forward market was the materialisation, to a certain extent, of the long expected revival in the cloth trade. If this revival lasts for any length of time, especially in the export trade, conditions in the forward section of the cotton market are likely to remain buoyant.

How a small administrative detail can adversely affect the production of good quality cotton can be seen from the difficulties of CO,/170 in Gujerat. This comparatively long-staple variety, which can be used as a substitute for U.S. cotton, is produced mainly by co-operative societies. The production this year of this cotton is placed at about 20,000 bales. This cotton was not included last year in the quota given to mills, with the result that it fetched an adequate premium. This year, it is included in the quota and there is, therefore, no competition amongst mills in Gujerat to secure this variety and the producers have failed to secure better prices for it. It is calculated that even the present small quantity has saved about Rs. 1.5 crores in dollar exchange for the country, by reducing the need for importing an equivalent quantity of cotton from the U.S. in the ordinary course, production of this quota would have been quadrupled next year, with the result that the savings in dollar exchange would have been about Rs. 6 crores. But the refusal of the authorities to allow the mills to buy this cotton outside of their quota allotments has discouraged producers who might refuse to sow this cotton during the next season.

Encouraging reports from piecegoods market and firm advices from spot section induced sustained bull support for cotton futures and prices recorded a handsome improvement. I.C.C. May, which opened the week at Rs. 671, shot up to Rs. 690½ yesterday. At this level, profit-taking set in and the contract finished lower at Rs. 683½. Similarly, I.C.C. August forged ahead from Rs. 686½ to Rs. 704½ yesterday, but receded thereafter to finish the week at Rs. 699.

The following was the trend of prices in the forward section during the week under review:

	Opening	High	Low	Closing
I.C.C. May ...	Rs. 671	690½	677½	683½
I.C.C. Aug. ...	Rs. 686½	704½	686½	699

Latest available quotations from the spot market are: Bengal *deshi* Rs. 620; Berar Jarillas Rs. 790; Khandesh Rs. 865; Vijay Rs. 895; Oomra *deshi* Rs. 740; Moglai Rs. 715.

As predicted previously, following the withdrawal of China from the Karachi cotton market, the prices have receded sharply. During the week under review, Australia was the only country interested in Pakistan cotton and, with the Continent awaiting reduction in world prices, there is little prospect of increased offtake from abroad at Karachi. The reimposition of control on the prices and distribution of cloth produced by local mills in Pakistan may also affect the prices of cotton adversely.

Latest available quotations from Karachi market are: Sind *deshi*: Rs. 80; L.S.S. Punjab roller Rs. 82-8; S.G. Rs. 86-8; N.T. roller Rs. 83, S.G. Rs. 78-8; 289 F. Punjab roller Rs. 86-8; S.G. Rs. 91-8.

It is but natural that the tempo of activity at Alexandria should be on the quiet side, with Sudan coming into the picture. The Egyptian Cotton Commission announced last week that it would sell its stocks at the daily official selling prices *plus* weekly average spot premiums, fixed by the spot market committee on Thursdays. This increase

in the selling prices of Government stocks to the level of spot prices has resulted in export interest in Karnaks being shifted from Government to the free market, while the Government's decision to liberalise sterling import licences for the purchase of industrial machinery has reduced the sterling entitlements and thus raised prices of Egyptian cotton for purchasers from the sterling area.

At New York, the trading has continued to be dull, as in the previous week. The undercurrent for nearer deliveries has been slightly weak, though good support has been there for the new season's cotton.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	30-3-54	23-3-54	16-3-54
Spot	35.20	35.20	35.25
May	34.36	34.40	34.48
July	34.51	34.53	34.58
October ...	34.09	33.92	34.03
December ...	34.04	33.89	34.01

ART SILK YARN QUIET

(From Our Own Correspondent)

BOMBAY, 31*st March*

The art silk yarn market was devoid of any notable development during the week under review. Operators in the forward section showed very little interest in business. A feeling of hesitancy prevailed, as they preferred to watch further developments in regard to the threatened closure of several art silk mills, consequent on the Central Government's failure to provide adequate relief in excise duty on art silk fabrics. They preferred also to await the outcome of the Silk and Art Silk Mills Association's move to go on a deputation to the Union Finance Minister with a view to impressing upon the latter the need for a substantial reduction in excise duty. Consequently, turnover in the forward section was greatly restricted. Over the week, the prices of yarn tended to decline. Ready quotations were, however, a shade better on buying support. The undertone of the market was quiet.

In the forward section, 150D March contract opened the week steady at Rs. 774, but receded to Rs. 766 the following day. Thereafter, it recovered to Rs. 774 today before closing slightly easy at Rs. 770. April contract drifted lower from Rs. 776 to Rs. 771. It gradually moved up to Rs. 782 today. Towards the close, however, the contract shade finished a lower at Rs. 778. In distinct contrast with the forward section, the spot section evoked good support and recorded improvement in values. 120 Japan, 150 Japan and 120 Italy gained an anna each to Rs. 4-14, Rs. 4-9 and Rs. 4-4, respectively. 150 Italy was better at Rs. 3-14½, as against Rs. 3-14.

The staple fibre yarn section displayed fully steady conditions, induced by the sale of 600 bales of yarn by Century Mills for forward delivery at a relatively higher rate of Rs. 3-7 per lb., as against the previously anticipated rate of Rs. 3-4. Buying support that ensued as a consequence pushed up the prices. The improvement was shared by both forward and ready sections. In the forward section, staple fibre yarn (40×2) for March delivery advanced from Rs. 672 to Rs. 686 before finishing at Rs. 680 per case of 200 lbs. April delivery rose by Rs. 20 to Rs. 693, although the closing rate was lower at Rs. 686. In the ready section, among foreign yarns (40×2), Shinco and Fuji put on an anna each to Rs. 4-2 and Rs. 4-1 per lb., respectively. Aurora was half an anna higher at Rs. 4-1-6. Suico was done better at Rs. 4-2-3, as against Rs. 4-2. Among indigenous yarns, Century and Sri Ram gained half an anna each to Rs. 3-7-9 and Rs. 3-7-6, respectively. City was a shade better at Rs. 3-11. Kohinoor was fully steady at Rs. 3-10-6 and Hirji at Rs. 3-6. New Great was quoted at Rs. 3-9-3.

The undertone of the cotton yarn market was fully steady, due to reports of good offtake in cloth market and firmness in cotton prices. The values were well maintained. Among 80s, Finlay advanced by As. 8 each to Rs. 67-8 per bundle of 10 lbs. Sri Ram gathered As. 4 to Rs. 62-12. Seksaria was steady at Rs. 56-8. Among 60s, City moved up by Re. 1-6 to Rs. 48-4. Raghuvanshi was transacted As. 4 higher at Rs. 54-4. Rajalakshmi and Finlay were unaltered, the former at Rs. 45 and the latter at Rs. 600. Among 40s, Maduras rallied As. 12 to Rs. 28-4. Meenakshi hardened by As. 10 to Rs. 27-2. Among 30s, Madura strengthened by As. 8 to Rs. 25. Among 20s, Hind rose from Rs. 16-11 to Rs. 17 and Edward from Rs. 16-6 to Rs. 16-10. Seksaria gained an anna to Rs. 16-11. Among 10s, Modern was fully steady at Rs. 13-4 and Podar at Rs. 13-4-6 and Elphinstone at Rs. 12-12.

The table below gives the prices of art silk, staple fibre and cotton yarns quoted yesterday, as compared with those in the previous week:—

	31-3-1954	24-3-1954
	Rs. a.	Rs. a.
Art silk yarn—		
150 March (per case of 200 lbs.)	770 0	773 0
150 April ,, ...	778 0	775 0
120 Japan (per lb.)	4 14	4 13
150 Japan (per lb.)	4 9	4 8
120 Italy (per lb.)	4 4	4 3
150 Italy (per lb.)	3 14½	3 14
Staple fibre yarn—		
40 × 2 March (per case of 200 lbs.) ..	680 0	674 0
40 × 2 April ,, ...	686 0	675 0
Suico (per lb.)	4 2½	4 2
New Great (per lb.)	3 9½	3 9½
Cotton yarn (per bundle of 10 lbs.)—		
10s Modern	13 4	13 4

60s City	48 4	46 14
80s Finlay	67 8	67 0

GROUNDNUTS FIRM

(From Our Own Correspondent)

BOMBAY, 31*st March*

The clarification by the Joint Chief Controller if Exports and Imports, Bombay, on 27th March, that, in the computation of quotas for export of H.P.S. groundnut *kernels*, the export to soft currency areas will not be taken into consideration, came as a shock to shippers. For, neither in the original Prese note of the Ministry, issued on 5th March, nor in a subsequent public notice issued by the Controller, was there any mention to this effect. In fact, the Import and Export Trade Controller of Rajkot has issued letters allocating quotas, in respect of shipments effected from Saurashtra ports, taking into consideration export to soft currency countries also. The present change will result in the reduction of the overall quota by about 2,500 tons. It is true that this is a small amount. But shippers have already effected purchases against their sales and have prepared H.P.S. incurring reavy quotas. Besides, the groundnut crop this year, estimated at 37½ lakh tons in terms of unshelled groundnut, is considered to be good. It is, therefore, held that the permission to export 2,500 tons of H.P.S. will not adversely affect the internal price structure. In the circumstances, the market is still entertaining the hope that the Government will withdraw the clarification and restore the original position.

The cut in export quota did not however, have any adverse effect on the market, as the quantity affected by it was considered to be small. In fact, the decision of the U.S. to increase its stockpile of metals and minerals, under a new policy announced on 26th March, hardened the sentiment of the operators. As a result, the groundnut section was firm. The linseed section also looked up in sympathy with groundnuts. The castorseeds section put on an improved tone during the first few sessions of the week, on reports of some business done in castoroil I pressure at £115 to £117 with the Continent. Subsequently, however, it tended generally to decline on withdrawal of support by professional operators induced by the report that the U.S. was not interested in the purchase of castoroil Commercial even at 10½ cents. Consequently, futures recorded some gains, although spots generally sustained minor losses.

The groundnut section was the highlight of the market. Bold F.A.Q. gained As. 12 to Rs. 35-8. April-May and June-July were higher by Re. 1 and Re. 1-3 at Rs. 35 and Rs. 35-9, respectively. Khandesh quality shot up from Rs. 36 to Rs. 37. Groundnut oil ex-mill gathered As. 12 to Rs. 18 and railway receipts As. 10 to Rs. 17-14. April and May deliveries were done at Rs. 17-14 and Rs. 18-3 as against Rs. 17-8 and Rs. 17-12, respectively.

In the linseed section, Bold ready improved from Rs. 24-12 to Rs. 25-8. April-May delivery gained As. 14 to Rs. 24-10. June-July was firm at Rs. 25-2. Linseed oil was up by As. 8 at Rs. 14-8. Linseed oil Indian (crude) was quoted at £150 c.i.f. (sellers) in the U.K. and the Continent but there was no demand.

Among castorseeds, May 1954 which opened steady at Rs. 107-14, fluctuated between Rs. 112-4 and Rs. 107-6, before closing at Rs. 109-14. Transactions in September, 1954, will commence tomorrow the 1st April, 1954. Spot Madras lost As. 8 to Rs. 22-8, while F.A.Q. was dull at Rs. 22. Castoroil I Pressure, however, gained As. 4 to Rs. 12-2 and Commercial As. 6 to Rs. 11-10. Although there was initial enquiry in castoroil in the Continent, buyers were not following it up with enthusiasm. Prices were somewhat higher than a week ago with B.S.S. March-April being quoted at £119, c.i.f. Commercial at £112 C.I.F.

The following table shows the prices of oilseeds and oil on the 30th inst., as compared with those at the end of the previous two weeks:

	30-3-54	24-3-54	16-3-54
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—			
Khandesh Quality Ready (per cwt.)	37 0	36 0	36 4
June-July	35 9	34 6	
April-May	35 0	34 0	33 14
Linseed—			
Bold Ready (per cwt.) ..	25 8	24 12	25 0

Castorseed—			
May 1954 (per candy)	109 14	107 14	104 12
Madras (per cwt.)	22 8	23 0	22 4
Groundnut oil—			
Ex-mill Ready (per quarter) ..	18 0	17 4	17 14
Castor Oil—			
Commercial (per quarter) ..	11 10	11 4	10 12

FURTHER RISE IN SUGAR PRICES

(From Our Own Correspondent)

BOMBAY, 31*st March*

The bullish fervour that prevailed in the Bombay sugar market last week persisted during the week under review too. Besides renewed demand from Gujerat, Madhya Pradesh and interior centres, the report that no imported sugar would be arriving in this harbour earlier than 10th May, 1954, imparted considerable strength to the market. We regret that the statement that appeared in this report last week that 15,000 tons of Spanish sugar would be landed in Bombay this week was a mistake caused by a misunderstanding of a report that had been received from overseas. What ought to have been stated there was that the quantity of sugar referred to would be loaded in Spanish ports this week. Reports received since then, however, indicate that loading has not yet taken place. The rumour that the earlier loadings of Spanish sugar might be despatched for Madras and/or Calcutta was another helpful factor. Traders, therefore, evinced greater interest in buying, but sellers were reserved in expectation of still higher prices. Consequently, sugar quotations staged a further rise. The improvement, however, was confined only to the spot section. The forward section was fully steady, with very little activity.

In the spot section, large grain indigenous sugar spurted from Rs. 93-97 to Rs. 96-98 per bag. Medium and small grains were higher at Rs. 94-95 and Rs. 93, as against Rs. 93½-94 and Rs. 92½, respectively. Among foreign sugars, Czechoslovakian was particularly favoured, its price advancing by a rupee to Rs. 90-93 per bag of 2 cwts. British refined hardened by As. 8 to Rs. 90-8 per bag of 2 cwts. Mexican sugar gathered As. 4 to Rs. 42-12 per bag of 110½ lbs. German and Cuban sugars were fully steady, the former at Rs. 89 per 220 lbs. and the latter at Rs. 39 per 100 lbs.

Prices of forward sugar did not experience any fluctuation. *Fagan* delivery was squared up at Rs. 85-12, that is at the same rate at which it had closed the previous week. Chaitra delivery was firm at Rs. 88-4, same as last week.

Arrivals of sugar into the Bombay market were larger than a week ago, the quantity actually received being 4,200 bags, as against 1,800 bags.

The Union Food Ministry is understood to have asked the Civil Supplies Department in Bombay whether it would be willing to lift the Central reserve sugar stocks lying with the Deccan factories for distribution through fair price shops and consumers' societies. This move, it is said, is a sequel to the need for bringing down the prevailing high prices of sugar, in view of the delay in arrivals of imported sugar. It is also reported that the Food Ministry proposes to make an immediate allocation of at least 1,000 tons from the Deccan factories to the Civil Supplies Department at the Government price of Rs. 27 per maund ex-mill. While the move is calculated to benefit the consumer to a great extent, it is feared that there is likely to be some trouble with regard to the question of the ex-mill price of Rs. 27 per maund, as has already happened in the case of U.P. and Bihar factories from which 10,000 tons of sugar have been requisitioned at the stated price. The controversy is due to an increase of As. 4 per maund in the price of cane. Since the Deccan factories are both the planters and the millers, it remains to be seen at what price sugar will be supplied to the Government of Bombay.

NARROW FLUCTUATIONS IN JUTE

(From Our Own Correspondent)

CALCUTTA, 30*th March*

Prices of jute goods fluctuated within narrow limits during the week under review, although there was moderate business in heavy goods for export. Market circles feel that the fear of competition in world markets for Indian goods from Pakistani mills, which have up-to-date machinery, is being overemphasised. Although Indian mills are also being modernised, they have a distinct advantage over the former in that the latter have a well-established market organisation, which Pakistani mills lack. The modernisation, which is being done by mills themselves, is financed by the reserves which these mills have built up out of profits. Further modernisation is being planned from long-term loans which the Government is considering to grant to such mills as are unable to finance modernisation by themselves. In contrast, Pakistani mills have modernised machinery provided by the share capital. With the result, depreciation for machinery in the East Bengal mills will be higher than that for Indian mills, which had come into existence even before World War I with comparatively less capital than what is being invested in the Pakistani mills. Considered from this angle, cost of production in East Bengal will be higher than in West Bengal mills. And this means that Indian mills have a price advantage over the Pakistani goods. No doubt, Pakistani mills have the advantage of the best quality jute, but cultivation in India is being improved gradually by scientific research, and it is hoped that before long India will have sufficient good quality jute.

Ready 40" 10 oz. hessians were at one time as low as Rs. 41-13 but over the week-end recovered to the former level of Rs. 42-4. This followed reports of acceptances from the United States for the July-December shipment. In sackings, there was interesting activity, although the quotation remained low. Buyers on behalf of Australia bought fair quantities of cornsacks for both April-June and July-September deliveries. It is expected that more purchases would be effected by shippers for export to Australia. From Rs. 106-4, B. twills gave way to Rs. 105-6, but subsequently recovered to Rs. 105-14. In spite of moderate export enquiries, the price did not move up. This was because buyers were offering only lower prices. When figures of production and stocks for the month of March are released, they are expected to indicate satisfactory sales in heavy goods, exceeding output for the month. Ready heavy cees plain was quoted at Rs. 110-8, and A. twills at Rs. 131-8.

The news that the Assam Government does not intend to rescind the proposed tax on raw jute, apart from reducing it to As. 8 from As. 10 a maund as originally proposed, has been noted with some disappointment. If this tax has to be borne by the consumers, i.e., the mills, then mills in West Bengal will be forced to find as much jute as possible from the States of West Bengal, Bihar, Uttar Pradesh and Madras, and minimise dependence on Assam jute. Assam is now one of the principal producers of the superior fibre in India, and there the grow-more-jute campaign has produced commendable results since 1947. But this new tax, it is considered, will be a definite check against further progress. The Finance Minister of Assam has stated that the new tax will not be levied on current stocks but that it will be collected on the new crop, including forward sales already put through. This means that the buyers will have to bear the burden.

Another cause for disappointment in market circles is that the tax will considerably affect the growth of Dubri town as a principal jute trading centre in Assam. Generally, jute from many districts of West Bengal and Bihar go there for being baled before being sent to mills. This will have to be discontinued, as when once outside jute enters Assam, it will be liable for the new tax. In view of these considerations, the market hopes that the Government of Assam will yet reconsider its decision.

The raw jute market was steady but quiet this week. Prices were steady on account of lack of fresh arrivals and lack of rain for commencement of sowing for the new crop. But, as mills are moderately stocked, their purchases were confined to small quantities. For the sake of business, weak holders were prepared even to discount quotations. Assam bottoms were transacted at Rs. 25 per maund, Bimli Rs. 21-8, and Daisee Rs. 28. Dubri bottoms were priced at Rs. 25-4, while Pakistani jat bottoms came to hand at Rs. 27-8.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, 29*th March*

A steady improvement in the overall food situation in the country has been maintained during the week under review. The rapid move by the Centre towards full decontrol of all foodgrains has been indicated by the behaviour of domestic grain markets in recent weeks and also by the trend in the international markets. Reports from almost all the major producing countries indicate a substantial increase in the production of foodgrains, especially wheat. In the four main wheat exporting countries of the world, stocks have risen from 555 million bushels in 1952 to 1,162 million bushels in 1953. Reserve stocks also exist in some importing countries. In Asia, the rice crop in 1953 has been favourable and, though some outlet remains, Eastern countries no longer keenly seek wheat as a substitute for the staple diet, namely, rice.

The all-India final estimate for rice for 1953-54 reveals a marked rise in the production. The current year's acreage and production are placed at 76.6 million acres and 27.1 million tons, as against 74.2 million acres and 22.5 million tons, respectively, in the partially revised estimate for 1952-53.

Rabi crop harvesting has begun all over North India and, very soon the market would be flooded with a definitely better than normal crop yield. Soon after the decontrol of millets and coarse foodgrains, a somewhat unsettled condition had developed in the markets—surplus and deficit—but prices have now stabilised and no heavy swing either way is anticipated.

The Indian Food Ministry continues to press forward its triumphant policy of decontrol. The only import restriction that now remains is the one on inter-State commerce on private account in wheat and rice. Wheat may be completely decontrolled after the rabi harvest is gathered. A mid step was taken this week with the announcement that inter-State barriers on grain trade in the region constituted by the four States of Punjab, P.E.P.S.U., Himachal Pradesh and Delhi would be abolished with effect from 1st May next. 'Free movement of wheat will be allowed within this zone. In regard to rice, it is stated that the agreement with Burma has materially eased the overall supply position and it should be possible for the Centre to permit free inter-State movements in this commodity too, as soon as the appropriate pricing policy for the relatively costly Burma rice has been worked out.

Foodgrain markets in U.P. remained quiet and featureless. Wheat was particularly quiet and producers that had withheld surplus from the market in season are now bringing it out, encouraged by increased crop yield prospects. There are moderate arrivals of old wheat in all the assembling centres. New peas arrivals have begun in both East and West U.P., but the quantity received is small and advices from East U.P. confirm early fears of the crop having been damaged by excessive rains and hail.

Pulses futures remained highly erratic, showing particular sensitiveness to weather conditions. On Wednesday last, there was unusually heavy downpour of rain, accompanied by heavy hailstorm. The local market for pulses futures flared up within an hour. The gain was erased next day, when the weather cleared and it was revealed that the area affected by excessive rains and hailstorm was not extensive.

Experiments made by the U.P. Agricultural Department have revealed that several varieties of rust-resistant strains, suitable for the hill regions, may be evolved shortly. Experiments have been made with strains of American wheat, Indian varieties and 23 other foreign strains. Of these, 29 varieties have been found to be rust-resistant.

SUGAR STEADY

(From Our Own Correspondent)

HAPUR, 29*th March*

Crystal sugar markets remained extremely steady and prices seemed to rise non-stop. The supply position in the main markets is rendered very tight in respect of both foreign sugar at ports and Indian sugar in inland markets. All the three ports of Bombay, Madras and Calcutta reported that stocks of foreign sugar had run out. In the North Indian markets, offerings were very reserved. The Kanpur Sugar Merchants Association urged the Government of India to release 200,000 tons of sugar to check the present upward tendency in the sugar markets. The Government did release a further quantity of 100,000 tons for sale in the free market out of the 1953-54 production of all the factories in the country. This, however, has failed to ease the position to any considerable extent and speculators are very active in the mill delivery section. As soon as the quota for free sale is released, speculators pounce upon it and withhold it from the market in order to press forward an upward pace.

For some time past, there has been a break in the continuity of receipts of foreign sugar. It is now announced that firm arrangements have been made by the Government of India for the import of 116,000 tons of sugar from foreign countries. Arrangements for the purchase of another 60,000 tons are likely to be finalised very shortly. Most of the sugar is expected to arrive in the country before the monsoon starts. According to present indications, the country is not likely to receive the first consignment of imported sugar at least earlier than a month. On this account, the announcement relating to heavy sugar exports programme too has failed to depress the outlook in the market to any visible extent.

The U.P. Chief Minister informed the State Legislative Assembly this week that the excess price of sugarcane paid to the cane growers in the western districts during the current season would be deducted from their share of excess profit which the factory owners were expected to make. The growers belonging to eastern districts would receive the full share of the cess profit.

Gur markets remained extremely steady. Reduced overall production of *gur* this season, large-scale alleged smuggling to West Pakistan from the Punjab boarders and unexpected rise in crystal sugar prices accounted for the steadiness. All principal *gur* assembling *mandies* both in West U.P. and in the south report very poor stock accumulations, even though the season is drawing to a close. *Gur* manufacture over a wide area has been terminated now and may be over in about a week's time. A sharp rise in ready and futures *gur* prices has been attracting moderate arrivals so far, but the position may not continue for any length of time. At Hapur, ready *pansera gur* is now quoted at Rs. 19-14 per maund, as against Rs. 18-6 quoted last Monday. *Baishak* is now quoted at Rs. 18-12, the highest for the season, as against Rs. 16-11-6 last Monday. Hapur *gur* arrivals averaged 1,000 to 1,500 maunds daily. Local stock accumulations are estimated at 40,000 maunds. There was excellent enquiry from importing areas at current prices.

METALS BETTER

(From Our Own Correspondent)

CALCUTTA, 30*th March*

Without recording any perceptible upward movement in prices, the metal market was steady during the week under review. Consumers showed particular interest in lead and they bought more scrap than the virgin material. From Rs. 61, the price advanced to Rs. 62, although, for a time, a recession to the opening rate was reported. The market has welcomed the Government decision to license freely exports of lead pipes, copper tapes and copper busbars.

Electrolytic copper continued steady and was quoted at Rs. 182. Demand was moderate and the scrap was difficult to obtain. There was interesting price movements in mercury which, at Rs. 655, recorded a gain of 65 points. This change was due to firmer advices from overseas countries. From Rs. 53-8, electrolytic zinc was raised to Rs. 54-4. Because of labour troubles in some galvanising establishments, the turnover was less than average. In contrast with other metals, tin was dull, the price shifting from Rs. 461 to Rs. 452.

CALF LEATHER IN POOR DEMAND

(From Our Own Correspondent)

MADRAS, 29*th March*

There has not been any change in the hides and skins market this week. U.K. dressers have kept out of the market, due to lack of orders for finished leather. E.I. tanners are in a well-sold position and are not willing to accept lower levels. Arrivals have met with ready demand and prices in the Periamet bazaar are 1d. to 2d. over U.K. Demand for cow calf and buff calf has been poor.

Arrivals of tanned goat and sheep have been restricted. Enquiries for superior tanned goat have been at last levels and prices are likely to rule firm. Importers in the U.S.A. offer $9.00 basis for drysalted goat skins 170/180 lbs., while exporters require 50 cents more, and business continues difficult.

Notices

THE GOKAK MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT AT THE Annual General Meeting of Shareholders of the above Company held on the 29th March, 1954, a Final Dividend of Rs. 12 (Rupees Twelve only) per Share, Free of Income-tax, was declared for the year ended the 31st December, 1953, and will be paid on and after Friday the 9th April, 1954, to those Shareholders whose names stood on the Register of the Company on the 25th March, 1954.

Dividend Warrants will be posted to the Shareholders at their registered addresses in due course.

By Order of the Board,
FORBES FORBES CAMPBELL & CO., LTD.,
Agents.

BOMBAY, 29*th March*, 1954.

KANKNARRAH COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE One hundred and forty-second Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, at 12-00 noon on Friday, 30th April, 1954, for the following purposes:—

(1) To receive and adopt the Directors' Report and Audited Accounts for the half-year ended 31st December, 1953, and the Balance Sheet as at that date.

(2) To declare Dividends.

(3) To elect a Director.

The Share Transfer Books of the Company will be closed from 16th April, 1954, to 30th April, 1954, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LTD.,
D. FORDWOOD,
Secretary,
Managing Agents.

4, CLIVE ROW,
CALCUTTA-1, 26*th March*, 1954.

Note.—Payment of any dividend declared will be made only to those members whose names are registered in the Books of the Company on the 30th day of April, 1954, or to their Mandatees. No applications for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

THE MILLOWNERS' ASSOCIATION
BOMBAY

NOTICE IS HEREBY GIVEN THAT THE ANNUAL GENERAL MEETING of the MEMBERS OF THE MILLOWNERS' ASSOCIATION, BOMBAY, will be held in the rooms of the Association (Second Floor, Elphinstone Building, Veer Nariman Road, Fort, Bombay), at 11-30 a.m. (S.T.) on Monday the 12th April, 1954, to transact the following business:

1. To receive and adopt the Committee's Report and Statement of Accounts for the year 1953;
2. To appoint Auditors of the Association's Accounts for the current year and to fix their remuneration.

And any other business that may be brought forward.

By Order of the Committee,
N. S. V. AIYER,
Secretary.

BOMBAY, 3*rd April*, 1954.

THE MODERN MILLS, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Twentieth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay, on Friday the 7th May, 1954, at 3-30 p.m. (S.T.), (1) to receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 31st October, 1953, (2) to declare a dividend, (3) to elect Directors in place of those who retire by rotation but who are eligible for re-election, and (4) to appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from Thursday the 15th April, 1954, to Friday, the 7th May, 1954, both days inclusive.

By Order of the Board,
N. SIRUR & Co., LTD.,
Managing Agents,
V. N. CHANDAVARKAR,
Managing Director.

BOMBAY, 30*th March*, 1954.

N.B.—The dividend when declared will be made payable at the Registered Office of the Company on and after Monday the 17th May, 1954, between 12 noon and 3.00 p.m. on week days other than Saturdays and between 12 noon and 1-30 p.m. on Saturdays to shareholders whose names stand on the Register of Members on the 15th April, 1954.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published half-yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. ‡ Sales and amount written off. (b) Investments. ‡ For ten months ended 31st December 1951.

(j) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 4 in96 the debentures section:—

(a) Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(c) Option of repayment at any time at 5 per cent. premium.

(d) Bearer bonds of Rs. 1,000 each repayable at par.

(e) Bearer bonds of Rs. 1,000 each repayable on 31st July, 2239.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952 or on any subsequent interest date at one month's notice.

e Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955 on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ¼ per cent. premium after 1st March, 1954, but before 1st March, 1957, and ½ per cent. premium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(hh) Option of repayment at any time at par at any time on or after 30th June 1947 on six months notice.

RATIONALISATION OF INDUSTRY

VIEWS OF MR. CHINTAMAN DESHMUKH

REPLYING to the general discussion on the budget in the House of the People last week, Mr. Chintaman D. Deshmukh, Union Minister for Finance, made a few interesting observations on rationalisation of industry and cottage industries which are reproduced below:

"As regards rationalisation—a matter which was dealt with obliquely by some of the hon'ble members on the other side—I think it is necessary that we should state our views, at least my views, and I believe they are shared by my colleagues. The need for increasing productivity, of course, is admitted by everyone. There is a special observation on this in the chapter on industrial development and policy in the Planning Commission's report. With the emergence of a buyers' market, the growing necessity to seek outlets for our industrial products in export markets and the increasing severity of international competition in such markets have stressed the need for a proper solution of this complex problem. Now we have been handling it on various fronts. We have been promoting measures for the improvement of managerial efficiency as well as of labour productivity. Expert productivity studies have been undertaken. An Institute of Labour Productivity is contemplated to be started. Quality control is being encouraged vigorously and, in diverse other ways, we are encouraging the promotion of higher standards of managerial efficiency and productivity.

"Now, the replacement of obsolete and outworn machinery by improved machinery of higher productivity—which is known technically as rationalisation—is obviously one of the essentials of technical progress and industrial development. Notwithstanding the imperative need to increase productivity and reduce costs by rationalising the industrial processes, such measures are often resisted because of the displacement of labour which is temporarily caused by them.

"The Planning Commission have specifically considered this issue in the chapter on labour, and have suggested certain safeguards in the interests of labour temporarily displaced, so as to facilitate the progress of rationalisation. They have, for instance, recommended that, where rationalisation is expected to lead to such displacement, fresh recruitment should be stopped, surplus workers engaged in other departments, as far as possible, retrenchment to be just as amongst the persons involved, those last employed being first discharged, etc. While the adverse incidence of such displacement on the individuals concerned should be, we admit, alleviated, to the greatest possible extent, as a measure of social policy, it would be wrong and against the general interests of the country to discourage or prohibit rationalisation altogether. That is the point that I wish to make.

"A little over two and a half millions of persons are engaged in organised industry, with reference to which this question of rationalisation is generally raised. It is common ground that, without a substantial growth of employment opportunities in the field of industry, we shall not be able to cope with the large number of additional persons annually joining the labour force, as a result of the growth of population and the trend towards greater organisation. Apart from this, there is the vast and unmeasured extent of underemployment in the rural economy. It is obvious that the growth in the level of general employment must not be negatived by a shortsighted policy in respect of technical progress. I maintain that it is possible to reconcile the claims of the individuals affected temporarily by any such displacement, with the requirement that we must provide for an expanding economy in the general interest. This is one more illustration of reconciling the economic imperative, so to speak, with the dictates of social justice.

"This House is aware of the recent enactment to provide for the grant of retirement benefits and benefits during periods of temporary lay-off to labour. The House will recall that, in view of an emergent situation in certain industry, Government first enacted the measure by resorting to ordinance, as the House was not in session, which would just show the importance which was attached by Government to this safeguarding of the interest of workpeople affected by retrenchment.

"While everything possible must be done, as I said, to alleviate hardships caused to labour temporarily displaced and to provide for its reemployment, what I say is that we must not get involved in a policy that would ban all technical progress and inhibit the growth of employment.

"At any given moment, industry comprises a large number of undertakings of various degrees of efficiency, some of them just started or starting, some others developing or contracting, and others which may become senile and may be on the verge of closure. Now it is essential for the healthy development and growth of industry that there should be a certain measure of elasticity about the labour force engaged by the different individual units according to their own circumstances. We ought to concern ourselves with the volume of total employment. A policy that makes retrenchment impossible by an undertaking could only have the result of inhibiting the growth and development of new lines of production by other undertakings and would possibly cause a far greater hurt to the economy than it would avoid, including, of course, the labour community itself, taken as a whole.

"I agree that, in the special circumstances of our country, rationalisation must be graduated and discriminating and according to a plan, if possible. The pace of rationalisation must be so graduated that the overall growth of employment opportunities more than keeps pace with the temporary displacements occurring consequentially by improved processes at particular points."

Mr. K. P. Tripathi: "May I ask a question? What will be the number of persons thrown out through rationalisation out of

EAST-WEST TRADE

FOR some time now, attempts are being made to cry halt to the cold war between the East and the West, at least on one front, namely, the trade sector. Ever since the citizens of the East European countries began to feel the pinch of the paucity of consumer goods, which finally culminated, last year, in serious unrest, the authorities of Communist countries have been taking more and more interest in developing commercial intercourse with the free countries. Beginning with consumers' goods, they are now eager to buy even durable goods in exchange for gold, as well as strategic goods. They have, of course, been successful in inducing the West European nations to sell these goods, thanks to the latter's keen anxiety to find a fresh outlet for their products. Another reason for these countries' readiness to trade with the Communist bloc is the realisation on the part of some of their leading statesmen that removal of trade obstacles will help reduce international tension and carry the world a step nearer peace. But they have, at the same time, recognised that a wholesale lifting of restrictions would be impolitic. The present attempts at widening the area of East-West trade are in the nature of a limited investigation into trade possibilities without undermining military security.

The credit for initiating the move by the Western side goes to the British Premier, Sir Winston Churchill. Recently, Sir Winston revealed his Government's intentions when he announced in the House of Commons that a "substantial" relaxation of the regulations (those affecting manufactured goods, raw materials and shipping, which were made three or four years ago in very different circumstances) would prove beneficial to the countries concerned. He made it clear, however, that he did not suggest that there should be "any traffic in military equipment, including certain machine tools—such as those capable of making weapons—and heavy weapons." Mr. Peter Thorneycroft, President of the Board of Trade, made a similar statement in the House of Commons. He said: "We believe it possible to combine an enforceable list of security controls on strategic goods, with relaxation on other goods and expansion of trade in them."

Although no comparable policy statement has been made on behalf of the Eastern side, it is clear that the authorities behind the Iron Curtain are willing to negotiate trade contacts with the West. Many factors have influenced Eastern Europe in the change it has made in its trade policy. In the first place, the sacrifice of agriculture at the altar of rapid industrialisation has checked the flow of raw materials to industries. This has given rise to raw material problems for the industries concerned. Secondly, consumer goods industries were, in the past, compelled to take a sub

East-West trade, the free world's trade with the Soviet bloc declined from $1,400 million in 1952 to $1,300 million in 1953. The low level of this trade must be attributed, as Lord Reading, the British delegate to the Geneva meeting, pointed out, to the Soviet Union's inability to offer sufficient quantities of goods and to the Soviet bloc's autarchic policy of concentrating on trade among themselves. The trade among the countries of the Soviet bloc now makes up 75 per cent. of their entire international commerce, as compared with 10 per cent. before the war.

Nevertheless, the attempts that are now being made to revive as well as to expand East-West trade deserve to be welcomed, because it might well serve as a prelude to better relations between the two regions. To Russia and to countries within its orbit, more East-West trade means more consumer goods. To the West, it means more timber and grain, besides a possible inflow of gold and consequent strengthening of its gold and dollar reserves. The revival of this trade will also restore the pre-war balance of European trade in which the trade between industrialised Western Germany and Eastern Europe formed an important part. If the same approach is made to trade with China, it will divert a good part of Japanese goods now seeking to flood the South-East Asian and Middle East markets to China, thereby giving a chance to India and some of the European countries to cater to their traditional markets. The Japanese traders are anxious to resume trade with China, but are unable to do so because of the embargo under the terms of the U.S. Battle Act.

The greatest impediment to the development of trade with the Communist countries is the unhelpful attitude of the United States. So sharp were the differences on this question between the U.K. and the U.S. that *The Times*, London, had found it necessary to warn that it would be wrong to make East-West trade a "fetish," which would come between the "U.S. and her friends in Europe." The consent of the U.S. for expanding trade with the Soviet bloc is essential, for any country, which has a security agreement with it, has to face the risk of losing American aid. Under the "Battle Act" passed in 1951, President Eisenhower is bound to cut off aid to countries selling strategic goods—a very vague term—to the Communists, unless he thinks it would be in America's interests to allow the trade.

The British Government feels that, in the present circumstances, it is necessary to permit a substantial relaxation of the restrictions on trade with the Soviet bloc. So strong were Sir Winston Churchill's views on this question that the American Government found it necessary to hold a hurriedly arranged conference with its principal allies to iron out the differences among them. Accordingly, a two-day meeting was held in London towards the close of last week, in which France also participated. The outcome of this conference is somewhat helpful, in that a wide area of agreement has been reached, providing a common basis for reviewing existing controls in order to encourage expansion of trade with the East. The three countries have agreed on the principles that are to govern the revision of the controls on trade with the Soviet bloc, but detailed arrangements for individual commodities have yet to be worked out. A further and a more representative conference, in which will be included all the countries of the North Atlantic Treaty Organisation, Western Germany, and Japan will be held in Paris this month, with the object of refining the existing controls by narrowing substantially their scope and increasing their effectiveness. The restrictions will, it is said, be confined only to those items which are closely related to Soviet military requirements.

The reactions of the U.S. representative to this Conference show that the U.S. Government has agreed to the British proposal only with great reluctance and, perhaps, with some mental reservations as well. For, on his return to the U.S., he said, significantly enough, that "there might well be a continuing difference" between the U.S., on the one hand, and Britain and France, on the other. In any case, the U.S. is firmly opposed to any relaxation of the existing embargo on trade with China and North Korea, a stand which the U.K. has agreed to accept, possibly as a compromise in order to obtain the U.S. consent for whittling down the ban on trade with Eastern Europe and Russia. The fact that, despite the current restrictions, the free countries' trade with China in 1953 was greater than in 1952 might have also induced Britain not to press the point with the U.S. for the present. According to a U.S. Government analysis, exports of Allied nations, other than the U.S., to Communist China during 1953 were greater at $270 million than in 1952 when they aggregated only $256 million. Similarly, their imports from China in that year were also higher at $425 million, as against $365 million. The main beneficiaries of this small expansion in the trade with China were Ceylon, Western Germany and the U.K.

The reluctance of the U.S. to go the whole hog with the U.K. and other European countries anxious to trade with the East is not altogether inexplicable. Apart from the fact that the Americans are prone to exaggerate the risks involved in trading with countries where dictatorship is the rule and where private enterprise has no place whatever, there are other considerations which make them feel the game is not worth the candle. In the first place, it might be difficult to keep trade and politics apart. Secondly, there is no reason to think that it will mean, so far as the U.K. is concerned, any great gain. It is true that the U.K.'s exports to the Soviet bloc now form only 1 per cent. of its total exports. But even before the war, it was no more than 4 per cent. Even granting that this area's capacity to absorb imports has increased, it is doubtful whether it will be in a position to pay for them in goods which the exporting countries want. The latter will no doubt accept payment in gold, but, during the past few weeks, Russia has provided enough indications from which one can infer that it will not be willing to reduce its reserves of precious metal below a limit. According to some British observers, "Russians do not intend to rely permanently on gold to make good the deficiency, at any rate on anything like the scale of the past few months." There are already reports that the flow of Russian gold to Europe and the Middle East has slowed down. Thirdly, it is doubtful whether other countries can count upon Russia and its satellites as either steady sources of imports or continuous destinations for exports over any reasonable length of time. It is believed that all that Russia is now interested in is the "conclusion of a series of bilateral trade agreements which would guarantee markets for specific quantities of Russian products." Incidentally, it will be interesting to note here that, although, at the time the Indo-Russian trade agreement was signed, there were strong expectations that Russia would buy a large quantity of Indian tea, not a pound of tea has been so far bought by that country. And finally, when the present emergency passes away, Russia might well withdraw itself into the closed shell of its own economy.

VIEWS OF A BANK CHAIRMAN

BUSINESS men and others who are interested in the Indian economy have for some time past been accustomed to watch for the addresses of bank chairmen, particularly for the address of the Chairman of the United Commercial Bank, for an analytical exposition of Indian economic trends. By temperament as well as by training, a banker is necessarily a staid person and no mere dreamer, a person who attaches less importance to the seemy side of things but evaluates economic trends with a rather aggressively objective, even if conservative, outlook. Also, bankers touch everyday business life at more points than any other class of men, and may, therefore, be trusted to speak with greater knowledge of the places where the *economic shoe pinches the people* and why it does so. From this point of view, the speech which Mr. G. D. Birla, Chairman of the United Commercial Bank, made at the eleventh annual general meeting of the Bank, held at Calcutta on Wednesday this week, will be read with more than ordinary interest. Now that the United Commercial is no longer a purely Indian Bank, in the sense that its operations are not confined only to India but extend to many parts of the world as well, Mr. Birla has enlarged, appropriately enough, the scope of his survey to include a few salient observations on the economy of the countries in which the Bank is interested. By doing so, he has earned the distinction of being the first among Indian bank chairmen to speak on international economic affairs in their annual addresses to shareholders. This innovation, modelled on the statements of Chairmen of Exchange banks, is typical of the enterprising spirit that has characterised the impressive growth of the United Commercial which has just entered the second decade of its existence.

In his speech to the shareholders, as, in fact, in his speeches on other occasions, Mr. Birla showed himself a rational optimist. He spoke with confidence about the country's ability to complete the task of economic reconstruction. He felt gratified by the fact that, "on the whole, Indian economy has shown a good deal of strength and vitality during the last year." He illustrated this statement by a reference to the increase in industrial and agricultural production and to the improvement in India's balance of payments position. Reviewing the progress of the Five-year Plan, Mr. Birla made a few notable observations about "deficit finance." Deficit financing, according to the Union Finance Minister, will aggregate Rs. 495 crores up to the end of 1954-55 and Rs. 395 crores in 1955-56, making in all Rs. 890 crores, as against Rs. 290 crores originally contemplated in the Plan. Mr. Birla was apparently not overwhelmed by the magnitude of the deficit finance contemplated by the Government. He felt that, in India, which had "favourable conditions for development" and which was determined to go ahead with its economic programmes, this amount should have "little or no effect on prices of consumer goods. With sufficient supplies of food and cloth, and the production capacity for the latter not as yet fully utilised," he said, "there will be no scarcity in these goods and there is no danger of rise in their prices."

Lest this should be interpreted to mean that this bank Chairman has thrown all caution to the winds, and has given a charter for limitless deficit finance, it is necessary to refer to the qualifications by which he hedged this general support for deficit finance. He warned that the resort to this device increased the responsibility of the Government and the currency authority to be "more prudent and vigilant in their financial policies and to curb with a heavy hand any tendency to increase uneconomic or wasteful expenditure." He noted that the weakest link in the chain of administration in the country was the States whose record of performance in pursuing the projects under the Plan was not very happy. He, therefore, declared that efforts must be made to strengthen their organisations to go full speed to complete the projects entrusted to them. This is a salutary warning which may be ignored by the Government only at the risk of an economic disaster. To adopt deficit finance is, as we have pointed out ere now, akin to a performance on a razor's edge; it requires considerable economic skill, caution and self-control, if this hazardous adventure has to yield the result expected of it.

The success of the Five-year Plan is undoubtedly vital to national progress. Considering, however, the fact that the *malaise* of unemployment in the country continues even after three years of sustained work in implementing the Plan, it seems clear that something more is necessary in order to raise the level of economic activity. The problem of the educated unemployed, which should, of course, be regarded as part of the general problem of unemployment, continues to be, in the words of Mr. Birla, the "most disturbing issue in the country." Nearly four lakhs of boys and girls, who leave educational institutions every year, are in search of employment. Their ranks are augmented by other men who lose their jobs as a result either of the closure of war-time control establishments or of dislocation caused to business and industrial units. The way out of this tangle clearly lies, as Mr. Birla rightly suggested, in expanding business and industry. Gone are the days when the Government could be relied upon to provide safe jobs for educated young men. It is expanding business, expanding agriculture, and expanding industry that can meet the demand for work for the huge and ever-increasing mass of India's educated youth. By placing impediments in the way of industrial progress in the shape of high taxation, omnibus wage fixation and idealistic labour laws, the Government is only preventing private enterprise from contributing to the solution of the problem of unemployment, a problem which, according to all evidence, is likely to prove too much for the Government to fight single-handed, that is, without the aid of the private sector. How utterly negative and unrealistic is the labour policy of the Government has been impressively stated by Mr. Birla in his speech. His observations on this subject—these endorse the views of this journal, expressed from time to time in recent months—merit reflection by all those, especially the educated young men, who are interested in the economic development of the country. The attention of labour leaders, politicians and administrators of the country needs to be drawn particularly to the enlightening report of the Swedish Federation of Trade Unions on full employment, an extract from which Mr. Birla has approvingly quoted in his speech.

NO BONUS ISSUE FOR BOMBAY DYEING

N.P.V. SHARES—OUTLOOK FOR TEXTILES—SIR ROBERT MENZIES ON RATIONALISATION

THURSDAY, 5 P.M.

THE share markets continue to present a steady to firm front to the dismay of some who have been feeling that a reaction is overdue on the score that markets have become a little overbought. There has been a slight fall in values today, but this represents only the customary profit-taking on the eve of settlement day. There are no pointers to show that a fundamental change in the trend is in the offing. It is true that fresh buying at current levels is not quite substantial, but that merely suggests that no strident increase in prices is likely. In the past few days, Indian Irons have been in the limelight, staging an impressive rise. The persistent bull support to this scrip, even at a level at which the yield works out to no more than 3.3 per cent., suggests that operators are optimistic of the long-term outlook for the Company. They are banking on the hope that, in a few years, the Company will be able to pay a higher dividend and that there will be a further capital appreciation in its scrip. This, however, is a view which only a speculator can take, because it involves some risks. For such a prospect cannot materialise within the next four or five years, if the findings of the Tariff Commission are to be relied upon. An interval of five years is rather too long a period to look ahead, in the present state of affairs in the country. Another important factor to be borne in mind by those who go in for these shares is that, during this period, the Company may have to raise additional equity capital to pay off a part of its obligations to the Government.

MARKET GOSSIP

• • • •

The Gilt-edged market, too, continues to be bright. There has been a further improvement in the value of almost all loans, the increase being a little greater in the long-dated issues. Knowing full well that the Reserve Bank is tuning the market for placing new issues, every operator has been trying to make a little by going long. This is one of the factors that have contributed to the rise in rates. It looks as though the market has now moved up to a level which is somewhat unrealistic as compared with the yields in other investment sectors. In a market bare of stocks, it is easy for the Reserve Bank to give a big push to values, but, if the new issues are to be a success, a little amount of restraint will be necessary. It should not create a climate in which the "stags" thrive to such an extent as to spoil the field for the new issue. In other words, the upward twist should not be overdone. Apparently, the Reserve Bank is aware of the need for this caution. Thus, today it resumed the sale of two loans, which it had stopped earlier in the week, namely, 3 per cent. 1970-75 and 3 per cent. 1966-68, albeit at slightly higher rates.

• • • •

The short-term money market is still active. Demand for money is good, while the supply is limited. Inter-bank call money commands the self-same rate of 3 per cent. Banks are keen bidders for call, as well as time, deposits and are offering the same rates of interest as in the previous week. There is, however, a feeling amongst some of them that the peak of the season has passed and the pull from up-country centres is not as strong as it used to be, say, a fortnight ago. Production of sugar for the current season is practically over everywhere, except in the South, and the demand for money from that industry has nearly dried up. Marketing of the principal cash crops is nearing the end, while finance for imports of cotton has already been fixed. Cloth stocks are not appreciable and so also those of jute goods, as the offtake of these goods has been fairly sizable and steady. Foodgrains are, of course, still moving, but they do not generally require much financing by banks. In view of all these factors, money market observers feel that the busy season this year will soon be over, thereby enabling the Government to begin its borrowing programme a little earlier than last year.

• • • •

Among the other markets in the city, while cotton has registered a perceptible fall, on account of liquidation by bulls and lack of support from mills, bullion has staged a smart rise. Over the week, I.C.C. May and August have dropped Rs. 18 to stand at Rs. 667-8 and Rs. 682, respectively. It would appear that most of the mills have now bought their requirements of Indian cotton for the present and can afford to wait and watch the market for a while. Further, they will shortly be receiving deliveries of foreign cotton and will have to find the necessary resources. In view of this as well as the fact that there is still a large quantity of domestic cotton, estimated at between 10 and 12 lakh bales, to be marketed, knowledgeable circles feel that the May Contract will not easily lend itself to a bull squeeze, even though the statistical position of Indian cotton is exceedingly sound and in favour of holders of the commodity. In any case, at present no big operator seems to be speculating in the market, though one can never rule out the possibility of some resourceful operator entering the ring at any time. In so far as the August Contract is concerned, it is widely believed that the chances for last year's history being repeated are fairly bright. That is one reason why it is standing at a premium of Rs. 15 per candy over the May Contract. But no flare up is expected even in this contract until the earlier delivery is out of the way.

• • • •

In the bullion market, both silver and gold have been active throughout the week. After initial hesitancy, both have spurted in value, today's closing being about the best levels for the week. As compared with the rates prevailing a week ago, silver is up by Rs. 2-8 and gold also by a similar amount. Considering that the unit of quotation for gold is smaller than that of silver—ready gold is Rs. 93-8 per tola and ready silver Rs. 171-13 per 100 tolas—the rise in gold is more striking than that in the white metal. There are no special reasons for the firmness of these precious metals, except that the supply is so small that the seasonal demand, though relatively modest as compared with what it used to be in some of the previous years, is making itself felt effectively on the price. In the case of gold, there is an additional factor, namely, the flow of smuggled gold has, as mentioned in these columns last week, thinned down. Our enquiries reveal that so far there has been no heavy speculative activity in both the metals, more especially in gold, on a scale comparable with what it used to be in the past. Refreshingly enough, there have been no complaints of bull squeeze, notwithstanding the fact that, in the past one month, silver has advanced by over Rs. 7-8 and gold by Rs. 4.

• • • •

A feature of today's trading in the textile section of the share market was the sharp sudden drop in the value of Bombay Dyeings from Rs. 431-4, touched early in the session, to Rs. 423-2 at the close. This recession reflects the market's disappointment caused by the Company Chairman, Mr. Neville N. Wadia's elucidation of his Board's policy in regard to the dividend and issue of bonus shares. The Chairman's remarks on these two issues represented a reiteration of the conservative policy which the Company has been following for decades. Quite a few in the market had expected that the management of the Company would move with the times and let the shareholders participate in the profits of their concern more liberally than in the past. This is evident from the fact that, on the eve of the Company's annual meeting held this morning, they had rushed to buy the shares, which resulted in a rise of Rs. 9 in their value. The expectation that the Chairman would announce an issue of bonus shares at today's annual general meeting of the Company seems to have been responsible for the unusually large attendance; the meeting lasted for over two hours, whereas in the past it used to be over quickly.

• • • •

Several shareholders were critical of the conservative policy followed by the management. One of them described this policy as "over-conservative," which went against the interests of shareholders. They expressed their disappointment at the meagre cash bonus of Rs. 2-8 per share declared in commemoration of the completion of 75 years. They had expected a somewhat generous distribution on this happy occasion. In this connection, they drew the Chairman's attention to the allocation of Rs. 14 lakhs from the past year's profit to the dividend equalisation fund, which raised it to Rs. 54 lakhs, and said that at least a portion of it could have been utilised to distribute a larger dividend. These shareholders apprehended the danger of a claim from labour on the huge reserves of the Company, now aggregating Rs. 2.32 crores (made up of a reserve fund of Rs. 50 lakhs, a rehabilitation and development fund of Rs. 98 lakhs, a dividend equalisation fund of Rs. 54 lakhs and other reserves Rs. 30 lakhs), as against a paid-up capital of Rs. 2.51 crores. They wanted an assurance from the Chairman that the Board of Directors would change the dividend policy at least next year in line with that followed by other well-managed companies. Of course, there were a few shareholders who commended the present policy of the management.

• • • •

Replying to the criticism, Mr. Wadia pointed out that the rehabilitation programme of the mills now on hand would cost Rs. 3 crores and that the Company could not afford to fritter away its resources by paying higher dividends. He added that the conservative policy had stood the Company in good stead for over 70 years. It had adverse periods of trading, as well as prosperous times, but the policy which they criticised now had helped the management to assure the shareholders of a steady dividend without a break. The shareholders could not expect a sudden change in the policy overnight, as it were. Mr. Wadia added that he did not expect the Company to have always prosperous trading. Sometime or other, it would have to face lean days. He, therefore, did not like to change the policy. He, however, assured the shareholders that, when the rehabilitation programme was complete and the Company was able to augment its earnings, he would consider the suggestion in the light of the then existing conditions.

• • • •

Referring to the plea that a part of the reserves could be capitalised not only in view of the fact that the reserve position warranted it but also on account of reports that, in the not distant future, the bonus issue might be treated by the taxation authorities as income in the hands of shareholders, Mr. Wadia categorically stated that, until the position in regard to the latter aspect, namely, the treatment of bonus issue as income, became clear, he would not consider the question of capitalisation of reserves. He wanted the shareholders to await the report of the Taxation Enquiry Commission, because, according to his information, some of the members of the Commission were in favour of taxing the bonus issue. He however, added that, even then it would bear only super-tax and not income-tax, as the reserves had already borne income-tax. Nevertheless, he said the Board would not consider this question till the Commission's report was out. He turned down the suggestion of a shareholder that the Company should apply to the Government and obtain its sanction in advance, so that the issue may be made afterwards.

• • • •

In recent years, there has been a keen controversy in the U.K. over the issue whether it is right to permit companies to have no-par-value shares (n.p.v.). Nothing, however, was heard about this issue in recent months, but it has once again become the talk of the city, following the publication of the report of the Committee, to which the question was referred last year. This Committee has held that there is general support for the no-par-value system, but the trade unions are strongly opposed to it; their representative on the Committee has submitted a minute of dissent. Although this type of shares has been popular both in the U.S. and Canada, it never found favour in the U.K. until a couple of years ago. British financiers and company managements used to consider it as an unorthodox device in company finance. The Cohen Committee (1945), the report of which formed the basis of legislation for the Companies Act, 1948, considered the question, but felt that there was little demand for and considerable opposition to no-par-value shares. But, with labour casting its envious eyes on the reserves of companies and misinterpreting the dividends that were being declared, the system of n.p.v. began to catch the imagination of some and gradually gained many votaries among investors three years ago. In 1952, a private Bill to make the issue of these shares permissible was introduced in the British Parliament, but it was talked out. The demand, however, persisted and early in 1953 the Government appointed a committee, with Mr. Montague-Gedge as Chairman, to consider whether it was desirable to permit the issue of no-par-value shares and, if so, to suggest the safeguards necessary in the public interest. This Committee has, as already stated, now advocated the n.p.v. system.

• • • •

In order to appreciate the value of this new device of no-par-value shares, it is necessary to understand the background against which the new system gained more and more adherents. In the U.K., as indeed in this country, there is no lack of ill-informed critics of company finance, company earnings, company reserves and company dividends. The large profits earned by companies during the war and post-war years, have given a new handle to labour propagandists. They seldom realise that, although profits appear large, they are small when the cost of replacing the assets is taken into account. Again, labour leaders make political capital out of the high dividends that are paid to shareholders. They inflame public opinion by drawing public attention to the high percentage of dividends recommended by Boards of Directors. What is conveniently ignored by these propagandists is that the dividends appear large only when they are related to the ordinary share capital, but are really small when they are related, as, in fact, they should be, to the working funds of companies. The real basis of a company's earning capacity does not lie only in its ordinary capital, but in its total working funds, capital (ordinary as well as preference capital, if any), reserves and borrowings. This factor is, however, completely overlooked by labour leaders, to whom any stick is good enough to beat the capitalist with and any distortion of truth is permissible so long as it furthers the fight against capitalists. Again, they turn their eyes away from the fact that to an average investor what matters is not the percentage dividends, as related to the paid-up capital, but its percentage in relation to the market price of the share. To get a correct estimate of the magnitude of a dividend, one has to consider the dividend in the context either of the real value of capital employed in the business or of the market price of the share.

• • • •

The device of issuing no-par-value shares (n.p.v. shares), it is held, will prevent the labour propagandists from making political capital out of the so-called 'high' dividends, declared by company managements. When a company seeks to change over from share capital to n.p.v. shares, the shareholder's interest remains what it was. He will receive so many shares of no-par-value instead of the same number of shares of a fixed denomination. Dividends will no longer be expressed as percentage of the paid-up capital, but in terms of money per n.p.v. share. The value of the n.p.v. share will no doubt fluctuate on the Stock Exchange, but there is no question of its being quoted at a premium or discount in relation to its paid-up value, for there is no paid-up value, as such. If a company pays a dividend Rs. 2 on a share which has a paid-up value of Rs. 10, it means a dividend of 20 per cent. This makes labour leaders and others with socialist ideas green with jealousy. It never occurs to them that the share might well be standing at Rs. 50, depending upon the company's financial position and other factors, and that the investor might have bought it at that price and would, therefore, be receiving only 4 per cent. on his investment. But this fact, now overlooked by labour leaders, could be brought home to them, if each share of the company is split up into four n.p.v. shares and a dividend of As. 8 is declared on each such share. Since the n.p.v. share would then be standing at Rs. 12½ (one-fourth of the market price of Rs. 50), the dividend rate would appear at its correct level, namely, 4 per cent. The unnatural and distorted relation between the paid-

(Continued on page 715)

EQUITIES RULE STEADY

SPURT IN SUGARS

(From Our Own Correspondent)

BOMBAY, *8th April*

THE strong bullish activity witnessed on the Stock Exchange in the previous week staged a halt during the week under review. Barring a few counters which attracted speculative attention, equities on the whole moved narrowly on cautious trading occasioned by selling pressure at bulges. Besides factors such as rumours about the Finance Minister's resignation, uninspiring commodity prices, lack of enthusiasm to follow last week's upward trend, disappointment over some of the textile company dividends and end-of-account considerations cumulatively contributed to bring about a restrained activity on the Exchange. However, Indian Irons, in the steel section, Imperials in the banking section, Belapurs, Phaltans, Walchandnagars, Wimcos and National Rayons in the miscellaneous group provided the highlights of the week. The undertone remained steady.

In the steel section, Indian Irons were prominent following active buying from Calcutta on encouraging production figures for March. Thus, the output of pig iron by the I.I.S.Co., Ltd. in that month amounted to 65,000 tons, steel ingots 47,550 tons, and steel 44,560 tons, as against 59,650 tons, 38,360 tons and 32,510 tons, respectively, in the previous month, and 63,100 tons, 42,600 tons and 39,870 tons in January, 1954. The output in March, 1954, constitutes the highest for any month during the Company's financial year just ended, and surpasses the previous highest of 64,510 tons of pig iron, 43,080 tons of steel ingot and 41,740 tons of finished steel obtained in December, 1953. Consequently, the Company's shares witnessed brisk activity with their values advancing from Rs. 29-13 to Rs. 31-2-8 on Tuesday this week. However, on profit-taking, they shaded off to Rs. 30-13½ at the close. Tata Ordinaries hardened from Rs. 189-4 to Rs. 192-8, but closed at Rs. 191.

Minor variations were noted in textile shares, most of which were concerned in profit-taking attracted by high levels seen last week. Bombay Dyeings moved, for the greater part of the week, between Rs. 420-10 and Rs. 426-14, and then spurted gradually to Rs. 431-4 this morning on expectation of a bonus announcement by the Chairman at today's annual general meeting. But they slumped to Rs. 423-2 at the close, on disappointment caused by the Chairman's turning down the shareholders' suggestion in this regard. Kohinoors hardened from Rs. 315-8 to Rs. 322, only to move down to Rs. 318. Central Indias advanced by Rs. 4 to Rs. 180-8. Finlays shed Rs. 4 to Rs. 262, following the disappointing results for 1953. The Company has declared a dividend of 16 per cent. on an increased capital, as against 20 per cent. paid for the previous two years on the old capital. Gokaks lost Rs. 2 to Rs. 271. Laxmis gained Rs. 3-12 to Rs. 523-12. The Company has declared a final dividend of Rs. 27-8 per share bringing the total dividend to Rs. 37-8 for the year 1953, the same as for the previous year. New Greats drifted lower from Rs. 155 to Rs. 131. Simplex were down by Re. 1-8 at Rs. 152-8, while Standards gained Re. 1-4 to Rs. 333-12. Svadeshis were marked lower by Rs. 4-4 at Rs. 303-8. The Company has maintained the dividend at Rs. 16 per share, as against the market expectation of Rs. 18 per share. Swans were well maintained at Rs. 353-12. A dividend of Rs. 20 per share has been declared for the year 1953 on an increased capital, as against Rs. 30 for the previous year on the old capital. Vishnus were down by Re. 1-4 at Rs. 140-10, on account of the lower final dividend of Rs. 4 per share for the past year, as against the correspondent's distribution of Rs. 7 for 1952. No interim dividend was paid for 1953, so that the total distribution for that year amounts to Rs. 4, as compared with Rs. 10 per share.

Imperial Banks provided a feature in an otherwise dull trading in the banking section. Imperial Fully Paids picked up Rs. 20 to Rs. 1,805 and Contributories Rs. 12-8 to Rs. 442-8. Centrals were a shade quiet at Rs. 56, while their New shares were steady at Rs. 59-4. Indias were lower by As. 8 at Rs. 148. Barodas were steady at Rs. 110-4.

Except for Orientals which continued to be in favour, the insurance section presented a quiet tone. Orientals gained Rs. 90 to Rs. 7,850. But New Indias dropped Rs. 2 to Rs. 46, on reports that the Company would again raise its premium rates on whole life policies. Indian Mercantiles lost a rupee to Rs. 40-8. Vulcans were taken As. 2 lower at Rs. 12-10. Empire of Indias were unchanged at Rs 640, as also Industrial Prudentials at Rs. 36-2.

Conditions were quiet in the electricity section, owing to reports that the question of sanctioning a higher standard rate of return to the industry has been postponed. Andhra Valleys, after a rise from Rs. 1,340 to Rs. 1,347-8, dipped to Rs. 1,335. Tata Powers advanced from Rs. 1,491-4 to Rs. 1,463-12, but reacted to Rs. 1,450. Tata Hydros were steady at Rs. 143-12. Ahmedabad Electrics were placed at Rs. 112-8 *ex-div.* (div. Rs. 4), as against Rs. 117-3 *cum-div.* last week. Bombay Suburbans lost As. 10 to Rs. 121-4.

In the miscellaneous section, cement shares presented a very steady front with a slight marking up in values. Associated Cements had a rise of a rupee at Rs. 158-12 and Digvijay of Rs. 2 at Rs. 117. Sugar shares were firm on reports of good prices ruling in the sugar market. After an initial sluggish movement from Rs. 263 to Rs. 261, Belapurs spurted to Rs. 269-8 at the close. Phaltans rose by Rs. 4-4 to Rs. 101-12. Walchandnagars had a spectacular rise of Rs. 15 to Rs. 183-12. Among other industrials, Bombay Burmahs were marked down by Rs. 3-12 at Rs. 418-12. B.I.Cs. were quiet at Rs. 8-7. Polsons reacted from Rs. 137-8 to Rs. 136-4. Premier Constructions broke away from Rs. 130-12 to Rs. 128-4 on bull liquidation. Scindias staged a rise from Rs. 18-1½ to Rs. 18-6½ early in the week, but slowly moved down to finish at Rs. 17-13. National Rayons advanced by Rs. 3-8 to Rs. 168 on optimistic expectations about the current year's working. Shivrajpurs scored a gain of Re. 1 to Rs. 75. Tata Chemicals were steady at Rs. 14-10, while Tata Oils were a shade quiet at Rs. 37-4. Wimcos were in good shape with a rise of Rs. 6-4 to Rs. 211-4.

* * * *

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA *7th April*

With a moderate increase in the volume of transactions, the Calcutta Stock Exchange witnessed steady conditions during the week under report. Engineering shares accounted for impressive rises with Indian Irons pushed to the forefront. The chief reason for the buying spree noticed in engineering scrips is the improved outlook for the engineering industry resulting from the allotment of large funds for development this year. Production in Indian Irons has been showing good improvement since resumption of full work a few months ago, and the general expectation, in market circles, favours a higher dividend for the current accounting period. As a long-term investment, Indian Irons bear a definite attraction, in that the yield percentage, which is now about 3.3, is bound to increase markedly in the next few years following expansion of output. Miscellaneous shares also moved up, since prospects for industries are considered good. Activity this week would have shown further broadening had it not been for the rumours regarding resignation of the Finance Minister from the Central Cabinet shortly.

The market took note of the American Government's decision to increase stockpiling, and speculators did not hesitate to put it to good use. Jute shares no longer occupy the first place, as they once used to, on the Calcutta Stock Exchange. However, jute goods looked up this week, but if this trend only continues for over a period, a change in sentiment in jute shares can also be expected. General investment support was given to tea shares, and inspiration for purchasing these counters at higher prices came from recent announcements of bonus issues and the expectation of further such announcements.

In active trading Indian Irons were pushed to Rs. 30-11 from Rs. 29-7. After this, a small decline to Rs. 30-4 was recorded. This proved only temporary as in the last two sessions a recovery set in, raising the quotation to Rs. 31-3. The closure today was at Rs. 30-14. The management of the Company has announced that March production comprised 65,000 tons pig iron, 47,500 tons steel ingots, and 44,560 tons of semis and finished steel. Among other counters, Indian Standard Wagons were taken to Rs. 80 from Rs. 66-8, although subsequent profit-taking reduced the gain to Rs. 77. At Rs. 19-10, Indian Galvanisings scored a three-point rise, Kumardhubis being fractionally higher at Rs. 10-1. Burn & Cos. were as high as Rs. 190 and Jessops changed hands at Rs. 28-12. Texmacos were sought at Rs. 11-5, and Marshalls gained to Rs. 7-4 from Rs. 6-8.

In quiet trading in jutes, Howrahs were taken at between Rs. 24-4 and Rs. 24-13, and Kinnisons were a shade higher at Rs. 193. Deltas gave way to Rs. 243 from Rs. 248, and Ganges to Rs. 70-8 from Rs. 72-8. At Rs. 141-8, Baranagores accounted for a loss of Re. 1-8.

Considerable attention was shown to miscellaneous counters, where most shares looked ahead. F. & C. Oslers spurted first to Rs. 14-11 and although at one stage of subsequent trading the rate receded to Rs. 13-15 on profit-taking, recovery followed soon to firm up the quotation to Rs. 14-11. Dunlop Rubbers were earlier taken at the higher rate of Rs. 36-2, while Martin Burns moved to Rs. 20-12 from Rs. 20-4. Still another feature was Metal Boxes which had buyers at Rs. 17-8 as against Rs. 16-10 previously. At Rs. 14-3 Calcutta Electrics were higher by As. 7, while Rohtas Industries lost to Rs. 14-3 from Rs. 14-6, and Bararee Cokes changed hands at Rs. 18-12.

Shares of paper mills were wanted at higher rates. Shree Gopals spurted to Rs. 24-8 from Rs. 22-8 to close firm at Rs. 24 today. India Paper Pulps were steady at Rs. 193. Stars were fractionally higher at Rs. 10-6. From Rs. 16-8 Orients New advanced to Rs. 17. Orients Old moving from Rs. 16-11 to Rs. 18-9. Titaghurs were transacted at Rs. 39-12. Among sugar mills, Darbhangas had buyers at Rs 14-4, as against Rs. 13-4 previously following the publication of satisfactory working results.

There is a feeling that the display of strength in recent weeks in the tea section has been far too much. Although prospects for tea gardens are good, the rates have advanced so much that operators preferred to be cautious this week. That was why trading was selective, and attention was paid to those counters which had not accounted for so much volume of business, as those which had added substantial gains. Thus Duffiaghurs moved to Rs. 43-2 from a previous rate of Rs. 39-4, Belgachias to Rs. 30-2 from Rs. 27, and Nagri Farms to Rs. 23-4 from Rs. 22-12. At Rs. 62-8, Rydaks scored Rs. 3-8. Hasimaras changed hands at Rs. 34-14, Choonabhutis at Rs. 324 and Brooke Bonds at Rs. 12.

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, *6th April*

The Madras Stock Exchange presented a comparatively uninteresting appearance this week. In the absence of any encouraging developments, price fluctuations were limited to a narrow range and there was a sprinkling of both gains and losses in certain select scrips. One notable feature of the week, however, was the further mild upward trend in tea scrips on broadened enquiries for tea leaves from abroad. Rubber and coffee shares also came in for some support, on expectations that the proposed agricultural income-tax would be only nominal. But miscellaneous scrips were generally easy.

The textile section came in for scattered enquiry. Rajalakshmis and Cannanores put on Rs. 2 each to Rs. 107-8 and Rs. 95, respectively. Saradas gained Re. 1-8 to Rs. 65. Rangavilas and Vasantas were each done Re. 1 higher at Rs. 50-8 and Rs. 177 *cum-div.*, respectively. Radhakrishnas, Rs. 100 paid-ups, however, lost Rs. 2-8 to Rs. 159 and Buckinghams Re. 1 to Rs. 138-8. Bangalore Woolens were lower by As. 12 at Rs. 401-4 and Coimbatore Spinnings As. 8 at Rs. 43. Combodias were done at Rs. 12-12 *cum-div.*, as against Rs. 12-10 *ex-div.* The directors have declared a lower dividend of 7½ per cent. (tax-free) on ordinary shares, for the year ended 31st December, 1953, as against 10 per cent. (tax-free) in the previous year.

Among plantings, teas were again in the limelight. Peermades gathered As. 8 to Rs. 35-4 *cum-div.* and Haileyburias As. 4 to Rs. 16-8. United Nilgiris rallied Rs. 3 to Rs. 200. Highland Produce and Nonsuch Tea put on As. 2 each to Rs. 12-8 and Rs. 33-2. Alageswar and Blue Mountain were all fractionally higher at Rs. 1-13½ and Rs. 2-15½, respectively.

Rubbers came in for moderate enquiry. Travancore Rubbers advanced by As. 4 to Rs. 15-8 and Athimattam As. 2½ to As. 14. Cochin Malabars gained As. 2 to Rs. 7-1 and Nenmeny an anna to Rs. 10-9. Rajagiris also improved by an anna to Rs. 11-7. Shevroys were fractionally higher at Re. 1-8½. Vaikundam, however, lost As. 4 to Rs. 16-8.

Coffee scrips too came in for some support. Consolidated Coffees shot up by As. 10 to Rs. 10-2. Coffee Lands were higher by an anna at Rs. 10-2. Mysore Coffees were better at As. 15. But Puthuthotams were quoted quiet at Rs. 3-5.

In the miscellaneous section, Indian Aluminium lost Rs. 5 to Rs. 120 and Rallis Rs. 2-12 to Rs. 54-8. India Cements eased by As. 8 to Rs. 18-4. Mettur Chemicals declined by As. 3 to Rs. 8 and Ogale Glass As. 2 to Rs. 2-12.

NEWS IN BRIEF

THE Golden Jubilee Week of the Bombay Provincial Co-operative Institute will be inaugurated by Mr. Jawaharlal Nehru, India's Prime Minister, on 11th April.

The next meeting of the Import Advisory Council will be held at New Delhi on 15th May, 1954. The Export Advisory Council will meet on the following day.

The Central Tractor Organisation of the Government of India has reclaimed more than 10,00,000 acres of land, since its establishment in 1947.

The Government of India has reduced the selling prices of tinplate by about Rs. 50 per ton, with effect from 1st April, 1954. The reduction has been rendered possible mainly by the fall in the prices of tin during recent months.

According to an announcement made by the Joint Chief Controller of Exports, Bombay, on 3rd April, the export of mercury chloride will be licensed freely on shipping bills against prior registration of sales. The export of mercury oxide and mercury sulphide would, however, continue to be banned. As against consignments already covered by shipping bills passed before 9th March, 1954—when the ban on exports of mercury oxide and sulphide was imposed—exports will, however, be permitted within the validity period of the licence endorsed on the shipping bills.

Air-India International has started a turnround service of its Constellation flights, with effect from 1st April. Under the new arrangement, the London-Bombay service will be extended to Calcutta. After re-fuelling at Calcutta, the plane will again take off for Bombay *en route* to London with West-bound passengers. Hitherto, Air-India International was operating separate Bombay-Calcutta Constellation service, which would reach Calcutta with overseas passengers bound for Calcutta early on Monday morning and leave for Bombay again on Tuesday morning. This new system has been adopted as a temporary measure for two months.

In a resolution adopted this week, the Congress Working Committee states that the stage has been reached when experience gained and the difficulties met with in recent years should be studied carefully and objectively with a view to evolving a national programme for the fulfilment with the widest possible public support and as speedily as may be feasible, of the directive of the Constitution. To this end, the Committee has suggested that the Planning Commission may make recommendations to the State Governments after collecting data and arranging for a full study of the subject in all its aspects by a committee appointed for the purpose.

The Government of India has reviewed the export policy of manganese and iron ores from the port of Calcutta in the light of the availability of wagons and the accumulation at the port of Calcutta. Since substantial quantities of these ores from the previous allotments still remain to be transported, it has decided to extend the period of validity of the quota-slips for purposes of allotment of wagons upto the end of April, 1954. In view of the accumulation of the ores at the port of Calcutta, it has also decided to give and take consideration to requests for the grant of supplementary export licences for the export of quantities in addition to the quotas already allotted. These requests will be entertained only from shippers and mine-owners, who have completed shipments against previous allotments and who do not require any transport facility for the additional quantity applied for.

Two more Indo-U.S. operational agreements were signed on 4th April, 1954, under the Indo-U.S. Technical Co-operation Programme. One provides for a contribution of $1.95 million by the U.S. to assist the implementation of a long-range project, already under way, for expansion and modernisation of aeronautical ground services and facilities in India. The U.S. contribution will be used chiefly for the procurement of equipment from outside India. India's contribution is Rs. 6.03 lakhs and it will be used for the cost of inland transport and handling of equipment supplies, acquisition of real property, etc. The other agreement relates to a project which will serve as the initial nucleus for a national water-supply and sanitation programme with the object of reducing the incidence of water- and filth-borne diseases. The U.S. expenditure will be $3.1 million covering the procurement of water-drilling rigs, pipes, other supplies and equipment as well as for their transportation to India. India's contribution is Rs. 10.5 crores and this will be spent on establishing and maintaining public health engineering organisations at the Centre and the States, training of engineers and other sanitation personnel and on procurement of equipment and supplies needed.

From Abroad

The total output of stainless steel in the U.S. during 1953 was 1,015,303 tons. The use of this steel has increased in automobile and architectural industries.

Aerial photographs taken by a British air survey company are being used to plan a 350-mile pipeline for carrying natural gas from Sui (Baluchistan) to Karachi.

Hungary will exhibit machine tools, agricultural machinery, electrical and tele-communication apparatus, textiles, porcelain and gold and silver ware at the International Trade Fair to be held in Paris in May.

One-third of the world's population, that is 180 million families, is without adequate housing, according to the 37th annual report of the International Labour Organisation. About 30 million of these families are stated to live in industrially advanced countries.

The quantity of yarn processed by the Dutch cotton, rayon and linen industries in 1953 was 70,538 tons, which represents a rise of 17 per cent. over 1952. Exports of cotton, rayon and linen amounted to 30,345 tons, as against 29,345 tons.

The insurance companies in Canada sold $2,555' million worth of business in 1953, an increase of 11.7 per cent. over 1952. Of this, ordinary insurance accounted for $1,921.5 million, industrial insurance for $151.5 million and group insurance for $482 million.

The sugar factory established in Abyssinia by the Amsterdam Trading Company is expected to commence production shortly. The ultimate rate of output is planned at 1,200 tons of sugar per month which is expected to cover Abyssinia's requirements.

The Government of France has granted credits of Frs. 20,000 million to Turkey for the establishment of industries. Out of this amount, Frs. 10,000 million will be allocated to public works, Frs. 6,000 million to private enterprise and the rest to various businesses.

The unemployed population in the U.S. in March, 1954 was 3,725,000, as against 3,671,000 in the previous month. The number of idle workers having unemployment compensation insurance as on 13th March, 1954, was 2,187,100, as against 2,213,959, the peak figure for this year touched on 27th February.

The Indonesian Government has taken new import measures aimed at the gradual elimination of export houses in Holland by establishing direct contacts with exporters in the countries from which Indonesia imports. At present, a very large part of Indonesia's trade with Europe is being carried on through Dutch merchant houses.

The oil industry in the U.S. is expected to spend during 1954 a record $2,860 million on new plant and equipment. This amount represents an increase of 4 per cent., as compared with 1953. The expenditure accounts for over 10 per cent. of the aggregate capital outlay of $27,200 million by U.S. business as a whole on new industrial and trade facilities.

A polyster resin (AR 493) which withstands continuous temperature up to 150° C. and which has good resistance to chemical attack has been developed by the General Electric Company of the U.S. The resin, it is claimed, can be used in the manufacture of glass cloth laminates which may be exposed to even higher temperatures (up to 250° C.) for short periods.

The U.K. Government has simplified the foreign exchange control measures. Accordingly, exports upto the value of $25 now need no exchange control forms (Form C.D. 3). For exports valued at £25 to £250, a new single sheet form (C.D. 3 x) is to be introduced as soon as possible. The requirement that exporters have to produce bank certificate to prove that the exchange earned by exports has been surrendered has also been dispensed with.

The U.K. shipbuilding employers and trade union leaders have agreed to end a ten-month old pay claim dispute on the basis of a 6 per cent. wage rise. The decision which follows an identical offer of an increase in the wages of 3 million engineering workers puts an end to U.K.'s most prolonged and extremely bitter post-war industrial dispute. The total number of engineering and shipbuilding firms involved is 5,000 and the extra wage bill, as a result of the 6 per cent. increase, is estimated at £70 million.

In September, 1953, the Union Bank of Burma (Exchange Control Department), Rangoon had issued instructions to all authorised dealers in foreign exchange that their correspondents overseas should be instructed not to negotiate any drafts or bills relating to imports into Burma, unless the relative shipping documents were accompanied by a survey report furnished by an official surveyor or a firm of official surveyors in the country from which the goods were consigned. The Union Bank of Burma has suspended the enforcement of these orders for the time being.

The Fiscal Reform Bill, now on the anvil of the French Parliament, seeks to provide "considerable" tax relief to individuals and enterprises. The tax-exempted net income of bachelors is proposed to be raised from Frs. 180,000 to Frs. 220,000 per annum and that of married couples from Frs. 360,000 to Frs. 440,000. In addition, salary and wage earners will benefit from an additional 10 per cent. allowance—over the existing 10 per cent.—which is deducted from the gross wage or salary for the purpose of calculating income-tax. Investments by enterprises, including purchase of tools, are to be completely exempted from production tax; at present, only 50 per cent. is exempted. This is expected to result in a saving of 16 per cent. in the cost of investments. The company profits tax, however, is proposed to be enhanced from 34 per cent. to 36 per cent. Another notable provision in the Bill relates to the replacement of the existing production tax by a tax on the increase in value which results from a manufacturing process.

PERSONAL

MR. R. E. Isar, I.C.S., is likely to be appointed India's Deputy High Commissioner in Colombo.

Mr. S. Nilakantan, Deputy Secretary in the Ministry of Labour, has taken over charge of the post of Chief Provident Fund Commissioner.

Mr. K. Balasubrahmanyam, Manager and Actuary, Bombay Life Assurance Co., Ltd., has been elected President of the Indian Life Assurance Offices' Association.

Mr. P. L. Saraogi, M.L.C., has been nominated by the Government of India as a Commissioner of the Port of Calcutta. He represents the Bharat Chamber of Commerce, Calcutta.

Mr. P. N. Talukdar, Managing Director of Messrs. N. R. Sarker & Co., Ltd., Calcutta, has been elected Vice-President of the Bengal National Chamber of Commerce for 1954.

Prof. D. G. Karve, Director of the Programme Evaluation Organisation of the Planning Commission, has been appointed Director and *ex-officio* Member-Secretary of the Indian Institute of Public Administration.

Mr. B. G. Kher, India's High Commissioner in the U.K., has returned to India on two months' leave. Mr. M. J. Desai, I.C.S., Commonwealth Relations Secretary in the Ministry of External Affairs, is likely to act as the High Commissioner in his absence.

Mr. Herbert Hoover (Jr.), Oil Consultant to the American State Department, has arrived at Teheran from London after a long conference there with major companies negotiating for the formation of a consortium for managing and marketing Iranian oil.

Mr. Homi Mody, a Director of Tatas, has been elected Chairman of the Textile Association (India) for the year 1954. Mr. G. N. Vaidya has been elected President. Mr. J. J. Randeri, Honorary Secretary, Mr. C. R. Srinivasan, Joint Secretary and Mr. G. K. Ved, Treasurer.

Mr. R. N. Bangur has been elected President of the Bharat Chamber of Commerce, Calcutta, for the year 1954. Mr. G. K. Khemka and Mr. D. N. Jalan have been elected as Senior Vice-President and Junior Vice-President, respectively of the Chamber.

Mr. D. N. Ross and Mr. D. O. F. Barnett, two officials of the Firestone Tyre and Rubber Co. of India Ltd., left for the U.K. this week on a two-month advanced training course in the Firestone Factory at Brentford, England, under the Company's technical training programme of Indian personnel.

Mr. A. D. Shroff, a Director, Tata Industries Ltd., who had been to the United States in connection with the establishment in India of an Industrial development bank in collaboration with American financiers and the World Bank, returned to Bombay early this week via London.

Mr. Murarji J. Vaidya has been elected Chairman of the All-India Manufacturers' Organisation for 1954. The other office-bearers of the organisation are: *Vice-Chairmen* (Bombay zone): Messrs. H. P. Merchant and Prabhu V. Mehta; *Vice-Chairman* (Eastern zone): Prof. S. K. Roy; *Joint Hon. Secretaries*: Messrs. S. M. Dahanukar, N. S. Pochkhanawala and D. M. Desai; *Hon. Treasurer*: Mr. B. D. Somani.

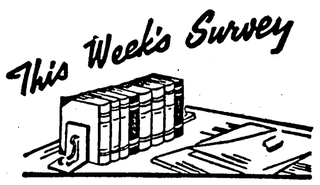
"COMMERCE" 1929

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *13th April*

The Magic Carpet

The first Indian air mail landed in India at sunset on Saturday last. The plane was three hours late on account of a delay caused by a sandstorm in Iraq. A large crowd cheered the arrival of the machine which made a perfect landing. The mails from England, having been transferred to a Post Office tender, were rushed to the office for distribution. Distinguished air chiefs travelled on the plane, and every night they slept in a different country, and in just over seven days after stepping on board at Croydon, they disembarked on the hot and sandy aerodrome at Drigh Road, Karachi. There were last minute anxieties and a change of direction owing to international complications, but when the original route is again flown it is hoped that the passage will be accomplished in a fraction more than six days. India will indeed be supine, if she does not realise that a new and vast commercial possibility is about to be opened out by this modern "magic carpet" of Baghdad. The great universal highway overhead, with no vast harbour works to construct, no expensive canals to excavate and with no miles of permanent way to be tested and relaid—will now be opened out throughout the world. The extension to Australia will soon be here and a branch line to South Africa is also promised. Age-old barriers will soon be broken down, and different races should be the better able to understand one another. The record of the Imperial Airways in the past shows that flying is safe; at least, it can be made as safe as any other form of transport today. Machines are now being built which are as easy to handle as modern motor cars, and the slotted wing makes them almost "fool-proof." In fact, experienced pilots will tell you that such accidents as do happen are due to what is called "faulty ground-work," or some mechanical defect which ought to have been traced and remedied before the machine "took off." It is to be hoped that, in India, Government will lose no time in putting into operation various air schemes that have for long been under consideration.



TAX EVADERS

THERE is a species of business men in India who resort to all possible means of evading the taxes due to Government. To say that they deserve utmost condemnation is to put the matter mildly indeed. Whether their activities are a hangover of that unfortunate chapter in Indian history when a "no-tax" campaign was regarded as a patriotic movement or an aftermath of war-time inflation, in which the first casualty was commercial rectitude, there is no denying the fact that successful evasion of legitimate taxes has inflicted serious damage not only to the country's finances but also to the reputation of private enterprise itself. Further, it has an adverse effect on the general business integrity. Thus, it has made even the honest taxpayer feel very often that it pays not to pay taxes. Its damaging effect on the country's economy will be evident from the fact that, if taxes were honestly paid, there would perhaps be much less need for fresh taxes.

It is now seven years since the Income-tax Investigation Commission undertook to unravel the mystery of tax-dodgers' activities. As case after case began to yield to the searching examination of this powerful and conscientious body, it became clear that tax-evaders had country-wide ramifications and that it would require uncanny patience, time and energy to bring to the surface all the income concealed from the eyes of the law. That the Commission's efforts have been crowned with success is clear from the fact that the total amount of concealment reported during the last six years ended 31st December, 1953, aggregates Rs. 46 crores. It has disposed of 1,031 cases out of the 1,668 referred to it. The following table shows the progress of the Commission's work:

(In lakhs of rupees)

Year ended	No. of cases disposed of	Report basis	Settlement basis	Total amount of concealment reported
1948 ..	4	4	...	4
1949 ..	101	1,32	1,56	2,88
1950 ..	232	2,08	6,03	8,11
1951 ..	320	31	17,81	18,12
1952 ..	206	1,69	9,20	10,89
1953 ..	168	20	5,72	5,93
Total ..	1,031	5,64	40,32	45,97

It will be seen from the table above that the Commission disposed of a smaller number of cases in 1953 than it did in 1952 or in either of the two previous years, 1951 or 1950. However, the Commission is not, as the figures would suggest, less energetic than it was formerly. The fall in the number of cases disposed of by the Commission, is attributed to its policy of concentrating on selected cases, which "were important from the point of view of revenue and otherwise." It was also due to the fact that the assessees were in a position to contest the cases "inch by inch with the assistance of the best legal brains available in the country." Again, since the Commission's life would have normally ended in 1953, the assessees were interested in seeing that their "cases were not disposed of within the year." The Commission's life has fortunately been extended for another two years.

The Commission has shown that it is worth its price. In 1952, the cost of the Commission was only 1.3 per cent. of the tax demand levied. This is, in fact, less than the cost of the regular Income-tax Department where the cost is 1.7 per cent. The overall average cost of the Commission upto the end of 1952 is 1.36 per cent. of the tax involved. It must, however, be noted that it is no part of the Commission's work to collect the taxes. Once the Commission decides the amount of tax to be recovered from a party, its work ceases, and actual recovery of the tax becomes the responsibility of the Income-tax Department. It would appear that, out of a total tax of about Rs. 24.5 crores that was levied on the basis of the Commission's reports up to the end of 1952, a sum of Rs. 8.85 crores has been collected by the Government. The total expenditure on the Commission, during this period, was only Rs. 33 lakhs. The cost of the Commission has thus been covered 25 times over by actual collections. Indeed, the collections would have been still better had it not been for the policy of the Commission and the Government to allow the "payment of the tax by easy instalments so that the assessees may be in a position to pay up the same without serious detriment to the industries in which they are mostly engaged."

Apart from the immediate monetary gain which the Commission's work has yielded, there are other notable advantages which flow from its inquisitional proceedings. The Commission has been able to establish as to which "items of incomings had been omitted or reduced and which items of expenditure had been inflated." Again, since account books were not always available, the Commission had to determine evasion on the basis of assets or other investments outside the account books. All this knowledge will stand the Department in good stead when it is called upon, in future, to deal with similar cases. Even now, the Commission is not certain that it has unearthed all the income concealed by the men concerned. It has, therefore, rightly made a reservation that, if other items of concealment were to come to light subsequently, the Commission or the Department would be free to tax such income.

NEW TEA BOARD INAUGURATED

Last week-end saw the inauguration in Calcutta of the Tea Board, constituted under the Tea Act, 1953, which came into force from the 1st inst. The Board was inaugurated by Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, who was primarily responsible for piloting successfully the Tea Bill in Parliament last year. The meeting of the Board was presided over by Mr. K. C. Basak, I.C.S., Chairman of the Board. The Central Tea Board Act, 1949, and the Indian Tea Control Act, 1938, having been repealed and replaced by the Tea Act, 1953, it has fallen to the lot of the new Tea Board to perform the dual functions, namely, the propaganda and cognate activities, on the one hand, and the control over production and export, on the other, done hitherto by two separate bodies. It is said that the new Board should be able to perform better the two functions, as they are, in fact, complementary to each other. But it remains to be seen whether, in actual practice, this expectation will materialise.

The Tea Board is not only invested, with enlarged powers and functions but is also a widely represented body, being manned by as many as 40 members (besides the Chairman), six of whom represent the Governments of the principal tea-growing States and 13 represent owners of tea estates and gardens and growers of tea. Persons employed on tea estates and gardens are represented by seven members and dealers, including both exporters and internal traders of tea, and manufacturers by another five members. Consumers and other interests are represented on the Board by seven members. Two members represent the Union Parliament. Of the total of 40 members, only 36 members, including the Chairman, have so far been appointed by the Government.

A feature of the Board is the inclusion of the Manager of the Reserve Bank of India, Calcutta. The Government feels that his advice in the matter of financing the tea industry will be of immense benefit to the Board. Another feature is the presence of two ladies in the body. The "special experience in the domestic sector" of the two ladies is sought to be utilised for suitable methods of propaganda. Their representation on the Board was humourously justified by Mr. Basak, in his welcome speech, on the ground of the "effectiveness of the feminine touch where other methods of persuasion fail." The third feature is the increased representation given to labour. Thus, the latter has seven representatives, as against three in the old Board. Referring to this, Mr. Basak expressed the hope that, with such a large representation of labour, the Board would afford an opportunity to the employers and employees in the tea gardens to present their respective points of view before the Board and arrive at a quick settlement, so that, in future, strikes and lockouts would be fewer and the chances of protracted and inconclusive discussions in bipartite or tripartite conferences would be greatly reduced. It was with this object in view that the Government included in the Tea Act, 1953, labour welfare as one of the functions of the Board. This function had not been expressly included in the old Central Tea Board Act; the c.t.b. was merely authorised, under a special rule, to expend from the Board's funds on labour welfare.

One of the important functions of the Board is to control production and distribution of tea waste, with a view to improving the quality of tea. The need for such a control is imperative, now that no industry, least of all the tea industry, can count upon a sellers' market. The industry has, no doubt, achieved some improvement in quality, thanks to its voluntary efforts since 1952-53. This should be preserved and improved, if Indian tea is to continue to command a wide market in the world. Mr. Basak disclosed that the Government would soon promulgate the Tea Waste (Control) Rules for this purpose.

Mr. Krishnamachari did well to allay the fears entertained in many quarters that, with too much Government control, the new Board would have little freedom of action and opportunity for service. He said that his only object was "to devise an instrument which could more effectively, than before, serve the interests of the industry, trade, labour and consumer." For this, he said, a close association of the Government was necessary and, indeed, was inescapable. He, however, assured his critics that it was not his intention to run this body as if it was a mere Government department.

Mr. Krishnamachari called for the adoption of an active and forward policy of development and suggested to the Board to prepare a plan of work for the next three years, the term of office of the Board, and indicated the lines on which they could work. In the first place, he emphasised the maintenance and improvement of the quality of tea, actually grown, manufactured and processed, as also of standards in packing at all stages, with the object of serving the consumer in India and abroad. Secondly, he thought the Board could devote some attention with profit to the expansion of the home market, which offered a potential field. In this connection, he pointed out that (1) the *per capita* consumption in India was very low, (2) competing beverages were few, and (3) tea continued to be the cheapest beverage. He invited the attention of the Board to the listless manner in which propaganda was being conducted in India. Properly organised and directed, the internal consumption could, he felt, be stepped up within a short period. An increase in this consumption would also provide a greater incentive to the producer, as there was always competition in foreign markets.

Mr. Krishnamachari urged the Board to devote its attention to strengthening the economic position of small estates. Small producers, particularly those who entered somewhat late, have many handicaps and little resources with which to overcome them. He said that consolidation of holdings or some form of co-operation was worth careful study. Though the proposed Plantation Enquiry Committee would make a comprehensive study of all the plantation industries, he did not like to postpone the study of this problem till the Committee submitted its report. Finally, he invited the Board's attention to the question of expanding the area under tea. While other tea producing countries are extending the land under tea to the extent allowed by the International Tea Agreement and new areas, outside the range of the I.T.A., are being brought under tea in some parts of the world, India has not even taken advantage of the limited scope to this end afforded by the I.T.A. He, therefore, asked the Board to give some attention to this aspect of the future of the Indian tea industry.

The economy of Indian tea depends very largely on the consumer abroad and its stability likewise is dependent on the fortunes of the overseas consumer. It is, therefore, important that the foreign markets should be preserved and developed. In this connection, Mr. Krishnamachari mentioned that the Government's attempts at conducting propaganda for tea in collaboration with tea interests abroad were bearing fruit.

The Board has a difficult problem to solve. It must ensure that tea continues to maintain its position as a leading foreign exchange earner and at the same time lay the foundation for an expanding domestic market which could absorb the shock of any possible disturbances in the overseas market. This will call for considerable powers of judgment and skill in adapting to new situations as they develop.

ROLE OF CHARTERED ACCOUNTANTS

Dr. Rajendra Prasad, President of India, did well to urge the Chartered Accountants, in his address at the opening of the new building of the Institute of Chartered Accountants at New Delhi last week, to maintain the independence and integrity of their profession. This is, indeed, a wholesome and pertinent advice. Correct accounting and efficient audit are as much an essential adjunct to good business administration as they are a valuable safeguard for investors. As Dr. Rajendra Prasad pointed out, the profession of chartered accountants provides the first line of defence to the unwary public against "money grabbers and opportunists." And he rightly warned: "The confidence of the public in even reliable and well-managed business undertakings would be greatly undermined, if unscrupulous persons were allowed, without let or hindrance, to manipulate company accounts or otherwise indulge in malpractices only to serve their own ignoble ends."

With the increasing tempo of economic activity in India, a heavy and onerous responsibility has devolved on the chartered accountants. They are, as Mr. S. Vaish, President of the Institute, pertinently remarked, being called upon to assume fresh responsibilities in the fields of management accounting, budgetary control, financial planning, industrial organisation and other allied spheres. Their position as tax consultants, the assistance which the State expects from them in making and computing assessments, and their role as auditors of co-operative enterprises, religious, educational and charitable institutions, endowments and trusts, and societies catering for social welfare, Mr. Vaish said, made their contribution to public welfare a substantial, though an unostentatious, one.

The foregoing brief account admirably indicates the vital role which the profession of chartered accountants plays in the country's economic set-up. There is, therefore, no exaggeration whatever in the statement of Mr. Chintaman D. Deshmukh, Union Finance Minister, made in the course of his address at the reception given by Mr. Vaish in connection with the first All-India Conference of Chartered Accountants, that he could not imagine anything more essential than proper accounting and auditing in the conduct of the affairs of the nation. In his characteristic way, Mr. Deshmukh observed: "It (the profession) may not be a most imposing thing, but it is certainly like a lubricating oil. If it fails, you will head for bankruptcy or provoke discontent among the people." The Finance Minister rightly stressed the need for a high standard of rectitude in the auditor's profession. To quote him: "I have no doubt there is no discipline which is so effective as self-imposed discipline. I have never believed in discipline being imposed from above. I am equally convinced that, as nothing succeeds like success, the more successful you are in exacting standards of rectitude, the easier will you work be."

A heavy responsibility lies on the Chartered Accountants Institute, for it enjoys a wide measure of autonomy. It is charged with the triple function of formulating a code of ethical standards and professional conduct for its members, ensuring proper training to prospective entrants, and conducting examinations qualifying for membership of the Institute. It has, at present, on its registers about 2,700 members, 1,750 articled clerks and 1,250 audit clerks. But this number is bound to increase with further development of Indian business and industry. When that comes about, people will naturally expect the Institute to give the country auditors and accountants, whose professional efficiency and business integrity are above reproach. It is to be hoped that the new building of the Institute of Chartered Accountants of India will house, as Mr. Deshmukh said, "all that is noble and dignified in the profession."

(*Concluded from third column*)

overt threat, it is easy to imagine that the suggested amicable settlement could be nothing short of a surrender to the demands of the landholders.

Perhaps, as there is a sugar shortage in the country and the dreaded buyers' market has not yet been established in relation to this commodity the factories might consider discretion as the better part of justice and decide to give in to this demand, at the same time adding a little to the price of sugar to cover this political levy. What I am intrigued about, however, is not the fact that we consumers shall be called upon to pay the price of the landholders' votes, but whether the Party in power will win all the votes of the grateful landholders. I suspect that it will be diddled out of a large block of these by its rivals, the socialists and the communists, who were earlier on this stretch of water for fishing. Mr. Hirey, to my mind, is too shrewd a public man not to know that public memory is short and gratitude seldom sways votes in elections.—*All Rights Reserved.*

OFF THE RECORD

(By "ROVER")

THERE is nothing more pathetic and baleful for our young democracy than the wail of a seemingly powerful Minister of the Government, about his helplessness regarding the implementation of a policy, which he regards as of fundamental importance. Last Sunday, Bombay witnessed a fresh demonstration of this humiliating love for office, when Mr. V. V. Giri, Union Minister for Labour, proclaimed, at a reception arranged in his honour, by the Bombay branch of the Indian National Trade Union Congress, that adjudication was his enemy No. 1 and confessed, at the same time, his abject surrender to this enemy. The defence that he tried to put up for this easy acquiescence was even more depressing, because it betrayed a complete misapprehension about the very basis of democracy on the part of one, who cannot easily be forgiven for such gross misconception about political democracy.

Those who have followed Mr. Giri's career as Labour Minister, since he joined the present Government of India, would be inclined to agree with me that, though he came roaring like a lion, he remained to purr like a domestic pet of the feline species. In fact, Mr. Giri has been tamed and domesticated by office even to a greater degree, because he has allowed himself to be reconciled to a complete abandonment of his most cherished convictions so far as acting on them is concerned. While some compromise here and there on minor aspects of principles or details has always been recognised as a political necessity, no politician worth his salt sloops so low while in office as to trample upon his own principles and to be cajoled or bullied by others to pursue policies which cannot be reconciled to them. For a responsible Minister placed in such an unfortunate position, the Constitution provides an honourable exit by way of resignation of his office. This is a familiar, if not frequent, aspect of political history in all properly established democracies. Perhaps, we in India have still to learn this elementary lesson that office should never outweigh principles.

That Mr. Giri does not regard adjudication as a mere detail of the machinery designed to adjust employer-employee relations is clear from the vehemence with which he condemned it as his enemy No. 1 and asserted that, left to himself, he would scrap it at the earliest possible opportunity. Opportunity he had in plenty, which he has persistently neglected. It is poor defence for a man of his record and position to plead that he was forced to acquiesce in adjudication, because the workers themselves wanted it and that as a democrat he had to bow to their desire. It must be a poor kind of democracy where the Government allows itself to be overruled on an important issue of policy, because one party to that issue and only one section of the public petulantly insists upon having something which, in the opinion of the Minister responsible for the subject in question, is patently injurious both for it and for the country as well. This sounds ominously not like democracy but like repudiation of its responsibility by the Government and surrender to the dictates of a group, which can afford to be obstreperous and aggressive. To put it very crudely, one fine morning, the workers might take it into their heads to ask that all employers be forthwith beheaded; I suppose the democrat in Mr. Giri would feel like humouring them in this, though he might agree to this demand only reluctantly.

For a long time, I have felt the need for a clearer conception of the duties and responsibilities of the Labour Ministers in the Central and State Governments. It seems to have been tacitly taken for granted that they are there not as representatives of the people charged, along with other Ministers as a team, to run the administration in the best interest of the country and to hold a fair and just balance between a number of conflicting interests, but as special advocates and partisans of manual workers in industry and agriculture. The Ministers for Industry, Commerce and Finance, for instance, do not regard themselves in a similar light. You will never hear an Industry Ministry saying that a certain policy was good according to his conviction for the economic welfare of the country, but that he was helpless because the industrialists wanted something opposed to this. If he did, he would be hounded out of office in no time.

One can both understand and appreciate the solicitude of the Government, in general, and the Labour Minister, in particular, to improve, in every possible way, within the resources of the country, the lot of workers and to secure their welfare. But this legitimate solicitude can in no circumstances justify either the deliberate sacrifice of the just claims of other sections of the community and the community as a whole or a surrender to the whims even if they be inconsistent either with their own long-term interest or the safety and well-being of the country. There is a wide and clear distinction between making efforts to raise the standard of living of workers and giving in to them willy-nilly to retain their support at the polls. Democracy should never be degraded to mean purchase of votes with patronage and concessions to groups commanding a large number of these.

Fishing for Votes!

One should not be surprised if a swarm of greedy flies gathered round a cube of sugar. I doubt if we humans, in spite of our boasted superiority in the scale of evolution, differ materially from the lower orders of creation. When a man comes into some money or makes it, he is besieged by a crowd of poor relations, who took no notice of him in the days prior to his attaining affluence. I gather that something of the sort is happening to the sugar industry in the country. During the lean years, when it was struggling and sweating to keep down its losses, it was tactfully let alone to carry the burden. Now, when it finds itself in a position to have a good margin, every one who can dig up some kind of genealogical tie with it, is eager mercifully to lighten the burden of this margin, by proposing to carry a part of it himself.

One can understand the Governments stepping up their demands on the industry, when it is making good profits; it is equally understandable if the workers claim a sizable slice of the cake, when the industry has progressed from the stage of a dry crust of bread to a cake rich with raisins. But long though I have scratched my head, I have failed to discover the legal or moral right of those who leased their lands to sugar factories in Maharashtra, a long time ago, for a stated period under a voluntary contract, to ask for a raise in rents during the pendency of these leases, because the industry was making more profits from the cane grown on these lands. And the politicians, who are accustomed to fish in troubled waters, are backing up this claim, with a strange disregard for law or logic.

And politics is a game in which you cannot let your rival steal a march on you. For years, we have seen the play of this rivalry in wooing the workers for their votes with heavily baited hooks. There is no question in this pastime of a sympathising politician putting his hand into his own pocket and giving the poor workers a part of his own hard-earned gains. What is held out to them is a promise to help in rooking the other fellow, the employer. If your rival pledges himself to procure more bonus, you could bid higher for the workers' support and loyalty by promising to get them more gratuity or dearness allowance.

Somebody possibly had a brainwave and extended this devise to the landholders, who had leased their lands to sugar factories. According to Marxian dialectics, it is the tenants who are always oppressed and landlords who are cruel and heartless. But the roles could quite easily be reversed, when the ratio of votes commanded by these two classes is inconveniently changed in a given sequence. And who is going to bother about logic and principles or the sanctity of contracts solemnly entered into, when your opponent in the political game is about to grab a virgin field full of future promise. So the Congress Party, too, must espouse the cause of poor landlords being done out of their dues by wily industrialists posing as innocent agricultural tenants.

Now Mr. B. S. Hirey, the Bombay Revenue Minister, with his weather-eye trained on the next elections, has come to befriend this whole class of "defrauded" landlords, by announcing that legislation for securing justice in respect of rents of lands leased to sugar factories in Maharashtra shall soon be introduced in the Assembly, if the factories fail to settle this claim amicably with their landlords. Backed by such an

MR. CHANDA'S REPORT MAIN CAUSE OF MR. DESHMUKH'S RESIGNATION

DECENTRALISATION OF FINANCIAL CONTROL WILL BE DANGEROUS

(From A Special Correspondent)

NEW DELHI, 6th *April*

THE Capital is thick with rumours of a possible Cabinet reshuffle within the next few weeks. Perhaps, this reshuffle might take place just before the close of the budget session or some time early June. The Prime Minister is likely to fill up the post of Defence Minister which has been remaining vacant for the last one year and more. Since this portfolio needs close and vigilant attention by an able hand, it is likely to be entrusted to the care of an able person of international reputation. The amazing success that has attended Mr. Rafi Ahmed Kidwai in his food portfolio has made him an almost superman. He is likely to be shifted to some other Ministry which requires considerable drive and push. There are some other Ministers who are reported to have expressed a desire to retire from the Cabinet in exchange for a Governorship elsewhere. Perhaps the most important is the reported resignation of the Finance Minister, Mr. C. D. Deshmukh, who has been the picture of stability and efficiency in Government during the last four years.

DELHI LETTER

The reported resignation of Mr. Deshmukh has been the subject of frequent discussion during this week by different sectors of society. There is complete unanimity about the ability and skill with which Mr. Deshmukh has been handling this difficult portfolio ever since his assumption of this office four years ago. His quiet and unassuming manner, his incisive brain, his vast experience both in administrative and banking lines and, above all, his transparent honesty and laudable intentions have endeared him to one and all, who happened to come in contact with him during these years. The immediate cause of his resignation is reported to have arisen following the recommendations of Mr. A. K. Chanda, Secretary to the Production Ministry and the Auditor-General-designate, on the question of decentralisation of financial control. It will be recalled that the Prime Minister had appointed Mr. Chanda a few months ago to enquire into the financial rules, regulations, precedent, etc., in regard to spending and to suggest amendments to eliminate avoidable delays in the sanction of expenditure for development projects. The Prime Minister had taken this step with good intention, but it is not known whether he had taken this decision in close co-operation with the Finance Minister.

It is reported that there had arisen some differences of opinion between the Prime Minister and Mr. Deshmukh on the abovementioned question, particularly in regard to the way in which Mr. Chanda had conducted his enquiry and made recommendations on this subject. It is said that the Finance Minister had been bypassed in this matter and that he had no alternative but to tender his resignation. Whatever it may be, Mr. Chanda's report has begun to focus the attention of financial *pundits* on the merits and demerits of 'decentralisation in regard to the control of expenditure. As matters obtain at present, the Finance Ministry has been exercising a fairly rigid control over the expenditure of all Ministries. It has attached special Finance Officers to each Ministry who are expected to scrutinise and sanction any proposal involving money. Mr. Chanda, who had enquired into this subject, is reported to have favoured decentralisation of finances. According to him, decentralisation is productive of better results than over-centralisation in one Ministry. By this method, Mr. Chanda hopes that each Ministry is not only left with a certain amount of manœuvrability but will also be developing prudence, thrift, circumspection, etc. He is reported to have taken up the cudgels against certain developments in recent years in regard to the centralisation system. For instance, it is suggested that the Finance Ministry has always taken up an antagonistic attitude towards any new line of expenditure and invariably begins to oppose things. It is only by constant pressure that some Ministries have been able to force their viewpoints and get the sanction of the Finance Ministry. Another defect in the working of the system has been the development of higgling between the Finance and the concerned Ministries. For example, when a Ministry wants increased staff for some development schemes, it generally shows an exaggerated figure, so that, after allowing for the number likely to be whittled down by the Finance Minister, it may get the staff which it feels is necessary.

As against these disadvantages, the centralised system has a number of advantages. It has been acting as a bulwark against extravagance. Despite this vigilance, however, there has arisen a number of scandals and huge spending. To take one example, the Irrigation Department of Government has spent nearly Rs. 2 crores on the investigation of the Kosi Project during the last few years. When the problem assumed great urgency, a decision was taken on the question of the construction of dam and other diversion channels without recourse to the abovementioned investigations. There have been similar instances of extravagance in the Hirakud, Damodar and Bhakra-Nangal Projects. It is, therefore, argued that decentralisation will result in greater extravagance by a section of unscrupulous persons, in case the Finance Officers in each Ministry are brought under the control of the Secretary of the Ministry. This apart, Mr. Deshmukh is reported to have taken up the stand against the recommendations of Mr. Chanda on the ground that, under the Constitution, the Finance Minister is reported to be the sole custodian of the nation's finances and is responsible to Parliament on this affair. If decentralisation were to be brought about, it appears that the Constitution will have to be suitably amended.

The present need of the country is the supreme necessity of intensifying its economic progress, in order to meet the growing demands of an ever-increasing population. This will call in the years to come the need to step up expenditure on various development schemes. Politicians in their anxiety to please their electorate and also for personal aggrandisement might sponsor good, bad and indifferent schemes and the necessity to scrutinise the projects on their merits must be entrusted to a team of impartial and able technical experts. It is a moot point as to how far Mr. Chanda's suggestion that the examination of the schemes should be entrusted to the departments concerned, could be workable, especially at this stage of the country's development. We have, besides, independent financial advisers to each Ministry, Estimate Committees, Public Accounts Committee, etc., and, despite all these, it is not unusual that Government money is being wasted or spent on a lavish scale. Whatever be the workability of Mr. Chanda's scheme in other countries, the principle of decentralisation cannot be suddenly adopted in this country until the conscience of the politicians and the public, not to speak of Government servants, develops fully on the sanctity of Government money. The idea of Mr. Chanda to make the Financial Adviser subordinate to the Secretary of the Ministry is also fraught with dangerous consequences, since the former will always try to adjust himself to the latter's whims and fancies, in the interest of his own future prospects. It is, therefore, imperative that the system of independent Financial Officers should be continued to control public expenditure. If it is suggested that there are inordinate delays which hold up the progress of development schemes, the remedy lies in the expansion of this control staff to expedite matters. Anyway, the whole question should be discussed threadbare by the Cabinet in all its aspects and a decision arrived at as to how the whole scheme should be reformed in such a manner as to accelerate the economic progress of the country. Meanwhile, Mr. Deshmukh should not be allowed to relinquish his job. His presence as the guardian of the country's finances is not only necessary but also indispensable at this juncture of Indian economy, since he is eminently suited to give practical shape to the idea of deficit financing during the next 24 months. The acceptance of his resignation will be like changing horses mid-stream, which, it is needless to add, is not only imprudent but also subject to great risk.

ECONOMIC SURVEY OF BRITAIN

STRESS ON INVESTMENT

(From Our Own Correspondent)

LONDON, 3rd *April*

"THE outstanding economic problem facing the United Kingdom," states the Chancellor's *Economic Survey* just published, "is still that of paying its way abroad, and the needs of the balance of payments must continue to govern the pace of internal expansion." How far is the coming Budget going to reflect this problem? In the year 1953, the value of the national output increased over the previous year by no less than £500 million, while a 9 per cent. additional volume of imports (at a cost *reduced* by 4 per cent.—thanks to a 12 per cent. fall in import prices) swelled the national resources by another £285 million. The lion's share of this increased total income of nearly £800 million went to consumers' expenditure, housing and defence took nearly as much together and additional investment in stocks and work in progress absorbed the balance. Judged by the test of the national income, 1953 was the most prosperous year this country has known.

LONDON LETTER

The other side of the picture is the relative weakening in exports (a 3 per cent. increase in volume balanced by a 3 per cent. fall in prices) and the reduced surplus on the balance of payments, which fell from £134 million in 1952 to £123 million in 1953. But the maintenance of a surplus enabled this country to continue its policy of removing restrictions on overseas trade and payments and to return the conduct of more of its import trade to private hands.

The *Survey* sees the country's real problem as the need to finance investment abroad and to build up the gold and dollar reserves. This requires a much larger surplus on the current balance of payments which must be matched by internal savings. Almost equal in importance is the need to increase productive investment at home—indeed, some passages in the *Survey* indicate that this is almost the prior need, since improvements in productive efficiency are necessary to reduce costs and prices which are the key to increased exports. If the Chancellor followed this lead exactly in his Budget, the latter would be a very lean affair for the consumer, who would be told that he was getting too much of the increase in the national output already and that since on current form his demand was likely to be maintained anyway, the Budget incentives would all have to go towards encouraging an increase in production.

"A primary aim of Government policy," we are told, is "to create a financial and economic climate which will help to stimulate the further growth of exports . . . we are no longer favoured with sellers' markets abroad, and there is keen competition in capital goods as well as in consumer goods." In 1953, an outstanding feature of British exports was the large increases in exports of aircraft, arms and ammunition and refined petroleum. It seems as if growing reliance is to be placed on sales of such armaments and aircraft, partly financed by American offshore purchases, although the potentialities of increased capital goods exports is stressed. The load of domestic defence expenditure (which has taken more than half the total increase in production over the past three years) is now levelling off and, with more steel available, "exports of capital goods are no longer being seriously impeded by the pressure of home demand." Indeed, we learn that a number of the capital goods producing industries have spare capacity "to provide both for an expansion of exports and a higher rate of industrial investment."

The physical resources for investment both at home and overseas are there; the need for such investment is there; what can be done to make the investment a reality? The answer on the home side must await the Budget and on the export side it appears to be price. The American recession, at the rate it has so far developed or appears likely to develop, is not regarded as a great danger for this year—it might become worse in its impact on our customers' markets in 1955. But "our competitive power would be disastrously weakened, and the consequent worsening of the balance of payments would destroy, for the time being, any chances of a further improvement in the standard of living . . . if increases in productivity are regularly outstripped by rises in money wages, salaries and profits." It is on that note that the *Survey* closes.

AMERICAN LETTER

DECLINE IN BUSINESS HAS ABATED

HEAVY CAPITAL INVESTMENT IN THE OFFING

(From Our Own Correspondent)

NEW YORK, 1st *April*

BUSINESS spending for plant and equipment in the United States during 1954 is now estimated at $27,200 million, according to figures issued by the Government on the basis of statistics provided by business and industry. This means, in effect, that 1954 will be another big year for capital expenditures. If the plans are realised, this year would be the second biggest on record—only 4 per cent. below the total for 1953 which was the largest year so far. These estimates on spending plans for new factories and equipment are regarded as of the utmost importance to all business, since these expenditures constitute one of the main props of the capital goods industries. They also are an excellent barometer of general business activity.

This spending has an effect throughout the economy. Orders for new facilities create jobs, tend to keep things humming in many trades, such as construction, steel, lumber, machinery and other lines. It is not too far fetched to conclude that the big investment projects for 1954 show that business men as a group still have a good deal of confidence in the future of the U.S. The automobile industry, which accounts for about one-sixth of national production, at a time when output is off because of lower sales, is spending huge sums for plant improvement, specifically. More than 2,000 million dollars are being earmarked in this field. This alone should be sufficient evidence that no serious recession in the U.S. is to be looked for. The present Administration, headed by President Eisenhower, may be slow in acting, but I am satisfied it is determined that nothing will be left undone by Washington to prevent a serious recession in business which the U.S. cannot afford domestically or internationally, socially or politically.

One of the greatest thorns in the side of the Republican majority in the Washington Government remains Senator Joseph McCarthy. Rather slow progress has been made in straightening out the dispute between the Senator's committee and the Army in settling charges and counter-charges. President Eisenhower the other day made the flat statement that any party to a dispute should not be permitted to act as a judge and the Senator now seems disqualified even to cross-examine witnesses. His political future may well be at stake in the forthcoming hearings. The American public still seems divided on the subject of the McCarthy investigations, but the pendulum appears to be swinging against the man because of what many regard as unfair tactics.

Tax Reductions

Tax reductions which have been passed by the Congress, are widely applauded by the business community. They put more spending money in the hands of individuals and corporations, but they do not assure that this money will actually be spent in the market place. It may just be hoarded. However, in the overall picture, tax reductions are considered an excellent stimulus to lagging retail sales. What is needed above that, however, is a feeling of confidence by the buying public that their existence is assured. At the moment, they are not so certain of that. Their doubts should be resolved in a few weeks.

A seasonal upturn in spring would only be seasonal. In fact, the last monthly report of the National Association of Purchasing Agents suggests that the industrial business decline has abated and is levelling off. For the first time since May, 1953, more purchasing executives reported increases in production and orders than those indicating further declines. The change of trend so far, it is emphasised, is marginal. New orders show the strongest trend with 31 per cent. of reporting agents rating higher, against 17 per cent. lower. The report notes that pay-rolls continued to decline. About 32 per cent. of respondents reported lay-offs or reduced working time. The peak month was January with 47 per cent. reporting lay-offs. Only few of the reductions in March, it was noted, were drastic.

A word may be in order here on unemployment figures. They are apt to be misinterpreted. The now three million unemployed, officially listed, out of a working force of more than 60 million Americans are not strictly unemployed. They include many women who joined the labour force after the outbreak of the Korean war.

Their departure from employment does not necessarily mean "unemployment." Many are not the breadwinners of their families and, in many instances, their return to the home means nothing else but fewer family savings. It has little economic or social implications. Thus, it may be unwise to jump to conclusions that things must be really "bad" in the U.S. because of rising unemployment. Whatever has happened so far in this direction, certainly, is not calamitous and compares very favourably with conditions in 1947 and 1948.

Indo-China

On the international scene, American public opinion is still quite preoccupied with developments in Indo-China. The fighting in this area is represented here as the keystone to the political future of all of South Asia. Despatch of U.S. airplanes and other military equipment to the beleaguered French forces are evidence of this feeling. President Eisenhower has taken a personal hand in this by mentioning the subject at one of his recent Press Conferences and the consciousness of the American people of the importance of Asian events is increasing steadily.

The Far East received additional attention by the consequences of a hydrogen bomb blast in the Marshall Islands on 1st March, 1954. It was described as "so far beyond what was predicted that you might say it was out of control," according to Congressman Chet Holifield from California. The explosions even astonished the scientists who took part and they made a deep impression here. What these experiments have actually accomplished, naturally, is a myth, except that up to this point atomic energy is being harnessed in the commercial installation of utility plants and propulsion for submarines, not to mention radiation practices to fight cancer and other diseases.

Also on the foreign scene, the tenth Inter-American Conference at Caracas, Venezuela, has finally recessed. In addition to the well publicised resolutions directed against Communism and colonialism, the Conference seems to have made some progress in reaching understandings that various measures should be taken to encourage the investment in subdeveloped countries, such as the elimination of double taxation and the freer movement of trade among raw material producing countries and industrial nations in the hemisphere.—*All Rights Reserved.*

(Concluded from next column)

a Cottage Industries Corporation to undertake the export of these products. An official Bill to this effect has already been introduced in the Pakistan Parliament.

All these measures are in addition to the steps which the Pakistan Government has already taken to implement the recommendation of the Export Promotion Committee. Exports have been considerably liberalised; as many as 124 items are now placed on the free list. Facilities are being provided for the promotion of exports of raw materials in which the country abounds. Recently a quick-freezing plant has been set up by an American firm in collaboration with the indigenous capital for the export of shrimps to the U.S. and Europe, which is expected to yield about Rs. 1 crore by way of foreign exchange every year. The export trade in many other raw materials, kapok, for instance, is being organised.

• • • • •

Cotton traders in Pakistan are now permitted to enter into barter agreements with overseas traders for the exchange of the carry-over cotton stocks of the 1951-52 season or earlier seasons for iron and steel, cotton yarn, silk yarn, and newsprint. An announcement to this effect was made by the Pakistan Government on Thursday last week. One specific condition, however, is laid down. The imports of the aforesaid items bartered against Pakistan cotton should be distributed in Pakistan to dealers nominated by the Government.

PAKISTAN NOTES

U.N. RAILWAY TRAINING CENTRE AT LAHORE

EXPORT DRIVE TO BE INTENSIFIED

TO Lahore goes the credit for housing the U.N. Regional Training Centre for Railway Operating and Signalling, the opening ceremony of which was performed by the Governor-General of Pakistan, Mr. Ghulam Mohammed, on Saturday last. The Centre is jointly sponsored by the U.N. Technical Assistance Administration and the Economic Commission for Asia and the Far East. The Centre will offer facilities for advanced training in modern transportation and signalling to the railway officials of member and associate member countries of the E.C.A.F.E. region.

This Training Centre fulfils the long-felt need for widening the knowledge and outlook of senior railway officials. With the acceleration of the tempo of the industrial activity in many countries of the E.C.A.F.E. region, the transport requirements have considerably increased, while actual capacities of the railway systems are found to be not adequate fully to meet the growing density of traffic on several sections of railways, particularly on single-track sections. Thus, the railway systems have been confronted with the problem of exploring ways and means to augment suitably their capacities, "in order to enable them to meet the demands more efficiently and economically, without, as far as possible, incurring the very heavy expenditure required for doubling the track." In this task, the responsibility that devolves on the Lahore Railway Training Centre is, indeed, great. The working of the Centre will, therefore, be watched with much interest.

The Centre is being provided with modern demonstration equipment and services of expert staff. In the course of his welcome speech, Dr. P. S. Lokanathan, Executive Secretary of the E.C.A.F.E., revealed that the Governments of France, Japan, the U.K., the Netherlands and Belgium had made "generous" offers of equipment. The Government of Pakistan also had provided various facilities "at a considerable cost to itself." Referring to the teaching staff, Dr. Lokanathan stated:

"We have succeeded in obtaining the services of expert teaching staff for the training centre. Besides the three instructors in the three branches of training, namely, operating, signalling and telecommunication, two assistant instructors drawn from countries of the region have also been appointed for one year. Assistant instructors will be appointed in rotation to give opportunities to suitable officers of the region to familiarise themselves with modern equipment and to qualify for occupying similar positions in national training centres."

Characterising the establishment of the Lahore Centre as a landmark in the history of both the E.C.A.F.E. and the U.N.T.A.A., Dr. Lokanathan said that it was the first occasion on which the U.N.T.A.A. had gone in a reasonably big way to develop a regional project in the transport field involving considerable outlay and covering the region as a whole. He described the Centre as a "concrete vindication of the faith of the U.N. in co-operation between Governments on regional basis." Similar sentiments were expressed by the Governor-General of Pakistan who emphasised that, with the modern scientific developments, the idea of any country or particular region living in isolation had to be given up altogether.

Export Drive

Recent reports from Karachi aver that the Government of Pakistan has made a bold bid to step up and diversify exports. The Government, for instance, is said to be seriously considering the introduction of what is called payment of export premiums to promote exports of manufactured goods. The proposed scheme includes, among others, a provision which seeks to allow exporters to import raw materials which are required for Pakistan's industries or consumer goods which are at present severely restricted. The question of reducing inland and shipping freights is also being examined. Measures regarding standardisation and grading of commodities too are engaging the attention of the authorities. A wool test house is expected to start functioning shortly. Grading of hides and skins is under consideration. The Pakistan Standard Institution is to lay down standards for manufactured goods. With a view to promoting exports of small workshop industries products, such as sports goods, surgical instruments, musical instruments, cutlery, hardware, carpets, etc., the Government proposes to set up

(Continued in previous column)

STERLING AREA'S BALANCE OF PAYMENTS POSITION IMPROVES

GROUNDS FOR CONFIDENCE IN FUTURE

AS a member of the sterling area and as one holding a large amount of its foreign balances in sterling, India is keenly interested in the *Economic Survey*, 1954, presented to the British Parliament last week by the Chancellor of the Exchequer. The *Survey* provides, besides a detailed account of the economic trends in the U.K., an interesting analysis of the financial position of the sterling area in 1953, as well as a broad indication of the future outlook for the area in the next 12 months. The report states that the year 1953 was one of consolidation for the sterling area and that, by reason of its present improved position, the area can look forward to the future with some confidence.

A clear picture of the balance of payments position of the sterling area as at the end of 1953 is indicated in the table below:

Balance of Payments of the Sterling Area

(£ million)

	1952	1953		
		1st half	2nd half	Year provisional
UNITED KINGDOM—				
Current balance with:				
Non-sterling countries* ..	—112	+46	..	+46
Rest of sterling area ..	+367	+22	+157	+179
	+255	+68	+157	+225
REST OF STERLING AREA—				
Balance† with:				
Non-sterling countries ..	+162	+173	+101	+274
United Kingdom	—367	— 22	—157	—179
	—205	+151	— 56	+95
Total sterling area balance with non-sterling countries ..	+ 50	+219	+101	+320

* Includes defence aid of £121 million in 1952 and £102 million in 1953. These figures are net of the U.S. share of counterpart funds.

† A U.K. estimate, which includes capital transactions with non-sterling countries.

The table reveals a number of interesting features. At the end of 1953, the U.K. had a surplus of £46 million with non-sterling countries, including defence aid, whereas, a year ago, it had a deficit of £112 million. Similarly, there was an improvement in the position of the rest of the sterling area and it was more impressive than in the previous year. Thus the latter had a surplus with the non-sterling area of £162 million in 1952. This rose in the following year to £274 million. Consequently, the surplus of the sterling area as a whole with the rest of the world shot up from £50 million to £320 million during the year under review. It will thus be noted that, once again, the contribution of the rest of the sterling area to the surplus achieved with non-sterling countries has been greater than that of the U.K. itself.

The figures read rather differently in respect of the position of the U.K. alone. Thus, the country's surplus with the rest of the sterling area, which stood at as high as £367 million in 1952, dropped by more than half to £179 million at the end of 1953, its overall surplus on current account, including defence account, coming down, as a result, from £255 million to £225 million. But this was neutralised by the improvement in the position of the rest of the sterling area, which transformed the overall deficit of over £200 million, in 1952, into a surplus of £95 million in 1953. Commenting on this improvement, the *Survey* makes some interesting observations which run thus:

"The improvement in the rest of the sterling area's balance with non-sterling countries has been mainly due to the sharp reduction of imports, particularly by Australia, in the course of 1952. The rest of the sterling area as a whole imported about one-quarter less by volume from non-sterling sources in the second half of 1952 than in the first half, and imports remained at around this level throughout most of 1953, though there was some increase towards the end of the year, following the easing of import restrictions by Australia and New Zealand. Import prices also were rather lower in 1953 than in 1952. Meanwhile, the volume of the rest of the sterling area's exports to non-sterling countries was relatively well maintained between the two years, although the value of these exports fell slightly because prices were lower."

The sterling area's surplus with the rest of the world was considerably smaller in the second half of 1953 than in the first, as is evident from the table above. Explaining the reasons for this, the *Survey* states:

"The main reasons for this were the interest payments on the North American loans, which mainly fall due at the end of the year; the usual seasonal decline in the sterling area's exports of wool and cocoa; and further falls in the prices of rubber and tin, which more than offset the gains from higher prices of cocoa, jute and tea. In addition, United States purchases of goods both from the United Kingdom and from the rest of the sterling area were tending to decline slightly in the last few months of the year."

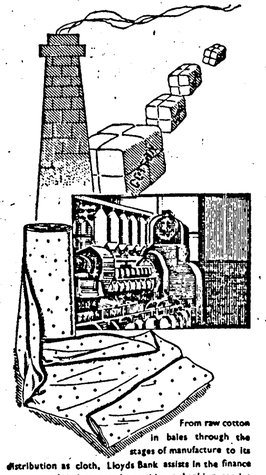
These changes resulted in causing a decline in the sterling area's surplus with the dollar area by £68 million between the two half-years and the balance with the E.P.U. also deteriorated. Again, in the first half of 1953, the U.K. was continuously in surplus with the E.P.U. and, therefore, received £49 million. But, in the second half, there was a small deficit and, consequently, it paid £8 million of gold to the Union. The less favourable balance of payments was marked by a slowing down in the rise in the reserves in the latter part of the year. But, even in the fourth quarter, there was some rise, notwithstanding the fact that £65 million was paid in service of the U.S. and Canadian loans at the end of the year.

With the improvement in the sterling area's balance of payments, the gold and dollar reserves rose by £240 million during the year under review. The strength of sterling was reflected in the London foreign exchange market. Apart from brief periods in January, September, October and December, spot quotations, according to the *Survey*, were constant at or above $2.81 throughout 1953 and, in the early part of the year, the rate closely approached the ceiling of $2.82. The rise in the reserves continued in the first two months of 1954, bringing the total to $2,583 million at the end of February. March figures published since the *Survey* was released reveal an even more encouraging picture, in that the total reserves at the end of the month went up by as much as $102 million to stand at $2,685 million. The surplus of $102 million for March is the highest for any month since April, 1943, when it was $107 million. The breakdown of this increase reveals that receipts from the U.S. on defence account, amounted to $14 million, from the E.P.U. $2 million and from trade transactions of the sterling area, $86 million. The improvement in the last mentioned source is striking, as compared with $14 million and $2 million received in January and February this year, respectively.

Explaining the chief factor for the improvement in the sterling area's position in 1953, the *Survey* states that "the relatively favourable course of world economic development in 1953 helped the sterling area to consolidate the same made in the previous year when the fall in the gold and dollar reserves had been reversed and confidence in sterling restored."

Discussing the prospects for the sterling area, the *Survey* says that there are solid grounds for confidence in the future. It, of course, admits that they depend both upon the policies which the individual countries themselves pursue and upon the future level of world trade and, in particular, of the United States' demand. But it draws attention to the action already taken to put the sterling area countries in a better position to meet any fluctuations in trade. Thus, inflation has been checked, gold and dollar reserves have been strengthened and sound development programmes have been launched for further strengthening this position. The Commonwealth countries, which met at Sydney, sought agreement on two aspects for achieving further improvement in the sterling area. First, they agreed to avoid all action which would lead to a general decline in world trade or which would add to the problems set for the rest of the world by any recession in the U.S. Secondly, they were agreed that it was impossible to set policies in advance to meet circumstances which could not be foreseen with precision. Nevertheless, there were three broad spheres of policy in which action should be taken as soon as the need became clear; first, what each Government could do to adapt its own policies, where necessary, to changing circumstances; second, the policies which could be carried out jointly by countries in the Commonwealth and sterling area and in the rest of the world; third, the role which international institutions such as the International Monetary Fund, the International Bank and the O.E.E.C. could play.

According to the *Survey*, the outlook for the U.K.'s balance of payments position too appears to be encouraging. For, in recent months, the country's exports have been running 5 per cent. above the last year's average level. Further, increases are expected in the country's sales of civil and military aircraft, military equipment, etc. There are also increased opportunities for revival of exports to Australia and New Zealand. As against these, no very large increase in the volume of imports of raw materials and manufactured goods is considered likely. Again the output of food and feeding stuff is expected to maintain an upward trend, while the balance of the U.K.'s invisible transactions is not likely to change very much this year. But the greatest uncertain factor in assessing the outlook for the balance of payments of the U.K. and the sterling area in 1954 is stated to be movement of prices of primary products and manufactured goods. "Changes in the relative prices of primary products and manufactured goods," to quote the review, "tend to have opposite effects on the balances of the United Kingdom and the rest of the sterling area, and the position of the sterling area as a whole may, in certain circumstances, be worsened by developments which result in an improvement in our own terms of trade. This is what might happen this year, if production in the United States did not recover quickly enough. In such circumstances, provided that British industry adapted itself to the more competitive conditions in world markets, the United Kingdom should continue in surplus on current account, but difficulties might arise later in the year, if there were a deterioration in the rest of the sterling area's balance with non-sterling countries."



From raw cotton in bales through the stages of manufacture to its distribution as cloth, Lloyds Bank assists in the finance of this vital industry and provides a banking service which has world wide connections through its Agents and Correspondents.

Lloyds Bank Limited — Incorporated in England

CAPITAL TRANSFERS IN BENELUX COUNTRIES

A conference of the Belgian, Dutch and Luxemburg Ministers has resulted in a decision to establish complete freedom of capital transfer among the Benelux countries. Control will, however, be retained over new capital issues in any one of the countries for account of borrowers in one of the others. This will be worked into the general framework of control of the capital market and is not intended to act as a discriminatory measure.

As a result of the decision, Dutch securities held by Belgian and Luxemburg investors will be unblocked as to both capital and income. The new regulation will allow securities issued in any one of the countries to be quoted in the others and there will be unrestricted arbitrage in securities among the three centres. Dollar and sterling securities will be allowed to change hands freely inside the Benelux area. But restrictions on their export will remain, though they will be made uniform and progressively withdrawn. At the same time, the work of framing a common dollar policy will be continued. A common list of freed dollar imports is being drawn up and restrictions will be applied only to goods not figuring in the list.

The only outstanding problem facing the area is the question of financing trade between Holland and the Belgo-Luxemburg area.

HIND BANK RAISES DIVIDEND

After paying a small maiden dividend of 2 per cent. for the year 1951 and maintaining it for the succeeding year, the Hind Bank Ltd. (General Manager: Mr. S. D. Pardiwala, Calcutta) has raised it to the modest level of 3 per cent. for the year

(*Continued on page 715*)

IMPRESSIVE RESULTS OF PUNJAB NATIONAL BANK

DEPOSITS RISE TO A RECORD LEVEL

VERY few Scheduled banks in India have had the distinction of earning higher profit for the year ended 31st December, 1953 than for the previous year. The Punjab National Bank Ltd. (General Manager: Mr. B. N. Puri, Delhi), the second largest Indian joint-stock bank, belongs to this category of banks. What is more striking about its results is that the profit for 1953 is the highest recorded since 1948. The dividend has been stepped up for the year under review. This is the second year in succession that the Bank has raised the dividend and it has done so comfortably. The other striking features of the audited accounts of the Bank for 1953 are: the total working capital, the deposits and investments as at the close of the year under review constitute a record in its history and the liquidity ratio is at a very high level.

The Bank's profit for the year under review has gone up from Rs. 34.12 lakhs for 1952 to Rs. 39.86 lakhs, a rise of Rs. 5.74 lakhs. It is noteworthy that such an improvement has been achieved in the face of a substantial rise in outgo by way of interest paid on deposits and borrowings and expenses, a feature common to all banks, and has been rendered possible by the expansion in its resources, as witness the rise of Rs. 6.37 crores in deposits as at the end of 1953. In consonance with the improvement in earnings, the distribution to the shareholders has been raised to 8 per cent. per annum, from 6 per cent. paid for 1952, to which level it had been enhanced from 4 per cent. paid for the two years 1950 and 1951. Though the dividend has thus been doubled in the course of two years, that is from 4 per cent. for 1951 to 8 per cent. for 1953, it still falls very much short of the record dividend of 12 per cent. paid for 1946.

The following comparative table gives the trend of the Bank's earnings and appropriations thereof since 1950:

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950
Interest and discount earned ..	245.29	214.36	177.51	171.59
Commission and exchange ..	55.06	47.80	43.74	29.98
Other income	31.09	32.70	35.84	20.57
Interest paid	106.51	88.63	67.89	61.92
Establishment and other expenses ..	178.85	171.15	150.14	118.75
Depreciation and repairs ..	6.21	5.05	9.39	4.24
Profit	39.86	34.12	34.17	36.63
To taxation	12.50	15.00	1.00	0.68
To reserves	11.19	8.46	..	1.52
To depreciation on investments.	..	..	10.68	16.28
To bonus to staff	7.50	5.48	3.77	8.02
To other appropriations ..	0.50	5.84*	10.44*	0.37*
Dividend	7.00	5.25	3.50	3.50
	(8%)	(6%)	(4%)	(4%)
Carry forward	3.10	1.09	5.84	0.66

* Include sums utilised for scaling down Pakistan assets in view of Displaced Persons (Debts and Adjustments) Act, 1951, for writing down other assets, bad debts written off and assets lost in Pakistan.

The income from interest and discount earned, which had risen by Rs. 36.85 lakhs in 1952, shows a further impressive rise of Rs. 30.93 lakhs in the year under review. The increase of Rs. 7.25 lakhs in commission and exchange earned is more encouraging than that in the previous year. There has been a fall of Rs. 1.61 lakhs in "other income," but it is very much less than that in 1952. The net increase in the total earnings thus amounts to Rs. 36.57 lakhs, which is very nearly the same as that noted in the previous year. This rise has been offset to a large extent by the increase of Rs. 29.08 lakhs in interest paid and of Rs. 7.70 lakhs in expenses. It is to be noted that the increase in interest paid is much larger than that in 1952 and far more so than in 1951. The rising trend in expenses has continued, though the pace of increase has been much less than in the previous two years. Of the rise of Rs. 7.70 lakhs in expenses during 1953, Rs. 1 lakh is accounted for by the compensation paid to the ex-General Manager for loss of office.

The following table brings out the variations in the main features of the Bank's balance-sheet as at the close of the last four years:

(In lakhs of rupees)

	As on 31st December			
	1953	1952	1951	1950
Capital	87.50	87.50	87.50	87.50
Reserves	90.00	89.00	87.50	1,13.84
Deposits	65,31.18	58,94.02	51,94.84	44,19.93
Borrowings from other banks ..	80.58	2,50.63	1,99.71	2.35
Bills for collection	5,55.93	5,05.19	6,12.86	3,29.50
Acceptances	2,68.47	1,92.36	1,81.66	1,45.59
Bills payable	4,07.28	3,78.91	4,28.08	3,61.63
Advances	25,54.91	29,29.40	24,22.05	19,78.07
Investments	36,14.27	28,79.90	26,55.04	19,98.79
Cash and money at call ..	7,47.40	6,63.78	6,91.52	8,03.79
Balance-sheet total ..	79,78.22	73,98.68	67,51.82	54,71.92
Ratio to deposits of—	%	%	%	%
Advances	39.1	49.7	46.6	44.7
Investments*	54.9	44.5	47.3	45.0
Cash	11.4	11.3	13.3	18.2

* Ratio arrived at after taking into account the securities earmarked against borrowings from other banks.

The provision for taxation is less by Rs. 2.50 lakhs, but much of this saving has been taken by the increased provision for bonus to staff. No allocation has been made to scale down the Bank's assets in Pakistan, for which purpose a sum of Rs. 7.92 lakhs was utilised from the profit last year. The transfer to the reserve fund has been reduced from Rs. 1.46 lakhs to Rs. 0.94 lakh, while that to the contingency reserve has been raised from Rs. 2 lakhs to Rs. 10.25 lakhs. That the dividend has been raised comfortably is evident from the higher surplus left to be carried forward.

As already noted, the balance-sheet total shows a notable rise of Rs. 5.79 crores to Rs. 79.78 crores, thus establishing a fresh record surpassing the previous one of Rs. 77.81 crores touched at the end of 1946. The Bank's reserves stand at the impressive level of Rs. 90 lakhs, Rs. 2.50 lakhs more than the paid-up capital, besides the inner reserves which it must have built up. Three years before, however, the Bank's reserves were even larger at Rs. 113.84 lakhs. The rising trend in deposits noted since 1949 has been kept up. The expansion of Rs. 6.37 crores in 1953, though a little less marked than in the previous two years, compares very favourably with that noted in the case of Scheduled banks in general. Another interesting feature to be noted, in this connection, is that, over the last three years, while the deposits of other Scheduled banks have fallen by 13.9 per cent., those of the Punjab National have gone up by 47.8 per cent. The rise in deposits during 1953 has been shared by all classes of deposits, fixed deposits showing an increase of Rs. 3.94 crores to Rs. 26.07 crores, savings bank deposits of Rs. 1.31 crores to Rs. 17.31 crores and current and other accounts of Rs. 1.12 crores to Rs. 21.93 crores. On the assets side, advances have dropped by Rs. 3.74 crores, in contrast to the rise of Rs. 5.07 crores at the end of 1952. Of the advances, loans, cash credits and overdrafts have declined by Rs. 4.84 crores to Rs. 21.95 crores, while bills purchased and discounted have gone up by Rs. 1.09 crores. The expansion in the latter class of advances, together with those in bills for collection and acceptances, as seen from the foregoing table, suggests that the Bank must have paid special attention to financing the internal and external trade of the country. The enlargement in resources has been well utilised to strengthen the Bank's liquid resources, as will be noted from the rise of Rs. 7.34 crores in investments and of Rs. 83 lakhs in cash balances, so that the liquidity ratio (taking into account only the unemcumbered portion of the investments) stands at 66.3 per cent. as against 55.9 per cent. It must, however, be added that the investments are shown at or below cost and are above the market value by Rs. 45 lakhs. Another point to be noted, in this connection, is that the item "bills payable" is a fairly heavy one in the case of this Bank, being as large as Rs. 4.07 crores, as against Rs. 3.74 crores a year before. If allowance were made for this liability, the liquidity ratio would be somewhat lower at 62.4 per cent. Even this ratio, it may be noted, is well above the average for the Scheduled banks as a whole.

(*Concluded from next column*)

Rs. 11.26 crores, at which they constitute a record, so far as year-end figures are concerned. Of these advances, loans, cash credits and overdrafts stand at Rs. 9.21 crores and bills purchased and discounted at Rs. 2.05 crores, as against Rs. 8.71 crores and Rs. 1.91 crores, respectively. The increase in resources has also been utilised to strengthen the investment portfolio and cash balances. The investments are shown at cost, the gap between the book value and market value has further widened from Rs. 57.07 lakhs to Rs. 63.71 lakhs. This depreciation is covered to the extent of Rs. 18.50 lakhs by the sum of Rs. 9 lakhs standing to the credit of non-statutory reserve fund and Rs. 9.50 lakhs to the sinking fund. The redemption value of securities, which form the bulk of the investments, is also lower than the book value, but this depreciation is well within the provision made as shown above. The combined total of unencumbered investments and cash balances gives a comfortable liquid coverage of 56.7 per cent. to the deposits.

CONTINENTAL BANKS OFFER CREDIT TO MEXICO

The Mexican Government has been offered a credit of $50 million by a consortium of German, Swiss, Swedish and Belgian banks. The loan is for a period of five to six years, but the Mexican Government is said to be in need of a loan for a much longer period, ten-year or upwards. The offer is, however, being studied by the Mexican Government, now that the $130 million loan it had from the Export-Import Bank is about to be exhausted on projects now in hand. The consortium's offer is considered to be timely in that the German Economics Minister, Dr. Ludwig Erhard, who is now in Mexico, has put on display the goods required by the Mexican authorities for carrying on their development plan. The German exhibition follows a similar show organised by the Belgian Economics Minister and ended just a few days ago. Mexico is in need of credit for equipping and expanding its main industries, namely, transportation, communication and electricity.

The offer of credit by the consortium to Mexico seems to be a part of the campaign by the Continental countries to increase Mexico's transatlantic purchases. It is stated that stability and full convertibility of the Mexican currency, namely, the peso, have made the Mexican market particularly attractive to European exporters and there is developing lively competition among them to supply Mexico's investment needs. A British firm has bid for a $8 million order of trolley buses against Dutch, German, and Italian bidders and is expected to complete negotiations in the near future, with liberal credit terms, allowing eight years for payments, as its winning advantage.

SMALL DROP IN PROFIT OF INDIAN BANK

DIVIDEND MAINTAINED ON HIGHER CAPITAL

A CONTRACTION of Rs. 1.27 lakhs in profit is disclosed by the audited accounts of the Indian Bank Ltd. (Secretary: Mr. N. Gopala Iyer, Madras) for the year ended 31st December, 1953. This recession is neither so serious as to affect the allocation to reserves by any perceptible extent and the distribution to the shareholders nor even as marked as that occurred in the previous year. Thus, the profit (arrived at after making provision for loss on sale of investments), which had dropped from Rs. 16.82 lakhs for 1951 to Rs. 14.18 lakhs for the succeeding year, has gone down to Rs. 12.91 lakhs for the year under review. However, with the fall in 1953, the profit has come down to the lowest level for the last four years.

The shrinkage in profit for the year under review would have been much sharper, had it not been for the much smaller loss on sale of investments than in the previous two years. Another factor which has evidently helped the Bank to escape a greater recession in profit is the further enlargement in resources. For the Bank's deposits, which had risen by Rs. 2.43 crores as at the end of 1952, show a further rise of Rs. 1.54 crores at the end of the year under review and stand at a fresh record high level in its history. The dividend has been maintained at 12 per cent. including a bonus of 2 per cent. for the fourth year in succession, but for this year it is on a higher capital.

The following comparative table shows, at a glance, the salient features of the Bank's results for the last four years and its progress since 1950:

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950

* Net loss after adjusting Rs. 10 lakhs from sinking fund.
† Include investments of staff security deposits.
‡ Ratio arrived at after taking into account the securities earmarked for borrowings from other banks.

The gross income of the Bank, amounting to Rs. 114.48 lakhs, as against Rs. 112.24 lakhs for the previous year, constitutes a record. This increase compares with that of Rs. 12.54 lakhs noted in the previous year. The income from interest and discount earned, however, shows a drop of Rs. 1.01 lakhs in distinct contrast to the experience of other banks and to the Bank's own experience in the previous two years. Receipts from commission and exchange are, on the other hand, again up and the increase of Rs. 2.44 lakhs from this source has been mainly responsible for the rise in gross income. Interest paid on deposits and borrowings is again higher by Rs. 3.17 lakhs, but the pace of increase is slower than in the previous two years. A saving feature of the Bank's results is the notable decline in loss on sale of investments. The drop in profit has meant a lower provision for taxation. Of the amount placed to the reserves, a sum of Rs. 2.50 lakhs (same as in the previous year) is accounted for by the addition to the reserve fund and Rs. 50,000 (as against Rs. 1 lakh) by the sinking fund.

The capital of the Bank was raised during the year from Rs. 55.40 lakhs to Rs. 57.80 lakhs (of which Rs. 11,475 represent unpaid calls) by making a further call of Rs. 5 per share on the Rs. 80 and Rs. 55 paid-up shares. It may be recalled that, in 1952, the Bank made a call of Rs. 5 on these partly paid-up shares. The reserves exceed the paid-up capital by nearly Rs. 19 lakhs. A break-down analysis of the Bank's deposits shows that all classes of deposits, except season and short-term deposits, have contributed to the increase, the fixed deposits improving from Rs. 5.80 crores to Rs. 6.83 crores, savings bank deposits from Rs. 3.82 crores to Rs. 4.02 crores and current and other accounts from Rs. 7.76 crores to Rs. 8.70 crores. Season and short-term deposits have declined from Rs. 2.93 crores to Rs. 2.30 crores. Advances show an increase of Rs. 64 lakhs to

(*Continued in previous column*)

GENERAL BUSINESS TRENDS IN U.S.

NATIONAL CITY BANK'S ROUND UP REVEALS STABLE CONDITIONS

THE month of March has brought no clear evidence of business improvement and, although the opinion seems to be spreading that the worst of the decline is over, this is a matter of faith rather than of statistical demonstration. Some figures, such as unemployment insurance claims and production statistics, point to a levelling off or only moderate decline. Others, such as retail trade reports, have been disappointing, partly because of certain special factors, including the late date of Easter and the prospect for excise tax reductions. Inventory liquidation is proceeding in orderly fashion, but stocks are still a problem in numerous lines, particularly steel and automobiles. Prices of non-ferrous metals firmed and sales increased during March, and similar encouraging reports were received for some textiles. New building construction contracts have continued to exceed those of a year ago, and the general level of prices has remained relatively stable.

Economic developments during March have been watched with particular interest because of a remark by President Eisenhower, at his 17th February Press Conference, that a failure of employment to pick up seasonally in that month would be a warning calling for the institution of a number of governmental measures to avoid a deep recession. It is apparent that this remark was taken too literally. The President at his 27th March Press Conference made clear that all significant developments, not just employment, were being watched and that they did not indicate the need for emergency action at this time.

Inventory Adjustment Continuing

The pattern of inventory adjustment appears on the whole to have been little changed in the first quarter. During January and February manufacturers' inventories were cut back at a seasonally adjusted annual rate of $3 to $4 billion, about the same as in the fourth quarter of 1953. According to the National Association of Purchasing Agents, a major share of its membership had by the end of March succeeded in bringing inventories into line with sales, while others had nearly completed the process.

In the steel industry, on the other hand, the growth in mill stocks of ingots and semi-finished steel called for a cutback in weekly production schedules. Output levelled off, after reaching a low point of 67.6 per cent. of capacity in the week ended 21st March. Steel executives, according to *Iron Age*, remain confident of an early upturn. Steel consumption appears to be outrunning production, and, in the latter part of March, a number of producers noted a quickening in the pace of new orders.

March automobile output of 524,000 passenger cars and 101,000 trucks was the largest for any month since July. Despite a seasonal rise in new passenger car sales, the industry continues to build more new cars than it is selling, in anticipation of spring demand.

New contract awards for building and other construction in the first three weeks of March continued to exceed those of a year ago, indicating a record first quarter.

Department store sales, which had held up well in January and February, showed in March sizable year-to-year declines—as much as 13 per cent. in the week ended the 20th. With the excise tax reduction effective 1st April, and with the approach of Easter, merchants are expecting better comparisons.

Business and Consumer Spending Plans

The way people feel about the current situation and the plans they make for the future are often better guides to the course of the economy than arrays of business statistics. A joint survey by the Securities and Exchange Commission and the U.S. Department of Commerce, conducted in February and early March, indicates that business men feel confident that their sales in 1954 will, on the whole, approximately equal the record set in 1953. They are backing up this confidence with plans to invest $27.2 billion in new plant and equipment during 1954. This represents a decline of 4 per cent. from the 1953 record of $28.3 billion—about the same change as was forecast last November in a private survey.

Such steadfastness of investment plans is heartening. It indicates that business planning for the long run, encouraged by prospective tax revision, is not easily deterred by short-term fluctuations. In addition, these plans show that business men recognise the need for modernisation of facilities and introduction of cost-cutting equipment, and are aware that, under highly competitive conditions, these needs are intensified rather than lessened. The maintenance of a high level of business outlays should be a sustaining force.

A second survey, covering consumer attitudes, financial position, and spending plans—conducted in January and February by the University of Michigan for the Federal Reserve Board—was also encouraging. Consumers still appear basically confident about the general outlook, although less optimistic than a year ago. The proportion which feels this is a good time to make major expenditures is about the same as last year. Plans to buy homes, new cars, and household durable goods have been trimmed from 1953 levels, but still compared favourably with the high levels of 1951 and 1952.

The great majority of consumers expect their incomes to be stable or rising during 1954, as compared with 1953, and they expect prices generally to be stable or lower. Liquid asset holdings have increased and are somewhat more widely distributed than in recent years. In general, the survey bears out Senator Flanders' recent remark that "the evidence strongly suggests that it is the will to buy rather than the absence of means which is limiting the amount of consumer expenditures at the present time."—By courtesy: *Monthly Letter, National City Bank of New York.*

U.S. AID TO INDIA IN 1953-54

With the signing in New Delhi on 2nd April, of an Indo-American agreement for $3.6 million (Rs. 1.72 crores) in economic aid from the United States for improving Rajasthan's electric power capacity, the entire $60,300,000 (Rs. 27,91,90,000) appropriated by the U.S. Congress for direct, special economic aid to India for 1953-54 has been allocated. The first of the economic aid agreements—for $20 million to rehabilitate the Indian railways—was signed here on 24th December, 1953. Altogether, five Indian-initiated projects have so far received direct economic aid from the United States.

The $60.5 million economic aid is part of the total authorisation of $89,100,000 (approximately Rs. 42½ crores) as economic and technical assistance to India for 1953-54 by the U.S. Government. In addition to the $60.5 million in direct economic aid, allocations totalling $11,903,000 (approximately Rs. 5.28 crores) have also this year been made out of the U.S. technical assistance funds.

Direct economic aid, as distinguished from technical aid, has been provided to India this year for the first time by the United States. While technical aid embraces both technical assistance and the training of Indians, it also includes the offer of technicians and the materials that go with it. On the other hand, economic aid is a straight dollar grant.

The $60.5 million U.S. economic aid this year has been allocated for five different types of activity—specific projects suggested by the Planning Commission of the Government of India: $25.5 million (Rs. 12.18 crores) for purchase of 200,000 tons of steel; $20 million (Rs. 9.56 crores) for 100 new locomotives and 5,000 new freight wagons; $8.5 million (Rs. 4.06 crores) for Rihand Valley development in U.P.; $3.6 million (Rs. 1.72 crores) for Rajasthan electric power development; and $2.9 million (Rs. 1.38 crores) for Madras City power plant expansion. Dollars made available to India under the economic aid programmes can be spent anywhere in the world. Purchases are made wherever prices are most favourable and not necessarily in America.

The United States has appropriated $189,000,000 (Rs. 90,34,20,000) in economic and technical assistance to India in the three years since the Indo-American Technical Co-operation Programme Agreement was signed in New Delhi on 5th January, 1952, by Prime Minister Nehru and Mr. Chester Bowles, then American Ambassador to India.

The Indo-American Technical Co-operation Programme, which is now in its third year, has been shaped directly to further the objectives of the first Five-year Plan. Owing to the high priority of increasing agricultural production, the greater amount of expenditure has been devoted to that field, although the programme has been steadily increasing in support of industrial development also. Industrial phases of the plan received large attention this year, and the entire amount of $60.5 million in U.S. economic aid has been applied in support of rapid industrialisation of India.

Under the technical aid programme, technical specialists have been brought to India on request of the Government of India for specific technical tasks. They obtain leave of absence from their regular work in the United States and remain for a period of six months to two years in accordance with the request. As of 28th February, 1954, there were 105 American Technical specialists in India. These included agricultural extension and vocational agricultural specialists, agricultural engineers, soil conservation and ground water experts, sanitary engineers, public health and nursing specialists, economic geologists, foundries experts, concrete construction and electrical engineers, a child welfare specialist, and experts in transportation, communication, power, industry, mining and labour.

Under the programme also, Indian technicians are sent to the United States for advanced training in any field which supports development in India. General categories of such training include agriculture, forestry and fisheries, health and sanitation, education, natural resources, industry, trade and industrial productivity, transportation and public works, public administration, and labour and community services.

As of 28th February, 1954, the number of Indian technicians who were in the United States or had returned after training was 240. Another 240 are under consideration to go to the United States for training.

CALL FOR REBUILDING COTTON MILLS

FUTURE OF RAW COTTON COMMISSION'S STOCKS

(From A Special Correspondent)

MANCHESTER, *30th March*

MOVES to rebuild new cotton mills to take the place of obsolete factories—not necessarily in Lancashire—were suggested this week by Mr. William T. Winterbottom, President of the Master Spinners' Federation, at the annual meeting in Manchester. "During the next few years," he said, "serious consideration must be given to the question of building new factories to replace those which, by reason of old age or subsidence or unsuitable design, can no longer house our developing industry. When rebuilding does take place, the cost, both of buildings and new plant, will make shift working essential," he continued. "Careful consideration should be given to selection of the locations most suitable and congenial to shift workers."

MANCHESTER LETTER

Describing the current conditions in the industry, Mr. Winterbottom said that Lancashire spinning mills had spent proportionately more than any European country in their £60,000,000 post-war modernisation programme. Amenities and working conditions had been further improved and wages had risen to a point where, instead of being one of the lower paid industries, cotton appeared well up in the list.

Still Higher Wages

After the setback which occurred in the earnings of operatives in the British textile industries, due to the 1952 slump, there has been a sharp advance in the wages available for the workers. The latest Ministry of Labour survey on the question shows that a fresh peak has been achieved.

There is clearly no sign of any real check to the rising spiral of wages in industry generally and the average earnings now illustrated are three times the pre-war level. The current figures relate to the last week in October, 1953 and cover nearly 6,750,000 workers in scores of different industries, as shown in the following table:—

All workers	Men (over 21)	Youths (under 21)	Women (over 18)	Girls (under 18)	All workers
	s. d.	s. d.	s. d.	s. d.	s. d.
October, 1951 ..	166 0	69 1	90 1	57 11	141 1
April, 1952 ..	173 7	71 9	92 2	57 9	147 3
October, 1952 ..	178 6	74 11	96 4	60 9	151 11
April, 1953 ..	185 11	77 7	100 3	62 6	157 7

COTTON					
October, 1951 ..	166 10	90 6	105 1	70 11	124 5
April, 1952 ..	149 0	80 4	93 9	70 4	111 6
October, 1952 ..	160 6	88 6	102 5	77 8	121 0
April, 1953 ..	166 1	90 7	106 2	79 0	124 8
October, 1953 ..	178 8	95 7	113 8	85 5	133 4

Weaving remains a better paid job than spinning so far as adults are concerned, but juveniles still command very good wages as compared with other trades shown in the review. Average earnings of women weavers were £5 18s. in the week concerned, while youths in the spinning trade received almost £5. Higher earnings can be secured by adults engaged in weaving rayon and other synthetic fibres. The average of all workers in this branch was just over £7, men receiving £9 6s. 5d. and women almost £6 in the week. In the textile finishing industry, the average wage for men was even higher, being £9 8s. 7d., and all workers in this section averaged £7 18s. 3d.

By last autumn, when this survey was taken, the mills had regained the momentum lost during the 1952 slump. The number of hours worked averaged 44½ weekly, as compared with 44.1 six months previously.

Supplies of Cotton

Politicians in the House of Lords have been raking through the dying embers of the fires of controversy which have raged over raw cotton purchasing. But the trade itself is now more interested in the actual operation of the system than in discussion of the principle involved. A little more light has now been thrown on what is to happen to the Raw Cotton Commission's stocks. In the first place, contractors-in will still receive supplies of particular growths from the Commission, which has taken steps to ensure that continuity will be maintained until new crops become available for private purchases. This refers, in particular, to cotton grown in Pakistan, East Africa, Peru and the Sudan, where new supplies cannot be obtained until next year.

No date has apparently yet been fixed for the winding-up of the Commission, but contracts for the provision of these particular types of cotton will be arranged before the end of August. Later, the Commission's surplus stocks will presumably be thrown open for purchase by contractors-out, when the needs of contractors-in have been suitably safeguarded.

The official attitude of the Spinners' Federation to the longstanding argument over raw cotton has been stated by Mr. W. T. Winterbottom, the President, who told the annual meeting: "We in the spinning industry must recognise that the successful operation of the Liverpool cotton futures market will depend far more on us than it did before the war. Conditions in the industry and in the world's cotton markets have changed and the contact between spinners and growers is closer and more direct than it has ever been before. We have worked for the reopening of the Liverpool market and, in two months' time, we hope to see it in operation. We are confident that this is the right step and that, with goodwill and co-operation from all who will benefit from its services, the market will soon be playing its full and rightful part in the cotton world."

The Liverpool Cotton Association, Mr. Winterbottom continued, had undertaken that, within a year of the market being reopened, it would examine the possibility of introducing a broader contract than the basis of American on which the system was being at first established. Special and urgent attention was demanded by the position of long-staple cotton, he continued, the first step being to demonstrate that a Liverpool futures market based on American cotton can be made to work. To quote him: "When that market is operating smoothly attention must be devoted to the longer stapled cottons. There are surely enough consumers and traders all the world over interested in long-staple cotton to support a futures market in this country based on a well-thought-out and suitable long-staple contract."

Textile Plant

Russian buyers are "showing interest" in textile finishing machinery produced by the big Manchester engineering firm, Mather and Platt. Mr. Loris E. Mather, Chairman of the Company, disclosed this at the annual meeting in Manchester. He said later that the firm had a representative in the Soviet Union at the moment who had been approached by Russian mill interests. "They are interested in the textile bleaching, dyeing, printing and finishing machinery we manufacture and we are hopeful that some definite order will result from this visit."

Russia is an old customer of the firm's for textile machinery. "A great deal of the textile plant we delivered to that country prior to 1914 is believed to be still in existence," said Mr. Mather. It was also disclosed at the annual meeting of the Company that important contracts for textile finishing plant have been secured from Turkey. No disclosure was made about the value of the contracts.

Quality of Overalls

Complaints that some manufacturers are so keen to sell their garments at lower prices than anyone else that all restraint on quality is thrown overboard, were made by Mr. N. W. Hey, retiring Chairman of the Domestic Group of the Overall Manufacturers' Association of Great Britain. Mr. Hey told the annual meeting of the group that, in some cases, the fabric was the lowest grade that was made, garment measurements were reduced to the very barest dimensions, the bias binding was no longer vat dyed, and the number of stitches to the inch was appallingly low. "The result is that there are now on the market many different qualities of overalls, some of which are so poor that they will not stand up to hard wear and the rigours of modern washing machines," he said.

Proceeding, Mr. Hey observed: "For this reason several members feel that there is still a good case to be made out for the standardisation of domestic overall fabrics, even if not for the overalls themselves. One could understand the desire to sell cheaply but there was surely a limit to the extent to which quality was debased. This line of action generally brought its own reward to those who adopted it, but, in the process, the trade generally got a bad name. Housewives should reject these articles," he said. "Some of them are no more than rubbish and it is up to housewives to refuse to buy them."

Discussing trade generally, Mr. Hey said that the trend towards more competitive trading had gone on at an increased tempo and the trade was now back to the state of affairs which existed before the war. Competition had been getting fiercer and fiercer and overall manufacturers had found that sales did not come as readily as a few years ago.—*All Rights Reserved.*

WORLD COTTON TEXTILE POSITION

MARKED RISE IN JAPANESE CLOTH PRODUCTION AND EXPORTS

A BRIEF reference to the recent trends in world textile economy, as revealed by the latest quarterly review of the U.K. Cotton Board, was made by our Manchester Correspondent last week (*vide* page 617). Fuller details of this review have since become available. These disclose that the final quarter of 1953 witnessed a high level of textile activity in the majority of countries. The aggregate cotton yarn production, for instance, in the major cotton textile manufacturing and exporting countries of the non-Communist world during the quarter was higher by 6 per cent. as compared with the previous quarter. Similarly, the total world trade in cotton piecegoods expanded by as much as 15 per cent., which is claimed to be the first substantial increase since the recession.

The rise in the output of cotton yarn in the non-Communist countries during the quarter under review was shared principally by Japan, the U.K. and the most of the countries of Western Europe. The output of cotton yarn (and also of spun rayon yarn, cotton piecegoods and rayon fabrics) in Japan touched a new post-war record in December, 1953. The rate of output during the quarter was roughly the same as in the corresponding quarter of 1939. The yarn output in January, 1954, is however, reported to have suffered a sharp break, due to shortage of raw cotton supplies, thanks to lack of foreign exchange. But to conclude on this score that the prospects for Japanese cotton textiles are bleak is not correct. For, if the expansion in the spindlesge by 150,000 in the three months ended December, 1953, after a period of relative stability in the first nine months of the year, is any guide, the output of cotton yarn in recent months must have been on the upward trend.

Textile Output in U.K.

In the U.K., cotton yarn production during the quarter under review was higher by 17 per cent. and cloth output by 21 per cent., as compared with the corresponding quarter of 1952. By November, 1953, activity in both spinning and weaving sections of the industry had reached 91 per cent. of the post-war peak level of November, 1951. Output in January was about 4 per cent. less than in November, but such a reduction, caused by absenteeism through illness, is quite usual at this time of year. It is beginning to appear that the spectacular increase in the output of spun rayon yarns and fabrics, which has been such a feature of the past year or so, may have gone a little too far, and a slight, but distinct, reversal of this trend is now noticeable. Since October, there has been quite a sharp drop in the output of spun rayon fabrics, and the peak output of spun rayon yarn, reached as long ago as last August, has never been equalled since. The prospects for the immediate future are of a continuation of the upward trend in output. The limiting factor will not be lack of demand, as order books are still lengthening, but the ability to produce and, above all, the availability of labour.

Complete figures relating to cloth output in West European countries are not available. From such statistical data as are available, it is seen that aggregate cotton yarn and cloth output in these countries during the quarter ended December, 1953, was higher by 7 to 8 per cent. as compared with the previous quarter. The rise was accounted for by all the countries, with the exception of Spain and Portugal which experienced a fall in output and Italy which maintained its previous quarter's level of production. Reviewing the prospects for the textile industry in the countries of Western Europe, the Board says: "The Italian industry still seems to be in the doldrums, although output of rayon cloth is making good recovery. Activity in the French, German and Dutch industries, on the other hand, is at a high level."

Incidentally, it may be noted that prospects for European textile industries are judged with moderate optimism by the O.E.E.C. Thus, in its survey of operations during 1953 recently published, the O.E.E.C. observes that, although it is difficult to assess closely the outlook for these industries over the years ahead, the indications are of reasonable prospects of a relative measure of prosperity, at least in the immediate future. Plant capacity in the European textile industries could, it is said, sustain a higher level of trade. The O.E.E.C., however, draws attention to the importance of action on the part of these countries to increase the level of consumption and demand for textiles in the European market themselves. Evidently, the organisation must have been prompted to tender this advice by the growing tendency to achieve self-sufficiency in many countries of the world which were formerly importers of textiles.

The cotton textile industry in the U.S. and Canada, on the other hand, seems to have experienced a recession. Thus, it is said that cotton consumption per working day in the U.S. has been less than in the corresponding period of the previous year in every month since August last. Moreover, the rate of consumption has been falling steadily, with the exception of a seasonal increase in January, 1954, and figures of machinery activity confirm this downward trend. No doubt the factors tending to reduce output are similar to those which are reducing activity in other industrial sectors of the U.S. economy, but, in the case of cotton textiles, they appear to have been aggravated by much smaller military purchases and the fall in exports of piecegoods. As a result, order books have been drastically shortened, although, so far, there has been little tendency for stocks of goods at the mills to rise. A further effect has been that cloth prices have fallen steadily since last August, although cotton prices have remained fairly stable.

World Trade

As already stated, the aggregate world trade in cotton cloth expanded by about 15 per cent. between the third and fourth quarters of 1953. The rise was shared mainly by Japan, India, France, Belgium, Italy and most of the other West European countries, while the U.S. suffered a contraction in exports. The rise of 15 per cent. in world cloth exports, though appreciable, was not sufficient to bring the total for the whole of the calendar year 1953 equal to even the low 1952 level. During 1953, Japan was the biggest exporter of cotton piecegoods, followed by the U.K., India and the U.S.

The bulk of the rise in world exports of cotton piecegoods during the quarter under review was accounted for by Japan. The quantity actually exported by this country was 280 million square yards, as compared with 242 million square yards in the previous quarter, which represents a rise of about 15.7 per cent. At this rate, the exports were almost double the low level touched during July-September, 1952. Of the total exports of Japanese piecegoods, the share of Indonesia alone was to the extent of 105 million square yards. The offtake by Siam, Burma, Australia, South Africa and British West Africa was also larger than in the previous quarter. Among the markets which took very much smaller quantities of Japanese cloth were Hong Kong and the U.K. Since the beginning of this year, negotiations with the Pakistan Government have resulted in contracts being booked for Japanese cloth. About 16.2 million yards of cloth are reported to have already arrived in Karachi.

Exports of cotton piecegoods from the U.K. in the last quarter of 1953 were larger than in the preceding quarter, making the total for the whole year almost the same as in 1952. Shipments of U.K. cloth to British West and East Africa expanded considerably. Exports to these markets are expected to continue to benefit from the ban on the import of all but a few types of cloth from Japan, provided, of course, there are no shipping difficulties.

India also figured prominently in the expansion in world textile trade during the three months ended December, 1953, the shipments actually made being 196.6 million yards, as against 176.7 million yards in the previous three months. Two factors were chiefly responsible for stimulating exports. First, the supply position of cloth was very comfortable, thanks to the high level of production. Secondly, the Government of India abolished the export duty on medium cloth. Most of the rise was with British East and West Africa, the U.K., and Australia. There was, on the other hand, a drastic reduction in exports of Indian cloth to Burma. The rise in exports of cloth has gathered further momentum during the first two months of this year too; the quantity exported is estimated at 170 million yards. It is not possible to say whether the same trend will be maintained throughout the year, what with the growing competition from Japan and the U.K. The U.K. Cotton Board, however, observes: "India will benefit in 1954 even more than the U.K. from the continuation of the restrictions on Japanese cotton goods in East Africa."

Exports of cotton piecegoods from practically all the West European countries registered improvement during the final quarter of 1953, as compared with the previous quarter. The improvement was particularly marked in the case of exports by France which was able to restore its trade to normal levels from the low point touched in the previous quarter, as a result of the sharp setback to shipments to Indo-China and West Africa. Exports from Italy continued their recovery, largely accounted for by larger offtake by Turkey, Italy's largest market. Exports from Belgium, especially to the U.K., also expanded considerably, as also those from Germany and Holland.

In distinct contrast to the trend of a general rise in exports of cotton goods, the U.S. was almost alone in suffering a contraction in exports during the last quarter of 1953. Its exports were lower than even the low level reached in the previous quarter. The fall was mainly accounted for by the steep decline in offtake by Indonesia. The Philippines also took less. The fall in exports to these two markets was so steep as to offset the improvement in despatches to Canada and other important neighbouring markets.

GOVERNMENT'S TEXTILE POLICY

A detailed account of the steps so far taken by the Government of India in implementing the recommendations of the Working Party for the Cotton Textile Industry was given by Mr. D. P. Karmarkar, Union Minister for Commerce, in the course of his reply to a question in the House of the People recently. Mr. Karmarkar was very explicit in his observations on the views of the Party that, owing to the change of management, in some cases to inexperienced hands, both production and quality of textiles had deteriorated. He said: "In order to curb the tendency, the Government have amended the Indian Companies Act, 1913, by the Indian Companies Amendment Act, 1951. Restrictions have accordingly been placed on changes in the constitution of the managing agents without the permission of Government. In addition, Government has assumed powers, under section 15 of the Industries Development and Regulation Act, to order an enquiry into the working of any mill, if it is satisfied that the mill is being worked prejudicially to public interest."

Referring to controls, Mr. Karmarkar said that the Government had relaxed all control measures, except in so far as they were considered necessary for the development of the handloom industry. He, however, made it clear that the Indian Companies Act and the Industries Development and Regulation Act gave Government "adequate' powers to interfere where necessary to do so. He alluded, in this connection, to the suggestion of the Technical Sub-Committee that the mills should produce fewer varieties over continuous periods of good quality cloth suited to the needs of the country, and said: "There is already a control on the production of shoddy cloth which prescribes the basic structure of cloth that should be produced, but mills are free to produce any variety within this structure. There are, however, restrictions on production of certain types of cloth such as *dhotis*, *lungis*, furnishing fabrics, etc. This is a special measure in the interest of the handloom industry."

Dwelling on the Party's recommendations concerning distribution of textiles, Mr. Karmarkar pointed out that, even after controls had been removed, State Governments had the power to regulate the distribution system, as they issued licences to cloth dealers—wholesale and retail. The Government, he said, did not consider it necessary to interfere with the existing system of distribution, for, with the change-over into a buyers' market, the Government was mainly anxious to ensure speedy and unhampered flow of cloth from the producer to the consumer and relieve accumulation of cloth in mills. As regards quality control on exports, he averred that the scheme drawn up by the Textile Commissioner for the inspection of cloth intended for export was approved by the Cotton Textiles Fund Committee at its meeting held on 10th February, 1954, and the suggestions of this Committee were under examination.

Mr. Karmarkar also dealt with the recommendations of the Working Party relating to raw cotton supplies. He claimed that the efforts of the Government to augment production of indigenous cotton with a view to reducing dependence on imports had been met with success. In support of this view, he said that production of cotton in 1953-54 was 4.1 million bales, against the Planning Commission's target of 4.2 million bales which still fell short of the demand. In this connection, he maintained that the measures to increase the acreage under cotton had not affected production of foodgrains.

Two other aspects relating to cotton, to which Mr. Karmarkar referred, related to purification of the varieties of cotton and export of comber waste. In regard to the former, the Working Party had urged strict enforcement of rules by State Governments. The Governments of Madras and Bombay had already amended the Cotton Ginning and Pressing Factories Act to provide for maintaining purity of cotton. The Governments of other States, including Punjab, Madhya Pradesh and Kutch, were also contemplating legislation for the purpose. Commenting on the Party's suggestions that a watch should be kept over the export of comber waste and that justification should be adduced by any mill which was unable to utilise it and desired to have it exported, Mr. Karmarkar observed: "The bulk of comber waste is exported to the U.S., the U.K. and other countries yielding valuable foreign exchange. The waste is utilised by a special process and, in the absence of the availability of technical skill, there will be no point in preventing exports."

"WORRAL'S DIARY"

The *Indian Textiles and Engineering Diary*, published by Messrs. John Worral Ltd., Oldham, England, the world-renowned specialists in the field of textile publicity (Agents in India: Messrs. W. H. Brady & Co., Ltd., Royal Insurance Buildings, Veer Nariman Road, Fort, Bombay. Price: Rs. 15 plus Rs. 2-8 for sales tax and packing and forwarding charges wherever necessary), needs no introduction. The *Diary* serves as an excellent medium for the promotion of mutual trade relationship between the makers and merchants of textile machinery, accessories, supplies, etc. The latest edition, that is the 1954 edition, contains a revised and up-to-date buyers' guide furnishing information on several important aspects relating to textile machinery industry and trade. Particular mention may be made of data relating to (1) machinery, accessories, power transmission equipment, mill supplies and services, (2) chemicals, auxiliaries, mineral products, etc., and (3) raw materials, yarn spinning, processing, manufacturing, finishing, merchanting, etc.

The other highlights of the publication are pictorial trade marks and designs, alphabetical list of trade names, notes and formulæ relating to spinning machinery and cotton preparing, besides a series of tables relating to the easy way of numbering yarns by counts, finding out warp and weft weights and determining piece-weight of small patterns, carding cloth, etc. Also given at the end of the publication is a list of cotton, silk, rayon and jute mills and of miscellaneous textile firms. The utility of the publication is enhanced by the inclusion of a classified list and glossary of textile fabrics (Indian section), statistical survey of cotton spindles and looms in India, and list of textile associations and other organisations connected with projection or marketing of textile fabrics in India and Pakistan.

FREE WORLD'S COTTON CONSUMPTION IN 1953-54

SIZABLE INCREASE FORECAST

AN encouraging trend, from the point of view of cotton interests the world over, is the increase in cotton consumption which has taken place in the current season in many of the leading textile countries. It now looks as though the consumption of cotton will improve significantly from the levels touched in the 1952-53 season. Indeed, the International Cotton Committee estimates that the current season's cotton consumption in the free world may aggregate 26.6 million bales (478 lbs. each). If this expectation materialises then the free world's cotton consumption will exceed not only the previous season's consumption level (25.9 million bales) but also the high level of 26.5 million bales, touched in 1950-51, the season that witnessed the Korean boom in textiles.

This conclusion has been reached by the Committee after a preliminary study of the statistical data covering the first four or five months of the present season which are now available. It is also based on the assumption that there will be no "serious reversal of existing trends" as the season progresses. If the conclusion—that is, the possibility of the 1953-54 level of consumption exceeding the 1950-51 level—is borne out by actual events, it will be a very healthy factor for cotton. This is because, whereas the 1950-51 level was, as already stated, the result of the Korean boom, the current season is a comparatively normal one. Accordingly, if consumption of cotton in this season exceeds the 1950-51 season's level it may well be regarded as a favourable development of long-term significance to the cotton economy of the world. The following table gives the consumption of cotton in the three years ended 1952-53 and the estimated consumption of cotton in 1953-54:

Cotton Consumption by Continent

(In million bales)

	1950-51	1951-52	1952-53	1953-54
U.S. and Canada ..	11.0	9.5	9.8	9.1
Central and South America ..	2.0	2.0	1.9	1.9
Western Europe ..	7.4	6.8	6.5	7.3

A study of the statistical data relating to cotton consumption during the first four or five months of the season reveals certain interesting trends. North America has undergone a period of contraction as a result of the perceptible reduction in cotton consumption both in the U.S. and in Canada. Aggregate consumption in South America remains steady. But, in other areas of the world, notably in Asia and Western Europe, there has been an expansion of consumption of varying magnitudes.

The following table gives the consumption of cotton in 1951-52 and 1952-53 and also the latest available consumption figures in 1953-54 and comparable figures for 1952-53:

Cotton Consumption

(In 000 bales)

	1951-52	1952-53	Month	Cumulative total from 1st August upto month shown	
				1952-53	1953-54
U.S.	9,196	9,457	Jan.	4,739	4,421
Canada	843	871	Jan.	137	108
U.K.	1,759	1,564	Dec.	611	748
France	1,226	1,160	Nov.	802	923
West Germany ..	965	1,073	Nov.	841	902
Italy	892	904	Dec.	340	328
Netherlands ..	267	295	Dec.	119	134
Belgium	407	371	Nov.	123	144

Sweden	125	122	Nov.	..	67
Austria	95	77	Dec.	28	38
Denmark	47	44	Dec.	19	20
Greece	107	103	Oct.	25	26
Finland	59	58	Jan.	31	24
Japan	1,818	2,065	Dec.	842	1,087
Hongkong	162	157	Dec.	63	85
India	8,299	8,656	Nov.	1,211	1,226

During the first half of the current season, the consumption of cotton in the U.S., as a reference to the relevant table will show, declined by over 300,000 bales or 7 per cent. as compared with the comparable period in 1952-53. The decline is attributed to reduced military purchases and decline in exports of textiles. The Committee states that consumption for the full season could, on present indications, be down by half to three-quarters of a million bales. Referring to the more recent trends in the American textile industry, the Committee says:

"There has been an improvement in the textile inventory position, however, and official sources state that textile markets were more active during January and that sales of some kinds of cotton grey goods were the largest since last spring."

The textile situation in Canada, it is stated, is becoming "critical." While overall demand conditions remain favourable, the home industry is affected by the large volume of imports from foreign countries. Over the first six months of the present season cotton consumption declined by 31,000 bales or 17 per cent. as compared with the same period in 1952-53. To remedy this situation, an amendment to the Customs Act has been made, which, it is stated, is designed to give Canadian manufacturers greater protection against textiles imported at abnormally low prices.

The European textile situation, as the table will show, remains favourable and cotton consumption in many countries continues to run significantly ahead of 1952-53. Relatively speaking, the greatest expansion has occurred in the U.K. where, over the first five months of the season, cotton consumption increased by 127,000 bales or 23 per cent. as compared with 1952-53. Although the recovery in demand has been primarily in the domestic market, there are signs of improvement in the export sphere, following the relaxation of import restrictions in Commonwealth countries, notably Australia and South Africa.

Both France and West Germany show an increase in cotton consumption. In France, it is stated, mills are generally experiencing easier conditions and better working margins but the industry is concerned with the competitive position of French textiles in export markets. In Italy, the textile situation has become more "stabilised" and, over the first four months, cotton consumption was only fractionally lower than the corresponding volume last season. Belgium and the Netherlands both show "significant" gains in consumption, while in Australia, Portugal and Finland also consumption is somewhat higher than a year ago.

There has been an increase in cotton consumption in many Asian countries. Referring to the trends of cotton consumption in Japan, India, Pakistan and Hongkong, the Committee says:

"Cotton consumption in Japan continues to run over 220,000 bales a month and up to the end of December was already nearly 245,000 bales higher than the corresponding 1952-53 total. Yarn production in December rose to a new post-war record of nearly 85 million pounds. The export outlook for cotton textiles showed a further improvement as a result of the Payment Agreement with the United Kingdom and the resumption of trade with Pakistan under the 1953 agreement. An export goal of 1.1 billion yards of cotton textiles for 1954 has been set by the trade compared with the 1953 total of around 900 million square yards. Trade sources are also of the opinion that cotton consumption in Japan during the 1953-54 season will rise to 2.5 million bales or over 300,000 bales higher than in 1952-53.

"Earlier in the season, the Indian textile industry was concerned with rapidly accumulating stocks but, following the Government's reductions in customs and excise duties on cotton textiles, both export and domestic demand has improved. Consequently, fears that there would have to be some curtailment in textile production in this country have subsided and the industry is expanding. Cotton consumption over the first quarter of the season rose by 36,000 bales and trade sources report that this continued during the second quarter. The improvement in textile demand in this country is reflected in the significant rise in raw cotton prices and the upward revision in import requirements during the present season. To further the export of Indian textiles, the Government has recently set up an export promotion council and the export target for cotton textiles during 1954 has been put at one billion square yards.

"Pakistan is becoming an increasingly important factor in free world cotton consumption. Over the first half of the season, consumption is believed to have been well in excess of 150,000 bales and for the full season, consumption is likely to approximate 350,000 bales.

"The Hongkong textile industry is also becoming more important. Mill consumption of cotton in Hongkong from August through December, 1953, totalled 85,000 bales against 63,000 bales a year earlier—an increase of 35 per cent."

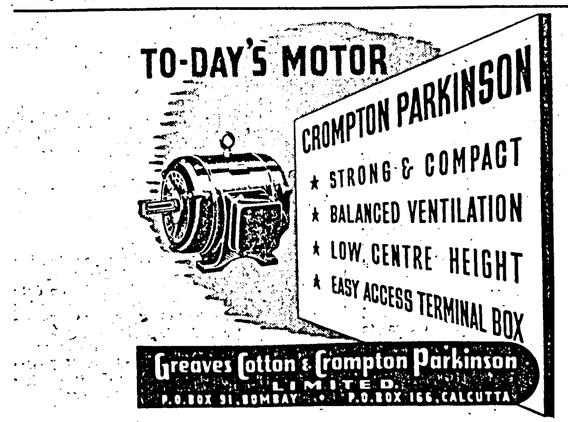
From what is stated above it should be clear that, among the Asian countries, Japan has shown the largest increase in cotton consumption. This will be further borne out by a reference to the second table on this page. The consumption of cotton in Japan is now running at an annual rate of 2.60 million bales, as against 2.06 million bales in 1952-53. The present annual rate of consumption in India, at about 3.58 million bales, is no doubt higher than in Japan but is not very much higher than in 1952-53 when it was 3.66 million bales.

COTTON BALE WEIGHTS IN U.S.

American cotton bales for most general purposes are estimated to have a gross weight of 500 lbs. and the average weight of bales from an entire crop exceeds this standard figure by only a very small margin. Each season, however, some bales weigh as little as 300 lbs. or less and others in excess of 700 lbs. These wide variations in weight from the average are the cause of several problems and inefficiences in the handling and marketing of cotton. Some statistics are now available on the extent of this problem, thanks to a study, conducted under the direction of Mr. John W. Wright, Chief Research and Testing Division, Cotton Branch, U.S. The results of this study, which are summarised in the February issue of the *International Cotton Bulletin*, show that although more than two-thirds of the bales in each of the 1951-52 and 1952-53 seasons were concentrated within the weight 450 to 550 lbs., about 8 and 6 per cent. of ginnings in the two seasons, respectively, either weighed 400 lbs. and less or more than 600 lbs.

Lightweight bales have several distinct disadvantages in marketing. Such bales represent an uneconomical use of baling material and are extremely difficult to compress to required densities. Bales considerably below average in weight are subject to appreciably higher per pound marketing costs since charges for services, such as storage, sampling, weighing, and compression, usually are assessed on a per bale basis irrespective of weight. Also, the usual tare allowance of 4.4 per cent. of gin bales is calculated on the assumption of 22 lbs. of bagging and ties on a 500 lbs. bale. Lightweight bales carrying such a tare exceed the allowance and are therefore subject to penalty for over tare. In order to offset this factor, graduated penalties are assessed in marketing channels—at $1 per bale at the 450 to 400 lbs. level and increasing to $3 per bale when weights drop below 350 to 300 lbs., according to territory of growth.

Extra-heavy bales (600 lbs. or more) are a serious potential source of damage to both gin press and compress equipment. Such bales also slow down operations and endanger workmen at both locations. Extra-heavy bales are more difficult to handle, store, and transport, are more ragged in appearance, and failure of ties is not uncommon. In recent years, efforts have been made to discourage the packaging of cotton in overweight bales, and penalties have been levied in some areas amounting to as much as $5 on bales weighing in excess of 700 lbs.



THE Government of India's intention to resort to deficit financing on a scale larger than was originally contemplated increases the responsibility of the Government and the currency authorities to exercise greater vigilance and prudence in their financial policies and to curb with a heavy hand any tendency to increase uneconomic or wasteful expenditure. This view was expressed by Mr. G. D. Birla, Chairman of the United Commercial Bank Ltd., in the course of his speech at the Eleventh Ordinary Annual Meeting of the Bank, held at Calcutta on Wednesday, 7th April, 1954. Referring to the problem of educated unemployment in India, Mr. Birla said that expansion of business and industry was the "only means of absorbing continuously increasing educated manpower," inasmuch as the opportunities in Government service, hitherto regarded as the main source of employment, were strictly limited.

The following is the full text of Mr. Birla's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you to our eleventh annual general meeting. The balance-sheet and profit and loss account of the Bank have been in your hands for some time. The year 1953 marked the commencement of the second decade of the Bank's history. I am glad to say, as in the case of the first decade, the second decade too has begun with considerable all-round improvement in the Bank's business.

Bank's Business

"The deposits of the Bank at the end of 1953 stand at Rs. 37.72 crores, an increase of Rs. 6.84 crores during the year. Expansion of your Bank's business under this head is of the order of 22 per cent. which when compared to an overall rise of less than 1 per cent. in the deposits of all Scheduled banks during the year should be considered as extremely good.

Cash

"Cash on hand and balances with banks stand at Rs. 6.86 crores which gives a ratio of 18.2 per cent. to deposits. This too is satisfactory.

Investments

"The investments of the Bank stand at Rs. 17.88 crores, showing an increase of Rs. 3.7 crores over the corresponding figure of 1952. The ratio of investments, less amounts borrowed there-against, to deposits is 38.5 per cent. Cash balances with banks and unencumbered investments amount in the aggregate to Rs. 21.39 crores which gives a ratio of 56.7 per cent. to total deposits. This is highly satisfactory. The Bank's investments appear in the balance-sheet at below market value.

Bills

"The amount of bills purchased and discounted has increased during the year from Rs. 5.07 crores to Rs. 7.80 crores, a rise of Rs. 2.73 crores or 53.8 per cent. It is gratifying to note that bills purchased, or discounted, a highly self-liquidating asset, form 20.7 per cent. of the Bank's total deposits. The amount of bills for collection is Rs. 4.24 crores against Rs. 2.75 crores in the previous balance-sheet. We should be happy that the total of bills purchased, discounted and received for collection stands at a figure of over Rs. 12 crores and forms over 20 per cent. of the total working funds of the Bank.

Foreign Exchange Business

"The Bank continues to make satisfactory progress in the foreign exchange business. The total of bills purchased payable outside India has increased from Rs. 2.75 crores at the end of 1952 to Rs. 4.72 crores at the end of 1953. Likewise, the amount of bills for collection payable outside India has increased from Rs. 1.46 crores to Rs. 2.47 crores. The total of both these figures has increased from Rs. 4.21 crores to Rs. 7.19 crores, a rise of 70 per cent.

"Business under acceptances, endorsements and other obligations, which is principally connected with international banking, has increased from Rs. 5.61 crores to Rs. 7.75 crores, a rise of 38 per cent. In spite of the fact that prices have been falling and there are more restrictions on imports, it is gratifying to note that there is all-round improvement in your Bank's foreign exchange business.

Advances

"Advances of the Bank have also increased during the year from Rs. 9.11 crores to Rs. 11.99 crores. Most of the advances of your Bank are of a seasonal character and self-liquidating. The percentage of advances to deposits is 31.8.

THE UNITED COMMER

Second Decade Begins With

Deficit Financing Imposes

MR. G. D. BIRLA'S SPEECH

"Taking advances and bills together there is an improvement under this combined head from Rs. 14.18 crores to Rs. 19.79 crores, an increase of Rs. 5.61 crores or nearly 40 per cent. The combined total of advances and bills, however, forms only 52.5 per cent. of total deposits.

"Looking to the fact that there has been shrinkage in prices and trade figures, it is gratifying to note that far from there being any fall in the Bank's business, there is increase both under deposits and lendings.

High Liquidity

"The Bank continues to maintain a very high ratio of liquidity. The total of cash, bank balances, money at call and at short notice, unencumbered investments and bills purchased and discounted stands at Rs. 29.19 crores which is 120 per cent. of demand liabilities, amounting to Rs. 24.27 crores. The percentage of these assets to total deposits and bills payable is 76.3.

Profit

"The profit of the Bank for the year 1953 is Rs. 23.51 lakhs. This is lower than the previous year's figure. Principal reasons for the fall in the Bank's profits, which are common to this Bank and to other banks, are higher rates of interest which banks in general pay on deposits, without any corresponding increase in their rates on lendings and investments, and increased cost of establishment charges; and in the case of your Bank some increase under 'other expenditure.' There is also in the case of new banks like ours need to provide for adequate depreciation on bank's property, furniture, fixtures, equipments and buildings which does not exist to such an extent in the case of older banks, as they have largely written off these assets in their long career. In the case of your Bank depreciation for 1953 amounts to Rs. 6.27 lakhs, which is Rs. 1 lakh more than that in 1952.

"The amount of interest paid is higher by Rs. 14.65 lakhs. Salaries and allowances of the staff, excluding ex-gratia payment made during 1952, shows an increase of Rs. 6.44 lakhs. Other expenditure mainly connected with our expansion programme shows a rise of Rs. 3.08 lakhs. Against these increases in expenses there is an improvement of only Rs. 19.35 lakhs in the Bank's earnings from interest, discount, exchange and commission, showing on balance a deterioration of about Rs. 5 lakhs in profit. That the Bank in spite of 22 per cent. increase in deposits and of 40 per cent. rise in its lendings should still experience adverse result in its net earnings shows that banking in India is faced today with extremely difficult conditions.

Appropriation of Profits

"Including the amount brought forward from 1952 the amount of available profit, after setting off Rs. 55,305 paid as donations to the Pagoda Building Fund of the Prime Minister of Burma and the Building Fund of the Federation of Indian Chambers of Commerce and Industry, etc., is Rs. 24,02,320-7-3. Out of this the Directors have already appropriated Rs. 5 lakhs to the reserve fund which now stands at Rs. 80 lakhs and made a provision of Rs. 9½ lakhs for income-tax, leaving a balance of Rs. 9,52,320-7-3. The Directors have recommended to you, in their report, to sanction payment of dividend at Rs. 2 per share, free of income-tax, same as last year, leaving Rs. 1,52,320-7-3 to be carried forward to the next year's account.

Branches

"During the year under review the Bank opened its branch in London. Originally, the office was located in Fenchurch Street, but later, on the Bank finding better and bigger accommodation it was shifted to No. 15, Throgmorton Avenue, E.C. 2. The branch is doing good business to such an extent that we are, even now, finding the present premises insufficient.

Management

"I am very sorry to inform you that the Regional Manager of the Bank for South-East Asia, Mr. J. P. Sen Gupta, died while on duty in the air crash at Singapore, when returning from Djakarta, on the 13th March, 1954. He was a capable and conscientious officer with a high sense of duty. On behalf of the shareholders, the management, the Board and myself, I offer our deep sympathy to Mrs. Sen Gupta and her children in their very sad bereavement.

"Your General Manager, Mr. B. T. Thakur, deserves our gratitude for ceaselessly working for the Bank. The great progress which the Bank has achieved in such a short time is mainly due to his industry, ability, effort and foresight. I take this opportunity to thank him and his colleagues and other members of the staff for their untiring work and high sense of duty.

Need for Common Action

"As a result of very keen competition amongst banks an undesirable practice has grown whereby not only fixed deposits but also call and overnight deposits are induced from banking accounts and accepted by banks at a disproportionately high cost of 3 per cent. or even higher, in addition to brokerage paid on such deposits. The cost of such deposits approximates to paying bank rate on current account money, which is not at all a healthy banking practice. All this money normally lies in current accounts earning little or no interest. One can understand borrowing at such a high rate between banks for the purpose of balancing their books at the end of the day, instead of going to the Reserve Bank, the lender in the last resort, for borrowing at the bank rate. But it is extremely undesirable that banks should load themselves with higher cost of borrowing by inducing transfers from their own current accounts to call deposits, or disturbing each other's similar accounts; because in the end it does no bank any good, but only increases the overall cost of deposits. The increased rate of interest on deposits does not bring into the banking system any new money. Again, all banks are suffering from their inability to pass on this added cost of deposits to their investments which were bought when the bank rate was lower and rates on deposits much lower; because rates of interest on such securities being fixed at the then lower rate cannot be raised at will. This disability is particularly great in the case of Indian banks which keep about 40 per cent. of their deposits in Government securities. It is not only the question of deterioration in the market value of investments which follows increase in the bank rate which affects banks, but also the more serious impairment in the rate of current earning which can only be righted after the securities mature for payment. But the difficulty of banks does not end here. The increased cost of deposits is also not fully passed on to banks' lendings. There is no corresponding increase in the rate of interest on advances, nor are the rates for buying bills adequately adjusted to the increased rates of interest on deposits. It will be to the common good of all banks that they should think of ways and means, if necessary under the friendly guidance of the Reserve Bank of India, to restore equilibrium in their earning capacity, by bringing their interest rates on their borrowings and lendings in proper alignment.

Establishment Expenses

"The question of establishment costs has really become very urgent and serious for banks in India. I give below a statement giving telling information about the establishment and operating expenses of Indian Scheduled banks and how they compare with the corresponding expenses of banks in the United States of America during the five years 1948 to 1952. These figures are based on the information given in the *statistical tables* relating to banks in India 1952, published by the Reserve Bank of India, and the Federal Reserve *Bulletin* for May, 1953. As the figures for 1953 are not available I have not been able to include them in the statement, but I am sure that, when they are published, they will indicate that the position has further deteriorated.

"It will be seen from the said statement that the ratio of establishment expenses to deposits of Indian Scheduled banks has been continuously increasing from 1.09 per cent. in 1948 to 1.80 per cent. in 1952, a rise of over 70 per cent. Similar ratio in the case of banks in the United States has been almost steady around three-fourths of 1 per cent. The incidence of these expenses on Indian banks is 115 per cent. more than in the case of the richest country in the world, the United States of America. As a result of the very heavy expenditure on staff, the overall operating cost of Indian Scheduled banks in 1952 is also extremely high. This means an unbearable load of 2.35 per cent. on deposits.

CIAL BANK LIMITED

All-round Progress in Business

New Responsibility on Govt.

AT ANNUAL MEETING

Expenses and Gross Profit

"Taking establishment expenses as a percentage of gross profits it will be seen that this ratio in the case of Indian banks has been continuously increasing from 44.31 per cent. in 1948 to 50.86 per cent. in 1952 in spite of continuous increase in the gross profits of banks. Similar ratio in the case of American banks is of the order of 33 per cent. This shows that establishment costs absorb 50 per cent. more of the gross profits of Indian banks than is the case in the United States.

"Taking the total operating expenses, the ratio thereof in 1952 to gross profits stands at 66.7 per cent. against the American ratio of 53.7 per cent. Further, the ratio has been steadily coming down in the U.S.A., whereas it has been going up in this country. In India, two-thirds of gross profit is absorbed by working expenses, a very high figure indeed, when we consider that out of the remaining balance older banks pay bonus to staff, which further decreases the residue from which first to meet such contingencies as fall in security values and bad debts to which banks are usually subjected and from the remainder pay taxes and dividends and to build up reserves. The position is getting very serious for banks, and they cannot be allowed to remain on such dangerous ground any longer.

Cost of Banking

"During the five years 1948 to 1952 the average establishment expenses per banking office in India for all classes of Scheduled banks has gone up from Rs. 33,000 to Rs. 50,000 per year, a rise of over 50 per cent. and this in spite of fall in deposits of banks.

Mounting Expenditure

"There is no end to this mounting expenditure. The Industrial Disputes Act, as it stands at present, makes it impossible for any bank to close any of its branches, howsoever unremunerative, or to terminate the services of any person howsoever inefficient or indisciplined; and on the top of this, increments have to be given every year, whether there is paying capacity or not, or whether the work of employees is good or not. The procedure of charge-sheeting employees, prescribed by labour tribunals, is cumbersome, resented by employees themselves, and does not help the banks. It is the very negation of speedy decisions so necessary in business and banking. No wonder there has been no expansion in banking in this country during the last several years. As healthy banking and its expansion are essential for the progress in the country's economy, I hope the Government will soon take suitable measures to restore normal conditions in banks.

Common Policy

"The least that the banks in India should do to overcome the deterioration in their working is to decide on a common policy in regard to the following matters:

"(i) No interest should be paid on current accounts. With an overall establishment cost of 1.8 per cent. and operating cost of 2.35 per cent. on total deposits, there is no justification for any interest being paid on current accounts, which, considering the nature of their operations and costs thereof are much costlier, in operation. Check accounts on savings banks are one of the means whereby such a common policy can be circumvented, and therefore common action in regard to such accounts is also necessary.

"(ii) No deposits payable at less than two weeks' notice should carry any interest. This will stop the suicidal action of banks in needlessly raising the rates of interest on call money received from clients. Such a practice already exists in other organised banking systems. For example, the minimum period for interest-bearing deposits is one month in the U.S.A., and three weeks in Great Britain. Inter-bank call loans may be exempted from such an embargo.

"(iii) Maximum interest allowed on any deposit should not be more than 1½ per cent. under the bank rate.

"(iv) Minimum rate for advances should not be less than 1½ per cent. over the bank rate. Looking to the facts that 50 per cent. of deposits of banks is in the shape of cash and bank balances, which earn nothing, and in Government securities return on which barely covers interest at present paid on fixed and call deposits, and that the banks' operating cost is 2.35 per cent. on deposits, and tends to rise further, a difference of 3 per cent. between the maximum rate of interest on deposits and the minimum rate on advances is the absolute minimum that should be ensured for healthy banking.

"(v) Rates for discounting and purchasing bills should be suitably regulated.

Appeal to Staff

"While I am conscious of the great and indispensable importance of all the members of our Bank's staff, high and low, and thank them for the work they are doing in making the Bank a big success, I think I should take this opportunity to appeal to them to concentrate more on developing their usefulness, efficiency and productivity, which qualifications alone can give abiding improvement in emoluments and standards of living. The present tendency to emphasise privileges without adequate realisation of wherewithal through better work, upon which alone depends the achievement of the former, has merely created weaknesses in the banking system, which must soon result in their own detriment. There has been no expansion in banking; but, on the contrary, there has been curtailment due to failure of banks and closing of branches. There is no further room for employment in banks which would automatically follow if there is increase in banking activities. The country's economy is crying for more banking. But obviously with an average expenditure of Rs. 50,000 per banking office no bank can think of even attempting to open at new places, because such expenditure once incurred cannot be eliminated, if the experiment does not prove a success. In their own interest, as well as in the larger interests of the country, they should be more realistic in their attitude. A little later I shall refer to the report of an important continental Federation of Trade Unions which also emphasises sanity and logical realism in labour policies.

General Conditions

"I take this opportunity to congratulate your General Manager on his appointment as a member of the Committee on 'Finance for the Private Sector.' Under the directions of the Planning Commission, the Reserve Bank of India has set up this Committee to explore ways and means for augmenting sources of finance for the private sector of Indian business, as distinct from the requirements of the public sector, i.e. of enterprises directly undertaken by the State, with special reference to the increased part that banks in India can play in this respect. Shortage in savings and capital is a serious impediment to the growth of our country's economy, and therefore a major cause of unemployment. Both Government and business men anxiously await the report of this Committee, which, I hope, will examine this vital problem of the country in a businesslike and, matter-of-fact manner, and indicate a correct basis for the formulation of the future financial policy of the country.

"Another body which has an important bearing on our national prosperity, is the Taxation Enquiry Commission under the chairmanship of Dr. John Matthai, a former Finance Minister of the country. For speedily developing the economic resources of underdeveloped countries like India, which have huge economic arrears to make good, there is immediate need for creating better incentives to make all sections of people rise equal to the occasion and to make all-out efforts for work, regardless of time, discomfort, inconvenience or sacrifice.

Savings and Investments

"While on the question of taxation, I cannot help referring again to a subject to which I have often referred in my annual speeches. In countries where literacy, capital, know-how, and banking and investment habits are poor, nothing helps growth of savings more than the introduction of bearer instruments of savings and investments. The revenue of the State will, in the ultimate analysis under the scheme, rise without doubt, because that money which does not at present function and does not pay any taxes to the State, will actually come forward and pay taxes through earnings on such bearer securities. To mitigate possible loss through evasion of tax, these instruments can be loaded with a surcharge of 10 per cent. of further tax, over and above what may be deducted at source and no refund should be allowed on such deductions. By such a formula the State would actually get more taxes. Increased revenues being so necessary, the State cannot afford to neglect any means which can help such a purpose. Continental countries have put no ban on bearer instruments. Banks in Switzerland continue to issue their bearer bonds. Conditions in our country, from the point of view of tax, are no worse than in European countries. It would be an act of high statesmanship to convert any act of seeming irregularity into an advantage, through suitable adjustments and modifications.

"Another point which I wish to stress again is that due to the great shortage of capable manpower in administrative and business management, a ceiling of 50 per cent. should be imposed on the tax payable on the highest slab of income of this class, in respect of their earned salaries. Our progress entirely depends upon these men, who bear great and increasing burdens of promoting national prosperity.

Money Conditions

"Monetary conditions in India in 1953 were fairly comfortable. The bank rate remained unchanged at 3½ per cent. per annum. The falling tendency of banks' deposits noticeable from 1950 has been reversed for the first time. Although Scheduled banks' deposits at the end of 1953 exceed the 1952 figure by only Rs. 7.40 crores, a nominal rise of four-fifths of 1 per cent., it is satisfactory to note that the change is for the better. Advances and inland bills of Scheduled banks at the end of 1953 stand at Rs. 461 crores, a drop of Rs. 7.24 crores or 1½ per cent. as compared to 1952. The ratio of advances and inland bills to deposits is 55 per cent. against 56.4 per cent. at the end of the preceding year. Currency in circulation has increased from Rs. 1,092 crores to Rs. 1,126 crores, a rise of 3 per cent. But the benefit of increased currency circulation has not come to the banking system because of the shift in income that has taken place to a different class of people, who are not accustomed to banking and investment. The money supply is, however, lower at Rs. 1,891 crores, a decrease of Rs. 47 crores, mainly due to fall in the balance of the Government of India with the Reserve Bank.

"The diversion of money from organised money market and the banking system, to the countryside and to private hoards, which has been a feature of the Indian monetary condition for the past several years, brings again to the forefront the urgent need of widening the field of work of banks, if necessary by new methods and new approaches suited to the special conditions of the country. I have already explained how Indian banks, on account of the high cost of working under present laws of the country, cannot cover millions of vastly scattered small pockets where money lies diffused. I hope the Committee which is looking into the question of increased finance for the private sector will find a solution for the deadlock and help in the growth of Indian banking.

Investment Trends

"All the loans floated last year by the Government of India and the State Governments were successful. Taking all the States together, they had to offer a return of slightly more than 4 per cent. on the loans. The return on Government of India's new flotation was a little above 3½ per cent. The index number of price of Government of India securities is somewhat lower at 90.1 against 91.1 at the end of

1952, but the index numbers of prices of other securities which give fixed or variable yield have gone up, the former having improved from 89.9 to 93.6, and the latter from 89.00 to 102.9. It is gratifying to note this remarkable improvement in the price of Stock Exchange securities, which has been falling continuously since 1946. The improvement in the investment market is due mostly to psychological reasons and partly to some institutional buying. As yet, there is not much evidence of the increased rate of formation of savings or of the increased purchasing power in the hands of people accustomed to invest. But as the industrial securities had gone down much below their intrinsic value due to a sudden collapse of confidence, as if by a stroke of paralysis, they have naturally revived due to improvement in conditions that are expected to arise out of the heavy expenditure contemplated by the Five-year Plan in the remaining two years. It is in our national interest to keep up this sentiment. Nothing should be done by the Government or the political leaders which will put a brake on incentive or confidence.

Other Economic Trends

"I am glad to say that on the whole Indian economy has shown a good deal of strength and vitality during the last year. The process of adjustment of war conditions to the post-war era, which was interrupted by the outbreak of the Korean War, has now restarted. The process of settling down will affect different countries differently. India's intrinsic economic strength is sufficiently great to make this process somewhat less disturbing than in the case of other Eastern countries, where the great fall in the prices of primary produce has led to a considerable worsening in their economic conditions.

"India has appreciably improved its agricultural and industrial production. The year 1953 closed with a surplus of 15 lakhs tons of foodgrains. Rice crop for 1953-54 is estimated to yield a record production of 27.1 million tons, an increase of over 4½ million tons on the previous year's crop. Wheat and other major crops also show good results. Food rationing has been abolished in many places and the prices are also coming down. The index number of wholesale prices has slightly gone up from 372.7 to 389.4, but it is much lower than the level prevailing in 1951 and at the outbreak of the Korean War. The index number of cost of living, for working classes in Bombay has likewise gone up from 321 in December 1952 to 344 in November 1953. The index number of industrial production is up by 9 points from 128.9 to 137.6, in spite of decreased production in iron and steel due to labour strikes and in jute goods. Most of the major Indian industries like cotton, cement, tea and paper show increased production. There was some decrease in the production of sugar, and the country had to import large quantities to take care of the deficiency. There is an all-round easier feeling of sufficient supplies in consumer goods at fair prices.

Terms of Trade

"Whenever there is adjustment of prices due to changes in overriding factors like war, peace, and foreign aid, the primary producing countries are generally the first to be adversely affected. With the decrease in war tempo consequent on the cessation of Korean hostilities, purchasing power of the people in backward areas is greatly reduced. Countries in South-East Asia are badly affected. The fall in the price of tin, rubber, copra, etc., has seriously impaired the purchasing power of these people, who mainly depend for their well-being upon their export value. It takes some time before this fall has full repercussion on the price of manufactured goods, where there is greater and organised resistance, due to trade unionism, to lowering production costs through adjustments in wages. But unless the equilibrium is quickly restored, the terms of trade would continue to be against the Eastern countries for a long time, which will in itself seriously react upon the industrial production of the Western countries. The latest figures of index numbers of terms of trade of different countries of the world show that in the case of the United Kingdom, there is a betterment from 111 at the end of December, 1952, to 86 at the end of October, 1953; but for other sterling countries the index number has gone up from 86 to 94. In the case of India there is a worsening from 93 in December, 1952, to 97 in July, 1953, in spite of the advantages we have of cheaper cotton and cheaper jute in our textile manufactures. In the case of other Eastern countries the index number has risen from 87 in December, 1952, to 94 in July, 1953. There is also a worsening in the case of Ceylon, Malaya, Burma and Japan.

Balance of Payments

"In spite of reduced level of India's foreign trade and a relatively greater fall in the prices of export commodities than in those of imported goods, I am glad to say there is improvement in India's foreign balances. Sterling balances of the Reserve Bank of India have improved from Rs. 705 crores at the end of 1952 to Rs. 723 crores at the end of December last. Our dollar position is also better. Against a deficit on this account of Rs. 173 crores at the end of 1952, there is a surplus of Rs. 18 crores in the corresponding period of 1953. India received during the year 92 million dollars for development purposes by way of Technical Co-operation Aid from the United States and under the Colombo Plan from Canada and from the Ford Foundation.

Five-year Plan

"On the 31st March last, India completed three years out of its Five-year Plan programme. The total cost of the Plan, which was originally estimated at Rs. 2,069 crores, has been increased by Rs. 175 crores, to promote employment, raising the overall figure of capital required to Rs. 2,244 crores. But the amount spent in the first three years of the Plan is about Rs. 1,000 crores which will leave about Rs. 1,250 crores to be spent during the next two years. If the Plan is to be completed, according to programme, something like Rs. 600 crores will have to be spent in the year 1954-55.

"The Finance Minister has budgeted for deficit finance of Rs. 250 crores during this year. This, when added to the amount of deficit financing during 1953-54, will raise the amount of deficit finance to Rs. 378 crores. In his speech in the Indian Parliament on the 22nd March last the Finance Minister announced that the total deficit financing up to the end of March, 1955, will go up to Rs. 495 crores, and the estimated amount under this head, during 1955-56, may go up to Rs. 395 crores, raising the total to Rs. 890 crores against Rs. 290 crores originally contemplated by the Plan. The amount had to be increased because of a shortfall of Rs. 290 crores in the estimated foreign aid, Rs. 135 crores estimated deficits in the budgetary resources of the Union and State Governments and Rs. 175 crores due to expansion in the Plan. This increased resort to deficit financing no doubt increases the responsibility of the Government and the Currency Authority to be more prudent and vigilant in their financial policies and to curb with a heavy hand tendency to increase uneconomic or wasteful expenditure. It also calls for greater self-discipline by the people of the country. If the created money is spent on development of economic plans there may at best be a small time lag until increased production obliterates the aberrations caused by this expenditure. For a country like India which has favourable conditions for development and is determined to go ahead with her economic programmes, this amount of deficit finance should have little or no effect on prices of consumer goods largely needed by the average man. With sufficient supplies of food and cloth, and the production capacity for the latter not as yet fully utilised, there will be no scarcity in these goods and there is no danger of rise in their prices. India must therefore successfully complete her Five-year Plan. If for any reasons full results are not achieved, the fault will not lie in the lack of finance, but in other causes like poor drive or inadequate administrative ability. Past record of performances of States for pursuing the projects under the Plan is not very happy; and efforts will have to be made to strengthen their organisations to go full speed to complete the projects entrusted to them.

Educated Unemployment

"The problem of educated unemployment continues to be the most disturbing issue in the country. Everyone has the fullest sympathy for these young men who after spending their slender parental fortunes and several years of precious young age in studying in schools and colleges are faced with serious problems of maintenance due to lack of occupation. The number of students in secondary schools and colleges has increased from 29½ lakhs in 1946-47 to 53 lakhs in 1951-52, a rise of over three-fourths. It is estimated that every year at least four lakhs boys and girls leave the safe portals of the educational institutions and come out in search of employment. This number is swelled by those who lose their employment on the abolition of rationing and controls, or as a result of closing down of some businesses during the process of adjustment which is now taking place. Figures of Employment Exchanges show a continuously decreasing record of replacements. On the other hand, registrations for employment have increased by 20 per cent. during the nine months March to December, 1953. A situation like this in a democratic age and in a democratic country is indeed very serious and critical.

Need for Expanding Business and Industry

"Employment in Government offices was for many years considered to be the main outlet for our educated young men. The opportunities for such employment are strictly limited. Expanding business and industry are the only means of absorbing continuously increasing educated manpower. It must be said to the credit of Indian business men and industrialists who, in spite of serious difficulties and great discouragements in the pre-independence age, had the vision and foresight to do the pioneering work of building up India's industries, undergoing losses, privations and sacrifices, which today employ millions of educated people, whose fate otherwise would have been bleak. Such is actually the case in several Eastern countries, which have acquired freedom in the post-war period. They have no modern business and industry worth the name to strengthen their economy and sustain educated employment. The policies and incentives which enabled our countrymen in the past to forge ahead in business, against heavy odds, would have found new encouragement under the new conditions. Indian business would have long before this attained still greater heights and would have brought the country greater prosperity and created many and varied opportunities for service and employment. Our young men and women who now feel so frustrated would then have been employed in work and remained contented. It is expanding business, expanding agriculture, and expanding industry that can meet the demand for work from the huge and ever-increasing mass of India's educated youth.

Labour and Wages Policy

"In my previous speeches I have given the caution that unrealistic policies would lead to deterioration in economy. A business man, be he a merchant or an industrialist, is always eager to work if he can make some profit, howsoever small, and if he is left free to take decisions in the interests of his business. But when the odds are against profit and the chances are for loss, it is too much to expect human nature being what it is, that people would come forward to engage themselves in losing enterprises. Inability on the part of the employer to control efficiency, discipline, and outturn in business, is the greatest obstacle to expansion in business and employment. If an employer is not free to control work and production, or if wages are governed by considerations other than those of quantity and quality of production, then the employer is helpless to achieve successful results. Our industrial labour legislation will have to be materially altered if the country aims at increased industrialisation and increased employment.

Establishment and Operating Expenses of Banks in India and the United States of America.

		1948	1949	1950	1951	1952
Indian Scheduled Banks—						
Deposits	Rs. crores	875	760	754	748	715
Gross profit	Rs. crores	21.44	21.47	22.14	24.62	25.25
Net profit	Rs. crores	8.07	7.88	6.58	7.51	7.44
Percentage of establishment expenses to gross profit		44.31	48.08	50.80	48.68	50.86
Percentage of establishment expenses to deposits		1.09	1.36	1.49	1.60	1.80
Percentage of operating cost to gross profit		60.8	63.7	65.7	64.8	66.7
Percentage of operating cost to deposits		1.48	1.80	1.93	2.13	2.35
Average establishment expenses per banking office	Rs.	33,000	37,000	42,000	46,000	50,000
U.S.A. Federal Reserve Member Banks—						
Deposits	$ million	121,362	123,885	133,089	141,015	147,527
Gross profit	$ million	2,678	2,725	2,994	3,363	3,755
Percentage of establishment expenses to gross profit		34	34	33.4	33.4	33.1
Percentage of establishment expenses to deposits		.72	.75	.75	.80	.84
Percentage of operating cost to gross profit		56.4	56.2	54.8	53.9	53.8
Percentage of operating cost to deposits		1.20	1.24	1.23	1.28	1.37

Note: 1. The word gross profit is taken to mean income from banking operations less interest paid on deposits and borrowings.
2. The word operating cost means establishment and other expenses of banks excluding interest paid.

Basis of Better Living

"The number of people who are enjoying the present one-sided benefit of industrial legislation is a microscopic minority of the total population of the country. They have been misled in a way and have been pampered to such an extent that they have acquired, through Industrial Tribunals run by men who have no knowledge whatsoever of the wider economics of the country, an overriding veto over prosperity and employment. Every one has the fullest sympathy with men of low incomes and poor standards of living. But the solution is not the burdening the consumer with a load beyong the capacity of his purse. Labour even cannot prosper unless production goes up. Production cannot go up unless it is sold and it cannot be sold unless the cost of production is within the reach of the consumer. Herein lies the crux of the problem. India is a poor country and to inflate the cost of production is to put a virtual ban on increased production. It is through industrialisation alone that all needs can be met. Sentiment and emotion for human suffering are noble traits of character; but to satisfy them we must concentrate on cheaper and increased production. We should, therefore, under no circumstances, divert our attention from the primary to the secondary issues, which would defeat the very object of sentiment. For solving India's unemployment, the need of realistic economic policies and the restoration of proper climate with greater freedom to business and industry are axiomatic. I hope the difficulties through which industry has gone and the necessities of the process of adjustments to which I have already referred will make all of us—Government, labour leaders and industrialists—sober, and will lead to a common outlook and a common emphasis on increased and better production, through harder and more work, as the basis of better living and better wages.

"Trade Unions and Full Employment"

"A number of wise and correct decisions as to the attitude of labour on employment and national economy are contained in a recent report of the Swedish Federation of Trade Unions on 'Trade Unions and Employment' which fully support the views I have just expressed, and which I have been reiterating for several years. The report 'recommends a much more vigorous labour market policy as a complement to general measures to keep effective demand below inflationary level. By means of economic incentives, selectively applied, a democratic society should be able to attain results equal to those achieved by dictators through force, i.e., a labour market whereby supply of and demand for labour adapt themselves very quickly to each other . . . . Administrative measures to combat inflation, such as price control, wage control, investment control and exchange control are of an awkward, negative type, always forbidding people to do what they want to do. In the larger run, they cannot be successful and they are, therefore, of a distorting and self-destructive nature.' A true correct analysis which all well-wishers of labour should bear in mind. Such a prudent policy would necessitate a certain amount of internal self-discipline by the trade unions, whether in this country or anywhere else. Labour being one of the largest forces in present-day civilisation, it is incumbent on its leaders to think constructively and not to countenance any destructive agitation. In the case of the Swedish labour movement it is realised that 'the Central authority of the Confederation of Trade Unions should discourage demands that would increase wage differences between workers performing work requiring similar physical efforts and mental qualifications, and at the same time take a favourable view of wage differentials based on differences in skill and ability.' The decisions of Indian Labour Tribunals are a complete negation of this wise finding by the labour leaders in other countries, and constitute a virtual embargo on expansion of employment in India, particularly of the educated classes, who should be intelligent enough to know what is good for them and the country.

Development Corporations

"To assist India in the development of industries, there are proposals to start two Development Corporations, one by the Government of India which will consider proposals for providing finance for large-scale industries, when private agencies may not be able to gather all the required finance. The second is by Indian industrialists with the blessings of the Government of India and of the World Bank. These moves are in the right direction. They will be autonomous bodies and work in different spheres. Each of them will have very wide powers for providing finance, managerial and administrative ability and technical know-how. They may even arrange participations between established industries abroad and domestic enterprises. Working of these institutions may be even on unorthodox lines or on *ad hoc* basis. They will establish their own conventions and traditions as they grow and gain experience.

No Clash

"The Industrial Finance Corporation and the new institutions of a similar nature that are being started by States have a limited objective. They provide part of long-term finance to people who are supposed to know everything of the industries they want loans for. But the proposed Development Corporations will embrace the very foundation and establishment of industries, including promotion, blue-prints, technical and administrative skill and finance. Their role will not clash with the purpose of the Industrial Finance Corporations which have a valuable part of their own to play in the country's economy.

International Conditions

"Your Bank today works in seven different countries. It is therefore not only a National Bank of India but a National Bank of every country it works in. It must be considered as an agency for international financial co-operation between the various countries which it serves. Our economic and statistical division conducts studies of economic problems of all these countries also. As Chairman of the Bank I must say a few words about the economies of the countries in which it operates.

United Kingdom

"As a member of the British Commonwealth, India is happy at the growing prosperity and improved reserves of Great Britain. Our currency reserves largely consist of sterling balances and the strength of sterling in the world markets automatically strengthens our rupee.

"At the last meeting of the Commonwealth Finance Ministers in Australia a number of common problems were discussed, and decisions were reached to improve the finances and economies of its components. Such meetings must strengthen not only domestic finances but also the invisible financial bonds of the members.

London's Importance

"Announcements by the British Treasury a few weeks back of the reopening of the gold market in London on the 22nd March and removing the distinction between bilateral and transferable sterlings are to be welcomed. Sterling is a key currency and it finances about 40 per cent. of total world trade. These changes will increase the use and status of sterling.

"Exchange trading rooms in London banks were reopened last year, after many years of closure since 1939. That was the first step to restore to London something of its pre-war financial machinery. The present two measures will further strengthen London's position and prestige as the biggest international financial centre. These decontrols must further fortify the recent increased confidence in sterling. It being now more usable, foreigners will more freely hold it; and some of it can be locked away by them in gold. The only element lacking now in the complete reversion to pre-war conditions, is the free convertibility between sterling and dollar. This obviously can not be attempted all at once, but the measures taken so far must hasten the day of complete freedom from control on exchanges.

Currency Convertibility

"The report of the U.S. Commission on Foreign Economic Policy, under the chairmanship of Mr. C. B. Randall, has gone into the question of currency convertibility. It wisely says that the restoration of convertibility is not merely a matter of curbing currency inflation abroad. In its opinion, something much more is necessary than fixing of appropriate exchange rates and controlling inflation; and that is to lay proper 'emphasis upon the structural longer run nature of many of the war-induced distortions in production and trade, and upon deeper seated changes already apparent before the war.' A country resorting to free convertibility, according to the Commission, must have, as a prerequisite, strong internal economy possessing necessary qualities of:

(a) willingness and ability to control money supply and its budget as safeguards against inflation,
(b) mobility to make the best use of its resources and
(c) ability and willingness to save in order to increase its productivity and improve its competitive position in world markets.

"Attainment over time of these conditions can indicate how quickly full convertibility could safely be approached. By its gradual action, spread over a number of decontrol orders, Britain is surely but steadily marching towards the ultimate free convertibility of its currency. And that will also be good for the rupee and all currencies linked to sterling.

Burma

"Burma is our next door friendly neighbour where your Bank has five branches, all doing well, the fifth one having been opened early this year at Bassein. Through a policy of service and helpfulness our Burma branches are doing their utmost to help the growth of economy and business of that country.

"Hitherto, due to world shortage in food, Burma was able to get a good price for its rice which provided badly needed funds to repair its war damages and to carry on a relentless fight against the rebels. But the world position in food is fast improving and Burma may not be able to get the price for rice it has been accustomed to in recent years. It must, therefore, concentrate on quickly developing its various other sources of wealth—oil, mining, timber, etc. A brave and friendly people, who have been able largely to overcome rebel activity without external aid, deserve fullest consideration and support in the development of their national economy, now that conditions are more peaceful.

Pakistan

"Pakistan's economy has shown a good deal of vitality and strength. Its balance of payment position records an improvement, in 1953 being a surplus of Rs. 12.24 crores, as against a deficit of Rs. 87 crores in the previous year, a betterment of nearly Rs. 100 crores. It has now begun manufacturing jute goods, its jute mills being of latest and up-to-date model and very efficient in production. Its cotton textile industry is also expanding. A young country like Pakistan has naturally to undergo sacrifices in present consumption to build up industries for future benefit; but its people can look forward to a well-deserved reward of better living once the industrial programme is completed.

Malaya

"We should all be happy at the improvement that has taken place in the Malayan situation. Restoration of law and order is a prerequisite to economic improvement. This coupled with political reforms, must lead to further tranquillity. But the fall in the price of copra, rubber and tin has reduced peoples' purchasing power and Government's revenue. The restrictive policy on trade between Singapore and Indonesia has also affected the country's economy. Britain is to be congratulated in coming to Malaya's help by donating £6 million in 1953 and promising help this year too.

Hongkong

"Hongkong has had a difficult year of trade in 1953. It mainly engages in entrepot trade.

(*Continued on page 708*)

DEVELOPMENT OF POWER ALCOHOL

ITS IMPORTANCE TO SUGAR INDUSTRY

BOTH the inaugural address of the Union Production Minister, Mr. K. C. Reddy, and the presidential address of Mr. G. S. Gupta, at the tenth annual general meeting of the All-India Distillers' Association, held recently at New Delhi, spotlight the value of developing the power alcohol industry further. Such a development is desirable for two important reasons. First, to the extent the production of power alcohol is raised by utilising the molasses, which is a by-product of the sugar industry, the cost of sugar manufacture can be brought down. Secondly, production of power alcohol adds to the country's fuel resources and reduces its dependence on foreign sources of supply. Apart from being used in the form of blended fuel, power alcohol is extensively used industrially. It is used in alcohol lamps; it serves as an anti-freeze element for automobile radiators; it is useful in bronzing liquids, cleaning fabrics, glass, etc., and it is also used in the manufacture of disinfectants, dyes, enamels, etching, inks, lacquers, oil-refining, paints, varnishes, perfumes, soap, waterproofing compounds, etc.

It is the multi-purpose utility of this material that must have weighed with the Planning Commission in according a very important place to the power alcohol industry in the Five-year Plan. The expansion plan envisages an increase in the annual installed capacity of the industry to 21.12 million gallons by 1955-56, as against 12.87 million gallons in 1950-51. The production target is placed at 18.00 million gallons, a rise of 13.28 million gallons as compared with 1950-51.

Despite the importance given to the development of the power alcohol industry, as noted above, the progress actually registered during the first three years of the Plan has not been quite satisfactory. The aggregate quantity of power alcohol produced in 1953 was only about 7.92 million gallons which fell short of the installed capacity of 13.02 million gallons by as much as 39.2 per cent. Incidentally, it may be noted that the total annual requirements of power alcohol are estimated at over 39 million gallons. Drawing attention to this lag, Mr. Gupta pointed out that "in order to achieve the targets provided in the Plan, a proper take-off should be provided." In this connection, he urged the Government to ensure adequate supplies of molasses to the distilleries and to increase the price of power alcohol.

Raw Material Supplies

Mr. Gupta's plea for ensuring raw material supplies at lower rates is fully justified. As readers are aware, the distilleries have been complaining about inadequate and irregular supply of molasses for a long time. The reasons for this are said to be lack of proper storage facilities—both at the sugar factories and distilleries—and transport bottleneck. Many of the power alcohol distilleries are situated at places far from the sugar factories, so much so that the cost of transport is heavy. Again, there are severe restrictions on the possession, storage, use, sales and transport of molasses necessitated by the prohibition policies of some State Governments. These are, indeed, the handicaps that are standing in the way of a free flow of molasses from the sugar factories to the distilleries, which must be removed if power alcohol production is to be stepped up. Reassuring is the statement of the Union Production Minister that the Governments of Uttar Pradesh and Bihar—these two States together account for more than 74 per cent. of the total output of power alcohol—would take steps to help the manufacturers in getting adequate and regular supply of molasses. Reassuring also is his statement that the Central Government would look into the question of revising excise rules in the light of its responsibility to increase production.

Price of Power Alcohol

It is, however, difficult to agree with Mr. Gupta's demand for an increase in the price of power alcohol. For, if it were conceded, it would result in a further rise in the cost of petrol-power alcohol mixture, thereby leading to an increase in the cost of transport run on this mixture. If the use of this mixture is to be popularised, it is necessary that the price of power alcohol must be kept as low as possible; and every endeavour must be made to reach this goal through economy in expenditure and improvement in efficiency of production and management. The Union Production Minister did well, therefore, to emphasise this aspect. He, however, revealed that a decision in regard to increasing the price of power alcohol was pending with the Centre.

Two factors, it is said, have been responsible for the heavy cost of manufacturing power alcohol. One is the high fuel consumption and the other the low grade of molasses supplied by a number of sugar factories. As the Planning Commission has rightly suggested, if molasses are stored in covered tanks and if the distilleries are continuously operated and carefully regulated, it should be possible to bring down the cost of production. There is also the need for a substantial relief in excise duty. The distilleries supply alcohol to the State Governments and pay excise duty on the quantity delivered. But they are given credit only for the quantity actually mixed with petrol by the petroleum companies. It is reported that the distilleries are called upon to pay the excise duty even on the unavoidable transit and handling losses, amounting to 1.5 per cent. of the alcohol in some cases. It is unfortunate that, despite the Planning Commission drawing the attention of the State Governments to this unfair charge, these Governments have failed to modify their stand. There is the need, too, for a reduction in the handling charges paid to the oil companies for the blending and marketing of power alcohol-petrol mixtures. At present, these changes are as high as seven annas per gallon.

Demand

Allied to the question of reducing the cost of production is that of raising the demand for power alcohol, for it is common knowledge that a larger turnover itself would enable producers to reduce the price. Although the fears that power alcohol-petrol mixture would choke the carburettors of motor cars have been dispelled by expert opinion and although the blend is acknowledged as a better fuel than even pure petrol or pure alcohol, there has been no worthwhile improvement in the use of this blended fuel, except in a few States. Apart from the high price of power alcohol, the elaborate excise rules governing the manufacture, issue and use of power alcohol and the absence of a uniform excise policy have been acting as a check on demand. These have adversely affected the power alcohol industry by placing them at a disadvantage *vis-a-vis* imported petrol which is not subject to any distribution control. Although more than five years have elapsed since the Indian Power Alcohol Act, 1948, investing the Government with powers to control the affairs of the industry, was passed, the Government of India has still not enforced the provisions of the Act fully and effectively. It is, however, gratifying to be told that the authorities have now realised this aspect, although belatedly. An indication of this was provided by Mr. Reddy in the course of his address. He said: "The Government of India will look into the question of revising excise rules in the light of their responsibility to increase production... The Indian Power Alcohol Act, 1948, has been enforced in the whole of U.P. and Delhi and over large parts of the Punjab, P.E.P.S.U. and Vindhya Pradesh. It is proposed to extend it to the remaining parts of these States."

Simultaneously with the implementation of the aforesaid proposals, the Government of India should also examine, in consultation with the power alcohol distilleries, the petrol companies and the State Governments, the issue relating to satisfactory disposal of power alcohol. The present arrangement for the purchase of power alcohol from distilleries by individual State Governments and the distribution of the mixture at the same price as neat petrol by the petroleum companies appears to militate against the wider adoption of power alcohol as motor fuel. The Planning Commission's suggestion with regard to this is the establishment of an all-India agency for acquiring the output of all the distilleries and making necessary arrangements for its distribution in the form of petrol-alcohol mixture through the petroleum companies. It is not understood as to why nothing has been done so far to implement this suggestion.

"INDIAN SUGAR INDUSTRY—1952-53 ANNUAL"

Yet another useful and interesting annual edition of the *Indian Sugar Industry*, which refers to the year 1952-53, has been published. (Editor: Mr. M. P. Gandhi. Published by Messrs. M. P. Gandhi & Co., Jan Mansion, Sir Pherozeshah Mehta Road, Fort, Bombay 1. Price Rs. 6.) The latest Annual, like its predecessors, contains an excellent factual review of the developments in the sphere of the sugar industry and trade in India and abroad during the season 1952-53. A study of this review will enable one to assess the progress of the Indian sugar industry against the background of world sugar economy. A pertinent but well-worn point which Mr. M. P. Gandhi, the Editor, has made, once again, in his preface, is that the future of the sugar industry in India depends on the reduction in the price of sugar which depends greatly on the success of our efforts to augment the average yield of cane—we emphasise more on sucrose content—which is at present as low as 14 tons per acre.

The Annual under review contains a revised and up-to-date "Sugar Industry at a Glance" section. The section is replete with statistical tables—more than 40 in number—relating to various aspects of the sugar economy, as, for example, production and consumption of sugar, imports, our manufacture, sugarcane crop, etc. The other principal features of the Annual include comment on sugarcane price fixation, capital and dividend statement of sugar mills, discussion on import and export prospects and sugar control, and a note on the functions of the Central Sugarcane Committee and the Sugar Development Council. The list of sugar mills in India and Pakistan working and projected—with addresses of managing agents, information regarding crushing capacity, etc.—has been revised and brought up to date.

SUGARCANE PRICES IN MADRAS

The price of sugarcane paid to the growers in the Nallikuppam factory area is based on what is popularly known as the S.I.S.M.A. formula. This formula seeks to give the agriculturist a return for his cane, directly related to the price at which the resultant sugar has been sold, adjusted to the actual mill recovery: Under the formula, the cane growers are getting an additional price of Rs. 5-1-1 per ton, besides the basic minimum price of Rs. 35-11-8 fixed by the Central Government. The sugar factories in Madras had urged the State Government some time ago to give statutory recognition to the formula. The State Government accordingly asked the Centre whether such could be done. In its reply to this query, the Centre has clearly stated that statutory effect cannot be given to the S.I.S.M.A. formula which, it says, should be left to the voluntary settlement and mutual agreement between the sugar mills and the cane growers. Disclosing this in the Madras Legislative Assembly the other day, Mr. M. Bakthavatsalam, Minister for Agriculture, said that it could not give statutory effect to the S.I.S.M.A. formula. In the circumstances, all that it could do was, he stated, to try and bring about a satisfactory settlement by negotiation with factory representatives.

WORLD SUGAR PRODUCTION

The current (1953-54) sugar season is expected to witness a record world output of 38.88 million tons of sugar—beet and cane sugar—if the estimates made by Messrs. C. Czarnikow Ltd., world-famous sugar traders, are to prove correct. The output surpasses the previous record of 37.08 million tons touched in 1951-52 by about 1.8 million tons. As compared with 1952-53, the estimated output for the current season is higher by over 3.00 million tons or a rise of 8.8 per cent. India and Pakistan together account for a production of 1.5 million tons of white sugar and 2.2 million tons of *gur*.

NEW SUGAR FACTORIES

The Central Government has decided to take steps to increase domestic production of sugar, in view of the increased consumption in the country. The additional capacity to be installed, says a Commerce and Industry Press note issued on Saturday last, may take the shape of establishing new factories, expanding existing ones and, to a limited extent, setting up refineries. The Government has invited applications before 1st May next for additional capacity to be installed.

(ESTABLISHED 1907)

DIRECTORS' NINETY-THIRD REPORT

The Directors have the pleasure to submit a statement of Assets and Liabilities and of Profit and Loss Account of the Bank for the year ended 31st December 1953. The Auditors' Report is also annexed.

2. The Net Profit of the Bank for the year amounts to Rs. 12,90,886-14-10 and together with the sum of Rs. 1,04,201-3-5 carried from the previous year's account, makes a total of Rs. 13,95,088-2-3.

3. Out of this sum, the Directors have made the following interim appropriations—

	Rs.	a.	p.
An ad interim dividend at the rate of 5 per cent. and a bonus of 1 per cent. (both free of income-tax) was paid which absorbed	3,40,000	0	0
The Directors now recommend that the following further appropriations may be made—			
To pay a final dividend of 5 per cent. and a bonus of 1 per cent. (both free of income-tax) thereby making the dividend and bonus for the year amount to 12 per cent.	3,47,000	0	0
To provision for taxes	2,60,000	0	0
To transfer to the Reserve Fund under Section 17 of the Banking Companies Act 1949 raising it to Rs. 58 lakhs	2,50,000	0	0
To transfer to Sinking Fund raising it to Rs. 9½ lakhs	50,000	0	0
To transfer to Bank's Buildings account	25,000	0	0
To carry forward	1,23,088	2	3
Total Rs.	12,95,088	2	3

4. The Bank rate remained unchanged at 3½ per cent. during the year under report.

5. Offices of the Bank were opened during the year at Chetput & Gandhinagar in the City of Madras, Avenue Road in Bangalore City and at Kancheepuram, New Delhi, Panruti and Theni.

6. In accordance with Articles 95 and 96 of the Articles of Association of the Bank four Directors Messrs. L. Alagusundaram Chettiar, P. V. Em. Kulandayan Chettiar, K. Balasubramania Iyer and Rao Saheb E. M. Muthappa Chettiar retire this year by rotation and they, being eligible, offer themselves for re-election.

OWNERSHIP OF RAILWAY COLLIERIES

MINISTRY OF PRODUCTION TAKES OVER POSSESSION

ALTHOUGH belated, the transfer of ownership of the railway collieries from the Ministry of Railways to the Ministry of Production, with effect from 1st April, 1954, is welcome, because it will do away with the existing anomaly of the disassociation of ownership of the collieries from management. This will eliminate the botheration of the Chief Mining Engineer, Railway Board, who is responsible for the administration of the railway collieries under the direct control of the Coal Commissioner, from going to various Ministries for petty sanctions needed in the day-to-day management of the collieries and avoid delay in the execution of his work.

It will be recalled that, with the introduction of control on coal in 1944 and the unification in the hands of the late Department of Supply of the fuctions regarding production and distribution of coal, the management of the railway collieries was transferred from the Railway Department to the Department of Supply, with effect from 1st June, 1944. The State Railway Coal Department, including the entire staff, was placed under the administrative control of the Coal Commissioner. Although the immediate object of the unification of the functions relating to production and distribution of coal was achieved by this transfer, it was considered that the arrangement under which the ownership of these collieries remained with the Railway Ministry, while the control vested with another Ministry, was neither logical nor convenient. The alternative of retransferring the management of the collieries to the Railway Ministry, which owned them, or of transferring their ownership to the Production Ministry, which managed them, was carefully considered. It was only after much thought and discussion that the decision to transfer the ownership of the mines to the Ministry of Production was taken.

According to the resolution announcing the transfer of ownership, published in a *Gazette of India Extraordinary*, dated 1st April, 1954, the details of the transfer including the financial adjustments between the Central and Railway revenues and the future form of management of these collieries are under consideration and a decision will be announced separately. It is stated that the transfer of ownership will help rationalisation of production and economise costs. Although there is some truth in this statement, it is hardly the whole truth. For mere vesting of ownership and management of railway collieries in a single Ministry alone will not lead to the achievement of these objects. More tangible efforts will have to be made in this direction. It is common knowledge that the operating results of the railway collieries do not bear any comparison with the financial results of private collieries. The working of the collieries in 1952-53, the latest year for which figures are available, discloses a net profit of Rs. 61.21 lakhs, as against Rs. 11.29 lakhs in 1951-52 and a loss of 69.98 lakhs in 1950-51. It is true that this profit, as compared with the previous two years, is encouraging. But this profit is negligible, considering that the capital outlay on the collieries is as large as Rs. 7.28 crores and that no tax is paid on it, whereas the private sector pays nearly 50 per cent. of its profit to the Government by way of income and corporation taxes alone. If allowance were made for the latter factor, the net return will only be about 4 per cent.

It may be argued that a public enterprise is not operated for profit but for public benefit. But that does not justify the management showing any less concern for costs than private enterprise does. What is really needed now is a drastic change in the administrative set-up of the collieries.

The question of running the railway collieries on economic lines has been engaging the attention of the public and the powers-that-be for a long time now. The Railway Collieries Enquiry Committee was of the opinion that the establishment of an autonomous statutory body for the management of railway collieries was not only desirable but also imperative, so that the policy of running the collieries through a Government Department might be substituted by the system followed by well-managed industries. But the Working Party for Coal found itself unable to recommend the formation of a statutory body for a group of collieries alone. It felt that the efficiency hoped for could be realised through the formation of a private limited company or a joint-stock corporation, completely owned by the Central Government.

The recommendations of the Working Party for Coal to constitute a private limited company or a joint-stock corporation deserves serious consideration. It is, of course, assumed here that such a company or corporation should be free from red-tapism, so characteristic of Government Departments, and be allowed to work efficiently. This will be possible only if the corporation or the company is not regarded as an appendage of the Ministry concerned and is given freedom of action to implement the policies of the Government in the best possible manner. The Working Party has suggested that the management of the company so formed should be vested in a Chairman and a Board of Directors. Each of the Directors is to receive a share in the company from the President of the Republic, which is to be held only during the tenure of his office and any profit accruing or dividend declared should be credited to the Government and not to the person concerned. The arrangement, while ensuring a certain measure of autonomy to the company, is expected to give the Government of India full control over the collieries.

As regards the capital structure and allied matters, the Working Party is of the opinion that the capital structure of the company should be equivalent to the assets on the date of transfer and the company should pay interest on the same to the Government at a rate fixed by the Government from time to time. The Government should permit the company to obtain loans either from the Reserve Bank or the Government of India itself for the running of the collieries, at a rate of interest fixed by the Government from time to time. The net profit or loss of the company or corporation should be transferred to the Government of India, after it is ascertained at the end of each year's working.

PARTICULARS OF ADVANCES REFERRED TO ON THE ASSETS SIDE OF THE BALANCE SHEET AS AT 31st DECEMBER, 1953

PARTICULARS		Amount Rs. a. p.
(i) Debts considered good in respect of which the Banking Company is fully secured		9,55,92,625 15 2
(ii) Debts considered good for which the Banking Company holds no other security than the debtor's personal security		1,59,06,485 7 5
Advances under Joint and several Promotes	1,06,79,093 7 2	
Advances to individual parties including Bills discounted and purchased	52,27,392 0 3	
(iii) Debts considered good, secured by the personal liabilities of one or more parties in addition to the personal security of the debtors		3,30,031 7 11
(iv) Debts due on temporary overdrafts and other advances		7,75,075 1 10
(v) Debts considered doubtful or bad not provided for		Nil
Total .. Rs.		11,26,04,218 0 4

PARTICULARS		Amount Rs. a. p.
(vi) Debts due by Directors or officers of the Banking Company or any of them either severally or jointly with any other persons (of which Rs. 10,39,021-15-1 is fully secured)		10,49,284 9 4
(vii) Debts due by companies or firms in which the Directors of the Banking Company are interested as Directors, partners or Managing Agents or, in the case of private companies, as Members (of which Rs. 22,06,840-11-9 is fully secured)		35,58,903 7 10
(viii) Maximum total amount of advances, including temporary advances, made at any time during the year to Directors or Managers or officers of the Banking Company or any of them either severally or jointly with any other persons (of which Rs. 11,10,416-12-6 is fully secured)		11,20,597 0 9
(ix) Maximum total amount of advances, including temporary advances granted during the year to companies or firms in which the directors of the Banking Company are interested as Directors, partners or Managing Agents or, in the case of private companies, as members (of which Rs. 35,18,417-1-5 is fully secured)		45,47,741 10 1
(x) Due from Banking Companies		21,56,361 4 9

We have audited the above Balance Sheet of the Indian Bank Limited as at 31st December 1953 and also the above Profit and Loss Account of the Bank for the year ended on that date in which are incorporated the audited returns from branches and sub-offices and report that :—

(a) We have obtained all the information and explanations we have required ;

(b) Such information and explanations have been found to be satisfactory ;

(c) The returns received from the branches have been found adequate for the purpose of our audit ;

(d) The transactions of the Bank as have come to our notice have been, in our opinion, within the powers of the Bank ;

(e) In our opinion, the Profit and Loss Account shows a true balance of Profit for the period covered by the Audit ;

(f) In our opinion, the above Balance Sheet and Profit and Loss Account are drawn up in conformity with the Law ;

(g) Such Balance Sheet exhibits a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us and as shown by the books of the Bank ; and

(h) In our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act 1913.

SOUTH INDIAN TEA IN 1953

OUTLOOK FOR CURRENT YEAR GOOD

A FEW months after the Indian tea industry had emerged from the crisis of 1952 and reached the road to recovery, tea planters and traders entertained a reasonable optimism that conditions during 1953 might resemble much closer those of 1951 than of the critical year of 1952. There was, of course, no complacency among them in view of the fact that past experience had clearly demonstrated how delicate was the balance between world supply and demand. The severe crisis of 1952 had shaken their confidence so much that no one could be assertive over the outlook. No one could have expected that the price of common tea would reach within a year 4s. 6½d. per lb. on the London market, as it did two weeks back—a price never before experienced in this century. In fine, the year turned out to be an unexpectedly favourable one.

The causes for the turn-round in the fortunes of the industry are well known. What is more important at the present moment is to see how far the present trend can be preserved, so that the industry can be helped to overcome completely the effects of the 1952 crisis. An idea of this is provided by Messrs. Forbes, Ewart and Figgis Ltd., one of the leading tea merchants and brokers of Cochin, in their latest annual publication, *Tea Review* 1953. The publication, as its appellation suggests, is devoted mainly to a review of the main features of trading in the Cochin tea market in the past year.

One of the causes for the recovery in tea prices was the psychological effect produced by the decision of the North Indian tea producers to reduce the North Indian crop by about 50 million lbs. South Indian producers were not a party to this scheme, which, in practice, was not effectively applied in North Indian gardens themselves, as weather conditions had intervened to reduce the crop by 21 million lbs. South Indian production, amounting to 120.8 million lbs., was, on the other hand, a record high, being better by 7.9 million lbs. Consequently, India's total tea crop was short by about 13 million lbs. Referring to this, Messrs. Forbes, Ewart and Figgis observe that, in view of the present statistical position, it is as well that the North Indian crop was not voluntarily restricted, as the market might be even higher than at present.

Commenting on the trading in South Indian tea in the Cochin market during 1953, the *Review* says that there was, once again, an increase in the weight of tea sold in the market, amounting to 35 million lbs. in 1952 and about 24 million lbs. in 1951. All sections of buying interests throughout the world participated in the regular auctions. The demand for all good class of teas continued throughout the year and these teas realised prices satisfactory to producers. The price gap between low and medium teas narrowed very considerably during the 12 months under review. In January, 1953, the difference was some As. 12 per lb., but it declined to As. 4 at the end of December, 1953. Whole leaf teas in particular met a good market all through the year. Tippy teas continued to be a poor market. Offerings of low and medium B.Ps., which were difficult to sell in 1952, were considerably reduced in 1953, as compared with the quantity sold in 1952. All high grown B.Ps. met a good market.

A disquieting feature of the sale, however, was the decline in the quality of high grown teas. It is stated that, generally speaking, the quality of these varieties was not quite up to the standard of the offerings in 1952. This was particularly noticeable in teas arriving from the end of September to early November, during which period in 1952 some very attractive teas were seen from the Nilgiri District. There was very little really common tea offered, and low and medium teas were about average with good medium types rather above the previous year. In mid-season, there were again a number of bold ragged stalky broken orange pekoes, particularly from Central Travancore. The *Review* points out that the appearance of such teas can certainly be improved by careful sifting. Some B.O.Ps. seen could only be classified as unsorfed bulk.

A notable, but unhealthy, feature of the trading was the wide fluctuations in price of export quota rights. The price of 1953-54 quota, for instance, which opened at 12 pies at the end of March, declined to 7 pies in the middle of April, but hardened to 24 pies in the middle of June. After a drop to 10½ pies after the export quota was increased from 115 to 122.5 per cent. of the standard exports, the price advanced to 40 pies by the end of 1953. It further rose to 60 pies, but is currently being quoted around 33 pies. Adverting to this, Messrs. Forbes, Ewart and Figgis make the following pertinent observations:

"It would appear that speculators are in the main the cause of the rapid rise in the price of quota towards the close of the year. Such speculators have no connection with the genuine export of tea, but, as long as export quota is a saleable commodity, the market will attract speculation, which is definitely not in the best interests of the trade. It is believed that much of the speculation in quota could be stopped, if full and frequent information were made available as to the amount of quota utilised for export each month and the total balance of quota still on the Joint Controller's books at the end of each month. This monthly balance should be divided into three groups, namely, (1) quota at credit of export buyers; (2) quota at credit of estates; and (3) quota at credit of others. It is certainly time that some scheme be evolved, whereby dealing in quota is confined only to those genuinely interested in the export of tea."

As regards the quota for 1953-54, the *Review* estimates the amount of quota available to cover shipments from India at 470 million lbs., as against the approximate total shipments of 438 million lbs., leaving a balance of 32 million lbs., the majority of which is more than likely held by speculators.

The current trend of tea prices is no doubt encouraging, but tea producers cannot be said to have completely recovered from the effects of the crisis of 1952. According to Messrs. Forbes, Ewart and Figgis, "at the moment, it is difficult to forecast where and when the upward swing in prices will finish." But it appears that, at least for a few months to come, the present strong market will continue. Giving their impressions about the outlook, Messrs. Forbes, Ewart and Figgis observe:

"Present available statistics point to the continuance of a strong market, as there appears to be a world shortage of tea. This may possibly be felt at its worst between March and the end of June this year. World consumption is reported to be on the increase particularly in the United Kingdom and the U.S.A. Various reasons are given for the increase, but probably the chief reason is that tea is still the cheapest drink of its kind.

"Teas most likely to be affected by the strong market are those which come within the low and low medium categories. Clean common Broken Pekoe is quoted in London (18-2-54) at 4s. 4d. with best sorts at very little more money. Packet retail prices in the United Kingdom were increased by 4d. per pound in January this year, but, in view of the present market, the trade is, undoubtedly, faced with the prospect of another price increase in the not far distant future.

"Stocks in the U.K. at the end of December, 1953, were some 103 million, as compared with 129 million at the same date in 1952. Shipments from North India to the U.K. from 1st April to the end of December, 1953, were 238 million lbs., as compared with approximately 170 million for the same period in 1952. Last year's North Indian crop has been shipped much more quickly than the 1952 crop, shipment of which continued into May, 1953. It is believed that the 1953 North Indian crop will be shipped by early March, 1954, and, after that, it will be the middle of the year before any more tea can arrive in the United Kingdom from North India.

"If retail prices increase much further, a certain amount of consumer resistance may be met, but whether this would be sufficient to affect consumption seriously is doubtful. To sum up, from the producers' point of view, the immediate future looks profitable and the present high prices will encourage them to pluck liberally. More tea is needed to meet increasing consumption, but it will take many months before stocks can be built up again to a normal level."

However, the latest decision of North Indian tea estates to regulate crop in the current year also, indicates that it may take some more time than expected before stocks can be built up to the normal level and the firm trend of prices may get a longer lease of time than anticipated.

(*Concluded from next column*)

position which not only gives full employment but assures a very considerable importation from India. If the present arrangement is continued, no discriminatory action is involved and Britain, he asserts, is only falling into line with all the other jute manufacturing countries of the world in fostering the home industry. Of course, he admits that there is a way out for the home industry through regaining its old market for the special type of goods it manufactured in pre-war years. This trade was sacrificed during the war. But consumers abroad have found alternative uses and to displace them will undoubtedly be an uphill task and may, according to him, take several years.

VERSATILITY OF JUTE

DUNDEE PLEADS FOR STATUS QUO

"JUTE is everywhere. It is sacks and bags. It is rope, twine, cord and string. It is hessian and scrim. It is the backing on the board-room carpet and the lining in directors' shoes. It is the unseen part of lino and the unsung part of a Saville Row suit.

"All this, and yet so shy and so anonymous! For indispensable is the word. Wherever there is hard work to do, wherever toughness is needed, jute is on duty, day in, day out."

Thus runs the song of jute sung by an advertisement in praise of the universality of jute. Accordingly, there is little exaggeration in the tribute paid to jute as "the world's greatest industrial fibre and is second only to cotton in terms of production in the whole of the natural fibre group" by Mr. Louis M. Hill, a former Chairman of the British Jute Trade Federal Council, while discussing its many uses in a special supplement of the *Financial Times* dated 29th March, 1954.

Jute's appearance all round us in different forms and shapes is so common that its versatile use is generally hidden from the view. Therefore, it is likely that its importance is lost sight of. In this context, the remarks of Mr. Hill on the part jute plays in the various spheres are worth noting. He says:

"Jute's ubiquity and versatility are practically unlimited. It is found in one form or another in and in mines; in road, air and sea transport; and even in film and theatre palaces. Because of this tial in the smooth running of dozens of different industries in this country. About 40 per cent. of the total yarn production in the United Kingdom is taken up directly by consuming industries for use in carpets, fuses, cables, twines, cordage and ropes; and the balance is woven into cloth. As a woven fabric, jute covers a much wider range of application. First and foremost, it is a carrier for an infinite range of goods in the form of a bag—for grain, flour, sugar, chemicals, coal, vegetables, etc. —and it is as a packaging material that it is most widely known, either for bagging, wrapping or baling. But its use in the form of cloth goes very much further. It covers, for instance, brattice cloth in mines; backing for linoleums; roofing felt, needle felt and plaster foundations; linings in boots and shoes; chair covers and webbing foundations in upholstery; tailors' padding and deck-chair canvas; wall coverings and drapings in a wide range of colours; scenery and backcloth material for film studios and theatres; motor-car upholstery; road surface and airstrip foundations; and waterproof covers."

The story does not end there. The reason for the amazing versatility is that the jute cloth is remarkably adaptable to widely varying conditions. "It can be made," to quote Mr. Hill again, "proof against mildew attack and fire; it can be mixed with other fibres; it can be washed and it can be made water-resistant. More important, perhaps, is the fact that the porosity of the cloth allows the contents of a bag to 'breathe', thus keeping them in condition and air resistance can be varied to suit particular needs by altering the weave or by special finishing treatments. Even a completely impermeable package can be produced for the carriage of fine powders."

What is stated above emphasises the importance of the industry in peace-time. In war-time, the part it plays as a strategic material is much more vital. The supply of containers for foodstuffs alone to the Services is only one of dozens of war-time uses of jute.

Mr. Hill presses forward these considerations to underline the need for treating the jute industry as a key industry of Britain. He says that physically the industry in the U.K. is small and compact; actually its influence is widespread and scattered and its products could hardly be more widely diversified. Mr. Hill, therefore, welcomes the Government's assurance of a safeguard in the home market against overseas competition in jute goods when war-time jute control ceases to function. But the problem is how to provide the safeguard. Says Mr. Hill: "The question of freeing the imported cloth from control and, at the same time, providing a safeguard to the home industry is one that is fraught with considerable difficulty, owing to the necessity of finding a method of protection that is workmanlike and is realistic and is free from encumbrances of international agreement." Mr. Hill opines that "it is not at all certain that it will be quickly resolved." But the continuance of the present arrangement provides, according to him, a very fair treatment all round. At present the home industry is meeting only 60 per cent. of the country's consumption and the substantial balance must be met from imports. He does not see any great change in future in this supply

(*Continued in previous column*)

THE HIND BANK LIMITED

DIRECTORS' REPORT TO THE SHAREHOLDERS

The Directors have pleasure in presenting herewith the Audited Accounts of the Bank for the year ended 31st December, 1953.

The Profit and Loss Account after deduction of all working expenses shows a profit of .. .. ..

IRRIGATION AND POWER PROJECTS

SECOND FIVE-YEAR PLAN UNDER PREPARATION

THE Planning Commission has invited State Governments to submit broad details regarding irrigation and power projects, which they would like to be included in the second Five-year Plan. The Technical Committee, appointed by the Planning Commission recently, with Mr. Jaisukhlal Hathi, Deputy Minister for Irrigation and Power, as Chairman, will scrutinise the reports that will be submitted by the States to the Planning Commission. The details of information called for relate to the following aspects of each project:

(1) The general scope of each project and the area to be benefited;
(2) whether the schemes have been investigated or are under investigation or have still to be investigated;
(3) the period required for construction and development;
(4) phased programme of works and benefits expected year by year;
(5) expenditure involved, internal and external; and
(6) priority accorded or to be accorded to any project which the State Government has undertaken or proposes to undertake.

So much for the particulars required regarding the new irrigation and power projects or to the stages of projects which have not yet been taken up. But, in respect of schemes which are on hand, and which will continue beyond the Five-year Plan, details of phasing of expenditure and of the works programme have been called for. This will enable the State Governments and the Planning Commission to appreciate the extent to which irrigation and power schemes taken up during the first Five-year Plan involve commitments in the second Five-year Plan also.

Power Position in States

The Planning Commission has also requested the State to explore the power position in the States and to suggest schemes having good employment potential. According to a communication recently addressed by the Commission to the States, the Commission has expressed its willingness to recommend grant of loans by the Central Government for suitable schemes requiring installation of thermal sets of sizes ranging from 500 kw. to 2,500 kw. and for the construction of transmission and distribution lines from the existing sources of supply. It will be recalled that one of the recommendations made by the Planning Commission last year to the States for relieving urban unemployment was to submit proposals for small power projects to provide electricity to growing towns, several of which could not expand their industries for lack of power. After considering the proposals, the Commission approved schemes costing about Rs. 11 crores. A few proposals for providing additional power in urban areas by private electricity undertakings, it is stated, were also submitted. They are said to be under the consideration of the Commission at present.

A review of the progress which the various river valley projects have so far made is provided in the Annual Report of the Ministry of Irrigation and Power for 1953-54, submitted to Parliament a few days ago. It discloses that the Bhakra-Nangal Project will release in July this year water for non-perennial irrigation of about 600,000 acres and power from the Nangal Hydel Channel Power House No. 1. The Nangal dam is complete, except for the installation of gates and gearings which are in progress. The Bhakra canals are scheduled to be completed by July, 1954. It is stated that work on the Bhakra dam, the second highest in the world, will begin soon after the diversion of the Sutlej through the tunnels next winter.

Damodar Valley

The Damodar Valley Project has made substantial progress. The Tilaiya dam and the hydro-electric station there are completed and the reservoir was filled to capacity during the last monsoon. At Bokaro thermal power station, all the three units of 50,000 kw. each, with the exception of some minor works, have been put into commission. The Konar dam is expected to be completed before the monsoon sets in. It has already started storing water, which will be used for cooling purposes at Bokaro thermal station. The diversion tunnel and the diversion channel at the Maithon project have been completed and earth dam is likely to be completed by June, 1954. Work on the right abutment and part of the spillway is in progress. The dam is expected to be ready during 1954-55 and the hydro-electric station during 1955-56. At Panchet hill, the earth dam and the excavation of the diversion channel are in progress. The Durgapur barrage and the canals project, which will divert waters released from the dams upstream for purposes of irrigation, is making satisfactory progress and it will be completed during 1956-57. Work on the transmission and distribution systems is progressing according to schedule. About 268 route miles of 132 kv., 66 kv. and 33 kv. transmission lines have been laid. Thirteen grid sub-stations and receiving stations have also been completed.

Hirakud Dam

The Hirakud dam will be substantially completed, and power and water for irrigation made available by July, 1956. The revised estimates of Stage I, as recommended by the Control Board, have been approved by the Government of Orissa. The project will irrigate about 448,600 acres in Sambalpur and Bolangir-Patna districts and develop a power potential of 1,23,000 kw. as installed capacity and 85,500 kw. as firm capacity.

The Kakrapar weir in Bombay State was opened on 29th June, 1953. Irrigation facilities have been provided to 40,000 acres. The aggregate expenditure up to the end of December, 1953 was Rs. 3.34 crores.

The scheme for controlling the Kosi River and providing irrigation was finalised during 1953-54. It will involve the building of a barrage at Hanuman Nagar, flood banks and other protective measures. The estimated cost of the first stage is Rs. 40.26 crores. The work will be executed by the Bihar Government and the Central Government will render necessary technical assistance.

Investigations completed during 1953-54 related to the Narmada Valley, Sabarmati and Madhya Pradesh (Mahanadi-Satiara) Projects and the reports are under examination. Data in regard to the Ukai dam in Bombay State, Tikarpara and Naraj dams in Orissa State, and Assam Projects are being collected.

The Mahanadi Bridge Committee, which was appointed in pursuance of the recommendations of the Public Accounts Committee, to scrutinise the accounts of the rail-road bridge at Sambalpur, has submitted its report. It is now under the Ministry's consideration. The Machinery and Equipment Committee set up by the Ministry to collect data in regard to operation, maintenance and standardisation of plant and machinery on all projects, has submitted its report which is being examined.

Rihand Valley Project

A recent development is the agreement entered into between the Governments of the U.S. and India, on 30th March, which provides funds for the Rihand Valley Project (U.P.). The total joint cost of the first phase of the project, which is expected to be completed by 31st March, 1957, is Rs. 22 crores, of which the dollar expenditure under the agreement will be 11 million and rupee expenditure 16.69 crores. The dollar expenditure will be the U.S. contribution under the India-U.S. Technical Co-operation Agreement and includes a provision of $2.5 million from the technical assistance funds for making technical services available, if needed. The rupee expenditure, which will be incurred by the Government of India, is towards the cost of construction, equipment, supplies and services.

The Rihand River Valley Project is one of the five major river valley projects, which were decided to be taken up towards the end of the first Five-year Plan. In its first phase, finance for which was provided under the agreement, just concluded, power generation is primarily contemplated. The U.P. Government sanctioned the construction of the dam on the Rihand River as early as in 1948. Approximately Rs. 75 lakhs have already been spent on the project. The dam will be about 500 feet high and 3,000 feet long and will create a reservoir 180 sq. miles in area holding 8.6 million acre feet of water. The power plant will have an initial installed capacity of 120,000 kw. and an ultimate installed capacity of 240,000 kw. In addition to the dam and power plant, the project will include the construction of an extensive system of transmission and distribution lines to carry the power to the areas where it will be used. The total area that will be irrigated will be 450,000 acres in Bihar through canals and 1,600,000 acres in U.P. by tube wells worked by electric power generated by the project. The annual yield of additional foodgrains is estimated at 600,000 tons.

Another operational development was signed between the U.S. and India on 31st March, 1954, which provides for U.S. assistance for expanding the existing thermal power plant in Madras City. This is a joint project which involves a contribution of $2.9 million by the U.S. and Rs. 2.92 crores by the Government of India. The project will increase the generating capacity of the Madras City power plant of 30,000 kw. during the next three years.

Yet another agreement between the U.S. and India was entered into on 2nd April, 1954, for improving the electric power capacity of Rajasthan, under the Indo-U.S. Technical Co-operation Programme. The agreement provides for the renovation and augmentation of 19 thermal power stations, both steam and diesel, in the State of Rajasthan. Extension of transmission and distribution lines is also provided for. A total of approximately 20,000 kw. of generating capacity will be installed.

The total estimated joint cost of the project is $3.6 million and Rs. 1.78 crores. The U.S. contribution of $3.6 million will be spent for the procurement of plant, equipment, supplies and services and their transportation to India, while the rupee expenditure of 1.78 crores will be incurred for defraying the costs of inland handling and transportation of plant, equipment, and supplies acquired under this project, the expansion of the power plant structures, the installation of the transmission and distribution lines and all other local costs connected with the scheme.

BRITISH OVERSEAS AIRWAYS CORPORATION

The British Overseas Airways Corporation (B.O.A.C.) completed 25 years of air service to India on 30th March, 1954. India is today one of the 51 countries of the world linked by the air services of the B.O.A.C. It will be recalled that it was on 30th March, 1929, that the first U.K.-India air service was inaugurated by Imperial Airways, one of the predecessors of the B.O.A.C., which was merged with the British Airways Ltd. to form the B.O.A.C. in 1939.

The history of the B.O.A.C.'s services to India makes stimulating reading. The most notable development has been the introduction of the Comet jet liner between London, Bombay and Colombo in August, 1952, and later through Delhi and Calcutta to Singapore and Tokyo. Thanks to the foresight, initiative and courage of the British aircraft manufacturing industry, the B.O.A.C. has revolutionised air travel with the turbo-jet Comet I's. Improved and more powerful versions of these will be flying ere long on the Australian and South American routes. This will be followed by a fleet of large four-engined Bristol Britannias using turbo-propeller power units.

The next important development has been the introduction of tourist travel at reduced fares. There are, at present, first and tourist class services from Delhi, Calcutta and Bombay to the U.K., which connect with other services to the North and South Americas, Canada, and East, West, Central and South Africa. In conjunction with Qantas Empire Airways, British Commonwealth Pacific Airliners and Trans Canada Airlines, the B.O.A.C. gives an all-British Commonwealth route round the world. The tourist fares from India to Europe and England represent a saving of nearly 30 per cent. during off-season and at least 20 per cent. during the on-season, as compared with the standard fare. A significant feature to be noted, in this connection, is that students up to the age of 26 can travel at half the adult standard rates.

The plans of the B.O.A.C. for the future are encouraging. There is a proposal to link India with two round-the-world routes—one in the northern and the other in the southern hemisphere. The northern route is planned to give a service from London via Newfoundland and Canada across the North Pacific to Tokyo, where it will join the existing route from London to Tokyo via the Middle East and India, thus making a world circuit of just under 20,000 miles. The southern route will run from London to New York, San Francisco, Honolulu, New Zealand, Australia, Singapore, Ceylon, India, the Middle East and back to London. There will be two types of service on each route—a "cannon ball" service of very fast aircraft operated by Comets and their later development, and a tourist service of aircraft, cruising between 300 and 400 miles per hour and carrying about 100 tourist passengers in reasonable comfort and with great economy of operation.

ELECTRO-CHEMICAL PROCESSES

THEIR APPLICATION TO INDUSTRY

THE importance of applying electro-chemical processes to the economic advancement of nations was stressed by Mr. S. V. Ramamurthy, Adviser to the Planning Commission, at a symposium on this subject organised by the Central Electro-Chemical Research Institute at Karaikudi, last week. Inaugurating the symposium, Mr. Ramamurthy said that there were three aspects of electro-chemical engineering, namely, electricity, chemistry and engineering, and the most significant of them was electricity. Not only was the physical value of electricity being well appreciated now, but its social importance also had come to be recognised. It might be looked on not merely as an instrument of economic development, but also as a vital instrument for the realisation of democracy. It seemed "almost to take matter nearer to the basic realities of life and spirit."

It was against this general background that Mr. Ramamurthy dealt with India's power potentialities and programmes. Remarking that India was not conscious of such power resources a decade ago, as it was today, he observed:

"The great river valley schemes of India, which have been pressed into construction, thanks to the vision and energy of our Prime Minister, will all yield large quantities of hydro-electric power. I may mention that it has been calculated that, in the small river of Indravati falling into the Godavary, there is potentially two million kilowatts of power. In the lignite mines of Madras and coal mines of Madhya Pradesh and Hyderabad, there are frozen rivers of power which can be used as sources of thermal power. In the first Five-year Plan, the development of water had received primary attention. In the second Five-year Plan, the development of power, as well as of water, will be emphasised. In this Institute, you are thus linked to one of the prominent lines of development, which India is following."

While electricity is the most powerful instrument for economic and social progress, chemistry is the most fruitful field for its use. The unseen powers of electricity are well adapted to be applied to the world of atoms. Nature stores its atoms according to its own economy. Man has to rearrange them to make use of such atoms for his own need. There are two ways in which electricity has been used for this purpose. One, according to Mr. Ramamurthy, is the conversion of electricity into heat and then the application of the methods of chemical engineering for reduction or revision of chemical composition. The other relates to the separation of chemical atoms in electrolytic cells by the use of electrical forces. Dealing with this aspect, Mr. Ramamurthy observed:

"Whether heat may be obtained from coal and oil or from electricity is a matter to be decided by economic considerations. Electro-thermal products, both metallic and non-metallic, have begun to be largely used by developed nations. They include metals like iron, aluminium, manganese and chromium. Electrolysis has enabled man to get metals in a high degree of purity, such as aluminium and magnesium. There is much today in our life which is the produce of electro-chemical industry, such as aluminium and stainless steel vessels, automobiles, cutlery, aeroplanes, radio sets, transformers, generators and electric lamps. Fifty years ago, we lived without these things. It is now the way of civilised life to use these things. Even if India desired to stress the value of an ascetic way of life, such stress can only yield a corrective and not an alternative to prevailing ways."

Then there is the engineering aspect. Adverting to this, Mr. Ramamurthy stated:

"In the engines which we use, heat is used to produce motion. For the vehicles used to make chemical changes, such as furnaces, we use iron to withstand the heat generated. If electricity is converted first into heat and then used for making chemical changes, such as steel from pig iron and limestone, the vehicle has to withstand heat and is made of iron or other strong metal. In electrolytic cells, electricity can be used directly to make chemical changes. Electricity can also be used directly to produce motion. Can we not, therefore, achieve engines for motion and vehicles for chemical change in the shape of cool engines and vehicles? The plant and the human body use the energy of life for motion and chemical change at a cool temperature. Beyond metals there is wood, as beyond heat there is electricity. The Industrial Revolution in England was based on coal and iron. I venture to think that a rejuvenated India, in a fresh creative activity, may produce an industrial revolution based on electricity and wood in place of coal and iron. This is a matter to which imaginative electro-chemical workers among you may perhaps give attention."

Concluding his speech, Mr. Ramamurthy called for planned progress of work of the Institute. He particularly suggested that the institute might take up the study of all metals that were being used in Indian industry or were needed for its further development. He urged investigation into the extent to which, and the manner in which, these might be obtained from indigenous as well as imported ores, whenever necessary, and in a high degree of purity. He felt that the extent to which the traditional metals like iron, copper, zinc and lead had been replaced or reinforced by lighter metals, which had recently come into use, showed the need for a study also of the use of metals, which had as yet received little attention.

IMPORT OF DOMESTIC SEWING MACHINES

The Government of India's defective policy regarding import of domestic sewing machines has brought about, it is stated, conditions akin to virtual monopoly in this line of trade. This state of affairs has arisen because no new-comers are allowed to participate in the import trade in these machines. Licences for importing them are being continuously given only to those who imported them in 1948-49 from soft currency area under O.G.L. IX. The exclusion of new-comers seems to have left the trade in the hands of a handful of importers who, taking advantage of a closed market, have not only eliminated the established middlemen in the trade but are quoting exorbitant rates for the machines.

Commenting on the Government's policy, the middlemen point out that, by their exclusion from the import trade, the Government has done them an injustice even though it has permitted grant of import licences to new-comers in various other items such as cloth, copra, tobacco, cigarettes, domestic refrigerators, certain machines, watches, musical instruments, etc. They do not understand as to why the same policy should not be pursued in the matter of sewing machines. They further draw attention to the fact that, in the import policy for January-June, 1954, provision has been made to grant facilities to persons even in certain special lines as, for instance, tailoring establishments, dentists, opticians and *agarbatti* manufacturers.

Licences for importing domestic sewing machines are issued to established importers on the basis of quota of 40 per cent. of half of the best year's imports. In calculating the best year's imports, only such types of machines as would, prior to January, 1950, have been classified as domestic machines, are taken into account. All sewing machines other than industrial sewing machines are included under the category of domestic sewing machines for purposes of the O.G.L. An industrial sewing machine is defined as a sewing machine whose landed cost is above Rs. 300 including the cost of cover but excluding the cost of treadle.

COAL MINES RESCUE STATIONS

A number of improvements were effected at the coal mines rescue stations in 1952-53. Among the new equipments are a siren of half-a-mile range for alerting the permanent rescue brigade in an emergency, chemical carbon monoxide detectors for detecting the percentage of carbon monoxide gas in areas affected by fires or explosions and methanometers for ascertaining the fire damp content in mine atmosphere. An improved type of reviving apparatus for rescuing persons through narrow headings, kata thermometers for ascertaining the hygrometric conditions and a sledge stretcher have also been introduced.

In view of the difficulties experienced, during rescue operations, arising out of accidental blockade of the passage of retreat of the rescue teams, the Entrapped Procedure Practice was introduced in 1952-53 in routine refresher trainings. This procedure enables the teams to remain safely in the irrespirable atmosphere with the breathing apparatus, for a longer period than the scheduled time, thus increasing the chance of rescuing entrapped teams. According to the report, initial training was given to 44 persons. In addition, 143 refresher and 104 pit practices were held.

The permanent rescue brigades of the rescue stations at Jharia and Sitarampur were called upon to render assistance on 12 occasions involving 17 days, while the Sitarampur Rescue Brigade rendered service on three occasions involving 16 days. Since their inception, these rescue stations, besides training 1,073 persons in rescue and recovery work, assisted in recovering about seven million tons of coal from the Jharia and Raniganj coalfields.

MINERAL DRESSING IN INDIA

A plea for the establishment of small-scale mineral dressing plants, along with the bigger ones, is made in an article on mineral dressing in India, published in the latest issue of the *Indian Minerals*, (Vol. VII. No. 2), issued by the Geological Survey of India. Mineral dressing is a process of treating raw minerals by some very cheap method, invariably physical in nature, to yield marketable minerals free from the associated rocks. The usual processes are hand picking, washing, jigging, tabling, flotation and heavy-media, electro-magnetic and electro-static separation. At present, mineral dressing plants are in operation for gold at the Kolar fields, for copper at Ghatsila, Bihar, for lead and zinc at Zawar, Udaipur, for iron ores at Noamundi, Singhbhum, for beach sands at Alwaye, Travancore and for coal at Jamadoba and West Bokaro in Bihar.

INDIAN AIRLINES

Aircraft of Indian Airlines Corporation will soon be seen in a new red and blue livery. A band of blue will run from the nose along the line of windows up to the tail. Above and below the blue will be a red line. The Corporation crest will appear below the cockpit in gold, while the Indian flag will be depicted on the tail fin. "Indian Airlines" will be painted in blue in both English and Hindi above the window line of the plane.

This colour scheme was designed, it is understood, in conjunction with I.C.I. (India) Ltd., whose well-known range of 'Dulux' paints will be used for repainting throughout the fleet. Both the selected colours are from the standard range of colours supplied by this firm. Each aircraft will be repainted as it returns to its base for regular periodic overhaul.

PERFECT IRON CRYSTALS

The General Electric Company has successfully evolved the first perfect crystals of pure iron. The crystals are a thousand times stronger than structural steel and have a tensile strength of one million pounds per square inch. The perfect crystals, in which every atom is in its proper place, were formed by superheating ordinary iron until it vaporised and then re-crystallised on a solid surface. The pure crystals, it is stated, do not rust, because their perfect alignment of atoms does not permit oxidation.

THIRTY-THIRD ANNUAL GENERAL MEETING

MR. R. E. CASTELL ON PROSPECTS FOR COTTON TEXTILE INDUSTRY

PRESIDING over the Thirty-third Annual General Meeting of the shareholders of the Buckingham and Carnatic Co., Ltd., held in Madras on 26th March, 1954, Mr. R. E. Castell, Chairman of the Company, struck a note of caution, in his address to the shareholders, about the prospect of a contraction in the profit margin of the Indian textile industry. He also visualised the weakening of demand for cloth, as the heavy burden of excise duties and sales tax imposed a heavy burden on the already strained purchasing power of the consumer.

The following is the full text of Mr. Castell's speech:

"GENTLEMEN:

"The report of the Directors and the accounts for the year ended 31st December, 1953, having been sent to you in due time, I propose with your permission to take them as read, but will be glad to answer questions later.

"I trust that the shareholders will regard with satisfaction the trading results of the year now closed which reflect the welcome change from the adverse conditions which prevailed for the greater part of the year 1952.

"Fortunately, there was no recurrence last year of the drought conditions which had been a distressing feature of several recent years and led to a crisis in Madras City and its surrounds in the early months of 1952. Although, however, good rains during the last south-west and north-east monsoon periods have provided the foundation for an adequate supply of water for some time ahead, we would all feel happier if a project was in clear view for a long-term safeguarding of the City's water-supply.

"During some periods of statutory price control over yarn and cloth, the prices fixed did not always cover the cost of production, particularly of that of high quality cloth. In 1952, the price control structure had a severe effect on the working of your own Company and would have resulted in a heavy loss but for the partial removal of price controls from 1st October, 1952, and without the help of export sales throughout the year at prices which, in spite of export duties and competition in overseas markets, were better than the prices fixed for domestic consumption.

Revision of Cloth Prices

"With the complete removal of price controls, your Company regained in 1953 the privilege and discretion to fix prices in proper relation to manufacturing costs. Care was always exercised, however, to ensure that the Company's selling prices were kept well within the reach of consumers, and generally advantageous purchases of the mills' requirements of raw materials for the year, assisted towards this end.

"I now turn to the profit and loss account and trust that the more detailed presentation will be welcomed by shareholders. The Directors' report has already drawn attention to the need for the increased charge for depreciation as a result of the additional capital expenditure on buildings and machinery brought into use during the year, and in addition it has been considered prudent to set aside nearly Rs. 9 lakhs from profits to the reserve for increased replacement costs of buildings and machinery. I am sure you will agree with the Directors on the importance of building up this reserve, in view of our commitments for essential rehabilitation and replacement.

"You will note from the appropriation account that we have made the necessary transfer to the debenture redemption fund as required by the Trust Deed, and have set aside a sum of Rs. 6 lakhs to general reserve in order to strengthen the financial position of the Company.

"Unfortunately, taxation takes a large part of our profits and does not enable us to conserve sufficient finance for possible future expansion. It is to be hoped that the serious effect of taxation on company finances will be relieved to some extent as a result of investigation of the taxation structure in this country by the Taxation Enquiry Commission.

"Although we have expended approximately Rs. 81 lakhs on capital account, we have been able considerably to reduce the overdraft with our bankers mainly as a result of the reduction in quantity and cost of stores, raw materials, process and finshed stocks. Every possible economy has been effected in the purchase and consumption of stores, and this is reflected both in the balance-sheet and the profit and loss account. It is my pleasant duty to express the Directors' appreciation of the very close co-operation they have received from the Manager and other officers of the mills, who have so greatly assisted in carrying out these economies and in introducing measures to achieve increased efficiency in the various processes of manufacture, including dyeing and finishing.

"As some measure of compensation for the disappointing results of 1952, your Directors have considered it reasonable to propose a higher rate of dividend to the ordinary shareholders and of bonus to employees. I feel it is my duty, however, to stress that the payments so made for 1953 must be regarded as exceptional, not only because payments both of ordinary dividend and bonus to employees are the highest in quantum in the history of the Company, but also because their scale will not be easily capable of repetition in future years.

Contraction of Profit Margins

"There are, indeed, abundant signs of a current and impending further contraction in profit margins in the Indian textile industry. The production of the industry in 1953 of 1,508 million pounds of yarn and 4,903 million yards of cloth passed the target of the first Five-year Plan, and output continues at the high rate set last year, although consumer demand has at times flagged alarmingly, and especially so during the third quarter of 1953. At the present time, the textile industry and trade face the prospect of demand for cotton and other textiles being weakened by the levy of additional excise duties by the Union Government and of heavy extra sales taxes by some of the States, in particular by those of Madras and Mysore. The effect of the proposed higher excise duties on fine and superfine cloths is tempered by the removal of the import duty on foreign cotton, but the additional sales tax thereon and the increases for other varieties of cloth both in excise duty and sales tax, will impose additional burdens on the already strained purchasing power of the consumer. In spite of a recent recession in prices of Indian cotton; the cost both of indigenous and foreign varieties is much higher than it was six months ago, but it is, I believe, the general experience of the industry and trade that buyers are unwilling to pay such higher prices as would be justified by the increase in cost of raw materials or of manufacture.

"I hope that arising from the many representations which have been made to the Central and States Governments some mitigation of the proposed new indirect, but severe, taxation will result: at the very least it is desirable that cloth of medium counts should not bear heavy excise duty and sales tax, as such cloth is used more by the poorer classes than cloth of coarse counts which has not been subject to such heavy attack by the taxing authorities. I think that the rating of cotton cloth into four categories has created the illusion that the range from 'coarse' to 'superfine' denotes an ascent from cheap utility to costly luxury, but the truth is that many fine and superfine cloths are popular with all income groups because, as well as being durable, they are light and cool to wear.

Sales Tax

"The judgment of the Supreme Court in March, 1953 to the effect that inter-State sales are taxable in the State in which the goods are delivered for consumption, has caused much confusion and anxiety throughout India to industrialists, traders and consumers. Following recent deliberations by the Union and States Finance Ministers, most of the States have decided on a procedure for the collection of tax on inter-State transactions which will not have the severely retrospective effect which some States were earlier proposing to enforce. There will, however, be a heavy extra burden of work for assessees, on your own Company for instance, which carries on an India-wide trade embracing 26 different States, most of which levy sales tax.

"In sales tax collection India differs from other countries in making no distinction between industry and the individual consumer. The result is that, in India, manufacturing costs are inflated by sales tax incurred on purchases of raw materials, stores and other essentials. The application of inter-State sales tax to these purchases will seriously increase the cost of manufacture.

"I hope that governments will urgently consider the exemption of all industrial consumers from payment of sales tax on their purchases whether made within the State or from outside. Such exemption would both benefit the consumer of the products of industry, and improve its ability to compete in overseas markets. Also, subsidiary industries would be assisted. As an example of the latter I may mention the garment-making industry of Madras State whose widespread trade is now imperilled by the proposed additional sales taxes on cloth.

Company's Export Trade

"Your Company has a long-established export trade and direct contacts with many overseas markets. From 1946 until 1952 this part of our trade was subject to the varying export controls ruling from time to time, but now no restrictions apply to the export of cloth except that of mineral khaki which has for long been a most important item of your Company's overseas trade. These restrictions were slightly relaxed in 1953 and we hope that as a result of further representations made to the Government they will soon be removed altogether. The only remaining export duty on cloth is that of 10 per cent. on coarse varieties and I hope that the Government will now give consideration to the withdrawal of that duty, as it has become apparent that it is a real obstruction to India's export drive.

"The recent welcome abolition of the import duty on foreign cotton should help towards achieving India's export target of 1,000 million yards of mill cloth, but this calls for an increase of nearly 300 million yards over exports in 1953. The newly formed Textile Export Promotion Organisation and the start made with a scheme for export quality control should also help to bridge the gap, by stimulating demand and improving the reputation of Indian textiles overseas.

"Your own Company will continue to do everything possible to make a useful contribution towards India's export trade.

"My colleagues and I have aimed to follow the example of our predecessors in the management of your mills by taking an active interest in the handloom industry. Ours being composit mills, most of our yarn production is used for our own weaving, but our supplies to the handloom industry both of ordinary and waste yarn have measurably increased since before the last war and we have taken pains to ensure that they are distributed to the best advantage of the handloom weavers. We readily join in the general sympathy for the more ancient industry, but we, nevertheless, consider that in order to ensure its survival, it is unnecessary to hazard the stability of our own industry which has to bear an ever-increasing share of responsibility in the economic progress of India, being expected to provide large-scale employment and otherwise to contribute towards the much desired improvement in the standard of living by providing social security in various forms, housing and other amenities for labour.

Provident Fund Scheme

"Returning to our accounts, you will find in the profit and loss account that the Company's contribution to the provident funds for employees is Rs. 3,80,789 more than for 1952. This is almost wholly the result of the new terms of the provident fund for workpeople, dating from November, 1952, operating for the full year, the change in our case being from 7½ per cent. on wages to 6¼ per cent. on wages and dearness allowance. Government has granted temporary exemption, which it is expected will soon be made permanent, for the Company to administer its own workpeoples' provident fund. The administration of the exempted fund places an extra burden on the Company and the Trustees which include two representatives each of the management and the workers, but the workpeople themselves wished the management to seek the exemption, as the Company's proposed Provident Fund rules were generally more beneficial to the workers than the rules of the Government Provident Fund scheme. Moreover, but for the exemption, the cost of Government inspection charges would have been four times the figure of Rs. 15,328 shown in the accounts for 1953.

"The Company's payment to the Employees' State Insurance Fund increased to Rs. 1,26,163 in 1953 but in Madras, as in many other parts of India no benefits are in force under the State Insurance scheme and the Company continues to operate its own medical services.

"It has been mentioned in your Directors' report that as at 31st December, 1953 the total liabilities of the Workpeoples' and Employees' Provident Funds were Rs. 95,75,102 and Rs. 12,28,411, respectively, and that all accounts in connection therewith have been transferred to the Trustees and are not, therefore, shown in the present accounts of the Company.

"The expenditure for the year on workpeoples' welfare amounted to Rs. 1,53,525. The proposed allocation of Rs. 1,50,000 to the workpeoples' housing reserve will bring the total of this account to Rs. 15 lakhs and your Directors feel that the time has come to give serious consideration to the building of more houses for our workpeople. This matter will, therefore, be taken up as soon as possible.

"You will remember that in August, 1952 we regretfully had to inform you that no interim ordinary dividend would be paid for that year. You received this news in stoic silence, but our labour, through their representatives, voiced their disappointment with persistence and, although, following prolonged discussions with the management, the labour leaders seemed to appreciate that the trading loss for the half-year was real and unavoidable, they continued to press the argument that some compensatory payment should be made to labour. Finally, reasonableness prevailed and both we and labour should be grateful to the Madras Government, in particular to the Minister for Industries and Labour, and his officials, for the helpful part they played in this and other matters, and which has contributed to the industrial peace which has obtained in our mills for over two years.

Bonus to Workers

"On 28th February, 1953 labour manifested their disappointment in the bonus declared for 1952 as a whole, by resorting to two one-hour token strikes in each of the day and night shifts. It is only fair to record to the credit of labour and their leaders, that the stoppages were conducted peacefully and without repercussions. I might add that, although these stoppages were unwarranted, due notice was given by the Union, and there was, in fact, only one irregular stoppage of work during the year, this on 18th September, when our labour joined so many other workers in the city in mourning the death of a notable Indian pioneer of Trade Unionism. I should add that this stoppage was later made good by a Sunday's work.

"In 1952, as a result of negotiation between the management and labour a procedure was introduced in the mills for the internal settlement of industrial disputes. This has resulted in many cases being settled in favour of the workers at one stage or other of the process of hearing. I am confident that the deliberations of the Mill Labour Advisory Organisation which carries out this procedure, will continue to foster good relations between management and labour.

"The co-operation of labour has earned for them a reward in the shape of a record bonus for 1953, but it should be noted that the working results of the Company depend not only on the all-in cost and co-operation of our labour but also on the effects of taxation, and of changes in the cost of raw materials, stores, fuel and power, and in the state of the market for the Company's products, both internally and overseas. To ensure that the prosperity of the Company is altered with the minimum adverse effect by any of these factors, we shall continue our efforts to improve the efficiency of the mills in all manufacturing processes but we earnestly hope that labour will not, by impatient demands for increased remuneration, endanger the Company's ability to make profits adequate to give a reasonable return to shareholders as well as a reward to labour, after bearing heavy taxation.

Reconstruction and Rehabilitation

"Good progress has been made with the work of reconstruction and rehabilitation. Nearly 300 looms are already working in the new weaving shed including a number of new automatic looms which are giving very satisfactory efficiency and increased wages to those workers who have volunteered to join in the Company's scheme for rationalisation in weaving. Within the course of this year it is expected that this new building will be complete in all respects, making a considerable contribution towards the improved efficiency of the mills.

"The new waste mill is already operating successfully and we can expect also within this year that the new power plant will be fully commissioned.

"We hope that negotiations will soon be concluded with the Madras Government for our acquisition of the old Farrens Road which separates the main mill premises from that reconstruction site on which the new weaving shed and waste mill stand.

"I am pleased to announce that Dr. Sir A. Lakshmanaswami Mudaliar recently accepted your Directors' invitation to join the Board, and so that the Company may gain the benefit of his wise counsel, I commend him to you for election."

(Concluded from next column)

although the general workmanship and finish are satisfactory. Some of these defects are not, however, considered to be of a very serious nature and can be easily overcome, and therefore, they should be no bar against the industry's claim for protection.

The industry seems to have some grievances regarding the Government's import policy. It may be mentioned that, from January, 1951 to June, 1952, licences for imports of electric brass lamp-holders were issued to the extent of 25 per cent. of half of the best year's imports from soft currency area only. From July-December onwards, the import policy was tightened and a stipulation was made that only 10 per cent. of the face value of the licences could be utilised for the import of brass lamp-holders and bakelite electrical accessories. Now the industry complains that (a) imports allowed into the country were excessive and resulted in the closure of a number of smaller units in the industry; and (b) item No. 39(c) of the I.C.T. Schedule, under which licences for lamp-holders are issued, being a composite item, importers have taken advantage of it by utilising it for importing mainly electric lamp-holders. Consequently, they demand that not only should brass lamp-holders be treated as an independent item but the Government should exercise strict vigilance over the imports. As regards the quantum of protection, it is necessary to bear in mind that the increase in the import duties proposed in the Finance Bill is already substantial, and any further concession is likely to kill initiative and enterprise of the industry to improve its efficiency which is necessary to put on the market quality products at competitive rates. However, the industry's claims to protection for a longer period, say three or five years, is in line with the recent policy of the Tariff Commission which favours extension of protection to generally longer periods.

LAMP-HOLDERS CLAIM PROTECTION

TARIFF BODY OPENS ENQUIRY

THE electric brass lamp-holders industry has put before the Tariff Commission its claims for continuance of protection beyond the end of the current calendar year when protection granted to it is due to expire. The industry was first granted protection in July, 1951, after an enquiry into its claim by the Tariff Board in 1950. The Government converted the then existing standard rate of duty of 36 per cent. *ad valorem* and preferential duty of 24 per cent. *ad valorem* into protective duties at the same rates. Subsequently, as a result of the surcharge levied in 1951, the rates went up 37½ per cent. and 25 per cent. *ad valorem*, respectively. This protection was to have expired at the end of 1953. However, pending further detailed enquiry into the affairs of the industry, protection to the industry was extended upto 31st December, 1954 under the Tariff (Third Amendment) Act, 1953. Again, in the Finance Bill, 1954, it is proposed to raise the standard as well as the preferential rates for imports to 60 per cent. and 50 per cent. *ad valorem* respectively. This increase on revenue considerations will provide an adventitious measure of protection to the industry.

The industry has thus enjoyed protection for a period of 2½ years. In 1950 there were 20 units engaged in the production of electric brass lamp-holders. But there are now only 14 units of which eight are in West Bengal, three in P.E.P.S.U., one in Bombay, one in Saurashtra and one in the Punjab. The units in West Bengal are stated to be not doing well. Some small units have stopped or diverted their productive capacity to other lines of manufacture, while the larger and more organised units have strengthened their production during the period of protection. Although the number of units declined, the output of brass lamp-holders by the industry as a whole rose from 547,434 pieces in 1951 to 858,612 pieces in 1952 and 1,572,640 pieces in 1953. Nevertheless, the production has been running well below the rated capacity of the industry, which, on single-shift basis is estimated by the Development Wing of the Commerce Ministry at 3.02 million pieces. According to the figures furnished by 13 units to the Tariff Commission, it works out to 3.9 million pieces. Information received from 10 units reveal that the industry employs 346 people and the value of fixed assets in the industry is stated to be Rs. 14.7 lakhs. But the Lamp-holders Manufacturers' Association claims that the industry employs about 1,500 persons and the amount invested in it is of the order of Rs. 30 lakhs. The domestic demand for brass lamp-holders is estimated at between 6 lakh pieces and 60,000 pieces. The Tariff Commission estimates it at 1.4 million pieces calculated on the basis of average annual imports plus domestic production.

The foregoing is just the gist of the present position of the brass lamp-holders industry in India as described by Mr. M. D. Bhat, Chairman, Tariff Commission, in his initial remarks at the opening of the enquiry into the claims of the industry for continuance of protection, held on 31st March last. According to Mr. Bhat, the industry demands protection for a period of three to five years on the ground that it had to face, during the early stages of the period of protection, a number of difficulties such as excessive imports, high prices of brass sheets and the persistent consumers' prejudice against the Indian product. It has also asked for certain specific types of assistance such as imposition of complete ban on imports of electric brass lamp-holders, continuance of Government purchases and provision of suitable technical advice from the Government.

Continuance of protection to this industry depends, as in the case of all other such industries, on several factors, such as the quality, price, the difference between the fair ex-works price and landed costs, and evidence to prove that it has endeavoured to improve its efficiency by the adoption of technical improvement and use of modern equipment. The price factor is of particular significance, because the product of this industry is a raw material to the electric lamp industry, and the price at which the latter is sold is dependent on the price paid to lamp-holders. As regards the quality of lamp-holders, the Chairman of the Tariff Commission has in his possession complaints regarding certain specific defects in the finish and durability of the indigenous product. The indigenous lamp-holders, for instance, fail to withstand the cord-gripping test laid down in the B.S. specification,

(Continued in previous column)

INSURERS MUST BE TRUSTEES OF POLICYHOLDERS

SIR COWASJEE JEHANGIR'S ADVICE

A FERVENT call to insurers to regard themselves as trustees of the money entrusted to them by the policyholders and to desist from doing anything that will undermine the confidence of the people in insurers was made by Sir Cowasjee Jehangir, in the course of his inaugural address at the Insurance Conference, held at Bombay last week. This advice acquires special significance, because it comes from Sir Cowasjee who, as the Chairman of a committee which in 1946 investigated the problem of insurers in India, has acquired an intimate knowledge of Indian insurance. This Committee, it may be recalled, brought to light several defects in the investment practices of insurers and served to give shape to the subsequent legislation relating to insurance. It is, therefore, to be hoped that Sir Cowasjee's call to insurers will be given the support it deserves. Indeed, private enterprise is, in a sense, on trial in this country. And, if private insurers do not acquit themselves honourably in that trial, it will have far-reaching repercussions not only on insurance but on other sectors of private enterprise.

Sir Cowasjee warned that it was wrong to ignore the basic consideration that insurance business can be built up only slowly. If any unit chooses to walk faster, much faster than the steady growth of its business will warrant, the "unit will meet with nothing but disaster." He added: "It was this desire to dash forward at a fast speed, before the company's position was consolidated, that has led to liquidations in the past and, more than that, for the growth of undesirable features in the business of life insurance." But Sir Cowasjee was not averse to competition as such. He recognised that there was bound to be competition and that "healthy competition increases the efficiency of the unit and enables it to render greater service to its clients." At the same time, he urged the need for "united action" which would be to the benefit and advantage of all.

After referring to the undesirable features of insurance, such as interlocking of funds of insurance companies, banks and insurance trusts, misuse of investment funds, and speculative purchase of shares of insurance companies, which have been witnessed in recent years, Sir Cowasjee declared that the management of a life assurance company should be considered as a "sacred trust." He added: "You are in the management of a business which is essentially meant to come to the rescue of poor people who have their trust in you, fully relying that you would come to their help in their hour of dire need." He warned that it was "criminal" to try experiments in the investment of funds, since the insurers will then be playing not only with shareholders' money but with the "life savings of the poorest" in the country. Sir Cowasjee hoped that the recent amendment to the Insurance Act would serve to eliminate substantially, if not completely, the undesirable features of insurers' investment practices. In this connection, he referred to the provisions of the amended Insurance Act relating to the appointment of Administrators, statutory limitation of expenses, and constitution of special bodies, such as Life Insurance Council and General Insurance Council. These provisions, as is well known, were inserted in order to place the insurance business on a sound basis.

But any lasting improvement in this sphere can come, as Sir Cowasjee himself recognised, through the voluntary exertion of the insurers themselves. He said: "I am one of those who believe that the best results in the direction of raising the tone of any business could be achieved by associating the members of the business itself in the task and thereby making them develop the traits of self-help and self-policing."

Do Not Invoke Government Control

Mr. Tulsidas Kilachand, who spoke at this conference, lent further support to this idea of "self-help" when he deprecated attempts at invoking governmental interference to set the insurance house in order. He said that the regime of controls, which had functioned in the last decade, had unfortunately led to a psychology of asking for more and more controls. We heartily endorse this sentiment, for there is an alarming tendency among the men engaged in the private sector to run to the Government for help, for guidance and for statutory regulation of the cost of their services. They do not stand up like men and fight for their independence, but behave like infants that cry for paternal support. How can people have faith in private enterprise if it cannot function without governmental regulations? This elementary fact does not seem to have been grasped by these men, who invoke governmental interference in their affairs. Are premium rates going down? Then, ask the Government to fix floors for these rates. Are interest rates going up? Then, ask the Reserve Bank to fix the ceilings for rates for deposits. This line of reasoning does no justice to the spirit of private enterprise, and is calculated to harm, in the long run, the people engaged in it. And the irony of it all is that these men start complaining later that there is too much control in their business, too much red-tape and too little scope for initiative. The fact is that they forget that governmental control means red-tape, delay and interference. This is not to suggest that governmental help should not be utilised at any time, but merely to emphasise that it should be regarded as a painful necessity, to be invoked in the last resort.

Per Capita Insurance

To revert to Sir Cowasjee's address. Although he admitted that the *per capita* insurance in India was small, he pointed out two factors which are likely to prove useful to insurers. In the first place, there was a shift in income from the middle class, till now the backbone of Indian insurance, to the working class. He, therefore, urged that "special efforts" should be made by insurers to build up a clientele among the working classes. Perhaps, labour leaders can help insurers a great deal in this matter. Unfortunately, they are too engrossed in politics to make a constructive approach to the workers and to encourage the habit of saving. Secondly, he hoped that the reliefs provided in the Estate Duty Act in respect of insurance will enhance the attractiveness of insurance policies. Many insurers are already turning their thoughts to this field and are making special efforts to win the support of persons who are likely to be affected by the Estate Duty Act.

Finally, Sir Cowasjee referred to the high rate of lapses in insurance policies, and stated that it must be due partly to the sharp reduction in income of many individuals since the termination of World War II, and to the fact that the cost of living was still high. He relied on proper selection and training of agents to remedy this defect, and deprecated the predominance of part-time agents who do not take sustained interest in their work over long periods. This aspect of the problem of Indian insurance also figured prominently in the address which Mr. S. D. Srinivasan, President of the Indian Life Assurance Offices Association, delivered at the Conference. He stated that, while there was reason to feel optimistic about the immense scope for insurance in the country, they had also to face the problem of mounting lapses. Referring to the scope for insurance, he pointed out that the *per capita* insurance in India was only Rs. 26, whereas it was as high as Rs. 7,000 in the U.S. and Rs. 1,600 in the U.K. The premium income of life assurance companies in India is only of the order of ½ per cent. of the total national income. He calculated that only about 30 lakhs families enjoy insurance protection for Rs. 3,000 per family. He added:

"These figures indicate that we have touched only the fringe of the problem. The *per capita* insurance may be relatively small and it is bound to be so for some years to come. But this is multiplied by the population to give the volume of business. This multiplicant is big and should afford a means for further expansion. There is thus great scope before us for expansion and for greater and useful service. Insurance increases with the development of industries and increase of national income. Industries require capital for expansion. Insurance pools capital resources and lends them to industries for development. Thus, the growth of industries and development of insurance are interdependent and go together. Our business has thus an important role to play in the current national plan conceived for social and economic development and I am confident it is playing its part."

But the fact that there is immense scope for insurance should not lull insurers into a false sense of complacency about the evils in insurance. On this point, Mr. Srinivasan observed:

"While we are all optimistic that we have before us a tremendous opportunity for expansion, we are equally alive to the evil of heavy lapses in our business that retards our growth. Though Rs. 146 crores of new business were effected in India in 1952, the increase of business in force at the end of that year was only Rs. 43 crores. The lapses in 1952 appear to have been abnormal even after allowing for exits due to claims, surrenders and paid-ups. It is estimated that nearly 40 per cent. of the business lapses before the policy acquires surrender value. Looking to the heavy initial expenses incurred in acquisition of new business, occurrence of such a large volume of early lapses makes the position of the companies difficult. Further, it is a loss to the community in that the effort put in to secure such new business that does not remain becomes a waste. Both the insurer and the insured are obviously responsible for this in varying degrees. The remedy is to train our field workers to care more for quality of business than quantity. They should be told to see that policies are taken for amounts which are within the resources of the policyholders and of types that suit their needs and help them to maintain their policies by continuous service and attention."

It is gratifying to note that Mr. Srinivasan emphasised the need for insurers to devote more attention to quality of business than to quantity. There is, as Sir Cowasjee stated, in effect, a certain gradualness in the growth and development of an insurance institution. A great insurance company, like Rome, cannot be built in a day. It takes years of hard work, patience and perseverance before an insurance company can lay claim to a permanent place in the hearts of the people whom it serves. "Expansion, consolidation, further expansion" should be the watchwords of a growing life office. Agents who produce glittering but insubstantial business, render no service to their offices. And the managements which fail to discourage such business are neglecting a part of their national responsibility.

PANDYAN INSURANCE CO., LTD.

Within a period of two decades since it was established in 1933, the Pandyan Insurance Co., Ltd. (Manager: Mr. S. C. Rawlinson, Madurai), has shown considerable expansion in its business. A general insurance company, the Pandyan has a large and growing fire business; its marine and miscellaneous branches, though less important than its fire branch, are making steady progress. The report of the Company for the year 1953 shows that its total profit at Rs. 4.72 lakhs was slightly higher than in the previous year. The dividend, however, has been maintained at 15 per cent.

During the year ended 31st December, 1953, the premium income in both the fire and marine branches improved over the level in 1952. Thus, the premium income in the fire department rose from Rs. 8.14 lakhs to Rs. 9.02 lakhs in 1953 and the income in the marine department from Rs. 6.25 lakhs to Rs 6.45 lakhs. The premium income in the miscellaneous section was somewhat lower at Rs. 3.05 lakhs. The Company derives a large part of its premium income from its overseas business. In 1953, the Company's foreign portfolio yielded Rs. 5.94 lakhs in the fire department, Rs. 0.12 lakh in the marine department and Rs. 0.92 lakh in the miscellaneous department. It is gratifying to note that the Company's foreign business is growing from year to year, and that its income from this source in 1953 at Rs. 6.98 lakhs compares favourably with Rs. 5.94 lakhs in 1952.

The Company's claims experience has been favourable in both fire and marine departments. Thus, the ratio of claims paid and outstanding, in the fire department was 29.8 per cent. in 1953 as against 37.1 per cent. in 1952. In the marine department, it was 12.7 per cent. as against 15.3 per cent. in the previous year. In the miscellaneous department, however, it was somewhat higher at 53.1 per cent. as compared with 48.1 per cent. in 1952, and 22.7 per cent. in 1951. But this feature is not peculiar to this company only, for the accident departments of nearly all insurers in India have shown an increase in their claims ratio.

The underwriting profit of fire, marine and miscellaneous departments was Rs. 1.98 lakhs, Rs. 2.44 lakhs and Rs. 0.31 lakh, respectively, as against Rs. 2.30 lakhs, Rs 2.28 lakhs, and Rs. 0.11 lakh in 1952. The total profit for the year under review (Rs. 4.73 lakhs), together with Rs. 4.76 lakhs being the income by way of interest, dividends and rent, makes in all Rs. 9.49 lakhs. The provision for depreciation absorbs Rs. 2.51 lakhs, and for taxation Rs. 2.25 lakhs. After providing for expenses of management, not applicable to any particular account, there is a balance of Rs. 4.15 lakhs which, together with the amount brought forward from the previous year, makes in all Rs. 4.19 lakhs. Out of this sum, the Directors have transferred Rs. 1 lakh to general reserve. The payment of 15 per cent. dividend absorbs Rs. 3 lakhs, leaving Rs. 19,429 to be carried forward to current year's accounts. The financial position of the Company is sound. Apart from a capital of Rs. 20 lakhs, the Company's reserves aggregate Rs. 60.99 lakhs, inclusive of fire fund (Rs. 4.51 lakhs), marine fund (Rs. 6.46 lakhs) and miscellaneous fund (Rs. 1.52 lakhs).

The fire insurance business in Norway is making rapid progress. In 1952, for which year figures are available, the premium income was 120.8 million kroners in 1951 and 92.2 million kroners in 1950. Inflation in war and post-war years, which created several problems for insurers, has been checked. The issue of consequential loss covers, now an important part of private insurers' business, continues to be a popular feature.

(Established in 1895)

DIRECTORS' 107th REPORT TO THE SHAREHOLDERS FOR THE YEAR ENDED 31st DECEMBER, 1953

The General Board of Directors beg to submit to the Shareholders the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1953.

The transactions for the year under report have resulted in a profit of Rs. 41,78,961-8-10 (including Rs. 1,92,604-14-0 brought forward from the previous year's account). The following amounts have been appropriated for the under-mentioned purposes :—

	Rs.	a.	p.
1. Transferred to Income-tax Provision	12,50,000	0	0
2. Transferred to Contingency Reserve	10,25,000	0	0
3. Transferred to Reserve Fund	93,672	7	3
4. Transferred to Bonus to Staff Account	7,50,000	0	0
5. Transferred to Charity Account	50,000	0	0
6. Ad-interim Dividend @ 8 per cent. per annum free of income-tax for the half-year from 1st January, 1953 to 30th June, 1953 paid	3,50,000	0	0
Total .. Rs.	35,18,672	7	3

The Directors recommend that the balance of Rs. 6,60,289-1-7 be disposed of as follows:—

	Rs.	a.	p.
(a) Dividend @ 8 per cent. per annum free of income-tax for the half-year from 1st July, 1953 to 31st December, 1953	3,50,000	0	0
(b) Carry forward to the next year's account	3,10,289	1	7

The Bank rate remained unchanged at 3½ per cent. per annum.

The Directors consider that the working of the Bank has been satisfactory.

THE BOTTLENECK IN OUR TRANSPORT

SOME SUGGESTIONS FOR ITS SPEEDY ELIMINATION

[*By B. V. VAGH, B.E. (Civil), M.I.E. (Ind.)*]

FOR some time past, there have been persistent complaints about the shortage of railway wagons from practically all industries in the country and the Planning Commission are reported to be in correspondence with State Governments on the subject. Newspapers also mentioned recently the formation of an official study group in New Delhi to investigate the position about transport.

The position in regard to goods transport in the country has never been satisfactory since the last war. During the past few years, it has been deteriorating steadily, due to increased production and large-scale constructional activities on various projects. Under railways, the Planning Commission have provided for a 10 per cent. increase in goods traffic, based presumably on a 10 to 11 per cent. increase in the National Income which the Five-year Plan envisages. There is no similar provision under road transport. Apart from providing a certain increase in road mileage, the Plan does not discuss ways and means of increasing the goods transport facilities by road.

Requirements

Broadly speaking, for an increase of about 10 per cent. in the National Income, as envisaged in the Five-year Plan, a corresponding increase in our goods transport facilities by rail and road each may more or less be considered sufficient subject to adjustments on account of an actual increase in production, *provided the pre-Plan transport facilities were sufficient for the traffic then offering.* This has not been borne out by experience. Since about 1945, there have always been complaints about the shortage of railway wagons. Judged by the number of road trucks in the country, many hold the view that the pre-Plan road transport facilities were not sufficient. Hence, it may be useful to examine the position without assuming either that the pre-Plan facilities were sufficient or that they were not. Some idea about this may be formed by comparing our goods transport facilities both by rail and road in terms of our National Income which is an index of production and services with those of other developed countries, also in terms of their National Incomes, and then making allowances for the degree of development of the countries concerned, the nature of their economies sizes and distances.

The relative position in regard to the transportation of goods *vis-a-vis* the National Income in the U.K. and India is as follows:—

	National Income (Rs. crores)	*Railway wagons*	*Road Trucks*
U.K.	18,197	11,09,000	9,08,769
India	10,000*	2,08,287	2,84,334†

*As estimated in the Five-year Plan as on 31st March, 1956.

† Made up of 89,334 motor trucks plus 1,95,000 being the equivalent of 96 lakhs of bullock carts in terms of their load-carrying capacity in ton/miles.

As will be clear from the above set of figures, for about half the National Income of the U.K. India has about one-fifth of the railway wagons and about one-third of the road trucks of that country. *In numbers, India's requirements of goods transport proportionate to its National Income as compared with that of the U.K. work out to about 6 lakhs of railway wagons and 5 lakhs of road trucks against the present about 2 lakhs and 2½ lakhs, respectively, that is, an average of, say, about twice the number in each category by the end of the five-year period of our Plan ending 31st March, 1956.*

Comparison with Other Countries

Information about the railway wagons in other countries is not available. The position regarding road trucks in the following nine industrialised countries in Europe, about which information is available, and in Japan works out as follows:

Country	National Income (Rs. crores)	Total number of trucks	Trucks per Rs. 1,000 crores
France	13,864	9,41,200	68,000
U.K.	18,197	9,08,769	50,000
Norway	1,106	50,500	46,000
Denmark	1,439	63,537	44,000
Italy	6,181	2,55,394	41,000
West Germany	11,156	4,51,075	40,000
Holland	2,213	86,000	39,000
Sweden	3,652	91,000	25,000
Switzerland	2,189	42,950	20,000
	59,997	28,90,425	
say	60,000	30,00,000	50,000
Japan	6,414	3,18,522	50,000

This gives an average of about 50,000 road trucks per Rs. 1,000 crores of National Income. On this basis, *India's requirements of goods transport by road work out to about 5 lakhs road trucks for a National Income of about* Rs. 10,000 *crores, as against the present number of about 2½ lakhs, that is, again about twice the present number.*

Relative Position

In the countries in the above table, industrial production preponderates, while, in India, agricultural production preponderates. The transport requirements of the latter are relatively smaller, as there are fewer raw materials in it to be hauled. Further, some of the production is consumed at the source by the farmers and, therefore, does not require transport to the same extent as industries. On the other hand, the size of India entails hauls on long distances and, therefore, broadly speaking, it should require comparatively more transport in industries than the countries in the above table. (In the U.K., for instance, about 11 lakhs railway wagons operate on a track of about 20,000 miles, while, in India, 2 lakhs wagons operate on a track of about 34,000 miles, excluding passenger traffic in both cases!). It is not known to what extent these factors will alter the figures arrived at above, but it may not be wide of the mark to estimate our requirements at about two-thirds of what the above figures indicate.

This figure of two-thirds has been suggested by an economist on the following reasoning:

(i) Excluding goods like motor cars, bicycles, tractors, engines, radio sets, electric fans, sewing machines, telephones, cables, etc., the output of which is not measured in tons, the total production in tons as per the Five-year Plan consists of:

A. Agricultural, including forests 50.5 per cent.

B. Non-agricultural including fuels, minerals and finished products like steel, cement, etc. 49.5 per cent.

(ii) About 70 per cent. of our population is engaged in A and may be assumed as consuming at the source or near about it, about 70 per cent. of the production under that head. The balance available for trade and, therefore, requiring transport is about 30 per cent. of A, that is, about 15 per cent., of the total production in tons.

(iii) The remaining about 50 per cent. of the total production may all be taken as being available for trade and, therefore, requiring transport.

(iv) Thus 65 per cent. of the total production in tons made up of 15 per cent. under agricultural and 50 per cent. under non-agricultural may be taken as requiring transport.

(v) Therefore, if India's transport requirements in terms of its production in tons of which the National Income can be taken as an index is X as compared with that of another more developed country in which all or almost all production is available for trade, then the correcting factor applicable to it will be about 65 per cent., say, two-thirds by reason of about half its production being agricultural and only 30 per cent. of it being available for trade.

If the 70 per cent. of agricultural production consumed at or near the source is to be excluded from our transport requirements as suggested above, then the number of bullock

REPORT OF THE AUDITORS TO THE SHAREHOLDERS OF THE PUNJAB NATIONAL BANK, LIMITED, DELHI

We have audited the annexed Balance Sheet of the Punjab National Bank, Ltd., Delhi, as at 31st December, 1953, and the annexed Profit and Loss Account for the year ended on that date, with the books and accounts kept at the Head Office in Delhi, in which are incorporated the Returns of the Banks Branches in Indian Union, Pakistan and Burma certified by the respective Branch Managers. We report that:

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory;

(b) the transactions of the Bank, which have come to our notice, have been within the powers of the Bank;

(c) the Returns received from the Branch Offices of the Bank have been found adequate for the purposes of the audit;

(d) in our opinion the said Balance Sheet and Profit and Loss Account are drawn up in conformity with law;

(e) the Balance Sheet exhibits a true and correct view of the state of the Bank's affairs and the Profit and Loss Account shows a true Balance of Profit for the year, according to the best of our information and explanations given to us and as shown by the books and records of the Bank kept at its Head Office; and

(f) in our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

DELHI, 20th February, 1954.

carts engaged on rural agricultural traffic has to be omitted from comparison. Since the lorry equivalent of all bullock carts has been included for comparison, this allowance seems obviously liberal. Then, the figure of two-thirds suggested above does not include extra transport on longer hauls on account of the size of our country and longer distances, but, still taking it as an indication, our transport requirements work out to about 1½ times (2 x ¾) the present number. This is 33 per cent. (say 30 per cent.) more than at present, i.e., *about 62,000 railway wagons and about 85,000 road trucks.* Here it is interesting to note that, excluding bullock carts, the numbers of trucks in Ceylon and the Philippines work out to about 28,000 and 25,000 respectively per Rs. 1,000 crores of National Income against only about 9,000 in India. That is, even Ceylon and the Philippines have about three times India's number of trucks in terms of their National Income. Judged by this standard, a 30 per cent. increase in our present railway and road capacity for goods traffic during the period of the Plan does not seem ambitious.

The production aimed at in the Five-year Plan on items listed below works out in the aggregate tonnage, in millions for all, to 24 per cent. on the 1950-51 figure:

Foodgrains	Crude petroleum
Cotton and Jute goods.	Sundry minerals
Sugarcane	Aluminium
Oilseeds	Cement
Soft coke	Fertilisers
Timber	Glassware
Fisheries	Heavy chemicals
Manganese	Iron and steel
Coal	Jute
Limestone	Paper
Gypsum	Salt
Irone ore	Sugar
Bauxite	*Vanaspati* and vegetable oils
Glass sand	Soap
Sulphur	Cloth
Rock phosphate	

On the basis suggested above, namely, that only about 30 per cent. of the agricultural production and all the non-agricultural production may be taken as entering into trade and, therefore, requiring transport, the increase in tonnage on these items in 1955-56 over the 1950-51 figure works out to 30 per cent. In addition, there are other items on which production, in million tons, will be appreciably more than before. Then, on items like cotton, jute, cloth, implements, motor cars and a host of others the transport requirements are not by weight but by volume which means more transport for extra production than that indicated by an increase in their tonnage. Again, there are services, operation requirements of industries and large-scale constructional activities on irrigation, power projects, expansion of industries, new factories, new institutions like research laboratories, houses, hospitals, school buildings, docks, roads and railways. All these require extra transport. These activities cannot be considered a temporary phase, as the present Five-year Plan is expected to be followed by others entailing progressively larger outlays in due course and, therefore, the transport requirements of such activities have to be provided for as a normal feature of our economy for a long time. *Taking into consideration all these factors, a 30 per cent. increase in the pre-Plan transport facilities as suggested above seems the very minimum.* In this connection, the following remarks reported to have been made recently by the Commerce and Industries Minister in an interview with the *Eastern Economist* are worth noting:

"We must have a bold and comprehensive plan for developing all forms of transport in the light of our future needs. These must be assessed with foresight and imagination. Small increase in terms of arithmetical percentages of known demands will not do. In an underdeveloped country like ours, the need for transport facilities develops in geomatrical progression and not in arithmetical progression."

Idle Capacity

In this connection, a reference is sometimes made to "idle capacity." While it is necessary to investigate and take measures to utilise to the full the idle capacity in any sphere, it is most important not to confuse it with deficiency and to differentiate between palliative and curative measures. The fact that various constructional works have been going on for two to three years without a noticeable increase in the transport capacity of the country seems to suggest that the idle capacity, if any, must be small. The railway organisation which has been shouldering the main burden of transport is hardly likely to have any noticeable idle capacity. There will be a certain amount of idle capacity in road transport, on account of inter-regional restrictions and the diffused nature of the industry. The former can and should be removed but the latter is more difficult to cope with, the operation being in the hands of thousands of individuals. Therefore, until the operation part of the industry is rationalised—and this will take decades—a certain amount of idle capacity has to be expected in road transport for a long time. *Thus, broadly speaking, no great relief can be expected from tapping idle capacity and, while steps should immediately be taken to locate and utilise it, the larger issue of making good the deficiency itself should not be lost sight of.* The primary object should be to ascertain the deficiency and the secondary to locate idle capacity.

Rail Transport

The extent to which the increase of 30 per cent. is feasible in the case of railways depends on finance for track, locomotives, rolling stock and available manufacturing capacity. All these are limited. The Five-year Plan provides for the manufacture of about 30,000 railway wagons in five years. Most of them are for renewals. With a production capacity of about 30,000 wagons, the country cannot obviously expect to have another about 62,000. Besides, extra wagons require more locomotives which are not available in India and may also not be available readily outside India and, if available, will entail loss of exchange. In this connection, it is heartening to hear that the railways have been planning a greater production of locomotives and wagons but the figures announced are very short of the above requirements.

The present trend all over the world is not to extend railways except on long-distance developments. Countries like Australia and New Zealand, the economic development of which is more recent than that of Europe and which, at the time of their development, were not so advanced as Europe in railway communications, have, at present, respectively, about 1,52,000 and about 1,18,000 road trucks per Rs. 1,000 crores of their National Income against an average of about 50,000 in Europe. This fact shows that modern tendencies are towards developing more of road transport than railway transport. Between 1940 and 1945, the U.S.A. dismantled about 26,000 miles of their railway tracks. This again proves the same fact. A recent research carried out by the Road Research Laboratory in the U.K. shows that:

(i) About three-fourths of the country's expenditure on internal transport in 1949 and 1950 was on road transport.

(ii) Road transport absorbed about 10 per cent. of the country's available resources against 3½ per cent. absorbed by railways.

All these facts show that India also will have to proceed cautiously in extending its railway transport.

Taking these facts into account, probably not more than about 20,000 railway wagons at the most, out of about 62,000 required, can be expected to be added by a special effort. In place of the remaining about 42,000, an equivalent number of road trucks will have to be employed. In terms of the respective carrying capacities of railway wagons and road trucks, the number of the latter works out to about 1,15,000 as shown below:

(i) Present Railway capacity with about 2 lakhs wagons—2,900 crores ton/miles.

(ii) Capacity of 42,000 wagons—600 crores ton/miles.

(iii) Present road capacity with about 90,000 trucks—470 crores ton/miles.

(iv) Trucks required for (ii)—1,15,000 crores ton/miles.

And the total requirements of road trucks come to 2,00,000 made up of:

(i) Those in place of 42,000 railway wagons	1,15,000	
(ii) Those required by road transport independently of the railways	85,000	2,00,000

According to the Tariff Commission, the capacity of the indigenous motor industry is about 22,000 motor cars and 22,000 trucks per annum *per shift*, say, about 40,000 per annum of each in two shifts. At this rate of output, it should take about five years to put on the road the additional (about 2 lakhs) trucks required. From the production point of view, therefore, the proposition seems feasible, provided the cost of new trucks is sufficiently cheap to induce operators to come forward to buy them. From the State point of view also, the development of road transport is more economical to them as all they need provide is additional track facilities, that is, roads, the more costly part, namely, operation being left to private enterprise.

Suggested Measures

Road traffic in this country has been developed solely by private enterprise and a large number of about 90,000 trucks in use today is privately owned. This fact shows that, wherever there is an opening, private enterprise has not been lacking; yet, during the past few years, there has been a stagnation in spite of scope and, unless the causes for it are removed, it is not likely that our transport problem will be solved. The Commerce and Industries member, Union Government, is reported to have said recently that "so far as road transport is concerned, the less said about it the better. The development that has taken place all along has been through private initiative and very largely because of the initiative of individual operators. *There are three factors which have killed this initiative—the scare that nationalisation has put into the minds of the entrepreneur, the high cost of new vehicles, and the high rate of State taxation*—so much so that road transport is not ready to take up whatever is left over to them by the lack of capacity on the part of railways to move raw materials and finished goods."

It is necessary to consider carefully the measures required to deal with this most unsatisfactory state of things and to attract as soon as possible the requisite number of new trucks. Some of them are suggested below in their broad outline:

(i) There should be no nationalisation of goods transport for a period of at least 15 years from now.

(ii) There should be no restriction, regional or inter-State, on road transport and licences should be issued freely to large undertakings operating, say, 25 or more trucks. The railways should have their own fleet of road trucks and should operate it on the same terms and conditions as private operators.

(iii) The present taxation on goods vehicles should be halved immediately and then gradually to one-third and octrois and wheel-taxes should be abolished. Substantial reductions are also necessary on taxes on petrol, tyres, etc.

(iv) New trucks purchased after a certain date to be fixed by Government should be exempted from income-tax for a period of at least five years.

No Loss to the State

None of these measures puts the Government to any loss. Nationalised passenger services have not proved so lucrative as some State Governments thought once and, therefore, they cannot be reasonably expected to be interested in goods services. In any case, States are so hard-pressed for finance required for their welfare projects that they will never be able to take on an additional liability for goods transport. Hence, the Governments lose nothing by agreeing to the first of the aforesaid suggestions. The second suggestion is necessary to relieve the present congestion. It entails no loss on railways who can have their own road fleet.

The addition of about 2 lakhs more trucks to the present about 90,000 (excluding bullock carts) makes a total of about 3 lakhs trucks, that is, about three times the present number. This means very nearly trebling the present revenue from taxation in a period of five years. Therefore, by reducing the present rates of taxation as suggested in No. (iii) above, Government will ultimately incur no loss on this account. There will be some loss in the interim period till the full number of extra trucks are put on the road but it has to be faced, as done recently by Government in the case of import duties in announcing their policy on the indigenous motor industry. In any case, the development of transport cannot be considered from the point of view of income from taxation. Production, distribution and the cost to the consumer have to come first, followed by service facilities, while the income to Government should be sufficient to meet collection and administrative charges. The present revenue to municipalities from wheel taxes and octrois is only about Rs. 3 crores, as against their liability of about Rs. 1½ crores for the "community" use of roads. The remaining about Rs. 1½ crores which they will lose with the abolition of these taxes can be easily borne by the Centre as recommended by the Motor Vehicles Taxation Enquiry Committee. In regard to income-tax, the Government has already accepted this principle in the case of new houses and new industries. It can afford to extend this facility to road transport also, as, in any case, the additional trucks will be a new source of income and, by foregoing the tax on it, the Government incurs no loss on its present earnings.

INCOME-TAX RETURNS IN U.S.

More than 60,000,000 persons in the United States have filed federal tax returns on their 1953 incomes. This is a record high number. In addition to the personal returns—required to be filed by midnight of 15th March—about 8,000,000 corporation income returns were submitted. This also is a new high total. The aggregate personal income-taxes for 1953 are expected at $32,500 million. Corporation income-taxes amount to $22,900 million.

The number of persons filing income-tax returns indicates the broad base of the tax. Actually, the number of persons whose incomes from wages and other sources are accounted for by the returns is greater than the 60-million figure. The reason for this is that, in a great many instances, the returns filed with the Government are joint returns, that is, they account for the incomes of husband and wife, if both have taxable incomes.

Every citizen or resident of the United States, be he an adult or a minor, who had a 1953 gross income of $600 or more, had to file a return to the Federal Government. In computing the tax, each person was allowed an exemption of $600 for himself and an additional $600 exemption for each person dependent on him. Thus, for a man with a wife and two minor children, the tax would not be applied against the first $2,400 of his annual income.

ASSOCIATED STONE INDUSTRIES (KOTAH) LTD.

SPEECH OF SARDAR DALJIT SINGHJI

THE Eighth Annual General Meeting of the shareholders of Associated Stone Industries (Kotah) Ltd., was held on 14th March, 1954, at Ramganjmandi, Kotah District (Rajasthan). The following is an extract from the speech of Sardar Daljit Singhji, the Chairman of the Company, delivered on the occasion:

"I deem it a great privilege in welcoming you all here this afternoon and presenting the Directors' report and the audited statement of accounts of your Company together with the auditors' report for the year ended 30th September, 1953, which have already been circulated. I hope you have gone through them and trust that you found the working of the Company quite satisfactory.

"The reports submitted for your approval show clearly that the financial stability of the Company is such of which any concern can be proud.

"The labour and the staff have played no small role in achieving this progress and I take this opportunity to thank them for their steadfast loyalty and co-operation. It is gratifying to note that there has been no labour trouble during the year under report and the relations between labour and management have remained happy and cordial. I assure you that this Company will always have the welfare of labour at heart and will try to provide still better amenities to its workers.

"The most important and serious problem confronting the Company which needs mention is the problem of wagon supply. The huge accumulated stock of flooring stones lying at Ramganjmandi railway station awaiting transportation has led to blocking of huge capital and if this situation is not remedied at the earliest, working of the Company may be affected seriously and notwithstanding the best efforts of the management to avoid such contingency, it may result in large-scale unemployment with all its accompanying miseries. I shall, however, like to thank the Central Railway Board authorities for having given me a patient hearing and for having fixed a daily quota for the movement of stones from Kotah District, but, unfortunately, the allotted quota is not being made available regularly and it is for the railway administration to remove the impediments created in the way of the progress of this industry, which is already among the foremost in Rajasthan, by alloting a definite and generous quota of wagons to enable the movement of stone regularly and more freely. Housing is still a grave national problem and flooring stones deserve a higher priority in transport than it has been given so far.

"The future of Rajasthan lies in rapid industrialisation. I hope that the popular State Government in Rajasthan, while keen on their plans of industrialisation, will also adopt a more sympathetic and imaginative policy towards those existing enterprises in the State like ours which have progressed steadfastly in the past in the face of so many odds.

"Our thanks are due to the Director-in-charge, Mr. Hiralal M. Parikh, who more than anybody else has, with his very sincere efforts in all the spheres of the Company's activities, helped in achieving the results which are before you.

"I also thank Mr. J. D. Kora, the energetic Manager and Secretary of the Company, the officers, staff, the labour and the customers for their sincere co-operation. I also thank our auditors and legal advisers for their valuable guidance.

"Thanking you all, once again, I now commend for your approval the resolution to adopt this report and accounts."

(*Concluded from first column*)

Besides taking into account the number of a taxpayer's dependents, the law bases income-taxes on the size of a person's income. That is, the tax rate increases progressively with the size of the income. For example, for a married taxpayer whose taxable income was not over $2,000 a year in 1953, the tax rate was 22.2 per cent. of that income. If his taxable income was $6,000 a year, the tax was slightly more than $1,500. If the taxable income was $10,000, the tax amounted to almost $3,000. In the highest income brackets, the tax rate increased to 92 per cent.

ENQUIRY INTO WORKING OF TRADE MARKS LAW

VIEWS OF COMMERCE CHAMBERS ON SOME CONTROVERSIAL ISSUES

ALTHOUGH the usefulness of the Indian Trade Marks Act, 1940, has been proved beyond doubt by the large number of proprietors who are making use of it, the working of the Act these 13 years has revealed that its provisions are inadequate to put an end to the growing volume of commercial piracy in the country. That the law, therefore, needs drastic changes is evident from a number of replies to the questionnaire issued by the Trade Marks Enquiry Committee submitted by the trading associations and chambers of commerce in the country. Two of such replies, namely, one submitted jointly by the Trade Marks Owners Association of India Ltd., the Pharmaceutical and Allied Manufacturers and Distributors Association Ltd., and the Bombay Chamber of Commerce, and the other by the Indian Merchants' Chamber, Bombay, copies of which have been forwarded to us, make illuminating reading. The suggestions made by these bodies are calculated to bring down to the minimum the alarming increase in infringements of well-known trade marks in respect of certain categories of goods such as drugs and food industries, soaps and toilet industries, stationery, electrical goods, matches, and tobacco industries. Besides, production of spurious articles, printing of counterfeit labels, and all sorts of illegal practices have also developed enormously. In order to eliminate these malpractices, the replies suggest a number of remedies.

On one or two important issues, there appears to be a difference of opinion between the two bodies, namely, the Indian Merchants' Chamber and the Bombay Chamber of Commerce. One of the questions relates to the proviso to section 6 of the Indian Trade Marks Act, 1940. The object of this proviso is to confer some special rights on owners of old trade marks, that is, trade marks which were in use before 25th February, 1937, the date on which the Government of India announced its decision to introduce trade marks legislation in the country. In the course of the memorandum conveying this decision, the Government announced that only those trade marks which were adapted to distinguish were likely to be registered under the proposed legislation, but that special protection would be given to old trade marks even though they did not satisfy the test of distinctiveness as laid down in the Act. The proviso referred to above was intended to carry out this assurance to old marks owners. But, being somewhat vague, this proviso has been responsible for expensive and extensive litigation. The Trade Marks Enquiry Committee wants to know whether it is desirable to delete the proviso.

Replying to this query, the Indian Merchants' Chamber states that it is not at all agreeable to any proposal for deleting the proviso to section 6. It considers that so far there has been no case on this point, except the one relating to "Indian Fan." In this case, the Registrar held that the proviso under reference did not confer any additional benefit on the old trade mark owners and that the test of distinctiveness was the same whether the mark was new or old. This decision of the Registrar was upheld by the Calcutta High Court. Says the Chamber: "It is just possible that an entirely different construction might be put on the proviso by the different High Courts. It is, therefore, still early to say whether the proviso does or does not confer any special rights on the old trade marks owners." But, if the Supreme Court also were to hold the same view at a future date when the case is referred to it, then it must be taken that the proviso in its present form has not succeeded in conferring special rights on the owners of trade marks in use before 25th February, 1937, as was intended by the Legislature. The proper course would then be to amend the proviso suitably to give effect to the intention rather than to delete it.

Proviso to Section 6 Should Continue

Further, a similar proviso in the British Act, says the Chamber, was allowed to remain for nearly 63 years, that is, from 13th August, 1875 to 1938. As against this, in this country, the Trade Marks Act has been in existence for hardly 14 years and, therefore, it is too early to say that all old marks have been disposed of by now, and it would not be wrong to assume that there must still be a great many cases of old trade marks owners who might not have sought registration under the Act. So the Indian Merchants' Chamber considers that the provision should not only be allowed to continue on the Statute Book but be amended in such a way as to confer special rights on the owners of trade marks prior to 25th February, 1937.

The combined memorandum of the Bombay Chamber of Commerce and the two other organisations mentioned above, on the other hand, argues that the proviso of section 6 should be deleted. The reasons given in support of this contention are: (a) all trade marks used before 25th February, 1937, should have been disposed of by now and, therefore, the proviso is of no value; (b) the wording of the proviso has rendered its real use obsolete and (c) judicial interpretation of the proviso has not done anything to improve the position of the owners of old trade marks.

The memorandum, however, strongly urges that some protection should be given to the owners of marks which are capable of distinguishing the goods of the proprietor. This could be provided, it says, by the inclusion of provisions similar to those relating to Part B registration in the U.K. Trade Marks Act, 1938. Such a provision would help the proprietor of a trade mark to obtain some protection, if he is able to satisfy the Registrar that his mark is not incapable of becoming distinctive. If this suggestion is accepted, the joint memorandum adds, there appears to be no valid reason why it should be expanded only to marks which have been in use prior to 25th February, 1937.

The memorandum also points out the need for a third type of registration which would help the users of an Indian trade mark in certain foreign countries to get the trade mark registered there. For, in certain countries, no foreign trade mark will be registered, unless the trade mark has been registered in the country of origin itself. In India, certain trade marks which are common to trade, are not entitled to registration. By reason of their not being registered in India these marks will be deprived of registration abroad. This disability may be overcome by opening a separate register to satisfy such cases.

Special Tribunals?

Another important issue raised by the Trade Marks Enquiry Committee relates to the settlement of disputes under the Trade Marks Act. The Committee desires to know whether it is desirable to set up a Special Tribunal from the point of view of (a) expeditious disposal of cases and (b) greater uniformity of decisions. On this question, too, there is divided opinion. The Indian Merchants' Chamber doubts whether cases would be expeditiously disposed of by a Special Tribunal. It admits that the specialised knowledge of the Trade Marks law would enable the Tribunal to be in a position to dispose of cases, without much loss of time, but it points out other considerations which should be taken into account before deciding to set up a Special Tribunal. One of them is whether there would be such a large volume of work as to justify the expense of maintaining a Tribunal, since "trade mark cases in India are very few." Even in the U.K., there are no Special Tribunals for dealing with trade mark cases, although in that country the number of such cases is larger than in India.

Points for Consideration

As regards (b) above, namely, uniformity of decisions in trade marks cases, the Indian Merchants' Chamber concedes that the setting up of a Special Tribunal would help the attainment of this object, but, in this case, too, there are other factors which ought not to be lost sight of. These are: (a) it is wrong to assume that the Special Tribunal would be able to understand the Trade Marks Act better than the District and High Court Judges who are also handling many other types of commercial cases; (b) the Trade Marks law is comparatively new and it is reasonable to expect that, with the passage of time, more cases will come up before the courts and greater experience will be gained; and (c) although the creation of a Special Tribunal is sought to be justified on the ground that it would lead to the creation of a specialised Bar which would help the courts in quick and exact decisions, the creation of a specialised Bar is only possible, the Chamber says, when the number of cases that would come before the Tribunals is large.

Again, the appeals from the Registrar's decisions have so far been very few and, therefore, says the I.M.C., there will not be sufficient work for the Special Tribunal. Further, if in addition to hearing of appeals from the Registrar's decision, the jurisdiction of the Tribunal is extended to try infringement and passing-off actions, it would lead to certain other difficulties. If it becomes a peripatetic body, visiting principal cities and towns to hear cases, most of its time will be spent in travelling from place to place and add to expenses of administration. Again, if cases are kept pending till the visit of the Tribunal, such would defeat the very object of setting up the Tribunal, namely, quick disposal of cases. On the other hand, if the litigants were to come to cities they will be put to inconvenience and expenditure. And, if hearings are postponed, their position would be worse still. The Chamber, therefore, contends that the establishment of a Special Tribunal is not desirable to handle disputes under the Trade Marks Act.

Exactly opposite is the view held by the combined memorandum submitted by the Bombay Chamber of Commerce which strongly advocates the setting up of a Special Tribunal. The creation of a Special Tribunal is justified on the following grounds: (1) trade marks law is a new measure, and both the Bar and the Bench have not the benefit of experience to handle the special cases under the law; (2) the trade marks cases are spread to so many courts in the country that it has precluded the creation of a specialised Bar which could assist the judges who are called upon to handle the cases. Consequently, a Specialised Tribunal would help creation of a specialised Bar; (3) a Specialised Tribunal would establish sound precedents and ensure uniformity of decisions; (4) many of the judges, before whom trade mark cases are taken, do not have an adequate understanding of the law, with the result that cases in which expert opinion considered to be genuine have resulted in failure. Comparing conflicting marks, judges frequently pay too much attention to points of difference and insufficient attention to the general similarity. An expert Special Tribunal would look into such cases as these with more understanding and practicability; (5) the Tribunal should consist of a sufficient number of judges of the status of High Courts with jurisdiction to act as a Court of Appeal from decisions of the Registrar of Trade Marks and as a Court of the first instance in infringement and passing-off actions. The judges should tour the country to hear cases in principal towns in the territory of India. Appeals from their decisions should be directly to the Supreme Court of India. The Chamber concedes that the formation of a Special Tribunal involves further expenditure by the Government, but it is of the opinion that, in the main, the expenses of such Court can be met from its own revenues.

JAPANESE IMPORTS

Japan will reduce imports by more than 10 per cent. during the coming fiscal year, if recommendations by the Ministry of International Trade and Industry (M.I.T.I.) are approved by the Economic Minister's Council. According to the completed M.I.T.I. plan, foreign currency for imports will be limited to $2,250 million. The plan approves the import of 975,000 tons of rice ($167 million), 954,000 tons of barley ($67 million) and 1,685,000 tons of wheat ($136 million). This proposed scale of imported foodstuffs represents an overall cut of 500,000 tons in an alternative plan by the Agriculture-Forestry Ministry. Other recommended import limitations are: 2,090,000 bales of raw cotton (valued at $285 million), a 20 per cent. cut; 610,000 bales of raw wool (valued at $154 million) a 13 per cent. cut and 70,000 tons of rayon pulp (valued at $14 million), a slight cut.

CANADIAN-JAPANESE TRADE

Indications are that a Canadian-Japanese trade agreement will be signed shortly. Japan is one of Canada's main grain customers, second only to the U.K. in wheat purchases. As competition from other countries is increasing in world markets, Canada is anxious to protect its markets. Japan is stated to have assured a minimum market for Canadian grain only when a general trade agreement is signed. The agreement is expected to provide for tariff reductions on Japanese shirts, gloves, toys, novelties and other goods, but is likely to safeguard Canadian manufactures from dumping of Japanese goods by providing for withdrawal of the Canadian concessions at a time when prices reach rock-bottom levels.

NEW PUBLICATIONS

The Process of Economic Growth. By W. W. Rostov. Published by Oxford University Press, London. Price: 25s. net.

"THIS is a historian's book about economic theory," as is correctly described by the author himself—Prof. Rostov of the Massachusetts Institute of Technology. It develops an empirical analysis of the forces that determine the changing shape of world economy by permitting the introduction of long period factors into economic analysis—including within them the changing social and political framework of the economy. This analysis has been attempted by describing the many variables that condition long-term trends under six *propensities*: propensity to (1) develop fundamental science, (2) apply science to economic ends, (3) accept innovation, (4) seek material advance, (5) consume and (6) have children.

He uses these propensities to explain the long and complex task of establishing the facts concerning the social determinants of economic growth at different times and places and of ordering them so as to make them amenable to measurement when required. The propensities "constitute a formalisation of a society's response to certain kinds of economic incentive, *given the structure of its value system as effectively operative through its existing economic, social and political institutions*" (page 29), e.g., in the determination of the level of investment. (italics ours). In this way, the economic decisions of a society can be explained: (i) as the relation between changes in income and the allocation of resources in various directions (or sectors) both in the short-term and the long-term; and (ii) by regarding the propensities as reflecting, for a short period of time, the response of society to changes in the yields believed to be associated with the allocation of resources in various directions.

Thus, the propensities are the summation of the complex response of society in certain directions to changes in income and/or in profit possibilities. As for the determinants of the propensities themselves, these are: the scale (or scales) of values within a society (or within its sectors) as effectively operating through its institutional structure, *which link the propensities with the structure of classes socially* and with the distribution of the working force and the techniques of production in the *economic sphere*. These two great determinants —the major variables—the working force and the stock of capital—are, in turn, dependent upon (i) birth and death rates, (ii) skill and degree of effort and (iii) the role of women and children on the one hand, and on such material factors as (*a*) yields from additions to capital stock, (*b*) flow of potential innovations, (*c*) levels of consumption and investment. This way of relating the short period changes in income and outlay and long period reaction of a society to the allocation of resources enables the author to formulate conclusions about (i) the level of output of an economy at any period of time, (ii) rate of growth, (iii) the interplay of technical yields and the effective strength of propensities with the prior long period operation of economic, social and political forces and (iii) a tendency to follow an approximation of a curve of growth, stagnation and decline.

With the help of these major variables and sub-variables, he defines the process of economic growth—particularly "to eliminate the possibility of short period fluctuations in real income"—and then proceeds to examine the nature of forces which, in a broad sense, cause changing rates in such a dynamic equilibrium. He begins by assuming full employment and an optimum outlay and shows how the recent theory—Keynesian and post-Keynesian —includes the assumptions of economic growth in various ways. In this way he examines Harrod's as well as Mrs. Jones Robinson's, discussions about the conditions of steady growth at full employment levels (or when these fail), and suggests that "economists might usefully sacrifice the elegance of existing forms and look afresh at the full economic process." While, fundamentally, the factors underlying the *process* undoubtedly are (1) the working force, (2) capital stock, and (3) profit, the accelerator is not "innovation" (of Schumpeter and others), but the "interaction of the rate of growth of income and the level (of productivity) of investment.". But this interaction has to be viewed when cleared of business cycles and the *ex-ante* optimum (and full employment). With the help of a statistical appendix (and two charts), he illustrates the patterns of the U.S. and British economies over the period 1800-1949 as showing "a relatively consistent rate of growth pattern in industries" and "regular stagnation after a phase of increasing rate of growth in the very early stages" (pages 100-101).

An interesting use of these models is made to "locate the process of *take-off* of a predominantly agricultural economy into industrialisation and the process of secular stagnation." The yields from capital stocks and the change in the propensities cause deviations from steady rate of growth; but, over and above these, there is the business cycle. This is explained (almost along the now familiar lines) as resulting from (1) the influence of various lags on the scale and character of investment and (2) the institutional environment of investment when carried out by private individuals (and institutions) in search of profit. The crucial factor is the concentration of investment during a boom period on certain key centres, disproportionately.

Finally, the author takes up the problems of long period trends of economic growth during the past 150 years in the Western world: the trends in relative inter-sectoral prices and income distribution; the character and yield from new investment; and the trend of general prices. He comes to an important conclusion from these, namely, the course of economic history has yielded sustained periods of over-expansion of capacity in certain sectors of the economy *decreed mainly by war* (with abnormally long periods of gestation) and by the process of extensive expansion into new territories.

Indeed, in Part II, he tries to apply his conclusions to two specific issues: war and economic change and impact of international trade especially in relation to the terms of trade between industrial and agricultural countries.

We welcome the book, for it successfully focusses attention on the main lacuna in the great theoretical apparatus that is built up in the last 30 or 40 years (viz., a working or acceptable theory of economic progress). Indeed, there is today a ferment in the world of economic thought around the theory of economic development, and empirical data, especially on entrepreneurship and the role of State, are increasingly made available. Besides showing the importance of the analyses of these long-term factors, Professor Rostov, in the last chapter, also illustrates how several new and great issues for theory as well as policy—as, for example, terms of trade, chronic inflation and full employment, steady full employment or freer market mechanisms, the balance between liberty and State control (or State enterprise), direction of investment in underdeveloped economy—can no longer be ignored with impunity. It is, of course, possible to say that the book has posed these many issues rather than provided their solution; but even this critic will agree that the economic historian has led him into an avenue in which he must see more light and hope.—M. C. MUNSHI.

Estate Duty Manual 1954. By Bhargava, Hedley and Aggarwala. Publishers: The Taxation Publishing Co. (India) Ltd., Delhi 7. Price: Rs. 17-8.

Amongst the spate of publications on the recent enactment of Estate Duty in India, this book attracts special attention for its lucid survey of the whole field of estate duty legislation, profusely illustrated by apt examples to carry home the meaning and drift of the complicated sections. So far as I am aware, there is hardly any other Indian publication which explains so clearly the estate duty problems in proper perspective. The co-operation of Mr. Hedley, an Incorporated Accountant of London, in bringing to bear on this complicated piece of legislation wide practical experience of estate duty administration in the U.K., has enhanced the value of the book considerably. The language of the Act is admittedly stiff and technical and difficult for a layman, nay, even for technical men like a lawyer and an accountant, to grasp the meaning at first reading. Hence a treatise which has attempted to reduce the meaning and the scope of each section in a simple, lucid and, as far as possible, in non-technical language is doubly welcome.

The book is divided into three parts, the first part containing 24 chapters. The charging section—the centre and circumference of a fiscal legislation—is discussed at considerable length and profusely illustrated by apt examples to drive home the substance and scope of the section and very useful charts summarising the reliefs, etc., in pictorial form.

There is an appendix containing the Estate Duty Bill 1952, rules framed by the Central Board of Revenue, various corresponding sections of the U.K. Act and other relevant Indian Acts which have a bearing on the Estate Duty Act. The authors promise a supplement to this manual to be supplied free to the purchaser of this manual. The supplement will contain suggestions for drafting various applications under the Act, as well as various typical specimen estates with computation of estate duty liabilities, prescribed forms of returns, affidavits, statements of accounts, etc.

I wish, however, to make one suggestion and that is the arrangement of the alphabetical index. In my opinion, this should have come at the end for facility of quick reference, instead of at the end of Part I, in the body of the book.

I have no hesitation in recommending this book to all those who are interested in the working and administration of Estate Duty—especially accountants, lawyers and secretaries of big estates for a clear exposition and lucid treatment of all problems arising thereunder.—R. K. DALAL.

The Silver Jubilee Souvenir, 1925-1953. Edited by P. Suryanarayana, President, Andhra Chamber of Commerce, Madras 1.

The Souvenir marks the commemoration of the Silver Jubilee of the Andhra Chamber of Commerce which completed its 25 years of useful service last year. The outstanding feature of the Souvenir is the series of informative articles it contains on population, agriculture, industry, mining, banking, insurance, etc., of the newly formed Andhra Desa. These articles have been contributed by leading business men and administrators, retired as well as still in service, of Andhra who are fully competent to speak with authority on the subjects chosen by them. Every one of these articles is so instructive that it would be invidious to single them out for special mention. In order to convey an idea of the fare served by this volume, one may, however, casually mention the article on "Food Production in Andhra" by Mr. S. V. Ramamurthy, I.C.S. (Retd.) or that on "Industrial Potentialities of Andhra Desa" by V. Ramakrishna, I.C.S. (Retd.). "Trade and Commerce of India" is another stimulating contribution from the pen of one of the leading business men of Andhra, Mr. P. Suryanarayana. These and other equally interesting articles, too numerous to mention, give one an idea of the vast economic potentialities of the newly formed State awaiting exploitation by well-thought-out planning and development.

The Souvenir provides also some idea of the valuable role played by the Chamber, during its career of a quarter of a century, in the service of commerce and industry of Madras, in general, and Andhra, in particular. The Chamber fully deserves to be complimented on this account. But, now that a new State has come into being, its real work lies ahead, as it will be called upon to bear still more burdens of responsibility in building up the economy of this infant State the name of which it bears. We have no doubt that, in this respect, the Chamber would rise to the expectations of the business community of Andhra, as there is no dearth of business talent and acumen either in the membership of the Chamber or in the State.

57B, FREE SCHOOL STREET,
CALCUTTA, *2nd April*, 1954.

N.B.—As any dividends that may be declared will be paid only to Shareholders registered in the Company's Registers of Members, those holding shares on Blank Transfers are advised to register them prior to 12th April, 1954.

KAMARHATTY COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE One hundred and fifty-second Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, at 12-15 p.m. on Friday, 30th April, 1954, for the following purposes:—

(1) To receive and adopt the Directors' Report and Audited Accounts for the half-year ended 31st December, 1953, and the Balance Sheet as at that date.

(2) To declare Dividends.

(3) To elect a Director.

The Share Transfer Books of the Company will be closed from 16th April, 1954, to 30th April, 1954, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LTD.,
D. FORDWOOD,
Secretary,
Managing Agents.

4, CLIVE ROW,
CALCUTTA-1, *26th March*, 1954.

Note.—Payment of any dividend declared will be made only to those members whose names are registered in the Books of the Company on the 30th day of April, 1954, or to their Mandatees. No applications for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

THE DUNLOP RUBBER COMPANY (INDIA), LIMITED

NOTICE IS HEREBY GIVEN THAT THE 28th Ordinary General Meeting of the Company will be held at the Registered Office of the Company, Dunlop House, 57B, Free School Street, Calcutta, on the 29th day of April, 1954, at 12-15 p.m., for the following purposes:—

(1) To consider, approve and adopt the Directors' Report and Statements of Account.

(2) To declare Preference and Ordinary Dividends.

(3) To elect Directors.

(4) To elect Auditors and to fix their remuneration.

By Order,
P. B. SEN GUPTA,
Secretary.

"DUNLOP HOUSE",
57B, FREE SCHOOL STREET,
CALCUTTA, *2nd April*, 1954.

N.B.—In terms of Article 4 of the Company's Articles of Association no Preference Shareholder as such is entitled to attend the Meeting. A Debenture Stockholder as such is also not entitled to attend the Meeting.

THE BENGAL POTTERIES LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Compahy, 45, Tangra Road, Calcutta, at 3-30 p.m. on Friday the 1st October, 1954, for the purpose of considering and if thought fit passing with or without modification the undermentioned Resolution as an Extraordinary Resolution.

"Resolved that the Managing Agency Agreement of Messrs. S. Lall Bhagat & Co., and its present Partners be terminated with effect from 1st of October, 1954."

By Order of the Board of Directors,
D. N. SEN,
Director.

45, TANGRA ROAD,
CALCUTTA, *27th March*, 1954.

E.I.D. REPORTS GOOD RESULTS

DISTRIBUTION TO SHAREHOLDERS RAISED

HEARTENING results are disclosed by the statement of accounts of the East India Distilleries and Sugar Factories Ltd. (Secretaries: Messrs. Parry's Holdings Ltd., Madras) for the year ended 30th September, 1953. The profit of the Company, which had suffered a substantial setback in the previous year, has advanced notably in the year under review. Though the quantity of cane crushed and the output of sugar in the season 1952-53 was less than in the previous season, the "reasonable" price realised by the Company on sugar and the satisfactory working of the other sections of its business, except the carbonic acid gas manufacturing section, have enabled it to report satisfactory earnings. Thus, the Company's distillery worked satisfactorily and produced better results. The chemical works experienced a more profitable year and the pottery factory catered for an expanding market. The profit from manufacture of carbonic acid gas was, however, affected by heavy competition.

The trading profits for the year under review works out to £344,863, which, as compared with that for the previous year, shows an increase of £107,031, but it falls short of that for 1950-51 by £87,398. The provision for depreciation has been stepped up from £63,468 to £75,024 and that for taxation has been more than doubled at £92,252, as against £43,734. Even after these larger allocations, the net profit stands higher by £25,553 at £159,269. To this net profit has been added a sum of £156,662 being the refund of Indian taxation received during the year. Of this sum, £10,210 represents post-war refund of Indian E.P.T. and £6,452 refund of double E.P.T., which the Directors have placed to the credit of capital reserve and provision for taxation, respectively. Thus, the total provision made for taxation is £98,705. Alluding to the Company's liability for taxation, the Directors observe:

"It has still not yet been possible to reach final agreement with the authorities concerned of the Company's liabilities to taxation in the United Kingdom and in India based on profits earned between 30th September, 1945, and the date of the transfer of control of the Company from the United Kingdom to India in January, 1948. It is hoped the position will be finalised during the course of the current year. In the meantime, the amount provided in the accounts is considered to be adequate and if, on finalisation, any over-provision results, it will be placed to reserve. Provision has been made for the full Indian taxation liability on profits earned up to 30th September, 1953. There are no further amounts to be received in respect of post-war refunds of excess profits tax and all such refunds have been placed to capital reserve."

The management has always been noted for its judicious policy in allocating the profit. In keeping with this healthy tradition, the Directors have transferred a sum of £75,000 to the general reserve, which did not receive anything last year. The plant and machinery replacement reserve, which had received £65,000 last year, has, however, not been strengthened further. In view of the increase in profit and the Company's very strong reserves, the Directors have justifiably raised the distribution to the 'B' ordinary shareholders from 15 per cent. to 20 per cent., free of Indian income-tax. However, the additional distribution is described as special extra dividend. The adoption of this procedure is a warning to the shareholders that they should not expect the same rate of distribution to be maintained for all time in future. This warning is justified, because the fortunes of the sugar industry are subject to the vagaries of the monsoon.

The following comparative table gives the salient features of the Company's results for the last four years:

	Year ended 30th September			
	1953	1952	1951	1950
	£	£	£	£
Trading profit	344,863	237,562	432,261	352,496

Carry forward	59,690	57,421	55,705	28,607

† 10 per cent. on "A" shares, 15 per cent. plus special additional dividend of 5 per cent. for 1952-53 and 15 per cent. for 1951-52, 1950-51 and 1949-50 on "B" ordinary shares.

The Company's main activity is the manufacture of white sugar from sugarcane. During the season 1952-53, the Company's factory crushed 308,000 tons of sugarcane, as against 326,117 tons in the previous season, and produced 27,552 tons of white sugar, as compared with 28,461 tons in 1951-52. The recovery of sugar amounted to 8.91 per cent. which is said to be a slight improvement on the figure recorded in the previous season.

The Company's financial position is strong. The reserves and surplus amount to £705,056 and are equal to more than 120 per cent. of the paid-up capital of £580,000. The fixed assets at cost aggregate £1,193,278, including £31,179 representing expenditure to date on buildings, plant and machinery in course of construction. The additions to fixed assets during the year amounted to £104,894. The book value of the fixed assets amounts to £692,770, the depreciation provided so far being £500,508. The current assets, excluding trade investments in India amounting to £13,015, aggregate £1,155,685 and represent more than double the current liabilities and provision for taxation, at £576,414. Of the current assets, stocks on hand and in transit show a decline from £1,092,277 to £742,800, while cash balances stand substantially higher at £200,135, as against £24,444 a year ago.

A persual of the speech of the Company's Chairman, published in our last issue, shows that the Company's shareholders can look forward to another year of satisfactory results in 1953-54. The Company spares no efforts to increase its output of sugar. The new distillery, now in course of erection, will be in production before the next annual general meeting. The carbonic acid gas will be able to produce a reasonable return in the near future, consequent on the lower cost of production of the new fermentation plant. The acid chamber plant, which has been repaired and reconstructed, is making a very useful contribution to the Company's chemical production. The Company's pottery factory is working well. The products of this factory are of good quality and are meeting the needs of an expanding market. As regards the confectionery section, the following observations of the Chairman will be read with interest:

"Last year, I told you that the Board had in mind the formation of a separate confectionery company to take over the assets of the Company's present confectionery department. I am pleased to tell you that the Board has now decided to proceed with this scheme and a detailed communication in this regard will shortly be sent to shareholders. As soon as the assets to be transferred have been properly and independently valued, it is proposed that the Company shall subscribe for the whole share capital in the new confectionery company. Subsequently, the Board proposes to distribute the majority of the Confectionery Company shares, as a dividend in specie, to the holders of the Company's 'B' ordinary shares in the proportion of one share of one rupee in the Confectionery Company for each 'B' ordinary share held. There will also be a small cash distribution to cover any super-tax liability."

The Chairman said that he believed that, with the certain industrial development of South India under the Five-year Plan and with the improvement in the general standard of living, the future of this Company could be viewed with confidence.

The 'B' Ordinary shares (£1 paid-up) of the Company are being currently quoted on the Madras Stock Exchange at Rs. 27-12 *cum*-div. On an *ex*-div. basis, the dividend for 1952-53 works out to a yield of 10.6 per cent. per annum, free of tax.

(Concluded from next column)

liabilities and provision for taxation by a good margin. The cash balances show a decline from Rs. 21.89 lakhs at the end of 1952 to Rs. 7 lakhs. The increase in the Company's borrowings and the shrinkage in cash balances mainly reflect the heavy capital expenditure that is still being incurred by the Company.

The outlook for the Company is promising. The management availed itself of the opportunity provided by the slack period in the rolling mills to experiment successfully with the rolling of sheets in alloys and of types not previously made in India on a commercial scale. The paste plant commenced operation in January, 1954, following the banning of import of aluminium paste. The following points culled from the Directors' report are relevant for judging the prospects for the Company:

"The expansion of the Company's smelter facilities in Travancore and of the rolling mills at Belur are proceeding satisfactorily; both are expected to be completed by mid-1954. The installation of an extrusion press adjacent to the smelter in Travancore has been put in hand and the press should be operating by the end of 1954. The Company has proceeded with these expansions, in spite of the dull conditions of the aluminium market through which we have been passing not only because we believe these conditions to be only transitory but also because our present troubles have shown the danger to small production units dependent on a restricted market. A more diversified range of products will make it possible to cater to commercial demands which at present are filled by other metals or by imports.

"From 1st January, 1954, your Company has become the exclusive selling agent in India for Venesta Limited's aluminium foils (other than tea-chest linings) which are manufactured in West Bengal. There is a considerable potential market for aluminium foil, the principal raw material for which we shall be in a position to supply when the expanded capacity of our Belur rolling mills starts operating during 1954."

The foregoing extracts reveal that the management is enterprising and has complete faith in the future for the industry in this country. This robust optimism is, indeed, commendable and is a typical instance of enlightened private enterprise. An uncertain factor that clouded one's view of the Company's prospects has now nearly disappeared, as will be noted from the following quotation from the Directors' report:

"The Company's longstanding dispute with the Travancore-Cochin Government over the rates to be paid for electric power supplies to the Alupuram smelter has been resolved in principle. A formal supplemental agreement is being negotiated including rates that will be in force until 1975 and that may be extended until 1995. Provision has been made in the attached accounts for the enhanced rate that will be payable by the Company."

INDIAN ALUMINIUM GOES OFF DIVIDEND LIST

OUTLOOK, HOWEVER, BETTER

THE year ended 31st December, 1953, proved to be a disappointing one for the Indian Aluminium Company, Ltd. (Managing Director: Mr. J. W. Cameron, Calcutta). The trading profit for that year suffered a marked shrinkage as compared with that for the previous 15 months. (The Company's financial year-end was changed in 1952 from 30th September to 31st December.) The trading profit, which amounted to Rs. 32.58 lakhs for the 15 months ended 31st December, 1952, as compared with Rs. 31.36 lakhs for the year ended 30th September, 1951, dropped to as low as Rs. 7.85 lakhs, for the year under review. This profit represents one of the lowest earned by the Company since its incorporation as a public limited one in 1945 and is only a shade better than that of Rs. 7.25 lakhs for the year ended 30th September, 1949.

The net result is still worse, in that there has been a net loss of Rs. 13.65 lakhs, after making provisions for depreciation and taxation, as compared with a net profit of Rs. 10.70 lakhs for the previous 15 months. It will be interesting to note that this is the first year since 1945 in which the Company has suffered a loss. This loss was, however, wiped off by the huge surplus of Rs. 22.28 lakhs brought in from the previous period.

After taking into account the sum of Rs. 2 lakhs, being the over-provision for taxation made for the year ended 30th September, 1951, and after paying the 5 per cent. preference dividend, the sum available amounts to Rs. 9.15 lakhs. Though this sum is sufficient to declare a dividend, albeit smaller than the dividend paid for the previous year, the Directors have thought fit to pass over the ordinary dividend. This may be a little disappointing to the shareholders, in that it was only three years ago that they got their maiden dividend of 3½ per cent. for the year ended 30th September, 1950. However, a careful study of the Directors' report reveals the need for conserving the Company's resources.

The operations at the Company's Lohardaga mines and Muri alumina works continued on a scale sufficient to meet the Company's own requirements of smelter as well as outside demand, the latter showing a pronounced increase in the year under review. However, production of ingot was seriously affected by the severe and prolonged power-cut in South India. The output of ingot amounted to only 1,984 tons, the lowest for any year since 1947. The Belur rolling mills operated well below capacity, the output having been limited by the paucity of orders. The large accumulated stocks of imported aluminium paste in the country made the sale of the Company's product very difficult and the Kalwa paste plant remained closed for nine months during 1953. These factors, coupled with the heavy expenses incurred in improving the sales and in expanding the production lines, cumulatively account for the extremely low trading profit of Rs. 7.85 lakhs (or 6.7 per cent. of the sale proceeds) as well as for the net loss of Rs. 13.65 lakhs.

The following comparative table gives an idea of the Company's progress since 1950-53:

(In lakhs of rupees)

	For the year ended 31-12-53	For 15 months ended 31-12-52	For the year ended 30th September	
			1951	1950

	..	..	(4% (p.a.)	(5% (p.a.)	(3½% (p.a.)
Carry forward	9.15	22.22	27.38	23.62

† For 15 months ended 31st December, 1952.

The sale proceeds for the year under review include a sum of Rs. 2.90 lakhs, representing the sale proceeds of agency products. The Company became a non-exclusive distributor in India for the products of Aluminium Union Ltd. Besides being a source of income in the form of commission earned, the distributorship has made it possible for the Company to develop the uses of aluminium in the country by making available immediately those items which the Company does not produce now.

The Company's latest balance-sheet discloses that the reserves and surplus amount to Rs. 45.30 lakhs, as against a paid-up capital of Rs. 2 crores. The provision for taxation aggregates Rs. 3.50 lakhs, and the current liabilities Rs. 1.39 crores. Of these liabilities, loans from banks and others amount to Rs. 1.14 crores, these having risen from Rs. 68.50 lakhs. The entire loan amount is unsecured, while a part of it was secured by hypothecation of assets last year. The gross block of the value of Rs. 3.45 crores (including additions to the extent of Rs. 38.63 lakhs during the year) has been written down to Rs. 2.10 crores. The current assets amount to Rs. 1.78 crores (of which stocks account for Rs. 1.44 crores), and exceed the current

(Continued in previous column)

Points From The Chair

Sterling Area's Greatest Dollar-earner

"NATURAL rubber is the sterling area's greatest dollar-earner. Since 1945 it is estimated that natural rubber has earned nearly 1,750,000,000 dollars, but the Malayan and United Kingdom Governments should take warning; in 1953, rubber's dollar earnings were only about half of what they were in 1952 and less than a quarter of what they were in 1951. The Malayan Government must do something and must do it quickly to help its rubber industry to remain competitive and to maintain its dollar-earning capacity. It has recently been announced that two of the large chemical companies and the Dunlop Rubber Company are going to commence the production of synthetic rubber in this country. It is important that this new venture be viewed in its true perspective."

P. B. L. COGHLAN,
Rubber Growers' Association (Incorporated).

Egypt's Economic Potentialities

"Egypt must take stock of her economic potentialities. An exceptionally fertile soil, unexploited resources and comparatively moderate charges in respect of public debt and current obligations are rare attributes nowadays in a world where the budgetary expenditure of so many countries bears so heavily on national resources. The agreements which the authorities have recently concluded involving the participation of foreign capital in the field of heavy industry, and also in respect of oil, constitute an important step in the effort which our country must maintain to make up lost ground. It is to be hoped that these agreements will act as a stimulant on the latent potentialities of the private sector of the economy."

ALY SHAMSY,
National Bank of Egypt.

Future of Aluminium

"While defence and stockpiling needs will, undoubtedly, continue to require large tonnages, the present adequacy of supplies is stimulating further development of those civilian uses in which the metal is now generally accepted and is encouraging the active introduction of aluminium in new fields which have been under development for many years. Aluminium now has full opportunity to prove its merits in competition with other materials, many of which have fallen in price. The era of greater competition will not be easy, as experience in some of our markets has already shown in 1953, but, in our view, if the price of aluminium can be maintained at economic and competitive levels, the inherent advantages of the metal should maintain a healthy and growing demand in the years ahead."

NATHANEL V. DAVIS,
Aluminium Ltd.

Outlook for Ravalgaon Sugar

"You would naturally want to know something about the working so far during the current season. I am sorry I have not very encouraging news about this. The sugarcane crop which was meant for crushing during this season was doing well during the earlier part of the year, but some time in April, 1953 it was announced by the irrigation authorities that the water level in the storage tank had gone very low and that the supply would, therefore, have to be cut drastically. There was practically no watering of the standing crop during that period. It also happened that the heat in the area was more severe than usual, so much so that at one time it was feared that the crop would be completely ruined. There were, however, rains during the earlier part of June which helped in saving the crop. Nevertheless, the long period of drought had its effect on the standing cane at a very critical time of its growth and the yield was naturally much below normal. The prices realised so far for sugar have been satisfactory, though it would be difficult at present to say what the overall position would be like, because the bulk of the production at your factory still remains to be disposed of. Cane production available for crushing during the season was down in the whole area and till this supply, both from the factory's own plantation and from *bagaitdars*, shows improvement, the working season as well as the total output are bound to remain low. It is unfortunate that apart from the loss in production and the resultant loss in profits from this, a short working season adds to the overheads and the manufacturing cost, further reducing the margin of profit to that extent."

GULABCHAND HIRACHAND,
Ravalgaon Sugar Farm Ltd.

Problems of British Agriculture

"The past year has been a reasonably satisfactory one for our agricultural industries. There has, however, been brought into sharp relief the problems which lie ahead, now that food rationing and price control are coming to an end. In the future, Government assistance will be shown as a cost of Government support to British agriculture and not, as it has been in recent years, as a cost-of-living subsidy to the consumers and, with some British farm prices higher than world prices, we must expect this item of our national expenditure to be scrutinised with a very critical eye. Nevertheless, I am sure that farmers can face the future with reasonable confidence. It has been repeatedly stated by the Government that it is their intention to encourage and support maximum food production at home and sufficient incentives to this end must always be given. In return, farmers must make the fullest possible use of our land resources, and it can be no part of Government policy to support the easy-going or inefficient farmer."

THE DUKE OF BUCCLEUCH AND QUEENSBERRY,
Royal Bank of Scotland.

COMPANY MEETINGS AND DIVIDENDS

VIJAYALAKSHMI MILLS LTD. Annual General Meeting, Kunyiamuthur, Coimbatore District, 16th April, 1954. Dividend: Rs. 6 per share.

AHMEDABAD MANUFACTURING AND CALICO PRINTING CO., LTD. Annual General Meeting, Ahmedabad, 19th April, 1954. Dividend: Rs. 18 per share (including Rs. 8 interim). Transfer books remain closed from 5th to 21st April, 1954, both days inclusive.

JAWAHAR MILLS LTD. Annual General Meeting, Salem Junction, 19th April, 1954. Dividend: As. 6 per share, free of tax. Transfer books remain closed from 5th to 19th April, 1954, both days inclusive.

JAY SHREE TEA GARDENS LTD. Annual General Meeting, Calcutta, 19th April, 1954. Dividend: Nil. Transfer books remain closed from 25th March to 19th April, 1954, both days inclusive.

AMALGAMATED COALFIELDS LTD. Half-yearly General Meeting, Calcutta, 20th April, 1954. Dividend: As. 8 per share, free of income-tax. Transfer books remain closed from 9th to 20th April, 1954, both days inclusive.

COLABA LAND AND MILL CO., LTD. Annual General Meeting, Bombay, 22nd April, 1954. Transfer books will remain closed from 13th to 30th April, 1954, both days inclusive.

SHREE KRISHNA GYANODAY SUGAR LTD. Annual General Meeting, Dalmianagar, 23rd April, 1954. Transfer books will remain closed from 17th to 23rd April, 1954, both days inclusive.

BELVEDERE JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 23rd April, 1954. Dividend: Rs. 7-8 per share. Transfer books remain closed from 6th to 23rd April, 1954, both days inclusive.

TRICHINOPOLY MILLS LTD. Annual General Meeting, Tennore, Tiruchirapalli, 24th April, 1954. Dividend: As. 11-1/5 per share, free of tax. Transfer books remain closed from 7th to 24th April, 1954, both days inclusive.

TRAVANCORE RUBBER AND TEA CO., LTD. Annual General Meeting, Alleppey, 26th April, 1954. Dividend: As. 12 per share (final). Transfer books remain closed from 10th to 28th April, 1954, both days inclusive.

RAMNUGGER CANE AND SUGAR CO., LTD. Annual General Meeting, Calcutta, 28th April, 1954. Transfer books will remain closed from 12th to 28th April, 1954, both days inclusive.

MODERN MILLS LTD. Annual General Meeting, Bombay, 7th May, 1954. Dividend: Rs. 5 per share. Transfer books will remain closed from 15th April to 7th May, 1954, both days inclusive.

ANDHRA VALLEY POWER SUPPLY CO., LTD. Interim dividend of Rs. 30 per share, for the year ending 30th June, 1954, payable on 26th May, 1954. Transfer books will remain closed from 17th to 30th April, 1954, both days inclusive.

TATA HYDRO-ELECTRIC POWER SUPPLY CO., LTD. Interim dividend of Rs. 3 per share, for the half-year ending 30th June, 1954, payable on 25th May, 1954. Transfer books will remain closed from 17th to 30th April, 1954, both days inclusive.

TATA POWER CO., LTD. Interim dividend of Rs. 30 per share, for the half-year ending 30th June, 1954, payable on 27th May, 1954. Transfer books will remain closed from 17th to 30th April, 1954, both days inclusive.

AMALGAMATED ELECTRICITY CO. (BELGAUM) LTD. Interim dividend of As. 6 per share, for the half-year ended 30th September, 1953, payable on or after 19th April, 1954. Transfer books will remain closed from 12th to 17th April, 1954, both days inclusive.

BENGAL COAL CO., LTD. Dividend of Rs. 10 per share plus a bonus of Rs. 5 per share, for the half-year ended 31st October, 1953.

WESTERN INDIA MATCH CO., LTD. Dividend of Rs. 10 plus a bonus of Re. 1 per share, for the year ended 31st December, 1953, payable on 10th May, 1954. Transfer books will remain closed from 19th April to 8th May, 1954, both days inclusive.

PREMIER CONSTRUCTION CO., LTD. Dividend of Rs. 6 per share, for the year ended 31st December, 1953, payable on 17th May, 1954. Transfer books will remain closed from 19th April to 8th May, 1954, both days inclusive.

RAJALAKSHMI MILLS LTD. Dividend of Rs. 7-8 per share, for the year ended 31st December, 1953. Transfer books remain closed from 1st to 14th April, 1954, both days inclusive.

VASANTA MILLS LTD. Dividend of Rs. 12 per share, for the year ended 31st December, 1953. Transfer books will remain closed from 14th to 28th April, 1954, both days inclusive.

LAKSHMI AGENTS LTD. (First Director: Mr. K. K. Misra.) Business: Manufacturers of all Kinds of Produce Goods. Authorised capital: Rs. 10,00,000. Private company. Address: 243, Upper Chitpur Road, Calcutta.

SARAF INVESTMENTS LTD. (First Director: Mr. C. M. Saraf.) Business: Financiers, Monetary Agents, Moneylenders, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 62, Nalini Sett Road, Calcutta.

RUTTONPORE TEA CO., LTD. (First Director: Mr. P. B. Datta.) Business: Tea Growers, Manufacturers and Wholesale and Retail Dealers of Tea. Authorised capital: Rs. 5,00,000. Public company. Address: E3, Clive Building, Calcutta.

QUESTION HOUR IN PARLIAMENT

Inter-State Levies

THE whole question of abolishing customs duty in certain Part B States, such as Rajasthan, Hyderabad, Madhya Bharat and Saurashtra, will be considered in the course of the year in consultation with the State Governments. The Rajasthan Government has undertaken to abolish the inter-State transit duties in the State by the end of 1954-55. The abolition of duties on certain articles is expected to be achieved with the introduction of sales tax by the Rajasthan Government in the current year.

—Minister for States

Statistical Institute

The Government of India has decided in principle that the Indian Statistical Institute, Calcutta, should be developed as the focal centre for professional training and research in statistics on the same lines as a higher technological institute.

Agricultural Finance

The Reserve Bank of India has sanctioned Rs. 60 lakhs as the limit of amount to be outstanding at any time during the period July, 1952 to June, 1953, for financing seasonal agricultural operations and marketing of crops in West Bengal State through the State Co-operative Bank. The amount actually drawn during this period aggregated Rs. 70 lakhs.

—Deputy Finance Minister

Foreign Investments

The Reserve Bank proposes shortly to undertake another survey of foreign investments in the country. During July, 1948 to October, 1953, remittances to the extent of Rs. 33.56 lakhs were received from residents of the U.K. for investment in the cotton textile industry. According to the 1948 Reserve Bank census, investments by residents of the U.K. in the cotton textile industry in India amounted to Rs. 9.26 crores. Since then, capital repatriation amounted to Rs. 53.4 lakhs.

Pak Rupee Rate

The disparity between the official and the market rates of the Pakistan rupee in terms of India currency will not affect the transfer of evacuee deposits. These deposits are subject to negotiation and settlement on a Government-to-Government basis and the official rate of exchange will be applied where necessary. The disparity between the market price of the Pakistan rupee and the official rate varies from place to place. The latest rate in the "free market" here (New Delhi) is 79 Indian rupees for 100 Pakistan rupees.

—Parliamentary Secretary to Finance Minister

Hirakud Dam

Approximately Rs. 29 crores have been spent on the construction of the Hirakud Dam up to the end of February, 1954. I cannot indicate now far the schedule of expenditure corresponded with the estimate so far as the actual work done is concerned. Estimates, however, have changed from Rs. 67 crores to Rs. 72 crores. It was originally estimated that the project would be completed by 1955-56, but, recently, it was found that it would be ready substantially by June or July, 1956. The revised expenditure does not include expenditure on the delta irrigation project.

—Deputy Minister for Irrigation and Power

Ordnance Production for Civilians

The estimated value of the work done in ordnance factories in the production of stores for civilian use during 1953-54 was Rs. 185.6 lakhs. The estimated value of sales during the same period was Rs. 156.37 lakhs. The Government intends to expand this scheme for production of civilian goods to the maximum extent possible commensurate with the surplus capacity available.

—Deputy Minister for Defence

Rail Passengers

The number of passengers booked during the nine months ended 31st December, 1953, indicated a decline on the Central, North-Eastern and Southern Railways, as compared with the corresponding period of the previous year. The overall decline amounted to Rs. 89 lakhs. On the Southern Railway, the decline was among the peasants. It is difficult to give reasons in respect of the other railways.

—Parliamentary Secretary to Railway Minister

Administrative Study

The sub-committee of the Planning Committee of the All-India Council of Technical Education has started its work in preparing a plan for the proposed Administrative Staff College and the National Institute. The Committee, headed by Mr. T. T. Krishnamachari, which is going into these questions will complete its deliberations within three months. The main purpose of the Administrative Staff College is to prepare studies for men who will hold executive responsibility in industry, commerce and the Government and help them to study common principles underlying administration. So far as the Institute of Management is concerned, its aim is to raise the standard of management throughout the country and undertake research, etc. It will help in supplying personnel for management in industry, commerce, etc., and create a lively interest among the people in the problems of management at all levels.

—Parliamentary Secretary to Education Minister

SMART RISE IN EARNINGS OF CALICO MILLS

BELVEDERE JUTE REPEATS DIVIDEND

Ahmedabad Manufacturing and Calico Printing Co., Ltd.

THE directors of the above Company (Agents: Messrs. Karamchand Premchand Ltd., Ahmedabad) submit the audited accounts of the Company for the year ended 31st December, 1953.

A sum of Rs. 71,18,203 (Rs. 45,67,966) of 1953 is available for appropriation which together with Rs. 22,19,005 (Rs. 2,89,575) brought forward from the previous year's account amounts to Rs. 93,37,208 (Rs. 48,57,541). The directors have transferred Rs. 35,00,000 (Rs. 26,00,000) to depreciation fund, Rs. 15,00,000 (*nil*) to fund for payment for taxes on income, Rs. 50,000 (*nil*) to contingency reserve fund, and paid Rs. 3,822 (*Rs. 38,536*) as donations debited in profit and loss appropriation account. The directors recommend payment of a dividend on "A" cumulative first preference shares for the year 1953, at 4½ per cent. on 1,600 shares of Rs. 125 each bearing interest at 4½ per cent. per annum free of income-tax, Rs. 9,000 (Rs. 9,000), payment of a dividend on diamond jubilee cumulative second preference shares for the year 1953, at 4½ per cent. on 16,000 shares of Rs. 50 each bearing interest at 4½ per cent. per annum, subject to income-tax Rs. 36,000 (Rs. 36,000), payment of a dividend on cumulative third preference shares for the year 1953, at 4½ per cent. on 38,666⅔ shares of Rs. 50 each bearing interest at 4½ per cent. per annum subject to income-tax Rs. 87,000 (Rs. 87,000), payment of a final dividend for the year 1953, of Rs. 10 (Rs. 10) per share free of income-tax on 1,00,000 ordinary shares together with the interim dividend at Rs. 8 (Rs. 8) per share on ordinary shares for the year 1953, absorbing Rs. 18,00,000 (Rs. 18,00,000) and to carry forward to the following year's account Rs. 23,51,386 (Rs. 2,87,005).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,54,11,054	Block ...	3,97,51,801
Reserves ...	99,56,782	Stock-in-trade ...	1,01,47,939
Depreciation fund ...	2,72,53,344	Stores, etc.	12,73,946
Provision for taxation ...	22,43,649	Debts and advances ...	1,46,18,052
Liabilities ...	91,78,478	Investments ...	3,65,600
Profit and loss appropriation account	34,83,386	Cash ...	13,67,355
	Rs. 6,75,26,693		Rs. 6,75,26,693

Belvedere Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1953.

After providing Rs. 1,85,000 (*nil*) for taxation there is a balance of Rs. 3,08,372 (Rs. 2,60,847) at the credit of profit and loss account from which the directors recommend payment as follows:—

Dividends on preference shares at Rs. 3-8 (Rs. 3-8) per share Rs. 24,500 (Rs. 24,500) and on ordinary shares at Rs. 7-8 (Rs. 7-8) per share Rs. 2,10,000 (Rs. 2,10,000) leaving Rs. 73,872 (Rs. 26,347) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills Association, the mills worked 42½ hours per week with 12½ per cent. of the total looms sealed.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	35,00,000	Block ...	39,88,617
Reserves ...	33,49,623	Stocks ...	27,89,572

Liabilities ...	13,59,817	Debts, deposits and advances ...	8,04,564
Profit and loss account ...	73,872	Investments ...	55,358
		Cash ...	12,105
	Rs. 87,40,425		Rs. 87,40,425

Sundatta Cotton-seed Utilisation Ltd.

The directors of the above Company (Managing Director: Mr. N. D. Sirur, Bombay) submitted the audited accounts of the Company for the fifteen months ended 31st December, 1953, which henceforward will be the date of closing annual accounts.

During the first five months of the period under report, i.e., until 28th February, 1953, the work of installation and erection of machinery and plant was continued over from the previous period and completed. Some trial runs took place for a few days in January, 1953, but owing to finishing touches to installation work, meagre raw material supplies and early teething troubles, production on a regular basis could not be commenced.

The result of the Company's operations for the ten months commencing 1st March, 1953 shows a small loss of Rs. 7,173 subject to depreciation, which could not be provided. This may be considered fairly satisfactory considering that for the first six months March-August the production was carried out at the initial rate of 12 tons of seeds crushed per day. It was only in September, 1953 that some of the new machinery ordered under the expansion programme was installed and the production stepped up to the more economic level of 25-30 tons per day.

There were several unforeseen difficulties which the Company had to face during the working period under report. In the beginning of May, 1953 the Government of Bombay imposed the cottonseed oilcake control order at a time when the arrivals of cottonseed, were at the peak. The Company, as well as the Tata Oil Mills Co., Ltd., who had contracted to purchase a substantial quantity of cottonseed for the year's crushing, had therefore to suspend all further purchases.

The crushing of cottonseed had also to be temporarily stopped since it became completely uneconomic in view of the fact that the Government of Bombay desired to purchase, for distribution in scarcity areas, 50 per cent. of the cottonseed oilcake produced by a mill at the unbelievably low price of Rs. 75 per ton when the market rate was Rs. 200 per ton. Strong representations were made by the Company to the Government both directly and through the Bombay Oilseed Crushers' Association against this order. As a result, it was withdrawn at the end of June, but by that time the arrivals of cottonseed in the market had dwindled and fresh purchases became difficult. However in July, crushing of the accumulated stocks of cottonseed was resumed.

In August, 1953, the Government of India permitted for a limited period until October, 1953, the free import of cottonseed oil at a preferential tariff. This well-intentioned measure, which was designed to overcome the virtual oil famine due to crop shortage and at the same time to stimulate the use of cottonseed oil in vanaspati, had the reverse effect. In spite of the fact that cottonseed oil from abroad became available at a substantial discount under groundnut oil, the majority of the vanaspati factories did not divert to its use because of unfamiliarity, while the few that had mastered the technique of using cottonseed oil, imported their requirements at a price so low that it bore no relation to the price of Indian cottonseed which had registered high levels. The only alternative left was to sell off the remaining stocks of cottonseed at the prevailing prices. During the period May-September, 1953, therefore, the Company had necessarily to divert its energies largely towards crushing an unfamiliar but remunerative seed known as "Kardiseed" which is a simultaneous crop to cottonseed and is abundantly grown.

In October, 1953, the Company reverted to cottonseed crushing on account of the Tata Oil Mills Co., Ltd., who were only able to purchase seed equivalent to a month's crushing on the basis of the expanded capacity which had by then been achieved. The balance of the contract has been by mutual agreement held in abeyance, and the Company expects to arrive at a new long-term arrangement in its place.

During the month of November, 1953, installation of the remainder of the new machinery that had arrived under the expansion programme was fully taken in hand while the annual overhauling of the machinery worked during the period was done at the same time. In December, the mills resumed production.

The sales of the various products and by-products manufactured by the Company have been brisk and satisfactory. The directors are pleased to report that the Company's mills are getting production standards on all types of seeds far higher than the local millers and substantially above those of Bombay City processors. The residual oil left in the oilcakes on our modern American equipment is equal to American results, and it can be said that the efficiencies attained are the best in India on expeller equipment.

The Company's financial position has been considerably strengthened during the period under report. In the extremely tight capital market, the Company was able to augment its paid-up equity capital from Rs. 4,55,428 to Rs. 7,00,243 which represents an increase of Rs. 2,44,815. It is hoped that the unsubscribed balance will be collected in the now more favourable investment climate.

To meet the immediate need for funds, and in order to cover the Company fully in respect of the additional fixed capital expenditure incurred in expanding the plant capacity, the directors decided to accept a loan of Rs. 4 lakhs offered by the Industrial Finance Corporation of India in response to the Company's application. This loan is on the security of the fixed assets of the Company and is repayable in eight annual instalments, commencing on 1st October, 1956. A sum of Rs. 2 lakhs was received on 30th December, 1953 as an interim loan, and the balance of Rs. 2 lakhs is to be made available on final completion of the documents.

During the current year, the directors have decided to purchase three new linter machines in addition to the five already installed making a total of eight in all. This will make the operations more economic. It has also been decided to acquire oil cooling machinery for improving the quality of cottonseed oil necessitated by the rigid standards of colour now laid down by the vanaspati manufacturers in Bombay. The cottonseed oil refinery section is being enlarged by adding a small bleaching plant fabricated in India to enable the Company to market some cottonseed oil in the local and upcountry markets as a direct edible product. The total addition to fixed capital expenditure in the current year is expected to be Rs. 1 lakh.

It may be here stated that the Company's mills have a rated capacity of 70 tons of cottonseed processed per day which can be achieved with a small amount of further machinery costing approximately Rs. 50,000. Due to power restrictions and financial considerations, it has been decided to limit the current year's capacity to 30 tons per day. However, when the Jog-Karnataka electric grid scheme reaches Hubli early in 1955, it is hoped to then raise the crushing capacity to the maximum of 70 tons per day, if other factors are favourable.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,02,280	Block ...	7,41,923

		Profit and loss account ...	7,173
	Rs. 13,22,291		Rs. 13,22,291

Braithwaite and Co. (India) Ltd.

The directors of the above Company (Secretary: Mr. Y. S. Tayal, Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1953.

After making provision to the extent of Rs. 9,00,000 (Rs. 5,75,000) to meet the Company's liability, in respect of income-tax and super-tax, transferring Rs. 4,00,000 (Rs. 2,00,000) to general reserve and after providing for depreciation and other sundry charges, the profit for the year (including Rs. 5,762-5-0, being post-war refund of excess profits tax) amounted to Rs. 6,04,189, which compares with the profit last year of Rs. 4,07,952. This profit together with the amount of Rs. 1,14,182 (Rs. 1,30,715) brought forward from last year's accounts, leaves a sum of Rs. 7,18,371 (Rs. 7,38,668) which the directors disposed of by paying a dividend for the year ended 31st December, 1953, of Re. 1 (As. 12) per share Rs. 5,65,979 (Rs 4,24,484) and carried forward Rs. 1,52,392 (Rs. 1,14,182).

The Company received a dividend on its investment in "The Braithwaite, Burn & Jessop Construction Company, Limited," of Rs. 1,59,730 (Rs. 82,360). The volume of orders in hand, both for the structural and wagon works is very satisfactory.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	39,61,853	Block ...	12,38,747
Reserves ...	29,33,555	Stock of materials and stores ...	6,90,802
Provision for taxation ...	13,84,454	Contracts-in-progress	45,32,955
Liabilities ...	32,08,367	Debts, deposits and advances ...	7,73,737
Profit and loss account ...	7,18,371	Investments	19,83,704
		Cash ...	29,86,855
	Rs. 1,22,06,800		Rs. 1,22,06,800

Savamalai Estates Ltd.

The directors of the above Company (Agents and Secretaries: Messrs. Peirce Leslie and Co., Ltd., Kozhikode, Malabar) submitted the audited accounts of the Company for the year ended 30th November, 1953.

After providing for depreciation and all charges the accounts showed a profit of Rs. 2,06,217 (Rs. 2,11,115). After adding the balance brought forward from last year of Rs. 94,443 (Rs. 55,015), there was a total sum of Rs. 3,00,660 (Rs. 2,66,130). After deducting provision for taxation Rs. 2,300 (Rs. 7,500), transfer to general reserve Rs. 36,707 (Rs. 1,00,000), interim dividend for the year 1952-53 paid on 30th November, 1953 at 10 per cent. Rs. 36,678 (*nil*), there was a balance of Rs. 1,74,976 (Rs. 1,58,630). The directors recommend payment of a final dividend of 20 (30) per cent. on the old capital of Rs. 1,83,390 absorbing Rs. 73,356 (Rs. 64,187), leaving to be carried forward to next year Rs. 1,01,620 (Rs. 94,443).

After taking into consideration the transfers from this reserve required to bring about the bonus issue and the amount transferred from this year's profits, the general reserve now stands at Rs. 2,00,000 (Rs. 2,50,000).

Additions during the year amounting to Rs. 33,389 represent expenditure on construction of a new staff quarter, 3 sets of 5 roomed labour lines, and other minor buildings. Additions during the year amounting to Rs. 37,573 cover upkeep charges of immature areas and cost of opening the 1952-53 clearings of 56 acres of robusta and 10 acres of arabica.

The crop of cwts. 2,906-1-16 was delivered to the Coffee Board and has been valued at Rs. 2-4 per point which works out at approximately Rs. 117.06 per cwt. for robusta and Rs. 151.58 per cwt. for arabica. Payments received to date amount to Rs. 2-1 per point. The 1953-54 crop is estimated at 100 tons and present indications are that this will be harvested. As much as 21 lbs. of ungarbled cardamoms were collected from the abandoned area at a cost of Rs. 42-7 and has been valued at Rs. 178-8.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,66,780	Block ...	4,53,251
Reserves ...	2,50,000	Stock-in-trade	87,788
Liabilities ...	57,094	Stores, etc. ...	22,281
Profit and loss account ...	1,74,976	Debts, deposits and advances ...	26,159
		Investments	29,050
		Cash ...	2,30,321
	Rs. 8,48,850		Rs. 8,48,850

N.B.—Figures within brackets relate to the corresponding period of the previous year.

GILT-EDGED BUOYANT

(From Our Own Correspondent)

BOMBAY, 7th April

Conditions in the short-term money market remained largely unchanged during the week under review, the stringency noted in the past several weeks showing no appreciable diminution. The only notable change was the disappearance of the demand for financial year-end purposes experienced in the previous two weeks. No doubt, funds lent for crop financing were found returning in driblets, but fresh demand was still on a large scale, so that the available supply was found inadequate. Money rates, therefore, remained unchanged. Inter-bank call money was done at 3 per cent. though some left-over funds were lent at times at 2½ per cent. Short-term deposits were done 3 per cent. for 1 to 3 months. 4 to 6 months' money was placed at 2½ to 3 per cent. and 6 to 12 months at 2½ to 2¾ per cent. The demand for these types of funds was as keen as ever.

The response to the Government of India Treasury Bills this week was a little better, the amount offered against the usual invitation for Rs. 100 lakhs having aggregated Rs. 142.50 lakhs, as against Rs. 101.50 lakhs in the previous week. Consequently, there was a decline in the average rate of accepted tenders from Rs. 2-11 per cent. to Rs. 2-10-9 per cent. per annum.

After two weeks of successive contraction, notes in circulation have expanded by as much as Rs. 21.11 crores in the week ended 2nd April, 1953. Disclosing this, the Reserve Bank of India's statement for that week records a drop of Rs. 6.60 crores in notes held in the Banking Department. The resulting rise of Rs. 14.51 crores in total notes issued is covered by a rise of Rs. 10 crores in foreign securities and of Rs. 4.51 crores in rupee coin. Such a large addition in the latter item could not be due to the return of rupee coin (including rupee notes) from circulation. It must have been the result of a fresh issue of rupee coin by the Government of India. Since usually such issues are made in units of Rs. 5 crores, the rupee coin in circulation must have actually gone up by Rs. 49 lakhs. In the Banking Department, a rise of Rs. 2.18 crores is noted in deposits of the Central Government and a fall of Rs. 23.64 crores in those of other Governments. Deposits of banks are also lower by Rs. 34.63 lakhs. Balances held abroad have shrunk by Rs. 8.78 crores, evidently due to the transfer to the Issue Department. Loans and advances to Governments are higher by Rs. 50 lakhs, while other loans and advances disclose a fall of Rs. 8.80 crores, of which advances to Scheduled banks against usance bills account for Rs. 8.50 crores.

An increase of Rs. 10.34 crores in demand deposits and of Rs. 47.93 lakhs in time deposits is disclosed by the Scheduled banks' statement for the week ended 26th March, 1954, as compared with that for the previous week. Inter-bank borrowings have gone down by Rs. 24.37 lakhs. Borrowings from the Reserve Bank have dropped by Rs. 2.91 crores and those from the Imperial Bank of India by Rs. 93 lakhs. Loans, cash credits and overdrafts show a fall of Rs. 66.84 lakhs, while bills purchased and discounted record a rise of Rs. 1.83 crores. Investments have gone up by Rs. 1.77 crores and cash balances and money at call by Rs. 4.21 crores.

The buoyancy in the Gilt-edged market, witnessed in the previous two weeks, was kept up during the week under review, with a further all-round rise in values. The stimulus was provided by the suspension by the Reserve Bank of India of the sale of 3 per cent. 1966-68 and 3 per cent. 1970-75, the only two issues which were selling last week. The sale of the former was suspended last Saturday at the last week's selling rate of Rs. 90-8, while the sale of the latter was stopped yesterday after raising its selling price by As. 2 more to Rs. 86-14. There were good enquiries for almost all issues and, in the face of a shortage of floating stocks, prices rebounded. 3 per cent. 1957 and 3 per cent. 1958 gained an anna each to Rs. 98-8 and Rs. 98-4, respectively. 3 per cent. 1959-61 advanced by As. 2 to Rs. 96-9 and 3 per cent. 1963-65 by a similar extent to Rs. 93. A rise of As. 3 to Rs. 93 took place in 3 per cent. 1964. 3 per cent. 1966-68 was well maintained at Rs. 90-8. 3 per cent. 1970-75 moved up by As. 3 to Rs. 86-15. 3 per cent. 1986 Conversion Loan responded well to widening enquiries by recording a rise of As. 7 to Rs. 83-3. 3½ per cent. 1961 N.P. Bond had business an anna better at Rs. 99-5.

In the foreign exchange section, there was no notable development during the week under review, the rupee-dollar exchange rate remaining unchanged at Rs. 475¼ (banks' selling) and Rs. 471¾ (banks' buying). However, in the New York market, sterling displayed once again considerable strength. After shading off from $2.81.9/16-2.81.11/16 on 25th March to $2.81.7/16-2.81.9/16 on 30th March, spot sterling moved ahead steadily to $2.81¾-2.81¾ yesterday. Likewise, forward sterling (3 months) gained from $2.81.1/16-2.81¼ to $2.81.5/16-2.81.7/16 and transferable sterling from $2.77¼-2.77¾ to $2.79-2.79¼.

LINSEED ADVANCES

(Messrs. A. Bradley and Co.)

CALCUTTA, 6th April

General conditions in the linseed market have been very firm during the week, owing to a decline in the movement of supplies from upcountry where prices have advanced. There have been keen enquiries for ready delivery, but only small business has been recorded, owing to scarcity of supplies. There are also keen enquiries for forward delivery which is quoted at a premium. The oil market has ruled firm and a keen speculative demand for forward delivery has resulted in fair business.

Latest quotations are: Ready Rs. 18-8 and April-June Rs. 18-12 per maund.

BULLION FIRM

(From Our Own Correspondent)

BOMBAY, 7th April

The bullish trend in the bullion market referred to in the previous week's report, gained fresh momentum during the week under review. Talks of stockpiling of strategic metals in the U.S., the virtual cessation of unauthorised arrivals of gold, the shrinkage in floating stocks of silver and gold and good offtake, all these strengthened the hands of bull operators considerably and lifted the prices to fresh high levels not seen in recent months. Frantic covering by short-sellers also assisted the upward trend. Silver, for instance, touched a high of Rs. 171-5 on Monday, thus establishing a level not witnessed since the first week of May, 1952. The higher level, however, brought a considerable amount of selling from prominent bull operators in order to avoid payment of margin. There was a strong resistance to the downward movement from bears who tried to push up the prices so as to force the bulls to pay heavy margin. There was, therefore, only a small recession from the peak and silver closed on balance with a gain of Rs. 2-6 per 100 tolas. Gold continued to forge ahead and touched a high of Rs. 91-14 (for forward delivery) which is a record for the last 19 months.

Silver for forward delivery (20th April settlement) opened the week at Rs. 168-1 and briskly moved up to Rs. 171-5 on Monday. As the buyers would have to pay margin if the closing rate had stood at Rs. 171-2, they hurriedly booked their profits. As the statistical position was in favour of a further rise, they persisted in liquidating their holdings, the effect of which was, as already stated, only a drop to Rs. 170-3 yesterday. The closing today was, however, a shade better at Rs. 170-11.

Ready silver (.996 Mint) maintained a premium of As. 4 over the forward, the opening and closing prices being Rs. 168-5 and Rs. 170-15, respectively. The floating stocks of silver are placed at 1,800 bars. The daily average offtake was 25 bars.

Opening at Rs. 89-10, gold for forward delivery (19th April settlement) jumped to Rs. 90-2 within a twinkling of an eye as it were. After a temporary setback to Rs. 89-11 on Saturday, forward gold resumed its upward trend and touched Rs. 91-14 today, before closing at Rs. 91-11.

Ready gold, which opened at Rs. 90-8, edged forward to a high of Rs. 92-10 today, but closed a shade lower at Rs. 92-7. The floating stocks of gold are estimated at 15,000 tolas. The daily average arrivals were 4,000 tolas, while the offtake was 5,000 tolas on an average.

In the London bullion market, silver prices remained unchanged at 73¾d. per fine ounce for spot and at 73¾d. for forward delivery. The price of gold, which had been showing a slightly downward trend ever since the opening of the market on 22nd March on account of the sale of Russian gold and touched a low of £12 8s. 3½d. on 2nd April, staged a smart recovery in the past three days. It touched a peak of £12 8s. 9d. yesterday, before closing at £12 8s. 7¼d. The rise in price is attributed to absence of any further offer of Russian gold.

The following comparative table shows the trend of the market during the week under review:

	7-4-54	Highest	Lowest	31-3-54
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint) ..	92 7	92 10	90 8	90 13
Forward	91 11	91 14	89 8	89 12

TEAS IRREGULARLY HIGHER

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 3rd April

The offerings in dust sale "F", which was held on Tuesday, 30th March, amounted to approximately 87,000 lbs. There was a strong general demand and prices advanced irregularly As. 1 to As. 2.

London Market.—Commons ½d., mediums 1d. dearer.

Colombo Market.—Active demand. Low-grown advanced five cents; mediums five to eight cents; high-grown lower following decline in quality.

Calcutta Market—Export.—No sale this week.

Dust.—19,000 packages. Less general demand. Market half to one anna easier. Black exportable types C.T.C. weakest feature.

Special licence.—At the beginning and throughout the week business has been effected at 30 pies, which remains today's quotation.

1954-55 *Export Quota.*—At the beginning of the week small business was done at 32 pies. Since then the market has strengthened considerably and business has been done in Calcutta at 35 pies. Today's quotations are sellers 39 pies and buyers 33.

Forthcoming auctions.—Sale No. 7 will be held on Tuesday, 6th April, and dust sale "G" will be held on Tuesday, 13th April, 1954.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd. wire:—

"*Sale* 7.—7,50,000 lbs. Less general demand. Market irregularly easier, except for common and low medium which are about steady. Best quality often As. 8 below valuation."

COTTON RECEDES

(From Our Own Correspondent)

BOMBAY, 7th April

Except for the ebb in the enthusiasm displayed during the earlier part of the week in the forward cotton market, the period has been more or less uneventful. So far as the May delivery is concerned, there is a lurking feeling among the operators that prices, even though they may rise, because of alternate bouts of buying, will not be easily maintained at a high level. This invites frequent profit-taking at bulges and the recession is often more marked than the advance.

The forward market has been going through this process during the week and it is likely that something of this nature will characterise dealings during the rest of the period, till deliveries start against the May contract. Another feature of trading in the forward market is that support by way of replacement buying always comes in at lower levels, to sustain the market against any onslaughts by shorts. On the whole, the present trend of trading, even though it has produced fluctuations amounting to about Rs. 20 in the course of the week, may be said to be moderately healthy. It, however, does not honestly reflect the conditions in the spot market, because of the fear of large-scale hedging and even deliveries in this somewhat vulnerable contract.

In the spot market, conditions during the first half of the week were comparatively more steady. Good quality cotton was in demand and rates of previous were tending to rise, as stocks of these varieties were gradually getting depleted. Among the styles most sought after were Vijay and Jarilla. Encouraging reports from the cloth market led to a broadening of activity, especially for domestic cotton.

In the case of imported styles, attention of the mills is concentrated, as before, on U.S. staple varieties. The high prices of alternative cottons from sources other than this have led spinners to waver in their long-established partiality for certain Egyptian and East African growths. In spite of this, some demand is always there for Egyptian-Karnak. Auctions at Kampala and Khartoum have proved disappointing from the point of view of Indian mills, inasmuch as the rates ruled high by the backing they received from buyers on the Continent and in the U.K. India has now to give up any hope of securing a goodly quantity from either of these two sources and it will be compelled more and more to fall back on the U.S. for whatever supplies it will need to carry it through the current season.

An interesting development in the spot market was the return of Bengals to the picture. A belief has gained ground that a further quota of 50,000 bales of Bengal *deshi* will be released for export soon by the authorities, in view of the tempting prices offered for this short-staple cotton by the U.K. and the Continent. This is all the more probable, because the local textile industry can be said to have acquired all the cotton of this variety that it needs and, even after this, a surplus is in evidence. On the other hand, the quotas of other short-staple varieties have remained unutilised and, if we are to sell some cotton abroad, we have to respect the choice of the buyers to a certain extent. This has given a fillip to the price of Bengals which had otherwise been neglected.

The spot market is also worried about the confusion prevailing regarding the implications of the sales tax rules on cotton transactions. This uncertainty has not only weakened sentiment more recently but, to a certain extent, retarded the volume of business also in the spot market, and active trading is not likely to be restored till after the deputation of the cotton merchants and *muccadums* gets the issues clarified from the State Finance Ministry. The imposition of purchase tax and the large quantity of cotton imported from various States in Bombay and Ahmedabad, together with certain established trade practices which the rules have refused to take note of, have made the position more complicated. In view of the general dissatisfaction expressed by all trades regarding the lack of clarity in the regulations governing the collection of sales tax, it is possible that the authorities will be compelled to give authoritative rulings on certain hypothetical issues to guide the markets. But till this is done, the ominous lull in the spot market is bound to continue.

The futures market opened the week on a firm tone, but reacted during the subsequent sessions, despite encouraging reports from the piece-goods market. I.C.C. May, after improving from Rs. 683½ to Rs. 687 on Friday, gradually receded to Rs. 670-8 today, due to profit-taking. Towards the close, however, there was a slight recovery induced by replacement buying and the contract finished at Rs. 673½. The net loss over the week was to the extent of Rs. 10. I.C.C. August moved up by Rs. 2 to Rs. 701 on the 2nd inst. Thereafter, it drifted lower to Rs. 685 before closing higher at Rs. 688-4. The net loss was Rs. 10-12. The spread between the two contracts slightly narrowed down from Rs. 15½ last week-end to Rs. 14-8 at the close today.

The following is the trend of prices in the forward section during the week under review:

		Closing 31-3-54	High	Low	Closing 7-4-54
I.C.C. May	... Rs.	683½	687	670½	673½
I.C.C. Aug.	... Rs.	699	701	685	688½

Latest available quotations from the spot market are: Bengal *deshi*: Rs. 620; Berar Jarillas Rs. 790; Khandesh Rs. 865; Vijay Rs. 895; Oomra *deshi* Rs. 740; moglai Rs. 710.

There is almost a complete black-out of Pakistan cotton in the world markets, just at present. In spite of the drastic reduction in prices, they still stand at unattractive levels for Karachi's traditional customers. Possibly, the prices are being maintained at the present levels in the hope that, even after supplies have been secured from Egypt, East Africa and Sudan, there will still be a gap for cotton from soft currency sources, which Karachi might hope to fill later in the season. During the

week, there has been a slight further recession in prices. But this has not resulted in any appreciable improvement in offtake or enquiries. Attention of the buyers abroad at present seems to be directed mainly towards the auctions in Sudan and East Africa and the large supplies available from the U.S.

Latest available quotations from the Karachi market are: Sind *deshi* Rs. 79; Punjab *deshi* R2. 76; 4F Punjab R.G. Rs. 77-8; S.G. Rs. 87-8; L.S.S. Punjab R.G. Rs. 81-12; S.G. Rs. 86-12; N.T.R.G. Rs. 85-4; S.G. Rs. 89-12.

At Alexandria a limited export demand for Karnak and domestic demand for Ashmouni have maintained activity at a reasonable level. In addition to Karnak, India is also interested in Giza 30 to a small extent. As there is no pressure of stocks at Alexandria and as this limited demand is bound to continue because of the supply position, the price level is not likely to be disturbed in the near future. The Far East, India and the Continent will generally account for whatever is left to sell.

At New York, the tendency to lighten the burden in the near contracts and to acquire contracts in new crop deliveries has been a little more emphasised during the week. One of the reasons for the more hopeful price outlook regarding the 1954-55 crop has been the receipt of reports regarding unsuitable weather conditions in some of the producing areas. Fluctuations have been narrower. Demand for export has naturally increased with high prices ruling in other markets and this will be met easily from repossessions from the loan cotton.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	6-4-54	30-3-54	23-3-54
Spot	35.10	35.20	35.20
May	34.24	34.36	34.40
July	34.41	34.51	34.53
October	34.03	34.09	33.92
December	34.02	34.04	33.89

ART SILK YARN LOOKS UP

(From Our Own Correspondent)

BOMBAY, *7th April*

The art silk yarn market was thick with the rumour this week that the Central Government would replace the excise duty on rayon fabrics by a levy of import duty on art silk yarn. It gained currency following the return of the delegation of the Silk and Art Silk Mills Association from New Delhi after impressing upon the Union Finance and Commerce Ministers the need for the abolition of excise duty on art silk fabrics. The aforesaid rumour, together with the shortage in floating stocks, induced some speculative buying, while sellers were somewhat reserved in expectation of a further rise in prices. Values of art silk yarn, therefore, tended to look up, though, towards the close, profit-taking erased a part of earlier gains in certain varieties.

In the forward section, 150D April contract rallied Rs. 4 to Rs. 781 yesterday but closed lower at Rs. 779 per case of 200 lbs. today on account of profit-taking. Business in May commenced at Rs. 781 on Friday. After improving to Rs. 786 yesterday, the contract receded to Rs. 784 today. In the ready section, 150 Japan *elicited* considerable buying support, thanks to acute shortage of stocks, and firmed up by As. 4 to Rs. 4-13 per lb. 150 Italy was a shade better at Rs. 3-15. 120 Italy was fully steady at Rs. 4-4 till the close of Monday, but tended to decline thereafter to finish the week at Rs. 4-3. 120 Japan was also fully steady at Rs. 4-14 till today; at the close, it was lower at Rs. 4-13.

The staple fibre yarn section presented an irregular trend, for operators showed little interest in business, as they preferred to watch developments in the art silk yarn section. Staple fibre yarn (40 x 2) for April contract, for instance, opened the week at Rs. 686 and receded to Rs. 679 per case of 200 lbs. on Saturday. After remaining at this level on Monday, the contract recovered to Rs. 682 yesterday. But today, again, it was quoted lower at Rs. 679. The net loss over the week was Rs. 7.

Indian cotton yarns, however, met with good buying enquiries during the week under review. Coarse and medium counts were specially favoured and prices recorded improvement. Fine counts were fully steady. But superfine counts were easy for want of support. Among 10s, Modern rallied Re. 1-4 to Rs. 14-8 per bundle of 10 lbs. Colaba gathered As. 2 to Rs. 13-4. Elphinstone was fully steady at Rs. 12-12. Among 20s, Madura picked up As. 8 to Rs. 19-2. Seksaria was maintained at Rs. 16-10. Among 30s, Seksaria and Madura were fully steady at Rs. 22-4 and Rs. 25, respectively. Among 40s, Meenakshi advanced by As. 6 to Rs. 27-8. Madura improved by As. 2 to Rs. 28-6. Among 80s, Seksaria and Elphinstone shed As. 8 each, the former to Rs. 56 and the latter to Rs. 60-8. Sri Ram lost As. 4 to Rs. 62-8. Among 90s, Khatau fell by Re. 1-8 to Rs. 57-8.

The table below gives the prices of art silk, staple fibre and cotton yarns quoted yesterday, as compared with those in the previous week:—

	7-4-1954	31-3-1954
	Rs. a.	Rs. a.
Art silk yarn—		
150 April (per case of 200 lbs.)	779 0	778 0
150 May	784 0	—
120 Japan (per lb.)	4 13	4 14
150 Japan (per lb.)	4 13	4 9
120 Italy (per lb.)	4 3	4 4
150 Italy (per lb.)	3 15	3 14½
Staple fibre yarn—		
40 x 2 April (per case of 200 lbs.) ..	679 0	686 0
Suico (per lb.)	—	4 3½
New Great (per lb.)	—	3 9½

10s Modern	14 8	13 4
20s Madura	19 2	18 10
30s Madura	25 0	25 0
40s Meenakshi	27 8	27 2
60s City	—	48 4
Sri Ram	62 8	62 12
90s Khatau	57 8	59 0

GROUNDNUTS EASY

(From Our Own Correspondent)

BOMBAY, *7th April*

A mild wave of selling pressure was in evidence in the groundnut and linseed sections during the week under review. Reports that the Centre had declined to take into account export to soft currency areas in the computation of quota for export of H.P.S. groundnuts, was mainly responsible for the selling pressure in groundnuts. Besides, longs in groundnuts were keen on getting rid of their commitments, on reports of enlarged arrivals in upcountry centres. The easiness in the linseed section was due partly to a sympathetic reaction with groundnuts and partly to a virtual absence of demand. Consequently, prices in both the sections disclosed minor losses. In the castorseed section, however, a regular tussle between the bulls and bears brought about erratic fluctuations in prices, with final quotations revealing slight gains. Spots also looked up in sympathy with futures.

The Hyderabad Grain and Seeds Merchants Association has, through a representation to the Union Minister for Commerce and Industry, pleaded for a free trade policy regarding export of castor oil and a reduction by 50 per cent., if not complete abolition, of export duty on castor oil. If the free trade policy was not possible, it has suggested the alternative of extension, upto September this year, of the period for export of castor oil. As regards export of groundnut oil, the Association has felt that the policy of bringing down prices of groundnut oil to a low level would be detrimental to the interests of producers. To quote its own words: "If the policy of the Government is to bring down the prices (of groundnut oil) to Rs. 1,000 per ton at Bombay or at Madras, then the rate of groundnuts at Hyderabad, which is a producing centre, should come down from Rs. 15 to Rs. 10 per maund which will not give a margin of profit to the agriculturists." The Association has felt that the point for consideration for export of groundnut oil should be whether the country was surplus or deficit in groundnuts. If it was in surplus, the export should be allowed in order to get foreign exchange. The present rate of groundnut oil at London was Rs. 2,250 per ton and this should be taken advantage of. It has requested permission to export *kardi* and niger seeds also.

The groundnuts section is slowly but steadily drifting down to low levels. Bold F.A.Q. declined from Rs. 35-8 to Rs. 34-10. April-May and June-July lost As. 10 to As. 12 to Rs. 34-6 to Rs. 34-13, respectively. Khandesh quality lost As. 12 to Rs. 36-4. Groundnut oil ex-mill was lower by As. 2 to Rs. 17-14. May delivery declined by As. 3 to Rs. 18.

The linseed section ruled slightly easy. Bold ready was done at Rs. 25-4, as against Rs. 25-8. April-May and June-July deliveries changed hands at Rs. 24-0 and Rs. 24-12, as against Rs. 24-10 and Rs. 25-2, respectively. Linseed oil ready was lower by As. 2 at Rs. 14-6.

In the castorseeds section, May delivery which opened steady at Rs. 109-14, fluctuated between Rs. 111-14 and Rs. 108-4, before closing at Rs. 110-2. September delivery was done Re. 1 higher at Rs. 117-4; the highest and the lowest touched were Rs. 117-12 and 115-10, respectively. Advices from the Continent for castor oil were encouraging. Castor oil B.S.S. (April) was quoted in the U.K. at £122 c. & f., First Pressure at £121 and Commercial at £115, as against £119, £118 and £112, respectively, a week ago.

The following table shows the prices of oilseeds and oil on the 7th inst., as compared with those at the end of the previous two weeks:

	7-3-54	*31-3-54	24-4-54
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—			
Khandesh Quality Ready (per cwt.)	36 4	37 0	36 0

Ex-mill Ready (per quarter) ..	17 14	18 0	17 4
Castor Oil—			
Commercial (per quarter) ..	11 12	11 10	11 4

SUGAR FIRM

(From Our Own Correspondent)

BOMBAY, *7th April*

The Bombay sugar market continued to present a firm note during the week under review also. This was due to considerable bull support induced by high prices for sugar quoted by mills and persistent buying enquiries from Madhya Pradesh, Gujerat, Saurashtra and South Indian markets. Consequently, prices of sugar staged an advance in the spot and the forward sections alike.

In the spot section, large grain indigenous sugar spurted from Rs. 96-98 to Rs. 100-102 per bag, including the first stage sales tax of half-an-anna in the rupee. Medium grain was transacted at Rs. 97-98, as against Rs. 94-95. Small grain had buyers at Rs. 95, as against Rs. 93. Among foreign sugars, German moved up from Rs. 89 to Rs. 93 per bag of 220 lbs. British refined rose by Rs. 3 to Rs. 93-8 per bag of 2 cwts. Mexican and Cuban gathered Re. 1-8 each to Rs. 44-4 per 110½ lbs. and Rs. 40-8 per 100 lbs., respectively.

In the forward section, *Chaitra* delivery rallied Re. 1-8 to Rs. 89-12 per bag. Today, however, it was quoted a shade lower at Rs. 89.

The improvement in arrivals of sugar into the Bombay market witnessed last week gathered further momentum during the week under review, the quantity actually received being 5,700 bags, as against 4,200 bags last week and 1,800 bags two weeks before.

It is reliably understood that the Union Food Ministry is now anxious to bring down the present high prices of sugar by arranging an immediate allocation of sugar produced by the Deccan factories to the Civil Supplies Department in Bombay for distribution through fair price shops and co-operative societies "at a reasonable price." With this move, the upward trend in the prices of sugar, at least of imported sugar, may be expected to be checked. But, so far as bold grain indigenous sugar is concerned, the prospects of prices remaining at high levels appear to be bright, unless, of course, large quantities of bold grain sugar from Czechoslovakia or Java are imported in the near future.

SLIGHT RECOVERY IN PEPPER

(Messrs. Parekh & Co.)

BOMBAY, *7th April*

During the week, the pepper market, after touching the record low price of Rs. 1,300 at Alleppey and Rs. 1,040 for April delivery at Bombay, showed signs of recovery as the growers showed resistance by withholding supply. Besides, exporters, who had on their hand high-priced fair sized purchases, refused to give concession, in anticipation of good enquiry for the nearby shipment on settlement of the month-old longshoremen strike at the Port of New York. Alleppey refused to sell below Rs. 1,500. Garbled pepper, at Cochin, improved from Rs. 245 to Rs. 275 per cwt. Knowing fully that American buyers will never buy in a declining market, Indian exporters tried the other way of bolstering the prices up in order to attract buying. But so far, despite the settlement of the dock strike, there is no sign of broadening off demand from the U.S., as the premium on the spot in New York is getting narrower almost daily. If no fair sized foreign buying develops during the coming week or two, it is feared that both the growers and the dealers will become tired in view of their heavy holdings and approaching monsoon. The demand for margin on the loaned pepper may any time break the backbone of the market. Any attempt on the part of the growers and the bull exporters to rig up the market may bring forth reactions from nervous shorts, but the resultant price advances cannot be taken as a reflex of the general market feeling. Those in India, with full knowledge of the international pepper picture, cannot themselves believe that there is any virtue in this form of bolstering prices. Indian growers must, in any case, be left to decide their own method of marketing. The market in general is more concerned with the statistical situation than with any unilateral action contemplated by the growers whether in India or in Sarawak or in Indonesia.

In the A.S.T.A. section, April and May shipments were done at prices ranging from $0.68 to $0.72. June shipment was traded from $0.64 to $0.68. At the time of writing, however, there are sellers for April and May shipments at $0.70 and June at $0.66½, but with small interest. In delivery trading, April and May deliveries were done from Rs. 1,040 to Rs. 1,170 and Rs. 1,070 to Rs. 1,220 per candy respectively.

Following are today's nominal quotations: Ready Rs. 160 per Bengali maund, and April Rs. 1,100-20 and May Rs. 1,140-60 per candy of 5½ cwts.

HEAVY JUTE GOODS ACTIVE

(From Our Own Correspondent)

CALCUTTA, *6th April*

Speculative support for heavy goods enlivened activity in the market during the week under review, although hessian accounted for only a fractional rise in prices. Following moderate business put through for export, in heavy goods, there was intense activity in the *futka* by speculators, and ready B. twills rose impressively to Rs. 108-8 from Rs. 105-12. The July-September position was taken to Rs. 105-2 from Rs. 103-10, and the April-June to Rs. 107 from Rs. 105-4. Mills were interested to sell forward. The improvement was due to the heavy selling done in March, as a result of which stocks are expected to show a substantial reduction. On the other hand, in hessian no such result is anticipated and, in fact, some increase in stocks with mills would not be a surprise to the market. Shippers entered into business in forward hessian, and small acceptances from both the United Kingdom and America continued to be received. Starting from Rs. 42-4, ready 40" 10 oz. hessians gained to Rs. 43-2, the f.o.b. rate being higher at Rs. 47-3. April-June and July-September deliveries at Rs. 43-2 for both were better by As. 12. The eight oz. hessians were last quoted at Rs. 38 f.a.s. and at Rs. 39-4 f.o.b.

A strong case for the functioning of a duly legalised futures market for jute goods was put forward by Mr. S. M. Mohta in his address to the annual meeting of the Calcutta Jute Fabric Shippers' Association last Wednesday. He said that it had been recognised all over the world that futures markets were essential for the proper and healthy development of trade in some commodities. No doubt, it was on the basis of this recognition only, that a futures market in jute goods was functioning in Calcutta. But violent variations in prices brought about by speculative elements very often caused difficulties in the way of price adjustments and forced the Government of West Bengal to ban the futures market from 19th December, 1952. If a futures market is only run on ideal and sound lines, it would be a boon to the industry as in times of dullness prices could be maintained. However, the lack of a duly constituted futures market has resulted in the growth of mushroom associations or exchanges where futures trading is being carried on with disastrous consequences to

genuine trade. The various associations and organisations concerned have already put forward their views on this subject, and it is to be hoped that an official futures market is established soon, with a machinery that would check unhealthy activities.

The raw jute market was steady, and business was done in about 350,000 maunds. The lack of rain so far for sowing of the new crop and the continuance of only small arrivals from upcountry centres made sellers reserved and forced buyers to agree to sellers' terms. Prices were, however, maintained, as mills would not give any hint to agree to pay higher prices. Thus Assam bottoms changed hands at Rs. 24-12, Dhubri bottoms Rs. 26-8, and jat cross bottoms Rs. 22. Junglis were traded at Rs. 24, while northern bottoms came to business at Rs. 27-8, as against Rs. 26 earlier. Pakistani jutes registered a decline, jats giving way to Rs. 27 from Rs. 27-8, districts to Rs. 26 from Rs. 27, and northerns to Rs. 25 from Rs. 26-8, basis bottoms in Indian currency. Daisee bottoms were quoted at Rs. 29, *Bimli* at Rs. 22-8 and westerns at Rs. 24-8. In the *pucca* bales section, Pakistani special N.C. cuttings were done at Rs. 75 a bale, and Pakistani N.C. cuttings at Rs. 65 a bale. First marks ready were sought at Rs. 170 a bale.

FOODGRAINS QUIET TO STEADY

(From Our Own Correspondent)

HAPUR, *5th April*

There is little to report from the Indian food front this week. The overall food position is quite comfortable and will improve further as the *rabi* crop arrivals in North India gather momentum. The Indian Food Ministry has asserted that the Government is now in a position to meet the food requirements, including rice in the country. Further details of the recently stipulated rice agreement with Burma are now disclosed. It is revealed that India only wants good quality rice and Burma will make every effort to supply it. The Burmese rice, after crediting a part of the cost towards Burma's debt to India, is likely to cost about Rs. 19 per maund. The internal economic price is about Rs. 14 to Rs. 15 per maund. The Government expects that India will be able to procure roughly about one million tons of rice from internal sources. Both varieties of rice, imported and internally procured, will be pooled before being issued to deficit areas.
