Foodgrain markets in U.P. remained quiet to steady. Harvesting of *rabi* crops, including wheat, is now in full swing all over the State. Coarse grain arrivals have begun, but the pressure is by no means heavy. Wheat arrivals may take another week or so. Trade stocks have been left very low. The State Government has offered for sale to the trade and public without quantitative restrictions stocks of wheat at Rs. 16, gram at Rs. 12 and barley at Rs. 10 per maund, but, as free market prices are generally lower than these, sales out of Government stocks have been nominal. The Government holds a stock of 33,559 tons of wheat and 12,977 tons of rice. Wheat stocks consist mainly of imported variety, while those of rice are indigenous produce. Wheat is also being sold to roller flour mills at Rs. 17-8-6 per maund for manufacture of *maida*, *sooji*, and *rawa* and at Rs. 15-8 for manufacture of *atta*. It is authoritatively stated that the Government has no intention of purchasing wheat or rice this year and that Uttar Pradesh will get its share from the reserve stock proposed to be built by the Centre.

A new wheat zone comprising the States of Punjab, P.E.P.S.U., Himachal Pradesh, Delhi and Bilaspur will come into being with effect from 1st May next. Movement of wheat within this zone will be free, but export of wheat from this zone will not be permissible. It is expected that the decision of the Government of India will provide an important market in Delhi from the surplus wheat of Punjab and P.E.P.S.U., and ensure a reasonable price for the growers. This will help the consumer in Delhi in getting wheat of his choice.

The food and procurement policy of the Travancore-Cochin Government is expected to undergo some changes, following the talks of the State's Chief Minister with Mr. Kidwai. It is understood that the Centre will supply the State whatever quantity of rice is required for consumption. Rationing in the State will, however, continue as at present. It is understood that the Government will hereafter supply to card holders an unlimited quantity of rice at the rate of Rs. 22-8 per maund.

The Bengal Civil Supplies Minister has stated that the food position in the State is quite satisfactory. According to Mr. Kidwai, the West Bengal Government has already implemented the Centre's policy of making rice available to people over and above the rationed quantity.

The Government of Madhya Pradesh has issued a clarification to the effect that the Centre has made it very clear that there will be no relaxation of inter-State movement of rice. Accordingly, the State Government will not permit ex-State movement of parboiled rice on trade account.

SUGAR PRICES RISE

(From Our Own Correspondent)

HAPUR, *5th April*

Crystal sugar markets remained very steady during the week under review and there was a further sharp rise in prices, particularly at the ports. Reckless speculative buyings were reported from Kanpur and Muzaffarnagar markets, and the sugar mills seemed to connive in withholding released sugar stocks from the ready market and thus push up prices. The Central Food Ministry has recently taken a number of steps to arrest this upward trend, the latest being the allotment of sugar to State Governments from out of the reserve of 25 per cent. of the production of each factory during the current season for distribution at controlled prices. All these, however, have failed to react bearishly on the markets. The President of the Kanpur Merchants' Association has suggested to the Government to forbid mills from entering into any future commitment, directly or indirectly. It is authoritatively stated that the Government of India has decided that steps should be taken to increase indigenous production of sugar, in view of the increased consumption in the country. The additional capacity to be installed for this purpose, says a Commerce and Industry Press note, may take the shape of establishing new factories, expanding existing ones and, to a limited extent, setting up refineries.

The sugar crushing season is now drawing to a close. It is hoped that, by the middle of this month, most of the mills in the country will have terminated working. Reports from Bihar are very discouraging, while those from the Deccan are not much better. About 3,735,000 maunds of sugar was manufactured in Bihar till the end of February, 1954, as against 5,024,000 maunds in the corresponding period of 1953. about 37,400,000 maunds of cane was crushed by the various sugar factories in Bihar. As prices of gur ruled high, a large quantity of cane was diverted to the manufacture of this commodity. Sugar production in Bihar, according to latest reports, will be about 10 to 15 per cent. less this year as compared with last year.

Ports complain that stocks of sugar are nearly exhausted and it may take more than a fortnight before any consignment of foreign sugar is received. Arrivals of foreign sugar upto 15th February, 1954 aggregated 241,000 tons, while production in Indian factories to date was 682,000 tons. It has been notified that sugar, which was decontrolled in Calcutta about a year ago, will again be sold through ration shops at As. 12-6 per *seer* from the second week of this month. There will, however, be quantitative restriction on such sales so that no one can purchase more than five *seers* in a single transaction.

Estimates of world sugar crops during the current season, issued by the London brokers, C. Czarnikow Ltd., show a total production of beet and cane sugar of 38,881,000 tons. This marks an increase of over 3 million tons or 8·8 per cent. as compared with 1952-53.

Gur markets remained fairly steady. There was moderate demand from importing areas for stock-piling. *Gur* manufacture is now virtually terminated and the peasants are busy gathering their *rabi* crops. Arrivals are appreciably lower, despite high price level. Despatches by rail were also poor, due to non-availability of empty wagons. Apart from reduced arrivals and sustained enquiry, an important steadying factor has been the speculative support induced by firm advices from crystal sugar market. Consequently, price movements in *gur* futures were very erratic.

The *Gur* and *Khandsari* Research station, Lucknow, has arranged to hold demonstrations of an improved process of *khandsari* manufacture. The process, it is stated, gives a yield of about 7.5 per cent. sugar on cane—25 per cent. higher than that obtained by the usual *desia sajji* process. The sugar produced is also of a better quality.

BRADFORD WOOL STRONG

(Messrs. J. Hardacre and Co.)

BOMBAY, *6th April*

The raw material is gaining in strength, according to reports from both primary and spot wool markets this week. It seems that, in Australian and New Zealand markets, importers are accelerating their buying, in order to secure maximum quantities of wool for shipment before these markets close for Easter.

In view of the increased prices commanded by crossbred wool in New Zealand, it is not surprising to find that crossbred tops are quoted at higher prices today. Medium crossbreds have advanced by 3d. per lb. over the week. Reports from today's sale in New Zealand indicate a further advance of 2½ per cent. over the prices ruling at the sale on 31st March, 1954.

The tone of the top market is very strong indeed, with the force coming from the raw material end. There is a steady flow of business, despite misgivings concerning the advancing price trend, and most-topmakers are fully booked, with the result that deliveries are now much further forward. The indication, therefore, is that, if anything, prices will tend to firm, or even advance, during the next few weeks.

Current quotations (in pence per lb. c. & f., Bombay) for Bradford oilcombed tops are given below:

48s carded (April-May, 1954) 90d., 58s super (April-May, 1954) 119d., 60s super (April-May, 1954) 134d., 64s super (April-May, 1954) 151d., and 70s super (April-May, 1954) 170d.

METAL PRICES ADVANCE

(From Our Own Correspondent)

CALCUTTA, *6th April*

Following the dramatic announcement in Washington of the American Government's decision to increase its stockpiling of 35 to 40 strategic minerals and metals, market advices from London and New York bear a distinctive encouraging tone. This higher tone was reflected in the local market, with zinc and lead occupying the pride of place in the upward movement in quotations. The immediate reaction of the shrewd among local operators was one of caution as they sighted the lack of any broadening of activity in world markets. For proposals for international control of the most destructive weapons mankind has ever produced have never been so vociferous as in the past one week or two. However, the stockpile announcement has been made in the United States and a squeeze of available supplies is bound to follow. It was this anticipation rather than the volume of business which raised quotations this week.

Consumer demand for zinc was low this week, and was met with no difficulty. But, for the reason already stated, the price was sent up from Rs. 62-8 to Rs. 66. In contrast, moderate business was done in electrolytic zinc which rose from Rs. 55 to Rs. 58 as compared with the gain in London from £76½ to £80½ per ton, and that in America from 9¾ cents to 10½ cents a pound. Consumers learnt with an air of satisfaction the report of fresh arrivals of copper in Bombay, since supplies were hard to find and an expected shortage was bound to cause headache to manufacturing concerns. No doubt, more arrivals are necessary to ease the supply situation. The price of electrolytic copper was held steady at Rs. 182 and the report that the American Government would buy 100,000 short tons of Chilean copper for the stockpile boosted the local sentiment. Tin advanced from Rs. 456 to Rs. 461, but purchases were restricted.

FALL IN DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, *6th April*

Last week's sale for domestic consumption was noted for a fall in demand which affected prices. Offerings of dust aggregated 19,000 chests. There was a general decline in prices by half to one anna. Although commons were also affected, they were steady. The worst features were the exportable types. After recording an irregular movement, C.T.C. Assams were slightly better towards the close of the sale. The rates were: best Assam C.T.Cs. Rs. 2-3-6 to Rs. 2-4, medium Assam grainy dusts Rs. 2-2, and medium Dooars Rs. 2-1. The leaf market was steady because of the small quantity on offer, i.e., 816 packages, most of which were the poor quality teas. Prices were steady.

KIPS HESITANT

(From Our Own Correspondent)

MADRAS, *5th April*

The kip market has ruled hesitant and importers are trying to buy at lower levels. In the local market, light weights are easy, while mediums steady and heavies firm. Business in cow calf and buff calf has been meagre. Demand for lower grades has been insistant and arrivals have met with good offtake for inland trade. The local market for tanned goat and sheep skins has ruled steady and clearances fair-sized. Prime tannages have been in good demand.

Shipments in bales during March, 1954 were: *To the U.K*: 2,929 td. cow, 222 td. cow calf, 89 td. buff hides, 349 td. buff calf, 700 td. goat and 739 td. sheep; *to the Continent*: 11 td. cow, 469 td. goat, 107 td. sheep and 80 D/S goat; *to the U.S.A.*: 93 td. cow, 55 td. buff hides, 33 td. buff calf, 145 td. goat, 258 D/S goat and 13 td. *snake skins*; *to Japan*: 23 tanned sheep skins.

HIDES DRIFT LOWER

(From Our Own Correspondent)

KANPUR, *4th April*

A downward tendency in prices characterised the trading in the hides and skins market during the week under review. The buff category was, however, not as much affected as others, such as wet salted cow. New weekly arrivals were slightly smaller than the average. The main purchasers were the local tanners and Madras dealers.

Latest quotations are: Wet salted cow, 1st grade Rs. 240 and 2nd grade Rs. 160 to Rs. 180 per score; wet salted buff, 1st grade 1/14 ozs. to 2 lbs. and 2nd grade 2 lbs. 2 ozs. to 2 lbs. 4 ozs. per rupee; goat, 1st grade Rs. 275 to Rs. 300 and 2nd grade Rs. 200 to Rs. 250 per 100 pieces; sheep Rs. 200 to Rs. 300 per 100 pieces.

Notice

JESSOP AND COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Directors have declared the payment, on 1st May, 1954, of the Dividend due on the 5 per cent. Cumulative Preference Shares of the Company for the half-year ending 30th April, 1954, without any deduction in respect of Income-tax payable by the Company.

The Preference Share Transfer Register of the Company will be closed from 21st April to 1st May, 1954, both days inclusive.

Dividends are paid only to Registered Shareholders or their Mandatees.

By Order of the Board,
F. RANKEN,
Secretary.

63, NETAJI SUBHAS ROAD,

THE UNITED COMMERCIAL BANK LTD.

(*Concluded from page 679*)

Shackles on trade between China and the rest of the world have affected Hongkong's prosperity. The cessation of Korean hostilities and the forthcoming Conference in Geneva, where the Chinese People's Government will, for the first time sit together with the Big Four Powers, will, let us hope, lead to the full revival in Hongkong's trade with the mainland.

Pondicherry

"It is regrettable that conditions for merging French possessions in India with the Indian Union are being unnecessarily retarded. Once the unification takes place, Pondicherry can be developed into a better port and its trade too can expand. There is no need for the agitation and disturbance which are now getting to be more frequent, to solve the merger issue. Realism and political sanity demand that this question should be immediately settled.

Economic Commission for Europe

"The survey for 1953 of the Economic Commission for Europe refers to the favourable dollar position of most Western European countries during the last 18 months. This is not due to increased exports to dollar area countries but is the result of reduced imports from hard currency areas. Europe has found alternate soft currency sources for buying wheat, sugar, cotton, tobacco, copper and petroleum products which make up in the aggregate 40 per cent. of Western Europe's dollar imports. The problem before Europe, therefore, is not the shortage of dollars but how to prevent falling industrial production developing into general decline. Recession in American business will further accentuate this problem. When dealing with terms of trade I have referred to the need of adjustment in production costs through smooth downgrading of wages.

United States

"The United States of America is perhaps the largest power today, economically, politically and militarily. Its aid, by whatever name called, has helped to rehabilitate the economy of many a country. But the tempo of this assistance is decreasing; and its capacity to bear the burden indefinitely and to the same large extent seems to be not so easy. Its people appear to be feeling the load of sacrifices they have been making for the last many years. With the fall in the intake of dollar goods by the rest of the world, and the decrease in the production of war goods due to cessation of Korean hostilities, there is bound to be some reduction in that country's industrial production. In spite of optimistic appraisals by some of the U.S. economists, signs are being increasingly felt of the deepening of recession in that country.

How to Check Recession?

"To check possible adverse influences on the European and American productions, it is necessary to pursue with full vigour programmes of investments for development in the backward areas of the East. This task of building up better economic satisfaction of people who have very low incomes, will not only keep at full speed the Western machines, but also lead to better political contentment tranquillity and peace. Such a policy will give far greater dividends in the friendship of millions and millions of Eastern people than mere expenditure on military alliances. In this connection, it is indeed hopeful to observe that President Eisenhower has laid correct emphasis on reduction of tariff barriers in the United States and expansion of dollar investments abroad in his special series of foreign economic policy recommendations to Congress at the end of last month.

U.S.-Asia Question

"The history of the United States is one complete uniform record of success and victory in all fields of life. It has not much galling experience of reversal or defeat. But hitherto its dealings have been mainly with smaller groups of humanity conforming to Western culture and civilisation. Its first contact with the biggest Eastern country, China, ended in a sad disillusionment. A new technique of winning the trust and confidence of the poverty-ridden Eastern peoples, who have nothing to lose in any political change, through a better understanding of their sentiment, attitude and purpose and winning their friendship through affection, service and generous allowances for their ignorance and backwardness, is absolutely necessary, if the influence of half the world's population confined in Asia is to be won for the common cause of democratic independence. No democracy has ever thrived on hunger and starvation.

At the Cross Roads

"The world today stands at the cross-roads. Will it take the road to self-destruction, through bigger and greater military preparation and the atom and the hydrogen bombs and myriad new and frightful means of killing man, or will it choose the ever-glorious path of helping people to rise above sloth, indolence and technical backwardness? Wisdom indicates the path of service and aid. In the minds of the great people of mighty U.S.A. lies the answer."

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nomin quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Account:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. ‡ Sales and amount written off. (b) Investments. † For ten months ended 31st December 1951.

(1) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Rs. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 4 in96 the debentures section:—

‡‡ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. pacmium.

(b) Bearer bonds of Rs. 1,000 each repayable a par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952 or on any subsequent interes date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955 on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. pemium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months notice.

MARKET GOSSIP

(Concluded from page 663)

up capital and quantum of dividend will have disappeared to yield place to the correct relationship between the company's financial position and the dividend declared.

• • • •

Students of company finance will no doubt realise that the same result could be achieved by the issue of bonus shares by capitalising the company's reserves. This is true. There is, in fact, no fundamental difference between the issue of n.p.v. shares and of bonus shares. Both seek to achieve the same aim, namely, to bring out the correct relationship between the company's profits and the resources employed by the company in earning those profits. But the issue of bonus shares involves the management in certain difficulties. A Government with leanings towards the left, may, at any time, impose restrictions on the issue of bonus shares. At any rate, it requires the sanction of the authorities in charge of capital issues. This, however, is not the only difficulty. In the U.K., as, in fact, in this country, there is a school of thought which believes that reserves do not belong only to the shareholders. This is disturbing to a degree. Hitherto, the shareholders' right to a company's reserves had been tacitly accepted on the ground that they were built up by voluntary sacrifice of shareholders, in the interests of the company. Indeed, they took pride in the practice of self-denial exercised by them in the past. But this sacrifice had assisted their company to expand its business, to provide more employment to workers, and to help prevent breakdown, unemployment and reduction of wages in times of adversity. This, indeed, is the correct view to take. But the modern world is topsy-turvy. The worker now feels that the reserves have been built up by his sacrifice, that they give because he did not put in, promptly enough, his claim for higher wage to which he was entitled. Even a person like Mr. Kaldor (Labour M.P.), an ex-Chancellor of the Exchequer, who must surely be aware of the circumstances in which reserves are built up, roundly declared in the British Parliament, the other day, that some system should be devised whereby the "workers are given a fair share of the reserves accumulated, thanks to their moderation." So, that's what a company's reserves are the workers' property. This new trend in economic thinking has given a further impetus to the demand for n.p.v. shares. A similar trend is noticeable in this country too. The recent award about the distribution of the reserves of the Madras Tramways is an instance in point. Perhaps, company managements in India too will do well to study the question of n.p.v. shares and the implications of the issue of such shares.

• • • •

Such a study has been rendered easier by the impressive summing up of the case for n.p.v. shares by the Gedge Committee in the U.K. The Committee lists the following main advantages claimed for the n.p.v. shares:

(1) They represent the share for what it is—a fraction of the equity—and do not import a notional token of value. (2) With no nominal capital and no par value shares, it is impossible to relate a dividend to a nominal capital and "a potent source of misunderstanding and misrepresentation" is, therefore, avoided. (3) Whether a company has no-par-value shares or nominal-value shares it is the capital employed and not the paid-up share capital which is the true capital of the undertaking. An ordinary no-par-value share does not purport to be anything but a share of the equity. (4) With no-par-value shares, matters analogous to "bonus" issues and sub-divisions are simplified. (5) Shares of no-par-value would, in certain cases, facilitate the raising of additional equity capital. The Committee emphasises that the change to the n.p.v. system is not to add any "suggestion of a value which is more true or real, but to remove a suggestion of value which is untrue and unreal." The Committee holds "strongly to the view that the adoption of the no-par-value system would assist in removing the misunderstanding and misrepresentation to which the existing system gives rise and which are so undesirable from the point of view of employers, workpeople and the nation."

• • • •

The Committee has emphasised the need for two safeguards. In the first place, the whole of the proceeds of the issue of n.p.v. shares should be carried to stated capital account and should not be distributed. Secondly, conversions from shares having a nominal value and vice versa should require approval by special resolution and, where there is more than one class of shareholder, the conversion should be subject to approval by extraordinary resolution of each class. The Committee's ordinary resolution of each class. The Committee's other recommendations include: (1) Companies should be allowed to issue ordinary shares of no-par-value if they wish, but should not be obliged to adopt the system. (2) The system should be confined to ordinary share capital. "We feel that a fixed dividend must have a relation to the sum on which it is paid, and that that, as well as the repayment of a fixed sum in a winding-up, is out of keeping with the concept of no-par-value." (3) A company should not be permitted to have its ordinary share capital partly in shares with nominal value and partly in shares of no-par-value. (4) Companies should be enabled by special resolution to convert their ordinary shares having a nominal value fully paid or not, into n.p.v. shares and to convert fully paid n.p.v. shares of no-par-value into shares having a nominal value. (5) There is no objection to n.p.v. shares being partly paid. (6) The system should be available to all companies having a share capital, including private companies. (7) No part of the proceeds of issue should be distributable as surplus and the stated capital should be treated as identical with the paid-up share capital of a company with nominal value shares. (8) The transfer of reserves and other sums to stated capital account, thus "freezing" them, and splitting of shares of no-par-value should require approval by special resolution. (9) Where there is no substantial change in the ownership of an undertaking as the result of a reconstruction or amalgamation, revenue reserves which existed before either happening should not be "frozen."

• • • •

Trade unions in the U.K. are, however, opposed to the issue of n.p.v. shares. They hold that it may lead to grave abuses, such as payment of dividend out of capital. The Committee, it will be noted, has provided against this contingency. Again, the unions feel that the main purpose of the issue of n.p.v. shares is to "conceal what is happening inside public companies and, in particular, to camouflage the payment of excessive dividends." This is an unfair charge, for the n.p.v. system is being advocated precisely to correct the false impression of an "excessive" dividend. The Trade Union Congress, however, could not define what it meant by "excessive" dividend. When pressed for a clarification, the representative of the T.U.C. said that an "excessive" dividend was "something which would strike an average trade unionist as being excessive in relation to the wage he is receiving and the general level of remuneration in occupation of all kinds." Apparently, British labour claims the power of a veto on dividends.

• • • •

If the Chairman of even an old and well-established textile company, such as the Buckingham and Carnatic Co., Ltd., finds it necessary to point out that the tax burden on the industry is heavy, it is time that the Government sits up and takes notice. Mr. R. E. Castell of the Company made, at the recent annual meeting of the Company, a few general observations which deserve wide notice. He said that there were indeed "abundant signs of a current and impending further contraction in profit-margins in the Indian textile industry." The industry and trade, he said, faced the "prospect of demand for cotton and other textiles being weakened by the additional excise duties by the Union Government and of heavy extra sales taxes by some of the States, particularly those of Madras and Mysore." We have, in the past, criticised the levy of excessive excise duty on cloth, and also the State Governments' ingenious move to utilise sales tax as a device for protecting the handloom industry. The new levies, he said, in effect, more than wiped out the benefit of the removal of import duty on cotton.

• • • •

Mr. Castell hoped that, as a result of the many representations made to the Central and State Governments, there would be some mitigation of the "proposed new indirect but severe taxation." He thought that it was desirable that at least medium cloth should be exempt from heavy duty and sales tax, since such cloth was being used by the poorer classes more widely than the cloth of coarser counts which has been exempt from heavy duty. All those who have any knowledge of the recent trends in sartorial fashions will readily agree with Mr. Castell's observation that "the rating of cotton cloth into four categories has created the illusion that the range from 'coarse' to 'superfine' denotes an ascent from cheap utility to costly luxury but the truth is that many fine and superfine cloths are popular with all income groups, as well as being durable, they are light and cool."

• • • •

Fiscal burdens are not, however, the only ones which the Indian textile industry has to bear. It suffers equally gr

SUPPORT THE NEW LOAN

THE Prime Minister's appeal to the nation to subscribe liberally to the National Plan Loan deserves the wholehearted support of one and all. The proceeds of this loan will be utilised for financing the Five-year Plan. Every one who subscribes to the new loan will actually be helping oneself, for, when the Plan is implemented, every one stands to gain. The Plan, as readers are aware, is a comprehensive one, providing for an all-round development of the country. It has been admitted by all who have studied the needs of the country, including the I.M.F. experts who visited India last year under the leadership of the eminent economist, Mr. E. M. Bernstein, that the order of development envisaged in the Plan is the minimum needed for preventing our economy from becoming a stagnant one. It is, therefore, needless to emphasise that, if the Plan is allowed to fail, the whole nation will be faced with economic retrogression. In fine, the Plan must not be allowed to fail.

It is generally agreed that the cost of the Plan exceeds the readily available resources in the country by a large sum, the gap being of the order of Rs. 890 crores. The country has already managed to cover, somehow or other, a third of this deficit—Rs. 290 crores to be precise—without feeling the inflationary impact of that expenditure. It is the remainder that is causing great difficulty to the Government. But it is a challenge to the nation. It is an opportunity to prove to the world that we are a dynamic society, capable of overcoming obstacles in the way of raising its living standards.

When the Plan was prepared, its authors had hoped that India would receive a sizable amount of economic assistance from those who valued it as a bastion of democracy in Asia and the Far East. At no time was India in need of a helping hand from friendly foreign countries than it is at present. But world politics have so developed now that it would be unrealistic for India to expect any large-scale assistance, consistent with its own cherished ideals, principles and cultural traditions. The greatest ideal for the realisation of which India is striving is peace; it strongly feels that the means of achieving this ideal are as important as the end. And it is undoubtedly right in holding to this principle, for, if the means followed are wrong, the end cannot be right. If acceptance of foreign aid requires a compromise of the fundamental principles valued by this country, such aid is not worth having. The U.S. is, perhaps, the only country that can render assistance on a scale needed by India. But its foreign policy differs from that of our country on so many essential points that it would be embarrassing to the Governments of both the countries if India were to take economic aid from that source. Until the situation clears, it is, therefore, better for India to rely on its own resources.

There is also another good reason why it is better to stand on our own feet. Economic aid of the type contemplated in the Five-year Plan is mostly a Government-to-Government affair. Such aid to a highly developed country, such as the U.K., having a first class administrative machinery, as well as realistic and mature politicians, might yield satisfactory results and carry the receiving country forward without any perceptible injury to its moral and material fabric. It is doubtful whether similar results would follow if such assistance were to be received by the Governments of countries which are politically immature, economically backward and administratively weak. State-to-State aid to such countries may induce complacency and indolence and ultimately reduce the will to stand on their own feet. It will encourage the party in power to be extravagant, to try its costly fads, to launch uneconomic ventures and to disregard public opinion or to try to win it through stunts when the need arises. It is thus dangerous for this young democracy to rely too much on foreign aid on a Government-to-Government basis. In saying this, we do not suggest that the country should spurn foreign assistance. All that we wish to indicate here is that it is far more safe for this country to obtain such assistance through private enterprise, as, for instance, through the proposed Industrial Development Bank sponsored by the World Bank.

In a way, therefore, the present turn of events, compelling the Government of India to go to the people for the funds needed to finance the Plan, is a blessing in disguise. The private sector need not be apprehensive that, as a large part of the resources which would have been available for its development would now flow into the Exchequer, there would be nothing left for it, because the success of the Plan would mean a stable economy conducive to its own growth. It is gratifying to find that the Chairman of the Federation of Chambers of Commerce and Industry, Mr. B. M. Birla, has reacted to the new issue in the right spirit. Business men, in particular, and the public, in general, will do well to realise that the alternative to stinting, saving and lending to the Government as much as possible is inflation, a distinctly unhealthy way of finding the money required for development. To the extent this loan succeeds, the need for resorting to this form of financing will be correspondingly reduced. In other words, by subscribing to the new loan, one will help maintain the value of the rupee. And a stable rupee is a pre-requisite for a sound economy. Accordingly, it is the duty of all to support the new loan to the extent permitted by their resources. Even as an investment, the terms of the loan compare favourably with the current yields on similar Gilt-edged securities.

RATIONALISATION

NO word in current usage in this country is more maligned than "rationalisation." Even if it is not condemned outright as a sin, it is considered by some to be extremely bad even to advocate it. A whole host of unpleasant associations have been allowed to develop around this word. Both Government spokesmen and labour leaders have succeeded in conjuring up visions of large-scale unemployment, mass misery and civil commotion and unrest, which, it is confidently asserted, will follow the adoption of rationalisation by industrial establishments.

It occurs to us that the Government and workers are afraid of rationalisation in much the same way as children are afraid of the dark. No attempt is made to find out whether all this scare, consternation and hysteria are justified. Why should an idea—such as the one conveyed by "rationalisation"—that has been used to such excellent advantage not only in the West but even in Japan which, too, has the problem of overpopulation, mean so much harm to India? Is it contended that this country could attain any industrial status without adopting the devices that have made other countries attain it? Does rationalisation really imply such profound disturbance to national economy as is made out? These are simple questions and deserve a straight answer.

The fact is that rationalisation is as sober, sound and workable a principle as any that made such industrialisation as has taken place possible in this country. And yet, the principle is bitterly opposed. An impartial examination of this doctrine, in so far as it is applicable to the cotton mill industry, was made this week by Mr. Neville N. Wadia, Chairman of the Bombay Millowners' Association. Since his observations are applicable as much to the cotton textile

industry, to which he specifically referred, as to any other industry, they deserve wider notice.

Mr. Wadia's sober exposition of the arithmetic of rationalisation should go a long way towards correcting the fears that are entertained about the ill-effects of adopting this device. The first question is: Can rationalisation be attempted by the entire industry and immediately? Obviously, it cannot be done. This is because the industry would need about Rs. 300 crores for rationalising itself, whereas it has no more than Rs. 100 crores to be spent on rationalisation. Again, there will be a time lag between the time rationalisation plans are chalked out and the time they are implemented. Secondly, what is the approximate number of men that are likely to be thrown out of employment through the industry's adoption of rationalisation? No one can give an accurate answer to this question. Mr. Neville Wadia calculated that, even if all looms were converted to automatic overnight, it would mean unemployment for 125,000 weavers out of 200,000 weavers. This is, of course, the maximum evil that might flow from rationalisation. That this maximum will never be attained should be clear not only from the fact that rationalisation cannot be achieved overnight but also from the consideration that it cannot be implemented by all mills. Again, the figure will, in actual practice, be less, since quite a few mills have already installed automatic looms.

As against this number, likely to be unemployed through rationalisation, one must consider the other ways in which the industry could be enabled to absorb more workers. If rationalisation results in a reduction in cost of about nine pies per yard—Mr. Wadia quoted this figure from a labour leader's view on the question—and this cost-reduction is passed on to the consumers, the latter will be able to buy another 360 million yards, to produce which an additional number of 54,000 workers will be required. There is also another angle from which the question might be looked at. The Government derives some Rs. 27 crores by way of excise duty on cloth. If this money were spent by the people on purchases of cloth, the mills would be able to engage themselves in an additional production of 432 million yards; this, in turn, would need 65,000 more workers.

Apart from these considerations, it is well to recognise that the industry has neglected its re-equipment needs for close upon quarter of a century. Textile machinery industry is not a static industry. During these years, it has made considerable progress. Is it contended that the cotton textile industry should indefinitely postpone re-equipment and modernisation of plant for fear that it might mean some retrenchment? If no improvement were permitted, it would mean that only the types of equipment, which are now in use, should be bought. It would be a "criminal waste" of capital, as Mr. Wadia suggested, to install machinery of an out-of-date type. Some displacement of workers is bound to occur whenever re-equipment takes place. But such displacement would necessarily be small, since the mills would be interested in working the new equipment for longer hours—this would need more workers—in order to recover the high cost of the new machines.

If, on the other hand, all modernisation were eschewed, the industry's production costs are bound to remain at a high level. The industry's competitive position would be seriously affected. In this connection, it is wise to remember that many countries are taking to the production of textiles and are installing modern types of machinery. Even the old textile-producing countries, notably Japan, are replacing their war-worn or war-damaged equipment by new equipment incorporating the latest improvements. If the Indian textile industry loses its competitive position in the world markets, it will mean that it will be compelled to reduce its production by 20 per cent. of the present output. This will mean loss of work for 20 per cent. of the present labour force or for 148,000 employees. The damage will be more serious than that. To quote Mr. Wadia:

> "Mills will consume less cotton which means less demand from our farmers and lower prices. Less mill stores will be consumed which means less work for all the ancillary industries which live on orders from the textile industry."

Modernisation of the textile industry will, on the other hand, mean cheaper cloth and, therefore, larger consumption; this, in turn, will lead to more production and employment. The question is whether it is right to throw away all this opportunity, hold 340 million consumers to ransom and deprive the country of the chance of earning foreign exchange merely to placate the existing labour force. Even industrial peace is very dearly bought if the price that has to be paid is the country's long-term economic interest. The inner contradictions in the Government's industrial policy are now coming to the surface. The country cannot aspire to Western standards of labour welfare, if it sets its face against Western industrial methods. To expect all the fruits of Western industrialisation and to refuse, at the same time, to pay the necessary price in the shape of harder work and modern equipment is nothing short of a delusion.

DEVELOPMENT OF THE MALNAD

ALTHOUGH it is now a truism to refer to India as an underdeveloped country, it is necessary to recognise that there are regions in the country which are practically undeveloped, compared to which other parts might well be termed as highly developed. One such undeveloped region is the Malnad of the South. This region is generally understood to cover the area from Belgaum in Bombay State to Malabar in the Madras State, cutting across at least four States—Bombay, Mysore, Coorg and Madras. But, really speaking, it covers the whole of the area stretching eastwards from the mountainous spine of the Western Ghats commencing from Bombay through the Wynaad to South Travancore, including spurs such as the Nilgiris, the Palnis and the Anamalais. One of the chief reasons why the development of this region has suffered is that it is under the rule of more than one State Government. Since it is the business of every State Government concerned to develop the region, no State is willing to carry the baby; obviously, even if any one State were so willing, it could not possibly nurse it efficiently enough. The result is that this lovely stretch of territory, which is second only to Kashmir in scenic splendour, has suffered grievously by continued neglect by the powers-that-be. And yet, Malnad, as those who participated in the recent Malnad Conference at Shimoga were at great pains to point out, is capable of being developed into a rich agro-industrial region.

Steeped in poverty, ignorance; and ill-health, the Malnad might well be called the "sick man" of India. It calls aloud for special treatment both on humanitarian and economic grounds. Those who know the fiscal and industrial value of coffee, cashewnut, spices and bamboo—these are only a few of the commodities the Malnad produces—will readily appreciate what a well-developed Malnad can mean to the country as a whole. In an article contributed to our 1953 *Annual Review Number*, Mr. Ivor Bull, a leading South Indian coffee planter, presented a plan for development of this much neglected area. He pointed out how suited this area was for growing coffee, paddy, pepper and cardamoms. According to his calculation, which no one has disputed so far, another two lakh families could find employment under coffee alone and almost an equal number would be employed in the cultivation of other crops and in the trading and development of the village and country life of this region. This is a telling enough argument in these days when any measure, designed to provide employment opportunities, has a special appeal to the Union and State Governments. That the development of this region will also mean additional revenue in the shape of export and excise duties on coffee, export duty on pepper and levies on plantation and other products, should be an additional inducement to the Governments concerned to expedite the development of this region.

The general problem of the Malnad is one of providing transport, communications, health and educational services. There has been no lack of committees which have studied the problem. The earliest of such efforts was the one made by the Mysore Government in 1901. Several other committees followed this effort. Many investigations have also been made. The two recent efforts in this direction were the appointment of a committee under Mr. A. V. Ramanathan of the Mysore State Civil Service (1945) and of the Central Malnad Planning Committee (1951) consisting of representatives of the Bombay, Coorg, Madras and Mysore States. It would appear that the Central Malnad Planning Committee submitted an interim report and that it has now been shelved. Surely, it is time that the development of the Malnad was carried beyond the investigation stage.

The first problem is to provide better communications which will open up the interior of the Malnad. Although the Malnad can boast of important sea-towns, such as Karwar, Bhatkal, Malpe and Mangalore, it has no well equipped harbour. It is also ill-served by railways and roads. The Railway Ministry, it is gratifying to note, is surveying the Mangalore-Hassan line. Mr. Nijalingappa emphasised that, if Birur were linked to this proposed line at Manjirabad *via* Chikkmagalur and Mudabidri, it would open up the interior of the Malnad. He also suggested that Karwar should be connected to Hubli *via* Yellapur and Sirsi, and that Daddi in North Kanara should be linked with Talguppa in Shimoga District. Mr. K. Hanumanthiah, Mysore's Chief Minister, revealed that the State Government was urging the Railway Ministry to connect Bangalore and Mangalore by a broad-gauge section. Although these detailed suggestions reveal the leaders' understandable awareness of the transport needs of this area, it must be admitted that development of railways, especially in mountainous areas, is a costly affair; it may not, therefore, be a reasonable proposition in these days of scarcity of capital. Investigations made by transport experts reveal that the present trend all over the world is not to extend railways, except on long-distance routes. Development of motor transport is, therefore, more suited to this area than that of railways. Besides providing an economic means of transport, this would also mean the laying of new roads and the improvement of the existing ones. The Malnad is a land of many rivers and rivulets. Hence the importance of constructing bridges. Both the Madras and Mysore Governments, it is stated, have constructed several bridges. Mr. Nijalingappa complained, however, that "the Bombay Government, on the other hand, for reasons best known to itself, has been slow, and not even a single bridge has been built so far." What the provision of transport facilities in this region will mean to national economy will be evident from Mr. Nijalingappa's statement that fish, caught along the coast, have often to be thrown into the sea, because the people have neither transport nor cold storage facilities.

The high altitudes of the hills in this region, coupled with the fact that many rivers originate in these hills, are favourable for developing large quantities of hydel power. And yet, the Malnad can boast of only a few hydel projects. The most important project, which has been undertaken so far, is the Mahatma Gandhi Project at the Jog Falls, designed to generate over one lakh kw. It would appear that the Kali Nadi Project and the Honne Maradu Project, (each is estimated to cost Rs. 40 crores) could generate 4½ to 5 lakh kw. each. There is scope for initiating many other smaller hydro-electric projects. Among the irrigations projects, the Tunga anicut (Mysore Government-sponsored project), it is estimated, will irrigate 21,000 acres. Work has been started by the Mysore Government in connection with the Bhadra Reservoir Project.

The only important industries in the Malnad region are those started by the Mysore Government; the Mysore Iron and Steel factory, at Bhadravati, and the Mysore Paper Mills, are some of these. The State Government proposes to set up a new sugar mill in Shimoga. The total amount (both what has been invested and what is proposed to be invested by the Mysore Government in its Malnad region) comes to about Rs. 40 crores. This is doubtless a large sum. But this region would need a much higher level of investment for its full development. Even then, it would leave unsolved the equally urgent problems of providing educational facilities, medical relief and public health services in this notoriously malarial region.

Since the problems of the Malnad are many and complex and have never been consistently publicised, the Conference did well to appoint a Standing Committee of 21 members to keep the subject of this region's development under constant scrutiny. The Conference urged the Union Government to appoint a Development Board for this region. Other resolutions adopted by the Conference emphasised the need for increasing agricultural production, and for the development of ports, railways and roads. If the fine sentiments expressed by Mr. Rafi A. Kidwai, Union Minister for Agriculture and Dr. Punjabrao Deshmukh, Deputy Minister for Agriculture, both of whom attended the Conference, are any indication of the Central Government's intentions, the Malnad bids fair to come into its own very soon. Dr. Deshmukh promised that the difficulties of co-ordinating the work of the different State Governments, which prevented, in the past, greater consideration of the Malnad's problems, would not be allowed any longer to "halt our progress." Mr. Kidwai affirmed that he was "sure a more comprehensive scheme for the development of this area will be taken up in the second Five-year Plan." Action, it is to be hoped, will be as reassuring as these promises.

SOME THOUGHTS ON NEW CENTRAL LOAN

DYESTUFF ISSUE—SUGAR PRICES—RELIEF TO DECCAN FACTORIES—U.S. FARM SURPLUS

WEDNESDAY, 5 P.M.

THE new loan announced by the Government of India late on Monday evening took the market by surprise, in that it came at a time when none expected it. That the Government was planning to borrow a much larger sum than was indicated by the Finance Minister in his budget speech has been known to market circles for some time now.

MARKET GOSSIP

In fact, this was hinted at in these columns well over a month ago. Further, the announcement of a new loan in the near future was scented by the market from the open market operations of the Reserve Bank of India during the past three weeks. But no one thought that the new loan would be announced so soon as this. The general impression was that it might be done some time in May or early June. Even when Mr. Nehru appealed to the public to support the new loan while addressing a public meeting at Chaupaty on Sunday, one did not think that the loan announcement would follow on the very next day. Thus, the Government's decision on the date for the announcement of the loan was a well-guarded secret.

• • • • •

The terms of the loan are, however, not a surprise. They are in line with market expectations. Before proceeding to discuss the merits of the loan, a brief description of the terms thereof is necessary. The loan is for a period of ten years. It carries interest at the rate of 3.5 per cent., taxable. The interest is payable every six months. The issue price is Rs. 98-8, while it will be repaid at Rs. 100. The list opens on 19th April, 1954, and will remain open until further notice. This means that the loan is for an unspecified amount. After the first week of the list remaining open, the issue price will rise by 9 pies per week. This increase approximates to the net interest which accrues on this security. Thus, during the second week, namely, 26th April, 1954 to 1st May, 1954, the issue price will be Rs. 98-8-9. In the following week, it will be Rs. 98-9-6 and so on. The new issue is on account of both the Centre and State Governments.

• • • • •

Since the issue price is at a discount of Re. 1-8, the redemption yield on this loan works out to 3.67 per cent. per annum. This return is in keeping with the yield on the existing loans of comparable maturity giving the same running yield. It is true that the yield on 3 per cent. 1963-65 or 3 per cent. 1964 is slightly higher at 3.78 and 3.85, respectively. There is, however, no reason to expect these issues to compete with the new loan, because the running yield on the latter is distinctly higher by 0.5 per cent. Most investors, except, perhaps, insurance companies, will prefer to buy a loan the running yield on which is higher. The loan with a higher redemption yield generally attracts only those who are prepared to keep it until the date of redemption. The longer dated loans give, of course, a much higher yield than the one available on the new loan. 3 per cent. 1970-75, for instance, offers 3.90 per cent. (earlier redemption). But, in the present state of affairs, the market's preference is for short- and medium-dated loans. Accordingly, the high-yielding long-dated loans will not stand in the way of the new loan.

• • • • •

As the terms of the new loan are in consonance with the current yields, they have had no perceptibly adverse effect on the value of existing loans. It is true that the conversion loan has declined from Rs. 83-3 to Rs. 82-14, a drop of As. 5. But, as there is always a certain amount of speculation in this security, the fall in its value cannot be taken as a true index of the Gilt-edged market's reaction to the new loan. The trend of the market is, however, quiet, because there has been no buying enquiry. Operators feel that, as there will not be much enquiry for the existing loans so long as the new loan is on tap, there may be a slight fall in their value. That may be so, but a point to be noted here is that, in the past few weeks, these loans were pushed up by As. 4 to As. 6, thanks to the Reserve Bank's open market operations. If, therefore, there is a fall in their value, it may mean no more than the loss of the recent adventitious gain, so that there is no cause for any grouse among the holders of the existing loans.

• • • • •

In fact, when we come to think of it, we feel that the Reserve Bank has been very thoughtful. It has prepared the market in such a way as not to cause any disappointment among those who had already bought Government loans. This is an important aspect from the psychological point of view. It induces confidence among the investors that they will not be left high and dry at the time of the next new loan. There are some in the market who seem to feel that the existing securities will decline in the coming weeks when some of the holders may unload and buy the new loan in order to please the Government authorities. But we do not think that the Reserve Bank will allow this to go very far, because any appreciable fall in the Gilt-edged values will have an adverse effect on the sale of new loan itself. It may, therefore, be expected to extend judicious support to the market on such occasions. We suppose the authorities are aware that, when they want to raise Rs. 150 to Rs. 200 crores, they will have to pay out to the market Rs. 10 to Rs. 15 crores in order to keep it in good shape.

Has the announcement been ill-timed? Since this is a loan on tap, the question is, perhaps, not quite relevant. As the Government wants to raise as much money as it can, it has evidently decided to be in the market earlier than usual. The present trend of the money market is, of course, not quite favourable for bringing about any large response from banks, the principal supporters of any new loan in the initial stage. The seasonal trade demand for money still persists and the banks have no large cash balances. House money, as well as 1 to 3 months' deposits, still fetch 3 per cent. and inter-bank call rate is 2½ to 3 per cent. Not much support can, therefore, be expected from the main capital markets for another four to six weeks, by which time the market may become a little easy. The Government, however, is not out to tap only the organised market, but wants to approach the upcountry towns and the rural areas, too, as witness the following extract from the Prime Minister's appeal to the nation:

> "The institutional investors, like banks and insurance companies and others, must, of course, give their massive support to this loan. But this is essentially a popular loan, going down to the humblest amongst us, who should be as much a sharer in this great adventure as anyone else."

If the foregoing consideration is taken into account, it will be seen that the loan is not ill-timed. The farmers and merchants in the interior must be approached at a time when they have cash on hand. This is undoubtedly the right time for that. A part of the agricultural crops has just been sold and the balance is still being marketed. The agriculturists will, therefore, be having some funds to spare. If, as in the past, the new loan were to be announced towards the end of May or June, they might not be having so much ready cash as they do now, for they would have spent a part of it. It would then be difficult to persuade them to invest in the new loan.

• • • • •

A feature of the new loan is that it is on behalf of both the Centre and the States. This means that there will be no separate borrowing by the States, as used to be in previous years, and that there will be no more 4 per cent. loans, at any rate this year. This is a welcome development in a way, in that there will be no competition among the various State Governments for the amount available in the capital market. This competition led to a lot of undesirable trends, which, if allowed to persist, would aggravate provincial jealousies and undermine, in course of time, national unity. We have no doubt that many institutional investors, having interests spread all over India, will heave a sigh of relief, for no longer will they be subjected to embarrassing and undue pressure from the Chief Ministers of all States to support their respective loans. The States themselves should welcome the present arrangement, because the terms of the loan are more favourable than what they would have to offer, if they were to raise loans on their own account. They are, of course, losing a part of their power, but that is a minor point considering the larger interests of the country. Surely, the Centre can be trusted to give each State a share in the proceeds of the loans according to the importance of their projects. If the State Governments want large loans, they must now work hard and persuade the people in their respective areas to subscribe liberally to the new loan.

• • • • •

It is not possible to say at this stage as to how long the list will be kept open. The loan may be on tap right through the year. During the war years, when this method was regularly in vogue, it was customary to keep a loan on tap for 9 to 10 months and the list used to be closed only after the subscriptions aggregated Rs. 110 to Rs. 120 crores. There is no reason why this procedure should not be continued now. In fact, the total subscriptions may be allowed to run up to Rs. 170 crores or even Rs. 200 crores. Since there is already one Central Government loan repayable in 1964 with an outstanding amount of Rs. 30 crores, besides a few State loans, one may argue that the problem of repayment would then present serious difficulty if the total maturities were to exceed Rs. 200 or Rs. 230 crores. But, by 1964, India's economy will have expanded to such an extent as to enable repayments of this magnitude easy.

• • • • •

Lastly, another question that is asked in market circles is whether India will be in a position to raise Rs. 150 to Rs. 200 crores this year. Although this sum appears to be fairly large, it is not beyond the country's reach. Perhaps, it may be news to many when they are told that, in 1953, the total net borrowings by the Centre, States and Local bodies were about Rs. 108 to Rs. 110 crores. With a little more drive and the backing of an impassioned appeal from the Prime Minister himself, it should not be difficult to raise Rs. 150 to Rs. 200 crores. The Reserve Bank has already paved the way for the success of the new loan by stopping the sale of weekly Treasury Bills.

• • • • •

Although India is a leading textile manufacturing country, it depends for a wide range of machinery, stores and chemicals consumed by the industry on foreign sources of supply. Many attempts have been made in recent years to remedy this defect by setting up units designed to manufacture textile machinery as well as stores and chemicals within the country. A welcome addition to the list of such industrial ventures in recent years is the Indian Dyestuff Industries Ltd., the full text of the prospectus of which appears elsewhere in this issue. The object of the Company is to undertake the manufacture of Vat Dyestuffs, like Vat Jade Green FFB, Vat Dark Blue BO, Vat Black BB and Vat Blue BC. These dyestuffs are largely used in the textile industry. It is stated that the Company is the first of its kind in India to manufacture Vat Dyestuffs, the textile industry's entire requirements of which are now met by imports. The Company is expected to go into production within a year and hopes to reach its full capacity, so far as the aforesaid four Vat Dyes are concerned, within three years and to produce them on a scale which will meet the country's present requirements. It will also undertake the manufacture of other Vat Dyes and technical investigations for this purpose have already been taken in hand.

• • • • •

From present trends in consumption, the promoters of the Company seem to be convinced that there is vast scope for a steady increase in demand in this country. With a rise in living standards of the people, there will be increased consumption of cloth and with it the demand for fast dyes. If the country's export trade, particularly to the Near and Far Eastern countries, is placed on a permanent basis, the demand for coloured cloth will be on the increase. The promoters have embarked upon this enterprise after carrying out extensive laboratory and pilot plant work. Though the methods of manufacture will be on the basis of those used in Western countries, the process has been evolved to suit local conditions. It will, however, be necessary to import a few organic chemicals in the first instance for the manufacture of these dyestuffs, but, ultimately, the entire manufacture will be out of Indian raw materials. The factory will be located near Bombay.

• • • • •

The authorised and issued capital of the Company is Rs. 30 lakhs, made up of 15,000 6 per cent. cumulative preference shares of Rs. 100 each and 15,000 ordinary shares of Rs. 100 each. Of this, the Directors and their friends have agreed to take up Rs. 7½ lakhs of preference shares and Rs. 7½ lakhs of ordinary shares; the balance of Rs. 7½ lakhs in preference shares and Rs. 7½ lakhs in ordinary shares is now offered for public subscription. A sum of Rs. 25 per share is payable on application and Rs. 25 per share on allotment. The balance of Rs. 50 per share on each of the preference and ordinary shares will be payable as and when required on call at intervals of not less than two months. The Managing Agents of the Company are Messrs. Anandlal Sheth & Co., Ltd. Bombay, in which the well-known house of Mafatlals has a share. Their appointment will be for a period of ten years from the date of incorporation of the Company. The Managing Agency agreement provides for a remuneration by way of commission at the rate of 10 per cent. of the net profit, subject to a minimum of Rs. 12,000 per annum. The Company has a strong board of directors, with Mr. Navinchandra Mafatlal as Chairman.

• • • • •

The price of sugar has been rising perceptibly all over the country. The upward trend has been rather sharp in the interior than in the main centres such as Bombay and Calcutta. This has naturally been causing concern to the Government. Only a few days ago, a couple of leading sugar merchants in Calcutta were denied the facilities to trade in sugar, as they were found guilty of profiteering. On Saturday last, forward sales of sugar by mills were banned, for some of them were indulging in price-raising tactics. This was followed three days later by the announcement of a few additional measures which amount to subjecting the sugar industry to a certain amount of control again. The Government has now decided to utilise its reserve stocks, namely, 25 per cent. of the current season's production, together with such quantities of sugar as are imported, for keeping prices under check. Both foreign and Indian sugar are to be pooled together and sold to consumers all over India at the uniform rate of Rs. 31 per maund, f.o.r. destination station; this rate will be reduced to Rs. 30 after 15th May, 1954. It is proposed to continue this arrangement at least upto the end of September. During this period, the factories will be given no further release orders for free sale, while whatever balance they have of the quantity that has already been released will have to be despatched by them before the end of May. If any factory wants to sell the unreleased portion—this may be about 10 per cent. of its production—it may do so to the Government at the prevailing rates, that is, the rates at which the Government will be selling to the trade. Thus, if the factories want to sell their sugar to Government before 15th May, 1954, then they will be paid on the basis of Rs. 31 per maund f.o.r. destination. This rate is Rs. 3 to Rs. 4 lower than the price at which the factories are currently realising on the sale of sugar already released.

• • • • •

No control is envisaged on distribution by the trade. The Government will sell the stocks of all sugar over which it has command at present at the aforesaid fixed price to both individual merchants and trade associations on the basis of a tender system, subject to a minimum quantity of 200 bags on the broad-gauge and 100 bags on the metre-gauge railway. The Government has the option to accept the tenders in full or in part and also to supply either indigenous or imported sugar. All stockists have been warned that they must dispose of the stocks they have before the end of May, 1954. After that date, if they hold any sugar, such is liable to requisitioning by the authorities.

• • • • •

By these measures, the Government hopes to bring into the market more supplies of sugar between now and before the monsoon when the

BOOMLET IN SHARES

ADVANCE HALTED AT THE CLOSE

(From Our Own Correspondent)

BOMBAY, 14*th April*

THE hesitant spell of trading noted on the Stock Exchange during the previous week gave way to cheerful conditions during the earlier part of the short week under review. Under a spell of speculative buying and covering by short sellers equity values rallied to new high levels. But this upward trend, which was rather sharp, received a check yesterday following the announcement of the Central Government's programme to borrow an unlimited amount for national development. There was mild selling pressure yesterday which pruned the top levels. If there was no selling pressure today, there was no great buying fervour either.

The buying spree in the earlier part of the week was touched off by firm advices from Calcutta where Indian Irons and jute shares were in keen demand. Favourable advices from the bullion market, reports of broadening demand for cotton piecegoods and bullish interpretation given to the demand of the millowners for rationalisation were all factors which sustained speculative buying. In broad and active dealings, the main body of shares scored handsome gains in the course of two days (Friday and Monday). The announcement of the new "unlimited" loan by the Central Government was not regarded as a favourable factor for equities, because the issue is expected to divert investment support from the market. Operators, however, preferred to remain cautious till a clear idea about the success of the loan emerged. Further, there was no support from Calcutta as the market in that centre remained closed from yesterday.

In the steel section, Tata Ordinaries opened cautiously at Rs. 190-12, but jumped to a high of Rs. 197-4 on Tuesday morning. After a reaction to Rs. 194-8 on that day, the shares closed today at Rs. 195-4, a gain of Rs. 4-4 over the week. Indian Irons were keenly bid and forged ahead from Rs. 30-13½ to Rs. 31-9 only to close lower at Rs. 31-3¼.

The textile section was in the limelight with all-round spurt in values. Bombay Dyeings made a spirited advance from Rs. 423-2 to Rs. 443-2 on Monday. In subsequent dealings, they came down to Rs. 436-4, before winding up at Rs. 440-10. Kohinoors were conspicuous with a rise from Rs. 318 to Rs. 328-8. The closing was a shade lower at Rs. 327. Sustained speculative buying in Centurys on good prospects for the current year lifted the shares from Rs. 331-12 to Rs. 341. Central Indias were well favoured and picked up Rs. 2-8 to Rs. 188. Finlays were put up by Rs. 6 at Rs. 268. Khataus gained Rs. 3-12 at Rs. 121-4. New Greats moved ahead by Rs. 6 to Rs. 157, Phoenix by Rs. 3-9 to Rs. 132-3, Sassoon Spinnings by As. 8 to Rs. 30-12 and Shrinivas by Rs. 13-12 to Rs. 226-4. Simplex made a useful gain of Rs. 3-8 at Rs. 156. Standards were taken up by Rs. 6-4 to Rs. 340 and Svadeshis by Rs. 3-4 to Rs. 306-12. Tata Mills spurted from Rs. 46-8 to Rs. 49-12.

In the miscellaneous section, sugar shares showed a tendency to weaken towards the close on reports regarding enforcement of control on sugar. Belapurs, after an initial rise from Rs. 269-8 to Rs. 271, came down to Rs. 266-8, though the close was better at Rs. 268. Phaltans advanced from Rs. 101-12 to Rs. 108, but finished at Rs. 105. Bhopals were steady around Rs. 11-14. After a rally from Rs. 158-12 to Rs. 161, Associated Cements gave way to Rs. 159-8. Digvijays were better by Rs. 1-12 at Rs. 118-12. Among other industrials, Alcocks were wanted Rs. 3-2 higher at Rs. 360-10. Bombay Burmahs (Old) spurted from Rs. 418-12 to Rs. 430, but drifted lower to Rs. 425-10 and the New shares stood Re. 1-4 higher at Rs. 147-8. Scindias spurted from Rs. 17-15 to Rs. 18-11½. B.I.Cs. were quiet at Rs. 8-5¼. C.P. Railways changed hands Rs. 2-8 better at Rs. 102. Indian Coppers were a steady feature at Rs. 3-2½. National Rayons were done at Rs. 165-12 *ex-div.*, as against Rs. 168 *cum-div.* (div. Rs. 9) last week. Premier Constructions moved narrowly and closed at Rs. 129. Shivrajpurs hardened by Rs. 4-8 to Rs. 79-8. Tata Chemicals advanced from Rs. 14-10 to Rs. 15-10, but reacted to Rs. 13-4. Tata Oils put on Rs. 2-4 at Rs. 39-8 and Wimcos Re. 1-4 at Rs. 212-8.

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, 13*th April*

After recording featureless conditions on Wednesday and Thursday last, the Calcutta Stock Exchange was noted for cheerful trading on Friday, since when a steady trend continued during the rest of the week. Such a change was due to the better advices from Bombay and improved prospects for jute mills. The impressive gains in the prices of almost all constructions of jute goods were taken notice of in the share market. The fact that there has not so far been a corresponding increase in the prices of raw jute, which is due to the anxiety of mills to keep down prices of jute goods at a minimum profit level, is to be taken as an encouraging feature, since the industry does not desire speculators to push up prices of jute goods to unnatural levels, which would affect the volume of business. This feature is also welcome to genuine investors in shares. Another factor for the better sentiment was the withdrawal of his resignation by the Finance Minister. The flotation of the "unlimited" National Plan Loan is bound to attract funds normally available to the share market, but, as the loan would be used for the speeding up of development projects, its good effects on industry and trade cannot but be reflected on share sentiment.

In transactions this week, jutes showed signs of assuming active leadership of the market. This may as well prove to be a temporary feature as the week's gains in the prices of jute goods were mainly due to the efforts of speculators. After a start at Rs. 24-8 Howrahs were pushed to Rs. 25-8, and Bally were placed higher at Rs. 150. At Rs. 309, Gourepores showed an impressive gain of Rs. 23. Nuddeas gained from Rs. 44 to Rs. 48-8, Champadanies from Rs. 144 to Rs. 152 and Indias from Rs. 124 to Rs. 138.

In the engineering section, Indian Irons were earlier quiet at Rs. 30-13, but laterly touched a high of Rs. 31-6. Indian Galvanisings, after giving way from Rs. 19-10 to Rs. 18-12 on profit-taking, recovered to Rs. 19-8 before closing quiet at Rs. 19-5. Texmacos received support at Rs. 12. Kumardhubis were mentioned in transactions at Rs. 10-1. Jessops were shown interest at the high rate of Rs. 29-4.

Support was again accorded to shares of paper mills at higher rates. Titaghurs were taken at as high a rate as Rs. 41, as against Rs. 39-12 a week ago. At Rs. 59-14, Bengals were better by Re. 1-10, while Shree Gopals were maintained at Rs. 24. India Paper Pulps were better at Rs. 194. Orients Old and New receded from Rs. 18-9 and Rs. 17 to Rs. 17-10 and Rs. 16-9, respectively.

In the miscellaneous section, F. & C. Oslers were an outstanding feature with a rise from Rs. 14-8 to Rs. 16-2, while Martin Burns dropped As. 3 to Rs. 20-9. Dunlop Rubbers were traded at Rs. 34-12, and Indian Cables hardened from Rs. 20-5 to Rs. 20-10. Although a number of transactions took place in Rohtas Industries, the price could not move higher than Rs. 14.

Although a steady tone was in evidence in the gains were insignificant. There were instances of fractional losses too. This confirms our impression recorded in these columns last week, viz., that buoyancy during recent weeks had raised prices far too much. Hansquas at Rs. 18-2 were better by As. 2, while Patrakolas were pushed down from Rs. 185 to Rs. 182. Dhelakhats moved between Rs. 14-9 and Rs. 14-12, whereas Teen Alis strengthened from Rs. 29-2 to Rs. 30-6.

The market remained closed today and would remain so for the rest of the week on account of the Bengali New Year and Easter holidays.

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, 13*th April*

The Madras Stock Exchange put on a cheerful appearance during the week under review; the market was, however, closed today on account of Tamil New Year's Day. There was an all-round improvement in values. Turnover also was encouraging. A notable feature of the market was the continued improvement in the quotations of tea scrips, on persistent firm advices from the U.K. and the Continent. Rubbers too were better, while coffees were out of shape. As the coffee market is almost immune from developments in the world markets, the squeeze for supplies of coffee in the Continent failed to impress the operators here. Miscellaneous and banking scrips came in for selective support.

Favourites among textiles were well supported. Metturs were enquired higher at Rs. 242, as against Rs. 235, and Dhanalakshmis at Rs. 208 as against Rs. 205. Vasantas rallied Rs. 5 to Rs. 182. Travancore Rayons gained As. 3 to Rs. 9-1. Bangalore Woollens were, however, quiet at Rs. 401-4 and Buckinghams at Rs. 138-8. Coimbatore Spinnings were unchanged at Rs. 43. Maduras, however, lost As. 9 to Rs. 39-3 and Loyals As. 4 to Rs. 17-12.

Among plantings, tea scrips continued to gain support. Nonsuch Teas shot up from Rs. 33-2 to Rs. 34. Coorg tea advanced by As. 2 to Rs. 6-10 and Periakaramalais by As. 2-6 to Rs. 8-4½. Chandramalais advanced by an anna to Rs. 3-8. Peermades were done at Rs. 33-4 *ex-div.*, as against Rs. 35-4 *cum-div.* United Nilgiris was dull at Rs. 200.

Rubbers also came in for encouraging support. Vaikundams moved up from Rs. 16-8 to Rs. 17-2 and Travancore Rubbers from Rs. 15-8 to Rs. 17-2. Peninsulars gained As. 4 to Rs. 11-8. Cochin Malabars were higher by an anna and a half at Rs. 7-2½ and Pullangodes by an anna at Rs. 3-2½. Sheveroys changed hands at Re. 1-10, as against Re. 1-8½ last week.

Coffee scrips ruled slightly easy. Coffee Lands lost As. 2 to Rs. 10 and Consolidated Coffees As. 3 to Rs. 17-15. Puthuthotams were, however, higher by an anna at Rs. 3-6.

In the miscellaneous section, Rallis advanced from Rs. 54-8 to Rs. 55-8. India Cements gained As. 2 to Rs. 18-6 and Stanes Motors As. 3 to Rs. 13-11. Mysore Chemicals and Fertilisers rallied As. 4 to Rs. 10. Mettur Chemicals, however, lost As. 2 to Rs. 5-14 and Mysore Gold As. 2½ to Rs. 3-3.

The directors of the Belsund Sugar Co., Ltd., Calcutta, have recommended a dividend of As. 12 per share, free of income-tax, for the year ended 30th September, 1953.

Notices

THE BELSUND SUGAR COMPANY LIMITED

NOTICE

THE ANNUAL ORDINARY GENERAL MEETING of the Shareholders will be held at the Registered Office of the Company, 14, Netaji Subhas Road, Calcutta, on Thursday the 6th May, 1954, at 11-30 a.m., for the purpose of receiving the Directors and Auditors' Report for the year ended 30th September, 1953, passing the Accounts, declaring dividends, electing Directors and Auditors in place of those retiring and transacting any other business that may be brought forward.

Notice is hereby given that the Share Transfer Books of the Company will be closed from 29th April to 6th May, 1954, both days inclusive.

The Dividend Warrants will be sent to Registered Shareholders.

By Order of the Board,
Per Pro BANGUR BROTHERS LTD.,
(Sd.) N. D. BANGUR,
Managing Agents.

14, NETAJI SUBHAS ROAD,
CALCUTTA, 8*th April*, 1954.

SOCIETE GENERALE INDUSTRIELLE DE CHANDERNAGOR
(SOCIETE ANONYME)

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Shareholders of the Company will be held at Clive Buildings, Netaji Subhas Road, Calcutta, on Tuesday the 18th May, 1954, at 12 noon, for the following purposes:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1953.
2. To declare a Dividend.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.
5. To transact any other business which may properly be transacted at the meeting.

Notice is also hereby given that the Register of Members will be closed from the 4th May to 18th May, 1954, both days inclusive. Dividend Warrants will be sent only to Registered Shareholders or to their Mandatees.

By Order of the Board,
For SOCIETE GENERALE INDUSTRIELLE DE CHANDERNAGOR (SOCIETE ANONYME),
For GILLANDERS ARBUTHNOT & Co., LTD.,
K. R. FETTES,
Managing Director,
Agents.

CALCUTTA, 8*th April*, 1954.

THE CALCUTTA TRAMWAYS COMPANY, LIMITED
(Incorporated in England)

THE DIRECTORS OF THE CALCUTTA TRAMways Company Limited announce that an Interim Dividend of 2½ per cent. free of Income-tax will be paid on the Ordinary Shares to the Shareholders registered in the Books on the 1st May, 1954, in respect of the profits for the year ended 31st December, 1953. Transfer Books will be closed from the 3rd May to the 15th May, 1954, inclusive, and Dividend Warrants will be posted on the 15th May, 1954.

By Order of the Board,
A. C. T. BLEASE,
Agent.

P-4, MISSION ROW EXTENSION,
CALCUTTA, 13*th April*, 1954.

NEWS IN BRIEF

THE Government of Cochin will repay its 3 per cent. 1953-55 loan at par on 1st October, 1954.

The Government of Andhra has decided not to deviate from the path of complete prohibition.

The aggregate cost of the projects in Andhra State accepted by the Planning Commission for immediate implementation is Rs. 8.70 crores.

Mr. Morarji Desai, Chief Minister of Bombay, inaugurated the second extension of the Chola Power Station near Kalyan (Bombay) on 12th April, 1954.

The Government of India has agreed to release from the development fund a sum of Rs. 2 crores to the Tata Locomotive and Engineering Co., Ltd. for setting up a steel foundry by the Company.

The Government of India proposes to send an Indian engineers' mission to China to study the flood and silt control measures taken by the Chinese Government in the Yellow-Huai-Yanktze river basins.

The Government of India has decided that applications for blanket licences, without details of machinery and other articles required, under the capital goods scheme will not be entertained in future.

The Hindusthan Aircraft Factory has handed over to the Indian Railways the 500th all-metal third class railway coach manufactured by it. All components of the coach, except the electrical fittings, are Indian made.

Test boring operations to assess the extent of coal deposits in the Godavari valley of Andhra State will be launched shortly by the Geological Survey of India. Test bore holes will be dug near Angareddigudem in the valley shortly.

The Damodar Valley Corporation Enquiry Committee, with Mr. P. S. Rao as Chairman, has alleged that a great deal of mismanagement in the operations of the Corporation has taken place, leading to a loss of Rs. 1.64 crores in the Konar Project alone.

The Government of India is considering a proposal for the establishment of a State Trading Corporation to undertake exports of handloom cloth and of certain selected products of small-scale and cottage industries, not on a monopolistic basis but side by side with private traders.

The Government of Punjab proposes to take over this year under its nationalisation and road transport plan 44 routes operated at present by private transport undertakings. The profits from these routes are expected to be Rs. 11.02 lakhs, as against a capital investment of Rs. 50 lakhs.

Two more States, namely, Assam and Bihar, have passed the necessary resolutions under Article 25 2(1) of the Constitution authorising the Centre to regulate the levy of estate duty on agricultural lands in those States. The Centre will shortly issue a notification including these States in the list of States in the first schedule to the Act.

Mr. Nehru, Prime Minister, opened the Central Salt Research Institute of the Government of India at Bhavnagar on 10th April. The Institute, which is the twelfth in the chain of national laboratories, will help the salt industry to improve the quality of salt from various sources and will conduct research in the economic recovery of by-products and their utilisation for the manufacture of other materials.

The Union Ministry for Agriculture has appointed a committee of enquiry to examine the working of the existing machinery relating to prices of agricultural commodities. Mr. P. N. Thapar, Adviser to the Planning Commission, has been appointed as Chairman and Mr. J. S. Sarma of the Union Food Ministry as Secretary. Mr. B. Ramamurthi, Joint Director of Central Statistical Organisation, is one of the members.

The Government of Andhra has announced the rates of levy of water cess on crops raised with the aid of water from the Tungabadhra project, under section 1 of the Madras Irrigation Cess Act. The rates are: Duffasal crops Rs. 18 per acre; early long duration paddy Rs. 12; later short duration paddy Rs. 7; dry irrigated food crop Rs. 4 and commercial crops Rs. 6. The following gradation shall be adopted in the levy of water cess: At one-fifth of the rate specified in rule 1 in the first year of irrigation; at two-fifths in the second year; at three-fifths in the third year, four-fifths in the fourth year; and at full rate from the fifth year.

A delegation of the Government of India, headed by Mr. G. L. Nanda, Minister for Planning, Irrigation and Power, will leave for Kathamandu shortly to discuss common problems relating to the execution of the Kosi Project. The members of the delegation include, among others, Mr. T. Sivasankar, Secretary to the Irrigation and Power Ministry, Mr. Kanwar Sain, Chairman of the Central Water and Power Commission, Mr. T. P. Singh, Administrator of the Kosi Project and Mr. C. V. Narasimhan, Joint Secretary to the Finance Ministry. The Kosi Project involves the construction of a barrage at Hanuman Nagar, three miles from the Indian border. The consent of the Government of Nepal is, therefore, a prerequisite for starting the execution of the project.

The Executive Committee of the All-India Handicrafts Board, at its meeting held on 11th April, decided to recommend the setting up of a central handicrafts development centre in Delhi. The main functions of the centre will be to carry out research work for developing better methods of handicrafts manufacturing processes, better and new designs, improved equipment and tools and use of raw materials, for imparting training to craftsmen, who have some experience in handicrafts and possess a creative bent of mind, and for collecting samples of handicrafts from time to time and studying the trend in fashions and tastes of different countries and for evolving new designs to suit buyers' requirements. For the present, the centre will take up the development of wooden, metal and ceramic handicraft products.

• • • •

From Abroad

The consumption of cement in Sweden rose from 249 kg. per head of the population in 1952 to 276 kg. in 1953, a level equal to that in the U.S.

The Government of South Korea has decided to sever its trade connection with Japan, until the latter agreed to resume trade on a genuine reciprocal basis.

Following the conclusion of the Indo-Rumanian trade agreement on 23rd March, 1954, it is learned that the Government of Rumania has decided to open its trade agency at Bombay.

The Government of Japan will carry out a nation-wide search for uranium during the 1954-55 fiscal year. It has earmarked a sum of 15,000,000 yen (£15,000 sterling) for the purpose.

Farmer co-operative organisations of the United States have now a total membership of 7.4 million. This is an increase of four per cent. above the figure at the opening of 1953 and is a record high mark for membership in such organisations.

The Governments of Yugoslavia and Turkey have entered into a trade agreement. Under the agreement, the two countries will exchange goods worth $80 million each way between 1st April, 1954, and 31st March, 1955. When post-war trade was resumed in 1947, the total exchange was worth $2 million only.

As a result of a grant made recently by the Ford Foundation, the U.S. National 4-H Club Foundation proposes to expand its International Farm Youth Exchange (I.F.Y.E.) programme this year. Aid from the grant will allow about 135 two-way exchanges of young people for farm study in the U.S. and 40 other countries. It will include 25 rural youths from India who will go to the U.S., and 10 American farm youths who will visit India.

International Combustion (Holdings) Ltd., London, has announced the formation of new subsidiaries, including International Combustion [Export] Ltd., a company which will devote its entire attention to the export side of the organisation's activities. This is part of a general reorganisation carried out within the group to meet further expansion, following an outstandingly successful year. The export arrangements of Riley Stoker Co., Ltd. will, however, remain unchanged.

A mission of eight major world oil companies has arrived at Teheran from London to negotiate a settlement on the nearly three-year-old Anglo-Iranian oil dispute, on the basis of an agreement reached among the companies recently at London for setting up an international combine to reopen the flow of Iranian oil to world markets. It is stated that, according to the agreement, the Anglo-Iranian Company will have a 40 per cent. holding in the shares of the new company. Five American companies, which are participants in the agreement, will between them hold the same proportion. The balance of 20 per cent. will be held by the Royal Shell (Dutch) and the Companie Francaise Des Petroles.

The Turkish Government has signed an agreement with two British firms for the construction of a dam and a power station at a cost of nearly £12,000,000. While one of the firms will build a 280-feet high dam and a power station about 65 miles south-east of Ankara, the other will supply the generating plant, transformers and switchgear for the station, which will be capable of generating 100,000 kilowatts. About £6 million of the cost of the project will be payable in sterling. Credit has been granted to the Turkish Government for nine years at five per cent., but 40 per cent. of the payments in sterling will be paid within four years. It is pointed out in London that the credit has the backing of the British Treasury.

PERSONAL

SIR Joseph Kay, K.B.E., Managing Director, Messrs. W. H. Brady & Co., Ltd., left Bombay this week for the U.K.

Mr. C. W. Middleton, Secretary and Treasurer, Imperial Bank of India, Bombay, will be retiring from service next week.

Mr. Tsutonu Nishiyama, Japanese Ambassador to India, left for Tokyo last week for consultations with his Government.

Mr. E. L. C. Gwilt, Managing Director, Glaxo Laboratories (India) Ltd., on retirement from service in India, left Bombay this week for the U.K.

Mr. K. Futamata, of the Japanese Foreign Ministry, has taken over charge as Consul for Japan in Bombay from Mr. M. Ito who left for Tokyo to join the External Affairs Ministry.

Mr. M. G. Chaora, Mr. Rasiklal Worah and Mr. Ratilal M. Dave have been elected President, Vice-President and Honorary Secretary, respectively, of the Indian Colliery Owners' Association.

Mr. E. S. Krishnamurty, Member of the Board of Excise, left for London *en route* to New York to attend a meeting of the U.N. Commission on Narcotics which commenced on the 16th inst.

Dr. S. S. Bhatnagar, Secretary to the Central Ministry of Scientific Research and Natural Resources, left for Paris to attend the meeting of the International Advisory Council of Scientific Research and Natural Sciences held under the auspices of the U.N.E.S.C.O.

GOVERNMENT OF INDIA

3½ PER CENT. NATIONAL PLAN LOAN 1964

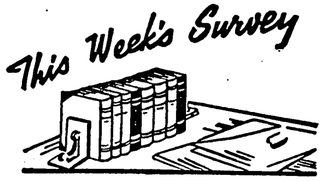
Redeemable at par on 19th April, 1964

Subscriptions in cash/cheque will be received without limit from 19th April, 1954, until further notice.

Issue Price Rs. 98-8 per Rs. 100 (Nominal). As interest accrues from 19th April, 1954, recovery on account of net interest will be made at the rate of 9 pies for every Rs. 100 from 26th April to 1st May, 1954, thereafter increasing by 9 pies per week.

Applications will be received at the offices of the Reserve Bank of India at Bombay, Calcutta, Delhi, Madras and Bangalore, at the branches of the Imperial Bank of India at other places in India except in the States of Hyderabad and Mysore, at the branches of the Hyderabad State Bank in Hyderabad State, at the branches of the Bank of Mysore Limited at Mysore, Shimoga and Mandya in Mysore State and at all Government treasuries and sub-treasuries.

For full particulars apply to any of these offices, branches or treasuries.



INDIA'S GESTURE TO BURMA

THE people and the Government of Burma will no doubt appreciate the Government of India's generous gesture in writing off 50 per cent. of the capital and forgoing the entire interest charges on the debt owed by Burma to India following the separation in 1937. Thus, under the terms of the settlement reached between the Governments of the two countries, revealed by the Union Finance Minister, Mr. C. D. Deshmukh, in Parliament on Thursday last week, the Government of India has agreed to reduce the capital sum of Burma's debt from Rs. 40 crores to Rs. 20 crores, besides agreeing not to claim any interest. The repayment of the debt is linked with India's purchase of 900,000 tons of rice at £48 per ton during the current year. This would amount to Rs. 15.6 crores. The balance of Rs. 4.4 crores would be treated either as financial aid to Burma under the Colombo Plan or as adjustment against the sale price of any rice that may be bought by India from Burma in 1955.

The original separation debt of Burma to India, it will be recalled, was Rs. 50.79 crores. It had then been agreed that this debt would be repaid by an annual instalment of Rs. 1 crore plus interest at 3½ per cent. After two instalments had been paid, war broke out and the Burmese Government suspended payments. The amount outstanding then was Rs. 48 crores and interest. Under the Indo-Pakistan partition agreement, a sum of Rs. 8 crores went to Pakistan, leaving Rs. 40 crores to the credit of India. After protracted negotiations for the repayment of this debt, the aforesaid settlement was arrived at.

As regards the pension charges, the Government of Burma has agreed to resume, with effect from the current financial year, payments of its share of the Central Pensions in issue on 31st March, 1937, in accordance with the arrangements made at the time of separation. It has also agreed to pay to the Indian Government the outstanding sum due to India as at the end of March, 1954, on account of the unpaid sums recoverable from Burma in respect of pensions. The payments will be in equal annual instalments spread over a period of 20 years commencing from 1954-55. The Government will not claim any interest on this outstanding sum also.

The foregoing details of the settlement of the Indo-Burmese pre-separation debt clearly reveal that India has been helpful in its dealings with its neighbour, despite the latter's decision to nationalise lands without granting reasonable compensation to Indian owners of Burmese land. Evidently, the Indian Government's generous attitude has been prompted by the need to maintain close and friendly relations with Burma, on the one hand, and by its anxiety to help Burma rebuild its economy through peaceful and democratic means, on the other. This gesture, it is to be hoped, will be warmly reciprocated by Burma.

EXCISE DUTY ON TOBACCO

The Union Government's decision to reduce the excise duty on certain varieties of tobacco and to extend the time limit for the removal of tobacco from warehouses will be welcomed by the tobacco interests. The duty on all non-flue-cured varieties of tobacco and on flue-cured varieties utilised for purpose other than the manufacture of cigarettes has been reduced, with effect from 9th inst., by 25 per cent. This concession is, however, limited to tobacco of the 1953 and earlier crops, since it is designed solely to stimulate the consumption of old stocks. The Government has also decided to reduce the duty on certain specified low grades ("Agmark" grades L.M.G., B, D8, DG, PL, FS or FS2) of flue-cured tobacco pertaining to pre-1954 harvests from Re. 1 to As. 9, if such grades are utilised in the manufacture of the cheaper varieties of cigarettes. This concession, it is stated, will come into force as soon as the Central Government's Directorate of Marketing and Inspection has completed its arrangements for the grading of the tobacco into "Agmark" grades. A further concession is that the time-limit within which the warehouse licensees are required to remove tobacco from their premises has been extended from four to five years.

That these concessions have come not a day too soon will be clear to those who have watched with dismay the continuing *malaise* that has afflicted the tobacco trade. In Guntur, the chief tobacco centre in India, about 32 million lbs. of stocks of tobacco are reported to be lying unsold, despite the fall in prices of certain grades of tobacco from As. 6 per lb. to as low as As. 1½ per pound. In announcing the concession, as above, the Government itself states that it has been aware, for some time past, of the "depressed conditions, which have, generally speaking, affected the market in unmanufactured tobacco and resulted in the accumulation of large stocks in the hands of producers and dealers."

The output of tobacco last year, at 219,000 tons, was 6.8 per cent. higher than in the previous year. But this was perhaps not the only—at least, not the most important—factor which brought about the collapse in prices. There has been a fall in quality too. Although the concessions now announced might offer some relief to the tobacco interests, the long-term remedy for the situation, as the Government rightly observes, lies in an "adjustment of production and of quality and greater care of crop." Indeed, the Government is "doubtful" whether any fiscal relief, by itself, will "markedly influence the movement of stocks from the producers and dealers in whose hands they lie at present." It is, therefore, to be hoped that the Union and State Agricultural Ministries will follow up these concessions by an energetic drive towards the improvement of quality and of marketing arrangements for tobacco. Perhaps, a relief in export duty on cigars, if granted, would also help the tobacco interests. That the Government has still an open mind on this question is evident from the official Press note. Although the Government has made the reservation that the concessions are purely temporary and are even liable to cancellation, if such cancellation is warranted by a change in market conditions, it has given the promise that the concessions will not "prejudice, in any way, whatever action the Government may decide to take on the recommendation of the Taxation Enquiry Commission." Again, the Government has promised that, despite the concessions given in the past in the time-limit for licensees to remove tobacco stocks from their premises, the Government would still be "prepared to consider the grant of further extensions in deserving cases."

SCIENTIFIC RESEARCH

Dr. S. S. Bhatnagar, Secretary to the Ministry of Natural Resources and Scientific Research, has much reason to feel gratified at the findings of the Egerton Committee report on national laboratories of India. For the Committee, headed by Mr. Alfred Egerton, a well-known British scientist, and consisting of, among others, Prof. Gaston Depody, Director of the Central National Institute of Science, Paris, which enquired into the working of these laboratories during the past five years, has, at the outset, commended the policy of establishing them. Not only has the Committee expressed its appreciation regarding the suitability of the buildings erected to accommodate the institutes and laboratories, which they say "bear the stamp of a master hand and should prove to be a permanent asset to India," but it has also approved the choice of directors, saying that the institutions have been "well served" by them.

The Committee has made 21 general recommendations, apart from specific recommendations for each laboratory. It has indicated the lines on which research can be carried out and made a number of suggestions of a scientific and technical nature. The full text of the report has, however, not yet been made available to the press. But, from news agency reports, the main recommendations would appear to be as follows:

(1) The Directors should be given as much autonomy as is possible in the matter of dispersal of funds. When a director, fulfilling the necessary qualifications, is not easily found in India, it will sometimes be necessary to consider applications from outside India. It is then necessary to adjust the emoluments so as to be in tune with conditions abroad.

(2) It is wise not to tie the research programme of an institute too completely to purely practical problems, but to encourage fundamental research work being done along with the researches of more direct applications. An institute needs to enquire and carry out *ad hoc* experimental work, but this should not be allowed to take up too large a fraction of the institute's efforts. A certain amount of repetition and trial of existing and well-known processes is necessary partly to adapt the processes to conditions as occur in India and partly to train staff to become acquainted with them.

(3) As regards general research, the Council of the Scientific and Industrial Research should be in a position to give some measure of direction to research work done under its ægis, so that it may be related to India's needs and to the general advancement of science through the work of research laboratories. Ideas, however, must mainly come from the centres of research from directors of laboratories and advisory boards, on which there should be some university members.

(4) So far as co-ordination of work is concerned, it should be the duty of the liaison officer at the C.S.I.R. headquarters to further all collaboration between the Council, institutes, laboratories and other organisations in which research is carried out. There should be closer co-operation between the C.S.I.R. and the agricultural and medical research services.

(5) Firms should be encouraged to make use of the national laboratories to get schemes tried out.

The Committee has rightly urged the need for decentralisation of functions and greater autonomy for directors in carrying out their day-to-day work. This is necessary, for it will, by helping to remove red-tapism to a considerable extent, encourage initiative on the part of the directors. As the success of these institutes depend on the quality of the directors, in particular, and the staff, in general, the recommendation that it is wrong to adhere too strictly to the principle that the directors' posts should be manned only by Indians, even when suitable Indians are not available, is of considerable significance. The Committee has rightly stressed the need for greater co-ordination between the activities of the various research institutes and laboratories and closer co-operation between the C.S.I.R. and the agricultural and medical services, as they will help evolve and implement an integrated national research programme. Also welcome is the recommendation that private firms should be encouraged to make use of the technical laboratories. This will usher in healthier relations between industrialists and research institutes which are essential for enhancing the practicability of these laboratories.

MINIMUM WAGES

No full account of what transpired at the second session of the Minimum Wages Central Advisory Board, which concluded its two-day session on 9th April, is available, since the conference was not open to the Press. The brief Press note issued by the Government of India throws only meagre light on the topics which were discussed at this session. Even the official review of the minimum wage legislation and of the measures adopted by different States in pursuance of this legislation which was given to employers' associations and trade unions, in order to facilitate intelligent discussion of the subject, has not been made available to the Press. It is not clear why the Government treats the whole subject as confidential. We have no doubt that Mr. V. V. Giri, as a believer in democratic principles, will be the first to appreciate the rights of the Press to have access to information about governmental measures which are no longer confidential. This is particularly necessary in a matter such as minimum wage legislation which is of vital importance to the nation and about which fullest possible information should be given to the public.

Be that as it may, the most important information revealed by the Press note is that the general opinion of the Board was that, in regard to fixation of minimum wage, a lower limit ranging from Re. 1-2 to Rs. 2 per day could be laid down for different areas and employments, below which there should be no statutory minimum wage. It is not clear on what basis this limit was arrived at. But the whole question, it is stated, will be considered further at the next Labour Ministers' Conference. The Board felt that the phasing of the increase over the present level could be achieved over a period of three years.

The Board recommended that there should be provision for a day of rest per week with wages in the case of employments listed in Part I of the schedule, such as rice mill, oil mill and woollen carpet making. There was, however, some difference of opinion as to whether there should be separate payment for the holidays. The Board urged that State rules should provide for payment for overtime work and where such a provision had not already been made, the State rules should be amended to incorporate this recommendation. In making additions to the schedule of employments covered by the Minimum Wages Act, the Board recommended the adoption of the following principles:

(a) Employments in which the conditions of labour are sweated, with the result that low wages are generally prevalent and in which there is no satisfactory organisation of labour; and

(b) employments in which some categories of labour are covered while others are not, though the place of work, conditions of wages and work, the state of organisation of labour and sometimes even the employing authority are similar if not the same.

In regard to the enforcement of the Act in the case of smaller establishments and, in particular, to the question whether units in the scheduled employments engaging less than ten persons should be exempted from the provisions of the Act, the Board was of the opinion that any exemption allowed in respect of establishments employing less than ten persons would be against the spirit of the Minimum Wages Act and recommended that, generally, no such exemptions should be allowed. In view, however, of the practical difficulties that will be encountered in enforcing it, the Board felt that the State Governments may allow relaxations in special cases upto a period of three years; the position should be reviewed later. Meanwhile, the Board urged that all steps should be taken as early as possible for the effective enforcement of the Minimum Wages Act.

In order to build up a sound system of inspection and enforcement, the Board felt that the State Governments should utilise, in addition to the inspectorate created specifically for enforcing the Act, the services of personnel employed by the labour and other departments for the enforcement of other enactments. The assistance of the local authorities like municipalities, village *panchayats*, etc., and the co-operation of non-official bodies like trade unions should also be enlisted to make the machinery of enforcement adequate to cover the numerous units coming under the purview of the Minimum Wages Act.

These recommendations have been arrived at after mutual consultation among the representatives of employers, workers, Central and State Governments who attended the session. It is, however, not clear whether the practical difficulties in the implementation of the Act were considered by the Council. There are many industrial units which just pay their way and where employer-employee relationship relating to wages and conditions of service are determined on the basis of age-old conventions. To interfere in their affairs may result in their extinction altogether. It is not that we are against fixation of minimum wages. But we feel that it is better to hasten slowly in this sphere and to let wages be determined by the capacity of the enterprise to bear the burden than to fix arbitrary levels which cannot be sustained, especially at a time when the sellers' market has vanished. One must be particularly careful in applying this legislation to marginal firms. Few can deny the truth of that age-old saying that "half a loaf is better than none."

(Concluded from third column)

balance, to evolve an agreed and mutually satisfactory plan of spreading the introduction of automatic machinery in the industry over a reasonably short period of time.

There is no need either for the Prime Minister or for Mr. Vasavada to emphasise that this is a human problem or that the human factor is a vital consideration, which could not be overlooked in a planned economy. Every practical problem between man and man, why, even the problems of nuclear physics or astronomy, in their final analysis, are human problems. Underscoring this aspect does not take us any further than we are. The mill-owners are not monsters and they, no more than labour leaders or politicians, do not want to run industries in a vacuum, irrespective of what effect it might have on human life and welfare. While Mr. Vasavada could not help indulging in these cliches, possibly because of force of habit and the need in politics of impressing the gallery, he was very wise in following this up by stating that what labour wanted to know was the period during which rationalisation was proposed to be completed, the effect it would have on employment, on cloth prices, on the quality of cloth and on export prospects. These are pertinent queries which workers are entitled to ask, and which, by a fortunate coincidence, are the very ones Mr. Wadia has tried to answer convincingly and logically with the help of facts and figures.—*All Rights Reserved.*

OFF THE RECORD

(By "ROVER")

THERE was no valid reason for the controversy about rationalisation in cotton textile mills to work itself into a climax, if not a virtual crisis. Apart from the merits of the question, the irrational and extravagant demands which were made by high ranking and reputedly sober labour leaders, the bitterness of tone which heralded it and the political capital tried to be made out of it by leading an attack on one of the sanest, soberest and most competent Ministers in the Union Government, are, indeed, features of this controversy, which raise some doubts about the political maturity of some groups and parties in our public life. It also revealed the uncompromising and at times even arrogant attitude, which is becoming characteristic of workers and some of their leaders on all issues affecting them. Equally noteworthy is the habit of surrendering to this form of bullying, which our Governments as a whole, and some chicken-hearted Ministers individually, are displaying of late with regard to most of the demands of workers. A Government which fails to maintain a fair balance between conflicting interests and allows itself to be stampeded into hasty and unconsidered action, as the Government of India and many of the State Governments have, on several occasions in the past, is only building up trouble both for itself and for the country.

I had hopes that the Prime Minister, with his known partiality for scientific and technological research, would say something helpful at Ahmedabad, to lay the dust of controversy and to give a new direction to the thoughts of workers, which at present are obsessed with the fear of large-scale unemployment. But the international developments in connection with the hydrogen bomb and the grim possibilities of the cobalt bomb had temporarily clouded his otherwise very clear vision on such questions as rationalisation and use of the latest machinery in industry to such an extent that he gave a new twist to the accepted meaning of the word 'rationalisation' and talked vaguely and unconvincingly about the questionable achievements of modern technology and the care with which technological advance should be availed of in any given industry at a given time. I grant that there is enough and more in the menace of these destructive weapons, placed in the hands of morally immature humanity, to upset sensitive minds like those of Mr. Nehru. It has brought a sense of despair, desperation and unreality into play in the sphere of constructive economic effort, on which people in Asia desire to concentrate for years to come. I am certain that but for these disturbing trends in international relations at this time, Mr. Nehru would have applied his mind to this important question of rationalisation in the textile industry differently and more constructively and his speech on the occasion of inaugurating the laboratories of the Ahmedabad Textile Industry Research Association would, perhaps, have been markedly different. Unfortunately, this fine opportunity for giving a new lead to the textile workers and millowners was lost by Pandit Nehru, because the necessities of world politics had thrown him into a mood which sent him running at a tangent.

Be that as it may, I have derived new hope for a peaceful solution of this problem. While I am writing this, representatives of the industry and the workers must be engaged in an earnest endeavour to seek this solution, with the help of the Planning Commission at New Delhi. The only unfortunate part of it is that the industry, as such, is not properly and adequately represented in these discussions. It appears that Mr. Ambalal Sarabhai from Ahmedabad is the only man to speak for the industry. He is an astute man, but his position is anomalous, inasmuch as he does not represent either the textile industry in the country or even the section of it located in Ahmedabad. In fact, he is there, because he is not a member of the Ahmedabad Millowners' Association. The conference has been occasioned by his applying to the Government for permission to import and install automatic looms in his mills at Ahmedabad, because this unit is not covered by the machinery for voluntary arbitration of employer-employee disputes in the textile industry at Ahmedabad, devised by the Mill-owners' Association and the textile workers' union.

Mr. Ambalal Sarabhai can, therefore, speak only about the conditions obtaining in the Calico Mills and argue out the case for automatic looms as based on these conditions. I do not know if the reference to the Planning Commission was only of a limited nature, which would naturally prevent it from enlarging the scope of its enquiry and inviting the help of leaders from other textile centres. But looking to the importance this question in general has assumed, it would have been better, if men like Messrs. Neville N. Wadia and Vithal N. Chandavarkar from Bombay and Messrs. Hatheesing and Sodhan from Ahmedabad, who have given a good deal of thought to this question and who are equipped and able to speak for the whole industry, had been associated in this search for a solution.

The very able and penetrating manner in which this question of automatic looms has been analysed in all its implications and likely results, with the help of facts and figures by Mr. Wadia, makes me regret it all the more that this enquiry, which might prove very fruitful, has been so narrowly circumscribed. In his address to the Bombay Millowners' Association this week, Mr. Wadia has shown, in a manner which would go to convince any impartial observer, that the introduction of automatic machinery is not only necessary for the survival of the industry in its present magnitude, but for enlarging the scope of employment in the long run. On the other hand, he has succeeded in making it equally clear that preventing textile mills from availing themselves of the latest technique would harm the cause of present and potential workers even more than that of the investors in this industry. Let us hope that those who have gathered together at New Delhi, especially the members of the Planning Commission, will give full consideration to Mr. Wadia's line of reasoning, before making up their minds on the momentous issues raised by this unfortunate controversy.

I am optimistic about the outcome of this conference at New Delhi, because of the welcome change in the attitude of Mr. S. R. Vasavada, President of the Indian National Trade Union Congress and a very influential leader of the textile workers at Ahmedabad, on the eve of the discussions. To begin with, both the tone and the temper in which he dealt with this problem in the course of a Press interview at New Delhi were different from his earlier statements. He was neither forthright nor arbitrary in the statements he made on this occasion, unlike his earlier pronouncements. It is also reported that Mr. Vasavada is likely to seek a discussion of this problem as a national issue affecting the textile industry as a whole, instead of confining it to the case of the Calico Mills. And, finally, instead of summarily and categorically dismissing the proposal as highly detrimental to workers, on the doubtful ground that it was bound to lead to large-scale and immediate unemployment, he has stated that labour was not opposed to rationalisation, but only desired a critical examination of its implications. In fact, he has suggested that a national plan be evolved for introducing rationalisation over an agreed period of time.

Now this is a great advance and improvement on the impossible position taken up earlier, both by him and Mr. Khandubhai Desai on this proposal. It would certainly help in creating the right atmosphere and conditions for a cool, impartial and dispassionate examination of the fears entertained by workers. What is still more important is that Mr. Vasavada has listed these fears and doubts and by implication declared himself to be open to conviction on this score. From the airy heights of declamation and denunciation, Mr. Vasavada has descended to brass tacks. Industrialists are peculiarly unprepared, by training, outlook and temperament, to participate in vague discussions of idealistic principles. If and when they do get involved in such empty exchange of words, they come out only second best against opponents well versed in the art of carrying on public controversies on hypothetical issues. Now that the issues have been narrowed down and defined, more or less clearly, by Mr. Vasavada, it should not be difficult for the millowners to satisfy both the workers and the authorities about most of these. And, if there is a little spirit of give and take on both the sides, it should not be difficult, with the good offices of the Planning Commission thrown into the

(Continued in first column)

(THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS)

A Licence has been obtained from the Central Government for the establishment of this new industrial undertaking of which a copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this Licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

Consent of the Central Government has been obtained to this Issue by an Order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

A COPY OF THIS PROSPECTUS HAS BEEN FILED FOR REGISTRATION WITH THE REGISTRAR OF COMPANIES, BOMBAY.

The Subscription List will open on the 15th day of April, 1954, and will close on or before the 30th day of April, 1954.

PROSPECTUS OF

INDIAN DYESTUFF INDUSTRIES LIMITED

BOMBAY

(INCORPORATED UNDER THE INDIAN COMPANIES' ACT VII OF 1913)

AUTHORISED & ISSUED CAPITAL - - - - - Rs. 30,00,000

DIVIDED INTO :

15,000 Six per cent. Cumulative Redeemable Preference Shares of Rs. 100 each	Rs. 15,00,000
15,000 Ordinary Shares of Rs. 100 each	Rs. 15,00,000
	Rs. 30,00,000

The Preference Shares carry a fixed cumulative preferential dividend at the rate of six per cent. per annum (free of income-tax) on the capital for the time being paid-up thereon, and the right in the winding-up to payment of capital and arrears of dividend whether earned, declared or not upto the commencement of the winding-up in priority to the Ordinary Shares, but shall not confer any further right to participate in the profits or assets of the Company.

The Share Capital is payable as follows:

	Preference Shares	Ordinary Shares		Preference Shares	Ordinary Shares
On application ..	Rs. 25 per share	Rs. 25 per share	On allotment ..	Rs. 25 per share	Rs. 25 per share

The balance of Rs. 50 per share on each of the Preference and Ordinary Shares shall be payable as and when required on Calls at intervals of not less than two months.

The Preference Shares comprised in the present issue are redeemable at the option of the Company at any time after the expiration of ten years by six months previous notice.

The method proposed for redemption of the said Preference Shares is by casting lots.

Out of the present Issue, the Directors and their friends and relations have agreed to take up and will be allotted the following shares :

7,500 Cumulative Redeemable Preference Shares of Rs. 100 each and 7,500 Ordinary Shares of Rs. 100 each

and the remaining:

7,500 Cumulative Redeemable Preference Shares of Rs. 100 each and 7,500 Ordinary Shares of Rs. 100 each are now offered for public subscription.

REGISTERED OFFICE

28, APOLLO STREET, BOMBAY 1.

OBJECTS OF THE COMPANY

The Company has been formed for the purposes mentioned in its Memorandum of Association, a copy of which is annexed to and forms part of this Prospectus, and particularly to undertake the manufacture of VAT DYESTUFFS like Vat Jade Green FFB, Vat Dark Blue BO, Vat Black BB, Vat Blue BC.

FACTORY

It is proposed to locate the Factory near Bombay.

SCOPE FOR THE COMPANY'S PRODUCTS

It is proposed to undertake the manufacture of VAT DYESTUFFS, such as Vat Jade Green FFB, Vat Dark Blue BO, Vat Black BB, Vat Blue BC. It may be necessary to import in the beginning a few organic chemicals, but the entire manufacture will be based on Indian raw materials as soon as possible. Most of the machinery required will be fabricated in this country.

The programme of manufacture resulted from extensive laboratory and pilot plant work carried out by leading experts in the field. Our research team is familiar with the methods of manufacture used abroad, particularly those described in the reports on the German dyestuff industry issued by the British and American Investigation Commissions. The processes evolved, however, will be suitable to local conditions and will incorporate improvements of known methods wherever possible. The Company hopes to reach its full capacity, so far as the four important vat dyes are concerned, within three years, and to produce them on a scale which will meet the total demand in the country at the present time. The Company will also proceed to undertake the manufacture of other vat dyes, technical investigations for which have already been undertaken.

India at present imports all the vat dyestuffs required by its textile industry. Approximately these imports annually are :

Vat Jade Green FFB	...	60,000 lbs.
Vat Dark Blue BO	...	30,000 lbs.
Vat Blue BC	...	50,000 lbs.

Looking to the present trend of consumption it is believed that the demand for the fast vat dyestuffs will be steadily on the increase. The same trend has been noticed in all countries including the U.S.A. The textile industry in India is the second largest in the world, and the annual production of cotton textiles in India is of the value of about Rs. 350 crores. With the rise in the standard of living which is anticipated, the production of textiles will undoubtedly increase with a consequent increase in the consumption of fast dyes. With the development of India's export trade to the Near and Far Eastern countries on a more permanent basis, the demand for coloured goods for export will also be on the increase. All these factors favour the development of the dyestuffs industry in India.

The declared policy of Government is to assist the development of important industries in India, such as the manufacture of dyes. It is hoped, therefore, that Government support will be forthcoming for the progress and stabilisation of the Indian dyestuff industry, of which the programme of the present Company, for the manufacture of fast anthraquinonoid vat dyes, will naturally form a very important part.

DIRECTOR'S QUALIFICATION

The qualification of a Director other than the Ex-officio Director, Special Director, or the Debenture-holders' Director is the holding of shares in the capital of the Company of the aggregate nominal value of Rs. 25,000.

DIRECTOR'S REMUNERATION

A Director's remuneration for each meeting of the Board attended by him shall be such sum not exceeding Rs. 100 as may be fixed by the Directors. The Directors are also entitled to additional remuneration for services rendered by them or any of them in signing Share Certificates or any Debentures issued by the Company. Provision is also made for payment to Directors for travelling expenses as also for remuneration to Directors who are members of a Committee appointed by the Board.

A Director may also be paid further remuneration by a fixed sum as may be determined by the Directors for extra services rendered or any special exertions made in going or residing out of Bombay or otherwise for the purpose of the Company and such remuneration may be in addition to or in substitution for his share in the remuneration aforesaid.

MINIMUM SUBSCRIPTION

The minimum subscription on which the Directors may proceed to allot shares is subscription of shares of the nominal value of Rs. 7,00,000.

PRELIMINARY EXPENSES

Mr. Anandlal Hiralal Sheth is the promoter of the Company and all preliminary expenses of all negotiations and other work in connection with the incorporation and registration of the Company or of and incidental thereto are paid and are being paid by him. He will be reimbursed by the Company for all such expenditure. The preliminary expenses have been estimated at not more than Rs. 25,000, exclusive of Rs. 15,000 payable to Messrs. Mahadevia Bros., Bombay.

PROMOTION MONEY

Nothing has been paid or is intended to be paid to any promoter as promotion money, except Rs. 15,000 which are to be paid to Messrs. Mahadevia Bros., Bombay, for advice and diverse services rendered in promoting this Company.

CONTRACT WITH MANAGING AGENTS

The Articles of Association and the proposed Agreement referred to in Article No. 4 of the Company's Articles of Association provide that the first Managing Agents of the Company shall be Messrs. Anandlal Sheth and Company, Limited. The first appointment will be for a period of ten years from the date of incorporation of the Company.

The Managing Agency agreement provides for remuneration to the Managing Agents by way of commission at the rate of 10 per cent. of the net profits made by the Company in any year or any shorter period for which the accounts are made up and placed before the General Meeting subject to a minimum of Rs. 12,000 per annum in the absence or owing to the inadequacy of profits. Liberty is reserved to the Managing Agents to draw a monthly sum of Rs. 1,000 towards and on account of the said minimum sum of Rs. 12,000.

The said remuneration is to be exclusive of and shall not include any remuneration, salaries or wages payable to bankers, solicitors, engineers, chemists, commission agents, dealers, brokers, officers, experts, clerks, mechanics, servants, workers and other employees or any expenses incurred on account of rent, post and telegram charges, printing and stationery and other office expenses or any travelling charges and expenses incurred by the Managing Agents in connection with the business of the Company, all which rent, remuneration, salaries, wages, costs, charges and expenses shall be borne and paid by the Company alone.

The Managing Agents are entitled to be paid reasonable and proper remuneration for any extra duties or work done by the Managing Agents for the Company, but such remuneration is not to be treated as Managing Agents' remuneration.

The Managing Agents have the right to appoint two Directors who are not liable to retirement or removal and are not required to hold any qualification shares. One of such Directors is styled the Ex-officio Director and the other Special Director.

CONTRACTS

Article No. 4 of the Company's Articles of Association provide for the execution of an Agreement between the Company and Messrs. Anandlal Sheth and Company, Limited, appointing them as the Managing Agents of the Company for a period of 10 years at the remuneration hereinbefore mentioned. A copy of the said contract is open to inspection at the registered office of the Company at 28, Apollo Street, Fort, Bombay 1, between the hours 2 p.m. and 5 p.m. on any working day except on Saturday.

There are no contracts relating to the acquisition of property.

INTEREST OF DIRECTORS

The following Directors are interested in the Company:—

Shri Navinchandra Mafatlal, Shri Arvind N. Mafatlal, Shri Anandlal Hiralal and Shri Sumatichandra Hiralal four of the Directors of the Company are shareholders of Messrs. Anandlal Sheth and Company, Limited, the Company's Managing Agents and except the first named one the other three above Directors are also Directors of the above Managing Agency Company and are accordingly interested in the remuneration payable by the Company to the Managing Agents under the said Managing Agency Agreement.

Shri Anandlal Hiralal, who is the promoter of the Company, is also interested in the payment of preliminary expenses to be paid by the Company to him.

All the Directors of the Company are interested in the payment of the fees payable to them for each meeting of the Board attended by them, for the travelling expenses and the extra remuneration payable for additional or extra services rendered or special exertions undertaken or otherwise in connection with the Company's business.

VOTING AND RESTRICTIONS

Ordinary Shareholders: Upon a show of hands every ordinary shareholder entitled to vote and present in person or by an agent duly authorised under the Power-of-Attorney shall have one vote and upon a poll every such Ordinary Shareholder entitled to vote and present in person or by an agent duly authorised under the Power-of-Attorney or by a proxy shall have one vote for every share held by him.

Preference Shareholders: The holders of Preference Shares shall have no right to vote either in person or by proxy at any General Meeting by virtue or in respect of their holdings of Preference Shares unless the preferential dividend is passed over in any year and is in arrears for a period of six months after the same has become due, or unless any alteration in the Memorandum and Articles of Association affecting the rights, privileges and interests of the Preference Shareholders is proposed or any resolution for the winding-up of the Company is proposed, in which later cases the holders of Preference Shares shall on a show of hands confer the same voting rights as Ordinary Shareholders and on a poll shall confer one vote for every Preference share held by such member.

Under Article 108 no member shall be entitled to be present or to vote at any General Meeting either personally or by proxy or attorney or as a proxy or attorney for any other member or be reckoned in a quorum whilst any call or other sum shall be due and payable to the Company in respect of any of the shares of such member.

CAPITAL AND DIVIDENDS

The Redeemable Preference Shares confer the right to a fixed cumulative preferential dividend at the rate of 6 per cent. per annum (free of income-tax) on the capital for the time being paid-up thereon and the right in a winding-up to payment of capital and arrears of dividend, whether earned, declared or not upto the commencement of the winding-up in priority to the Ordinary Shareholders, but do not confer any further right to participate in the profits or assets of the Company.

RESTRICTIONS UPON THE TRANSFER OF SHARES

The Articles provide that the Directors may at their own absolute and uncontrolled discretion and without assigning any reason decline to register or acknowledge any transfer of shares and in particular may so decline in any case in which the Company has a lien upon the shares or any of them or whilst any money in respect of the shares desired to be transferred or any of them remain unpaid or unless the Transferee is approved by the Directors.

It shall not be lawful for the Company to register a transfer of shares unless the proper instrument of transfer duly stamped and executed by the transferor and transferee has been delivered to the Company along with the scrip.

UNDERWRITING COMMISSION AND BROKERAGE

The present issue is not underwritten. Brokerage at the rate of 1 per cent. shall be paid by the Company to recognised brokers on allotments made in respect of applications bearing the stamp of such brokers.

Further, when the Company so decides it shall be entitled to pay a commission of 4 per cent. to a person or a company with whom the Company enters into an agreement or contract to underwrite the present or subsequent issues.

RESTRICTIONS ON DIRECTORS

Article 163 provides for the management of business by the Directors who may exercise all powers and do all acts and things as the Company is by its Memorandum of Association or otherwise authorised to exercise and do and are not by the Articles or by statute directed or required to be exercised or done by the Company in General Meeting subject nevertheless to the provisions of the Act and of the Memorandum of Association and to any regulation not being inconsistent with the Memorandum and Articles of Association from time to time made by the Company in General Meeting provided that no such regulation shall invalidate any prior act of the Directors which would have been valid if such regulation had not been made.

APPLICATION FOR SHARES

Application for shares should be made on the form accompanying this Prospectus and sent to the registered office of the Company at 28, Apollo Street, Bombay 1, together with the remittance of the amount payable on application. Where no allotment is made the deposit will be returned in full less Money Order commission and where the number of shares allotted is less than that for which the application has been made the balance will be applied towards the further amount due. Failure to pay any future instalments due on shares allotted will render previous payments liable to forfeiture.

INSPECTION OF DOCUMENTS

Copies of the Indian Companies' Act, Memorandum of Association of the Company and the Agreement or draft agreement entered into or proposed to be entered into can be inspected at any time at the registered office of the Company at 28, Apollo Street, Bombay 1, between the hours 2 p.m. and 5 p.m. on all working days except Saturdays.

Copies of the Prospectus and forms of applications for shares may be obtained from the registered office of the Company at 28, Apollo Street, Bombay 1. The Company was registered on the 18th day of February 1954.

Dated this 12th day of April, 1954.

INSURANCE OF BANK DEPOSITS—I

ITS IMPORTANCE AS A MEANS FOR INFUSING CONFIDENCE

FEW features of the Indian banking system have attracted the anxious attention of those who are interested in its future than the tardy growth of deposits with banks. The magnitude of those deposits, when it is set against the background of the total currency in circulation, is not large enough to inspire confidence in the role which the banks are expected to play in the national economic development. Indeed, it is this basic defect in the country's economy which expresses itself in the shape of a demand for control on interest rates on deposits, frequently put forward by bankers. In recent weeks, this demand has gathered considerable force, as witness the reference to it in the speeches of bank chairmen. In all this frantic canvassing for control on interest rates, what is conveniently forgotten is that, so long as the total volume of funds seeking refuge in the safe vaults of the banks remains practically unaltered, or grows only at a slow rate, any attempt at controlling interest rates, even if successful, will not prove a lasting remedy.

Indeed, bankers' thoughts should now be turned towards the question of drawing off, as deposits, a more significant portion of the money in circulation than what is available for the banks today. That this is a question of fundamental importance to the banking system will be evident even from a glance at the trend of bank deposits in India. The following table brings out this trend in India, as compared with that in the U.S.

Deposits and Notes in Circulation

	U.S. (In million dollars)			India (Rs. in crores)		
	Currency in circulation	Deposits of commercial banks	Postal deposits	Notes in circulation	Total deposits of scheduled banks	Postal deposits
1947 ..	28,868	137,538	3,417	1,265.81	1,079.99	142.35
1948 ..	28,224	139,517	3,330	1,351.09	1,042.16	128.11
1949 ..	27,741	120,764	3,198	1,195.44	925.69	148.49
1950 ..	27,206	140,259	2,924	1,205.32	928.23	167.19
1951 ..	29,206	155,480	2,705	1,202.32	918.13	185.06
1952 ..	30,438	165,181	2,547	1,103.88	891.97	199.81

It will be seen from the table above that while in the U.S. deposits form over five times the currency in circulation, such form only about 50-60 per cent. of the total notes in circulation in India. This means that, in the U.S., the major proportion of the total money supply is available for use by the banks. In India, the reverse is the case. It is the public that has command over the larger proportion of the total money supply. Even if allowance is made for the difference in the national incomes of the two countries—the high level of national income in the U.S. permits the people to leave their surplus cash with banks—there is no doubt that there is considerable room for augmenting the money that is deposited with the Indian banks.

Low Level of Bank Deposits

All this raises the old question as to how best the banks could be enabled to attract money as deposits. In other words, what are the main reasons for the low level of bank deposits in India? Apart from the low level of income, and the consequent necessity for retaining resources for bare consumption needs, there are other factors which impede the development of bank deposits in this country. In the first place, there has been a shift of income from the banking-minded sections to other sections of the population. Secondly, the Government competes with the banks for the available savings by directly encouraging the people to deposit with Postal Savings Banks or to invest in National Savings Certificates and other papers. Thirdly, the banks are unable to render as efficient a service as might be expected from them, thanks to the high costs of operation, and unsatisfactory conditions and discipline amongst the bank staff. Fourthly, there is a lack of confidence in cheques as instruments for settlement of debts. The Government is the worst offender in this respect, for it generally mistrusts the use of cheques. The railways, for instance, will not accept payment, in cheques, for big amounts, even from reputable business concerns. Recently, we came across an instance where one of the big firms in Bombay wanted to arrange for a first class special train involving a cost of over Rs. 10,000. The railway official concerned insisted on payment of this amount in cash. Fifthly, the rigidity in the system of advances has caused many people to wonder whether the banks are performing a national service at all. If a borrower finds that a bank will lend only against the highest form of security he is, perhaps, less inclined to treat the bank as a friend in need. This affects the loyalty of the public towards the banks, and has an adverse effect on deposits.

Finally, there is the problem posed by the frequent failure of banks. A bank failure, it cannot be too strongly emphasised, is more than a mere business failure; it shakes public confidence in credit institutions to a very much greater extent than the failure of an ordinary business firm. Every such failure puts the clock of banking progress backwards. And for the people directly concerned in the failure, it will almost always mean a permanent distrust for banks in general. There is a no greater enemy of banks than the man whose fortunes have been affected by the failure of a bank. The fact that he does very often recover subsequently a major portion of his wealth, which he entrusted to the bank, does not, in any way, help restore the confidence which he loses by the failure of his bank. Once bitten by a bank failure, he is a hundred times shy in enstrusting his deposits with a bank; no bank is good enough to be worthy of his confidence. He becomes a walking advertisement of the instability of the banking system. His lack of confidence is also infectious to a degree. One can never statistically estimate the amounts which have been lost to banks through the failure of the 187 banks over the 1947-52 period, involving a liability of Rs. 92 crores.

Public Confidence

Thus, any study of the dismal failure of bank deposits to forge ahead with the passage of time forces one back to the consideration of the fundamental principle, which is as old as banking itself, namely, that the banking structure of a country rests ultimately on the confidence of the public. No law can create that confidence, once it is lost. And most laws become superfluous if that confidence has been created and is sustained by a nation's banks. The world's great banks, such as are to be found in the U.S. and in the U.K., have endured, because they have created that confidence. Standing on the bedrock of public faith in their security, they are certain that no buffet of misfortune will shake them. Men may come and men may go, but they go on for ever.

How to create that confidence in this country, where bank failures are both many and grievous, is a problem which must engage the attention of all bankers. To say that the problem concerns only the less well established banking institutions is to develop a blind spot to the ravages of bank failures. It concerns all banks, no matter whether they are big or small. And the creation of confidence in banks amongst the public will bring rich rewards to all banks, big as well as small, for that will enable the public to entrust their wealth to the banks, without any anxiety about the future of that wealth. Secure in the thought that banks will take better care of their money than they themselves can, the public will not, as it is now, be chary of depositing it with banks; nor will the Indian public believe, as it does now, that precious metals are the commodities which possess the highest form of security.

Deposit Insurance in U.S.

In order to create this confidence, a suggestion which has, in fact, been mooted in the past, is to institute a system of insurance of bank deposits. The fact that it has been made before does not in any way detract from its value as a device for creating confidence amongst the depositing public. Its value rests on the idea that just as a person, who has insured his life, will seldom develop a pathological anxiety about the welfare of his family, so will a person have no fears about entrusting his money to a bank so long as he knows that the bank's deposits are covered by insurance. Insurance of bank deposits is, of course, not a new-fangled idea, too idealistic to be translated to reality. It has been tried in the U.S., where it has vindicated the faith of its sponsors in its efficiency. An eloquent but well-deserved tribute to the U.S. Federal Deposit Insurance Corporation (F.D.I.C.) was paid, some four years ago, in the House of Representatives, by Mr. Paul Brown, who has had considerable experience in the working of credit institutions. He said:

"In my long experience with the many different aspects of business and Government as well as my studies of the history of governmental activities, I have never encountered an organisation, either in or out of Government, whose record excels that of the Federal Deposit Insurance Corporation. None has done a better job. . . .

"When you call the roll of those who have confidence in the F.D.I.C., not one discordant voice is heard. Foremost among the staunch supporters of the Corporation are the depositors with over 104,000,000 accounts, of which nearly one hundred and three million or 99 per cent. are fully protected. Almost three-fifths of the $156,000,000,000 in deposits is fully insured under the limitation of $10,000 maximum insurance for each account.

"The bankers who operate the 13,600 insured banks in the United States are keenly aware of the stability that the Federal Deposit Insurance Corporation has created for the entire banking system. No insured bank has failed since 1934. It is a fact of great historical significance that the present President of the United States is the only man who has occupied the White House without an insured bank failure.

"For the first time in the history of this great nation, a whole generation of youth has grown to adulthood without experiencing at first hand the personal misfortunes of serious banking troubles. Their knowledge is limited to the history of these panic episodes in the cold types of the printed page. They take for granted the safe and sound institutions and practices which have relegated bank failures to the past.

"Every man, woman, and child in the United States—every farmer, and every working man—every one who does business in this great nation is benefited by the Federal Deposit Insurance Corporation. Now, at last, people can rest assured that their deposits are safe. Business men may conduct their affairs without uncertainties and fears of losses resulting from banking troubles. So it is not surprising that confidence in the Federal Deposit Insurance Corporation and the officials who manage it is universal. . . .

"The Corporation has engendered among depositors a feeling of confidence in the banking system. For the American system of free-enterprise banking, depositor confidence is of fundamental importance. The Corporation's record of success in protecting depositors fully warrants this confidence. Our financial system can be maintained only so long as the Corporation is successful in inspiring and perpetuating confidence among bank depositors. In my opinion, it is impossible to overemphasise the fact that the Corporation is the principal safeguard for the dual system of banking and free enterprise in this country. . . .

"The Federal Deposit Insurance Corporation has succeeded beyond the fondest hopes and expectations of those who conceived it. Testifying to this is the fact that no insured bank has been placed in receivership since May, 1944. Nor has a depositor lost money resulting from the failure of an insured bank. Furthermore, the F.D.I.C. has restored the public's confidence in our banking system which was undermined during the protracted agricultural depression of the 1920's and evaporated completely after the total collapse of our economy in the tragic depression of the early 1930's.

"The F.D.I.C. has eliminated the disastrous effect of banking failures on our economy. It has created an atmosphere in which the nation's business can be transacted freely and without threat of financial paralysis which heretofore occurred periodically. Now the Corporation has dedicated its efforts to the task of preserving the financial stability which it has achieved for our economy. Over the years to come, the preservation of this stability in banking will be its greatest achievement, and a major contribution to the welfare of America."

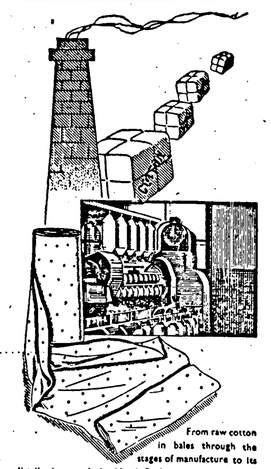
A Well-deserved Tribute

This is high, but, as we stated earlier, a well-deserved tribute to this great institution, the F.D.I.C. If this institution has done so much to inspire confidence amongst the American citizens in their banking system, is it too much to hope that a similar institution in this country can do at least a fraction of what its counterpart has done in the U.S.? Those who decry insurance of bank deposits as a new-fangled idea that will never take root in this country seldom realise that banking itself was, till recently, a new idea. There is no reason to think that insurance of bank deposits is likely to present insurmountable obstacles in the way of those who wish to give a concrete shape to this idea. Even the Rural Banking Enquiry Committee, which felt constrained to reject it, recognised the importance of providing insurance for deposits. The Committee said:

"The proposal that a system of 'deposit insurance' should be developed for all banks in India has been made by several people. Although the proposal may be commendable in principle, we feel it is not opportune or practicable at the present stage. The risks and uncertainties to which banking in this country is subject at present are far too many and their nature is not yet fully understood. We are in the stage of transition from exceptional war-time conditions, during which the banking system expanded considerably, to a more normal state of affairs and the changes which such a transition is likely to bring about are far from clear . . . . Moreover, a fairly well established and sound system of banking is essential before a scheme of insurance against what may be described as calculable risks can be put forward. As suggested in paragraph 45, the question of introducing deposit insurance in this country should be deferred until the process of consolidation of the banking system, as envisaged by the Banking Companies Act, has taken place when conditions will be more propitious for the setting up of a practicable and satisfactory scheme of deposit insurance."

Although the Committee thus conceded that deposit insurance was "commendable" in principle, it based its rejection of this device on the ground that the country was passing through a transitional period in its banking history and that it was "not opportune" to introduce this innovation. But this argument has lost some of its validity, for the banking system has passed the transitional stage, and is now entering upon what many bankers recognise as a normal period. It will, therefore, be useful to consider the scheme, as it operates in the U.S., and the possible form it may take in the context of Indian conditions. There is no doubt that bankers will, on reflection, consider any institution, similar to the F.D.I.C. in the U.S., as a reliable safeguard against that panic, to which the Indian public is so notoriously susceptible and which is so fatal to the progress of banking.

(To be concluded)



From raw cotton in bales through the stages of manufacture to its distribution as cloth, Lloyds Bank assists in the finance of this vital industry and provides a banking service which has world wide connections through its Agents and Correspondents.

Let LLOYDS BANK look after *your* interests

Lloyds Bank Limited — Incorporated in England.

TRAVANCORE FORWARD BANK LTD.

The Travancore Forward Bank Ltd. (Managing Director: Mr. M. C. Mathew, Kottayam) has done well during the year ended 31st December, 1953. The profit for the year has gone up from Rs. 2.21 lakhs to Rs. 2.47 lakhs, which is a fresh record in the history of the Bank and is a shade better than the previous record profit earned in 1946. The year under review is the twenty-fifth year of the Bank's working and it is a happy augury that the Bank has earned a record profit for the year.

Interest and discount earned show a rise from Rs. 12.45 lakhs to Rs. 13.40 lakhs and commission and exchange from Rs. 3.13 lakhs to Rs. 3.99 lakhs. There has been an increase in interest paid from Rs. 7.27 lakhs to Rs. 8.30 lakhs, accompanied by a rise in expenses from Rs. 5.92 lakhs to Rs. 6.43 lakhs. After providing for depreciation on and repairs to the Bank's property, the profit amounts to Rs. 2.47 lakhs, as against Rs. 2.21 lakhs. Following the improvement in earnings, the Directors have raised the provision for taxation from Rs. 1 lakh to Rs. 1.10 lakhs, and the allocation to the general reserve from Rs. 45,000 to Rs. 50,000 and to the contingency fund from Rs. 30,000 to Rs. 40,000. The dividend is maintained at 3 per cent. which absorbs Rs. 45,000 leaving to be carried forward Rs. 4,206, as against Rs. 2,152 brought in.

The balance-sheet as on 31st December, 1953, shows that the Bank's reserves stand at Rs. 9.01 lakhs, as against a paid-up capital of Rs. 15 lakhs. Deposits amount to Rs. 2.57 crores, an increase of Rs. 32 lakhs over the year. Advances, too, have risen by Rs. 11 lakhs to Rs. 1.33 crores, at which level they are equal to 51.7 per cent. of the deposits. Investments (at cost) are higher at Rs. 55.42 lakhs, as against Rs. 46.56 lakhs. Cash balances also show an expansion of Rs. 12.09 lakhs to Rs. 85.99 lakhs. The combined total of investments and cash balances provide a coverage of 55 per cent. to deposits.

The Bank completes 25 years of its service next month and the Directors propose to celebrate the Silver Jubilee in a fitting manner.

ANDHRA BANK'S RESULTS ENCOURAGING

An all-round improvement in the business of the Andhra Bank Ltd. (General Manager: Mr. E. Ramachendramurti, Masulipatam), during the year ended 31st December, 1953, is indicated by the audited accounts of the Bank for that year. Thus, the Bank's deposits, as at the end of the year under review, show an expansion of over Rs. 72 lakhs to Rs. 5.40 crores (which is a record so far as the year-end figures are concerned), advances have gone up by over Rs. 61 lakhs and the profit, which had dropped in the previous year, has recorded a welcome improvement from Rs. 3.68 lakhs to Rs. 4.12 lakhs. The increase in profit is not marked, but it is in refreshing contrast to the experience of most of the other Scheduled banks in India. The higher profit has enabled the Directors to raise the allocation to the reserves and to increase the distribution to the shareholders from a rate of 6 per cent. which had been paid for the previous three years to 6½ per cent.

The following comparative table giving the salient features of the Bank's accounts for the last four years provides an idea of its progress in recent years:

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950
Interestand discount earned ..	25.45	23.61	23.40	20.54
Commission and exchange ..	5.70	5.02	5.51	5.02
Interest paid	12.41	11.11	11.21	10.03
Administrative and other expenses	15.00	14.01	12.67	10.68
Depreciation and repairs ..	0.25	0.20	0.16	0.15
Loss on Sale of and provision for depreciation on investments	..	0.13	0.88	0.01
Profit	4.12	3.68	4.40	5.09
Provision for taxation ..	1.65	1.40	1.90	2.25
To reserves	0.85	0.75	0.86	1.10
Dividend..	1.62 (6½%)	1.50 (6%)	1.50 (6%)	1.50 (6%)
Carry forward	0.07	0.07	0.04	0.26

	As at 31st December			
	1953	1952	1951	1950
Capital	25.00	25.00	25.00	25.00
Reserves	12.41	11.28	11.92	11.35
Deposits	5,39.86	4,67.45	4,45.04	4,42.37
Borrowings from other Banks ..	..	..	68.00	59.00
Advances	3,01.97	2,40.69	3,21.32	2,06.15
Investments	1,00.79	1,04.93	1,54.65	1,60.98
Cash	97.84	1,20.89	91.70	97.20
Balance-sheet total ..	6,82.73	6,03.12	6,60.62	6,12.54
Ratio to deposits of— ..	%	%	%	%
Advances	55.9	51.5	72.1	66.9
Investments	35.3	33.1	19.3*	16.8*
Cash	17.6	25.8	20.7	21.9

* Ratio arrived at after taking into account only the unencumbered portion of the investments.

The gross income of the Bank for the year under review amounts to Rs. 31.78 lakhs, representing an increase of Rs. 2.64 lakhs over that for the previous year and constituting a record in the history of the Bank. Receipts from interest and discount account for an increase of Rs. 1.84 lakhs and those from commission and exchange for Rs. 0.68 lakh. To a large extent, the rise in income has been absorbed by an increase of Rs. 1.30 lakhs in interest paid and of about Rs. 2 lakhs in administrative and other expenses. A small loss of Rs. 13,370 was incurred last year on sale of investments, but no such loss was sustained this year. The provision for taxation has been increased by Rs. 25,000 to Rs. 1.65 lakhs and the transfer to the reserve fund from Rs. 65,000 to Rs. 85,000. The increase in the dividend from 6 per cent. to 6½ per cent. requires Rs. 12,500 more than the amount paid out last year.

The rise in deposits has been shared by all classes, fixed deposits (including cash certificates and season deposits) going up from Rs. 2.18 crores to Rs. 2.53 crores, savings bank deposits from Rs. 1.35 crores to Rs. 1.58 crores and current and other accounts from Rs. 1.14 crores to Rs. 1.29 crores. The improvement in resources has been utilised to strengthen the main revenue yielding asset, namely advances, which have risen by over Rs. 61 lakhs. Loans, cash credits and overdrafts show a rise from Rs. 2.22 crores to Rs. 2.78 crores and bills purchased and discounted from Rs. 19 lakhs to Rs. 24 lakhs. Investments (shown at cost) have risen by Rs. 36 lakhs to Rs. 1.91 crores. Cash balances, however, have shrunk by Rs. 23 lakhs, but the combined total of the investments and cash balances are higher by about Rs. 13 lakhs. The rise in deposits being substantially higher, the liquidity ratio has declined from 58.9 per cent. to 52.9 per cent., but it is still very comfortable.

The Bank has completed thirty years of working since its inception in 1923. The progress made by it during these three decades is reflected in the following table:

(In lakhs of rupees)

	1924	1933	1943	1953
Paid-up Capital ...	1.00	1.18	7.81	25.00
Reserves	—	0.11	0.51	12.41
Deposits	0.51	13.38	66.69	539.86
Profit	—	0.08	1.03	4.12
Dividend (per cent.) ...	9	4	6	6.5
No. of offices	1	5	17	57

The Bank opened six sub-offices during the year under review. A temporary pay-office was also opened during the year at the premises of the Andhra Legislature Secretariat, Kurnool, for the convenience of the Assembly members during the sessions of the Assembly.

WORLD BANK LOAN TO NORWAY

The International Bank for Reconstruction and Development granted last week a loan of $25 million to Norway for the purpose of helping the country to carry on its economic development. One of the important parts of this development is the expansion of Norway's merchant fleet. The loan will provide part of the foreign exchange needed for the purchase of merchant ships being built in foreign shipyards.

This is the first loan given by the Bank to Norway. It is for a period of 20 years and carries interest of 4.75 per cent. per annum, including the statutory commission of 1 per cent. Amortisation of the loan will begin in October, 1957.

BRITAIN'S BUDGET

TAX RELIEF TO INDUSTRY

(From Our London Correspondent)

THE most important news that has come out of Mr. Butler's 1954 Budget is that there is to be no general election this year. This is not a cynicism and it is based on the very precise terms in which Mr. Butler introduced his proposals. He explained that we had had a very successful and prosperous year but that we were facing uncertain times and that, in these circumstances, it was good sense to carry on as we were and then, if things turned out better than seemed likely, have the benefit of this in the following year. It is very unlikely that a Government would choose to go to the country after having made such a programme to help their opponents, if successful, to introduce substantial tax reliefs in their first year.

Mr. Butler himself described the Budget as a "carry-on" Budget and the only significant change he announced was the granting to industry of a tax relief on one-fifth of any new investment undertaken. Apart from this, there was a small concession of entertainments duty designed not to cheapen entertainment to the public but to enable the cinema, theatre, and sport-promoting industries to pay their way in the face of increasing competition from the home entertainment of television and wireless. There were other small changes, but nothing of consequence.

The allowance to industry is, however, very important and follows the line of the Chancellor's argument that one of Britain's main problems is to increase its home investment and the productive efficiency of industry. At present, businesses are allowed to set off against their profits for a given year 20 per cent. of the value of new equipment and in subsequent years 10 per cent. only until the total has been written off. There are variations in these figures according to the type of equipment, but that is broadly their effect. The new proposal, however, permits an *additional* 20 per cent. of the value of equipment to be written off so that, in all, a business may set off against profits 120 per cent. of its expenditure on new equipment, viz., 20 per cent. in the first year and thereafter 10 per cent. per annum until a total of 120 per cent. has been written off. The ultimate effect of this is to enable a business to finance one-fifth of new investment out of remitted taxation, i.e., out of the Chancellor's pocket instead of that of the business, and in addition write off its depreciation out of profits in the usual way.

There was some criticism that the Chancellor in a "no change" year should single out the corporate investor for tax relief and pay no regard to the claims of private taxpayers; but in doing this he is looking at the realities of business finance in a capitalist society and accepting that, if industry is to re-invest its profits in order to improve the productive efficiency of the nation, then sufficient profits must be left to it to re-invest. He is drawing a distinction between businesses which attempt to re-invest their earnings in productive capital and the private person who may be relied upon to consume his earnings rather than invest them. His decision can be attacked by his political opponents on grounds of political theory on the organisation of modern industrial society but not on the grounds of the practical way of dealing with the problem in society as at present organised.

But the Opposition are on stronger ground when they criticise the Chancellor for not making concessions in pensions to balance the increases in the cost of living. The total cost of the necessary concessions would have been some £50 million as well as substantial savings in the actual administrating of the pension schemes under national insurance. At present, the pensions established in 1946 by the Labour Government payable to insured persons have, as a result of the steep rise in the cost of living since those times, become completely inadequate and drive a large proportion of the beneficiaries to seek relief from the National Assistance Boards. Mr. Butler expressed the greatest sympathy with old age pensioners and others who rely on fixed incomes from public funds for their living expenses, but pleaded that he could not afford to do anything for them. The amounts involved, however, are so small in relation to a Budget of £4,500 million that his explanation will not be very convincing to one half of the nation.

The revenue continues buoyant and direct taxation is estimated to yield another £44 million in the coming year, with indirect taxes producing a further £26 million. Other income,

DEVELOPMENT OF TEXTILE INDUSTRY

A CASE FOR ALLOWING EXPANSION IN LOOMS

(By C. V. NARAHARI RAO, M.A., B.L.),

ADVANCE information about the draft second Five-year Plan is in the air. It is stated that greater emphasis will be laid in this Plan on industrialisation than in the first Plan. For there has been a grievance that the industry, especially the large-scale industry, has met with only a cavalier treatment at the hands of the authors of the first Five-year Plan, in that only Rs. 173 crores out of the total of Rs. 2,069 crores (that is, 8.4 per cent.) have been earmarked for the development programmes in the public sector. Again, only Rs. 140 crores (6.7 per cent.) are set apart out of the above for large-scale industries. Private enterprise is left to shift for itself.

Despite the good news of greater concentration on industries, it is reported that the Government of India has set its face against the establishment of new composite mills even during the second planning period. Their opposition seems to be not only for new weaving units but also for the expansion of existing units. This is undoubtedly disquieting. If the position under the first Plan had been bad, it is to be made worse under the second one.

Even under the first Plan, a considerable proportion of the industrial development envisaged is by way of expansion of the existing units. Such expansion is made to rest largely on private initiative and resources, with only the possibility of supplementation at certain points by the resources of the public sector. That the Planning Commission's estimates of production target and actual output are faulty becomes clear from the fact that the mills produced in 1953 nearly 200 million yards more than the target figure of 4,700 million yards cloth. Whereas the Planning Commission has taken it for granted that the existing consumer goods producing industries are adequate, they have failed to take note of the fact that the existing capacity for the production of capital goods and producer goods is quite inadequate. This serious defect in the industry is particularly emphasised in the Report of the Working Party for the Textile Industry.

Requirements of Looms

What exactly is the need of the industry for replacement. Though accurate statistics are not available and a unit-by-unit survey has yet to be made, it is gathered that the existing capacity of looms manufacturing industries is inadequate. As on 31st August, 1953, there were 207,250 looms in the Indian Union, the Bombay State alone having more than half of the looms, 136,093, to be precise. About a quarter to half of the looms is in need of urgent renovation, that is to say, 100,000 looms. But such replacement must, due to various factors, be a natural process extending at least over 10 years. The total capacity of the four loom manufacturing units in India, yet in infant stages, is estimated at 5,700 looms per year. The Texmaco (Gwalior) Ltd., started in 1943, has a production capacity of 2,700 looms; the Cooper Engineering Co., Ltd., has a rated capacity of 1,200 looms; the India Machinery Co., Ltd., Howrah, which commenced manufacture in 1944, can make 1,200 looms; and the Mysore Machinery Manufacturers Ltd., Bangalore, which started looms manufacture in June, 1948, has a potentiality for 600 looms. At this rate of only 5,700 looms per year, only half of the 100,000 looms could get replaced in ten years if we were to rely entirely on indigenous machinery and also did not further reckon the new demands likely to arise in the next 10 years, by way of more machinery requiring replacement. In this connection, it will be well to remember also that the increase envisaged in the first Plan in the plain, semi and automatic looms is 4,100 by 1956, which is quite inadequate.

Assuming for the moment that all the indigenous manufactured looms are absorbed by the renovation schemes of the existing mills, there is yet a shortfall for the immediate requirements which has to be met only by importing foreign looms. Taking the average price of a loom with its accessories and motor at Rs. 4,000, the cost of replacement of 10,000 looms every year during the next 10 years will amount to Rs. 4 crores each year. The cost of the 5,700 indigenous looms as per maximum estimated production capacity comes to Rs. 2.28 crores. The remaining looms worth Rs. 1.72 crores will have to be imported. The value of weaving machinery imported was Rs. 1.84 crores in 1949-50 and Rs. 1.68 crores in 1951-52 and Rs. 79 lakhs in 1950-51.

But all the looms produced within the country will not get so readily absorbed as to provide a further incentive to indigenous producers. The hesitancy and caution of millowners to go in for indigenous capital goods is well known. To some extent, this is due to the fact that our machinery manufacturing industry has yet to reach the perfection shown by foreign countries. Investment in capital goods, as stated by the Working Party, is to be made with a view to securing the maximum efficiency from such machinery for at least 30 years. Unlike in the case of certain spinning machinery imports, where the issue of an import licence is made dependent upon a mill placing an order with an indigenous manufacturer for about twice that quantity for like machinery, there is no such ratio fixed yet for looms. This is another handicap to the millowners who want to renovate their old machinery with at least a part in modern foreign machinery. One inevitable result, as pointed out by the Working Party, is that, while renovation is postponed, to that extent the offtake of indigenous produced machinery is delayed and a disincentive given to the capital goods producing industry, which is not a desirable thing at all.

Rigidness of Policy

Further, with nearly half of the machinery in the existing units becoming old and outmoded with over 25 years' hard wear and tear and the present cost of the machinery having risen threefold, not many mills are anxious to renovate or even expand their units early. Surely, it does not augur well for the future of the textile industry in India if any desire for loomage expansion is thwarted by a rigid observance of a policy, especially having regard to the fact that the renovation of old looms in established industries is not proceeding on a pace commensurate with the need for maintaining production for long at the present level, or at the target figure of the first Five-year Plan.

After all, the applications for expansion of loomage will be few, considering the present high prices and the resources available to the mill industry. Only a few mills, which were prudent enough to heed the Government caveat, while the war was on, that the industry should not dissipate their good profits during the war but conserve such profits against the almost certain rainy day of the post-war years for utilisation for rehabilitation, renovation or expansion of their units, are in a position to embark upon expansion of their weaving capacity or add a weaving department in their own mill as the case may be. It is difficult to understand the wisdom of the Government in discouraging expansion even in these cases.

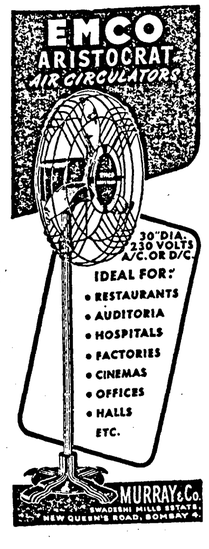
The undesirability of such rigidness of policy is even more apparent in the case of refusal to those mills (the writer knows at least one mill) which had already undertaken the expansion under the post-war expansion plan and had actually incurred considerable expenditure in installing the preparatory machinery and getting ready the electrical equipment and buildings for the purpose but had only delayed the actual purchase of the looms, due to causes beyond their control such as cotton shortage, power shortage, and complications of international situation and exchange. Now to deny them the privilege of renewing the permission already given, under the present Industries (Development and Regulation) Act, 1951, is, to say the least, contrary to the directions given clearly even by the Planning Commission that, in such instances where large expenditure has been involved, or, in the language of a recent statute, "effective steps" had already been taken, some relaxation should be made and every facility given to the particular unit to complete the scheme and give the country the benefit of its investment which must otherwise remain idle and useless.

Case of South Indian Mills

It is also observed by the Planning Commission that industrial development in India has so far been concentrated in a few areas. If it is to proceed in a balanced manner, the Commission says, increasing attention must be paid to the establishment of industries in those States and regions which have so far remained backward. It is stated that, under the Industries (Development and Regulation) Act, 1951, the Government has powers to regulate location. A more convincing plea cannot be made out for the expansion of loomage in the case of the South Indian mills at least, for it is a sad fact that the loomage in the undivided Madras State formed only 4 per cent. of the all-India loomage. There can be no fear that applications from this area will be numerous for reasons already stated, and only a few established mills will desire to expand at the moment. There can really be no objection to allowing them within the policy of the Five-year Plan, even if entirely new units are to be disallowed.

It may, however, be contended that more looms in the South will affect the yarn supplies to the handloom weaving industry., To my mind, this has unfortunately become a stock argument, verging almost on obsession. The growth of the South Indian spinning mills by taking to weaving has not affected in the least the quantum of yarn supply to the handloom industry for nearly 30 years now, since the development of the mill industry in this area from about the second quarter of the present century. What has really happened is that the handloom industry came to use more and more of the Indian mills' yarn in the place of the foreign and imported yarn. Furthermore, with the growth of indigenous mill cloth production, there came a corresponding reduction in imports of cloth for our requirements from the U.K. and Japan. The advent of the war practically did away even with this little dependence and our mills rose to the occasion. They not only catered to internal requirements but actually found it possible to export their products. All this time, the mill industry did not harm the handloom industry. Questions of accumulation of stocks, recession in prices, consequences of the replacement of the sellers' market by the buyers' market are all ills common to both the mill industry and the handloom industry, and the real solution appears to lie in increasing the purchasing power of the masses. To the extent the South will produce a little more cloth out of its mills, its dependence on Ahmedabad and Bombay mills will be reduced and the mills there will also stand to benefit ultimately by having to find outlets by way of exporting their products. Export will thus be promoted.

Last but not least, I feel tempted to say that we cannot afford to rest complacent that we have, as already stated, exceeded the target of 4,700 million yards cloth production envisaged in the Plan by nearly 200 million yards. After all, this level can only provide 16 yards *per capita*, which is stated to be not in keeping with a good standard of life and that at least 25 yards should be our minimum. If people have to buy more cloth, its price should go lower and one of the best means to achieve that is greater production. Surely, to increase production, it is not the right way to restrict loomage expansion till 1961.—*All Rights Reserved.*



SLIGHT INCREASE IN DOMESTIC CLOTH CONSUMPTION

POOR ROADS THREATEN EXPORTS

(From A Special Correspondent)

MANCHESTER, 6th April

MANCHESTER LETTER

NOW regarded as an inevitable forerunner to the Chancellor's Budget statement is the Government's economic survey which establishes the basis on which the Treasury is to make its calculations. The current document presents a reasonably encouraging view of increasing output, higher employment and further investment in the basic industries but has no very clear message for the nation.

Traders in Lancashire need not be reminded that the amount of cotton cloth exported in 1953 was the lowest since 1947. What the survey does not mention is that the quantity of Lancashihre-made fabric shipped abroad was in point of fact larger than in the previous year, due to the reduction in imports. The recovery from the depth of the 1952 depression was hailed with relief in Lancashire and the current situation in the industry is sufficiently encouraging to give local traders a somewhat misleading impression. When viewed from outside as a national asset or liability the situation may not appear to be quite so encouraging.

It is interesting to note from the survey that the expenditure on clothing last year was only about one per cent. higher than in 1952. Allowing for the fall in prices this represented an increase of some three per cent. in the quantity of clothing purchased. There is evidence for the belief that seasonal fluctuations have been on a much larger scale and have resumed their pre-war importance.

Stocks of clothing, the survey adds, showed some tendency to rise during 1953, but even towards the end of the year when many retailers found the level of sales disappointing, there was no sign of distributors building up excessive stocks. A vital factor during the year was the fact that there were no marked changes in raw material prices.

Unfortunately, the economic survey has little to offer in the way of advice to exporters and industrialists as a whole. The usual exhortations to keep down costs and prices, to invest in modernisation and expansion of industry and to press on with all measures for increasing productivity are repeated and are not likely to arouse much enthusiasm among traders.

Doublers Do Well

An indication of the progress made in cotton doubling in Lancashire since the recession was given by Mr. Alan J. Stott, Chairman of the Cotton Yarn Doublers' Association, at the annual meeting. He pointed out that the increase in output of doubled yarn, which is now about 20 per cent. higher than at the same time last year, had been obtained with a relatively smaller increase in the number of operatives. The figures he quoted compare favourably with those for other sections of the industry and indicate a more effective use of available labour.

According to the latest man-power totals issued by the Cotton Board, the labour force at the end of February was 290,600 on the books of employers, representing an increase of more than 15,000 compared with twelve months previously, Nearly 2,500 more workers are now being employed in doubling compared with a gain of 5,800 in weaving and nearly 7,000 in single spinning.

Mr. Stott urged doubling employers to do their utmost to promote interest in the training schemes which are now being organised in several mill centres. The value of courses of this kind has been frequently emphasised since the war and it is essential that operatives are trained to take over the more skilled occupations as inevitable wastage due to old age takes its toll. This particular problem is by no means the prerogative of the doubling branch and is one of vital importance to the industry generally.

Shorter Hours

Sir John Grey, President of the Cotton Manufacturers' Association, who has had many years of negotiations with the trade unions over matters affecting wages and conditions in the cotton industry, was scathing last week about the latest move to obtain a 40-hour week for the operatives.

In his capacity as Chairman of John Grey Ltd., the textile manufacturing group, at the annual meeting at Burnley, he described the idea as "the most frivolous suggestion I have heard for a long time."

Commenting on the outstanding need for increased output from the mills in order to reduce the lengthy delivery terms now required, Sir John said: "At such a time I feel it is most regrettable that a suggestion of this kind should have been made. I hope that if ever an actual claim is submitted to the employers' organisations, it will be turned down flat."

The Twisters' and Drawers' Amalgamation has tabled a resolution calling for the introduction of a 40-hour week, together with a 12½ per cent. increase in wages to compensate operatives for the shorter hours of work, which will be considered at the annual conference of the United Textile Factory Workers' Association opening at Morecambe on 29th April, 1954.

Anglo-U.S. Deal

An important dollar-earning agreement has just been signed between the Casablancas High Draft Co. of Salford and America's biggest manufacturers of cotton spinning and preparatory machinery, the Whitin Machine Works, of Whitinsville, Massachusetts, under which the U.S. company is licensed to incorporate in its cardroom and spinning machinery all the Salford firm's new high draft developments.

The agreement has been won in face of "intense competition" particularly from Germany, where a number of firms offering rival systems have been eager to negotiate agreements with American machinery makers. "The value of the agreement to this country must be measured not only in terms of the important dollar earnings resulting from royalties and from what we anticipate will be very substantial direct exports to Whitin, but also in terms of prestige," said a spokesman for the Salford firm.

The Casablancas Company, which has a turnover of £1,000,000 per annum, employs about 600 people engaged solely in the production of high drafting equipment for cotton spinning and preparatory machinery. A high proportion of the Lancashire-produced cotton spinning machinery is equipped with the Salford firm's systems, and licence arrangements are also held with a number of leading machinery makers in other countries.

Cloth Output and Labour

It is no wonder that delivery dates for Lancashire cotton and rayon goods show no sign of shortening when the latest cloth production figures are studied. Very little improvement in output was recorded in February compared with the previous month, although the position is a good deal better than a year ago.

Since the holidays in the weaving districts ended last year the trend of output has shown very little improvement, although it has remained steady. The following figures indicate the position month by month (being weekly averages, in linear yards):—

	1953	1952
July	35,450,000	27,190,000
August	50,700,000	39,000,000
September	51,600,000	40,350,000
October	57,370,000	46,450,000
November	57,370,000	48,480,000
December	51,090,000	43,700,000

	1954	1953
January	54,940,000	46,640,000
February	55,480,000	49,100,000

So far, in the first eight weeks of the current year, aggregate output has been 441,670,000 linear yards of cotton and rayon cloth, compared with 429,560,000 yards in the first nine weeks of 1953. The total cloth production last year at 2,632,210,000 yards was some 350,000,000 yards higher than in the slump year of 1952 but remained 330,000,000 yards below the 1951 aggregate.

The weaving section of the industry continues to display only very slow gains in recruitment. Man-power in the four weeks of February increased by 180, bringing the total to 141,980 operatives on the books of employers. This compares with 136,110 workers available twelve months previously.

Poor Roads

A warning of the threat to Britain's export effort created by the country's inadequate road system was given this week by the Manchester Chamber of Commerce in a report to 5,000 member firms.

Speaking generally, declared the report, it was true to say that British roads had been

THE ANDHRA BANK, LIMITED

ESTABLISHED : 1923

Head Office: **MASULIPATNAM**

The 30th Report of the Board of Directors to be presented to the Shareholders at the 30th Annual General Meeting to be held at the Registered Office of the Bank, Cantonment Road, Masulipatam, on Sunday the 18th April, 1954.

The Directors have the pleasure to submit to the Shareholders their annual report on the working of the Bank for the year 1953 together with the Balance Sheet as at and Profit and Loss Account for the year ended 31st December, 1953, to which the Auditors' Report is annexed.

The Net Profit of the Bank for the year 1953 including a sum of Rs. 7,230-10-1 brought forward from the previous Year's account and after payment of a month's salary amounting to Rs. 54,347-13-7 as bonus to staff, amounted to Rs. 4,19,642-14-2, out of which the following Interim appropriations were made.

	Rs.	a.	p.
Interim dividend for the half-year ended 30th June, 1953, at the rate of 6 per cent. per annum free of Income-tax, which absorbed	75,000	0	0
Transferred to Statutory Reserve under Section 17 of the Banking Companies Act, 1949	85,000	0	0
Your Directors now propose :—			
To pay a final dividend for the half-year ended 31st December, 1953, at 7 per cent. per annum free of Income-tax, making a total of 6½ per cent. for the year 1953, which will absorb	87,500	0	0
To make Provision for Taxes	1,65,000	0	0
To carry forward to next year's account	7,142	14	2
Total	Rs. 4,19,642	14	2

The official rate of the Reserve Bank of India remained at 3½ per cent. per annum.

There is an all round improvement in the business of the bank during the year over that of 1952.

Six Sub-Offices were opened at Pamarru, Penugonda, Bhattiprole, Kothapet (Tenali), Kovvur and Chodavaram during the year. A temporary Pay-Office has been opened during the year at the premises of the Andhra Legislature Secretariat, Kurnool, for the convenience of the Assembly Members, which works during the sessions of the Assembly.

Your Directors regret to record the sudden demise of Sri K. Subbarao Naidu, their colleague, on the 4th June, 1953. Sri Batchu Venkateswarlu of Vijayawada was co-opted in this vacancy.

Messrs. Dara Visweswararao, K. Subrahmanya Dutt, B.Sc., and Batchu Venkateswarlu, are three of the Directors retiring by rotation under Article 94. From the next longest in office, Sri Repaka Satyanarayanamurty has volunteered to retire. The retiring Directors are eligible for re-election.

You are requested to appoint Auditors for the current year and to fix their remuneration. Messrs. Brahmayya & Co., and Ch. V. Lakshmiah & Co., the retiring Auditors, offer themselves for re-appointment.

By Order of the Board,
S. R. Y. SIVARAMA PRASAD BAHADUR,
Chairman.

23rd March, 1954.

BALANCE SHEET AS AT 31st DECEMBER, 1953

THE ANATOMY OF AUTOMATISATION
FEARS OF LABOUR LEADERS UNWARRANTED

(By S. D. MEHTA, M.Com. LL.B., Ph.D.)

RATIONALISATION *is in the news. If that were an index of greater public awareness of the many-sided complexities of a pressing problem, the spotlight would be a great asset. But, as things stand today, the reverse is the case. To a problem which intrinsically encompasses technical, financial and managemental offshoots that are not always easily reconciled, are now added a misunderstanding of structural aspects of industrial organisation and a misconstruction of the extent and effects of changes proposed in industrial practice. As a result, rationalisation has become a spectre instilling unjustified fears in the public mind.*

The attitude of public distrust covers rationalisation in all industries—the bidi-making machine as much as the machinery used in the making of footwear. But its most important significance presently attaches to the cotton mill industry, where the automatic loom and the Barber-Colman winding and warping systems are in the process of becoming the focuses of an unknowing hate. This attitude—whatsoever its origin—will spell the death-knell of all hopes for technological progress which alone can ensure, in the long run, the competitive efficacy of Indian industry.

The present article aims at providing a resume of the facts of the situation concerning automatic looms, and points out that the automatisation of looms sought is not on so extensive a scale as to result in widespread unemployment in the short run, and, furthermore, that the pace of automatisation can be regulated with the greatest ease, if ever the situation assumes a character which is not in consonance with social policy. The presence of certain factors, such as tremendous variations in the wage rates prevalent in different regions in the country and the need to ensure competitive capacity in the export markets of the world, to mention only two factors, the economic significance of which cannot be lost on any dispassionate observer of the Indian economic scene, necessitates automatisation in the weaving sector of the cotton mill industry, specifically, and other rationalisation measures, more generally.

The first automatic looms in India were installed before the First World War. But they were in the nature of isolated experiments and their number did not exceed a few dozens. The end of the war recorded the earliest attempts at major installations of considerable strength. These took place in Madras and Bangalore in mills managed by Messrs. Binny and Company. Although experimentation proceeded apace thereafter, only 1,725 automatic looms had been installed in Indian mills by 1930. The next three years recorded substantial progress and the number stood at 4,524 in 1933. But this expansion in number co-existed with the preponderance of the two South Indian enterprises in terms of proportion. Thereafter, for more than a decade, automatisation of looms made no headway in the Indian mill industry, the net result being that, at the close of the Second World War, only a little more than 4,000 automatic looms were installed and working.

In the course of the eight years that have elapsed since, the cotton mills of India have added nearly 5,000 looms, and, according to a recent survey undertaken by the International Federation of Master Spinners, 9,049 automatic looms are presently installed in India. This figure excludes 264 automatic attachments to ordinary looms. In other words, in the course of eight years of the most rapid expansion, India's cotton mills have added less than 700 looms annually. It might be recalled that these years included some of the best years from the point of view of general profitability, and, until recently (July 1952), of the absence of prohibitory restrictions on the import of automatic looms.

Having appraised the rate at which automatic looms were being installed hitherto, we may now have a closer look at their geographical dispersion, and the nature of their size-distribution.

In Table I are presented the details of the locational pattern of automatic loom installations in India, as on 31st August, 1952. It is submitted that the changes thereafter have not been substantial and, in the absence of more recent published information, this table may be regarded as a fair reflection of the present position.

TABLE I

Centre-wise Distribution of Automatic Looms as on 31st August, 1952

	Number of mills	No. of automatic looms
Bombay City]	12	2,340
Ahmedabad	11	1,493
Petlad	1	8
Sholapur	1	8
Delhi	2	884
Bhiwani	1	57
Burhanpur	1	2
Nagpur	1	10
Ujjain	1	16
Gwalior	1	25
Burnpur	1	97
Madras	1	2,450
Coimbatore	1	200
Udamalpet	1	50
Madurai	1	27
Bangalore	1	1,085
Total ..	38	8,752

Three major conclusions emerge from the table:

(a) The average size of an automatic loom installation in India is very small—240 looms.

(b) If the figures for the four mills in Madras, Bangalore and Delhi are excluded from consideration, 34 mills in the country are seen to have only 130 looms each.

(c) Out of more than 300 composite mills in India, as many as 262 mills have not even bothered to experiment with automatic looms.

The impressions gathered from Table I are further reinforced by the frequency distribution of these 38 mills according to the number of automatic looms and the total number of looms, vide Table II.

It is clear from Table II that, out of 38 installations, 23 have 100 or less automatic looms and 32 have less than 300 looms each. Only two installations are in the range beyond 1,000 looms, and that exclusive use of automatic loomage is negligible. The distribution of the smaller installations over many different ranges of total loomage indicates clearly that, during a period when the rate of automatisation has been at its highest, there has been no indiscriminate installation of such machinery.

The rate and pattern of automatisation are thus seen to be indicative of the limited character of automatisation inside Indian weaving sheds. Even without prohibitory restrictions on the import of the most essential types of automatic looms, it is difficult to see how the rate of automatisation can rise beyond 2,000 annually in the next five years or so. And let it not be forgotten that 200,000 looms are presently installed in Indian mills! Besides the proof of experience, there are many other factors that do not make automatisation a feasible proposition in large sections of the Indian mill industry. First, the overall volume of resources available for capital investment is totally inadequate for the needs of the industry, and, furthermore, these funds are required to be spread over all sections of the industry. This may be seen in the table below:

Type of machinery	Value of machinery imported in India during 1950-51 to 1953-54 (Lakh Rs.)	Percentage share to the total %
Spinning	1,478	45
Weaving	582	18
Bleaching and dyeing ..	71	3
Printing	85	4
Other	979	30
Total ..	3,195	100

Actually, for the industry as a whole, the proportion of urgent replacement is higher in the spinning section, where the average age of machinery is higher. The great increase in recent years in the volume of working capital required also constitutes an additional demand on the available resources which has already led to additional bank advances to the tune of Rs. 35 crores over the 1948 levels.

Secondly, the preponderance of *dhotis* and *saris*—i.e., bordered cloths—which are not as easy to handle on automatic looms tempers the rate of automatisation for the industry as a whole.

Thirdly, the large proportion of existing loomage in good working order prevents any runaway adventures in the field of automatisation.

Fourthly, the installation of automatic looms on a sufficiently large scale is not without its own operational headaches, especially so if it is desired to work these looms on the basis of high

(Continued on page 763)

AUDITORS' REPORT.

We have audited the Balance Sheet of the Andhra Bank Ltd., as on 31st December, 1953, and the Profit and Loss Account for the year ended on that date, as set-forth above, with the books of the Head Office and the certified returns from Branches and Sub-Offices and we beg to report that :—

(a) we have obtained all the information and explanations we have required and such information and explanations have been found to be satisfactory ;
(b) the transactions of the Company which have come to our notice have been within the powers of the Company ;
(c) the returns received from the Branch Offices of the Company have been found to be adequate for the purpose of our audit ;
(d) the Profit and Loss Account shows a true balance of profit for the year ended 31st December, 1953 ;
(e) the Balance Sheet and Profit and Loss Account are, in our opinion, drawn up in conformity with the Law ;
(f) the Balance Sheet exhibits a true and correct view of the state of the Bank's affairs as on that date according to the best of our information and explanations given to us and as shown by the books of the Bank ; and
(g) that, in our opinion the books of account have been kept by the Bank as required by Section 150 of the Indian Companies Act.

PROGRESS OF SUGARCANE RESEARCH AND DEVELOPMENT

FOOD MINISTRY'S REPORT MAKES INADEQUATE REFERENCE

SUGARCANE research and development is one of the most important fields of activity of the Union Food and Agriculture Ministry. Naturally enough, one expects the Ministry to review periodically the progress registered in the field as a result of the policies and programmes implemented by it. But the annual reports of the Ministry do not at all fulfil this expectation. And the latest report, that for the year 1953, is no exception. Thus, the report throws very little light on aspects relating to sugarcane development. All that the report says is as follows:

"A total expenditure of Rs. 49 lakhs was incurred on the five-year Sugarcane Development Schemes in Part A States, the implementation of which ended on 31st March, 1953. An increase of 3 to 8 tons in yield of cane per acre was achieved in the development block as a result of the schemes. These schemes are being continued for another three years. Similar schemes are also being sponsored in the sugar producing Parts B and C States."

As regards the functions of the Indian Central Sugarcane Committee (I.C.S.C.) also, the report makes only vague references. For instance, it merely states that the Committee "continued to subsidise, wholly or partly, 42 schemes of sugarcane research and development in the country during the year under review. These schemes covered, among others, the following three:

(1) Improvement of growing, breeding and marketing of sugarcane;

(2) research, production, distribution and propagation of improved varieties of cane;

(3) development of the *gur* and *khandsari* industries.

As regards the activities of the Sugarcane Breeding Institute, too, very little information is made available. Thus, the report merely says that the Institute continued to do "useful work" in evolving new varieties of sugarcane and distributing them to the research stations and substations for performance of tests. What these new varieties are and what is the outcome of these tests are questions on which the report does not throw any light. Similarly, it fails to give details regarding the so-called vigorous types of cane collected for breeding work from the States of Rajasthan, Punjab and Bihar. Incidentally, it may be noted that, with the abridging of the functions of the I.C.S.C., which, jointly with the Central Government, exercised administrative control of the institute, the administration of the Institute has been taken over completely by the Centre with effect from 1st January, 1954.

The Food and Agriculture Ministry would have done well to give detailed and precise information regarding the progress in the implementation of the development programme for sugarcane. Such a study would show what tangible work has been done in this direction. It would show that the per-acre yield of cane has not only not increased but has actually declined. Thus, the average yield of cane per acre for the 1953-54 season (based on the second estimate of the crop) is placed at 12.4 tons, as against 14.1 tons in 1943-44, that is before the I.C.S.C. was set up. Similarly, there has been a setback in the recovery percentage of sugar, the all-India average for 1952-53 being 9.98, which compares unfavourably with 12.62 in 1943-44.

What is this state of affairs due to? Perhaps it is due, in large measure, to the fact that the I.C.S.C. had hitherto been burdened with a heavy responsibility; it had to conduct research into all aspects of the sugar industry and cane cultivation, so that it could not devote adequate time to cane development. The Government of India's decision to divest the I.C.S.C. of the responsibility for technological research in the development of sugar and its by-products, although belated, must, therefore, be welcomed as a step in the right direction. It will be recalled that, when the Government changed the Sugar Committee into an independent body by renaming it as the Indian Central Sugarcane Committee nine years ago—in June, 1944, to be precise—it was specifically stated that the Committee would exclusively look after cane research and development. But, in actual practice, the entire responsibility for guiding sugarcane research and advising the Central and State Governments on matters relating to the improvement and development of the industry connected with sugarcane and its products rested mainly with the Central Sugarcane Committee.

Consequent, however, on the decision of the Government of India to form a Development Council for Sugar under the Industries (Development and Regulation) Act, 1951, the Committee has now been relieved of a part of its functions such as those relating to the technological research and development of sugar and its by-products which are to be performed by the Development Council. The rest of the functions relating to the research and development of sugarcane and the *gur* and *khandsari* industries continue to be performed by the Committee. The Committee, it will be recalled, was reconstituted with effect from 1st January, 1954. Accordingly, the administration of the Indian Institute of Sugar Technology, Kanpur, and the Sugarcane Research Institute, Bhadruk, which was hitherto under the I.C.S.C., has been assumed by the Government of India. Now that the I.C.S.C.'s burden has been lightened, it is to be hoped that the Committee will be able to pay undivided attention to research in, and development of, sugarcane in all the cane-growing States in India.

CO-OPERATIVE SUGAR FACTORY

The Pravara Co-operative Sugar Factory Ltd., at Loni, in Srirampur taluk of Ahmednagar District in Bombay State, has functioned successfully during the last five years, according to a Press note issued by the Director of Publicity, Government of Bombay. The factory was founded on 31st December, 1948. The factory, it is claimed, has constituted itself as a centre of community service to 41 villages with a total population of about 25,000. Although the sugar production in this factory is maintained at the rate of 7,051 tons per annum, the quantity of sugarcane crushed being 70,000 tons, the profit made by it has fallen. Thus, in 1952-53, the factory earned only Rs. 2,63,000, as against Rs. 4,11,000 in 1951-52 and Rs. 3,58,000 in 1950-51. The Director of Publicity, however, says that "the profit can increase along with the productivity of the factory, if more canal water could be supplied to member-cultivators."

The society's authorised share capital amounts to Rs. 31,00,000, out of which shares of the value of Rs. 26,00,000 have been offered for sale and shares worth Rs. 15,85,000 have been subscribed for. Out of this amount, the State Government's share amounts to Rs. 6,00,000 and the agriculturists have purchased shares worth Rs. 9,79,000. Each share is of the face value of Rs. 500 and, out of the total of 537 holders of the shares, as many as 401 members hold between one and three shares. This shows that the majority of members are small men and agriculturists. Loans of Rs. 20,00,000 from the Industrial Finance Corporation and of Rs. 19,00,000 from the Bombay State Co-operative Bank were obtained by the society. Rs. 34,62,000 have been invested in machinery alone, while Rs. 9,65,000 have been invested in lands and buildings.

The society has a team of 10 progressive agriculturists who raise more than 62 tons of sugarcane per acre. The members of the society grow sugarcane in 1,600 acres of land. Cane is grown in 397 acres of land which receive the Pravara canal water and the remaining acreage depends on well water. For every acre of cane, there are two acres in which foodgrains are grown. Tractor-ploughing and improved seed and manure are used in raising all crops. Along with the reserve fund of Rs. 2 lakhs, there are research and improvement funds amounting to about Rs. 1½ lakhs and they are utilised towards improvement of crop productivity.

The society helps member-cultivators by granting loans in cash against the security of their crops. Such financial assistance during 1952-53 amounted to Rs. 4.71 lakhs and larger amounts had been spent in the previous two years. During the last year's scarcity, the cultivators were also helped to get their wells deepened. The society has purchased two tractors and they are lent to member-cultivators. A machine repairs shop and a motor garage have also been maintained for the benefit of the cultivators. Facilities have been established for sale of diesel oil, pumps and their spare parts. Engines are also hired out to them when theirs get out of order. They also receive advice and assistance in dealing with sugarcane pests.

The factory workers are housed in specially constructed tenements and piped water and other sanitary facilities have been established for them. There are gardens for their use and adequate care is taken of their health. Facilities also exist of a ration shop, a flour mill, supply of vegetables, etc. The workers have their canteen and boarding establishment, their club for recreation and also a library and reading room. There is a branch of the Bombay State Co-operative Bank, post office and a guest house in the colony. In addition to their wages, the factory workers receive an annual bonus equivalent to two months' pay.

RENTS OF LANDS LEASED TO DECCAN SUGAR MILLS

MOVE TO RAISE THEM DEPRECATED

ANY dispassionate reviewer of the developments in the sugar industry in the Bombay State since the advent of the Congress Government will find that the Government has been treating it in a stepmotherly fashion. He will not fail to notice that the Government has been using this industry not only as a source of revenue for itself but also as an instrument for ensuring its popularity with workers and small landholders who have leased their lands to the sugar companies. How else can one explain the reported move of the Government to introduce legislation seeking to secure higher rentals for the lands leased to sugar factories by the landholders? The most objectionable feature of this move is that it seeks to alter the terms of a contract which is still in force, thereby disregarding the sanctity of contracts. It is not surprising, therefore, that this move has caused considerable concern among the sugar mill owners in the Deccan. In the course of his speech at the last annual general meeting of the Walchandnagar Industries Ltd., Mr. Gulabchand Hirachand, the Chairman, made a pointed reference to this development and struck a note of warning that the attempts at tampering with the legal contracts freely entered into for the lands leased to sugar factories might create a situation fraught with danger, not merely for the sugar industry but for every form of economic activity.

This warning is, indeed, quite pertinent and timely. A large part of the areas on which the sugar factories in Bombay State are growing sugarcane consists of lands leased to the factories on a rental basis, a long time ago, for a stated period under a voluntary contract. The industry was planned and established on the basis of the rents stipulated in the contracts. There could be no objection to a change in the basis of rentals when the existing leases come up for renewal, for the landholders will then be justified in asking for a higher rent in the light of the current level of fortunes of the sugar industry. But to ask for a rise in rents even during the currency of a contract, merely because the factories are making more profits from the cane grown on these lands, is highly unjustified. If the Government were to countenance such a demand, it would simply undermine people's faith in the sanctity of contracts.

Economic Considerations

Viewed from the angle of economic considreations also, the plea is untenable. It was only a few years ago that an official enquiry was instituted to ascertain whether the rents paid by the sugar factories were on the whole fair or not. This enquiry revealed that the rents were not only fair but generous. The same position holds good even today. As Mr. Gulabchand pertinently remarked: "The prices of agricultural products were at their peak at that time, that is when the enquiry was instituted. Since then, they have gone down. The price of land is nowhere near what it was three to five years ago. In fact, nothing has happened since this enquiry which would affect the recommendation of the Committee which made it."

Another important aspect of the sugar industry, to which Mr. Gulabchand referred, related to sugar prices. The price of sugar prevailing in the market, he declared, could not be considered to be high, for, in his opinion, this price looked higher only in comparison to the price of sugarcane, which was reduced officially at the beginning of the season (1952-53). But the reduced prices, he said, were unreal in comparison with the ruling market prices for the cane. This became patent immediately after the crushing season started, for many factories had to purchase cane at prices higher than those fixed by the Government.

Proceeding, Mr. Gulabchand argued that the current price of sugar could not be described to be high, if regard were to be paid to the industry's need for building up resources for carrying out renewals and rehabilitation. All this sounds reasonable, but even Mr. Gulabchand cannot but concede that the current price of sugar in India is higher than what the people can afford to pay and what it is in the rest of the world. How long does he expect the people to pay such high prices? The remedy lies, not in asking for higher prices or in supporting the present level of prices, but in insisting upon the introduction of measures for bringing down the cost of sugar.

SOME CURRENT PROBLEMS OF COAL

STOCKS AT PITHEADS MOUNTING UP

THE present position and problems of the coal industry figured prominently in the presidential address of Mr. B. L. Agarwalla at the twenty-first annual meeting of the Indian Colliery Owners' Association held at Dhanbad. The Coal Commissioner, Mr. R. N. Ramadhyani, also addressed the gathering. Mr. Agarwalla selected for special comment the recent reduction in the price of grade II coal, shortage of wagon and siding facilities, the mounting burden of costs and the like. Mr. Ramadhyani, too, referred to every one of these problems and pointed out how, in the present circumstances, the Government could not follow, a course different from the one it was following.

Prefacing his address with a review of the history of price controls, Mr. Agarwalla deplored the reduction in the price of grade II coal by As. 9 per ton, with effect from 18th February. To quote him:

"If we take into account the series of new burdens imposed on the industry since the C.B. Award, beginning with the Joshi Award and ending with the Tribunal Award for paid holidays, we find that, by this cut, the Government have not only taken away whatever little profit margin there might have been for some of the more favourably placed grade II coal producers, but have indeed rendered all grade II mines uneconomic. Do the Government expect or intend that we accept this position?"

Mr. Ramadhyani held that the price cut was justifiable, as it was an open secret that grade II coal was selling at much below the statutory prices. He was of the considered opinion that it was no use in fixing prices at a level which could not be maintained.

Mr. Agarwalla attributed the failure of raisings and despatches in 1953 "to keep up the forward move of the previous years" chiefly to "transport limitation." Raisings and despatches in 1953 were 35.85 million tons and 30.61 million tons, as against 36.30 million tons and 31.18 million tons in 1952 and 34.31 million and 29.11 million tons, respectively, in 1951. Mr. Ramadhyani was of the view that the slight fall in the overall despatches of coal was primarily due to the record export of coal (including to Pakistan) of 3 million tons which was again due to abnormal conditions that prevailed in 1951-52, following the acute shortage of coal in the U.K. and Europe. On the ground of decline in exports alone, the coal industry lost despatches to the tune of more than one million tons. The actual shortfall in despatches from the Bengal-Bihar coalfields, however, was only about 400,000 tons. He pointed out, in this connection, that, in 1953, nearly 500 wagons were lost because of their withdrawal by the Government of Pakistan. Referring to the position of transport this year so far, he said that there was a heavy loss in February-March because of the *Kumbh Mela*. The railways, he assured, were, however, trying to make good the loss. He forecast that the overall position of despatches of coal this year would be fairly good, if not better than in 1953.

Referring to the cost of labour, which accounts for over 70 cent. of the total cost of production of coal, Mr. Agarwalla criticised the tendency of labour to demand more and more wages without any regard whatever to its productivity. To quote his own words:

"And when it is remembered that, unlike other commodities, coal is a wasting asset, which means that every ton of coal removed from the mine and sold in the market is not the disposal of the usufruct of the industry, but is so much of the corpus of the mining property sold away, it will be realised that the wages, concessions and amenities which we give to labour and which compare favourably with those granted in other industries are quite on a generous scale. Unfortunately for this country, the workers' low marginal efficiency has relatively enhanced the cost of production in all sectors of private and public enterprise. As compared with pre-war level, the labour cost has increased many times today, while the labour's productivity has fallen considerably. Labour leaders do not care to bear it in mind that, when their vaulting demand exceeds the realistic yield basis, it is liable to overleap itself. The question of wages or prices of commodities is one of economics and should not be mixed up with politics. Any artificial increase in wages not related to realities will ultimately recoil on wage-earners themselves."

Speaking on this subject, Mr. Ramadhyani warned labour against exorbitant and unreasonable demands and asked them to take the economic circumstances into consideration before making demands for increased wages. He said that the employers also should take into consideration similar circumstances before asking for higher prices for coal.

A graphic account of mounting stocks and the financial distress which they caused to the collieries was also given by Mr. Agarwalla. He said:

"The immediate problem of the coal industry in Bengal and Bihar fields is the problem of ever-mounting stocks at the pit-heads. The stocks at pit-heads which had been 1.7 million tons in 1948 and which came to one million tons at the end of 1949 have gradually risen to 3.4 million tons at the end of 1953. This pit-head stock is mostly concentrated in the collieries in the Bengal and Bihar fields, the major portion of which consists of slack coal for which there is not enough transport available. There seems to be no immediate prospects for the disposal of this stock, although there is enough demand for slack coal for brick burning purposes. This means the blocking of all the available resources of collieries in the stocks. Had this stock been uniformly distributed in all collieries, the position would not have been so precarious; whereas, some collieries carry heavy stocks equivalent to their output for six months or more, others have little or practically no stocks. Collieries, which are overburdened with stocks, have in some cases started what is known as distress sales even below cost of production. These distress sales have started a vicious circle from which no collieries can escape and it is, therefore, urgently necessary that some ways and means should be devised for relieving collieries of this burden of stocks."

Mr. Agarwalla's suggestion for solving this problem is as follows:

"It is true that the recently introduced system of B.R.K. distribution will give some relief to collieries but this system cannot solve the problem of slack coal, as transport for B.R.K. is only about 50 per cent. of the available coal. It follows, therefore, that some industrial concerns must be persuaded to use run-of-mine coal, instead of steam

OUTLOOK FOR NATURAL RUBBER

AMERICAN PRICING POLICY OF GR-S RUBBER UNHELPFUL

NATURAL rubber is again in the news. There have been several pronouncements in recent weeks by the representatives of natural rubber producers on the outlook for this world commodity *vis-a-vis* the growing tendency to produce synthetic rubber. The Dunlop Rubber Company, Imperial Chemical Industries and Monsanto Chemicals all have plans for manufacture of synthetic rubber in the U.K. I.C.I. has plans for setting up the first large-scale production of a range of rubber-like polymers based on butadiene. The plant will have a planned capacity of about 10,000 tons per year and will commence operation before 1956. Dunlop Rubber proposes to erect a £500,000 plant for the manufacture of specialised types of synthetic rubber. It will have a capacity of not more than 2,000 tons annually. The plant is expected to commence production in about two years. However, Dunlop's output of synthetic rubber will be used for its own tyres and other products. It has no intention, at present, to engage in large-scale output of general-purpose synthetic rubber.

While it is admitted that it is inevitable that the U.K. should, for strategic and commercial reasons, prepare for production of synthetic rubber, which is finding new and expanding uses, the aforesaid plans have created a fear in Malaya that British rubber manufacturers would soon expand this field once they get into it. There is also a feeling that they would get Government subsidy. This fear has, however, been allayed by Mr. Oliver Lyttelton, Secretary of State for Colonies, in his speech at a recent gathering of the Federation of British Rubber Manufacturers' Associations. He said: "We used to complain of the subsidisation of synthetic rubber in the U.S., and it would be paradoxical if we ever incurred the same criticism inside our own country. Our Imperial interests are first of all, to cheapen the production and widen the use of natural rubber."

Both Have a Place

It may also be pointed out that a limiting factor in the expansion of the new synthetic rubber industry in the U.K. is the supply of raw materials from the chemical industry. Further, under the present plans, the output of synthetic rubber in the U.K. is not expected to encroach, to any marked extent, on the sphere of natural rubber. The total planned output of 20,000 tons for the new plants is roughly equivalent to the amount of special purpose synthetic rubber which the U.K. would be importing this year. To some extent, for certain specialised uses, the synthetic rubber produced in the U.K. may replace natural rubber. But it is admitted that, in the long run, natural and synthetic rubber are assured of their places with the prospect of an expanding use of rubber, provided the natural rubber remains competitive in price. At the present price level, it may be noted here, natural rubber is fully competitive with synthetic and this has led to an increased consumption of natural rubber by the U.S.

The consumption of rubber, including synthetic, in the U.S. during 1953 amounted to an all-time record high of 1,335,000 tons of which natural rubber, however, accounted for only 553,000 tons. Nevertheless, there is a silver lining here, in that, in recent months, the consumption of natural rubber has shown an upward trend. Thus, whereas the consumption of natural rubber in the U.S. formed only 39.6 per cent. of its total absorption in the first half of 1953, it gradually improved in the second half of that year and reached 49 per cent. in February, 1954. If it holds at about 50 per cent. during the current year, which is a reasonable assumption, the offtake of natural rubber will be substantially greater than that in 1953.

Encouraging as this trend is, it is not sufficient to enable one to view the future with robust optimism. The surplus of natural rubber is still heavy, accounting for the current low price. The total production of natural rubber during 1953 amounted to 1,720,000 tons and consumption stood at 1,565,000 tons, an increase of 100,000 tons. The greater part of the surplus of 155,000 tons was absorbed by national stockpiles, but the remainder, which went into commercial stocks, has been responsible for the depression in price. At a meeting of the Rubber Study Group held in May, 1953, the American representatives gave an assurance to the effect that there could be no surplus of natural rubber during the next 12 months and that they would buy every pound of natural rubber available to them at prices competitive with GR-S which, they said, would not be substantially lower than the price of natural rubber at that time. This assurance was reiterated in October, 1953. Despite all this there is still a surplus of natural rubber and its price continues to stay at a depressed level.

Though the U.S. Government made some helpful moves towards increasing consumption of natural rubber, its pricing policy of GR-S remains unchanged. It is the attitude of the U.S. in this regard that is causing the natural rubber producers deep concern. This concern was voiced by Mr. P. B. L. Coghlan, Chairman of the Rubber Growers' Association, at its annual meeting held two weeks back, thus:

"This vexed question of whether the present price of GR-S is truly commercial can only be answered by the U.S. Government, which operates the plants. Nevertheless, the view has been expressed by certain leading American Congressmen and manufacturers that the present price is below what would be charged commercially. Under the existing plans for the disposal of the Government synthetic plants, the earliest date by which these can be handed over to private enterprise is 30th April, 1955. If the plants are disposed of to private industry, at a fair valuation, it will be interesting to see if the present price is maintained. If there is an increase in the price when the plants are handed over to private industry, then it will support our contention that the U.S. Government has been providing its manufacturers with an artificially cheap alternative to natural rubber, consequently depressing the price of the latter and thereby causing economic difficulties in South-East Asia. While we would all prefer to believe that the U.S. Government has not been doing so, it is sometimes difficult to understand why Britain's premier dollar-earning commodity is probably the lowest-priced raw material in post-war markets."

Mr. Coghlan went on to point out how the price of rubber since 1939 has failed to keep pace with that of other commodities. While a wide range of raw materials, excluding rubber, had appreciated by 350 per cent. over the 1939 average, the increase in the price of rubber was less than 20 per cent. Whereas the price of rubber had lagged behind, the cost of production, particularly wages, had followed the general upward trend. In Malaya, the workers' wages, he said, were now more than 400 per cent. of what they were in 1939.

Shortage Before Long

Although there is a surplus production of natural rubber, Mr. Coghlan visualised a shortage of this commodity before long, in view of the increasing world consumption. The shortage might become increasingly greater as the years march on, unless replanting is maintained. With an accelerated replanting of rubber plants, as recommended by the Rubber Study Group, Mr. Coghlan felt that more and more natural rubber could be marketed at capital and production costs which should be certainly lower than those of synthetic rubber. Unfortunately, with the present low price of natural rubber and the high incidence of taxation in every form, very few companies are in a position to make adequate provision for replanting.

The short-term outlook for natural rubber is not encouraging. The surplus of production over consumption may be less during the current year than it was in 1953. In 1953, the U.S. stockpile took some 70,000 tons off the market, while, this year, it is estimated that not more than 30,000 tons will be needed to complete the target of 1.25 million tons. If, however, the Iron Curtain countries increase their intake, the situation will be different. Though much optimism is not held on this account, rubber producers have evinced keen interest in the reported negotiations between the U.S.S.R. and Indonesia for the purchase of 100,000 tons by the former. From a long-term view, however, the outlook for natural rubber is encouraging, but even this depends upon the replanting programme. Referring to this, Mr. Coghlan observed thus:

"As I have already indicated, the future for natural rubber is bright, provided our rate of replanting can be maintained. The trend of total rubber consumption is still upward and, according to authoritative estimates, world consumption will be of the order of three million tons by 1960. The objective of all rubber growers is clear and indisputable, increased replanting leading to increased production at cheaper costs and increased attention to quality, classification and marketing. The future holds great possibilities for our industry; let us, therefore, prepare our plans accordingly."

Much the same sentiment was expressed by Sir Eric Miller, Chairman of the Pataling Rubber Estates Ltd., in his address to the shareholders of the Company at their annual general meeting held recently. He said:

"New uses keep being found for this wonderful material which, as I have often said, takes so much of the harshness out of life. Whatever the outlook may be for a few months at a time, there is no doubt whatever that the world will continue to require increasing quantities of rubber year by year, of which natural, with its special properties, will always command a full share."

COFFEE INDUSTRY

The present position of the Indian coffee industry offers a strange spectacle, in that none of the interests concerned, namely, the producer, the consumer and the Government, seems satisfied with it. There is no reconciliation between the needs and interests of the three. There is an accumulation of stocks of the commodity, for which no outlet has been found. There is admittedly a vast scope for increasing the production of coffee, but the producer complains that the price he gets does not provide any incentive for increasing production. The consumer feels that the ruling price of coffee is too high for him to pay. The Government is of opinion that the coffee producer is making enough profit. But it has found itself unable to bring down the prices. It has allowed a limited quantity of coffee to be exported and levied an export duty also on the exports, so that the proceeds can be utilised to subsidise the consumer. But it has not attempted a solution which is at once acceptable to all the three interests concerned.

In the circumstances, the coffee planters' suggestion for referring the question of the cost structure to the Tariff Commission seems a fair one. But this suggestion is not acceptable to the Government, because, according to it, there is no conflict between the consumer and the producer. It has, on the other hand, decided to appoint an omnibus body, called the Plantation Enquiry Committee, to study the problems of the whole plantation industry. It remains to be seen how far the recommendations of this Committee are going to meet the requirements of the coffee industry. Coffee planters have been sparing, in the meantime, no efforts to avail themselves of every possible opportunity to bring home to the Government the "plight" of the industry.

At the annual general meeting of the Mysore Planters' Association held in Chikmagalur early this month, Mr. H. C. Lake, retiring Chairman of the Association, complained against the gradual application of certain restrictive measures and the closing in of the net of Government control on this highly individualistic occupation, the latest of such controls being the Plantation Labour Act which has been enforced from 1st April, 1954. Apart from the taxes which the coffee planter had to pay, he had to forfeit his control entirely over the selling of his produce and of his right to receive the full proceeds of the sale of his crop. Mr. Lake questioned the Government's wisdom in exercising such control over the industry. He urged the Government to consider whether it would not be wiser to encourage more private enterprise and adventure in all spheres and to reward any successful enterprise by allowing the fruits and rewards of hard work and thoughtful planning to remain with the originator for his further use and reinvestment.

The Plantation Enquiry Committee, Mr. Lake hoped, would go into all the details of the plantation industry, its cost of cultivation, home trade and export trade, as also the investment and the return to the grower. No fixation of a price should be attempted lightly, he emphasised, without a very thorough investigation into the needs of the industry.

The visit of the Union Minister for Agriculture, Dr. Punjabrao Deshmukh, to Mysore last week was availed of by the Indian Planters' Association of Mysore to submit a memorandum pleading relief from the present difficulties of coffee planters of the State. The memorandum pleaded for (1) the abolition of the export duty of Rs. 62-8 per cwt., (2) permission for the export of surplus coffee to avoid deterioration in quality and to take advantage of the current high prices in the foreign markets, (3) the appointment of an impartial non-official enquiry committee to consider the various aspects of the coffee industry and its future development, as the present level of prices was unremunerative and did not provide any incentive for investors to increase production, and (4) the postponement of the implementation of the Plantation Labour Act as conditions in the industry had not yet stabilised themselves.

The Association also represented to the Minister that the Union Government's proposal to enact a new Coffee Bill and to introduce a system, whereby the members of the Board would be nominated and not elected by the representatives of the industry, would be a retrograde step, resulting in the Board being run as a department of the Ministry of Commerce and Industry. This would also injure the progress of coffee cultivation. The present Coffee Board, set up under the Coffee Market Expansion Act, it was submitted, had been working satisfactorily and was responsible for the steady development and increase in the production of coffee. It was, therefore, urged that the Minister should see that the Government of India dropped the Coffee Bill and continued with the present Coffee Board.

In his reply, the Minister for Agriculture is reported to have promised (so far as his Ministry was concerned) to afford every possible help for the cultivation of coffee in larger quantities, as it was the intention of the Government of India to promote every kind of crop, not only food crops.

POWER SUPPLY IN MADRAS STATE

STEPS TO MEET SHORTAGE INADEQUATE

ALTHOUGH Madras has the distinction of being a pioneer among the Indian States in regard to the development and distribution of electric power, it is not free from acute power shortage. It is stated that, even in 1955-56, when all the power schemes under execution are expected to be completed, there would still be, other things remaining the same, a shortfall of 35,000 kw. during the irrigation season and 65,000 kw. during the non-irrigation season. If fresh demands —these are steadily increasing—were to be taken into consideration, the deficit would be naturally larger. Unfortunately, the Planning Commission is very slow in attending to the power needs of the South; in fact, it has been very reluctant to give its approval to the schemes coming from Madras. To give an instance, although it gave its consent to the Koyna Valley scheme in Maharashtra, it is still considering the Kundah Hydro-electric scheme, which Madras desires to be included in the revised Plan. Even the efforts of a deputation of the members of the State Legislature to convince Mr. Gulzarilal Nanda, Minister for Irrigation, Power and Planning, of the need for going ahead with the implementation of the project, with a view to speeding up the State's industrial and agricultural development, have borne no fruit. This delegation pointed out that the commencement of work on this scheme would not involve any immediate financial outlay on the part of the Centre, as there was an unutilised part of the resources budgetted for expenditure on power projects. Thus, as against the State's plan for a total expenditure of Rs. 15.64 crores by the end of 1953-54, the actual expenditure incurred is estimated at Rs. 14.46 crores, thereby leaving a balance of Rs. 1.18 crores. Even this argument does not seem to have cut much ice with Mr. Nanda.

The prospects for the inclusion of the Kundah scheme, therefore, appear to be bleak. It is stated that the question of approval of the scheme by the Commission would arise only after the Priorities Committee of the Planning Commission has scrutinised the project, as the major expenditure of the scheme would fall in the second Five-year Plan. No such condition was imposed on Bombay when it wanted permission to go ahead with its Koyna scheme, even though it was far more complicated and costly than the Kundah scheme. Be that as it may, if such a scrutiny were insisted upon, it would involve delay in the approval of the project resulting in the postponement of the execution of the project by a year or two. The execution of even the Periar scheme may be held up, because of the unresolved dispute between Madras and Travancore States on the question of royalty for the use of the Periar waters.

The Periar Hydro-electric scheme is expected to generate 75,000 kw. initially and 100,000 kw. ultimately. The cost of the scheme is estimated at Rs. 6.75 crores at the outset and Rs. 10.47 crores ultimately. The Kundah scheme, recently modified as desired by the Planning Commission, is capable of producing 145,000 kw. initially and 180,000 kw. ultimately. The cost of the project, which is estimated at Rs. 26 crores at the outset, will rise to Rs. 35.44 crores by the time it is completed.

Besides the aforesaid schemes, there is yet another proposal, but it is a very important one in that, if sanctioned and executed, it will bring about an industrial revolution in an area where the people's enthusiasm for starting new ventures is being dampered by lack of power. It is the establishment of a thermal station at Neiville, with an initial capacity of 100,000 kw. and an ultimate capacity of 200,000 kw. The fruition of this scheme depends on the efforts that are being made to develop the large lignite deposits found in that area. The potentialities of these deposits are now well known, but those who are in the know of things say that the work in regard to the exploitation of these mines is proceeding very very slowly. The new Government of Madras, which is being formed as these lines are being written, under the energetic leadership of Mr. Kamraj Nadar, will, it is hoped, take greater interest in this project and urge the Centre to extend the necessary assistance.

So much for the new schemes. As regards the progress of work on existing schemes, the picture is quite encouraging. In fact, some of the schemes, such as the Moyar Hydro-electric scheme, the first stage of extension to the Madras thermal plant, the Madurai thermal scheme and the Papanasam Hydro-electric extension, have been completed adding 72,000 kw. to the power capacity of the State. The third stage of the Pykara Hydro-electric and the second stage of the Madras Thermal Plant extension are expected to be completed soon. In regard to the latter, an operational agreement was signed only a few days back between the U.S. and India, under which assistance of the former country will be obtained for the speedy implementation of the project.

The total installed capacity of the generating plants in Madras State today is 220,000 kw.; the power generated per annum being 707 million units. Some idea of the improvement that has taken place can be had from the fact that the comparable figures in 1946-47 were 104,000 kw. and 298 million units. The connected industrial load, which was 122.500 kw. before independence, is 233,000 kw. today. The irrigation and agricultural load has increased since independence from 40,700 to 93,100 kw. There were 826 rural industries receiving power in 1947; today, their number is 2,038. About 3,000 medium-scale industries, 30 new textile mills and a number of other major industrial units have been set up during the period with the aid of power supplied. The total mileage of high and low tension lines has increased from 4,806 in August 1947 to 9,949 at present. The number of consumers, which was 1.25 lakhs about 6½ years ago, is now 3.40 lakhs. It is significant that these results have been achieved with a total expenditure of just under Rs. 30 crores during the period 1947-48 to 1953-54. Thus, the average expenditure per annum is about Rs. 4.25 crores only. The gross capital expenditure for 1954-55 is Rs. 6.25 crores. But this expenditure, after adjustment of transfers for stores and recoveries such as those for work done by other departments and in respect of service connections for consumers, will leave a net expenditure of Rs. 4.96 crores. All this expansion seems impressive but it is not adequate, considering the power needs of the State.

The Government of Madras has, we are told, ambitious plans for rural electrification. Its targets are extension of power to 250 villages every year and connection of about 3,000 agricultural pump sets annually. The number of villages receiving supply of power at present is about 2,000, as against 843 in 1946-47. Madras is the largest among the States in India to provide electricity to such a large number of villages. The number of agricultural pump sets connected, which on the eve of independence was 5,000, is now as many as 17,000.

NEW AIRCRAFT FUELLING SYSTEM AT AHMEDABAD

Indian Airlines Corporation's Dakota aircraft, bound for Karachi, which passed through Ahmedabad the other day, was fuelled by Burmah-Shell's new system, commonly known as "Hydrant" fuelling. Instead of a large fueller carrying fuel to the vicinity of the aircraft, gasoline is carried in an underground pipeline under pressure by means of a pump installed far away from the apron. The pipeline terminates on the fuelling apron itself in a specially designed sump. When fuel is required a small trolley, which carries the metering equipment, a host reel and micro-filter, is coupled to the hydrant housed in the sump by means of a flexible hose. The other hose which is also carried on the trolley is employed for delivering fuel to the aircraft tanks. This simple system is capable of delivering gasoline to two aircraft simultaneously at an overall speed of 75 gallons per minute per aircraft. It is understood that "Hydrant" fuelling is now recognised the world over as the most modern method of fuelling aircraft.

This is the second system of its kind introduced in India by Burmah-Shell and similar installations are now under construction at several other airfields, including a very large system which will shortly be in commission at Dum Dum airport.

(Concluded from next column)

has, however, a programme for the manufacture of the central or axial electrode by 1956.

The Commission has also to enquire into the availability, quality and price of raw materials required by the industry. The most important raw materials required are bright drawn free cutting mild steel hexagonal bars, rectangular nickel wire of special alloy and chemical composition, manganic strip and free cutting bars. Among other materials required are zinc electro-plating chemicals, cutting and lubricating oils and packing materials, such as paper, cardboard boxes, etc. Most of these materials have to be imported from abroad.

AUTOMOBILE SPARKING PLUG INDUSTRY

CLAIM FOR PROTECTION

THE Tariff Commission has commenced its enquiry into the claim for protection by the automobile sparking plug industry. This is the second in a series of enquiries into the automobile ancillary industries which the Commission has decided to hold in continuation of its enquiry into the automobile industry held last year.

The indigenous producers of sparking plugs have asked for protection in various forms. They include the levy of a protective duty of 94 per cent. *ad valorem*, in addition to other forms of protection and assistance such as grant of subsidy, imposition of ban or restrictions on import of sparking plugs, abolition or refund of import duty on raw materials, finished components, and machinery and equipment used in the manufacture of sparking plugs. Simplification of controls, development of the manufacture of raw materials within the country, patronage by Government departments, assemblers and manufacturers of automobiles, importers and consumers, restriction on manufacture to a few units, assistance for training technicians, etc.

The speech of Mr. M. D. Bhat, Chairman of the Tariff Commission, delivered on 9th April at Bombay, while opening the public enquiry into the industry's claim for protection, discloses that, at the time of the Commission's enquiry into the automobile industry in 1953, three firms, namely, the Motor Industries Co., Ltd., Bangalore, the Auto Accessories (India) Ltd., Bombay, and Simpson & Co., Ltd., Madras had proposed to manufacture sparking plugs in collaboration with foreign firms. Now, the Commission is given to understand that only the former two have taken steps to implement their plans for the manufacture of sparking plugs and that Simpson & Co., Ltd., has suspended its plans. The Motor Industries Co., Ltd., has entered into collaboration with Messrs. Robert Bosch GmbH, Stuttgart, West Germany, for the manufacture of sparking plugs, according to Bosch specifications, while the Auto Accessories (India) Ltd. has reached an understanding with Smith Motor Accessories Ltd., U.K., for the manufacture of K.L.G. sparking plugs. The Motor Industries has already started operations.

The first point to be considered in an enquiry into the claim for protection is the demand for the product concerned. In the case of the item under reference, the estimates of demand vary. The Development Wing of the Ministry of Commerce and Industry has estimated the current demand for all types of sparking plugs used in automobile engines at 1,500,000, of which 150,000 are for original equipment and 1,350,000 for replacement purposes. The Motor Industries have estimated the demand in 1954 and 1955 at 1,200,000, of which 1,020,000 plugs are for 14 mm. size and 180,000 plugs for 18 mm. size. For 1956, they have estimated the demand at 1,300,000 plugs, of which 1,105,000 plugs will be of 14 mm. size. The Auto Accessories Ltd., however, have estimated the demand at 500,000 plugs. The estimates of the Ford Motor Company of India Ltd. are 1,905,000 plugs consisting of 1,800,000 plugs for replacement purposes and 105,000 plugs for original equipment. This Company expects the demand to remain stable at the same level in 1955 and 1956. In view of these conflicting estimates, the Commission, at the outset, has to determine the basis for estimating the demand and then build up the estimates of demand, current and future.

So far as the capacity of the industry is concerned, the Motor Industries have put it at 300,000 plugs for 1954, of which 255,000 are of 14 mm. size and 45,000 plugs of 18 mm. size. The Company proposes to increase its capacity to 1,000,000 plugs by 1956, of which 850,000 will be of 14 mm. size and 150,000 of 18 mm. size. The Auto Industries has put their present capacity at 260,000 plugs per annum.

As regards actual production, the Motor Industries started assembly of sparking plugs on 31st August, 1953 and by 3rd December, 1953, it had assembled 20,000 plugs. The manufacture of sparking plugs has been started only on an experimental basis.

An important question which the Commission has to consider is the manufacture of what is known as the "insulating centre" of the sparking plug. The Motor Industries Ltd. is at present making only the body of the sparking plug along with certain other parts and is importing the vital part, namely, the insulating centre. It

BANGALORE WOOLLEN, COTTON AND SILK MILLS CO., LTD.

MR. CASTELL'S ADDRESS AT SEVENTY-FIRST ANNUAL MEETING

PLEA FOR EARLY SOLUTION OF INTER-STATE SALES TAX PROBLEM

AN earnest plea for an early solution of the problem of inter-State sales tax which has caused so much "misgiving and harassment" following the judgment of the Supreme Court in March, 1953, was made on behalf of all industries, traders and consumers by Mr. R. E. Castell, Chairman of the Bangalore Woollen, Cotton and Silk Mills Company, Ltd., in the course of his speech to the Company's shareholders at their Seventy-first Annual General Meeting held at Bangalore on 27th March, 1954. Till a solution was found, many consumers, he said, faced the prospect of having to pay still more tax on their purchases and assessees had to carry a heavy extra burden of work in keeping sales tax accounts for so many different States.

The following is the full text of Mr. Castell's speech:

"GENTLEMEN,

"The Directors' Report and accounts for the year ended 31st December, 1953, having been sent to you in due time, I propose with your permission to take them as read, but I shall be glad to answer any questions members may wish to ask after concluding my speech.

"Improved trading has enabled your Directors to make proposals resulting in a payment for the year of a total of 25 per cent. dividend to ordinary shareholders and a bonus of three months' basic wages to employees.

"I am sorry to have to state that the quantum of bonus for 1952, which was referred to an industrial tribunal, has not yet been finally settled, but, as the matter is *sub judice*, I must refrain from any comment thereon except to say that a bonus of two months' wages has already been paid to employees in respect of that year.

"Your Directors have mentioned in their report that wages for 1953 were nearly Rs. 11 lakhs more than in 1952. Of this amount about Rs. 9,66,000 was paid in wages and dearness allowance with retrospective effect as a result of references first to an industrial tribunal and later to the Labour Appellate Court. It was fortunate indeed that exceptionally favourable trading results enabled the Company to bear this abnormal addition to expenses and yet make those provisions and payments, the details of which have been placed before you.

"I would mention, however, that the higher rates of wages and dearness allowance will increase the annual wage bill henceforth by about Rs. 6 lakhs.

Good Demand for Cloth

"Although ceiling price controls were discontinued by Government, your Company so regulated its selling prices for cotton goods that they enjoyed a good demand throughout the year. It is true that at times there were signs of a falling off in demand, but owing to careful distribution in the Company's India-wide markets no serious accumulation of stocks resulted.

"It is to be hoped that the newly increased excise duties on cotton cloth will not unduly reduce the purchasing power of the public. The extra sales taxes proposed by some of the States, in particular by Mysore and Madras, will, however, bear heavily on consumers. I hope that, as a result of the many representations which have been made, this extra taxation will not be enforced. It is most essential that medium cloth should be taxed as lightly as possible, as this variety is even more in demand by the masses than is coarse cloth.

"All industries and traders, and consumers too, are eager for an early solution of the problem of inter-State sales tax which has caused so much misgiving and harassment since the judgment of the Supreme Court in March, 1953. In the meantime, many consumers face the prospect of having to pay still more tax on their purchases, and assessees, your own Company, for instance, must carry a heavy extra burden of work in keeping sales tax accounts for so many different States. It also seems very wrong that sales tax generally should have to be paid by an industrial concern on its purchases of raw materials, stores and other essentials, but at present, in India, unlike other countries, no distinction is made for sales tax purposes between the individual consumer, the trader and the manufacturer. It is most desirable that exemption be given to manufacturers from payment of sales tax on their purchases. In saying this, I refer to all industries, including the garment-making industry whose competitiveness and enterprise are now checked by this form of taxation.

Octroi Duty

"There is yet another tax problem now before us and other local textile mills in that the Bangalore Corporation is contemplating imposing an octroi duty on all cotton and wool entering the city limits. We earnestly hope that the Corporation, to whom representations have been made, will decide against the collection of octroi on essential raw materials which would place the local industry at a disadvantage in relation to mills elsewhere in India.

"I may add that our manufacturing costs, and those of other industrial units in this State, are liable to be increased by higher charges for electric power supply. In addition to the demand for higher charges dating from March, 1953, the Mysore Government has now proposed to increase the surcharge on power supply rates from 10 to 20 per cent.

"Lower purchase prices of raw materials have helped towards the successful results of the year, as also have measures for economy in the consumption of stores. With the co-operation of the Manager and his staff, the management will continue vigorously to pursue their efforts towards economy and improved efficiency in all manufacturing processes, seeking by these means to counteract those additions to cost which are beyond the Company's control. The co-operation of labour is equally essential, if the Company is to maintain its ability to compete in Indian and overseas markets.

"The Company has for nearly five years been involved in the processes of adjudication of industrial disputes, but I wish to place on record that it is greatly to the credit of our labour and their leaders, that they have conducted themselves peacefully over a long period, in spite of their differences with the management. May this peace long continue and as one contribution towards the further development of good relations, the management will always be happy to consider any reasonable suggestions from labour for improvement of the present arrangements for the internal settlement of industrial disputes.

Steady Export Trade Maintained

"The export duty on medium cloth was removed in October, 1953, and although an export duty of 10 per cent. still applies to coarse cloth, despite active competition from Japan and other countries, the Company has so far contrived to maintain a steady export trade. For many years it has been the Company's policy to sell direct to overseas markets, and efforts will continue to be made to develop present contacts and to extend the Company's trade to new territories.

"Although demand for the Company's woollen goods was generally satisfactory, keen competition depressed selling prices. If this branch of the Company's activities is to make an appropriate contribution towards successful trading results, it is essential that production costs should be reduced, and this matter continues to receive the special attention of the management. The move of the woollen section to Hebbal is nearly complete, but dyeing operations cannot begin there until an adequate water-supply is available. This we hope will soon be obtained with the help of the Bangalore Corporation.

"'Cotswol,' our well-known Union fabric, has continued to sell well throughout India. Until October, 1953, cloth of this type was subject to an export duty, but now this barrier is removed, the Company is making a concentrated effort to find overseas markets for 'Cotswol' and has already met with some success.

"In the silk section, the Company is making increasing use of raw silk produced within Mysore State. As many of you know, the Company specialises in the manufacture of superior quality silk *saris* and piecegoods, but over the years the fortunes of this particular activity of ours have fluctuated due to keen competition, and it would seem that, at the very best, only a modest profit can be expected.

Tax Liability Determined

"Returning to the accounts, I am sure that all shareholders will welcome the news that the Company has at last been able to determine its total liability for taxation. The surplus provision made in the past, amounting to Rs. 26 lakhs, has been transferred to general reserve, which has been further augmented as a result of the raw material, process and finished stocks being now valued at the lower of cost or market value.

"As the balance-sheet shows, the effective capital of the Company as at 31st December, 1953, amounted to Rs. 2,23,39,431 which is the total of our assets less liabilities as at that date. The Company's issued capital of Rs. 46,50,000 is, therefore, quite inadequate to meet the needs of the Company.

"It is necessary to bear in mind that the capital employed at the end of the year represents a figure far short of the maximum requirements, since at the year-end our stocks of raw materials are usually well below their highest point and additional finance is required, particularly during the early part of the year, for seasonal purchases of our main raw materials.

Bonus Shares to be Issued

"In order to bring the issued capital more into line with the capital employed in the business, your Directors have proposed the issue of two ordinary shares for each such share held and to utilise Rs. 81 lakhs of the general reserve for this purpose.

"The increase in the authorised capital requires the approval of the Government of India, and the necessary application will shortly be made.

"It has been considered prudent to set aside Rs. 4 lakhs from profits as provision for additional depreciation based on replacement costs, and, I am sure, you will agree with the Directors on the importance of building up this reserve in view of the present high replacement costs.

"In the profit and loss account you will notice that the contribution to provident funds for employees is Rs. 1,72,515 more than for 1952. This increase is largely due to the new terms of the Provident Fund for Workpeople which came into force in November, 1952, since when the basis of contribution from employer and employee has been 6¼ per cent. on wages and dearness allowance, as compared with the previous basis of 7½ per cent. on wages only.

"The expenditure on welfare in 1953, at Rs. 1,83,021, was much the same as in the preceding year.

"Year after year, more houses have been added to the village which the Company has established for the benefit of its workpeople. Our building programme for 1953 was held up because of a possible heavy liability arising from a levy which the Mysore Government was proposing to make under the Mysore Labour Housing Act. As this levy has not been imposed, the Company now intends to proceed with the construction of more houses for our workpeople. We also plan to provide various new amenities, in particular, electric lighting and cement flooring for the existing houses. Towards the proposed expenditure your Directors have recommended an allocation of Rs. 1,50,000 which will make up the workpeople's housing fund to nearly Rs. 3,50,000."

HOUSES FOR WORKERS

A call to millowners and industrialists to construct houses for their workers was made by Mr. Morarji Desai, Chief Minister of Bombay, in the course of his address, while declaring open the Bapunagar, an industrial workers' township at Ahmedabad, built by the Bombay Housing Board under the subsidised housing scheme. Evidently, Mr. Morarji must have been provoked by the woefully inadequate housing facilities available to workers in the Ahmedabad mills. Provision of houses (and other amenities), he rightly said, would relieve the sufferings of the workers and help raise output. Mr. Morarji did well also to urge the workers to organise and execute housing schemes themselves with Government assistance, instead of relying entirely on the Government for building houses. Incidentally, it is stated that 6,058 tenements with all amenities will be built at Bapunagar at a cost of Rs. 2.24 crores by 1955.

NATIONAL RAYON CORPORATION LIMITED

SEVENTH ANNUAL GENERAL MEETING

TAX CONCESSIONS TO NEW INDUSTRIES INADEQUATE, SAYS SIR PURSHOTAMDAS

THE hope that the Government of India would continue the realistic policy of allowing imports of rayon yarn only to the extent the country was deficit was expressed by Sir Purshotamdas Thakurdas, K.B.E., C.I.E., Chairman of the National Rayon Corporation Ltd., at the Seventh Annual General Meeting of the Company held in Bombay on 9th April, 1954. The Company's total requirements of rayon yarn were about 40 million lbs. per year which figure, he said, was likely to increase with the growing popularity of art silk fabrics. The Board of Directors was, accordingly, considering a suggestion made to it for working up a programme of expansion and would take such action as might appear to them warranted by considerations of safety. Sir Purshotamdas also pointed out, in the course of his speech, how the tax concessions allowed to new industries were inadequate.

The following is the full text of Sir Purshotamdas's address:

"The seventh Directors' report and audited statement of accounts for the year ended 31st December, 1953, have been in your hands for some time now and, I believe, you will have no objection for my taking them as read.

"Since the accounts show corresponding items for the year 1952, I do not think it necessary to analyse the different items again in this speech excepting for the following few items which require certain explanation. The increase in the amount of Directors' fees and travelling expenses appearing this year, as against the corresponding figure for the year 1952, is due to the change in the method of accounting rather than any actual increase in the expenses. We have been advised by the auditors that expenses incurred by Directors for travelling for business purposes either in India or abroad should be appropriately shown under this heading rather than under the general heading of travelling and conveyance. That is the reason why there is an increase under this account and a corresponding reduction in the figure appearing against the general head of expenses.

"The provision of Rs. 14,902 is for payment of tax, for which the Company will be liable for its non-business income, such as interest on call moneys, transfer fees, etc. The provision made last year was in respect of income on this account for a period of three years whereas the provision made now is only for the year under report and hence the difference. I may, however, repeat here that according to our estimates the Company's profits will not be assessable to any income-tax or corporation tax this year also, on account of the initial, double and multiple shift depreciation allowances allowed to our industry and that the aforesaid provision of tax is only with a view to meet the liability for non-business income which we are advised will not be allowed to be adjusted against the depreciation allowance.

"The item of Rs. 13,084 appearing as loss against sale of assets represents the difference in cost and selling price of two old cars sold during the year without taking into account the amount of depreciation provided so far in respect of those assets.

Production Higher Than Rated Capacity

"Production at the plant continued to be higher than the rated capacity as at last year. You will also have noticed that the stock position of the finished products was quite comfortable as compared to the stock position last year. The import policy followed by the Government in allowing imports only to the extent of the deficit requirements of the country has resulted, as anticipated, in stabilising the prices of yarn and liquidating the overstocked position of yarn in the markets as well as with the Company. It is hoped that the Government will continue this realistic policy hereafter also.

"The Directors have recommended in the Report a provision of Rs. 22,00,000 as reserve for 'deferred taxation.' This provision is essential in the case of new industries like ours so as to equip ourselves to meet the income-tax and corporation tax liabilities in future years which are bound to be heavy once the Company's profits catch up with the large depreciation allowances allowed to new industries in the initial years. In effect, the so-called concessions of higher depreciation allowances allowed to new industries are not a real and substantial relief in the true sense of the term, because the entire scheme works out only to postpone the Company's tax liabilities by a few years. This is bound to be so as long as the amount of depreciation allowed is equal to the original value of the assets to be depreciated.

"Due to these high depreciation allowances, even the concession given to new industries, exempting for a period of five years their profits of 6 per cent. of the employed capital, becomes illusory. For it would be very difficult for any new industry to make profits large enough to wipe away even such depreciation allowances which work out at the end of the first, second, third, fourth and fifth year to an aggregate of 50 per cent., 70 per cent., 85 per cent., 95 per cent. and 100 per cent. of the book value of the assets, respectively. The possibility of any new industry to be able to take the advantage of this benefit is, therefore, very remote, because such benefits are allowed to new industries only for a period of five years after they start operations and are not allowed to be carried forward.

Income-tax Anomaly

"The Government has time and again announced that income upto 6 per cent. of the employed capital in new industries will be free in the hands of the shareholders also. Unfortunately, this intention does not appear to have been adequately reflected in the relevant provisions made in the Indian Income-tax Act. The position of the shareholders in this respect at present is rather obscure and anomalous. We are now advised that a strict interpretation of the Income-tax Act will render the dividends that are being declared, liable for taxation in the hands of the shareholders whereas such would not have been the case had our profits been higher to the extent of providing for all the depreciation and unabsorbed depreciation and also 6 per cent. of the capital employed. Virtually this results in rendering ineffective all the concessions held out by the Government to investors in new industries. The Company is thinking of taking up this matter suitably with the authorities concerned through proper channels.

"The average imports during the past five years have now established that the total requirements of rayon yarn of this country would be about 40 million lbs. per year which figure is likely to increase with the increased popularity of the art silk fabrics and their *per capita* use in India. It has been suggested to us that in these days of planned development, the country may expect us to take this opportunity and work up our programme of expansion, keeping in line with the industrial development of the country as a whole. Your Board is considering over this somewhat ambitious-looking suggestion and will take such action as may appear to them warranted by considerations of safety. The Company has taken in hand construction of a building for housing a duplicate plant whenever the Board orders the necessary machinery.

"The important raw materials used in the manufacture of rayon yarn, as you may be aware, are sulphuric acid, carbon bisulphide, caustic soda and wood-pulp. Out of these raw materials, the Company has been manufacturing sulphuric acid and carbon bisulphide since the beginning. The question of manufacturing caustic soda at the plant itself has been engaging the attention of your Directors for some time past.

"While the turbo-alternator set which has been installed and worked could meet the present requirements of electric power for the additional spinning frames now under erection, the extra power required for the expansion scheme is being negotiated with the Government and the Tata Power Company. We believe that this bottleneck in the matter of supply of sufficient electric power which hampers the expansion of industries will ease considerably by the time the suggested expansion programme is taken in hand and completed.

"The supply of wagons for coal continues to be another headache. Though this matter was straightened out by proper approach to the authorities concerned as and when emergency arose, it would help matters a good deal, if the Government comes to the aid of industries and gives this matter top priority so as to solve this difficulty once and for all.

"The recent announcement by the Central Government to levy an excise duty of one anna on every square yard of art silk fabrics has naturally caused a flutter and heavy depression in the art silk weaving industry. Representations are being made to the Central Government in this connection, which I sincerely hope the Government of India will consider very sympathetically, so that the progress so far made in this connection may not get a setback. I do not wish to dwell at further length on this, but I cannot help feeling that, in trying to encourage industrialisation, they must not kill what is already in existence.

Research Work

"Your plant is now equipped with a modern and up-to-date research laboratory which has been set up in the new premises specially constructed for the purpose. A pilot plant also has been ordered out and is expected at the site by the end of this year. With the establishment of the research laboratory and the pilot plant, the Company will be completely equipped for conducting experiments and researches on the various kinds of pulp and other raw materials. It will also help us considerably to be in line with modern scientific development in the methods of production of rayon yarn and other synthetic fibres.

"The Company has been concentrating on producing only 150 and 120 denier yarns of the bright variety. After the installation of the additional spinning frames it is proposed to manufacture finer deniers, as well as dull yarn which are in great demand in the market.

"The arrangements initiated last year for bulk sales to the premier association of the silk and art silk mills in this country continued during the year under report also.

"You will recall that in the Chairman's speech delivered last year, a reference was made to the role of risk capital in the starting of new industries and a hope was expressed that the sacrifice made by such investors would be amply rewarded in due course of time. I am glad that our expectations in this regard, resulting in the Company being able to declare a maiden dividend on ordinary shares have materialised.

"Before concluding, I would like to express my appreciation of the excellent work done by the workers and the technical and non-technical staff of the Company, but for whose loyalty, sincerity and hard work, it would not have been possible for the Company to achieve the excellent results that they have been able to obtain."

MANCHESTER LETTER

(*Concluded from page 729*)

very sadly neglected in the past 25 years yet they were now being called upon to bear a terrific weight of transport. To this should be added the hold-ups and delays due to bottlenecks and the need for more by-passes and new bridges.

"Approached from the point of view of loss of man hours, the problem is assuming alarming proportions. As an exporting nation we continue to be reminded that we must ensure the real competitiveness of our industry and we are rightly warned of the mounting power of our competitors," it stated. The report added:

"Accepting such responsibility is one thing but being impeded in the vital issue of transport and the speedy movement of finished goods and raw materials is another side to the question. Many of the efforts of trade can so easily be nullified if delays in transport add to costs of production, cause disorganisation to working programmes and generally create a feeling of frustration."

The report agreed that the road improvement schemes put forward for the whole country demanded a large sum of money.

Raw Cotton Imports

Imports into the United Kingdom last week amounted to 26,411 bales. Shipments included 8,157 bales Nigerian, 5,269 bales Egyptian and 4,005 bales American.—*All Rights Reserved.*

WALCHANDNAGAR INDUSTRIES LIMITED

MR. GULABCHAND HIRACHAND'S ADDRESS AT ANNUAL MEETING

SUGAR INDUSTRY STANDS IN NEED OF HIGHER RETURN ON INVESTMENT

IT is not so much for giving higher dividends as for achieving rehabilitation and expansion that the Indian sugar industry stands today in need of a higher return on its investment. This view was forcefully expressed by Mr. Gulabchand Hirachand, Chairman of the Walchandnagar Industries Ltd., in the course of his address at the Forty-sixth Ordinary General Meeting of the Company held at Bombay on Friday, 9th April, 1954. In support of his contention, Mr. Gulabchand pointed out that, during the war years, the sugar industry was rigidly controlled and was allowed a "very limited margin of profit," from which it could not set aside sufficient amounts for rehabilitation and replacement of machinery, which it had to do at the inflated prices of today. He also emphasised the urgency of expanding the industry "considerably" with a view to keeping pace with the rise in the consumption of sugar.

The following is the full text of Mr. Gulabchand's address at the meeting:

"GENTLEMEN,

"From the Directors' Report on the working of your Company and the statement of accounts for the year ended 30th September, 1953, you must have noticed that, though the year under report was not so favourable in the matter of production and recovery as the previous year, the results could be described as fairly satisfactory. As the report and the statement of accounts have been in your hands for some time, I propose to take them as read.

"It was not a favourable year for the industry as a whole. The rains were not satisfactory. In fact, there were famine conditions in many parts of our tract. The position with regard to water-supply deteriorated further during this year and the sugarcane crop everywhere suffered as a result of inadequate water-supply. However, you will be gratified to know that, on the whole, your Company was not affected as adversely as so many other units in the industry, partly because of our earlier precaution to have extra acreage under supplementary lift irrigation. Though the total production during the year went down by about 15 per cent., the net profit, after providing a lakh of rupees more for depreciation than in the previous year, was reduced only by a little less than 10 per cent.

Sugar Production

"You would naturally expect me to say something about the working of the current season which is about to end so far as your factory is concerned. You will be gratified to know that there is every hope of crossing the two-lakh bags limit for sugar production this year. Though the supply of water from the canals for the cane which came for crushing during this season was not as good as one would wish, there was definitely some improvement, because of the more favourable monsoon, and you will find the result reflected in the report for the ensuing year.

"The prices realised this year have so far been satisfactory. However, as nearly half of the production still remains to be sold and as the Government proposes to requisition larger quantities from the production this year, the overall result may not be as encouraging as you might be led to expect from the rise in production.

"And this brings me to an important aspect of this industry. For some time past, you must have noticed an agitation against the comparatively high price of sugar prevailing in the market. In the first place, this price looks higher in comparison to the price of sugarcane, which was reduced officially at the beginning of the season. This lower price which was fixed by the Government was rather unreal in comparison to the market conditions. This became patent immediately the crushing season started and many factories had to purchase sugarcane at prices higher than those fixed by the Government. In any case, the lower price of sugarcane fixed by the Government did not in any way benefit concerns like yours which grow their own cane. By the time the prices were reduced, the cane which was to be crushed during this season was ripe for crushing and the expenses that had to be incurred for raising this cane had already been incurred. These expenses for cultivation were in no way lower for concerns similar to yours. The price of sugar cannot, therefore, be said to be high, so far as this section of the industry is concerned.

"But, apart from this consideration, one has to bear in mind that the sugar industry as a whole has been lucky in having a good margin only during recent years. During the initial stages, the industry had to struggle hard to establish itself, even though it was protected. Later, during the war years, it was rigidly controlled and was allowed a very limited margin of profit, from which it could not set aside sufficient amounts for rehabilitation and replacement of machinery, which it has to do at the inflated prices of today. The industry needs to be considerably expanded, because the consumption of sugar in the country has increased and, for this also, finance is not easily available. The industry, therefore, stands in need of a higher return on its investment, not so much for giving higher dividends as for the purposes of rehabilitation and expansion.

A New Menace

"I do not propose, on this occasion, to exhaust your patience by cataloguing all our grievances. The tax burden continues to be heavy and threatens to be heavier. The demands of workers, backed up by political considerations, are difficult to resist. Expenditure on schemes for welfare, which have a tendency to run far ahead of the improvement in the general economic progress of the country and the rate of production, has to be stepped up under official pressure year after year. All these things are known to you. But what I want to bring to your notice is a new menace, which threatens not merely the economic position of the industry in Maharashtra, but to undermine that confidence in the sanctity of contract, which is the foundation of all economic activities.

"You must have seen from the report that the area of land taken on lease by your Company comes to as much as 10,515 acres. The whole of this land was taken on long leases which are still in operation and will be so for some years to come. The industry was planned and established on the basis of these rents which it was to pay for a period of 30 years. Because of the comparatively higher margin obtained during recent years, an agitation has been going on for either terminating these leases or to increase the rents fixed substantially. Soon after our popular Government came into power, its attention was drawn to this agitation and an enquiry was instituted to ascertain if the rents paid by the factories were on the whole fair or not. It came out, as a result of this enquiry, that the rents were not only fair but generous even by the standards of today.

"The prices of agricultural products were at their peak at that time. Since then, they have gone down. The price of land is nowhere near what it was three to five years ago. In fact, nothing has happened since this enquiry which would affect the recommendation of the Committee which made it. We were, therefore, painfully surprised the other day when the Revenue Minister was reported to have announced in the Assembly that legislation to secure fair rents for the lands leased to sugar factories by small landholders will be introduced soon. All I would say about this at present is that these were legal contracts freely entered into and that tampering with them might create a situation fraught with danger for every form of economic activity, including commerce, industry, insurance, banking, shipping, etc. Let us hope that the Government would examine this aspect of whatever action they propose to take with regard to the question of these leases.

Distillery

"You would expect me to say a few words about the distillery which forms the most important subsidiary activity, apart from cane cultivation and manufacture of sugar of your Company. You will be gratified to know that the production of rectified spirit during the year under report broke all previous records. Against 259,518 gallons of spirit produced in the previous year, your Company was able not only to produce but to market 322,218 gallons during the year under report. You will be further gratified to know that, even during the current season, the work of the distillery has been very satisfactory. In this connection, I have also to inform you that the question with regard to renewing the licence of your distillery on mutually agreeable terms has been practically settled after protracted negotiations. It would not be out of place to record here that, both with regard to the negotiations for the renewal of the agreement and also with regard to the difficulties experienced in the day-to-day working, the Ministry and the Department have been consistently sympathetic and helpful.

"I recall with pleasure that some of you were good enough to evince more active interest in the working of your Company at Walchandnagar by visiting it. As you are aware, a representative group of shareholders sacrificed their valuable time and undertook the discomforts of a journey during the hot weather to pay a visit to the factory in April, 1952, and to see for themselves how the numerous activities carried on there were faring. I can assure you that this display of interest on your part had given both your Directors and the workers at the factory great encouragement. We were hoping that more shareholders would volunteer for such a visit during the year under report and we were dissatisfied when no such desire was expressed. However, I hope that some of you will make it convenient next cold weather, when the factory restarts, to come to Walchandnagar and help us with your suggestions.

"In the meantime, you would be gratified to know that a party of important State legislators, including the Deputy Speaker of the Assembly, Mr. S. R. Kanthi, paid your Company the compliment of visiting the factory and the plantation and saw all the activities going on there, as also the conditions under which thousands of workers live. I had a letter from the leader of the party expressing their appreciation of all that they saw at Walchandnagar, which was also embodied in one or two of his valued contributions to the Press.

"Before I conclude, I should like to bring to your notice the good work done by the staff of your Company, both at the head office and at Walchandnagar, which is mainly responsible for the good results. I hope you will agree with me that we should put on record our appreciation of the manner in which they have discharged their responsibility and shouldered the work, which, for various reasons, is getting more and more difficult and complicated from year to year."

FUTURES TRADING IN SUGAR

The Government of India has decided to withdraw, with immediate effect, the permission given to sugar mills to enter into agreements for forward sales of sugar. Hereafter, sales can be effected only against specific release orders issued by the Central Government. Announcing this decision on the 10th inst., the Union Food and Agriculture Ministry said: "The Government of India is informed that an important reason for the recent increase in sugar prices is futures trading in sugar resorted to by certain speculators in Uttar Pradesh, Saurashtra and other places. The Government is also considering, *inter alia*, the feasibility of issuing directives to mills to make sales only to parties nominated by Government, so that distribution can be effected through reliable channels."

The opening stock of sugar with factories in India on 16th February, 1954, was 533,000 tons, as against 802,000 tons on the corresponding date of the previous season, but arrivals of foreign sugar up to 28th February, 1954, aggregated 248,000 tons. The production of sugar in the country and arrivals of foreign sugar during the fortnight ended 28th February, 1954, were 112,000 tons and 7,000 tons, respectively. Out of the stock with the mills, 32,000 tons were despatched during the fortnight, as against 74,000 tons during the corresponding period of last year. The closing stock with the factories on 28th February was 593,000 tons, as against 865,000 tons on the same date last year.

The total production of sugar for the season 1953-54, that is, from 1st November, 1953, to 28th February, 1954, was 794,000 tons, as against 859,000 tons during the corresponding period of the previous season. The total quantity despatched was 396,000 tons, as against 480,000 tons.

TEXTILE INDUSTRY AND GOVERNMENTS' LABOUR POLICIES

LACK OF UNIFORMITY IN LEGISLATION

ASPECTS relating to labour and labour legislation figured prominently in the address of Mr. Vithal N. Chandavarkar, the incoming Chairman of the Millowners' Association, Bombay, at the annual meeting of the Association held on Monday last. This is not surprising, considering the disquieting effects of the lack of uniformity in labour legislation affecting, the cotton mills, in particular, and industry, in general. The concurrent powers of legislation enjoyed by the Union and State Governments in labour matters, Mr. Chandavarkar said, had produced, very often, undesirable results. "The State Governments," to quote him, "are inclined to run amuck, with the result that matters have been made very involved and practically unworkable."

That this view is not at all exaggerated will be evident from the instance, cited by Mr. Chandavarkar himself, of the recent Industrial Disputes (Amendment) Act, seeking to provide compensation for lay-off and retrenchment, passed by the Centre *vis-a-vis* the provisions of the Bombay Industrial Relations Act. The Bombay Act covers all matters relating to industrial disputes, including provision for conciliation, investigation, enquiry, adjudication, etc. The Central Act seeks to withdraw the particular issue relating to compensation for lay-off and retrenchment from the provisions of the Bombay Act. The result is that questions such as quantum of compensation to be given for lay-off and/or retrenchment are brought within the purview of the Central legislation, while questions such as the circumstances in which a factory is sought to be closed down, or is closed down, will still remain within the jurisdiction of the State law, which means that the State Government will be entitled to enquire into such closure. All this is, as Mr. Chandavarkar very appropriately remarked, "an extremely unsatisfactory position, for, though compensation is paid, there is no finality in the whole thing."

Financial Resources Insufficient

A reference to this subject was made by the retiring Chairman Mr. Neville N. Wadia, also. Pointing out how unjustified the Government was in imposing upon employers the burden of relief to retrenched workers, Mr. Wadia strikingly observed:

"When stocks of cloth mounted beyond the financial resources of some mills last September, they put up notices of closure. Due to the general unemployment position and the deterrent effect which these closures would have caused, the Government of India quickly issued an ordinance and later passed an Act compelling industries, which closed or laid-off workers, to pay them benefits on a large scale. It is, indeed, unfortunate that careful calculations were not made as to the likely effect of this Act upon industry. I have received a statement from one centre of the industry, which clearly shows that not a single mill in that area could afford to close without going into voluntary liquidation. Mills themselves have not got sufficient finance to pay compensation at the scale laid down in the Act. While it may force them to go on working until they come to a standstill for want of finance, the situation then would be far worse than it is now, and one may well ask: 'Is it right that the money which a shareholder has invested as capital in the mill industry should be used for the payment of compensation to workers?' It is as well to remember that there are well over 100,000 shareholders, who are the real owners of the mills in India."

Equally unjustified is the recent modification of the Bombay Industrial Relations Act, under which an employer, who desires to experiment in rationalised methods of work, should follow the procedure laid down therein for giving notice of change, followed by conciliation, arbitration, etc. Hitherto, these formalities were absent, except when an employer wanted to adopt new methods on a permanent footing. Mr. Chandavarkar characterised the application of the regular B.I.R. Act procedure even to experimental measures as "a retrograde step." He said: "As it is, due to the opposition of workers, any progress in the direction of rationalisation is extremely difficult, and the amendment makes things more difficult by bringing even experimentation within the scope of the Act requiring notice of change, etc."

Sales Tax

Mr. Chandavarkar had a few interesting observations to make on the Supreme Court's interpretation of Article 286 of the Constitution. The interpretation, he said, had given rise to a very confused state of affairs in regard to sales tax. For any business concern, it is more than enough to have to deal with the sales tax of its own State, and, for the matter of that, the scheme of things in the new two-point sales tax introduced in the Bombay State "is still a jigsaw puzzle to many of us." When that is the case, Mr. Chandavarkar asked: "How can any business concern be expected to study and understand the Sales Tax Acts of about 28 States in India, to keep in touch with the amendments made from time to time, and to submit to the assessments made by the authorities of those States?" This is a very pertinent question. Indeed, it is, as Mr. Chandavarkar rightly averred, a pity that this state of affairs should have arisen from a section of the Constitution which was really intended to facilitate free inter-State trade movement. He did well to urge the Central Government to examine the issue very carefully and set matters right at a very early date.

Industries (Development and Regulation) Act

The incoming Chairman of the Millowners' Association did well also to deal with the practical difficulties which the mills encountered in regard to the working of the Industries (Development and Regulation) Act. Under the provisions of the Act, it will be recalled, the mills cannot introduce any new trade mark or trade number for their products, unless they have previously obtained a Government licence. A change in the specification of cloth, however minor it may be, also requires a licence from the Government and payment of Rs. 50 by way of licence fee. Commenting on this, Mr. Chandavarkar observed:

"The use of dealers' numbers is a common feature in the trade, as also minor changes in specifications to suit the requirements of particular markets. If, in all these cases, one had to fill in a form, remit Rs. 50 and await a licence from Government, then, business would almost come to a standstill, as the Government of India would be inundated with applications which, if our past experience were any criterion, would pile up, with the result that the stamping and packing of our goods would be held up."

Few will dispute the correctness of this view, as also the views on the restriction that no industrial undertaking can effect any substantial expansion without securing a licence. Referring to this aspect, he remarked:

"Substantial expansion means an expansion which substantially increases the productive capacity of an undertaking, or which is of such a nature as to amount virtually to a new industrial undertaking, but does not include any such expansion as is normal to the undertaking. In a recent case, I understand, the installation of a printing plant in a mill has been held to amount to a substantial expansion. As you all know, the addition of a printing plant does not increase the productive capacity even by a yard of cloth, and it is surprising that the addition of a printing plant should be regarded by Government as a substantial expansion, requiring a fresh licence. The position was brought to the notice of Government when the Bill was originally under discussion in Parliament, and it was hoped that due consideration would be given to practical difficulties experienced by manufacturers. In this, we were disappointed, for, in a communication we recently received from Government, they adhered to their original interpretation of the Act. Appropriate representations have been made, and we fervently hope that Government would appreciate our difficulties and amend the law accordingly."

Research

Another important aspect of the cotton mill industry to which Mr. Chandavarkar made a special reference related to application of fundamental research to problems of industry. In this connection, he alluded to the establishment of the proposed Textile Research Association in Bombay and revealed that the Association would be registered on the 19th inst. The financial basis of the scheme is that 50 per cent. of both capital and recurring expenditure will be received from the Cotton Textiles Fund Committee. There will, however, be a ceiling limit of Rs. 5 lakhs to the help to be received from Government sources, which means that the mills will have to limit the total expenditure to Rs. 10 lakhs per annum, the Research Association contributing Rs. 5 lakhs. The three "immediate objectives" of the Association are (1) to provide scientific information on the processes of the industry, its raw material and products, (2) to help those firms in the industry in need of such assistance in the application of existing scientific knowledge to their own particular problems, and (3) to develop improvements in processes, processing machinery and products.

The fulfilment of all these objectives entails quite a large expenditure—non-recurring and recurring. Nevertheless, it would be possible to put the available financial resources to best advantage if duplication in research were avoided. Reassuring, in this connection, is Mr. Chandavarkar's statement that, "research being an expensive necessity, we are seeking to cut down our recurring expenditure by co-ordinating our activities with other institutions which are engaged in the same field."

CLOTH AND YARN EXPORTS

In a communication addressed to the Joint Chief Controller of Exports, Bombay, the All-India Exporters' Association has put forward a plea for the extension of the period of free licensing of non-priced marked cloth packed for domestic consumption for shipment beyond 31st March, 1954. The plea is based on the ground that many exporters of cloth had purchased and cleared goods before 31st March under A.R.1 and A.R.4 Forms. These have been stored in godowns awaiting shipment. In some cases, it is stated, goods had been sent for processing which were not ready in the processed state for shipment within the time limit. Further, it is argued that the difficulties in cases where goods have been purchased and cleared from upcountry mills would be aggravated, as there might be marked delays in transit before the goods reach the Port of Bombay for shipment.

In another communication, the Association has urged the extension of time limit for yarn shipment in certain "hard" cases, wherein a continued strike for seven weeks in a supplying mill upset the whole delivery schedule and handicapped shipments from being effected in time. It has also pleaded for extension in cases where yarn shipments could not be effected within the prescribed time limit due to late arrival of the steamer, though relative shipping bills had been passed and goods were lying in the docks.

IMPORT OF ART SILK YARN

Under the import licensing arrangements for the current half-year, licence-holders are not allowed to utilise more than 25 per cent. and 5 per cent., respectively, of the face value of their licences for the import of 120 denier and 150 denier art silk yarn in bright finishes. The Joint-Chief Controller of Imports and Exports, Calcutta, has now announced that these restrictions do not apply to imports of acetate, bemberg and other non-viscose yarn of 120 and 150 deniers. The holders of valid licences for import of art silk yarn are required to produce before the licensing authorities concerned the licences granted to them for the purpose of endorsement.

Hyderabad State Bank

Constituted under the Hyderabad State Bank Act with Liability of Members Limited.

NEW PUBLICATIONS

In the Shadow of the Mahatma. By G. D. Birla. Publishers : Orient Longmans Ltd., Bombay. Price : Rs. 5-8.

ON reading this book, one feels like stumbling, by sheer luck or accident, on a gold mine with layer upon layer of rich ore. To begin with, the period covered by this personal memoir is one of the most eventful and rich in human and political interest in the history of India. And those who are alive when history is being made are the people who are possibly the most ignorant about essential details. The broad events, leading up to the happy termination of the struggle for independence in 1947, may be a matter of common knowledge. But what lends significance and meaning to these major events is an intimate knowledge of the background and still more the warmth and intimacy of personal participation in the tangled web of motives, tones and undertones. The author of this book had a vantage point from which to view this march of history; he was, in a sense, detached enough to interpret it more objectively than those more emotionally involved; and, what is more helpful than all the rest, he had the rare gift of being able to see the trees as well as the wood at the same time.

At first, one is surprised that Mr. Birla should have chosen the most difficult of literary forms and techniques, for this by no means easy work. To try to build up a complete and comprehensive picture from a collection of stray letters, addressed to and written by a number of people, is fraught with the deadly risk of turning out something, which is not merely syncopated but lacking the breath of life. A clumsy hand would have killed the spirit even before the book took some shape. But, whether by accident or design, what has emerged, in spite of quotation after long quotation, is like a delightful mountain stream, winding its way now lightly, at times turbulently and on occasions even tempestuously, through awesome gorges, undulating valleys and severely gaunt or smilingly fertile plains, till it empties itself with a final rush into the ocean of eternity, with the demise of Gandhiji. One must confess, unaccountable though it is, that Mr. Birla has a literary artist's touch, which plays both with lights and shadows, as well as speed and rhythm, altering these according as his mood changes from gay to grave and creating an illusion that these lights and shadows, movement and rhythm are actually in the events which he is recording. But for this skilful handling, this book might well have resembled a huge but uneven heap of rubble.

For those who need more solid fare, there is plenty here. It is inevitable that, in attempting a work of this nature, the "I" should intrude pretty often. But these frequent appearances of the ego are not laboured. The text has not been tortured to force its appearance, nor is there a deliberate display of vanity, though it does peep through, now and then, in a rather naive and easily forgivable manner. Perhaps, what saved the author from degenerating into a rank egoist was the fact that he lived and had his being in two, possibly three, worlds, Wardha, Viceroy's House-cum-Whitehall, and business, which gave him a balance, each one correcting the exaggerations and idiosyncrasies of the other two.

Looking back even from this short distance, some of the episodes, which appeared then as momentous, have shrunk in size. On the other hand, Mr. Birla has been able to throw new light on the popular versions of certain events, which have perplexed many. In the interplay of powerful personalities and in cases of conflicts and clashes of strong wills, it is the personal angle and the filling in of obvious gaps which illuminate the whole scene and provide a key to the unravelling of many a mystery. The real value, apart from the emotional interest which it is bound to excite in the minds of Indian readers, the so to say historical value of this book lies, as pointed out by the President in his foreword, in the authentic record it provides for future historians. The bare bones of events, unexplained by many of these revealing letters and the key which the author provides for their proper interpretation and appreciation, might have created a twisted and, perhaps, a distorted picture for those who will follow us a hundred years hence. There will be no danger of such an ugly possibility of a misshapen evaluation of India's struggle for independence or of the contribution of many of the outstanding associates of Gandhiji in India's renaissance. This is the signal service which Mr. Birla has rendered to history. His book is by no means an epic, but he has rendered the birth of an epic possible at some distant date. The service is all the greater, because it has come from a business man and a much misunderstood and often misjudged business man at that.—T. M. DESAI.

Census of India Paper No. 1. 1954—Languages—1951 Census. Released by the Office of the Registrar-General of India. Published by the Manager of Publications, Government of India, New Delhi. Price : Rs. 2-8.

This Paper is a bulky publication exceeding 700 pages which gives detailed figures of population, classified according to the 15 languages specified in the Constitution. In addition, statistics relating to 720 minor dialects, some of which such as *Agrawali, Ambhani* and *Bazari* are spoken by only one person in the country, are also classified in this brochure. The total number of speakers of all these various dialects does not exceed 3 million. About 63 foreign languages returned as being the mother-tongue of persons enumerated in India at the 1951 Census are arranged alphabetically in this brochure.

According to the Registrar-General of India, a large number of languages, as well as dialects which are either well recognised or purely local dialects, has been returned as mother-tongue at the Census. In the earlier Censuses, it was the practice to attempt an affiliation of dialects to the parent languages and give the figures only for the main languages in the tables. Even in the exhibition of figures in the tables, a scheme of classification of the languages was adopted.

There have been controversies in the past about particular names whether they stood for separate languages or for dialects of some other languages. In view of these, it was decided that the Census of India should not be committed to the resolution of any controversy in such matters, and that the name given by the citizen to his own mother-tongue should be accepted as such and the returns with identical names aggregated. In the main, this rule has been followed in most States. In Bihar, Hyderabad, Madhya Bharat and Rajasthan, Census Superintendents have grouped certain names of languages and dialects with what they regarded were clearly their parent languages. The names thus grouped together are furnished separately in the fly-leaf or in the table itself. From some other States, as, for example, Uttar Pradesh, West Bengal, Vindhya Pradesh and Mysore, it is reported that certain local dialects which can be obviously identified with particular languages have been combined with that language. Although the names have not been given, it is clear in the context that the numbers involved must be quite small.

The tables thus compiled for each State, with details by districts, are printed as Part III of the Paper. They provide data relating to bilingualism, in addition to mother-tongue data. Notes explaining and commenting on the significance of the figures in these tables have been prepared by State Census Superintendents and they are printed as Part II of the Paper.

Of the five tables given in this publication, the first table gives population figures for every language specified in the Constitution. As the language returns of the Punjab, P.E.P.S.U., Delhi, Himachal Pradesh and Bilaspur States were vitiated by controversy, the returns relating to the languages involved in the controversy have been lumped together. These comprise all returns purporting to be *Hindi, Urdu, Hindustani* or *Punjabi*. Hence no all-India total has been specified for persons who returned the national language—Hindi—as their mother-tongue. The second table gives figures for 23 languages, the names of which are distinguished from others by two facts: first, they are known to be spoken as the mother-tongue, by the members of scheduled tribes as specified in the Constitution (Scheduled Tribes) Order, 1950; secondly, the number of speakers of the language (or dialect) exceeds 100,000. The names of 24 other Indian languages (or dialects) with speakers numbering 100,000 and over have been given in the third table.

The unclassified population in East India consists of 293,649 persons in West Bengal, 470 persons in Bihar and 399 persons in Assam. It is reported that these returns relate to languages spoken by persons known to be members of tribes or tribal communities, but whose mother-tongue could not be identified. The unclassified returns of South India relate entirely to Travancore-Cochin. In that State, language details were not extracted for persons who speak languages other than Malayalam, Tamil, Hindi, Telugu, Konkani, Kannada, Gujarati and Marathi. In North-West India, the enumeration record of 268,602 persons in the Punjab was destroyed by a fire that broke out in the Jullundur Tabulation Office. Consequently, language data for these persons are not available.

The appendix at the end of the all-India tables gives a statement showing for every district in a State the main language with the percentage of speakers to the total population. It also shows language or languages (if any) whose speakers number 10 per cent. or more of the total population of the district. In such cases also, the percentage of speakers of those languages is furnished.

The Co-operative Movement in India (Third Edition). By Dr. Eleanor M. Hough. Published by Geoffrey Cumberlege, Oxford University Press, Mercantile Buildings, Lal Bazar, Calcutta 1. Price : Rs. 15.

This is the third revised and enlarged edition of the publication, the first edition of which was brought out in 1932 and the second edition in 1950. The third edition contains a survey of the progress in the field of co-operative movement in India in the past few decades. The utility of the survey is particularly enhanced by the inclusion of an excellent review of the recent developments in the co-operative movement by Mr. K. Madhava Das, an officer of the Reserve Bank of India. This has brought the overall picture of the co-operative movement "as nearly up-to-date as the available data permit."

Considering the growing importance that is being attached to the co-operative movement in India, Dr. Hough, the author, has, indeed, done well to emphasise, in the preface, that co-operation on the Indian sub-continent has not worked the miracle for which its earlier enthusiastic advocates had hoped. Dr. Hough analyses the reasons for such a state of affairs against the background of conditions in undivided India, most of which persist even today. Among these, special attention has been drawn to some of the basic weaknesses of the co-operative movement, such, for instance, as lack of spontaneity and inadequate education in co-operative principles. She sounds a note of warning against the trend towards coercion and away from the co-operative ideal. Significantly enough, she remarks: "It is, to say the least, inconsistent and futile to push forward co-operative expansion regardless of principles, because economic prosperity is recognised to be so necessary as a bulwark against Communism, while, at the same time, welcoming the Communist ideology into the fortress by introducing the principle of compulsion into co-operative effort."

There is considerable force in these observations. Those who are in charge of promoting the co-operative movement will do well to take due notice of them and examine how the movement can, as Dr. Hough has very aptly put it, overcome adverse external conditions and internal weaknesses, "avoiding the repetition of past errors and consolidating and augmenting gains."

Digest of Workmen's Compensation Cases. By P. S. Bakhle and V. B. Kher. Available from V. B. Kher, c/o Messrs. Manilal Kher, Ambalal & Co., Solicitors, Jehangir Wadia Building, 51, Mahatma Gandhi Road, Fort, Bombay. Price: Rs. 15.

It is now nearly 30 years since the Workmen's Compensation Act came into operation. Since then, a large volume of case law has grown up under this Act. The present volume attempts to collect all India case law on this subject. Perhaps, this is the first of its kind produced so far. An important feature of the book is that it includes even unreported cases. This feature, among others, as Mr. Shantilal Shah, Bombay's Labour Minister, has pointed out in his foreword, adds to the utility of the book.

It may, however, be asked whether, after the coming into operation of the Employees' State Insurance Act, 1948, the Workmen's Compensation Act will not lose its importance. Adverting to this question, the authors point out in their preface that the Employees' State Insurance Act, which provides for a triple cover of maternity, sickness and disablement injury benefits, applies to factories only. The workmen's Compensation Act will, therefore, continue to be applicable to establishments other than factories. Further, they observe that "the Employees' State Insurance Act does not repeal the Workmen's Compensation Act. On the other hand, it relies upon the Workmen's Compensation Act to determine the particular circumstances in which the benefit will be payable to disablement injury."

MR. T. R. A. PAI ON MUTUAL INSURERS' PROBLEMS

COMPETITION FROM STATE INSURANCE DEPARTMENTS DEPLORED

MUTUAL insurers in India are naturally jubilant over the reported decision of the Oriental Government Security Life Assurance Company, Ltd., the leading Indian proprietory insurer, to mutualise itself, for, this means a great accession of strength to their ranks. Another company whose scheme of mutualisation has already been approved by the Government is the Prithvi Insurance Company, to which a reference is made separately on this page. Naturally enough, Mr. T. R. A. Pai, President of the Association of Mutual Life Offices in India, welcomed, in the course of his address at the recent annual meeting of the Association, the trend towards mutualisation, and looked forward to the day when the Association "can count very many of the present-day proprietory insurers on its roll as mutual insurers."

Mr. Pai referred briefly to the mutual insurers' case for tax relief. This case, as readers of *Commerce* are no doubt aware, is based on the ground that, since mutual insurers are in no way different from co-operative insurers, they must be treated, for purposes of taxation, on a par with co-operative insurance offices. Mr. Pai stated that the Association had already submitted its memorandum to the Taxation Enquiry Commission and also incorporated therein the latest decision of the Supreme Court of Canada which conceded the mutual insurers' case for tax relief. He said: "In brief, our arguments conveyed to the Taxation Enquiry Commission the idea that both mutual insurers and co-operative insurers belong to and carry on their main business with their respective members and, therefore, mutual insurers too should be given the same exemption from income-tax as co-operative insurers."

State Insurance Departments

Yet another question which figured prominently in Mr. Pai's address was the competition which private insurers were compelled to face from the insurance departments run by the Union and State Governments. He said that it was "really deplorable" that, at a time when Indian insurers were facing very keen competition from foreign insurers, the State and Central Governments were adding to the difficulties of Indian insurers by sponsoring separate insurance organisations of their own. He pointed out that Government-sponsored insurance had failed in the U.S. and the U.K. He added:

"If the Governments of such highly advanced and insurance-minded countries like the U.S.A. and the U.K. have failed in their attempts to popularise State insurance, in spite of its being cheaper than private insurance, how can the Governments of a comparatively less insurance-minded country, like India and its States, popularise State insurance? In short, I would like to say that the earlier the Government authorities close down their departments for securing insurance business the better for them. Experimenting on and subsidising such schemes at the expense of the taxpayer is not only going to be a strain on the State revenues but also contributing to the growth of unemployment by depriving regular insurance agents of their dues and jobs. Besides, the attempt of the Governments to popularise their insurance schemes, which are slightly cheaper, simply spoils the morale of the Indian insurance market instead of increasing the business of their insurance departments to any considerable extent. Out of their total life insurance and other insurance funds of Rs. 205 crores as on 31st December, 1951, Indian insurers have invested about Rs. 122 crores in Indian Government securities alone, about Rs. 1.61 crores in the securities of Part B States and in all about Rs. 141 crores in Government and approved securities. In such circumstances, it is the duty of these Governments to stand by their indigenous insurance companies and help them in all ways and not to do anything detrimental to their progress and expansion."

Mr. Pai is unfortunately not quite convincing on this issue. While it is true that it is unnecessary for the State to enter the field of insurance, he cannot contend that the Government-sponsored insurance is bound to fail and, at the same time, express concern over the competition which that insurance offers. He is, of course, entitled to protest against the Government insurance schemes being subsidised from public revenues. Here, the protest is against the principle of making the taxpayer pay for the apparent cheapness of Government insurance. He would have done well to emphasise this aspect of State Insurance Departments instead of merely asking the Government to close down its insurance services. Further, this demand cannot carry much conviction to the public, unless private enterprise in the field of insurance is ready to prove that it can cater to the insurance needs of the common man. In the U.K. and the U.S., his needs are being effectively met by provident fund societies. There are no such societies worth the name in this country. Even the one society that was in existence under the auspices of a leading life office has actually closed down. The latter could have utilised a part of its vast resources to carry the message of insurance through its provident fund company to industrial workers and farmers, proving thereby that private enterprise could provide cover not only to the well-to-do sections of the society but also to people of small means.

Selection of Agents

In other words, there are two ways of fighting Government-sponsored insurance. In the first place, the Government must be compelled to work its insurance department on commercial lines. This would take away the advantage which these departments now enjoy over their commercial rivals. Secondly, the private insurers must aim at giving better service to the policy-holders than what the Government-sponsored Insurance Departments can offer. From this point of view, Mr. Pai's emphasis on the proper selection of insurance agents is entirely correct. He said:

"Selection of insurance agents is an important aspect of our business. The better the selection, the better will be the business and the morale of the insurance world as such. It is also likely that the total annual output of Indian insurers will go up, if care is taken by them to select only quality salesmen. As selection standards are raised, the double purpose of building up public goodwill and of removing the ill-will caused by the less competent agents in the past, will be served very well."

It is to be hoped that the question of proper selection of agents, and also the question of their promotion to positions of importance will receive more attention from insurance managements than it has apparently received so far. It would appear that the idea of evolving an aptitude test for insurance agents has made much headway in the programme of the Indian Life Assurance Offices Association. The future of Indian insurance, especially that of private insurers, will depend on how carefully the agents are chosen and how adequately they are trained, encouraged and rewarded.

PROVISION FOR RETIREMENT

Insurers in the U.K. have welcomed the recommendations of the Millard Tucker Committee's Report on the Taxation Treatment of Provisions for Retirement. Mr. G. P. S. Macpherson, Chairman of the Standard Life Assurance Company, Edinburgh, for instance, hailed the Report as the "outstanding event relating to life assurance business" in the U.K. The Committee, which sat under the chairmanship of Mr. Millard Tucker, was appointed in 1950 to enquire whether additional tax relief should be given to persons engaged in a profession or business on their own account, or in a partnership, to help to provide for retirement and dependents. In the U.K., unlike in this country, old age pensions, on a modest scale, are given by the State, while many employers operate pension schemes for their employees. These pension schemes are the result of the joint endeavours of the employers and employees to provide a pension for the workers after their retirement.

The Committee was asked to enquire into what special tax reliefs were necessary in order to help men in different walks of life to provide adequately for their pensions. Contributions to approved trust fund pension schemes, as the law now stands in the U.K., qualify either for total or partial exemption from income-tax. Such schemes, it is now estimated, cover nearly six million persons. No tax relief is, however, available for persons whose employers do not operate a pension scheme for the workers. Nor is any such relief available for the so-called "self-employed" workers, such as writers, artists, shopkeepers and certain types of directors. These classes of persons are not allowed to claim relief from income-tax for their contributions to individual pension schemes. The Committee's main recommendation seeks to abolish this anomaly.

The essence of the Committee's recommendation is that a "self-employed" person should be allowed full relief from income-tax and surtax on premiums paid to a trust fund or an insurance company to secure a life annuity to begin when he reaches 65, or any later age he may chose upto 70, with ages 60 and 65 for a woman. Premiums in any year, it is suggested, should be limited to a fixed percentage of the earnings of that year. At retirement age, there should be an option to take up to one-quarter in lumpsum form (tax-free), subject to an overriding limit of £10,000. There should also be an option to convert part of the annuity into a widow's or orphan's annuity. The uncommuted part of the annuity would be taxable. It is also proposed that these reliefs, with slight modifications, should be extended to certain company directors, and also to employees whose employers have not set up any sort of pension scheme. Again, employees whose employers have set up a scheme providing comparatively small pensions, it is stated, should be allowed relief on the same lines as those proposed for self-employed persons, but limited to the amount required to bring their existing pension prospects up to a normal standard.

These recommendations deserve the notice of the Taxation Enquiry Commission in this country, as well as of Indian insurers. Perhaps, the grant of a generous tax relief for contributions to pension funds will stimulate many persons to take up pension policies. It would also induce private employers to institute pension schemes for their workers. Indeed, the case for such relief is stronger in this country, where nearly all classes of persons, except those engaged in Government service, receive no pension whatever after their retirement.

PRITHVI INSURANCE CO., LTD.

The scheme for mutualisation of the Prithvi Insurance Company, Ltd., Madras, submitted by the management to the Controller of Insurance, Government of India, has been accorded sanction by the Government. The sanction of the Government has been notified in the *Gazette of India* dated 27th March, 1954. The scheme envisages the mutualisation of the Prithvi Insurance Company, Ltd., and the raising of the capital structure of its subsidiary company, the Asiatic Government Security Life and General Assurance Company, Ltd. The Prithvi has an ordinary capital of Rs. 15 lakhs, divided into 150,000 shares of Rs. 10 each, while the Asiatic's capital is Rs. 5 lakhs, divided into 100,000 shares of Rs. 5 each. The decision to convert the Prithvi into a public company limited by guarantee was taken by a special resolution in May, 1953. It was in pursuance of this resolution that the management submitted to the Government its scheme for conversion into a company, limited by guarantee and not having a share capital. The main features of the scheme, as now approved by the Government, are:

(1) All the properties, assets and moneys of the original company (Prithvi Insurance Company, Ltd.), representing the capital and general funds, will be held by the Mutual Company in trust, to be known as "Trust Funds."

(2) The Mutual Company will cease to carry on general insurance business, such as fire, marine and motor.

(3) The Prithvi will enter into a reinsurance agreement with the Asiatic for reinsurance of all its (Prithvi's) general insurance policies.

(4) Every shareholder of the Prithvi will receive a sum of Rs. 5 in respect of each share held by him. He will also be entitled to receive two fully paid-up shares of the Asiatic in respect of every five shares of the Prithvi, held by him, at the issue price, namely, Rs. 5 per share. The Mutual Company shall, out of its Trust Funds, pay to the Asiatic a sum of Rs. 5 for each share allotted in this manner to the Prithvi's shareholders. In the event of any shareholder not electing to accept allotment of the shares of the Asiatic, the Mutual Company shall pay to such shareholder a sum of Re. 1-8 in respect of each share held by him in lieu of the shares of the Asiatic to which he is entitled.

(5) The Mutual Company shall pay out of the Trust Funds any amounts that may be payable to the Asiatic in pursuance of its reinsurance agreement. The balance of the Trust Funds, after meeting all claims against the general funds of the Company, shall be distributed amongst the shareholders *pro rata* according to the number of shares held by each shareholder.

(6) The paid-up capital of the Asiatic will be increased to Rs. 10 lakhs by the issue of 100,000 additional shares of Rs. 5 each. Of these, 60,000 shares or such smaller number as may be taken up, shall be reserved for allotment to the shareholders of the Prithvi, and the remaining 40,000 shares or such larger number as may be available and necessary to constitute the Asiatic as a subsidiary of the Mutual Company shall be allotted to and taken up by the Mutual Company.

WORKING OF TRADE MARKS LAW

SOME MORE SUGGESTIONS FOR IMPROVEMENT

IT will be recalled that, in our last issue, while referring to the replies submitted to the questionnaire of the Trade Marks Enquiry Committee by the Indian Merchants' Chamber, Bombay, and jointly by the Bombay Chamber of Commerce, the Trade Marks Owners Association of India Ltd. and the Pharmaceutical and Allied Manufacturers and Distributors Association Ltd., only two of the important issues were dealt with. This week it is proposed to refer here to a few more problems raised by the replies to the questionnaire under reference.

One of the points on which advice is sought by the Trade Marks Enquiry Committee relates to section 33. According to this section, the assignment of trade marks without goodwill of the business has to be advertised at the discretion of the Registrar. In some countries, such as Australia, the advertisement is not required by law. The Committee desires to know whether such advertisement serves any useful purpose. Expressing its opinion on this issue, the I.M.C. states that, since the provision aims at safeguarding the interests of consumers, the provision should be retained in the Act. It thinks that the deletion of the requirement as to advertisement is likely to lead to multiplicity of assignments and frequent changes of ownership of the mark. This in turn will lead to confusion among the public.

The memorandum of the Bombay Chamber admits that the said provision affords to the public not only an opportunity for learning that there had been a change in the origin of goods but also some small measure of protection against fraud. But it points out that these by themselves are insufficient reasons to justify the delays and other disadvantages which may be caused to registered proprietors who wish to assign their marks. It, therefore, suggests that the procedure should be done away with.

Section 38 of the Act refers to defensive registration of trade marks limited to invented words. The Committee desires to know whether this section could be extended to other kinds of well-known marks. Dealing with this point, the I.M.C. observes that the scope should be extended to goods of an allied nature. For instance, a proprietor of a registered trade mark well known, say, in respect of coffee may be allowed to register the trade mark defensively in respect of allied items such as tea, cocoa, etc. Beyond this, the I.M.C. is not willing to extend the scope of the provision, as otherwise some of the big concerns might monopolise all possible devices, words and other trade marks, thereby reducing the scope for selection of trade marks available to others. The joint memorandum, however, suggests that the matter of defensive registration should be one in which the Registrar of Trade Marks should be given the widest discretion. It, therefore, feels that a section should be so framed in the Act as to invest in him powers to use his discretion, having regard to the nature and degree of notoriety of the mark in question and the nature of the goods in respect of which defensive registration is sought.

Appeals

At present, appeals from the Registrar's decision are being heard by a Bench of two or more judges as, for instance, in the High Courts of Calcutta and Mysore. But the first appeal in Bombay is heard by a single judge of the Bombay High Court. The question has arisen whether an appeal should always be heard by a Bench of two judges. It arose out of the decision of the Calcutta High Court that a second appeal did not lie before the High Court under the Trade Marks Act This decision has now been set aside by the Supreme Court. Nevertheless, the I.M.C. opines that it is desirable to introduce a uniform system of a Bench of two judges in all the High Courts to hear appeals from the decisions of the Registrar. More or less a similar view is held by the combined memorandum submitted by the Bombay Chamber of Commerce.

With regard to the registration of what are known as "service marks," that is, marks used by persons to perform some kind of service in connection with used goods such, for instance, as repairing of old tyres or the laundering or dyeing of clothes, the I.M.C. points out that, as these marks can at best the limited only to local areas, there will be no need to register them on an all-India basis. In the U.K., the Act does not provide for registration of service marks. The I.M.C. feels that the question of extending protection under the Trade Marks Act to service marks should be investigated further. The same view is also held by the joint memorandum.

Commenting generally on the Trade Marks Act and Rules as a whole, the I.M.C.'s reply and the Bombay Chamber's joint note make a number of suggestions which merit the close attention of the Committee. Mention may be made here of one or two important suggestions. The head office or its branches of the Registrar of Trade Marks are situated in Bombay, Calcutta and Mysore. Appeal cases are being held in the High Courts of these three places. The Indian Merchants' Chamber wants the Act to make it clear that the appeals should be heard by any High Court and not by the three High Courts alone mentioned above. It further suggests that hearing officers in the Registry should not be allowed to practice in respect of trade mark disputes for a period of three years after relinquishing their office.

NEW HOME FOR I.C.I.

The new head office building of Imperial Chemical Industries (India) Ltd. at Chowringhee, Calcutta, built on modern lines at a cost of about Rs. 50 lakhs, was opened on 31st March, 1954, by Dr. H. C. Mookerjee, Governor of West Bengal. Welcoming the Governor, Mr. N. D. Harris, Chairman of the Company, remarked: "This is a great day for I.C.I. (India) Ltd. It marks the planting of another strong root in India, and another substantial increase in our stake in India. This building is a sign that we view our future in this country with confidence. While we admit to requiring a fair return on our investment in India, we believe honestly and with great faith that the free collaboration of British industry and commerce with India cannot but result in great benefits to both and the creation of a strong bulwark against the many disrupting forces rampant in the world today." Mr. R. C. Todhunter, the Overseas Director on the Main Board of I.C.I., London, who also took part on the occasion, forecast a bright future for the Company and for India. He said: "I foresee during the next decade that we shall engage in further manufactures in India in co-operation with our Indian friends just as we have done at Rishra and have started to do at Gumia in explosives." He observed that the more India progressed in the manufacturing field, the more would it need chemical, raw materials and intermediate results. He too stated that the Directors of the I.C.I. had strong confidence in the future of India and that India would go from strength to strength.

The Governor of West Bengal availed himself of this occasion to pay well-deserved tributes not only to I.C.I. (India) Ltd. for the excellent service it is rendering to this country, but also to the entire British business community. Answering a query posed by himself, namely, to what extent was the economic development of India due to British enterprise?, he remarked in a pleasant reminiscent mood: "Last week, speaking at various functions, I had occasion to look up certain facts. I found that, in 1832, the first cotton mill was started at Fort Gloster Estate—the Bowria Cotton Mill. The first tea garden was started experimentally in 1835 by the East India Company. John Marshman, colleague of Dr. Carey, started the first paper mill in 1850 at Serampore—the Balley Paper Mill. George Aklin started the first jute mill at Serampore, now known as the Wellington Jute Mill. These are only a few instances. All this we owe to you. You have spent your blood and your treasure in building up these industries. All we have done is to follow in your footsteps. Whatever you have done, we are grateful to you. Of course, what the I.C.I. is doing today is only another step in the direction already taken by many. We are thankful to you and I am glad to find that today about Rs. 125 lakhs per year are being distributed between the Indian staff in the shape of wages. You have given them good working conditions, a good building in which they can work—for this we are grateful to you. By erecting this new Rs. 50-lakh building on Chowringhee, you are carrying on a noble tradition, and are giving a concrete example of what Mr. R. A. Butler, the Chancellor of the British Exchequer, had in a recent speech in Calcutta described as the interdependence of independent nations."

Proceeding, he deplored the rapid transfer of commercial and industrial concerns built up with British blood and money into the hands of Indians. "I believe," he declared, "Indians with money can start independent interests of their own. There is enough room for both." Another brief extract from Dr. Mookerjee is worth quoting for the benefit of foreign business men in this country and also for those abroad who think of taking an interest in India. "The Constitution," said the learned Doctor, "makes the position of foreign capital quite safe. Business men are supposed to have more commonsense than others and they should know that the safeguards are ample. There is no question of liquidation of foreign capital. It is quite correct to suggest that we cannot do without foreign capital. In fact, we welcome it. It is folly on the part of business people to be led astray by the remarks made by hotheaded people. India is not the country where people talk too much."

SULPHUR FROM GYPSUM

CAN INDIA DO IT ?

THE report that the Development Council for Heavy Chemicals, Acids and Fertilisers has recommended to the Ministry of Commerce and Industry to set up a plant for the extraction of sulphur from gypsum available in Rajasthan is welcome news. For India is dependent, at present, entirely on imports for its requirements of sulphur. This dependence on imports for such a basic raw material is a highly uncertain factor not quite conducive to the healthy development of the nation. In any emergency, such as the one that occurred in 1951-52, when sulphur supplies were cut off owing to the Korean crisis, the working of several vital chemical and other industries will be severely handicapped. The industries that would be seriously affected, to mention only a few, are sulphuric acid, superphosphate, sugar, match, starch, iron and steel and petroleum refinery.

Normally, it is said that the consumption of sulphuric acid in any country is the barometer of the prosperity of its industry and agriculture. Judged by this standard, India presents a very disappointing picture. India's *per capita* consumption is 0.65 lb. per annum, as compared with 45 lbs. in the U.K. and 110 lbs. in the U.S. It is unfortunate that even for this small consumption of sulphuric acid, which is used in metallurgical industries, the iron and steel industry, fertiliser manufacture, the production of dyestuffs and innumerable other industries, India has to depend on imports.

The principal sources of sulphur are:

(1) Native sulphur or brimstone deposits of sulphur in its "free" or elemental form;
(2) pyrites—iron sulphide ore containing about 40 per cent. sulphur;
(3) natural gas containing sulphur in the form of hydrogen sulphide;
(4) petroleum refinery gas—also containing hydrogen sulphide;
(5) gypsum—a mineral which contains about 20 per cent. sulphur as calcium sulphate; and
(6) coal—containing sulphur as pyrites and organic compounds.

In India, gypsum is available in large quantities in Rajputana, but the proved deposits are just sufficient to meet the requirements of the ammonium sulphate fertiliser plant at Sindri. Naturally, any scheme to produce sulphur from gypsum will affect the supply required by the Sindri fertiliser factory. The extraction of sulphur from gypsum will not, therefore, be a feasible proposition, unless the Sindri factory switches over its production from ammonium sulphate to ammonium nitrate, which is a more concentrated form of fertiliser and which does not require gypsum for its production. It is, of course, presumed here that the farmer will be trained in the use of ammonium nitrate. It is stated that there are good reserves of pyrites in India, which can be used to produce sulphur, but they have still to be properly surveyed and located.

The major obstacle in the way of production of sulphur from gypsum is its cost. It is stated that the cost would be about Rs. 700 per ton, as against Rs. 240 per ton, f.o.r. Bombay, for imported sulphur. Imported sulphur in pre-war years was available at Rs. 100 per ton. As extraction of sulphur from gypsum will give the by-product, namely, cement, it might be possible to pass on a part of the cost to cement. But, here again, as cement prices are controlled, the extent of transfer of burden will be limited.

Experts aver, however, that, despite the high cost of its extraction, sulphur should be extracted in India, because it is a commodity which has a highly strategic and commercial importance. But it is only the Government that can embark on such a venture. In the alternative, it has to subsidise such a venture as is being done in the United Kingdom.

Indian requirements of sulphur are only about 60,000 to 65,000 tons; the world output of sulphur is about 7 million long tons. Production of 100,000 tons of sulphuric acid required by India requires 35,000 tons of sulphur. About 7,000 to 8,000 tons of sulphur are needed by the sugar industry, about 500 tons are used for dusting the crops, approximately 1,000 tons go into the bleaching of starch and the balance goes for sundry uses, such as paper manufacture, pyrotechnical industry, civil explosives (for mining), etc.

If the Government finally decides to undertake extraction of sulphur, the first question that has to be settled is the site for the location of the plant. It is needless to add that whatever centre is chosen for locating the plant for sulphur extraction, it is necessary that it should answer the test of accessibility of raw materials and of markets.

Notices

PRESIDENCY JUTE MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Sixty-seventh Ordinary General Meeting of the Shareholders of Presidency Jute Mills Company, Ltd., will be held at "McLeod House," No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Wednesday the 5th May, 1954, at 2-45 p.m., for the following purposes:—

1. To receive the Directors' and the Managing Agents' Report and the Auditors' Report and to pass the Accounts for the half-year ended 31st December, 1953.
2. To declare a Dividend.
3. To elect Directors. Mr. Alec A. Leslie and Mr. J. R. Jacob retire by rotation and, being eligible, offer themselves for re-election.
4. To appoint Auditors and to fix their remuneration.

The Share Transfer Books of the Company will be closed from 22nd April to 5th May, 1954, both days inclusive.

By Order of the Board,
McLEOD & Co., LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, 12*th April*, 1954.

Note.—Payment of the proposed dividend, if declared, will be made only to those members whose names are registered in the Books of the Company on the 5th May, 1954, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

MACNEILL AND BARRY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5½ per cent. per annum for the half-year ended 31st March, 1954.

Payment will be made on 1st May, 1954, to those Preference Shareholders whose names appear on the Company's Register on that date, or in accordance with their instructions.

By Order of the Board,
A. H. FORSTER,
Secretary.

2, FAIRLIE PLACE,
CALCUTTA, 8*th April*, 1954.

THE BENGAL FLOUR MILLS COMPANY, LIMITED

THE BOARD OF DIRECTORS HAS DECIDED to recommend to the forthcoming Ordinary General Meeting of the Company a dividend at 17½ per cent. per annum, for the half-year ended 31st December, 1953.

By Order of the Board,
BALMER LAWRIE & CO., LTD.,
Managing Agents.

21, NETAJI SUBHAS ROAD,
CALCUTTA, 9*th April*, 1954.

THE SVADESHI MILLS COMPANY LIMITED

NOTICE

THE SIXTY-EIGHTH ORDINARY GENERAL Meeting of the Shareholders of THE SVADESHI MILLS COMPANY, LIMITED, will be held at the Registered Office of the Company, Bombay House, Bruce Street, Fort, Bombay, on Monday the 3rd May, 1954, at 4-30 p.m. (S.T.), to transact the following business:—

(1) To adopt the Directors' Report and the audited Statements of Accounts of the Company for the year ended 31st December, 1953.
(2) To declare Dividends.
(3) To elect three Directors in place of those who retire by rotation but are eligible for re-election.
(4) To appoint Auditors and to fix their remuneration.

As already notified, the Transfer Books of the Company have been closed from Monday the 22nd March to Tuesday the 20th April, 1954, both days inclusive.

By Order of the Board of Directors,
TATA INDUSTRIES LTD.,
Managing Agents,
T. V. BADDELEY,
Director.

BOMBAY, 8*th April*, 1954.

Note.—The dividends, if sanctioned at the General Meeting, will be payable from Tuesday the 4th May, 1954, to the shareholders whose names stand on the Register of the Company on the 20th April, 1954, and the dividend warrants will be duly posted to the registered addresses of such shareholders.

THE SVADESHI MILLS COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of The Svadeshi Mills Co., Ltd., will be held at the registered office of the Company at Bombay House, Bruce Street, Fort, Bombay, on Monday the 3rd May, 1954, on the conclusion of the Annual General Meeting of the Company fixed for 4-30 p.m. (S.T.) on that day, for the purpose of considering and, if thought fit, passing the Resolutions providing for an increase of Capital and for a consequential alteration in Article 4 of the Articles of Association of the Company, set out in the Notice and the Circular Letter dated the 30th March, 1954, posted to the shareholders.

J. Wanless.

THE TATA MILLS LIMITED

NOTICE

THE DIRECTORS OF THE COMPANY HAVE decided to recommend to the Annual General Meeting the payment of a dividend on Ordinary Shares at Rs. 1-8 per share, free of income-tax, to the shareholders for the year ended 31st December, 1953.

For and on behalf of
THE TATA MILLS, LIMITED,
TATA INDUSTRIES LTD.,
Managing Agents,
T. V. BADDELEY,
Director.

BOMBAY, 8*th April*, 1954.

THE SVADESHI MILLS COMPANY LIMITED

NOTICE

THE DIRECTORS OF THE COMPANY HAVE decided to recommend to the Annual General Meeting the payment of the following dividends, both free of income-tax, to the shareholders for the year ended 31st December, 1953:—

Rs. 5 per share on Preference shares
Rs. 16 per share on Ordinary shares

For and on behalf of
THE SVADESHI MILLS CO., LTD.,
TATA INDUSTRIES LTD.,
Managing Agents,
T. V. BADDELEY,
Director.

BOMBAY, 8*th April*, 1954.

RESULTS OF FINLAY GROUP MILLS

DISTRIBUTION TO SHAREHOLDERS UNCHANGED

THE financial results of the group of three cotton textile mills under the management of Messrs. James Finlay & Co., Ltd., Bombay, namely, the Finlay Mills Ltd., the Gold Mohur Mills Ltd., and the Swan Mills Ltd., for the year ended 31st December, 1953, may appear at first sight disappointing. For, in distinct contrast to the experience of many other cotton textile mills which have earned substantially higher profits in 1953 than in the previous year, the Finlay group mills do not show any improvement over the previous year. On the other hand, the gross profits of two of them, namely, the Gold Mohur and the Swan, have substantially declined, the former from Rs. 30.24 lakhs to Rs. 20.11 lakhs and the latter from Rs. 41.92 lakhs to Rs. 26.50 lakhs. The gross profit of Finlay, however, discloses a slight rise from Rs. 22.02 lakhs to Rs. 22.72 lakhs.

Before judging the results of the Finlay group mills for the year under review *vis-a-vis* those of other mills, it must be borne in mind that the Finlay group mills are purely fine and superfine count mills and as such their results should be viewed against the background of the trading conditions that prevailed during the year. In the first instance, the output of fine count cloth was, on the whole, substantially lower, though that of superfine varieties was slightly higher. Secondly, the offtake of these two varieties by the internal as well as overseas markets was substantially lower, on account of the consumer resistance brought about by the high prices of these varieties. The offtake would have been worse but for the reduction in October, 1953, of the excise duty on superfine cloth and the grant of drawback of import duty on cotton used in cloth meant for export. In the circumstances, it is not surprising that the results of the Finlay group are not as impressive as those of other Bombay mills.

The following table shows, at a glance, the comparative results of the three mills for the last two years:

(In lakhs of rupees)

	For the year ended 31st December					
	1953	1952	1953	1952	1953	1952
	Finlay		Gold Mohur		Swan	
Sale proceeds (net)	187.62	228.23	107.14	207.53	240.29	293.35
Other income	19.91	16.77	1.24	1.33	4.18	4.05
Expenses	164.73	222.08	178.27	178.62	217.97	255.48
Gross profit	22.72	22.02	20.11	30.24	26.50	41.92
Agents' remuneration	2.38	2.31	2.17	3.19	2.76	4.30
Provision for—Depreciation	4.51	2.42	2.80	4.67	5.51	3.84
Taxation	7.50	8.00	6.00	11.00	8.50	16.00
Net profit	8.33	9.29	9.34	11.38	9.73	17.78
To reserves	..	0.25	2.00	5.00	2.50	10.50
Dividend	8.00*	8.00	6.25	6.25	7.20†	7.20
	(16%)	(20%)	(12½%)	(12½%)	(20%)	(30%)
Carry forward	5.74	5.41	5.41	5.42	5.75	5.71

* On the increased capital of Rs. 50 lakhs raised on 9th September, 1953, by capitalisation of Rs. 10 lakhs out of the reserves.
† On the increased capital of Rs. 36 lakhs raised on 9th September, 1953, by capitalisation of Rs. 12 lakhs out of the reserves.

It will be observed that the sale proceeds of all the three mills have declined substantially. The rise in "other income" in the case of Finlay Mills is due to the increase in receipts from bleaching, mercerising and dyeing charges. The drop of Rs. 38.25 lakhs in expenses of Finlay Mills mainly reflects the decline in cost of cotton consumed by Rs. 52.10 lakhs. This decline in cost of cotton consumed is offset by the rise in other expenses to the extent of Rs. 13.85 lakhs, of which mill salaries and wages account for Rs. 8.27 lakhs, stores, spares and chemicals for Rs. 2.50 lakhs and contribution to employees' provident fund and administrative charges for Rs. 1.96 lakhs.

The cost of cotton consumed and yarn purchased shows a decline of Rs. 11.48 lakhs in the case of Gold Mohur, but the rise in other expenses is of the order of Rs. 11.13 lakhs, so that the saving on the former account has almost been offset by the latter. This explains the negligible fall in expenses. Of the increase in other expenses, mill salaries and wages account for Rs. 6.04 lakhs, dyeing, bleaching and mercerising charges for Rs. 3.17 lakhs and contribution to employees' provident funds for Rs. 1.77 lakhs.

The decline of Rs. 53.06 lakhs in the sale proceeds of the Swan Mills has been accompanied by a decrease of Rs. 49.55 lakhs in cost of cotton consumed and yarn purchased. Other expenses have, however, gone up by Rs. 11.04 lakhs, mainly accounted for by mill salaries and wages (Rs. 6.03 lakhs), stores, spares and chemicals (Rs. 1.68 lakhs) and contribution to provident fund (Rs. 1.42 lakhs).

The appropriations of the profits of the three mills have been shown in the foregoing table and, therefore, need no elaboration. However, it may be pointed out here that the allocation of Rs. 25,000 to the reserves of Finlay Mills last year represents the provision for gratuity fund, while no other additions have been made to the other reserves in the last two years. The transfer to the reserve fund of Gold Mohur has been reduced from Rs. 2.50 lakhs to Rs. 2 lakhs. No addition to the dividend equalisation fund has been made this year, while a sum of Rs. 2.50 lakhs was added to this reserve last year. The Directors of the Swan Mills have cut the transfer to the reserve fund from Rs. 7.50 lakhs to Rs. 2.50 lakhs. The dividend equalisation fund which had received Rs. 3 lakhs last year has not been strengthened further this year.

The following synopsis of the balance-sheets of the three companies as on 31st December, 1953, reveal their sound financial position:

	As on 31st December		
	Finlay	Gold Mohur	Swan
	Rs.	Rs.	Rs.
Capital	50,00,000	50,00,000	36,00,000
Reserves and surplus ..	59,36,244	53,09,089	66,53,232
Provision for taxation ..	13,20,459	11,80,946	14,06,714
Liabilities	31,97,481	22,94,085	29,71,032
Gross block	86,02,384	63,10,672	93,47,153
Less—Depreciation ..	68,51,296	45,10,387	68,93,068
Net block	18,41,088	17,01,285	24,53,485
Stock-in-trade	58,43,131	59,26,288	72,76,008
Stores, spares, etc. ..	16,62,915	10,05,896	11,97,987
Debts, deposits and advances	15,57,982	17,16,183	21,41,504
Investments	1,02,200	81,000	71,000
Cash balances	54,86,868	32,61,468	4,00,594
Rs.	1,04,54,184	1,37,81,120	1,46,33,868

Notwithstanding the capitalisation of Rs. 10 lakhs in the case of Finlay and Rs. 12 lakhs in the case of Swan during the year under review and of Rs. 25 lakhs in the case of Gold Mohur in 1952, the reserves and surplus of all of them stand at impressive levels. The gross block has been well written down and current assets exceed current liabilities and provision for taxation by a very wide margin.

All the three companies are going ahead with their rehabilitation programmes. The Gold Mohur has placed orders for new mixing room and blow room machinery as well as for 6,500 spindles with the necessary preparatory machinery. The extension to the cord department of the Swan has now been completed and is in partial production. The programme of Finlay which, in addition, has a proposal to manufacture sewing thread, is explained by the Directors thus:

"Your Company has entered into a partnership with the English Sewing Cotton Co., Ltd., Manchester, under the name of the Alexander and Finlay Thread Company, for the manufacture of sewing thread. The initial capital of the partnership has been limited to Rs. 28,00,000 to be subscribed by the two partners in equal proportion. The machinery has been shipped and it is hoped that the partnership will be in production by the end of the year.

"The rehabilitation of the spinning machinery continues. The new blow room and mixing room is now in operation and orders have been placed for 8,500 spindles, with the necessary preparatory machinery against replacements, and to meet the additional requirements of the Alexander and Finlay Thread Company. The pilot plant for experimenting in textile processes is now nearing completion and it is hoped that considerable benefit will be derived from research which can now be carried out in this department."

On the basis of their current market value (*ex-div.*) and the proposed dividends, the shares of Finlay, Gold Mohur and Swan give a yield of 6.5 per cent., 7.1 per cent. and 6.1 per cent., respectively.

WALCHANDNAGAR INDUSTRIES

The extracts from the Directors' report and the summary of accounts of the Walchandnagar Industries Ltd. (Agents: The Premier Construction Co., Ltd., Bombay) for the year ended 30th September, 1953, published in our issue of 3rd April, 1954 (*vide* page 646), would have given readers a broad idea of the Company's working during the year under review, as also of its financial position as at the end of the year. The results of the Company, studied in conjunction with the Chairman's speech delivered at the annual general meeting (a text of which is published elsewhere in this issue) will show that the results for the past year are satisfactory.

The gross profit of the Company for 1952-53 shows a shrinkage of only Rs. 1.74 lakhs, that is from Rs. 40.72 lakhs for 1951-52 to Rs. 38.98 lakhs. The net profit (subject to taxation), however, shows a decline of Rs. 2.49 lakhs to Rs. 23.03 lakhs, due to a slightly larger provision for depreciation, at Rs. 12 lakhs (as against Rs. 11 lakhs). This contraction in net profit has meant a cut in the allocation to the reserves, but the dividend has been well maintained at 14 per cent. for the third year in succession.

The following comparative table gives an analysis of the Company's financial results for the last four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1953	1952	1951	1950
Proceeds of plantation products	74.67	94.42	93.98	69.49
Farm and dairy proceeds, etc.	7.51	6.77	5.44	5.15
Sale proceeds from sugar factory, distillery, oil mill, etc.	193.80	219.97	189.34	150.17
Plantation expenses	55.90	65.98	62.58	55.24
Sugar factory, distillery, oil mill expenses	153.70	221.08	207.13	139.42
Administrative expenses	5.88	6.06	6.24	5.56
Gross profit	38.98	40.72	40.22	27.58
Managing Agency commission	3.95	4.20	4.24	2.86
Depreciation	12.00	11.00	12.50	10.00
Net profit (subject to taxation)	23.03	25.52	23.48	14.72
To reserves	9.00	11.00	9.00	1.87
Dividends—				
Preference 7%	0.24	0.24	0.24	0.24
Ordinary	14.14	14.14	14.14	12.12
	(14%)	(14%)	(14%)	(12%)
Carry forward	1.73	2.08	1.94	1.85

The company's sugar factory had a considerably shorter period of crushing. The sugarcane crushed during the season amounted to 163,107 tons, a decline of 21,785 tons from that crushed in the previous season. The output of sugar, accordingly, dropped from 2,19,598 bags to 1,87,326 bags The recovery also was lower at 11.61 per cent. as against 12.01 per cent. Thus, production and recovery have both not been favourable. This is not a peculiar feature of this Company alone; for the industry as a whole had an unfavourable year. The deterioration in water-supply affected sugarcane crop everywhere. The Company was not, however, affected as adversely as many other units in the industry, partly because of the precaution taken by the Company to have extra acreage under supplementary lift irrigation.

A gratifying feature of the Company's working during the year is the record production of rectified spirit, which aggregated 3,22,218 gallons, an increase of 62,700 gallons over the previous year. The entire output of rectified spirit was marketed.

As regards the outlook for the current season, so far as sugar manufacturing is concerned, the Chairman has struck a note of caution against any undue optimism. He thus observes:

"You would naturally expect me to say something about the working of the current season which is about to end so far as your factory is concerned. You will be gratified to know that there is every hope of crossing the 2-lakh bags limit for sugar production this year. Though the supply of water from the canals for the cane which came for crushing during this season was not as good as one would wish, there was definitely some improvement because of the more favourable monsoon, and you will find the result reflected in the report for the ensuing year. The prices realised this year have so far been satisfactory. However, as nearly half of the production still remains to be sold and as the Government proposes to requisition larger quantities from the production this year, the overall result may not be as encouraging as you might be led to expect from the rise in production."

The Rs. 100 paid-up ordinary shares of the Company are being currently quoted at Rs. 185 *cum-div.* On an *ex-div.* basis, the latest dividend gives a yield of 8.2 per cent. per annum free of tax.

JAY SHREE TEA

The favourable prices that prevailed for tea during 1953, as compared with that in 1952, together with a substantial increase in output of tea, have enabled the Jay Shree Tea Gardens Ltd. (Managing Agents: Messrs. Birla Bros., Ltd., Calcutta) to report satisfactory results for the year ended 31st December, 1953. The gross profit for the past year amounts to Rs. 18.54 lakhs, as against Rs. 1.75 lakhs for the previous year. The results for the year under review are, however, not strictly comparable with those for 1952, because of the very widely different trading conditions in the two years. A comparison with the profit for 1951 will, however, be a fair one. Such a comparison shows that the financial results for the year under review are more or less the same as those for 1951. Thus, the gross profit for the latter year is Rs. 18.30 lakhs, that is about Rs. 24,000 less than that for 1953. The net profit amounts to Rs. 10.75 lakhs for the year under review, as against Rs. 1.63 lakhs for the previous year and Rs. 12.18 lakhs for 1951. Out of the net profit, the Directors have transferred a substantial sum of Rs. 10 lakhs to the reserve fund. They do not propose to declare any dividend for the year under review, in view of the proposal to capitalise a part of the Company's reserves and issue bonus shares, referred to later on in this review. It may be noted, in this connection, that the Company had paid a dividend of 6 per cent. for the previous five years.

The following comparative table shows the results of the Company at a glance for the past three years:

(In lakhs of rupees)

	For the year ended 31st December		
	1953	1952	1951
Sale proceeds	98.16	60.60	81.63
Income	1.79	11.02	16.64
Expenses	83.96	63.14	87.14
Gross profit	18.54	1.75	18.30
Managing Agents' remuneration	1.95	0.12	0.12
Depreciation	2.84	0.10	2.99
Taxation	3.00	..	3.00
Net profit	10.75	1.63	12.18
To loss from Ceylon Branch	0.15	0.50	0.06
To reserves	10.00	..	10.00
From reserves	..	1.00	..
Dividend	..	2.34	2.34
Carry forward	0.84	0.24	0.71
		(6%)	(6%)

The Company's output of tea during the year under review amounted to 2,550,146 lbs. which, as compared with that in 1952, represents an increase of 259,451 lbs. and constitutes a record in the history of the Company, surpassing the previous best of 2,424,606 lbs. in 1951. This increase in crop and the better prices fetched are reflected in the rise in sale proceeds for 1953. The sharp increase in expenses is accounted for by the larger purchases and the rise in establishment and other charges.

The latest balance-sheet of the Company discloses a satisfactory financial position. The reserves and surplus aggregate Rs. 35.09 lakhs, as against a paid-up capital of Rs. 39.05 lakhs. The provision for taxation stands at Rs. 3.95 lakhs and current liabilities at Rs. 11.14 lakhs. The gross block of the value of Rs. 61.30 lakhs has been written down to Rs. 43.25 lakhs. The current assets aggregate Rs. 45.98 lakhs and represent more than three times the current liabilities and provision for taxation.

The Directors propose, subject to the sanction of the Controller of Capital Issues, to capitalise a sum of Rs. 19,52,300 out of the reserve fund, standing at Rs. 34 lakhs, and issue bonus shares of Rs. 10 each fully paid-up in the proportion of one bonus share for two existing ordinary shares.

Points From The Chair

Burden of Sales Tax

"ALL industries and traders, and consumers too, are eager for an early solution of the problem of inter-State sales tax which has caused so much misgiving and harassment since the judgment of the Supreme Court in March, 1953. In the meantime, many consumers face the prospect of having to pay still more tax on their purchases, and assessees, your own Company, for instance, must carry a heavy extra burden of work in keeping sales tax accounts for so many different States. It also seems very wrong that sales tax generally should have to be paid by an industrial concern on its purchases of raw materials, stores and other essentials, but at present, in India, unlike other countries, no distinction is made for sales tax purposes between the individual consumer, the trader and the manufacturer. It is most desirable that exemption be given to manufacturers from payment of sales tax on their purchases. In saying this I refer to all industries, including the garment-making industry whose competitiveness and enterprise are now checked by this form of taxation."

R. E. CASTELL,
Bangalore Woollen, Cotton and and Silk Mills Co., Ltd.

Sugar Prices Not High

"For some time past, you must have noticed an agitation against the comparatively high price of sugar prevailing in the market. In the first place, this price looks higher in comparison to the price of sugarcane, which was reduced officially at the beginning of the season. This lower price which was fixed by the Government was rather unreal in comparison to the market conditions. This became patent immediately the crushing season started and many factories had to purchase sugarcane at prices higher than fixed by the Government. In any case, the lower price of sugarcane fixed by the Government did not in any way benefit concerns like yours which grow their own cane. By the time the prices were reduced, the cane which was to be crushed during this season was ripe for crushing and the expenses that had to be incurred for raising this cane had already been incurred. These expenses for cultivation were in no way lower for concerns similar to yours. The price of sugar cannot, therefore, be said to be high, so far as this section of the industry is concerned."

GULABCHAND HIRACHAND,
Walchandnagar Industries Ltd.

Concessions to New Industries Ineffective

"The Government has time and again announced that income upto 6 per cent. of the employed capital in new industries will be free in the hands of the shareholders also. Unfortunately, this intention does not appear to have been adequately reflected in the relevant provisions made in the Indian Income-tax Act. The position of the shareholders in this respect at present is rather obscure and anomalous. We are now advised that a strict interpretation of the Income-tax Act will render the dividends that are being declared, liable for taxation in the hands of the shareholders, whereas such would not have been the case had our profits been higher to the extent of providing for all the depreciation and unabsorbed depreciation and also 6 per cent. of the capital employed. Virtually this results in rendering ineffective all the concessions held out by the Government to investors in new industries. The Company is thinking of taking up this matter suitably with the authorities concerned through proper channels."

PURSHOTAMDAS THAKURDAS,
National Rayon Corporation Ltd.

State Control Over Insurance

"I am absolutely sure that those who coptend —as some do, on political grounds—that the investments of life assurance funds should be under the control of some central State body are entirely overlooking the great benefits that come to policyholders through the sense of personal responsibility for their interests which lies firmly on the shoulders of directors and managers of the individual offices. I am convinced that under any form of State control an entirely different balance of responsibilities would apply, and it is difficult to see how it could be to the advantage of policyholders. I would add one final word on this subject. Let no one talk of 'wealthy insurance companies' as some are apt to do, when speaking of the large life funds of insurance offices. These funds are, in effect, held in trust for millions of policyholders, and represent part of their savings—in many cases quite a large part."

L. E. D. BEVAN,
National Provident Institution for Mutual Life Assurance.

Growth of Credit Insurance

"In 1939, the total British home and export turnover insured against credit risks was £115 million. In the first year after the war the figure was £209 million, and today it is in the neighbourhood of £1,200 million a year, divided more or less evenly between home and export transactions. What is the explanation of this rapid expansion and what does it portend? Undoubtedly, post-war inflation has had much to do with it and high taxation a lot more. But apart from these factors, with the use of credit insurance has come the realisation of the benefits it brings; assistance in judging the credit standing of a customer, warnings of adverse experience, help in collecting overdue accounts and payment of losses at an early stage of proceedings."

SIR JOHN MAKINS,
Trade Indemnity Co., Ltd.

COMPANY MEETINGS AND DIVIDENDS

COLABA LAND AND MILL CO., LTD. Annual General Meeting, Bombay, 22nd April, 1954. Dividend: *Nil*. Transfer books remain closed from 13th to 30th April, 1954, both days inclusive.

SHREE KRISHNA GYANODAY SUGAR LTD. Annual General Meeting, Dalmianagar, 23rd April, 1954. Dividend: Rs. 1-8 per share. Transfer books remain closed from 17th to 23rd April, 1954, both days inclusive.

CAMBODIA MILLS LTD. Annual General Meeting, Coimbatore, 24th April, 1954. Dividend: As. 12 per share, free of income-tax. Transfer books remain closed from 10th to 24th April, 1954, both days inclusive.

GOLD MOHUR MILLS LTD. Annual General Meeting, Bombay, 26th April, 1954. Dividend: Rs. 12-8 per share free of income-tax, payable on and after 27th April, 1954. Transfer books remain closed from 3rd to 26th April, 1954, both days inclusive.

DURBHANGA SUGAR CO., LTD. Annual General Meeting, Lohat, District Durbhanga, Bihar, 26th April, 1954. Transfer books remain closed from 17th to 26th April, 1954, both days inclusive.

POONA ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Bombay, 26th April, 1954. Transfer books remain closed from 12th to 26th April, 1954, both days inclusive.

BROACH ELECTRIC SUPPLY AND DEVELOPMENT CORPORATION LTD. Annual General Meeting, Bombay, 26th April, 1954. Transfer books remain closed from 12th to 26th April, 1954, both days inclusive.

NASIK-DEOLALI ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Bombay, 26th April, 1954. Transfer books remain closed from 12th to 26th April, 1954, both days inclusive.

SWAN MILLS LTD. Annual General Meeting, Bombay, 27th April, 1954. Dividend: Rs. 20 per share, payable on and after 28th April, 1954. Transfer books remain closed from 3rd to 27th April, 1954, both days inclusive.

RAMNUGGER CANE AND SUGAR CO., LTD. Annual General Meeting, Calcutta, 28th April, 1954. Dividend: Rs. 2 per share. Transfer books remain closed from 12th to 28th April, 1954, both days inclusive.

CHITTARANJAN COTTON MILLS LTD. Annual General Meeting, Calcutta, 28th April, 1954. Dividend: Re. 1 per share (10 per cent.), for the year 1952. Transfer books will remain closed from 20th to 28th April, 1954, both days inclusive.

FINLAY MILLS LTD. Annual General Meeting, Bombay, 28th April, 1954. Dividend: Rs. 16 per share payable on and after 29th April, 1954. Transfer books remain closed from 3rd to 28th April, 1954, both days inclusive.

JAYSHREE TEXTILES LTD. Annual General Meeting, Calcutta, 28th April, 1954. Transfer books remain closed from 15th to 28th April, 1954, both days inclusive.

BENGAL COAL CO., LTD. Half-yearly General Meeting, Calcutta, 29th April, 1954. Dividend: Rs. 15 per share (including a bonus of Rs. 5 per share). Transfer books remain closed from 15th to 29th April, 1954, both days inclusive.

DUNLOP RUBBER CO. (INDIA) LTD. Annual General Meeting, Calcutta, 29th April, 1954. Dividend: Re. 1-8 per share, free of tax.

KANKNARRAH CO., LTD., Half-yearly General Meeting, Calcutta, 30th April, 1954. Transfer books remain closed from 16th to 30th April, 1954, both days inclusive.

KAMARHATTY CO., LTD. Half-yearly General Meeting, Calcutta, 30th April, 1954. Transfer books remain closed from 16th to 30th April, 1954, both days inclusive.

WESTERN INDIA MATCH CO., LTD. Annual General Meeting, Bombay, 3rd May, 1954. Dividend: Rs. 11 per share (including a bonus of Re. 1 per share), free of income-tax, payable on and after 10th May, 1954. Transfer books will remain closed from 19th April to 8th May, 1954, both days inclusive.

SVADESHI MILLS CO., LTD. Annual General Meeting, Bombay, 3rd May, 1954. Dividend: Rs. 16 per share, payable from 4th May, 1954. Transfer books remain closed from 22nd March to 20th April, 1954, both days inclusive.

TATA MILLS LTD. Annual General Meeting, Bombay, 4th May, 1954. Dividend Re. 1-8 per share, payable from 5th May, 1954. Transfer books remain closed from 22nd March to 20th April, 1954, both days inclusive.

LAKSHMI COTTON MANUFACTURING CO., LTD. Final dividend of Rs. 27-8 per ordinary share, (making Rs. 37-8 for the year 1953) payable on 17th May, 1954. Transfer books will remain closed from 28th April to 12th May, 1954, both days inclusive.

QUESTION HOUR IN PARLIAMENT

Tea Councils

TEA Councils will shortly be set up in Canada, Eire and other important tea-consuming countries. A marked improvement has been noticed in the export of tea to the U.S. since the Tea Council started functioning there.

• • • •

Cottage Industries

The Government of India has under consideration a proposal to send a team of experts to Japan for a study of cottage industries and their development. Persons who will be useful in the promotion of cottage industry in this country will be included in it.

—*Commerce and Industry Minister*

Soviet Technical Aid

The offer of technical assistance under U.N. auspices made by the Soviet representative at the last E.C.A.F.E. session is under the consideration of the Government of India.

—*Finance Minister*

Gold Hauls

The total quantity of smuggled gold seized by the Customs authorities in India during 1953 was 31,247 tolas, valued at about Rs 25.41 lakhs, while, in the first two months of 1954, the quantity of gold seized was 27,290 tolas valued at Rs. 21.96 lakhs. In all, 634 persons were involved during the periods in question. Most of the gold was detected by the Customs authorities by traditional methods.

—*Deputy Finance Minister*

Foreign Firms

The Reserve Bank proposes to undertake a survey of foreign firms in respect of insurance and import trade. The Reserve Bank has already undertaken a survey in regard to freight and fare charges. As regards foreign trade handled by foreign firms, the survey has been completed and its findings have been published in the Annual Report of the Bank. The Government have no information regarding the amount paid as commission, brokerage and insurance to non-Indians in the foreign trade of the country, but, as the transportation and insurance business is largely in foreign hands and a major portion of the foreign trade is handled by non-Indian banks, considerable sums must be being paid to non-Indians on this account.

—*Parliamentary Secretary to Finance Minister*

Prices of Foodgrains

The prices of foodgrains this year are generally lower than those of last year. Food prices in most of the principal markets in the country have declined. The general trend is downward. At a few centres, however, as is natural in a large country like India, prices have either remained stationary or shown a slight increase, largely on account of local or seasonal factors.

—*Minister for Food and Agriculture*

Import of Sugar

The quantity of sugar imported during the sugar year 1953-54 will depend on carry-over stocks with factories, production during the current season and the estimated requirements during the same period.

• • • •

Release of Sugar for Sale

The Central Government has asked factories to release sugar for sale but, in case they failed to do so within two months of the order of release, the Government will requisition the stock.

• • • •

Cane Growers' Share in Sugar Industry's Profits

The U.P. Government has informed the Central Government that they intend to hold a tripartite conference shortly to evolve a formula, according to which excess profits made by sugar factories in U.P. can be shared by the cane-growers. The question of applying the formula, when finalised, to Bihar' factories, as also to set up a machinery to implement the formula, will be considered after a decision is taken in the matter.

• • • •

Orissa Rice for Kerala

Forty-four special trains carrying 1,000 tons of rice each have been running from Orissa to Travancore-Cochin at a rate of one train a day on an average. Orissa had declared a surplus of 154,000 tons of rice, most of which has been exported. It is expected that it will ultimately give 350,000 tons. Orissa has been urging the Government of India, since the Burma rice deal, to take more rice from Orissa. The movement of rice from Orissa will depend on the requirements of the deficit States from time to time. Rice from Orissa will also go to the Central Reserve as and when necessary.

—*Deputy Food Minister*

Shipbuilding

About 36 per cent. of the Five-year Plan target for shipbuilding has been achieved.

—*Parliamentary Secretary to Production Minister*

Ports Development

About Rs. 83.20 lakhs are being advanced to the maritime States for the development of minor ports. Of this, Orissa gets Rs. 4.05 lakhs, Madras and Andhra Rs. 10.39 lakhs, Travancore-Cochin Rs. 6.91 lakhs, Bombay Rs. 36.00 lakhs, Saurashtra Rs 12.50 lakhs and Kutch Rs. 13.35 lakhs.

—*Parliamentary Secretary to Transport Minister*

SETBACK IN RESULTS OF SHREE KRISHNA GYANODAY SUGAR

CAREW AND COMPANY WIPES OFF ARREARS OF PREFERENCE DIVIDEND

Shree Krishna Gyanoday Sugar Ltd.

THE directors of the above Company (Managing Agents: Messrs. Sahujain Ltd., Dalmianagar) submit the audited accounts of the Company for the year ended 31st July, 1953.

After providing Rs. 6,03,382 (Rs. 6,65,058) for depreciation the year's working shows a net profit of Rs. 8,65,149 (Rs. 16,72,299) to which is added the balance brought forward from last year of Rs. 4,188 (Rs. 27,889), making a total of Rs. 8,69,337 (Rs. 17,00,188). This amount the directors recommend to be appropriated as follows:—

Payment of dividend for the year ended 31st July, 1953 to the shareholders as on 23rd April, 1954; on 6,000 "A" class preference shares at Rs. 6 (Rs. 6) per share free of income-tax Rs. 36,000 (Rs. 36,000), on 12,000 "B" class preference shares at Rs. 5 (Rs. 5) per share free of income-tax Rs. 60,000 (Rs. 60,000), on 2,00,000 ordinary shares at Re. 1-8 (Re. 1-8) per share, i.e., 15 per cent. free of income-tax Rs. 3,00,000 (Rs 3,00,000), provision for taxation Rs. 3,70,000 (Rs. 7,00,000) and transfer to general reserve (raising it to Rs. 18,00,000) Rs. 1,00,000 (Rs. 6,00,000) leaving the balance of Rs. 3,337 (Rs. 4,188) be carried forward.

The working results of the two factories during the 1952-53 season were as under:—

	Cane crushed	*Sugar produced*	*Recovery* Per cent.
	Mds.	Mds.	
Hathwa ...	29,51,634	3,04,131	10.3
Lauriya ...	35,06,465	3,38,167	9.64

However, the current crushing season has been very short and the crush substantially lower. Both the factories have already closed with a total crush of 15,03,470 maunds at Hathwa and 17,41,073 maunds at Lauriya with a recovery of 9.74 per cent. and 9.75 per cent., respectively.

The conversion at Hathwa sugar plant into carbonation process was completed and it commenced operation during the season 1953-54 leading to improvement in the quality of the sugar. It is regretted that the construction of tramway line at Hathwa for transport of cane could not be completed due to several difficulties. Efforts are being made for laying down the line so that it could be available for use during the next crushing season.

The directors have decided to make the Lauriya sugar factory also a carbonation plant. It is hoped that the converted plant will go into operation during the next season.

Production of alcohol and spirits during the year under review was 7,82,984 bulk gallons, as compared to 7,52,572 bulk gallons in the previous year. Judging from the production during the first half of the current year ended January, 1954 at 4,17,634 bulk gallons, it is expected that the current year's output will further increase. Nevertheless, the cost of power alcohol manufacture continues to be high as compared to that of distilleries in U.P. on account of higher transport charges incurred for procuring molasses from sugar factories situated at long distances and molasses price in Bihar being fixed by Government at a level higher than the market rates prevailing in U.P. For this reason, the working results of the distillery have not been satisfactory. Repeated representations are being made to the Central and Bihar Governments for suitable steps so that the incidence of molasses cost on alcohol manufacture cost of the distilleries in Bihar be in parity with that of U.P. distilleries.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	38,00,000	Block ...	49,71,444
Debentures ...	15,00,000	Stock-in-trade	93,02,429
Reserves ...	20,68,560	Stores, etc. ...	15,68,346

	Rs. 1,85,54,144		Rs. 1,85,54,144

Carew and Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Gladstone Lyall & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th June, 1953.

The accounts show a working profit, after payment of forfeited dividends of Rs. 2,724 (*nil*) of Rs. 8,57,385 (Rs. 7,55,918). After deducting provision for taxation of Rs. 4,76,921 (Rs. 3,41,338) and adding the balance brought forward of Rs. 41,747 (debit of Rs. 5,15,886), there is an available balance of Rs. 4,22,210 (Rs. 1,93,747) which the directors propose to deal with as follows:—

Payment of arrears of preference dividend for the two years ended 30th June, 1951 and 30th June, 1952 Rs. 1,04,000 (arrears of preference dividend for the year ended 30th June, 1950, Rs. 52,000). Payment of preference dividend for the year ended 30th June, 1953 Rs. 52,000, and transfer to debenture redemption reserve fund Rs. 2,00,000 (*nil*) leaving to be carried forward Rs. 66,210 (Rs. 41,747).

The directors report that all the three distilleries worked at a profit, but in the case of Asansol the profit was considerably reduced owing to a shortage of molasses and wagons to move spirits. In the case of Rosa the profit was down owing to the Government allotting fewer warehouses to the distillery.

Due to restrictions in the issuing of import licences for essential raw materials the sales of the Company's pharmaceutical works at Darsana were considerably below expectations.

The Company's Rosa factory achieved an increased recovery from 8.91 per cent. to 9.71 per cent. following upon the improvements made, which fully justified the expenditure. Unfortunately, due to adverse climatic conditions the crush was reduced from 23,52,647 maunds to 18,39,271 maunds which resulted in the factory working at a small loss. For the current season there has been even less cane available because of the divergence of a large quantity of cane to *gur* and *khandsari* manufacture due to the cultivators being able to obtain a higher price for the cane, than that fixed by the Government for supplies to sugar factories. The cane was, however, of good quality.

As was anticipated the crush at the Darsana factory showed an increase over the previous year of around 4½ lakh maunds. This was due to favourable climatic conditions and to the allotment of additional zones but as these zones were acquired late in the season there was a reduction in the overall recovery figure compared with the previous year. Unfortunately, owing to adverse climatic conditions last autumn, the crush for the current season has been smaller.

The position regarding the application to the State Bank of Pakistan for remittance of profits made by the Darsana branch has advanced somewhat and the further information called for has been supplied.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	40,00,000	Block ...	45,57,588
Debentures ...	23,50,000	Stocks ...	75,42,804

Trichinopoly Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. Mooljee Ramjee and Sons, Ramjeenagar) submit the audited accounts of the Company for the year ended 31st December, 1953.

The net profit for the year after providing for all expenses including payment of Rs. 98,703 (*nil*) made during May 1953 as awarded by the Industrial Tribunal as bonus for the years 1950 and 1951 and writing off Rs. 55,537 (Rs. 56,747) as depreciation on fixed assets, is Rs. 2,071 (Rs. 71,470). Adding the balance of last year's profit, a sum of Rs. 11,914 (Rs. 1,32,497) stands to the credit of the profit and loss account. The directors, however, recommend that a sum of Rs. 90,000 (*nil*) be drawn from the dividend equalisation fund and propose that the amount thus available, viz., Rs. 1,01,914 (Rs. 1,32,497) be disposed of as follows:—

To declare a tax-free dividend of 7 (7) per cent. Rs. 97,904 (Rs. 85,654) and to carry forward the balance of Rs. 4,009 (Rs. 9,843) to next year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	13,98,660	Block ...	3,21,730
Reserves ...	8,68,332	Stock-in-trade	11,51,702
Provision for taxation ...	75,461	Stores, etc. ...	1,55,816

Profit and loss account ...	11,913	Investments	2,450
		Cash ...	3,63,902
	Rs. 24,70,132		Rs. 24,70,132

Dhanalakshmi Mills, Ltd.

The directors of the above Company (Managing Agents and Secretaries: Messrs. M. Nanjappa Chettiar and Sons, Tirupur) submitted the audited accounts of the Company for the year ended 31st December, 1953.

After deducting all working expenses and interest and providing Rs. 4,75,201 (Rs. 3,88,381) for depreciation, the year's working has resulted in a net profit of Rs. 11,34,166 (Rs. 4,57,569). With the sum of Rs. 20,746 (Rs. 54,627) carried forward from last year there was a balance of Rs. 11,54,912 (Rs. 5,12,196) to the credit of the profit and loss account. From this sum the directors have expended Rs. 2,500 (*nil*) on mahimai and donation and have provided Rs. 1,60,000 (*nil*) for compensation for involuntary unemployment and Rs. 1,36,000 for bonus to employees. The balance of Rs. 8,56,412 (Rs. 5,12,196) was appropriated as follows:—

Provision for taxes Rs. 3,60,000 (Rs. 2,00,000), payment of a tax-free dividend of 20 (10) per cent. to shareholders Rs. 4,86,960 (Rs. 2,43,480) and carried forward to next year Rs. 9,452 (Rs. 20,746).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	24,34,800	Block ...	12,22,958
Reserves ...	24,06,342	Stock-in-trade	26,48,775

		Cash ...	6,02,064
	Rs. 64,25,040		Rs. 64,25,040

Shree Sitaram Sugar Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Karamchand Thapar and Bros., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st August, 1953.

The total crush during the year was 27,41,912 maunds of cane with a recovery of 10.51 per cent. as compared to 22,78,642 maunds of the previous season. Substantial economies in stores and fuel consumption were also achieved and there has been a marked improvement in the recovery percentage and quality of sugar produced.

According to the previous record of consumption in the country there was expected to be a surplus of sugar during 1953; however to the great surprise of the trade and the Government the internal consumption considerably increased so much so, that by the middle of the year 1953, the shortage of sugar was evisaged in the country and the Government of India started imports to meet the consumption.

Crushing season 1953-54: The cane crop of 1953-54 in Eastern U.P. was severely damaged by drought during the germination period. Heavy floods in monsoon season severely damaged the cane crop in Eastern U.P. and North Bihar. The mills in these areas had as such a very short crush in the current season, the figure of the Mill being 12,90,106 maunds of cane and an average recovery of 10.01 per cent.

With the installation of new machinaries as mentioned in last report, the working in 1953-54 was very smooth and the daily crushing rate reached upto 29,000 maunds in 24 hours.

During the year, the Company made a gross profit of Rs. 9,74,758 (Rs. 7,46,440). After providing for debentures and other interests, depreciation and managing agents' remuneration by way of profit commission etc., there was a net profit of Rs. 6,27,592 (Rs. 5,18,636), out of which Rs. 2,90,000 (Rs. 2,40,000) has been set aside for income-tax leaving a balance of Rs. 4,25,909 (Rs. 3,42,768) in the profit and loss account including Rs. 88,318 (Rs. 64,141) brought forward from the previous year, which the directors distributed as follows:—

Payment of a dividend on ordinary shares for the year ended 31st August, 1953 at Re. 1 (Re. 1) per share Rs. 79,450 (Rs. 79,450), a bonus for the year ended 31st August, 1953 at Re. 1 (nil) per share Rs. 79,450 (nil), transfer to reserve fund Rs. 1,25,000 (*nil*), transfer to dividend equalisation fund Rs. 50,000 (Rs. 75,000) and carried forward Rs. 92,009 (Rs. 88,318).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,95,462	Block ...	13,63,803
Debentures ...	5,00,000	Stock-in-trade	28,28,051
Reserves ...	14,57,940	Stores ...	3,95,100
Provision for taxation ...	11,95,767	Work-in-progress ...	81,067
Liabilities ...	30,41,424	Other assets	2,954
Profit and loss account ...	4,25,909	Debts, deposits and advances ...	12,81,499
		Investments	8,13,950
		Cash ...	6,50,078
	Rs. 74,16,502		Rs. 74,16,502

N.B.—Figures within brackets relate to the corresponding period of the previous year.

(Concluded from page 733)

coal. Many consumers like the Calcutta jute mills and the Calcutta Electric Supply Corporation are already using slack coal instead of steam coal for steam-raising purposes. I do not see why others cannot do the same with some alterations in their boilers. The next step I suggest for giving relief to the collieries in the Bengal and Bihar fields is the abandonment of the so-called scheme of rationalisation of movement. This has not resulted so far in any increased availability of transport; on the contrary, this has considerably handicapped collieries of these two fields."

It may be noted, in passing, that the Association adopted, at its meeting, a few resolutions which are of some importance. The most important of them was that the Government should restore the recent cut in the price of grade II coal. Among others, the Association urged that the Government should help increase the daily average loadings of coal by providing more wagons and removal of terminal and transhipment bottlenecks. Permission for the erection of sidings of all categories should be granted as soon as they are applied for by the collieries. Special attention should be given for the transport of brick-burning coal and soft coke. The Government collieries should be directed not to enter into unequal competition with market

SALE OF TREASURY BILLS SUSPENDED

(From Our Own Correspondent)

BOMBAY, 13*th April*

The week under review was notable for two outstanding developments in the money market. One was the announcement of a new 10-year 3½ per cent. loan by the Government of India. The other was the suspension of the sale of Treasury Bills, evidently as a sequel to the former. It may be noted here that the sale of these short-term bills was resumed on 9th September, 1952, after a long break of three years, and was continued right through 1953 till now, except for a short interval in December, 1953.

The signs of a slight fall in the pressure for demand for funds which were visible in the short-term money market during the past several weeks persisted during the week under review also. This relaxation was more the result of an abatement of fresh demand for funds than that of any noteworthy expansion in the volume of floating funds. Supplies were still scanty, but banks were able to get their requirements without much difficulty. Inter-bank call money among all sections of banks was unchanged at 3 per cent. though, after clearing hours, call money was available at 2½ per cent. among the larger banks. House money at call was placed at 3 per cent. Short-term deposits were bid at 3 per cent. for one to three months and at 2½ per cent. for four to six months.

The slight decline in the demand for money is reflected in the better response to the Government of India Treasury Bills this week. The amount offered, against an invitation for the usual sum of Rs. 100 lakhs, was Rs. 192.75 lakhs which is the largest sum tendered since 17th November, 1953. The average rate of accepted tenders, however, stood unchanged at Rs. 2-10-9 per cent. per annum. No tenders for Treasury Bills have been invited for next week, presumably because of the new National Plan Loan announced by the Government of India this week. Apparently, the Government does not want to dry up the amount available for investment in the new loan by continuing the sale of Treasury Bills on which the yield has been quite attractive.

A sharp rise of Rs. 11.23 crores in demand deposits and a contraction of Rs. 2.06 crores in time deposits are disclosed by the consolidated statement of position of Scheduled banks for the week ended 2nd April, 1954. Inter-bank borrowings also show an increase of Rs. 1.29 crores. Borrowings from the Reserve Bank of India have been reduced by Rs. 8.63 crores, while those from the Imperial Bank have risen by Rs. 1.94 crores. An increase of Rs. 2.38 crores is noted in advances and of Rs. 4.92 crores in bills purchased and discounted. Total cash balances, including balances with other banks in current account and money at call and short notice, have risen by Rs. 11.60 crores.

The notable event of the week was the announcement by the Government of India of the issue of a 10-year loan for national development purposes. The loan is known as the National Plan Loan, 1964. It will carry interest at the rate of 3½ per cent. and the issue price will be Rs. 98-8 per cent. The loan is redeemable at par on 19th April, 1964. Subscriptions will be received from the 19th inst. until further notice. A feature of this new issue is that its size has not been fixed in advance. The issue will be kept on tap. As interest accrues from 19th April, 1954, recovery on account of net interest will be made at the rate of nine pies for every Rs. 100 from 26th April to 1st May, 1954, thereafter increasing by nine pies per week.

The Gilt-edged market continued to present a steady front during the major part of the week under review, though a slight selling pressure was noted in some of the loans towards the close following the announcement of the new loan. Early in the week there was a change in the Reserve Bank's open market operations. Thus, the sale of 3 per cent. 1966-68 and 3 per cent. 1970-75 last week which had been suspended in the previous week, was resumed in the beginning of the week under review on the 8th inst. to be precise. There was no increase in the Bank's selling price of 3 per cent. 1966-68, but the price of 3 per cent. 1970-75 was put up by As. 2 to Rs. 87. The volume of business done was small, 3 per cent. 1957 had buyers an anna lower at Rs. 98-7. 3 per cent. 1958 was wanted at Rs. 98-4. 3 per cent. 1959-61 was unchanged at Rs. 96-9. 3 per cent. 1963-65 had sellers at an anna better at Rs. 93-1, as also 3 per cent. 1964 at Rs. 93-1. 3 per cent. 1966-68 had business at Rs. 90-7. 3 per cent. 1970-75 improved by an anna to Rs. 87. 3 per cent. 1986 Conversion Loan was on offer and declined to Rs 83. Some business was reported done today at Rs. 82-14 also. 3½ per cent. N.P. Bond was maintained at Rs. 99-5, though there were buyers at Rs. 99-4½ only.

The rupee-dollar exchange rate was unchanged during the week under review at Rs. 475¼ (banks' selling) and at Rs. 471¾ (banks' buying). In the New York market, spot sterling held its ground at $2.81¾-2.81¾. Forward sterling (3 months) which stood unchanged at $2.81-5/16-2.81-7/16 during the major part of the week, shaded off to $2.81¼-2.81¼ yesterday. Transferable sterling dropped to $2.78¾-2.79, after gaining strength from $2.79-2.79¼ to $2.79¼-2.79¾.

TEA PRICES RISE

(From Our Own Correspondent)

CALCUTTA, 12*th April*

Following an increase in demand, steady conditions were witnessed in the internal tea sales last week, when dusts offered comprised 20,300 packages. There was a general price increase by half an anna to one anna. The most favoured types were C.T.C. Assams and black leafy teas suitable

(Continued in next column)

BULLION TOUCHES NEW HIGH

(From Our Own Correspondent)

BOMBAY, 13*th April*

Conditions akin to boom prevailed on the Bullion Exchange during the week under review. Under a spell of speculative buying and nervous short-covering, both as a result of good demand for ready, bullion prices touched new high levels, after a period of nearly two years. Forward silver touched a peak of Rs. 173-12, the highest since 3rd March, 1952. Similarly, forward gold jumped up to a high of Rs. 95-1, a level not seen since that date. As usual, the higher levels, however, attracted some profit-taking, which was very heavy in the case of silver. Consequently, the earlier gain in silver was entirely wiped out and the week's closing was a shade below last week's closing. The selling pressure in gold was, however, counteracted by the good offtake in the ready section (which commanded a premium of Re. 1 over the forward) and on balance finished nearly Rs. 2 higher.

The sharp upward trend is attributed to shortage of floating stocks, encouraging offtake of ready metal, the withdrawal of the Finance Minister's resignation which was interpreted to mean that the ban on import of gold would continue, fear of a strong inflationary spiral in future, induced by the sharp rise of Rs. 21 crores in notes in circulation disclosed by the Reserve Bank's statement last week, and inspiring upcountry advices. The enforcement of margin against bulls in silver on Thursday and in gold on Friday last did not check the upward thrust. The unabated rise was ultimately reversed on Monday following heavy selling pressure due to apprehensions that section 33C of the Bye-laws of the Bombay Bullion Association had been interpreted in favour of bears in respect of relief from payment of margin. This, coupled with weaker advices from upcountry centres, depressed the sentiment.

The sharp advance in gold caused a deadlock in trading among jobbers who suspended business on Saturday and Monday. They, however, resumed their activity today, but business was restricted.

Silver for forward delivery (20th April settlement) opened at Rs. 170-13 and as it closed on Thursday above Rs. 171-2, the rate at which automatic margin would be operative, bulls were obliged to pay a margin at the rate of Rs. 500 per bar on their outstanding purchases. However, the market continued its upward trend and touched a high of Rs. 173-13 on Saturday. The heavy unloading which ensued during the last two days brought it down to Rs. 170-9 at the close. Business in May settlement commenced on Saturday at Rs. 173-11 and, after touching Rs. 174-4, closed lower at Rs. 171-1.

Ready silver (.996 Mint) began at Rs. 171-1 and, after touching a peak of Rs. 174-9, reacted to Rs. 171-5 at the close. The premium of ready over forward which stood at As. 4 early in the week widened to As. 12 at the close, reflecting the shortage of floating stocks and good offtake. The floating stocks are estimated at 1,700 bars. The daily average offtake was 35 bars.

Forward gold (19th April settlement) opened the week at Rs. 91-13 and forged ahead to Rs. 94-9 on Friday. As the closing rate on that day was above the rate at which margin would be operative bulls had to pay a margin of Rs. 7 per tola. The statistical position having continued to be favourable for a bullish trend, forward gold was ragged up further to Rs. 95-1 on Saturday, at which level a reaction set in. There was a significant drop to Rs. 93-9 on Monday this week due to heavy arrivals on that day. The arrivals having slowed down and offtake having improved today, there was a recovery to Rs. 94-2 before closing lower at Rs. 93-15 due to weakness of silver. Business in May settlement commenced yesterday at Rs. 93-14 and closed for the week at Rs. 93-2.

Opening at Rs. 92-10, ready gold advanced to Rs. 96-4 yesterday, but closed at Rs. 94-10. The premium of ready over forward widened from As. 12 to Re. 1-10 yesterday, before it narrowed down to Re. 1 today. The floating stocks of gold are reported to be 15,000 tolas. The daily average arrivals were about 5,000 tolas. The daily average offtake was also 5,000 tolas.

In the London market, silver remained unchanged at 73¾d. per fine ounce for ready and at 73¼d. for forward. Gold, however, continued its last week upward trend and touched £12 8s. 10½d. on the 8th inst., but reacted to £12 8s. 8d. yesterday.

The following comparative table shows the trend of the market during the week under review:

	12-4-54	Highest	Lowest	7-4-54
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	94 10	96 4	92 9	92 7
Forward	93 10	95 1	91 12	91 11
Sovereign	90 4	90 8	89 8	89 8
SILVER				
Ready (.996 fine Mint) ..	171 5	174 9	171 0	170 15
Forward	170 9	173 13	170 8	170 11
London Ready	73¼d.	—	—	73¼d.
London Forward	73¼d.	—	—	73¼d.
London Gold	248s.8d.	248s.10½d.	248s.7¾d.	248s.7¾d.
New York Ready	85¼c.	—	—	85¼c.

(Concluded from previous column)

for export, prices of both advancing by an anna. Among Darjeelings, those with flavour were in good demand. The rates were: Best C.T.C., Assam Rs. 2-4-6 to Rs. 2-5, medium Assam grainy dusts Rs. 2-2-6, and medium Dooars Rs. 2-1-6. Offerings of leaf aggregated 1,350 chests which were mostly of residue grades. Demand was strong and prices were very steady.

FORWARD COTTON IRREGULAR

(From Our Own Correspondent)

BOMBAY, 13*th April*

In spite of the spurt in cotton futures last week-end, the opening of the week has once again demonstrated a lack of confidence amongst bull operators. While a limited number of longs with resources might combine to take deliveries of cotton tendered in the May contract, the rank and file of the operators are in no mood or position to do so and, as the period of maturity of contract draws near, liquidation by these at every small rise seems to be a regular feature. Even for those with resources, conditions for taking delivery are nor very favourable. The premia quoted for tenderable cotton of various styles in the spot market is so high today that it not only requires a larger amount of investment to be locked up, but there are doubts as to whether mill demand for this high-priced cotton can continue at the present level.

Still it must be admitted that the long-range trend in Indian cotton must remain bullish in view of the supply position. This view was also supported by Mr. Neville N. Wadia, the retiring Chairman of the Bombay Millowners' Association, at the annual general meeting of the body. Mr. Wadia also pointed out that the carry-over at the end of this season would be small. Forward markets, however, are often ruled by the necessities of the prevailing situation at any given time and, unless a very strong organisation is formed amongst buyers with plenty of resources to weigh over cotton next month, the position of the May contract is likely to remain vulnerable.

But it is surprising that there is no buoyancy in the August contract as well. The premium of August over May still lingers at the same level of Rs. 14. The technical considerations which rule over the May contract do not operate in the case of August. Demand for cloth within the country continues to be brisk and is expected to grow in volume, unless the millowners make the mistake they have committed several times in the past of raising rates inordinately. The export outlook, though restrained, is still helpful judging by the performance during the first quarter of this year. Stocks with mills are not so large as to keep them off the market for any length of time. In view of all this, it is not improbable that, once this aspect is realised by operators, there might be a sudden jump both in the price of August contract and in the premium of August over May. Even now, the tendency of operators is towards straddle trading by selling May and buying August. Once this tendency gets accentuated, the price difference between the two Contracts is likely to be more marked.

The falling off of demand in the spot market during the week under review is also somewhat intriguing. As stated above, conditions in the cloth market are very encouraging. This should induce the mills to buy more cotton. One of the reasons for this neglect of indigenous cotton is the diversion of the mills' attention to imported cotton, as the present tendency seems to be to produce yarn of higher counts. The weakness in the forward market is also responsible, to a certain extent, for the reluctance on the part of the mills to buy Indian cotton at present. Another powerful factor which contributed to the temporary reduction in the volume of trade in the spot market is the uncertainty about the sales tax. Till this point is cleared as a result of the discussions which are taking place between the spot cotton trade and the authorities, the turnover at Sewri is bound to remain on the low side.

With regard to exports, nothing has materialised so far about the expectations entertained amongst shippers for a further release of 50,000 bales of Bengal *deshi*. These hopes are, however, still running high, in view of the factual position regarding supplies of Bengal *deshi* in the country. Even if a further quota is forthcoming, it seems that a substantial part of it will go towards the fulfilment of existing commitments, which were in excess of the actual quantity released previously, and cotton available for new transactions will be of a limited nature. Cotton prices in the world market are believed to have reached their peak points for the season and, considering the tendency at New York, the prices might show some recession in the future. It is, therefore, necessary that, if any quantity of Bengals is to be released, the Government should announce this at an early date.

With regard to imports, there seems to be a slight lull, so far as cotton from sources other than the U.S. is concerned. Even the quantity of U.S. cotton, according to the import licences issued till the end of March, is moderate at 71,113 bales. These, however, do not include the outstanding licences of the past year and extended further. The largest share of 245,112 bales out of the total quantity of 463,668 bales of imports, for which licences have been issued, is claimed by Egyptian cotton, with East Africans standing next and accounting for 137-913. Sudans so far have aggregated only 8,598 bales, while imports from all other sources such as Peru and Mexico, etc., have not reached even the 1,000 bales limit.

The futures market moved irregularly during the week under review with alternate bouts of profit-taking and short-covering. Over the week, the prices were a shade lower. I.C.C. May opened the week easy at Rs. 671-8, as against Rs. 673-8 last week. After receding to Rs. 664 on the 9th inst., it recovered to Rs. 673-8 yesterday. The contract again slided down to Rs. 666-8. Lower levels evoked short-covering and the contract improved to Rs. 674 today, although the closing rate was slightly lower at Rs. 671-8. I.C.C. August declined from Rs. 687-4 to Rs. 679 on Friday. After recovering to Rs. 688 yesterday, it receded to Rs. 684-8 today. Towards the close, however, it was higher at Rs. 685.

The following is the trend of prices in the forward section during the week under review:

		Closing 7-3-54	*High*	*Low*	*Closing* 13-3-54
I.C.C. May	Rs.	673¾	674½	664	671½
I.C.C. Aug.	Rs.	688½	688	679	685

Latest available quotations from the spot market are: Bengal *deshi* Rs. 620; Berar Jarillas Rs. 790; Khandesh Rs. 865; Vijay Rs. 895; Oomra *deshi* Rs. 740; Moglai Rs. 710.

An important event in the cotton world will be the opening of the forward market at Liverpool early next month. The Bill allowing private trading in cotton and termination of fresh purchases by the R.C.C. has been passed in Parliament. The Uganda Marketing Board will hold another auction today and offer 137,200 bales of the current crop. In spite of hurried sales at Khartoum, the prices realised are handsome and the fears entertained in Alexandria on this score have proved groundless.

While there has been no development of note at Karachi, there has been some recession in prices, as can be seen from the latest available quotations given below:

Sind *deshi* Rs. 78; Punjab *deshi* Rs. 77; 4F Punjab R.G. Rs. 78; S.G. Rs. 83-8; L.S.S Punjab R.G. Rs. 80-8; S.G. Rs. 84-8; N.T.R.G. Rs. 81; S.G. Rs. 85-8; 289F Punjab R.G. Rs. 84; S.G. Rs. 89.

At Alexandria, the tempo of trading continues to be low, as can be expected, in view of the limited supplies left there. France and Italy have shown some interest, while India seems to have secured all the cotton it needs from this source for the time being. There is some move at Alexandria to persuade the Government to allow forward trading in cotton. But it is doubtful whether the authorities would consider this request favourably in the present political uncertainty prevailing in the country.

At New York, prices have been gradually declining with some irregular fluctuations during the week. The tendency to liquidate current holdings and to go long in the new crop deliveries was also not very much in evidence this week. And there is a note of caution in the day-to-day trading. It is, however, worthwhile repeating that, in view of the increasing political tension, which might result in another Korea being created in Indo-China, this is a suitable time for Indian mills to secure their supplies of U.S. cotton.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	12-4-54	6-4-54	30-3-54
Spot	35.00	35.10	35.20
May	34.05	34.24	34.26
July	34.22	34.41	34.51
October	33.76	34.03	34.09
December	33.74	34.02	34.04

ART SILK YARN DRIFTS LOWER

(From Our Own Correspondent)

BOMBAY, 13*th April*

Greatly restricted turnover and narrow price movement were the features of trading in the art silk yarn market during the week under review. This was the result of confusion among dealers *inter se* and among dealers and consumers, following the complicated two-point sales tax system introduced with effect from the 1st inst. There was also the uncertainty regarding the excise duty on art silk fabrics. While one section of traders felt that the excise duty would be completely abolished, another section was very doubtful about the abolition of the duty. In the context of conflicting reports about the likelihood of the Government's decision thus, traders exercised utmost caution in their dealings. The general trend of art silk yarn during the week, however, was downwards, thanks to lack of buying support. Two bearish factors were responsible for such a state of affairs. First, there was the report of a bulk purchase agreement, signed by the Silk and Art Silk Mills Association, Bombay, with an Italian manufacturer, covering Rs. 1.86 crores worth of art silk yarn. Secondly, the Government of India removed acetate, bomberg and other non-viscose yarn of 120 and 150 deniers from the scope of the present restrictions (for January-June, 1954), under which licence-holders are not permitted to utilise more than 5 per cent. of the face value of their licences for the import of 120 deniers and 150 deniers of art silk yarn in bright finishes.

In the forward section, 150D April contract receded from Rs. 779 to Rs. 774 per case of 200 lbs. May contract dropped Rs. 5 to Rs. 779. Prices of art silk yarn in the spot section also tended to decline. 150 Japan fell by As. 2 to Rs. 4-11 per lb. 120 Italy, after improving by As. 3 to Rs. 4-6 yesterday, declined to Rs. 4-3-6. 150 Italy was half-an-anna lower at Rs. 3-14-6, although it had gone up to Rs. 4-1 yesterday. 120 Japan, however, was steady at Rs. 4-13.

Arrivals of art silk yarn into the market would appear to have declined in the past two weeks. An indication of this is provided by the reduction in imports. The quantity of yarn actually imported into Bombay Port during the month of March was a little over 1.82 million lbs., as against 2.10 million lbs. in the previous month and 2.68 million lbs. two months before.

Under the reported bulk purchase agreement between the Silk and Art Silk Mills Association, Bombay, and the Italian firm, the latter has agreed to supply are silk yarn at 40d. per lb., as against the average rate of 43d. at which it had sold Rs. 1 crore worth of yarn last year. This purchase covers a part of the import quota held by the Association for the licensing period January-June, 1954. The aggregate value of the quota—this is made up by pooling the quotas of individual members—is estimated at Rs. 1.86 crores.

In contrast to the trend in art silk yarn market, the staple fibre yarn section presented a steady trend this week. The steadiness was induced by good buying enquiries. Consequently, prices registered improvement. Staple fibre yarn (40×2) April contract advanced by Rs. 6 to Rs. 685 before closing at Rs. 683 per case of 200 lbs. May contract spurted from Rs. 685 to Rs. 690, but finished lower at Rs. 687. In the spot section, 40×2 Sitaram gathered an anna to Rs. 3-8 per lb. Raghuvamshi was transacted at Rs. 3-6, as against Rs. 3-5-3. New Great, Hirji and Sri Ram gained half-an-anna each to Rs. 3-8-9, Rs. 3-6 and Rs. 3-7-6, respectively. Foreign yarns, however, suffered loss in values. Suico, Shinco and Fuji were all lower by half-an-anna at Rs. 4-1-6, Rs. 4-1 and Rs. 4, respectively.

The cotton yarn market remained steady. Under the impetus of good offtake by consuming centres, values tended to look-up. Among 10s, Modern rose by As. 2 to Rs. 13-6 per bundle of 10 lbs. Colaba gained an anna to Rs. 13-5. Among 20s, Madura was better by As. 2 at Rs. 19-4 and Seksaria was higher by an anna at Rs. 16-11. Among 40s, Meenakshi advanced by As. 4 to Rs. 27-12. Among 60s, Sri Ram was fully steady at Rs. 57-4, Raghuvamshi at Rs. 44-12 and Finlay at Rs. 59. Among 80s, Finlay at Rs. 66 and Elphinstone at Rs. 60-8 remained practically unchanged over the week.

The table below gives the prices of art silk, staple fibre and cotton yarns quoted yesterday, as compared with those in the previous week:—

	12-4-1954	7-4-1954
	Rs. a.	Rs. a.
Art silk yarn—		
150 April (per case of 200 lbs.)	774 0	779 0
150 May	779 0	784 0
120 Japan (per lb.)	4 13	4 13
150 Japan (per lb.)	4 11	4 13
120 Italy (per lb.)	4 3½	4 3
150 Italy (per lb.)	3 14½	3 15
Staple fibre yarn—		
40×2 April (per case of 200 lbs.) ..	683 0	679 0
40×2 May	687 0	—
Suico (per lb.)	4 1½	4 2
New Great (per lb.)	3 8½	3 8½
Cotton yarn (per bundle of 10 lbs.)—		
10s Modern	13 6	13 4
20s Madura	19 4	19 2
30s Madura	25 0	25 0
40s Meenakshi	27 12	27 8
60s Finlay	59 0	59 0
80s Sri Ram	62 0	62 8
90s Khatau	57 8	57 8

GROUNDNUTS FIRM

(From Our Own Correspondent)

BOMBAY, 13*th April*

A distinctly firm trend was visible in the local oilseeds market this week. The firmness was pronounced in the groundnut section, on good support by *vanaspati* interests and crushers. Encouraging advices from North Indian markets for rapeseed were mainly responsible for this buying support. The linseed section also ruled firm partly in sympathy with groundnuts and partly as a result of some demand from the Punjab and U.P. interests. The castorseeds section advanced on speculative support. There was scattered demand from the Continent for castor oil. The *niger* and *kardi* sections proved no exception to the generally upward trend in the market. Prices in almost all sections of the market recorded substantial gains.

The National Chamber of Industries and Commerce, U.P., Agra, has urged the Forward Markets Commission to take immediate steps to stop speculation in oil and oilseeds in the country. Drawing the attention of the Commission to increasing speculative activity in Delhi, Bharatpur, Aligarh and other seed markets in the country, it has pointed out that such activity is detrimental to the economic stability of the oil industry.

The easy conditions witnessed in groundnuts last week gave way to a firm trend. Bold F.A.Q. shot up from Rs. 34-10 to Rs. 35-12. April-May and June-July were higher by As. 14 and As. 13 at Rs. 35-4 and Rs. 35-10, respectively. Khandesh quality moved up by As. 10 to Rs. 36-14. Groundnut oil ready gathered As. 8 to Rs. 18-6. May and June deliveries changed hands higher at Rs. 18-9 and Rs. 18-11, as against Rs. 18 and Rs. 18-3, respectively.

Shorts in the linseed section tended to cover their commitments. Bold ready advanced from Rs. 25-4 to Rs. 26. April-May and June-July deliveries improved from Rs. 24-9 and Rs. 24-12 to Rs. 25-15 and Rs. 26-4, respectively. Linseed oil ready was higher by As. 10 at Rs. 15. Linseed oil (April-May) was quoted in the Continent at £104 c.i.f.

In the castorseeds section, May delivery, which opened at Rs. 110-4 as against Rs. 110-2, fluctuated between Rs. 112-4 and Rs. 110, before closing at Rs. 111-2. September delivery, which changed hands early in the week at Rs. 117-6 as against Rs. 117-4 last week, moved between Rs. 119-2 and Rs. 117-4, before closing the week at Rs. 118-2. Madras quality improved by As. 7 to Rs. 23-4. Commercial Oil was generally steady at Rs. 11-2 and I Pressure at Rs. 12-4. Oil B.S.S, gained As. 4 to Rs. 13. On the Continent B.S.S. (April) was quoted at £120 c. & f., as against Rs. 119 c. & f. a week ago, I Pressure at £119 c. & f. as against £118 c. & f. and Commercial at £113 c. & f. as against £112 c. & f.

Among other oilseeds, *kardi* Bold improved by As. 6 to Rs. 18-8 and niger Madras by As. 4 to Rs. 29-8. Niger seed (pure) March-April delivery ruled steady at £54 c.i.f. on the Continent.

The following table shows the prices of oilseeds and oil on the 13th inst., as compared with those at the end of the previous two weeks:

	13-4-54	7-4-54	31-3-54
	Rs a.	Rs. a.	Rs. a.
Groundnuts—			
Khandesh Quality Ready (per cwt.)	36 14	36 4	37 0

Commercial (per quarter) ..	11 12	11 12	11 10

SUGAR PRICES FORGE AHEAD

(From Our Own Correspondent)

BOMBAY, 13*th April*

Hectic buying, induced by the reimposition of the ban on forward sales of sugar by mills, announced by the Central Government on Saturday last, characterised the trading in the Bombay sugar market during the week under review. The Government's directive that sales of sugar should be effected only against specific release orders and the possibility of the Centre asking the mills to make sales only to parties nominated by it was interpreted by traders as a definite indication of the imposition of some form of effective control on sugar distribution. This, together with the renewed expectation of an appreciably lower output in the current season, let loose a wave of buying pressure and prices of sugar forged ahead to touch the highest levels for the past several weeks. The prices of sugar quoted by mills have gone up considerably, the ex-mill rates for ordinary grain sugar being as much as Rs. 36 per maund in the Deccan and Rs. 34-8 in the U.P.

In the spot section, large grain sugar firmed up from Rs. 100-102 to Rs. 105-110 per bag, including the first stage sales tax of half-an-anna in the rupee. Small grain moved up by Rs. 6 to Rs. 101. Medium grain advanced from Rs. 97-98 to Rs. 103. Among foreign sugars, British refined was specially favoured and commanded as high a price as Rs. 99 per bag of 2 cwts., as against Rs. 93-8 last week, both the rates inclusive of sales tax at the first stage. Cuban sugar spurted by Rs. 3 to Rs. 43-8 per 100 lbs. Mexican rose by Rs. 2-8 to Rs. 46-12 per 1104 lbs. Czechoslovakian sugar was firm at Rs. 100-102 per bag of 2 cwts. All these rates too are inclusive of sales tax at the first stage.

In the forward market also, prices registered a handsome improvement. *Chaitra* delivery picked up Rs. 2-8 to Rs. 92-4 per bag. Business in *Vaikash* delivery commenced at Rs. 87. After hardening to Rs. 91, the contract receded to Rs. 90 today.

Arrivals of sugar into the Bombay market this week were smaller than those in the previous two weeks, the quantity actually received being 3,000 bags, as against 5,700 bags last week and 4,200 bags two weeks before.

The contemplated move of the Central Government to issue directives to sugar mills to sell sugar to its own nominees has, as already stated, led the traders to feel that sugar control is in the offing. Some, however, do not agree with this view. For, in their opinion, the move refers only to the 25 per cent. stocks held as Government reserve which will be sold at Rs. 27 per maund. It is, therefore, believed that the control as anticipated by the trade generally will not at all come, although it is quite probable that some stringent measures may be taken to meet the unprecedented buying wave in sugar. Some are also inclined to feel that a further portion of the stocks of millers may be frozen, or a further release of sugar for free sale may be announced to meet the present emergency.

LESS GENERAL DEMAND FOR TEAS

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 10*th April*

The offerings in sale No. 7, which was held on Tuesday, 6th April, amounted to approximately 7,45,000 lbs. Quality was maintained, but there was less general demand. Prices for low and low medium teas remained steady, but medium teas declined As. 2 to As. 3. There were some fine high-grown teas with very good quality and flavour on offer, but these were seldom competed for and were the weakest feature of the sale, often being to be well supported and remained steady. The following are the quotations:—

	1954	1953
	Rs. a. p.	Rs. a. p.
Low-grown Travancore B.O.P.	2 10 0	1 13 0
Medium Travancore B.O.P. ...	2 11 0	2 2 0
		to 2 3 0
Anamallais B.O.P.	2 14 0	2 5 6
Best liquoring Nilgiri B.O.P.	4 0 0	3 13 0
Well made black leaf O.P. ...	2 11 0	2 4 6

London Market—Sale of 5th April—Market unchanged.

Sale of 7th April.—Market irregular, easier top and bottom.

Colombo Market.—Strong general demand. Low-growns steady. Others lower following quality.

Calcutta Market—Export.—No sale this week.

Dust.—Good general demand. Market irregularly half anna dearer. Black exportable types and C.T.C. dusts strongest features.

Special Licence.—Small business was done here this week at 34 pies, but both buyers and sellers are scarce.

1954-55 *Export Quota.*—Business has been effected here at 39 pies, which remains today's quotation.

Forthcoming Auctions.—Dust sale "G" will be held on Tuesday, 13th April, and sale No. 8 will be held on Tuesday, 20th April, 1954.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd. wire:—

"*Dust Sale G.*—1,40,000 lbs. Good demand. Prices irregular, but generally firm."

JUTE GOODS BUOYANT

(From Our Own Correspondent)

CALCUTTA, 12*th April*

Buoyant conditions were in evidence in the jute goods market during the week under review, the leadership for the impressive upward movement in rates being provided by heavy goods. Stockists derived considerable satisfaction from the publication of stock figures as at the end of March, according to which sacking goods accounted for a sizable reduction of 10,500 tons, that is, from 71,900 tons in February to 61,400 tons. This was, of course, in line with market expectations earlier, as traders could not have taken a different view, in view of the great volume of business that took place in March. The present position of sacking goods is in striking contrast with the position a year ago, when mills, realising the glut of sacking in the market and the need to increase production of hessian, began transferring sacking looms to the production of hessian. A situation has now arisen to justify a reversal of this process, if only to avoid any unnatural price trend in the market. In fact, there is a shortage for ready deliveries of certain heavy goods such as heavy cees, both green striped and plain, for which demand is unsatisfied. No shortage in the long run is expected, as mills are able and equipped to produce as much sacking and hessian as there is demand. But a shortfall in production, as compared to genuine consumption demand, is capable of creating an artificial shortage, as a result of which prices may tend to go higher. This has to be prevented in the interests of continued export business at a moderate level. That certain mills realise this and are producing heavy cees plain, instead of B. twills, go to show that they are anxious to prevent the development of a trend that would disturb the export business.

There is no shortage for, or squeeze in, B. twills, because of the Katni market. Despite the fact that B. twills ready are comparatively cheaper than heavy cees, yet consumers who had already placed their orders do not seem to change over to B. twills. Turnover in sacking goods was moderate. Heavy cees, both plain and striped, were bought by shippers by paying substantial premiums. Ready heavy cees plain advanced from Rs. 117-8 to Rs. 120-8 and the green striped ones from Rs. 125 to Rs. 129-8. There was also good demand for cornsacks, cotton packs, A. twills, light cees and Liverpool twills, but shortage of ready materials limited business. Ready D.W. flour bags were steady at Rs. 132. Transactions in B. twills were speculative in character. The ready material, in sympathy with other constructions, gradually picked up strength from Rs. 108-11 to Rs. 110-12, the July-September as well as the May-June positions at Rs. 108 and Rs. 109-12, respectively, showing gains of Rs. 2 each. Today, however, there was profit-taking and the rate was marked down to Rs. 109-8.

Hessian was also steady and interest was shown by buyers on behalf of the United States. The news that hessian stocks at the end of March increased to 29,600 tons, as against 21,900 tons in the previous month, was more or less counteracted by expectations of good business with the Argentine for the June-July shipment. Now that more sacking will be produced at the cost of hessian, prices are bound to remain steady. Ready 40" 10 oz. improved from Rs. 42-13 to Rs. 44, today's rate being lower at Rs. 43-10 f.a.s. and Rs. 47-11 f.o.b. The eight oz. hessian was quoted today at Rs. 35-14 f.a.s. and at Rs. 39-2 f.o.b.

Impressive rises were added to the prices of raw jute. But mills refused to pay the prices asked for by buyers. For any unhealthy upward movement should be avoided in the interest of manufactured goods. Sellers were reserved on expectations of higher prices. The lack of rain so far has delayed sowing of the new crop and, as such, the new crop will not be available to mills as soon as originally expected. The realisation that mills will have to carry on with the stocks of raw materials held by them and that are available in the market is itself an encouragement for stock-holders to insist on higher prices. Daisee bottoms were traded at Rs. 31 and middles at Rs. 34. Northern bottoms changed hands at Rs. 28. At Rs. 24, Bimli f.a.q. gained one point, and buyers were prepared to pay Rs. 28-8 for Pakistani jat bottoms. Assam lower middles and bottoms were priced at Rs. 31-8 and Rs. 28-8, respectively.

METALS WELL MAINTAINED

(From Our Own Correspondent)

CALCUTTA, 12*th April*

Steady conditions were again in evidence in the metal market during the week under review, and the recent gains were well maintained. It is usual at this time of the year that producers of non-ferrous metal products have to plan for the procurement of raw materials for the fulfilment of Government orders for the financial year 1954-55. There was no surprise, therefore, in the small increase in demand for the principal base metals this week. The stockpile policy of the American Government is stated to be the procurement of strategic metals and minerals, when prices are low, and keeping the same away from the market. This, in effect, means a "price support scheme" for the materials needed for stockpiling. Keeping away from the market of such materials procured would mean that the market trend will not be influenced to move in a downward direction by dumping in the market materials once bought for stockpiling.

During the week, electrolytic copper was traded at Rs. 182. There was active demand and fresh arrivals are needed to ease the supply situation. Not much time was necessary for consumers to absorb the recent arrivals in Bombay. A particularly interesting feature was the improvement in tin, which is showing signs of reaching the replacement cost. The week's gain was Rs. 10 to Rs. 474. The improvement was influenced by encouraging advices from London. Moderate business was also put through in the local market. Another feature was the steadiness in mercury which, under the influence of Government's decision to license freely exports of mercury chloride, gained 100 points to Rs. 755. Electrolytic zinc was in great demand and changed hands at Rs. 57-8. Lead, however, was quiet at Rs. 69.

LINSEED FIRM

(Messrs. A. Bradley & Co.)

CALCUTTA, 12*th April*

Linseed prices have ruled very firm during the week and activity has been on a rather limited scale, whilst supplies from upcountry have fallen off. A fairly good demand for ready goods has resulted in some trading on a small scale only, while forward enquiries from local speculators have resulted in some higher-priced transactions. Conditions remain firm in the oil section; there have been enquiries chiefly for forward positions and a fair turnover has been recorded. Latest quotations are: Ready Rs. 19-2 and June-July Rs. 19-12 per maund.

KANPUR HIDES UNCHANGED

(From Our Own Correspondent)

KANPUR, 11*th April*

During the week under review, the Kanpur hides and skins market remained unaltered. New arrivals during the week were slightly higher than the average and were readily disposed of. The Madras dealers were a bit lukewarm. The major party behind the main transactions over the wet salted cow and buff were the local tanners.

Latest quotations are: Wet salted cow, 1st grade Rs. 240 and 2nd grade Rs. 160 to Rs. 200 per score; wet salted buff, 1st grade 1 lb. 14 ozs. and 2nd grade 2 lbs. 4 ozs. per rupee; goat skins, 1st grade Rs. 300 and 2nd grade Rs. 260 per 100 pieces; sheep skins Rs. 250 to Rs. 300 per 100 pieces.

HIDES RULE DULL IN MADRAS

(From Our Own Correspondent)

MADRAS, 12*th April*

Trading in the hides and skins market has been slow and shippers are expecting improvement only after Easter. Arrivals of kips are moderate and offtake is small. Stocks have not accumulated in the bazaar, and sellers decline to follow London levels which are 1d. to 2d. below. U.K. dressers are buying cautiously, in view of absence of demand in quantities for leather. Demand for cow calf and buff calf has been *nil* and that for buff heavies moderate.

Clearances of sheep and goat in the local market have been good, and prices in the raw centres have ruled firmer.

Notices

UNITED BANK OF INDIA LIMITED

Registered Office: UNITED BANK BUILDINGS

4, CLIVE GHAT STREET, CALCUTTA

NOTICE

NOTICE IS HEREBY GIVEN THAT THE next Ordinary General Meeting of the Shareholders of UNITED BANK OF INDIA LIMITED will be held at the Registered Office of the Bank at the UNITED BANK BUILDINGS, 4, Clive Ghat Street, Calcutta, on Sunday the 9th May, 1954, at 10 a.m., to transact the following business:—

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. a.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. ‡ Sales and amount written off. (k) Investments. † For ten months ended 31st December 1951.

(1) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Rs. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 764 in the debentures section:—

§§ Option to repay on sixmonths' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. psemium,

(b) Bearer bonds of Rs. 1,000 each repayable a par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952 or on any subsequent interes date at one month's notice.

(e) Retnrsable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955 on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months notice

MARKET GOSSIP

(*Concluded from page 719*)

demand for it is heaviest. It remains to be seen how far it will succeed, for one does not know how hoarding and price racketeering by merchants, who know that the country is short of sugar this year, will be prevented. The total production in the country this year will be no more than 11 lakh tons, which, together with a carry forward of 2 lakh tons, gives a total supply of 13 lakh tons. As against this, consumption is of the order of 17 to 18 lakh tons. It is true that the Government is trying to bridge this gap through imports. But so far it has not been able to buy even 2 lakh tons of foreign sugar, the first shipment of which will be available only next month. There are many in trade circles who wonder whether the Government will be able to import all the sugar it wants to, namely, 5 lakh tons, as prices in the world markets are firm and supplies are not easily available.

• • • •

In order to augment supplies in the country, the Government has been considering for some time the question of allowing imports of raw sugar from Cuba and other places to be processed into white sugar by the factories in the Deccan, South India and other centres. But the Government has been slow in taking a decision on this matter and imposing all sorts of irksome conditions which give no incentive to the factories to implement this idea. At a Press conference in Bombay held today, Mr. Rafi Ahmed Kidwai disclosed that the Government has so far given permission to import 1,00,000 tons of brown sugar, which, in terms of white sugar, is equivalent to 90,000 tons. But so far no factory seems to have bought a single ton of brown sugar, as the Government wants not only to skim off all the profit for itself, leaving only a small margin to the manufacturer, but also to maintain strict control over the manufacturers' accounts. Some of these conditions are so stringent that one wonders whether the Government is at all keen on getting the sugar supplies augmented in this manner.

• • • •

A welcome development so far as the Deccan sugar factories are concerned is the decision of the Bombay Government not to apply the Growth of Food Crops Act to them from the current year. Ever since 1944, these factories had to devote one-third of the land belonging to their sugarcane farms to food crops. Following the removal of this restriction, the factories can grow more cane and expand their sugar production, provided adequate supply of irrigation water is made available. Another advantage of the withdrawal of this restriction is that factories will be able to get better sugarcane crops. The relaxation will allow green manuring to be carried out or leguminous crops raised or permit the lands to be left fallow with considerable advantage to subsequent crops. None of these measures to maintain the fertility of the soil could be used ever since the grow-more-food crop scheme was extended to the sugarcane farms of the Deccan factories some ten years ago.

• • • •

A study group of American agricultural experts—the team is styled as the U.S. Agricultural Trade Mission to Asia—will arrive in this country this week-end, it is learnt. Presumably, they have been asked to perform the study under the ægis of the U.S. Department of Agriculture to implement one of the steps in President Eisenhower's farm programme which he outlined in his message to the Congress early this year. In that message, he called for a series of trade missions—one to Europe, one to Asia and one to Latin America—to study "the possibilities of expanding international trade in food and fibre." These experts are expected to explore the possibilities of expanding trade in agricultural commodities, improving marketing and trade practices and promoting international trade through private channels.

• • • •

The agricultural experts have, of course, no powers to conclude trade contracts on the spot. But it seems safe to presume that their advice will materially assist the U.S. Administration in formulating foreign trade policies in relation to agricultural produce. The team which is coming to India is expected to hold consultations with private traders and representatives of the Government. The U.S., as is well known, faces the problem of large surpluses which have accumulated with the Government-sponsored Commodity Credit Corporation. As on 31st December, 1953, the Corporation's holdings of farm production, including wheat, cotton and tobacco, were valued at $4,545 million. The American authorities are known to be thinking in terms of overcoming the dollar shortage, which prevents larger absorption of American produce by foreign countries, through a system under which the buyers would be free to pay the cost of their purchases in national currencies. The Government of India has not yet expressed its attitude towards such proposals in any definite manner. But it is presumed that the Government is not likely to be averse to such proposals from the American side, if the terms and conditions of the latter are favourable. There is no reason why India should not buy such commodities as cotton, if the U.S. were prepared to take the value of the commodity sold in rupees, to be repatriated after some years.

• • • •

Among the commodities which the U.S. could offer and India tempted not to reject, must be mentioned cotton. Although the supply of cotton in India is none too scanty, Indian requirements are more than what could be met out of domestic production. Reviewing the cotton position in relation to the textile industry's requirements, Mr. Neville Wadia, Chairman of the Bombay Millowners' Association, observed, in the course of his address at the recent annual meeting of the Association, as follows:

"The cotton crop of 1953-54 has proved to be the best for many years. Although, at one time, it was estimated at as high as 44 lakh bales, it is now much more likely to be 41 lakh bales. While this has enabled larger quotas to be given to all mills, equivalent to 84 per cent. of their normal offtake, this is still far short of the requirements of the industry for which nothing less than 50 lakh bales will suffice. As it is, the carry-over, as on 31st August, is not expected to be more than at the same time last year, and it was already dangerously low then."

RATIONALISATION OF ADMINISTRATIVE MACHINERY TO SUIT DEVELOPMENT

IN recent weeks, much has been said about the Finance Ministry's control over expenditure of other ministries. The complaint has been that the present system is not in keeping with the need for speed in implementing development projects, as it is very cumbersome, breeds red-tapism and causes delay. This school of thought has, therefore, been arguing that there should be a certain amount of delegation of powers to the spending ministry, ensuring freedom of action. While conceding that work must be carried on quickly without being handicapped by red-tape and that petty considerations should not be allowed to stand in the way of development work, the protagonists of the existing system insist that there must be a proper scrutiny of expenditure of public funds, in order to avoid waste. This is doubtless an important issue, but it does not seem to have been widely realised that this issue is but a facet of the far more important problem of improving the efficacy of the administrative machinery, in general, and its usefulness to economic planning and development, in particular. It is obvious that the need for continuing, in its present form, the system of close checks and counter-checks by the Finance Ministry over the expenditure of the various other ministries will not arise, if the administrative machinery as a whole is more efficient than now. The question of financial control should, therefore, be considered not in isolation but simultaneously with the larger question of rationalisation of the whole administrative machinery for expediting Government business.

It is true that, for some time past, this question has been engaging the attention of the Government of India. Recently, a senior official of the Civil Service, Mr. Ashok K. Chanda, was asked to make a rapid and informal review of the existing administrative and financial procedures and make recommendations for improving them. This official has already submitted a few reports to the Prime Minister and some more are on the way. Others, such as Mr. Paul H. Appleby and the late Mr. N. Gopalaswamy Iyengar, too, have studied this problem and made suggestions to raise the efficiency and standards of administration. But, in view of the latest episode, namely, Mr. C. D. Deshmukh's resignation and its subsequent withdrawal, there is a danger of too much prominence being given to the issue of financial control to the exclusion of the much bigger reform of the administrative machinery. In fact, a solution to the former will depend upon the character of the reform of the latter. We, therefore, feel that this question must be given a higher priority than that of financial control. Accordingly, we propose to examine it at some length. In order to avoid misunderstanding, it is necessary to say at the outset that the object of this article is not to criticise the present administrative personnel, who have many achievements to their credit, but to record certain impressions as they strike us, with a genuine desire to assist the organisation of more effective attitudes and practices.

The record of achievements of the Civil Service in India both in maintaining stability at home and, by and large, in upholding prestige abroad has been exemplary. But, at the same time, it must be stated that, with all these qualities, the Service still offers a very inadequate instrument for producing successful results in a practical way, especially in matters of economic planning. It is the purpose of this article to state that, while procedures are important, the real secret of successful administration is more a question of mental attitudes and approaches and a capacity for team work. Both these qualities are absent at present in our administrative set-up, whether it be at the Centre or in the States.

Before proceeding to state as to what is wrong with the attitude of the administrators in this country, it is also fair to admit two more points to their credit. First, the present administration, when it inherited the big job of developing the country's economy, began on a task for which it had no tradition or experience. In pre-war days, the whole budget of the Government of India was limited to a little over Rs. 100 crores per annum, of which probably no more than Rs. 10 to Rs. 20 crores related to developmental activity. Today, the size of the Central Government's development investment has risen to a level varying between Rs. 300 and Rs. 500 crores per annum; in terms of the sheer size of the job, it is so vast and new that it should not surprise anybody if the administration has made some mistakes or faulty approaches.

Secondly, having regard to this magnitude of the job, the size of the administrative personnel is rather small. It is true that, during war-time, the Secretariat of the Government had increased quite appreciably, judged by mere numbers. But this increase is still very inadequate relatively to the nature of the work to be done, partly because the war-time personnel is not suited to handle the big and delicate jobs and partly because the jobs themselves are so heavy, so complicated and so numerous that it is definitely well beyond the competence of the civil servants charged to do them. In making any criticism of the administration in this country, it is only fair to acknowledge that a large body of the senior civil servants in this country works under such great pressure and with so little relaxation and holidays that it is, indeed, a matter of surprise that they have not turned out to be worse than they are. It is only people who do not understand all that is involved in administration and who have no appreciation of how many more people are employed for similar jobs in other countries that can honestly criticise the administration at the senior level in this country for their failures and inadequacies. Side by side with this, however, there is also a great deal of indolence, evasion and incredible incompetence at some of the subordinate levels of the service, involving a great deal of waste of time and money and slowing down governmental operations as a whole. But that is a separate issue by itself.

Having said all this, it is necessary to observe that, while the integrity of the civil service as a whole is beyond doubt, there are numerous traits of a qualitative character which inhibit efficiency in terms of practical results. Some of these are traits of training and environment and some of temperament and character. One of the most important shortcomings which one notices in the attitudes of administrators who evolve policy in this country is their general incapacity for team work. This is, indeed, surprising in a body of men who are so level-headed. If one observes a team of people working on similar jobs, especially in the field of business, an important difference that strikes one is the extent to which these administrators tend to take decisions not as teams but as individuals of superior authority. Here is a question of conflict between the desire to exercise authority and the need to achieve results. In any big practical organisation, whether it be the running of a governmental project or a huge organisation, such as General Motors and I.C.I., which manages a budget much larger than the budget of the Government of India, the system which produces results is one under which most of the important decisions affecting practical policy are evolved after a great deal of discussion between men of varying talents and different degrees of skill and specialisation and on the basis of an array of facts, opinions and judgments which are systematically and laboriously collected and analysed. The efficient administration of today recognises that the best way to produce results is to combine appropriately a great deal of commonsense with a great deal of various types of specialised talent. The present Indian administration, which can claim high credit in many matters, has been found to be singularly defective in its ability to organise policy-making by the method of widespread consultation and the recruitment of skill and knowledge in this process.

The average Indian civil servant, when he inherited the duty of economic planning, came to it with a mind made up more to exercise authority than to organise consultation. He thought of himself in terms of a Deputy Secretary, a Joint Secretary or a Secretary, each higher in wisdom than the other (though all of them cringe before even the most idiotic of ministers) and each of them thinking that his writ was final and not open to question by anyone below or outside of them. Very often the civil servant proceeded to assume that he knew all about everything; indeed, there was even a sneaking feeling that to consult a technician or an engineer or a salesman or a factory manager or an economist even in regard to practical jobs was something beneath the dignity of the wise men in the Government Secretariat. And when consultations were made, in the final analysis, the decision on policy, usually taken by the executive, tended to be coloured by his own prejudices. At the level of execution also, the attitudes and the complexes of the administrator came to influence and modify action. These characteristic features of the Secretariat persist even today.

The explanation for this state of affairs, offered by even enlightened officials, is that they are a more practical-minded and a more level-headed people and that the consultants look at the problem from the angle of special interests and that the academic men take only a very theoretical view of problems. It must be admitted, of course, that these charges are not without some foundation. And what does it prove? It only proves that there are greedy people or foolish people amongst the consultants, as there are amongst the civil servants as well. It should, therefore, be the endeavour of any administration rather to find all the time in each of these categories the most objective of minds and organise them to be able to work together than to take decisions which tend to be related largely to one type of experience or knowledge. It is in that respect that there has been a failure in our administration all along the line and one notices even today the unfortunate tendency on the part of the administrator to presume to be able to decide and to sit in judgment on all manner of highly technical issues.

Further, in much of the thinking of the civil servant, as that in most of the other groups of men of this generation, there is a deeply negative strain, whereas the times require a healthy and positive approach in so many things that India is doing. As in the case of politicians in this country or business men or professors, the present generation of civil servants also is cursed with the blight of being a very good critic but a very poor constructor. To that extent, there is truth in the jibe of Mr. Chester Bowles, an ex-U.S. Ambassador to India, who records, in his recent book, a remark which he is said to have made to an Indian civil servant that civil servants in India know a hundred reasons why a certain thing *should not* or *could not* be done, but not one of them knows as to *why* or *how* it could be done. Brought up largely in the traditions of a Government which accentuated stability as against expansion, law and order as against life and growth, a great deal of the intellectual inheritance of this class tends to be conservative and unadventurous, with a real but unacknowledged preference for the existing order and with little sense of adventure in the context of a dynamic society. This is essentially a failure of attitude, rather than of intellectual competence or executive ability. It is this kind of attitude which inhibits the civil servant from taking risks, from going in search of ideas, from respecting others with ideas and from indentifying himself boldly with policies of a constructive character.

Yet another inheritance from the traditions of the old administration which inhibit progress is the very unfortunate predominance of the mind of the accountant and the legalist and the mind which delights to babble in the tweedledum and tweedledee of procedural niceties rather than that which takes pride in some concrete results and achievements. This was a tradition which suited admirably the old world colonial administrations dominated by the law-and-order boys, classical scholars and poetry readers, who took to administration for a hobby. It, of course, takes time for minds to adjust themselves and to grow from ancient structures to modern needs and it may be that even our administration is adjusting itself slowly. But it is a growth which strikes one as being very painful and very slow.

This is not intended to suggest that we could have achieved better results if the accountants did not keep accounts and the experts in tweedledum and tweedledee did not point out to us the niceties of distinction between a procedure and a policy. The accounts, of course, must be kept and forms of procedure must be observed; but these have a place of their own. That place is not to dominate and exclude the more essential objectives of action and policy. It must be clearly realised that an administration, in which accounting and procedural niceties dominate in the degree in which they do in India, is one which tends to become singularly unrealistic and incompetent to handle the big jobs that await this country.

A similar inhibiting influence on the administration is the quality of parliamentary control that is exercised. The present relationship between administration and Parliament produces the impression of lame people being led by the blind. Parliamentary control is necessary and desirable, but, in this country, it tends to be small minded, unrealistic and devoid of a sense of proportion. Parliament must, of course, be vigilant; financial and other controls must be exercised, but exercising a power presupposes a certain clear-cut appreciation of the important as against the unimportant and of all action in relation to the final objectives. It may be that, in course of time and on the basis of experience which is being acquired gradually, the parliamentary committees will become realistic and competent in their assessment of executive action. But, at present, it will not be far from the truth to say that parliamentary committees proceed with their jobs in a spirit of criminal investigation, out to find fault and to exaggerate failings rather than as practical men keen to get the job done in a spirit of understanding and tolerance which men of truly superior ability can bring to bear on the jobs.

To a minor extent, the effectiveness of administration in this country also suffers from the application of the somewhat outmoded principle of assigning responsibility purely on the basis of seniority in service. A large number of people, who are in high places today, are people who are there not by virtue of aptitude, training and experience, but merely because they were born a few years earlier and joined the service earlier. In a system in which most of the administrative requirements were static, as in the British colonial administration of India, this system worked with a fair amount of success, but today premium should rest on ability, since the principle of seniority does not necessarily produce results. It is true that there is a certain amount of selection for service men in the present administration, but, on the whole, it is ineffective. Another defect is that men on particular desks, when they are just beginning to acquire the mastery of that work, are transferred to some other desk where they are entirely new and will take time to put their shoulder to the wheel effectively. While some amount of movement from place to place is inevitable and even desirable, the larger interests of the country should not be subordinated purely to the small interests of safeguarding claims by seniority; if necessary, justice could be done in all such cases not by transferring people too recklessly but by an adjustment of their monetary recompense, without undue rigidity about grades and salaries attached to particular posts.

A number of these drawbacks could also be rectified by eliminating the present pure blood theory of the civil service tradition and by importing from time to time even at the top levels service men of acknowledged competence from the fields of business, industry, journalism, universities, etc. The old idea that, in order to keep the civil service away from the pampering influences of business and party politics, their privileges for promotion must be inviolate, should be abandoned in favour of the practice of periodical injection of fresh blood at the top levels. In fact, even in the U.K., the traditional home of old-world civil service ideas, these principles have been modified during and after the war to suit the requirements of high-pressure administration. A number of people has been brought into administration at the senior cadres in the U.K. from amongst the managerial class of business executives (who are not the class described as capitalists), as well as by men from the fields of journalism and learning. Some of these men have amply justified their selection, partly because the selection was careful and with an eye to true merit and integrity. In the U.S.A., of course, civil service practices go to another extremity, but, opportunist political considerations apart, a careful periodical reshuffling of civil servants helps to produce a freshness of outlook and ideas which the civil servants, recruited on principles of life-long security of tenure and promotion on the principles of seniority, fail to produce.

Finally, the degree of excellence of administration cannot exceed the merit of the people who are selected to man it. From this angle, the basis of selection should be merit and not province, language or community. This is a truism, but even those who are in sympathy with it often fail to observe it in reality. From this point of view, it would be interesting to investigate how, from the beginning of independence, recruitment to positions of trust and responsibility has tended, in each of the ministries or their subordinate organisations, to result in the recruitment of men of the minister's own clan or State or community. This aspect of our life which seems to affect even some of the highest men in the land represents one of our dismal weaknesses. This failing seems to be applicable even to subordinate organisations and technical bodies, where, at any rate, premium should be given to merit and not to the origin of one's deputies and assistants. And yet who can proclaim honestly today that, by and large, recruitment to civil service positions is free from this virus and that on each job the administration is able to employ our best men rather than the men whom someone in the administration likes for personal, communal, or linguistic reasons?

These are some of the factors which influence the quality and efficiency of administration in relation to the big jobs that await execution. These are not merely matters of formal procedure or methods of keeping the files. They are matters which go deep into the qualitative content of the men in charge of our administration, their attitudes, their temperament and the body of tradition which clings to the administration and governs the nature of its efficiency. The qualities necessary for efficiency can be achieved, but they can be achieved not by laying down a set formulæ but by a collective elevation of the quality of endeavour with which the administrative as well as the parliamentary wings of Government in this country strive to perform their duties. Experts on administration from within or outside the Government may devise systems which are apparently wise and intelligent, but, in the ultimate analysis, it is the men and their attitude which are very important. We concede that it is not easy to produce the necessary qualities or eliminate the failings overnight. Nevertheless, it is better to single out the things against which we should be on our guard and to realise that, in this country, neither the administration nor Parliament has as yet a sufficient degree of the practical approach to things which is the essential prerequisite for achieving success in the big projects that have been taken in hand.

INDIAN BANKS PROPOSE TO CONTROL INTEREST RATES ON DEPOSITS

MORE NEW VENTURES IN THE OFFING

THURSDAY, 5 P.M.

FOR the second week in succession, the Share Markets have been upset. Last week it was the announcement of the new loan which had a dampening effect on sentiment, because of its anti-inflationary implications. But the markets soon staged a recovery, following the spectacular increase in notes in circulation which made it easier for operators to forget the significance of the new loan. This week, however, the markets slumped again, for no other reason than Mr. Deshmukh's casual remark about the value of placing a ceiling on dividends. Market men interpreted his statement to mean that he was not averse to re-introducing the control on dividends and that he might do so at any time. The exact statement made by the Finance Minister on this subject in Parliament yesterday is as follows: "... I have no objection to reviewing this matter (the limitation of dividends). It may be that the Taxation Enquiry Commission is also devoting a certain amount of attention to this subject. Generally speaking, of course, we may admit the proposition that frugality in dividend distribution and maximum ploughing back of profits is highly desirable, and this, indeed, is what every good business concern normally does. In cases where Government assist industry, they take care to ensure that whatever additional resources become available to industry are devoted to capital expenditure and one must recall that the list of industries expecting Government assistance is getting larger and larger every day. For instance, when we fixed the prices for steel and cement, two of the basic commodities, we did take this into account."

MARKET GOSSIP

The foregoing statement was made in reply to a suggestion made by the Deputy Speaker, Mr. M. A. Anantasayanam Iyengar, that a limitation on dividends should be introduced in order to compel corporations to plough back the major part of their profits. But there is nothing in his statement to warrant the conclusion that the Finance Minister is seriously considering the question of introducing dividend control now. On the other hand, there is enough evidence in the latter part of the above quotation from which one can safely infer that he does not see the necessity for it at present. His emphasis on the frugality in dividend distribution may, however, strengthen the hands of conservative company managements not to yield to the vociferous demands of their shareholders for higher dividends. It may have a salutary effect even on those who have been contemplating declaration of big dividends.

• • • •

The move to control interest rates on deposits by mutual understanding among the banks themselves, backed by the support of the Reserve Bank, to which a reference was made in these columns in our issue of the 4th inst., has gone a step further. A meeting of Indian banks was held on Monday the 19th inst., in which certain proposals were considered and a unanimous decision was taken on the maximum rates payable on current account and short-term deposits. It is reported that the banks were of the view that the practice of accepting call deposits must be given up. These proposals were considered at a meeting of banks held on Tuesday, under the auspices of the Reserve Bank, in which the Exchange banks also participated for the first time. No final decision was, however, reached, as the Exchange banks wanted time for careful consideration of the suggestions made by the Indian banks. Meanwhile, market circles are sceptical of the success of the proposed "self-controls," for past experience of such gentlemen's agreements has not been quite happy; they were honoured more in the breach than in their observance. There are also some who question the appropriateness of such controls, as they are not in keeping with the fundamental principles of private enterprise and they wonder how the Reserve Bank could informally underwrite any understanding mutually agreed to among the banks A few among the Indian banks themselves are not happy over this move, as they are afraid that it will ultimately lead to more and more controls by the authorities.

• • • •

Some very important issues were raised by Mr. Maneklal Premchand, who has succeeded his brother, the late Mr. Kikabai Premchand, as the Chairman of the Industrial Investment Trust Ltd., in his speech at the annual meeting of the Company, held this week. He warned that, in view of the competitive phase in international trade which India is now entering, it is essential that the "old and worn-out" machinery of its industries should be replaced by new and modern equipment. He deplored that the textile industry should have been saddled with a cess in order to help the handloom industry. He said that the sooner the Government ceased penalising efficiency in industry and abolished the cess the better it would be for the country's industrial progress.

• • • •

The new Chairman of the Industrial Investment Trust uttered a note of warning against any excessive reliance on deficit finance. "It cannot be too often emphasised," he said, "that there is a danger of inflation, if this method of finance oversteps its limits." He suggested that adherence to a clearer money policy would provide a check on inflation and added: "We must avoid the mistake of borrowing cheap in future, if we want to avert the repetition of the 1952 crisis. We should be prepared to pay a reasonable rate of interest. If we do this, there will be an even flow of funds into trade and industry." This advice is timely, in view of the fact that there are rumours that the Shroff Committee has either recommended or is likely to recommend a lowering of the Bank rate. If such a measure were adopted, it would be deplorable to a degree. It is not clear what purpose will be served by reducing the Bank rate now. Apart from the fact that, in an undeveloped country like India, the Bank rate is a less powerful instrument for stimulating the economy than in the industrially advanced countries, a reduction in the rate would definitely interfere with the flow of savings. If money is not borrowed for investment purposes, it is not because it is costly but because the climate is not favourable for new ventures. The right remedy for this situation lies in a vigorous policy of aiding private initiative and enterprise rather than in any tinkering with the Bank rate.

• • • •

Some interesting developments seem to be taking place in the field of Indian automobile industry. The Government of India has suddenly woken up from its slumber and is showing considerable concern over the manufacturing activities of the existing factories. It has appointed a special officer, Lt.-Col. V. P. S. Menon, to study the progress that has been made by these factories and report to what extent they are keeping up to their programme of progressive manufacture of cars. This officer is also expected to help the manufacturers by ascertaining their difficulties and trying to remove them with the assistance of the Government. What is it that has been responsible for this new sense of urgency in the Government? A number of factors can be cited, but the most important would appear to be (a) the worsening international political situation, and (b) the need for fulfilling the promise held out by the Commerce and Industry Minister nearly a year ago that, within a few months, cars would become cheaper. This promise was based on the substantial reduction in import duty on C.K.D. packs a reduction which was given mainly with a view to stimulating the offtake of cars. But the promise has not so far materialised; on the contrary, the prices of cars are higher than they were a year ago, though the offtake has been distinctly better, leading to a clearance of the accumulated stocks. It is stated that the stocks of automobiles in the market are so small that even the prices of second-hand cars have tended to look up.

• • • •

The automobile manufacturers, however, contend that it is incorrect to compare the current prices of cars with those of a year or 18 months ago, because the period taken was one of depression for the industry. During that period, the slump was so severe that Hindustan Motors, for instance, had to auction their stocks of automobiles at sacrificial prices. It was these low prices that stimulated offtake and helped them to clear their stocks. Thereafter, the market price has been steadily rising and has now reached a level which is regarded as normal, taking into consideration their cost of production. If this explanation is correct, it is reasonable to presume that they will not allow any further increase in price to take place.

• • • •

Another interesting development in the field of automobile industry is the approval by the Central Cabinet of the arrangement recently entered into between the Tatas and Mercedes Benz, the famous German motor car makers, for the manufacture of heavy trucks and cars in the factory of the Tata Locomotive Engineering Co., Ltd. This project will be implemented by the T.E.L.CO., in addition to making locomotives. For the present, no fresh capital is likely to be raised by the Company to finance this new project, as the German firm will be advancing the cost of additional machinery that will be erected. Full details of the arrangement are not available, but the two leading existing motor companies are critical of the conditions under which the Government has allowed this deal to go through. They contend that this new entrant in their field has been assured of an important facility which they have been denied. The facility referred to is the Government's guarantee of a minimum return to the T.E.L.CO. which covers the latter's overheads. This guarantee was offered to the Company, in order to encourage it to make locomotives and not automobiles. They, therefore, feel that to continue the guarantee of minimum return to the T.E.L.CO. is unfair to them, because it places the T.E.L.CO. in a far more advantageous position *vis-a-vis* themselves. It would appear that the protests made by them to the Government have failed to yield any favourable results.

• • • •

It is feared that the Tata-Mercedes combination may adversely affect the prospects for the Ashok Motors Ltd., Madras, which, too, has a programme for the manufacture of trucks in collaboration with Leylands of the U.K. It is believed that the Indian market for trucks is not big enough to keep two heavy truck manufacturers going and that, in a fight for the survival of the fittest, the Tata-Mercedes combination may emerge victoriously, because of its large resources and superior talents.

• • • •

Meanwhile, the Rootes group is pulling out of India, as it has been unable to make much progress with the manufacture of cars. Its Indian company, the Automobile Products of India, has already ceased its operations, though there are reports that it will restart operations following the permission given to it to import parts for assembling a limited number of cars. The controlling interest in this company has been sold by the Rootes Group to a South Indian business man, Mr. M. A. Chidambaram Chettiar, of the South India Corporation Ltd., subject to Government's sanction. It remains to be seen what the new management will do to make the Automobile Products of India a success.

• • • •

It will be recalled that, some weeks ago, we referred to the interest which Tatas had decided to take in the business of Messrs. Volkart Brothers, *vide* page 551 of our issue dated 27th March, 1954. We now understand that negotiations have been completed and the new company that is to be formed for taking over Volkart Brothers' present import and engineering activities will have a capital of Rs. 1.50 crores, of which 55 per cent. will be held by Tatas and 45 per cent. by the present partners of Volkart Brothers. The latter will continue to do their cotton, shipping and insurance business in India as at present.

• • • •

There are indications that private enterprise in India is actively planning establishment of new industries. We referred earlier to Tatas joining hands with Mercedes Benz for manufacturing trucks and cars. Their idea in participating in a part of the Volkart Brothers' business is also to manufacture some of the machinery, that is now being imported, within the country itself. This may probably lead to an expansion of the activities of the Investa Machine Tool factory. But these plans are nothing as compared with their plan for the manufacture of dyes at Jamshedpur in collaboration with the world-famous German firm, Bayers. This is a heavy chemical industry, requiring large capital investment, estimated at Rs. 10 crores. It is believed that Tatas will take up 25 per cent. of the capital and that a similar amount will be invested by Bayers. The balance will be offered to the public. It is stated that Jamshedpur is the most ideally suited place for undertaking the manufacture of dyes from coal, because of the large quantity of coal gas available from the coke ovens of the Tata Iron and Steel factory. It is further stated that, with the expansion of the T.I.S.Co. factory, the quantity of coal gas that will be available there will be so large as to make the manufacture of dyes right from the basic raw material a highly profitable proposition. It is true that at present India has one dye factory in Bulsar and another is being planned near Bombay. But these are dependent upon imported intermediates, whereas the Tatas' scheme goes a step further, in that it envisages manufacture of the whole process in India. The reactions of the Government to this project are yet to be known.

• • • •

It is learned that Birlas, too, are contemplating to start some new industries. Thus, they are believed to be seriously considering the establishment of a rayon industry in the vicinity of Bombay, similar to the National Rayons Ltd., and a chemical industry in Saurashtra where plenty of sea salt is available. It would, however, appear that no firm decisions have been taken in regard to the latter.

• • • •

Apropos the sugar refinery proposed to be established in the Bombay port, the Food and Agriculture Minister, Mr. R. A. Kidwai, stated last week at a Press conference that the question was being examined by the Planning Commission. This implied that the Government has taken no decision at all. But the sugar manufacturers in the Deccan do not seem to be convinced that the Minister was telling the whole truth and they are greatly perturbed by reports that the person who put forward the proposal has already received the licence for importing the necessary machinery. These factories feel that the establishment of a refinery in Bombay would be detrimental to their interests, besides being contrary to the declared objectives of the Five-year Plan.

• • • •

It is surprising how issues, accepted as settled, continue to figure in Parliamentary debates. One such issue is India's attitude to foreign capital. Although the Government has repeatedly clarified its policy in relation to foreign capital welcoming it as a necessary aid in the country's attempts at improving living standards, it is a pity that the issue is periodically raised, as if nothing has been said on the subject before. In his reply to the debate on the Finance Bill, the Union Finance Minister, Mr. C. D. Deshmukh, was compelled to restate the Government's attitude to foreign capital. Since the members of the opposition, who raised the issue, continue to rely on stock arguments that used to be levelled against foreign capital in the pre-independence era, Mr. Deshmukh did well to remind the House that the fears voiced by some were groundless, since the Government has "adequate powers to ensure that foreign capital does not use its position to the detriment of national interests." The fact seems to be that the opposition refuses to recognise Indian independence, much less to appreciate its implications. Its attitude towards foreign capital smacks a little too much of the horror of primitive communities for foreigners and foreign things.

• • • •

Mr. Deshmukh emphasised that foreign capital could "render useful service or bring the know-how, particularly in an undeveloped or under-developed economy like ours." This aspect was clearly stated, it may be recalled, by Prime Minister Nehru, as far back as in April, 1949, when he averred that "Indian capital needs to be supplemented by foreign capital not only because our national savings will not be enough for the rapid development of the country on the scale we wish,

(*Continued on page 811*)

HEAVY UNLOADING IN EQUITIES

FEARS ABOUT DIVIDEND LIMITATION

(From Our Own Correspondent)

BOMBAY, 22*nd April*

THE Stock Exchange had the most unwelcome news for some time past, when the Finance Minister assured the members of Parliament yesterday, in the course of his reply to the debate on the first reading of the Finance Bill, that the Government was prepared to review the question of limiting the dividends of companies. This statement of the Finance Minister was in response to the suggestion made by the Deputy Speaker of the House, who was one of the main speakers on the Bill, that the time had come when we had to put a ceiling on dividends distributed by companies so that the balance of the profits could be ploughed back into the industry for purposes of capital formation. The Finance Minister's statement caused a shake-out today on the Stock Exchange and under an avalanche of selling orders equities over a wide front suffered fair-sized losses, more than wiping out the earlier gains. End-of-account considerations also induced operators to lighten their commitments.

Earlier in the week, equities followed an irregular pattern, in consonance with outside advices, namely, the movements in bullion and commodity markets, as well as reports from Calcutta where Indian Irons and jute shares were well fancied. The undertone was, however, one of confidence. The week under review was also noted for the high-lights provided by sugar and automobile shares, which were keenly bid.

In the steel section, Tata Ordinaries opened on a confident note at Rs. 196-4 and advanced sharply to a high of Rs. 199-8 on Saturday, on speculative buying and nervous short-covering, backed by higher advices from Calcutta. The higher level, however, encountered sizable liquidation of a profit-taking nature. Lack of buying interest and lower commodity advices pulled the shares down to Rs. 194-8 on Tuesday. Buoyant Calcutta advices and smart rise in bullion prices revived buying enthusiasm yesterday when Tata Ordinaries moved up to Rs. 197-4 before a further erosion, caused by the Finance Minister's statement, brought them down to Rs. 193-4 today. Indian Irons experienced some violent fluctuations during the week. After a spurt from Rs. 31-3½ to Rs. 31-14 early in the week, the shares reacted to Rs. 31-1½ on Tuesday. Heavy buying from Calcutta and short-covering lifted them upto Rs. 31-11½ yesterday, before winding up today at Rs. 31-2.

Textile shares kept a steady front almost throughout the week, but today selling pressure caused deep dents, resulting in moderate losses over the entire list. Bombay Dyeings moved between Rs. 436-14 and Rs. 448-12 *cum-div.*, before closing at Rs. 418-12 *ex-div.* today. Kohinoors finished the week with a loss of Rs. 7 at Rs. 320. Century, which was listed *ex-div.* early in the week at Rs. 320, touched a high of Rs. 333-8, but closed the week lower at Rs. 326-8. Central Indias lost Rs. 6-8 to Rs. 181-8, Finlays Rs. 4-8 to Rs. 263-8, Gokaks Rs. 8 to Rs. 256, Indore Malwas Rs. 3-12 to Rs. 112-8 and New Greats Rs. 4 to Rs. 153. Shrinivas which were a favourite counter last week suffered a drop of Rs. 10 to Rs. 216-4. Simplex moved down by Rs. 2-8 to Rs. 153-8. Srinivas closed at Rs. 320 *ex-div.*, as against Rs. 340 *cum-div.* last week. Svadeshis were marked down from Rs. 306-12 to Rs. 295-8 and Swans from Rs 352-8 to Rs. 350. The notable exceptions to the general trend were provided by Laxmis which gained Rs. 10 to Rs. 593-12, Vishnus which were done Re. 1-14 better at Rs. 142-8 and Sholapoors which advanced by Rs. 200 to Rs. 2,210.

Bank shares were easy, due to the weakness in Gilt-edged securities. Imperial Bank Fully Paids were marked down by Rs. 16 at Rs. 1,810 and Contributories by Rs. 7-8. Centrals lost a rupee to Rs. 56 and their "A" shares As. 4 to Rs. 59-4. Indias lost As. 8 to Rs. 147-12 and Barodas As. 12 to Rs. 106-4 *ex-div.* United Commercials were, however, better by As. 8 at Rs. 41-8.

Insurance shares kept a steady front, with the trend towards higher levels. Orientals put on Rs. 50 to Rs. 7,950 and Empires Rs. 5 to Rs. 655. New Indias were, however, a shade lower at Rs. 46. British India Generals were taken up a fraction better at Rs. 13-2 and Vulcans at Rs. 12-12.

No definite trend was noticed in the public utility section. Ahmedabad Electrics stood Re. 1-4 lower at Rs. 112-13. Bombay Suburbans showed no change at Rs. 122-8. Surat Electrics dropped a fraction to Rs. 128-12. Tata Hydros were a shade better at Rs. 143-8. Andhra Valleys improved by Rs. 8-12 to Rs. 1,353, while Tata Powers lost Rs. 2-8 to Rs. 1,452-8.

In the miscellaneous section, sugar shares provided a lively feature with all-round gains. Keen enquiries, coupled with shortage of stocks, caused a spurt in Belapurs from Rs. 268 to Rs. 283. Although they were marked down to Rs. 274 at the close, the gain over the week was Rs. 6. Phaltans had a rise of Re. 1 to Rs. 106. Walchandnagars were done at Rs. 176-4 *ex-div.*, which on the *cum div.* basis disclosed a gain of Rs. 2-12. Among other industrials, A.C.C. were placed Rs. 2-4 lower at Rs. 157-4; the shares touched a high of Rs. 161 during the week. After an advance from Rs. 425-10 to Rs. 430, Bombay Burmahs (old) retreated to Rs. 415-10. Scindias declined from Rs. 18-11½ to Rs 18-1. B.B. Petrols were As. 2½ lower at Rs. 2-15½. B.I.Cs. were quiet at Rs. 8-4 and Indian Coppers at Rs. 3-2½. National Rayons made a smart rise from Rs. 165-12 to Rs. 170, but were pushed back to Rs. 155-4 at the close on adverse news about rayon prices in the U.K. and fears that the Company's bulk deal with the Silk and Art Silk Mills' Association presented some difficulties. Premier Constructions were a fraction down at Rs. 128-8. Shivraipurs had business at Rs. 67-8 *ex-div.*, as against Rs. 79-8 *cum-div.* (dividend Rs. 8). Tata Chemicals dropped Re. 1-1 to Rs. 14-3. Tata Oils were unchanged at Rs. 39-8 Wimcos reacted from Rs. 212-8 to Rs. 210. Hindustan Motors commanded a good deal of attention on suggestions about the future of the automobile industry and rose from Rs. 7-6½ to Rs. 8. Premier Automobiles hardened from Rs. 65 to Rs. 68. Tata Locomotives had active buyers at Rs. 112, as against Rs. 108, on reports that the Company's plans for manufacture of trucks have been approved by the Government of India.

• • • •

Calcutta Stock Exchange

(From Our Own Correspondent)

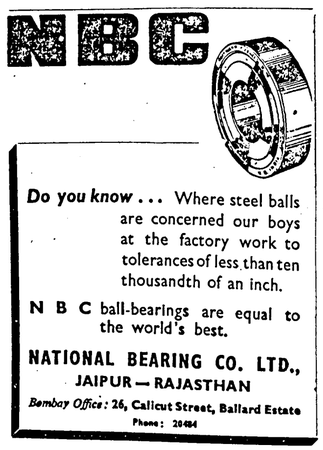
CALCUTTA, 21*st April*

The week under review consisted of only four sessions, in view of the Easter holidays. During this short period, sentiment was highly cheerful, and both investors and professional operators conspired to make the market place very active. The volume of transactions, therefore, recorded an impressive increase, with attractive gains added all round. Miscellaneous industrials, paper mills, engineerings and jutes occupied the pride of place.

The attractive appreciation in the prices of jute goods encouraged speculative activity in jute shares, although, in view of the fact that mills had sold most of the goods for forward deliveries even before the higher trend set in, the mills do not stand to benefit as much as the bazar stockists of jute goods. After the dullness in recent weeks, local shares looked up this week, following the general improvement and expectations of increased consumption of coal by industry. Although engineering shares were subjected to profit-taking, the closing rates were higher on balance. Since miscellaneous industrials and other sections attracted a good portion of the funds available to the market, tea shares were quiet, although gains were maintained in whatever transactions took place. Teas have the distinction of being active, when the general sentiment is weak, and dropping to an air of quietness on the reverse direction of the general trend.

In the engineering section, Indian Irons advanced from Rs. 31-6 to Rs. 31-12 on Thursday. Although, since reopening on Monday last, profit-taking reduced the gain to Rs. 31-1, the undertone was buoyant, today's closing rate being Rs. 31-12. Jessops were better at Rs. 29-6, while Indian Galvanizings, after being lower at Rs. 18-15, rose to Rs. 19-2. Texmacos were put through at Rs. 12-1 and Marshalls were steady at Rs. 7-12. Indian Standard Wagons were wanted at Rs. 74 and Kumardubis realised Rs. 10.

Jutes accounted for a fair turnover at hardening rates. Anglo-Indias were raised from Rs. 198 to Rs. 201, Lawrences from Rs. 148 to Rs. 152, Unions from Rs. 163 to Rs. 170, Champadanies from Rs. 152 to Rs. 157, and Alliances from Rs. 170 to Rs. 183. At Rs. 176-8, Orients were better by Re. 1-8. Budge Budges hardened from Rs. 140 to Rs. 146 and Belvederes from Rs. 208 to Rs. 212. Deltas were steady and, at Rs. 250, the addition was Rs. 6. Ganges were taken higher at Rs. 73-8, as against Rs. 66-8. Nationals were marked today at Rs. 25-9.



Coals were subjected to moderate enquiries. Equitables hardened from Rs. 32-14 to Rs. 33-8, and East Indians from Rs. 26-4 to Rs. 26-12. Pench Valley were steady at Rs. 25-8 and New Beerbhooms at Rs. 18. Central Indias were fractionally higher at Rs. 6-3. Raneegunges were sought at Rs. 11-14, while Bengals were easy at Rs. 503-8.

Among miscellaneous industrials, F. and C. Oslers were in the forefront, and in the large number of transactions that followed, gained Re. 1-5 to Rs. 17-7. Another particular feature of this week was Niccos which steadied to Rs. 17-1, as against the previous rate of Rs. 16-3. Dunlop Rubbers were a shade lower at Rs. 33-2, but Rohtas Industries were fractionally higher at Rs. 14-6. Metal Boxes were crossed at Rs. 17-12. India Steamships evoked attention at Rs. 9-10. Carew Sugars were on demand at Rs. 8-8 and Rallis India at Rs. 56-4.

Shares of paper mills continued to attract attention and, after scoring higher values, a mild profit-taking reduced the gains partially. Thus, after touching Rs. 42-6, as against Rs. 41-12 last Thursday, Titaghurs gave way to Rs. 42. Shree Gopals were very buoyant and were taken up to Rs. 25-4, as against Rs. 24-2. Bengals moved up by Re. 1-6 to Rs. 61-4.

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, 20*th April*

A strong bullish psychology prevailed in the Madras Stock Exchange. There was enthusiastic buying in most of the scrips. Naturally, prices shot up and recorded impressive gains over the week. A significant feature of the week was the good performance of textile scrips. Led by tea scrips, plantings also came in for encouraging support. The main reason for the firm trend in teas was the expectation of generally satisfactory results of tea companies in 1954. The declaration of dividend by Parksides and Nonsuch Teas buoyed up the sentiment of the operators. The official announcement regarding the appointment of the Plantation Enquiry Committee was generally welcomed in market circles. There was some good buying in rubbers, while selected scrips among coffees were favoured. Miscellaneous and banking scrips, however, failed to make much headway.

Activity in the textile section was broad-based and, under the influence of bull support, prices staged a sharp rally. Thus, Coimbatore Cotton shot up from Rs. 208 to Rs. 220 and Coimbatore Pioneers from Rs. 137-8 to Rs. 145. Coimbatore Spinnings gained Rs. 2-4 to Rs. 45-4. Dhanalakshmis were taken up by Rs. 14 to Rs. 222. Lakshmis (Rs. 50 paid-up) rallied Rs. 3 to Rs. 118 and Lakshmis 'A' (Rs. 25 paid-up) Rs. 2 to Rs. 58-8. Premiers were higher at Rs. 95, as against Rs. 93. Radhakrishnas also rose by a similar amount to Rs. 167 *cum-div.* Metturs hardened by Rs. 5-8 to Rs. 247-8 and Krishnarajendra by Re. 1 to Rs. 56. Saradas firmed up from Rs. 70 to Rs. 76. Vasantas showed a gain of Rs. 3-8 at Rs. 185-8 *cum-div.* Rajalakshmis changed hands at Rs. 109 *ex-div.*, as against Rs. 107-8 *cum-div.* Vijayalakshmis, however, lost Rs. 6 to Rs. 71-8. Loyals were down by As. 4 at Rs. 17-12 and Mysore Spun by As. 2 at Rs. 6-11.

Among plantings, tea shares were in the limelight. United Nilgiris firmed up from Rs. 200 to Rs. 205 and Mlamallays from Rs. 41 to Rs. 42. Parksides disclosed a gain of Rs. 2-2 at Rs. 15-4 *cum-div.* The Directors have declared an interim dividend of 10 per cent. for the year 1953-54. This makes in all a total of 15 per cent. paid so far for the year. The dividend paid during the previous year was also 15 per cent. Nilgiri Tea was up by As. 8 at Rs. 13-8 and Highland Produces by As. 6 at Rs. 12-14. Coorg Tea improved by As. 4 to Rs. 6-14 and Waterfall by As. 2 to Rs. 3-7. Coonoor Teas were dull at Rs. 25-8 *cum-div.*, despite the declaration of a final dividend of 25 per cent. which makes a total of 35 per cent. for the year ended 30th September, 1953, as against Rs. 17½ per cent. during the previous year. Nonsuch Tea was done at Rs. 34-6 *cum-div.*, as against Rs. 34 *ex-div.* The Directors have declared an interim dividend of 10 per cent. for the year 1953-54. The dividend paid so far amounts to 33 per cent. The total dividend paid in the previous year was 35 per cent.

Rubbers came in for selective support. Thamarapallys changed hands higher at Rs. 18, as against Rs. 17-6, and Peninsulars at Rs. 12-2, as against Rs. 11-8. Teekoy and Travancore Rubber improved by As. 4 each to Rs. 7-6 and Rs. 16, respectively. Kailas hardened by As. 2 to Rs. 4-9 and Velimalai by an anna to Rs. 2-15.

Coffee scrips also came in for some buying support. Coffee Lands advanced from Rs. 10 to Rs. 10-4½ and Consolidated Coffees from Rs. 17-15 to Rs. 18-1. Mysore Coffee was up by As. 2½ at Rs. 1-1½. Puthuthotams was fractionally better at Rs. 3-6½.

In the miscellaneous section, Jeypore Mining advanced from Rs. 150 to Rs. 175. Rallis gained As. 8 to Rs. 56 and Indian Steel Rolling Mills As. 3 to Rs. 12-13. Mysore Stonewares were up by As. 2 at Rs. 8-4. Other scrips remained dull. Mysore Glass and Enamel and Mettur Chemicals lost As. 4 each to Rs. 3-4 and Rs. 5-10, respectively. Dalmia Cement (Rs. 10 paid-up) was down by As. 4 at Rs. 9-2 and Nundydroog by As. 2 at Rs. 3-15. Travancore Cement was done at Rs. 5-11 *cum-div.*, as against Rs. 5-10 *ex-div.*, following the declaration of a dividend of 5 per cent. for the year ended 31st December, 1953, the same as in the previous year.

NEWS IN BRIEF

THE Planning Commission will appoint a Committee shortly to study in detail the working of prohibition in the country and suggest measures for its effective implementation as a national policy.

The Government of Madras is examining the possibility of taking over and restarting the Madras City tram service. If, however, it involved heavy initial expenditure, the Government will not restart the service.

The Government of India has exempted raw sugar, that is, sugar with associated impurities and having a sucrose content not exceeding 98 per cent. by weight on the material dried at 105° centigrade, from payment of import duty.

The current session of the House of the People will conclude on 15th May. Among the Bills which will come up for consideration before the session concludes are: the Finance Bill, the Minimum Wages (Amendment) Bill, the Factories (Amendment) Bill and the Companies Bill.

A conference of representatives of the Union Ministry of Food and Agriculture, the Projects Administration, the U.S. Technical Co-operation Mission and the Ford Foundation was held in Bangalore on the 22nd inst. to discuss the progress of the agricultural expansion schemes undertaken by the Government of India, the State Governments and the Ford Foundation.

A textile research institute, the first of its kind in India and modelled after the Shirley Institute of Manchester, U.K., will soon be built up in Coimbatore, at a cost of Rs. 36 lakhs. The South Indian Millowners' Association has submitted plans for approval to the Cotton Textile Fund Committee, Bombay. The Institute will concentrate on research in spinning.

The Fisheries Technological Station, Calicut, has developed a simple method for the preservation of prawn meat. The prawn meat prepared according to the method evolved at the Station retains the flavour of fresh prawns and can be prepared into delicious and wholesome dishes. If properly packed, it can easily last for at least two months.

The Government of Bombay has approved of the Bombay Municipal Corporation's proposal to take over the Bombay Gas Company. It is also stated that the Government will bring in legislation at the next session of the Legislature to enable municipalisation of the 100-year old gas undertaking. The Government is also reported to have asked the municipal corporations of Ahmedabad and Poona to try and start gas services in their cities.

The Government of India has now under consideration the question of planning and erecting a synthetical petrol plant as a long-term measure. Disclosing this in the House of the People this week, the Deputy Minister for Natural Resources and Scientific Research said that this was apart from the three oil refineries which were being set up, two near Trombay and the third at Vishikhapatnam. The question of production of synthetic petrol out of lignite at Neivell in the South was also under consideration.

The tenth meeting of the Crops and Soils Wing of the Board of Agriculture and Animal Husbandry, Indian Council of Agricultural Research, will be held in Bangalore from 25th to 29th April. The meeting will review the progress of the programme for agricultural expansion as envisaged in the Five-year Plan. Planning and analysis of experiments on the cultivators' fields and assessment of the results of improved practices adopted by them is an important item on the agenda for the Crops and Soils Wing. The meeting will also review the work so far done on the Japanese method of paddy cultivation in the country and make recommendations regarding those aspects of it which could be adopted in different agricultural regions.

From Abroad

The Minister of Finance and Economy, Egypt, has authorised the issue of Treasury Bills not exceeding £E. 60 million to finance purchase of cotton by the Government out of the 1954-55 crop.

Japan's balance of international payments during the fiscal year ended 31st March, 1954, finished with a deficit of $313 million, (£111 million). This compares with a favourable balance of $94 million in the previous year.

World population increased by 30 million from middle of 1951 to mid-1952, according to the U.N. Demographic Yearbook. The Yearbook indicates that, if this rate of increase continues, it will take less than 70 years for doubling the present world population.

Consumption of electricity in the United States has more than doubled in the last nine years. In 1953, a total of 513,000 million kilowatt-hours was generated, or 42 per cent. of the world's total, and 1,400,000 new customers were added, bringing the total to 49,900,000 or 98 per cent. of all American homes.

Most American men past the age of 65—the generally-accepted retirement age—are still actively working, according to a survey by the Metropolitan Life Insurance Company. Of all men at ages 65 to 69, three-fifths are gainfully employed. At ages 70 to 74, the proportion is about two-fifths. Even among those at 75 and over, one in five is still working.

World output of rice this year will be more than ever before in history, according to an estimate by the U.S. Department of Agriculture. The 1953-54 rice crop is estimated at 264,000 million pounds, about 10,000 million pounds more than the previous season. The figures do not include Communist China, Russia and North Korea.

German shipbuilding reached a new peak in March last, the deliveries amounting to 119,000 gross tons, of which 69,000 gross tons were for shipping firms abroad. New orders received are said to have recently increased in volume, but they are not large enough to make up for the extremely high rate of delivery. Recent orders from abroad include two 10,000-ton turbine ships to be built for the India Steamship Co., Ltd., Calcutta.

The National Coal Board, Britain, has increased the price of inland coal by 4.8 per cent. on an average or 2s 10d. per ton. The increased prices will be effective from 3rd May, 1954. The increase is expected to yield to the National Coal Board £17 million in the remaining 8 months of the year and will meet the deficit arising from additional capital charges, new safety measures and changes in pieceworkers' rates.

The Australian-made Holden motor car, produced by General Motors-Holden Ltd. of Melbourne, continues to be popular among the Australians, as will be seen from the figures of registration of vehicles for the month of January, 1954. Of the total of 11,787 registrations for vehicles of all types, except motor cycles, new Holdens accounted for 2,099, Ford for 1,616 and Austin 1,030.

Two large American companies will shortly begin manufacture in Australia. They are the Philip Morris Company, cigarette manufacturers, and the Champion Spark Company, makers of spark plugs. The former will manufacture cigarettes for local consumption and for export to sterling countries. The latter will form an Australian company in association with a Sydney firm and will begin production this year.

The post-war boom in shipbuilding appears to have passed its peak in the U.K. and the U.S., while the output continues to expand in European shipyards, according to the 1953 report of Lloyd's Register of Shipping. This is notably so in Germany, where tonnage built for home and export has increased in one year by 298,000 tons, the report says. The world mercantile fleet increased by 3.2 million tons gross during 1953 to 93.4 million tons gross.

The O.E.E.C. has made three main recommendations to West Germany for cutting to manageable proportions the German surplus with the E.P.U. which is at present unbalancing the whole E.P.U. system. They are: (1) an accelerated redemption of Germany's external debts, (2) a purposeful policy of internal economic expansion with special reference to consumption, and (3) a more liberal import policy. These recommendations have been accepted by the Bonn Government.

Africa, and especially Ethiopia, may become an important world source of coffee in future, according to the United Nations Food and Agriculture Organisation. The F.A.O. reports that harvesting of coffee in Ethiopia, resulting from efforts of the Ethiopian Government, with the U.N. agency co-operating, is under way and shows signs of marked success. However, the development of better transportation and the use of improved cultural methods are required before Ethiopia can become an important source of supply.

The National Cash Register Machine Corporation of Dayton, Ohio, has received a patent on an Indian currency adding machine invented for it by Mr. Nelson R. Frieberg of Ithaca, New York. The machine, it is claimed, can cope with rupees, annas and pies. In designing the machine, the inventor has drawn from the experience in sterling, which has 12 pence to the shilling, although there is no denomination of 16 to one. The keyboard has one column at the right side for the pies and two for the annas. Rupees are added by the usual decimal method.

A novel method of preservation which is claimed to be of great importance to the food industry has been launched in Sweden after ten years of experiment and tests. The system entails the use of hot air instead of steam for sterilisation. Besides the utilisation of hot air, the tins are kept rotating during the process, which reduces the time of operation with a resultant improvement in the quality of the products. Vegetables and fruit treated in this way contain 40 per cent. more vitamins than those preserved by conventional methods. Whipping cream with a high concentration of fat can also be canned by the new system. The preservation apparatus has a capacity of 10,000 400-gr. tins per hour.

PERSONAL

MR. N. V. Rao, lately Joint Chief Controller of Imports, has been appointed Deputy High Commissioner for India at Lahore.

Mr. L. J. Johnson, Chief Secretary, Delhi State Government, has been appointed Deputy Secretary, Ministry of Rehabilitation, Government of India.

Mr. M. R. Sachdev, Director-General of Supplies and Disposals, has been appointed Secretary to the Ministry of Works, Housing and Supply, Government of India.

Dr. A. Krishnaswamy, M.P., is likely to represent India on the Minorities Sub-Committee of the United Nations Human Rights Commission, in succession to Mr. M. R. Masani.

Mr. Denzil A. Bryan, Principal Trade Commissioner for the U.K. in Bombay, left for the U.K. on home leave. During his absence, Mr. Gordon J. Husted will be in charge of the Trade Commissioner's Office.

Mr. S. M. Mistry has been elected President of the Association of Merchants and Manufacturers of Textile Stores and Machinery, India, for the year 1954. Mr. N. J. Nair has been elected Vice-President, Mr. B. M. Ghia, Honorary Secretary and Mr. Hiralal L. Shah, Honorary Treasurer.

Sir Bertram Stevens, who was the Australian representative on the Eastern Group Supply Council in India during the war and at present an accountant and adviser to Indian industrial groups in Sydney, passed through Bombay and Delhi on his way back to Australia after a three months' stay in Britain.

Mr. H. L. Brinkley, leader of a ten-man American Agricultural Trade Mission, has arrived in India, along with the members of the Mission, to discuss with Government officials and private traders the possibility of expanding trade in agricultural commodities. The Mission will proceed to Rangoon next week and later on visit Bangkok, Jakarta, Singapore, Hongkong and Tokyo.

Mr. S. Sen, I.C.S., Consul-General for India, Geneva, will be the Government delegate to the third session of the Advisory Committee on Salaried Employees and Professional Workers of the I.L.O., which is scheduled to be held at Geneva from 10th to 22nd May, 1954. Mr. M. A. Sreenivasan, Chairman of the Kolar Gold Mining Companies, and Mr. B. K. Mazumdar of Atul Products Ltd., will represent employers, while Mr. Purushottam Thakkar, Vice-President, National Union of Commercial Employees, Bombay, and Mr. P. S. R. Anjaneyulu, General Secretary, All-India Telegraph Union, Delhi, will represent workers.

OBITUARY

We regret to place on record the death of Mr. Framroze H. Mehta, a prominent business man of Bombay, on Saturday last. Mr. Mehta was the Managing Director of Messrs. Mehta & Co., and was the Chairman of the British India General Insurance Company, Ltd., besides being a Director of several industrial concerns.

"COMMERCE" 1929

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 27*th April*

World's Petroleum Production

In an interview accorded to the London *Times* last week, Sir Henri Deterding urged the necessity of conserving the supplies of petroleum throughout the world. He said that he did not ask that the oil industry should enter into an agreement, but the industry should pledge itself to effect real conservation during the next nine months. Sir Henri declared that, if there was an effective control of production, he could guarantee maintenance of the present rate of production for twenty years. Sir Henri is an authority on the subject and he certainly knew what he was talking about. Although few things are more dangerous than attempting to prophesy future events where oil is concerned, it is difficult to escape the conviction that the world is using up its resources of liquid petroleum at such a rate that bankruptcy is inevitable. Oil, in contrast to coal, is a liquid and will flow; an oil well thus taps a variable, sometimes considerable, area round the actual borehole. Moreover, whereas a coal seam may be continuous over a large area, oil has collected into a number of comparatively small pools. Many of the great oilfields have thus had an extraordinarily short life. Even taking into account probable and possible new areas, there is no doubt that the liquid oil supplies of the world are being used up at a vastly greater rate proportionate to reserves than are the coal supplies. It must be remembered also that the oil, once withdrawn from the earth, is not replenished. Depletion of reserves cannot be made good by natural increase, as it can be, for example, in the case of timber. The United States holds more than ever the dominant position as a world producer. The output in 1927 was 905,800,000 barrels—72.23 per cent. of the world's total. The United States run of luck still holds; the amazing succession of new fields discovered and brought into exploitation from 1918 to 1926 was continued in 1927. But it must be emphasised that the stupendous production is being maintained and increased only by the continued discovery of new fields, the yield from which more than balances the decreased output of old fields. Every year the "possible" areas become more and more restricted and inevitably the tide must turn.

PLEA FOR TAX RELIEF

THE Federation of Indian Chambers of Commerce and Industry has now followed up its (two) earlier memoranda to the Taxation Enquiry Commission by another note, which draws the Commission's attention to the welcome tax reliefs granted by certain foreign countries and to the recent unwholesome changes made by the Indian income-tax authorities in the existing assessment practice. The Federation points out that Australia, New Zealand, the Union of South Africa, West Germany and the U.S. have all taken the initiative in reducing tax burdens. Australia has cut its income-tax rates by 12½ per cent., reduced company taxes, abolished or eased sales tax. New Zealand has increased its income-tax allowances. South Africa has abolished the savings levy and increased the exemptions for income-tax purposes. West Germany has cut its corporation tax from 60 to 45 per cent. and the tax on individuals by as much as 60 per cent. in certain cases. The U.S. has announced several measures which aim at liberalisation of exemptions from tax and at grant of concessions to business incomes. These reliefs include concessions in respect of income from foreign investments, extension of carry-back of losses from one to two years, exemption of expenditure incurred on research and an option for small corporations to be taxed as partnerships and for certain partnerships to be taxed as corporations.

India presents a striking contrast to these countries, inasmuch as not only has there not been any comparable tax concessions but even the existing tax burdens are sought to be increased. The Federation has cited four instances to show how income-tax is sought to be made a more onerous burden than it was. In the first place, the Central Board of Revenue has changed the procedure regarding taxation of the commission waived, either in whole or in part, by the managing agents. Till recently, the procedure was that the Department would not attempt to put an "unjustified burden" on the managing agent who waives a part or whole of the commission with genuine intentions rather than with the intention of dodging tax liability. Even this concession, unsatisfactory as it was, has been modified to the disadvantage of the managing agent. Under the new procedure, the surrendered commission will not be taxable only if the managed company suffers a loss through the payment of the commission. The mere surrender of a commission will not entitle the surrendered commission to tax relief, if the company can make a profit, however small, through the payment of the commission. This is an invidious distinction that will discourage the habit of surrendering commissions, which is practised by many far-sighted managing agents. The Federation rightly insists that "there should not be any distinction, so long as there has been a *bona fide* surrender."

The second instance of an unwelcome change in tax procedure is the authorities' attempt to tax partially the income derived from coffee plantations on the analogy of the demand made on tea companies. The Federation insists that the income of coffee companies is purely agricultural and the process employed by coffee companies to render the produce "fit to be taken to the market" is not in the nature of a manufacturing process. Thirdly, some income-tax officers, it is pointed out, refuse to grant initial and additional depreciation allowances in respect of reconditioned machinery imported from abroad on the ground that it is not new machinery. The Federation points out, in this connection, that, apart from the fact that reconditioned machinery imported from abroad is for all practical purposes new machinery, such machinery ought to be considered as "new" machinery, in terms of the Income-tax Act, since it "would not have earned any initial or depreciation allowances in India prior to its installation."

Finally, the Federation has drawn the Commission's attention to the inherent difficulties which managements have to face in conforming to the statutory obligation to pay compensation to retrenched workers. It is bad enough that compensation has to be paid at a time when the managements are compelled to retrench workers through decline in their profits or through actual loss suffered by them. There is, however, a provision whereby such compensation can be carried forward for a period of six years to be set off against profits in these years. But the concessions will not, in actual practice, imply any great relief. If the unit concerned is closing down operations, there is no question of its carrying forward the compensation amount. The unit should be allowed to carry it back and set it off against previous years' profits. Again, if the unit continues to work and its profits are insufficient to permit it to benefit by the concession to carry forward this compensation amount, it should be allowed to carry it back and to set off the compensation against past profits. There is also some justice in this plea, since compensation has a bearing on the services rendered by the workers in the past. Both on grounds of equity and commonsense, it seems necessary to concede the Federation's demand that the managements should be permitted "to carry at their option, backward or forward, partly or wholly, the unabsorbed compensation."

FINANCE BILL, 1954

The Finance Bill, 1954, which was moved in the House of the People on Monday this week by the Union Finance Minister, Mr. Chintaman Deshmukh, will doubtless be welcomed. For the Bill contains several tax reliefs, direct and indirect. Thus the concessions granted under the Indian Income-tax Act, pending the report of the Taxation Enquiry Commission, and which expired on 31st March last, have been continued for two more years. The concessions include exemption of foreign profits chargeable on remittance only in the case of a resident person, exemption of income from property built before 1st April, 1956, initial depreciation allowance at the rate of 15 per cent. in the case of buildings completed before 1st April, 1956, and exemption available under section 15-6 if production is commenced before 1st April, 1956. The exemption of interest payable outside India to a non-resident on a loan issued for public subscription outside India, which was hitherto given effect to by executive order, is now proposed to be put on a legal footing by an amendment to the Income-tax Act.

Although no relief is proposed to be given in Estate Duty, the two amendments to the Act contained in the Finance Bill are to be welcomed, inasmuch as they clarify the position in respect of the administration of the Act. The first amendment removes any doubt that the property deemed to pass on death is chargeable as the property passing on death. The second makes it clear that the exemption under clauses (F) and (G) of clause 33 regarding insurance for payment of Estate Duty or deposit of advance for payment of Duty is not to exceed Rs. 50,000 in the aggregate.

With regard to indirect taxes, the Finance Bill contains the measures of relief in excise duty on soap and footwear which have already been given effect to. The first 25 tons of toilet and laundry soaps cleared from a soap factory in any financial year are exempted from payment of excise duty. The number of units expected to benefit by this concession is 39, out of a total of 82 which fell under excise control in the beginning. In the case of footwear, the exemption limit for non-power-operated factories has been raised from 19 workers to 49. This is estimated to give relief to 12 out of a total of 76 units. As regards import duty on betel-nuts, no change has been proposed. Justifying the imposition, the Finance Minister reiterated that the duty was levied in order to reduce the profit of the middlemen. He said that reports of market values from the ports indicated that, as against the increased duty of Rs. 33 per maund, the market price had risen by less than Rs. 15 and that his anticipations had materialised to some extent.

It is not so much in respect of these taxes as in that of excise duty on art silk fabrics that the relief sought to be given by the Finance Minister is substantial, as will be evident from the following concessions:

(1) Exemption limit will be raised from factories employing up to nine looms to those employing up to 24 looms.

(2) The rate of excise duty will be reduced from one anna per square yard (exclusive of the handloom cess of 3 pies per yard) to six pies (in addition to the cess of 3 pies).

(3) Mills will be given the option of paying in advance a lump-sum of Rs. 22-8 per month per loom employed in the production of art silk fabrics, instead of the prescribed rate on their actual production.

The foregoing concessions no doubt indicate the Finance Minister's anxiety to provide relief to the art silk industry—the net incidence of excise duty on the industry as a whole is now estimated at Rs. 75 lakhs per annum, as against Rs. 1.6 crores originally estimated—which is said to be passing through very difficult times, thanks to rising manufacturing costs, on the one hand, and poor demand, on the other. As it is, the cost of production, we are told, is very high; the import duty on yarn alone accounts for as much as 50 per cent. of the cost of the raw material. But, in his anxiety to give the industry some relief, the Finance Minister has been unduly partial to small producers by exempting factories employing upto 24 looms completely from payment of excise duty. The number of such factories is estimated at 208, accounting for 5,000 looms out of the total of 26,000 in the country. In other words, by segregating these factories from the bigger units, the Finance Minister has placed a premium on inefficiency, in that the small and inefficient units have been given direct protection against the bigger and the more efficient ones. The latter are now being penalised for no other reason than that they are big and more efficient. This is certainly a clear instance of discriminatory treatment. Further, those units which have looms varying from 25 to 30 will wantonly scrap some of the looms as being useless, with a view to escaping payment of the duty. If the Finance Minister really wants to provide relief to the small art silk mills, he can as well abolish the whole of the excise duty and enhance the import duty on foreign fabrics. What is worse, the bigger units have also been made to face competition from units producing 100 per cent. staple fabrics which will no longer be subject to excise duty. Incidentally, it may be noted that mixed fabrics containing staple fibre and cotton, if produced in composite mills, will be assessable as cotton cloth.

The method of collecting excise duty in a lump-sum of Rs. 22-8 per loom in advance, every month, is quite a novel one and the Finance Minister deserves to be congratulated on his initiating such a procedure. Surely, this procedure will enable the art silk mills to free themselves from a substantial part of excise control and physical supervision over their operations. But the success of this scheme will depend on the trend of the market for art silk fabrics, since the mills will have to decide which is the advantageous course—to pay a lump-sum per loom and escape excise supervision or to invite such supervision and pay the duty on the cloth produced.

FINANCES OF RAILWAYS

The Government of India will shortly appoint a committee of the two Houses of Parliament, with the Railway Minister as the Chairman and the Finance Minister as one of the members, to review the working of the 1949 Convention with particular reference to the contribution of the railways to general revenues. This is in accordance with the recommendation of the Railway Convention Committee of 1949, of which the late Mr. N. Gopalaswami Ayyangar, Minister for Railways, was the Chairman, that the working of the Convention should be reviewed after a period of five years.

It will be recalled that the main recommendations of the Committee, which were accepted by the Government of India, were as follows:

(1) The separation of the railway finance from general finance should continue, but the general taxpayer should have the status of a sole shareholder of the railway undertaking, entitled to a guaranteed dividend of 4 per cent. on the loan capital invested in the undertaking.

(2) A Railway Development Fund should be constituted for the purpose of financing expenditure on passenger amenities, labour welfare and projects which are necessary but unremunerative at the time of construction.

Since the new Convention lays down only a fixed dividend contribution to general revenues, it has bestowed greater freedom on the railways in the regulation of their day-to-day financial transactions, such as the framing of the rules of allocation of expenditure, etc., which, under the 1924 Convention, were controlled by general finance, as they affected the calculation of the surplus in which the latter was interested. It would, however, appear that even the new Convention does not bring about a real separation of the railway from the general finances. Although two distinct accounts are maintained, they do not effect a separation of the ways and means parts of the two wings of the Government. General finance acts as the banker to railways and the reserve funds of the railways are deposited with their banker, who is, however, free to utilise them for his ways and means financing. This has limited the freedom of the railways to draw upon their balances to meet their own requirements.

Apart from this consideration, what has been causing anxiety latterly is that the railway surpluses have declined enormously, while the contributions to general finance have increased. Between 1951-52 and 1952-53, this surplus declined from Rs. 28.34 crores to Rs. 13.19 crores. For 1953-54, the surplus is estimated at no higher than Rs. 5.14 crores. The dividend payable to general finance has, however, increased from Rs. 33.41 crores in 1951-52 to Rs. 33.99 crores in 1952-53 and to Rs. 34.46 crores in 1953-54; it is estimated at Rs. 35.50 crores for 1954-55. This upward trend in the railways' contribution to general finance is attributed to the fact that there has been an increase in capital-at-charge of railways. The capital-at-charge which was Rs. 850.11 crores in 1951-52 rose to Rs. 857.38 crores in 1952-53 and to Rs. 875.16 crores in 1953-54. By the end of the current year, it is expected to stand at as much as Rs. 909.99 crores.

The days of large surpluses are now over. Indeed, the railways might find it difficult even to make steady contributions to the Railway Development Fund. The Fund had a balance of Rs. 19.44 crores at the beginning of 1951-52. While, during the first two years of the Plan, there were net additions to the Fund to the tune of Rs. 2.95 crores and Rs. 4.66 crores, respectively, there was a net withdrawal of about Rs. 8.52 crores in 1953-54. In the current year, there is expected to be a net withdrawal of another Rs. 4.95 crores. This is certainly a disquieting situation, as it would adversely affect the programme of undertaking new projects, which, though unremunerative in the strict technical sense, may yet be very necessary from the passengers' point of view.

There is also another important question to be considered. The over-capitalisation of Indian railways, arising mainly out of the history of its ownership, has been commented upon adversely by various expert committees from time to time. The Indian Railway Enquiry Committee (1947), for instance, pointed out that, out of the total capital-at-charge of railways, about Rs. 68 crores represented intangible assets, which should be gradually written off through a Debt Redemption Fund to be built up out of contributions from revenue at a rate of 1 per cent. of gross receipts.

NEWSPAPER OFFICE A FACTORY?

A judgment of some importance to newspaper concerns in India was given by Mr. L. P. Hirway, Judge of the Gwalior Labour Court, on 14th April, in a dispute between a dismissed journalist, Mr. D. Awasthi, and the Hindusthan Journals Ltd., the proprietors of the *Navprabhat*, when he declared that a newspaper office employing twenty or more persons was a factory within the meaning of the Factories Act, 1948. The proprietors of the Navprabhat had questioned the jurisdiction of the court to entertain the application of the journalist for the recovery of unpaid salary of Rs. 310, on the ground that it did not come within the purview of the Payment of Wages Act, 1936, which applied only to factories. They argued that, since the Navprabhat was not carrying on any manufacturing process, it was not a factory within the meaning of the Factories Act.

The way in which the judge arrived at the decision that the newspaper office was a factory is ingenious. According to section 2(m) of the Factories Act 1948, a "factory" means any premises including the precincts thereof; (i) whereon ten or more workers are working, or were working on any day of the preceding twelve months, and in any part of which a manufacturing process is being carried on with the aid of power or is ordinarily so carried on; or (ii) whereon 20 or more workers are working or were working on any day of the preceding twelve months, and in any part of which a manufacturing process is being carried on without the aid of power or is ordinarily so carried on, but does not include a mine, subject to the operation of the Indian Mines Act, 1923 (IV of 1923), or a railway running shed.

"Manufacturing process" is defined as any process which includes, among others, making, altering, repairing, ornamenting, finishing, oiling, washing, cleaning, breaking up, demolishing or otherwise treating or adopting any article or

OFF THE RECORD

(By "ROVER")

THAT there is a sordid, even cruel, side of private enterprise cannot easily be gainsaid. I am not referring here to the black chapter of dishonesty, downright cheating and law-breaking, which emerged during the war years and after as an ugly running sore and which cannot but be regarded as a temporary disorder of the body economic. When a crime of the magnitude of murder, of wholesale destruction of men, women and children in their homes, is exalted to the status of heroism and bravery, when such crimes are publicly honoured and extolled, lowering, nay, even total extinction, for a time, of all moral and social values is not to be wondered at.

But this moral degradation of the human spirit was by no means confined to the domain of private enterprise in commerce and industry. No section of the community and no stratum of society escaped this contamination. Even students in schools and colleges did not escape this moral scourge. Now that the priests and preachers are fast disappearing, or, at least, losing their influence over society, politicians and public men have come to regard themselves as the keeper of its conscience. While in the case of business men and other classes of society, this war-bred demoralisation is definitely fading out, I, for one, fail to notice any such welcome transformation amongst those who are closely associated with politics, as a class. If anything, an enlarged field of operations and the vast increase in opportunities opened up by recent political developments, which have resulted from the State's entry into almost every phase of life of the individual or family, has made nepotism in varied forms a deep-seated canker of the body politic, both in this country and in many other lands.

The cruelty and sordidness, which I referred to at the outset as characterising private enterprise, arise from the growth of industrial and commercial entities to the enormous size of corporations and companies, effacing human ties and human values. Just as the human and healing touch vanished as business and industry tended to become impersonal, it also lost ground as the profit motive came to be accepted, more and more, as a sole criterion of success. There was a stage in the growth of capitalism and private enterprise, when ruthlessness and a false kind of efficiency and drive, which resulted not from voluntary and free co-operation of the staff and workers, but from a brittle and sulking obedience out of a fear of punishment, were ennobled to the status of supreme tests and yardsticks for measuring the achievements of private enterprise. It was the darkest phase of private enterprise, when human lives were looked upon as something cheaper than machines and as material to be squeezed, thrown on the dunghill and replaced by countless other equally cheap lives.

But industry outgrew this stage, partly owing to the pressure of public opinion, and partly owing to the growth of enlightenment and the concept of human welfare amongst the better type of employers. Even this was a phase, though perhaps a much longer phase, and it still lingers in many a business house, as even the vestiges of the earlier inhuman stage, when workers were looked upon as so many hands and not personalities, are still to be found amongst a few units controlled by selfish and arrogant employers, whose minds are so atrophied as to be totally incapable of growth or of receiving new ideas. The more sensitive and refined spirits, amongst those controlling large private enterprises, soon discovered that there was something ugly and revoltingly patronising in the idea of organising benevolent welfare activities. They perceived that so long as these flowed from conscious benevolence, these so-called favours tended to keep employers and employees completely apart in spirit, as if inhabiting two separate worlds.

The other day, I wrote in this column about some of the new and bold ideas advanced by Col. L. Sawhny of the Associated Cement Companies Ltd. He thought in terms of creating, not only a sense of confidence and comradeship but that of co-operative effort and joint enterprise creating or achieving something that is worthwhile, which the country needs, amongst all the people from the top to the bottom in every industrial unit. The best results, both with regard to the quality and the quantity of production, could be achieved only under such conditions and not under the present relationship of enforced and sullen obedience, if not active hostility, leading to less and less output at an ever-increasing cost. I am often surprised at the attitude of resignation amongst many industrialists with this deplorable state of affairs. I have noticed in certain quarters a tendency to accept the present relationship of continuous conflict, on the one hand, with the authorities and, on the other, with the workers as something normal and inevitable. They think they have done their duty when they have criticised official policies and resisted demands from workers up to a point.

I know that they are not happy at heart about the way things are slowly drifting towards disaster in industry, but they refuse to strike out on some daring policy, which would put an end to this aimless drift. I have talked to many of them, and, to my utter dismay, I have found that, barring a few enterprising minds, most of them are content to be forced to make concessions to workers and to accept restrictions and burdens from the Government under protest and to pass them on, in the form of added cost, to the consumers. So long as this defeatist attitude persists, there could be no large-scale expansion of industrial activity. They also appear to be blind to the fact that no amount of increased wages or additional amenities, extracted out of them as a result of fight and friction, will bring about any change in the attitude of workers or harmonious and smooth working in the industry. What is required today for dynamic and enthusiastic effort is a new basis of relationship and the restoration of the human and personal contact.

Being in this mood, I was deeply stirred by the evidence of this so badly needed new spirit in the message of farewell Mr. J. R. D. Tata sent to every worker of Air-India Ltd. and Air India International Ltd., on the 31st of July, 1953, when these two outstanding units in the world of Indian aviation enterprise ceased to be and were swallowed by the two State Corporations which came into existence under the Air Corporations Act, 1953, a minute after the midnight of this fateful day. This message has been reprinted as a fitting prelude to a beautifully got up brochure, recording the history of the two companies and of their long forgotten ancestor, the Tata Air Lines, which was our country's pioneer enterprise in commercial civil aviation. This brochure was presented as a souvenir to the staff of these two companies about eight months ago. It was a happy thought on the part of Bombay House to make this publication, which tells the story of pioneering in civil aviation, available to a wider circle of readers interested in the closing of this proud chapter in the evolution of our country's transport and communications, which form the basis of all economic, social and cultural activities.

Here is a splendid specimen of private enterprise at its best. When the shadows are getting darker, when the evening is closing in, when the ominously still night is about to descend, when the last flicker of life in this enterprise, built up with the loving care and willing sacrifices of a fond mother, is about to depart, when his heart must have felt heavy with the impending tragedy, Mr. J. R. D. Tata's thoughts turn not to the pecuniary losses, which must have been substantial, but to all those who helped him in rearing this child. With a poignancy which rends the heart in shreds as you read this message, Mr. Tata recalls the early pioneer days and more especially a crisp October morning twenty-one years ago, when he took off in a tiny Puss Moth in an inaugural flight from Karachi to Bombay with the first precious load of mail. He recounts how his heart was full of hopes and, at the same time, full of humility and prayer for the safety of all those who then worked and would work in future for this grand adventure. Towards them all, this young aristocrat of industry entertained, throughout the years, an abiding sense of comradeship, which made the extinction of these two pet concerns of his a tragedy, which I can see he has not yet got over.

This is followed by years of planning and fagging, of buying larger planes and expanding operations. After seventeen long years of this gruelling but happy and engrossing task, Mr. Tata and his friends (not employees) feel ready for bigger things, for multi-engined air-liners, for daily frequencies and for unfamiliar sky over strange and far-flung lands. But just when they had worked upto this glorious stage, when excitement and exhilaration must have made their blood course like quicksilver in their veins and arteries, when this band of enthusiatic workers were at the threshold of a new realisation of their bright-coloured dreams, World War II came to shatter these as it must have ruined many an ambitious plan the world over. But happily for them, the later stages of the war brought new opportunities and valuable experience.

The end of hostilities and later independence for the country, instead of bringing them fulfilment and joy, unexpectedly brought them only blinding frustration and anguish. But even in the midst of this humiliation and disappointment, which must have seared his very soul, it must be said to the credit of this great House that they did not let bitterness overtake them or iron to enter their souls. Nothing caused Mr. Tata greater worry and regret than his anxiety about the careers of his men. With a commendable magnanimity of spirit, he, in wishing them success and prosperity in their new employment, urged them "to serve the new Corporations with zeal and loyalty, for in their hands will rest the prestige and success of Indian air transport."

One can imagine the depth of the gloom which must have settled on the soul of this great captain of industry at this crisis. For him, perhaps, the darkest hour of the night had come. There is such a ring of sincerity and truth in the final words of his parting message that I have not the heart to translate or abridge them. I shall let Mr. Tata speak for himself: "And now the time has come to say good-bye. As we turn the last page and put away the book, regret or bitterness has no place in our hearts. Instead, we may find content in the thought that what we did was worth doing, that we set our standards high and would not lower them, that we never need part with our memories."

PARLIAMENT COMPLETES VOTING ON DEMANDS FOR GRANTS

NEW PHASE OF DEVELOPMENT IN ENGINEERING INDUSTRY

(From A Special Correspondent)

NEW DELHI, 20*th April*

DELHI LETTER

WITH the passing of the Appropriation Bill for the fiscal year 1954-55 on Saturday last, the task of voting on the demands for grants of various Ministries was complete. The last two Ministries the demands of which were voted this week were Commerce and Industry and Finance. The voting on the demands of all Ministries took just a fortnight and, with this, the real work concerning the budget session was over, except for the formal passing of the Finance Bill, which is being debated upon at the time of writing. It was originally anticipated that the budget session would drag on till the end of May, but it has now been decided that Parliament will rise for the summer earlier, that is on 15th May. From this week onwards, the House of the People will be engaged in disposing of a number of Bills, the most important of which being the Minimum Wages (Amendment) Bill, the Code of Criminal Procedure (Amendment) Bill, the Hindu Marriage Bill, the Hindu Marriage and Divorce Bill, the Companies Bill, High Court Judges (Conditions of Service) Bill, T.A. and D. A. of Members Bill, Voluntary Surrender of Salaries (Exemption from Taxation) Bill, and Drugs and Magic Remedies (Objectionable Advertisement) Bill.

Mr. T. T. Krishnamachari, Minister for Commerce and Industry, is nothing if he is not endowed with hitting power against his opponents. His reply to the demand for grants of his Ministry was strewn with invectives and sarcasm. In consequence, it was somewhat lacking in logic, cogency and thought. The Minister did not indicate any new policy. Instead, he was able only to coin new slogans such as "rationalisation without tears." His inability to enunciate any new bold policy must be attributed, to some extent, to the smooth running of his Ministry during the last one year and more and the satisfactory progress it has been able to report on the trade and industrial fronts. Thus, on the trade front, the wide gap in the merchandise trade, very much pronounced during the last few years, have narrowed down appreciably, while, on the industrial front, there has been a moderate increase in production, despite sizable setbacks in some individual sectors.

Textile Industry

Mr. Krishnamachari pointed out that his Ministry could not implement the Working Party's Report on the textile industry because the Report was somewhat incomplete without an evaluation of the factual position and the relationship between the three sectors, namely, the *handloom*, the powerloom and the mill industry. He, however, assured the House that, when the Kanungo Committee submitted its report, the Government would be able to take such decisions as would be possible at that time. The Minister accepted the plea, advanced by a section of the House, that there was considerable disinvestment of foreign capital during the last few years, which was far more than the new foreign investment. There was, however, one particular satisfaction, namely, whereas the new investment was in lines producing new goods, the disinvestment was mainly in industries already established. The Minister stated that he was anxious to promote trade with the U.S.S.R. but felt that the improvement in this sphere would take some more time.

On the question of rationalisation, Mr. Krishnamachari was inclined to adopt what is known as Fabian tactics. At any rate, he was not aggressive, but hoped that everything would shape itself satisfactorily in the end. He agreed that both rationalisation and modernisation were necessary, particularly in regard to the jute industry. The Minister gave some figures regarding jute looms in Pakistan, present and proposed, which appear to be totally misleading. It is regrettable that he is not posted with the latest information on the subject, despite the fact that India has its trade representatives at Dacca. The latest position is that two mills with a capacity of 1,400 looms have been working in Pakistan on a double-shift basis, while another six new mills are under erection. The existing two mills have also been expanding, with the result that, in another two years, their total looms will stand at about 6,750. The current rate of annual production of the two working mills is estimated at about 34,000 tons, as against the country's internal requirements of 40,000 to 50,000 tons. When all the mills come into production stage and are worked on a double or treble-shift basis, Pakistan may be in a position to produce about 200,000 tons of jute goods.

This apart, the Minister was perhaps right when he pointed out that rationalisation was a time-consuming process, in the sense that it took time not only to install new machinery, etc., but also to train people to handle such machinery effectively. Meanwhile, the new industries that would be started in the country in both the public and private sectors, following the encouragement afforded by the Development Corporation and other Finance and Investment Corporations would, according to the Minister, create an expanding economy which might absorb the retrenched labour resulting from rationalisation. He also favoured the creation of a fund which would provide for insurance against frictional unemployment.

Stake in Export Markets

At present, most members of the Government of India have been looking at the question of rationalisation from the angle of labour and unemployment. They should not, however, overlook the fact that, in regard to certain industries, especially in jute and cotton textiles, India has a considerable stake in the export markets. Since the country has to maintain its competitive power in these two industries, the Government spokesmen must evolve a rational policy and see to it that at least such of the mills as have been doing good export business and have foreign connections, as, for example, in cloth, should be given priority to introduce rationalisation and, for this purpose, these mills should be given all reasonable encouragement. Otherwise, the country's foreign trade will be put in jeopardy.

During the debate on the demands for grants of the Commerce and Industry Ministry, most members of Parliament drew the attention of the Government to the low volume of production in a number of industries *vis-a-vis* their installed capacity. The Government is fully aware of this position. The Engineering Capacity Committee, which has been entrusted with the task of suggesting the ways and means of fully utilising the capacity of various industrial units, has already made a number of valuable suggestions regarding import policy, customs duties and Government purchases. It has visited factories all over the country and is bringing to the notice of the Government continuously cases where, through the addition of balancing plant or otherwise, new lines of production can be set up to produce items for which the country is still dependent on imports.

Engineering Industries in 1953

One significant development during 1953 was the production of many new engineering items not hitherto made in the country. This trend of development has been steadily going on during the last two or three years. Among the new lines of production, mention may be made of cylinder liners (dry), free-wheels and chains for cycles, kerosene-operated refrigerators, layer-built batteries, *milling machines* 31½"×9½" (both plain and universal types), multi-spindle drilling machines, rubber conveyor belting, steel wool, shaper 24" all geared, motorised, etc. In addition to these new items, new ranges of manufacture were also established by the existing industries in items such as all-geared head lathes 8½" centre×24" bed, drilling machines 1" cap floor type, squirrel cage motors upto 135 h.p., transformers of 2,000 K.V.A. capacity with 33 K.V. on the H.T. side, lacquered foil in milk strip gauge and in light gauge for the confectionery trade, ni-hard grinding media, reinforced type of

BRITAIN'S EXTERNAL BUDGET

INCREASE IN STERLING LIABILITIES

(From Our Own Correspondent)

LONDON, 15*th April*

LONDON LETTER

THE Government have now published details of the Balance of Payments for 1953 showing a net surplus of £225 million (including £102 million of U.S. Defence Aid). This is not quite as good as the surplus of £255 million in 1952, or of £300 million in 1950—but both those good years sandwiched the unfortunate 1951 with its deficit of £385 million and a gold loss nearly as great.

This year's surplus was accompanied by an increase in the gold and dollar reserves of £240 million. It is also interesting to find that Overseas Investment last year amounted to over £200 million—but this investment though not far short of the surplus on the external accounts is in no way related to it. Indeed in 1951, the year of the heavy deficit and heavy gold loss, overseas investment was as high as £340 million—and it was financed by a corresponding increase in sterling liabilities—in other words, the U.K. borrowed as much as she lent. Last year, sterling liabilities showed a further increase of £222 million—so that the U.K. borrowed even more than she lent!

The recent history of these sterling balances is interesting. Till two years ago, those owing to non-sterling area countries had been running at over £1,000 million, while those to sterling area countries had been growing to some £2,800 million; a year ago these figures had been reduced to about £750 million and £2,700 million, respectively, but last year saw an increase: the non-sterling area liabilities grew by about £20 million, those to the Colonies grew by £85 million and those to the other Commonwealth countries by £170 million. Investment in the Commonwealth has become a matter of banking—with the U.K. borrowing short and lending long. But the contribution of the Colonial territories to this exercise is much more significant than these figures indicate, for the Colonies earned a dollar surplus of £110 million last year, which gave a major contribution to the growth in the gold reserves as well as swelling the U.K.'s investment potential by the Colonies' willingness to hold it in the form of increased sterling balances.

Earnings of Gold and Dollars

Where did the other £130 million of gold and dollars come from to make up the year's gain of £240 million? Trade with the dollar area did not help, for though exports, visible and invisible, brought in £577 million, *imports*, including invisible, cost £683 million and the defence aid contribution of £102 million barely squared the account. Miscellaneous capital transactions bringing in £20 million was all the dollar area produced. But gold sales by Commonwealth countries brought in some £80 million which, however, was offset to the extent of £33 million by Commonwealth deficits with the dollar area. The biggest net gold gain (after the Colonies) came in part from the non-sterling, non-dollar countries which yielded £64 million.

The following table shows how the net surplus in the balance of payments was achieved:

(Millions of £'s)

VISIBLE TRADE			INVISIBLE TRADE		
Imports f.o.b.		2,872	Payments		
Exports f.o.b. (including re-exports)		2,675	*Add*—		
			Net Government payments		557
Deficit		197			154
					711
			Receipts	£1,031	
			U.S. Aid ..	102	
					1,133
			Surplus		422
			Net surplus		225

It will be noted that, if Government transactions (mainly, of course, the British Government's overseas military expenditure) and U.S. aid are excluded, there is a surplus on commercial "invisibles" of £474 million. Shipping is the main contributor to this, yielding over £120 million; income on investments nowadays only brings in £50 million; tourists coming to Britain pay for Britons travelling abroad, and the balance of the gain, £300 million, comes from the overseas transactions of oil companies, civil aviation, royalties, insurance, banking, commissions and merchanting profits.—*All Rights Reserved.*

PAKISTAN NOTES

FUTURE OF PAKISTAN'S ECONOMY

TREND OF PRODUCTIVITY UPWARDS

WITH the coming into power of the United Front Parliamentary Party under the leadership of Mr. A. K. Fazlul Huq in East Bengal, following the defeat of the Muslim League in the elections, all interest has now centred round the future of Pakistan economy. This is only to be expected, inasmuch as it stems from the anxiety about any possible clash between the new Ministry and the Centre. There is already a section of opinion which fears the danger of an economic fragmentation of Pakistan. Another section, however, feels that there is no justification for so pessimistic a view, although it admits that East Bengal will struggle for greater freedom from control by Karachi. To this section belongs Sir Percival Griffiths, C.I.E. In the course of an interesting article contributed to a recent issue of the *Financial Times*, London, Sir Percival says that "any real separatism is perhaps unlikely." In support of this view, he observes: "East Pakistan contributes the major portion of Pakistan's foreign exchange earnings and its yield in taxation to the Centre is such that a West Pakistan deprived of this support might well not be economically viable. An isolated East Pakistan, on the other hand, would need to import grain from abroad—which, at the moment, would not be difficult—and would be more at the mercy of economic pressure from India."

Nevertheless, Sir Percival warns against the risk—this, he considers, is the immediate cause for anxiety—of uncertainty as to the seat of authority leading to vacillation and lack of any definite economic policy. He therefore, emphasises that the sooner the constitution is settled and the relations between East Pakistan and the Centre determined, the better will it be for Pakistan's economic progress.

Economic Recovery

Sir Percival has made an impressive survey of Pakistan's economic progress in the last one year. He is inclined to feel that the Finance Minister of Pakistan is, above all, a realist, and his picture of a Pakistan in which foreign payments are balanced, the budgetary position is sound, and development and production is in full swing is "basically accurate." According to him, the total payments on current account for goods and services imported were reduced from Rs. 277 crores in 1952 to Rs. 143 crores in 1953. The gold and sterling reserves which had been depleted from Rs. 148 crores to Rs. 60 crores in 1952 stood higher by Rs. 12 crores in 1953. Pakistan's foreign exchange earnings in the current calendar year are not expected to exceed Rs. 150 crores, despite higher jute and cotton prices. Foreign exchange to the extent of nearly Rs. 16 crores is expected from the U.S., Canada, Australia and New Zealand during 1954-55, besides the U.K. credit of £10 million for agricultural purposes and the hoped-for loan from the World Bank. In spite of all this, Sir Percival observes, the position will be "difficult" and, when "priority has to be given to capital goods, defence needs, cloth, medicines and invisible charges, it is clear that there cannot be much relaxation over the import of general consumer goods."

Government Expenditure

Referring to the rise in Government expenditure, Sir Percival says:

"There is an apparently irresistible tendency for the expenditure of any Government in any country to rise, and the revised estimates for 1953-54 have crept up to nearly Rs. 108 crores. This will still leave expenditure and revenue about balanced, but it is a little disturbing to note that the upward tendency in expenditure is still there and that, in 1954-55, expenditure is expected to be Rs. 111 crores. There are good reasons for this increase, but the fact remains that, of the Rs. 26 crores retrenchment proposed in the Budget for 1953-54, about Rs. 13 crores have been restored. Development projects, of course, account for a good deal of the increase."

Sir Percival alludes next to food production. Basing himself on the rise of 500,000 tons in *kharif* crop in 1953 and the substantial improvement in *rabi* crop in 1953-54, he opines that prospects are not unhopeful, but there is a tendency in political circles to exaggerate the possibilities of increased production. Turning to industrial development, Sir Percival says:

"In the industrial field, even the untrained observer forms an impression that much has been achieved and, in the case of textiles there can be no doubt that this is so. The Pakistan Economic Appraisal Committee, the report of which has recently appeared, was nevertheless very critical of what had been done. It expressed disappointment that power capacity had only risen in five years from 74,000 kw. to 125,000 kw. and it lamented the very limited extent to which private enterprise had undertaken industrial development. It is a healthy sign that a Pakistan committee should thus be critical, but an outsider's impartial view of the rapid growth of textile mills, of the development of Chittagong, of the great irrigation schemes under construction, and of the solid achievements of the Pakistan Industrial Development Corporation lead inevitably to the conclusion that Pakistan is, in fact, increasing her productivity rapidly."

Seaports

The constitution by the Pakistan Government of a 17-man National Committee to examine the depth of seaports and their entrances marks an important event in the history of Pakistan shipping. The Chairman of the Committee is Mr. Mohsin Ali, Chairman, Pakistan Central Engineering Authority. This decision of the Government is in pursuance of the recommendations made by the Permanent International Commission of Navigation Congress as early as in 1951.

The terms of reference to the Committee are quite broad-based. Thus, it is asked to make an economic assessment of the practicability on enlarging and/or deepening of ports for anticipated needs, and the relation between the cost of works and the benefit that would accrue. Further, it is to examine the issue relating to the participation of foreign countries in the international and coastal navigation. The Committee is also asked to make a study of the statistical data and other technical problems regarding the structure of harbour installations and equipment for specific shipping demands. The other terms of reference include assessment of the efficiency of labour and influence of mechanisation over cargo-handling, comparison of local and international costs.

(Concluded from next column)

a war. It's not going to be used by our initiative." The President was trying to reassure the country so that Americans "do not develop the jitters or any kind of panic and not fall prey to *hysterical things*," as he said. Pictures and stories of the latest explosions have been widely circulated here and have shown, among other things, that one well directed explosion could wreck a city like New York quite easily.

There is more and more concern in the United States about the Far East. This is clearly reflected in the new foreign aid programme for the fiscal year 1955, which the Administration presented to the Congress. For the first time in many years, emphasis has shifted away from Europe. The Far East is put down for the lion's share—$1,800 million, or nearly twice of what Europe is to get. The largest single item is $1,100 million for Indo-China. The global total asked for by the executive branch of the Government is $3,500 million which is more than $1,000 million less than the funds appropriated last year. The great bulk of the amount is for defence assistance. There is still trouble in the Senate, however, as evidenced by the remark of Senator Knowland, Republican majority leader, who said that the Congress might wish to hold up action on foreign aid "until it finds out which of our allies will go along with a firm Indo-China *policy*." As a matter of fact, Indo-China is becoming as much of a *cause celebre* in the U.S. as Korea was at one time. The American public has been thoroughly aroused by official statements that the fall of that country to Communism may mean the loss of all of Asia to the Kremlin. Yet, while the supply of war goods is freely granted, there is not the lightest suggestion regarding the despatch of troops and of entering the fighting in the same manner as was done in Korea.

The decisions of the Geneva Conference will have to be seen, but there is not too much hope that any reasonable solution will be found at this or possible succeeding conferences, particularly since the American suggestion for a united Western front was coolly received in both Paris and London. Meanwhile, the American public, as a whole, is entering the spring season with much hope and enthusiasm —more than has existed for a long time, both economically and politically.—*All Rights Reserved.*

AMERICAN LETTER

MORE MONEY ON NEW PLANT THIS YEAR

FAR EAST TO GET LARGER SHARE OF U. S. AID

(From Our Own Correspondent)

NEW YORK, 15*th April*

THERE is more optimism in industrial and business quarters than there has been for some time. Surveys by competent sources show that manufacturing concerns, generally, will spend more money this year for plant and equipment than they did in 1953. This is important, since spending for expansion has been one of the mainstays of the American economy for many years. Indeed, most indications are that the slump in business is short-lived.

Savings still continue at record levels. Both mutual savings banks and savings and loan associations reported a new high of deposits for the first three months of the year. Construction outlays in the first quarter of 1954 rose $7,200 million, an increase of $100 million over a year ago. It, too, was a new high for the period. These March quarter expenditures ran at an annual rate of $36.1 billion. The really significant element is that this compares with outlays of $34,000 million forecast for all of 1954 by the Labour and Commerce Departments. Most of the gains, last month, reflected expansion in private housing and public utility construction plus gain in highway work.

There are favourable signs on the economic horizon as well. Farm machinery makers have been in the doldrums, hit by the slump in farm income, but things have picked up in this line, too. Thousands of workers have been recalled to work who had been idle since late last year. In another sector, retail hardware sales are also running ahead of last year. Manufacturers of the Norge washers and refrigerators said: "It begins to look as if 1954 sales might run as much as 20 per cent. above last year." Also, the hoped-for spring sales upturn in the automobile industry seems to be materialising. New car sales have built up to a point where order backlogs are beginning to build up on some of the most popular models, such as Buick and Oldsmobiles. Discounts are not as deep as they were. The average discount early this year was about $300. Today, it is down about 20 per cent. The independent cars, other than Fords, General Motors or Chrysler cars, are also beginning to move off the sales floors and enquiries have increased appreciably.

Keeping Money Easy

The credit authorities have been doing everything in their power to keep money easy and, thus, make it attractive to borrow. At the present time, the rediscount rate of the Federal Reserve Banks is being reduced from 1½ to 1½ per cent. to bring this rate more in line with with open market operations. Treasury bills, currently, are yielding around one per cent. and ninety days bankers' acceptances are about 1½ per cent. as an example. Loans by banks to business are still going down, but that is seasonal (until June) and no cause for alarm.

Spring and Easter buying has been satisfactory on the retail level and special promotions are receiving considerable attention. Price reductions which followed halving of the excise taxes on such luxury items as furs have been passed on the consumer and have helped in better volume.

On the political scene, Senator McCarthy's doings are still in the limelight. The investigation of his feud with the U.S. Army is still to come. It is peculiar, though, to note that the mail of radio commentators and clergymen, who attacked the senator, is running almost half pro and con McCarthy. But this varies and there are localities where the popular reaction is 5 to 1 against McCarthy. Another hot topic of discussion in recent weeks has been the hydrogen bomb and various explosions in the Pacific. India's proposal, submitted by Prime Minister Nehru, that the United Nations Disarmament Commission outlaw nuclear weapons received wide publicity here as well as great popular support. What will be done about it in the U.N. remains to be seen. The United States has, however, for the first time given its pledge to the world that it will not use the hydrogen bomb in war unless the Russians take the initiative. President Eisenhower made that promise, when he said: "But we know with respect to that bomb, we're not going to start

(Continued in previous column)

INSURANCE OF BANK DEPOSITS—II

HOW IT OPERATES IN U.S.—OUTLINE OF A SCHEME FOR INDIA

LAST week, we referred to the enduring structure of the British and American banking system, and also to the great role which the Federal Deposits Insurance Corporation (F.D.I.C.) plays in one of these two countries, namely, the U.S., in creating that confidence among depositors which forms the bedrock on which the giant American banking structure rests. Once it is conceded that in this country, too, a system of insurance of deposits can be trusted to create and sustain such confidence in our banking structure, it should be clear that one cannot possibly find a better model for instituting a similar system than the F.D.I.C.

Established in 1934, the F.D.I.C. has been the first line of defence for depositors as well as bankers in the U.S. Events have proved that it has also been an invincible line of defence. The Corporation was inaugurated under the provisions of the Banking Act of 1933. It was set up with a capital stock of $289 million, contributed by the Federal Government ($150 million) and by the Reserve Banks ($139 million). This capital stock has since been repaid in terms of the Act of 1947. The Corporation is managed by a board of three Directors, of whom two are appointed by the President for six-year terms, and the other is the Comptroller of Currency in his ex-officio capacity. Insurance is compulsorily extended to all member banks of the Reserve system, as well as to such non-member banks as conform to prescribed requirements. In 1952, the system covered 13,631 banks, out of a total of 14,595 banks. The banks covered by the scheme accounted for deposits aggregating about 96 per cent. of the total deposits in the U.S. In seeking admission, a bank applies to the Corporation and the application is approved if the institution is sound. Protection is accorded to the deposits of banks only if they measure up to certain standards. The Corporation thus encourages conformity with high banking standards and advocates improved business practices.

The insured banks pay a premium of one-twelfth of one per cent. annually on their deposits to the F.D.I.C. Out of this premium income the Corporation first pays its operating expenses and losses. Then, it adds two-fifths of the balance to the insurance fund. The rest of the premium income is credited to the insured banks. These banks use this credit in the ensuing year as part payment for the premiums which become due. The Corporation provides for insurance covers for $10,000 per depositor in any one bank. This means that, if an insured bank experiences financial difficulties and goes into receivership, the F.D.I.C. pays the depositor upto a maximum of $10,000. In 1952, the total income of the Corporation was $88.3 million, made up of premium income ($56.8 million) and investment income ($31.5 million). Its operating expenses during that year were $7.6 million and deposit insurance loss and expenses $0.6 million. Thus, the net income added to the deposit insurance fund was $80.7 million. The present insurance fund of the Corporation stands at the impressive total of $1,363 million. This forms, however, only 0.72 per cent. of the total deposits of the insured banks as at the close of 1952.

Draft Scheme for India

It is noteworthy that, although the F.D.I.C. was started with borrowed capital, it has been able to pay back this capital within a short period. If India decides to start a similar Corporation, it will be necessary, according to a draft scheme prepared by a leading Indian banker, to borrow funds, at the first instance. Perhaps, a capital of Rs. 10 crores will not be found too high, since that would be only 1.5 per cent. of the deposits in India of the Indian scheduled banks. Of this capital, the paid-up capital might be initially kept at a level of Rs. 5 crores. The Corporation could be given borrowing power equal to that of the subscribed capital. The premium levy might be fixed at one-sixteenth of one per cent. of deposits with each bank. This would secure for the Corporation an income of Rs. 40 lakhs a year. The levy could usefully be reviewed once in every five years, with a view to making *pro rata* or discriminating refunds to the well-placed individual banks. If losses have to be kept within reasonable limits, great care will have to be exercised before banks are admitted to the scheme. The Reserve Bank is already equipped for intensive inspection of the banks. The Corporation could well depend on these periodical inspection reports, and supplement them, if necessary, by other investigations before conferring its membership on a bank which seeks admission to it. So far as foreign banks are concerned, some feel that India will do well to follow the practice of the F.D.I.C. in the U.S., which does not insure deposits with foreign banks. But there are others who feel that they, too, should be included in the scheme. This is a matter of detail which needs further examination. It can, however, be stated that foreign banks in India are not in the same position as in the U.S.

To begin with, the limit of insurance per depositor in any one bank may be fixed at Rs. 5,000, unless it is found necessary to raise it, say, to Rs. 10,000 in order to attract support. An estimate of the probable rate of progress of the Insurance Fund as worked out in the draft scheme, which covers only the Indian scheduled banks, is given below:

(Rs. in crores)

Year	Deposits in insured banks	Insurance deposits	Insurance fund
1955	650	260*	5.40†
1959	1,000	400*	7.60‡
1974	2,500	1,000*	25.00§

* 40 per cent. of total deposits.
† More than 2 per cent. of insured deposits.
‡ About 2 per cent. of insured deposits.
§ 2.5 per cent. of insured deposits.

Premium income has been calculated in the table above at the lower rate of 1/16th of one per cent. Losses and expenses have not been provided out of the premium income since it is expected that the interest income from the premium fund will, as in the case of the U.S., be sufficient to meet such losses and expenses.

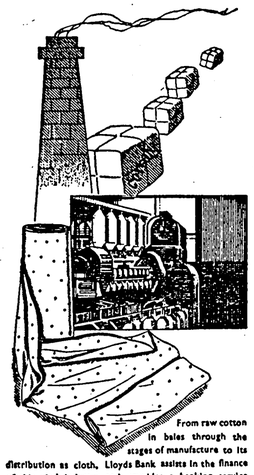
These are, of course, purely notional suggestions and estimates. But the author of the scheme has made suggestions on the basis of the experience in the U.S. A capital structure of Rs. 10 crores is suggested because it will bear a ratio of 1.5 per cent. of the total deposits of Indian scheduled banks. This ratio would be 100 per cent. more than the ratio which the U.S. thought fit to maintain at the first instance. As regards the suggested premium rate (1/16th of one per cent.), it is somewhat lower than the rate (1/12th of one per cent.) fixed in the U.S. But it must be remembered that the average rate in the U.S., after allowing for refunds, has been only 1/25th of one per cent. Further, the Corporation was created in the U.S. at a time when there was a serious economic depression. Since the possibility of facing large losses is remote, at least in the near future, a levy of 1/16th of one per cent. would, perhaps, be safe enough. Finally, the amount of deposit, that will be covered by insurance, is fixed at Rs. 5,000, because most deposit accounts in this country would fall within this level. The average deposit per account in the big Indian scheduled banks is Rs. 2,140 and in the smaller scheduled banks Rs. 1,500. It is true that a few very large banks have an average deposit account of about Rs. 10,000. But the ceiling for insured deposits, it may be noted here, is fortunately illusory. American experience shows that this ceiling is a mere formality and all the deposits in an insured bank do, in reality, acquire protection under the scheme.

Premium Not Onerous

Now, the question is whether the premium will prove the proverbial last straw for the banks. But an analysis of the income and expenditure of the Indian banks shows that the levy, even if it cannot be considered a flea-bite, will not be too onerous for the banks. Indian Scheduled banks will have to pay, under the scheme, only about Rs. 40 lakhs per year (on the basis of 1952 deposits) or only about 1.2 per cent. of the gross earnings—it will certainly be lower if the Exchange banks are brought into the scheme. Nor is this levy large when compared with the increase in the Bank's expenses that has taken place as a result of increase in interest rates and in establishment charges. Between 1950 and 1952, the rate of interest on deposits increased from 0.82 per cent. to 1.09 per cent.; this has meant an additional expenditure of Rs. 158 lakhs to banks. Again, between 1950 and 1952, the establishment charges of the banks rose by Rs. 159 lakhs to Rs. 1,284 lakhs; between 1948 and 1952, the increase in these charges was of the order of Rs. 334 lakhs. Surely, a levy of the order of Rs. 40 lakhs, which deposit insurance implies, is not going to mean an intolerable burden to the banks.

Indeed, the levy is bound to weigh less heavily on banks when one considers that deposit insurance might bring about a downward trend in interest rates on deposits, or at least might facilitate the adoption of measures designed to effect a downward trend in these rates. A ceiling on the rate of interest on deposits, say, at its 1948 level, will alone mean a saving of 25 to 30 per cent. in interest charges; this would mean a saving of Rs. 2.10 to Rs. 2.20 crores. What makes the task of prescribing any ceiling on interest rates so difficult today is the fact that banks differ widely in their creditworthiness. This difference in their standing and importance compels some banks to pay a higher rate of interest than others. But a deposit insurance system will tend to eliminate unhealthy competition for deposits, and thereby bring down interest rates. Thus, the system can be expected to earn its own premium income.

(To be concluded.)



distribution as cloth, Lloyds Bank assists in the finance of this vital industry and provides a banking service which has world wide connections through its Agents and Correspondents.

Let LLOYDS BANK look after *your* interests

Lloyds Bank Limited — Incorporated in England

GRINDLAYS BANK LTD.

A decline of Rs. 4.63 lakhs in the profit to Rs. 4.51 lakhs is disclosed by the audited accounts of the Indian branches of Grindlays Bank Ltd. (General Manager in India: Mr. A. Simpson) for the year ended 31st December, 1953. Though the fall in profit is in consonance with the general trend of bank earnings in India, the extent of decline is somewhat marked, being more than 50 per cent. With the shrinkage of Rs. 4 lakhs noted in the previous year, the Bank's profit has dropped by nearly two-thirds—65.7 per cent. to be precise —in the course of the last two years.

The following comparative table clearly shows how the profit of the Bank has gone down:

(In lakhs of rupees)

	1953	1952	1951
Interest and discount earned ..	34.89	35.34	33.11
Commission and exchange ..	27.27	28.13	30.10
Interest paid	8.44	6.76	4.74
Expenses	48.24	47.54	45.29
Depreciation and repairs ..	0.99	0.06	0.06
Profit	4.51	9.14	13.14

It will be noted that, during the year under review, there has been a decline in both the main sources of income, these accounting together for Rs. 1.28 lakhs, while interest paid has gone up by Rs. 1.68 lakhs and expenses by about Rs. 70,000. It will also be observed that the outgo on the former account has risen by Rs. 3.70 lakhs in the last two years, which reflects the high cost of borrowings by banks, and on the latter account by about Rs. 3 lakhs.

The Bank's balance-sheet at the close of the year under review shows that its deposits, at

DEVELOPMENT OF BACKWARD ECONOMIES

WORLD BANK PRESIDENT URGES SPEEDING UP OF EFFORTS

PROBLEMS of world economic development, with particular reference to the underdeveloped countries and the role which the World Bank plays, were protrayed in a lucid and illuminating manner by Mr. Eugene R. Black, President of the International Bank for Reconstruction and Development, in the course of his address at the seventeenth session of the U.N. Economic and Social Council at New York on Wednesday last week. Mr. Black drew pointed attention to the obvious manifestations of underdevelopment—the misery and poverty of the urban masses, the inefficiency of farm production and inequity of land tenure systems, illiteracy, disease, and, often, sullen hopelessness in many parts of the world. From this, one should not, however, rush to conclude that he presented a rather pessimistic picture of the world economic set-up. For Mr. Black emphasised what he characterised as the "pervading evidences of dynamic, curative forces at work—at work and gaining momentum." Among these evidences, the following three stand out most prominently:

The driving energy of Asia's new nations, sparked by pride in the dignity of independence and fed by a consuming urge to demonstrate that that independence can contribute to a fuller and a better life;

the growing recognition by many powerful interests in Latin America that static economics may be explosive politics, and that, in the long run, the course of conservatism is to push on with the expansion of production and with ever-wider distribution of its benefits; and

the awakening perception of the peoples of Africa, unfortunately sometimes displayed in such extreme and violent form as to be self-defeating, that their position of economic backwardness is not pre-ordained and that the resources of their land can be made to produce a better life within, as well as beyond, the borders of their continent.

Realism and Farsightedness

These are some of the many forces which are at work today throughout the underdeveloped world. If the forces are to be diverted in productive channels, instead of being allowed to be spilt over in riotous and destructive flood, it requires "a high degree of realism and political farsightedness in international statesmanship. How this can be achieved was neatly described by Mr. Black thus:

"On the part of the underdeveloped countries, there has sometimes been an unfortunate tendency to overemphasise the financial aspects of development—to urge that it is the low level of income, and, therefore, of savings, that is the one great obstacle to progress and that, therefore, the one real solution is for the advanced countries to make available large amounts of capital for development purposes. This analysis is one of those half-truths that obscure more than they reveal. If I judge correctly, it is the character and initiative of the people, the confidence they have in themselves and in the future of their country, the honesty and efficiency of the Government administration, the nature of the country's social institutions—it is these and many similar factors, quite as much as capital, which determine the rate of economic growth. *With individual or communal initiative, properly directed, small funds can work miracles. Without initiative or direction, no amount of investment is likely to prove very effective.* (Italics ours.)

"Let me not be misunderstood. I do not minimise the importance of capital, nor am I unaware of the immense investment which will be required if the development objectives of the democratic world are to be achieved. Certainly, the rate of investment that is flowing at present will not suffice to achieve those objectives, at least not in many of the poorer countries of Asia and the Middle East. But I insist that constantly reiterated emphasis on what the advanced countries should do for those less advanced distorts the true nature of the problem and may sometimes even be used as an excuse for failing to act on those matters which only the underdeveloped countries themselves can control. . . .

"For the industrialised countries, the issue is not the extent of the poverty or need elsewhere, but rather the extent to which it is in their own long run interests to aid in the economic growth of areas whose productivity is still unduly low. This issue, I believe, the advanced nations are not yet assessing adequately. Sometimes, even in influential quarters, development appears to be regarded simply as a slogan for debate at international gatherings, or as a matter of social improvement to be worried around by the well-meaning. I think the time has come when, in their own interests, the industrialised countries must really come to grips with the fundamentals of the problem."

In Mr. Black's opinion, the fundamentals of the problem are both economic and political. On the economic side, he posed the question whether the industrialised areas were satisfied with the prospect of a gradual expansion of trade within the existing structure of trading relationships or, wish, as a long-term matter, to enjoy the much wider markets which would become available through an increase in productivity and, therefore, of consumption levels throughout the underdeveloped world. On the political side, he asked whether the advanced countries really believed their oft-stated creed that the best long-term hope for peace lay in the spread of democratic institutions. In his own characteristic way, Mr. Black remarked: "... democracy needs for its vitality an economic climate characterised by hope and not despair. It is only in an atmosphere of economic growth and opportunity that we can realistically expect development of the kind of community which values the rights of the individual above the powers of the State. Economic stagnation and political democracy are not easy companions."

Evidently, Mr. Black must have been provoked to make the foregoing remarks by the fact that the importance of the aforesaid questions to the industrialised countries is often obscured by the insistent pressure of their immediate domestic problems. It is probably because of this that the industrially advanced countries have failed to contribute much to the development of the underdeveloped countries of the world. Mr. Black did well to urge these countries "urgently to re-examine and restate their development objectives, and then to join in the formulation of a long-term programme of action adequate to achieve these objectives."

Positive Side of Development

Looking, however, at the positive side of the world economic development, Mr. Black claimed that, in many ways, the record of accomplishment over the last five years had been impressive. In support of this claim, he observed:

"The validity of the development concept has been widely established and, in many parts of the world, it has gained a political hold that even entrenched interests have learned to respect. In many underdeveloped countries, realistic programmes of development have been worked out—frequently with the help of experts from the Bank and other international agencies—and the implementation of those programmes has often evoked an enthusiastic response of the national will.

"Widespread programmes of technical assistance have been conceived, negotiated and put into effect There are still weaknesses in these programmes, and difficult problems of co-ordination remain unsolved. But it is a striking fact that, at the end of last year, over 3,000 technical experts were at work all over the world under international auspices, the Colombo Plan and the United States assistance programmes, participating in what is undoubtedly the greatest technological education campaign ever undertaken.

"Foreign private capital, too, is beginning to venture more boldly into developmental areas, with its emphasis not quite so heavily concentrated as before on the field of extractive industry. And the flow of public loans has been substantial and accelerating.

"No longer do the words 'inert' or 'static' describe the economies we are discussing—whether in Latin America with its rapid drive towards industrialisation, or in India and Pakistan which are striving so hard and with such marked success to increase the output of their land, or in the many other parts of Asia, the Middle East and Africa where development is now gathering momentum."

Role of World Bank

The World Bank has contributed much to the progress in the development of world economy, especially of the counfries in the underdeveloped region, as noted above. This is clearly revealed by the factual account which Mr. Black gave of what the Bank has been doing and what it has accomplished in the past one year. During the nine months ended March, 1954 alone, for instance, the Bank granted over $302 million as loans to 13 countries, thereby bringing the total loans so far made since the inception of the Bank to $1,892 million, the number of loans and of countries being 102 and 33, respectively. Along with the increase in lending activities, the rate of the World Bank's disbursements to its borrowers has also been accelerated. Thus, in 1953, the disbursements amounted to $240 million, bringing the total to about $1.250 million. In making disbursements, the Bank, it is significant, has been able to use extensively currencies other than dollars. Out of the funds disbursed last year, nearly 30 per cent. was accounted for by non-dollar currencies. Equally significant is the fact that more and more of the loan proceeds are now being expended outside the U.S., rendered possible by increase in productive capacity in these areas. During 1953, about $97 million, or 40 per cent. of the disbursements, was expended in countries other than the U.S. In the early years of the Bank's operation, it will be recalled, most of the funds loaned by the Bank were being utilised for purchases in the U.S. alone.

A striking feature of the World Bank's lending operations is that loans have been made for financing basic production and providing facilities that aid basic production. The Bank-financed facilities have gone a long way towards achieving direct increase in production and promoting expansion of private industrial and agricultural enterprises. An idea of the variety which Bank financing necessarily takes was provided by Mr. Black. The Bank has granted $20 million to Chile for the establishment of a chemical pulp mill and a newsprint plant. It has given to Australia three loans aggregating over $200 million. The most recent of these loans, amounting to $54 million, was made just over a month ago. More than half of this loan is being used for the improvement of transport, a quarter for agricultural purposes, and the remainder for development of electric power facilities and various industries. The Bank has granted $8.5 million to Ecuador for the construction of eight main highways radiating out from Guayaquil, which will help augment agricultural production.

The activity of the World Bank is not confined to lending operations alone. It includes also the provision of services of special representatives to assist the Governments of some countries, such as Nicaragua and Panama, in formulating comprehensive development programmes and technical aid and advice. The principal method of providing technical assistance is through general survey missions, organised at the request of member countries to analyse their economies and to help formulate broad schemes of expansion. In recent months, the Bank has sent out three more missions of this kind to Nigeria, Malaya and Syria.

Raising Funds in Private Markets

The World Bank has also been active in raising additional loan funds in the private capital markets. In 1953, it sold more than $200 million worth of its own bonds, of which U.S. dollar bonds accounted for $175 million and Swiss franc bonds for Sw. Fr. 150 million. The market for these securities, it is gratifying to be told, is broadening significantly among investors in both the U.S. and other countries. Again, the pricing of the Bank's most recent issues has reflected a general reduction—this is a welcome sign—in the cost of long-term money, which, in turn, has enabled the Bank to effect, twice in recent times, a downward revision in interest charges on loans. The Bank has continued to sell securities from its loan portfolio to private investors in the U.S. and other countries. Since the start of the current fiscal year, it has sold the equivalent of about $16 million of such obligations—$5 million with, and $11 million without, the Bank's guarantee. It has obtained other loan funds through further releases by member countries of their 18 per cent. local currency subscriptions to the Bank's capital. Total releases to date which have been used or allocated for loans aggregate the equivalent of almost $757 million, as compared with about $710 million at the beginning of 1953. In addition, the equivalent of about $436 million has been released subject to various conditions or limitations on its use.

Yet another sphere in which the World Bank has evinced keen interest is the encouragement of flow of private capital into productive enterprise. Recently, a mission from the World Bank had visited India to explore the possibilities of setting up a privately-owned and privately-operated development corporation to help finance the expansion and modernisation of Indian industries. A Steering Committee is now drafting a charter for the proposed corporation which will finance both the existing and the new enterprises through loans and equity participations, besides providing technical and managerial advice. Referring to this, Mr. Black expressed the hope that satisfactory arrangements would be completed for bringing into existence the corporation and assured that the Bank would be able to assist it with a loan. Incidentally, he revealed that interest in the formation of a similar corporation had been shown by Ceylon and that the Bank had accordingly sent a mission to Colombo to explore the matter further.

FUTURE OF COTTON TEXTILE INDUSTRY

NEED FOR REDUCING COST OF PRODUCTION

WHAT is the future of the cotton textile industry in India? This question has been discussed and debated upon for some time now in the Press and on the platform not only by those who are directly connected with the industry but by Government spokesmen and the public at large. These discussions have centred round the complicated question of bringing down the cost of manufacture, involving such issues as high labour costs, labour productivity and rationalisation. It is on the extent to which a satisfactory solution of these issues is found that the future of the industry hinges. Mr. Shantilal Mangaldas, President of the Saurashtra Mill-owners' Association, did well, therefore, to devote some attention, in his address at the recent annual meeting of the Association at Ahmedabad, to these issues.

Mr. Mangaldas began by stressing the important role which this industry plays in the country's economy. He regarded the cotton textile industry, which had been built up patiently over the last 100 years, as a national heritage, and added: "To preserve this national heritage is not enough. We must add to it in the years to come."

There is no exaggeration whatever in these remarks of Mr. Mangaldas. The industry does play a vital role in the economy of the country. With an installed capacity of over 11 million spindles and 200,000 looms, the industry produces about 4,850 million yards of cloth, besides providing yarn for producing about 1,200 to 1,500 million yards of cloth on handlooms. It consumes all the cotton produced in the country—3.5 to 4 million bales—and imports about 700,000 to 800,000 bales of foreign cotton. It is thus the mainstay of the cotton producers in the country and exercises a stabilising influence on the agriculturists engaged in cotton production. It consumes 2 million tons of coal, 50 million gallons of fuel oil and 900 million units of electrical energy. The industry provides direct employment to about 800,000 workers and contributes to the Exchequer Rs. 20 crores annually by way of excise duty alone. There are also other taxes which it pays. It earns valuable foreign exchange through export of hundreds of millions of yards of cloth.

Dispassionate Examination

The object of restating these well-known facts is to stress that the issues facing such a vital industry require to be examined in a dispassionate manner and purely from the point of view of the larger interests of the country as a whole, instead of on sectional or sentimental grounds. This is particularly so when the question of giving protection to the handloom and *khadi* industries, in which only a small fraction of India's total population is employed, against the cotton mill industry, has to be considered. In this connection, the remarks of Mr. Mangaldas bear reproduction:

"... there is scope for increase in cloth production on the basis of increased consumption in the country. This is possible, however, only if the purchasing power of the people is improved either by increase in their income or by reduction in the price of cloth. I believe the second alternative only is open to us at present. Price reduction offers the best scope for stimulating internal consumption of cloth and it is here that the mill-made cloth scores over handloom cloth and *khadi*. While recognising the importance of the handloom industry and *khadi* in the present economic set-up of the country and while appreciating the Government's anxiety to protect those who are engaged in these industries, I feel that the artificial method of giving protection to these industries at the cost of the mill industry is not the right way of dealing with this problem. We cannot get away from the fact that textile mills represent the most economic mode of cloth production and any attempt to deprive them of this natural advantage by imposition of extra burdens in the form of excise duty, handloom cess, etc., will merely lead to difficulties in some other form.

"High prices naturally tend to decrease the consumption of cloth in a country like ours where the purchasing power of an average person is extremely low. I am convinced that, if the present restrictions and burdens on the mill industry are continued, we should not expect to see any substantial increase in the present level of *per capita* consumption of 13 yards of cloth. It needs to be examined whether the present policy is ultimately in the best interest of the country. I hope the Kanungo Committee, which is enquiring into this problem, will be able to make practical recommendations which would enable the mill industry to function effectively *in the interest of the consumers* (italics ours), while, at the same time, giving the handloom industry and *khadi* scope to continue to serve the country in the sphere where they are best suited to do so."

In the context of the need for reducing the cost of production, Mr. Mangaldas deprecated the tendency on the part of the authorities to pass a series of labour welfare legislation without due regard to the ability of consumers to pay. Each year, he said, witnessed a new law placing fresh liabilities on the mills. Alluding, in particular, to the question relating to payment of compensation for lay-off and retrenchment, Mr. Mangaldas struck a note of warning that, if such reliefs were given, they would adversely affect production and employment. He said:

"The future of the textile industry in this country depends primarily on the internal market and secondarily on the export market. We have a large internal market to support this industry, but, unfortunately, the purchasing power of the people is low. The offtake of cloth in the internal market is, therefore, relatively small. In the export market, there is keen competition from other countries. This competition will grow more and more acute as time passes. In both the cases, therefore, the cost of production will determine the quantitative demand for cloth. Particularly during the last five years, the cost of production of mill-made cloth has gone up considerably because of a number of labour welfare laws passed by the Government.

"Each year witnesses a new law placing fresh liabilities on the mills. The year 1953 saw the amendment of the Industrial Disputes Act, 1947, so as to provide for relief in the case of lay-off and retrenchment. It has been estimated that a fair size mill, desiring to close either one or both shifts, would be required to pay to the workers an amount varying from Rs. 10 to Rs. 20 lakhs as compensation. I wonder if the Government has examined the effects of this measure in the long run. While it may prevent closure of a mill temporarily, it will also have the effect of forcing it to shut down permanently, even when it may be possible for it to close down temporarily only to avoid losses and restart after a while. To give a concrete instance, two of our units which have been compelled to shut down on account of financial and other difficulties will have to pay compensation to workers to the extent of approximately Rs. 1,50,000 in one case and Rs. 2,50,000 in the other case. These units which are financially tight would be further weakened by payment of such heavy amounts and will probably go out of production for ever. I wish the Government realises that trade cycles and depression may compel employers to curtail production temporarily and, if such reliefs are given, they would adversely affect production and employment."

Turning to the problems of the textile industry in his own State, the S.M.A. President expressed "deep regret" at the deterioration in the conditions of the textile mills. According to him, out of nine mills, two have been forced to shut down completely, while one mill has been compelled to close its second shift. As a result, about 2,500 workers have been thrown out of employment. Most of the remaining mills are working uneconomically, with their financial position gradually deteriorating. In view of these, Mr. Mangaldas averred that, unless immediate steps were taken to relieve undue burdens on the industry and make its working economic, "the textile industry in Saurashtra will continue to shrink from its present position." And he warned that any delay in taking joint action by mills, labourers and the State Government might well prove dangerous. In this connection, he suggested the appointment of a committee to enquire into the working of the industry with a view to recommending ways and means for setting the industry on a sound basis. As this was only of long-term importance, he pleaded for relief by way of exemption of uneconomic units from the operation of the Provident Fund and State Insurance Acts, a downward revision in railway freights on cotton, coal, stores, cloth, etc., and reduction in water and electricity charges.

Rationalisation

On the question of rationalisation, Mr. Mangaldas had a few interesting observations to make. He observed:

"The problem of rationalisation in Saurashtra must be differentiated from that in the more advanced centres like Ahmedabad and Bombay. Whereas, in these latter places, the mills have already succeeded in achieving a certain measure of rationalisation, the mills in Saurashtra have not been able to do so and are very much behind them in this respect. What is demanded is that we should be permitted to bring our labour strength in line with that in a similar unit in Ahmedabad or Bombay. For instance, in Ahmedabad and Bombay, a workman minds two sides of a ring frame and, recently, there has been an agreement for four sides. Two sides of a ring frame per worker must, therefore, be regarded as normal workload in the textile industry. In Saurashtra mills, a worker minds only one side of a ring frame. If, therefore, we ask a worker to mind two sides of a ring frame we are merely asking him to do as much work as his counterpart in Ahmedabad and Bombay is doing. The introduction of the system of giving two sides of a ring frame to a worker and the consequent retrenchment of surplus workers does not, in my opinion, amount to rationalisation in the strict sense. It merely means terminating the services of absolutely superfluous workers who are an unnecessary burden on the industry. Their retrenchment has become unavoidable in the present circumstances, because the purpose is not to enable the mills to make larger profits but to secure their continued existence. I hope the problem will be viewed from this angle, and the efforts of the mills in Saurashtra to assign to workers what has come to be regarded as normal workload in the textile industry will not be misunderstood or misinterpreted."

REORGANISATION OF KANPUR COTTON MILLS

Reorganisation of cotton mills in Kanpur is now a matter of extreme urgency, if they are to survive in the present highly competitive markets. This view was expressed by Mr. R. D. R. Bell, Chairman of the Employers' Association of Northern India, at the seventeenth annual general meeting of the Association held at Kanpur on Wednesday last week. In support of his view, Mr. Bell pointed out that it was almost five years since the seven cotton mills submitted their schemes of reorganisation to the Government of Uttar Pradesh for approval and, during this period, it was estimated that these mills had been carrying approximately 9,000 surplus workers, with a total wage bill amounting to over Rs. 1 crore per annum. He doubtless appreciated the State Government's reluctance to approve of any scheme which might involve retrenchment of workers, in view of the increasing unemployment. But he could find no excuse for the Government withholding approval when certain mills had given an undertaking that they would implement their schemes, as natural wastage of labour occurred, and thus avoid retrenchment.

Mr. Bell presented a somewhat gloomy picture of the conditions in the Kanpur cotton mills. Towards the end of June, 1953, he said, unsold stocks of cloth and yarn, particularly the former, showed a tendency to increase. The position rapidly deteriorated until, in the month of October, when the ten cotton mills were faced with unsold stocks of 43,160 bales of cloth and 4,453 bales of yarn, valued at more than Rs. 4 crores. Even the measures of relief announced by the Government, such, for instance, as abolition of export duty on medium cloth, reduction in excise duty on fine cloth from As. 3-3 to As. 2 per yard, and refund of import duty on cotton used in the manufacture of cloth meant for export, did not bring satisfactory results to the Kanpur mills. For, situated as they are at places far off from the ports, the mills could not compete with the mills situated at, or near to, the ports. "It is, therefore, obvious," Mr. Bell said, "that the financial results of the local cotton textile industry for 1953, when published, will again present a gloomy picture."

Analysing the factors responsible for the "economic crisis" in the Kanpur textile industry, Mr. Bell observed: "During recent years, manufacturing costs have increased considerably as a result of labour legislation and, while much of it is in line with the natural progress towards improved conditions of employment, it is considered that some, if not all, of this legislation is somewhat premature and on too lavish a scale, with the result that the industry has not been able to digest the additional financial burden."

INDUSTRIAL FIBRES

The world output of industrial fibres in the current (1953-54) season would surpass the record level touched in 1952-53, according to the estimates of the Commonwealth Economic Committee. The consumption of fibres, especially of apparel fibres, is also expected to expand. During 1952—the most recent year for which comparative statistics are available—the Commonwealth countries produced 2,180 million lbs. (greasy weight) of wool. This quantity represents 50 per cent. of the world total of 4,328 million lbs. The share of the Commonwealth in the aggregate world exports of wool in 1952 was still larger, bearing 81.6 per cent. This higher proportion was due to the fact that some of the national wool clips were (and are still being) consumed in the countries of production and did not enter world trade.

Among the world's apparel fibres, cotton takes the first place, with the rate of output maintained at 17,386 million lbs. per annum, followed by wool accounting for 2,034 million lbs. (clean). Among non-apparel fibres, carpet wool accounts for 456 million lbs. (clean basis).

The year 1953 witnessed a marked improvement in the world trade in industrial fibres, in distinct contrast to a downward trend in the previous year. The improvement occurred mainly in wool and jute, while cotton showed a moderate rise. The U.K., described as the world's largest importer of fibres, took substantially more in 1953 than 1952, including deliveries of wool which were the highest since the war. The U.S. also imported more cotton and jute, but its purchases of wool continued to be low as in the previous year. Japanese imports of fibres, particularly cotton and wool, rose again in 1953 and those of Continental Europe were well above 1952.

World consumption of apparel fibres tended to rise in 1952-53, as compared with the previous season, due mainly to enlarged demand for cotton in the U.K. and Western Europe.

World stocks of industrial fibres in 1953 stood at the highest level since 1947. Stocks of wool, however, were the only exception, in that they were lower, thanks to the disposal of the greater part of the South American surplus during 1952-53.

LIVERPOOL COTTON MARKET SCHEDULED TO REOPEN NEXT MONTH

AMERICAN 15/16-INCH MIDDLING CHOSEN AS BASE FOR CONTRACT

(By A Special Correspondent)

MANCHESTER, 13*th April*

MANCHESTER LETTER

A GUIDE as to how the Liverpool cotton futures market will function on its reopening for trading next month after a lapse of 12 years has been drawn up and circulated to interested firms by the Liverpool Cotton Association. Two booklets outlining the change from the Raw Cotton Commission's cover scheme to a futures market and the details of transactions likely following the revival of full-scale private enterprise in 1954 provide not only the background to the switch but offer assistance to traders.

Stressing the changes which have taken place in world trading conditions since the Liverpool market was last open, the Association points out that the futures market cannot re-evolve itself gradually in the manner of its original inception. "It has to take on from the start the full burden of carrying the whole of the hedges of an industry which has continued to have parallel facilities during the market's eclipse," it adds.

American Advice

In a foreword to the booklet entitled *The Futures Market* 1954, Mr. A. J. Kentish Barnes, President of the Liverpool Cotton Association, acknowledges the invaluable help and advice extended to Liverpool by members and officials of the New York Cotton Exchange during recent months. "Recognising the benefits that can accrue to the whole structure of world cotton trading, from the complementary operation of futures markets in two great producing and consuming countries," he says, "they have given freely of their unique experience of futures market operation during the post-war years."

The new contract provided by the futures market, which is based on United States cotton and about which criticism has been voiced, is defended by the Association. The new Liverpool contract has been designed with three main features, it is stated. It is closely allied to the New York contract, with a similar quality basis and trading months corresponding to the active positions in New York. The range of tenderable qualities is restricted broadly to those in normal demand for consumption, and it also contains safeguards against a possible "squeeze" of the near position due to shortage of tenderable stock in this country. The contract, the Association states, incorporates the advantages of being reasonably narrow without the attendant dangers.

The basis for the contract will be Middling 15/16 inch American cotton, the trading unit will be 100 bales weighing 48,000 lbs. net and trading positions will be for October-November, December-January, March-April, May-June and July-August. Trading in each position will cease at the end of the first month.

In view of the uncertain situation concerning Egyptian and Sudan cotton it has not been considered prudent by the Liverpool Cotton Association to provide a long-staple cotton contract for the time being. A joint committee of spinners and raw cotton interests, however, has been formed to consider the objective of opening such a contract. "Once the American contract has been successfully launched and the market has secured the participation and confidence of traders throughout the world, a strong base will exist from which to launch an Egyptian type contract, even without its counterpart in Egypt," the Association claims.

Without giving any definite indication as to the level at which prices are likely to open in dealings due to start on 18th May, one of the booklets points out that true parity between October New York and October-November Liverpool should be around 350 to 400 cent points. If New York, therefore, is around 34 cents, Liverpool should be approximately 32d. to 32.50d., with the dollar-sterling rate at 2.81 dollars.

Excessive selling pressure due to a large switch of hedges from the Raw Cotton Commission's cover scheme might tend initially to depress the market and narrow the parity with New York. This should correct itself in due course, the Association observes, as professional straddle operations are likely to be initiated to take advantage of the fact that Middling 15/16 inch cottons will, under such circumstances, be quoted at a price below the cost of bringing such cotton from the United States and tendering it in Liverpool.

Delayed Delivery Probe

Some mystery surrounds the details of a new project which the Cotton Board is sponsoring to investigate the many problems involved in the current delivery situation within the industry. It is understood that a firm of managerial experts has been engaged to undertake a pilot study of the subject.

No one would deny that delivery presents the most awkward handicap to distributors of Lancashire cotton textiles at the moment. It is in many ways far more of a problem than price and it has its repercussions all along the line of production.

The enquiry into the reasons for delays in delivery of cloth is, at any rate in the first place, to be directed towards the finishing section of the trade and the merchants who are concerned with the cloth once it has left the loom. The final processors of the material from its grey state onward have frequently been accused of unnecessarily holding up its further progress and distribution but they have their own problems to face.

Mr. James Ewing, Chairman of the Bradford Dyers' Association, has pointed out, for example, that the finisher is at the moment involved in storage and insurance of grey cloth to an extent which tends to become burdensome. Those in this section, he adds, would welcome a system enabling a more even flow of output in order to make it possible to anticipate accurately the date of completion of orders. The finishing organisations, as a result, are gladly co-operating with the Cotton Board in the investigation.

Japan—The Harsh Reality?

An estimate of the effect which the Anglo-Japanese trade agreement may have on the Lancashire textile industry has been drawn up by a leading firm of Manchester stock brokers. A close study of the likely implications of the pact has brought the authors to the unmistakable opinion that the outlook is not only serious but may well cause a depression extending over several years.

The basis on which this premise is made stems from the forecast that Japanese exports of cotton piecegoods to sterling area countries may expand by nearly 200,000,000 square yards, representing an increase of over 50 per cent. At the same time shipments of rayon piecegoods to these markets are estimated to rise by some 50,000,000 square yards.

Lancashire, as the main supplier of textile goods to this area, is obviously the most vulnerable to increased competition. If the most pessimistic view is taken that our local mills are to lose as much trade as Japan gains, it could mean a total of five weeks' output of cotton cloth and three weeks' production of rayon goods. Spinners in turn may lose trade equivalent to about five and a half weeks' cotton yarn production and two and a half weeks' output of staple fibre yarn.

Further details of how such a trend of trade would affect merchants and finishers are elaborated in the report, but the seriousness of the prospect need not be overemphasised. There are other aspects to the problem, such as the mounting competition from India in overseas markets which, as the survey points out, may well force Japan to improve the quality of her exports, bringing them more directly into conflict with the output of goods shipped from Lancashire.

"Initially, the result may only be to shorten producers' order books in Lancashire and thus increase their competitive position," the survey continues in its summing up. "The critical point to be considered is whether production diverted from export channels can be absorbed in the home market. If Japan gains in international trade at Lancashire's expense it is unlikely that there will be any marked effect upon textile trading results covering 1954."

It is then that the document records the view that a continuation of the export loss envisaged in 1954 into later years may well cause a depression unless surplus capacity can be induced to leave the industry very quickly. The possibility of redundancy in Lancashire's mills has been raised on several occasions since the war, but there is a natural disinclination to avoid taking action to dispose of plant until the last moment.—*All Rights Reserved.*

COTTON NEWS SERVICE IN U.S.

WIDE RANGE AND VARIETY OF INFORMATION

IN an economy in which private enterprise holds the dominant place, commercial and trade information is of the utmost importance. Indeed, such an economy can hardly function effectively in the absence of prompt and reliable news service. The men engaged in private enterprise, whether as buyers or sellers, should know the trend of prices, the nature and magnitude of supply and demand for commodities, and should be in a position to understand and appreciate the factors which influence these prices. This presupposes the existence of a reliable market news service. If such a service did not exist, the seller would be practically at the mercy of buyers. Again, the sellers, too, would stand to lose, since those who have the knowledge of market conditions would be better able to trade than those who do not possess it. The smooth functioning of a competitive economy implies that the men engaged in it have reasonable access to all relevant information.

So much for the general importance of market news service to an economic democracy. But it should be clear that it is of particular importance to cotton economy. The distinguishing feature of the economy of cotton is that it is produced by thousands of small farmers, collected, stored and marketed by hundreds of small and large traders and consumed by a small number of mills. At every stage of this complicated process of the transfer of cotton from the field to the cotton mill, the men connected with cotton do require a great deal of expert knowledge about this commodity. This fact was realised by the U.S. administrators soon after the Civil War in that country when the centres of cotton consumption began to develop at places far removed from regions where the commodity was grown. The administrators also realised that, if the dissemination of cotton information was left entirely to private news agencies, it might mean not only some bias or other in the content of the service given but also restricted utility for the service, in that only those who subscribed for the service would be in a position to use it. This led to the creation of a nation-wide system of cotton news service undertaken by an impartial agency, namely, the Government, through its Department of Agriculture. The nature and the methods of approach employed by this leading cotton growing, cotton consuming and cotton exporting country in the world in the collection and dissemination of cotton information have been reviewed in a very interesting article, contributed to the January, 1954, issue of the *Indian Cotton Growing Review*, by Mr. R. T. Mirchandani, of the Directorate of Marketing and Inspection, Government of India, who made a special study of the Market News Service of the U.S. Department of Agriculture (U.S.D.A.) in the course of his study tour of the U.S. under the auspices of the Technical Co-operation Administration.

The cotton markets in the U.S. may be broadly classified as "local or producers' markets" and "central spot cotton markets." The former form the medium through which the great bulk of the cotton is marketed by the growers. The latter are small in number but perform the essential services required in assembling, transporting and storing of cotton. The cotton grower in the U.S., unlike his counterpart in India, disposes of his cotton after getting it ginned and baled. The crop sold as seed cotton hardly forms one per cent. of the total production. The prices in the leading spot and forward markets influence the price paid by a buyer to the cotton grower. The U.S.D.A. has selected ten of the central markets on the basis of their importance and strategic location for reporting price quotations and for determining the commercial price difference for tenderable grades above or below the basic grade; the basic grade is Middling 15/16 inch staple cotton.

In short, the Cotton Market News Service provides farmers, ginners, merchants and millowners with information on price, stocks, quality and market activity in cotton, cotton linters, cottonseed, and in some types of cotton cloth. In 1947-48, only 25 per cent. of the growers sold their cotton without having price information. This shows that the Service is widely utilised by cotton men. The Service is administered from Washington through the quality improvement and market reports division of the Cotton Branch of Production and Marketing Administration and is operated through four area offices located at Atlanta, Bakersfield, Dallas and Memphis. The cotton prices collected are: (1) daily price quotations with premiums or discounts as reported for the various qualities of cotton in each of the ten designated spot markets, (2) prices in other markets, (3) prices of cotton delivered or landed at mill points. The volume of sales, as recorded by the cotton exchanges at the end of the business day, is also collected and published. Further, the quality of cotton ginned in States and Districts is reported during the ginning season in terms of its grade and staple length. This information is obtained by classing approximately 10 per cent. of all ginnings. The estimate of the quality of the cotton carried over as on 1st August each year, which is part of the news service, is made by classing representative samples of cotton in storage at mills, public compresses and warehouses.

Besides the daily price report, the market news division publishes the *Farmer's Weekly Cotton Price* report which is designed for the use of individual farmers as a guide in selling cotton. Another weekly report, entitled *Weekly Cotton Market Review*, carries a summary of the cotton market situation up to the close of business on Thursday of each week. The *Cotton Price Statistics* is a monthly publication which is a compilation of cotton prices with premiums and discounts for grades and staples. Another monthly publication is the *Cloth Prices* report which shows (a) the prices of approximate quantity of unfinished cloth of 17 standards obtainable from a pound of cotton with adjustments for saleable waste, (b) the average prices in the designated ten spot markets for the types of cotton assumed to be used in the quality of cloth, and (c) the spreads between the price of raw cotton and its approximate cloth equivalent. Reports, entitled *Quality Reports*, are issued twice a month during the season, from September to March, showing the estimated proportions of the various qualities of the cotton ginned in the U.S. and in individual States and districts. Finally, there are two annual reports, one giving the statistics of the quality of cotton ginned in the U.S. and the other showing the statistics relating to grade, staple length and tenderability of the carry-over cotton, as on 1st August each year.

Although raw cotton is the most important commodity about which the News Service gives information, there are two other allied commodities about which the Department gives much useful information, namely, cottonseed and linters. The U.S. Department of Agriculture is the only public source of widespread market information on cottonseed. It publishes a weekly cottonseed review which contains information about the prices, quality and other factors relating to cottonseed. Since linters are an important by-product of the cottonseed crushing industry, the Department issues a weekly review containing market information on cotton linters.

The market reporters, who send by wire information about cotton from their centres to Washington, from where market reports are released, use a code laid down for this purpose. The code has been prepared with an eye to ten points on which information is generally given in the reports—spot cotton market activity, domestic mill buying, export buying, booking for freight space, offerings by merchants and shippers, offerings by farmers, weather conditions, crop conditions, insect infestation and damage, and grade and staple descriptions. Since speed is the essence of the dissemination of market news, every effort is made to publish the news promptly. In order to see that a wide section of the public gets the information it wants, and gets it quickly enough, the authorities make use of newspapers, radios, mimeographed bulletins, telephone and telegraph.

CONSUMPTION OF INDIAN COTTON

SIZABLE INCREASE SEEN

IT has been clear for a long time now that mills are utilising larger quantities of Indian cotton than in the past. During the season 1952-53, the consumption of such cotton was at a record level of 36 lakh bales as compared with 29.8 lakh bales in the previous season. Even this high level of consumption is likely to be exceeded this year. During the first four months of the 1953-54 season—that is, 1st September to 31st December, 1953—the consumption of Indian cotton was 12.9 lakh bales. On this basis, the current season's consumption of this cotton would be as high as 38 to 39 lakh bales. Indeed, if the consumption of Indian cotton in the last month of this four-month period, namely, December, 1953, is taken as a guide to the consumption for the whole season, the mills are likely to use 40 to 41 lakh bales of Indian cotton. The following figures show the consumption of Indian and foreign cotton in 1951-52, 1952-53 and in the first four months of the 1953-54 season:

(In bales of 392 lbs. net)

	Indian cotton	*Foreign cotton*
1951-52	2,987,453	1,084,018
1952-53	3,611,630	848,786
Sep. to Dec. 1953 (4 months) ...	1,290,296	229,056
September, 1953	310,827	62,812
October	326,526	61,154
November ...	305,601	50,128
December ...	347,342	54,962

It is against this large increase in Indian cotton consumption that one has to study the balance-sheet for cotton in India. The supply of all cottons for the current season is placed by a reputable commercial house at 67.7 lakh bales. This is made up of stocks of Indian cotton (on 31st August, 1953) 14.6 lakh bales, stocks of foreign cotton (on 31st August, 1953) 3.4 lakh bales, production of Indian cotton (including village consumption of 2.7 lakh bales) 43.7 lakh bales and estimated imports of foreign cotton 6 lakh bales. The distribution side of the balance-sheet is estimated to consist of mill consumption of Indian cotton 38.5 lakh bales, mill consumption of foreign cotton 7 lakh bales, village consumption 2.7 lakh bales, exports 2 lakh bales, estimated stocks of Indian cotton (at the end of the current season) 15.1 lakh bales, estimated stocks of foreign cotton (at end of the current season) 2.4 lakh bales. On the basis, the end-season stocks of Indian cotton would be only 50,000 bales higher than on 1st September, 1953. But it should be clear that, if the consumption of Indian cotton goes up to 41 to 42 lakh bales, the end season carry-over stocks might turn out to be very much lower than the stocks at the end of the last season.

If carry-over stocks have to be prevented from dipping below reasonable levels and if mills are to be assured of ample supply of cotton, it is necessary that Indian production of cotton should be increased and, till that is done, a liberal import policy should be adopted. Although Indian cotton output has made remarkable progress in recent years—it was only 20.6 lakh bales (commercial crop) in 1948-49—there is no doubt that the current high levels of consumption of Indian cotton indicate the need for increasing the output of this commodity further. It would appear that the Standing Committee of the Cotton Advisory Board recommended to the Government that the target of production of Indian cotton should be raised to 50 lakh bales as early as possible. The mere raising of the target is, perhaps, not quite the right thing to do, for, in India, where only 7 per cent. of the area under cotton is irrigated land, the monsoon plays a very dominant role. What is necessary is that more irrigated land must be brought under cotton, and farming practices improved. Meanwhile, imports should not be unduly restricted. Many importers feel that the present restriction, which stipulates the prior sale to mills as a condition for the grant of import licence for cotton, does not enable the importers to import and stock foreign cotton freely. Perhaps, the removal of this restriction will help augment the supply of cotton in the country through facilitating larger imports.

U.S. COTTON

The final ginning figure for the 1953 cotton crop of the U.S. is 16,324,000 bales, according to the Bureau of Census. The ginnings of upland cotton this season had a larger proportion of grades St. Middling and above compared to last year. The proportion of Middling and Strict Low Middling was smaller on the same comparison, while the proportion of Low Middling and lower white grades was larger.

BOMBAY FIRE AND GENERAL INSURANCE

FIRE PREMIUM INCOME MOVES UP

NEXT year, the Bombay Fire and General Insurance Company, Ltd. (Manager: Mr. B. H. Reporter, Bombay), will complete two decades of useful existence. Established in 1935, the Bombay Fire and General is a purely general insurance company, transacting business in fire, marine and accident insurance. It has branches in several principal trading centres, such as Calcutta, Madras, Delhi, Ambala, Akola and Dhulia. It derives a substantial part of its premium income, particularly in the fire department, from its overseas business for which it has chief agents in Karachi, Chittagong and Rangoon. Although the year 1953, to which the Company's latest report and accounts refer, proved a difficult one, especially for the Company's accident department, it is gratifying to note that the Company's principal department, the fire section, was able to report satisfactory increase in net premium income. The aggregate profit from the three departments was, however, lower at Rs. 1.10 lakhs, as against Rs. 3.46 lakhs in 1952. Nevertheless, the return to shareholders has been maintained at 5½ per cent. per annum.

Fire Department

In the fire department, which forms the Company's principal source of business, the net premium income advanced from Rs. 8.89 lakhs in 1952 to Rs. 9.22 lakhs during the year under review. The increase is to be attributed entirely to the better performance of the Company's foreign business. For, the premium derived from the Company's foreign fire business increased from Rs. 3.02 lakhs to Rs. 3.82 lakhs, while the premium income from the business effected in India declined from Rs. 5.87 lakhs to Rs. 5.40 lakhs. Losses in this department were, however, higher at Rs. 3.33 lakhs, as against Rs. 1.93 lakhs in 1952. Commission and expenses, on the other hand, were somewhat lower at Rs. 4.73 lakhs. The increase in losses has affected the Company's fire profit which declined from Rs. 2.64 lakhs to Rs. 0.85 lakh.

Marine Department

The net premium income in the marine department aggregated Rs. 2.36 lakhs, as compared with Rs. 2.60 lakhs in 1952. This decline in premium income was shared both by the Indian and the foreign portfolio of the Company, the former having declined from Rs. 1.37 lakhs to Rs. 1.25 lakhs and the latter from Rs. 1.24 lakhs to Rs. 1.12 lakhs. Claims were, however, slightly higher at Rs. 1.53 lakhs. Expenses (including commission) were, on the other hand, somewhat lower at Rs. 0.83 lakh. The profit from the marine department declined from Rs. 0.67 lakh to Rs. 0.24 lakh.

The accident department of the Bombay Fire and General shares the general experience of accident insurers in India as well as abroad, who find it increasingly difficult to run this department on a profitable basis. Although the net premium income in this department improved from Rs. 1.40 lakhs to Rs. 1.52 lakhs, claims also rose from Rs. 0.57 lakh to Rs. 0.64 lakh. Expenses (including commission) were also higher at Rs. 0.79 lakh, as against Rs. 0.71 lakh in 1952. The working of this department yielded a profit of only Rs. 1,439, as compared with Rs. 15,427 in 1952.

Transfer to Reserve

The profits from the fire, marine and accident departments, together with the income from interest and transfer fees (Rs. 39,432), the profit from sale of investments (Rs. 1,797) and the amount brought forward from the previous year's account (Rs. 2.68 lakhs) make in all Rs. 4.20 lakhs. Out of this sum, the Directors have transferred Rs. 75,000 to the reserve for taxation and Rs. 50,000 to the general contingencies fund. The payment of a dividend of 5½ per cent. to shareholders (Rs. 2·4 on the Rs. 40 paid-up shares and As. 9 on the Rs. 10 paid-up shares) absorbs Rs. 0.24 lakh, leaving a balance of Rs. 2.71 lakhs to be carried to the current year's accounts.

The Company's financial position is sound. Besides a capital of Rs. 4.20 lakhs, its reserves (excluding the reserve for taxation), funds and unappropriated surplus aggregate Rs. 14.12 lakhs, inclusive of fire fund (Rs. 4.77 lakhs), marine fund (Rs. 2.36 lakhs), and accident fund (Rs. 0.78 lakh).

HIGHER SUGAR OUTPUT AT LOWER COST

REAL SOLUTION LIES IN INTENSIFYING CANE CULTIVATION

ALTHOUGH the Indian sugar industry (including the *gur* and *khandsari* sectors) enjoys the distinction of being the second largest in the world, next only to Cuba, the country has now turned out to be one of the world's principal sugar importers. Not only has the production of sugar failed to keep pace with the expansion in demand but the cost of manufacture also is considerably higher than in other countries. What is this state of affairs due to? It is due, in a large measure, to the fact that the progress in the primary stage—that is, sugarcane cultivation—has lagged far behind that in the secondary stage—that is, sugar manufacture—thanks to lack of adequate and proper attention paid to intensive sugarcane cultivation. That there is no exaggeration whatever in these observations will be clearly evident from the frank remarks of no less a person than Dr. Punjabrao Deshmukh, Union Minister for Agriculture, made in the course of a talk recently broadcast from the Delhi station of the All-India Radio. Mr. Deshmukh said that, in spite of agricultural research conducted over a long period, yields are still very unsatisfactory as compared with other countries. Dr. Punjabrao minced no words when he said that they (per-acre yields) had unfortunately either continued to remain stationary at the low level of 14 to 15 tons per acre and had, in some cases, gone down.

Now that the people have got accustomed to eating more white sugar—the aggregate consumption requirements are estimated at 1,700,000 tons per annum and that it is bound to increase further in future—the necessity for increasing sugar production has arisen. The fulfilment of this need depends mainly on the supply of sugarcane, the principal raw material of the sugar industry. To quote Dr. Punjabrao's own words: "Co-ordinated efforts of the State Governments, factory interests and development workers are needed to achieve greater average acre-yields of sugarcane. If these efforts are speeded up, greater production of the raw material and its diversion to the mills, and, ultimately, greater and more economical production of sugar, will be ensured."

Importance of Cane Development

The Agriculture Minister did well to emphasise, once again, the need for according greater and more careful attention to, and adequate provision of, the essential wherewithals to improve its production. He said:

"India has now become one of the largest sugarcane-producing countries in the world. Nowhere else is its cultivation as ancient as in this country, where it has been converted into products for indigenous consumption from time immemorial. Sugarcane is now being cultivated throughout the Indian Union over an area of 4 to 4½ million acres, and 55 to 59 million tons in terms of *gur* are produced every year. It plays a very important part in the agricultural economy of the country; it is the chief source of livelihood or of cash income for a large section of our agricultural population. The rural economy in the three major sugarcane-growing States of Northern India—U.P., Bihar and the Punjab—is intimately linked with cane cultivation. In the manufacturing side, the sugar industry provides employment to about 135,000 workers in the sugar mills, besides indirectly helping to provide employment to workers in industries dependent upon sugar."

Although there is nothing new or novel in these observations, they do not lessen the importance of the issue involved, especially as the sugarcane cultivation in India has, as already stated, not received adequate and *proper* attention. In the considered opinion of Dr. Punjabrao, seven factors are capable of improving the yield of crops in India. These are: (1) Use of manures and fertilisers, (2) control of water-supply for crops, (3) use of improved varieties, (4) control of pests and diseases, (5) prevention of soil erosion, (6) use of better implements, and (7) better system of cropping. In so far as the sugarcane development, however, is concerned, Dr. Punjabrao urged that highest priority should be given to the first three factors. According to him, variety is no longer a factor limiting the yield of cane in India. Impressive results have been obtained at the Sugarcane Breeding Station at Coimbatore. There are varieties under cultivation which, with proper manuring and irrigation, can give very high yields. In fact, as readers are aware, in Peninsular India, the average yield of sugarcane obtained is 35 to 45 tons per acre.

One of the important factors holding up crop yields in India is lack of adequate manuring. Alluding to this, Dr. Punjabrao Deshmukh, observed:

"Improved varieties demand heavier manuring to show their best performance. While a great many good varieties have been distributed, these have, as a general rule, been grown with whatever manure the cultivator had at his disposal and could spare easily, and the net result is that there has been no spectacular increase in the average yields in this country, in spite of the fact that the sugarcane area in certain major States, like U.P., has been fully saturated with improved varieties. I am of the opinion that inadequate manuring is holding up crop yields in this country. The creation of proper organisations for manure supply, according to schedules worked out by the Agricultural Departments for different crops, should be given the highest priority in our programme of cane development."

Minister's Initiative

There is much force in this view. And it is gratifying to be told by the Minister for Agriculture that he is taking steps to initiate action to increase the production of sugarcane in the three important cane-growing States of U.P., Bihar and Punjab. In this connection, he disclosed that, recently, the sugarcane experts of these three States were invited to New Delhi and consulted about the immediate steps that could be taken to improve the acre-yields of standing cane crop. In consultation with them, it had been decided to provide a heavier dose of top-dressing with sulphate of ammonia and to lay out thousands of trials on the cultivators' fields, in addition to large-scale top-dressing of standing crops in blocks with this or similar nitrogenous fertilisers.

Proceeding, the Minister stated that, notwithstanding the fact that thousands of maunds of manures and fertilisers had already been distributed in the various sugarcane-growing regions, the average cane-grower had not yet become fully fertiliser-minded. This is, indeed, a frank admission. The chief factor responsible for it is lack of adequate financial facilities to cultivators. Reassuring, therefore, is the statement of the Minister that measures are being taken to ensure that application of manure is not hindered on account of lack of finances required by the cane-grower for the purpose. Also reassuring is his statement that the Central Government is evolving a scheme according to which the States and the Centre will share the cost of the organisation required to handle larger quantities of manure for intensive application to the cane crop, as well as on additional plant protection measures.

The foregoing measures refer, however, mainly to the standing sugarcane crop, the improvement of which is of immediate importance. Looked at from the long-term point of view, the problem of developing cane in Northern India, or, for that matter, anywhere else, assumes special significance. The problem will have to be tackled not on one front only but on several fronts. These, as Dr. Punjabrao rightly pointed out, include the following:

(1) Planning and execution of irrigation projects;
(2) propagation of disease-free seeds yielding cane of higher sucrose content;
(3) improved cultural technique, including use of improved implements and treatment of the soil;
(4) provision for plant protection; and
(5) scientific harvesting programme to ensure that under-ripe cane is not delivered to factories for crushing.

It is true that all these matters are being dealt with by the Indian Central Sugarcane Committee, which started five-year sugarcane development schemes in the States of U.P., Bihar, Madras, Bombay, West Bengal and Orissa in 1948-49; these schemes have been continued for a further period of three years. But the progress so far achieved has not been quite satisfactory, the limiting factor being lack of irrigation facilities. With the completion of a large number of tube-wells in the factory areas in the North Indian sugar mills and the river valley projects elsewhere, this deficiency should, as Dr. Punjabrao aptly pointed out, be met fully in the near future. Nevertheless, there is no gainsaying the fact that the tropical conditions of South India are more suitable for cane development than the sub-tropical climate of North India. It is this factor which should be the major plank on which the pattern of the future development of the sugar industry should be based.

LIGNITE MINING IN SOUTH ARCOT

IS PILOT PROJECT A SUCCESS?

EVER since the discovery of large-scale deposits of lignite in South Arcot (Madras State) became known, there has been considerable interest in the possibility of South India becoming an important industrial area. There is, however, much prospecting still to be done. A pilot project was, as is well known, undertaken recently in order to find out whether commercial mining of lignite was possible. This project, however, has not been completed yet. But it is gratifying to learn that the Committee of officials, deputed recently to make an on-the-spot study of the working project, has reported favourably on the project. The Committee consisted of Mr. C. V. Narasimhan, I.C.S., Joint Secretary, Ministry of Finance, Mr. A. Lahri, Director of Fuel Research Institute, and Mr. A. B. Guha, Chief Engineer. It would appear that the Committee's findings indicate that the project is a complete success. The Committee has also suggested measures for the completion of the pilot project as early as possible and for undertaking full-scale mining thereafter, on a commercial scale. In the light of the Committees' findings, the Government of India, it is stated, will render such assistance as is needed for expediting the completion of the pilot project and the commencement of full-scale commercial mining. A project report for mining about 5,000 tons of lignite will be drawn up shortly. There are also proposals for the installation of 100,000 kw. power plant at Neville and a plant for briquetting 1,000 tons of lignite a day.

Since the working of the pilot project so far reveals that it is a success, the commercial exploitation of lignite has become a feasible proposition. About 2,000 million tons of deposits are expected to be recovered from Neville, which is indeed a "very valuable asset to South India." Experts aver that the lignite deposits, which are 15 to 20 million years old, are of "good quality." Laboratory tests have disclosed that lignite catches fire easily and burns well. The composition of lignite, it may be mentioned, is as follows: Moisture 40 per cent., ash 3.6 per cent., volatile matter 29.7 per cent., and fixed carbon 26.7 per cent. The calorific value is 6,500 B.T.U. (British thermal units) per lb. There is a layer of 20 to 25 feet thick white clay, which contains about 40 per cent. alumina.

Power Generation

The influence of lignite and its products on future power generation is enormous. Lignite can be used directly in power stations in pulverised form for raising steam, as is being done in Australia, Germany, and the U.S. It can also be carbonised by low temperature carbonisation and the char obtained can be used in boilers in pulverised form and by-products can be utilised. About 2.5 tons of lignite will be required to make a ton of char, giving a calorific value of about 13,000 B.T.U. The volatile matter will, when condensed, yield a tarry liquid of about 18 gallons a ton or roughly about 15 per cent. on raw lignite. This tar will, on further distillation, yield about one-third of good road surfacing material and about one-third as creosote oil which is useful for wood preservation. The remaining one-third is a liquid fuel with properties and calorific value similar to crude oil. Thus, a million tons of lignite, when processed, will leave about 6 million gallons each of crude oil, creosote oil and of tar. It is possible even to burn crude tar itself directly in boilers for raising steam or in large gas turbines for peak-load relief stations. An important by-product namely, montan wax, can be secured by the solvent process. Montan wax is used for electrical insulations and furniture polish.

The commercial exploitation of lignite will usher in a new era of industrial prosperity in South India. For the progress of this region is, as is well-known, held up, by lack of power resources. Lignite can be made available at a very cheap cost, as compared with that of coal obtained from Bengal and Bihar. The annual rate of demand for coal south of Singareni is low enough, there would be a demand for another 2 million tons. In all, a consumption of 4 million tons of lignite will be possible, including domestic consumption. Lignite deposits in South Arcot are, therefore, a source of great wealth to South India.

GRINDLAYS BANK LIMITED

(Incorporated in England)

BALANCE SHEET OF INDIAN BRANCHES AS AT 31st DECEMBER 1953

CAPITAL AND LIABILITIES	Rs.	a.	p.	Rs.	a.	p.

(Sd.) A. SIMPSON,
General Manager in India.

We have audited the foregoing Balance Sheet of the Indian Branches of Grindlays Bank Ltd., as at 31st December, 1953, and also the foregoing Profit and Loss Account for the year ended on that date, in which are incorporated the authenticated returns of the Calcutta, Madras, Delhi, New Delhi and Simla Branches and report that:—

(a) we have obtained all the information and explanations which we have required;

(b) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;

(c) such Balance Sheet exhibits a true and correct view of the state of the Branches' affairs according to the best of our information and the explanations given to us and as shown by the books of the Branches; and

(d) in our opinion, books of account have been kept by the Branches as required by Section 130 of the Indian Companies Act, 1913.

BOMBAY, 23th March, 1954.

Chartered Accountants.

ENQUIRY INTO CONDITIONS AND PROBLEMS OF PLANTATIONS

THREE-MAN COMMISSION APPOINTED

THE Government of India has appointed a commission of enquiry, under the Commissions of Inquiry Act, 1952, to conduct a comprehensive enquiry regarding the economic condition and problems of three plantation industries, namely, tea, coffee and rubber. This is the first time that a comprehensive enquiry is being instituted into the affairs of these industries. Normally, one may interpret this step as a mark of the Government's recognition of the importance of these three industries to the economy of the country. But we wonder whether it can really be interpreted that way, because the persons chosen to enquire into the industry's affairs are just novices who will have to learn everything from A to Z about plantation industries before they can express their verdict on the problems facing the industry. The utility of this enquiry either to the industry, in particular, or the country at large, is of a very dubious nature.

The Commission consists of three members, Mr. P. Madhava Menon, I.C.S., Additional Secretary, Union Ministry of Commerce and Industry (Chairman) and Mr. K. G. Sivaswamy, formerly of the Servants of India Society and Research Associate of the Delhi School of Economics and Prof. M. V. Mathur, Head of the Department of Economics, Rajputana University, Jaipur (members). A feature of the composition of the Commission is that it contains neither a representative of the industry nor a spokesman of labour. On the other hand, the Government proposes to appoint two assessors, one to represent the interests of the industry and the other to represent the interests of labour, in order to aid and advise the Commission in its work. The names of the assessors are yet to be announced. The assessor representing the industry will, it is learned, be chosen from a panel of names which the Government has invited the planters' associations to submit. It is not known whether the planters have accepted the Government's suggestion and be content with nominating an assessor instead of seeking direct representation on the Commission itself. In addition to the assessors to be appointed on behalf of the industry and labour, the Commission will also associate with itself local assessors with detailed knowledge of local conditions in respect of each planting area and each plantation industry when it visits the different localities. Since the members of the Commission are not intimately acquainted with the affairs of the industry, they will have to rely on the advice of these assessors to a very large extent. One does not, therefore, know how the Commission will decide an issue when conflicting views are expressed on it. In such cases, the outcome may be that of blind leading the blind. In fine, the enquiry ceases to be an expert one, which is what the industry needs.

The Government of India's decision to undertake the enquiry is a sequel to the insistent demands of the planters for a thorough investigation into all aspects of the plantation industry, with particular reference to the cost structure thereof. It will be recalled that one of the criticisms of the Rajaram Rao Committee's recommendations regarding the tea industry was that they did not touch even the fringe of the industry's problems. It will also be recalled that the Industrial Committee on Plantations, which met in December, 1952, to consider some of the recommendations of the Rajaram Rao Committee, recommended the appointment of a Tripartite Commission to investigate the cost structure of the tea industry. The Government, however, did not accept the Industrial Committee's suggestion to appoint a tripartite commission, but instead decided to appoint an expert committee. This was so far as the tea industry was concerned. As regards the coffee industry, the planters have been demanding an enquiry by the Tariff Commission into the affairs of their industry as the price fixed for coffee does not allow any margin for development of coffee production, for which there is a vast scope in the Malnad. The Minister for Commerce and Industry, however, was unwilling to concede this demand. As for rubber, the price of this commodity in India is higher than the world price and this stands in the way of the Indian rubber goods manufacturing industry expanding itself and finding a world market for its products. If the price of rubber is to be brought down, a large-scale rehabilitation and development scheme, which the industry estimates would cost Rs. 7 crores, has to be undertaken. The Indian Rubber Board, at its last annual meeting, recommended, that the Government of India should include the rehabilitation and development scheme in the Five-year Plan and allot necessary funds for subsidising the same. The consumers of rubber, especially those who are catering to world markets, are complaining that they are finding it difficult to retain their markets, let alone expand it as they have to compete with those foreign manufacturers who are getting the benefit of low world prices for raw rubber. As readers are aware, the price of rubber in India is substantially higher than the world price. Their demand, too, needs to be looked into. There are thus enough grounds for undertaking a thorough enquiry into all the aspects of the three plantation industries.

In announcing the decision to appoint an "expert" committee for tea in February, 1953, rather than a tripartite commission in accordance with the suggestion of the Industrial Committee on Plantations, the Ministry of Commerce and Industry itself announced that, in view of the technical nature of the problem of cost and trade structure of the industry, an expert committee would be more appropriate for the purpose and that this committee woud consist also of one person with intimate knowledge of labour problems. This expert committee for tea was never appointed and, after a long interval of 15 months, the Government has now appointed the omnibus body under reference. For reasons already mentioned, no one who knows anything about the plantation industry with regard this commission as an expert body which can successfully tackle the "technical nature of the problem."

The terms of reference of the Commission are broad-based. It has been asked to go into all aspects of the three plantation industries, including the amount of capital, Indian and non-Indian, invested in them, the methods of production and costs of production, the methods of financing and marketing, including all the factors which affect the price paid by the consumer, and the possibilities of further expansion and development of these industries. It has also been asked to make recommendations to the Government on the measures necessary to secure for the producer a fair price for his product and to the consumer a fair price for the article he buys, to enable the provision of necessary finance for the plantation industries, to ensure suitable marketing arrangements, and for the proper development and expansion of these plantation industries.

The Commission is required to submit its report within a year. Thus by the time the Commission reports its findings, more than two years will have elapsed since the Commerce and Industry Minister promised to appoint an expert enquiry committee. Then, the Government will take its own time to announce its verdict on the Commission's recommendations and take action thereon. In the meantime, the industries will continue to suffer from their handicaps. The worst sufferer by this delay will be the coffee industry for which the Government has developed a blind eye for no explicable reasons. Further, by the time the Government makes up its mind on the recommendations of the Commission, there may be a change in the situation facing the industry, thereby rendering the Commission's findings of purely academic interest.

EXPORTS OF NORTH INDIAN TEA

The total shipments of North Indian tea during the year ended 31st March, 1954, amounted to 388.72 million lbs., an increase of 35.54 million lbs. over the previous year. The following table shows the shipments to some of the main countries during the last three years:

(In thousand lbs.)

	Year ended 31st March		
	1954	1953	1952
U.K.	285,560	235,436	231,761
Eire	20,981	11,987	23,607
U.S.	19,595	21,333	17,829
Canada	13,995	15,676	11,862
Persian Gulf	10,794	14,769	12,863
Egypt	8,837	12,598	2,987
Red Sea ports	7,320	8,958	3,945
Istanbul	6,031	6,019	3,627
Amsterdam and Rotterdam	4,369	6,206	4,231
Hamburg and Bremen	3,753	2,360	2,022
Australia	1,438	2,724	4,657
New Zealand	1,119	938	299
South America, Central America and West Indies	1,066	3,479	6,303
U.S.S.R.	...	...	5,165
Iran	902	882	7,431

The total shipments to the U.K. from India during the calendar year 1953 aggregated 302.36 million lbs. as against 225.04 million lbs. in the previous year, a rise of 77.32 million lbs. This increase, it may be noted here, is a little more than the rise in Britain's total import of tea, the exact increase being 73.15 million lbs. Although the total exports of North Indian tea during 1953-54 were 35.5 million lbs. more than in the previous year, the quantity sold in Calcutta for export to all destinations was 23.3 million lbs. less than in the previous year. This is partly due to the shortfall in crop; but the main reason for this is stated to be an increase in direct sales to London, through the auctions held there.

According to a Press report, concern is being felt in Calcutta over the large shipment of North Indian tea direct to London for sale at Mincing Lane. This is said to be detrimental to the development of Calcutta as a world market for tea. Though the need for developing Calcutta as a world market for tea cannot be denied, it should be noted that Calcutta does not offer the same facilities as London. So long as these facilities, for instance, warehousing, arrangements for blending, etc., are not made available in Calcutta, the cry for developing Calcutta as a world market will only be futile. So far efforts made to provide them have not borne any outstanding results. Attempts made in the past to compel all countries to buy direct from Calcutta were not completely successful and India was needlessly losing some of its markets to its competitors. It was, therefore, found necessary to permit London to re-export tea. This has proved beneficial to this country. Thus, Mincing Lane has developed a good re-export trade with several Continental countries, thereby helping Indian tea to be marketed in places where direct sales from India could not be increased.

STOCKS OF JUTE GOODS DECLINE

OUTPUT SIZABLY UP

THE Indian jute mills' monthly returns for March, 1954, discloses a slight improvement in the stock position of jute goods and a rise in production. Thus, at the end of the month under review, the total stocks amounted to 92,914 tons, as against 95,417 tons a month before, a reduction of 2,503 tons. This decline is solely due to a substantial drop of over 10,000 tons in sackings. Hessians, on the other hand, have accumulated by about 8,000 tons over the level that prevailed at the end of February, 1954.

Now to mention the actual figures. Sacking stocks stood at 61,407 tons, as against 71,864 tons a month before and 94,742 tons a year earlier. The reduction would have been even more substantial had the quantity for which delivery was due been shipped. The hessian stock show an increase of 7,594 tons carrying the total to 29,588 tons. Holdings of other varieties of goods also were higher by 360 tons at 1,919 tons. The total stocks of hessian, sacking and other types at the end of March, 1953, were 138,797 tons, of which 41,874 tons were hessian and 94,742 tons sackings. It will be seen from these figures that even though the stocks of hessian showed a marked increase over the previous month, they were well below those a year before.

The following table gives the position of the various types of jute goods as at the end of March this year, as compared with those a month before, as also with those as on 31st March, 1953:

(In tons)

	As on			
	31-3-1954	28-2-1954	31-1-1954	31-3-1953
Civil—				
Hessian	29,298	21,749	21,125	40,755
Sacking	60,607	71,196	72,001	92,406
Others	1,904	1,559	1,643	2,144
Total	91,809	94,504	94,859	1,35,305
Government—				
Hessian	290	245	231	1,119
Sacking	710	668	639	2,336
Others	15	...	...	37
Total	1,015	913	870	3,492
Grand total	92,914	95,417	95,729	1,38,797

The output of jute goods during March, 1954 was 7,325 tons more than in the previous month. To be precise, it amounted to 75,586 tons, as against 68,261 tons in the preceding month. Evidently, the increase is due to the fact that February was a short month. But what is significant is that even as compared with both January, 1954, and March, 1953, the output in the month under review reveals a perceptible increase. On the basis of production figures, consumption of raw jute during the month may be placed at 438,398 tons, as compared with 395,914 tons in the previous month and 431,694 tons in the corresponding month of the previous year.

With March output, the total for the nine months of the season July-March, 1953-54, amounts to 644,358 tons, as against 671,970 tons in the same period of the preceding season, namely, 1952-53. The total consumption of jute during the nine months of the current season 1953-54, based on the output of jute goods, may be placed at 3,736,275 bales, as against 3,896,426 bales in the corresponding months of 1952-53.

The table below gives a summary of the types of goods produced in March, 1954, as compared with that in February and January, 1954, and March, 1953:

(In tons)

	March, 1954	February, 1954	January, 1954	March, 1953
Civil—				
Hessian	34,328	31,792	31,447	29,553
Sacking	37,830	33,804	33,234	39,580
Others	3,120	2,450	2,510	2,746
Total	75,278	68,046	67,191	71,859
Government—				
Hessian	11	24	21	2,082
Sackings	264	191	115	489
Others	13	...	...	...
Total	308	215	136	2,571
Grand total	75,586	68,261	67,327	74,430

The increase in the output of jute goods in March last was shared by all sections, namely, hessian, sacking and other fibres. The output of hessian rose from 31,816 tons in February, 1954, to 34,339 tons in March 1954, sackings from 33,995 to 38,114 tons and other varieties from 68,261 tons to 75,586 tons.

THE
CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA
(Incorporated in England by Royal Charter, 1853)
(Liability of Stockholders Limited)

OFFERS COMPLETE BANKING SERVICES INCLUDING FOREIGN EXCHANGE FACILITIES
Branches at Bombay, Madras and other important centres in South India.
R. F. WISHART, Managing Director.

How banking serves the SPICES INDUSTRY

There is tremendous demand throughout the world for pepper and cardamoms and South India produces the bulk of these spices. One-third of the entire world demand for pepper is grown between Karwar and Cape Comorin; and in 1951-52, India's exports earned more than Rs. 27 crores.
Within the last ten years there has been a remarkable increase in cardamom growing, particularly in the South Indian states of Mysore and Coorg, and the districts of Madura, Tinnevelly, Malabar and Coimbatore.
The Indian spices industry has a happy future, and banking will naturally help to expand and improve it. The facilities and guidance of a good bank, such as the availability of ready funds when needed and the collection of dues from any part of the country, have become part of efficient organisation in every industry.
We at Palai are proud that many spice growers of South India employ the *complete* banking service we offer:
Current Accounts—Demand Drafts—Telegraphic Transfers—Investments—Letters of Credit—Bill Collection—Deposits — Loans & Overdrafts—Confidential Credit Reports, etc.
If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.
Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns and have the amounts credited to their accounts at any of our branches.
PALAI CENTRAL BANK LTD.
(Incorporated in Travancore-Cochin with Limited Liability)
Head Office: PALAI, TRAVANCORE
Branches at: Madras, Cochin, Quilon, Trivandrum, Alleppey, Mangalore, Bangalore, etc. *Also at:* Delhi & New Delhi.

MONEY GOES DOWN THE DAMODAR

RAU COMMITTEE FINDINGS DISQUIETING

ALTHOUGH the report of the Damodar Valley Corporation Committee to enquire into the affairs of the Corporation was submitted to the Government of India a few months back, only last week a brief summary of the report was made public. It will be recalled that the Committee was appointed on 15th October, 1952, with Mr. P. S. Rau, I.C.S., as Chairman, with Mr. V. D. Dantyagi, Mr. G. R. Garg and Mr. B. N. Lokur as members. Mr. B. D. Nanda was the member-Secretary. The Committee was asked to enquire into and report on the following matters relating to the Damodar Valley Corporation:

(1) Land reclamation and rehabilitation works undertaken by the Damodar Valley Corporation;

(ii) the changes in the design and construction features of the Konar and Tilaya dams; the award of contracts and the rates for the various items of works;

(iii) the planning and purchase of stores and equipment for works on the Damodar Valley Corporation and the procedure therefor;

(iv) the adequacy of the Damodar Valley Corporation Act, 1948, and the organisational set-up of the Corporation; and

(v) the appointment of a chief engineer for the Damodar Valley Corporation.

The brief summary, as released to the Press, contains a scathing indictment of inefficiency and waste of public money in the execution of the Damodar Valley multi-purpose project. The Committee has complained of overcentralisation so common with Government departments. So startling are the revelations of grave administrative irregularities and so damaging the allegations that they are very likely to smash what little confidence the public has in the working of Government enterprises.

Lack of Planning

There has been a lamentable lack of planning and utter disregard of financial propriety in the execution of the project. It is certainly difficult to single out any individual instance from the multiplicity of recklessness and indifference to financial rectitude cited by the Committee. The quantum of mismanagement in the operations has resulted in a loss of Rs. 1.64 crores in the case of the Konar Project alone.

The report is highly critical of the non-appointment of a chief engineer for two and a half years. The adverse effects of it, the Committee says, has been writ large in the loss of expert advice and frequent changes in design, leading to increase in costs and waste of public money. Owing to absence of competent technical advice, there was no proper appreciation of the magnitude of the problem involved in the construction of the project. Little wonder, therefore, that the Corporation failed to pay sufficient attention to planning of equipment in the early stages. Overall planning, according to the Report, was made impossible by frequent and numerous changes in the design and programme. The Committee deplores that, although the Corporation took over the Bermo seam of the Kargali colliery on sub-lease as early as in October, 1950, mining operations have not yet started. This is an instance of lack of proper planning.

The severest criticism of the Committee relates to changes in the features of the Konar dam. To quote the Committee's remark: "If the contract with the French firm, Societies de Construction des Batignolles, was a serious mistake, the appointment of Messrs. Gruner Bros., a Swiss firm, was a misfortune." The original design was prepared by Mr. Voorduin in 1946. Later, the French firm was appointed to recast the design and the Swiss firm, Messrs. Gruner Bros., as consulting engineers, and Hind-Patel, an Indian firm as contractors. The design of the French firm was adopted by the Corporation as revised by Messrs. Gruner Bros. The latter, according to the Committee, made some changes in the design. The Committee is at a loss to understand "how these costly changes were suggested or accepted so soon after Messrs. Gruner Bros., had declared the S.C.B. design (the one prepared by the French firm) to be sound and economical."

It is true that the report has fixed the responsibility for the vacillation and indecision in appointing the chief engineer on the Corporation as a whole. Nevertheless, it does not minimise the personal responsibility of the Chairman in the matter which it says was "by no means negligible."

A significant feature of the Report is its recommendations in regard to the organisational set-up of the D.V.C. At the outset it has made out a case for decentralisation of administration. It remarks: "While the Corporation should concern itself with policy matters and broad features of general administration, supervision and control, there should be generous delegation of power at all levels indicating both well-defined responsibility and adequate powers. The Committee is against full Parliamentary control over statutory corporations in charge of river valley schemes. This is understandable, because, as the Committee itself points out, "such control will have the effect of placing them in a position worse than that of a Government department." Its suggestion that a formal provision can be made in the Damodar Valley Corporation Act enabling the Government to call for information sounds sensible.

Semi-autonomous Corporation

In the Committee's view, a semi-autonomous Corporation is the best method yet devised for the execution of multi-purpose projects efficiently and economically. In view of the tremendous mistakes that have been made in planning and in preparing estimates of cost, the Committee suggests that the Corporation should be created only when a project has been investigated in sufficient detail and a fairly firm estimate has been sanctioned by the Government. While the Corporation should have power to execute the project without any outside interference, within the sanctioned project estimate, it should not have power to modify the project. That power should vest only in the Government. If the project estimate is likely to be substantially exceeded, the Corporation must obtain the Government's sanction. After completion of the project, the Corporation should have full power to run its commercial or quasi-commercial activities like irrigation, navigation, power and flood control. The report suggests that power should be taken over by the Government to give directions relating to the exercise by the Corporation of its functions somewhat on the lines of the Air Corporations Act.

It is interesting to note, in passing, that the Committee has recommended that a high-ranking social worker, with sound knowledge of economics and who commands the confidence of the local population, should assist in the development of the valley. It further suggests that, in the matter of development, the advice and assistance of advisory bodies composed of local leaders should be sought and the co-operation of the State Governments and local authorities ensured. This suggestion is important in that it seeks to invoke the aid of the population, whose lives will be greatly transformed by the benefits of the Corporation, in the fulfilment of one of the most primary functions of the Corporation, namely, the development of the Valley. In implementing this suggestion, the authorities of the Corporation, however, must remember that too many cooks spoil the broth.

PLANNING TRANSPORT

Following the receipt of answers to the questionnaire relating to transport issued by the Planning Commission some time last year to various commercial bodies, Mr J. N. Nanda, Transport Adviser to the Planning Commission, recently visited important commercial centres, with a view to discussing the question personally with the concerned interests. During his visit to Calcutta, the representatives of the Indian Tea Association pointed out that, while the transport needs of the tea industry in Assam were largely met by river steamers, in North Bengal railways were the main form of transport. Unfortunately, frequent bottlenecks at various Ganges crossways, the inadequacy of the Assam rail link, the lack of facilities on the metre-gauge sector for stores despatched by rail-cum-river route via Dhubri were the main obstacles to uninterrupted flow of transport.

The principal problems of the coal industry, as disclosed by the interests concerned, were the shortage of locomotive power and operational facilities, bottlenecks at Moghulseral, Agra and Waltair. The representatives of the Indian Mining Association held that production depended entirely on transport available to carry coal and that the industry could produce all the coal required by the country, provided adequate transport facilities were made available. Mr. Nanda, we are told, admitted that there had so far been no specific planning to deal with increased production of coal, but such planning, he declared, was now being attempted.

The paper industry is also suffering from bottlenecks at important junctions. The Indian Paper Makers' Association forecast an increase in the production of paper by about 40 per cent. in the next five years, which naturally meant setting up of new and expansion of the existing units. These developments would result in a heavy additional demand on existing transport. They urged the spreading of the industry to parts other than Bengal, particularly Madhya Pradesh and Punjab, with a view to reducing congestion at particular points.

The jute interests held that the present transport facilities were, on the whole, adequate, except during the peak season. Of course, there were the bottlenecks at Ganges crossways, Forbesganj and Bihar which must be overcome. In Madras, the movement of jute was hampered by the shortage of wagons and the high priority given to transport of foodstuffs. Plans for increased production would raise the quantum of existing traffic by about 33⅓ per cent. in the next five years. As most of the traffic would be from the north, this would increase congestion at the Ganges crossings.

Mr. Nanda is said to have pointed out that, in spite of large allocations made for railway development during the Five-year Plan, there would still be found considerable deficiency in the requirements for transport facilities. He assured the Calcutta commercial interests that, in the second Five-year Plan, more money would be made available for development of railways.

TATAS RAISE POWER CHARGES

The Tata Hydro-electric Companies have increased the charges for electricity supply to bulk consumers by 15 per cent., with effect from 1st April, 1954. The increase has been effected, with a view to covering the cost of energy supplied from thermal generation since October, 1953, and of thermal energy to be supplied in future months. According to a Press note issued in this connection, it has been the policy of the Tata Hydro Companies from their inception to supply electrical energy at the lowest practical rate, and a progressive policy of rate reduction was followed by the Companies. Even through the war years, right upto 1953, no increase was made in the basic pre-war rate, despite the fact that the prices of other commodities had increased many-fold and the cost of operation of the Companies had increased substantially. Since the end of the war and to the extent feasible, the Tata Hydro-electric Companies increased their hydro generating capacity, but this was not sufficient to meet the growing demands for electrical power. Since October, 1953, the Tata Grid system has been obtaining some electrical energy from the new thermal generating units recently installed at Chola by the Railway and the Bombay Government. The Chairman of the Tata Hydro Companies, Mr. J. R. D. Tata, had stated at the last annual general meetings of the three Companies that the cost of purchase of the output from the thermal stations would be passed on, without profit, to consumers. The surcharge is, therefore, now imposed for the purpose of paying to the Railway and the Bombay Government the charges, which they levy for the additional cost of energy supplied since October, 1953, and of energy which they will supply in future months from their thermal stations. The percentage of surcharge will, however, be subject to variation from time to time, depending on the quantum of energy purchased and the costs charged.

The public are already aware that in order to meet the pressure of pent-up demands, the Tata Hydro Companies have undertaken their new project for a major thermal generating station at Trombay, designed in the first instance for a production of 50 MW.

ROCKET SHIPS TO CARRY MAIL?

The idea of flying postal mails through rocket ships has once again been revived. Reports from London indicate that German scientists are planning the construction of a rocket ship which will carry mail from Hamburg to New York in less than an hour. Dr. Albert Puellenberg, Hitler's rocket scientist, along with certain others, has, it is stated, already prepared the blue-print needed for the purpose.

It will be recalled that it was in 1920 that the first experiment in the construction of a rocket ship was made by an Australian scientist, namely, Ing. F. Schmiedl. But it was not until 1931 that it was actually tried. The rocket, however, exploded in its sixth flight while carrying mails. The Germans were the next in the field with a series of experimental flights in 1931. Even these experiments received a setback with the explosion of the experimental rocket, killing its inventor, Herr R. Tilling. The scene then shifted from the Continent to the U.K. Once again, a German scientist, Gerhard Zucker, was the moving spirit behind the experiment. By 1934, he perfected an aluminium rocket, the front portion of which carried mail and the latter portion the explosive charge which drove the rocket. Zucker's rocket may well be considered as the forerunner of Hitler's V-2 bombs. His experiments were by far the most successful. But even these ultimately failed. It was not until five years later that the subject again received attention and this time in France and the U.K. But even these experiments did not go far enough to make despatch of mail by rocket a feasible proposition. It remains to be seen to what extent the latest attempt will succeed.

CALTEX (INDIA) LIMITED

The Royal Dutch Shell recently applied to The Hague Court of Justice for an injunction against the Caltex Petroleum Company with regard to the letters used on the trade mark "IC-PLUS" for its new ignition Control Additive. The Royal Dutch Shell contended that this was an infringement of the Shell trade mark "I.C.A." and it, therefore, alleged unfair competition. The Hague Court Judge, however, dismissed Shell's suit. Similar proceedings were taken in Belgium, and, as at The Hague, the suit was dismissed there also. It is understood that similar proceedings are pending in Ceylon.

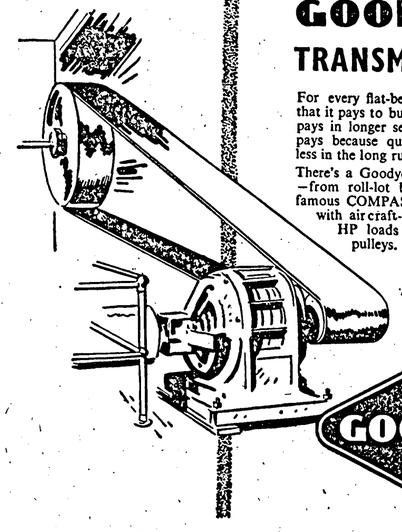
TRANSMISSION BELTS



For every flat-belt transmission drive, you'll find that it pays to buy and specify Goodyear belting—pays in longer service, pays in lower maintenance, pays because quality Goodyear belting costs you less in the long run.

There's a Goodyear construction to fit every need—from roll-lot belting for agricultural use to the famous COMPASS Steel Cable Belt that is bodied with air craft-type steel cables to handle highest HP loads and cope with small, high-speed pulleys.

Ask us for help in belting your drives—and always insist on Goodyear transmission belting.

INDUSTRIAL GOODYEAR PRODUCTS

WORKING OF STATE INSURANCE SCHEME

ATTITUDE OF DOCTORS AND EMPLOYERS CLARIFIED

THE success of the State Insurance Scheme depends on the co-operation of the different parties to the Scheme—the Union Government, the Corporation which administers the Scheme, the State Governments, the employers, the doctors and the workers. Some light on the attitude of the Central Government, the employers, and the doctors towards the Scheme was thrown last week. Mr. V. V. Giri, Union Labour Minister, who addressed Bombay's medical profession in the city, stated that the Scheme had been undertaken in accordance with one of the directive principles of India's Constitution. He emphasised that the fact that the benefits of the present scheme were restricted to a particular category of industrial workers should not go to create an impression that the Government was "out to pamper a particular class." The Government desired progressively to widen the scope of the Scheme as it gained experience in its working. He also revealed that it was proposed eventually to bring the members of the workers' family also within the Scheme. Indeed, the Government's intention was that it should later develop a national health scheme "spread over the length and breadth of the country." He urged the doctors to join the Scheme in the spirit of pioneers and earn the "blessings of the future generations of the country."

Judging from the many questions, which were asked by the doctors that were present at the meeting, it would appear that the medical profession is not satisfied completely with the Health Insurance Scheme. This also becomes clear from the speech of Dr. A. D. Daftary, President of the Bombay Branch of the Society for the Study of Industrial Medicine, India, at the recent Annual Convention of the Society. Dr. Daftary said that the capitation fee of Rs. 6-8 offered by the State Insurance Corporation to the doctors was "barely sufficient" to cover the expenses. He urged the medical practitioners in Bombay to come together and express their opinion on the question. He, however, recognised that the Scheme was a step in the right direction and that it would be a milestone in the history of medical relief in the country.

The employers' attitude towards the Scheme was expressed by Mr. Vithal N. Chandavarkar, Chairman of the Bombay Millowners' Association, who inaugurated the Convention of the Society. Mr. Chandavarkar offered the full co-operation of the millowners in implementing the Scheme. He emphasised that, before introducing the Scheme in Bombay, the authorities should remove the defects found in the working of the Scheme in Delhi and Kanpur. If the Scheme was to be successful, the workers should be provided with medical facilities on their factory premises. He stated that he was prepared to urge the millowners to help the Government and the Corporation with accommodation within their factories, free of charge, and called upon doctors attached to various industries to persuade the Corporation to accept that offer.

The offer, as Mr. Chandavarkar himself explained, has several advantages. In the first place, it would enable the industrial units concerned to retain the services of medical practitioners already working in the industries. Secondly, it would enable the workers to get medical facilities within their respective factories. Thirdly, the workers would be able to attend to their work if the ailment was a simple one. They would not lose their wages, which they would probably have to if the medical facilities were available in centres other than factory premises. In view of these considerations the Corporation authorises will do well to consider the offer made by Mr. Chandavarkar.

There is another point which has unfortunately received less attention than is due to it. The employers, as is well known, have already been contributing, for the last two years, a levy towards their part of the expenditure on the Scheme. And yet, the Scheme itself is not functioning in Bombay. Thus, this levy is a contribution against which they derive no corresponding advantage whatever. On the other hand, many of them continue to maintain the medical facilities which they have created. Although there will necessarily be a certain time lag between the date a levy is imposed and the date on which the purpose for which it is imposed is given effect to, it must be recognised that to continue such a levy for a longer time than is reasonable is to inflict a burden on the employers concerned without any *quid pro quo*. Mr. Chandavarkar rightly contended that the practice was *ultra vires* the Constitution, as no levy could be charged without providing the facilities for which is was collected. This is a point of view which deserves wider notice. After all, a levy is meant to be used for a particular purpose. And it seems an extremely unwholesome practice that it should be collected without the Government or the Corporation fulfilling the purpose for which it is imposed.

CO-OPERATIVE INSURANCE FOR AGRICULTURE

Among the many fields which insurance has invaded, agriculture is one of the most important, for it brings its benefits to the people engaged in an occupation which is subject to many hazards that are beyond man's control. Agricultural Insurance is a very wide term, connoting insurance of crops and livestock against agricultural accidents, including fire, and hail- and wind-storms. In the West, agricultural insurance has made rapid headway, the Government itself directly assisting the insurance societies in covering the initial expenses. Some of these insurance societies, though not all, work on the co-operative principle. The question of applying the insurance principle to Indian agriculture has for some time past engaged the attention of some leading insurers and also the Government of India. In this connection Mr. Kalipada Bhattacharjee, whose article on "The Economics of Co-operative Insurance" in a recent issue of the *Indian Co-operative Review* has been quoted by the *Co-operative News Digest* of the Agricultural Credit Department of the Reserve Bank, says, since India is essentially an agricultural economy, it is only a country-wide co-operative insurance system that will be helpful in solving the problem of agricultural industry. The author suggests that a central institution should be started first to organise local insurance societies and the central society should function as a reinsurance organisation to underwrite all classes of risk. The local societies, according to the author, should work on the following lines:

(1) The society must limit itself to a small area with a population not exceeding 5,000 inhabitants; (2) annual premium and contributions must be fixed within the limits prescribed by the Ministry of Agriculture; (3) it must reinsure all risks with the central society; (4) compensation must be given for a fixed percentage of loss only, and (5) the society should work with the close collaboration of the local co-operative credit society and the central bank.

The method of reinsurance may be: (1) by transferring each risk in whole or in part separately; (2) by covering a certain proportion of losses incurred during the given period, and (3) by reinsuring all losses sustained over a certain sum.

There is great scope for agricultural insurance activities. Each State of the Indian Union should have an agricultural and general co-operative insurance society. All State units should be federated in an all-India Co-operative Reinsurance Union, in which all such societies should be represented and it would be a step forward in the direction for the establishment of co-operative insurance system which will undertake all forms of agricultural and general insurance operations through the State Insurance Units.

A federal co-operative institution can undertake only reinsurance business, keeping the independence and responsibility of State organisations. It will also help maintain the co-operative character and principle. Such a federated reinsurance union, if started in India to undertake reinsurance business in all its branches, will be able to help the promotion of business of agricultural and general insurance. The purpose of the society will be mainly to help its member societies to develop their activities. The co-operative credit societies of Indian States may use the facility of agricultural insurance to protect the borrowing members from all classes of agricultural accidents covered by the insurance policy. The credit societies will also be safeguarded from all risks as all investments will be covered by insurance. The rates of premium will be considerably lower, because the insurance will be booked through credit societies and the societies will collect premia at a very low cost.

FORMATION OF GROUPS

A warning against the present tendency among insurers to form groups with a few strong companies as leaders and others as "camp followers" was given by Mr. E. K. Srinivasan, the retiring President of the Indian Insurance Companies' Association, at the annual meeting of the Association, held at Calcutta. Mr. Srinivasan feared that this tendency might ultimately lead to Indian insurance being concentrated in the hands of a few companies. He warned that such concentration was not in the national interest. Indian insurance, he said, must be broad-based on numerous well-run companies rather than on a few powerful units. This is no doubt a wholesome warning. But it should, at the same time, be made clear that, if the only way in which smaller insurers can maintain themselves and earn reasonable profit is to align themselves with powerful insurers, there is no reason why such alignment should be decried. The smaller insurers would, of course, be at liberty to build up their business in their own way and grow out of the state of dependence on powerful insurers. From this point of view, Mr. Srinivasan's appeal to insurers to develop individuality and resist Government intervention in their affairs is certainly well conceived.

Mr. Srinivasan recognised the advantages of the Insurance Pool but observed that there should be no invidious difference in the distribution of the Pool business. The measure of a company's capacity to handle business should not be based merely on capital and premium income. The running of the Pool, he said, was also "not satisfactory"; it should be run just as any other insurance company and the present system of honorary underwriters should be done away with. He urged every member of the Pool to take a vigilant interest in the terms and conditions on which the Pool business was written and to exercise their right to constructive criticism of the working of the Pool. Proceeding, Mr. Srinivasan observed that, if the insurance Pool did not confine itself to handling Government business alone but spread its activities to procuring reciprosity from foreign fields, it would develop the Pool into a big insurance company which eventually might form the nucleus for nationalisation of insurance in India, against which Mr. Srinivasan sounded a note of warning. It is to be hoped that the Government and the authorities of the Pool will take note of Mr. Srinivasan's observation, and that the Pool's members will avoid the impression that they are not taking an intelligent interest in its affairs.

Shirts
Towels
Blankets
Hosiery
Bed Sheets
Textile Mill owners always take proper care to ensure that the goods they manufacture are of superior quality. Sound business sense tells them that it is equally important that these goods reach the ultimate consumer in perfect trim.
That is why many manufacturers are already using the amazing, new packaging material — 'Alkathene' Film. Experience has taught them that deterioration in goods can so often be due to inferior baling failing to protect textiles against rough handling in transit and bad weather conditions. As a result, not only are the goods damaged but, eventually, the reputation of the products and the producers is lowered in the consumer market.
Today, 'Alkathene' Film is made in India. 'Alkathene' Film gives your textiles the packaging they deserve. It is impervious to damp and moisture. Tough and resilient, 'Alkathene' Film does not crack or split. It is transparent and, whilst affording complete protection, will display your goods to advantage.
the revolutionary new protective packaging material
'ALKATHENE' Film
MADE IN INDIA

SUNDATTA COTTON-SEED UTILISATION LIMITED

INDUSTRY ASSURED OF BRIGHT FUTURE

MR. G. L. P. CHATENAY'S SPEECH AT SECOND ANNUAL MEETING OF COMPANY

A NOTE of robust optimism about the outlook for the cottonseed crushing industry was struck by Mr. G. L. P. Chatenay, Chairman of the Sundatta Cotton-seed Utilisation Ltd., in his speech at the Second Ordinary General Meeting of the Company held at Bombay on 7th April, 1954. His address was a lucid exposition of the economics of this new industry in India and its value to the country's economy. It also gave a clear indication of the lines on which the Government could help the industry to register rapid progress.

The following is the full text of Mr. Chatenay's speech:

"GENTLEMEN,

"The Directors' Report and annual statements of accounts for the period ended 31st December, 1953, have been in your hands for some time now, and, with your permission, I propose to take them as read. Being the first year of actual production, the Directors decided to submit a more detailed report than is customary, and there is, therefore, very little that I can add to it. I would, however, like to say that, in my opinion, it is quite creditable for a young company practically to balance its books in the first year of working, and, at the same time, strengthen its financial position considerably. This has been achieved in spite of the initial problems and handicaps which are common to any new industry.

"I am sure that shareholders would be desirous of knowing the immediate and long-term prospects of the cottonseed processing industry, in general, and your Company, in particular. I shall, therefore, devote myself entirely to this important question. First, let me state that I am personally convinced of the bright future of this industry, which creates wealth out of waste.

Wealth Out of Waste

"To illustrate my point, I shall give a concrete example. Out of every 100 lbs. of cottonseed processed, approximately 20 lbs. are extracted by way of cottonseed oil and linters, while about 5 lbs. are lost in processing by way of trash, stones and other foreign matter. The remaining 75 lbs. or so are made available as feed for cattle in the form of clean and wholesome cottonseed oilcake, instead of the whole cottonseed which is fed at present. To make up the loss of the oil removed, cheaper substitutes like maize or barley can be fed to cattle along with the cottonseed oilcake.

"It is estimated that, if all the cottonseed grown in India were processed, the edible oil thus produced would enable the diversion of nearly two million acres of land from other oilseeds to entirely new cultivation after allowing for the land required to grow the substitute cattle feeds to make up for the oil removed from cottonseed.

"Cottonseed oil has long been one of the major sources of edible fat in cotton-producing countries such as the United States, the U.S.S.R., Peru, Mexico, Brazil and Egypt. In more recent years, it has had a phenomenal growth in Pakistan after Partition owing to the paucity of other oils there.

Not Much Headway Made

"In India, which is the second largest cotton-growing country in the world, the cottonseed processing industry has hitherto not made much headway, because, until very recently, almost the entire production of cottonseed was of the low oil-bearing type known as *Desi*. Since Partition, however, there has been a concerted drive to increase the production of medium and long-stapled varieties of cotton, in order to replace the equivalent Pakistani growths. The seeds from these cottons, known as 'American-type,' are admirably suited for crushing, due to their higher oil content as compared with *Desi* cottonseeds.

"Moreover, these American-type seeds yield a valuable by-product of processing known as 'linters' which are practically absent on the *Desi* seeds. Linters are short fibres which remain on the seed after ginning and have necessarily to be removed in delinting machines prior to crushing the seed for oil. These linters, which have a variety of possible uses, are now being utilised by Messrs. Sirsilk Ltd., in Hyderabad State, for the manufacture of acetate rayon yarn. As yet, however, the production of suitable linters in India is not adequate to meet the demand from this industry.

"It is, therefore, apparent that, initially, emphasis has to be placed on processing the American-type cottonseeds grown in India, since they offer the most integrated scope. Your Company's mills are fortunately located in an area which has converted wholesale to the production of American-type cotton and seed known as 'Laxmi.' In the last three years, the production of this seed in Dharwar District has almost trebled from about 15,000 tons to 45,000 tons annually. The oil content of Laxmi cottonseed is about the highest in India, while the linters extracted are among the best.

"An eloquent testimony to the view that I hold of the bright prospects for cottonseed crushing is the large number of people who have entered the field in India during the course of the last two or three years. Apart from your up-to-date and modern unit, it is our estimate that there are now at least 20 units in other areas which are processing cottonseed on a regular basis against the mere handful a few years ago.

Stimulus From Vanaspati

"The main stimulus to this fairly rapid expansion was given by progressive and enterprising *vanaspati* manufacturers, in particular Messrs. Hindustan Vanaspati Manufacturing Company., Ltd., a Lever concern, who are ever seeking new and steadier sources of vegetable oil to replace partially their main raw material, groundnut oil.

"Moreover, a great step forward has been recently taken by the Government of India in allowing *vanaspati* manufacturers to mark their product as 'Made from Vegetable Oil' as against the old requirement of specifically mentioning on the label, in bold print, the names of the various oils used. It is now permissible for cottonseed oil, groundnut oil and til oil to be mixed in any proportion whatsoever in the manufacture of *vanaspati*. As a result, the market for cottonseed oil is broadening, and more and more *vanaspati* manufacturers are turning to its use.

"The demand for cottonseed oilcake has also substantially increased in the last few years. Major cities such as Bombay, Ahmedabad, Poona and Delhi have become large consumers of cottonseed cake, which is slowly but surely replacing whole cottonseed in the feeding of milch cattle. Being a perfect substitute in this respect, the price of cottonseed oilcake bears a somewhat close relationship to that of cottonseed itself and thus provides a partial hedge to the crusher, since approximately 40 per cent. of the sales return from cottonseed processing is derived from oilcake.

Price Levels

"The main difficulty, however, arises from the lack of a relationship between the prices of cottonseed and its major product, cottonseed oil, which provides nearly 52 per cent. of the total sales return. Cottonseed oil fluctuates in price with groundnut oil for which it is a substitute. A fall in the price of groundnut oil entails a reduction in the price of cottonseed oil, but there is no corresponding reduction in the price of cottonseed because the major determinant of cottonseed price in India is still the demand for it as cattle feed.

"In normal times, it is true that the price of cottonseed as a cattle feed should be somewhat below its parity price as a raw material for crushing. For instance, with the decontrol of coarse grains in Bombay State, the price of cottonseed has dropped considerably this year since grain substitutes for feeding cattle have become cheap. It is to be hoped that this is the true level of price for cottonseed as a cattle feed, which automatically makes its crushing a paying proposition.

"The key to successful and increasing crushing of cottonseed on a long-term basis, however, still lies, in my opinion, in achieving some definite relationship between the price of cottonseed and of cottonseed oil. If left to natural forces, this might take a very long time, since it involves the virtual disappearance of cottonseed as a cattle feed and its entire replacement by cottonseed oilcake such as has taken place in the U.S.A. Besides, in India, quite apart from the conservatism of the cattle owner, another factor that has to be contended with is that the *Desi* cottonseeds, which form approximately 80 per cent. of the cottonseed production, are not quite suited to crushing by normal methods, because of their low oil and negligible linter content, as mentioned earlier. For this very reason, they are popular for cattle feeding in the country as a whole.

Readjustment of Freight Rates

"A *via media*, therefore, lies in distinguishing between the *Desi* seeds, which may be considered as cattle feed, and the American-type cottonseeds which can now truly be characterised as oilseeds. In the few areas where the feeding of American-type cottonseeds is prevalent, it is apparent that there should be strong promotional propaganda in favour of diverting to the use of either cottonseed oilcake or *Desi* cottonseed. One such area is the State of Saurashtra. Formerly, owing to its proximity to Pakistan, it used to consume for cattle feeding large quantities of American-type seeds which were imported by sea from Karachi. Since Partition, this demand has now shifted to other areas in India, and exercises a considerable influence on the price structure of American-type cottonseed whose production in India, although increasing, can never hope to meet the needs of both the crushers and the cattle feeders.

"A memorandum has been presented to the Government of India by your Company recently, the main feature of which is a suggestion for variation of relative freight rates between *Desi* and American-type cottonseeds which are clearly distinguishable from each other. At present, strangely enough, all cottonseeds are classified in the railway tariff as 'oilseeds,' and, as such, attract a freight rate which is equal to that applicable to most other oilseeds. It has been suggested that, on the one hand, the freight rate on *Desi* seeds should be reduced to the same level as oilcakes since both are cattle feeds and should, therefore, be in the lowest freight category. On the other hand, it has been argued that American-type cottonseeds should have an increased freight rate since their bulky nature makes them more comparable to groundnuts in shells which have a higher freight rate than other oilseeds.

"The above argument can be justified not only from the railway standpoint but also in the light of the need for developing the cottonseed processing industry. The net result of these suggested modifications in freight rates, if accepted, would be that the *Desi* types of seed would become relatively cheaper in the principal markets, particularly Saurashtra, where the cattle feeders would gradually switch over to them. On the other hand, cottonseed crushing being a highly localised industry, crushers in the American-type growing areas would get their raw material more plentifully than before, unhampered by extraneous influences. More mills would then divert to crushing cottonseed, and competition amongst two or three mills in any one area would serve to relate the price of American-type seed in that area to the price obtainable for cottonseed oil.

Future Plans

"Your Company's plans for the future are being made in the sure hope that further concrete steps will be taken by the Government to encourage the industry in line with the Planning Commission's recommendations. Added support to this view has come from an altogether unexpected quarter, the All-India *Khadi* and Village Industries Board, which has wholeheartedly endorsed the crushing of cottonseed since it is claimed that this would help to relieve the pressure that the organised oilseed crushing industry is exercising on the village *ghanies*. It is being argued that, if oil mills in the interior were to take to crushing of cottonseed which cannot be crushed economically in *ghanies*, the other oilseeds would become more freely available to the village industry.

"Your Company's efforts are at present being directed towards rapidly increasing the cottonseed crushing capacity. During the last one year, the capacity has been increased by 2½

(*Continued on next page*)

THE PUNJAB NATIONAL BANK LIMITED

CHAIRMAN'S SPEECH AT ANNUAL MEETING

INTRODUCTION OF DECIMAL SYSTEM FAVOURED

THE One Hundred and Seventh Ordinary General Meeting of the shareholders of the Punjab National Bank Limited was held at the Head Office of the Bank at 8, Underhill Road, Delhi, on 14th April, 1954, Mr. Shriyans Prasad Jain, M.P., Chairman, presiding.

The following is a summary of Mr. Jain's speech on the occasion.

The Chairman stated that the working of the Bank during the year 1953 had resulted in profits amounting to Rs. 41,78,961 including Rs. 1,92,604 brought forward from the accounts of the preceding year. These profits were Rs. 2,32,655 higher than those of 1952 and Rs. 7,05,811 than those of 1951. It was gratifying to note that, notwithstanding the general trend of declining bank profits in 1953, the working of the Punjab National Bank had resulted in relatively higher profits. The paid-up capital of the Bank remained unchanged at Rs. 87,50,000 while over Rs. 1 lakh had been credited to the reserve fund, raising it to Rs. 90,00,000 at the close of the year. The deposits of the Bank were Rs. 65.31 crores at the close of the year, showing an increase of Rs. 6.37 crores over the figures of the preceding year, as against the total increase of Rs. 3.94 crores in case of all other scheduled banks (from 2-1-1953 to 1-1-1954). The working capital of the Bank stood at Rs. 79.78 crores on 31-12-1953 and this showed an increase of Rs. 5.79 crores and Rs. 12.26 crores over that of 1952 and 1951, respectively.

Not only deposits, but the number of depositors too had substantially gone up. The percentage increase in the number of depositors for the year ended June, 1953, in case of this Bank was 4.8, as against 0.94 in case of all other Scheduled banks. Out of the total number of accounts with all the Scheduled banks, nearly 12 per cent. were in the books of the Punjab National Bank.

The Chairman of the Bank pointed out that a study of the balance-sheet of the Bank would reveal a strong liquid position of the Bank. Assets of the Bank in cash, bank balances, money at call and short notice and investment in Government and Trustee securities amounted to Rs. 42.72 crores which was equivalent to 65.41 per cent. of the total deposit liabilities of the Bank. The bills discounted and purchased amounted to Rs. 3.59 crores. The liquid assets of the Bank thus amounted to Rs. 46.31 crores being 70.9 per cent. of the Bank's deposits. In the case of all the Scheduled banks, the percentage of liquid assets to deposits came to 57.25 per cent.

Expanding Foreign Exchange Facilities

The increase in the deposits of the Bank during the year under review led to the increase in the investments of the Bank by Rs. 7.45 crores and in the bills discounted and purchased by Rs. 1.1 crores as compared with the figures of 1952. Foreign exchange business of the Bank grew considerably in volume during the year. A reference to the item of "acceptances, endorsements and other obligations" would reveal that the amount under this head had increased from Rs. 1,92,36,386 on 31-12-1952 to Rs. 2,68,46,663 on 31-12-1953. In order to improve the exchange facilities offered by the Bank to the public, the Bank had reorganised the Foreign Exchange Department at the head office and had entered into reciprocal arrangements with a number of important Exchange banks of the world. The foreign exchange services of the Bank could, therefore, be favourably compared with those offered by any other major Indian bank or foreign Exchange bank operating in India.

The Bank placed 37,823 lockers through its 83 offices at the disposal of the public and this facility proved of great value and utility to the customers.

Training College

The Chairman stated that the Bank had under consideration a scheme for opening a Training College at the head office for officers and clerical staff to impart training in the latest techniques of banking routine and administration and to improve their ability and efficiency. Accounting machines had recently been introduced in the Central Accounts Department at the head office of the Bank, resulting in speed and efficiency. If our currency could be adapted to centesimal system, mechanisation could be more successful. Under this system, a lot of time now being wasted in adding, substracting and multiplying odd units as annas and pies, would be saved.

Labour Relations

After a general review of the economic and political situation in India and abroad, the Chairman chose for special mention the improvement in food and industrial production at home and stated that there were still many economic problems in the country awaiting solution. Banking, which had such a vital role to play in solving the economic problems of the country, was itself suffering from several handicaps. The lack of harmonious relations between the workmen and the managements was proving a great obstruction in the efficient administration and in the progress of the banking institutions. He regretted to observe that the labour laws and awards, instead of improving the situation, had multiplied the difficulties of the Bank, so much so that, under the present law, an employer could not discharge, dismiss or otherwise punish a workman even for "gross misconduct" not connected with the dispute pending before a Tribunal, Conciliation Board or Conciliation Officer. This unsatisfactory state of affairs could not prove conducive to the growth of discipline and efficiency among bank employees. He, therefore, pleaded that section 33 of the Industrial Disputes Act and section 22 of the Industrial Disputes (Appellate Tribunal) Act should be suitably amended as to empower the employer to appropriately deal with an employee for misconduct not connected with the dispute. Such rigid regulations as were now being enforced could not but harm the interests of those whom these claimed to protect. Branch banking was not developing. Smaller offices had become uneconomical to run while new offices at smaller towns and rural centres could only be run at a loss. In 1949, the number of offices of all banks including those of non-scheduled banks was 4,441. In 1950, 1951 and 1952, the number continued declining to 4,353, 4,140 and 4,061, respectively. This affected the overall position of employment in the country to some extent.

The Chairman asserted that the paucity of banking facilities in the rural areas was mainly responsible for the large amount of funds lying idle there. These were being wastefully spent and were not being utilised for the development of the country. He pointed out that the ratio of the bank deposits to the currency in circulation was low in India as compared with other countries. This was because the public was not bank-minded. More money with banks would ultimately mean greater investments in Government securities and more loans to commerce and industry. The Chairman suggested that efforts had, therefore, to be made to increase public confidence in the banking structure of the country.

Shroff Committee

He further referred to the appointment of the Shroff Committee on "Finance for the private sector," the report of which was being anxiously awaited. He stated that, if the agents of the Reserve Bank of India could provide liberal remittance facilities and if the Imperial Bank of India could accept cash in any tenderable form especially small notes and coins without limitation, it would help the banks to work with smaller cash balances, releasing spare funds for financing trade and industry.

Mr. Jain made another suggestion for providing and improving storage facilities for foodgrains so that waste on account of pests, insects and moisture, etc., could be eliminated. This would help the agriculturists in being able to secure accommodation against their produce. In such circumstances, the banks could extend their activities in rural and semi-urban areas and help enlarging the basis of credit. Such warehousing facilities could be provided through co-operative efforts or by commercial banks, assisted by loans or subsidies by the Government. Receipts of recognised warehouses could serve as security for loans from banks.

In the end, the Chairman appreciated the hard and good work done by Mr. B. N. Puri, General Manager of the Bank in improving the work of the Bank. He also complimented the members of the staff for their loyal and conscientious services rendered to the institution. He thanked the constituents of the Bank for their continued patronage. And, lastly, he expressed his gratitude to the Local Directors, Local Advisers and Directors of the General Board for their co-operation.

SUNDATTA COTTON-SEED UTILISATION LIMITED

(*Concluded from previous page*)

times from 12 tons to 30 tons of seeds crushed per day, and it is expected that the final rated capacity of 70 tons per day will be reached in the near future after hydro-electric power reaches Hubli.

"This quick increase in capacity is being undertaken, because it has been found from experience that, owing to the late season for Laxmi cottonseed which commences in our area in April, it is neither possible nor desirable to work on cottonseed on a regular basis for more than six months in a year, since the new all-India crop of groundnuts moves into the markets in October-November every year and depresses the edible oil prices in general. An important advantage, however, is that edible oil prices generally steady down by the following April when we commence our cottonseed purchases, and are usually on the ascendant until September. This considerably minimises the business risk of carrying stocks and takes your industry out of the realm of speculation.

"Our experience shows that, if about nine to ten thousand tons of cottonseed are crushed in six months at an average daily rate of 70 tons, the crushing cost can be reduced to very reasonable proportions, even allowing for the entire year's overheads. However, your Directors have no intention of keeping the mill idle for the six months October-March, when cottonseed is not capable of being crushed on a regular basis. The obvious course is to process groundnuts which are in season at this time of the year, and available freely in the area.

Groundnut Crushing

"The Company tried groundnut crushing early this year, but it was found that, due to severe competition, the economics of non-speculative groundnut crushing was marginal, notwithstanding the excellent degree of efficiency that your mill was achieving. Your Directors are, therefore, seriously considering the question of installing a solvent extraction plant which enables the removal of practically all the residual oil from the oilcake, and makes the integrated processing of groundnuts a sound proposition. The Company may also buy groundnut oilcakes produced by the other local millers and extract the oil therefrom. Besides being a profitable operation, this step would keep the staff fully employed during the slack season for cottonseed. During the cottonseed season, the solvent extraction plant can act as a supplement to the cottonseed processing plant.

"The Company already holds a licence for a solvent extraction plant and is closely watching the successful efforts that have been made in this direction by same manufacturers in Bombay City. Further steps to implement the scheme may be expected in the not too distant future.

"I believe that I have now given you as complete a picture as I can of the cottonseed processing industry as well as of your Company's plans. While Government encouragement can speed up the industry's development, there is no doubt that cottonseed crushing is here to stay in India. Although a great deal still remains to be done. I feel that shareholders can look forward to the future with optimism.

"Before I conclude, I would like to express on your behalf and on behalf of your Directors our appreciation of the services rendered by the working Directors and the employees of the Company.

"I now propose that the Directors' Report and audited balance-sheet and statements of accounts for the period ended 31st December, 1953, be approved and adopted."

CAPITAL EROSION IN IRON AND STEEL INDUSTRY

RESULTS OF STUDY BY AN ASSOCIATION OF RESEARCH WORKERS

THAT there was not only no real capital formation in the iron and steel industry, during the years 1937 to 1951, but the inflation even wiped out the new paid-up capital brought in and the free reserves ploughed back in the industry amounting to Rs. 16 crores is the conclusion reached by a study of the published accounts of the basic iron and iron and steel producers, the Tata Iron and Steel Company, the Steel Corporation of Bengal and the Indian Iron and Steel Company, undertaken by the Association of Indian Trade and Industry. The study, published under the title *Financial Trends in the Iron and Steel Industry*, points out that, assuming the 1951 price level to be 300 per cent. of the 1937-39 level, there has been capital erosion in the industry of about Rs. 25 crores, the entire burden of which has fallen on the shareholders. The industry's profit appropriation trends show that, of the gross profits of the industry available for distribution after paying tax, about two-thirds used to be distributed as dividends in 1937-39, as against one-third in 1949-51, and the balance allocated to depreciation and free reserves. As against this decrease in the amount of dividends distributed to shareholders, employees' earnings have increased more than fourfold. The capital erosion in the industry, according to the study, is due mainly to the practice of calculating depreciation for income-tax purposes on the basis of historical, instead of replacement cost of fixed assets, which caused the industry's book profits to be over-estimated by about Rs. 50 crores, and its income overtaxed by over Rs. 25 crores.

Apart from taxation policy, Government's price-fixing policy has also been at fault, as the 8 per cent. return allowed on gross block to cover taxation, profit-sharing bonus to labour, managing agents' remuneration, dividends and allocation to reserves, is inadequate. The study gives a table which shows that, in 1951, of the 8 per cent. allowed on gross block, the actual expenditure on taxation absorbed 5.7 per cent. bonus to labour 1.5 per cent., and managing agents' remuneration 1.1 per cent. leaving no margin available for either dividends or allocation to free reserves. The study says that the Government intend to make ulterior use of the industry's equalisation fund, which is created by crediting to it the difference between the higher prices charged to consumers and the lower prices paid to producers, as, instead of using the accumulations entirely for subsidising higher priced imports, which is the fund's avowed purpose, the Government propose to lend them to the companies, "thus converting the Industry's own earnings into debts due to the Government."

The study suggests that, "in view of the crippling effect of inflation and the past policy of the Government on the financial position of the companies, the Goverment should (1) immediately sanction the increase in returns on gross block from 8 per cent. to 10 per cent. as recommended by the Tariff Commission; (2) refer to the Commission the problem of paying out the amounts accumulated in the equalisation fund to the industry in the form of retrospective price increases; and (3) introduce appropriate measures to allow all industries to charge to current revenue a part or whole of the difference between the replacement cost and the original (or historical) cost of fixed assets, spreading the amount over a reasonable period." According to this study, there is statistical evidence to show that any tax relief or price increase is likely to be used mainly for enhancing the free reserves of the industry, and scarcely for increasing dividend distribution.

Capital Formation

The total gross assets of the industry increased from Rs. 44 crores in 1937 to Rs. 105 crores in 1951. Of this increase of Rs. 61 crores, gross block absorbed Rs. 34 crores; inventories Rs. 16 crores; and receivables (tax deposits, advances, debtors, etc.) Rs. 11 crores. Cash, bank deposits and Government securities together fell by Rs. 3 crores, but industrial securities increased by the same amount. As against an increase of Rs. 34 crores in the gross block, the net block increased by only Rs. 9 crores. Even this increase in the net block (net fixed assets) is illusory, as book figures, when corrected for price changes, show that the real value of the block added is just short of the real value of the assets consumed (depreciation) during the period. The holding of inventories has increased from 2.5 months' production in 1937 to 4.3 months' production in 1951. The real value of the total assets estimated by correcting book figures for price changes shows that there was no real capital formation in the industry during the period 1937-51. The paradox of a slight decrease in the real value of the fixed assets as against an increase in the installed capacity of the industry is explained by the analogy of a person who had a new car in 1937, as against two highly worn out cars in 1951, the real value of the latter two falling just short of the real value of the former one.

The funds required for increasing the assets as above were obtained mostly from internal sources. The depreciation fund during the period increased by Rs. 25 crores, from Rs. 13 crores in 1937 to Rs. 38 crores in 1951, and free reserves increased by Rs. 13 crores, from Rs. 5 crores in 1937 to Rs. 18 crores in 1951. Of the external sources of capital funds, share capital contributed only Rs. 2.91 crores, and the total paid-up capital of the industry increased from Rs. 16.71 crores in 1937 to Rs. 19.62 crores in 1951. Of this increase, Rs. 1.50 crores was accounted for by the conversion of debentures into preference shares. Debentures and loans increased during the period by Rs. 3 crores, from Rs. 4 crores in 1937 to Rs. 7 crores in 1951. The payables (including tax provision and sundry debtors) increased steeply by Rs. 17 crores, from Rs. 5 crores in 1937 to Rs. 22 crores in 1951.

The brochure says: "A casual look at these impressive rupee records might lull us into the belief that there is nothing to worry about the lack of new venture capital in an industry whose books show increase in capital investment from year to year. This illusion is caused by the inflation, which distorts, the true picture, and camouflages the weak spots in the industry's finance. . . . All the new capital brought in and the free reserves ploughed back into the industry during the period have been completely wiped out by the inflation," and "shareholders have suffered a loss of capital worth about Rs. 25.50 crores in terms of 1951 prices."

Revenue Trends

The study includes an examination of the revenue trends. The total income of the industry during 1937-51 from sales, etc., has been estimated at Rs. 472 crores and the total expenditure at Rs. 356 crores, of which Rs. 211 crores are for raw materials and other manufacturing expenses; Rs. 123 crores for employees (salaries, wages, bonus, welfare expenses, etc.; Rs. 9 crores for capitalised expenditure charged to revenue; Rs. 9 crores for managing agents' remuneration and Rs. 23 crores for sundry expenses. The margin of gross profit was Rs. 117 crores, which was allocated thus: depreciation Rs. 29 crores; taxation Rs. 40 crores; dividends Rs. 36 crores; and free reserves Rs. 12 crores. The net profit was Rs. 88 crores before tax and Rs. 48 crores after tax.

The industry's total income increased from Rs. 16 crores in 1937 to Rs. 56 crores in 1951, but all the different components of costs and appropriations did not increase proportionally. Taking the amounts of different items of costs and appropriations for the triennium 1937-38-39 as 100, we find that in the triennium 1949-50-51, wages and salaries were 414, manufacturing expenses 349, depreciation 327, taxation 248, managing agents' remuneration 121, net profits after taxes 92 and dividends 73. Employees benefited most by this shift, and their share in total revenue increased from 20 per cent. in 1937 to 29 per cent. in 1951. Managing agents' share of total revenue fell from 2.6 per cent. in 1937 to 1.1 per cent., and dividends from 18.8 per cent. in 1937 to 4.2 per cent. in 1951. The industry distributed as dividends over Rs. 3 crores in 1938, and only Rs. 2.35 crores in 1951. The study says:

"The Industry's profits appropriation trends may be regarded as socially desirable but for the fact the burden has been shifted almost entirely on shareholders. Two-thirds of the balance of profits, after deducting tax provision (but before deducting depreciation provision), used to be distributed by way of dividends and one-third retained for depreciation provision and allocation to free reserves in the years 1937-39. The corresponding ratio for the years 1949-51 was exactly the reverse: only one-third was distributed and two-thirds retained."

Taxation Policy

Criticising the Government's taxation policy, especially the practice of allowing depreciation on the historical instead of the replacement cost of fixed assets, which has resulted in the overestimation of profits by over Rs. 50 crores, and overtaxation of its income by about half the amount, the study says:

"Although the method of accelerated depreciation allowances introduced since 1948 enables the industry to obtain finance for replacing fixed assets for the time being, it works in effect only as a system of deferred tax payment, and does not compensate the industry for the overtaxation and capital erosion that has occurred due to overestimation of profits. It would be fairer to the assessees if they were allowed to write off the whole or part of the difference between the replacement cost and the historical cost of assets as extra depreciation, provided that they actually spent the excess amount for replacement purposes. If the writing off of the difference as suggested above is not politically feasible, then the only other way in which the industry could be compensated for this loss of capital is through a general reduction in the rates of income-tax and super-tax on companies."

Price Policy

After an examination of the Government's price-fixing policy, the study says: "The prices paid to the industry do not leave an adequate margin for dividends and for allocation to reserves." In fixing the retention prices, the Tariff Commission had been recommending, till recently, a return of 8 per cent. on gross block, or gross fixed assets, to cover the expenditure on taxation, managing agents' remuneration, a part of the profit-sharing bonus to labour, and also dividends, and provision to free reserves. Fair retention prices used to be calculated, till recently; on the basis of depreciation on original or historical cost. In their most recent report on fair retention prices, the Tariff Commission is reported to have recommended that, in view of the necessity to provide finance for replacement and expansion, the rate of return should be increased from 8 per cent. on gross block to 10 per cent. Even this recommendation has not been accepted by the Government on the ground that they intend to give the companies a loan from the equalisation fund. In 1951, of the 8 per cent. allowed on the gross block, tax provision absorbed about 5.7 per cent. profit-sharing bonus to labour (over and above the amount allowed as costs) absorbed about 1.5 per cent., and managing agents' remuneration one per cent. leaving nothing for distribution of dividends or for allocation to reserves. The highest margin left for dividends and allocation to free reserves in any year since 1944 has been only 3 per cent. (1948).

The study pleads for the strengthening of the reserves of the companies, by increasing retention prices and tax relief, "as statistical evidence based on profit and appropriation figures for the period 1937-51 shows that an increase in profits is likely to be utilised principally for allocation to free reserves and scarcely for increasing dividends."

The study considers that the industry has been meted out unfair treatment in respect of price and taxation policies, and says: "Harsh treatment to an old industry in the private sector is not likely to encourage the growth of new ones, and it is hoped that Government policy will veer round and provide more favourable conditions for the growth of an industry whose shares are the leading counters on the stock market. That would make the climate favourable for attracting the savings of the community into industrial investment and thus contribute to enduring prosperity."

THE
BANK OF MAHARASHTRA
LIMITED
Head Office: POONA 2

Paid-up Capital .. .. Rs. 16,00,000
Reserve Fund and other Reserves .. .. Rs. 7,00,000
Total working Funds exceed Rs. 4,00,00,000

Drafts on all branches (22) of the Bank and on important cities like Madras, Calcutta, etc., available at moderate rates.

Arrangements for opening letters of credit through Bombay Office.

Bank's subsidiary, the Maharashtra Executor and Trustee Co., Ltd., deals in Executor and Trutsee business.

Contribution
TO INDIA'S STEEL PRODUCTION
JAMSHEDPUR, CITY OF STEEL
Jamshedpur is India's city of steel. Here amidst the blazing furnaces and roaring machines of the Tata Iron & Steel Company's various works, iron ore, coal and limestone get transformed into steel, life-blood of India's growing industries. An integral process in the continuous production of steel is the shaping of the red hot ingots into bars. In the blooming mill where this important operation takes place, General Electric double-armature 5600 H.P. motor provides the driving power. In fact, there are many other G.E. motors and controls installed in Tatas' extensive shops, providing equally essential service to the production of steel.
Successful implementation of India's industrial programme calls for a substantial increase in production of steel. General Electric is proud of the contribution it is making to the modernisation and expansion programme of Tata's steel plant in engineering and supplying of the essential electrical equipment.

INDIA'S FOREIGN TRADE IN 1953

SHARP DECLINE IN ADVERSE TRADE BALANCE

THE trend of India's foreign trade in 1953, for which complete figures are now available, was definitely better in certain respects than that of the previous year or for that matter of 1951. Both in 1951 and 1952, the pattern of trade was somewhat distorted by some abnormal features like the Korean war boom, sharp rise in the prices of imported articles, particularly those in regard to raw cotton, raw jute, foodgrains, large-scale famine conditions and the necessity to import large quantities of foodgrains. During 1953, not only a certain amount of stability was noticeable in the country but the terms of trade also were favourable enough to effect a sizable reduction in the adverse balances. For instance, the impressive rise in the exports of tea, together with the improvement noticeable in the sendings of jute manufactures and cloth, particularly during the second half of 1953, had a favourable effect on the export trade. At the same time, the country was able to bring down the import bill to a considerable extent on account of higher production in foodgrains, raw cotton, etc.

Total imports by sea, land and air in 1953 amounted to Rs. 566 crores, as compared with Rs. 801.24 crores in the previous year, the percentage of decline being 30 per cent. The total value of exports during this period receded from Rs. 619.05 crores in 1952 to Rs. 528.63 crores, the fall being 14.5 per cent. The adverse trade balance, amounting to Rs. 37.39 crores in 1953, was appreciably lower than in the preceding year when it stood at the high figure of Rs. 182.19 crores. The total balance of payments position during 1953 was, however, in favour of India, in view of the increase in receipts from foreign countries such as the U.S. economic aid, loans from the World Bank, the Colombo Plan aid, etc.

Imports

In the import section, the value of foodgrains recorded a substantial decline from Rs. 202.68 crores in 1952 to Rs. 72.27 crores during the year under review; in 1951, it had aggregated Rs. 183.61 crores. The total value of imports under the food and drink group in 1953 was substantially lower at Rs. 114.56 crores, which compares with Rs. 238.28 crores in the previous year. In this section, imports of wheat and rice accounted for Rs. 52.82 crores and Rs. 14.74 crores, respectively, the corresponding figures in the previous year being Rs. 126.37 crores and Rs. 48.75 crores. Imports of *jowar* and *bajra* were also marked down appreciably from Rs. 27.56 crores to Rs. 4.71 crores in 1953. The value of fruits and vegetables recorded a small increase from Rs. 13.55 crores to Rs. 14.71 crores, as also condensed milk from Rs. 3.5 crores to Rs. 3.85 crores. The quantum of increase in the latter was greater, being 4.2 lakh cwts. as against 3.12 lakh cwts. In regard to spices, while the quantum showed a marked decline from 9.06 lakh cwts. to 7.69 lakh cwts., the value disclosed a small rise from Rs. 5.08 crores to Rs. 5.37 crores.

Raw Materials

In the raw material group, raw cotton imports in 1953 were considerably lower at Rs. 49.86 crores, as compared with Rs. 115.44 crores in the previous year. The actual quantum of imports stood at 1.08 lakh tons, as against 2.05 lakh tons in 1952. In 1951, these imports came to the high figure of Rs. 114 crores. The intake of mineral oils continued to show a steady increase, the figure for 1953 being nearly Rs. 86 crores, as against Rs. 84.35 crores and Rs. 71.53 crores in 1952 and 1951, respectively. A substantial portion of these oils consisted of petroleum and lubricating oils for industrial purposes. For instance, kerosene oil accounted for Rs. 23.55 crores and other oils for Rs. 55.61 crores. Imports of raw jute came to Rs. 14.40 crores, as against Rs. 23.50 crores in the preceding year, the respective quantum being 2.64 lakh tons and 2.34 lakh tons.

In the manufactures group, machinery and millwork, including belting, showed a downward trend, the figure for 1953 being placed at Rs. 87.04 crores, as compared with Rs. 94.60 crores in the preceding year. In 1951, this item accounted for Rs. 109.86 crores—the peak figure to be seen so far in the country's history. A part of this decline is attributable to the steady expansion of domestic engineering industries, some of which have begun to manufacture a number of capital goods. A large part of this recession is, however, due to the reduced pace of private investment and the absence of the free flow of risk bearing capital to industries. Imports of instruments and appliances were being maintained at the high level of Rs. 22.87 crores, as against Rs. 21.75 crores in the previous year. Metals, excluding ores, accounted for Rs. 38.82 crores, as against Rs. 44.96 crores in 1952. In this section, iron and steel accounted for Rs. 23 crores and the non-ferrous metals for Rs. 12.63 crores. The total quantum of metals in 1953 amounted to 2.79 lakh tons, as compared with 2.67 lakh tons in the previous year. Chemicals and drugs recorded a decline from Rs. 30.52 crores to Rs. 24.38 crores, the 1951 figure being Rs. 31.42 crores. Dyes and colours moved up slightly from Rs. 12.48 crores to Rs. 15.83 crores, while in 1951 they had touched the high level of Rs. 21.74 crores. The intake of electrical goods was somewhat higher at Rs. 14.96 crores, as compared with Rs. 12.92 crores in 1952.

Among other items, artificial yarn recorded a sharp rise from Rs. 7.07 crores to Rs. 11.39 crores. Raw wool and tops moved up from Rs. 4.86 crores to Rs. 7.92 crores, the quantum in 1953 being 14.6 million lbs., as against 10.1 million lbs. in the previous year. In regard to artificial silk yarn, the quantity rose from 19.1 million lbs. to 34.9 million lbs. The value of motor cars and motor omnibuses declined slightly from Rs. 6.91 crores to Rs. 5.59 crores, the quantum also receding from 10,645 to 9,445. The value of newsprint imports rose from Rs. 4.65 crores to Rs. 5.09 crores, but the volume thereof rose markedly by about 50 per cent., that is, from 9.16 lakh cwts. to 13.65 lakh cwts. Paper, excluding newsprint, recorded a slight decline from the point of value, the figure dropping from Rs. 6.19 crores to Rs. 6.06 crores, but, in respect of quantity, these imports improved from 8.20 lakh cwts. to 12.19 lakh cwts. indicating thereby that the prices of these goods had experienced a marked fall during 1953. Imports of seeds (mostly copra) rose from Rs. 2.84 crores to Rs. 3.71 crores. Staple fibre and yarn imports were lower at Rs. 2.52 crores, as compared with Rs. 4.52 crores in the preceding year. In view of the gradual expansion of the industry, the intake of cycle and cycle parts was lower at Rs. 1.90 crores, as against Rs. 3.87 crores in the previous year. Cotton manufactures receded from Rs. 5.38 crores to Rs. 3.32 crores, while manures increased from Rs. 2.88 crores to Rs. 3.71 crores. The liberalisation in respect of oils was reflected in the higher flow of vegetable non-essential oils, the value going up from Rs. 4.42 crores to Rs. 5.96 crores.

Exports

In some respects, India's export trade in 1953 showed a notable improvement over that of the previous year. The volume of trade in respect of jute goods, cotton manufactures, tea, cashew kernel, manganese ore, tanned hides and skins, coir yarn, etc. recorded a modest rise. Tea exports set up a new record in history both in value and quantum, the respective figures being Rs. 103.12 crores and 502 million lbs., while in the previous year they stood at Rs. 80.80 crores and 413 million lbs. The value of exports in 1951 amounted to Rs. 95.56 crores. Exports of cloth were valued at Rs. 56.39 crores, the quantum being 658 million yards, as against 598 million yards in 1952. The value of exports in 1952 was, however, higher at Rs. 64.31 crores. Besides the above, despatches of other cotton manufacturers, particularly handloom products, amounted to Rs. 7.42 crores, as against Rs. 9.21 crores in the previous year. In 1951, both these items earned as much as Rs. 94.07 crores. The value of jute goods exported recorded a sharp fall from Rs. 162.85 crores in 1952 to Rs. 110.63 crores in 1953, largely as the result of a notable decline in prices and the reduction in the export duty. The quantity of jute goods exports, however, moved up slightly from 7.37 lakh tons to 7.48 lakh tons. Sendings of woollen carpets and rugs improved from Rs. 2.71 crores to Rs. 3.65 crores, as also the quantum from 7 million lbs. to 9 million lbs. Coir yarn and manufactures were higher at Rs. 7.89 crores, as compared with Rs. 7.36 crores in the previous year, the respective quantum figures being 14.76 lakh cwts. and 12.20 lakh cwts.

In the food and drink group, there was a small rise in the quantum of exports of cashew kernels in 1953 which improved from 26,000 tons to 28,000 tons, but their value receded from Rs. 12.12 crores to Rs. 11.88 crores. Due to the fall in price, the value of pepper exports was marked down from Rs. 18 crores to Rs. 13.18 crores in 1953, their quantum also receding from 2.64 lakh cwts. to 2.29 lakh cwts. Exports of tobacco declined appreciably from Rs. 18.31 crores to Rs. 12.30 crores, as also their quantum from 96 million lbs. to 73 million lbs. In the raw materials section, despatches of raw cotton were valued at Rs. 11.00 crores, as against Rs. 15.12 crores in the previous year, and the quantum of exports also declined, albeit slightly, from 46,000 tons to 45,000 tons. Lac and mica exports stood at Rs. 6.82 crores and Rs. 8.48 crores, as against Rs. 8.39 crores and Rs. 9.59 crores, respectively, in the previous year. Coal exports receded appreciably from Rs. 10.92 crores to Rs. 7.64 crores, as also the quantum from 30.63 lakh tons to 20.98 lakh tons. Manganese exports maintained the upward trend, the figure moving up from Rs. 21.63 crores to Rs. 25.70 crores. The quantum of exports also rose from 14.12 lakh tons to 16.58 lakh tons. Raw cotton waste exports stood at Rs. 9.01 crores, as compared with Rs. 9.43 crores in the previous year and raw wool declined from Rs. 8.62 crores to Rs. 6.53 crores in 1953, as also the quantity from 39 million lbs. to 24 million lbs.

Oilseeds, which occupied an important place on the export map, have been gradually losing their importance. During 1953, there was practically no export of linseed and castorseed, while groundnut kernels came down from about 10 lakh tons in the pre-war period to just 10,000 tons during the year under review. Groundnut oil declined from Rs. 9.75 crores to Rs. 2.47 crores, linseed oil from Rs. 6.15 crores to Rs. 1.09 crores and castor oil from Rs. 7.09 crores to Rs. 4.93 crores.

Raw hides and skins were fractionally better at Rs. 5.88 crores, as against Rs. 5.85 crores in the previous year, while those of tanned hides and skins recorded a notable improvement from Rs. 17.69 crores to Rs. 26.46 crores.

Geographical Distribution of Trade

In the import trade, the U.K. occupied the place of pride, accounting for Rs. 140.43 crores, as against Rs. 148.97 crores in the previous year. The sharp decline in the value of foodgrain and raw cotton imports was responsible for the steep fall in the imports from the U.S.A. which were marked down from Rs. 272.66 crores to Rs. 89.52 crores during the year under review. Imports from Pakistan receded from Rs. 29.14 crores to Rs. 19.43 crores, as also those from Canada from Rs. 29.66 crores to Rs. 18.92 crores. Australia was able to improve its exports to India from Rs. 15.10 crores to Rs. 26.56 crores, as also Italy from Rs. 11.46 crores to Rs. 20.90 crores. West Germany's exports to India continued to expand, the figure moving up from Rs. 24.19 crores to Rs. 28.79 crores. Egypt's share, too, rose slightly from Rs. 20.11 crores to Rs. 21.74 crores, but that of Burma declined from Rs. 31.08 crores to Rs. 18.24 crores. Imports from Japan fell sharply from Rs. 19.41 crores to Rs. 12.46 crores and those from Kenya from Rs. 19.67 crores to Rs. 16 crores. Imports from Bahrein Island and Saudi Arabia (mainly mineral oils) amounted to Rs. 17.63 crores and Rs. 13.38 crores, respectively. The Netherlands and France despatched goods valued at Rs. 11.28 crores and Rs. 10.54 crores, respectively.

In the export trade also, the main customers were the U.K. and the U.S.A. which absorbed goods valued at Rs. 148.14 crores and Rs. 95.03 crores, as against Rs. 125.76 crores and Rs. 116.49 crores, respectively, in the previous year. Exports to Pakistan declined from Rs. 47.35 crores to Rs. 7.86 crores and those to Australia from Rs. 23.45 crores to Rs. 15.97 crores. Sendings to Canada were valued at Rs. 13.92 crores, the previous year's figure being Rs. 12.74 crores. Exports to W. Germany, Italy and France amounted to Rs. 10.37 crores, Rs. 5.37 crores and Rs. 5.34 crores, respectively. Despatches to Burma and Japan amounted to Rs. 20.45 crores and Rs. 25.88 crores, as against Rs. 23.49 crores and Rs. 25.20 crores, respectively in 1952.

INDIA'S TRADE POLICY

Replying to the two-day debate in the House of the People last week, Mr. D. P. Karmarkar, Minister for Commerce, claimed that India's foreign trade had, after seven years of difficult times, shown "a condition of creditable satisfaction." This claim is based on the fact that the year 1953, as pointed out in the report of the activities of the Commerce and Industry Ministry, witnessed the restoration of healthy conditions in the economy of the country. Anxiety over the country's balance of payments position disappeared. The fear of depression that had cast a gloom over many industries in 1952 was dispelled. The level of industrial production was the highest on record which enabled the Ministry to relax controls. The general index of industrial production, which stood at 128.7 in 1952, a figure higher than any seen in any other post-war year, was exceeded in 1953, with the average for the first ten months being placed at 134, in spite of the fact that the production of a key item like steel suffered in the early months of the year on account of labour dispute in one of the principal units. The production

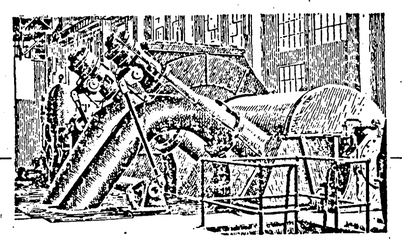
Complete hydro-electric schemes


The ENGLISH ELECTRIC Company designs, manufactures and installs complete hydro-electric generating plant ranging from the main turbines and alternators to the smallest auxiliaries, including the transformers and switchgear.
'ENGLISH ELECTRIC' hydro-electric plant of all types and sizes has been installed in all parts of the world under widely diverse conditions.
The illustration shows the turbine end of one of the 21,000 h.p. double runner twin jet impulse water turbines. These operate under a 940 ft. head at 428 r.p.m., and drive 16,750 kVA 11,000 volts 50 cycles alternators at the Tarraleah Power Station in Tasmania.

NEW PUBLICATIONS

The Cotton Mills of India—1854 to 1954. By Dr. S. D. Mehta. The Textile Association (India), Bombay Branch, Ganesh Bhuvan, Suparibaug Road, Parel, Bombay 12.

SO scattered are the statistical data relating to the early history of the cotton textile industry in India that to survey the developments in the industry right from its inception is by no means an easy task. The efforts made by Dr. S. D. Mehta, the author, at conducting an intensive exploration into historical materials concerning the industry are, therefore, commendable. The results of this exploration are published in the book, *The Cotton Mills of India*—1854 to 1954. Some of his findings throw fresh light on the history of this industry not disclosed by the earlier chroniclers.

Dr. Mehta's study may be broadly divided into two sections. The first half of the 100 years, covering the period 1854 to 1904, is placed in the context of individual initiative and growth. The latter half of the period is treated in relation to its domination by more general forces of a wider character, "possessing a significance that travels beyond mere individuals." The progress in the sphere of the cotton mill industry during these hundred years, as reviewed by Dr. Mehta, has been most eventful. The following extract culled from the first chapter of the publication will fully bear testimony to this:

"The ownership of the industry has shifted from a few score individuals of ample means to lakhs of shareholders distributed between the widest extremes of regional affiliation and income categories. Over 800,000 workers are presently on the rolls, where less than 2,000 were employed in 1860. The annual output now hovers around 4,500 million yards of cloth and 1,600 million lbs. of yarn, and comprises a range of other products, all of which together bring into the coffers of the industry Rs. 500 crores annually. Nearly 45,000 comprise the technical, clerical and administrative cadres, besides those who are employed, directly or indirectly, in the ancilliary and auxiliary industries that have accompanied the larger growth."

Dr. Mehta begins his study with a brief review of the conditions that obtained at the time the cotton mill industry took its birth. According to this study, by 1861, the industry had finally emerged from the stage of isolated enterprise into a stabler and more expansive pattern. After alluding to the effects of the civil war in America and the crash that followed on the Indian industry, the author reviews the growth of the industry during the years 1869 to 1892, a period which coincided with the opening of the Suez Canal, the expansion in the roads and railways, and the development of communications. The next chapter covers the series of crises during the years 1892 to 1901—the currency muddle in 1893, the communal riots in Bombay City, the plague epidemic, and the Japanese and the Chinese competition. The following chapter deals with the brighter days for the mill industry in the period ended 1914, accompanied by a nation-wide agitation that took under its fostering care the growth of the indigenous textile industry. The review of the progress of the industry during the first two world wars and the inter-war period is done in four interesting chapters. Then he takes the reader to a study of the first steps in planning.

There is a special chapter, captioned "Looking Ahead", in which Dr. Mehta draws pointed attention to the establishment of the buyers' market for cotton texiles the world over. He has emphasised the need for the adoption, by the industry, of a conscious approach to the problems of management. To quote him:

"The keynote of such an approach will have to be continuous change in place of the more discontinuous developments that have served the purpose, on the whole, none too badly, hitherto. It is no longer merely a question of shifting from one ratio of machines to men, to another, a higher ratio. The change will have to be more continuous, if the industry is to make readjustments in favour of the handloom industry, and also hold its own against the powerloom factories, rayon weavers and hosiery factories. In operational terms, a management approach oriented along these lines would imply a withdrawal of the faith that considerable sections of the industry still lavish on the rule of thumb and traditional methods."

The utility of the publication is enhanced by the inclusion at the end of a statistical analysis "to quantify, to testify and to supplement the fifteen chapters that constitute the main part of this book." This analysis is placed in the context of the cotton mill situation as obtaining in the early months of 1953, the hundredth year of the industry's organised existence in India, although, occasionally, a broader historical perspective is given, with a view to providing a fuller appraisal of the industry and its achievements.

Although one may disagree with Dr. Mehta's views on isolated questions, there is no doubt that the author has presented the history of the cotton textile industry as a record of facts, palatable or otherwise, which should enable one to have a balanced historical understanding of the developments in the industry. Indeed, Dr. Mehta's study, as Mr. H. P. Mody aptly puts it in his foreword to the publication, fills a major gap in the literature concerning the cotton mill industry. Accordingly, it should command a place of its own in the literature concerning the origin and growth of our major industries.

The Structure of Commerce. By Dr. Noel Branton, English Universities Press Ltd., London. Price: Sh. 12-6 net.

In about 279 pages, Dr. Noel Branton has sought to make a comprehensive and up-to-date survey of commercial practices. Among the several subjects dealt with are marketing of natural and manufactured goods, structure of retail and wholesale trade, business finance and capital, services of joint-stock banks, organisation of transport, business risks and insurance, organisation of import trade, and banking instruments for payment of money. In dealing with these subjects, the author has endeavoured to keep technicalities within reasonable bounds. Also, in order to avoid confusing the text with reproductions of commercial documents and description of their use, the latter have been relegated to an appendix.

The treatment of the subjects is based on the views on the study and teaching of commerce as set out in the Carr-Saunders report on education for commerce, published by the British Ministry of Education in 1949. At the end of each chapter is given a specimen answer to an examination question to help the candidate who is studying privately or by means of correspondence course.

Although the book is primarily intended to meet the requirements of students taking commercial examinations in the U.K., it provides the general reader with a clear and objective account of the work of the modern commercial system.

The Wealth of India-Industrial Products, Part III, D-E. Published by the Council of Scientific and Industrial Research, Ministry of Natural Resources and Scientific Research, Government of India. Available at Publications Division, C.S.I.R., Old Mills Road, New Delhi 2. Price : Rs. 20.

The present volume, comprising articles beginning with the letters D and E, follows, in the main, the pattern of the earlier parts of the series. The selection of items dealt with is based on the *Alphabetical Index of the Commodities that enter into the Sea-borne Trade of British India* (Manager of Publications, Delhi, 1948) and Brady's *Materials Handbook* (McGraw-Hill Book Co., N.Y. 1947) and *Raw Materials Guide* (H.M.S.O., London). The volume includes monographic information on 54 industries, some of which have been grouped together under major subject heads. Thus 13 industries including radio receivers and components, telegraph and telephone equipment, transformers and wires and cables, are included under the subject "electrical industries"; 15 items including lemongrass oil and sandalwood oil are included under "essential oils." The other industries dealt with include dairy products, dyestuffs, expanded metals and explosives.

An attempt has been made, in compiling articles, to trace the development of the industries dealt with and to describe their present position, the principal raw materials and their sources. A description of the manufacturing processes and available statistical data are also given. It may, however, be noted that, as in the case of the previous Part, the paucity of published information and statistical data on Indian industries and the reluctance on the part of certain industries to supply information have contributed to the unevenness noticeable in the treatment of the subjects. Such information as has been presented in the articles has been col-

ANDERSON WRIGHT (RAMGARH) LTD.,
Managing Agents.

CALCUTTA, 25*th March*, 1954.

(*Concluded from previous page*)

lected mainly through correspondence, personal contacts with manufacturers and visits to factories. The volume also includes indices to Parts I to III.

Cost Accounts. By L. N. Gupta. Publishers : Kitab Mahal, 56-A, Zero Road, Allahabad. Price: Rs. 2-8.

The main purpose of the author in writing this book is to explain the principles of cost accounting and their application in business. Unlike several other publications, the one under review deals with conditions obtaining in India. This, together with the inclusion of a sufficient number of worked out examples and exercises for practice, renders the book quite useful, especially to students offering advanced accounts for the B Com. and M. Com. examinations of the Indian Universities. The business man also will find the book useful, since it indicates how, by maintaining proper records, expenditure can be controlled, waste avoided and labour utilised best.

College Annual. Editor : Prof. Lokaranjan Das Gupta. Publication Section, City College Commerce Department, 13, Mirzapore Street, Calcutta.

The *College Annual* contains several interesting articles on economic topics. There is, for instance, a fairly detailed review of the economic affairs in India during the year 1953 by Prof. R. N. Sengupta. Two other interesting articles are "Financing the Five-year Plan" by Prof. Sukumar Ghose and "Some Thoughts on Nationalisation" by Mr. S. Khaitan. The *Annual* also gives statistical data relating to the progress in the field of economic development since the Partition.

ORIENT PAPER MILLS LIMITED

CALCUTTA, 8*th April*, 1954.

PROFIT OF DUNLOP RUBBER SHRINKS AGAIN

DIVIDEND WELL MAINTAINED

FOR the second year in succession, the Dunlop Rubber Co. (India) Ltd. (Managing Director: Mr. Cecil Stack, Calcutta), reports a contraction in its earnings, the latest year for which it has had a setback being the one ended 31st December, 1953. The gross profit of the Company, for instance, had dropped from Rs. 146.54 lakhs for the year ended 31st December, 1951, to Rs. 125.91 lakhs for the succeeding year. This has further shrunk to Rs. 120.96 lakhs for the year under review. Though the Company's profit has fallen by Rs. 25.58 lakhs during the last two years, it is noteworthy that the contraction in profit for 1953, namely, Rs. 4.95 lakhs, is considerably less than that of Rs. 20.63 lakhs noted a year ago and that the profit for the past year stands well above that for 1950. The net profit has declined by Rs. 11.25 lakhs to Rs. 55.38 lakhs, as against an increase of Rs. 6.79 lakhs in the previous year. The ratio of the Company's profit to turnover works out to 7.4 per cent. before taxation and 4.6 per cent. after taxation, as compared with 7.7 per cent. and 4.8 per cent., respectively, for the previous year. Consequent on this fall, the addition to the reserves has been cut by Rs. 15 lakhs, but the dividend has been maintained at 15 per cent. per annum.

The salient features of the Company's results for the year under review are presented against those for the preceding three years in the following table:

(In lakhs of rupees)

—	For the year ended 31st December			
	1953	1952	1951	1950
Sale proceeds ..	12,57.95	12,97.48	14,18.78	8,28.27
Other income ..	4.90	5.03	3.25	1.50
Cost of goods sold ..	10,22.19	10,66.03	11,82.26	6,32.25
Selling and other expenses ..	1,13.20	1,04.07	86.12	76.94
Debenture interest ..	6.50	6.50	6.50	..
Gross profit ..	1,20.96	1,25.91	1,46.64	1,17.18
Provision for—				
Bad debts ..	0.30	0.30	0.30	0.30
Depreciation ..	27.78	25.93	38.34	26.92
Taxation ..	37.60	53.05	48.06	40.16
Net profit ..	55.38	66.63	59.84	49.80
To reserves ..	24.00	39.00	32.00	19.00
To debenture expenses	..	..	..	7.76
Dividends—				
6% preference ..	3.57	3.57	3.57	3.60
Ordinary ..	24.00 (15%)	24.00 (15%)	24.00 (15%)†	20.00 (20%)
Carry forward ..	10.83	7.01	6.73	6.01

† On the increased capital of Rs. 1.60 crores raised by the capitalisation of Rs. 60 lakhs from the general reserve in April, 1951.

The sale proceeds have again gone down, due to a reduction in selling prices, but the fall of Rs. 39.53 lakhs compares well with that of Rs. 121.30 lakhs. This is explained by the fact that, whereas, in the previous year, both the volume of goods sold and the selling prices thereof were lower, in the year under review the volume of goods sold was higher than in 1952, thereby offsetting, to some extent, the effect of the reductions in selling prices. To a certain extent, the reduction in selling prices was rendered possible by lower cost of production; this is indicated by the further decline of about Rs. 44 lakhs in the costs as shown in the foregoing table. Selling and other expenses have, on the other hand, gone up by Rs. 9.13 lakhs. The rise in these expenses is accounted for mainly by the increase of Rs. 9.38 lakhs in selling expenses and of Rs. 1.53 lakhs in administration and operating salaries. Office and operating establishment expenses have declined by Rs. 1.78 lakhs. The rise in expenses is evidently due to the increase in the Company's turnover, following the introduction of a new range of products during the year under review.

Nothwithstanding a fall in profit, the Directors have made a higher provision for depreciation on account of the substantial additions to the gross block. The provision for taxation has also been raised by Rs. 4.45 lakhs. This is due to the fact that, while in 1952, the Company had the benefit of double taxation relief for previous years, there has been no such relief in the year under review. On the other hand, the Company has suffered in 1953 certain losses on exchange in respect of Pakistan taxation payments. The decline of Rs. 4.95 lakhs in gross profit and the larger provisions for depreciation and taxation account for the shrinkage of Rs. 11.25 lakhs in net profit. After reducing the allocation to the general reserve, the dividend has been comfortably maintained, as witness the higher sum carried forward.

The financial position of the Company is quite satisfactory, as will be noted from the following synopsis of its latest balance-sheet:

Liabilities	Rs.	Assets	Rs.
Capital ...	2,30,00,000	Gross block	4,54,79,385
Reserves and surplus ...	1,59,82,832	*Less*—Depreciation ...	2,79,62,308
Debenture stock ...	1,30,00,000	Net block ...	1,75,17,077
Provision for taxation ...	3,25,000	Debenture redemption fund ...	11,96,029
Liabilities ...	1,81,75,509	Stores and stocks ...	3,62,59,013
		Investments ...	16,000
		Debts, deposits and advances ...	1,40,47,260
		Cash ...	14,47,962
Rs.	7,04,83,341	Rs.	7,04,83,341

The reserves and surplus stand at Rs. 27.81 lakhs higher than at the close of 1952. The provision for taxation is lower by Rs. 20.75 lakhs, on account of the fact that the Company's income-tax assessments have been completed up-to-date. Current liabilities have been reduced by Rs. 39.34 lakhs. Of the current liabilities, loans from banks account for a decline of Rs. 58.61 lakhs, reflecting the fall in the value of stocks. The liability on account of sundry creditors is, on the other hand, higher by Rs. 19.77 lakhs. On the assets side, there has been a net addition of Rs. 47.73 lakhs to the gross block, mainly on account of additions to buildings, plant and machinery of the value of Rs. 48.60 lakhs. The debenture redemption fund has been strengthened by Rs. 4.08 lakhs. Stocks are lower by Rs. 64.39 lakhs, mainly due to lower costs. As against this, debts, deposits and advances disclose a rise of Rs. 3.39 lakhs and cash balances Rs. 3.66 lakhs. The total current assets, at Rs. 517.70 lakhs, exceed the current liabilities and provision for taxation by a very wide margin of Rs. 332.70 lakhs.

The Rs. 10 paid-up ordinary shares of the Company are being currently quoted at Rs. 34-8. At this rate and on the basis of the latest dividend the yield works out to 4.35 per cent. per annum, free of tax. The relatively low yield, as compared with that available on some of the other first class equities, reflects the popularity of this scrip with investors.

(Concluded from next column)

crores, including the addition of Rs. 13.90 lakhs during the half-year under review, has been written down to Rs. 1.93 crores. The current assets amount to Rs. 3.03 crores and exceed the current liabilities and provision for taxation and cesses by Rs. 54 lakhs.

The Rs. 200 fully paid-up shares of the Company are being currently quoted at Rs. 503 *ex-div.*, at which rate and on the basis of the latest dividend, they gave a yield of about 6 per cent. per annum, free of tax.

MANUFACTURE OF PAPER CONES AND TUBES

A new company will shortly be formed in South India for the manufacture of paper cones, tubes and other specialities. It is understood that the Textile Paper Tube Company, Ltd., Romiley, England, the leading manufacturers in the U.K. of paper cones and tubes, have made arrangements, in conjunction with Messrs. A. & F. Harvey Ltd., Madurai (the Managers of the Madura Mills Ltd.), to set up a factory for this purpose in Punalur (Travancore-Cochin) where there is already a paper mill. The new company, which will be called the Indian Textile Paper Tube Company, Ltd., is expected to commence production within the next 12 months. The consent of the Controller of Capital Issues is said to have been obtained for the issue of capital by the new company. Messrs. A. & F. Harvey Ltd. will be the Managing Agents of the Company.

WIMCO MAINTAINS DIVIDEND ON HIGHER CAPITAL

A decline of Rs. 5.90 lakhs in gross profit of the Western India Match Co., Ltd., (Managing Director: Mr. T. H. Rydin, Bombay), is disclosed by the audited accounts of the Company for the year ended 31st December, 1953. This is in distinct contrast to the increase of Rs. 12.07 lakhs noted in the previous year's profit. After advancing from Rs. 93.97 lakhs for 1951 to Rs. 106.04 lakhs for 1952, the profit has suffered a setback to Rs. 100.14 lakhs for the year under review. This setback is not so serious (the profit still compares very well with that of 1951 and 1950) as to affect the distribution to the shareholders. The return has been maintained, for the fifth year in succession, at the rate of 11 per cent., made up of a dividend of 10 per

(Continued on page 801)

SETBACK IN EARNINGS OF BENGAL COAL

CUT IN RETURN TO SHAREHOLDERS

THE seasonal decline in output, coupled with the loss of production due to an "illegal" strike in September last, together accounting for 75,364 tons or 6.2 per cent., had an adverse effect on the earnings of the Bengal Coal Company, Ltd. (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) for the half-year ended 31st October, 1953. The gross profit shows, as compared with that for the previous year, a decline of Rs. 12.43 lakhs to Rs. 30.47 lakhs, the lowest since the half-year ended 30th April, 1948. The results would have been far worse than it has been but for an increase in despatches which were higher by 10,600 tons. The net profit has gone down by Rs. 5.77 lakhs. Consequently, the allocation to the reserves has been cut from Rs. 7.50 lakhs to Rs. 2.50 lakhs and the distribution to the shareholders from 17½ per cent. per annum paid for the previous half-year to 15 per cent. by lowering the bonus part of it from 7½ per cent. to 5 per cent. per annum.

It will be recalled that the distribution to shareholders was cut last half-year from 20 to 17½ per cent. per annum, one of the considerations which influenced the Directors in pruning it being "the uncertainty of future trends within the industry," to which the Chairman of the Company made an elaborate reference in his speech at the last annual general meeting of the Company. The Company's performance during the half-year under review has justified a further cut in distribution to the shareholders. The dividend for the half-year under review is the lowest since the Company's capital was doubled in January, 1950. Following this, the distribution for the half-year ended 30th April, 1950, was halved from 35 per cent. to 17½ per cent. per annum, but was enhanced to 20 per cent. per annum for the half-year ended 30th April, 1952. This was maintained for the next half-year also, only to be restored back to 17½ per cent. per annum for the six months ended 30th April, 1953.

The salient features of the Company's financial results for the last four half-years are compared in the following table:

(In lakhs of rupees)

—	For the half-year ended			
	31-10-53	30-4-53	31-10-52	30-4-52
Sale proceeds ..	322.50	315.32	256.33	285.70
Other income ..	5.30	11.26	9.20	8.18
Stocks ..	19.24	23.91	14.83	19.24
Coal purchases ..	21.75	23.85	16.78	25.41
Freight, shipping charges and commission ..	110.80	107.33	59.63	81.89
Other expenses ..	160.11	161.52	142.22	145.30
Gross profit ..	30.47	42.90	42.54	62.08
Provision for—				
Managing Agents' commission ..	1.32	2.29	2.33	3.19
Depreciation ..	12.16	11.20	10.00	7.00
Taxation and cesses ..	7.20	13.35	11.50	21.00
Net profit ..	9.79	15.56	18.71	20.89
E.P.T. refund (net) ..	..	..	..	0.68

Directors' commission ..	0.08	0.09	0.10	0.10
Carry forward ..	6.29	6.91	8.03	7.25
	Tons	Tons	Tons	Tons
Raisings ..	11,39,168	12,14,532	10,55,707	11,91,067
Despatches (including coal purchased) ..	13,17,970	13,07,370	12,20,936	12,59,190

The raisings of coal during the half-year under review show a decline of 75,364 tons, as compared with those for the previous half-year, but represent an increase of 83,461 tons as compared with those for the corresponding half-year of 1952. The rise in sale proceeds, despite the fall in output, is on account of the increase in despatches, which, at 1,317,970 tons, represent the highest since the half-year ended 30th April, 1950. The fall of Rs. 6 lakhs in other income is largely accounted for by the decline in commission earned, from Rs. 6.28 lakhs to Rs. 1.48 lakhs. Though there has been a decline in coal purchases by Rs. 2.10 lakhs, it has been more than offset by the rise in freight, shipping charges and commission by Rs. 3.47 lakhs. The provision for depreciation has been raised by nearly Rs. 1 lakh, consequent on the fresh addition to the fixed capital expenditure.

The Company's financial position is quite impressive. The reserves and surplus aggregate Rs. 1.26 crores, as against a paid-up capital of Rs. 1.20 crores. The provision made so far for taxation and cesses amounts to Rs. 35.17 lakhs. The current liabilities aggregate Rs. 2.14 crores. The gross block of the value of Rs. 5.40

(Continued in previous column)

Points From The Chair

Risk Capital by Banks

"IT is also suggested that the banking system in the country, which has been mainly concerned with the supply of commercial credit so far, should undertake the responsibility of helping the industrial sector in finding its requirements for long-term business. This is a responsibility that has also been enjoined on the Indian banking system under the Five-year Plan. Apart from the technical difficulties of the restrictions imposed by the Banking Companies Act, I really wonder how and in what manner the Indian banking system could make this departure without straining its resources which are reasonably fully employed in financing the seasonal trade. The banking organisation could only assist the industries by way of temporary overdrafts or loans, but cannot venture to supply to these manufacturing concerns, what may be termed 'risk capital.' I believe that Industrial Finance Corporations all over the country should undertake this long-term financing of industries."

CHAIRMAN,
Indian Overseas Bank Ltd.

Cheap Money

"To fulfil the big plans and projects, our authorities are relying on deficit finance. It cannot be too often emphasised, however, that there is a danger of inflation if this method of finance oversteps its limits. Whatever steps we may take for the implementation of our development projects and plans we must see that we steer clear of the dangerous rock of inflation. Another check on inflation can be provided by adhering to a dearer money policy. We should not revert to the cheap money policy. We must avoid the mistake of borrowing cheap in future, if we want to avert the repetition of the 1952 crisis. We should be prepared to pay a reasonable rate of interest. If we do this, there will be an even flow of funds into trade and industry."

MANEKLAL PREMCHAND,
Industrial Investment Trust Ltd.

Development in all Spheres Needed

"While it is said that the overall production in the country has been increased, one cannot but express doubts, as so many industries are being closed down. It is only a handful of major industries, like textile, cement, paper and iron and steel, in which there has been increase, but the capacity of absorbing employment of these big industries is very limited. It is the small and medium-scale industries that provide employment in wider area, but these have been hard hit and that is how unemployment is created. If Mr. Deshmukh feels that the total weight of the nation's body has increased, it has to be said that it is not a healthy increase, being one part of the body swelling at the cost of the other limbs... For healthy growth of the nation, development in all spheres is essential and that is what is wanting. This is mostly due to the unsteady policy of the Government."

G. R. SATHE,
Presidency Industrial Bank, Ltd.

Restriction on Jute Crop in Pakistan

"It would appear from reports received here that Pakistan is to restrict the crop now being sown; it is hoped that she has taken into consideration her good fortune in having had favourable weather for her last three crops—unfavourable weather for the next crop could, under the circumstances, have serious repercussions. Pakistan's policy of restricting acreage sown under the jute has, together with the exchange value of her rupee, had the effect of keeping Pakistan raw jute prices approximately 15 per cent. above the price at which Calcutta mills can buy the equivalent qualities of Indian-grown raw jute in their internal markets. Pakistan's action has handicapped her customers—the jute spinning and manufacturing industries of the world—and has made it increasingly difficult for them to compete in world markets with Indian produced goods. While this is a delicate subject, it is my duty to draw Pakistan's attention to the results of her policy."

W. G. N. WALKER,
Jute Industries Ltd.

Financing of Industry Through Insurance Funds

"While on the subject of investments, there is one further matter to which I should like to refer. From time to time statements are made that insurance companies, one of the most effective mediums for private savings, do not invest sufficient of their available funds in providing finance for industry. British insurance companies are as much concerned in the economic health of this country as other financial institutions here and I do not think that this criticism is justified. As regards the funds available for investment on the general side of the business, it must be borne in mind that a considerable volume is transacted overseas, involving the retention there of substantial sums in the provision of reserves. In dealing with the funds accruing from life business, regard must be paid to the obligations to policyholders and our paramount object is, therefore, security. Consistent with our responsibilities in that connection, the published accounts of insurance companies show that investments in industrial debentures, preference and ordinary shares are very considerable and that companies do make a vital contribution to the finance required by industry."

THE RT. HON. LORD BRAND,
North British and Mercantile Insurance Co., Ltd.

COMPANY MEETINGS AND DIVIDENDS

DURBHANGA SUGAR CO., LTD. Annual General Meeting, Lohat, District Durbhanga, Bihar, 26th April, 1954. Dividend: Re. 1-8 per share. Transfer books remain closed from 17th to 26th April, 1954, both days inclusive.

POONA ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Bombay, 26th April, 1954. Dividend: Rs. 8 per share. Transfer books remain closed from 12th to 26th April, 1954, both days inclusive.

Manganese Plant

An application for the grant of licence under the Industries (Development and Regulation) Act, 1951, for the establishment of a ferro-manganese plant at Rajagada (Orissa) was received in December, 1953. The licence was granted in March, 1954. The Orissa Government has been consulted and it supports the establishment of the plant.

—*Minister for Commerce*

Koyna Project

Negotiations are in progress for securing a World Bank loan for the Koyna Project. The World Bank has given two loans aggregating $29 million for the D.V.C. The total amount withdrawn up to March, 1954, from the first loan was $14,603,157.92. No amount has been withdrawn from the second loan yet. The amount spent on the D.V.C. up to date was Rs. 59,19,65,165. The share of each participating Government was: Central Rs. 16,50,95,165, West Bengal Rs. 29,93,94,000 and Bihar Rs. 12,75,06,000.

—*Deputy Minister for Irrigation*

Swiss Experts

There are at present 13 technicians mainly of Swiss nationality engaged in the machine tool prototype factory at Ambernath. Of these, 10 are on contracts in pursuance of an agreement entered into by Messrs. Oerlikons of Switzerland with the Government of India and the remaining three are on direct contract independently of the firm. There are also 13 Swiss technicians working at Khamaria who have been deputed by Messrs. Oerlikons under a separate agreement, but they are not employees of the Government. They have not been engaged for the manufacture of any particular item, but for the setting up of, and establishing full production at, the machine tool prototype factory, Ambernath, and for the establishment of a project for the manufacture of certain defence stores at Khamaria. Suitable Indian officers have been attached to these technicians to take over from them when they leave. Some of them are also sent to Switzerland for training. It is intended that the Indian officers should replace the Swiss as soon as they are considered to have acquired sufficient experience.

—*Deputy Defence Minister*

Telephones

The Indian Telephone Industries, Bangalore, manufactured 39,997 telephones in 1953.

—*Communications Minister*

Calcutta Telephones

Eight buildings have been completed and one is in progress in connection with the automatic telephone system in Calcutta. So far, the Government has spent Rs. 270 lakhs. Part of the land on which buildings has been erected belongs to the West Bengal Government and the rest is acquired. In selecting the site, technical experts had to take into account the desirability of focussing all the telephone lines at a central place.

The expert committee appointed by the Indian Central Jute Committee to examine the technological research expansion scheme has submitted its report. The expert committee has recommended that priority should be given to the schemes for (a) woollenising of jute, (b) making cheap wrappers from a mixture of wool and woollenised jute, and (c) making of ply yarn with wool and woollenised jute for knitting purposes.

—*Food and Agriculture Minister*

PROFIT OF RAMNUGGER CANE LOWER DESPITE HIGHER PRODUCTION

AGARPARA JUTE HALVES DIVIDEND

Ramnugger Cane and Sugar Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Anderson Wright, Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st August, 1953.

The factory started crushing on the 26th November, 1952 and continued till 11th April, 1953. A quantity of 21,01,143 maunds of sugarcane was milled with an average sugar recovery of 10.33 per cent. as compared with 17,94,760 maunds and 10.87 per cent., respectively during the previous season.

The total crush was made up of 14,36,653 maunds of cane from the Company's own farms and 6,64,490 maunds of cane from cultivators. The corresponding figures for the preceding season were 11,62,012 maunds and 6,32,748 maunds, respectively. The yield of plant cane per acre from Company's farms was the highest ever obtained. This higher yield more than compensated for the shortfall in recovery percentage, as the quantity of sugar recovered per acre of land recorded a satisfactory increase over previous year's figures.

The minimum price of sugarcane payable by factories was reduced by Government from Re. 1-12 per maund to Re. 1-5 per maund for gate deliveries. No statutory control was exercised by the Government over the price and distribution of sugar, but releases of stocks were so regulated that the industry always had a reserve stock likely to be requisitioned at prices corresponding to the minimum cane price. Accordingly, a quantity of 390 tons amounting to 4.9 per cent. of the production was requisitioned from the factory at a price of Rs. 27 per maund, for grade E27. The balance of the factory's production was sold in the free market including a quantity of 200 tons exported to Japan.

The Government of India reduced the ex-factory price of controlled sugar from 1951-52 season's production in stock with factories on 1st December, 1952, so as to give the consumer immediate benefit consequent upon the reduction in the price of cane. In case of sugar factories in the northern region including the Company's factory, the price was reduced from Rs. 30-8 to Rs. 27 per maund and the difference of Rs. 3-8 was paid by Government direct to factories in the form of subsidy. This subsidy was met from the proceeds of an additional excise duty which was levied at the rate of Re. 1-6 per cwt. on all sugar produced during the season 1952-53.

The statutory price of molasses requisitioned for supply to distilleries in West Bengal was reduced from Re. 1-14 per maund to Re. 1-6 per maund with effect from 4th June, 1953.

The weather conditions during the year under review were very unfavourable for the growth of sugarcane. The rainfall was poor and the prevailing dry conditions adversely affected the standing 1953-54 season crop. Irrigation resources of the Company have now been extended by the addition of more tubewells and pumping sets.

The profit, after deducting all working charges and commissions, and after providing Rs. 1,54,877 (Rs. 1,74,982) for depreciation and Rs. 5,05,000 (Rs. 4,50,000) for taxation, amounts to Rs. 6,89,510 (Rs. 11,44,575) to which is added the amount carried forward from last year of Rs. 1,61,652 (Rs. 3,21,528) making a total of Rs. 8,51,162 (Rs. 14,66,103). This amount the directors recommend, should be dealt with as follows:—

In payment of a cumulative preference dividend at 6 (6) per cent. per annum for the year ended 31st August, 1953, without any deduction in respect of Indian income-tax or Bengal agricultural income-tax paid by the Company Rs. 24,000 (Rs. 48,000 for the years 1951 and 1952); in payment of a dividend on the ordinary shares at 20 (7½ per cent. for 1951 and 20 per cent. for 1952) per cent. per annum for the year ended 31st August, 1953, without any deduction in respect of Indian income-tax or Bengal agricultural income-tax paid by the Company Rs. 3,31,964 (Rs. 4,56,451 for 1951 and 1952) to be transferred to reserve for replacements and extensions Rs. 2,00,000 (Rs. 3,00,000), to be transferred to general reserve Rs. 2,00,000 (Rs. 3,00,000), and to be carried forward Rs. 95,198 (Rs. 1,61,652).

Season 1953-54.—The factory has already completed the season after crushing a quantity of 13,98,985 maunds of cane with an average recovery of 10.05 per cent. These results have been due to extremely dry weather which has affected sugar production all over India, particularly of factories situated in Eastern U.P., Bihar and West Bengal.

The minimum sugarcane price has been fixed by Government at Re. 1-7 per maund for gate delivery for the two seasons 1953-54 and 1954-55, while the additional temporary excise duty of Re. 1-6 per cwt., imposed last year, has been discontinued. The sugar policy otherwise has remained unchanged. The Government, however, have announced that approximately 25 per cent. of the annual production of sugar factories will be treated as reserve stock which can be requisitioned by them at a controlled price of Rs. 27 per maund for E27 grade in case of necessity.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Rs.	81,29,917	Rs.	81,29,917

Agarpara Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. B. N. Elias and Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September, 1953.

With the sum of Rs. 58,243 (Rs. 3,11,246) brought forward from the previous half-year and after providing for depreciation and all other charges, there remains a balance of Rs. 3,96,788 (Rs. 24,43,368) from which the directors have set aside Rs. 2,76,000 (Rs. 8,25,000) for taxation leaving a balance of Rs. 1,20,788 (Rs. 14,68,368) to which has been added the sum of Rs. 3,00,000 (*nil*) transferred from dividend equalisation fund making a total credit of Rs. 4,20,788 (Rs. 14,68,368). This balance the directors propose to dispose of as follows:—

To payment of dividend on 10,000 preference shares at 7 per cent. per annum free of income-tax Rs. 35,000 (Rs. 35,000) and to payment of dividend on 6,00,000 ordinary shares at 10 (20) per cent. per annum free of income-tax Rs. 3,00,000 (Rs. 6,00,000) leaving to be carried forward to next period Rs. 85,788 (Rs. 3,33,368).

In accordance with the provisions of the Indian Jute Mills' Association working time agreement, the Mills worked for 42½ hours per week throughout the half-year with 12½ per cent. of the total looms remaining sealed.

During the period under review, trading conditions continued to be difficult and the gunny market remained depressed but on 14th September, 1953, Government reduced the hessian export duty from Rs. 275 to Rs. 120 per ton.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	70,00,000	Block ...	46,57,268
Debentures ...	12,00,000	Stocks ...	39,93,429
Reserves ...	56,50,000	Stores ...	8,25,963
Provision for taxation ...	13,83,985	Debts, deposits and advances ...	36,39,637
Liabilities ...	21,56,406	Investments	6,23,198

	Rs. 1,74,76,178		Rs. 1,74,76,178

Cambodia Mills Ltd.

The directors of the above Company (Managing Agents and Secretaries: Messrs. Peirce, Leslie & Co., Ltd., Coimbatore) submitted the audited accounts of the Company for the year ended 31st December, 1953.

The result of the Company's working for the year after allowing Rs. 1,59,541 (Rs. 1,59,555) for depreciation was a profit of Rs. 6,19,837 (Rs. 4,16,041), to which was added the unappropriated profit brought forward Rs. 93,399 (Rs. 55,358) making a total of Rs. 7,13,236 (Rs. 4,71,399). After deducting dividend paid on cumulative preference shares at 7 per cent. free of income-tax, for the year ended 31st December, 1953 Rs. 7,000 (Rs. 7,000), provision for taxation Rs. 2,60,000 (Rs. 1,71,000), provision for involuntary unemployment to labour Rs. 2,50,000 (*nil*) and transfer to reconstruction and development reserve Rs. 6,579 (*nil*), there remained a balance of Rs. 1,89,657 (Rs. 2,93,399). The directors made payment of a dividend of 7½ (10) per cent. free of income-tax, on the ordinary shares of the Company Rs. 1,50,000 (Rs. 2,00,000) and carried forward the balance of Rs. 39,657 (Rs. 93,399).

It will be observed, that while the gross trading profit for the year showed a considerable improvement on the result of the previous year, the recent Award of the Special Industrial Tribunal has forced on the Company a heavy liability in the form of compensation for involuntary unemployment to labour for the years 1952 and 1953. In these circumstances, the directors paid a dividend of 7½ (10) per cent.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	21,00,000	Block ...	15,06,790
Reserves ...	20,00,280	Stock-in-trade	18,28,680

Profit and loss account ...	39,657	Debts, deposits and advances ...	5,60,634
		Investments	2,33,631
		Cash ...	13,19,039
Rs.	57,41,825	Rs.	57,41,825

Travancore Rubber and Tea Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. Aspinwall and Co. (Travancore) Ltd.] submit the audited accounts of the Company for the year ended 31st December, 1953.

The balance in the profit and loss account carried to appropriation account is Rs. 11,98,103 (Rs. 8,71,512). As is customary, the appropriation account bears the necessary provision for depreciation on buildings and machinery, also full provision for taxation has been made at current rates. Unsold stocks at the time of closing are valued at market rates. The balance of Rs. 6,78,477 (Rs. 5,16,606) in the appropriation account is carried to the balance sheet.

Sale averages for both tea and rubber in 1953 show a welcome increase, and have enabled the Company to make a useful profit.

The rubber crop harvested amounted to 34,722 lbs. in excess of estimate, and had it not been for the cessation of Sunday tapping, resulting from legislation introduced in May, would have equalled the 1932 figure. It is satisfactory that in spite of the lower crop figure estate expenditure per lb. shows no material increase. Comparative figures for the last four years are given:

(Cents per lb.)

	Crop	Estate expenditure	All-in cost	Average sale price	Net profit
	Lbs.				
1950 ..	10,36,978	50.42	71.86	85.89	14.03
1951 ..	10,94,201	53.30	87.18	120.09	32.91
1952 ..	10,39,098	64.55	90.63	124.46	33.83
1953 ..	9,89,722	64.91	98.49	129.27	30.78

The Company no longer manufactures any group 4 rubber, which is difficult to sell, and concentrates on producing the maximum percentage of the best sheet rubber, which is being taken up regularly by a large manufacturing firm on the basis of the present Government control rates for rubber which are in force until September, 1955. It is conservatively estimated that 9,80,000 lbs. of rubber will be collected during 1954. Estate expenditure is estimated at 70.15 cents per lb.

Tea—in spite of a late monsoon it was hoped that the estimate of 11,75,000 lbs. would be exceeded, but dry conditions at the end of the year, coupled with the severe attack of helopeltis on Vellani Division, reduced the crop to 11,50,696 lbs.; this figure compares with 12,11,542 lbs. in 1952 and exceeds the 1951 crop of 11,23,542 lbs.

Except for 12,417 lbs. B.O.P. shipped to London, all the Company's teas were sold to advantage at Cochin auctions. As from the first auction in 1953 improved tea prices have been obtained, resulting in a sale average of 186.22 cents per lb., showing a rise of 31 cents over the 1952 figure. Comparative figures of tea crops, cost and revenue for the last four years are placed below:—

(Cents per lb.)

	Crop	Estate expenditure	All-in cost	Average sale price	Net profit
	Lbs.				
1950 ..	9,19,957	120.61	157.06	183.01	25.95
1951 ..	11,23,763	116.89	158.90	197.73	38.83
1952 ..	12,11,542	125.16	144.67	155.21	10.54
1953 ..	11,50,696	122.76	160.26	186.22	25.96

Tea prices in 1954 so far show an improvement as compared with the same period last year, and 50 per cent. of the Company's 1954 production of B.O.P. and B.O.P.F. has been sold forward for the year at higher than last year's average. For 1954 it is estimated that 11,75,000 lbs. of tea will be produced at an estate expenditure of 123.06 cents per lb.

In 1953, rainfall less than average and unevenly distributed affected the tea crop adversely, whilst non-Sunday tapping reduced the rubber crop. At the moment the Company's tea and rubber crops are behind last year's harvesting and further rains are required to help the estates through the hot weather months. Rubber prices for the year are fixed by Government control, and prospects of the continuance of remunerative prices for tea appear good.

The Plantations Labour Act becomes operative as from 1st April, 1954 and obligations under this Act will increase all estates' working costs materially and will involve capital expenditure, but details are not yet available, and the financial burdens involved cannot yet be estimated.

The profit and loss account after deduction of the interim dividend of 2½ (*nil*) per cent. and preference dividends paid, leaves an available balance of Rs. 7,59,669 (Rs. 7,45,692), and the Board recommends disposal as under:—

Payment of a final dividend (first and final) on the paid up ordinary capital, of 7½ (6) per cent. Rs. 3,07,500 (Rs. 2,46,000), transfer to non-executive staff retirement fund Rs. 30,000 (Rs. 20,000), transfer to dividend equalisation fund Rs. 50,000 (Rs. 2,00,000), transfer to rubber replanting reserve Rs. 67,500 (*nil*) and leaving to be carried forward a sum of Rs. 3,04,669 (Rs. 2,79,692).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	57,00,000	Block ...	66,15,335
Reserves ...	12,98,284	Stock-in-trade	6,19,346
Provision for taxation ...	5,81,216	Stores and spare parts, etc. ...	2,02,384
Liabilities ...	4,77,036	Other assets	48,467
Profit and loss account ...	7,59,669	Debts, deposits and advances ...	44,321
		Investments	6,04,004
		Cash ...	6,82,268
Rs.	88,16,205	Rs.	88,16,205

N.B.—Figures within brackets relate to the corresponding period of the previous year.

MONEY MARKET DULL

(From Our Own Correspondent)

BOMBAY, 21*st April*

Three days have now passed since the Government of India's National Plan Loan opened for public subscription on the 19th inst. But no visible effect of the flotation of the new loan has so far been felt on the short-term money market. Since the last report was written, conditions in the market have remained dull. The seasonal demand for funds has somewhat abated and there have been an influx of funds, but the supplies have not been enough to ease the stringency. The undertone, therefore, remains firm, with no change in interest rates. Inter-bank call money is still earning 3 per cent., though some stray transactions are being done at 2½ per cent. after clearing hours.

Short-term deposits continue to be bid at 3 per cent. for one to three months and 2½ per cent. for four to 12 months.

As stated last week, there has been no borrowing by the Government through Treasury Bills this week.

The statement of affairs of the Reserve Bank of India for the week ended 16th April, 1954, as compared with that for the previous week, discloses a further expansion of Rs. 3.72 crores in notes in circulation, following the enlargement to the extent of over Rs. 40 crores in the previous two weeks. With the aforesaid increase, the notes in circulation stand at the end of the week under review at Rs. 1,230 crores, as against Rs. 1,165 crores at the end of the corresponding week of 1953. Notes held in the Banking Department have declined by Rs. 3 73 crores in the week under review. In the Banking Department, Central Government deposits show a fall of Rs. 9.28 crores, while those of the State Governments account for an increase of Rs. 2.52 crores. There has been a decline of Rs. 18.75 lakhs in deposits of banks. Cash balances are lower by Rs. 3.74 crores, as also balances held abroad by Rs. 58.96 lakhs. Ways and means advances to Governments show a decline of Rs. 68 lakhs. Other loans and advances have risen by Rs. 1.30 crores. Of these loans, advances to Scheduled banks against usance bills account for an increase of Rs. 1.88 crores. The total amount of such advances to banks since 1st January, 1954 is Rs. 53.22 crores, an increase of Rs. 2.40 crores over the week.

The Scheduled banks' statement for the week ended 9th April, 1954 discloses that the upward trend in bank credit was being maintained in that week, Loans, cash credits and overdrafts show a rise of Rs. 5.70 crores and bills purchased and discounted Rs. 96.29 lakhs, bringing the total advances to Rs. 552.16 crores, which represent not only an increase of Rs. 21.18 crores over those at the end of the corresponding week of 1953 but a rise of Rs. 12.30 crores over the peak level of Rs. 529.86 crores touched on 8th May, 1953. There has been no corresponding rise in banks' deposits during the week under review. In fact, demand deposits are lower by Rs. 36 lakhs. Time deposits have, however, risen by Rs. 2.42 crores. Inter-bank borrowings have declined by Rs. 1.29 crores. Borrowings from the Reserve Bank are up by Rs. 4.55 crores, while those from the Imperial Bank are down by Rs. 1.89 crores. There has been a decline of Rs. 2.51 crores in investments, and of Rs. 9.79 crores in total cash.

The Gilt-edged market suffered a perceptible setback during the week under review. There was selling pressure all-round, the medium and long-dated issues being the worst sufferers. The rot set in early in the week in 3 per cent. 1986 Conversion with a sudden drop of As. 14 to Rs. 82-2 on Thursday. Though there was a recovery to Rs. 82-4 on Saturday, the sentiment was shaken and from Monday onwards there was again a recession which spread to other loans also. The undertone at the close was easy.

3 per cent. 1957 was on offer and dropped As. 2 to Rs. 98-5, while 3 per cent. 1958 was unchanged at Rs. 98-4. 3 per cent. 1959-61 had sellers at Rs. 96-7, that is As. 2 below the previous week's rate. 3 per cent. 1963-65 and 3 per cent. 1964 declined by As. 3 to Rs. 92-14. 3 per cent. 1966-68 shed As. 2 to Rs. 90-6. 3 per cent. 1970-75 was done at Rs. 86-9 *ex-voucher*, as against Rs. 87 *cum-voucher* last week. 3 per cent. 1986 Conversion Loan suffered a loss of Re. 1 to Rs. 82. 3 per cent. 1961 National Plan Bond also encountered heavy selling and lost As. 7 to Rs. 98-14.

There was no change in the rupee-dollar exchange rate during the week under review. In the U.S. market, there was a further accession to strength by sterling, albeit by a fraction. The spot sterling moved between $2.81¾—2.81¾ and $2.81-13/16—2.81-15/16 before closing yesterday at the latter rate. The forward sterling (3 months) advanced from $2.81¼—2.81¼ to $2.81-5/16—2.81-7/16 and transferable sterling from $2.78¾—2.79 to $2.79—2.79¼. It is stated that the demand for sterling in London on American account, as well as on account of the leading continental centres, was heavy, while there was a genuine shortage of sterling.

LINSEED PRICES MAINTAINED

(Messrs. A. Bradley & Co.)

CALCUTTA, 19*th April*

Despite a generally firm undertone, the linseed market remains quietly steady and prices appear to be almost unchanged. Arrivals from upcountry are very poor, whilst buyers have not shown much interest except at lower prices. There has been some speculative activity for forward delivery, but buyers appear to be more cautious. The turnover has on the whole been small. Owing to poor demand, the oil section has been rather inactive, although prices remain fairly steady. Latest quotations are: Ready Rs. 19-6 and June-July Rs. 19-12 per maund.

RECOVERY IN BULLION AT CLOSE

(From Our Own Correspondent)

BOMBAY, 21*st April*

A feature of the trading on the Bullion Exchange during the week under review was the revival of some hectic speculative activity in silver. As a result, the white metal experienced wide fluctuations in prices. Gold also followed an irregular pattern in sympathy, but the variations were not so wide and frequent as in silver.

The selling pressure in silver which began towards the close of the previous week persisted early in the week under review also, causing a heavy drop in prices. As the forward price fell below Rs. 171-2, the margin against bulls which was enforced in the previous week, became inoperative. Thereafter, there was a recovery on revival of bull support and purchases by option dealers. But Monday this week witnessed the reversal of the trend again, consequent on heavy unloading by bulls, coupled with selling by bear operators, on settlement considerations, which run out yesterday. As the decline in the forward rate for the May settlement was more than Rs. 5 from the starting rate for that settlement, there was an automatic clearing on Monday. But the selling pressure was not arrested. In fact, one of the bull operators turned a bear and sold heavily yesterday. Some of the bulls also joined hands and pressed sales, in order to enforce margin on bears. In this effort, they succeeded yesterday, when the closing price for the May settlement stood more than Rs. 7 below the starting rate, and bears were forced to pay a margin of Rs. 500 per bar. The selling was so heavy that the price in Bombay fell below those in other centres. There was, therefore, a rush for buying today not only by local dealers but also by upcountry dealers, with the result that there was a sharp jump in silver prices, wiping off a good part of the earlier losses. However, the white metal finished the week with a loss of Re. 1-4 on balance.

In the gold section, arrivals were on a fairly large scale in the earlier part of the week, and the offtake did not keep pace with the arrivals. There was, therefore, a setback in prices. Later on, arrivals slackened, resulting in a hardening of the rate.

The re-opening of the gold market in London recently was the subject matter of interpellations in the House of the People last week. In reply to a question, the Finance Minister said that the re-opening of the London gold market was expected to have no repercussions in India, as gold prices were higher in India than outside and as residents of the sterling area would not be permitted to buy gold freely in London. In reply to another question, he said that the Government of India had no intention to give direction to the Reserve Bank of India to sell gold, either to buy dollars or for other purposes.

Silver for forward delivery (20th April settlement) opened the week at Rs. 171-1, but dropped on the opening day itself to Rs. 169-3. After a recovery to Rs. 171 on Saturday, there was a landslide to Rs. 165-15 yesterday when the settlement ran out. Business in the next settlement (19th May) began at Rs. 171-7. After moving down to Rs. 169-5, this settlement regained strength to touch Rs. 171-3 on Saturday. Yesterday, it fell to a low of Rs. 166-1 before finishing at Rs. 169-8 today.

Ready silver (.996 Mint) opened at Rs. 171-13 and closed at Rs. 169-9, the highest and lowest levels touched being Rs. 171-15 and Rs. 165-14, respectively. The floating stocks of silver are estimated at 1,600 bars. The daily average offtake was 20 bars.

Opening at Rs. 93-8, gold for forward delivery (19th April settlement) retreated to Rs. 91-12 on Monday, before the settlement ran out at Rs. 92. Forward gold for the May settlement (18th May) began at Rs. 92-15 and drifted lower to Rs. 90-11 yesterday. The closing today was, however, better at Rs. 92-9.

The opening and closing prices of ready gold were Rs. 94-6 and Rs. 93-7, respectively. The highest and the lowest levels touched were Rs. 94-11 and Rs. 91-7, respectively. The floating stocks of gold are estimated at 15,000 tolas. The daily average arrivals of gold were 6,000 tolas. The daily average offtake was 5,000 tolas.

The following comparative table shows the trend of the market during the week under review:

	21-4-54	Highest	Lowest	13-4-54
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	93 7	94 11	91 7	94 10

New York Ready	85¼c.	—	—	85¼c.

DEMAND FOR TEA FALLS

(From Our Own Correspondent)

CALCUTTA, 20*th April*

A fall in general demand was the feature of the sales for internal consumption held last week, when offerings of dusts consisted of approximately 19,500 chests. Prices of almost all varieties moved down by half an anna, but the best leafy C.T.C. Assams were steady and the price was raised up by half to one anna. The quotations were: best Assam C.T.C. Rs. 2-4-6, medium Dooars Rs. 2-1, medium Assam grainy dusts Rs. 2-2. In contrast, the leaf market witnessed very strong conditions because of the small quantity on offer, viz., 360 chests. Prices realised were above valuations.

COTTON PRICES LOOK UP

(From Our Own Correspondent)

BOMBAY, 21*st April*

Sentiment in both the forward and spot markets in cotton has been on the whole healthier during the week under review. Though hesitation still marks the activities in the forward market, confidence has returned largely as a result of the revival of mills' interest in the spot market. The statistical position is also beginning to be felt. The widening of the difference between the two contracts to over Rs. 16, too has gone to induce a greater balance in the outstanding business, because a part of the straddle trade has been liquidated. This has brought about purchases in May contract with sales against earlier purchases in the August contract. Had it not been for the too obvious eagerness on the part of some longs in the maturing contract to lighten their burden, as a result of this rise in the price of May contract, the price of May would have been more steady than at present.

Though hedges by spot houses are not likely to be lifted altogether, a movement to transfer these to the later contract is now in evidence. This is also calculated to restore the balance further and to narrow down the gap between the two contracts. The final result will depend, however, on the readiness of bull operators in the forward market to take delivery, and, looking to the conditions in the spot market at present, it is likely that there would be less hesitation now to do so. This fact will, in itself, go far to reduce the quantity tendered for delivery next month. Technical considerations, such as room rates, also will play some part. But, on the whole, a stampede of unloading in May, which was feared at one time, with its upsetting effect on the market, is not now likely. The only danger to the forward market at present is from the very depressing influences from other forward markets, especially from bullion, because of a large amount of interlocked trade, owing to the identity of certain large-scale operators in both the markets. This might upset all reasonable calculations and create a panic where grounds for none exist.

As expected, after the long stretch of holidays leading to a closure of the spot market, there is a revival of mills' demand at Sewri. Conditions in the cloth market are very helpful at present and consumption of Indian cotton, in spite of Government's discouragement, has been on the increase. Unless there is a fillip to imports later in the season, the pressure on the diminishing supplies of Indian cotton, especially of good quality, is bound to increase. Imports may not go beyond 600,000 bales, unless traders are allowed to import U.S. cotton on their own account, for which a move has been set on foot by the trade. All these conditions will operate with greater force in the case of spot trading than in the forward market.

The presence of the 11-member U.S. Farm and Agricultural Trade Mission in Bombay this week might result in some concession by way of extra facilities for import of U.S. cotton in the country, for which this mission is seeking markets in Asia. Apart from Japan, India is the biggest consumer of cotton in Asia, in general, and of U.S. cotton, in particular. It is the short supply of dollars which prevents a greater consumption of U.S. cotton in this country and greater restrictions by the authorities on imports of this cotton. If the mission can succeed in removing this difficulty with regard to exchange, there is bound to be a greater inflow of U.S. cotton in the coming months. This might ease the supply position as well as that with regard to the staple-very-of. At present, this is the only factor which the spot market has to take into account in its operations and expectations.

There has also been some reduction in the price of East African and Sudan cotton at recent auctions. But this reduction though insignificant, is not enough to upset the advantage which U.S. cotton enjoys in the Indian market, if exchange difficulties can be overcome. Import trade might also revive in the coming months because of reduction in the price of Egyptian cotton, which is based on New York futures. But there is little of the type of cotton required by India now left at Alexandria. In any case, whatever the source of imports, some revival in import trade in the spot section is sure to be a feature of trading during the next month or two.

The cotton futures market did not experience any wide fluctuations in prices during the week under review. The tendency, however, was generally upwards. I.C.C. May began the week with a steady note at Rs. 671 and, in following encouraging reports from the spot section, gradually moved up to Rs. 682 on Monday. At higher levels, profit-taking set in and the contract receded to Rs. 675 yesterday. Support was again in evidence today when it recovered to Rs. 678, before closing lower at Rs. 676-12. The net gain over the week was to the extent of Rs. 5-8. I.C.C. August opened at Rs. 683 and, after advancing to Rs. 699 on the 19th inst., drifted lower to Rs. 689-8 early today. Towards the close, however, it staged a recovery to Rs. 693-8. The net gain was Rs. 8-8. The spread between the two contracts which was Rs. 13½ last week-end widened to Rs. 16¾ today.

The following is the trend of prices in the forward market during the week under review:

	Closing 13-4-54	*High*	*Low*	*Closing* 21-4-54
I.C.C. May ...	Rs. 671½	682	671	676¾
I.C.C. Aug. ...	Rs. 685	699	685	693¾

Latest available quotations from the spot market are: Bengal *deshi* Rs. 625; Berar Jarillas Rs. 795; Khandesh Rs. 870; Vijay Rs. 900; Oomra *deshi* Rs. 745; Moglai Rs. 715.

India's interest in the Karachi market is admittedly theoretical. While the tendency towards lower prices at New York, Alexandria, Kampala and Khartoum, which are its natural rivals, is bound to affect prices at Karachi, the statistical position there is not such as to cause much anxiety either to the trade or to the authorities. Receipts

in Karachi during this season till the beginning of this month amounted to 1,048,977 bales, as against 1,429,891 bales during the same period last year. Exports this year during this period came to 753,615 bales, as against 994,700 bales in the preceding season. Excluding the carry-over, Karachi has still to dispose of nearly 250,000 bales of this year's crop. The Continent, which used to favour Karachi, is gradually losing interest in this market, especially now that the spinners in Europe are reported to have covered the requirements for months ahead. The U.S. cotton is likely further to replace Pakistan cotton in these markets, with liberal cash credits given to some of the countries in Europe for the purchase of American cotton. Sooner or later, Karachi will, therefore, be forced to peg down the rates, if it wants to dispose of this quarter of a million bales on its hands. Latest quotations from Karachi market are: Sind *deshi* Rs. 79; Punjab *deshi* Rs. 76 to Rs. 77-4; 4F Punjab Roller Rs. 79-8; S.G. Rs. 85; L.S.S. Punjab Roller Rs. 82; S.G. Rs. 86-8; N.T. Roller Rs. 82-8; S.G. Rs. 87-8; 289F Punjab Roller Rs. 85-8; S.G. Rs. 90.

At Alexandria, there has been easing of prices all round, as a result of the decline in the New York market. Some centres on the Continent and the U.K., however, are still interested in Giza 30. Turnover at Alexandria is very much smaller in recent weeks, in marked contrast to the hectic activities early in the season.

At New York, both the new crop and the old crop deliveries have suffered decline, as a result of welcome rains in certain cotton producing areas previously suffering from droughts. But trade demand for export has remained steady. This, together with some short-covering, gave some support to prices. The undercurrents are uncertain and there is every possibility of a two-sided movement in the near future.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	20-4-54	12-4-54	6-4-54
Spot	35.20	35.00	35.10
May	34.10	34.05	34.24
July	34.22	34.22	34.41
October	33.78	33.76	34.03
December	33.76	33.74	34.02

ART SILK YARN RECOVERS

(From Our Own Correspondent)

BOMBAY, 21*st April*

Although easy conditions were witnessed during the early sessions of the week under review, the art silk yarn market staged a recovery yesterday which was fully maintained today. The initial easiness was the result of three bearish factors, namely, uncertainty regarding excise duty on art silk fabrics, large arrivals of imports, and reports of competition among Continental yarn producers to capture business in India, following the recent bulk purchase agreement signed by an Italian manufacturer with the Silk and Art Silk Mills' Association, Bombay. All these factors combined to induce selling pressure in art silk yarn and values drifted lower. The downward movement persisted till the close of the market on Monday. Yesterday, however, the market gained strength, thanks to the substantial relief in excise duty on art silk fabrics announced by the Union Finance Minister, and prices staged a recovery. But the recovery was not so pronounced as to make up the previous losses, so that today's closing quotations were lower than those eight days before.

In the forward section, 150D April contract receded from Rs. 774 to Rs. 758 on Monday. After recovering to Rs. 771 today, the contract finished a shade lower at Rs. 770. 150D May contract dropped Rs. 17 to Rs. 762 on the 19th inst., but improved to Rs. 775 today. In the spot section, 150 Japan fell by As. 2 to Rs. 4-9, but recovered to Rs. 4-11. 150 Italy, after declining from Rs. 3-14½ to Rs. 3-12, rose to Rs. 3-14. 120 Italy moved irregularly between Rs. 4-3 and Rs. 4-6 before closing at Rs. 4-4. 120 Japan, however, was fully steady at Rs. 4-13.

It is reported that several art silk yarn producing firms on the Continent have of late shown much interest in expanding their business with India. They are said to be offering favourable terms in the form of special terms and discounts. Some have even expressed their willingness to offer yarn at specially low and attractive prices. It now appears that the Syndicate of European yarn producers is now practically dissolved, the members being free to sell their product at the rates and on terms which suit them most. This development may not, however, be expected to bring about a marked decline in yarn prices in the country, what with the restrictions placed by the Government on imports. Much will also depend on the trend of the art silk fabrics and cotton piecegoods markets.

The staple fibre yarn section moved in sympathy with the art silk yarn market. An irregular trend was in evidence in the early sessions with alternate bouts of profit-taking and short-covering induced by rumours regarding excise duty on staple fabrics. Following the Finance Minister's proposal not to treat staple fibre as art silk for purposes of the excise duty on art silk fabrics, the traders thought that it would give impetus to larger production of staple cloth from domestic or imported raw staple fibre. Most of the yarn producing units which had either closed down or curtailed output were expected to reopen. This expectation induced considerable buying enquiries for yarn and prices forged ahead, with gains spreading to both forward and spot sections.

Staple fibre yarn (40×2) for April contract moved up by Rs. 16 to Rs. 699 before closing at Rs. 698. May contract rallied 19 points to Rs. 706, although it was a shade lower at Rs. 704 towards the close. In the spot section, 40×2 New Great was specially favoured and was taken an anna and a half higher at Rs. 3-10-3. Kohinoor, Century, Hind, Hirji and Sitaram gained an anna each to Rs. 3-11, Rs. 3-8-9, Rs. 3-8-3, Rs. 3-7 and Rs. 3-9, respectively. Among foreign yarn (40×2), Suico was better by half an anna at Rs. 4-2. Shinco and Fuji improved by a like amount, the former to Rs. 4-1-6 and the latter to Rs. 4-0-6. Aurora was fully steady at Rs. 4-1-6.

Steady trend in raw cotton prices and encouraging offtake in piecegoods markets induced good buying support for cotton yarn. The upward trend in values registered last week was maintained this week too. The improvement was particularly noticeable in the coarse varieties. Thus, among 20s, Hind advanced by As. 4 to Rs. 17-4. Edward and Madura rose by As. 2 each to Rs. 16-12 and Rs. 19-6, respectively. Seksaria gained an anna to Rs. 16-12. Among 10s, Podars was half an anna higher at Rs. 13-5. Modern was fully steady at Rs. 13-6 and Elphinstone at Rs. 12-12. Among 40s, Madura hardened by As. 12 to Rs. 28-8. Among 60s, City evoked excellent buying support and was marked up by Rs. 2-4 to Rs. 50. Finlay was unaltered at Rs. 59. Among 80s, Elphinstone was picked up at Rs. 60-12, as against Rs. 60-8. Finlay, however, lost a rupee to Rs. 65 and Sri Ram fell by As. 8 to Rs. 61-8.

The table below gives the prices of art silk, staple fibre and cotton yarns quoted yesterday, as compared with those eight days before:—

	21-4-1954	13-4-1954
	Rs. a.	Rs. a.
Art silk yarn—		
150 April (per case of 200 lbs.)	770 0	774 0
150 May	775 0	779 0
120 Japan (per lb.)	4 13	4 13
150 Japan (per lb.)	4 11	4 11
120 Italy (per lb.)	4 4	4 8½
150 Italy (per lb.)	3 14	3 14½
Staple fibre yarn—		
40 × 2 April (per case of 200 lbs.)	698 0	683 0
40 × 2 May	704 0	687 0
Suico (per lb.)	4 2	4 1½
New Great (per lb.)	3 10½	3 9½
Cotton yarn (per bundle of 10 lbs.)—		
10s Modern	13 6	13 6
10s Madura	19 6	19 4
20s Madura	25 0	25 0

60s City	50 0	47 12
80s Sri Ram	61 8	62 0
90s Khatau	—	57 8

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, 21*st April*

The firm trend witnessed last week gathered further momentum this week. This was partly due to generally encouraging advices from Madras and Adoni, where the Calcutta interests were reported to be hectically covering their commitments. There were also reports of large-scale smuggling of vegetable oils into Pakistan. Consequently, even the rumour that forward business in oilseeds might be prohibited in upcountry centres failed to damp the enthusiasm of operators. As a result, business done in the market was considerable and prices soared, thereby recording substantial gains over the week.

The genuine traders and consumers, as well as the Bombay Oilseeds Exchange, have been much perturbed over the persistent rise in oilseeds prices. Small wonder, the Bombay Oilseeds Exchange has suggested, in a telegram to the Chief Controller of Imports, New Delhi, that free imports of palm oil, palm *kernel* oil, coconut oil and cottonseed oil should be permitted. It has also urged token Imports of linseed oil, which is available at much cheaper prices abroad, since imports would help in realising the Government's objective of bringing down the prices of oils and oilseeds.

The firm trend was pronounced in groundnuts, on support from *vanaspati* interests. It was also due to the rumour that the Government would take into consideration, in the computation of quotas for export of H.P.S. groundnut kernels, the export to soft currency areas also in any one of the calendar years, namely, 1951, 1952 and 1953, as the case may be. As a result, Bold F.A.Q. shot up from Rs. 35-12 to Rs. 36-14. April-May and June-July advanced from Rs. 35-4 and Rs. 35-10 to Rs. 36-4 and Rs. 36-9, respectively. Khandesh quality gained Re. 1-2 to Rs. 38. Groundnut oil ready was higher by As. 10 at Rs. 19 and railway receipt by As. 6 at Rs. 18-12. April-May and June deliveries were done higher at Rs. 18-12, Rs. 18-14 and Rs. 19, as against Rs. 18-6, Rs. 18-9 and Rs. 18-11, respectively.

The linseed section ruled steady in sympathy with groundnuts. The firm trend in mustard seed in North Indian markets was also responsible for it. Linseed Bold ready rallied As. 10 to Rs 26-10. April-May and June-July deliveries were higher by As. 13 and As. 11 at Rs. 26-12 and Rs. 26-15, respectively. Linseed oil gained As. 2 to Rs. 15-2.

The castorseed section too ruled firm, mainly due to speculative support. Castorseed May delivery, which opened at Rs. 111-4 as against Rs. 111-2, fluctuated between Rs. 115-4 and Rs. 110-10 before closing the week at Rs. 114-2. The September contract disclosed a gain of Rs. 2-6 at Rs. 120-8; the highest and the lowest touched during the week were Rs. 121-10 and Rs. 117-12, respectively. Madras quality ready advanced from Rs. 23-4 to Rs. 23-14. Castor oil BSS moved up by As. 4 to Rs. 12-12 and First Pressure by As. 10 at Rs. 12-14. Commercial quality was steady at Rs. 11-12.

Even *kardi* and *niger* seeds proved no exception to the general firm trend in the market. Bold ready firmed up by As. 12 to Rs. 19-4 and June-July delivery by Re. 1-1 to Rs. 19-12. *Niger*, Madras gained As. 4 to Rs. 29-12.

The following table shows the prices of oilseeds and oil on the 21st inst., as compared with those at the end of the previous two weeks:

	21-4-54	13-4-54	7-4-54
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—			
Khandesh Quality Ready (per cwt.)	38 0	36 14	36 4
April-May	36 4	35 4	34 6
June-July	36 9	35 10	34 13
Linseed—			
Bold Ready (per cwt.)	26 10	26 0	25 4
April-May	26 12	25 15	24 9
June-July	26 15	26 4	24 12
Castorseed—			
May 1954 (per candy)	114 2	111 2	110 2
September 1954	120 8	118 2	117 4
Madras (per cwt.)	23 14	23 4	22 13
Groundnut oil—			
Ex-mill Ready (per quarter)	19 0	18 6	17 14
Castor Oil—			
Commercial (per quarter)	11 12	11 12	11 12

SUGAR PRICES SLUMP

(From Our Own Correspondent)

BOMBAY, 21*st April*

There was a sharp fall in sugar prices in the Bombay sugar market during the week under review, following the Central Government's decision to sell its reserve stocks (25 per cent. of current season's output) and imported sugar at a uniform price of Rs. 31 per maund all over India upto 15th May, 1954, and thereafter at Rs. 30 per maund. Those who had tried to corner their stocks, immediately after the forward sales in sugar by mills were banned, began to unload their holdings while buyers displayed a reserved attitude in expectation of a further downward trend. Arrivals of sugar, too, were a little larger, being 4,600 bags, as against 3,000 bags in the previous week. The consequent fall in prices more than wiped out the gains registered in the previous week. Actually, today's closing quotations were substantially lower than those two weeks ago.

The fall in prices was in marked evidence in the spot section. Large grain sugar was hammered down from Rs. 105-Rs. 110 to Rs. 100-Rs. 102 per bag. Small grain slumped by Rs. 6 to Rs. 95. Medium grain was lower at Rs. 97-Rs. 98, as against Rs. 103. Among foreign sugars, British refined was the worst sufferer, with a loss of Rs. 4 to Rs. 95 per bag of 2 cwts. Czechoslovakian receded from Rs. 100-Rs. 102 to Rs. 97-Rs. 98 per bag of 2 cwts. Cuban dropped Rs. 4 to Rs. 39-8 per 100 lbs. Mexican fell by Rs. 3-12 to Rs. 43.

In the forward section, *Chaitra* delivery which had gone up to as high as Rs. 92-4 last week was squared up at Rs. 88-8 per bag. *Vaishak* delivery declined by Rs. 2-8 to Rs. 87-8.

The Central Government's move to sell its reserve stocks and imported sugar at a uniform price throughout the country is regarded in market circles as a big pincer move to trap in all channels, it is said, have been dislocated as a result of this move. It, however, remains to be seen how speedily and efficiently the scheme will be implemented and the despatches effected by the mills against release orders issued by the Food Ministry. Some are inclined to feel that a serious lacuna still remains to be filled in so far as the release orders are concerned. As these are to be issued by the Food Ministry direct and not by the respective Regional Directors, some delay, fore, felt that, if disposals of sugar are to be speeded up, the Regional Directors should be empowered to issue release orders to specific mills up to a certain quantity.

As regards sugar distribution, it appears that the two trading bodies in the city—the Bombay Sugar Merchants' Association and the *Shakkar Vypari Mandal*—have each been allocated 23,000 bags of sugar for being distributed among the members. Meanwhile, consumers of, and dealers in, sugar from Hyderabad, Madhya Pradesh, Gujrat and other places in Bombay State are daily coming into the market to submit their tenders under the Government-sponsored scheme of distribution.

TEA IRREGULAR

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 17*th April*

The offerings in dust sale "G" which was held on Tuesday, 13th April, amounted to approximately 152,000 lbs. There was a good general demand and although prices were a little irregular the market remained steady.

London Market.—After easier opening, closed firm.

Colombo Market.—No sale this week.

Calcutta Market—Export.—No sale this week.

Dust.—24,900 packages. Less general demand. Market irregularly half anna easier. Best C.T.C. strongest feature.

Special Licence.—At the beginning and throughout the week small business has been effected at 36 pies, but sellers are scarce.

1954-55 Export Quota.—At the beginning and throughout the week a fairly large volume of business was done at 42-43 pies, which remains today's quotation.

Forthcoming Auctions.—Sale No. 8 will be held on Tuesday, 20th April, and dust sale "H" will be held on Tuesday, 27th April, 1954.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd. wire:—

"Sale 8.—9,60,000 lbs. Less demand. Prices irregularly one to two annas dearer for everything. Whole leaf grades strongest feature and dearer, particularly orange pekoes."

DECLINE IN RAW JUTE ARRIVALS

(From Our Own Correspondent)

CALCUTTA, 20*th April*

Conditions in the jute markets were again steady this week, which was short of three working days on account of holidays. Prices were well maintained. Argentina is stated to have bought 15,000 tons of hessian for June-July shipment, for which tenders had been called earlier in the week. The market anticipates more business from Argentina. The United States was also interested in hessian for July-September shipment. Ready hessian 40" 10 oz. opening at Rs. 43-8 was soon pushed to Rs. 44-2 last Thursday. The improvement yesterday took the rate up to Rs. 44-10. Although production of jute goods, during March, was higher at 75,600 tons as against 68,300 tons in February, the fact that mills were reducing the percentage of production of hessian to that of sacking brought in an element of firmness to hessian. Foreign consumers were reluctant to follow the increase in prices, but shippers had to accept offers to honour commitments. Most of the benefit from the higher prices was derived by the bazar stockists as mills had only little to offer. Shrewd market men realise that the upward trend cannot be maintained in the coming weeks, in view of Continental competition. In the heavy goods section, a moderate quantity was bought for shipment to Australia. Ready B. twills improved to Rs. 110-4 from Rs. 109-2, and the July-September position to Rs. 107-10 from Rs. 106-10. Very firm conditions prevailed yesterday and this raised the rate further to Rs. 112.

Foreign demand for jute goods during recent months has shown that it is difficult to establish a correct relationship between the percentage of production of sacking and that of hessian. One or the other is often higher, but an overall increase in production is not yet called for, although no difficulty is anticipated for meeting raw material requirements even in the event mills decide to increase working hours. The question centres around demand, which supports neither an increase in overall output nor the establishment of any new mill. In this context, Assam's desire to establish a jute mill should be stiffly resisted, and the news that the Central Government is not agreeing to the proposal of a private party to establish a jute mill in Assam suggests that there is full realisation in New Delhi of the industry's views in this regard. Assam is a major producer of raw jute, particularly of superior types. Being sympathetic to Assam's desire to have a mill, the Union Government is reported to be attempting to persuade a mill in West Bengal to shift to Assam. If any of the West Bengal mills agrees to this suggestion, it would indeed be welcome. The loss of production during the time this transfer takes place and the considerable money that would be required for this purpose are deterrent considerations. Perhaps, the Government will come forward with helpful proposals to effect such a transfer.

The raw jute market was firm. Fresh arrivals were small, and sellers were reserved. Mills bought small quantities, although they resisted paying higher prices. For, mills are not benefited by the present rise in the rates for jute goods, since even before this improvement, forward positions had been booked up. As such, it is difficult to see how the better trend of prices in jute goods can be maintained in the days to come. This is, of course, usually the period when raw jute looks up. With depleted stocks and mills' need to consider every offer of raw jute sale in order to enable them to plan their manufacturing programme, stockists of raw jute insist on their terms. This year, owing to the delay in rain in several districts, the new crop would take more time than usual for coming to the market. For the same reason, a near estimate of the crop is not available. So, when raw jute prices are forced up, stockists of jute goods lose no time to push up prices, although such a trend is harmful to mills. At Rs. 28-8, northern bottoms gained As. 8, and Assam bottoms were higher at Rs. 28. Jat bottoms came to business at Rs. 31, and Murshidabad tossa bottoms were enquired at Rs. 28.

FOODGRAINS QUIET TO BEARISH

(From Our Own Correspondent)

HAPUR, 19*th April*

Foodgrains and pulses markets remained quiet to bearish during the week under review, and prices in the spot section moved within a narrow range. The Indian Food Minister, Mr. R. A. Kidwai, has expressed the hope that the Government would remove the remaining controls on wheat and rice at an early date, in view of the continuous improvement in their supply position. The main problem today is, according to Mr Kidwai, the question of movement of foodgrains from place to place. The transport problem is expected to be solved soon facilitating easier movement of foodgrains from place to place. The Union Minister for Agriculture, Dr. Punjabrao Deshmukh, has expressed the confidence that India's agricultural production would be doubled in five to ten years' time. If the present pace in agricultural production is maintained, India will not be required to look to any country for help to feed the people.

Rice is again in the news this week. The Indian Food Minister claims that rice is available in plenty now in the country. India has produced enough for its requirements. The first shipment of rice from Burma under the new agreement will be arriving in a few days. It is announced that, by the middle of May, after a few shipments of Burma rice have reached, rice rationing will have been lifted totally in Bombay. Assam, a deficit State till now, has a surplus of nearly 72,000 tons of rice and Mysore is faced with unsold stocks amounting to 30,000 tons. In these areas, prices of rice are reported to be considerably lower than the Government rates and, if this position continued, prices may, it is feared, decline to an uneconomic level to the farmers. It is learned that India will export 200,000 tons of rice this year and this is the first time it is doing so after the lean years of the war and post-war period. Japan and China have asked for this rice. Canada may also be interested in our better quality rice as, indeed, it was before the war.

With regard to wheat, it is revealed that India has not made any proposal to the International Wheat Council for imports and a boat which was coming empty now has been asked to bring 10,000 tons. It is quite likely that India will be using another ship like that and bring in another 10,000 to 15,000 tons, but no decison has been taken regarding large-scale import of wheat. India imported 29,650 tons of foodgrains from abroad during the first three months of 1954. They included 9,250 tons of wheat, 12,300 tons of rice and 8,100 tons of milo. In addition, 9,900 tons of rice have been received from the Government of Ceylon in exchange for indigenous rice to be supplied to it. The total quantity of rice procured during these three months was 690,750 tons.

According to the final estimates of the current year's *rabi* crops, the area is put at 5,472,000 acres and the yield at 1,564,000 tons. The revised estimates published some time ago placed the two figures at 5,428,000 acres and 1,238,000 tons, respectively. Mysore and Hyderabad have contributed mostly to the increased yield this year.

It has been decided to allow, with immediate effect, free movement of rice on trade account witnin the zone comprising Punjab, P.E.P.S.U., Himachal Pradesh and Bilaspur States. Exports out of the zone will not be allowed. The zoning arrangement for the free movement of wheat in the above-named States will come into force from 1st May next. Government, however, continues to issue unrestricted quantities of wheat from its sale depots in Delhi at the issue price of Rs. 15-8 per maund.

Harvesting of *rabi* crops is nearly over in U.P. and threshing operations are in full swing. Market arrivals have also begun. The supply position is steadily easing and, with this, prices of nearly all the cereals, particularly wheat, are coming down. Wheat prices have also fallen in Punjab and Madhya Pradesh. Gram has remained stationary, since arrivals are poor in face of a moderately good demand. Gram supply position in Bombay and Madras has now considerably improved, following recent receipts. There has been some bearish reaction on rice prices also. Assam and Bihar reports confirm easier conditions. Prices may fall still lower, with the crop movement gathering full momentum. As stated above, *rabi* crop prospects this year raise hopes of an increased yield.

KIPS RULE DULL

(From Our Own Correspondent)

MADRAS, 19*th April*

The kip market has remained steady and trading with the U.K. has been dull due to proximity to Easter holidays. Stockists decline to accept lower prices and shippers think that the bottom has been reached. Enquiries for cow calf and buff calf have been poor. Arrivals of tanned buff heavies have been small and met with keen competition.

In the tanned skins section, prices rule firm, due to good clearance. There were good enquiries for tanned goat skins from the Continent and the U.S., and a few sales of drysalted goat skins to the U.S. have been reported.

BUFF RECEDES

(From Our Own Correspondent)

KANPUR, 18*th April*

During the week under review, the conditions of the hides and skins market were slightly different from those in the previous week, inasmuch as there was an easily detectable downward trend in the prices of wet salted buff which is the second important category of the market. The other facets of the market were more or less the same. Wet salted cow was in brisk demand.

Latest quotations are: Wet salted cow, 1st grade Rs. 240 and 2nd grade Rs. 160 per score; wet salted buff, 1st grade 1 lb. 14 ozs. to 2 lbs. and 2nd grade 2 lbs. 4 ozs. to 2 lbs. 8 ozs. per rupee; goat skins, 1st grade Rs. 300 and 2nd grade Rs. 250 per 100 pieces. Sheep skins Rs. 250 to Rs. 300 per 100 pieces.

COMPANY AFFAIRS

(Concluded from page 796)

cent. and a bonus of 1 per cent. But the distribution for 1953, being on a higher capital raised during the year by capitalising Rs. 55 lakhs out of the general reserve, the sum required for this purpose absorbs Rs. 6.05 lakhs more than in the previous year.

The following comparative table shows, at a glance, the salient features of the Company's financial results for the last four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950

Carry forward	4.28	4.21	2.86	4.16

The Directors report that, for most of the year under review, the Company's factories in India worked to their full capacity, but reduced consumption, coupled with increased competition from the low-priced products of subsidised cottage manufacturers, resulted in a somewhat lower production and sales towards the end of the year. Reflecting the lower production and sales are (1) the decline of Rs. 76 lakhs in sale proceeds, (2) the increase of Rs. 14 lakhs in the value of closing stocks, and (3) the fall of Rs. 30 lakhs in excise duty paid. The provision for depreciation has been raised by Rs. 4.80 lakhs, consequent on the sizable fresh addition made to the fixed capital expenditure. The cut in the provision for taxation follows the fall in gross profit. Although the decline in net profit, at Rs. 43.03 lakhs, is only Rs. 7.14 lakhs, the allocation to the reserves has been reduced substantially by Rs. 15.44 lakhs. The sum of Rs. 4.56 lakhs added to the reserves from the profit for the year under review represents the allocation to the general reserve, as against Rs. 17.50 lakhs provided last year. In addition, a sum of Rs. 2.50 lakhs was transferred last year to the dividend equalisation fund.

The paid-up capital of the Company was raised during the year from Rs. 2.20 crores to Rs. 2.75 crores, by the capitalisation of Rs. 55 lakhs from out of the sum standing to the credit of the general reserves. This was the fourth time that the Company raised its paid-up capital by capitalisation of reserves.

After the capitalisation of Rs. 55 lakhs in 1953, as aforesaid, the reserves and surplus as on 31st December, 1953, stand at Rs. 73.52 lakhs, as against a paid-up capital of Rs. 2.75 crores. The provision for taxation amounts to Rs. 1.02 crores and current liabilities aggregate Rs. 1.39 crores. There has been an addition of Rs. 36.79 lakhs to the fixed capital expenditure during the year, bringing the gross value of the block account to Rs. 2.50 crores. As against this block, a depreciation fund of Rs. 1.50 crores has been built up. The current assets amount to Rs. 4.90 crores, representing more than twice the current liabilities and provision for taxation. Of the current assets, cash balances alone account for Rs. 1.39 crores.

The Rs. 100 fully paid-up shares are being currently quoted at Rs. 211-14 *cum-div.* On an *ex-div.* basis, the shares offer a yield of 5.5 per cent. per annum, free of tax.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. x Sales and amount written off. (k) Investments. ‡ For ten months ended 31st December 1951.

(1) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Rs. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 764 in the debentures section:—

§§ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952 or on any subsequent interest date at one month's notice.

(e) Redeemable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955 on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at 3 per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months notice.

MARKET GOSSIP

(Concluded from page 767)

but also because, in many cases, scientific, technical and industrial knowledge and capital equipment can best be secured with foreign capital." Although the Government considers, as is well known, each application for investment of foreign capital on its merits, its action has invariably been guided by four broad considerations: (1) The new project should lead to greater production, (2) there is a genuine programme of manufacture, (3) the new project is undertaken in a sphere where Indian capital has not ventured or Indian technical know-how is not available and (4) the project will lead to saving in foreign exchange. Now, Mr. Deshmukh singled out the last consideration for special comment and emphasis. He illustrated it by a reference to investment in the field of oil refining. The total foreign capital invested in the refineries is of the order of Rs. 35 crores. By importing crude oil to the tune of Rs. 26 to Rs. 27 crores, the refineries will manufacture oil which, at current prices, may be valued at Rs. 44 crores. There is thus a net saving of Rs. 17 to Rs. 18 crores of foreign exchange per year (though some allowance will have to be made for profits remitted abroad). Besides this advantage, the refineries provide employment, both direct and indirect, and help train young Indians in an entirely new industry. Now, this is true of many a foreign enterprise. It is not perhaps as widely realised as it should be that, in many fields of industrial enterprise, new ground was broken first by foreign enterprise, though many Indian concerns profited by the work of the early pioneers. Mr. Deshmukh rightly stressed that foreign capital is "desirable and welcome, provided it is of the right kind and is sought to be invested in the right field."

* * * *

Foreign capital may come in in the form either of direct investment through private channels or of indirect investment by means of a Government-to-Government loan. Which of these two methods is the better? We have always held that direct (private) investment is the better form of foreign capital participation in the economic development of the country. There are, as Mr. Deshmukh pointed out, at least two advantages in direct investment. In the first place, direct investment "earns its income out of the profits it creates." This "flexibility" is not shared by the loans made on a Government-to-Government basis. Secondly, private foreign investment "usually brings with it the technical know-how." Since it is in the interest of the foreign investor that the concern should earn a reasonable profit, he brings the best talent of which he is capable to bear upon the new enterprise. It is true that even when a Government-to-Government loan is given, foreign technical personnel could be invited by the country receiving the loan to assist it. But experience shows that, since these experts have no stake in the industry in which the loan is invested, they cannot possibly take the same responsible interest in the new undertaking, initiated with the assistance of the foreign loan, as in the case of direct investment. In any case, these experts, whose services have to be paid for "cast a heavy burden" on the country receiving the loan. But when a foreign investor participates in an undertaking in this country or in any other underdeveloped country, he places the services of his technical men freely at the disposal of the new industry.

SURVEY

(Concluded from page 771)

substance, with a view to its use, sale, transport, delivery or disposal.

At the outset, Mr. Hirway stated that it had not been disputed that the strength of the office was below ten. A manufacturing unit with ten or more employees comes within the definition of "factory," if it uses power. He held that the teleprinter in the *Navprabhat* was part and parcel of the office and it was run by electric power. Referring to this machine and the manufacturing process, he said:

"This machine is run by electric power and sheets of newsreels are constantly manufactured out of this machine. These newsreels are taken out of the machine and the news printed therein is given a new heading, is moulded into a new form and takes a different shape. In this way, the manufacturing process is carried on in the *Navprabhat* with the aid of power."

Thus, the *Navprabhat* fulfilled, in his view, all the requirements of the first definition of a factory in the Act. Assuming that the teleprinter machine did not carry on any manufacturing process, the *Navprabhat* nevertheless came, according to the Judge; within the second definition, namely, that it employed 20 or more persons and a manufacturing process was being carried on there without the aid of power. To quote him:

"The *Navprabhat* is a daily newspaper and the main work of the persons engaged in its office is to collect material for the manuscript of the paper. The news and articles received in the *Navprabhat* press, either through the teleprinter machine or through any other source, is the raw material for this factory. Some material is received through post, some through reporters and some through telephone or radio. All this raw material is treated and adapted by the editorial staff and a new shape is given to it. The news is moulded or casted in a particular manner, attractive and exciting headings are given, suitable headlines are found and, out of all this process, a final product, namely, the manuscript of the *Navprabhat* daily emerges which is used for printing in the press and the paper thus printed is sold. None can dispute that the material received in a newspaper office is in a crude form and in a raw state. This crude and raw substance is subjected to the process of treating or adapting and is finally rendered fit for printing in the press. Such a change would come within the meaning of the term treating or adapting any article or substance with a view to its use, and thus would constitute 'manufacturing process.'"

In this way, he held that the *Navprabhat* office satisfied all the important "ingredients" of a factory. Earlier, he pointed out that the Payment of Wages Act applied to all persons employed in a factory whether they were officers or otherwise and whatever was the nature of the work they did—clerical, manual or otherwise—so long as their wages averaged less than Rs. 200 a month. In passing the Act, he added, the Legislature had carefully avoided the use of words like "workers", "workmen" and "employees", which occurred in similar Acts pertaining to social legislation. Consequently, he held that the nar

Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. LXXXVIII. No. 2254 BOMBAY, 1 MAY, 1954 PRICE Rs. 1/8

INDIA AND U.S. SURPLUS FARM PRODUCTS

FOR over a week now, the eleven-member U.S. Farm and Agricultural Trade Mission has been touring India and will have probably left the country by the time these lines appear in print. It has met a cross section of business men and Government officials. It is not known what impressions the Mission is carrying with it. Surprisingly enough, not much has been said in the daily Press about the discussions that took place between the members of the Mission and the Indian representatives. Nevertheless, there is enough evidence that the Mission's visit has not created lively enthusiasm and failed to evoke much attention even in the circles intimately concerned. The cotton market, for instance, scarcely took any notice of it, though at one time it used to speculate on the outcome of this move. If this is an indication of India's interest in the proposals put forward by the Mission, then it reflects a poor appreciation on the part of both the mercantile community and the officials of the possibilities of developing trade with the U.S. which these proposals offer. Although the object of the American Mission and its arrival in India were known to them for some time, it would appear that no concrete proposals had been evolved by the Indian side and that much of the talk that took place was of a rambling nature. It is true that the delegation is only on a fact-finding mission and that it has no powers to enter into any firm commitments. All the same, it would have been worthwhile if a carefully thought out scheme for exchange of goods between the two countries had been presented to it, for such would have helped the Mission to give, on its return to America, a precise picture of India's needs to the U.S. Government. Perhaps, it is not too late to do so even now. With the explanations provided by the members of the Mission, India can submit a tentative scheme for consideration by the American side.

One reason for the lack of keen interest displayed by this country in the Mission may be the present none-too-happy political relations between India and the U.S. This, however, is not an adequate explanation. The Mission has been here to discuss not aid but the prospects for trade, an exchange of goods between the two countries on a mutually satisfactory basis. Acceptance of aid may mean an obligation, which India is understandably reluctant to undertake. Surely, there is no such obligation in a two-way trade, under which one country pays for the goods bought in terms of goods. It may, of course, be necessary for the U.S. to provide some facilities to India for making the payment in goods. But that is a normal feature of trade agreements, especially those concluded in a sellers' market, and does not amount to any extraordinary favour being conferred by the U.S. on India.

It is common knowledge that the U.S. has large surpluses of a variety of agricultural commodities and farm products. They are so large as to cause "serious concern" over the economic stability of the U.S. What is even more disquieting is the fact that production of these goods still continues to be in excess of the U.S. needs and currently available export outlets, with the result that the surpluses threaten to expand further. Although steps have been taken to restrict output, the process has to be gradual, as, otherwise, it will cause severe hardship to American farmers which, in turn, will adversely react not only on the whole U.S. economy but also on the world economy. It is, therefore, a difficult problem to be solved quickly.

A few figures may be cited to show how vast are the surpluses. Carry-over stocks of wheat on 1st July last aggregated 562 million bushels, that is, more than twice what they had been a year before; these are expected to go up further to 875 million bushels on 1st July, 1954. Similarly, the cotton carry-over, which stood at 5.5 million bales (of 500 lbs. each) on 31st July, 1953, almost double the previous year's volume, is expected to reach a total of 8.6 million bales on 1st August next. Corn stocks, which had advanced by more than 50 per cent. to 764 million bushels by 1st October last, are expected to aggregate some 900 million bushels by 1st October next. Holdings of fats and oils almost doubled in mounting to 1,550 million lbs. on 1st October, 1953, and will climb up to 1,650 million lbs. on 1st October, 1954. The U.S. Government's anxiety over this situation is aggravated by the fact that, thanks to its price support scheme, a great part of these surpluses has found its way into the warehouses of the Commodity Credit Corporation. Practically the whole of the wheat surplus is held by the C.C.C., the value of such holdings being placed at $2,250 million. Again, more than 8 million bales of cotton, valued at $1,400 million, are either in inventory or under loan. The aggregate investment by the C.C.C. is placed at $6.250 million, divided between inventories and crop loans, their exact share being $2,650 million and $3,600 million, respectively.

The leader of the Mission to India, Mr. H. L. Brinkley, publicly stated in Bombay that the U.S. did not want to disturb the markets of other countries by "dumping" its surplus production. Nor did it desire to destroy the surplus in order to keep up the price levels. Its object was to explore stable markets for its agricultural production and to utilise its surplus for the benefit of the needy people, instead of allowing such surplus to deteriorate in storage. These are encouraging remarks. They show that the Americans are conscious of the need for avoiding the tragic dilemma in which the world found itself in the 'thirties with excess stocks co-existing with hunger. Of course, mere awareness of this need will not do; what is urgently required is its translation into action. The solution lies in increasing the purchasing power of poorer consumers in the world.

The problem is not a simple one, for, even if the Americans are prepared to make a free gift of some of their surpluses, it cannot do so without hurting the interests of some of the other countries producing the same goods. The latter countries may complain that their markets have been lost. When the U.S. offered to sell tobacco to Europe at market prices for deferred payment (that is, for payment in local currencies), Indian tobacco growers, for instance, alleged that their traditional markets were being "stolen" by the Americans. Similar charges may be made by the Australians and Canadians, if the U.S. gives away large quantities of wheat to the needy countries at nominal prices or on very easy terms. The best way of disposing of the surplus products, therefore, is to create additional demand in the countries that offer markets for them. This will necessarily take some time and require the energetic co-operation of the importing countries.

The U.S. Government is trying to dispose of its surplus farm products in two ways. One is to sell farm surpluses to foreign countries for local currencies, which will not be cashed for some years, and the other is to exchange them for commodities which are needed by the U.S. Hardly any progress has been made under the commodity-for-commodity method, while $225 million are expected to be disposed of under the first method (namely, the sale for local currencies) before the end of June next. New proposals are being designed to sell more under this method during 1954-55. American officials hope that the revised programme, which will be submitted to the Congress shortly, will enable them to clear the accumulated stocks at least to the tune of $300 million, if not more. In order to make the new programme attractive to recipient countries, they propose to let them use the largest part of the sale proceeds for financing their development projects. The bulk of the shipments next year, we are told, will be to underdeveloped countries, principally in Asia. The magnitude of this programme is, however, not so impressive when compared with the towering surpluses.

If Mr. Brinkley's remarks are any indication, the U.S. seems to prefer the commodity-for-commodity arrangement, for it is more specific in regard to the payment for imports of American surpluses than the sale-for-local-currencies method. For all practical purposes, the former is a barter agreement, the only difference being that the recipient country agrees to pay in goods not immediately but over a period, say, of five or ten years. The basis for determining the quantum of goods will presumably be the world prices ruling at the time of negotiating the deal. It will not be realistic to expect the U.S. to sell below world prices, for it will then be accused of dumping by other countries producing the same commodity. The country buying American goods under this scheme has two advantages. First, it receives ready delivery of goods, the sale proceeds of which can be used for financing its development projects. Or, alternatively, it has an assured supply of goods in reserve, against which it can

create purchasing power for implementing its development programme and absorb the currency from circulation as and when the commodity reserves are sold. Secondly, it can sell to the U.S. those goods for the production of which it has all the necessary facilities but which it is unable to use now for want of markets. Even if the scope for this is limited, the advantages of booking orders in advance for, say, five years, are obvious; briefly, they amount to providing a guaranteed market for the products concerned and the producers thereof can plan their production programme with confidence.

India, in our view, stands to gain by such an arrangement. Its reserves of cotton are slender and a supply of half a million bales of American cotton will not be unwelcome. There will be no harm in building up a larger reserve of foodgrains than the one which it has at present. Prospects of better domestic food crops are doubtless brighter than they were in recent years and schemes for increasing the indigenous output are being steadily implemented. But the margin between the expected expansion of production and population is so narrow that one or two bad harvests could upset all the calculations. This is not a prudent risk to take at a time when we are planning to resort to deficit financing to the tune of Rs. 600 crores in the two years ending March, 1956. India is short of oils and fats, as well as milk. An increased supply of these by drawing on the U.S. reserves at a time when we are launching upon large developmental expenditure will help us to prevent the cost of living from going up, if not to bring it down. In exchange for the supply of these goods, India can undertake to supply larger quantities than it does now of jute goods, manganese, tea, pepper, coffee, cashewnuts, coir products, castor oil and a number of minerals such as manganese. Where supplies are found inadequate, arrangements can be made to increase their production, thereby providing opportunities for increased employment and an assured market for these products at least for some years. It will thus be seen that it is worthwhile exploring the possibilities of utilising the U.S. Government's move for the disposal of its surplus farm products for the mutual advantage of both India and the U.S.

WORLD RICE POSITION

WORLD food statisticians have struck the most cheerful note they have played for some time now by drawing attention to the fact that, in the last one or two years, food production in the world has outstripped the growth of population. To those who still remember the gruelling experience of food shortage in the war and early post-war years, the improvement in food output must be more than a mere comfort. They will derive no small satisfaction from the fact that, while the world population has increased by 1½ per cent. in recent years, the production of food in the free world alone has actually exceeded the growth of population by 0.7 per cent.

Although a large proportion of the world population depends for its food requirements on widely different articles of food, such as wheat and other cereals, quite a substantial part of the world's peoples depends almost exclusively on rice as a staple article of diet. Most Asian countries, including large parts of India, are inveterate rice eaters. Since the rice-eating population also inhabits economically underdeveloped countries—though there is no causal connection between the two factors—the availability of rice on an adequate scale in this region has both an economic and a political significance. From this point of view, it is gratifying to note that the U.N. Food and Agriculture Organisation has published a comprehensive report on rice, in the series entitled *Commodity Reports*, which throws much fresh light on world rice position.

World rice production, according to the report, rose by over 8½ million tons or by nearly 6 per cent. between 1951-52 and 1952-53. To give the actual figures: World rice output, excluding the output in the U.S.S.R., rose from 151.2 million tons in 1934-38 period (average) to 152.3 million tons in 1951 and still further to 161.1 million tons in 1952. Many factors contributed to this increase. But the F.A.O. cites the opinion of the U.S. Department of Agriculture, which attributed the increase in rice production to the inducement provided to the growers by the "unusually high prices for rice in 1952" and the concerted effort of world organisations and Governments to stimulate rice production. The following table gives the rice production in different countries in 1934-38 (average), 1951 and 1952:

(In thousand tons)

	Pre-war average, 1934-38	1951	1952
Asia (excluding U.S.S.R.) ..	144,800	140,900	149,000
Of which			
Associated States of Cambodia, Laos, Viet-Nam ..	6,498	4,660	4,604
Burma	6,971	5,500	5,841
China:			
22 provinces	50,065	48,300	..
Manchuria	411		
Taiwan	1,642	2,040	2,100

Of which			
Australia	43	58	75
World total (excluding U.S.S.R.).	151,200	152,300	161,100
U.S.S.R.	318	..	..

The increase in rice output has been rendered possible mainly by the increase in the land under rice. Thus, the acreage under rice improved from 85.8 million hectares in pre-war years to 94.3 million hectares in 1951 and to 95.5 million hectares in 1952. Asia accounts for the major portion of the land under rice; its share increased from 82.0 million hectares in pre-war years to 87.6 million hectares in 1951 and to 88.5 million hectares in 1952. The rice yield per hectare has, on the other hand, declined from 17.7 quintals in pre-war years to 16.1 in 1951, though it has since improved to 16.9 in 1952. The yield in 1952, in terms of quintals per hectare, in some of the leading rice producing countries is (figures in brackets refer to the yield in pre-war years) as follows:

Burma 14.6 (14.1); India 11.8 (13.6); Japan 41.3 (36.3); Malaya 20.8 (17.2); Pakistan 13.1 (14.8); Brazil 15.4 (14.3) and Italy 49.6 (53.0).

Although there was thus an overall increase in rice production, the increase itself was unevenly distributed among the leading producers. In analysing the increase in output, the Report has drawn attention to the rice supply position in the countries which participate in world trade in rice either as exporters or as importers. Among rice-exporting countries, Burma continued its gradual recovery in acreage and production, although they still fell short of the pre-war levels by about 20 per cent. In Thailand, on the other hand, there was a sharp decline in rice output. General increase in production was recorded in a number of rice-importing countries. The Report notes that the "most notable improvement occurred in India." The heaviest rice importer, Japan, also reaped on an unchanged acreage a harvest of over one million tons more paddy than in 1951-52. The following table gives the area under rice and the production of rice in leading exporting and importing countries in pre-war years as well as in 1951 and 1952:

	Area (In million hectares)			Production (In million tons)		
	1934-38 (average)	1951	1952	1934-38 (average)	1951	1952
Exporting Countries

Total ..	36.8	42.0	42.8	58.1	56.5	62.9

In 1953, there was, as compared with the previous year, a decline in exports of rice from the principal rice-exporting countries. Thus, Thailand exported 1.11 million tons, as against 1.22 million tons in the previous year, Burma 0.99 million tons, as against 1.14 million tons, and U.S. 0.48 million tons, as against 0.63 million tons. This decline in international trade in rice is attributed to several factors. In the first place, many importing countries increased, as already stated, their domestic production of rice. Secondly, the fall in foreign exchange earnings in some countries compelled them to reduce their rice import targets. Thirdly, there was less rice available for export in some exporting countries, notably Egypt and Brazil. As a result of these factors, some exporting countries had larger surpluses of unsold rice than they had anticipated. But they did not, on that account, reduce their selling prices. If they had done so, the surplus might possibly have been reduced substantially.

The F.A.O. Report spotlights an important feature of the post-war rice situation. Thus, it refers to the fall in the proportion of the world production of rice which enters into foreign trade. In this respect, it is difficult to compare rice with wheat, as the rice that is exported is milled before export, while the reverse is true of wheat. If the exports of rice are converted into their unmilled equivalent, then one finds that, in 1934-35, about 13.5 per cent. of the world's wheat crop was exported but only 8.5 per cent. of the rice crop (excluding the U.S.S.R. in both cases). This disparity widened greatly in post-war years. In 1951, the proportion of wheat exports to total wheat production rose to 20 per cent., while that of rice fell to 5 per cent. Explaining the significance of the relative performance of the two commodities in international trade, the Report says: "The total rice grown is nowadays still higher than the total wheat crop, but the tonnage of rice entering into world trade is now only about one-quarter of that of wheat. Furthermore, the unsold stocks of rice suitable for export are normally very small, as compared with those of wheat. A change of a given quantity in world import requirements or world exportable supplies thus has much sharper repercussions on the world markets for rice than on that for wheat."

Normally, only small quantities of rice are carried over from one season to another. The shortage of capital in rice-producing countries and lack of storage facilities are reasons for the low carry-over stocks in rice. The years 1952 and 1953, however, proved exceptions. By December, 1953, Burma had 500,000 tons of unsold rice, Thailand 400,000 tons and Viet Nam 150,000 tons. Although these stocks are burdensome to their owners, it must be remembered that they form only about 1-1½ per cent. of world rice consumption or 25 per cent. of one year's world trade. By contrast, wheat stocks at the end of the year were 25 per cent. of the world consumption and 130 per cent. of the annual world (except U.S.S.R.) trade and, by the middle of 1954, they may be as high as 30 per cent. and 210 per cent., respectively. Be that as it may, it is estimated that, by July, 1954, rice stocks will aggregate 2.75 million tons.

The supply position of rice for the current year is comfortable. Apart from the unusually high stocks, a bigger rice output is forecast for a number of countries. Export availabilities are expected to be larger in a number of countries. The recent conclusion of the China-Ceylon agreement shows that China might be able to export at least 300,000 tons. Burma and Thailand have large stocks which should increase the export availabilities in these two countries. Viet Nam and Cambodia will together have an exportable surplus of 500,000 tons. Taiwan and Pakistan, according to the Report, may be able to export up to 200,000 and 150,000 tons, respectively. Although the position in several countries is still uncertain, it is predicted that the "world's exportable surpluses of rice will be considerably greater than the amount taken by importers in 1953."

The outlook for supply of rice, bright as it already is, is likely to be even better in the next few years. Many countries have set high production targets. The targets (in million tons of paddy), to be reached before 1956-57, for some selected rice-producing countries, are: Burma 7.8; Ceylon 0.6; India 41.4; Indonesia 11.2; Japan 13.7; Malaya 0.8; Pakistan 15.5; Thailand 8.2 and Viet Nam 4.1. For the Far East region, excluding China, a 23 per cent. rise over pre-war average production is expected by 1956-57, 11 per cent. to result from larger crop areas and 10 per cent. from better yields. Egypt hopes to double its present crop by 1956. Iran and Iraq have set higher production goals. Latin American countries are planning increases of varying degrees. If all the current plans are fulfilled, the world production of paddy in 1956-57 (excluding China) will amount to 129 million tons, as compared with 112.0 million tons in 1952-53 and 100.7 million tons in 1934-38. This would be an impressive increase in production. But it is necessary to remember that it would be somewhat difficult to reach the targets, considering that all the main rice-producing countries belong to the underdeveloped region of the world and that the execution of the plans for expansion in rice output imply large capital investments for which they do not have adequate resources.

INDIAN IRONS FANCIED WELL

CHEMICALS ATTRACT MORE INVESTMENT—BELGIUM GIVES A LEAD TO OTHERS

THURSDAY, 5 P.M.

THE new settlement on the Stock Exchange opened well this week. The market quickly got over the shock caused by Mr. C. D. Deshmukh's observations on dividend limitation. As we stated last week, there was no need at all for the market to have taken his remarks so seriously to heart.

MARKET GOSSIP

Reading between the lines, one could have easily noticed that he was only giving a diplomatic reply to those politicians who have not yet learned that socialism is a spent force. In any case, the Finance Minister's statement did one good thing at least. It helped to bring about a healthy shake-out and improve the technical position of the market. Many weak operators have got out, leading to a restrained activity. It is reported that some big investors availed themselves of the opportunity presented by the sudden fall in prices last week to make selective buying of some leading counters. Over the week, the majority of scrips have recorded small gains. In some cases, particularly steels, the improvement from the lowest levels touched early in the week is sizable. The general sentiment of the market is still bullish, though the tendency to enter into fresh commitments at this level is not so strong as it used to be some weeks ago. This is especially so in the case of textile shares.

• • • •

It is reported that there has been some heavy buying of Indian Irons by knowledgeable sources. This is attributed to reports that some scheme of capital expansion, which will be advantageous to the existing shareholders, is under consideration by the management of the Company. Whether or not there is any truth in these reports is beyond our ken. But whatever that may be, the volume of speculative activity in this scrip has expanded to a considerable extent. The place of Tata Deferred is being rapidly taken by this counter. This is neither in the interest of the Company nor in that of the investment market as a whole. It will make the task of the Company's management to issue new capital, whenever the need for it arises difficult, if the value of its shares is pushed up to a level which is beyond their intrinsic merits. The Company's management will do well to consider the advisability of quashing all baseless rumours by stating the real position.

• • • •

The bullion market is a shade quiet at the time of writing, after staging a quick recovery from the low levels touched last week. The closing rates, though somewhat below the highest levels witnessed earlier in the week, are substantially higher than those a week ago. At Rs. 94-3, ready gold reveals a gain of Re. 1-7; likewise, ready silver at Rs.171-1 shows a rise of Rs. 2-15. The firmness of both the metals is due to good seasonal demand in the face of smaller floating stocks. It would appear that, thanks to good agricultural crops all over India and fairly decent prices earned by farmers, the demand for both the precious metals is relatively better than in the previous year. Reflecting the improved offtake, ready gold commands a sizable premium of Re. 1. In the case of silver, too, the premium for ready, amounting to As. 10, must be regarded as substantial. A pleasant feature of trading in bullion in recent days is the absence of any concerted effort on the part of resourceful operators to form themselves into a syndicate and rig up the market, even though conditions are quite favourable for it. The offtake is good; arrivals are not plentiful; floating stocks, especially in the case of silver, are small and, above all, the monetary indices point to an inflationary situation. No rational explanation for the indifference of big speculators is forthcoming. Perhaps, it is the good fortune of Dr. B. V. Narayanaswami Naidu, Chairman of the newly constituted Forward Markets Commission, that the turbulent bulls have now become docile and disunited.

• • • •

The Indian bullion market is, of course, cut off from the world markets by the ban on imports. Nevertheless, the operators in this market will be interested to know that, for the first time after a long interval, the price of silver in the London bullion market has declined. The change is only a minor one, from 73½d. to 73¼d. per fine ounce for spot. But as even a minor change in this market is a rarity, it has aroused the inquisitiveness of operators there, necessitating an explanation on the part of market scribes. According to one of them, this slight fall is probably a reflection of the recent increase in selling on Russian account. He says that, although the U.S.S.R. has not been very active in the London market, it has been selling silver elsewhere in connection with barter deals and that some of this metal has flowed to London.

• • • •

The initial response to the new loan has been encouraging. In the first week, a sum of Rs. 31.5 crores was subscribed. Of this, about half seems to be on account of banks. The Imperial Bank, the Punjab National and the United Commercial—these three alone have subscribed Rs. 12 crores, their individual shares being Rs. 7 crores, Rs. 3 crores and Rs. 2 crores, respectively. It is a safe guess that all the other banks together must have taken up not less than Rs. 4 crores. Such a large subscription by the banks, even at a time when the seasonal demand for funds has not shown any appreciable slackening, was rather unexpected. It has, however, led to some tightness in the short-term money market and interest rates are firm. It has also rendered the Gilt-edged market friendless, with no buyers and all sellers. The following table shows how this market has fared after the announcement of the new loan:

	11-3-1954 Before open market operations	12-4-1954 Before the new loan was announced	22-4-1954 A week ago	29-4-1954 Latest closing
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
3% 1957	98 5	98 8	98 3	98 2
3% 1958	98 2	98 4	98 1	98 1
3% 1959-61	96 2	96 9	96 6	96 6
3% 1963-65	92 8	93 1	92 13	92 13
3% 1964	92 8	93 1	92 13	92 12
3% 1966-68	90 4	90 8	90 3	90 4
3% 1970-75	86 8	87 0	86 8	86 8
3% 1986 Conversion.	82 10	83 2	81 12	81 14*
3½% N. P. Bond ..	98 14	99 5	98 8	98 14

* Sellers at Rs. 81-12 reported.

It will be noted that the closing rates of today are a shade better than those a week ago and that, except in the case of the Conversion Loan, all the securities are now standing at almost the same levels as those that prevailed before the Reserve Bank started preparing the market for the new loan. Two conclusions emerge from this comparative study. One is that the downward trend has been arrested, for the time being at any rate. The other is that the loss in value following the issue of the new loan is no more than the fortuitous gain brought about by the Reserve Bank's open market operations. If the values of existing loans are well held at the current levels, the holders of such loans will, therefore, have no cause to complain that the new issue has placed them at a disadvantage.

• • • •

Appropos our report last week regarding the move by the Indian banks for controlling interest rates on deposits, we are reliably informed that it is not strictly correct to say that these banks want to abolish the system of call deposits. What they want is that these deposits should have a minimum limit in regard to both time and amount and a maximum limit on the rate of interest. Thus, no bank should accept call deposit and pay interest thereon in excess of the current account rate of ½ per cent. per annum, unless it is for, say, Rs. 50,000 and is not called before one week from the date of deposit. If anyone were to ask for payment of this deposit before a week was over, that deposit should be treated as current deposit. It is further understood that, although there is no move now to control the rates of interest on advances, steps may be taken in this direction after some time. Meanwhile, the Sub-Committee, which was appointed last week to go into the question of drafting the scheme for the control of interest rates on deposits, is working hard and will complete its labours in time for consideration at the next meeting of banks scheduled to be held early next week under the auspices of the Reserve Bank.

• • • •

The manufacture of chemicals seems to have caught the fancy of many a leading industrialist in this country. Last week, we alluded to Tatas' move for establishing a basic dye industry at Jamshedpur, requiring a capital of Rs. 10 crores, and to that of Birlas to establish a rayon factory in Bombay and soda ash factory in Saurashtra. We now understand that Tatas' move is still in a stage when no immediate steps are likely to be taken for its implementation. The Government of India has been kept informed of their plan and of the understanding which they have reached with the German firm, Bayers. It may be that active steps will be taken to translate their plan into action when the T.I.S.CO.'s expansion plan nears completion. Meanwhile, Tatas are said to be sponsoring indirectly through a firm of Ahmedabad millowners—believed to be Chias—a small dyes project involving a capital of Rs. 1 crore. In the implementation of this project also, they will have the assistance of Bayers. The factory will be situated either in Bombay or near Poona. A notable feature of this venture will be that almost all plant and machinery, except some of the value of Rs. 5 lakhs, will be manufactured in India.

• • • •

As for Birlas' move to have a soda ash industry in Saurashtra, the Central Government does not seem to be in favour of it, for reasons explained in our Delhi Letter this week. The Saurashtra Government, however, is said to be very keen on having this industry and it remains to be seen whether it will succeed in its plea with the Centre for revising its decision.

• • • •

Another industrial house is also said to be planning to make its contribution to the establishment of chemical industries. We hear from reliable sources that the Rohtas Industries Ltd., under the management of Messrs. Sahu Jain Ltd., is contemplating a heavy investment of about Rs. 10 crores on rayon, caustic soda, soda ash, paper and cement. It is already making these products, except rayon and soda ash. This means that, in addition to expanding the existing chemical, paper and cement factories, it proposes to add two new lines of manufacture.

• • • •

Yet another move that is calculated to increase India's production of chemicals is in the offing. The Atul Products Ltd., at Bulsar has decided on a scheme of expansion and is understood to have applied to the Government for a loan of Rs. 1 crore, presumably through the Industrial Finance Corporation. The Company is also said to be negotiating with I.C.I. (India) Ltd. for securing its assistance for the manufacture of new lines of dyes and for the marketing of the finished products.

• • • •

Prices of edible oils have risen, since the war, out of all proportion to the rise in prices of other commodities, in spite of the drastic reduction in oil exports. The reasons for this are varied, but a position has now arisen where the Government feels that there should be a considerable reduction in prices of edible oils to afford some relief to the consuming public. It has been suggested to the Government by the Bombay Oilseeds Exchange that, if cottonseed oil were allowed to be imported into the country at a preferential tariff, the pressure that the *vanaspathi* industry is exercising on the price of groundnut oil would be eased. It is, however, felt that apart from having some psychological effect, the above step by itself will not secure the desired results. On the other hand, it is feared that the few *vanaspathi* factories which have taken the initiative in using cottonseed oil, produced in India, would go in for imported cottonseed oil which is a more standardised product, particularly that from the U.S.A. The result would be that the nascent cottonseed crushing industry in India would be paralysed, as happened last year, while the majority of the *vanaspathi* factories, which apparently have some prejudice towards using cottonseed oil, would still continue to buy groundnut oil to the fullest extent of their requirements. If, therefore, imported cottonseed oil is allowed into the country at a preferential tariff, it is felt that, at the same time there should be a ceiling placed on the use of groundnut oil by *vanaspathi* factories to the extent of, say, 70 per cent. of the total oil used. These combined measures would have a very healthy effect on groundnut oil prices, since 25 per cent. of the *vanaspathi* demand for groundnut oil would automatically disappear, the balance 5 per cent. being made up of the statutory requirement for the use of *til* oil.

• • • •

The only other edible oil allowed to be used in place of groundnut oil in *vanaspathi* manufacture, without marking on the label, is cottonseed oil, and to facilitate this change-over imported cottonseed oil will largely figure in the initial stages. But, as domestic production of cottonseed oil increases, the imports can be tapered off over a period of a few years. It is also felt that these steps would, in fact, tend to increase the production of domestic cottonseed oil which would then be assured of a continued market and a steady price which would be related to that of imported cottonseed oil which fluctuates within narrow limits in the world markets. In regard to the marketability of *vanaspathi* produced out of, say, 25 per cent. cottonseed oil, it may be stated that, in other countries, particularly Pakistan, 100 per cent. cottonseed oil is used for manufacture of *vanaspathi*. There is, therefore, no reason why, if a limited quantity of cottonseed oil is used, the product should in any way suffer. Of course, the colour of the *vanaspathi* may be a shade darker, but already a few manufacturers are producing this type of *vanaspathi* in India, some of them being famous brands. In the national interest, therefore, it is desirable that any measure such as free import of cottonseed oil should be coupled with an enforced reduction in the use of groundnut oil in the manufacture of *vanaspathi*.

• • • •

By creating a "Ministry for the Middle Classes," the Belgian Government has taken a step, unprecedented in the constitutional history of any nation in the world. The Ministry, it is stated, will concern itself with the peculiar problems of this class. That the middle class has problems peculiar to itself and that it is a class which has played a distinguished role in world history as a stabilising force, has been acknowledged by all social thinkers. The World War I gave a jolt to this class. The rise of Fascism in Germany in the inter-war years and the success of the Communist revolution in China are both attributed, at least partly, to the difficulties which the middle class had to encounter. World War II has meant a virtual eclipse of this class in many countries.

• • • •

Caught between a rising price spiral and inadequately responsive incomes, the middle class has everywhere fought a losing battle. In India, the middle class, which has been a never-failing source of supply of men for the technical cadre, managerial work, retail trade and the learned professions, has been the worst sufferer in the inflationary aftermath of the war. Few people realise that the institution of every form of economic control throws hundreds of small traders out of their traditional jobs, that the increase in prices means a virtual loss of income to this class whose earnings are rigidly fixed. They have little bargaining power, thanks to the fact that they are disorganised. Indeed, it is this consideration which seems to have led the Government of Belgium to set up a separate ministry for the middle class. Organised workers could get the Government to adopt impressive social security schemes for themselves. No such scheme is in existence for middle class, especially the independent workers, shopkeepers and craftsmen. It would appear that the outgoing Belgian Government had introduced a Bill for independent workers but the contribution was fixed so high that the Bill was rejected by the Chamber. The new Ministry can be trusted to evolve a scheme more acceptable to the middle class. In any case, many in this country will wish godspeed to this new Ministry, and hope that it will provide some guidance to other countries, where the problems of the middle class have been no less intractable than in Belgium.

• • • •

It is reliably learned there is no truth in the report that the Shroff Committee has advocated a reduction in the Bank rate.

EQUITIES RULE STEADY

PROFIT-TAKING AT CLOSE

(From Our Own Correspondent)

BOMBAY, 29*th April*

THE Stock Exchange displayed a steady tone during the week under review, on a revival of buying orders in the new account which started on Monday. The downward movement caused on Thursday last week by the Finance Minister's statement in Parliament about dividend limitation gathered momentum early in the week under review due partly to end-of-account consideration and partly to the belligerent attitude of Pakistan on the Kashmir issue. The new account, however, opened on a confident note and a rallying disposition was soon in evidence. The recovery movement gathered strength on buoyant advices from Calcutta and firmness in the bullion market. The growing tension in Indo-China also gave a fillip to the bullishness. In broad and active dealings the entire body of shares, under persistent bull support and short-covering, moved up sizably. After three days of consistent rise, operators were disposed to pause and book their profits today. In the process, a good part of the earlier gains was wiped out and in some cases fractional losses were noted.

The world's attention has now been diverted to the Geneva Conference on the one side and the Conference of Prime Ministers of Asia in Colombo on the other. The profit-taking today was evidently due to operators' preference to wait and watch the progress of the talks. The fears about curb on dividends appear to have died out, presumably on the feeling that the Government might not take any action in this direction before the Taxation Enquiry Commission submits its report, even if the Government has any intention of freezing dividends.

Steel shares once again provided the lead to the market. Tata Steels had earlier reacted from Rs. 193-4 to Rs. 189-8, but in the new account advanced to Rs. 198 yesterday. The closing today was a shade lower at Rs. 196-8. After being marked down from Rs. 31-2 to Rs. 30-6, Indian Irons had a bright spell with a spurt to Rs. 31-10½ yesterday, due to paucity of sellers and keen enquiries from Calcutta. Today, however, they declined slightly to Rs. 31-5½ on rumours about issue of new shares.

Small but useful gains were noted over a broad front in the textile section. The reports of growing demand for cloth imparted strength to this section, despite profit-taking operations at the close. Bombay Dyeings declined from Rs. 418-12 to Rs. 410 early in the week, but recovered to Rs. 421-14, before closing at Rs. 416-4. After being placed lower at Rs. 313-12, Kohinoors enlisted support and came up to Rs. 323-4, but closed lower at Rs. 319. Centurys were a favourite counter and gained Rs. 5-12 over the week at Rs. 332-4. Central Indias disclosed no change over the week at Rs. 181-8. Finlays were done at Rs. 248 *ex-div.* (dividend Rs. 16) as against Rs. 263-8 *cum-div.* last week. Gokaks were steady at Rs. 255-8, so were Indu Ordinaries at Rs. 11-4½ and Indore Malwas at Rs. 112-8. Khataus shed Re. 1-4 to Rs. 120. New Greats picked up Rs. 5-8 to Rs. 158-8 and Podars Rs. 3-2 to Rs. 150. Shrinivas were unchanged at Rs. 216-4. Sholapurs scored a gain of Rs. 15 to Rs. 2,225. Simpiex were marked up by Rs. 3-8 to Rs. 157. Standards stood Rs. 2-8 higher at Rs. 322-8 and Svadeshis were done Rs. 2-8 better at Rs. 297-8. Swans were placed at Rs. 330 *ex-div.* (dividend Rs. 20), as against Rs. 350 *cum-div.*

Bank shares were quiet and sentiment towards the close was further affected by the award of the Labour Appellate Tribunal revising the scales of pay of bank employees. Central Banks were marked down by Rs. 2 to Rs. 54 and their new shares by As. 12 to Rs. 58-8. Imperial Fully Paids dropped Rs. 10 to Rs. 1,800, while their new shares were better by Rs. 3 at Rs. 442-8. Indias lost Rs. 2-8 to Rs. 145-4. Barodas were, however, better by Re. 1-12 at Rs. 108 and United Commercials by Re. 1 at Rs. 42.

Quiet conditions prevailed in the insurance section. Orientals were done Rs. 40 lower at Rs. 7,910 and New Indias Re. 1 lower at Rs. 45. Jupiters lost a fraction to Rs. 7-8 and Indian Mercantiles to Rs. 40-4.

The miscellaneous section followed the general pattern of the market and the undertone was steady. Belapurs had a gain of Re. 1-8 at Rs. 275-8 and Bhopals As. 4 at Rs. 12-8. Phaltans were fractionally lower at Rs. 105-8, while Walchandnagars gained Re. 1-4 to Rs. 177-8. Among cement shares, A.C.C. moved between Rs. 156-4 and Rs. 158-12, but closed at Rs. 157-12. Digvijays put on Rs. 2-12 to Rs. 122. Among miscellaneous industrials, Bombay Burmahs reacted on heavy selling pressure from Rs. 415-10 to Rs. 405-10. Alcock Ashdowns declined by Rs. 3-12. B.B. Petrols received some support and gained As. 2½ to Rs. 3-2½. B.I.Cs. were featureless at Rs. 8-4 and Indian Coppers at Rs. 3-1½. C.P. Railways changed hands Re. 1-8 better at Rs. 103-8. National Rayons were on offer and lost Rs. 2-4 to Rs. 153. The highlight of the section was provided by Premier Constructions which rose by Rs. 7-4 to Rs. 135-12 on influential buying. Shivrajpurs were quiet at Rs. 67. Tata Chemicals were favoured at Rs. 14-7½, a rise of As. 3½ over the week. Tata Oils were in demand on expectation of good working results and advanced by Rs. 2-4 to Rs. 41-12. Wimcos were unchanged at Rs. 210. Among shipping and transport shares, Scindias picked up As. 6 to Rs. 18-7. Bharat Lines had business a rupee lower at Rs. 95. India Steams were done As. 3 better at Rs. 8-10. Hindustan Motors firmed up from Rs. 8 to Rs. 9, but closed at Rs. 8-9. Premier Automobiles advanced from Rs. 66 to Rs. 73-8. Tata Locomotives were done at Rs. 121, as against Rs. 111-8.

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, 28*th April*

The Union Finance Minister's reference to the Government's readiness to review the question of limiting dividends of joint-stock companies caused a setback in share market conditions, and the nervous liquidation that followed brought down the values of several counters. It was, however, soon realised, that is, after the full text of his statement was available, that Mr. Deshmukh's statement was noncommital; what he had said was in reply to a suggestion which called for the reintroduction of dividend limitation. Since Monday last, a ray of cheer was in evidence, but the volume of transactions remained lower.

There is appreciation over Mr. Deshmuk's reference to frugality in expenditure and the need for the maximum ploughing back of profits, both of which, in his own admission, are normally done by every good business concern. Although dividends are not statutorily limited, high taxation and increased labour costs are the two among the powerful factors which necessarily limit dividends. It is stated that the Taxation Inquiry Commission is also looking into this matter, and the market is watching developments. In the present days, dividends are necessarily low, but a statutory restriction would put down private incentive. This is not desirable in the interests of an expanding national economy.

The Finance Minister's announcement of minor adjustments in the new taxation proposals was noted with satisfaction, as also the heavy initial subscription to the National Plan Loan. Jute shares had not yet fully reflected the impressive additions in the prices of jute goods. This was so because the market believed that prices of jute goods were bound to fall and as such, on the basis of the present improvement, commitments in shares would be risky.

Sectionwise, jutes received a smaller number of enquirles, and in transactions, speculative Howrahs declined earlier from Rs. 25-4 to Rs. 24-12, but, on fresh support, staged a recovery to Rs. 25-3. Today, again, a recession to Rs. 24-15 was recorded. Moderate support was given to Presidencies which gained As. 12 to Rs. 6-9. Kelvins were traded at Rs. 253-8, as against Rs. 247 previously, while Bally lost Rs. 5 to Rs. 149. Nuddeas were easy at Rs. 46 and Barnagores at Rs. 144-8. At Rs. 132, Indias lost five points.

Among coals, Burrakurs were better at Rs. 9-5, and Raneegunges were steady at Rs. 11-10. Bengals were unchanged at Rs. 503-8. East Indians were shown further interest and rose from Rs. 26-12 to Rs. 27-8. New Beerbhooms were steady at Rs. 18-5 and Amalgamated advanced from Rs. 21-2 to Rs. 22-12.

Shares of paper mills were subjected to profit-taking, Titaghurs being lower at Rs. 41-4, as against Rs. 42 a week ago. Shree Gopals gave way from Rs. 25 to Rs. 24, but, subsequently, picked up strength to close at Rs. 24-7. India Pulps were priced at Rs. 200.

In the engineering section, Indian Irons opened at Rs. 31-7 last Thursday and gradually lost Rs. 30-8 by the week-end. On Monday, the upward trend set in again and raised the quotation to Rs. 31-9. Burn & Cos. were transacted at Rs. 187. At Rs. 28-12, Jessops were lower by As. 8, and Texmacos were shaded from Rs. 12-1 to Rs. 11-15. Braithwaites declined from Rs. 17 to Rs. 16-7, Indian Galvanisings from Rs. 18-14 to Rs. 18-10 and Indian Standard Wagons from Rs. 74 to Rs. 72.

A feature among miscellaneous industrials was National Rollings which, on interested buying, improved from Rs. 12-12 to Rs. 14-8. Rohtas Industries were in strong demand throughout the week and gained Rs. 2-11 to Rs. 15-14. Profit-taking, however, intervened at one time and reduced the rate to Rs. 15-10. Martin Burns were better at Rs. 20-13. Dunlop Rubbers were steady at Rs. 35. Airways India were an earlier feature for the improvement from Rs. 12-10 to Rs. 14. Niccos were at one time higher at Rs. 18-12, as against Rs. 17-7 last Wednesday, but were subsequently available at Rs. 18-4.

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, 27*th April*

The hectic trading witnessed on the Madras Stock Exchange last week received a setback this week. Barring a few popular counters, which attracted special attention, the market had a generally dull week. There was a mild wave of selling pressure at last week's high levels. Operators were cautious in making fresh commitments, especially in view of the Union Finance Minister's remark in the Council of States, on Monday last, that the private sector could not be largely left to itself in the second Five-year Plan, thereby indicating stricter controls.

The bullish sentiment which prevailed last week in the textile section, weakened this week. The only notable feature was that a few popular counters came in for some support. Of them, mention must be made of Dhanalakshmis which improved from Rs. 222 to Rs. 227 and Metturs from Rs. 247-8 to Rs. 251. Cannanores gained Rs. 3-8 to Rs. 103-8 and Gnanambikai Re. 1 to Rs. 83. Lakshmis (Rs. 30 paid-up), however, lost Rs. 2 to Rs. 116 and 'A' (Rs. 25 paid-up) Re. 1-8 to Rs. 57. Rajapalayams were lower at Rs. 107-8, as against Rs. 109, and Bangalore Woollens at Rs. 400, as against Rs. 401-4.

Teas among plantings came in for some enquiry. United Nilgiris advanced from Rs. 205 to Rs. 206-8. Coonoors and Mlamallays rallied Re. 1 each to Rs. 25-8 *cum-div.* and Rs. 43, respectively. Parksides and Peermades gained As. 4 each to Rs. 18-8 *cum-div.* and Rs. 34-12 respectively. Nonsuch Tea was done at Rs. 33-4 *ex-div.*, as against Rs. 34-6 *cum-div.*

Rubbers were in poor demand. Thamarapallys advanced from Rs. 18 to Rs. 18-4 and Teekoys from Rs. 7-6 to Rs. 7-8. Vaikundams moved up by As. 4 to Rs. 17-6 *cum-div.* Cochin Malabars and Be Bes were fractionally better at Rs. 7-3½ and Rs. 2-13½, respectively. Rajagiris, however, lost As. 3 to Rs. 11-12 and Pullangodes an anna to Rs. 3-3. Kailas too was lower by an anna at Rs. 4-8. Travancore Rubbers were done at Rs. 16-4 *cum-div.*, as against Rs. 16 *ex-div.* The Directors have declared a dividend of 20 per cent. on the ordinary shares for the year ended 31st December, 1953, the same as in the previous year.

In the coffee section, Coffee Lands recorded a gain of As. 5½ to Rs. 10-10, while Consolidated Coffees lost an anna to Rs. 18. Puthuthotams were also lower by an anna at Rs. 3-5½. Mysore Coffee was, however, quiet at Re. 1-1½.

The enquiry in the miscellaneous section, however, was a little more broad-based. Jeypore Minings shot up from Rs. 175 to Rs. 180. Travancore Cements gathered As. 7 to Rs. 6-2 *cum-div.* and Mysore Chemical Manufacturings As. 6 to Rs. 13-2. Aluminium Industries and Mysore Vegetable Oil rallied As. 4 each to Rs. 13-14 and Rs. 10-8 *cum-right*, respectively. Andhra Cement 'B' also improved by As. 4 to Rs. 11-8. India Cements, however, lost As. 4 to Rs. 18-2 and Mysore Tobaccos As. 2 to Rs. 10-11. Spencers were unchanged at Rs. 16-8.

Among banks Imperials (Rs. 500 paid-up) improved from Rs. 1,795 to Rs. 1,810. Indian, Rs. 100 paid-up, and Rs. 85 paid-up put on Rs. 2 each to Rs. 177 *cum-div.* and Rs. 144 *cum-div.* respectively. Bank of Mysore advanced by Rs. 2 to Rs. 295, Indo-Commercial 'C' eased from Rs. 36-8 to Rs. 33, Andhra, Rs. 100 paid-up, was done at Rs. 112-8 *ex-div.*, as against Rs. 116 *cum-div.* and Rs. 50 paid-up at Rs. 60-12 *ex-div.*, as against Rs. 62-8 *cum-div.*

TELCO TO MAKE TRUCKS

The Tata Locomotive and Engineering Company have concluded, subject to the approval of the Government of India, a long-term agreement with Messrs. Daimler-Benz A.G. of Germany, the well-known automobile manufacturers, for the manufacture of Daimler-Benz products in India, to be marketed under the name of "Tata-Mercedes Benz." Although manufacture may, in later years, extend to other products, the initial programme will be in the field of heavy diesel trucks.

Under the proposed agreement, Messrs. Daimler-Benz will make a substantial investment of Rs. 80 lakhs in the share capital of the Tata Locomotive and Engineering Company and will, for an initial period of fifteen years, place at the disposal of the Indian Company the full benefit of their vast technical knowledge and experience dating back to 1883. With the assistance of Messrs. Daimler-Benz, diesel-engined truck chassis will be built at the Company's Works at Jamshedpur under a progressive programme which will ensure that complete trucks, including engines and transmissions, will be manufactured in India in approximately five years.

While in no way restricting the manufacture of locomotives and locomotive boilers, the automotive project will, by utilising spare capacity and by spreading overheads, increase efficiency in both the locomotive and automotive divisions. In addition, the use of existing facilities and common services will appreciably reduce the total amount of capital expenditure required for the automotive project. The total capital expenditure envisaged in the first step, for the initial truck programme is a little under Rs. 3 crores. Subject to the approval of the shareholders of the Company under its Articles of Association, Messrs. Daimler-Benz's investment will be in the form of ordinary shares of the Company, which they will purchase at par.

The management of the Tata Locomotive and Engineering Company believe that this project will be an important step forward in the progress of India's industrialisation and will in due course bring undoubted benefits to the shareholders of the Company because it will diversify the Company's production and increase its ultimate earning prospects; to labour, because it will afford increased employment and facilities for training in higher engineering skills and techniques; to the users of motor trucks and buses, because it will provide a regular and economical source of supply of vehicles of the highest quality and to the country as a whole, because it will establish a valuable new industry in the precision engineering field and ensure uninterrupted supplies of products vital to the security and economic progress of the nation.

NEWS IN BRIEF

THE budget session of the House of the People, which was to conclude on 15th May, will last till 21st May. The extension of the session has been recommended by the Business Advisory Committee.

The Railway Board has decided to run "sugar specials" to Kanpur from stations in Izzatnagar area to relieve sugar shortage in Kanpur District. It is stated that four or five special trains will carry about 2,500 tons of sugar; this is in addition to the normal quota planned to be carried by the Central Board of Transport.

The Government of India has agreed to the proposal of the Andhra Government to depute a trade delegation to explore foreign markets for Indian tobacco. The delegation, which will comprise representatives of Government, tobacco growers and dealers, will visit Russia and East European countries.

The Government of India has decided to lay 1,500 to 2,000 miles of new railway lines during the Second Five-year Plan period. All States would come under the railways expansion scheme. However, the Government is anxious to open new lines in backward areas first for the benefit of *Adivasis* and backward classes.

According to the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, the all-India second estimate of linseed for 1953-54 puts the current year's area at 2,455,000 acres, as against 2,668,000 acres of the adjusted second estimate for last year, thereby showing a decline of 208,000 acres or 7.8 per cent. in area over last year.

The Kashmir Government's joinery factory, which has been built at a cost of Rs. 22 lakhs, will shortly go into production, arrangements for which are now complete. The factory has a capacity of producing 36,000 doors and an equal number of windows per year. It is also proposed to produce burglar-proof electric meter boxes and other articles of commercial use. A plant to season wood is also being installed in the factory.

The Andhra Government has decided to remove the ban, with effect from 1st May, on the grant of licences to private tobacco dealers within a radius of five miles of the Central tobacco marketing yards at Guntur, Tadikonda and Mangalagiri in Guntur District. The order will enable the tobacco growers of the area to sell their produce to private dealers also, instead of only on the auction floors at the three marketing yards as hitherto.

The Central Government is arranging to grant about Rs. 35 lakhs to the Orissa Government during the current Five-year Plan period for specific road development purposes. This grant is for undertaking new road works which are likely to promote inter-State through communication or open up new areas or contribute materially to rapid economical development in the State. A similar sum may be made available under the next Five-year Plan also.

Provisional statistics relating to industrial disputes during February, 1954, show a decrease in the number of disputes and workers involved, but an increase in the number of man-days lost as compared with the previous month, according to the Labour Bureau. The total number of disputes during the month was 82, involving 41,003 workers and accounting for a time-loss of 342,805 man-days. The average duration of disputes was 8.4 days, as against 6.3 days in January, 1954.

Electricity generated by 640 public utility power stations in India during January, 1954 was 589.7 million kw.h. of which 478 million kw.h. were sold to ultimate consumers. There was a decrease in production of about 14 million kw.h. as compared with December, 1953. The corresponding figures of output and sale for January, 1953, are 533.5 million kw.h. and 441.8 million kw.h. and for January, 1939, 210.9 million kw.h. and 176.6 million kw.h. respectively.

A non-stop tourist service between Bombay and Cairo was inaugurated by the Trans World Airlines on 30th April, 1954. The new service reduces the travel time between India and the U.S. by 24 hours. It is being introduced as part of the T.W.A.'s world-wide programme to make long-range air travel easier and faster for the tourist and the business man. The T.W.A.'s Flight No. 905 will leave Bombay every Friday, goes to Cairo non-stop and then continues flying to New York *via* Athens, Rome, Geneva and Paris.

An agreement was signed on 25th April between the Government of India and the Nepalese Government regarding certain aspects relating to the execution of the Kosi Project. The project, which envisages a barrage in East Nepal at a cost of Rs. 38 crores, is included in the current Five-year Plan. Its construction is expected to be completed in five years. According to the agreement, the entire cost of the project will be borne by the Government of India. A Co-ordinating Committee will be set up, with three representatives each from Nepal and India. A Nepali Minister will be the Chairman and the Project Administrator the Secretary. A Control Board for the administration of the project will be set up by the Government of India.

The Andhra Government is considering measures to exploit fully the forest wealth as one of the sources of augmenting the revenues of the State. The Government proposes, accordingly, to depute an officer to Japan to study the different uses to which bamboo can be put and two others to Dehra Dun to study the methods by which the forest wealth could be increased. The forests in Andhra contain a good variety of bamboo useful for the manufacture of paper, household articles and toys. The present annual revenue of Rs. 40 lakhs from forests can be easily increased to Rs. 1.5 crores. The Government also proposes to explore the possibility of introducing coffee and other plantations in the State. Coffee is being grown in certain parts of the Agency areas in Visakhapatnam and Srikakulam.

Mr. M. Bhaktavatsalam, Madras State Minister for Industries, disclosed, in the course of a Press interview recently at Madras, that the scope for starting factories producing ceramic products on a cottage scale at Neiveli would be examined. There is already a proposal to start a factory at Neiveli and to dovetailing it with any other scheme which the Government might undertake for promoting ceramicware manufacture on a cottage-industry basis. This proposal, we are told, has already been placed before Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry. Mr. Bhaktavatsalam further revealed that the white clay layer which had to be removed before reaching lignite deposits at Neiveli would supply ample material for ceramic industry.

A Council of Industry for the more effective representation of industrial interests has been formed having as its members, Mr. J. R. D. Tata, Mr. G. D. Birla, Mr. Shri Ram, Mr. Kasturbhai Lalbhai, Mr. A. Ramaswami Mudaliar, Mr. Dharamsey Khatau, Mr. Vithal Chandavarkar, Mr. Neville Wadia and Mr. Homi Mody. It will be recalled that, on 12th January last, a conference of some of the leading industrialists in the country was held in Bombay at the instance of Mr. Homi Mody. In the course of the discussion that took place, there was general agreement that immediate steps needed to be taken for a more sustained and vigorous presentation to Government, Parliament and the public of the view-point of industry and of the vital role that free enterprise can play in the economic development of India, and that, for this purpose, special machinery had to be set up which could function continuously and expeditiously. The Council which has now come into existence is a result of that initiative.

From Abroad

The U.S. Government has granted Yugoslavia another $10 million to buy wheat in the U.S.A. Yugoslavia has so far received $15 million for such purchases.

Six British business men representing engineering and chemical industries, left early this week for East Berlin for talks with Chinese trade delegates.

Burma and the Republic of China have signed a trade agreement in Rangoon under which all payments will be made in sterling. The agreement is for three years.

Japan proposes to start negotiations with the Persian Government next month for a $31 million trade agreement. Japan hopes to export cotton cloth and machines in return for raw cotton and crude oil.

The Soviet Union has joined the International Labour Organisation, after a lapse of 15 years. Russia first became a member of the I.L.O. in 1934. Its membership lapsed on 14th December, 1939, when its membership of the League of Nations ended.

Union leaders in Manchester have decided to back a call for a substantial wage increase for more than 100,000 workers in the cotton and rayon weaving industry. The weavers were granted 5 per cent. rise only in August last which added £4 million a year to the industry's wage bill.

Ceylon, Nepal, Viet Nam, Cambodia, Laos, the Republic of Korea and Japan have been admitted to full voting membership of the E.C.A.F.E. These seven countries had hitherto held associate membership in the E.C.A.F.E. Austria, Finland, Ireland, Italy and Portugal have been granted full membership in the Economic Commission for Europe.

The output of British cars reached a record of 14,700 per week in March, and the commercial vehicle production averaged about 5,000 a week. The output for the first quarter of the year amounted to 183,000 cars, an increase of 54,000 cars over that for the corresponding quarter of last year, and 64,700 commercial vehicles, an increase of 3,700 vehicles. Exports during March amounted to 34,400 cars, the highest figure for any month since January, 1952, and 11,000 lorries and buses, bringing the total for the first quarter to 84,300 cars and 33,000 commercial vehicles, representing an increase of 17,000 and 6,350, respectively over the year.

• • • •

OBITUARY

We regret to announce the death, last week-end, at his home in Northern Ireland, of Captain H. J. Miller, R.D., R.N.R. He was the Senior Partner in Messrs. Ericson and Richards, Marine Surveyors, Bombay, and was widely known and respected in commercial circles in the city. During the last war, Captain Miller was seconded for very responsible duty with the Royal Navy in its control of the Bombay Harbour and Port.

PERSONAL

MR. Mahendra Bikram Shah has been chosen by the Nepali Government to be Nepal's Ambassador in India.

Mr. T. Nishiyama, Japanese Ambassador in India, who had been on a three weeks' visit to Japan, returned this week.

Mr. P. A. Engineer has succeeded Mr. C. W. Middleton as Secretary and Treasurer of the Imperial Bank of India.

Mr. George V. Allen, U.S. Ambassador to India, left for Washington this week to testify before the U.S. Senate Appropriations Committee on economic aid to India.

Mr. G. D. Binani has been elected President, Mr. L. N. Kanoria, Senior Vice-President and Mr. K. P. Goenka, Vice-President of the Indian Chamber of Commerce, Calcutta, for the year 1954.

Mr. Frank Kafer, Sales Manager of the Goodyear Tyre and Rubber Company of India Ltd., left for the U.S. to take up his new assignment in the Goodyear Tyre and Rubber Export Co., Ltd., Akron, Ohio (U.S.A.).

Mr. G. V. Sivaswamy, Operation Superintendent, Air-India International Ltd., left for Barcelona to attend the seventh session of the International Air Transport Association Technical Conference, which began there on the 28th inst.

Mr. E. M. Nees, Chief Engineer and Deputy Manager, Export Division of Messrs. Siemens-Reiniger-Werke, Germany, who is on a short visit to India to inspect the various Siemens X-ray installations in some of the large hospitals, arrived in Bombay last week.

Mr. H. L. Jerath, Director-General of Posts and Telegraphs, and Mr. S. S. Anantakrishnan, Director of Postal Services attached to the Posts and Telegraphs Directorate, left for Geneva on Wednesday last to participate in the meeting of the Executive Liaison Commission of the Universal Postal Union which is scheduled to begin at Lucerne in Switzerland on the 3rd inst.

Mr. C. J. E. Keene of Messrs. Titaghur Paper Mills Co., Ltd. has been elected Chairman of the Indian Paper Makers Association for the year 1954-55. Mr. V. Mehta of Messrs. Shree Gopal Paper Mills Ltd. has been elected Vice-Chairman. The Committee of the Association for the year will consist of Mr. P. H. Sykes, Seth P.K. Mehta and Mr. J. R. T. Niemeyer.

Mr. V. Rangachari of Messrs. Maconochie and Co., has been elected President of the Madras Stock Exchange for the year 1954-55, while Mr. H. Subramaniam of Messrs. Chitra & Co. will be the Vice-President. Mr. H. C. Kothari will be the Honorary Treasurer. Mr. K. Venkataraman and Mr. C. R. Chandrasekhariah will be the Joint Honorary Secretaries.

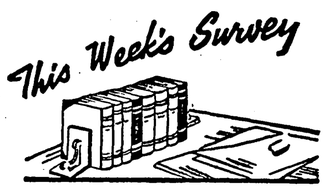
"COMMERCE" 1929

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 4*th May*

Another Bombay Crisis

Sixty thousand Bombay mill operatives struck work on Tuesday last week, and with over 70 mills closed at the time of writing and 135,000 millhands idle, the strike is heading for a crisis. There is a widespread feeling of uneasiness and regret that such a crisis in the Bombay mill industry should have arisen so soon after the Fawcett Committee had finished their labours. The amazing part is that there is decidedly no general disposition to strike on the part of the millhands, and as is pointed out by Mr. H. P. Mody, President of the Bombay Millowners Association, if the workpeople are driven out it will be entirely by the methods of intimidation with which Bombay has now become familiar. Mr. Mody believes that the crux of the whole matter is that the Girni Kamgar Union has called out thousands of men recklessly, and failed miserably in their attempt to bully the management into submission. They now find that they have got thousands of men on their hands and on their consciences. If the Union does not succeed in getting these men reinstated, the position of the leaders becomes exceedingly awkward. "The whole thing," says Mr. Mody, "boils itself down to this, that half a dozen leaders of the Girni Kamgar Union dare not face the thousands of men whom they have thrown out of employment and in order to save their own skins they are determined to create trouble all round, so that if and when a general strike takes place they may be able to escape the consequences." He adds that the operatives have no grieyances of any sort, and the leaders of the Union may be relied upon to cloud the issues and create trouble. The Union in question, by the way, is monopolised by labour leaders of the left wing and the "Red Flag" variety, its President being Mr. Alwe, who is now awaiting trial at Meerut. The Textile Labour Union, of which Mr. N. M. Joshi is President, stands for moderation and conciliation and is opposed to another general strike.



SCIENTIFIC MANAGEMENT

THE conference of South Indian industrialists, which was held at Bangalore last week under the chairmanship of Prof. M. S. Thacker, Director, Indian Institute of Science, and the President of the Institute of Management, Bangalore, urged the need for the promotion of scientific management in business concerns. Welcoming the delegates, Prof. Thacker said that management was no longer a heritage handed down to a select few, but was a science which had to be developed in the same way as other fields of learning. Competence, integrated with scientific and applied management, would, he said, ensure the success of concerns, whether Government or private, while incompetence would result in waste of resources and in failure to canalise the creative energy of workers that was latent. Mr. A. V. Raghavachar, General Manager of the Mysore Government Electric Factory, stated that management must be made out of human material, which should be properly selected. Mr. M. C. Niles of the Technical Co-operation Mission of the U.S. Embassy, New Delhi, held that management was both a science and an art.

It is gratifying to note that industrialists are becoming more and more alive to the importance of scientific management. As management is concerned primarily with people, its success is dependent on two factors: First, its ability to interpret and satisfy human wants; and second, its skill in evaluating human aptitudes and abilities and then applying them to production. Where such insight and skill are lacking, even the best of schemes are bound to fail.

How can the executives and supervisory staff develop such insight and skill? One way is through systematic study of human nature in relation to production problems. This might be called the 'scientific' aspect of management. Another is through experience in practising the art of management. Surely, a combination of the two offers the most fruitful means of increasing managerial efficiency.

The importance of the function of management will be evident when it is realised that industrial development of the U.S. is chiefly attributed to competent management. To quote the observations on management in U.S. industrial concerns, of a group of British labour leaders which visited the U.S. some time back: "We are convinced that it is efficient management which set the pace of productivity in American industry. American trade union officials can rely on management to be sufficiently progressive."

STATE ENTERPRISES

With the incursion of the State into the economic sphere, a question which continues to baffle administrators the world over is how best a governmental undertaking can be conducted efficiently. Assuming that it is necessary for the State to sponsor and manage certain enterprises—this is a big, and, in many individual instances, an untenable assumption—it is at least reasonable to expect that they should be managed well enough to justify State ownership. But efficiency is after all a relative concept. To judge whether the State manages an undertaking which belongs to a sphere in which private enterprise is also engaged would be difficult unless, as Mr. M. R. Masani stated, at a recent meeting organised by the Institute of Management, Bangalore, "there are equal opportunities and facilities for free competition with equal taxation." Mr. Masani warned that, if a State undertaking in India were permitted to charge differential prices or rates or allowed tax and other concessions, it would be a "discriminatory act striking at the root of the mixed economy, and showing a bias that might vitiate the whole experiment embodied in India's Five-year Plan." Since India is weak in its resources, both in finance and trained personnel, he rightly urged that it would be wise, in the national interest, to desist from further acts of nationalisation.

Nevertheless, he made three important suggestions for improving the efficiency of State undertakings: (1) Advisory bodies should be set up to hear consumers' complaints. (2) A system of quasi-judicial tribunal should be set up in order to ratify or reject scales of prices and review the quality of goods or services produced. (3) There should be a periodical "efficiency audit" of the undertaking by an independent organisation. We heartily commend these suggestions to the attention of the Central and State Governments, for if they were implemented, it would be one effective method of reassuring the public that their interests are not being sacrificed for purely ideological considerations.

MINIMUM WAGES

After considerable discussion, the House of the People passed on 23rd April, the Minimum Wages (Amendment) Bill. The Bill extends the time limit for the fixation of minimum wages in "sweated" industries, such as rice, flour and oil mills, which expired on 31st March, 1952, and in agriculture which expired on 31st December, 1953, upto 31st December, 1954. It also validates the wage rates fixed in employments in Part I of the Schedule to the Minimum Wages Act since 31st March, 1953.

A significant feature of the debate on the Bill was the concern expressed by certain members of the House about the repeated extensions, which have been given by the Government, for fixing minimum wages. They also alleged that there had been too many violations of the Act. A few demanded the extension of the scope of the Minimum Wages Act so as to include all industries. A few others, however, bitterly criticised the Act on the ground that, in a number of small industrial pursuits, the fixation of minimum wages under the Act had wrought havoc. Such *entrepreneurs*, they said, had to close down their enterprises, because of their inability to maintain the level of minimum wages. Consequently, they held that thousands had been rendered unemployed, which was certainly not what was intended by the Act.

Replying to the debate, Mr. V. V. Giri, Union Minister for Labour, assured the House that so far as fixation of wages in industries in Part I of the Schedule to the Act was concerned, there would be no further extension. He pointed out that the demand for extension of the scope of the Act so as to include all industries was based on a misunderstanding of the spirit behind the Act. This Act, he said, was mainly intended to cover cases of labour which were unorganised and where trade unions did not exist or where it was difficult to have a strong trade union and where there was little or no bargaining power on the part of the workers.

As regards fixation of minimum wages in agriculture, Mr. Giri held that, in view of many administrative difficulties, only limited beginnings had been made by various State Governments. The fixation of minimum wages was mainly confined to low-wage pocket areas, as also to areas selected for intensive development. The scope of the Act, he said, would be extended further as experience was gained.

Again, speaking on the third reading of the Bill, Mr. Giri forecast the establishment of a national minimum wage in course of time. He promised to place before the forthcoming Labour Ministers' Conference the recommendation made by the Minimum Wages Central Advisory Board at its last meeting held early in April at Bombay that a national minimum wage of Re. 1-2 to Rs. 2 per day should be laid down for different areas and employments.

Now that the time limit for fixation of minimum wages has been extended, it is to be hoped that the State Governments will implement the legislation seriously. They should expand and improve the machinery for fixation of minimum wages. Further, the acts of violation of the law by the industries, if not properly explained, should be seriously dealt with.

Notice

THE UNITED FLOUR MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Eighty-first Ordinary General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, at 4 p.m. on Wednesday the 12th May, 1954, for the following purposes:—

(1) To receive the Directors' Report and the Audited Accounts for the half-year ended 30th November, 1953.
(2) To declare a Dividend.
(3) To elect a Director.
(4) To appoint Auditors for the current year.

The Transfer Register will be closed from the 5th to the 12th May, 1954, both days inclusive.

By Order of the Board,
SHAW WALLACE & COMPANY, LTD.,
Managing Agents.

CALCUTTA, 15th April, 1954.

REVISION OF PREMIUM RATES

The question of revising the premium rates, in the light of the request made by the Executive Committee, Life Insurance Council of the Insurance Association of India, has engaged the attention of insurers since 30th March, when the Committee made the request. At its meeting, held on that date, it considered the situation arising from the drastic downward revision of premium rates, announced by some leading insurers. In making the suggestion for a reconsideration of the premium rates, the Committee stated that to the extent that the reductions had been brought about by "increasing the minimum sum to be assured under policies and/or by reducing the rate of commission customarily payable on such policies" the insurers had "offended" the principles laid down by the Committee. The Committee's criticism applies, in the main, to whole life policies, wherein the insurers had reduced the premium rates by increasing the minimum sum for which insurance could be taken and/or by reducing the agents' commission. It would now appear that several insurers have revised, in accordance with the Committee's suggestion, the premium rates in respect of whole life policies. In a Press note issued on this subject, the management of the Oriental Government Security Life Assurance Company, Ltd. announces that "in pursuance of the directive issued by the Life Insurance Council, the Company has now made the requisite upward adjustments in the premium rates for all whole-life types of policies," and that the revised rates will come into force on 29th April, 1954. Despite the upward revision of premium rates, as a sequel to the Committee's directive, the premium rates, it is learnt, will still be below the rates which prevailed before the downward revision was made.

PAPER INDUSTRY

Although the conditions in the paper market are now fairly stabilised and violent fluctuations in prices are conspicuous by their absence, the paper industry in India does not seem to have come out of the wood yet. An indication of this is provided by the downward trend in output. The quantity of paper produced during the year 1953 was not more than 128,536 tons, which compares unfavourably with 137,504 tons in the previous year. What is this state of affairs due to? For an answer to this poser, one has only to peruse the presidential address of Mr. P. H. Sykes, delivered at the recent annual meeting of the Indian Paper Makers' Association held at Calcutta on Wednesday last week.

Mr. Sykes referred, in detail, to the series of disquieting factors which adversely affect the progress of the paper industry, such, for instance, as labour troubles, difficulties in securing at reasonable prices adequate supplies of raw materials, and compulsory use of lower grade coal for which the boilers are not suited. He deprecated the tendency among the labour leaders to play off one section of the paper industry against another. He said that the industry wanted to treat its labour well. But what it desired in return—Mr. Sykes even stated that the industry had every right to demand it—was a full day's work for a full day's wage. Significantly enough, he remarked: "Without it (a full day's work), our industry cannot prosper. Our costs do not show any signs of abating. Indeed, the apparently never-ending upward trend of payments, in one form or another, to labour more than offsets the slight savings in cost in other directions that some of us have been able to achieve."

The I.P.M.A. President reiterated the plea, repeatedly put forward by his predecessors, for co-ordinating all State forest policies into a uniform policy. He also wanted the paper mills to be granted long-term leases of bamboo and grass lands on reasonable terms. In support of this plea, he observed: "Some forests are being wrecked by unscrupulous contractors and, surely, there is a lot to be said for putting these forests in the hands of paper mills which, in their own interests, wish to see them as productive as possible, a state which can only be achieved by careful husbandry." From the Government's point of view, too, long-term leases in the right hands, he said, meant not only steady revenue but also careful preservation of their forests.

It is not the defective lease system alone that has interfered with the free flow of raw materials to the paper mills; the transport bottlenecks also seem to have been equally responsible. Alluding to this, Mr. Sykes observed: "When the Railway Administration recently altered its preferential system of moving traffic, the paper industry lost its priority and has to take its turn with our miscellaneous categories. We get quotas, but, judging from the Eastern Railway Zone, it would appear that the fact that our requirements are largely seasonal has again been overlooked." The imperative need to step up output of paper implies that the complaint regarding shortage of transport facilities should be removed. It is to be hoped that the railway authorities will address themselves to this task in right earnest.

Another handicap impeding the progress of the paper industry, to which Mr. Sykes drew pointed attention, related to the pressure brought upon the industry to use lower grade coal than that to which the boilers are suited. Such pressure, it is needless to add, can only lead to inefficiency, damage to plant, and waste of coal, money and transport. The Government will do well to take steps to remove this pressure, so that the paper industry may, by using good quality coal, enhance its manufacturing efficiency which, incidentally, will serve to bring down the cost of paper production.

FUTURE OF GOLD PRICES

Despite the many innovations that have taken place in the world economy and the many new commodities that have come into use, sometimes creating their own demand and sometimes replacing the demand of other commodities, there is one commodity which has shown a surprising resilience to all changes. It is gold, the demand for which is in no way less keen than in the earliest periods of known history. The yellow metal is still sought after by all nations, young and old, undeveloped as well as industrially advanced. And no nation seems willing to lose its gold reserves without some feeling of a loss that is better averted than borne. In fine, gold has not been dislodged from its pre-eminent position. Whether this position will endure for a long time to come is, of course, difficult to say. Only, there are no signs that the yellow metal is likely to fall from grace. In this connection, it is interesting to hear what Mr. Arthur H. E. Taylor of the Kolar Gold Mining Companies had to say on the subject of the future of gold prices in India.

Speaking at a recent meeting of the Kolar Gold Field Mining and Metallurgical Society, Mr. Taylor, the text of whose address appears elsewhere in this issue, recognised that it was "most difficult" to make any forecast, since there are "so many factors involved which can change prices overnight." Although India is a closed market for gold, in that both imports and exports are prohibited, there are several factors which influence the course of gold prices, such, for instance, as the general level of prices and state of the economy, seasonal demand for gold during the marriage and harvest seasons, and smuggling of gold from abroad. Mr. Taylor, however, thought that one of the causes for the recent decline in gold prices was the depression in the world free market for this commodity. Nor did he see—apart from seasonal and other fluctuations—any "foreseeable reason for expecting the general level of prices in India to rise *greatly* in the near future." He was careful though to add that "should there be a deterioration in international relations, a slump in America, with an eventual raising of the dollar price some two years later, or a revival of purchases of gold by France, the position would, of course, change."

In India, there is a seasonal demand for gold, in the early part of the year when the marriage season is in full swing and during the summer months. This is usually followed by falling prices from October onwards when the smuggling season is believed to be at its height. Apart from these seasonal factors, Mr. Taylor listed two favourable factors for gold. In the first place, the excellent rains of last autumn, he said, had resulted in good crops and the demand for gold had been quite brisk of late. Secondly, the Government's Five-year Plan contemplates an expenditure of Rs. 700 crores in the next two and a half years. Mr. Taylor said: "With so much money circulating and with such stimulus to employment, even if achieved only to a partial extent, the demand for gold must undoubtedly be assisted."

OFF THE RECORD

(By "ROVER")

IT was not without some feeling of pleasant satisfaction that I received, early this week, a brief statement, with the compliments of Mr. Homi Mody, announcing the birth of a Council of Industry consisting of nine leading and representative business men. What is both gratifying and noteworthy about this group is that it is an evenly balanced team, representing every part of the country geographically, every important section of commerce and industry and every shade of opinion in the business world of the country. Any organisation, which has behind it men of such diversified achievement and strength, could speak with authority on important economic issues before the country and would easily command both attention and due consideration from the authorities as well as all thinking sections of the public. To have been able to get together on a single platform all these men, each one of whom can necessarily claim an individual and original outlook and attitude on affairs, in general, and economic policies, in particular, is something of which Mr. Mody can be justly proud.

When nothing more was heard for weeks and then months about the brave utterances at the conference called by Mr. Mody, when it began to appear as if it was likely to prove one of those welcome but spasmodic episodes, with the likes of which the traditional limbo must be cluttered up, I almost kicked myself for a fool, who easily got excited over trifles. I had expected great things of this initial move by so careful and cautious a man as Mr. Homi Mody, who does not plunge into things merely as a result of a stray impulse. I had made no secret of the high hopes I entertained about what was likely to follow from a firm and wise decision taken at this gathering to have efficient machinery for the more effective representation of industrial interests before the public, which is the source of all political power and authority. The extent and the depth of my disappointment could be easily gauged in view of this, when a grave-like silence seemed to envelop the issue and it appeared to have been so utterly forgotten that nobody cared even to mention it in public. In the light of the powerful body which has emerged as a result of possibly what was an intense, behind-the-scene activity, the agonising delay is fully justified and can be readily forgiven.

I wish, however, that the announcement about the formation of this Council of Industry had not been as bald as it is. Besides announcing the names of the members of the new Council, which I refrain from reproducing, as the editor tells me that he has done this elsewhere in this issue, the Press note merely recalls the initial conference last January and the general agreement arrived at then regarding the need for taking immediate steps for a more sustained and vigorous presentation of the viewpoint of industry, to the Government, Parliament, and the public. This new organisation is now supposed to organise and set up special machinery, which would function continuously and expeditiously, to put before the public and the country's sovereign Legislature the vital role that private enterprise can play in India's economic development. Both the public and the rank and file in industry would certainly have liked to know something more about this machinery and the manner in which it is to work. I wish Mr. Mody had taken us more into his confidence and lifted at least a part of the curtain which shrouds the whole affair in mystery.

What I, for one, would like to know is how this new body will differ in its aims, objects and methods from several other organisations, such as, the Federation of Indian Chambers of Commerce and Industry or the A.I.M.O. Without going into the reasons for its partial failure, I am prepared to confess that the Federation has not been able to live up to the expectations of the pioneers who launched it. While it has laboured hard, it has failed to inspire confidence amongst the public and the Governments about the *bona fides* of Big Business, in spite of eloquent annual protestations to the contrary by its foremost leaders. In a sense, it has also ceased to be fully representative of the business community as a whole. A mere duplication of organisations and machinery will not secure the object, which those, who are behind the present move, have in their mind. It will have to be both different and dynamic in its approach and outlook.

I hope Mr. Mody will not mind my being blunt and tactless, for I cannot help saying that the very first thing this new organisation of his will have to tackle is to remove the suspicion in the minds of the authorities and the public about the ability of any business organisation to compel its constituents to be above the common weaknesses attributed to business men, to which, in spite of honourable exceptions, quite a number of them succumb from time to time. The effectiveness of the Council of Industry is bound to depend not merely on the vastness of its resources and the quality and efficiency of the machinery it proposes to set up, about which nobody need have any misgiving, but on the extent of its success in enforcing a rigid code of honour and integrity on the general run of business men. If it can do this, half its battle will be won. It would in no way help to point to the element of corruption and nepotism amongst political parties and other sections of the public. Society as such and on the whole may be loose in its morals. Cæsar's wife has not only to be pure; she has also to be above suspicion.

Whither National Industries?

Though it is now over five years since the country first decided to change the nature of its economy from a capitalist set-up based on free private enterprise, neither those in authority, who are engaged in implementing this momentous decision, nor the public are clear in their mind about the composition and the functioning of the public sector. The British people are endowed with a genius for muddling through without a previously prepared plan and policy. Their political institutions, their vast but now rapidly vanishing empire and even the economic structure of their country are a result of *ad hoc* growth and improvisation and not that of a conscious pursuit of a preconceived design. Besides, the Britishers are a patient race and everything comes ultimately to those who are prepared to wait. We have neither this gift of genius from Heaven nor the grit and patience born of self-discipline. We in this country are temperamental and impatient and we are too much in a hurry to change the face of things and build a brand new economy. Perhaps, this impatience is natural; we had to wait for a cruelly long time to snatch the initiative for doing any building on a large scale. But this does not justify our working without a plan or design. If we are in a hurry, it is all the more necessary to have a clear head and a detailed plan of operation. There may be a vague glimpse of a distant design with blurred outlines amongst some of our leaders. But this is a poor substitute for a plan, meticulous in every detail.

A mixed economy, artificially superimposed by executive authority, which is not a result of natural and slow growth, has necessarily to be precise and clearly defined in all its aspects. Not only have we failed at any time to lay down precisely what the attitude of the State is going to be towards private enterprise, with regard to its growth, financing and functioning, but we have even forgotten in our haste to lay down the shape of industrial units sponsored and run by the State and the lines on which they are to function. It is the taxpayers' money, in large chunks, which the Governments, Central and State, are throwing on these heavily financed industrial concerns without a clear plan and purpose. One would have expected that they would have given some thought at least to the structure and nature of these organisations, instead of just launching them in almost a new cast every time, according to the mood of the moment. They conveniently overlooked even to settle the broad outlines of the kind of control Parliament or the State Legislatures, as the case may be, were to exercise over them or the ties which were to bind them to the individual Ministries, which were supposed to be responsible for their working. Even the original principle of the public sector confining itself to public utility concerns, defence requirements and certain sectors where private investment is not likely to be forthcoming for obvious reasons, has been abandoned in the case of steel, shipping and fertilisers.

One has only to look at the various specimens of State enterprise, to realise the muddle that has been created by inexperienced administrations in this sphere. As pointed out by the Committee of the Federation of Indian Chambers of Commerce and Industry at its meeting in Bombay this week, there are four different forms in which these concerns are being managed. Some are managed departmentally, others executed departmentally but controlled by some inter-State *ad hoc* authority, still others have taken the form of statutory corporations, while a few are registered as public companies under the Indian Companies Act, but owned solely by the Government of India. It is not difficult to visualise the headaches and possibly chaos, these multiplicity of indeterminate forms is going to give rise to, as time goes on. For the time being, the Committee of the Federation has confined its attention only to the pricing policy of these Government enterprises, because it impinges directly on the private sector, but later complications are bound to arise, which will require a deeper study of this subject.

This problem was also discussed at a recent symposium on national industries organised by the Institute of Management at Bangalore, when Mr. M. R. Masani, in an analytical and thought-provoking address, asked how there could be any basis of comparison between the efficiency and utility of State enterprise, unless there were equal opportunities and facilities for free competition with equal taxation for both the sectors. Mr. Masani, of course, seems to have started with an assumption that mixed economy and State enterprise constituted only an experiment and that the latter were still on trial. The politicians, however, seem to have disposed of this question long ago. They have decided in favour of State enterprise irrespective of the cost and the only question in their mind is as to how long and in what progressively narrowing field private enterprise is to be allowed to operate, before it is completely abolished.

I very much doubt if the issue as to whether or not a particular product is best produced under State or free enterprise is still open to be decided, as Mr. Masani claims, in the light of experience obtained through free and equal competition between the two sectors. If it were and if this important issue has not already been decided upon purely on the ground of prevailing ideologies, which is only another name for basic prejudices, the conclusion which Mr. Masani arrived at, namely, that it was yet too early for our country to judge about the merits of State enterprise or its success or failure, is both wise and fair. This conclusion also implied, as stated by him, that, pending a review of the entire position at an appropriate time in the future, the national interest would be best served by desisting from further acts of nationalisation or expansion of the public sector.—*All Rights Reserved.*

MR. DESHMUKH NOT IN FAVOUR OF NEW SODA ASH FACTORY

MORE FOREIGN TECHNICAL EXPERTS

(From A Special Correspondent)

NEW DELHI, *27th April*

DELHI LETTER

IT is seldom that Finance Ministers show versatility other than dull and drab facts and figures. Mr. Chintaman Deshmukh is an exception. He studied botany during his college days, but began life as an administrator. Later, he drifted himself as Finance Secretary to the former Central Provinces Government, which ultimately landed him as the Governor of the Reserve Bank. In this capacity, he was able to distinguish himself as an able and level-headed financier and banker. It is not his capability as a Finance Minister that needs so much emphasis as his scholarship in a number of subjects and languages. He has often quoted verses from eminent Sanskrit poets in support of his arguments on the floor of Parliament but during his reply to the debates on the Finance Bill this week, he himself composed a beautiful Sanskrit sloka in regard to his levy on betelnuts. Lovers of Sanskrit in Parliament very much appreciated the Finance Minister turning himself as a Sanskrit Pundit. Perhaps, Mr. Deshmukh will as easily make his mark as the Head of Sanskrit Chair in any university as he has been able to make his impress felt in his Ministry during the last four years.

The Government of India and the Planning Commission are now thinking of the second Five-year Plan which is expected to be of "a far better amplitude" than the present Plan. They want to seek the co-operation of all parties in the formulation of this Plan and hope to invite suggestions and priorities from important political and commercial institutions shortly. Thus, they hope to be able to formulate a Plan "which may not fall far short of the optimum."

Chemical Industries

In the course of discussion on the Finance Bill, a number of members stressed the importance of fostering the growth of basic industries in the country. The Finance Minister stated that the proposed Industrial Development Corporation might be able to fill up this lacuna. "Our judgment," stated the Finance Minister, "is that, in the prevailing circumstances, when other channels of profit are open to private enterprise, they may not be so willing to establish and nurse over a long period or over a difficult period some of the basic industries which the Planning Commission consider as essential." He revealed that Government had under consideration schemes for increasing the production of soda ash in the country and had appointed a special officer to survey possible sites for the setting up of a manufacturing plant. In so doing, the special officer has to take into account the fact that these factories have to be dispersed all over the country. The Finance Minister told the House that he could not accept the proposal to start another soda ash plant in Saurashtra, as there were already two plants in that area, both of which contemplated expansion. The difficulty in regard to soda ash plants in Saurashtra, according to him, was that wagons available to lift the soda ash were not adequate and it was no use further complicating the situation by starting a third plant in that area.

The installed capacity of caustic soda and soda ash in the country now stands at 39,680 tons and 54,000 tons, respectively, the number of respective units being 12 and 2. The actual production of these two heavy chemicals in 1953 amounted to 21,760 tons and 55,822 tons, respectively. Government has already approved the plans for augmenting the installed capacity of these plants, by 7,000 tons in respect of caustic soda and by 36,000 tons in the case of soda ash. The three important raw materials for the production of soda ash are salt, limestone and coal. In a vast country like India, it is always necessary to reckon the high cost of distribution of basic chemicals such as soda ash and sites, therefore, offering advantages at least in respect of two raw materials with the possibility of facilities for cheap and easy transport to bring the third from other centres of production and simultaneously to distribute the final product to the consuming centres should be considered favourably. Possible sites for the erection of soda ash plants other than Porbandar and Jaffrabad in Saurashtra are Tuticorin and Tinnevelly in South India, areas in Orissa and Bengal where salt production might be developed and the Lake Chilka area in Madhya Pradesh and Orissa. It may be mentioned that the location of lignite deposits in South Arcot District, South India, is likely to create conditions favourable for the industrialisation of this part of the country. Limestone deposits are found near Tiruchirapalli while salt is manufactured at Vedaranyam (Tanjore District). It is, therefore, possible that this area may offer good scope for the development of the manufacture of heavy chemicals.

In regard to the manufacture of caustic soda, the special officer appointed by Government must take into account the large deposits of sodium sulphate associated with small quantities of other chemicals such as sodium carbonate at Didwana and Sambhar available as a by-product of salt manufacture. Such sources have been utilised in other countries for the production of soda ash and other heavy chemicals. It is suggested that the National Chemical Laboratory should investigate the possibility of exploiting such indigenous resources of sodium sulphate for producing caustic soda either by causticising sodium sulphate with lime or by developing suitable electrolytic processes.

Foreign Technical Assistance

Foreign technical assistance and foreign capital have been playing an important part in the industrialisation of the country, especially in such of those industries where the technical know-how is generally at a high level. Besides, Government has been continuing their efforts to secure technical help from industrially advanced nations of the West, for the development of the industries in the country under foreign technical assistance such as the Point Four Programme, the Colombo Plan and the Expanded Programme of Technical Assistance of the United Nations and its specialised agencies.

The period of assignment of the American expert on foundries obtained under the Point Four Programme in March, 1952, for one year to advise on operating conditions and improvement of foundries, has been extended to meet the increased demand for his services by the foundries. His services will now be available till August, 1955, for establishing and directing a training centre at the Indian Institute of Technology, Kharagpur, where practical training is being given to foundry supervisors and foremen drawn from the industry.

Under the United Nations Technical Assistance Programme, the services of an expert from the U.S.A. were obtained to assess the country's future requirements of high tension insulators and to examine various expansion schemes and to advise on the best manufacturing methods, machinery and raw materials. The services of an expert on plastic mould making were also obtained for making suggestions to use to the maximum possible extent the existing tool room facilities for plastic manufactures and generally to advise the industry on the best possible methods of developing mould making. From the Food and Agriculture Organisation of the United Nations, a pulp and paper expert was invited to assess the pulp and paper requirements of the country as well as the potential resources available for the expansion of the pulp and paper industry. Under the Colombo Plan, the services of two experts have been obtained for a survey of the idle capacity in engineering industries.

Foreign Capital

Out of the capital of Rs. 73.2 crores issued during the first eleven months of 1953, foreign capital permitted by Government was computed at about Rs. 15 crores. Among the industries in which foreign capital was permitted to be invested were dyes, drugs, hydrogen peroxide, clinical thermometers, gold gilded glass beads, food essences, abrasives, cycle parts, lifts and water meters. Apart from cases involving the participation of foreign capital, there were a number of schemes in which manufacturing was to be undertaken by Indian firms on payment of royalties or fees to foreign firms which supplied the technical know-how. Some schemes of this kind sanctioned during the year related to the manufacture of laminated and coil springs for automobiles, air conditioners, barfil rollers, Bunsen and other burners, security articles, radio sets, machine tools and workshop equipment, vibrating table frames, diesel engines, switch gear and allied products, piles, reinforced cement concrete pipes, fountain pens and fountain pen ink, perfumes, cosmetics and oils, technical benzene hexachloride and lindane.

The cement industry continues to be expanding. There are now 24 units in operation, with a capacity to meet almost all the essential requirements of the country. The present installed capacity is placed at 4.33 million tons, while the output in 1953 amounted to 3.78 million tons. The supply position of cement is expected to improve further during 1954. One unit, with an annual capacity of two lakh tons, is expected to go into production in July this year. Modernisation of one existing unit is also expected to be completed in the course of this year. The total capacity will then be about 4.53 million tons and the actual production is expected to go up to about 4.1 million tons per annum. Sixteen more expansion schemes approved by the Government of India are in progress. Almost all of them are expected to be completed by 1955-56. The completion of all these schemes will increase the annual capacity to about 6.14 million tons. India will then not only be completely self-sufficient in cement but will also have some surplus for the export market which is being gradually developed by allowing exports in small quantities to neighbouring countries

---

The Government of Pakistan has fixed the export quota for tea at 32 million lbs. for the financial year 1954-55. The actual quotas to individual estates which will be allowed to export tea to any destination without restriction will be allotted by the Pakistan Tea Licensing Committee, Sylhet.

THE NATION'S INCOME

RISE OF £750 MILLION IN 1953

(From Our Own Correspondent)

LONDON, *24th April*

AT this time of the year, the Government produces a spate of White Papers concerned with national productivity, the budget, and income and expenditure. The last of these is particularly interesting and there are few countries the Central Statistical Services of which have analysed in the degree which the Treasury has done how the nation gets and spends its money. It is, of course, the estimates of personal income and expenditure which, though, perhaps, not the most significant from the broadest economic angle of what constitutes national progress, is nevertheless what matters most to the persons who contribute to national progress.

LONDON LETTER

In 1953, we find that total personal incomes have risen to £13,500 million, of course, before taxation. This is some £750 million more than last year, which was as much over 1951. The increase since 1948 has been nearly 50 per cent., but this, unfortunately, is not an indication of a similar increase in well-being, since the greater part of this has been due to the steady rise in prices.

Within the total of £13,500 million, wages and salaries, including the income of the men in the Forces, account for £9,000 million. In a similar category come the incomes of professional persons, farmers and private traders, whose earnings aggregate £1,600 million. There we have the grand total of £10,600 million of what are known as "earned incomes", nearly 80 per cent. of the total. The balance of personal income is made up of about £1,500 million of unearned incomes, that is, rents, dividends, interest, etc., and £1,000 million of National Insurance benefits and other income received by private persons from Public Authorities.

How is this total of £13,500 million spent? Nearly £1,000 million, in fact, includes savings and various private provisions for depreciation; another £500 million are National Insurance contributions; and another £1,100 million are provision for taxation. This leaves £11,000 million, or rather more than 80 per cent., which people can spend in any way they choose.

Consumers' Expenditure

The following table shows percentage-wise how consumers' expenditure is made up:

Food	32.3
Drink and tobacco	15.5
Rent, rates, fuel and light	11.4
Household goods	7.1
Clothing	9.3
Private motoring and travel	7.1
Other goods and services	17.4
Total ...	100.0

Thus, little more than one-tenth of our income goes on house room and heating and lighting our homes; one-third goes on food; and, about one-sixth on clothing and household goods. But these items account for only 60 per cent. of what we spend and the remaining 40 per cent. comes into the category largely of luxuries, or, as they are now regarded, semi-luxuries—drink, tobacco, travel, and all the miscellanea which a civilised society regards as essential.

One cannot help concluding with the comment that it is highly improbable that the average consumer whose spending is reflected in these figures exists. Low down in the income scale, expenditure on house room may be as low as indicated above, as a result of controlled rents, while the expenditure on necessities will probably be a good deal higher. Moving up the income scale, the proportion of income spent on rent undoubtedly goes up, that on food often tends to go down, and that on the "luxuries," so-called, may, in the top income levels, amount to more than half.—*All Rights Reserved.*

The Lancashire-Pakistan Cotton Committee has invited the Pakistan cotton industry to send a delegation to Manchester for discussions with the leaders of the cotton industry at Lancashire. The delegation is expected to be in Manchester from the 24th to 29th inst.

U.S. ECONOMIC OUTLOOK

NO FEAR OF RECESSION

(By JAMES C. WORTHY, Assistant Secretary of Commerce for Administration, U.S. Department of Commerce)

THERE have been a series of predictions of economic bad weather for the U.S. economy ever since the end of World War II, but the economy has continued its forward march. Whether the current uneasiness in certain quarters will be justified by the event, only time will tell. Personally, I am looking to the future with great confidence in the capacity of the American economic system, to adapt with a minimum of stress and dislocation to any eventuality. I would like to suggest, briefly, what I consider ample grounds for such confidence.

First, population growth: The population of the United States increased by 19,000,000 during the decade ended 1950, and the Bureau of the Census estimates that it will increase by 28,000,000 more during the present decade. This tremendous rate of growth means not only a constantly increasing total market for goods and services but also important changes in the structure of demand.

The increasing number of babies and younger children, as well as the rising proportion of elderly people in the total population, are bringing about radical changes in the direction of manufacturing and merchandising efforts. These changes represent serious threats to those managements who may be too slow to adapt themselves to rapidly changing circumstances. At the same time, these changes represent great opportunities to those alert enough to make profitable use of them. Very much the same kind of threat and opportunity is presented by the great geographical redistribution of population now under way and by the rapid acceleration of the growth of suburban residential and retail shopping areas.

Personal Disposal Income

The second major cause for optimism is the current high level of personal disposable income (income after taxes), which, in 1953, reached an all-time high of $248,000 million. There is no single economic factor quite as significant as the size of the consumer's pocket-book.

Potential consumer purchasing power in the United States is strong today not only because of current high levels of income but also because of the strong asset position of consumers made possible by past savings. As at the end of September, 1953, American consumers held approximately $374,000 million in currency, bank deposits, insurance, Government bonds, and shares in savings and loan associations. In addition, they held about $200,000 million in corporate securities, more than 90 per cent. equity in farm land and farm buildings, a substantial equity in owned non-farm homes and unincorporated businesses, and an unestimated quality of households equipment and personal durable goods. At the same time, total short-term consumer debt amounted to $28,000 million, or less than one-third of the currency and demand deposits held by consumers. By the standards applied to business, this is an extremely strong financial position. It represents, on a cash assets basis, a ratio of three to one and, on a current or liquid assets basis, a ratio in excess of 20 to one.

New Products and Services

A third element of confidence is the rapid introduction of new products and services into common use. Think, for a moment, of the number of new kinds of merchandise which were either very rare or did not exist at all prior to World War II—television, automatic dishwashers, automatic clothes washers and dryers, home air-conditioning, new kinds of fabrics, new kinds of materials, and new uses for present materials.

Processes of this kind are cumulative. Growth feeds on growth, new products on new products. The very dynamism of industry gives greater and greater emphasis to research and development, which is accelerating still more the rate of innovation. New patents are being issued at the rate of about 750 a week, but the Patent Office of the Department of Commerce still cannot keep up and the backlog of patent applications continues to grow.

The adaptability, resourcefulness, and ingenuity of American business, on the one hand, and the insatiability of human desires for better living, on the other, provide a potential for continued expansion which will continue without the stimulant of war and defence expenditures and which should readily take up any slack created by any curtailment in the level of military procurement. Such curtailment, in any event, will be gradual and likely to represent in any period only a very small proportion of the total gross national product.

Here, we need to keep in mind the natural, virtually irrepressible, tendency of American economic activity toward expansion, a tendency which undoubtedly will prove strong enough to more than offset, in due course, any decline in defence spending which is likely to occur. This continued expansion, however, will not be automatic; it will not occur as easily as a gas fills a vacuum. To realise the magnificent production potential of American industry, to profit on the possibilities of new products and new markets, will require tremendous efforts in distribution. During recent years, as a nation, we have concentrated on production goals, material and equipment goals, industrial expansion goals. From here on, we must direct a greater portion of our national effort to distribution goals and consumption goals.

Economic Resources

My fourth major element of confidence lies in the fact that there are sufficient economic resources available to support an even higher level of consumption than we enjoy today. One index of the opportunity to raise the level of consumption in the United States may be found in the relationship between personal disposable income and actual expenditures. Before World War II, Americans were spending an average of close to 95 per cent. of their personal disposable income for consumption goods and services in the more prosperous years and an even higher proportion of a lower income in less prosperous years. During World War II, shortages of consumer durables and other items sharply limited expenditure and consumption, but, after 1946, purchases increased sharply to make up for the deficiencies which had developed. Consequently, from 1947 through 1950, the proportion of income spent was somewhat higher than in pre-war years.

However, since early 1951, consumer expenditures have averaged only about 92-93 per cent. of disposable income, as compared with 95 per cent. or more in pre-war years. The significance of this shift lies in the fact that a 1 per cent. increase now in the proportion of personal consumption expenditures to personal disposable income would result in more than $2,000 million of additional retail sales.

The purchasing power is there. It is there in terms of both past savings and current income, both of which exceed any previous period. But the fact that it is there is not enough. The time has long since passed in the United States when necessity-goods have dominated the pattern of consumer spending. The great mass of Americans now earn incomes that support standards of living far above the level of subsistence. Both the tremendous increase in national income and its wider diffusion have placed in the hands of consumers a growing proportion of discretionary purchasing power, purchasing power which may not be exerted at all, or, if exerted, may be utilised in alternative ways. The continued expansion of markets is, therefore, dependent on effective merchandising. New methods of production must be matched by new methods of distribution.

Problem of Distribution Costs

Above all, we must deal effectively with the problem of distribution costs. There are no reliable, overall figures on this subject, but a reasonable estimate, leaning heavily on the conservative side, would be that somewhere between 40 and 60 per cent. of the consumer's dollar is absorbed in the distributive process. For many individual items, as I know from my own merchandising experience, distribution costs are even higher. In the United States, we have excelled in cutting production costs, but we have scarcely scratched the surface in cutting distribution costs. Here lies one of the great opportunities in our commercial history for creative imaginative business management to make a tremendous contribution to improved standards of living and to continue healthy industrial expansion.

My fifth element of confidence in the future American economic outlook is that there are ample grounds for believing that the managers of the American distribution system, particularly those in the retail segment of that system, will prove equal to this challenge and opportunity.

PAKISTAN NOTES

AN ECONOMIC PLAN FOR MIDDLE EAST

GOVERNOR-GENERAL'S SUGGESTION

AN economic plan for the countries of the Middle East, on the lines of the Colombo Plan, was suggested by Mr. Ghulam Mohammed, Governor-General of Pakistan, in the course of his inaugural address at the third conference of the non-official International Islamic Economic Organisation held at Karachi on Sunday this week. It should be possible, Mr. Ghulam Mohammed said, to work together on a number of projects of common interest such as research in agriculture, land and water uses, provision of technical information and, in certain cases, technical assistance. He further added that it should also be possible to call upon the experts and technical advisers of the countries of the region for guidance and consultation in matters in which they have attained eminence.

This is not the first time when the suggestion for an economic plan for the Middle East countries has been put forward. For the same suggestion had been made in the two previous conferences also. Mr. Ghulam Mohammed himself was the first to make the proposal. In his capacity as President of the first session of the I.I.E.C., held more than four years ago, on 25th November, 1949 to be precise, Mr. Ghulam Mohammed—he was then Finance Minister of Pakistan—had urged the countries of the Middle East to form themselves into a group of Muslim nations which, by mutual co-operation in the economic field, could help themselves by helping each other. In that connection, he had drawn the attention of the countries concerned to the need for interlinking the economies of the geographically contiguous countries of the Middle East which had been in the iron grip (economically) of powerful nations of the West. To quote his own words: "This is an age of large grouping. The pressure of other large groups is being exerted on us. Let us be strong enough to resist their pressures and develop a system of collective bargaining and collective security."

Although more than four years have elapsed since the suggestion for an economic plan for the countries of the Middle East was first put forward, the progress in its implementation has been dismally unsatisfactory. Apart from the political instability of most countries of the region, economic limitations, such as inadequate capital resources, technical knowledge and know-how, are stumbling blocks in the way of an economic plan for the Middle East. In view of these, as also of the changed and rapidly changing world political situation, it is highly doubtful whether such a plan will prove feasible and practicable.

Textile Industry

Unless the Government of Pakistan effects an upward revision in the controlled prices of cotton yarn produced in the country on or before the 10th inst., the textile mills will have to close down from the 11th. This is the warning given by the Pakistan Textile Millowners' Association. The plea for an upward revision in yarn prices is based on the increase in raw cotton prices. Although the price of raw cotton has risen from Rs. 64-12 to approximately Rs. 84, the Government insists, says the Association, on maintaining the control price of yarn at Rs. 18-12. The series of negotiations with the Government are said to have failed.

My sixth element of confidence is the new Administration in Washington. In his State of the Union Message, Budget Message, and Economic Report to Congress, President Eisenhower has listed the achievements thus far accomplished in the economic field and has outlined the great forward goals for the Congress and the Nation.

These, I think, are six solid reasons for confidence. Certainly there will be readjustments, but, in a dynamic economy, constant readjustment is a condition of growth. Certainly, there may be "soft spots," but, if we had only "hard spots," our system would be so rigid that it would loose its capacity to change and adapt. Certainly, there are potentialities for a recession—whether of the "orthodox" variety or otherwise—but also there are potentialities, which are at least equally great, for moving ahead to even higher levels of achievement.—*Exclusive to "Commerce."*

INSURANCE OF BANK DEPOSITS—III

MANIFOLD ADVANTAGES OF THE SYSTEM

THOSE who have followed the general arguments by which the system of deposit insurance for banks was supported in the first article of this series and the description of the working of the system in the U.S. and of the tentative scheme for the adoption of a similar system in India presented in the second article will be quick to appreciate the manifold advantages that must flow from instituting a system of insurance of bank deposits in this country. All that is now necessary is to sum up the main advantages of the system, in order to indicate briefly how it will directly strengthen the structure and indirectly assist the economic development of the country.

Almost the first effect of instituting a system of insurance of bank deposits is the great confidence it will instil in the minds of the depositors. They will no longer distrust a bank, as many still do in this country, and will be ready to leave their savings with the bank more willingly than in the past. Not only will the decline in bank deposits be averted but they will tend to expand. The expansion of bank deposits may be expected to take place more particularly in the sphere of "personal" deposits. As soon as the news gets abroad that bank deposits are practically Government-guaranteed, a deposit with a bank, in the eyes of the educated, as well as the unlettered, depositors in the country, will acquire the status of a Gilt-edged security. This is particularly true of upcountry and rural areas where the prejudice, bred by ignorance of the working of credit institutions, is unfortunately still too strong to induce people to prefer bank deposits to gold and silver.

Again, with the increase in bank deposits and in the confidence of the people in their security will come a new status for bank cheques. Discharge of debts by cheques will become more universal with all its advantages in the shape of diminution of the risk in handling cash and expeditious settlement of debts and other financial obligations. Government and semi-Government undertakings, too, should have no objection to their dues being paid by cheque. Nor need they continue the present restrictions on banks, such as those relating to the retention of the funds belonging to Government and other semi-Government bodies.

Freed from inhibiting fears of abrupt withdrawal of funds by the depositors, the banks will be encouraged to increase their operations as well as extend the area of their services. The banks will be in a better position to feel their way in unexplored areas. The confidence of foreign banks in Indian banks will improve once they realise that the deposits in the Indian banks are fully insured against normal banking hazards. Indeed, this will assist Indian banks in starting branches abroad.

The system of insurance of bank deposits will ensure that fluctuations in bank deposits (one of the causes for the unevenness of bank profits) will be limited to factors other than the confidence of depositors. A steady trend in profits and dividends of banks, which may be expected to flow from the adoption of the system, will place the banks in a better position to raise fresh resources from the capital market. It may be noted here that in the U.S., the F.D.I.C. has introduced a system of refunding the premium for insurance of bank deposits to the insured banks, in order to enable the latter to declare better dividends and attract fresh capital. This policy has benefited the banks. It has also benefited the insuring authority, since the risk involved in the case of banks, which acquire larger capital resources, is relatively smaller to the insurer. The insured banks derive a benefit not only from their ability to raise additional finance but also from a decline in their expenses. This latter benefit arises from the fact that the insuring authority can take the initiative in placing a ceiling on interest rates. One of the major measures, adopted by the F.D.I.C. immediately after its formation, was to fix a ceiling on the rate of interest paid on bank deposits. Operating costs of the banks are, in fact, under the insuring authority's constant scrutiny. It enforces conformity to certain fairly well defined standards by the banks and thus facilitates the orderly expansion of the banking system.

Since the insuring authority thus takes prophylactic measures designed to prevent the outbreak of banking crises, it should be clear that the growth of the banking system will receive a great stimulus. No longer will it be necessary for the smaller banks to go through the cruelly slow process of a "run" and a recession, before they take their place alongside the honoured members of the banking community. Although it will still be true that no bank can become a "big" one in a day, the system of insurance of deposits will at least lessen the severity of the banks' battle for front place. And if some casualties become inevitable, there is at least one satisfaction, that the fall of the banks concerned will, if they are insured, cause less misery to the depositors than otherwise. Moreover, the insuring authority's perpetual interest in the insured banks will obviate the need for the use of harsh and punitive measures, such as non-licensing of banks and prohibition of receipt of further deposits, in order to weed out the erring members of the banking community.

Perhaps, a major advantage of deposit insurance lies in the fact that it will facilitate merger of banks. What prevents the bigger and well organised banks from taking over the lesser banks is that they are not always certain of the extent of the liabilities they are asked to absorb. Indeed, they are not sure whether the good they might be rendering to the smaller or weaker banks does not involve too heavy a sacrifice on their part. They are often prevented from allowing a smaller bank, in difficulties, to merge its identity with them out of fear that the malady of the patient they are out to cure might ruin their own health. But, when the banks are all insured, there will be less disinclination among the bigger banks to help or to take under their protection a deserving younger bank. Mergers and amalgamations of banks will thus be easier to put through.

Such, in the main, are the advantages that may be expected to flow from the adoption of a system of deposit insurance. It should be clear that the system has its advantages for the general economy too. In the next few years, a large volume of new money, under the Five-year Plan, will be pumped into the economic system. If all this money were left in the hands of the people, they may be tempted to spend it, which will lead to open inflation. On the other hand, if this excess purchasing power were contained within the banks, the temptation to spend would be less. Thus, it would provide one of the best dams against the inflationary floods that might otherwise engulf the whole national economy. The best way to promote the healthy diversion of purchasing power to constructive channels is to encourage the people to deposit their money with the banks. Since deposit insurance can be trusted to promote the spread of this habit among the people, it must be acclaimed as the least offensive and the most effective of anti-inflationary measures undertaken by any Government anywhere in the world.

COMMONWEALTH DEVELOPMENT

The Commonwealth Development Finance Company (C.D.F.C.)—set up in London as a result of the Commonwealth Economic Conference of 1952—has, during its first financial year, invested, or negotiated investment, in three major projects, one in Pakistan and two in South Africa. The Pakistani project is the Sui Gas Transmission Company Ltd., to pipe natural gas through the lower Indus Valley to Karachi and provide a fuel source for the area's growing industries and agricultural installations. The South African projects are the Electricity Supply Commission of South Africa, for increasing the supply of power to the Rand and the Orange Free State and expanding gold production; and the South African Industrial Cellulose Corporation, for manufacturing pulp from Natal eucalyptus plantations, saving on pulp imports from outside the sterling area, and adding to the area's exports.

The projects—investments in which, when completed, should aggregate some £5,000,000—are listed by the C.D.F.C. chairman, Sir Frederick Godber, in the Company's first annual report, just published in London.

The Company's activities in regard to the three projects are not fully reflected in the accounts (to be presented at the Company's annual general meeting on 29th April), Sir Frederick points out, explaining that, of the three, only the £2,000,000 loan to the South African Electricity Supply Commission was actually advanced during the year under review. But a footnote to the balance-sheet as on 31st March, 1954, shows that the Company had conditionally agreed to subscribe approximately £1,000,000 in the Sui Gas Transmission Company.

During its first year, the C.D.F.C. received a number of applications, a large majority of which were unsuitable for detailed consideration. But at least three are still under consideration. The intended formation of the C.D.F.C. was first announced at the time of the Commonwealth Economic Conference in December, 1952, when the need was stressed for speeding investment in the Commonwealth to develop its resources and improve the sterling area's balance of payments position. The Company was incorporated in March last year as an instrument of private enterprise formed with Government approval. Of its £15,000,000 share capital, £8,250,000 has been subscribed by 91 industrial, mining, shipping, and banking companies and firms in the United Kingdom, and the remainder by the Bank of England (thus the largest shareholder, though it does not have, or seek to exercise, control).

The main objects of the C.D.F.C. are "to provide or procure financial facilities of all kinds for the development of natural and other resources of any part of the Commonwealth." The C.D.F.C.'s role is primarily to help the financing of development undertaken by private enterprise; it does not, therefore, propose to take direct part itself in such development, and "special emphasis is laid on the provision of expert management by those already engaged in the enterprise concerned."

Generally, C.D.F.C. considers financial assistance only in case of applicants who cannot raise capital in the area where the development is taking place; who have provided a reasonable amount out of their own resources; have raised as much as can reasonably be expected through normal market channels (C.D.F.C.'s policy is to supplement, rather than compete with, existing lending institutions); can provide expert management for the undertaking; and whose projects offer reasonable prospects of being remunerative.

HINDUSTAN COMMERCIAL BANK LTD.

As in the case of many other Scheduled banks in India, the Hindustan Commercial Bank Ltd. (Managing Director: Mr. Kishen Chand Puri, Kanpur) has had an unfavourable period of working during the year ended 31st December, 1953. The Bank's profit, which had been steadily improving from Rs. 1.34 lakhs for 1949 to Rs. 4.80 lakhs for 1952, suffered a setback to Rs. 2.60 lakhs for the year under review. With the sum of Rs. 10,609 brought in from the previous year, the total available for appropriation is Rs. 2.71 lakhs. The Directors have utilised Rs. 2.56 lakhs to write off bad debts and furniture and stationery in respect of Pakistan branches, leaving a sum of Rs. 15,160 to be carried forward. It may be noted that last year a sum of Rs. 4 lakhs was utilised out of the profit to write off bad debts, Rs. 1 lakh was transferred to investment reserve and Rs. 35,000 was provided for paying bonus to staff. For the seventh year in succession, the dividend to the Bank's shareholders has been passed over. In fact, barring the year 1946, when they had a return of 4 per cent., they have not received anything from the inception of the Bank.

The following comparative table giving the variations in the main items of the Bank's balance-sheet as at the close of the last four years, provides an idea of its progress:

(In lakhs of rupees)

	As on 31st December			
	1953	1952	1951	1950
Capital	125.00	125.00	125.00	125.00
Reserves	19.40	15.80	10.80	15.80
Deposits	454.68	450.83	407.86	609.10
Borrowings from other banks	121.57	102.00	84.75	37.00
Advances	309.99	309.47	310.86	305.25
Investments	289.73	289.43	239.66	271.64
Cash	67.45	71.02	86.02	85.43
Balance-sheet total	759.26	783.73	810.29	786.39
Ratio to deposits of—	%	%	%	%
Advances	71.3	68.4	62.4	53.7
Investments*	39.7	41.6	41.1	45.1
Cash	15.5	15.7	17.3	16.4

* Ratio arrived at after taking into account the investments earmarked against borrowings from other banks.

REFORM OF COMPANY LAW—I

NEW LEGISLATION MUST PROVIDE FOR SPECIAL NEEDS OF THE COUNTRY

(By A. RAMAIYA, Advocate, Madura)

THE new Companies Bill, which seeks to consolidate and amend the law relating to companies, is the longest legislative measure ever introduced in the Legislature of this country. It contains 612 sections and eleven schedules, many of them consisting of numerous clauses with elaborate details, the entire measure occupying nearly 400 pages of closely printed matter. The Bill is based almost entirely on the recommendations of the Company Law Committee, which made its Report early in 1952; in all essential particulars, most of these recommendations have been faithfully adopted in the drafting of the Bill, except that, in respect of one or two matters not covered by the recommendations, such as the provisions relating to the compulsory amalgamation of companies in the national interest, the Government have thought fit, in the light of recent experience, to include them in the Bill. It goes to the credit of the Committee that its recommendations were so thorough and convincing as to be accepted wholesale in the revision of the Indian Companies Act. Whatever may be the views and opposition of certain ultra-capitalist bodies to the reforms sought to be given effect to in the provisions of the Bill, a careful study of it shows that it will usher in a new era in the history of industrial and commercial enterprise through the creation of conditions necessary for the healthy functioning of joint-stock enterprise in the private sector of the country's economy. While the provisions of the Bill as a whole are generally acceptable—and I am inclined wholeheartedly to give my support to it.—I find that, as a lawyer who is specialising in this branch of law and has had occasion to come in contact with and acquire some intimate knowledge of the working of several companies in South India, there is scope for offering a few suggestions for altering or adding a few clauses here and there. I hope that they will receive due consideration at the hands of those responsible for the passage of the Bill in Parliament.

Fundamental Principles

In a Welfare State like ours, the best method of carrying on private enterprise to the extent to which such enterprise is considered expedient, is undoubtedly by means of companies incorporated under the Companies Act. The limited company is an attraction to small investors. As a company, unlike an individual or a firm, is under a statutory obligation to maintain accounts and submit to annual or other periodical audit by a qualified auditor, it is less likely than individuals and firms to be unreliable for any business purposes, including Government dealings, especially in respect of fiscal matters such as the income-tax and business profits tax and is certainly more amenable to Government regulation and less prone to evasion. The object of reform must, therefore, be to encourage in the private sector of the economy the corporate form of business enterprise in preference to individuals and firms.

The system of companies is essentially a democratic one. It is based on majority rule by the shareholders, and through election of representatives called directors for carrying on the management. And the board of directors in their mode of work are also governed by the majority principle. The presumption underlying the system is that the majority having a major stake in the company which is their concern will be more interested than the minority in ensuring proper management. If, however, the majority should do anything to the clear detriment of the minority and for the benefit of the majority only and not of the company as a whole, the law should intervene and protect the minority interests from oppression.

Amendments of the law in this country should not proceed on the lines of a simple adoption of what has been effected in England without due regard to the objectives of the system of economy obtaining in this country. Our special circumstances would seem to require the company law reform to proceed on the following lines:

(1) In the case of companies concerned in the production or distribution of essential commodities or services there should be adequate statutory povision for effective Government intervention in the interests of the public whatever may be the nature of the companies concerned—whether public or private.

(2) In the case of all public companies and the subsidiaries of such companies whether public or private, the law should ensure adequate protection to the investing public and make effective provision against fraudulent promotion and bad and dishonest management.

(3) In the case of private companies (other than subsidiaries of public companies), in view of their being more or less in the nature of family concerns or partnerships, the law should, to the extent to which they do not affect the public interests, give free scope for development and provide for the least interference, with their internal management or affairs.

(4) In the case of any company it is expedient on grounds of public policy that the law should make adequate provision for the protection of shareholders against possible oppression and mismanagement on the part of those who are in charge of the company's affairs.

(5) As a corollary of the last principle, emphasis has to be laid on the need for an efficient administrative machinery to enforce the provisions of the law enacted for ensuring the efficient and honest management of companies. The Committee on Company Law Reform in England expressed, at the very outset of its Report: "It seems to us important that observance of the requirements of the Companies Act should be vigorously enforced and still more important that, where companies are improperly or dishonestly conducted, their affairs should be investigated and the offenders prosecuted."

A Satisfactory Measure

Bearing in mind these basic principles, if we examine the provisions of the Bill now before Parliament, we find that the principle No. 1 calling for adequate statutory provision for Government intervention in the case of companies concerned in the production or distribution of essential commodities and services, has not been recognised at all. Similarly, neither principle (3), which points to the desirability of least interference with private companies, nor the principle (5), which emphasises the need for an efficient administrative machinery to enforce the observance of the provisions of the Act, has received due consideration in the drafting of the Code. While, as observed earlier, the Bill, so far as it goes, is a thoroughgoing and satisfactory measure, the alterations and additions mentioned by me are only by way of constructive suggestions without in any way detracting the merits of the provisions of the Bill.

With these preliminary remarks, I propose to examine some of the sections of the Bill which, in my view, need certain improvements. To take first section 2(2) which deals with "associate of managing agent." If the object of the definition is to secure the effective enforcement of the provisions of the Act relating to the managing agent, by extending them to associates of the managing agent, it is necessary to improve the definition by including an additional sub-clause as follows:—"Any adult member of the Hindu family of which the managing agent is a member manager." It is generally only through such members of his own family as his trusted associates that a managing agent is naturally and ordinarily inclined to put into effect his contrivances for evading any restrictions imposed on him by any provisions of the Act.

Section 5—Officer who is in default: The definition, as it is, is so worded that it will possibly enable any and every officer who has defaulted in his duty to escape by pleading that he was not 'knowingly guilty.' If the object of the penal provisions is to enforce observance of the requirements of the Act and discourage their contravention, it appears to me to be necessary that a proviso as follows will have to be added to this section:

"Provided that an officer who is wilfully in default shall be deemed to be knowingly guilty."

Section 51—Matters to be stated in Prospectus: (A) When a company is formed and forms of application for shares are issued, applicants must be in a position to know whether or not the shares are easily marketable. In the case of several companies, power is given to the directors by the Articles to refuse the registration of any transfers at their discretion; and this has caused a good deal of hardship in many cases. It appears to me desirable that there should be some such statutory provision inserted in section 51 or in Schedule II as follows:

"The Prospectus shall contain a statement in a conspicuous place whether and to what extent there would be restrictions as regards transfers of shares."

Again, where a company is registered in one State and invitation to subscribe for shares is issued in other States, either by means of newspaper advertisements or otherwise, it is highly desirable that soliciting of subscriptions for shares from investors in other States should be prohibited, unless permission to deal in the proposed shares has been obtained from any recognised stock exchange. When any announcement, advertisement or other public offer or invitation is made on an all-India scale, investors not unnaturally expect to obtain a marketable investment; and a statement as to whether or not permission has been granted by any stock exchange will put investors on guard as to deciding whether or not it would be wise for them to put their moneys into the proposed venture. I would, therefore, suggest the inclusion of a sub-section like this, after sub-section (2) of section 51:

"No company having its registered office in one State shall issue any form of invitation for shares in any other State, unless permission to deal in the proposed shares has been granted by a recognised stock exchange."

Questionable Transactions

Section 102—Declaration by transferee: In the public interest, it is necessary that, in all cases of transfer of shares, there should be a declaration by the transferee as to whether he is a beneficial owner or nominee and if the latter for whom. This will check a good deal of *benami* and other questionable transactions by managing agents or directors. The Cohen Committee in England had also made a similar recommendation. I would, therefore, add the following as sub-section (2) to section 102: "Every transfer of shares shall contain a declaration by the tansferee whether he will be the beneficial owner of the shares comprised therein or only a nominee, and, in the latter case, for whom he will be the nominee."

Section 105(3)—Appeals against refusal to register a transfer: In very many cases an appeal to the Central Government at Delhi will be a costly affair. In the interests of the investing public, a right of appeal in the first instance to the Registrar of Companies with a right of further appeal, if need be, to the Central Government will be conducive to economy, besides relieving the Central Government from an overcrowd of mostly small cases of this sort. I suggest that sub-section (3) may be suitably amended as follows:

(3) Against any refusal of a company, the transferor or transferee may appeal to the Registrar, who, after giving the parties an opportunity to be heard, may dispose of the same.

(4) Any person aggrieved by an order of the Registrar under sub-section (3) may prefer a further appeal to the Central Government who may empower a specified authority to hear and dispose of appeals of this class.

Section 159(3)—Default in holding Annual General Meeting: Where there is default in holding the annual general meeting, instead of the Central Government the Registrar may be given power or delegated power to interfere as provided in this section. Otherwise, as the Central Government is at a great distance, there will be great delay and expense.

(To be continued)

BANK OF MADURA LTD.

The Bank of Madura Ltd. (Secretary: Mr. P. S. Viswanathan, Madurai) has earned a profit of Rs. 1.15 lakhs (after providing for bad and doubtful debts) for the year ended 31st December, 1953. This compares with Rs. 2.34 lakhs for the previous year. Out of the profit for 1952, the Directors had adjusted Rs. 2.29 lakhs (besides drawing Rs. 2.65 lakhs from the reserves) for writing off the loss of Rs. 4.94 lakhs on the sale of the Bank's holdings of long-dated securities. After making provision for this, the profit available was Rs. 5,321. There has been no such loss to be provided for this year. The Directors have accordingly transferred Rs. 1.15 lakhs to the reserve fund, as against Rs. 5,000 provided last year. The sum left to be carried forward is Rs. 662, as against Rs. 723 brought in.

The capital of the Bank was raised during the year from Rs. 7.50 lakhs to Rs. 11.25 lakhs by making a call of Rs. 25 per share on 15,000 shares, making the shares Rs. 75 paid-up. The reserves amount to Rs. 1.53 lakhs. There has been an increase of Rs. 12 lakhs in deposits to Rs. 2.05 crores. Advances have declined from Rs. 1.41 crores to Rs. 1.11 crores, while investments (at cost) have been strengthened from Rs. 41.59 lakhs to Rs. 67.63 lakhs and cash balances from Rs. 18.94 lakhs to Rs. 40.59 lakhs. The ratio of advances to deposits has declined from 73.2 per cent. to 54 per cent. and the total liquidity ratio has gone up from 31.4 per cent. to 52.8 per cent.

PROTECTION FOR PICKERS INDUSTRY

ITS CONTINUANCE UNDER CONSIDERATION

LAST week, it was the turn of the pickers industry to appear before the Tariff Commission for the consideration of the question of continuing protection beyond 31st December next. The claim of the industry for protection or assistance, it will be recalled, was first examined by the erstwhile Tariff Board in 1948. And, as a sequel to its recommendations, the Government of India granted protection to the industry for two years, with effect from 1st April, 1949, by converting the then existing revenue duty of 10 per cent. *ad valorem* on pickers into a protective duty. Following a subsequent enquiry in January, 1951, the protection was extended by another 21 months, that is, up to the end of December, 1952. The Government also raised the rate of duty to 10½ per cent. *ad valorem* plus a revenue surcharge of 5 per cent. Pending another detailed enquiry, the protection was extended, in consultation with the Tariff Commission, first up to 31st December, 1953, and subsequently up to the end of the current calendar year. The pickers industry has thus already enjoyed tariff protection for more than five years.

Pickers are extensively used in the textile industry as accessories on looms. The function of a picker is to propel the shuttle across the width of the loom for inserting the weft in the cloth which is being woven. The history of the manufacture of pickers in India dates back to the beginning of the First World War. The industry soon made headway during the war years; by the end of the war, there were as many as 40 factories in operation. After the First World War, the industry faced keen competition which reduced the number of factories to just three. It was only with the commencement of the Second World War that the industry again came into prominence, the chief impetus being the lack of imports. The number of factories rose to 60 at the end of 1945, with an aggregate output of 20,000 gross pickers.

The pickers industry is essentially a small-scale industry; in some cases, it is organised even on a cottage-industry basis. Most of the factories are located in Bombay and Kathiawar, the types of pickers manufactured being those required by the cotton textile industry. The factories situated in Calcutta produce pickers for the jute industry.

Progress of the Industry

Thanks to the tariff protection for five years, the pickers industry has considerably expanded in recent years. The total installed capacity of only 26 factories—the number of units in existence is 70 and that in actual production 60—is now estimated at 93,300 gross per annum, which compares very favourably with 50,000 gross for the whole of the 60 units in existence in 1948. Of the total capacity of 93,300 gross, cotton pickers (4B round foot) account for 68,000 gross, jute pickers for 11,000 gross, drop box pickers for 7,000 gross, and other kinds for 7,300 gross. But the industry is not working to its full capacity. The trend of production has, in fact, been downwards in recent years. Thus, in 1953, the industry produced 27,856 gross pickers, as against 28,638 gross in 1952 and 28,743 gross in 1951. The present rate of production falls short of the demand at 41,450 gross (37,500 gross cotton pickers, 3,200 gross jute pickers and 750 gross other types), as agreed to at last week's Tariff Commission's public enquiry.

The gap between production and demand thus, and also the other aspects, such as supply position of raw materials, quality of indigenous products, imports and import control policy, and c.i.f. prices of imports, have to be dispassionately examined before arriving at a decision with regard to the continuance of protection to the pickers industry. Mr. B. N. Adarkar, member, Tariff Commission, was therefore, right in prefacing his speech, delivered while opening the public enquiry on Wednesday last week, with a request to all the interests concerned—the manufacturers, the importers and the consumers—to help the Commission with their knowledge and experience to arrive at "sound and well-thought-out conclusions."

Case for Continuance of Protection

The case for the continuance of protection to the pickers industry is based on two considerations:

(1) Athough imports of pickers have been totally banned since July-December, 1952, the mills had already built up heavy stocks before the ban was imposed and this has kept the demand for indigenous pickers at a low level and prevented the industry from utilising a reasonable proportion of its capacity.

(2) Continuance of protection will enable the industry to consolidate its position and encourage the more progressive units to modernise their equipment in order to attain a high standard of quality.

Some of the importers, on the other hand, are stated to have expressed the view that the industry is now firmly established and is no longer in need of protection.

The pickers industry fulfils one of the important conditions for protection, namely, that all the principal raw materials required for the manufacture of pickers, with the exception of sperm oil, are available locally. These include raw buffalo hides, sodium sulphide, wire and wire nails, panel pins, lime, sulphuric acid and caustic soda. The main sources of sperm oil supply are the U.K. and the U.S. Although more than five years have elapsed since the Tariff Body recommended investigation of the possibility of supply of sperm oil from sources other than these countries, no worthwhile progress seems to have yet been made.

Quality of Pickers Poor

As regards the other important condition for protection, namely, the quality aspect, the general opinion among the consumers of pickers seems to be that, while the indigenous product has shown some improvement in quality since the last enquiry (1951), it is still below the requisite standard. All the firms which are members of the All-India Pickers and Textile Leather Manufacturers' Association, it is claimed, produce pickers strictly in accordance with the I.S.I. specifications and it is only the large number of units outside the Association that continues to manufacture sub-standard products, thereby impeding the progress of the industry. How far and to what extent this claim is justified it is difficult to say. Mr. Adarkar, however, said: "It seems that the Association has not yet been able to devise adequate measures for enforcement of standards. The Director of Industries, Bombay, has informed us that his efforts in this direction have also not yielded any tangible results. We have received varying estimates of the average life of indigenous pickers, ranging from 150 hours to 350 hours, while the average life of imported pickers is estimated by some at 400 hours and by others at as long as 600 hours."

Surely, this is a great drawback of the pickers industry which should be remedied, if the confidence of consumers is to be won. Mr. Adarkar did well to emphasise this aspect which he characterised as the basic problem of the industry. Said he: "...it is imperative that the industry should try its utmost to find a satisfactory solution to this basic problem." This is possible by proper internal organisation. After all, the present difficulties of the pickers industry, it is said, arise not so much from its cost of production as from its internal organisation.

PLEA FOR LARGER RAW SILK IMPORTS

A vigorous plea for liberalising imports of raw silk was put forward by Mr. P. M. Chinai, President of the Silk Merchants' Association, Bombay, in the course of his address at the recent annual meeting of the Association. The plea is based chiefly on the ground that there is a wide gap between the quantity now being produced by the indigenous industry and consumption requirements. Said Mr. Chinai: "In view of an increase in the output of filature silk here being unlikely, the demand for more raw silk imports is just and reasonable." Two other grounds on which the plea is based are the poor quality and the high prices of the indigenous product. Mr. Chinai said that, despite protection, the Indian sericulture industry had not made any progress in the matter either of quality or of price. In view of all these, the restrictions on raw silk imports are stated to have caused immense hardship to the handloom weaving and *jari* industry, since the quantity allowed on the present quota basis is not enough to meet the requirements.

The Silk Merchants' Association President expressed the fear that the present difficulty of obtaining quality silk fabrics at reasonable prices might lead to the encouragement of substitutes and might cause a setback to the industry. The position, he maintained, could be averted by maintaining raw silk prices at reasonable levels, which was possible only by allowing liberal imports of raw silk. Mr. Chinai wanted, too, adequate imports of silk fabrics, in view of the inability of the indigenous industry to meet the demand.

CLOTH EXPORTS FROM INDIA

There was a slight setback to India's export trade in cotton piecegoods during March, 1954. The quantity of cloth passed for shipment in that month amounted to 78.9 million yards, a fall of 3.9 million yards and 2.1 million yards as compared with shipments in February and January, 1954, respectively. A further decline in exports is anticipated for the month of April. An indication of this is provided by the fact that the cloth passed for shipment during the first fortnight of April was not more than 36.6 million yards.

The aggregate quantity of cloth exported during the whole of the first quarter of the current calendar year, however, was larger than that in the corresponding quarter of 1953, being 242.7 million yards, as against 135.9 million yards. The bulk of the cloth exported consisted of medium counts, thanks to the abolition of export duty in October, 1953. The quantity of this variety actually passed for shipment was 149.5 million yards, as against 44 million yards. Coarse cloth accounted for 59.9 million yards, fine cloth for 27.9 million yards and superfine varieties for 5.4 million yards. The corresponding figures for the same quarter last year were 56.5 million yards, 32.7 million yards and 2.7 million yards.

TEXTILES EXPORT PROMOTION

Replying to a question in the House of the People on Monday last, Mr. D. P. Karmarkar, Commerce Minister, said that an export promotion committee for textiles was already taking shape. An ad hoc committee with 19 members had already been formed for the year to look after the work of export promotion of textiles. The proposed organisation in future would be an autonomous non-official board which would work under the supervision of the Cotton Textiles Fund Committee. Referring to complaints regarding packing and quality of textiles exported, the Minister claimed that, in both these respects, there had been distinct improvement.

TEXTILE RESEARCH INSTITUTE

Another important step in the establishment of the Textile Research Institute sponsored by the Millowners' Association, Bombay, was marked on Monday last week, when the Bombay Textile Research Association was registered under the Societies Registration Act of 1860. The Interim Council of Management of the Association consists *inter alia*, of the following:

Messrs. Vithal Chandavarkar, Neville N. Wadia, T. V. Baddeley, C.B.E., Dharamsey Mulraj Khatau, Krishnaraj M. D. Thackersey, G. D. Somani, M.P., Ramnath A. Podar, and Arvind N. Mafatlal.

RUSSIA BOYCOTTS AUSTRALIAN WOOL

"From next week, Russia will not buy Australian wool." This was disclosed by Mr. M. N. G. Kovalev, Commercial Attache to the Soviet Embassy at Canberra, on Saturday last. The boycott, it is said, follows the Russian note to Australia breaking off diplomatic relations with that country. The total quantity of Australian wool purchased by Russia since the beginning of this year amounts to 60,000 bales.

The Central Government would continue the system of giving subsidy to *khadi* production and sale during 1954. Disclosing this, the Commerce Minister revealed in the House of the People that Rs. 30 lakhs had been asked for the purpose. During 1953, the quantity of *khadi* produced in the country was 10,657,468 square yards valued at Rs. 1,94,00,798.

MONOPOLIES COMMISSION'S REPORT ON CALICO PRINTING INDUSTRY

YARN OUTPUT MOVES UP

(From A Special Correspondent)

MANCHESTER, 20th *April*

THE Monopolies Commission, set up during the term of office of the Labour Government in Britain, began in 1951 an investigation into alleged restrictive practices in the calico printing industry. Its findings have now been published and its recommendations are as strong as any previous reports produced by the organisation. Textile traders in Lancashire are somewhat indignant that their particular industry should be constantly picked on in this way, contending that restrictive practices are by no means the sole prerogative of industrialists in this area.

MANCHESTER LETTER

The Commission, however, has recommended that the various schemes evolved by textile printers for their own protection during the past 15 years or so should be scrapped. At the same time it admits that there are exceptional circumstances in the Lancashire textile industry. Few people need reminding of the era of price-cutting which caused so much hardship in the county little more than a generation ago. The sponsors of the minimum price schemes and other arrangements contend that only by such means can a decent living be ensured for those employed in the industry, its plant maintained and improved, and an adequate supply of new recruits attracted.

The Commission's view is to take a larger and longer outlook, believing that by maintaining prices at a high level printers will lose ground in the face of foreign competition and that the volume of business done will contract. This, in turn, it observes, means less employment, not only in calico printing but also in spinning, weaving and other sections of the cotton and rayon industries. The arrangements for printing, it contends, will only create a false sense of security and delay adjustments and redeployment of resources which will eventually have to be made.

"Scrap The Lot"

The Commission, therefore, recommends the abolition of the scheme organised by the printers under which firms either pay into a pool or are compensated from it in ratio to the amount of business they undertake below or above an agreed level. It considers the minimum price arrangements operate against the public interest and should be discontinued, although a non-enforceable list of prices may be issued as a guide. Other agreements, particularly those between the Calico Printers' Association and other large finishing combines, should be ended and the redundancy agreement drawn up in 1949 should also be wound up.

Perhaps the basis of the attitude adopted by the Commission is most clearly brought out in the sentence of the report which says: "We believe that it is generally true that price competition provides the keenest stimulus of all to the pursuit of efficiency and that its absence is bound in some degree to lessen the incentive to reduce costs." This investigating body has so far enquired into relatively few trades and the current report is in many ways the most outspoken.

In its future probes, the Commission may well have decided to take a tougher line with the industries being investigated. Lancashire is vitally affected by such an attitude as the spinning and doubling industry is equally vulnerable to attack on its minimum price schemes. Commenting on the report, the Federation of Calico Printers issued a statement which described the proposals as disastrous in their implications not only to the calico printing trade but to the whole of the Lancashire textile industry. The fundamental opposition expressed by the Commission to the principle of minimum price arrangements, the Federation added, applied in one form or another to almost every section.

Unrestricted competition before the war had resulted, the statement continued, in cut-throat competition, the running-down of plant and machinery, a poorly-paid and under-employed labour force, bankruptcy or near-bankruptcy for a large percentage of the firms engaged and had completely failed to stem the loss of export trade.

The Federation claimed that the system failed so disastrously that the Government had to step in in 1939 and pass the Cotton Industry Enabling Act for the express purpose of creating machinery to provide minimum price arrangements of the very type now prescribed by the Monopolies Commission. The implications of the report, it added, will in fact go much further than the textile industry and present an acute problem to a very large section of British industry as a whole.

Buxton Talks

The Golden Jubilee Congress of the International Federation of Master Cotton Spinners' and Manufacturers' Associations to be held at Buxton from 13th to 20th May will be attended by 250 delegates from 14 member-countries, according to the Congress programme. Mr. W. T. Winterbottom, President of the Master Cotton Spinners' Federation of Britain, will act as Congress President. Business sessions range from discussions on international monetary problems as they affect the cotton industry to the utilisation of man-made fibres.

On 17th May there will be a civic reception and dinner given by the Lord Mayor and Corporation of Manchester at which Lord Woolton, Minister of Materials, will speak. On the following day Congress delegates will travel to Liverpool for the reopening of the Cotton Exchange after a lapse of 13 years.

The International Federation was formed in 1904 and its policies have influenced the development of raw cotton growing, encouraged improved and higher crops in a number of countries and helped to achieve quality standards in the cotton industry's raw material. Since its formation the Federation has also undertaken a world statistical service.

Yarn Output Up

Lancashire mill workers spun 34,000,000 lbs. of cotton and rayon yarn more in the first three months this year than in the same quarter of 1953, the Cotton Board announced this week. Total yarn output for the three months was 262,090,000 lbs., as compared with 227,930,000 lbs. over the same period a year ago. The workers rounded off the quarter with their best achievement so far this year. They produced 20,730,000 lbs. of single yarn in the last week of March—40,000 lbs. more than their previous best result recorded the week before and close on 6,000,000 lbs. more than in the corresponding week last year.

Recruitment Aid

As a move to increase the supply of key workers to Lancashire's 1,000 cotton weaving mills, a new apprenticeship agreement has been reached between mill employers and the Loom Overlookers' Amalgamation.

The agreement, announced in Manchester this week, reduces the minimum age of entry into an apprenticeship scheme for loom overlookers from 19 to 17, and provides for junior and senior apprenticeship stages up to 21.

In a statement, the Cotton Spinners' and Manufacturers' Association said there had been concern about the supply of overlookers in mills in many areas. The new agreement, it was hoped, would help to stimulate the flow of entrants and attract the best type of youth for training for these key positions. There are at present 6,000 loom overlookers in the cotton weaving industry.

Unemployment in Textile Industry

Unemployment in Lancashire cotton spinning and weaving mills fell again in the month to mid-March, Ministry of Labour figures for the region show. In cotton spinning, the number idle decreased to 950, of which 450 were temporarily stopped, and in the weaving section the number unemployed dwindled to 480, including 280 on short time. In the finishing section the out-of-work figure was reduced to 420.

More vacancies exist in the spinning and weaving section than in any other single industry in the North-West. Labour requirements in spinning aggregate 5,080 and 2,200 more operatives are needed in weaving. Vacancies in the finishing branches number 460.—*All Rights Reserved.*

PIRACY OF U.K. TEXTILE DESIGNS

The Manchester Chamber of Commerce has asked more than 1,000 textile firms to supply detailed information of Japanese "piracy" of Lancashire designs. In a letter asking the firms for evidence, the Chamber says: "It has agreed with the Cotton Board and the British Rayon and Synthetic Fibres Federation on concerted action for dealing with alleged commercial malpractices by Japanese traders." The bodies had met at the suggestion of Mr. Peter Thorneycroft, President of the Board of Trade.

A spokesman of the Chamber recently said that, since the signing of the recent Anglo-Japanese payments agreement, which provided Japan with wider opportunities for exporting textiles to sterling areas, there had been a resurgence of complaints by Lancashire firms, alleging piracy of their designs.

THE HINDUSTAN COMMERCIAL BANK, LIMITED

DIRECTORS' REPORT TO SHAREHOLDERS

GENTLEMEN,

The Directors beg to submit the audited Balance Sheet as at and Profit and Loss Account for the year ended 31st December, 1953.

The profits for the year including balance of Rs. 10,608-13-0 brought forward from the last year and after providing for all working expenses and depreciation amounted to Rs. 2,70,682-13-1. Your Directors have decided to make the following appropriations therefrom :—

		Rs.	a.	p.
1.	Amount utilised for writing off of Bad Debts and furniture and stationery in respect of Pakistan Branches	2,55,522	14	1
2.	Balance to be carried forward to the next year's account	15,159	15	0
	Total .. Rs.	2,70,682	13	1

The business of the Bank during the year under review continued to be satisfactory.

The Bank's Branch at Lalitpur had to be closed during the year as it was found to be unremunerative.

The Directors take this opportunity of extending their grateful thanks to the constituents and shareholders for their continued confidence and support. They also express their grateful appreciation to the Members of Local Advisory Boards for their help and guidance.

The Directors have examined the list of accounts drawing our special attention as received from the Auditors and are of the opinion that the accounts mentioned therein are either not bad or doubtful and the the Bank holds adequate provision for them as much as is considered necessary.

In terms of Article 97 of the Articles of Association of the Bank, Sardar D. Inder Singh and Lala Pannalal Berlwal were taken as Directors this year. They retire from office but being eligible, offer themselves for re-election.

According to Article 107 of the Articles of Association of the Bank, two Directors, viz.,

1. Lala Gurusharan Lall, C.I.E., and
2. Lala Sital Prasad,

retire by rotation from the Board, but are eligible and offer themselves for re-election.

You are requested to appoint Auditors for the current year and to fix their remuneration.

For and on behalf of Directors,
PADAMPAT,
Chairman.

30th March, 1954.

BALANCE SHEET AS AT 31st DECEMBER, 1953.

CAPITAL AND LIABILITIES	Rs.	a.	p.	Rs.	a.	p.

COTTONSEED CRUSHING INDUSTRY

NEED FOR ADJUSTMENT IN FREIGHT RATES

THE prospects for the cottonseed crushing industry in India are now recognised as bright, thanks to the fact that the industry belongs to the class of industries which depend for their raw material on indigenous sources and which have a large domestic market, either actual or potential. And yet few people know the economics of and prospects for this comparatively recent entrant into the ranks of India's industries. Mr. G. L. P. Chatenay, Chairman of the Sundatta Cotton-seed Utilisation Ltd., therefore, did well to avail himself of the opportunity provided by the recent annual meeting of the Company to deal at some length with the fortunes of the cottonseed crushing industry. His illuminating address, published in our last issue, deserves a wider audience than the one for whom it was intended.

The cottonseed crushing industry, Mr. Chatenay said, is "here to stay in India." This optimism is based not only on the economic importance of the industry but also on the admirable natural conditions which prevail in this country for its progress. Although cotton-seed oil has for long been a source of edible fat in the U.S., the U.S.S.R. and certain other cotton-producing countries, the crushing of cottonseed in India, the second largest cotton-growing country in the world, made little headway till recently. India, however, seems to be making up for past neglect. For, apart from the modern plant for crushing cottonseed, owned by the Sundatta Cotton-seed Utilisation Ltd., there are now nearly 20 units engaged in the processing of cottonseed.

The cottonseed crushing industry, Mr. Chatenay said, creates "wealth out of waste." This is because cottonseed, which is now practically entirely used only as cattlefeed, can be converted by the industry into edible oil, the residue (cake) used as cattlefeed and the linters extracted from the seed put to a great many uses. Every 100 lbs. of cottonseed processed yield 75 lbs. of oilcake (cattlefeed), 20 lbs. oil and linters and 5 lbs. waste. It is true that cattle get a slightly less rich food by being fed with the cake rather than the cottonseed. It would, however, appear that, in order to make up the loss of oil removed, cheaper substitutes, like maize or barley, can be fed to cattle along with the cottonseed cake. This will not impose any strain on India's agricultural economy. Actually, it will mean what might well be called rationalisation of agriculture. For, Mr. Chatenay said: "It is estimated that, if all the cotton-seed grown in India were processsed, the edible oil thus produced would enable the diversion of nearly two million acres of land from other oil-seeds to entirely new cultivation, after allowing for the land required to grow the substitute cattlefeeds to make up for the oil removed from cottonseed."

Among the factors which may be trusted to help the cottonseed crushing industry, mention must be made of the demand for cottonseed oil from *vanaspati* interests. The Government has removed the restriction whereby the *vanaspati* manufacturers were compelled to state the kind of oils that had been used in the making of their product. It is now sufficient if the manufacturers state on the label, "Made from vegetable oil." As a result of this, the market for cottonseed oil, according to Mr. Chatenay, is "broadening." The All-India Village and Khadi Industries Board, too, has supported the cottonseed crushing industry on the ground that, if the oil mills in the interior take to crushing of cottonseed which cannot be crushed economically by *ghanies*, the other oil-seeds would become more freely available to the village industry. Again, the cottonseed crushing industry will increase considerably in importance when the linters, extracted from cottonseed, find more extensive use.

If the cottonseed crushing industry, which is thus of great importance to India's national economy, has to be placed on a firm footing, then it is necessary that it should be assured of a regular supply of raw material at reasonable prices. Now, the price of cottonseed is determined by the available supply, as well as by the demand from two competing sources—the crusher, who needs this commodity for crushing, and the cattleowner, who needs it as cattle-feed. The price, which the cattleowner will pay for cottonseed, is itself dependent upon the the prices of certain other commodities, such as coarse grain, which can be put to use as cattle-feed. If the Indian cottonseed crushing industry develops in the same way as it has done in the U.S., cottonseed will cease to be used as cattlefeed, the commodity being exclusively used for purposes of crushing. This, however, is a long-term process. What is now needed is to shorten this period of transition. This can be done only by making the price of cottonseed somewhat costlier for the cattleowner than for the crusher.

Normally, this will be difficult to accomplish. Fortunately, it can be done with some ease, since the crusher is generally interested in American cottonseed, which has a higher oil content and produces better and more linters than *deshi* cottonseed, while the cattleowners, except those in Saurashtra, are content to use *deshi* cotton-seed. If Saurashtra were to be prevented from bidding up the prices of American cottonseed, which should more naturally belong to the sphere of the crusher, then the freight rate for American cottonseed should be higher than that for *deshi* seed. In this way, American cotton-seed could be retained for use by the crushers whose mills are generally located in the cotton-seed-growing region. The rate for *deshi* seeds, as Mr. Chatenay pointed out, could be reduced to the same level as oilcakes, since both are cattle-feeds. Indeed, the bulky nature of American cottonseed is comparable to groundnut which is subject to a higher freight rate than other oil-seeds. Thus, by increasing the freight rate for American-type cottonseed and reducing that for *deshi* seed to the level applicable to oilcakes. the Railway Ministry would not only be assisting the growth of this industry of national importance but also be rationalising the structure of freight rates on this group of commodities in a scientific manner.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the Balance Sheet of the Hindustan Commercial Bank Ltd., as at 31st December, 1953, as above set forth and the annexed Profit and Loss Account for the year ended the same date with the books and accounts kept at the Head Office in Kanpur in which are incorporated (a) the returns of the Bank's Branches in India and Pakistan (Lahore) certified by the respective Branch Managers and amended at the Head Office on the basis of the information with the Head Office, and (b) Statements of Accounts prepared at the Head Office based on the records of the various other branches in Pakistan which were evacuated in the year 1947. Subject to the complete disclosure and adequate provision for Bad and Doubtful debts and the notes appearing on the face of the Balance Sheet, we report that :—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory.

(b) The transactions of the Bank which have come to our notice, have been within the powers of the Bank.

(c) The returns received from the Branch Offices of the Bank have been found adequate for the purpose of audit.

(d) In our opinion the said Balance Sheet and Profit and Loss Account are drawn up in conformity with the law.

(e) The Balance Sheet exhibits a true and correct view of the state of the Bank's affairs and the Profit and Loss Account shows a true balance of Profit for the year according to the best of our information and explanations given to us and as shown by the books and records of the Bank kept at its Head Office, and

(f) In our opinion, Books of Account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

ECONOMICS OF "GUR" INDUSTRY

SCOPE FOR EXPANSION DEPENDS ON AVAILABILITY OF SUGARCANE

IF India occupies a very conspicuous place on the world sugar map, it is due more to production of *gur* than white sugar. Thus, *gur* accounts for as much as 60 per cent. of the total 'sugar' (which includes both *gur* and white sugar) output in the country, the remaining 40 per cent. being shared by white sugar and *khandsari*. The manufacture of *gur* is an important cottage industry; it is responsible for the utilisation of three-fifths of the total sugarcane crop and is equal to more than thrice the quantity of sugar produced by mills. It provides employment for as many as 500,000 persons of whom for 70,000 persons it is the main source of living. Moreover, the industry caters to the needs of the bulk of the population and provides a substitute for sugar. Till recently, the price of *gur* was much cheaper than white sugar, but now the difference in price between the two is not appreciable. Indeed, on certain occasions, certain types of *gur* cost more than white sugar. This has been due mainly to an increase in the consumption of *gur*, mostly for illicit distillation. Incidentally, it may be noted that *gur* is an essential article of food; it is said to contain all the mineral and other nutritive constituents in cane juice. An average sample of *gur* contains 50 to 80 per cent. of sucrose, 10 to 20 per cent. of inverted sugar and a small percentage of mineral salts, ash and moisture.

This brief account indicates the vital role that *gur* plays in the structure of the "sugar" industry, in particular, and in the country's economy, in general. There is a section which strongly feels that, while planning for the future expansion of the "sugar" industry, due recognition must be given to the development of the *gur* sector. Drawing attention to this aspect, in a recent publication, *Planning for Full Employment*, the All-India *Khadi* and Village Industries Board, for instance, has suggested the lines on which the pattern of the future development of the *gur* sector of the Indian sugar industry should be set. Before dealing with these suggestions, it would be better if a brief reference were to be made to the latest position of the *gur* industry and the special problems that are confronting it.

Production of *Gur*

The production of *gur* has varied from year to year, depending on the availability of cane, as well as on the prices of both *gur* and sugar. A record output of 4.36 million tons was achieved in 1937-38. The average annual rate of output in recent years has been between 2.8 million tons and 3.1 million tons. In 1952-53, the production was 2.88 million tons. The State of Uttar Pradesh accounts for more than 50 per cent. of the total *gur* production. Bombay, Hyderabad, Punjab and Madras are the other important *gur*-producing States. Although Bihar is one of the major sugarcane-growing States, little is available for *gur* manufacture, as 70 to 80 per cent. of cane is devoted to sugar production.

Most of the *gur* produced is consumed directly; only a small percentage is utilised for industrial purposes. With the introduction of prohibition in several States, however, *gur* has found an increasing use for purposes of illicit distillation. Significantly enough, the publication under reference makes no mention of this recent development in the economy of the *gur* industry.

The following table culled out from the same publication indicates the trend of consumption of *gur*, against the background of that of white sugar in recent years:

Season	Aggregate consumption (in 000 tons)			*Per capita* consumption (in pounds)		
	Sugar	*Gur*	Total	Sugar	*Gur*	Total
1943-44 ..	12,36	28,33	40,69	6.5	23.8	30.3
1944-45 ..	12,38	28,23	40,59	9.0	22.1	30.1
1947-48 ..	10,45	34,92	45,37	7.3	22.2	29.5
1948-49 ..	11,82	28,87	40,19	9.0	17.5	26.5
1950-51 ..	11,06	31,32	43,27	7.6	19.4	27.0
1951-52 ..	12,63	32,40	45,03	7.9	20.3	28.2
1952-53 ..	17,46	28,77	46,23	6.9	17.9	28.8

It will be evident from the foregoing figures that the *per capita* consumption of "sugar" in India has not only increased but has actually declined, the average being 26 to 28 lbs., which compares very unfavourably with 143 lbs. in Australia, 106 lbs. in the U.S. and 92 lbs. in the U.K. It may be noted, in this connection, that *gur* consumption is higher in the States of U.P., Bombay and Punjab than in the southern parts of the country. Even here, the consumption of sugar is overwhelmingly in the form of *gur*; it is only in the urban areas that there is a marked preference for crystal sugar. But the trend throughout India points decidedly in favour of white sugar.

One of the main impediments to the smooth development of the *gur* industry is the highly unstable market conditions. Drawing attention to this aspect, the Board observes: "The steep variations in prices have not benefited the cultivator or the workers in the industry but have only increased the profits of the middlemen and the hoarder. In the long run, such unsteady conditions are bound to be detrimental to the healthy development of this industry. The prosperity and the future of the sugar industry, as well as those of *gur*, would depend upon the stabilisation of the price of cane, sugar and *gur* on a rational basis."

The supply of sugarcane to the *gur* industry is another important factor. With the contemplated increase in the productive capacity of the sugar factories, the supplies of cane for *gur* production may be reduced, unless the total production of cane itself is raised. Restriction on production of one type of sugar in favour of another is not desirable, since such a development, while not augmenting the total available supplies of "sugar," only transfers the problem of shortage from one sector to the other. The real solution to this problem, therefore, lies in augmenting the output of sugarcane by intensive cultivation. Closely related to the question of supply is that of cane prices. Inasmuch as sugarcane forms the major part of the cost of *gur* (and also of sugar) manufacture, any reduction in its price will help bring down the price for *gur* (and sugar).

Can *Gur* Hold its Own?

With the rapid increase in consumption of crystal sugar, the question arises as to whether *gur* can hold its own. It can if adequate measures are taken to bring down the cost of production and to make *gur* available to the consumer at reduced rates. *Gur* production is still carried on in a primitive manner leading to considerable inefficiency and high cost of manufacture. Extraction of juice is lower than in sugar factories. The *gur* producers are also ignorant of the use of juice clarificants which affect the quality of the finished product. There is at present no agency to educate them on simple modern and scientific methods which would result in higher yield of quality *gur*. These objects can be rectified, if the measures suggested by the Board are implemented. Mention, for instance, may be made of introduction of improved *kolhus*, pans and other implements such as percolators, moulds, juice strainers, etc., construction of improved furnaces, use of cheap and efficient clarifying agents, and improvements in the juice boiling technique.

The development of the *gur* industry depends also on the adoption of sound marketing methods. *Gur* consumption is considerably high in areas where it is produced. If it is produced in abundant quantities in the Southern regions, the consumption in these areas will go up. The scope for this is particularly great in view of the fact that the yield and the sucrose content of sugarcane in these areas are high *vis-a-vis* the sub-tropical areas in the North.

STEPPING UP SUGAR OUTPUT

Licences for the establishment of seven new sugar factories by shifting the idle or unsuitably located plants and one factory by importing a complete plant during the years 1954-55 and 1955-56 have been granted by the Government of India. This was disclosed by Dr. Punjabrao Deshmukh, Union Minister for Agriculture, while replying to a question in the House of the People on Thursday last week. The Minister remarked that it was difficult to say how many of these factories would be able to start crushing during 1954-55 or 1955-56. The number of further factories to be erected would depend upon the crushing capacities of the plants to be erected in each case. The target for additional capacity, however, was 450,000 tons. In this connection, the Minister stated that the existing installed capacity of the sugar industry was not fully utilised; the percentage of idle capacity, as distinct from not fully utilised, was 3.58.

The upward revision in the target for additional capacity in the sugar industry—to the extent of 450,000 tons—is a complete modification of the target set by the Planning Commission. The Commission had fixed the target at as low as 1.55 million tons by 1955-56, as against the target of 2.0 million tons now announced by Dr. Deshmukh. While fixing the target, the Commission had proceeded on the following two wrong assumptions:

(1) The production of 1.5 million tons of sugar by 1955-56 will be sufficient to meet the *per capita* consumption of 8.7 lbs.

(2) In the present state of development of the industry in the country, the problem of facilitating full production in the existing units is of greater importance than that of establishing new units, involving heavy capital expenditure.

In view of these, the Planning Commission said that there seemed to be no necessity for creating new capacity. Both the assumptions have proved false. Thus, the consumption requirements of white sugar alone are now found to be very much larger, amounting to 1,700,000 to 1,800,000 tons per annum, which is 300,000 tons more than what the Planning Commission had estimated. Further, the existing units have not been able to utilise their capacity in full, due to factors such as lack of adequate cane supplies to the factories, defective location, and poor efficiency of sugar manufacture on account of worn-out machinery and plant in several factories. It is, however, gratifying to find that, at least now, the Government of India has realised the need for larger production of crystal sugar and has raised the target. Reassuring is the statement of the Union Minister for Agriculture that "increase in the production of sugar is sought to be achieved by (1) stepping up the production of sugarcane by intensive cultivation and (2) installing new factories having an annual production capacity of 450,000 tons."

STOWING IN COAL MINES

LOANS TO BE GRANTED

THE Coal Board has set apart a sum of Rs. 50 lakhs, at the outset, as a reserve for the grant of loans during 1954-55 for the installation of stowing plants in coal mines at 3½ per cent. per annum. The loans are repayable in annual or half-yearly instalments, spread over a period of 10 years. The loans will be granted from the Coal Mines Safety and Conservation Fund. The sum now earmarked is Rs. 27 lakhs more than that set apart last year for this purpose. It is, however, not known how much of this amount was utilised and how many collieries availed themselves of this facility.

The Coal Board has been paying subsidies not only to collieries which have been stowing for ensuring safety of workers, but also to those stowing for conservation of coal. The maximum rate of assistance granted by the Coal Board for stowing carried out for safety used to be 75 per cent. of the actual cost of stowing, subject to a maximum of Re. 1-4 per ton of material for hydraulic stowing, upto 1st March, 1953. Thereafter, the maximum rate was raised to Re. 1-5. The high rate of Re. 1-5 per ton was decided upon, because the cost of handpicking since 1948 had risen and it had been found necessary to encourage smaller collieries, which had no elaborate stowing plants, to carry out stowing for safety. The rate of assistance for handpicking with surface material has been 85 per cent. of the actual cost, subject to a maximum of Re. 1-9 per ton of material. A sum of Rs. 66.77 lakhs was paid as assistance for stowing during 1953-54. Assistance is being granted to collieries stowing for conservation, since 19th December, 1953, as an *interim* measure on similar terms, subject to a maximum of Rs. 1 lakh in each case.

The annual receipts by way of stowing cess has been of the order of about Rs. 1.10 crores. As against this, the expenditure of the Coal Board in 1952-53 was Rs. 72.39 lakhs; in 1953-54, it is estimated to be higher, at Rs. 84.33 lakhs to be precise.

The progress of stowing so far has not been quite satisfactory. Although stowing was started as far back as in 1914, it has hardly touched the fringe of the problem. Till recently, it was practised only as a measure of safety. Latterly, however, a number of mines has been resorting to it for purposes of conservation too. It is true that stowing adds to the cost of extraction, but mining interests have come to realise that, without stowing, only a small fraction of available coal resources in any mine could be extracted and that, as such, stowing would turn out to be a profitable proposition in the long run.

The most successful technique developed so far is hydraulic sand stowing. But encouragement of stowing with materials other than sand is of great importance, as it would reduce the cost of stowing. It is gratifying to note that this question has been engaging the attention of the Coal Board for some time past. We are told that the experiments conducted in certain collieries in this direction have proved a success.

TENACIOUS EFFORTS BEING MADE TO IMPROVE KENAF

PROGRESS OF RECENT EXPERIMENTS

IT is common knowledge that *kenaf (Hibiscus cannabinus) is one of the fibres which has* been challenging the place of raw jute. It has, of course, not yet established itself as a serious rival, though it made its appearance several years ago. But efforts are continuously being made by certain countries of the world to perfect *kenaf* as a substitute for jute. The latest reports indicate that experiments on the cultivation and utilisation of *kenaf* have disclosed somewhat encouraging results. Attempts to grow *kenaf* on a commercial scale are being pursued tenaciously in Florida, Albama and Lousiana in the U.S. and in parts of Australia. Experiments at improving the quality and strength of the fibre are also being conducted.

At its present stage of development, the quality of *kenaf* is unpredictable. As compared with better grades of jute, its tensile strength is lower. Besides, *kenaf* fibre is coarser and does not split down so well in carding. Consequently, *kenaf*, for the time being, is likely to be used in coarser yarn, which does not require too fine a split. It is further stated that *kenaf's* high prices, combined with its unpredictable quality, usually marred by a dirty slate colour renders it unsuitable for immediate commercial use on a large scale.

There is a difference of opinion as to the best method of treating *kenaf* fibres. Some are of the opinion that all bast fibres should be retted, as this is the only way to remove completely the sap which will otherwise crystallise and make the fibre brittle, while others are in favour of decortication. It has been found, however, that retted *kenaf* sometimes develops mildew. Micro-organisms remain in the finished product after retting and, whenever it gets into a warm damp atmosphere, it is likely to develop mildew. Decorticated *kenaf*, however, does not have the micro-organisms and does not develop mildew and, in this, it is claimed that *kenaf* is superior to jute.

Properties

Reports on the properties of *kenaf* produced in Australian territories by the Commonwealth Scientific and Industrial Research Organisation reveal that retting yields better fibre than mechanical decortication. Decorticated fibre is generally found to be much harsher than retted fibre. Further, it is not so well separated as the retted fibre. Its strength is less than the retted material, usually only about 75 per cent. It is suspected that most of this difference in strength might be due to damage to the fibre during decortication.

There was some indication some time back that retted fibre from more mature stocks was stronger that that from younger stocks. But later strength tests made on this fibre from different heights of the stalks have shown no significant variation, except the fact that fibre from the extreme top is appreciably weaker.

Commercial and laboratory tests have further revealed that retted *kenaf* fibre can be processed on jute systems and can be spun into yarns to at least as fine as 10 lbs. Of course, the yarns will not be so strong as those obtained from first quality jute and tend to be more variable. But it is admitted that *kenaf* fibre can be used for most of the purpose for which jute is used in Australia.

Decorticated *kenaf* fibre may also be spun on jute systems. It requires, however, a heavier batching treatment and is suitable only for yarns of 16 lbs. and heavier. It has been used for the manufacture of yarns for woolpack cloth for which it is reported to be quite satisfactory.

It is generally believed that *kenaf* is less flexible than jute and that *kenaf* yarns break very rapidly at the knots. But tests conducted so far have revealed that these statements are baseless. The knot efficiency, as disclosed from tests, is as follows: Retted *kenaf* 65.6 and decorticated *kenaf* 67.9. As against this, the knot efficiency of jute is only 58.0.

It is stated that direct decortication means too much of waste and that, even if the machines were to be improved, top heavy mechanisation would have to be employed to deal with all green stalk harvested over a short period; the machinery would have to remain idle for the remaining part of the year.

In view of these experiments, it is inferred that, if retted *kenaf* could be produced economically, it would prove a good substitute for much of the raw jute at present imported into Australia. Decorticated *kenaf*, on the other hand, would probably not prove to be acceptable as a general substitute for high quality jute.

WAGES OF JUTE MILL WORKERS

It will be recalled that, early in April, 1954, the Government of West Bengal referred the dispute between the jute mills in the State and their workers relating to wages to the First Industrial Tribunal. The terms of reference to this Tribunal are as follows:

(1) Should there be any revision of basic wages and dearness allowance for a working week of 48 hours in the jute textile industry?

(2) (a) Should there be any change in prevailing basic wages and dearness allowance of all categories of workmen on account of loss in earnings due to reduction of weekly working hours from 48 to 42½? If so, what should be the wage and dearness allowance under the altered working arrangements? (b) What principle should be followed in fixing the wage structure when the weekly working hours are below 48?

CHINESE HESSIAN AND GUNNY BAGS

Chinese-made hessian and gunny bags are, it is reported, competing with the Indian jute goods in Hong Kong market. South Africa, which has been a banned destination for Indian jute goods exports since 1946, is looking to Hong Kong for Chinese supplies. It is understood that about 300,000 gunny bags of Chinese origin have recently left for South Africa. The prices quoted for Chinese goods are 10½d. per yard for hessian (11 oz. 45") and 21½d. per gunny bag weighing 1.11 kilos.

PHILIPPINE BAN ON IMPORT OF JUTE GOODS

The import of jute fabrics, both burlap and bag, into the Philippines has been banned. The object of the ban is to provide incentive to the local jute manufacturing industry which has made repeated representations to the Government for protection. The ban is, however, expected to operate for a temporary period, because the total Philippine production is still far short of the requirements and the quality of the goods produced is said to be inferior to the imported product.

(Concluded from next column)

the cause, the present revival of natural rubber is considered as a genuine improvement in the outlook for the raw rubber industry.

Meanwhile, rubber producers in the East have thought it fit to discuss with representatives of the rubber trade measures designed to improve the quality as well as the packing and shipping of rubber. A conference of representatives of rubber industries of eight countries was held in Singapore last week. In a statement to the conference, Mr. W. J. Sears, Vice-President of the Rubber Manufacturers Association of America, said that the data compiled over the last three years by the R.M.A. showed that all types and grades of natural rubber could be supplied in conformity with R.M.A. standards, which he believed were practical. He added that a substantial part of the material left over after producing certain R.M.A. standards could be used to produce R.M.A. pure smoked blanket, which would find a greater market in America provided it was consistent in quality. "We believe," he said, "that the present R.M.A. types should stand and not be lowered or temporarily suspended. We believe ways will be found to improve quality as a result of the forthcoming free competition between tree rubber and chemical rubber." It was, however, pointed out by Mr. J. E. Cogswell, representing the Joint Committee of the British Rubber Manufacturers and Tyre Conference of Great Britain, that more than half of the natural rubber was being produced by small holders, the vast majority of whom, particularly in Indonesia, had only the most primitive equipment. It might, therefore, take ten years to upgrade the bulk of the low grades to the R.M.A. types. British manufacturers agreed with the R.M.A. that the adoption of universal-type rubber samples was necessary.

It will be interesting to watch the trend of world rubber prices in the next few weeks. If it improves further, it is reasonable to expect that Indian manufacturers of rubber goods will be in a better position to compete with overseas manufacturers in world markets.

RUBBER PRICE HARDENS IN LONDON

FUTURE DEPENDS ON U. S. POLICY

THE London rubber market has been a steady feature in recent weeks. The spot price touched last week-end a high of 18¾d. per lb., the best level which natural rubber has commanded since October last. It may be recalled that rubber touched a low of 15½d. per lb. on 8th March this year, the lowest level for the past four years. This steady advance in natural rubber price is said to be due to persistent buying from America, which in turn has been induced by fears of short supplies and the possibility of an increase in the price of synthetic rubber, as a result of its lower output.

The competitive position offered by the price of natural rubber has, in fact, led to steady demand for this commodity from America since last year, thus raising the proportion of natural rubber consumed in that country from 36 per cent. in 1952 to 50 per cent. at present. In March this year, the latest month for which figures are available, the U.S. consumption of natural rubber amounted to 53,757 tons, the highest monthly consumption since October, 1950, as against 46,604 tons in February and 50,707 tons in March 1953. Consumption of synthetic rubber amounted to 55,585 tons, as compared with 48,806 tons in the previous month and 77,903 tons in the corresponding month of 1953. The total consumption of both natural and synthetic rubber was 109,342 tons, as against 95,410 tons in February and 128,610 tons in March last year. The proportion of natural rubber used to total consumption thus works out to 49.17 per cent. The consumption of natural rubber in the world as a whole declined in February this year by 12,500 tons and the output by 22,500 tons. Thus, the estimated world surplus fell to 15,000 tons in February from 25,000 tons in January this year.

Recently, the Reconstruction Finance Corporation of the U.S. announced that the output of synthetic rubber would be reduced this year. Accordingly, it revised its production schedule for the second quarter of this year so as to reduce the output by 7,000 tons from the original quantity planned. In the quarter April-June this year, the average monthly production of synthetic rubber will be 35,400 tons, as compared with the monthly output of 70,000 tons in 1953. In the last month of the first quarter, the U.S. output of synthetic rubber amounted to 56,394 tons, as compared with 52,024 tons in February, 1954, and 81,408 tons in March, 1953.

The reduction in the output of synthetic rubber during the current year and the narrowing of the gap between production and consumption of natural rubber have made manufacturers feel that the available surplus is not enough to cover their needs. Though the stocks with the trade had been very low, they were not in a mood to give up their hand-to-mouth buying policy. But now they have suddenly realised that the decline in price of natural rubber has been arrested and their stocks which had dwindled considerably must be replenished.

The lower output of synthetic rubber in the U.S. has, as already stated, led to the belief that its cost of production will increase and that there will, therefore, be a rise in the price of this commodity. But, in some quarters, it is held that this is no more than a possibility. Another cause for the hardening of the natural rubber is stated to be the suspension of stockpile rotation policy of the U.S. The future stockpile rotation policy has not been settled and is still under consideration. The decisions reached on this question will exert considerable influence on the future course of the rubber market, particularly the relationship between the prices of the various grades of rubber. It may be recalled that after the meeting of the International Study Group in London, in October last, the U.S. authorities decided to reconsider their rotation policy. Actually, they suspended the rotation policy on 9th December, 1953. At that time, they had sold on a forward basis 10,000 tons per month for the January-March period and about 3,000 tons per month for the April-June period. It is felt that they may now rotate another 2,000 tons for April, making a total of 5,000 tons for the month. Thereafter, they have to await the Government's decision on future rotation policy. In the meantime, the U.S. manufacturers have had to look to the East for part of their requirements of low grades of rubber in April and for the bulk of their requirements in May and June. Whatever may be

PRODUCTION AND DISTRIBUTION OF MINERAL OIL

IS THERE AN INTERNATIONAL CARTEL?

THE production and distribution of mineral oil in the world outside the Communist countries are handled mainly by seven gigantic companies. These are: The Standard Oil Company (New York), the Royal Dutch-Shell Group (The Hague and London), the Anglo-Iranian Oil Company, Ltd. (London), the Gulf Oil Corporation (Pittsburgh), the Texas Company (New York), the Standard Oil Company of California (San Francisco) and the Socony-Vacuum Oil Company, Inc. (New York). So vast is the power concentrated in the hands of these concerns that it has often led to doubts whether they have not abused it to the detriment of consumers.

It is alleged that these companies have entered into agreements between themselves on such subjects as fixation of prices and limitation of production which are calculated to cut out competition. In fact, these were the charges, which the United States' Federal Trade Commission had to investigate when it enquired into the working of these companies in 1949-51. The essence of the allegation is that there is an international oil cartel which is detrimental to the larger interests of the consumers. This allegation, however, yet remains to be proved. Examining this oft-repeated charge, especially in the United States of America, in an enlightening article, published in one of the recent issues of *Wirtschaftsdienst*, a German monthly economic bulletin, Dr. Burkhardt Roper, Hamburg, doubts the veracity of the allegation. To quote him: " . . . in the thirties there was an imperfect and unsuccessful international oil cartel. All the arbitrary elements in the present world price fabric notwithstanding, we doubt whether this cartel still exists at the present time and whether the regional arrangements amount to a deliberate system." Apart from the well-known differences of opinion on what constitutes a cartel, he says that the finding of an answer to this crucial question has been rendered more difficult by the fact that, in view of the existing market structure, which he describes as a "partial oligopoly," the effects of "conditionally operative cartel strategy" are almost indistinguishable from the effects of appropriate behaviour on the part of a "few partial monopolists."

Share of Big Seven in World Production

Indicating the extent to which the seven companies hold the field in oil, the author says:

"... outside the U.S.A., about four-fifths of all production and refining and of all reserves are in the hands of the seven big integrated concerns. Furthermore, the greater part of the remaining fifth is owned by Government monopolies—as in the East Bloc countries, Austria, Yogoslavia, Spain, Mexico, Brazil, Bolivia, and Chile. In most of these countries, whose share of world production was not more than 10 per cent. in 1949, the petroleum industry stagnated after its nationalisation. For this branch of trade more than any other calls for enormous enterprise and daring, and this a planned bureaucracy is hardly capable of providing. Well-known instances of expropriation, especially at the expense of the big concerns, are Russia, Mexico, Rumania and, more recently, Iran. Really independent producing companies, i.e., companies connected neither with the big concerns nor with Government monopolies, are consequently rarely met with outside the U.S.A. If, in addition to the U.S.A., we set aside the U.S.S.R., and Mexico, the Big Seven's share of world reserves is as much as 92 per cent. The future trend of events will consequently be determined by the behaviour of these companies, who have it in their power to exploit oil resources more intensively or not. No appreciable changes have occurred recently apart from nationalisation in Iran. The Big Seven have a similar, though slightly smaller, lead in the production of crude oil."

The net income of the seven big companies in 1952 was about $1,000.7 million, an amount larger than the exchequers of many countries in the world today. But they are not, according to Dr. Roper, "excessively large as compared with the capital invested. They have resulted mainly from international combinations which only a few giant firms have been able to achieve up to the present. To the political economist, these profits represent a conglomeration of elements not easily broken down into their component parts consisting of profits on pioneering enterprise, special advantages enjoyed by world-wide integrated firms, temporary or partial monopoly earnings and the customary interest on capital plus an unneeded risk premium." Proceeding, he observes: "The population of the world increases every year by 1 per cent. and industrial production by 2 to 3 per cent., whereas the rate of increase in the oil industry is 5 per cent. So long as this ratio continues, big profits will be earned until successful substitute competitors appear in the power and lubricants sector."

The anti-trust authorities in the U.S. have regarded the big companies of the American oil industry with suspicion ever since the dissolution of the Standard Oil Trust. This was followed by dozens of U.S. anti-trust actions. Accordingly, it is not surprising that the Federal Trade Commission should have selected, in 1949, the oil industry as the object of its eighth investigation of international cartel carried out during and after the Second World War. Dealing with the possible outcome of the present anti-trust proceedings, Dr. Roper says:

"To prophesy as to the outcome of the proceedings at this stage, when the hearings are not due to begin for another few years, would be a risky matter. What the anti-trust authorities have in mind are the acts which are regarded as violating the law. These are to be declared illegal and prevented in future by suitable measures. The parties will presumably come to an arrangement amongst themselves for the termination—ostensible or actual—of agreements, which are particularly restrictive of competition. The intention of restricting competition is clearly discernible in the crisis cartel measures of the thirties, but not in the Middle East agreements. According to the firms' statements, the former are no longer in force and would accordingly not come within the scope of the proceedings unless traces of them have remained. The Middle East agreements obviously affect competition, where exports to the U.S. are concerned, and exclude others from purchases of 'cheap' oil. These agreements will presumably be altered to enable any one to buy oil from ARAMCO at the published prices, so that this will no longer be distributed amongst the joint owners, according to their capital participation. An endeavour will certainly be made to come to a similar arrangement regarding the other Middle East agreements; the long-term delivery contracts between the Big Seven may possibly be relaxed. Now that the wells in the Middle East are flowing freely, pipelines and refineries have been built and a beginning has been made in writing off some of the enormous investments incurred, a loosening up of the present contract system is surely economically defensible. These measures alone will not endanger the position of the Big Seven, and, in our opinion, they will not lead to keener competition between them. It is hardly possible to dispel by force an atmosphere of mutual respect and assistance which has grown up during the many years in which these companies have worked side by side and sometimes in collaboration. It is probable, however, that the market opportunities of the middle-sized companies in the economic area between the U.S.A. and the East Bloc will increase. But it would be dangerous for the five largest American firms if the present head of the Anti-Trust Department is able to carry out his avowed intention of splitting up the vertical organisation of the oil industry in the U.S.A. and dividing trade from production as in the film industry."

Price of Oil

Dr. Roper's study has led him to the view that the break-up of the present world-wide combinations will not lead to any reduction in the prices of oil, as is being hoped by the U.S. anti-trust authorities. He points out that "the decline of solidarity amongst the Middle Eastern producers observable in the past few years has weakened the power of this collective demand monopoly in oil concessions and strengthened that of the geographically restricted but within their economic area omnipotent supply monopolists, the owners of oil resources."

Dr. Roper says that, at present, the roles of exploiter and exploited seem to be changing over. This does not mean any advantage to the consumer but only a shifting of incomes to consumers. The leading industrialists' consciousness of their national and international responsibilities, as also the pressure of public opinion, is a sufficient guarantee, according to Dr. Roper, to see to it that big oil firms do not, for the sake of earning short-term scarcity profits, put up their prices to the excessive extent observed in other staple commodities during the Korean boom. It will rest with the world economic policy, which is gradually taking shape, to see that the mighty stream of oil does not dry up, but flows more abundantly than ever through the most favourable channels to the great marketing centres and is not forced by "self-seeking State and concern policy" along devious cost-increasing by-ways.

Explanation

The aforesaid conclusion of Dr. Roper is based on the following interesting rationalisation:

"The problem which emerges from the long years of successful collaboration between the world's largest oil companies is this: compromise agreements are concluded all along to bridge over irremediable conflicts of interests resulting from private agreements and to eliminate elements of uncertainty. The Governments of the geographically highly concentrated producing countries try to get the highest production royalties and taxes they can and to utilise their labour potential to the best possible effect. They rise up overnight from the depths of poverty to become power-conscious nations. The consuming countries want to import their raw materials as cheaply as possible and refine them in their own countries; the lower the prices of the final products, the greater the prospects of intensive mechanisation and of cutting out other sources of energy—for instance, of replacing coal by heating oil. Here again taxes skim off part of the price advantage enjoyed by petroleum products. Finally, as the organisers of the constantly growing stream of oil, the firms are interested in getting their shareholders the highest possible long-term profits and, what can be even more important, in securing their capital investment. The respective Governments' capacity in the matter of tax revenue is just as great in the firms' home countries as in others. Still further problems arise in the case of the U.S.A. The Government is under considerable pressure from small oil producers, who operate in the U.S.A. only and who would like to see oil imports only admitted to supplement and not to replace domestic output and are interested in high prices for crude oil. For reasons of foreign policy, however, the Government is inclined to favour an increase rather than a restriction of potential sales of Middle Eastern and Venezuelan oil, in order to lessen the danger of Communist manœuvres. The big oil firms naturally look with suspicion on any extension of the powers of the State, for, to them, it may mean the nationalisation or socialisation of their producing, refining or marketing areas, restrictions on imports as the result of foreign exchange or customs policy or rationing, or even a monopoly by a State-owned company. They are consequently free-traders *par excellence*, reject State control as an impediment to 'the natural flow of oil,' and what they want is to use their economic power in the interplay of competition and co-operation to make themselves the natural rulers of the mighty and complex oil empire (as one side puts it), or (according to their opponents) to go about their business for the good of the community."

Thus, three striking conclusions emerge from Dr. Roper's study. One is that the abolition of the present set-up is most unlikely to lead to any fall in oil prices. Secondly, such abolition may be followed by worst forms of State-controlled monopolies, which will not be half as efficient as the gigantic seven oil companies. Thirdly, the States have enough control over these companies to make them behave properly, if, at any time, they tend to fleece the consumer. Accordingly, it is better to tolerate the present set-up than to find a new arrangement. A devil known is preferable to a devil unknown.

GANGA-BRAHMAPUTRA PROJECT

The fifth meeting of the Ganga-Brahmaputra Water Transport Board was held on 21st April at Calcutta, under the presidentship of Mr. N. M. Ayyar, I.C.S., Secretary, Ministry of Transport. The Board decided to appoint a whole-time officer to take charge of the pilot project for shallow craft on the Upper Ganga and to recommend to the Government that he should be deputed to the Netherlands for a few weeks to finalise designs of the special type of craft required, in consultation with the U.N. expert, Mr. J. J. Sterie, who visited India in connection with this project a few years ago. It also approved the appointment of Mr. Justice N. S. Lokur, Chairman of the Railway Rates Tribunal, to undertake an investigation of the question of freight rates charged by river steamer companies operating on the Ganga and Brahmaputra Rivers. The Board further recommended that the Planning Commission should be approached for a larger allocation of Central Government funds to finance the project.

NEW PRODUCTS AND PROCESSES

Synthetic Textile Fibre

A NEW synthetic textile fibre called *Saran* is being manufactured by a Nürnberg factory (West Germany) from an American raw material, the so-called *Saran-Powder*. This fibre will complement the chemical fibres so far known as, e.g., cellwool, perlon and nylon. The new fibre has, it is stated, exceptional resistance to climatic influences.

• • • •

Refining Metals

A new and simple process for refining metals and other substances to almost perfect purity has been invented by the Bell Laboratories (United States). At the degree of purity reached by this method, there will be only one atom of impurity in 10,000,000,000 atoms of the purified material: the equivalent, roughly, of a pinch of salt in 35 freight cars of sugar. The new process is now being used in the purification of germanium for transistors, the tiny devices that do many of the tasks of complicated electronic tubes.

• • • •

Rotary Liquid Pump

A firm named Schnabel-Rotoren-Leuvensestraat 43, at Scheveningen (the Netherlands), has put on the market a new type of rotary pump. The rotor body of this pump has near its circumference evenly distributed axial bores, which are turned off down the central part, so that on its circumference semi-cylindrical recesses are formed, which are flanked by two drilled flanges.

The recesses serve to support cylindrical, axially rotating vanes, which are machined between the rotor flanges to an accurately determined profile.

The pump body is formed to a special profile between the rotor flanges. As a result of the couples due to the centrifugal action produced by the rotating rotor, the vanes revolve against the wall of the pump body, because the centre of gravity of each vane will move as far as possible from the centre of the rotor.

As the location of this centre of gravity can be controlled by the choice of material and shape of the vanes, it is possible so to choose the impact of the vanes on the wall as to obtain an exactly effective seal between suction and discharge sides and yet to reduce friction losses and wear to a minimum. Owing to the efficient supports of the vanes, they can, moreover, be made of highly wear-resistant plastics, such as nylon. The pump is suitable for high- and low-viscosity liquids.

• • • • •

Machines for Prestressed Tubes

New methods and equipment for manufacturing tubes of prestressed concrete for water conduits has been developed in Sweden by the Hälsingborg firm of Sylvan and Qvibelius. The new technique is used for manufacturing the so-called Premo tubes, invented by two Norwegian engineers and now patented in 40 countries. The tubes consist of an inner tube of concrete prestressed lengthwise, an intermediate coil of high-quality steel wire and an outer layer of concrete. In the course of the manufacturing process, the two layers of concrete attain homogeneous tension, which prevents the formation of cracks. The concrete conduits are not heavier than conventional cast-iron tubes. They are also considerably less expensive. A further advantage is that they are rust- and freeze-proof. The tubes are manufactured in standard sizes of 5-metre lengths and with an inner diameter ranging from 300 to 900 millimetres.

THE DUNLOP RUBBER CO. (INDIA), LTD.

MR. CECIL STACK REVIEWS PROGRESS

THE Twenty-eighth Ordinary General Meeting of the Dunlop Rubber Company (India) Ltd. was held in Calcutta on 29th April, 1954. Addressing the shareholders, Mr. Cecil Stack, Managing Director of the Company, observed as follows:

"The Directors' Report and accounts for the year 1953 have been in your hands for some time and with your permission I will take them as read.

The Year's Trading

"You will recall that last year I referred to the sharp decline in demand compared with 1951, which resulted in substantially lower sales in 1952. In 1953, the position became more stabilised with business at a somewhat higher level than during most of the previous year. The volume of sales of nearly all of our products improved satisfactorily. On the other hand, total sales in value were Rs. 40 lakhs, or 3 per cent. lower than in 1952, due to reductions in selling prices. As I indicated at our last annual general meeting, falling raw material prices enabled us to reduce cycle tyre prices in April, 1952, and motor and giant prices in September, 1952. Further substantial reductions were made in March, 1953, affecting all tyres and also Dunlopillo cushioning. Later in the year a downward revision of industrial belting prices became possible as the result of expanding production.

"Tyre stocks were adequate throughout most of the year under review, but the distribution of our products was again interrupted by unsatisfactory transport conditions, mainly lack of railway wagons, thus causing temporary shortages in various parts of the country.

"The net profit for the year was Rs. 7 lakhs less than in 1952, but the ratio of profit to turnover was almost the same as in the previous year—7.4 per cent. before deduction of tax, compared with 7.7 per cent. After taxation the corresponding figures are 4.6 per cent. and 4.8 per cent. in 1953 and 1952, respectively.

Products

"Our technical staff have constantly under review the development of new methods of manufacture and the use and application of new materials, so that the trend of world development is reflected in our products wherever possible. For example, rayon which provides certain definite advantages in tyre performance has, during the past year, replaced cotton in our giant tyre range. Similarly, we are continually seeking to satisfy the need for special performance tyres, and in this connection our Traktmaster Giant Tyre, designed for use where roads are bad or non-existent, was introduced during the year and proved an immediate success.

"Our sales of bullock-cart tyres have increased steadily from year to year, indicating that a growing body of cart owners appreciate the advantages and ultimate economy of pneumatic tyre equipment as opposed to iron-shod wheels. The use of modern agricultural machinery is creating an increasing demand for tractor tyres and plant has been installed at our factory to produce those sizes for which there is sufficient demand to justify economic manufacture.

"Record quantities of cycle tyres and cycle rims were manufactured and sold by us in 1953. India's bicycle manufacturing industry is growing rapidly and the development of this industry is of considerable interest to us for the reason that we supply most of its original equipment requirements of tyres and rims.

"Before leaving our tyre range, I would like to refer to aero tyres, which, although so far a comparatively small part of our business, nevertheless, receive more than a proportionate share of our efforts to meet the nation's requirements. As a result of the continual progress in aircraft design, tyre manufacturers are constantly faced with fresh problems in developing tyres to meet different and invariably more arduous conditions. A number of new sizes was added to our range last year, the latest being the first tyre to be made in India for use on jet aircraft.

"Turning now to our other products, Dunlopillo Latex Foam cushioning has continued to make steady progress. Apart from the comfort of this type of cushioning which is the chief attraction to the domestic user, the fact of its long life and consequent low ultimate cost is becoming more widely known, with the result that it is being increasingly specified for public buildings, hospitals and transport services.

"Industrial transmission belting has made such remarkable progress that we were able to reduce our prices substantially in August, 1953. As I advised you last year, our plant was the first installation in India capable of producing high quality rubber ply belting to British Standard Specifications and it is gratifying to know that industry generally is finding it a useful source of supply. During the year a start was also made with the manufacture of conveyor belting and the results are most encouraging.

"Considerable progress has been made in our manufacture of fan belts and industrial Vee belts. The range of sizes has been expanded and the quality achieved is highly satisfactory.

"Each year since the war has seen an extension to the range of products made at Sahaganj and this has ensured a steady expansion of our manufacturing activities. It should also be a source of encouragement to the rubber plantation industry in considering their replanting policies.

Raw Materials

"The raw material supply position was satisfactory throughout the year and the shipping facilities for imported materials improved. This enabled us to reduce our stocks of imported chemicals, which provided a welcome saving in the amount of capital invested in our inventories. The general price trend was downwards, although to a lesser extent than in the latter half of 1952. There has been no change in the controlled price of indigenous rubber since it was increased in October, 1952. Throughout the year we were able to obtain all our requirements from South India.

Profit and Loss Account

"I have already referred to the decline in turnover and net profit compared with the previous year. After deducting the charge for taxation the balance of profit available for disposal is Rs. 62,39,833, compared with Rs. 73,58,469 for 1952. The Directors are recommending the same rate of ordinary dividend as for 1953, that is, 15 per cent. which will absorb Rs. 24 lakhs. The Directors also recommend the transfer of Rs. 24,00,000 to general reserve as against Rs. 39 lakhs last year. This will increase the total general reserve to Rs. 1 crore 38 lakhs, as shown in the balance-sheet.

Balance-sheet

"The Company expended Rs. 48¼ lakhs on additions to fixed assets, against Rs. 50 lakhs in 1952. These additions in the main consisted of extensions to our housing estate and further additional plant for new products. The depreciation written off in 1953 was Rs. 27,78,060 compared with Rs. 25,93,000 in the previous year.

"Inventories at Rs. 3,62,59,000 were Rs. 64 lakhs lower than at the end of 1952. This is partly due to the saving in imported materials to which I have already referred, and partly to lower costs. Other current assets are a little higher, but the reduction in inventories is responsible for lowering total current assets by Rs. 57 lakhs and net capital employed by almost the same amount. Consequently, the closing bank overdraft is now down to Rs. 82 lakhs, compared with Rs. 146 lakhs at the end of 1952. During the last five years profits to the extent of Rs. 1,45,00,000 have not been distributed, but have been retained in the business and the total reserves and surplus at the end of 1953 amounted to Rs. 1,60,00,000. These retained profits are fully employed in the business representing as they do a substantial part of the increases during the same period of Rs. 2,12,00,000 in gross fixed assets and Rs. 1,21,00,000 for working capital.

Employee Relations

"The Company has a high reputation for working conditions and general labour relations. We are proud of our record in the provision of social amenities for our employees, which we are continually improving and extending. In the last two years alone, despite less favourable trading conditions, expenditure on employees' living accommodation, canteen, school and other services was Rs. 27 lakhs. We are always conscious of the ungrudging and skilled service which the Company receives from its employees. Throughout the year under review all employees, both staff and operatives, have played their part to the full in overcoming our difficulties and achieving the results of which I have told you. I would like once again to send them your warm

(*Continued in first column*)

(*Concluded from third column*)

appreciation and thanks for their continued support and devotion to duty.

"Before concluding, I would like to refer to the retirement of our Works Director, Mr. R. F. Bennett, who resigned from the Board on 31st December last. Mr. Bennett had been at Sahaganj since the inception of our factory in 1936 and was Works Director for the last 14 years of his stay. I feel sure you will wish to join the Directors in expressing our great appreciation of the long and valuable services rendered by Mr. Bennett.

"Mr. Bennett is succeeded by Mr. F. G. W. Jackson, who has been Mr. Bennett's deputy since 1951 and who has served in the Dunlop organisation here and in other countries continuously since 1926, with the exception of the war years. On your behalf I would like to welcome Mr. Jackson as a member of our Board."

VALUE OF INSURANCE TO COMMUNITY

CONFORMITY TO HIGH ETHICAL STANDARDS NECESSARY

AMONG the services rendered by the Indian Life Assurance Offices Association, particular mention must be made of the forum which it provides for the discussion of topics connected with life assurance. Every year, it selects a few life assurance topics and invites those who participate in the conference to read their papers which form the subject of examination and comment by insurance men. The Association must be congratulated on this service, for in this country, where insurance is still not so well understood as in the West, any attempt made to keep its problems steadily before the public deserves both encouragement and praise. We would commend this practice of the Association to the attention of general insurers too, who lag behind life insurers in the very necessary art of publicising their achievements and promoting an intelligent discussion of their problems.

This year, the Indian Life Assurance Offices Association chose, among other topics, an important subject, entitled "Value of Insurance to the Community." Since this subject, as its very title shows, is of general interest, the papers read on this subject deserve wider notice. Mr. G. Somasundara Row of the Andhra Insurance Company, Ltd., rightly treated insurance in its relation to the wider movement towards "Welfare State." Indeed, the human aspect of life assurance deserves particular emphasis, for it cannot be too strongly reiterated that insurance, in the ultimate analysis, renders an essentially humanitarian service, in that it helps a family, on the unfortunate death of its insured bread-winner, to avoid all the misery that must come to it through loss of income. Mr. Somasundara Row did well, too, to point out how this essentially humanitarian character of life assurance was recognised during World War II, when the nations agreed, explicitly or implicitly, that "even in the midst of destruction of many things in the general strife and confusion, the sanctity of life insurance contracts would be upheld and strictly observed and the funds of even enemy nations in all countries would be regarded as inviolable."

Although insurers do not, as Mr. Somasundara Row said, deal in any "tangible commodity," they do help create it. From the point of view of the individual, insurance brings escape from fear or anxiety about the future of his family. Freed from these fears, an insured person goes about his life's work peacefully and with greater efficiency. From the point of view of the community, insurance means a steady stream of investible funds. Thus, insurance benefits both the individual and the State. Apart from the direct benefit, which insurance brings to the State through its ability to make available large funds for national enterprises, it renders indirect help to public finance, in that it helps the State, as Mr. S. P. Sharma of the Victoria College, Gwalior, emphasised in his paper, to curtail "to an appreciable extent public expenditure on alms-houses and orphanages, police and military force, prisons and courts and hospitals and asylums." An insured person, therefore, helps himself as well as the community.

The main advantages of a life insurance policy, as a form of investment, to the insured person were neatly summarised by Mr. P. A. S. Mani of the Oriental Government Security Life Assurance Company, Ltd. In the first place, there is the element of security, thanks to the insurance law which provides for the safe investment of insurance funds. Again, changing economic conditions cannot alter the value of a policy. Secondly, it is convertible into cash at a reasonable rate of interest when the policyholder feels such a need. Thirdly, the policy—the with-profit variety, of course—earns a constant rate of interest for "every moment of time" it remains with the company. Finally, there is what he called "convenience of operation," the agents are at the service of the policyholders for advice, guidance and help. If the policyholder desires that the money should be paid to the beneficiaries in easy instalments so that there may be no risk of dissipation of funds it could also be arranged. Other advantages of a life policy include the reduction in tax which insurance means to the policyholder, the value of a policy as a method of payment of estate duty and the ease with which a policy, representing property, can be inherited by the survivors without administrative expenses, lawyers' charges or court fees.

The primary appeal of a life policy, however, rests on its value as cover for the risk of death. This aspect was emphasised by Mr. Sharma who quoted Sir Winston Churchill's description of insurance. With his great gift for the telling phrase, Sir Winston said:

"If I had my way, I would write the word 'Assure' over the door of every cottage and upon the blotting book of every public man, because I am convinced that, for sacrifices which are inconceivably small, families can be secured against catastrophies which otherwise would smash them for ever. It is our duty to arrest the ghastly waste not merely of human happiness but of national health and strength, which follows, when through the death of the bread-winner, the frail boat in which the fortunes of the family are embarked, founders and the women and children are left to struggle hopelessly on the dark waters of a friendless world."

Few can improve upon Sir Winston's tribute to insurance. It is high tribute. But it is also a well-deserved tribute. And, if insurance in any country has to make it real contribution to individual and social welfare, it is necessary, as Mr. E. K. Srinivasan, President of the Indian Insurance Companies Association, said, at a recent Rotary Club meeting in Calcutta, that both the insurers and the insured should abide by high moral standards. The company should regard its funds as a sacred trust. The insured should, on his part, realise that it is unethical conduct to try to induce payment out of the community fund on false pretences. It is only when such ethical standards are maintained by both the insurers and the insured that insurance, as the highest form of co-operative service, can yield benefits of lasting value to the community.

HEALTH INSURANCE SCHEME

The State Governments' share of the cost of medical benefits, under the Employees' State Insurande Scheme, will be one-fourth of the total outlay, instead of one-third of the expenditure as originally proposed. This décision to reduce the State Governments' share of the cost of the Scheme was taken by the Standing Committee of the Employees' State Insurance Corporation, which met in New Delhi last week. The credit for securing this relief to State Governments goes to the Bombay Government which had protested strongly against the present system of allocation of expenditure. Hitherto, the cost of the medical benefits has been shared between the State Governments and the Corporation in the proportion of one-third and two-thirds respectively. The Bombay Government felt that it would be inequitable to spend a disproportionate amount on industrial workers alone, while the rest of the community received far less attention. In 1953-54, the Bombay Government spent As. 12 per head on public health. Even on the basis of the reduced level of contribution (that is, one-fourth of the cost of medical benefits), the Government would be spending Rs. 2 per head on industrial workers, involving a total expenditure of Rs. 60 lakhs. The Standing Committee further decided that a capitation fee of Rs. 6 per insured person per annum should be paid to medical practitioners with an additional As. 8 in Greater Bombay and Calcutta.

Yet another important decision taken by the Committee was to appoint local advisory committees in all important centres, where the Scheme is in operation or is to be implemented, for securing the co-operation of all the interests concerned at the local level. Each local committee will consist of a chairman nominated by the Chairman of the Regional Board, an official of the State to be nominated by the State Government, the administrative medical officer in change of the Scheme, and between two and four representatives of the Corporation. An official of the Corporation will act as Secretary of the Committee. The Committee approved the Madras Government's proposal to adopt the panel system of medical care. So far as the Bombay State is concerned, the Government will adopt the panel system in Bombay and the service system in Ahmedabad. It was further decided that representatives of the workers and employers should be associated with the committees appointed to select the staff of the Corporation. The Committee examined the recommendations of the Medical Benefit Council in regard to the treatment of insured persons affected by T.B. and other chronic diseases.

The Committee is also reported to have considered a report reviewing the working of the Scheme in Delhi, Kanpur and in certain centres in the Punjab. It is not clear what decisions were taken by the Committee in order to expedite the extension of the Scheme to other centres. The Scheme has been implemented in full only in Delhi, Kanpur and seven industrial centres in the Punjab, covering 40,000, 84,000 and 32,000 workers, respectively. The slow rate at which the Scheme is being implemented has caused misgivings among employers in those parts of the country where it is not now enforced, since they have to contribute to the Scheme without getting any return whatever for the contribution they make. Be that as it may, the Scheme will, it is learned, be implemented in Bombay on 2nd October, 1954, and in Ahmedabad on 26th January, 1955. It will be implemented in Nagpur in May, 1954, in Coimbatore in July, 1954, and in four industrial centres of Madhya Bharat—Indore, Gwalior, Ujjain and Ratlam—in May, 1954. The other centres, where the Scheme, according to a statement made by Mr. V. V. Giri, Union Labour Minister, in Parliament last week, will be introduced during 1954-55, are: Calcutta City and Howrah District (West Bengal), Singapur, Phagwara, Kapurthala and Gobindgarh (P.E.P.S.U.), Bhavnagar and Jamnagar (Saurashtra), Bangalore and Suburbs (Mysore), Jamshedpur, Patna, Mukardhubi, Dalmianagar, Monghyr, Basudevpur (Bihar), Hyderabad, Warangal, Gulbarga, Shahabad, Sirpur and Nandad (Hyderabad), Agra, Allahabad, Banaras, and Lucknow (Uttar Pradesh) Alleppey, Trichur, Quilon, Alwaye and Ernakulam (Travancore-Cochin). It is to be hoped that at least during the current year, the present schedule will be adhered to, and the Scheme extended to the centres, as now proposed. It is gratifying to note, in this connection, that with a view to achieving "quick results" the Corporation has evolved a "control chart" which enables the authorities to watch the progress of the Scheme. Equally reassuring is the Standing Committee's decision to appoint a sub-committee to deal with urgent issues. The Chairman of the Standing Committee will be the Chairman of the sub-committee also. This sub-committee will act on behalf of the Standing Committee in all matters, not affecting major policy, which are likely to arise from time to time and need prompt settlement.

INDIAN PAPER MAKERS' ASSOCIATION

MR. P. H. SYKES REFUTES CHARGES AGAINST 'THE INDUSTRY

PLEA FOR UNIFORM FOREST POLICY

WARM appreciation of the successful efforts on the part of the representatives of the paper industry and the Government in effecting a contract by free negotiation for the supply of paper to Government was expressed by Mr. P. H. Sykes, Chairman of the Paper Makers Association, at the Annual General Meeting of the Association held in Calcutta on 21st April, 1954. Mr. Sykes availed himself of the opportunity to refute the charges made against paper makers of making enormous profit through the aid of tariffs, import trade control and Government preference for Indian goods, without any effort to make quality paper. Observing that the charges were unjustified, he went on to catalogue some of the industry's problems that stand in the way of the industry's progress, namely, prolonged labour strike, difficulties in getting the raw materials required, pressure brought upon the industry to use lower grade coal for which the boilers are not suited, etc. Mr. Sykes also made a plea for a uniform forest policy for the whole of India.

The following are extracts from Mr. Sykes' speech:

"GENTLEMEN,

"This year has not been a particularly eventful one; so I propose merely giving you now a short resume of such highlights as there have been.

"The subject that has been of the most importance and interest to us—partly because it is the freshest in our minds but mainly because it always is our largest single piece of business—is the Government contract for 1954-55. I am glad to say that this contract was concluded last week and our thanks go to our representatives who acted as negotiators for the industry and to Government for having shown a praiseworthy desire to get the business concluded quickly. Even more important is the fact that Government have agreed with the industry that the unpleasant process of costing need only be resorted to, when there is such a wide disparity in the two parties' ideas of price as to make further negotiations impossible. It is admirable that the two sides have been able to make and accept—or accept after slight adjustment—an offer, without having to call in any outside agency such as costing to effect a settlement, a process which would certainly never have had our approval. What in effect has been achieved is settlement by 'free negotiation' which, indeed, was always the intended basis of settlement for these annual contracts, but which we had recently come to fear was no longer the case in spite of our being a decontrolled industry. For many months the issue was in doubt and the position was very unsatisfactory; but in January we started to make progress. The fact that the contract was not finalised until after the date from which it was to become effective, is to be deprecated; and I hope that this year the next one will be negotiated and completed at least two or three months before it is due to start operating. There will be no tardiness on the part of the industry in achieving this aim. I also hope that Government will be issuing the new contracts to the various mills at a very early date so that supply may be carried on uninterruptedly.

Prices of Paper Supplied to Government

"Government will, I hope, appreciate our willingness to come to terms at the price which has now been agreed on; for there are many units of the industry which do not consider the Government price an attractive one and which think that, with costs as they are, there was justification for an increase. Government have done well in ensuring their supplies at a level of prices which stands remarkably low in the world market. On our side we appreciate Government business, since it gives us security, but the fact of the matter is that we have our duty to the public too and for that reason we would feel it unfair if Government were to expect any one supplying mill to earmark more than about one-third of its production for Government's use, which, of course, would leave less than two-thirds for the civil market, which would be hardly reasonable. Our February offer to Government was, therefore, made on the basis of not more than 30-35 per cent. to Government of each supplying mill's production. Incidentally, the fact that Government require such a high proportion of India's production points strongly to the country's unfortunately low standard of literacy. If that can be raised there will be every justification for the erection of more paper mills, which in turn should curtail the necessity for importing paper on the present scale.

"The mention of new mills reminds me that the Association has had the pleasure of welcoming to its ranks a new member, Ballarpur Paper and Straw Board Mills, a mill which, I am glad to say, seems to have got off with a good start. It speaks well of the healthy tendencies to be found in the Indian paper industry that, whilst there is rivalry between mills, that rivalry is on the whole friendly and reasonable. I would be very sorry if the day ever came when this was not so. Before Ballarpur, our latest-joined recruit was Tribeni Tissues, the only concern in India to make high-grade cigarette paper. Tribeni is able to look after the bulk of India's requirements and then still have two-thirds of its capacity available for export. Response from overseas has been encouraging and I am glad to tell you that the Company is progressing well.

Market Conditions

"I have not much to say on the subject of our market since it was free from violent fluctuations and really quite normal. Throughout the year there was a good steady demand for the usual grades of Indian paper, but there was never very much life in the market. The black market has ceased to exist, I am glad to say, and gone are the days when middlemen made fortunes out of paper. I hope that this healthier state of affairs will persist. Following the trend of paper prices overseas, our market is now tending to harden and it looks as though the demand for Indian paper is going to increase. There is no doubt that the large tonnage of paper that was lost to the market due to the unfortunate strike experienced by one of our leading companies has influenced the present position and tended to extend the delivery periods available from Indian mills. Generally speaking, the quality of our paper is improving and it is very gratifying to know that more and more consumers of speciality papers are endeavouring to obtain their requirements from indigenous sources. I must mention one regrettable feature and that is the growing tendency, doubtless because of the public's reduced purchasing power, to use cheaper grades of paper, such as newsprint, even for text books. I hope very much that consumers will soon learn that such a policy can only prove costly in the long run, for newsprint is not meant to have anything other than a short life. However, the price of newsprint is hardening and its delivery period increasing so that its use may, with any luck, be confined to the purpose for which it is really intended.

"I think I might now comment on an unpleasant, and most unwarranted, attack which has recently been made on our industry by the Paper Traders' Association, Bombay. In extravagant language their President has recently seen fit to accuse us of being lacking in service to the nation, of sponging on Government to an unfair degree and of making vast profits at the expense of the poor people. What the unfair help is that we have been able to get out of Government I do not know, but I can easily conjecture what the feelings are of those mills which can only just pay their way and of those which have suffered enormous losses due to strikes that might never have taken place, had Government legislation not been more favourable to the worker than to his employer. An extract from the President's speech reads as follows: 'we find to our regret that all these aids through tariffs, import trade control and Government buying preferably Indian goods, have been utilised only in making more and more profits. No effort has been made to make quality of paper better or bring down the costs. People of this country have every right to demand better qualities of paper and at cheaper prices.' Whether or not this is an attempt to get Government to reduce import duties on foreign paper, we refute these charges and, I think you will agree with me that they are so obviously unjustified that I need not elaborate further. We also seem to have come under fire from the All-India Printers' Conference over the quality of our products. The criticism (I refer to the presidential address at their recent session in Calcutta) was not nearly so vituperative as in the case of the Paper Traders' Association, Bombay, but I do not consider that there is justification in the charge that our older mills cannot make decent white printing. Many of us can, and do; and, if we do not, then why do we not receive more complaints direct instead of through the Press?

Labour Troubles in Paper Mills

"On the production side, we have, of course, all had our troubles, but the biggest bar to progress has, without any shadow of doubt, been the situation in the field of labour. It is time that labour realised its responsibilities in the industry. It must realise that a worker must work, if he is to earn his pay. The worker, unfortunately, has little individuality or initiative. Consequently, he has to be led. Nobody minds that; but what one does mind is when he is misled, as is so often the case with certain union leaders. We all want our labour to be well treated. All we wish for in return—and we have every right to demand it—is a full day's work. Without it our industry cannot prosper. Our costs do not show many signs of abating. Indeed, the apparently never-ending upward trend of payments, in one form or another, to labour more than offset the slight savings in cost in other directions that some of us have been able to achieve. No decent employer minds paying his labour well, if he is getting something in return. But what of the productivity of our labour? No mill can boast greater productive effort per head, but all can point to a far heavier wage bill. That is a state of affairs of which India cannot be proud and I feel that our Government is not facing up to it in a sufficiently realistic manner. Even more to blame are those union leaders, who instead of setting a good example, are cashing in on the favourable trends of legislation and exploiting situations which employers find themselves powerless to prevent. The result is loss of discipline and less work, a situation which must be avoided if our industry is to accept its responsibility and produce all the paper the nation needs. Such increases in production as we are showing, seem to me to come more from new machinery than from improved effort on the part of the now much better-paid worker. During the past twelve months Titaghur Paper Mills had to put up with a five-and-a-half months' strike in one mill and a three-and-a-half months' strike in the other. In the previous twelve months Bengal Paper Mills suffered a five-and-a-half months' strike and Tribeni a two months' one. The strikes were almost invariably illegal, unjustified and pointless and as a result the country lost thousands of tons of paper and the workers lakhs of wage-money. Many traders suffered badly too. It is a poor record. It is not progress. I see I have been blaming the workers, or their unions, primarily for this sorry state of affairs, and Government indirectly. We, the employers, must, however, also put our house in order. We must make sure that our labour is fairly treated and then we would do well to get together and try to achieve uniformity in the pay and conditions of service that we consider we are in a position to offer. At the present moment we are at the mercy of unscrupulous labour leaders whose favourite pastime is playing off one mill against another.

Raw Materials

"Of materials used by the industry and their attendant problems, I am going to mention only bamboo, sabai grass, salt cake, coal, hosiery cuttings and old hemp rope cuttings. So far as the first three are concerned, the problems consist of availability and transport; and with regard to the last two, their export is our worry. The coal problem is the question of quality, though, in passing, I might mention that the Planning Commission not long ago recommended that we should use less coal—a suggestion with which we are all in accord, but the answer to which is not easy to find without the installation of new steam-raising plant, a very costly business.

"Bamboo and grass are forest produce and the question of leases is thus entailed. It has come to be a hardy annual for the Chairman

GOLD AND ITS PRICE

FUTURE FOR FREE MARKET SOMEWHAT GLOOMY

(By ARTHUR H. E. TAYLOR, Director, The Kolar Gold Mining Companies Ltd.)

I HAVE chosen as my subject "Gold and its Price," because it seems to me that this is a subject not only of considerable interest to all members of this Society* and staff of the Kolar Gold Field, but because it is of fundamental importance to the industry and its future. In recent years and even months, factors affecting gold and its price have been of such importance as to threaten the very existence of the Kolar Gold Field as a profitable industry.

Gold in the minds of the masses represents inherently wealth and security. Its properties of durability and glitter produce of its conceptions of splendour and ornament, as well as a means of investment and trust. But its value, as a medium of exchange in international credit and national stability, is of singular importance. No other metal has ever taken its place as the backing of international currency, accepted throughout the world. However, its value in terms of currency, like other metals and commodities, is subject to fluctuations. Its price is an index of inflation. I propose to review briefly these fluctuations during the life of the Kolar Gold Field mining industry, with particular reference to the more recent happenings in the world and Indian bullion markets.

Though, to a large extent, gold is held in most countries as reserves for the stabilisation of currencies and its price is regulated by legislation, in India, it is more a commodity than a currency, and can be purchased in the open market. Thus the price varies, like other commodity prices, depending upon supply and demand.

Past History

It is interesting to note that, during the earliest years of the Kolar Gold Field from its inception up to 1914, its production of gold was shipped to London and sold through three well-known firms there. The gold was assayed and refined by these firms and sold at approximately £3 17s. 9d. per standard ounce, equal to Rs. 21-3 per tola. It was under the Bank Charter of 1844 that the price of gold was fixed at this price, and anyone taking bar gold to the Mint in London was entitled to receive in exchange coin or cash to that value. The fact that this Charter remained in force until 1914, with the result that there was no alteration in the price of gold for a period of 70 years, is an indication of the stability of conditions in those times as compared with the changing circumstances of more modern days.

On the outbreak of the First World War in 1914, on the advice of the Bank of England, arrangements were entered into with the Bank for the purchase of the Kolar mines' production of gold on the following terms:

(i) The gold to be deposited at the Bombay mint to the order of the Bank of England;

(ii) the Bank to pay the companies in sterling on the basis of £3 17s. 9d. per standard ounce.

Similar arrangements were entered into by the Bank of England for the purchase of the output from the South African, West African and Australian gold mines. The Kolar arrangement also applied to gold from North Anantapur and the Jibutil (Anantapur) gold mines.

It was one of the terms of this arrangement that it was to be of a permanent nature, but this did not prove to be the case. In order to avoid exchange losses, due to variations in the rupee rate of exchange, this arrangement was varied in May, 1919, to the extent of permitting the mines to sell approximately one half of the gold to the Government of India at Rs. 55-8 or £3 17s. 9d. per standard ounce, the arrangement being for one year from May, 1919. The other half was to be sold at the same price to the Bank of England and the proceeds to be received in London.

Prior to First World War

Previous to the 1914-18 war, India had for many years been importing gold into the country. It is reported from reliable sources that, for the 50 years ended 1913, gold to the value of an aggregate of £230,645,000 or Rs. 307.527 crores was absorbed by India, this being more than 11 per cent. of the world's production during those years. In the year 1911-12, net imports reached Rs. 38 crores. It is thus apparent that India's demand for gold is for the metal itself rather than for its use as a medium of currency. However, during the 1914-18 war, these imports almost ceased, as Gold Standard countries were unwilling to part with their gold resources, and a premium on gold arose in India over the official world price of Rs. 21.2 per tola. By 1916, the price in Bombay was Rs. 26 per tola and, by 1919, it had risen to Rs. 35.

The reason for these increases was the general increase in commodity prices and fears of insecurity caused by the effects of war. These increased commodity prices were having to be borne by gold producers in full, as they were not permitted to dispose of their gold in premium markets. If the Indian gold mines had received the real value of their product, instead of its fixed mint price, and had been paid in rupees, they would have received 12½ per cent. more than they were receiving. Much pressure was, therefore, brought to bear on the appropriate authorities for a revision of the existing system of gold sales. This resulted in the termination of the arrangement with the Government of India in 1921, after which the Kolar Mining Companies were able to obtain the premium prices for gold in Bombay and this has continued ever since that date.

After the end of the 1914-18 war, the prices of gold in India dropped back from the inflated prices of war years and remained fairly steady at around Rs. 21.2 per tola, especially, as in 1929, the price was fixed by law at Rs. 21-8 per tola.

Gold Crisis

As an aftermath of war, a severe slump occurred in 1930. It might also be described as a gold crisis. The vast inflation of currency made during and after the war had led to artificial prosperity and higher prices. Counteracting economic forces, however, began to make themselves felt. Currencies which had been devalued from their pre-war levels were reorganised one after another. Governments fully alive to the important part played by gold during the war aimed at securing as big a share of the world's gold stocks as possible. The amount of monetary gold available has always been regarded by Governments as a measure of the quantity of currency that could be issued to meet the interchange of commodities and services. The result was that, in the scramble for gold, the world's economic equilibrium had been upset. Both the United States and France had adopted a policy of gold buying and in 1929 held nearly half of the world's monetary stock. A serious loss in currency as a medium of exchange had been suffered by the Gold Standard world by reason of such rapid accumulations of the metal by these two countries. Sterilisation of so much gold led inevitably to restriction of currency and credit in other parts of the world. While production maintained its normal increase, the world's consumption capacity was curtailed greatly. The decline in the world's buying power with no corresponding decrease in production caused a collapse in commodity prices, particularly in those of agricultural commodities.

As the prosperity of industry and its employees depends largely on the purchasing power of the people, it was inevitable, in view of the serious fall in prices, that industry should have to suffer. Widespread unemployment was the result. Incomes of Governments declined, with no corresponding fall in expenditure. Governments resorted to borrowing and to a very heavy run on the Bank of England, with the result that Great Britain went off the Gold Standard in 1931.

A Gold Standard is a system of currency based on gold, and on the convertibility at sight of a State's paper or silver currency into gold at a fixed price. A country is on the Gold Standard when the money—paper bills, silver coins, etc.—is redeemable on demand at a fixed weight of fine gold for each monetary unit. To maintain the Gold Standard, two things are necessary. The currency authority—usually a Government—must purchase at a fixed price and coin free of charge all gold brought to it. It must also sell at the same price all gold demanded of it. Gold, therefore, remains the one commodity in a Gold Standard country which requires no change in price measured by monetary units. The Government can easily fulfil its pledge to purchase gold at a fixed price, and it can print paper money for this purpose. The main difficulty in the operation of the Gold Standard arises when the bankers, as agents of the Government, are called upon to redeem in gold large amounts of paper currency or other kinds of money, as the gold held in reserve for such emergencies is normally only a small part of the face value of the paper and other non-gold currency in circulation. A sustained run on gold will eventually force the suspension of the Gold Standard. This is what happened in 1931.

Suspension of Gold Standard

The United Kingdom first went off the Gold Standard during the 1914-18 war. She returned to the Standard on 29th April, 1925 and finally abandoned it in 1931, and has not returned to it since.

In 1930 in India, owing to the tremendous fall in commodity prices and slump in trade, the rupee equivalent of the produce of the Indian cultivator was greatly reduced, while his expenses did not change. Much distress gold came into the market, a total of Rs. 10 crores in value being tendered to the Government at the statutory rate of Rs. 21-3-0; in addition, Rs. 180 lakhs worth were shipped abroad. A regular export business in gold began and the total exports to the end of the year were Rs. 37 crores or 7 per cent. of the net imports since 1900 and about 19 per cent. of the total imports during the last seven years.

The suspension of the Gold Standard in 1931 formed another milestone in the history of gold prices. The run on the Bank of England ceased and alternative sources had to be found by gold buying countries. Gold which ruled at Rs. 21-4 a tola at the beginning of the year 1931 rose steeply and touched Rs. 31-2 per tola by the end of the year, and rose steadily from Rs. 33-7 per tola in 1932 to Rs. 37-10 in 1938. The cause of this rise is attributed to several factors—gradual improvement of the agricultural class from their economic depression, slight recovery in commodity prices, acquisition of gold by countries for payment to the U.S.A. of war debts and the growing tension among the Western countries.

Large quantities of gold were exported from India from 1931 onwards; Rs. 300 crores between 1931 and 1936. With the increased world price and demand, production of gold increased enormously in South Africa, Canada and other countries and prosperity came to gold producers and their Governments.

An important step took place in 1934 when America, recognising the evil of instability and being the largest possessor of gold stocks, fixed the gold price at $35 per ounce with a view to stabilising the dollar in relation to sterling.

Once again, the clouds of war began to gather in Europe and, by 1937, international relationships had seriously deteriorated. Rearmament programmes forced up prices and, owing to war fears, the price of gold began to rise further. Purchase of gold by authorities in the open world markets by all countries, including India, in order to secure sterling funds, were added causes for an increase in price. The process of hoarding continued in Europe and the demand was so brisk that large consignments were air-transported from India.

Demand for Indian Gold

It is interesting to note here that, as from 1st April, 1935, the Reserve Bank of India came into being with control over the management of currency and sterling requirements of Government. With the declaration of war with Germany in September, 1939, the price of gold in Bombay shot up to Rs. 43-8 per tola. Defence regulations were imposed in the United Kingdom prohibiting dealing in gold, except through official channels, and the Bank of England announced its buying price of gold at 168s. per fine ounce, equal to Rs. 42 per tola. The regular flow of gold into the Kentucky vaults of the U.S.A. continued as a result of large-scale purchases of war supplies from her by Great Britain and Empire countries. More than 80 per cent. of the world's monetary stock of gold was held by the U.S.A. in 1941. The demand for Indian gold was enormous and some Rs. 39 crores worth of gold, namely, four million ounces, were shipped abroad from India during 1939. At the same time, cost of living indices all over the world were rising and India was no exception.

While the price of gold in the U.K. and the U.S.A. remained fixed, that is, at 168s. and $35, the Indian market registered prices which broke all previous records. The proximity of war, the possibility of direct attack by Japan, and the expansion of paper currency resulted in continued and strong demand for gold in India, and the premium over world prices grew steadily greater. By 1942, the price had arisen to Rs. 72 per tola and Rs. 93 by the end of 1943. The demand in India reduced exports of gold to negligible proportions and, once again, gold began to be imported, though under restrictions imposed by the Indian Government. After declining to Rs. 84 in July, 1946, at the close of hostilities and following the granting of some licences for import of gold, the price went up to Rs. 117 when imports were banned. The highest ever recorded was Rs. 120 per tola or Rs. 120-2 per ounce registered in May, 1950. The devaluation by the United Kingdom in September, 1949 of the pound sterling in terms of the dollar from $4.03 to $2.8 resulted in the official sterling price of gold being raised from £8 12s. 3d. to £12 8s. per fine ounce. The object of the devaluation of the pound was to stop the drain on the United Kingdom dollar reserves and to assist the export drive to the dollar countries.

With high gold prices, firm demand and free market conditions in the Bombay Bullion Exchange, while the price of gold was pegged in other countries, to smuggle gold into India had and still has of smuggling gold into India from the Middle East through Goa and Pondicherry, and by landing it on the shores from *dhows*, derived handsome profits from the substantial premium obtainable for gold in India.

Effect On The Kolar Gold Field

Before passing to the more recent picture in which we see the position regarding gold prices in the world and in India as it is today, I would like to deal very briefly with the effect of these fluctuations on the Kolar Gold Field mining industry.

By contrast with today's conditions when fluctuations occur almost daily, prior to 1939, the price of gold was so stable as to be taken as a constant when superintendents came to frame their programme for the next year's working. Profits fluctuated according to grade, tonnages and costs, and, in fact, a mining budget in its true sense, both technically and economically, was the rule. Stability of prices enabled programmes to be foreseen and estimated as much as 15 years ahead. Schemes for exploration and development could be laid out and agreed with a reasonable degree of accuracy so far as costs and profits were concerned. This important factor played a big part in the carrying of these mines to great depths and in decisions to sink major shafts from surface, install cooling plants, second stage layout, and so on. Without this element of stability these bold schemes might not have been undertaken.

A sudden rise in the price of gold temporarily resulted in increased profits until such time as resulting inflationary tendencies began to be felt in the form of increased cost of living, wages and costs generally. Sudden upward fluctuations naturally give rise to the seizure of opportunity by Governments to annex for their revenues some portion of the fortuitous profits caused thereby, however temporary they may be.

Gold Duty

In the year 1940, the Government of Mysore imposed a duty on gold under which the Government took 75 per cent of the sale price of gold above Rs. 100 per ounce. In doing so, the Mysore Government followed the action of certain other Governments, notably the Union of South Africa. The gold duty was clearly intended to be a levy of a temporary character. The Government of the Union of South Africa, whose action was followed by the Mysore Government, was the earliest to realise the disastrous effect of the new impost on their gold mining industry, and, indeed, on their national economy. That Government repealed the gold duty in less than six months of its enactment, and, in fact, even before the Mysore Government had imposed the duty. The Governments of Canada, Australia, Rhodesia, and the Gold Coast, sooner or later followed suit, but the Mysore gold duty continued for nine years and undermined the industry so gravely as to threaten its future continuance.

The gold duty was a tax on receipts and bore no relation to profits, which were declining due to increasing costs. The huge sum of £9,300,975, or Rs. 12.43 crores, was paid to the Mysore Government for the years 1940 to 1949 by the Kolar Gold Mines. Such payments to Government so depleted the finances of the industry that it became impossible to provide funds so essential for exploration and development. It has been said that the damage to the industry by the gold duty was such that the industry would never recover from its effects. On its repeal, the gold duty was replaced by a new burden in the shape of a contribution which takes 75 per cent. of any surplus after allowing certain deductions and a 6 per cent. dividend. That this levy is discriminatory and damaging to the industry, its development and expansion, has been repeatedly brought to the notice of the Government.

It is somewhat ironical to note that this situation is the outcome of a sudden increase in the price of gold in 1939 and it may be said that, had such an increase not taken place, the industry would have fared very much better than in fact it has. Rising gold prices, therefore, do not always mean better days for the industry; in fact, very often, the reverse is the case. In the submissions to the Mysore Government during the negotiations that preceded the removal of the gold duty, it was mentioned that the position was indeed so paradoxical that, simultaneously with the exceptionally high price of the product, the industry was suffering from an unprecedented depression.

Unfortunately, there has been a fall in the price of gold of more than 25 per cent., as compared with the price at the time of the signing of the new agreement. Although outputs have been increased to the utmost capacity of the mines, this disastrous fall in the price per ounce, with no compensating fall in inflationary tendencies and costs of living indices which so materially affect costs, has so reduced profits that the permitted amount of 15 per cent. of costs is available only in small part for setting aside towards depreciation and development expenditure, while there has been no surplus on which to pay contribution to the Mysore Government, and only very meagre dividends have been paid to our shareholders.

The Present

Now, let us turn to the trend of events in recent times and review the factors affecting gold prices today and in the immediate future. It was in the early part of 1952 that a crisis occurred in the Bombay bullion market. There had been a gradual decline in price from the peaks of May, 1950 and April, 1951, when the price was around Rs. 118 to Rs. 120 per tola. The year 1952 opened with the price around Rs. 106 per tola, but, in April, 1952, it crashed to Rs. 78 per tola and recovered by the end of the year to Rs. 83 per tola. This fall coincided with a widespread slump in commodity prices in India, and such panic conditions ruled on the Bombay bullion market that, for a period, all dealings ceased by closure of the market until the situation could be assessed more clearly.

We here on the Kolar Gold Field were faced with a sudden and precipitous fall in gold price without any fall in our working costs. In the 1952 bullion review of a well-known firm of brokers in London, the following extract appears with reference to gold prices in India:

"The fall in price is causing concern to local gold mining interests, hampered as they are by Government restrictions and all too painfully aware that considerable quantities of metal are smuggled into the sub-continent through Goa, Macao, Pondicherry and Kuwait. Producers are on the horns of a familiar dilemma; the higher the local gold price, the greater the incentive to the unwelcome competition of smugglers, while a price low enough to cut out smuggling may cut as deep into legitimate mining profits."

Though in the first half of 1953 there was an improvement in price, a definite downward trend commenced towards the end of September and prices fell away to below Rs. 80 per tola, and we have been obliged to review every possible method of meeting the situation, particularly as costs continue to rise and recent legislation places more and more burdens upon the industry. It was these very recent dilemmas that caused me to take this opportunity to bring some of the facts before you. Any information which can be obtained as to the causes of fluctuations in gold price must be of assistance in framing policy.

An all-important factor to appreciate is that, even today, the price of gold in India is at a substantial premium over prices ruling in world markets, due, of course, to the Government's policy of import restrictions and the continued internal demand for gold in India. Though the internal position is all important and somewhat unique, the external position has an important bearing on the subject, with particular reference to the world free market price of gold.

Decline Due to Lack of Demand

The decline in gold prices in Bombay in the autumn of last year resulted from a lack of demand for gold and occurred without any crisis or obvious disturbing influence. This suggests that it might have been due to influences other than speculation, which, if lasting, would result in a long-term downward trend in prices, which in turn would have a fundamental effect on revenue, payable grade of ore, and the economics of the industry.

You may all be aware that, while America will buy gold at the fixed price of $35 per fine ounce, there is also a world free market for gold as indicated by quotations on the leading Continental centres. This world free market price regulates, to some extent, the level of gold prices in Bombay.

In the last two years, there has been a gradual but steady downward trend in the world free market price. At the beginning of 1953, the world free market price was $38; two years previously, it had been nearer $45. In November, 1953, it had dropped to $35, around which price it has remained since. This is the lowest free market price since the war. Much the same story comes from the other international centres in the Middle East and Far East, where prices have dropped back to their pre-Korean levels, and, in some cases, to even lower figures.

There is, therefore, now only a very small incentive to producers to sell their gold in the open markets, as the premium has almost disappeared. Fluctuations in prices are, of course, largely controlled by supply and demand.

World Gold Supply

At present, the world supply is very much greater than the demand so far as the free markets are concerned. Until very recently, that is, the end of 1953, some 700,000 to 800,000 ounces of newly mined gold were being produced and sold on the free markets every month. These figures were made up roughly as follows:

	Ounces
South Africa	400,000
Rhodesia	50,000
Australia	100,000
West Africa	70,000
East Africa, New Zealand	20,000
Canada	100,000
Colombia, Venezuela, etc.	40,000
Others	20,000
Total	800,000

Trade with Australia and New Zealand

Business men trading with Australia and New Zealand are invited to use the complete banking service of the Bank of New South Wales.

The oldest and largest joint-stock bank operating in Australia and New Zealand, the Bank of New South Wales keeps in close touch with local conditions through over 850 branches and agencies (sub-branches) in Australia, New Zealand, Fiji, Papua and New Guinea. It is thus particularly well equipped to provide enquirers overseas with a full picture of the local business and rural scene.

REPORT OF THE AUDITORS TO THE MEMBERS OF LLOYDS BANK LIMITED

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank as far as appears from our examination of those books, and proper returns adequate for the purposes of our audit have been received from Branches not visited by us.

We have satisfied ourselves as to the Cash, in hand, with Bank of England and Eastern Reserve Banks, the Balances with, and Cheques in course of collection on, other Banks in the United Kingdom and Ireland, the Balances with Banks abroad, and the Bills. We have also verified the correctness of the Money at Call and Short Notice and the securities representing the Investments of the Bank. We have examined the above Balance Sheet and Profit and Loss Account which are in agreement with the books of account at Head Office and certified returns from the Branches—the Eastern Branches accounts being brought in as at the 31st October, 1953. In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required of banking companies by the Companies Act, 1948, and, on the basis authorised therein, the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at the 31st December, 1953, and the Profit and Loss Account gives a true and fair view of the profit, ascertained in the manner therein indicated, for the year ended on that date.

In our opinion the group accounts (comprising the Balance Sheet and Profit and Loss Account of the Bank and the annexed accounts of The National Bank of Scotland Limited), have been properly prepared in accordance with the provisions of the Companies Act, 1948, applicable to banking companies and, on this basis, give a true and fair view respectively of the state of affairs and of the profit of Lloyds Bank Limited and its subsidiary dealt with by such group accounts so far as concerns members of Lloyds Bank Limited.

3 Frederick's Place, E.C. 2, 13th January, 1954.

GOLD AND ITS PRICE

(Concluded from page 837)

Of this total, half, namely, 400,000 ounces per month, came from South Africa. About 200,000 ounces of this monthly supply went to Beirut and are believed to have eventually found their way by smuggling into India and Pakistan. About 200,000 ounces went to Indo-China, Malaya and Indonesia, etc. That left between 300,000 and 400,000 ounces per month. In the past, this would have been readily absorbed by France and China. Now these two, until recent years steady buyers of gold, have ceased to buy.

Since 1927, France has been buying gold at the rate of 300,000 ounces every month. It is interesting to note that all this vast quantity of gold has been smuggled into France, since, like India, the import of gold into France is prohibited. A fair proportion of this is believed to have entered France officially under licence to export and then has come back in smuggled form.

In spite of the weakness of the franc and the inherent policy of French people to have their wealth in foreign investments or gold, the demand for gold has fallen right off. French trade has been particularly bad, inflation is ever increasing and the costs of living have soared. The French people, far from buying gold, are obliged to sell it. Public interest in gold in Paris has virtually disappeared. The international situation and its improvement has lessened the need to hoard gold as a hedge against international conflicts. The reform of the inheritance tax in France removed a further reason for Frenchmen to buy gold.

China, which in the past has been a regular buyer of large quantities of gold, has, under Communist rule, ceased to be a purchaser. The punishment on conviction for purchasing or hoarding gold in China today is death. Thus these two important buyers of gold for so many years past are now out of the picture.

A further and very real cause of the recent depression in free market prices is that Russia has recently been selling gold in very large quantities, apparently in order to provide herself with foreign currency with which to buy consumer goods. Some 100 tons of gold have been sold by Russia during the latter part of 1953 and early 1954. The sale of such huge quantities, though of great benefit to Great Britain, which is believed to have purchased a large share of this gold, which results virtually in exports to the U.S.A. of this value, has caused a further setback in the free market price and has been the principal reason for the virtual disappearance of the premium in the free markets. Both South Africa and Australia have ceased selling any portion of their production in the free markets.

World Official Price of Gold

Much speculation in the past regarding the world official gold quotation of $35.00 per ounce came from people who were counting on a change in the American Treasury view towards the official price of gold. In recent months, hopes have waned and, in well-informed circles, the view is held that a change in America's buying price is not even in sight, though opinions are firmly held that one day it must come, but not until at least two years after a slump in American trade. Though a recession has already begun, it is not yet anything approaching a slump. A further point to be borne in mind is that it is a difficult procedure to bring about any such change as it has to go before Congress, where, as at present constituted, it will always meet with much opposition.

On the side of the need for an enhancement in the official world price has been Mr. H. C. Havenga, the South African Minister of Finance, who has on more than one occasion put his country's case before the annual meetings of the International Monetary Fund. In September, 1952, he urged strongly both a higher U.S. price for gold and a return by member countries to an International Gold Standard—the former to enable the revaluation of central reserves at a higher figure in order to further a return to convertibility and also to stimulate trade between the United States and the non-dollar countries; the latter to check inflationary policies and to promote the smooth running of trade and payments. His point was that the alternative was that exchange restrictions and discrimination in international trade might have to be accepted as permanent features of the modern world. His appeal for a higher U.S. gold price was supported by Australia.

The future of free market gold prices is, therefore, somewhat gloomy and there is no immediate reason in sight which might be expected to cause it to improve. Should the French decide to devalue the franc—quite a possibility—gold prices might rise due to a temporary demand for gold, but it would only be temporary. Conditions in France do not lend themselves to the hope of an early return of France as an important purchaser of gold. With France and China both out of the picture, the regular and basic demands for monthly newly mined gold has suffered a severe blow. Should Russia cease selling the price, would probably improve. At present there is no indication that America will cease to purchase gold in such quantities as may be offered at $35 per ounce, in which case the price can fall only fractionally below that figure. The welcome reopening of the London gold market is unlikely to have any immediate effect on free market gold prices.

The Price Of Gold In India

The price of gold in Bombay, as in world markets, is also controlled by supply and demand. The demand for gold by India has been consistent and regular over a long period of years, and India has been virtually a bottomless pit into which gold has not ceased to pour. Hardly an ounce of gold has come out of India since 1941. The demand is mainly one of hoarding through uncountry purchasers throughout the length and breadth of this vast country. The Indian's inherent confidence in the yellow metal as a medium of investment of savings and wealth, the necessity of customary purchase of gold as dowries for marriages, and speculative buying are causes of demand. Demand is, of course, affected by seasonal rains, trade recessions, famine and such like, together with inflationary and monetary confidence—causes similar to those applicable in markets elsewhere.

Gold is consumed in the form of ornaments and small bars (one, five and ten tolas). There are at least half-a-dozen brands in vogue. Gold is first bought by wholesalers in Bombay and then sold to upcountry clients in big lots or smaller pieces.

The supply is made up of smuggled gold, newly mined gold and a certain amount of dishoarding. The daily offtake in the Bombay ready market is said to average about 10,000 to 12,000 tolas during the season (October to May, and half that during the off-season (June to September).

I have already mentioned that, owing to restrictions on import and export of gold, and the demand being consistently more than the supply, the price in Bombay rules higher than the world free price, and hence India becomes attractive to smugglers. It is alleged that gold is usually smuggled in from Kuwait via Goa and Pondicherry and in *dhows* (country boats) along the coast. It is said that the gold is bought in Kuwait from the international markets, Switzerland, France, Hong Kong, Macao and Bangkok, against dollars. It is believed that 20,000 to 25,000 tolas come into the Bombay bullion ready market per week, though this varies greatly. I have heard it from a reliable source that between 1½ and 1¾ million ounces are smuggled into India annually. However, these figures must be regarded with reserve.

The fact that world markets have become overloaded with gold makes supplies much more freely available for smuggling from the Middle East than they were in the past. Not very long ago it was difficult to come by and the quantities which could be obtained in Kuwait were limited. Now supplies are more than ample. The depression in world free markets makes the premium in Bombay attractive, even though less profitable, but, owing to the easy availability of gold, a smaller profit on larger parcels is attractive to smugglers.

Present prices still allow a margin of profit for the smuggler. Opinions differ as to the requisite profit wanted by the smuggler, and the cost of it. The actual cost of smuggling is rated at 10 per cent., with a profit of 10 per cent. to cover risks of confiscation. At $36 per ounce, the price is Rs. 64 per tola. If about 10 per cent. to this is added to the cost of getting it to Bombay, that is Rs. 70, plus about 10 per cent. profit, the price at which it is attractive is between Rs. 76 and Rs. 80 per tola in Bombay. This price is, of course, controlled by the free market price which controls the dollar purchasing price in the Middle East. These figures are, however, pure conjecture and are obtained from various opinions expressed in authoritative circles.

Active steps are being taken by the Government of India to check smuggling of gold and to restrict channels through which dollars required to pay for gold smuggled from the Middle East can be obtained, and we have read in the Press from time to time of substantial confiscations of smuggled gold. But, with such a huge coastline, it is not easy to prevent gold coming in. In fact, the prevention of smuggling is so complex that even the active steps being taken are believed to be only partially effective.

Future Trend Of Gold Prices

To conclude my remarks, you may expect me to make some reference to the possible future trend of prices in India on which the prosperity of the Kolar Gold Field so largely depends. It is, however, most difficult to make any such forecast, for, there are so many factors involved which can change prices overnight. The facts which I have recounted give only a bare picture of some of the aspects.

The fundamental factor of the world free gold market depression and its causes to which I have referred is undoubtedly one of the causes of the lowering of gold prices in India from those ruling not so long ago. Disregarding seasonal and other fluctuations, there is, therefore, no foreseeable reason for expecting the general level of prices in India to rise greatly in the near future. Should there be a deterioration of international relations, a slump in America with an eventual raising of the dollar price some two years later, or a revival of purchasing of gold by France, the position would, of course, change.

In India itself, inflationary tendencies, trade recessions, failure of crops, etc., make money short, and cause buyers to become sellers as in early and late 1952, and October, 1953. These setbacks are likely to occur from time to time. Smuggled gold is, we believe, readily available and finds its way into the Bombay market in large quantities to form a damper on any flare up which may take place. Only in the monsoon months when *dhows* cannot put out to sea is the supply cut off, unless and until prices sink below the price at which smuggling becomes unattractive or if preventive steps by Government prove to be more effective.

However, there are the favourable factors. From an examination of the trend of prices over the past two years, one can note the seasonal changes when demand is good—in the early part of the year when the marriage season is in full swing, and usually during the summer months when the monsoon is on—to be followed by falling prices from October onwards when the smuggling season is believed to be at its height. The excellent rains of last autumn have resulted in good crops and so the demand has been quite brisk of late.

Again, on the better side, is the Government of India Five-year Plan which allows for the expenditure of Rs. 700 crores on industrialisation in the next two and a half years. With so much money circulating and with such a stimulus to employment, even if achieved to only a partial extent, the demand for gold must undoubtedly be assisted. I hope and believe that the Indian's faith in gold will never fail and that, in spite of generally lower prices for some time to come and fluctuations from time to time, but subject always to Government legislation, prices in the future will be such that the Kolar Gold Field Companies can continue to operate profitably.

LLOYDS BANK LIMITED—*(Continued)*

AUDITORS' REPORT ON THE INDIAN BRANCHES OF LLOYDS BANK LIMITED UNDER SECTION 33 OF THE BANKING COMPANIES ACT, 1949.

We report that we have audited the Balance Sheet of the Indian Branches of Lloyds Bank Limited, dated 31st December, 1953, and above set forth and the annexed Profit and Loss Account for the year ended 31st October, 1953, with the books and accounts as kept at the General Manager's (Eastern Branches) Office, Calcutta, in which are incorporated certified returns from the Indian Branches and have obtained all the information and explanations we have required. In our opinion such Balance Sheet and Profit and Loss Account are drawn up in conformity with the law and the Balance Sheet exhibits a true and correct view of the state of the Bank's Indian Branches' affairs according to the best of our information and the explanations given to us and as shown by the books at Calcutta and the certified returns from the Branches. In our opinion books of account have been kept as required by law.

W. T. C. PARKER,
General Manager (Eastern Branches).

THE ASHOK MOTORS LTD.

CHAIRMAN'S SPEECH AT ANNUAL MEETING

HEAVY COMMERCIAL VEHICLES TO BE MANUFACTURED

ADDRESSING the ordinary shareholders of the Ashok Motors Ltd., at their Fifth Ordinary General Meeting which was held on 24th April, 1954, at the Registered Office of the Company at Ennore, Madras, Mr. S. R. Y. Sivarama Prasad Bahadur, Rajah of Challapalli, who presided at the meeting, said:

"I extend to you a warm welcome on the occasion of the Fifth Annual General Meeting of your Company.

"On the 12th of December, 1953, Mr. Raghunandan Saran, who was the Director-in-charge of this Company, while returning from Delhi to Madras, met with an untimely death in the tragic air crash. He was one of the original promoters of the Company and the Company has lost a sincere and loyal friend and an upright and efficient administrator and a gifted and selfless industrialist, who had the national interest foremost in his heart.

"The Director's Report and statement of accounts for the period ended 31st December, 1953, is before you and, with your permission, I shall take them as read. I would, however, like to draw your attention to the marked fall in the sales turnover and profits during the year. This is solely due to the delay in the issue of import licence, resulting in the shut-down of the works for nearly four months and the persistent and concerted go-slow policy adopted by the hourly rated workers for a period of eight months in the year. The workers involved in such go-slow tactics were strongly condemned by the Industrial Tribunal, Madras. In consequence, the sales turnover during the year dropped to about Rs. 1,25,00,000, as against approximately Rs. 1,45,00,000 in the previous year. The Company had provided depreciation to the maximum permissible rate on fixed assets amounting to Rs. 2,20,013-12-0 and, after making this provision, a sum of Rs. 4,48,437-11-6 is available for appropriation on dividends and payment of income-tax, super-tax, etc.

Long-term Planning

"During the year under review, the report on the automobile industry by the Tariff Commission was released on 25th April, 1953. Our comprehensive manufacturing programme to the Government for the progressive manufacture of Leyland commercial vehicles had been approved by the Government of India and intimated to us by their communication dated 1st March, 1954. Our principals, Messrs. Leyland Motors Ltd., Leyland, U.K., have come forward generously with financial and technical assistance to implement the progressive manufacturing scheme and, with their active participation, we can confidently foresee a very bright future for this Company, which would permit the Company to function as a full-fledged manufacturing concern. Now that the Government decision has been released, we can henceforward embark on a long-term planning and this would help to implement the phased progressive manufacturing scheme of the heavy commercial vehicles.

Demand for Vehicles

"Leyland is a well-known product which has stood the test of all trials and have proved successful in operation by the various transport organisations in this country, as also in the rest of the world. The Leyland diesel chassis is well known for its sturdy construction, dependability and low cost of operation. Ever since we took over the distribution of Leyland products in this country, the demand has been steadily on the increase and, all along, it was a question of the demand exceeding the supply, as our principals could not fulfil the various orders in view of the world-wide demand for their products. Once we start manufacturing the Leyland vehicles here, this problem would be solved to a very great extent and we will be in a position to meet the requirements of all the transport organisations. The demand for vehicles is likely to be more in view of the development of road transport in the Five-year Plan.

"In accordance with the agreement reached with our principals, Messrs. Leyland Motors Ltd., with a view to implementing the manufacturing programme, your directors and our principals have considered it necessary to terminate the Managing Agency Agreement and to make the Company Director-controlled. To give effect to the manufacturing programme, it is necessary to raise further capital and our principals, Messrs. Leyland Motors Ltd., have agreed to participate financially in the capital structure of the Company and, to match their capital, it will be necessary to raise capital from Indian sources to an equal extent.

Financial Results

"Here, I may point out that the Company is being run very economically without loss of efficiency, so much so a dividend of 5 per cent. per annum, free of income-tax right from the inception of the Company had been declared to the shareholders to date. To illustrate the healthy position of the Company, it will be pertinent to point out that, out of the total block of fixed assets acquired at the original cost of Rs. 34,40,000, depreciation upto 31st December, 1953 of Rs. 18,09,000 had been provided for. This is in addition to the reserve for replacement of machinery and equipment of Rs. 1,50,000 already created. I wish to bring out another salient point of the accounts of this Company, namely, as against the paid-up share capital of Rs. 54,56,500, the total resources of the Company are in the region of Rs. 84,40,000. This will go to highlight the sound state of affairs of the Company.

"We can be proud of the performance and we are confident we will be able to improve in the future, owing to the active participation in our Company by our principals, Messrs. Leyland Motors Ltd., U.K. I would, therefore, appeal to you to invest in a larger measure in this Company to make the manufacturing programme a success.

"I now move that the Directors' Report and the audited accounts be and are hereby approved and adopted."

The accounts and balance-sheet as at 31st December, 1953 were approved and adopted, and a dividend of 5 per cent. per annum, free of income-tax on 'A' and 'B' class shares of the Company for the year ended 31st December, 1953, as recommended by the Directors, was declared.

(Concluded from next column)

be used to support the Communist war machine, perhaps in aggressive moves against other Asian nations.

It would mean, too, the loss of Indo-Chinese trade for the rest of South-East Asia and other parts of the world. The availability of rice, for instance, so badly needed by Indonesia, Malaya and other rice-deficit nations to feed their growing populations, would be drastically reduced as one-third of the "rice bowl" would be taken from normal trade channels. Moreover, some $40 million of Indo-Chinese trade each year is with other countries of Asia and the Far East. Much of this trade would be lost to them, or would be subject to Communist political direction.

The rest of the free world, too, would find an important source of trade all but cut off. Indo-China's exportable surpluses of a number of important materials would no longer be available in world markets as in the past, and the people of the Associated States would no longer be in a position to obtain from the free nations the quantities of goods they need for their economic development.

Most important, perhaps, all of South and South-East Asia would then lie exposed to the aggressive designs of Communist imperialism. In this area are to be found the bulk of the world's supplies of such materials as tin, rubber, copra, and rice, and much of its oil, bauxite, manganese, tungsten, jute and other commodities. But more than this, supplies of raw materials would be placed in jeopardy. The nations of Asia and the Far East have been making considerable progress in speeding their economic development. Loss of Indo-China, with its increased threat of Communist infiltration and domination throughout the region, would dim the prospects for further development and perhaps nullify the progress that has already been made.

ECONOMIC POSITION OF INDO-CHINA

PROSPECTS FOR INDUSTRIAL DEVELOPMENT ENCOURAGING

INDO-CHINA, the geographical area that includes the Associated States of Viet Nam, Cambodia and Laos, is a land of varied and rich resources, with an outstanding potential for economic development. Its 27 million people live in a total area of about 286,000 square miles —about twice the size of the British Isles and one-third larger than France. They earn their livelihood principally from agriculture.

Rice is the main crop, covering about five of the six million hectares of cultivated land. Rice comprises 90 per cent. of the average diet. Before World War II, it accounted for 35 per cent. of the area's export trade. The Communist-led aggression in Indo-China, following the widespread dislocation caused by World War II, has disrupted the area's efforts to restore its rice trade. The Governments of the Associated States have made good progress in this direction, with output now running close to the pre-war average of about 6.5 million tons a year. But exports from Indo-China, principally from Viet Nam and Cambodia, have been only about 20 per cent. of the pre-war average of 1.3 million tons a year. Indo-China, Burma and Thailand together make up the so-called "rice bowl" of Asia. Supplies from these lands account for nearly three-fourths of world exports, and are indispensable for meeting the needs of the growing populations of other Asian and Far Eastern nations.

Rubber is the great plantation crop of Indo-China. The plantations centre round Saigon in Viet Nam and extend to Cambodia. Output has been brought back to levels close to the pre-war average of 60,000 tons a year, although many of the plantations still must function as virtual armed camps, because of the Viet Minh harrassment. While Indo-Chinese rubber production makes up little more than two per cent. of the world total, it accounts for more than one-third of the export trade of the Associated States.

The other important Indo-Chinese crops are cotton, corn, coffee, tea, sugar and pepper, the latter being an important item on the world market. The vast fish resources of the great Lake of Cambodia and the forests of ebony, mahogany, cinnamon and cinchona—from which quinine is produced—are also important to the economy of Indo-China.

Mineral Resources

In addition, Indo-China has significant reserves of tin, iron, tungsten, manganese and zinc. It also has exceptionally rich sources of water power, with the Red River in the north and the Mekong in the south. With many of its resources still not being utilised fully, and others barely tapped, Indo-China has before it an encouraging prospect for industrial development.

Indo-China also has the fundamentals of an excellent transportation system. But this, too, has been affected by the Viet Minh Communist attacks. The 22,000 miles of roads and 2,100 miles of railroads which existed before World War II have been reduced considerably by direct damage and by Communist sabotage.

Today, because of the Communist disruption of Indo-China's economy, the Associated States have one of the most unfavourable trade balances in the world. Indo-China now buys about three times as much as it sells, whereas, before World War II, its annual trade often was in balance and even showed an export surplus. Indo-Chinese exports have fallen from a pre-war level of about $100 million a year to about $70 million a year. With much of the area's resources devoted to the struggle against Communist aggression and not available to sustain normal economic activity, imports from other parts of the world have climbed. Most economists believe that restoration of internal security would lead to quick resumption of normal activity and trade. It also would permit the people of the Associated States to step up their efforts towards greater industrial and agricultural development of their countries.

If Indo-China were to fall under complete Communist domination, the economic impact on the Far East and other parts of the world could not be overestimated. Most obviously, such a development would lead to exploitation of Indo-Chinese resources for Communist ends. Rice, corn, fish and other foodstuffs would be siphoned off to feed the hungry peoples of the Chinese mainland and other Communist countries. Rubber, tin, coal and other raw materials would

INDIAN ALUMINIUM COMPANY, LIMITED

MR. K. C. MAHINDRA'S ADDRESS AT SIXTEENTH ANNUAL MEETING

PLAN AND STRUCTURE OF PROTECTION NEEDS REVISION

ADDRESSING the Sixteenth Annual General Meeting of the Indian Aluminium Co., Ltd., held at Calcutta on Friday, 23rd April, 1954, Mr. K. C. Mahindra, Chairman of the Company, confidently stated that the aluminium industry would be able to exchange this year the crutches of a high protective duty to a small cane. Now that the feasibility of production of primary aluminium in India had been proven, the "plan and structure of protection" for this essential industry, Mr. Mahindra declared, needed revision. He emphasised, in this connection, the vital importance of designing the fiscal policies in respect of aluminium in such a way as to provide direct incentives for expansion in demand, and not merely to generate conditions for instituting production of the primary ingot. Referring to his own company, he made it clear that they would seek no special advantage but only welcome a tariff policy which would ensure the long-term stability and progress of the industry.

The following is the full text of Mr. Mahindra's speech at the meeting:

"GENTLEMEN,

"The audited accounts of the Company for the year ended 31st December, 1953, and the accompanying Directors' Report have been circulated.

"The reasons for the unfavourable results shown in the accounts for the past year have been fully stated in the Directors' Report and I do not propose to go over the same ground. I would like, however, to comment briefly upon how I view the Company's position in the light of current developments and give some perspective to the future.

"The fortunes of companies, like those of individuals, are influenced by the environment in which they live and operate. The prosperity of the Indian aluminium industry has so far largely revolved around the utensil market, which is a market particularly sensitive to general economic conditions prevailing in the country. The income of the average consumer is so small that even a slight rise in the price of food causes a considerable reduction in the purchases of less essential articles. During the first eight months of last year, food prices increased by 18 per cent. and, as the cost of living rose, consumption levels declined. However, during the last four months of the year, prices started to decline from the peak reached in August, following the good harvest in that season, and, as the year closed, business was improving and there were signs of revived confidence in the economy.

Competition from Scrap Rollers

"Coupled with the recession in demand for aluminium was the increased competition experienced from the scrap rollers. The two main rollers who produce their own virgin metal are at a serious disadvantage in this competition, as compared to the numerous opportunists rolling scrap on a small scale without regard to quality. So-called surplus profits from our rolling mills are expected to subsidise the return on our smelting enterprises. Unfortunately, there just are not enough profits to do this, as you painfully are aware.

"These events have told their lesson. We still have an uphill task before us, but the worst, I believe, is now over. Although the utensil market is once again active, we do not propose to relax our efforts to increase our outlets, diversify our products and find new markets. Our production and selling rate of rolled products is now double the average rate during 1953 and, while the major portion of it is still destined for the utensil market, an increasing proportion is for industrial applications.

"An interesting commercial prospect is opened up in the possibilities of export to the neighbouring countries in Africa, the Middle East and Asia. During the last session of Parliament, an act was passed which aims at encouraging India's export trade by allowing a drawback of duty paid on raw material imported from abroad for use in the manufacture of articles for export. This act applies to aluminium manufacture also; we should be able to secure a substantial part of the business by rolling aluminium sheets and circles from imported ingot for use in utensils for export to various long-established markets outside India. This, however, would only provide an outlet for our rolled products. We should create the conditions under which export needs can be met, not from imported ingot, but from indigenous metal, so that the markets for Indian manufactures abroad will not be limited only to utensils but extend to other fabricated products.

Uses of Aluminium

"In my address to you last year, I dwelt at length on the numerous new uses being developed for aluminium which form the basis of the remarkable increase in world production of the metal to its present level of about 2 million tons and of the plans for its further expansion. As a recent United Nations report has pointed out, aluminium production has increased by 10 per cent. per year since the beginning of the century, or, in other words, output has doubled every seven years. At this rate, world production of primary aluminium should reach 4 million tons by 1960 and there is every reason to expect it to continue growing at a rapid rate for many decades to come. In America and Europe, a large part of the increase in aluminium has been as a replacement for other non-ferrous metals, but about half the total consumption is for uses in direct competition with steel. It should, however, be remembered that the world production of aluminium constitutes hardly 3 per cent. of the world output of steel and is not expected to increase to more than 5 per cent. by 1960. Aluminium is now being increasingly employed in rail and road transport, civil and mechanical engineering, shipbuilding, household equipment and packaging. Most of the steel so far displaced by aluminium has been in the form of sheets, where aluminium production is 4 per cent. of world production of thin steel flat products on a volume basis, as compared with only 1 to 1½ per cent. in the case of tubes, light structural shapes, castings and forgings. Aluminium is thus proving a more suitable metal than other non-ferrous metals and steel in ever-widening fields of application.

"The resources of copper, lead and zinc in India are limited and about Rs. 14 crores are being spent annually on imports of these metals to meet requirements. Steel supplies also are inadequate and only about 2 million tons of finished steel are expected to be available from internal sources by 1957, as compared with the estimated requirements of about 3 million tons. With the upsurge of industrial activity, there is going to be a growing demand for both ferrous and non-ferrous metals in India. While, for certain industrial uses in the West, aluminium may compete with steel, in India, for many many years to come, aluminium and steel will play supplementary roles in providing the necessary basic materials for industrial development.

Lower Prices and Better Quality

"In the face of these needs and possibilities, it is somewhat surprising to find the scepticism with which even some responsible persons view the proposed expansion of aluminium production in India to 20,000 tons per annum of primary metal by 1957. What answer am I to give to such scepticism? I would say that there is certainly no hope of developing the indigenous aluminium industry so long as it is confined to small production units with a high-cost and high-price structure and serving a restricted market. Ours is a poor country and we, particularly, must rely upon a low-cost and low-price economy. Whether it is aluminium for utensils for the villager or aluminium for industrial applications, markets will only be won and held by lowering costs and prices, while, at the same time, maintaining high quality and rendering better service to the customers than is provided by sellers of competing materials.

"Writing 'Aluminium *versus* Rest,' Oscar R. Hobson, the doyen of city editors of the U.K. dailies, had this to say in the *News Chronicle* of London: '... but demand is necessarily dependent upon price and, if aluminium is to seize the vast opportunities laid before it by science it will need to be cheaper. Not much cheaper, perhaps, as its advantages seem to be so great that a small reduction in its price would probably lead to a very great increase in its use. Until such a reduction in price occurs, aluminium will probably not make very much more headway, as manufacturers feel that, at twice the price of steel, most of its advantages are outweighed. The future of aluminium is thus now solely a matter of price.'

Higher Production

"An appreciable reduction in costs can only be achieved by increased production. The expansions of the smelter at Alupuram and the rolling mills at Belur are expected to be completed by the middle of this year and we look, as a result, for a satisfying improvement in production costs. In the case of the smelter, it is something we have been waiting for since 1947; now for the first time we shall be making full use of our investment in bauxite mines, alumina recovery, and smelting. It would be pleasant to speculate on the fortunes of this Company had we been supplied with full power in mid-1947 as contracted for. Such speculation is not profitable; indulgence in recrimination never is. Our faith and patience have been rewarded, which strengthens us for the next big task we face, namely, a new modern large smelter at Hirakud.

"As you know, we have been licensed to build a smelter at Hirakud with an initial capacity of 10,000 tons and capable of easy expansion to 20,000 tons. In conjunction with our Canadian consulting engineers, we have gone as far as is practicable with this project; before we go any further, however, we must be satisfied of the date on which our requirements of firm continuous electric power will be available. The question of financing is prominently before us, but, in view of its complexity and the general investment climate it does not admit of an easy solution.

Merits of Rationalisation

"May I at this stage avail myself of the privilege of expressing my personal views on topics of more general interest? We have lately had a series of controversial disquisitions on the merits of 'rationalisation.' It appears strange, indeed, that none of the disputants seems to have bothered to find out what rationalisation actually means. Admittedly, there is no Hindi equivalent of this word. I turn, therefore, to the Oxford Dictionary where *'to rationalise'* is '(Econ.) to reform an industry by making production balance consumption and by co-operation of rival industries and of capital and labour, when *rationalisation.*' In the text of this definition are to be found answers to the many ill-inspired criticisms. Do we not, by continuous process of adjustment day in day out, bring our actions into conformity with reason? Do we not, each one of us, attempt to get the most out of our activities by a more efficient handling of our time, our tools, and our talents? It appears to me that the present controversy over rationalisation is an overflow of the talk on employment which engaged our Press and platform a few months ago. Our politicians and trade union leaders, who so dearly love to talk in platitudes, have not stopped to think of the implications and nuances of basic employment which is only a reflection of the problem of population in this country. It is disheartening to observe that the outstanding publication of the last few years has remained comparatively unnoticed by the Press, by the legislators, by the politicians, and even by our statesmen. I refer here to Mr. R. A. Gopalaswami's very able exposition of this problem in *Census of India*, 1951. The ultimate meaning of much of our recent history and present problems is to be found in this report.

"Rather less than 20 per cent. of the earth's surface is suitable for crop cultivation and, of this area, approximately half lies in the tropical zone. It is on this 20 per-cent. of the earth's surface that the great bulk of the world's population is at present concentrated. In Asia, already dense populations press constantly upon the limits of subsistence and have perhaps been kept in check, and only just, by harsh natural controls of famine, war, pestilence and natural calamities. In Eastern Europe and agricultural Asia, cycles of population increase have been started which are now difficult to arrest. The

DEVELOPMENT OF INDIAN INDUSTRIES

VIEWS OF MR. KARAMCHAND THAPAR

IF India were to forge ahead in the industrial field, the Centre and the States should take steps to create an atmosphere that would encourage investment in the private sector. This in brief was the substance of the presidential address of Lala Karamchand Thapar at the annual general meeting of the Indian Chamber of Commerce, Calcutta, held last week. Mr. Thapar was highly critical of the impression prevailing in certain circles that the existence of profit motive was an undesirable instinct. He expressed concern at the spate of legislation affecting the industry, introduced by the powers-that-be partly in their anxiety to better the lot of labour, partly to have control over the irresponsible sections of business men and partly to gather as much revenue as possible in utter disregard of their ill-effects on the growth of industries.

Mr. Thapar prefaced his speech with a review of economic conditions in 1953. He admitted that the year 1953 recorded progress on all fronts. There was generally a marked increase in industrial production over a wide field. The index of industrial production touched a figure of 135 in 1953, as against 128.9 in 1952 and 117.2 in 1951 and 105.0 in 1950. Not only this, the production in some industries, namely, cement and cloth, recorded new highs. The index for cement production rose from 207.2 in 1952 to 245.1 in 1953 and that for cloth output from 117.7 to 125.1. Although the picture presented thus was encouraging, Mr. Thapar held that it still left a lot to be desired, because the general standard of living in India was too low as compared with the U.K., the U.S. or Canada. He asserted, and rightly, that an improvement in the standard could be achieved not by a simple transfer of existing wealth from the relatively rich to the relatively poor, but by raising the total national dividend. After all, the number of those who could be regarded as rich is a fraction of the population and, even if all their wealth is distributed among the have-nots, it will not make any significant improvement in the lot of the poor.

The standard of living is dependent chiefly, among others, on the quantum of industrial output. The increase in industrial production is possible only when capital, especially risk capital, flows freely into the private sector. And this can be had only when capital is assured of a fair return, which, in turn, is dependent on the quantum of profit.

Profit Motive

There is, however, a feeling among some that the very instinct of making profit is undesirable and, therefore, should be deprecated. Alluding to this aspect, Mr. Thapar observed as follows:

"Whatever the organisation of society and industrial management, profits must accrue; otherwise all economic advance would come to a halt. Profits are, no more and no less than the reward for the risks taken and borne by the investing classes and the *entrepreneur*. We, who manage industries, are only the trustees of the investing classes and it is a social duty cast on us to see that they get the reward for their waiting and for the risks they take in industrial enterprises. The concept of a Welfare State connotes welfare of all and I do not think that the idea of earning profits, which is the source of further effort and investment, is inconsistent with this concept which concerns itself not only with distribution, but production of wealth as well, which must increase in the interest of the nation. Industrial organisation is a delicate mechanism, the intricacies of which it is well to understand. If the true role of the investor and the *entrepreneur* and their services to the community are properly appreciated, much of the unwarranted criticism that is at present levied would disappear. It is such an atmosphere that is needed for the healthy growth of the country's economy. If the *entrepreneur* is given adequate incentive and encouragement, I am sure, he will help raise the national income and build up the country rapidly. And it is this more production that alone can translate into reality the dreams of a Welfare State."

That apart, there are a number of other factors which are adversely affecting the development of industries. They are, according to Mr. Thapar, high taxation, restrictions on investment and the spate of labour laws. How these have been retarding the growth of industries will be clear from the following extract from Mr. Thapar's speech:

"High taxation, both corporate and individual at all levels—local, provincial and Central—have discouraged savings and investments. Besides, a number of Government regulations canalising investment into particular fields, for instance, the investing of certain types of funds in Government securities, investment by insurance companies and the like, have diverted large funds away from industries. Then, the industrial enterprises are saddled with heavy burden of labour welfare measures, such as industrial housing which locks up large funds of industry. As a result, capital formation is inadequate and slow. The anxiety about capital formation, therefore, has become indeed great and universal. It is too obvious that, if the Exchequer, on the one hand, and the labour on the other, were to continue to milk the industry's earnings for stimulating consumption and not of further production, the entire basis of our economy would be shattered. The industry, if it has to play its part in the furtherance of industrial growth of the country, has a right to ask for easing of its unbearable burden, the tax burden in particular."

Thus, it is evident that inadequate savings, and the consequent poor rate of capital formation, are the major obstacles to the growth of industry. There is also one more factor which is restricting the quantum of funds available for investment in the private sector. This is, according to Mr. Thapar, Government borrowing. He suggested that the Government should keep in view the needs of private industry when they enter the capital market.

Another suggestion which Mr. Thapar made in regard to the provision of more finance to development of industries related to reorientation of the banking policy in the country. He suggested that the Reserve Bank, the Industrial Finance Corporation and the commercial banking system should evolve a suitable scheme for enabling commercial banks to lend funds for long-term needs. He pointed out, in this connection, how, in the U.S., the commercial banks regarded two-year and three-year loans for equipment as consistent with good banking practice. The I.M.F. Mission, which visited this country last year, also recommended that the Reserve Bank of India should study this problem so that commercial banks might be enabled to utilise their idle resources in providing finance to industry. Another important recommendation made by the Mission related to the fact that the Industrial Finance Corporation should collaborate with commercial banks in making industrial loans. Referring to the short-term needs of finance, Mr. Thapar suggested that the Government could help industries by expediting payment of their bills, and by making advance payments in case of large orders, which require a long time for processing and involved considerable investment.

Company Law Reform

Mr. Thapar made a pointed reference to the significant part played by joint stock enterprises and the managing agency system. He regretted, however, that interference by the Government in the day-to-day working of companies had hindered its smooth working. The Government, he said, had sought to interfere even in the determination of flotations, in the fixation of rate of interest for debentures and preference shares, in the fixation of remuneration to directors, in the determination of the number of directors, etc.

Mr. Thapar also referred to the proposed reform of Company Law and pointed out how some of the provisions were likely to hamper legitimate business, promotion of fresh enterprises and, consequently, the economic growth of the country. As an instance, he pointed out that, after the proposed Bill became law, transfers of managing agencies could not take place, unless approved by a special resolution. Such a provision, he held, would greatly hinder Indianisation of foreign managing agency houses in the country. Similarly, he held that provisions relating to inter-company investments, borrowing by directors for the purpose of the company and loans and advances by companies were equally restrictive.

Mr. Thapar maintained that the allotment of Rs. 400 crores under the Five-year Plan for the development of railways was absolutely inadequate. He suggested that the tempo of activity in improving railway transport should be increased and, in opening of new lines, priority should be given to the areas with bottlenecks and those areas which abounded in mineral and forest resources. He was of the opinion that the difficulties of the industries had been enhanced because of the deterioration in the operational efficiency of railways, and that re-grouping of railways had not been worked wholeheartedly. He, therefore, suggested a thorough enquiry into these matters.

Alluding to the development of road transport, Mr. Thapar pointed out that, while development of road transport in the country was urgently called for, the policies of some of the State Governments were hampering its development. Apart from the high level of taxation on motor vehicles, private operators of lorries and buses could not easily get licences for plying new vehicles. Further, there was delay in the grant of permits for entry of such vehicles in the neighbouring States. Restrictions were imposed even on the movement of vehicles from one district to another of the same State. Operation of the Motor Vehicles Act in some States by the same authority which was responsible for the administration of the nationalised transport organisation was creating difficulties of no mean order. As a result of these difficulties and restrictions, private operators, who had sunk about Rs. 240 crores, were able to work only 50 per cent. of their capacity. Mr. Thapar, therefore, suggested that the State Governments should revise their policy in such a manner as would give maximum scope to the development of road transport.

Rationalisation

On the much discussed subject of rationalisation, Mr. Thapar made the following realistic observation:

"The question of retrenchment and rationalisation are interrelated. The Government seem to be taking the view that, if rationalisation were to result in retrenchment of labour, it should not be proceeded with. This is simply unworkable. If better and modern techniques mean cheapening of cost, either by economy in the use of raw material or by reduction of labour or both, they have got to be introduced if we are not to remain static. Our jute, cotton and coal industries, which are all exporting industries, stand in urgent need of rationalisation and mechanisation. If they are not allowed to proceed with their schemes, only for fear of retrenchment, our costs would go up and we would not be able to compete in world markets. With the emergence of Japan and Germany as our competitors and appearance of substitutes and the building up of the jute industry in foreign countries, our position is vulnerable. If modern methods of production were not allowed to be employed, not only our costs would go up, but even production would suffer which would restrict the volume of employment. The Prime Minister, the other day, expressed himself in favour of introduction of the latest types of technique in production and said that some unemployment was bound to arise. He expressed fear only about large-scale retrenchment as a result of rationalisation. Of course, the human element has got to be kept in view. But I do not think rationalisation on the scale contemplated, looking to the present-day financial difficulties, would result in any large-scale unemployment. But, in any such attempt, the advantages and the disadvantages have to be balanced. In my opinion, the lasting benefit which rationalisation would confer in the shape of reduced cost, higher and more efficient production, and in releasing forces which would create more employment opportunities, far outweigh the temporary disadvantage of some unemployment. I would urge upon the Government to show courage, foresight and statesmanship in this important matter and not to use political brakes on economic progress."

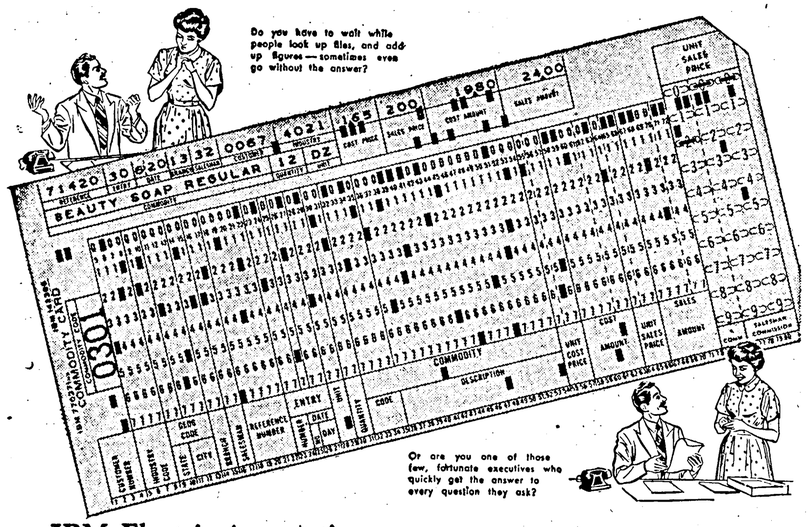
As in 1952, the technical management will again be in the hands of the *Nordwestdeutsche Ausstellungs-Gesellschaft m.b.h. (Nowea), Dusseldorf.*



IBM Electric Accounting

can increase your business efficiency

When you ask a question, you want the answer *soon* and you want it *right*. You'd probably agree that quick, accurate answers could save your business a lot of money.

That is why so many organisations rely on IBM Punched Card machines — because they give you, at a moment's notice, all the facts and figures you need.

Not only for 'big business'

Almost every business, large or small, can benefit from IBM accounting. Though varying considerably in their functions and capacities, IBM machines have a single basic characteristic — the ability to save time for the businessman in meeting the complexities of modern business.

Better still, each IBM installation is fitted exactly to your needs — there is no such thing as a 'standard' IBM setup. Experts study your individual problems, and submit a plan for your approval. The enormous flexibility of IBM machines ensures that the final system is tailor-made to your requirements.

IBM Service

Delivery of any IBM equipment marks the *beginning*, not the end, of our customer relationship. For along with the equipment, IBM provides — on a continuing basis — for its maintenance, for training and instruction of operators and supervisors — all the things, in fact, that help the customer obtain maximum value from his IBM equipment.

Saving time in 79 countries — 30 languages

Billing • Payroll • Statistics
Stores Accounting • Accounts Receivable
Financial Statements • Cost Accounting, etc.

For the smaller business

IBM Service Bureaus, located in principal cities, bring the advantages of high-speed, versatile IBM Punched Card Accounting within the reach of almost any business. IBM Service Bureaus are staffed by experienced personnel, and equipped with the latest IBM electronic and electric machines. All work is performed on a confidential basis. The cost is modest.

Notices

HINDUSTHAN WOOLLEN MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Members of the above Company will be held at the Registered Office, 8, Royal Exchange Place, Calcutta, on MONDAY, the 31st day of MAY, 1954, at 3-30 o'clock in the afternoon, to consider and if thought fit to pass with or without modification the following resolutions, namely:—

1. That, subject to the consent of the Central Government being received, the resignation of Birla Brothers Ltd., as Managing Agents of the Company with effect from the 25th day of JANUARY, 1954, be accepted.

2. (*As a Special Resolution*). "That, subject to the consent of the Central Government to the resignation of the Managing Agents being received, the Articles of Association of the Company be altered in manner following :

(*a*) In Article 2, the words "The Managing Agents means the Managing Agents for the time being" shall be deleted and the words "The Managing Director means the Managing Director or Managing Directors for the time being" substituted therefor.

(*b*) The words "Managing Agents or the" wherever they appear in Articles 4, 5, 7, 10, 14, 16, 46, 54, 159 and 176 shall be deleted.

(*c*) In Article 15, the words "by the Managing Agents or by their constituted attorney or" shall be deleted.

(*d*) The words "Managing Agents" wherever they appear in Article 16 line 3, Articles 17, 18, 19, 41, 42, 47, 59, 61, 64, 85, 154(10), 154(19), 154(20), 154(27), 154(29), 154(30), 158 line 1, 183 and 187(2) shall be deleted and the word "Directors" substituted therefor.

(*e*) The words "or the Managing Agents" wherever they appear in Articles 26, 27, 31, 33, 37, 38, 39, 50, 52, 53, 66, 76, 77, 82, 84, 86, 120, 143, 144, 157(*a*) lines 7 and 12, 158, 165(3), 166, 177 and 204 shall be deleted.

(*f*) In Article 43, the words "nor its Managing Agents" in lines 1 and 2 and the words "or Managing Agents" in line 5 shall be deleted.

(*g*) In Article 49, the words "the Managing Agents" shall be deleted and the word "they" substituted therefor.

(*h*) In Article 76, the words "from the Managing Agents or" appearing in line 5 shall be deleted.

(*i*) In Article 81, the words "and the Managing Agents" shall be deleted.

(*j*) Article 89 shall be deleted.

(*k*) In Article 94, the words "or in his absence by any other ex-officio Director representing the Managing Agents on the Board of Directors", and the words "or any other ex-officio Director" shall be deleted. In the same Article, the figures "127" shall be deleted and the figures "137" substituted therefor.

(*l*) In Article 115, the words "ex-officio or an" shall be deleted.

(*m*) In Article 119, the words "but for the purposes of this Article the office of Managing Agent shall not be deemed to be an office of profit under the Company" shall be deleted.

(*n*) In Article 120, line 2, the words "and the Managing Agents" shall be deleted.

(*o*) In Article 121, the words "the Managing Agents or" shall be deleted.

(*p*) In sub-clause 8 of Article 123, the words "but this sub-clause shall not apply to any Director or Directors appointed by the Managing Agents" shall be deleted. Sub-clause 12 of the same Article shall be deleted.

(*q*) In Article 124, the words "Provided that the power to reduce the number of Directors . . ." to the end of the Article shall be deleted.

(*r*) The words "other than an ex-officio Director" appearing in Articles 125 and 128 shall be deleted.

(*s*) Article 127 shall be deleted.

(*t*) In Article 130, the words "other than ex-officio Director or Directors" shall be deleted and the words "other than the Managing Director or Managing Directors" substituted therefor.

(*u*) The first sentence of Article 135 shall be deleted and the following new sentence substituted therefor. "A Director may at any time summon a meeting of Directors."

(*v*) Article 137 shall be deleted and the following new Article substituted therefor.

"137. The Chairman of the Directors shall be appointed from amongst the Directors by the Company in General Meeting. If no Chairman is appointed, or if at any meeting the Chairman is not present within half-an-hour of the time appointed for holding the same, the Directors present shall choose some one of their number to be Chairman of such meeting."

(*w*) The words "and by the Managing Agents" appearing in Article 141 shall be deleted.

(*x*) The Heading and Articles 145 to 153, both inclusive, shall be deleted and the following new Heading and Articles substituted therefor :—

MANAGING DIRECTOR

"145. The Directors may, from time to time, appoint one or more of their body to be the Managing Director or Managing Directors of the Company, either for a fixed term or without any limitation as to the period for which he is to hold such office, and may from time to time (subject to the provisions of any contract between him and the Company) remove or dismiss him from office and appoint another or others in his place. A Managing Director shall not be subject to retirement under Article 130 hereof."

"146. A Managing Director on ceasing to hold the office of Director from any cause shall, *ipso facto* and immediately, cease to be a Managing Director.

"147. The remuneration of a Managing Director may from time to time be fixed by the Directors, and may be by way of fixed salary and allowances or commission on dividends, profits or turnover of the Company, or of any other company in which the Company is interested, or by participation in any such profits, or by any, or all of those modes."

"148. The Directors may from time to time entrust to and confer upon a Managing Director for the time being such of the powers exercisable under these presents by the Directors as they may think fit, and may confer such powers for such time, and to be exercised for such objects and purposes, and upon such terms and conditions, and with such restrictions as they think expedient; and they may confer such powers, either collaterally with, or to the exclusion of, and in substitution for all or any of the powers of the Directors in that behalf; and may from time to time revoke, withdraw, alter or vary all or any of such powers."

(*y*) In Article 154, the words "subject as aforesaid . . ." to the words ". . . that is to say" shall be deleted and the following substituted therefor—

"Without prejudice to the General powers conferred by Article 143 hereof and to any other powers or authorities conferred by these presents on the Directors, it is hereby expressly declared that the Directors shall have the following powers, that is to say :—

(*z*) Articles 155 and 156 shall be deleted.

(*aa*) In Article 157(*a*), the words "the Managing Agents" appearing in lines 3 and 4 and the words "or of Managing Agents" appearing in line 6 shall be deleted.

(*bb*) In Article 159, the words "The Managing Agents under the control of" appearing in line 1 shall be deleted.

(*cc*) In Article 161, the words "and in any event shall be signed by the Managing Agents" shall be deleted.

(*dd*) In Article 163, the words "Managing Agents or" shall be deleted.

(*ee*) In Article 202, the words "Managing Agents" where they appear in line 2 and 6 shall be deleted.

(*ff*) In Article 204, the words "or of the Managing Agents" appearing in line 10 shall be deleted.

An application under section 87CC(1)(b)(i) of the Indian Companies Act has been made to the Central Government seeking their permission for the matters mentioned above and this notice may therefore also be treated as required under section 289(4) of the Indian Companies Act, 1913."

BY ORDER OF THE BOARD.

CALCUTTA, 23*rd April*, 1954.

Managing Director,
Secretaries, Treasurers and Agents.

BOMBAY, 7*th April*, 1954.

EARNINGS OF T WO TATA GROUP MILLS IMPROVE

SVADESHI TO ISSUE BONUS SHARES

A WELCOMF improvement in the earnings of the Svadeshi Mills Company, Ltd., and the Tata Mills Ltd., both under the management of the Tata Industries Ltd., for the year ended 31st December, 1953, has been recorded. The gross profit of the former, which had shrunk from Rs. 50.99 lakhs for the year 1951 to Rs. 17.35 lakhs for 1952, has risen to Rs. 23.13 lakhs for the year under review, a rise of Rs. 5.78 lakhs of 33·3 per cent. over 1952. Similarly, the gross profit of the latter amounts to Rs. 9.70 lakhs, as compared with a loss of Rs. 2.30 lakhs for 1952. The net profit of the Svadeshi Mills amounts to Rs. 12.44 lakhs, as compared with Rs. 10.41 lakhs for the previous year and Rs. 25.29 lakhs for the year before. The net profit of the Tata Mills amounts to Rs. 4.12 lakhs, as against a loss of Rs. 2.30 lakhs for 1952 and a profit of Rs. 13.14 lakhs for 1951.

The Directors of the Svadeshi Mills have decided to maintain the dividend on the ordinary shares at 16 per cent., to which level it had been reduced last year from 18 per cent. paid for 1951. However, it must be noted that, a year ago, the Directors had to draw a part of the amount required from the dividend equalisation fund to pay the dividend of 16 per cent., while there has been no need for such a course now. It cannot, however, be stated that the dividend for the year under review has been fully earned. For the Directors have had to utilise a part of the surplus brought in from the previous year for this purpose. The Tata Mills' dividend has been raised to 6 per cent. from 4 per cent. paid for the previous year, to which level it had been cut from 16 per cent. paid for 1951. The dividend of 4 per cent. for 1952 was entirely met out of the dividend reserve. In enhancing the dividend for 1953, the Directors have had to draw a part of the sum required from the dividend reserve. Thus, from the point of view of dividends, the performance of both the Companies has not been encouraging.

From the point of view of earnings also, the performance of the two companies cannot be considered encouraging. Thus, as against net sale proceeds of Rs. 3.37 crores, the gross profit of the Svadeshi amounts to Rs. 23.13 lakhs, or less than 7 per cent. The position in the case of the Tata Mills is even worse. For the gross profit, at Rs. 9.70 lakhs, works out to only a little over 3 per cent. of the sale proceeds (net).

Referring to the trading conditions that prevailed during the past year, the Directors observe, in their report to the shareholders of the respective companies, as under:

"All price and distribution controls on cotton textiles were removed from 10th July, 1953. The control on production continued. To protect the handloom industry Government imposed a penal excise duty on the sale of *dhotis* in excess of a mill's permissible quota in any quarter. From 1st March the *ad valorem* excise duties on fine and superfine cloths were replaced by specific duties per yard, which made the sales of certain varieties of cloth difficult, as in many cases the specific duties were much higher than they would have been at *ad valorem* rates. Earlier in the year, the export duty on coarse and medium varieties was reduced from 25 to 10 per cent. *ad valorem*. In October, in order to promote exports of cloth, Government abolished the export duty of 10 per cent. on medium cloth. The export duty of 10 per cent. on coarse cloth, however, remained."

The salient features of the financial results of the Svadeshi Mills for the year under review are compared in the following table with those for the previous three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950
Sale proceeds (net)	337.46	328.18	326.21	297.91
Cotton, art silk, etc., consumed	153.10	173.84	154.31	123.55
Expenses	163.84	142.20	124.84	127.07
Gross profit	23.13	17.35	50.99	50.55
Managing Agents' commission ..	1.23	0.94	4.70	4.80
Depreciation	8.00	6.00	4.00	2.50
Provision for taxation	1.41	..	17.00	19.00
Net profit	12.44	10.41	25.29	24.25
To reserves	..	..	11.00	10.00
To dividend equalisation fund..	12.75	10.00	14.25	13.75
To gratuities account	0.20	0.20	0.15	0.20
Dividends—*				
5 per cent. preference ..	0.75	0.75	0.75	0.75
Ordinary	12.00	12.00	13.50	12.00
	(16%)	(16%)	(18%)	(16%)
Carry forward	0.41	0.91	0.70	0.81

* Paid out of dividend equalisation fund.

A feature of the results for 1953 is the sharp rise of Rs. 21.68 lakhs in expenses, which has wiped out a good portion of the rise in sale proceeds and the saving in consumption of raw materials. Of the expenses, salaries and wages account for a rise of Rs. 13.85 lakhs, stores for Rs. 3.97 lakhs electric energy for Rs. 1.21 lakhs and provident fund contribution for Rs. 2.84 lakhs.

An idea of the progress of the Tata Mills since 1950 can be gained from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950
Sale proceeds (net)	309.95	289.51	335.22	232.98
Cotton, art silk, etc., consumed	148.44	165.03	168.63	118.54
Expenses	152.15	133.20	140.26	109.47
Gross profit (+) or loss (—) ..	+9.70	—2.30	+27.61	+5.38
Managing Agents' commission ..	0.58	..	1.47	0.26
Depreciation	5.00	..	5.00	2.50
Taxation	..	..	8.00	..
Net profit (+) or loss (—) ..	+4.12	—2.30	+13.14	+2.62
To reserves	..	..	5.00	..
To dividend reserve account ..	1.75	..	7.25	2.60
To gratuities account	0.25	..	0.75	..
Dividend*	1.95	1.30	5.21	2.60
	(6%)	(4%)	(16%)	(8%)
Carry forward	0.07	—2.05	0.25	0.11

* Paid out of dividend reserve account.

There has been an increase of Rs. 20.44 lakhs in sale proceeds, accompanied by a drop of Rs. 16.59 lakhs in cotton, art silk, etc. consumed. These are offset to the extent of Rs. 18.95 lakhs by the rise in expenses. A rise of Rs. 9.07 lakhs is noted in salaries and wages, Rs. 4.77 lakhs in stores, Rs. 1.34 lakhs in repairs and renewals, Rs. 1.38 lakhs in interest paid and Rs. 2.64 lakhs in provident fund contribution. It may be noted that the previous year's loss of Rs. 2.30 lakhs was arrived at after taking into account Rs. 6 lakhs, being the surplus provision for taxes made in preceding years. The appropriation of the profit is clearly indicated in the foregoing table.

Both the companies have on hand vast renovation and reorganisation programmes. The Svadeshi Mills installed machinery of the value of Rs. 28.42 lakhs during 1953. At the end of 1953, machinery worth Rs. 14.42 lakhs was received and these have to be installed. The Directors also sanctioned, during the year, a further expenditure of about Rs. 44 lakhs for carrying out the plan of renovation. During 1953, the value of new machinery installed in the Tata Mills amounted to Rs. 62.29 lakhs. Machinery awaiting installation at the end of the year amounted to a further cost of Rs. 14.94 lakhs.

The following synopsis of the balance-sheets of the two companies reflect their financial position:

	Svadeshi	Tata
LIABILITIES	Rs.	Rs.
Capital	90,00,000	82,67,488
Reserves and surplus	1,19,12,082	49,97,217
Debentures	..	39,94,000
Provision for taxes	6,00,000	33,589
Liabilities	1,01,99,025	1,32,06,804
Total ..	3,17,12,007	2,54,99,848
ASSETS		
Gross block	1,70,99,941	1,63,47,827
Less—Depreciation	90,25,820	43,36,553
Net block	80,74,121	1,10,11,274
Stock-in-trade	1,46,94,433	1,15,77,886
Stores and spares	11,97,232	14,36,896
Debts, deposits and advances	14,14,315	11,67,150
Investments	49,69,178	2,31,645
Cash	3,62,728	65,997
Total ..	3,17,12,007	2,54,99,848

The Directors of the Svadeshi Mills have proposed to issue 25,000 new ordinary shares to be allotted as fully paid-up to the holders of existing ordinary shares (in the ratio of one new share for every three existing shares held) by capitalising Rs. 25 lakhs from the reserve fund which now stands at Rs. 50 lakhs. This is the third time that the Company's reserves are being capitalised, all in the post-war years. The two earlier occasions were: (1) in July, 1948, when a sum of Rs. 30 lakhs was capitalised and issued as bonus shares in the ratio of one new share for every old share held, and (2) in August, 1949, when a sum of Rs. 15 lakhs was capitalised and issued as bonus share in the ratio 1:4. Thus the Company would have raised its capital by Rs. 70 lakhs, that is from Rs. 30 lakhs to Rs. 1 crore, by way of capitalisation alone in the course of the last seven years.

The Rs. 100 paid-up ordinary shares of the Svadeshi Mills are being currently quoted at Rs. 294 *cum-div.* On an *ex-div.* basis, the latest dividend gives a yield of 5.7 per cent. per annum, free of tax. The Rs. 25 paid-up shares of the Tata Mills are being currently quoted at Rs. 49 *cum-div.* On the *ex-div.* quotation, the yield works out to 3.2 per cent. per annum, free of tax.

VASANTA MILL REPEATS DIVIDEND OF 12 P.C.

EARNINGS SHOW IMPROVEMENT

AFTER four successive rises from 5 per cent. for 1948 to 12 per cent. for 1952, the dividend of the Vasanta Mills Ltd. (Managing Agents and Secretaries: Messrs. R. K. Shanmugham Chetty and Bros., Coimbatore) has been maintained at the latter rate for the year ended 31st December, 1953. Last year, it may be recalled, the Directors had stepped up the dividend from 10 per cent. to 12 per cent., notwithstanding the precipitous fall in the earnings of the Company. Evidently, they were confident of repeating the dividend for the succeeding year comfortably, if not enhancing it further. The audited accounts of the Company for the year 1953 disclose better results than for the previous year, but the setback noted in the previous year has not been fully offset.

The gross profit of the Company, which had dropped from Rs. 18.67 lakhs for the year 1951 to Rs. 8.52 lakhs for 1952, has risen to Rs. 12.53 lakhs for the year under review. Thus, the profit for 1953 falls short of that for 1951 by as much as Rs. 6.14 lakhs. It is also a shade lower than that for 1950. The net profit for the year under review amounts to Rs. 4.58 lakhs, which is better than that for 1952 by no more than Rs. 0.63 lakh, but compares unfavourably with that of Rs. 7.21 lakhs for 1951 and of Rs. 3.73 lakhs for 1950. Judged from this trend of profit, the distribution to the shareholders for the year under review is certainly a liberal one as compared with that paid for either of the two years 1951 and 1950.

Trading conditions during 1953 were favourable for textile mills in India. Consequently, a number of them have even been able to report bumper results for that year. But some of the mills in South India could not avail themselves fully of the opportunity of better trading conditions, thanks to the curtailment of output occasioned by the cut in power supply. The Vasanta Mill belongs to this category of mills, but it was able to reduce the stoppage of work to the minimum. Referring to this development in their report to the shareholders, the Directors observe:

"As in the previous year, the low water level conditions at the power supply source again necessitated a severe cut in the electric energy available to the mills, but, as a result of the installation of an additional generator, the Company was able to reduce the stoppage of work on this account to a minimum. Any unforeseen cut up to 40 per cent. of the mills' current requirements will now be met by the two generators installed by the Company."

The following summary of accounts for the year under review, as compared with those for the previous three years, gives an idea of the Company's progress since 1950:

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950
Sale proceeds	131.50	140.88	172.86	111.84
Raw materials and manufacturing expenses	114.04	128.21	150.03	94.79
Other expenses	5.46	4.43	6.06	4.70
Gross profit	12.53	8.52	18.67	12.67
Managing Agents' commission	0.00	0.55	1.20	..
Depreciation	3.55	2.52	4.26	0.93
Taxation	3.50	1.50	6.00	2.06
Net profit	4.58	3.95	7.21	6.78
To general reserve	..	0.50	2.00	0.50
,, other reserves	1.09	0.50	2.00	0.50
Dividends—		0.52	2.78	4.16
Preference	0.28	0.28	0.28	0.28
Ordinary	2.62	2.62	2.10	1.89
	(12%)	(12%)	(10%)	(9%)
Carry forward	0.24	0.50	0.39	0.40

Reflecting the stoppage of work due to power cut is the decline of Rs. 9.38 lakhs in sale proceeds, but it is not as marked as in the previous year, because the duration of stoppage was a little shorter. Raw materials, stores and power consumed and manufacturing expenses are also lower by Rs. 14.17 lakhs, as against Rs. 21.82 lakhs in the previous year. Of these, raw materials, stores and power consumed account for a decline of Rs. 16.86 lakhs, while mill salaries and wages have gone up by Rs. 2.68 lakhs. The rise of Rs. 1.03 lakhs in other expenses is mainly accounted for by the increase of Rs. 1.01 lakhs in provident fund contribution. The provisions for depreciation and taxation have been raised by Rs. 1.03 lakhs and Rs. 2 lakhs, respectively. No addition has been made to the general reserve which had received Rs. 50,000 in the previous year. The allocation to the reserve for contingencies, however, has been stepped up from Rs. 50,217 to Rs. 99,475. A sum of Rs. 1 lakh has been added to the reserve for replacement and renovation of machinery which did not receive anything last year.

(*Continued on next page*)

Points From The Chair

Demand for Motor Vehicles

"LEYLAND is a well-known product which has stood the test of all trials and has proved successful in operation by the various transport organisations in this country, as also in the rest of the world. The Leyland diesel chassis is well known for its sturdy construction, dependability and low cost of operation. Ever since we took over the distribution of Leyland products in this country, the demand has been steadily on the increase and, all along, it was a question of the demand exceeding the supply, as our principals could not fulfil the various orders in view of the world-wide demand for their products. Once we start manufacturing the Leyland vehicles here, this problem would be solved to a very great extent and we will be in a position to meet the requirements of all the transport organisations. The demand for vehicles is likely to be more in view of the development of road transport in the Five-year Plan."

S. R. Y. SIVARAMA PRASAD BAHADUR,
Ashok Motors Ltd.

Productivity of Labour

"No decent employer minds paying his labour well, if he is getting something in return. But what of the productivity of our labour? No mill can boast greater productive effort per head, but all can point to a far heavier wage bill. That is a state of affairs of which India cannot be proud and I feel that our Government is not facing up to it in a sufficiently realistic manner. Even more to blame are those union leaders, who instead of setting a good example, are cashing in on the favourable trends of legislation and exploiting situations which employers find themselves powerless to prevent. The result is loss of discipline and less work, a situation which must be avoided, if our industry is to accept its responsibility and produce all the paper the nation needs. Such increases in production as we are showing, seem to me to come more from new machinery than from improved effort on the part of the now much better-paid worker."

P. H. SYKES,
Indian Paper Makers Association.

Production of Coffee Unremunerative

"It is unnecessary for me to enlarge further on this subject, as I consider the accounts which are before you provide their own eloquent comment upon the charge one hears levelled against coffee growers that they are earning excessive profits. You will see from the accounts that a modest crop of 422 tons contributed only Rs. 73,000 to the trading profit of the year—a profit of only Rs. 27 per acre, one-tenth of the corresponding yield from tea. Not only is this far from excessive, it is near to loss. I would go so far as to say that no other agricultural product farmed with similar care would give so exiguous a return and, indeed; I feel we could lease our land for grazing more profitably than this. We can understand a slump and recognise that agricultural enterprises are, if anything, less resilient to economic forces than other undertakings. In this particular case, however, there is no slump; there is a boom in world coffee markets. The year's crop could have been sold abroad at more than double the price it is fetching locally and it seems to me a little strange that so much argument should take place on the domestic issue when so much advantage for all concerned can be derived from the fullest exploitation of the high world market."

W. W. KILGOUR,
Ouchterlony Valley Estates (1938) Ltd.

Low-cost Economy Needed

"In the face of these needs and possibilities, it is somewhat surprising to find the scepticism with which even some responsible persons view the proposed expansion of aluminium production in India to 20,000 tons per annum of primary metal by 1957. What answer am I to give to such scepticism? I would say that there is certainly no hope of developing the indigenous aluminium industry so long as it is confined to small production units with a high-cost and high-price structure and serving a restricted market. Ours is a poor country and we, particularly, must rely upon a low-cost and low-price economy. Whether it is aluminium for utensils for the villager or aluminium for industrial applications, markets will only be won and held by lowering costs and prices, while, at the same time, maintaining high quality and rendering better service to the customers than is provided by sellers of competing materials."

K. C. MAHINDRA,
Indian Aluminium Co., Ltd.

(*Concluded from previous page*)

The Company's balance-sheet as on 31st December, 1953, reveals a satisfactory financial position. The paid-up capital is unchanged at Rs. 25.50 lakhs and the reserve and surplus amount to Rs. 32.96 lakhs, exceeding the paid-up capital by Rs. 7.46 lakhs. The provision for taxation stands at Rs. 3.68 lakhs. The current liabilities amount to Rs. 18.29 lakhs. The value of the gross block, at Rs. 49.32 lakhs, has been written down to Rs. 17.10 lakhs. The current assets aggregate Rs. 59.64 lakhs and exceed the current liabilities and provision for taxation by a wide margin of Rs. 37.67 lakhs.

The Rs. 100 paid-up ordinary shares of the Company are being currently quoted at Rs. 185-8 *cum-div.* On an *ex-div.* basis the latest dividend gives a yield of about 7 per cent. per annum, free of income-tax.

COMPANY MEETINGS AND DIVIDENDS

OSMANSHAHI MILLS LTD. Annual General Meeting, Hyderabad, 6th May, 1954. Dividend: Rs. 4 per share. Transfer books remain closed from 28th April to 10th May, 1954, both days inclusive.

AZAM JAHI MILLS LTD. Annual General Meeting, Hyderabad, 6th May, 1954. Dividend: Rs. 6 per share. Transfer books remain closed from 28th April to 10th May, 1954, both days inclusive.

BELSUND SUGAR CO., LTD. Annual General Meeting, Calcutta, 6th May, 1954. Dividend: As. 12 per share. Transfer books remain closed from 29th April to 6th May, 1954, both days inclusive.

CALCUTTA JUTE MANUFACTURING CO., LTD. Half-yearly General Meeting, Calcutta, 10th May, 1954. Transfer books will remain closed from 4th to 10th May, 1954, both days inclusive.

BENGAL JUTE MILL CO., LTD. Annual General Meeting, Calcutta, 10th May, 1954. Transfer books will remain closed from 3rd to 10th May, 1954, both days inclusive.

PODAR MILLS LTD. Annual General Meeting, Bombay, 11th May, 1954. Dividend: Rs. 10 per share. Transfer books remain closed from 1st to 15th May, 1954, both days inclusive.

ASSAM MATCH CO., LTD. Annual General Meeting, Bombay, 12th May, 1954. Dividend: Re. 1-4 per share. Transfer books remain closed from 1st to 15th May, 1954, both days inclusive.

SOORAH JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 12th May, 1954. Transfer books remain closed from 1st to 12th May, 1954, both days inclusive.

UNITED FLOUR MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 12th May, 1954. Dividend: As. 8 per share. Transfer books will remain closed from 5th to 12th May, 1954, both days inclusive.

LAKSHMI COTTON MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 12th May, 1954. Final dividend of Rs. 27-8 per share (making Rs. 37-8 per share for the year). Transfer books remain closed from 28th April to 12th May, 1954, both days inclusive.

VISHNU COTTON MILL LTD. Annual General Meeting, Bombay, 13th May, 1954. Dividend: Rs. 4 per share. Transfer books remain closed from 29th April to 13th May, 1954, both days inclusive.

BOKARO AND RAMGUR LTD. Half-yearly General Meeting, Calcutta, 13th May, 1954. Dividend: Nil. Transfer books remain closed from 26th April to 13th May, 1954, both days inclusive.

ORIENT PAPER MILLS LTD. Half-yearly General Meeting, Calcutta, 14th May, 1954. Transfer books remain closed from 1st to 14th May, 1954, both days inclusive.

BALARAMA VARMA TEXTILES LTD. Annual General Meeting Shencottah, 14th May, 1954. Transfer books remain closed from 1st to 14th May, 1954, both days inclusive.

NELLIMARLA JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 17th May, 1954. Transfer books will remain closed from 4th to 17th May, 1954, both days inclusive.

EMPIRE JUTE CO., LTD. Half-yearly General Meeting, Calcutta, 17th May, 1954. Dividend: As. 8 per share. Transfer books will remain closed from 4th to 17th May, 1954, both days inclusive.

CHITAVALSAH JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 17th May, 1954. Transfer books will remain closed from 4th to 17th May, 1954, both days inclusive.

SOCIETE GENERALE INDUSTRIELLE DE CHANDERNAGOR (SOCIETE ANONYME.) Annual General Meeting, Calcutta, 18th May, 1954. Dividend: Rs. 15 per share. Transfer books will remain closed from 4th to 18th May, 1954, both days inclusive.

KELVIN JUTE CO., LTD. Half-yearly General Meeting, Calcutta, 19th May, 1954. Transfer books will remain closed from 6th to 19th May, 1954, both days inclusive.

ANDHRA CEMENT CO., LTD. Annual General Meeting, Madras, 22nd May, 1954. Transfer books will remain closed from 10th to 22nd May, 1954, both days inclusive.

TRAVANCORE CEMENT LTD. Dividend of As. 8 per share of Rs. 10 each. Transfer books will remain closed from 22nd May to 5th June, 1954, both days inclusive.

PARKSIDE (NEILGHERRY HILLS) ESTATE CO., LTD. An interim dividend of Re. 1 per share for the year ending 30th June, 1954.

SHREE NIWAS COTTON MILLS LTD. Dividend: Rs. 14 per share. Transfer books will remain closed from 11th to 26th May, 1954, both days inclusive.

KILLICK INDUSTRIES LTD. Interim dividend of Rs. 4 per share for the year ending 30th June, 1954. Transfer books will remain closed from 3rd to 17th May, 1954, both days inclusive.

COMPANY REGISTRATIONS

BHARAT PULVERISING MILLS LTD. (First Director: Mr. Shamjibhai Harjivandas Mehta.) Business: Manufacturing and Dealing in Insecticides, Larvicides, etc. Authorised capital: Rs. 25,00,000. Private company. Address: 38A, Sayani Road, Parel, Bombay 28.

RAJHANS PICTURES (SANGAM) LTD. (First Director: Mr. Jayanti Prasad Agarwal.) Business: Cinematograph Trade and Industry. Authorised capital: Rs. 5,00,000. Private company. Address: 246, Famous Cine Building, Mahalaxmi, Bombay 11.

QUESTION HOUR IN PARLIAMENT

Foreign Assistance

INDIA has so far received Rs. 232 crores by way of foreign assistance. The assistance includes a loan of $71 million from the World Bank, $55 million through the Colombo Plan, $190 million wheat loan, $170 million U.S. aid and $5 million aid by Ford Foundation. —*Deputy Finance Minister*

Synthetic Petrol Plant

The Government of India has now under consideration the question of planning and erecting a synthetic petrol plant as a long-term measure. This is apart from the three oil refineries which are being set up, two near Trombay (Bombay) and one at Vizag.

• • • • •

Gold Production

Production of gold in 1953 was 222,924 ounces, as compared with 253,264 ounces in 1952 and 180,429 ounces in 1948. The reason for the fall in production during 1953 was the greater depth to which mining had gone, especially in the Kolar mines, coupled with low productivity of labour and the consequent increase in the cost of production. In many places, new findings of gold have been discovered, but the exploitation of gold depends on many factors. There are already some workable mines in Manbhum District in Bihar where it has been mined economically, but it is for the State Government to take the initiative.

—*Deputy Minister for Natural Resources and Scientific Research*

Income from Tourists

India earned in 1952 Rs. 2.3 crores by way of foreign exchange through tourists. In the same period, Indian tourists were estimated to have spent abroad a sum of Rs. 10.72 crores. No separate account of remittances for sight-seeing tours by Indian tourists are available, but the bulk of the expenditure under travelling expenses for non-commercial purposes may be taken as expenditure on sight-seeing tours. The expenditure by students in foreign countries does not come under this head. The question whether expenditure of such large amounts in foreign exchange for sight-seeing tours is justifiable should be directed to the Finance Ministry.

—*Deputy Minister for Transport*

Cotton Imports

The procurement and import programme for cotton for the current season has been settled. The Cotton Advisory Board has suggested that the country's requirements of foreign cotton during the cotton season (1953-54) will be about 600,000 bales.

—*Commerce and Industry Minister*

Tea Production and Exports

It is officially anticipated that the tea crop for 1954 will be 630 million lbs., as against the latest estimate of 608 million lbs. for 1953. While the export quota of good quality tea for 1953 was 437,048,943 lbs., the quota for 1954-55 has not as yet been fixed.

• • • •

British Industries Fair

The Government had decided to participate in the British Industries Fair to be held this year. It is proposed to have 75 exhibits which include exportable goods both manufactured and unmanufactured, materials pertaining to general intelligence regarding industrial development, production level attained and targets aimed under the Five-year Plan and exhibits of cultural and prestige value. The estimated expenditure involved is Rs. 2,75,000. —*Commerce Minister*

Industrial Training

Industrial training in 32 categories of trade is given at the centres of the Ministry of Labour in the technical section and 23 in vocational section. There has been a great demand for the trainees and diploma holders and most of them are employed. It is true that the Madras and U.P. Governments have not recognised the diploma granted by the Centres. The Government of India is trying to persuade these Governments to recognise the diplomas.

• • • •

Plantation Labour

A Bill to extend to plantation labour the benefits of lay-off under the Industrial Disputes (Amendment) Act, 1953, will be introduced in Parliament as early as possible.

• • • •

Dispute of Insurance Employees

The Government hopes to reach a decision soon on the question of setting up of an all-India tribunal to go into the dispute of Insurance employees and their managements. —*Labour Minister*

Ordnance Factories

The final figures of the work done by the ordnance factories against trade orders during the financial year 1953-54 are not available, but it is anticipated that the total value of trade work, excluding those from the Railways and the P. and T. Department, undertaken in ordnance factories during 1953-54 would be approximately Rs. 129 lakhs. In 1952-53, the ordnance factories produced goods valued at Rs. 112 lakhs and, in 1953-54, the total value was estimated at Rs. 129 lakhs. This is in addition to orders from the Railways and Communications Ministries. Inclusive of these orders, the total value is expected to be Rs. 185 lakhs. —*Deputy Minister for Defence*

TRADING RESULTS OF ASSAM MATCH COMPANY SATISFACTORY

COONOOR TEA PAYS RECORD DIVIDEND

Assam Match Co., Ltd.

THE directors of the above Company (Managing Director: Mr. T. Rydin, Bombay) submit the audited accounts of the Company for the year ended 31st December, 1953.

The trading result of the year has been satisfactory. The factory worked to its full capacity and sales continued good. At the turn of the year, however, production had to be somewhat curtailed due to reduced demand. The factory and other property of the Company have been adequately maintained. A sum of Rs. 2,47,196 has been provided for depreciation on buildings and machinery.

A sum of Rs. 10,00,000 out of the amount standing to the credit of the general reserve fund has recently been capitalised pursuant to the extraordinary resolution passed at the Extraordinary General Meeting held on the 9th of November, 1953. In terms of the said extraordinary resolution 1,00,000 ordinary shares authorised to be issued by the aforesaid capitalisation are to rank pari passu with the old shares and to qualify for dividend out of the profits of the Company for the year ended 31st December, 1953.

For 1953 a provision of Rs. 5,00,000 has been made for taxation. The net profit for the year, after providing for depreciation and taxes for 1953 as aforesaid, is Rs. 6,14,515 (Rs. 5,85,308) to which should be added the sum of Rs. 1,35,909 (Rs. 1,00,602), being the balance carried over from last year, making a total of Rs. 7,50,424 (Rs. 6,85,909) which the directors recommend may be dealt with as follows:

To pay a dividend for the year ended 31st December, 1953, at the rate of 7½ (7½) per cent. per annum (i.e., As. 12 per share) free of income-tax absorbing Rs. 2,25,000 (Rs. 1,50,000 on old capital), to pay a bonus for the year ended 31st December, 1953 at the rate of 5 (5) per cent. per annum (i.e., As. 8 per share) free of income-tax absorbing Rs. 1,50,000 (Rs. 1,00,000 on old capital), to set aside for dividend equalisation fund Rs. 75,000 (Rs. 50,000), to set aside for general reserve Rs. 1,63,896 (Rs. 2,50,000) and to carry forward to next year's account Rs. 1,34,529 (Rs. 1,35,909).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	30,00,000	Block ...	29,21,793
Reserves ...	24,98,165	Stock-in-trade	4,90,235
Provision for taxation ...	12,35,057	Stores ...	5,77,808
Liabilities ...	4,54,002	Raw materials	10,03,817
Profit and loss account ...	7,50,424	Goods-in-transit ...	98,450
		Debts, deposits and advances ...	18,73,783
		Investments ...	6,138
		Cash ...	9,65,622
Rs.	79,37,648	Rs.	79,37,648

Coonoor Tea Estates Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Matheson, Bosanquet & Co., Ltd., Belmont, Coonoor) submit the audited accounts for the year ended 30th September, 1953.

A crop of 2,72,717 lbs. of tea was secured against an estimate of 2,10,000 lbs. compared with a crop of 1,95,637 lbs. obtained for the previous season. The crop of 2,72,717 lbs. is an all time record for this estate. The cost of production was 96.68 cts. including manure costs of 11.60 cts. per lb. The crop was sold at a net average of 162.64 cts. per lb., compared with 158.21 cts. obtained for the previous season.

Capital expenditure to the extent of Rs. 11,965 (Rs. 9,760) was spent on the following:—

Reconstruction of lines Rs. 7,483 (*nil*), chimneys to lines Rs. 120 (*nil*), bathrooms Rs. 1,862 (*nil*) and expenditure on new labour quarters (incomplete) Rs. 2,500 (Rs. 7,600).

After providing for depreciation, taxation, etc., the profit for the year amounted to Rs. 1,34,931 (Rs. 53,467) to which has to be added the balance brought forward from the previous season, viz., Rs. 53,875 (Rs. 53,134) making a total of Rs. 1,88,806 (Rs. 1,06,601). An interim dividend of 10 (3) per cent. was paid on 17th August, 1953, absorbing Rs. 24,986 (Rs. 12,493) and 6 per cent. on preference shares Rs. 9,000 was paid totalling to Rs. 33,986. There thus remains a balance of Rs. 1,54,820 (Rs. 85,109). The directors now recommend the payment of a final dividend of 25 (12½) per cent. (making 35 (17½) per cent. for the year) which will absorb Rs. 62,465 (Rs. 31,233) and to transfer Rs. 5,000 to dividend equalisation reserve and Rs. 29,000 to general reserve leaving a balance of Rs. 58,355 (Rs. 53,875) to be carried forward to the current season.

Estimate 1953-54 crop.—A crop of 2,20,000 lbs. is estimated. Cost of production is estimated at 116.45 cts. per lb. including 14.78 cts. for manuring.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,99,860	Block ...	4,20,657
Reserves ...	1,69,025	Stock-in-trade	55,025
Provision for taxation ...	17,200	Stores and spare parts	6,874
Liabilities ...	21,236	Debts, deposits and advances ...	23,835
Profit and loss account ...	1,54,820	Investments	1,27,338
		Cash ...	1,28,412

Nutan Mills Ltd.

The directors of the above Company (Agents: Messrs. Jagabhai Bhogilal Nanavaty & Co., Ltd., Ahmedabad) submit the audited accounts of the Company for the year ended 31st December, 1953.

The accounts show a loss of Rs. 3,290 (profit of Rs. 2,35,711) after deducting depreciation on building and machinery. After adding the last year's balance of Rs. 4,584 (Rs. 466), there is a sum of Rs. 1,294 (Rs. 2,36,177) to which is added the amount brought from dividend equalisation fund Rs. 1,66,000 (Rs. 75,000), making a total of Rs. 1,67,294 (Rs. 1,71,177 after providing Rs. 1,40,000 for taxation). The directors recommend the payment of dividends as follows:—

To the payment of dividend of Rs. 20 (Rs. 20) and a bonus of Rs. 10 (Rs. 10) per share, income-tax free on 5,000 ordinary shares of Rs. 100 each for the year ending 31st December, 1953, Rs. 1,50,000 (Rs. 1,50,000), to the payment of dividend at Rs. 3-5-1 (Rs. 3-5-1) per share on 5,000 4½ per cent. cumulative preference shares of Rs. 100 each for the year ending 31st December, 1953 (after deducting income-tax) Rs. 16,594 (Rs. 16,594) and to carry forward to next year's account Rs. 700 (Rs. 4,584).

A sum of Rs. 1,66,000 (Rs. 75,000) has been transferred from dividend equalisation fund for the purpose of distribution of dividends.

The year under review was a very difficult one, for the varieties which the mills have been producing for the last several years. Unfortunately, the Government of India converted the *ad-valorem* duty into a specific one which laid a very heavy burden on the fine goods the mill was producing. Besides, because of the heavy impost, the sales fell off and the stocks accumulated which had to be disposed off at very unremunerative prices. The directors are, therefore, sorry that the results of the working of the mills during the year are anything but satisfactory. The management is trying hard to face the situation but with the difficulties of obtaining the requisite supplies of cotton in the free market it is not an easy task.

During the year under report an amount of Rs. 7,338 (Rs. 3,33,394) was received as refund of part excess profit tax, under Section 10(1) of the Indian Finance Act, 1942, for the year 1946 and the directors have transferred the said amount to the reserve fund. The mills have 24,840 spindles and 572 looms. During the year the mills continued running of third shift upto October, 1953.

Accounts in brief are as under:—

Presidency Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1953.

The profit for the half-year after providing for depreciation Rs. 90,700 (Rs. 1,02,500) amounts to Rs. 3,32,164 (Rs. 92,800) from which is deducted the debit balance brought forward from the previous half-year of Rs. 1,80,348 (Rs. 4,76,887) leaving a balance of Rs. 1,51,816 (debit of Rs. 3,93,006). The directors have transferred from this amount to the general reserve account Rs. 75,000 (*nil*) leaving an available balance of Rs. 76,816 (debit of Rs. 3,93,006). This amount the directors recommend should be distributed as follows:—

Dividend on 500,000 ordinary shares at 5 (*nil*) per cent. per annum for the half-year ended 31st December, 1953, or As. 2 (*nil*) per share Rs. 62,500 (*nil*) leaving to be carried forward Rs. 14,316 (debit of Rs. 3,93,006).

Jute stocks are shown at cost. Sold stocks of goods have been calculated at contract sale rates and goods unsold on 31st December, 1953, have been valued at market rates.

In accordance with the main and supplementary working time agreements of the Indian Jute Mills Association, working hours were 42½ hours per week with 12½ per cent. of the total looms sealed. Due to a re-allocation of loom hours on a group basis the mills worked 48 hours per week with 12½ per cent. of their total looms sealed.

Unsettled labour conditions prevailed throughout the period. During the period trading conditions remained difficult with an upward trend in prices of both raw jute and manufactured goods towards the end of the year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	25,00,000	Block ...	18,47,810
Debentures	8,00,000	Stock ...	24,48,579
Reserves ...	5,18,552	Stores ...	2,94,597

Liabilities ...	16,23,587	Investments	2,64,534
Profit and loss account ...	14,316	Cash ...	45,166
	Rs. 54,75,835		Rs. 54,75,835

Durbhanga Sugar Co., Ltd.

The directors of the above Company (Secretary: Mr W. F. Malden, Lohat, District Darbhanga) submitted the audited accounts of the Company for the year ended 31st August, 1953.

The Lohat Factory started crushing operations on the 24th November, 1952, and stopped on the 25th April, 1953, whereas the Sakri Factory commenced on the 14th November and stopped on the 15th May. The following were the results of the season's operations:—

	Lohat maunds.	Sakri maunds.	Total maunds.
Cane crushed ..	33,51,827	26,61,652	60,13,479
Sugar produced ...	3,21,969	2,65,598	5,87,565
Recovery	9.61	9.978	9.77
Working days ..	135	154	

The minimum cane price was fixed by the Central Government at Re. 1-5 per maund for supplies made at the mill gate and Re. 1-3 per maund at purchasing centres on the railway as compared to a flat rate of Re. 1-12 per maund in the previous season. At long last Government appreciated the plea of the industry that there was high expenditure involved in transport of cane from outstation purchasing centres, which was consistently ignored in their cost structure in the control period. The relief thus obtained was nevertheless threatened to be nullified by the increased freight charges proposed by the Railway Board, who eventually were persuaded to postpone their action. The increased freight charges were thereafter made applicable in season 1953-54.

The cost of transport of cane by factories' own means, such as, by tramways, trucks, trailers, etc., was also recognised for the first time and a deduction of three pies per maund per mile was permitted from the mill gate price, subject to a maximum of three annas, where such transport was undertaken.

The revenue account for the year disclosed satisfactory profits on the operations of the season, and after transferring Rs. 5 lakhs to reserve, there remained Rs. 6,17,612, which together with Rs. 2,04,248 brought forward from last year, and Rs. 63,449 from the suit against the ex-selling agents, gives for appropriation a sum of Rs. 8,85,309 doubtful debt amounting to Rs. 4,054. The directors made payment of a 15 per cent. dividend and carried forward the balance to next year after allowing for a bonus amounting to 25 per cent. of the net profit to all employees, as shown in the following appropriations:—

Payment of 15 per cent. dividend Rs. 3,90,000, to provision for doubtful debt Rs. 4,054, and for bonus to employees (25 per cent. of net profit) Rs. 2,79,403 leaving to be carried forward the balance of Rs. 2,11,852.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	26,00,000	Block ...	18,41,866
Reserves ...	32,77,552	Stock of sugar	63,25,773
Provision for taxation ...	8,03,602	Stores, etc.	20,20,197
Liabilities ...	45,64,569	Debts, deposits and advances	12,72,491
Profit and loss account ...	8,31,255	Investments	2,03,251
		Cash ...	65,400
	Rs. 1,19,28,978		Rs. 1,19,28,978

Raneegunge Coal Association, Ltd.

The directors of the above Company (Managing Agents: Messrs. B. N. Elias & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th September, 1953.

The result for the half-year's working showed a profit of Rs. 3,17,230 (Rs. 3,12,166). After adjustment of profit on sale of old machinery, etc., and providing for depreciation, cess, Bengal Agricultural Tax and transferring Rs. 50,000 (*nil*) to reserve fund the profit and loss account showed a net profit of Rs. 1,25,257 (Rs. 2,68,924). The debit balance of Rs. 97,825 (debit of Rs. 7,22,688) brought forward from last account has been wiped off and the profit and loss account showed a balance of Rs. 27,432 (credit of Rs. 4,53,764) at credit which was carried forward.

Coal raisings, despatches and stocks are as follows:—

	Half-year ended 30th Sept., 1952	*Half-year ended* 31st *March*, 1953	*Half-year ended* 30th Sept., 1953
	Tons	Tons	Tons
Raisings ...	1,33,064	1,64,044	1,43,490
Despatches	1,46,933	1,88,360	1,55,592
Stocks ...	46,557	21,763	9,661

The Company have manufactured for the half-year 2,847 tons of Nos. 1 and 2 hard coke, of this a total of 2,082 tons was despatched and 1,852 tons remain in stock as on 30th September, 1953.

The raisings and despatches for the half-year showed a decrease in comparison with the previous half-year. This has been due largely to difficulties encountered during the monsoon period and steps are being taken to see that these will not occur. The directors reported that again during the half-year the Company has shared in the export trade from Calcutta. The Company has continued to operate satisfactorily during the subsequent half-year and it is hoped that the payment of dividends will be resumed shortly.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	23,99,500	Block ...	33,96,486
Reserves ...	16,17,105	Stock of coal	1,69,380

Profit and loss account ...	27,432	Debts, deposits and advances ...	16,86,258
		Investments	8,158
		Cash ...	29,610
	Rs. 59,45,524		Rs. 59,45,524

N.B.—Figures within brackets relate to the corresponding period of the previous year.

STRINGENCY IN MONEY PERSISTS

(From Our Own Correspondent)

BOMBAY, 28*th April*

The effect of the National Plan Loan kept on tap on the short-term money market was quite perceptible during the week under review. The subscriptions to the Loan during the first week amounted to Rs. 31.5 crores and this, coupled with the further subscriptions during the last three days, had considerably dried up the floating funds in the market. This was so particularly because the major portion of the subscriptions was provided by the banks. Though no fresh demand for funds was in evidence, the acute shortage of floating funds was keenly felt by banks. In the inter-bank call money sector, most of the banks were keen borrowers, but, in the absence of lenders, they had to seek the help of the Reserve Bank and the Imperial Bank. Inter-bank call money rate was, therefore, unchanged at 3 per cent. Short-term deposits were bid at 3 per cent. for one to three months. Some of the banks were reported to have offered this rate for even longer periods, up to six months. Four to six months' deposits were generally placed at 2½ to 2¾ per cent. The view expressed in these columns four weeks ago that, even during the slack season, there would not be a surfeit of funds seems to have been generally accepted and this accounts for the higher rate offered by some of the banks for four to six months' deposits.

A contraction of Rs. 9.32 crores in notes in circulation is disclosed by the statement of affairs of the Reserve Bank of India for the week ended 23rd April, 1954, as compared with that for the previous week. Notes held in the Banking Department are higher by Rs. 9.82 crores. The consequent increase of Rs. 50 lakhs in total notes issues is covered by a similar rise in rupee coin. In the Banking Department, a rise of Rs. 8.94 crores is noted in the deposits of the Central Government. This evidently reflects the initial subscriptions to the new loan. Deposits of other Governments are, on the other hand, lower by Rs. 93 lakhs, whereas deposits of banks have gone up by Rs. 2.06 crores. Cash balances have risen by Rs. 9.83 crores, while balances held abroad are lower by Rs. 46 lakhs. Ways and means advances to Governments show an increase of Rs. 67 lakhs and other loans and advances of Rs. 1.41 crores, of which those to Scheduled banks against usance bills account for Rs. 15 lakhs. The total amount advanced to Scheduled banks against usance bills since 1st January, 1954, is Rs. 55.15 crores, as against Rs. 21.94 crores in the corresponding period of 1953.

The Scheduled banks' statement for the week ended 16th April, 1954, as compared with that for the previous week, discloses a rise of Rs. 1.02 crores in demand deposits of banks and of Rs. 17 lakhs in their time deposits. Inter-bank borrowings have risen by Rs. 1.38 crores. Borrowings from the Reserve Bank of India and the Imperial Bank of India have also gone up by Rs. 1.47 crores and Rs. 1 crore, respectively. A rise of Rs. 3.68 crores is noted in loans, cash credits and overdrafts and of Rs. 90 lakhs in bills purchased and discounted. There has been a decline of Rs. 3.95 crores in investments, presumably due to sale of securities in order to subscribe to the new loan. Cash in India and balances with the Reserve Bank together account for an increase of Rs. 1.25 crores, balances with other banks in current account for a decline of Rs. 95 lakhs and money at call and short notice for an expansion of Rs. 1.73 crores.

The Gilt-edged market remained depressed during the major part of the week. Towards the close, however, the undertone was steady, the downward trend in prices having abated. Though some of the institutional investors are reported to have liquidated their holdings in sizable quantities to make room for the new loan, such sales have not been reflected in the prices. 3 per cent. 1957 had business at Rs. 98-3, a loss of As. 2 over the week. 3 per cent. 1958 had sellers at Rs. 98-1, As. 3 lower than last week. 3 per cent. 1959-61 changed hands an anna lower at Rs. 96-7. 3 per cent. 1963-65, after declining by As. 2 to Rs. 92-12, steadied up by Rs. 92-14. 2½ per cent. 1964 was on offer at Rs. 92-12, as against Rs. 92-14. 3 per cent. 1966-68 was down by As. 2 at Rs. 90-4, some business was reported done at Rs. 90-3 also. 3 per cent. 1970-75 was quoted at Rs. 86-9, though business was put through at Rs. 86-9½ also. 3 per cent. 1986 Conversion Loan, after receding from Rs. 82 to Rs. 81-8, spurted to Rs. 82. Similarly, 3½ per cent. 1961 National Plan Bonds, after receding to Rs. 98-12 recovered and closed steady at Rs. 98-14.

In the foreign exchange section, the rupee-U.S. dollar exchange rate stood unchanged at Rs. 475 (banks' selling) and Rs. 471½ (banks' buying). In the New York market, sterling was a shade quiet, the spot rate declining from $2.81-13/16—2.81-15/16 to $2.81⅜—2.81-7/8 and the forward rate for three months from $2.81-15/16—2.81-7/16 to $2.81-3/16 —2.81-3/16. Transferable sterling was, however, slightly strong, having risen from $2.79—2.79½ to $2.79½—2.79¾.

HIDES STEADY

(From Our Own Correspondent)

KANPUR, 25*th April*

During the week under review, the conditions in the hides and skins market were more or less the same as in the previous week. New arrivals of the week were below the average and were readily disposed of. The Madras dealers were not as active as in the preceding week. The main parties behind the transactions were the local tanners.

Latest quotations are: Wet salted cow, 1st grade Rs. 240 to Rs. 260 and 2nd grade Rs. 140 to 180 per score; wet salted buff, 1st grade 1 lb. Rs. 180 per score; wet salted buff, 1st grade 1 lb. 14 ozs. to 2 lbs. 2 ozs. and 2nd grade 2 lbs. 4 ozs. to 2 lbs. 8 ozs. per rupee; goat, 1st grade Rs. 330 and 2nd grade Rs. 290 per 100 pieces; sheep Rs. 270 to Rs. 300 per 100 pieces.

BULLION FIRM

(From Our Own Correspondent)

BOMBAY, 28*th April*

Shrinkage in floating stocks in the face of good demand for silver and gold in the ready section and increasing tension in the Far East induced a strong bullish fervour in bullion during the week under review. Demand for silver was reported to be good not only in Bombay, where the daily average offtake was 25 bars, but also throughout upcountry centres. It is estimated that, as against a supply of 50 bars per day, the all-India offtake was in the neighbourhood of 150 bars during the last few days. Consequently, it is believed that there must have been a heavy decline in the stocks of silver readily available in the country. In gold, the main sources of supply were Mysore and Hyderabad and with a successful check on the influx of contraband gold, these supplies were found to be inadequate to meet the demand.

Despite occasional profit-taking the market was firm, the rise in prices over the week being Rs. 2-1 per 100 tolas in silver and Re. 1-1 per tola in gold, both for forward delivery. It is, however, stated in certain circles that the rise has not been as high as is warranted by shortage of stocks. This is said to be due to the fact that there is no syndicate of operators working in the market and operators are trading only individually.

Silver for forward delivery (19th May settlement) began the week at Rs. 169-7 and, after a recession to Rs. 167-7 on Friday, resumed its upward trend to touch a high of Rs. 172-2 today before finishing at Rs. 171-6 on unloading by bulls.

Ready silver (.996 Mint) advanced from Rs. 169-11 to Rs. 172-10, but closed lower at Rs. 172. The premium of ready over the forward which was As. 4 early in the week widened to As. 10 at the close. The floating stocks of silver in Bombay are estimated at 1,500 bars and those all over India at 4,000 to 5,000 bars. The daily average offtake in Bombay was 25 bars during the week.

Opening at Rs. 92-12, gold for forward delivery (18th May settlement) had an early setback to Rs. 91-12, but soon a recovery set in, lifting up the rate to a high of Rs. 94-2 today. But profit-taking at the higher level, pruned it to Rs. 93-10 at the close.

Ready gold picked up from Rs. 93-11 to Rs. 95-2, before closing at Rs. 94-10. The floating stocks of gold are estimated at 15,000 tolas. The daily average arrivals were 5,000 tolas, while the offtake was 7,000 tolas on an average.

In the London market, silver for both spot and forward was unchanged till Friday last at 73¾d. and 73½d. per fine ounce, respectively. But on Monday this week, there was a decline in spot to 73½d. and in forward to 73¼d.; yesterday they dropped further to 73⅜d. and 73¼d., respectively. Gold, on the other hand, was firm with a rise from £12 8s. 7¼d. to £12 9s. 1d. yesterday.

The following comparative table shows the trend of the market during the week under review:

	23-4-54	Highest	Lowest	21-4-54
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	94 10	95 2	92 9	93 7
Forward	93 10	94 2	91 12	92 9
Sovereign	61 4	61 4	61 0	60 8

New York Ready	88⅛c.	—	—	88⅛c.

SLUGGISH TRADING IN KIPS

(From Our Own Correspondent)

MADRAS, 26*th April*

Kip trading has been sluggish and U.K. interest has been patchy. Leather buyers seem to be buying with caution. Good marks enjoyed good call and heavy premium has been paid. For market qualities, dressers have only increased their bids by ¼d. to 1d. per lb. in isolated cases. The price disparity in marks affects raw prices and smaller tanners have been badly hit. Demand for cow calf and buff calf has been nil. Arrivals of buffs have been small and prices increased by 6 pies per lb., due to good demand. Local prices are 5 per cent. above U.K. levels.

In the tanned skins section, there was good clearance of tanned goat and sheep skins. Prices, however, were unchanged.

In the London public auctions, 550,000 tanned goat and 1,080,000 sheep skins will be available for sale. Prices of raw goat skins were easier and sheep firmer last week.

MODERATE DEMAND FOR TEAS

(From Our Own Correspondent)

CALCUTTA, 27*th April*

Although prices recorded an irregular pattern during last week's tea sale for internal consumption, there was moderate demand for the offerings. Dusts aggregated 20,371 packages. The best C.T.C. teas and the bright liquoring Dooars were the strongest features and prices were occasionally raised. Medium Assams were easy, while a steady trend was in evidence in clean commons. The poorer varieties were offered at fractionally lower rates. The rates were: Best Assam C.T.C. Rs. 2-4-6, medium grainy Assam Rs. 2-1-6 to Rs. 2-2, and medium Dooars Rs. 2-1.

The leaf market was very steady, offerings amounting to a small quantity of 258 packages. These included 39 chests of new season's Darjeelings, the major part of the balance being the residue and end-of-season teas. Demand was strong and prices were raised above valuations. Darjeelings were the strongest feature.

SPOT COTTON STILL IN DEMAND

(From Our Own Correspondent)

BOMBAY, 28*th April*

It is worthy of note, by all those who are out to defend wild fluctuations in forward markets as perfectly natural, that a purely technical and temporary factor, such as the fixing of the room-rate for a week, should have brought about a marked fall in prices in the forward section of the cotton market on last Friday evening. It must also be noted that this slump in prices occurred, in spite of the university admitted inherent strength of the statistical position of cotton for the rest of the season. If a small and otherwise insignificant temporary occurrence could so twist the permanent values by frenzied trading, during the hours when the market is supposed to be closed by the very members of the organisation which is controlling forward trading, it must be said that there is something wrong with the system of forward trading as it is allowed to operate in this country.

Last week, it was hinted in this review that technical considerations such as room-rates would play some part in shaping the future of the market during the ensuing weeks. The room-rates for certain varieties fixed by the Committee were considered as bearish and resulted in a wave of selling and in widening the gulf between the May and August positions enormously. This shows the preponderance of speculative elements in market transactions over that of genuine and *bona fide* trading. A joint appeal by over 50 members is believed to have been filed with the Board to revise the room-rates and this brought about an improvement in the position of May contract. This, however, had no effect on the widening gulf between the two contracts which actually increased, in spite of the improvement in the earlier contract as mentioned above. The premium of Rs. 24 in August over May will further accentuate the removal of hedges from the earlier contract to the later one. There is still an air of uncertainty about the actual position with regard to tenders. But it is likely that apprehensions of heavy tenders might be belied, in view of the tempting premium commanded by the August delivery.

Another hurdle which the market will have to get over next week, and also in the weeks following it, will be the proportion of rejections in the cotton offered for delivery. In any case, it is an encouraging sign that the improvement witnessed at the commencement of this week came as a result not merely of short covering but also of some bull support.

In marked contrast to the sentiment in the forward market, the spot market is steady to firm. Demand for staple varieties is gradually broadening. Reports from cloth markets continue to be very encouraging. Imports of cotton from abroad are not likely to overstep the existing estimates, and the carryover position at the end of the season will be materially in favour of those holding stocks. The only snag in the position is with regard to enquiries from abroad. The export trade in cloth is not as buoyant as in previous months. Nevertheless, activity in the spot market has been brisk, the daily turnover being estimated at 4,500 to 5,000 bales.

The foreign cotton section of the spot market, however, is not in this happy position. For the time being at least, the mills seem to have lost their interest in imported cotton. There is little to buy from Egypt. Perhaps, the lowering of prices at Kampala might encourage fresh enquiries for some of the varieties, which are popular with the Indian mills. But interest in East African cotton on the whole is not on a par with the past. Sudan cotton, too, has not been much in the picture during this season. The only active counter in this section is Californian. Being cheaper than the rest on parity and more easily available, with the added advantage of having the licences open till the end of the calendar year, this cotton is claiming the mills' attention almost exclusively, in spite of the recent rise in prices of the current season's cotton at New York. There might be some change in this picture after shippers in Alexandria find themselves in a position to offer next season's crop.

The export market continues to be dull and it looks as if there will be no fresh business for shippers in Bombay for the rest of the season. They have been extremely disappointed at the lack of response from the authorities to their request for fresh release of Bengals. This disappointment is perhaps, shared by the habitual consumers of this cotton in the U.S.A., the U.K. and the Continent also. There is, however, still some hope that there might be a belated release for export, after the Government is thoroughly convinced that Bengal cotton will not be in demand by Indian mills. One of the reasons for refusing to countenance requests for additional release of this cotton for export appears to be the Government's policy to discourage cultivation of this variety, so that the supply of medium-staple cotton in the country might be increased in the coming season. It, however, remains to be seen, whether the cultivators will be influenced readily so far as sowings for the next season are concerned. It is not merely orthodoxy which leads cotton growers to devote their lands to this cotton. Conditions in certain producing areas favour the growth of this cotton in preference to other longer staple varieties and the cultivator is in no position to take big risks by putting his land under medium-staple cotton, which crop might be adversely affected by seasonal conditions.

Except on Saturday last, fluctuations in prices in the futures section during the week under review were confined to a narrow range. The market presented a steady trend during the first two sessions of the week and prices tended to look up. Late on Friday evening and on Saturday, there was a fairly sharp fall, for reasons, already mentioned. Buying support was, however, again in evidence on Monday when a slight recovery was recorded which persisted in the subsequent two sessions also. Nevertheless, today's closing rates, however, were a shade lower than those a week

ago. I.C.C. May contract improved from Rs. 676-12 to Rs. 678 and, after receding to Rs. 665 on Saturday, gradually rose to Rs. 674-8 today before finishing at Rs. 673-12. August contract was steady at Rs. 694 on the opening day, as against Rs. 693½ last week. After declining to Rs. 684½ on the 24th inst., it recovered to Rs. 697 today. At the close, however, it was slightly easy at Rs. 695½.

The following table shows the trend of prices in the forward section, during the week under review:

	Closing 21-4-54	*High*	*Low*	*Closing* 28-4-54
I.C.C. May ...	Rs. 676½	678	665	673½
I.C.C. Aug. ...	Rs. 693½	694	684½	695½

Latest available quotations from the spot section are: Bengal *deshi* Rs. 605; Berar Jarillas Rs. 742; Khandesh Rs. 824; Vijay Rs. 847; Oomra *deshi* Rs. 750; Moglai Rs. 700.

There is little to report about the Karachi market, except that the textile mills in Pakistan have announced their determination to close operations, as they are dissatisfied with the controlled prices of yarn manufactured in the country. The rise in the price of cotton has rendered prices of yarns fixed by the Government uneconomic and, unless there is an upward revision in these prices by the Government or an undertaking to supply cotton to the mills at subsidised rates, the mills might be forced to stop working. As enquiries from abroad are also poor, a reduction in home consumption might adversely affect prices in the cotton market at Karachi.

The quantity of cotton exported from Karachi upto 15th April, 1954 was 833,018 bales, as against 1,049,543 bales in the corresponding period last season.

Latest available quotations from the Karachi market are: Sind *deshi* Rs. 78-80; Punjab *deshi* Rs. 75-78; 4F Punjab roller Rs. 80-81; S.G. Rs. 85-86; L.S.S. Punjab roller Rs. 82-83; S.G. Rs. 85-87; N.T. roller Rs. 83; S.G. Rs. 87; 289F Punjab roller Rs. 85-86; S.G. Rs. 89-90.

At Alexandria, there is a lull. There have been no developments so far with regard to the suggestion made to the authorities to allow forward trading in the new crop. It seems that the authorities are in no hurry to give such permission. In the meantime, the foreign buyers, having satisfied their requirements for some time, are not interested in fresh purchases at present prices. The position with regard to the new crop is encouraging and production next season is expected to be substantially more than during the current year.

The Egyptian Cotton Commission has announced its policy for the disposal of cotton in the next season. According to this policy, with effect from 26th June, 1954, the Commission's sales, of both old and new crops and, whether 'On Call' or at fixed prices, will be based on 'October' New York, plus 40 per cent. for long staple and plus 12½ per cent. for other qualities. Adjustments will have to be made for the differentials in force for various grades at the time of sale, as hitherto. The selling premiums for the next crop are expected to be announced very shortly. All sales up to 25th June, 1954 will be based on New York 'July' and 'On Call' sales based on 'July' must be fixed latest by 25th June, 1954.

At New York, the relative position of the old and the new crops has been practically reversed. The earlier tendency to sell the maturing May contract and to boost the distant deliveries has disappeared, after the welcome news of favourable weather in almost all producing areas. There is little support forthcoming now for distant deliveries. On the other hand, the large volume of repossessions from loan cotton would have depressed the near positions also, but for good support but by shippers who bought for export. While the May position has improved, July is still subject to large-scale hedging of cotton released from loan.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	27-4-54	20-4-54	12-4-54
Spot	35.45	35.20	35.00
May	34.53	34.10	34.05
July	34.33	34.22	34.22
October	33.87	33.78	33.76
December	33.83	33.78	33.74

As regards the new cotton crop, on the basis of the planted acreage and assuming average abandonment, the yield is expected to be approximately 12 million to 13.5 million bales. Disappearance next season is expected to be in the neighbourhood of 12 million bales, consisting of 8.5 million bales for domestic consumption and 3.5 million bales for export.

The U.S. Secretary of Agriculture recently indicated that acceptance of foreign currencies might become the standard practice for sale of surplus commodities, including raw cotton.

ART SILK YARN RECEDES

(From Our Own Correspondent)

BOMBAY, 28*th April*

Limited demand from consuming centres, heavy arrivals of imported yarns, and reports of considerable forward business booked by Japanese, Italian and other Continental producers with Indian firms at lower prices combined to impart an easy tone to the art silk yarn market during the week under review. Nevertheless, the market did not experience any marked fall in prices, although the closing rates today were lower than those a week ago. In fact, a steady tone prevailed during the last three sessions of the week. This was, perhaps, due to the expectation among operators that the demand for art silk yarn would once again revive, since substantial relief had been given to art silk mills by way of reduction in excise duties and drawback of import duty on yarn used in the manufacture of fabrics meant for exports.

Art silk yarn (150D) for April delivery receded from Rs. 770 to Rs. 757 today. At the close, however, the contract was a shade higher at Rs. 758. The net loss over the week was Rs. 12. May contract dropped Rs. 13 to Rs. 761 before finishing at Rs. 762. The spread between the two contracts narrowed down slightly from Rs. 5 last week-end to Rs. 4 today.

Prices of art silk yarn in the spot section also staged a retreat. Following reports of substantial forward business in Japanese yarn, 150 Japan was hammered down from Rs. 4-11 to Rs. 4-4-9 yesterday. Lower levels evoked support and the price recovered to Rs. 4-9 today. The net loss over the week was As. 2. 120 Japan dropped an anna to Rs. 4-12. 120 Italy fell by As. 2 to Rs. 4-2. 150 Italy was half an anna lower at Rs. 3-13-6.

In sympathy with the art silk yarn market and following large arrivals, the staple fibre yarn section also witnessed easy conditions. Staple fibre yarn (40 x 2) for April delivery shed Rs. 15 to Rs. 683. May delivery suffered a loss of Rs. 16 to Rs. 688. In the ready section, Phœnix declined by As. 2 to Rs. 3-7. City, Kohinoor and Century lost an anna and a half each to Rs. 3-10-6, Rs. 3-9-6 and Rs. 3-7-3, respectively. New Great was easy at Rs. 3-9, as against Rs. 3-10-3. Among foreign yarns, Aurora changed hands half an anna lower at Rs. 4-1. Suico and Shinco were neglected, the former at Rs. 4-1-9, and the latter at Rs. 4-1-3. Fuji, however, was steady at Rs. 4-0-6.

An irregular trend was visible in the cotton yarn market this week. Coarse and superfine counts did not experience any change in prices, while medium counts and fine counts up to 40s registered some improvement. Turnover, on the whole, however, was greatly restricted. Among 10s, Modern was steady at Rs. 13-6 and Elphinstone at Rs. 12-12. Among 20s, Edward advanced by As. 4 to Rs. 17. Hind gathered As. 2 to Rs. 17-6. Among 40s, Seksaria moved up from Rs. 26-8 to Rs. 26-14. Hind was fully maintained at Rs. 31-8. Among 60s, Seksaria hardened by As. 4 to Rs. 47. Finlay, on the other hand, receded by As. 8 to Rs. 58-8 and City by As. 6 to Rs. 49-10. Among 80s, Seksaria was unaltered at Rs. 56-12, Finlay at Rs. 65, Elphinstone at Rs. 60-12 and Sri Ram at Rs. 61-8.

The table below gives the prices of art silk, staple fibre and cotton yarns quoted today, as compared with those seven days before:—

	28-4-1954	21-4-1954
	Rs. a.	Rs. a.
Art silk yarn—		
150 April (per case of 200 lbs.)	758 0	770 0
150 May	762 0	775 0
120 Japan (per lb.)	4 12	4 13
150 Japan (per lb.)	4 0	4 11
120 Italy (per lb.)	4 3	4 4
150 Italy (per lb.)	3 13½	3 14
Staple fibre yarn—		
40 x 2 April (per case of 200 lbs.) ..	683 0	698 0
40 x 2 May	688 0	704 0

40s Seksaria	26 14	26 8
60s City	49 10	50 0
80s Sri Ram	61 8	—

GROUNDNUTS EASY

(From Our Own Correspondent)

BOMBAY, 28*th April*

The oilseeds market presented a mixed trend this week. The groundnut section came in for some selling pressure on increased arrivals and lack of enquiry from consuming interests and crushers. The castorseed section, on the other hand, looked up on rumours that the Government of India would reduce duty on export of castor oil by 50 per cent. Market circles also awaited the announcement of export policy for the period beginning from 1st May. The linseed section ruled quiet in the absence of any encouraging development.

The report that the Government had decided to consider, while granting quotas for export of H.P.S. groundnuts, exports made to soft currency areas also in the prescribed period, turned out to be true. According to the circular issued by the Joint Chief Controller of Imports and Exports on 28th April, export quotas for H.P.S. groundnut will be allowed only to the extent necessary to permit shippers to fulfil the commitments made by them prior to 25th March, 1954. This was responsible for some steadiness in groundnuts early in the week. But, subsequently, the prices tended to decline on pressure of fair arrivals. Khandesh quality, which opened at Rs. 38-4 as against Rs. 38, declined to close at Rs. 37-4. Bold F.A.Q. lost As. 2 to Rs. 36-12. April-May was lower by As. 8 at Rs. 35-12 and June-July by As. 13 at Rs. 35-11. Groundnut oil ex-mill eased from Rs. 19 to Rs. 18-6 and railway receipt from Rs. 18-12 to Rs. 18-4. May and June deliveries were done lower at Rs. 18-5 and Rs. 18-7, as against Rs. 18-14 and Rs. 19, respectively.

There was some tussle between the bulls and the bears in castor futures. May contract which opened steady at Rs. 114-2 fluctuated between Rs. 118-4 and Rs. 112-10, before closing at Rs. 116-10. September contract was higher by Rs. 2-2 at Rs. 122-10; the highest and the lowest levels touched were Rs. 124-4 and Rs. 119-2, respectively. Madras quality improved from Rs. 23-14 to Rs. 24-2. Castor oil B.S.S. was steady at Rs. 12-12 and Commercials at Rs. 11-12. Castor oil I pressure declined by As. 2 to Rs. 12-12. On the Continent B.S.S. April was quoted at £123 c. & f., as against £122 c. & f. early in April. Commercial quality was unchanged at £115 c. & f.

The linseed section came in for little enquiry. Bold ready gained As. 2 to Rs. 26-12. April-May and June-July, however, lost As. 4 and As. 7 respectively to Rs. 26-8 each. Satna was down by As. 2 at Rs. 25. Linseed oil was, however, higher by As. 10 at Rs. 15-12.

Among others, *kardi* bold lost As. 2 to Rs. 19-2 and June-July As. 6 to Rs. 19-6. Niger F.A.Q. was lower by As. 4 at Rs. 29.

The following table shows the prices of oilseeds and oil on the 28th inst., as compared with those at the end of the previous two weeks:

	28-4-54	21-4-54	13-4-54
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—			
Khandesh Quality Bold Ready (per cwt.)	37 4	38 0	36 14

BUSINESS IN PEPPER THIN

(Messrs. Parekh and Co.)

BOMBAY, 28*th April*

The pepper market ruled quiet but steady during the fortnight under review, the business being extremely thin. Prices at Alleppey were steadily held and moved between Rs. 1,425 and Rs. 1,450, both sellers and buyers awaiting confirmation of rumours regarding the reduction in the export duty. In the Asta section, however, there were heavy fluctuations. April and May shipments were traded at $0.71 down to $.066. June shipment fluctuated between $0.69 and $0.64. According to the bazar rumours, if the Government were to fix the export duty at the flat rate of Rs. 75 per cwt., there would be no relief to the growers, as, even at the ruling rate of garbled pepper at Rs. 250, the present export duty at 30 per cent. comes to the same figure. There are, however, some in the trade who believe that the Government, in order to encourage export, might reduce the export duty from the present rate of 30 per cent. to 20 per cent. *ad valorem*. No official announcement has been made so far and the trade here, as well as in foreign countries, is in suspense. Such an atmosphere of uncertainty should be removed soon for otherwise, it is likely to tell upon the Indian export during the months of May and June. Thereafter, there will be competition from Sarawak and Lampong and any belated action then may not serve the purpose in view.

At the present level of prices, the market looks very much uncertain, as neither the growers appear to be in a mood to reduce their selling price nor the exporters are willing to buy without concession, on account of poor enquiry from New York. In view of small export to the U.S. during the month of April, growers are expecting better demand from that source during the coming month. Growers and traders are watching very closely the day-to-day developments at the Geneva conference. Sarawak and Lampong at the moment are not pressing sales, as they are at the tail end of their season, although Sarawak is reported selling the new crop for future deliveries at reduced prices.

Today's nominal quotations are: Ready Rs. 170 per Bengali maund and May Rs. 1,170/90 and June Rs. 1,160/80 per candy of 5¼ cwts.

SUGAR PRICES RECOVER

(From Our Own Correspondent)

BOMBAY, 28*th April*

The Bombay sugar market, which suffered a sharp fall in prices last week, staged a recovery during the week under review, following revival of buying support at lower levels. Renewed reports of a marked decline in sugar output during the current season and of low stocks and poor arrivals into the local market engendered fresh buying. The undertone of the market at the time of writing is fully steady.

In the spot section, small grain sugar was specially favoured and hardened by Rs. 2 to Rs. 97 per bag. Large grain was quoted higher at Rs. 100-105, as against Rs. 100-102. Medium grain rose by a rupee to Rs. 98-99. Among foreign sugars, Cuban gained As. 6 to Rs. 39-14 per 100 lbs. British refined and Mexican were fully maintained at Rs. 95 per bag of 2 cwts. and Rs. 43 per 110½ lbs., respectively. Czechoslovakian, however, proved an exception and receded from Rs. 97-98 to Rs. 94-97 per bag of 2 cwts.

In the forward section, *Vaishak* delivery improved by As. 6 to Rs. 87-14 per bag.

As already reported, arrivals of sugar were very poor this week, being no more than 500 bags in all, as against 4,600 bags last week and 3,000 bags in the week previous to it. Stocks of indigenous and imported sugar in the spot section are estimated at 30,000 bags.

The Central Government's move to sell its reserve stocks (25 per cent. of current season's output) and imported sugar at a uniform price of Rs. 31 per maund (f.o.r. destination) all over India would appear to have had the desired effect of bringing down the sugar prices. The proof of this is provided by the appreciable fall in the ex-mill quotations all round and slack demand for ex-mill "free" sugar by traders. Sugar trade circles are now inclined to believe that there will not be any abnormal rise in sugar prices. This expectation is based on the following four factors:

(1) The hoarders and speculators are keen to disgorge their holdings of ex-mill "free" sugar;

(2) the sugar imported from Spain and the U.K. is expected to arrive in Bombay during the second week of May;

(3) the Union Food Ministry is expected to delegate powers to the Regional Director (Food), Bombay, for the issue of release orders upto a certain limit to specified mills in order speedily to meet any demand that may emerge from the inferior centres; and

(4) the price of indigenous sugar, as also of imported sugar, will be reduced to Rs. 30 per maund (f.o.r.) destination with effect from 15th May, 1954.

The problem of handling Government sugar by the two trade associations still remains unsolved. The old association is continuing to complain about the delay in despatches of the sugar allotted to it. It is holding a meeting today to discuss how the distribution should be effected and how the payments should be made and in whose name, etc. As far as the slight delay in despatches is concerned, it appears that the manufacturers are not to be blamed at all; on the contrary, they must be complimented for drawing the attention of the authorities to the fact that, if they are to issue bills in the names of the trade associations in whose names the release orders are issued, then they will have to charge sales tax and general tax aggregating one anna in a rupee, whereas licence dealers will normally be expected to pay only the first stage of sales tax of half-an-anna in the rupee. Further, under their articles of association, the trade associations cannot enter into any commercial dealings and as such they are not entitled to obtain a sales tax *registration certificate* and a *licence* number. Thanks to this technical difficulty, which is by no means easy to overcome, there has been delay in the despatches of Government-allocated sugar to the city and the reports indicate that the Government is thinking of helping the associations by permitting the manufacturers to modify the release orders issued in favour of the associations and deliver sugar to the parties specified by the associations. But, unfortunately, the associations' difficulty does not end here, as a large number of their members is rather reluctant to entrust their funds and handling of sugar in the hands of a few persons in the absence of suitable guarantee for an early settlement of accounts. It, therefore, remains to be seen how this matter will be tackled. In the meantime, reliable reports indicate that some wagons are being loaded today for the trade bodies in the city.

JUTE GOODS PRICES ADVANCE

(From Our Own Correspondent)

CALCUTTA, 27*th April*

Speculative support and covering demand kept the jute goods market very active this week. Shippers reported moderate acceptances from foreign buyers. B. twills were a strong feature and the ready position was at one time as high as Rs. 114-6, as against Rs. 113-9 on Tuesday last. Profit-taking reduced the gain to Rs. 113-12 on Friday, but, by the week-end, a spurt to Rs. 114-2 was recorded. The better trend was continued yesterday and the rate again touched Rs. 114-2. Ready 40" 10 oz. hessian was raised from Rs. 44-8 to Rs. 45-1 and, after losing to Rs. 44-8, closed at Rs. 44-9 which rate was maintained in transactions yesterday. The 8 oz. hessian was better at Rs. 36-12, with the f.o.b. rate at Rs. 40.

The rise in jute goods prices thus, which has been the result of speculative activity, cannot but be considered temporary, as competition from other countries producing jute goods is growing. Particularly this week, there were two items of news, the significance of which would not support Indian jute goods being priced high. That the Philippines is making earnest attempts to be self-sufficient in meeting its baggaging requirements is indicated in its temporary ban against imports of jute fabrics into that country. Production in the Philippines, although inferior to the imported jute goods and much below requirements, is said to be rising, and the temporary ban is a sequel to the manufacturers' demand for protection against imports. The other item of news is that jute goods of Chinese origin are being mentioned increasingly in export transactions in the Hongkong market, from where South Africa, which destination is banned for Indian goods, is reported to have recently bought 300,000 gunny bags. These items of news are reminders to Indian manufacturers to price their goods at a reasonable level, but they have been helpless in the recent rise in prices, which is attributed to speculation and which is now fully reflected in the prices for raw jute.

Mills gave limited support to raw jute, as they were reluctant to support higher prices, in view of the possibility of jute goods losing the gains. A slight increase in fresh arrivals was reported, but, as these were still low for this time of the year, the market trend remained uninfluenced. Sowings are yet below earlier expectations and this encourages stockists to quote higher rates. Assam lower bottoms changed hands at Rs. 29-8, with middles quoting Rs. 32-8. Northern bottoms were supported at Rs. 29, at which rate Dhubri were also available. Pakistani jat bottoms were quoted at Rs. 30. Other latest quotations are: Northern middles Rs. 32, Assam upper middles and bottoms Rs. 31-8 and Rs. 28-8, Daisee middles and bottoms Rs. 34-8 and Rs. 31-8, Murshidabad bottoms Rs. 27, Western bottoms Rs. 26, Jungli bottoms Rs. 25, Orissa middles and bottoms Rs. 32-8 and Rs. 29-8, Uttar Pradesh bottoms Rs. 25, Bimli f.a.q. Rs. 25, and Pakistani northern middles and bottoms Rs. 32 and Rs. 28. Pakistani *habi jabi* rejections were mentioned in business at Rs. 107 a bale and Pakistani N.C. cuttings at Rs. 75 a bale.

DEMAND FOR TEA DECLINES

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 24*th April*

The offerings in sale No. 8, which was held on Tuesday, 20th April, amounted to approximately 960,000 lbs. Following the seasonal decline in quality, the demand was less generally for all grades except for high-growns and whole leaf teas. High-grown teas received very little support, but the whole leaf grades, particularly orange pekoes, were the strongest feature of the sale and were irregularly half to one and a half annas dearer. The following are the quotations:—

	1954 Rs. a. p.	1953 Rs. a. p.
Low-grown Travancore B.O.P.	2 9 0	1 13 0
Medium Travancore B.O.P.	2 10 0	2 0 0
Anamallais B.O.P.	2 13 6	2 4 0
Best liquoring Nilgiri B.O.P.	3 6 0	3 8 0
Well made black leaf O.P.	2 12 6	2 2 0

London Market.—No sale this week.

Colombo Market.—Strong demand. Low-growns firm to dearer. Others lower following quality.

Culcutta Market—Export.—No sale this week.

Dust.—20,300 packages. Less general demand. Market occasionally half anna easier. Best C.T.C. strongest feature.

Special Licence.—Business in special licence has been effected at 39 pies, which remains today's quotation, but sellers are scarce.

1954-55 *Export Quota.*—At the beginning of the week there was a slight decline in new quota, but this has once more appreciated and business has been effected at 42 pies, which remains today's quotation.

Forthcoming Auctions.—Dust sale "H" will be held on Tuesday, 27th April, and Sale No. 9 will be held on Tuesday, 4th May, 1954.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd. wire:—

"*Dust Sale H.*—1,40,000 lbs. Market irregular. Grainy block types fully firm. Others one to two annas easier."

METALS RULE DULL

(From Our Own Correspondent)

CALCUTTA, 27*th April*

Although prices were well maintained, conditions were dull in the metal market during the week under review. After the hectic activity during the past two weeks or so, consumers elected to remain out of the market, in view of the irregular advices from New York and London. There were some Government enquiries, but, as these were for only small tonnages, they did not affect the market trend. Electrolytic copper first gave way from Rs. 185 to Rs. 181, but was again nominally quoted at Rs. 185. Demand was insignificant and the easiness in New York, following American purchases of Chilean copper, imparted an air of uncertainty as regards the future trend. Whether transactions take place or not, any marked decline in prices is difficult, in view of the poor supply position. A small quantity of scrap changed hands.

The order books of manufacturers of non-ferrous metal products are said to be satisfactory. Quotations for brass and copper sheets were maintained, but, in view of the general dullness, buyers were reluctant to enter into commitments. Mercury was steady at Rs. 850 a flask. Tin opened at Rs. 493, and lack of demand soon forced the rate down to Rs. 478. Electrolytic zinc was quoted at Rs. 58-4, at which rate transactions took place. Virgin lead was easy at Rs. 65-8.

FOODGRAINS QUIET TO BEARISH

(From Our Own Correspondent)

HAPUR, 27*th April*

The foodgrains markets remained quiet to bearish during the week under review and prices recorded small decline at most of the places. Transport difficulties have at places developed shortage of supplies. This, however, is regarded as a temporary phase *Rabi* harvesting is now over all over North India and threshing operations are in full swing. Grain movement to the *mandies* has begun, but the same is yet to gather momentum. Nevertheless, the supply position is everywhere improving. The heavy crop output of pulses has been responsible for pressing down their price index by as much as 24 per cent., while cereals had declined by 9 per cent. since September. The all-India final estimates of *rabi* crop for 1953-54 put the current year's area and production at 5,472,000 acres and 1,564,000 tons, respectively. The final estimates show an increase of 0.8 per cent. in area and 26.3 per cent. in production over last year. It is gathered that the wheat crop is not threshing out as well as had been anticipated and hail damage seems to have been very severe in certain districts. The output and quality are expected to be below that of last season. Threshing results of peas crop are also reported to be far from encouraging.

Latest official estimates regarding wheat crop place the current year's acreage at 2,381,000 acres. The final estimate of last year's crop were 24 million acres and 6.7 million tons. According to official quarters, there are indications that the price of wheat in the country is likely to fall. Already, reports of a falling trend are pouring in.

Further relaxation of restrictions on the movement of foodgrains from Punjab have now been announced by the State Government. All restrictions on the movement of paddy, rice and their products from Punjab, P.E.P.S.U., Delhi, Himachal Pradesh and Bilaspur State have been withdrawn with immediate effect. With effect from 1st May, there will be no restrictions on the movement of wheat from one place to another in this north-west region comprising the five States.

The W. Bengal Government has fixed 3rd May, 1954, as the date for the withdrawal of rationing in six more towns in the State—Bansberia, Hooghly, Chinsurah, Halishahar, Kanxhanpara and Naihati—with a total population of about 280,000. This will mark the third stage in the execution of the policy of gradual deration ing. After May, the rationed population in the State will be about 4.7 millions distributed in Calcutta, Howrah and a few neighbouring industrial towns, as well as in Darjeeling,

(*Continued on page* 863)

INDIAN PAPER MAKERS' ASSOCIATION

(*Concluded from page* 835)

of this Association to express at our meetings the pious wish that the Central Government would co-ordinate all State forest policies and persuade State Governments to accept such centralised direction. All we ask is that paper mills be granted long-term leases on reasonable terms. The lure of greater revenue by auctioning forests to the highest bidder for ridiculously short periods cannot be to the nation's ultimate good. Indeed, the safety of India's natural resources might be gravely impaired by the constant chopping and changing of leaseholders that is still the order of the day. Some forests are being wrecked by unscrupulous contractors and surely there is a lot to be said for putting these forests in the hands of paper mills which, in their own interests, wish to see them as productive as possible, a state which can only be achieved by careful husbandry. Apart from this, paper mills cannot exploit their leases, as they should, unless they know that they are going to retain them for some time. From Governments' point of view, long-term leases in the right hands mean not only steady revenue but careful preservation of their forests.

"In Eastern India, bamboo was in fairly good supply, but one should remember that its largest user was out of action for many months. With regard to grass, however, an alarming situation has developed. Its availability seems to be getting less. This is not due to the natural growth of the plant failing, but to the obstacles hindering paper mills in procuring it seemingly growing greater. The output from one vast grass-growing area has this season fallen away to practically nothing. This would never have happened, had that lease been put in the hands of some reputable paper mill. It is hoped that Governments will take notice of the present unfortunate trend and remedy the situation before it is too late.

"The transport of these materials remains a problem. When the Railway Administration recently altered its preferential system of moving traffic the paper industry lost its priority and has to take its turn with our miscellaneous categories. We get quotas but, judging from the Eastern Railway one, it would appear that the fact that our requirements are largely seasonal has again been overlooked. Had it not been for Titaghur's strike some of the other Calcutta mills would have had a very bad time over transporting their bamboo. As it is, from one district of the Eastern Railway from which grass supplies come, it is practically impossible to secure movement and I do not know what will happen when the rains come. I also understand that Shree Gopal Paper Mills are having great difficulty in obtaining grass from Northern and North Eastern Railway stations. Transport difficulties have been experienced too by Ballarpur, largely because it is a new mill and apparently has not yet acquired full recognition by the Railway Administration, and many mills are finding difficulty in getting their salt cake moved from Rajasthan.

"Our troubles over salt cake are not confined to transport. This material is obtainable only from Rajasthan and failure of supplies from there would be a calamity to many mills. At the end of 1953 things had come to such a pass that, had it not been for the efforts of the representatives of several mills who had to go and stay on the site, supplies would have practically dried up. It was apparently just a question of providing more labour and I earnestly hope that the Rajasthan Government will realise the absolute necessity of quickly remedying matters, particularly as in the rains the salt cake pans get flooded and it is, consequently, necessary to stockpile before that happens. The Association appealed to the Government of India, but they have given no indication of really appreciating the gravity of the situation. Though they may claim the contrary, the supply position is again deteriorating and, unless we can be certain that indigenous supplies will be forthcoming in the right quantity, we shall just have to insist on our being permitted to import.

"We have not been able to convince Government that the continued export of hosiery cuttings is detrimental to our interests, but discussions are still taking place on the subject of the export of old hemp rope cuttings. The Association has put forward a *strong case* for a ban on the export of this valuable indigenous raw material. I have not much to say on the subject of coal except that we resent very much the pressure that is still being put on us to use lower grade coal than that to which our boilers are suited. This can only lead to inefficiency, damage to plant and waste of coal, money and transport.

"In conclusion, I have much pleasure in recording my thanks to our Secretary and my fellow Committee members for their valuable assistance during the past year."

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. ‡ Gross and amount written off. (b) Investments. † Per cent. ended 31st December 1951.

(f) Ends of Rs. 1-12 per share on 1,25,000 shares and final dividend of Rs. 1-12 per share on 2,40,000 shares of which 1,25,000 shares are bonus shares.

* The following company pays bonus in debentures and ends there on page 854 in the Investment Supplement.

(a) Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1952) by drawings at 102 per cent. or by purchase at or 102 per cent.

(c) Ends of Rs. 1,000 each carrying a 4½ per cent. preference.

(d) Ends bonds of Rs. 1,000 each carrying a 4½ per cent. preference.

(e) Ends bonds of Rs. 1,000 each carrying 4½ per cent. preference.

(g) Ends bonds of Rs. 1,000 each with option of redemption at par on any subsequent interest date at six month's notice.

(h) Redeemable at par on 1st July, 1954, and 1st January, 1955, at 105 per cent. and thereafter at 102½ per cent.

(i) Ends bonds of Rs. 1,000 each with option of redemption at par on 3 months' notice at 102½ per cent. during the 12 months ending 1st March, 1954, at 101 per cent. during the 12 months ending 1st March, 1955, at 100½ per cent. during the 12 months ending 1st March, 1956, and at par thereafter until 1st March, 1957.

(j) Ends of redeemable at par on 1st January, 1955, at 105 per cent. and thereafter at 102½ per cent.

(k) Ends debentures carrying 4½ per cent. interest.

BANKING

(Concluded from page 822)

The increase of Rs. 3.20 lakhs in reserves is due to the inclusion of Rs. 1 lakh provided last year for investment reserve, Rs. 1.99 lakhs being the difference in exchange between Indian and Pakistan currency (reserved against bad debts of Pakistan branches) kept in suspense, and Rs. 20,585 being the reserve for taxes. Deposits have declined by Rs. 16.15 lakhs. Though this drop is smaller than that in the previous year, the downward trend in deposits noted since 1946 has continued. Thus, from Rs. 13.62 crores at the end of 1946, the Bank's deposits have gone down by Rs. 9.27 crores or 68 per cent. With a shrinkage in resources, the Bank has been borrowing rather heavily from other banks to meet the demand for funds towards the close of the year. This practice accounts for the rise of Rs. 19.57 lakhs in this portfolio as at the end of the year under review. Advances are higher by only Rs. 1.51 lakhs, but the fall in deposits has raised the ratio of advances to deposits from 68.4 per cent. to 71.3 per cent. Investments (at book value) are almost unchanged. Their market value is lower by Rs. 32.59 lakhs, of which shares and debentures in joint-stock companies account for a depreciation of Rs. 12.95 lakhs.

The auditors of the Bank, in their report to the shareholders, have drawn attention to some of the Bank's accounts, which presumably are not satisfactory. Referring to this, the Directors observe in their report as follows:

"The Directors have examined the list of accounts drawing our special attention as received from the auditors and are of the opinion that the accounts mentioned therein are either not bad or doubtful and that the Bank holds adequate provision for them as much as is considered necessary."

FOREIGN EXCHANGE FOR COTTON TRADING

The latest step towards the reopening of the Liverpool cotton futures market is an announcement by the Bank of England of arrangements for the use of foreign exchange under the market scheme which comes into effect with the resumption of futures trading on 18th May and the winding-up of the Raw Cotton Commission. The new regulations are similar to those already adopted for other "freed" markets, the trade itself will organise dealings, with the Bank of England exercising supervisory powers. Subject to these arrangements, dealings with buyers and sellers of actual cotton or cotton futures in any part of the world will be permitted to "persons and firms having a continuing interest in the import or marketing of raw cotton."

Generally, foreign currencies, including dollars, will be available without restriction to members of the cotton futures market, provided they are recommended by the Liverpool or the Manchester Cotton Association, and that they comply with the specified procedure for import licences, returns, etc. The market is to have a regular organisation with membership open to merchants, brokers, traders, and others with a continuing interest in the marketing of cotton, and the Liverpool and Manchester Cotton Associations are to have disciplinary powers over its members. They will also consult regularly with the Bank on the general position, trading, and conditions of the market. If the Bank considers that "an excessive position," unwarrantable speculation, or any other undesirable practice or situation is developing, the associations will use their disciplinary powers to check it.

Regulations covering the sale of cotton to overseas buyers have as their principal object the conservation of dollar reserves. The export of cotton of American account origin from the U.K. will "normally not be allowed." Cotton of American account area origin or other non-scheduled territory origin bought with U.S. or Canadian dollars must be re-sold outside the scheduled territories only for U.S. or Canadian dollars, or sterling from American, Canadian or registered account.

BOMBAY STATE FINANCE CORPORATION

The Bombay State Financial Corporation, a body incorporated under the State Financial Corporations Act, 1951, has commenced its work. Started with the objective of giving a fillip to medium and small-scale industries in the State of Bombay, the Corporation will give financial accommodation to such industries for acquiring capital and production assets like land, buildings and plant and machinery for purposes of development. Small-scale industrial concerns are, for purposes of the Corporation's activities, defined as those with an invested capital not exceeding Rs. 5 lakhs and medium-scale concerns as having a share capital or fixed assets of the value of Rs. 20 lakhs. Again, the industrial concerns, which will be eligible for aid, are those concerns that are engaged in the manufacture, preservation or processing of goods or in mining or in the generation or distribution of electricity or any other form of power. The Corporation's functions include the grant of loans or advances to industrial concerns and the purchase of debentures in such concerns. It will also underwrite the issue of stocks, shares, bonds or debentures by industrial concerns and guarantee the issue of loans raised by these concerns in the capital market. In the first instance, the Board of Directors, it is stated, has decided to extend financial accommodation by way of loans or advances and to subscribe for the debentures issued by industrial concerns.

A notable part of the Directors' first decisions is that while the minimum amount for which accommodation will be granted is fixed at Rs. 10,000, the maximum amount of financial accommodation to a single industrial concern has been fixed at Rs. 5 lakhs, though a loan for a larger amount may be granted on the merits of the application concerned. This is a wise decision both from the point of view of the lender and the aided industrial concerns. It will enable the Corporation to distribute its available resources over a wide front. Perhaps, it will also mean that the risks would be comparatively smaller. Although no priority has been fixed for the grant of loans, the Corporation's policy will, it is stated, be to encourage development and expansion of industries in accordance with the programme of industrial development, laid down by the Planning Commission, and with the Bombay Government's industrial policy.

Judged by any standard, the terms and conditions on which loans and advances are proposed to be made by the Board would be considered liberal. The rate of interest will be 6 per cent. per annum. The period of the loan will, it is stated, be decided on the merits of each applicant concern but will not exceed 10 to 12 years; the principal amount will be repayable in instalments which will be specified according to the circumstances of each case. The amount of loan will be approximately 50 per cent. of the net value of fixed assets, land, building, plant and machinery and will be secured by way of legal first mortgage of these assets together with such other assets as may be offered as security by a borrowing concern. In granting a request for loan, the Corporation's authorities will take into account all relevant factors, such as the financial position and adequacy of the security offered, profit-earning capacity, ability to pay interest and to return the loan, competence of technical and managerial staff, technical soundness of the schemes of development, expansion or renovation, title to property and creditworthiness of the borrowing parties.

The Bombay State abounds in many small and healthy industrial concerns which, with the kind of financial help now promised by the Corporation, will be able to make further progress. It is to be hoped that quite a few of these concerns will benefit from the advice, guidance and help which the Corporation, as now constituted, is capable of giving.

INDIAN ALUMINIUM COMPANY, LIMITED

(Concluded from page 842)

deceptive gifts of medical science cutting death rates all over the world without limiting births will soon make the world a permanent and hopeless slum. Besides, health and welfare measures may be favouring the reproduction of weak human strains.

"For large sections of our population today, productivity has little to offer above the necessities of existence. In order to cope with the increased population, the increase in agricultural productivity required is of the order of 21 per cent. before 1961, 37 per cent. before 1971 and 54 per cent. before 1981. Are our various development plans capable of contributing to increased production on such a scale? The Census Commissioner says 'No'.

"The Planning Commission has affirmed that population control can be achieved only by the reduction of the birth rate to the extent necessary to stabilise the population at a level consistent with the requirements of national economy. This can be secured only by the realisation of the need for family limitation on a wide scale by the people.

"The incidence of improvident maternity is at present between 40 per cent. and 45 per cent. Out of every 40 births which occur among every 1,000 people in the course of one year, 17 births are of this nature. A reduction in the number of births from 40 to 23 is likely to reduce the rate of growth of population from about 13 per cent. per decade to about 1 per cent. per decade.

"How much time have we in this matter? Very little, according to the Census Commissioner. In the context of his findings, the present-day problem of unemployment is but a pale reflection of the very grave emergency of population growth facing our country. It is felt that research into the physiological and medical aspects of human fertility and its control, education and persuasion in the matter of family planning are not enough, and more radical measures will be necessary. People have to be convinced that the 'occurrence of improvident maternity should evoke

FIRST THOUGHTS ON JUTE ENQUIRY COMMISSION'S REPORT

IT is gratifying to find that the recommendations of the Jute Enquiry Commission (Chairman: Mr. K. R. P. Aiyangar) have dispelled the scepticism with which its appointment in August last was received. Many wondered then what useful purpose the Commission would serve, as the ground it was asked to cover was quite familiar, having been explored by some distinguished persons before. Its appointment was regarded merely as a device by the Government to postpone action on vital issues affecting the development of the industry. This journal, too, was one of those who did not appreciate the necessity for yet another enquiry of the type entrusted to the Commission. Nevertheless, it has no hesitation in admitting now that the Commission has done useful work, completing its assignment expeditiously and satisfactorily. The Commission has covered a great deal of ground. It has met and discussed the issues posed to it with a cross-section of the trade and industry, without any preconceived notions. Its report, so far as it can be judged from Press summaries, seems to be comprehensive and its conclusions and suggestions are, generally speaking, realistic.

Doubtless there is nothing new in most of its findings—a tribute to the work of earlier investigators—but they are valuable all the same for at least two reasons. First, they have been reiterated by a committee of persons chosen by the present Government. They should, therefore, be acceptable to the authority. Secondly, in the present atmosphere, dominated by doctrinaire politicians and truculent labour leaders, who unhesitatingly favour mortgaging even the near future for the immediate present, re-statement of and frequent emphasis on the known conclusions are not without some good; this will enable the public to appreciate the real position of the jute industry. The views of the Commission on taxation of the raw material, controls and rationalisation, for instance, are of topical interest and will be of great assistance to the industry which has been crying hoarse for a fair deal on these matters.

On the subject of grow more raw jute, the Commission has taken a practical view. It has rightly held that the object of the grow-more-jute campaign should be a more restricted one, namely, attainment of relative rather than absolute self-sufficiency and that, in the long-term interests of jute growing in India and of the jute industry, the import of jute from Pakistan should be restricted to grades which are not available in the required quantity in India. Recent experience has shown that only at exorbitant cost can India grow as large a crop as 4.5 to 5 million bales. For an industry the existence of which is dependent on world economic trends and competition from rival producers and substitutes, the cost of raw material is an important factor. Raw jute must, therefore, be grown only on lands highly suited for it and it is undesirable to encourage utilisation of marginal lands for this crop. Accordingly, the Commission has endorsed the view of the expert committee that, in U.P., as well as in other States, a cautious policy of re-examining the areas under jute cultivation should be pursued and cultivation restricted only to places where good retting water is freely available and other serious handicaps like transport difficulties are not great. It is, however, necessary to qualify the last portion of this suggestion relating to transport. If any particular area is suitable for cultivation of jute in every other respect, except transport, that area must not be prevented from growing jute. In such cases, efforts must be made to remove the transport bottleneck.

One of the important issues referred to the Commission was how best raw jute producers could be assured of a sustained economic return for their crop. The Commission has indicated several ways in which this could be done. All these can be summed up under three broad groups, namely, intensive cultivation by adoption of improved methods, proper marketing arrangements coupled with prompt dissemination of market news to farmers in a manner that is easily understood by them, and reduction in taxation and freight rates on raw jute. More specifically, the Commission has advocated abolition of sales tax and similar taxes on raw jute and a reduction in the freight rates quoted by railways and river steamer companies for carrying raw jute. Now that this suggestion has emanated from an official committee, it is to be hoped that the concerned authorities will require no further evidence for appreciating and implementing it.

The Commission has recommended the appointment of a Jute Commissioner, the establishment of a Jute Board and the setting up of a Development Council for the jute industry, all for assisting growers and mills to attain strength and stability. It is stated that the Jute Commissioner and the Jute Board can help the grower know easily the fair price for raw jute on the basis of the rates for manufactured goods and keep a watch over the channels through which the raw material is marketed, while the Development Council can look after the interests of manufacturers. In the absence of the full text of the report, where the Commission must have given its reasons in support of these proposals, one would like to defer comment on them. Nevertheless, it looks as though their implementation will mean needless duplication of existing machinery. Thus, there is no reason why the Indian Central Jute Committee should not do the job expected of the Jute Commissioner and the Jute Board. All that may be necessary is some expansion in the staff of the Committee by taking in persons of the right type. There is hardly any necessity for a Development Council for the industry, inasmuch as the I.J.M.A. is a body quite capable of serving the interests of the industry. Where decisions requiring the consent of labour and the Government have to be taken, the issues can be conveniently thrashed out at tripartite conferences. In any case, the system of development councils which is already being tried in some of the industries, has not been so great a success as to encourage one to advocate its extension to other industries with enthusiasm.

An outstanding feature of the Commission's recommendations for assuring an economic price for the raw jute grower is its rejection of the suggestion for a statutory minimum price for jute, put forward by quite a number of people claiming to champion the cause of the grower. This is a suggestion which, on the face of it and in the light of India's need for achieving self-reliance in regard to jute, is very attractive. The system of guaranteed minimum prices is in vogue in many countries, including such advanced nations as the U.S. and the

ways in which the grower can be helped to get a better return for his crop are, therefore, those suggested by the Commission and already referred to. Incidentally, the Commission has expressed itself against statutory controls over either the manufacturer or the producer of jute and in favour of voluntary regulation. This is another instance of the Commission's sense of realism and appreciation of the fact that throughout the world the trend is towards freedom from official controls.

On the most important terms of reference to it, namely, the place of futures trading in the marketing of jute and jute goods, the Commission's performance does not seem to be quite satisfactory. The Commission has, of course, done well in recognising the importance of a futures market for both raw jute and jute manufactures and in advocating the establishment of "a single well-knit and regulated organisation such as the East India Cotton Association," but it has not put forward any scheme for preventing unhealthy speculation which has been the chronic drawback of the Calcutta jute trade. Besides examining and enquiring into the nature and content of speculation in the *fatka* market, the Commission was expected to say how that market could be prevented from becoming a centre of gambling operations which it was all along, thereby necessitating its closure. It is common knowledge that the wide fluctuations in prices caused mainly by excessive speculation have done the jute industry great harm in the past and they will do so again if a futures market is opened without proper safeguards for keeping speculation firmly under control. While agreeing with this view, the Commission has failed to show how the evil could be checked. All that it has stated on this subject is as follows:

"We endorse generally the recommendations of Mr. Todd for the setting up of such a market. We also consider that for the balanced operation of the futures market, dealings in both raw jute and jute goods should be started simultaneously. We have not gone into details regarding the constitution of any associations to run such a market. In the past, the East India Jute and Hessian Exchange has functioned to some extent as a futures market. But we suggest that a body with a more broad-based construction, representing all interests, and with wider bases for business and necessary checks against speculation can be formed by the voluntary co-operation of those in the trade who are interested in forward business. Further, as, under the Forward Contract (Regulation) Act, 1952, recognition for such association functioning in a forward market has to be accorded by the Forward Markets Commission, it is for those who desire to promote or revive such an association to frame a suitable constitution and submit the same for approval of the Commission."

By thus skipping over the issue, the Commission has not fulfilled one of the tasks allotted to it. It is, however, well that the Commission did not attempt to carry out this task. The job is one which can be satisfactorily done only by an expert body that is fully aware of the techniques of the speculators' game.

The Commission has expressed its views rather categorically on two issues of controversial nature. One relates to the working time agreement and the other to rationalisation. While its views on the former may be contested by the Indian Jute Mills' Association, those on the latter will be opposed by labour. The I.J.M.A. is of the opinion that the working time agreement has many achievements to its credit and that the time has not yet arrived even for some relaxation, let alone abolition. It feels that scrapping of this agreement will spell cut-throat competition and disaster to weaker units. The Commission, however, holds the view that the effect of the agreement has been to spread out the fall in production uniformly over all sections of the industry, irrespective of efficiency, resources and costs. If, however, the efficient mills were to work to full production, it argues, costs would be reduced which in turn would increase their competitive power. It seeks to minimise the shock of this change-over to the industry by suggesting that the change could be effected in stages or by sections. As a first step, it advocates the restoration of the working hours to 48 per week. In any case, it feels that those incurring considerable expenditure for modernisation should be exempted from the restriction on working hours. As for labour displaced from units which close down, such, according to the Commission, could be absorbed in mills working longer hours. In view of the complex nature of the issues involved, fuller details of the pros and cons are required to enable one to express decided views on the Commission's proposal. But, on theoretical considerations, it can be stated that the Commission is on firm ground, for the working time agreement amounts to compelling the efficient units to subsidise the inefficient units. The industry is opposed, rightly, of course, to such a policy in regard to raw jute producers. How then can it justify the application of that policy to itself?

On the subject of modernisation of the industry, the Commission is firmly of the view that such is imperative. "The present size of the market that India holds can be retained," in the words of the Commission, "only by accelerating the pace of modernisation and showing potential competitors that the Indian industry is determined to spare no efforts to keep its markets and will be taking all reasonable steps to increase efficiency and reduce costs." It, therefore, urges the Government to pay immediate attention to the problems connected with modernisation of the industry. It is aware that rationalisation might cause, in the short run, a contraction in employment, but feels that this problem has to be settled as best as possible if permanent damage in the long run to the growers, trade and industry, involving widespread distress, is to be avoided. There is scarcely any exaggeration in this warning. If labour leaders mean well by the country, they should pay heed to this warning and give up their intransigent attitude.

BANK EMPLOYEES

THE Labour Appellate Tribunal (Bombay) has now given its decision on the appeal preferred by the banks and their employees against the Sastry Award. That the Tribunal has taken a broad and human view of the entire question of the wage scales for bank employees is clear from the fact that it has emphasised that it "can do the banks no good to deal in crores if the humble human material which they employ in their work year in and year out has the feeling that a fair wage is for him an unattainable illusion." A perusal of the Tribunal's decisions, as well as a study of the time scales recommended by it, will show that bank employees have been given a generous deal.

The employees will, therefore, have the satisfaction that they did not appeal in vain. In general, not only are the scales more generous than what the employees would have got under the Sastry Award but they are distinctly favourable even as compared with the Sen Award which the banks feared would impose too onerous a burden on them. This factor, welcome as it will be from the bank employees' point of view, might conceivably give a fillip to fresh demands by clerks in other spheres where the wage scales are lower than the scales now awarded by the Tribunal. Indeed, the scales of several classes of employees in many State Governments and even in the Central Government do not seem to compare favourably with those of bank clerks. From this point of view, the Tribunal's decision might conceivably initiate a fresh bout of wage negotiations.

Whether or not the Tribunal's decision provokes the men, engaged in spheres other than banks to make similar wage demands, there is no doubt that there is at least one matter on which there is bound to be perpetual controversy between the banks and their employees. That is the bonus issue. Two questions are involved here. The first relates to the legal problem about the grant of bonus. The second relates to the more practical problem of the quantum of bonus. Section 10(*b*) of the Banking Companies Act states that no banking company shall employ any person whose "remuneration or part of whose remuneration takes the form of commission or of a share in the profits of the company." Hitherto, the banks got over this legal obstacle by treating bonus as an *ex-gratia* payment. Now the Tribunal, quoting from its own previous Full Bench decision, has held that a bonus is "not an *ex-gratia* payment but is a claim to an additional wage which could mature if, and only if, the concern had a prosperous year." Since bonus has no fixed relation to the profits in a year and its grant is subject to many other considerations, the Tribunal holds that it is "unrealistic" to look upon it as a share in profits. Having thus dismissed the idea that a bonus is a share in the profits of a *banking company*, the Tribunal reaches the conclusion that the provision of Section 10 cannot "function as a bar either to the employees' claim to bonus or to the banks' payment of bonus."

It appears to us that the concept of bonus has been left high and dry. If it is neither an *ex-gratia* payment nor a share in profits, it is difficult to say to what species of accounting it could legitimately belong. Perhaps, the Tribunal might have refrained from all this logic-chopping, if it had straightaway acknowledged that bonus is an innocuous form of profit-sharing and had suggested a suitable amendment to Section 10. Or it could even have recognised bonus as an *ex-gratia* payment and suggested some sound principles for its payment.

If bonus has thus been given a "neither fish, flesh nor good red herring" treatment, the distribution of bonus has been made a somewhat difficult task. The Tribunal has held that the "bonus issue of each bank will have to be taken up separately." It admits that its efforts to discover a "relatively simple" formula for the ascertainment of bonus of banking companies have failed, because of the diversity of factors involved. Bonus will, therefore, mean an annual hurdle for each bank, a period of uncertainty, every year, for banks, their shareholders and their employees. Many banks will naturally hate this uncertainty, and the prolonged negotiations, endless disputes, adjudications and all the rest of the apparatus of the Industrial Disputes Act which the Tribunal's decision means for them. The only real beneficiaries of this decision are the lawyers. Indeed, the Appellate Tribunal has provided a boon for the legal fraternity.

Perhaps, a far more disturbing feature of the Tribunal's decision on the bonus issue is its view that an adjudicator who is engaged in settling the quantum of bonus for bank employees is entitled to "call for such information as he considers necessary, notwithstanding the secret nature of the reserve or the banks' claim that, in law, they are precluded from exhibiting certain information in the balance-sheets." Now this is a virtual licence for bank employees and adjudicators to tear down the curtain of secrecy behind which the banks have traditionally operated. A vindictive employees' union will not hesitate to call for information which, even if it does not turn out to be of any material advantage to it, might do some serious damage to the business of a bank. The relations between the banks and their clients have for long been regarded as a matter of strictest confidence between the parties. There is a grave danger that all this confidence may be called in question. The banks might be compelled to produce a whole series of transactions, and much unnecessary controversy might thereby be generated. If this is to be averted, the adjudicators and the industrial courts should exercise considerable discretion in their probes into banks' affairs.

It should be clear to all that the new wage scales and other emoluments, recommended by the Tribunal, will impose a fresh burden on the banks. Estimates place the additional burden at 10 to 15 per cent. of the existing establishment charges. The burden will, of course, vary from bank to bank. Generally speaking, the banks with a large number of branches will be affected more adversely than the banks with a relatively smaller number of branch offices. Also, the burden on the banks will increase with the passage of time, inasmuch as salaries and other emoluments for staff have to be increased according to the length of service.

The Tribunal's decision raises three issues. In the first place, the banks will now have to seek ways of augmenting their income. Perhaps, a slight increase in interest rates on advances will become inevitable. Judiciously applied, the increase, it is to be hoped, will not prove too onerous a burden on borrowers. Secondly, the banks may legitimately look forward to an improvement in the efficiency of their employees. The banks' staff will, we hope, respond generously to this Tribunal's stirring call for a "fair day's work for a fair day's wage." "To do less," the Tribunal says, "would be to invite disaster either by removal for inefficiency or by a general lowering of wages." It adds: "This is the writing on the wall for all to see in the context of our country's present economic situation." Thirdly, the banks must exercise utmost discretion in the recruitment of new personnel. It would be wrong to increase the staff indiscriminately. Again, a job in a bank has been made sufficiently comfortable to entitle the banks to look for a high level of attainment among new entrants. A bank should, therefore, recruit only when it must, and then—and this is important—only the best. Any other course is fraught with danger to the bank's finances.

GOOD DEMAND FOR GOLD IN LONDON

STERLING STRONG—SUGAR AWARD UPHELD

THURSDAY, 5 P.M.

STALEMATE seems to have set in in the Share Market. Barring a rise of over Rs. 20 in Bombay Dyeings and of Rs. 15 in New Greats caused by some special buying, the week under report has seen no new features. Steel shares have not attracted any fresh buying; on the contrary, at every small rise, they are encountering some liquidation. In the absence of any new developments, speculators are biding their time.

MARKET GOSSIP

It is, however, noteworthy that the market has been able to hold the recent gains. The Gilt-edged section has once again started slipping down, with most of the securities dropping a couple of annas. Consequently, these loans are now standing even below the levels that prevailed before the Reserve Bank started preparing the market. Subscriptions to the new loan on tap in the second week was Rs. 14 crores, thereby raising the total for the first fortnight to Rs. 45.5 crores. This is undoubtedly a sizable total, considering that trade demand for money still persists. In a way, the large size of total subscriptions indicates that quite a good part thereof is due to brisk canvassing and support from special quarters. Institutional investors, trusts, business concerns, big individuals, are all being continuously goaded to buy the National Plan Loan. This pressure is largely responsible for the quiet trend of the Gilt-edged market.

• • • • •

With a substantial amount of funds having gone into the new loan, the money market is tight; banks are keen bidders of short-term deposits, offering 3 per cent. even for periods which run into the traditional slack season, namely, the monsoon months. Informed circles feel that there will be no perceptible fall in interest rates so long as the new loan is kept on tap and that this year the customary break between the slack and busy seasons which occurs during June to November will not be visible in the short-term money market.

• • • • •

After the recent advance in values, the bullion markets have slumped. Both silver and gold have lost about Rs. 3-8, following heavy selling by leading speculators induced by the prospects of a settlement of the war in Indo-China and by the belief that the seasonal demand for these metals is petering out. In London, however, the price of gold has moved up. It is now more than a month since the London market for gold was re-opened. The price fixed initially was 248s. 6d. per fine ounce. Since then, the quotation has advanced to 249s. 2d. It is claimed for the market that dealing prices here are much closer than elsewhere. This factor gives the market an importance which its Continental confreres do not possess. Also the market has shown its ability to meet the additional demand for gold (reflected in the improvement in gold prices) that has emanated particularly from the U.S., the Middle East and the Far East. It owes its success in meeting this additional demand to the Bank of England's helpful attitude. It would appear that the Bank has been drawing upon its own stocks, as well as upon the inflow of newly mined South African gold, in order to feed the market. Since such sales are against dollars, the Bank's total foreign exchange reserves do not suffer any depletion.

• • • • •

The Bank of England could not have purchased gold from the U.S. in order to feed the London market. In the first place, the present level of prices does not permit such a transaction to be made on a profitable basis. It is computed that, unless the London price rises above 250s. per fine ounce, the Bank would not find it worthwhile to buy gold from the U.S. at $35 per fine ounce—the U.S. official price for gold—and pay commission and other charges for transport of gold to London. Secondly, even if the gold price were to rise to an attractive level, the Bank could not possibly buy American gold in order to meet the demand in the local market, for the U.S. authorities are generally most reluctant to permit the central bank of a foreign country to divert the gold purchased from them for local consumption. The authorities' opposition is based on the ground that such diversion will encourage the hoarding habit and that it will mean reduced gold reserves for the central bank concerned to support the currency.

• • • • •

The U.S. official policy on gold continues to be what it was at the time of the Truman Administration. Thus, the authorities are reluctant to raise the official price for gold. Mr. Burgess, Deputy Secretary to the U.S. Treasury, and Mr. M. Martin, chief of the U.S Federal Reserve System, have emphasised that the "intention and assured ability of the U.S. Government to maintain a constant price for gold was one firm basis for measuring world values and a major reason why the dollar could be used everywhere to settle international transactions." An increase in the price of gold would give rise to inflation and induce others to think that the U.S. is prepared to make periodical devaluations of its currency. They have also rejected the suggestion for free convertibility of dollar into gold. The link between gold and dollar, they claim, is more important than the redeemability of dollar into gold. Mr. Burgess, however, said that, if convertibility was restored to the world's principal currencies, the U.S. might choose to permit conversion of dollar into gold. Commenting on the American gold policy, Mr. Lombard writes in the *Financial Times*, London, as follows:—

"When the world economic situation was inflationary, Washington argued that an increase in the world gold price would do nobody any good and that any change in this field would have to wait for the re-establishment of a stable world economy. Now that stability has been attained, it is held that an increase in the world gold price would nevertheless be harmful to the U.S. and its friends, including presumably those among them—and they are many—that have pleaded for such an adjustment. The one hope the gold producer has of seeing the purchasing power of gold restored to its former level, and his financial difficulties eased accordingly, apparently lies in a world recession. Neither Mr. Burgess nor Mr. Martin had anything to say regarding the form U.S. gold policy was likely to take in such circumstances. So, presumably they wanted to leave the Administration free to change its mind about gold in that kind of situation. But since the American Government is, happily, committed to take action to keep a world recession at bay so far as it lies within its power to do so, hopes of a higher gold price coming about from this cause are obviously not very bright."

• • • • •

Sterling is again in the limelight. Its growing strength, watched with interest by the entire sterling area, is reflected in the sterling dollar exchange rate which touched, in the London market, the ceiling of $2.82, fixed under the rules of the International Monetary Fund. These regulations allow, as is well known, a one per cent. variation either way in relation to the official rate. When the British Exchange control authorities, who have to see that the variation does not exceed the prescribed limits, saw that the ceiling rate had been touched by sterling, they sold sterling in order to keep its rate within the maximum limit. Consequently, sterling is now quoted a shade below the ceiling, at $2.81-15/16, to be precise.

• • • •

The firmness of sterling in the international markets stems from the confidence in the currency generated by the continued improvement in the sterling area's gold and dollar reserves. The area achieved a gold and dollar surplus during April 1954, of $135 million, the highest since April, 1953, when it was $107 million. In each of the first three months of the year, ended March, 1954, the surplus was $25 million, $40 million and $102 million, respectively. The surplus for April has raised the central gold and dollar reserves to $2,820 million, their best level since October, 1951, when they were about $3,080 million.

• • • • •

This striking performance of sterling is not due entirely to the improvement in the sterling area's gold and dollar reserves, impressive as they are. Other factors have also been responsible for it. In the first place, there has been a great flow of short-term investment funds from the U.S. to the U.K. This is because the official rediscount rate in the U.S. is only 1½ per cent., having been recently cut to this level from 1¾ per cent., whereas the Bank rate in the U.K. is as high as 3½ per cent. Secondly, foreign money has come to London in the hope that the pound is bound to appreciate in value and the owners of the hot money feel that it will be a profitable investment to keep the money in London. Thirdly, there has been an increased tendering for British Treasury Bills by sterling area central banks which are looking for suitable short-term employment for their funds and also for ways of augmenting their London balances. Indeed, there has been such keen bidding for the British Treasury Bills that the average rate has declined to 2-1/32 per cent., the lowest level touched since the Bank rate was raised from 2½ per cent. to 4 per cent. in 1952. Finally, there has been considerable speculation about the possibility of widening the limits within which sterling is now allowed to fluctuate. If this is done, sterling is expected to appreciate further in terms of the dollar. This would yield a sizable dividend to the people who have moved their funds to London. At the moment, the I.M.F. rules require member-countries to restrict exchange movement within one per cent. either side of official parities. Those who look forward to a relaxation in the Fund's policies believe that the Fund might decide to allow member-countries freedom to let their rates fluctuate within 10 per cent. of official parities. This would widen the present lower and upper limits for sterling ($2.78 and $2.82) to $2.52 and $3.08.

• • • • •

Many financial observers feel that it is advantageous to widen the present one per cent. limit to which fluctuations in sterling are restricted. Perhaps, a relaxation of these limits would be a convenient half-way house on the road to convertibility. The Randall Commission, for instance, emphasised that, although it did not favour a "dash" for the convertibility of the pound, it was, however, sympathetic to the concept of a "floating rate." It advocated a "gradual and controlled" approach to full convertibility. It also favoured reasonable relaxation of restrictions by the I.M.F., such as a relaxation of the time schedule for utilisation of quotas and of the provision for maintaining fixed parities.

• • • • •

It is held that a relaxation of the present limits within which sterling is permitted to fluctuate would be an effective deterrent to speculation. The present limits hold temptation for the speculators who have to lose only one to three per cent., if sterling does not move in accordance with their anticipations. On the other hand, if the limits were widened to, say, 5 per cent. either way, the speculator would stand to lose a heavier amount; the fear of this heavy loss would tend to keep speculation down. However, those who oppose any widening of the limits urge that such relaxation would introduce a large measure of uncertainty into world trade. This fear, it is stated, is not so well founded, in view of the fact that the present rigidity in the exchange fluctuation has not been particularly beneficial to world trade. It is felt, therefore, that it is wise to relax restrictions, since such relaxation might well lead to a state of affairs in which full convertibility could be attained.

• • • •

Is the flow of foreign funds into London, which explains partly the growing strength of sterling, a great blessing? In one sense, it is, since it denotes confidence in London's financial position. In another sense, it is not, for it means nothing more than a foreigner's desire to book easy profits without risk. Foreign funds have been employed in order to bid for Treasury Bills. This has been partly responsible, as already noted, for the decline in Treasury Bill rates. Does this decline indicate the possibility of a downward adjustment in the British Bank Rate? Discussing the inflow of foreign money and its possible effect on the Bank Rate, Mr. Oscar Hobson, City Editor of the *News Chronicle*, observes as follows:—

"Bank rate will not come down merely because a few tens of millions of foreign money have come to London. So far the authorities have sternly resisted the downward pull. Action has been taken by them to keep the money market on a pretty tight rein. This month the discount houses have several times been forced to go to the Bank of England, the lender of last resort, to borrow on penal terms. Nothing is easier for the authorities than to counter any inflow of foreign money, but the explanation is somewhat complicated, because it involves that highly discreet instrument, the Exchange Equalisation Account. The E.E.A. is the offshoot of the Government which holds the gold, dollar and other foreign exchange reserve of the country. When it buys gold or dollars, it pays sterling for them and this sterling is normally raised by issuing Treasury Bills.

"If foreign money comes into this country at a time when the commercial balance of payments is in good shape (as it undoubtedly is today), then the inflow of that money will bring gold with it. To finance this inflow of gold, the Exchange Equalisation Account has to issue more Treasury Bills to the market and in this way it extracts cash from the banking system. Thus the effect of the 'hot money' inflow is almost exactly neutralised. This is undoubtedly the policy which is now being followed and which will continue to be followed if the inflow of foreign money becomes larger. When, in a few days' time, the Treasury announces the gold and dollar reserves of the Exchange Equalisation Account at the end of April, it will undoubtedly be a favourable statement. Day by day the Bank of England has bought dollars in the market. We have also received more gold from Russia and from the European Payments Union and over $13 million from the Philippine Government. But let us remember that some of this inflow of gold will be the counterpart of an increase of foreign money employed in the London market. If and when that money departs, gold may go with it."

• • • • •

Even if it is wrong to assert that American recession has been reversed and a positively helpful turn has been taken by American economy, all available indications suggest that recession has at least been halted. "The month of April," writes the *National City Monthly Letter*, the monthly bulletin of the National City Bank of New York, "has strengthened the impression gained in March that the decline in business is flattening out." It adduces a number of reasons to justify its hopeful reading of the American economic situation. The latest available figures on industrial production and employment "reveal little, if any, slippage in overall totals, with a number of lines showing improvement." Employment is "levelling" off, following the decline which occurred previously. Steel mill operations have been maintained at about 68 per cent. capacity over the past two months, while steel scrap prices have firmed up. Retail car sales have, however, been running less than 10 per cent. below a year ago. Agricultural consumption expenditure, including services as well as goods, for the first quarter of the year, according to the *Monthly Letter*, were at an annual rate of $230 billion as again $228 billion in the first quarter of last year, though the increase was largely accounted for by services. Expenditure on durable goods has, however, declined by 7 per cent. This is not due to lack of purchasing power. The reduction in personal income taxes has increased the "disposable" income. People, it is stated, are saving their money and paying their debts. This is encouraging indeed. But the brightest spot in the business picture, according to the *Letter*, is the building construction. It notes with satisfaction that larger companies, according to a survey conducted by the McGraw-Hill Publishing Company, "intend spending on plant and equipment as much, if not more money than they spent for these purposes during the previous banner year 1953." These plans, if carried out as scheduled, will have a "powerful sustaining influence on the business situation generally." The *Letter* concludes by saying that it is "hard to envision any serious let-down in the face of so high a level of capital investment."

CAUTIOUS TRADING IN EQUITIES

SPURT IN BOMBAY DYEINGS

(From Our Own Correspondent)

BOMBAY, 6th *May*

CONDITIONS on the Stock Exchange were somewhat stagnant during the week under review. Barring a few counters which received good support on consistent buying from influential quarters, activity was at a low ebb, and price movements were narrow. Operators on the Stock Exchange remained cautious, having liquidated their outstanding positions in most of the counters. The undertone, however, remained good, as could be seen from the fact that the offerings were well absorbed without any worthwhile break in prices. The sentiment was kept intact by encouraging advices from London and New York where industrials were firm. The rumours in London about prospects of a cut in Bank rate was also another factor which prevented any deterioration in undertone.

Operators had, however, reasons to be cautious. The international political situation is still uncertain. The stringency in the short-term money market shows no sign of any relaxation. The persistent weakness of the Gilt-edged securities is a depressing feature. Rationalisation in industry does not seem to get the measure of support it deserves. Above all, there was no fresh factor to stimulate activity, all the factors which portend good prospects for the immediate future have already been discounted in the prices.

Steel shares were uninspiring. After an initial firmness, they ruled quiet on reports of fall in production during the month of April. Tata Steels, which advanced from Rs. 196-12 to Rs. 200-4 on Friday, reacted to a low of Rs. 195-4 on Monday, before closing today a shade better at Rs. 197. The Company's output of pig iron during April amounted to 83,200 tons, representing a decline of 11,400 tons from the previous month's production. The quantity of steel ingots produced was lower at 77,500 tons, as against 89,700 tons in March, and finished steel declined from 65,000 tons to 54,000 tons. The output of pig iron was the lowest since February, 1951 and that of finished steel since February, 1950. Indian Irons jumped early in the week from Rs. 31-5½ to Rs. 31-12. After reacting to Rs. 31-1 on Monday, they closed today at Rs. 31-4. The Company's output of pig iron, steel ingots, and finished steel during April amounted to 61,950 tons, 41,079 tons and 37,600 tons, respectively, as against 63,000 tons, 47,550 tons and 44,560 tons in the previous month.

Textile shares were steady on encouraging advices from the domestic cloth market. Bombay Dyeings and New Greats provided the highlights of this section, on consistent buying from influential quarters. Large parcels of Bombay Dyeings were reported to have changed hands on investment buying by big parties, resulting in a rise of Rs. 20 over the week to Rs. 436-4. Kohinoors moved between Rs. 325-8 and Rs. 318-8, but closed with a gain of Rs. 28 at Rs. 321-8. After improving from Rs. 332-4 to Rs. 340, Centurys were marked down to Rs. 331-8 on Monday. They, however, moved upto Rs. 337 at the close. Central Indias were well held around Rs. 182. Finlays gained Re. 1-8 to Rs. 249-8. Gokaks shed a rupee to Rs. 254-8. Laxmis dropped Rs. 12-8 to Rs. 581-4 and the Minervas Re. 1-4 to Rs. 110. New Greats were concerned in a buying spree by a big operator and spurted from Rs. 158-8 to Rs. 173-8. New Citys had a rise of Rs. 5-15 to Rs. 165-15. Podars rose Rs. 5 to Rs. 153. Simplex picked up Rs. 4 to Rs. 161. Standards were maintained at Rs. 322-8. Svadeshis were done at Rs. 283-8 *ex-div.* (dividend Rs. 16) as against Rs. 297-8 *cum-div.* last week and Tata Mills at Rs. 48 *ex-div.* as against Rs. 49-12 *cum-div.*

After the jolt received on Thursday last week, on the announcement of the Labour Appellate Tribunal's decision, bank shares staged a recovery on replacement buying. Central Banks recouped from Rs. 54 to Rs. 55-8 and their new shares from Rs. 58-8 to Rs. 59-8. Imperial Fully Paids were unchanged on balance at Rs. 1,800, while the Partly Paids hardened by Re. 1-4 to Rs. 443-12. Bank of India's were up by As. 12 at Rs. 146. Barodas stood at Rs. 108 without any gain over the week. United Commercials spurted from Rs. 42 to Rs. 45-4, in the absence of selling.

The *insurance* section was devoid of any notable feature. Activity was restricted and price variations were small. New Indias were a fraction lower at Rs. 44-12. Orientals drifted lower from Rs. 7,910 to Rs. 7,800. Indian Mercantiles had some business As. 4 higher at Rs. 40-8. Empires were done at the self-same rate of Rs. 655. Jupiters were kept at Rs. 7-8 and Industrial Prudentials at Rs. 36-2.

Small selling was in evidence in electricity shares, but the sales were mostly well absorbed, so that the decline in prices, wherever it occurred, was fractional. The undertone, therefore, remained steady. Ahmedabad Electrics showed no variation at Rs. 112-13. Amalgamateds changed hands As. 2 higher at Rs. 10-8. Bombay Suburbans suffered a drop of As. 5 to Rs. 121-14. Andhra Valleys were marked up by Rs. 7-8 to Rs. 1,365. Tata Hydros were unchanged at Rs. 144, while Tata Powers dropped Re. 1-4 to Rs. 1,446-4.

The miscellaneous section showed a mixed pattern and the price changes were small, except in select counters which received influential support. Among sugar shares, Belapurs showed a drop of Re. 1 to Rs. 274-8, while Phaltans had a rise of As. 12 at Rs. 106-4. Walchandnagars stood Re. 1-4 lower at Rs. 176-4. Cement shares were steady, but no notable advance in prices was recorded. A.C.Cs disclosed no change at Rs. 157-12, while Digvijays rose by Re. 1 to Rs. 123. Among engineering and mining counters, Alcocks were put through Rs. 4-6 lower at Rs. 350-10. Premier Constructions closed Rs. 2 lower at Rs. 133-12. Tata *Locomotives had business upto Rs. 125*, and the closing at Rs. 124 was Rs. 3 higher over the week. Hindustan Motors were taken at Rs. 8-8½ as against Rs. 8-9. Premier Automobiles gained a rupee to Rs. 73. Shivrajpurs closed with a loss of a rupee to Rs. 66. Indian Coppers were unchanged at Rs. 3-1½, while B.B. Petrols rallied smartly from Rs. 3-2½ to Rs. 3-9. Among miscellaneous industrials, Bombay Burmahs (old) recorded a rise of Re. 1-4 to Rs. 406-14, while their new shares dropped Rs. 2-8 to Rs. 138-12. B.I.Cs were dull at Rs. 8-3. National Rayons spurted from Rs. 153 to Rs. 164-8. There were rumours that the Company would issue new capital at par to the existing shareholders. Killick Industries picked up Rs. 4-8 to Rs. 179. *Scindias were quiet at Rs. 18-4.* Tata Chemicals were a shade better at Rs. 14-9, while Tata Oils lost Re. 1-4 to Rs. 40-8. Wimcos were featureless at Rs. 210.

• • • •

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, 5th *May*

Although the undertone on the Calcutta Stock Exchange was steady during the week under review, each stage of the rise in price was checked. Gains and losses were, therefore, insignificant on balance and there was a fall in the volume of business. Operators were cautious. The drop in the volume of business should be attributed to the diversion of funds for subscription to the National Plan loan.

Although the Central Finance Minister only meant what he actually said recently in New Delhi regarding the suggestion for the reintroduction of statutory limitation of dividends of joint-stock companies, market circles are left with the feeling that Mr. Deshmukh's reference was bound to attract "investment" funds to the new loan. The cause for poor activity in the market this week is found in such an analysis, as this could not be otherwise when industrial activity is on the increase and Government figures, published this week, place 1953 as the year when the overall industrial production in the country touched peak levels since 1947. Industrial labour strikes are happily on the decrease, and there has been no development since the beginning of this year to show why the improvement of last year cannot be maintained in 1954.

It appears that the market is pausing, but it is bound to gather cheerful activity when once the capital market gets settled after the Government is satisfied with its needs. The West Bengal Financial Corporation, public subscription to which is open now, will also claim market funds, especially from this State. Ultimately, however, as in the case of the National Plan loan, the Corporation will also be of help to the industry.

Operators' disinclination to enter into commitments in jute shares, on the basis of the recent improvement in the prices of jute goods, proved justified, because jute goods treaded back this week. The outlook, however, is good. The general weakness affected the volume of business in teas also, although, considering the prospects for tea gardens, no pessimism need be entertained regarding working results for the current accounting period. A fair crop is expected, as also fair price for the same.

Sectionwise, a firm trend was in evidence in engineering shares, but any upward trend was out of the question, in view of the caution exercised by operators. Indian Irons opened last Thursday at Rs. 31-7, but soon gave way to Rs. 31-2 on settlement adjustments. Over the week-end, the rate recovered to Rs. 31-10, but, on Monday, depression set in to take the quotation down to Rs. 31-3, today's rate being slightly better at Rs. 31-4. Jessops were earlier raised from Rs. 28-12 to Rs. 29, but subsequently lost the gain. Texmacos were easy at Rs. 11-8, as were Indian Galvanizings at Rs. 18-5. Indian Standard Wagons were maintained at Rs. 72-8, while Kumardhubis were fractionally better at Rs. 10-3. Burns realised Rs. 188, as against Rs. 187 previously.

Although the volume of business was lower, teas were firm. Some counters were subjected to profit-taking. Thus, New Dooars gave way from Rs. 450 to Rs. 444, Banarhats remaining unchanged at Rs. 447. Batajans were fractionally better at Rs. 29-8, as were Gohpurs at Rs. 39-8. Although steady, Hasimaras were lower at Rs. 33-12. Nagri Farms invited interest at Rs. 22-8 and Patrakolas at Rs. 179.

The earlier dullness in miscellaneous industrials gave way to steadiness subsequently and selective counters recorded gains. Rohtas Industries opened at Rs. 15-11 and gradually improved to close at Rs. 16-6. A note of buoyancy was in evidence in British Burma Petroleums, which sprurted from Rs. 3-1 to Rs. 3-11 on interested buying. The expansion taking place in the works of the National Rolling and Steel Ropes attracted further attention for these shares, which were bought at Rs. 14-13, as against the paid-up value of Rs. 10. Dunlop Rubbers were steady at Rs. 35-2 and Martin Burns at Rs. 20-13. F. & C. Osiers were subjected to profit-taking and, as a result, gave way from Rs. 18-4 to Rs. 17-10. B.I. Corporations were to hand at Rs. 8-5.

Greater attention was shown to shares of sugar mills and, although interest was at lower levels, Ramnugger Canes were an exception and were an impressive feature for the rise of Re. 1-8 to Rs. 23-4. Champarans were transacted at Rs. 26-2, while Belsunds were pushed down from Rs. 8-11 to Rs. 8-9. Darbangas gave way from Rs. 13 to Rs. 12-8.

Jutes were mostly easy. Howrahs declined from Rs. 24-15 to Rs. 24-7. Kinnisons realised Rs. 198, while Khardahs featured with a rise of Rs. 17 to Rs. 212. Orients were better at Rs. 171 On the other hand, Champadanies were pushed down by Rs. 7 to Rs. 153, Standards by Rs. 8 to Rs. 119, and Bally by Rs. 4 to Rs. 145.

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, 4th *May*

The performance of the Madras Stock Exchange, during the week under review, was devoid of interest. Trading was characterised by a general desire to lighten commitments rather than to enter into fresh ones. Operators, especially in the planting section, awaited the publication of the Bill relating to the proposed agricultural income-tax. Although it was expected to be on the same lines as the Travancore-Cochin Act, fears were expressed about the possible changes in its passage through the Legislature. There was lack of enthusiasm for textile scrips also. Barring a few scrips, the miscellaneous section showed no perceptible improvement.

Even the selective enquiry witnessed last week in the textile section slowly tapered off this week. Lakshmis (Rs. 50 paid-up) lost Rs. 4 to Rs. 112. Bangalore Woollens were down by a rupee at Rs. 399. Rajalakshmis were lower by As. 8 at Rs. 107 and Travancore Rayons As. 1-6 at Rs. 9-5-6, against Rs. 185-8 *cum-div.* Buckinghams, however, gained Re. 1-8 to Rs. 140 and Maduras As. 10 to Rs. 41-4.

Tea shares also were dull. Periakaramalais eased from Rs. 8-4 to Rs. 8. Peermades declined by As. 6 and finished the week at Rs. 34-6. Blue Mountains and Chandramalais were colourless at Rs. 3-1 and Rs. 3-9½, respectively. Devasholas were quiet at Rs. 20-11 and Nilgiri Teas at Rs. 13-8. Nonsuch Teas, however, improved As. 4 to Rs. 33-8 and Highland Produce by an anna to Rs. 12-15.

Rubbers were slightly easy. Pullangodes were down by an anna at Rs. 3-2. Cochin Malabars and Thirumbadis were fractionally lower at Rs. 7-3 and Rs. 3-5, respectively. Nenmenys remained unchanged at Rs. 10-9.

Among coffee scrips, Coffee Lands evoked little interest at Rs. 10-10 and Puthuthotams at Rs. 3-5½. Kil. kotagiri (tea and coffee) were lower by As. 2 at Rs. 7-9 and Nil. Neerugundi (tea and coffee) by As. 8 at Rs. 3-13. Neelamalais (tea and coffee) were, however, fractionally better at Rs. 5-1.

In the miscellaneous section, Deccan Sugars, Rs. 10 paid-up, gained an anna to Rs. 10 and Rs. 25 paid-up, As. 8 to Rs. 24-8. Mysore Sugars moved up by As. 2 at Rs. 44-12. Dalmia Cements, Rs. 10 paid-up, were lower by As. 12 at Rs. 8-6 and Mettur Chemicals by an anna at Rs. 5-8.

Notice

THE COCHIN STATE POWER AND LIGHT CORPORATION, LIMITED

(Incorporated in Travancore-Cochin State)

Registered Office:

Cable House, 70 ft. Road, ERNAKULAM.

Branch Office:

20, Second Line Beach, MADRAS-1.

INTERIM DIVIDEND ANNOUNCEMENT

THE DIRECTORS HAVE DECIDED TO declare an Interim Dividend of 6 annas per share (free of Income-tax) on the shares of Rs. 7-8 paid-up for the year 1953-54. The dividends will be paid on the 25th May, 1954, to those shareholders whose names stand on the Register of Members on the 20th May, 1954. Transfers lodged with the Company after 21st May, 1954, therefore, will not be eligible for this dividend.

By Order of the Board,
CHANDRIE & CO., LTD.,
Managing Agents.

28th *April*, 1954.

NEWS IN BRIEF

THE *main 44-mile canal from Bhakra to Rupar* will be completed by the middle of this month when it will be ready for letting water.

The Government of India proposes to raise the cess on paper and strawboard from As. 4 and As. 2 to Re. 1 and As. 8 per ton, respectively.

According to a report issued by the Akola District Cotton Merchants' Association, the Madhya Pradesh cotton crop for the 1953-54 season is estimated at 725,000 bales (of 392 lbs. each), as against the previous season's crop of 718,069 bales.

The Government of Bombay has issued orders under the Bombay Municipal Boroughs Act, 1925, and the Bombay District Municipal Act, 1901, prohibiting the municipalities from levying octroi or terminal tax on yarn used for handlooms and handloom cloth, including *khadi*, brought within their octroi or terminal limits for consumption or use therein.

The Government of India has decided that, with the exception of oxides and supplies of mercury, the exports of which are banned, exports of mercurous chloride and other mercury salts and compounds, e.g., *raskapoor, shingraf, etc.*, will be licensed freely on shipping bills against prior registration of sales as in the case of mercury chloride.

The Government of India has decided to allow exports of conduit pipes and accessories during 1954 by manufacturers and/or their accredited agents upto 20 per cent. of their production during 1953. During 1953, India produced 3.77 million feet of conduit pipes. There are 7 units with an installed capacity of 7.56 million feet of conduit pipes per annum, on a single-shift basis.

The Government of India has instructed its trade representatives abroad to examine the possibilities of marketing Indian-assembled radio sets in their respective areas. It has removed all restrictions on exports. It may be noted that, immediately after the war, there were promising markets for Indian-assembled radios in Far Eastern countries, but, owing to the shortage of radios within the country, restrictions had to be imposed on exports.

The Union Government proposes to construct about 100 lighthouses and aids to navigation at a total estimated cost of about Rs. 4 crores. The construction is in pursuance of the development plan drawn up by the Central Lighthouse Department. It is expected that, of these, works costing about Rs. 2 crores will be completed during the Five-year Plan period. The overall plan envisages expenditure of over Rs. 262 lakhs on equipment and Rs. 137 lakhs on construction works.

The Government of India has decided to allow *exports of an additional quantity of one* million yards of grey drill, processed into mineral *khaki* colour, on a "first-come-first-served" basis. According to a notification issued by the Joint Chief Controller of Exports on 4th May, the quota of one million yards announced in July, 1953, has been exhausted. All other conditions and requirements, as envisaged in the notification, dated 1st July, 1953, in this regard will remain the same.

Following recent discussions at Delhi between officials of the Food Ministry and the Punjab Government(I), the Punjab has secured an assurance that all rice procured in the State for the Central pool would be lifted. The Punjab officials had complained that, of the 125,000 tons of rice procured for the Central pool, nearly 15,000 tons had still remained even after the Punjab Government had taken about 3,000 tons for internal consumption. Mr. Kidwai, Union Food Minister, is said to have assured the Punjab officials that the Centre would honour its commitments.

A conference of all-India trade associations is being convened at Delhi on 8th and 9th May, 1954, for the purpose of considering the question of Inter-State sales tax and the difficulties thereunder. Representatives of trade associations from different parts of the country are expected to participate in the conference. The conference will be inaugurated by Mr. Chimanlal B. Parikh, President, Indian Merchants' Chamber. Mr. S. K. Patil, President of the Bombay Pradesh Congress Committee, and member of Parliament, will preside over it.

Plans for the annual production of 60 tons of *sulpha drugs*, efficacious in T.B. and leprosy treatment, in Hyderabad State, are likely to materialise from November next under State aid and in collaboration with a Swiss firm, in pursuance of a trade agreement between India and Switzerland. The machinery and plant, already available in local firms, have been selected for the purpose and are being re-aligned. Further shipments of machinery are due in June next. It is stated that the manufacturing programme will be finalised by foreign technical experts in consultation with accredited representatives of the State Government and medical men during this week. The erection of the plant is scheduled to be completed by October next and production is expected to be in full swing before the year closes.

From Abroad

The price of coffee in Belgium has been frozen by a Government decree after a 25 per cent. increase in the past few days.

West Germany has entered into a barter agreement with Chile for exchanging $500,000 worth of trucks and $4 million worth of Lantz agricultural tractors for $4.5 million worth of copper.

All restrictions on exports of rubber from the U.K. to Eastern Europe and from Malaya to Russia and Eastern Europe have been removed with effect from the 3rd inst.

Pakistan has decided to step up cotton production to 2.5 million bales per annum over the next three years. The object of this decision is to maintain a high level of foreign exchange earnings.

The total number of broadcast receiving licences in the U.K. as at the end of March, 1954, was 13,436,793, of which television sets accounted for 3,248,892 and sets fitted in cars for 226,667.

The Australian Commonwealth Bank has raised its buying price for gold from £15 9s. 10d. to £15 12s. 6d. following the re-establishment of the gold market in London. The price of sovereign has gone up by 6d. to £3 12s. 6d.

Industrial production in the U.K. rose in March 1954 to about the peak level established in November, 1953, the index number being 133 (base: 1948=100). The average rate of production in the first quarter of 1954 was nearly 7½ per cent. higher than in the corresponding quarter of 1953.

The Nash-Kelvinator Corporation and the Hudson Motor Car Company have formally merged and will be known as American Motors Corporation. The combination will make the new company the fourth largest producer of automobiles in the U.S., the other three being General Motors, Fords and Chrysler. The newly formed company commenced business on 1st May, 1954.

A resolution to encourage the flow of private capital to underdeveloped countries was adopted by the United Nations Economic and Social Council last week. Only two countries—Russia and Czechoslovakia—voted against. It recommended that countries should negotiate appropriate treaties, agreement or other arrangements on double taxation, and the insurability of certain non-business risks.

Polish motor-car engineers report experiments with a new petrol-saving device. The device, called "Ozonisator," sends out ultra-violet rays which convert part of the air taken in by the engine into ozone. Ozone causes complete combustion of the petrol and air mixture. The Ozonisator is said to save about 10 per cent. in petrol which otherwise is not completely burnt in the engine. Several cars have been fitted with the device for experimental purpose.

The International Bank for Reconstruction and Development reported a net income of $15,006,406 for the nine months ended 31st March, 1954, as compared with $12,947,735 for the corresponding 1953 period. Total reserves on 31st March, 1954, were $137,309,233. The report said that, during the nine months, the Bank made 22 loans aggregating $275,482,000 to Australia, Brazil, Chile, Colombia, Ecuador, Iceland, Italy, Japan, Nicaragua, Panama, South Africa and Turkey.

The Eastman Kodak Company in the U.S. is investigating and testing two new synthetic textile fibres, both in the wool-like class. One is being made as staple fibre and the other is a new type of polyester of the dacron type, the only difference being in chemical composition. While the latter is still in an earlier stage of development, the former has already undergone trials in mills which show that it dyes well and appears to wear as well as wool.

The view that the current American business contraction was one of the least serious in history was expressed by Dr. Arthur Burns, Chief Economic Adviser to President Eisenhower. He expressed the belief that business downturn had reached its low point and was hopeful that things would improve. The Administration was preparing an emergency public works programme and a new tax cut plan for use if the economy took a downturn instead of improving. No details of possible further tax cut recommendations were given, but higher income-tax exemptions have been suggested as one way of increasing consumer purchasing power.

An analysis of cotton grey cloth imports into the United Kingdom on the basis of supplying countries shows that India replaced Japan as the major supplier in the early months of 1954. Following imports of 5,488,000 square yards from India in January, the total in February rose to 10,727,000 yards. When 311,000 yards of Indian finished cloth is added to this figure, imports from India in February accounted for 11,038,000 yards of the total imports of 18,719,000 yards for the month from all sources. Unlike cloth shipped to the U.K. from a number of other overseas countries, none of the Indian cloth was designed for re-export after undergoing finishing processes in the country.

Britain is now the third most important oil refining country in the world (excluding the U.S.S.R. for which details are not available), according to figures just published by the U.K. Petroleum Information Bureau. These figures show that, at the end of 1953, refining capacity amounting to just over 400 million tons was located in the U.S. out of a world total of some 700 million tons, apart from plants in Russia and in countries of the Soviet block. The most important country after the U.S. was the Netherlands West Indies (with 33 million tons), followed by the U.K. with just under 29 million tons.

The revised estimate of world wool production compiled by the Commonwealth Economic Committee in London forecasts that the output for the 1953-54 season will be some 4,350 million lbs. (greasy)—50 million lbs. less than the earlier estimate issued in October. The chief reasons for this decline are the reduction of 30 million lbs. and 23 million lbs., respectively, in the estimates for Australia and Argentina. The Australian clip, however, is still expected to be the second largest on record—1,260 million lbs., or three per cent. less than last season's peak of 1,300 million lbs. The current Argentine clip is assessed at 397 million lbs., or two per cent. below last season's. Estimates for India and Pakistan remain at 72 million lbs. and 30 million lbs., respectively. The estimate for South Africa has been lowered from 278 million lbs. to 276 million lbs. and that for New Zealand remains unchanged at 421 million lbs. The estimate for the U.S. clip is raised by 2 million lbs. to 285 million lbs. and that for Britain by 7 million lbs. to 105 million lbs.

PERSONAL

MR. A. J. Riches, General Manager of Lipton Ltd., has left for the U.K. on retirement.

Sir Alexander Clutterbuck, British High Commissioner to India, will proceed to the U.K. on leave at the end of this month.

Mr. R. F. Isar, Deputy Secretary to the Union Government, has, it is learned, been appointed Deputy High Commissioner to Ceylon.

Dr. A. Lahiri has been appointed Director of the Fuel Research Institute, Digwadih. Dr. Lahiri, who will succeed Dr. J. W. Whitaker, is the first Indian to hold this post.

Mr. C. S. Jha, India's Ambassador to Turkey, has returned to India after completing his assignment in that country. Mr. Jha has been appointed Joint Secretary to the Ministry of External Affairs.

Mr. Kanwar Sain, Chairman, and Dr. L. R. Rao, Director, Central Water and Power Commission, left for China this week to study the various measures adopted there for controlling floods in the Yellow River.

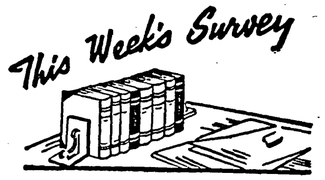
"COMMERCE" 1929

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 11th *May*

India's Credit Abroad

If India is to prosper materially and hold her own in trade, industry and commerce against the other nations of the world, she must maintain intact her credit abroad which is still very high. The credit is not the result of indigenous efforts, but the effect of British rule in India. Unfortunately for her, Indian politicians of a certain type are out to undermine this high credit by their foolish creed of non-co-operation, by their futile cry of boycott of British goods and by their fanatic outcry against the inflow of external capital. Any talk of non-co-operation is foolish, unless and until there is co-operation amongst the non-co-operators themselves; the cry of boycott of British goods is futile unless and until India is in a position to produce enough indigenous goods to meet the demand which is now largely met by imported articles; and the outcry against the inflow of external capital is fanatical unless and until Indians have been able to pool their resources, coax the hoarded money out into fruitful investments and regulate finance by the establishment of credit institutions on a sound basis. But indigenous capital in India is not only inadequate, but is extremely shy even today; and it is a patent fact that but for foreign capital, India would not, and could not, have achieved the marvellous progress she has made in the realms of trade, industry, communication, agriculture and commerce. Sir George Schuster, the new Finance Member, who, in introducing the budget in March last, declared that India's credit was high abroad, warned the Indian Merchants' Chamber in Bombay last week that in the London market the credit of India stands low today as a result of the resolutions recently passed at the political conferences in favour of independence. Indians have not, so far, been able to establish and maintain credit institutions of the first rank and their efforts in that direction have almost always been attended with dire consequences. Indians have thus been afforded an excellent opportunity in the proposed banking enquiry to devise ways and means to regulate finance; and we have an assurance from no less a personage than the Finance Member himself that it is the intention of the Government of India to secure to the central committee not only a majority of Indian personnel, but also an Indian Chairman. Let Indians make the best use of this golden opportunity and establish and maintain first class banking and insurance corporations—the two chief credit institutions.



RATIONALISATION OF COTTON INDUSTRY

WHENEVER anyone connected with the cotton textile industry speaks today, one can with certainty expect a pointed reference to the question of rationalisation. This is not surprising, considering the fact that the question has been so much in the forefront in recent months, being discussed and debated upon extensively in the Press and on the platform. Mr. A. D. Shroff, Chairman of the Svadeshi Mills Ltd., and Mr. N. H. Tata, Chairman of the Tata Mills Ltd., dwelt at length on this question, in the course of their speeches at the annual meetings of the respective companies held recently and stated, in effect, that, in the context of the rapidly changing conditions in the textile markets, rationalisation was inevitable.

Mr. Tata drew pointed attention to the competition in the world textile markets offered by such highly efficient countries as Japan, and said that, if the Indian cotton mills were to withstand competition, they had to be rationalised. In this connection, he alluded to two handicaps, which he called "the inherent disadvantages," from which the textile industry had been suffering. First, the ratio of workload to wages prevailing in India is unfavourable by international standards, even after making due allowance for poor working conditions, enervating climate and malnutrition. Secondly, the present mentality of trade union leaders seems to be to look at a job "as a perpetual institution, wherein even natural vacancies caused by death, retirement or otherwise cannot be utilised for bringing down a bloated muster." Significantly enough, Mr. Tata remarked:

"If the idea finds favour in Government quarters, then let us forget for ever our hopes of building up an efficient industry which can hold its own against foreign competition and serve the interests of the consumer. . . . It would be difficult for any honest and responsible trade union leaders to dispute the fact that the Indian textile industry, which is obliged to sell in highly competitive markets, is employing far more workers than it can afford."

There is considerable force in these observations of Mr. Tata. One may, however, ask: What about the displacement of labour that will arise from rationalisation? The millowners do appreciate this anxiety on the part of labour, as witness the remarks of Mr. Shroff, who said: "I am fully conscious of the fact that, in a country like ours, where avenues of employment under present conditions are limited, the problem of rationalisation cannot be treated in isolation from its reaction on the community as a whole." But, to the millowners, the fears of widespread unemployment following rationalisation are not only clearly exaggerated but also entirely misconceived. As Mr. Shroff rightly pointed out, in its limited application to the cotton textile industry, rationalisation cannot by any stretch of imagination result in "sudden and widespread" unemployment. For there are very few mills in the country which have today the financial resources to embark upon any large-scale renovation of labour-saving plant and machinery. Even if a number of mills simultaneously decides to install such machinery, it can only be made available over a period of years.

This, indeed, is the bare truth which has unfortunately not been recognised by the so-called champions of the cause of labour who are guided more by political than by economic considerations. The major plank on which any plan for economic development should be based is the satisfaction of the community's wants at an economic price. Certainly, rationalisation of the cotton textile industry will, as Mr. Shroff very pertinently stressed, result in lower cost of production and make available to the masses of the country one of the ordinary necessities of life, namely, cloth, at cheaper prices. Looked at from the angle of labour welfare also, rationalisation is highly desirable. To quote Mr. Shroff again:

"It has been actually proved by experience that a weaver working on automatic looms earn decidedly better than he even did before and, at the same time, he is relieved of a certain measure of strain and fatigue, because of both better equipment and conditions of work provided. Experience in Western countries has shown that, by cheapening the cost, the demand for the production can be increased, thus paving the way for increased capacity for the industry which will be reflected in increased demand for labour."

Both Mr. Shroff and Mr. Tata put forward a vigorous plea for the abolition of the 10 per cent. export duty on coarse cloth. Mr. Shroff failed to understand why the Government persisted in retaining the duty, particularly at a time when increased exports were necessary, since the country was not in a position to absorb the entire domestic production. Expressing a similar view, Mr. Tata said: "The export duty of 10 per cent. on coarse cloth still continues to hamper the trade and, if Government are anxious that the textile industry should achieve in 1954 the export target of 1,000 million yards fixed by the Buxton Conference, this duty of 10 per cent. should be removed to enable coarse cloth, which formed about one-third of total exports in 1953, to withstand the stiff competition experienced abroad." Now that the overseas consumer is coming into his own, it is time the question of abolishing the export duty on coarse counts was considered dispassionately.

FUTURE OF ALUMINIUM

The rapid rise of aluminium, once regarded as a very expensive metal of no great practical use, forms an interesting episode in the history of metals. When its versatile qualities such as lightness, strength, workability and ability to conduct heat and electricity became more widely known, it got and continues to get more and more votaries. Its use has expanded greatly in the present century, and the metal is invading many fields. This explains, as Mr. K. C. Mahindra, Chairman of the Indian Aluminium Company, Ltd., pointed out at the recent annual meeting of the Company, the "remarkable" increase in the world production of the metal to its present level of about two million tons. Quoting from a U.N. report on aluminium, Mr. Mahindra emphasised that the production of aluminium has expanded by 10 per cent. per year since the beginning of the century. At this rate, world production should reach four million tons by 1960. A large part of the increase has taken place as a replacement for non-ferrous metals. But about half the total consumption is for uses in direct competition with steel. Lest this should give one an exaggerated idea of aluminium's ability to replace steel, Mr. Mahindra pointed out that world production of aluminium constitutes hardly 3 per cent. of the world output of steel and is not expected to increase to more than 5 per cent. by 1960. Nevertheless, the fact remains that aluminium is "proving a more suitable metal than other non-ferrous metals and steel in ever-widening fields of application."

In India, the supplies of most non-ferrous metals are limited. Even the supplies of steel are inadequate. In this context Mr. Mahindra estimates that, with the "upsurge of industrial activity, there is going to be a growing demand for both ferrous and non-ferrous metals." Nor did he fear that, in this country, aluminium would, as in other countries, compete with steel. Both can be expected to pay "complementary roles in providing the necessary basic materials for industrial development." Mr. Mahindra was, therefore, understandably surprised that there should be sceptics who doubted whether India could expand its aluminium output to 20,000 tons by 1957.

He was, however, conscious of the fact that, if aluminium industry has to develop, it must cease to be "confined to small production units, with a high cost and high price structure, servicing a restricted market." He recognised that an "appreciable reduction in costs can only be achieved by increased production." So far as the Indian Aluminium Company, Ltd., is concerned, it would appear that the contemplated expansion of the smelter at Alumpuram and the rolling mills at Belur would be completed by the middle of this year. This would lead, he hoped, to a reduction in production costs. The Company has also been licensed to build a smelter at Hirakud with an initial capacity of 10,000 tons and an ultimate capacity of 20,000 tons. He said the question of financing the project was being considered, though the "general" investment climate in the country indicated that no "easy" solution was possible. Perhaps, an assurance of a continuous supply of electric power, which, he said, was necessary before the scheme could be taken up, would facilitate the execution of the project.

MADHAVLAL AND CO. LTD.
BOMBAY

MRS. SHANTAGAURI MADHAVLAL M. Bhatt, J.P. and Honorary Magistrate, who was actively associated as a Director with her husband, Shri Madhavlal Makhanji Bhatt, during his lifetime in the business of Madhavlal & Co., Ltd., Bombay, has been appointed Managing Director and Chairman of the Board of Directors of the said Company. The business of the Company will, as usual, be continued as heretofore. The old experienced staff has been continued.

TRAINING FOR BUILDING LABOUR

The building construction industry has reason to feel gratified at the decision of the Government of India to start a pilot scheme at New Delhi to train skilled and unskilled workers for employment in the building trade. For the scheme, which is estimated to cost Rs. 2 lakhs, will, if successful, make available to building contractors a supply of well-trained personnel.

The pilot scheme is a part of a broad plan drawn up by the Ministry of Works, Housing and Supply, with a view to attracting young men to take up construction work as a career. It provides for starting similar training schemes in a number of selected places throughout the country, under a central organisation, if the pilot scheme proves a success. An important function of the central organisation will be to co-ordinate and supervise the training schools. A welcome feature of the scheme is the proposal to run, along with the pilot scheme, an advanced training course for teachers of various training schools in some States. The class for training masons will serve as an object class for this advanced training.

The first year programme of the pilot scheme includes (1) training of educated employed persons, (2) workers of Central Public Works Department from the work-charged staff, (3) persons with basic knowledge and some practical experience, and (4) junior supervisory personnel of the Central Public Works Department. In order to provide incentive to unemployed young men, the scheme guarantees employment for a period of eight or nine months. During the period of training, students will be provided with free board and lodging. A small stipend will be given to educated unemployed trainees and members of advanced classes. No stipend will, however, be given to employees of the Public Works Department of Central or States Governments. The trainees will also be allowed to keep for their out-of-pocket expenses, the money they may earn during the period of practical training.

The scheme is expected to supplement the work of the Rural Housing Cell, which was established at New Delhi, in October last year, to design suitable houses for different areas in the country, keeping in view the availability of local building materials and climatic conditions. While the Cell will supply specialised knowledge, the personnel trained under the scheme will, it is hoped, considerably help in the wide-spread introduction of aided self-help techniques in various States, which, for the time being, seem to be the only solution to the difficult problems of rural housing, slum clearance, sweepers' housing and housing of low-income groups.

DEVELOPMENT OF PORTS

Though belated, the suggestion made by the National Harbour Board, which met last week at Poona, that the Planning Commission should consider the feasibility of developing Malpe or Mangalore on the west coast and Tuticorin on the east coast of Madras as major ports and Pradip at the mouth of the Mahanadi in Orissa as intermediary or major port, is welcome. This, however, raises once again the controversy about the relative claims of Mangalore and Malpe for being developed as a major port. For, while the West Coast Major Port Development Committee rejected Mangalore on marine considerations and selected Malpe as a more suitable site, Mr. S. Nanjudiah, in his report on the survey of minor ports in India, held that the rejection need not be considered final and that it could be reopened at a later stage. It is, however, acknowledged that a major port is necessary between Murmugoa and Cochin and that either Mangalore or Malpe should be developed at an early stage in the interest of developing South West India. So far as Tuticorin is concerned, this is one of the very few important ports on the east coast of Madras. This port has the unique distinction of being the only port which, though classified as a minor port, is constituted into a Port Trust. The need for developing Tuticorin as a major port is stressed, because of the vast hinterland trade which it commands. The question of opening a major port on the coast of Orissa has been engaging the attention of the State Government for a long time now.

At the aforesaid meeting of the Board, considerable discussion centred round the problems relating to deck labour also. It was pointed out by port authorities that there had been a steady deterioration in the output of labour, notwithstanding the improvement that had taken place in the matter of wages and other amenities. If a serious situation were to be avoided, they held that it would be necessary to review the working of the dock labour decasualisation scheme now in operation at Calcutta and Bombay. On behalf of labour, a plea was made for total decasualisation of all sections of port labour and for eliminating the practice existing in Calcutta under which a share of the wage money was retained by the *sirdar*, through whom labour was engaged. Mr. Lal Bahadur Shastri, agreeing with the need for prompt action in the matter, said that he would himself personally meet and hold discussions with the port administrations and labour leaders concerned, port by port, in order to arrive at a satisfactory solution. It would be difficult, he said, to achieve uniformity in the matter of decasualisation of labour as conditions varied from port to port. He was certainly stating the bare truth when he said that labour leadership among dock workers lacked the strength necessary to induce workers to maintain output.

SALES TAX ON FORWARD CONTRACTS

A judgment of far-reaching importance to States' finances in general and to forward trading in particular, was delivered this week by the Constitution Bench of the Supreme Court. The case, on which the judgment was given, arose out of the appeal preferred by the Sales Tax Department of Uttar Pradesh against the order of the Allahabad High Court which had quashed the assessment made on a certain firm in respect of the firm's forward contract in *gur* and peas. The Department had made the assessment in terms of the U.P. Sales Tax Act. A sale, in terms of this Act, includes sales on forward contracts. The U.P. Sales Tax Act was enacted by the State Legislature in exercise of the powers to tax sales, conferred on States by the Government of India Act, 1935.

The Supreme Court considered the question whether the power to impose a tax on sales of goods, conferred on States, included a power to impose a tax on forward contracts. Mr. Justice Venkatrama Ayer, who delivered the judgment, distinguished between the words "sale" and "agreement to sell." He said that since there existed at the time of the enactment of the Government of India Act, 1935, a well-defined and well-established distinction between a sale and an agreement to sell, it would be proper to interpret the expression "sale of goods," in the sense in which it had been used in legislation both in England and India and to hold that it authorised the imposition of a tax only when there was a completed sale involving transfer of title. The position, therefore, was, his Lordship continued, that a liability assessed to sales could arise only if there was a completed sale under which price was paid or was payable and not when there was only an agreement to sell. The power to impose tax on the sale of goods could, therefore, be exercised only when there was a sale under which there was a transfer of property in the goods and not when there was a mere agreement to sell. He held, therefore, that this portion of the U.P. Sales Tax Act, which sought to bring forward trade within the meaning of the word "sale" for purposes of taxation, were *ultra vires* the Constitution.

Two Operational Agreements were signed in New Delhi on Friday last week between the Governments of India and the United States of America, under which agricultural and medical institutions in India will receive facilities and equipment for expansion of their programmes. The total joint cost of the projects covered under the Agreements amount to $700,000 and Rs. 3,20,000. The dollar expenditure, which will be the U.S. contribution, will be utilised for purchasing of equipments, etc., while the rupee part will be for meeting internal costs. Agricultural institutions which will receive assistance include agricultural colleges in India and some of the institutions for agricultural research. The other agreement aims at strengthening and assisting in the upgrading of medical research institutions, medical colleges and allied institutions by supplying essential items of equipment which are not available in India and also related technical assistance.

OFF THE RECORD

(By "ROVER")

IT is not for me to examine the decision of the Labour Appellate Tribunal in the disputes between the banks and their employees. The banks themselves are the best judges in this matter. They know where the new pair of shoes, presented to them in the shape of this new award, will pinch them, because pinch them it will. As has happened in the case of many an industry and trade, the banks after bewailing their woes and the sufferings these new inflictions will involve, will try, perhaps, to pass on as big a part of the new burden to their constituents and grin and bear what they dare not try to shift to other shoulders. As a matter of policy, the bank employees will denounce it as unsatisfactory and deficient in many respects and pocket what gains it has brought them. I, for one, would not grudge them whatever benefits they have received, if the resulting loss to the country by way of retarding the economic development in general and the progress of banking in the semi-urban and rural areas in particular, were not to be disproportionately high.

As the Tribunal has claimed, the matters covered by the award are long-term arrangements. The Tribunal has laid down a set of terms for payment and conditions of work, which should hold good for a long time. Will this be regarded as such by the employees led by politically-minded leaders, who see, in every gain, a convenient jumping board for more strident demands? Echoes of this are already being heard from some of them. Bank managements might console themselves by the consideration that the heavy burden imposed on them might be well worth bearing, if this imposition were to secure not merely peace in the field of banking for a long period, but the loyalty and devotion to work of a satisfied staff, as the Tribunal was sanguine enough to trust.

There are many, however, who fear that there is but a poor chance of these hopes being realised and, looking to the atmosphere prevailing in the world of commerce and industry today and the situation created by legislation with compulsory adjudication as its pivotal principle, which places a premium on workers' leaders raising new disputes and perpetuating old ones to maintain their hold on their following, who can assert with authority that, after all, these realists may not prove right about their forebodings? Even the Tribunal has been forced to recognise that the approach of many of the banks, to the problems arising from their relations with their staff, is inspired by a sympathetic understanding of their circumstances and so has felt obliged to administer a stern warning to the employees against any indiscipline, which in the long run was bound to harm them the most.

The Tribunal could not have been more explicit in its advice to the bank staff that, now that they had been given reasonable terms, they must adjust themselves to these for some years. It could not also have been more emphatic in its admonition that employees must give a fair day's work for a fair day's wages and that to do less would be to invite disaster. How far this stern rebuke by the Tribunal will have effect remains to be seen, because it has been the common experience of employers, whether it be in banks and offices or in fields and factories, that, with every increase in wages and allowances and addition to amenities, output per man-hour has dwindled progressively. In fact, one can almost see that all the time there is a kind of subconscious and subtle 'go-low' movement in operation everywhere.

I am, however, inclined to view this affair from an angle, which has often been missed both by the authorities and the workers. Just as industrialists are apt to create vested interests in the enterprises they control and manage, workers are creating vested interests in the jobs they hold. In a country where overpopulation is chronic and unemployment one of the biggest headaches of the community, one would think that, in every official policy, the emphasis would be on the enlargement of the field for employment in the country. Both the workers and the authorities are only too ready to plead this as an excuse for disallowing the use of labour-saving machinery in industry. But they are completely oblivious of this aspect of the question, when it comes to placing such additional burdens on industry as to shut out any chance of expansion which could provide more jobs.

The time has now come to ask ourselves whether we shall have more jobs to provide employment for those who are out of work today and the millions who are coming of age every year, who will have to search in vain for employment, or better paid and more comfortable billets for those who are already employed. To put it very bluntly, should we have half a loaf for ten people or a full loaf for five and complete starvation for the rest? From this it can be easily seen that almost every conflict today between employers and employees is in reality a conflict between the employed and the unemployed. This callousness on the part of those who are employed towards their own brethren, who are leading an agonising life for want of gainful employment, is really amazing. What grim and terrible repercussions it would have, when the ever-increasing numbers of the unemployed realise the truth that their own more fortunate comrades have, in their struggle for improving their own condition, kept them out of jobs, which would have been created but for this struggle, and that the Governments, while commiserating with them for their misfortune, have all along considered only the interests of those already in employment.

Take, for instance, the case of banks. Several banks had adopted, during recent years, the policy of opening of branches in every likely place. Every new branch opens up an avenue of employment for at least half-a-dozen or more educated unemployed. But, if the pay scales and other conditions demanded by those already working in these institutions are such as to make opening of branches in small towns and large villages a losing proposition for the bank, they would be forced to give up this wholesome policy. It may be that the Government might prevent, by some means, the banks from closing the branches already in existence, but it could not compel them to open new branches, which they would have to run at a loss. In a vast country like ours, with an unrestricted scope for development of banking activities in virgin tracts, a large number of branches would ordinarily have been opened year after year. All this and the economic expansion in the areas concerned, which would have followed from it, have been rendered impossible by this award. Whatever improvement this might bring about in the lot of bank employees will be at the cost of those who would otherwise have found work in branch offices, which now will never be born. There could be no better proof of the bitter fact that the employed and not the employers are the enemy of the unemployed. Only my respect for our Government prevents me from bracketing it in this respect, with "the employed."

Democracy in Dalal Street

Having lived a greater part of my life in an Indian State, I am naturally not enamoured of royalty. There is something cramping, something unreal about the whole atmosphere where princes and potentates abide. While there is still a lot of sentimental moaning, out of attachment born of long association, for the dethronement and disappearance of Tata Deferred, undisputed king of the Bombay share market for a generation and a half, one cannot but help noticing the new freshness and wholesomeness which characterise the air in the trading hall of this extremely vocal body.

During all those years when King Deferred ruled the roost, many an important scrip had to remain subdued and had to creep more or less submissively in the shadow of the sovereign of the market. The allegiance owed by the general run of operators was so deep that it was a rare occurrence for any individual counter to break away on grounds of special merit or otherwise, from the path of aggression or retreat pursued by the all-powerful Deferred at any given moment. Even worthless scrips blossomed and flowered in the sunny smile of the great one; on the other hand, even the aristocrats who had carved out a niche of their own in the Court at Dalal Street, were frowned upon by the multitudes, when the King was in a cheerless mood and sulked in his harem.

I doubt if you could have failed to notice, that is, if you are a frequenter of this once great kingdom now turned a republic, that, with the establishment of democracy in Dalal Street, the whole atmosphere has changed. Men's minds now work unfettered by ties of loyalty to an individual ruler and there is scope and opportunity even for the humblest to forge ahead and come to the fore, though the rabble as a whole, might be in retreat. Even the cobbler who sat huddled in his tattered raiment only yesterday can aspire to and does at times stem the ebb with his individual performance. Free play of individual judgment has today taken the place of outmoded and anachronistic fealty to a Frankenstein who had shackled the imagination of even the brave men in the bazaar.

While a lingering sentiment still renders token homage to the hereditary heir, in Tata Ordinary, and grudgingly concedes some precedence and the privilege of operating out of hours and in darkness, the principle is in no position to assert his authority over the empire of his ancestor. An interloper from the east, Indian Iron, which makes no claim to blue blood but has succeeded in getting together a horde of freebooters and adventurers in Calcutta, has invaded this country in the hope of filling the temporary vacuum created by the passing away of the old monarch. Having tasted the freedom and liberty of judgment brought about by democracy, even during the short period it has been in operation, it is now for the subjects of this free and independent State to resist all the onslaughts or blandishments of new aspirants to the throne either from abroad or some bold spirits from the ranks of the army of the late ruler. The King is dead, long live the Republic!—*All Rights Reserved.*

DEBATE ON COMPANY LAW BILL

MANAGING AGENCY SYSTEM SEVERELY CRITICISED

(From A Special Correspondent)

NEW DELHI, *4th May*

DELHI LETTER

DISCUSSIONS in Parliament took a lively turn this week when the Finance Minister, Mr. C. D. Deshmukh, moved the motion to refer the Companies Bill to a Joint Committee of both Houses of Parliament. The debate on the motion was largely preliminary in character, but a number of members participated actively on many of the controversial character of this Bill. The best speech on this occasion was doubtless made by Mr. T. T. Krishnamachari, Minister for Commerce and Industry, who was able to bring all his experience of commercial life as well as that of administrative work in Government to the solution of many of the problems confronting the company management. The Minister was not only realistic in his approach in dealing with this complicated question, but also made many constructive suggestions as to how the problems should be tackled. Mr. N. C. Chatterjee, a Judge of the Calcutta High Court at one time and one of the foremost lawyers of the country, was also actuated by considerable realism. Mr. Deshmukh, Finance Minister, recounted lucidly the object and reasons of the Bill as well as its scope.

Many members of Parliament were extremely critical of the role of many managing agents in the administration of company affairs. Most of them were imbued with memories of the war and post-war periods when unscrupulous managing agents began to indulge in antisocial activities such as black-marketing, cornering of shares, evading taxes to Government, etc. One member characterised this class of people as "business sharks" who were bent upon swindling people, and insisted that Government should safeguard the interests of innocent shareholders who were tempted to invest their life's small earnings in companies. Another member with leftist leanings stated that not a single committee appointed by either the British Government or the Indian Government had one good word to say about the managing agency system. A member from the Punjab suggested that measures should be taken to curb the speculative activity of managing agents. Another member from the same State compared the unscrupulous managing agents to vultures and wanted that Government should clip their wings in such a way as to ensure that they might not be able to dig their claws deep into the flesh of the investor. A member from Madras wanted that Government should approach the whole problem from three angles. First, business must be 'professionalised,' that is to say, a machinery should be devised for the observance of certain minimum standards of morality and code of conduct; secondly, there should be no undue restriction on initiative and, thirdly, a balance had to be struck between private and social needs. Private greed should be made to subserve social needs, he said. A member from Uttar Pradesh traced the recent developments in the managing agency system and pointed out that big financiers had begun to turn this system into a sort of cartel and a net of companies under one management. He urged that provisions should be made to safeguard the interests of shareholders in every possible way.

The Bengal lawyer Mr. N. C. Chatterjee was very realistic in his approach. He admitted the serious defects in the managing agency system and also conceded the prevalence of "sharks" operating in it, which had brought disrepute to the entire managing agency set-up. He was, however, of the opinion that, before condemning the managing agency system, Parliament should take into account how far, in the present economic structure of the country, it would be advantageous to continue it. There could, however, be no two opinions that the malpractices found in the working of this system should be done away with, but how could there be planning, unless the private sector was allowed full play, subject to certain safeguards, he asked. He agreed that Indian managing agencies in a way tended to be confined to one family and to become almost a hereditary thing, resulting in inefficiency and corrupt managers. This needed to be rectified, so that it might not be possible to develop a "family coterie ruling a particular concern."

Mr. T.T.K.'s Views

In a well-reasoned and cogent speech, the Commerce and Industry Minister, Mr. T. T. Krishnamachari, argued that Parliament should accept certain basic factors in considering the company law reforms. One such was the pre-existence of an *entrepreneur*. He pointed out that, although there were many evils in the system, they had to tolerate it, because of the good that came out of it and also because they had nothing else to replace it with. He was in favour of regulation and control by the Government in order to make the system work tolerably well. The benefits of a joint-stock company primarily flowed to the individual investor and the company promoter and only secondarily to the entire economic structure of the country. If the Bill was looked at from that point of view, the Minister stated, there could be a more realistic appreciation, of it. The Minister laid considerable emphasis that Parliament should carefully consider the safeguards for minority shareholders and the ways of preventing interlocking and other defects of company management. The problem of protecting the ordinary shareholder was not an easy one and Parliament might at best provide for the disclosure of a large amount of information by the company promoter or manager, but the Minister was of the opinion that the shareholder himself must be more alert. Besides, the position of the minority shareholder had also to be safeguarded, especially when the managing agents had been holding a majority share. In this connection, he suggested that Government could undertake the reform of stock exchanges in the country on the lines of the American Securities and Exchange Commission. The American system had provided, according to the Minister, considerable safeguards for the investor.

Referring to the question of managing agencies, Mr. Krishnamachari stated that he was not a supporter of any system of perpetuation of wealth or of managerial power in the hands of a few. The merit of a managing agent was of a person who was the means of bringing together various factors and providing an instrument of production. The development of this system in this country had been horizontal rather than vertical. The Minister made a realistic approach when he said: "The prime necessity today is that there should be expansion. There should be more opportunities for employment. There should be development of national wealth, which is the only way by which we can provide for greater employment, greater benefits for the people and a greater justification for the welfare State for which we stand here wedded.... We cannot therefore rebuild our industrial structure without the managing agency system. Mr. Krishnamachari was in favour of safeguards to prevent the misuse of powers by managing agents. He wanted to ensure that the managing agencies had the capital structure and resources necessary to provide security against misbehaviour. Their capital structure must be substantial, he said. He did not view with favour the establishment of a statutory authority to administer company law. Certain ideas might be good in themselves for certain purposes, but often, when one projected them into certain circumstances, they were not good, he argued. Finally, he stressed the necessity of setting up an Economic Civil Service which could run State concerns on business lines.

In the course of his reply to the debate, the Finance Minister gave some convincing reasons for the retention of the managing agency system since the "time has not come for its elimination." He agreed that many managing agents had committed considerable misdeeds, but said that he had instances that a number of them had nursed the companies, assisted them with loans and helped them to tide over difficulties. After reviewing the whole position dispassionately, he concluded that, if they were to eliminate the managing agency system, they would probably be dealing a very severe blow to the extension of industrialisation of this country. "We should not end this system unless we first tried mending it," he declared. It is, therefore, certain that Government will not take steps to end this system, but to modify it in such a way as to prevent its abuses.

BANK MONEY AND BUSINESS

STOCK MARKETS QUITE STRONG

(From Our Own Correspondent)

LONDON, *1st May*

LONDON LETTER

THE first months of this year have emphasised the trend that began in 1953 of a "reflation" of bank money, in sharp contrast to the successful deflation of 1952 which brought to an end the post-war inflationary period. The deposits of the London Clearing Banks rose, of course, steeply during the war and early post-war years to reach, in 1951, a total three times as great as before the war—an average month by month of over £6,000 million. Then came the tight money policy of 1952 and deposits in that year averaged £6,083 million against £6,162 million a year before. The Chancellor, having successfully halted the endemic inflation, then took fright—and the same trend was evident in most countries with which comparisons can be made—and relaxed his restrictions very gently. The result was a rise in 1953 to £6,256 million of bank deposits; an upswing paralleled *only* in the post-war years. The opening months of 1954, however, show a further *increase* of £200 million over the corresponding months a year ago.

The easing of credit—albeit at higher interest rates than ruled in 1951, so that banking is, once again, a profitable occupation—is manifested in other aspects of banks' accounts. The cash ratio to deposits last year was (and is in this) lower than ever at 8.1 per cent., as compared with the 8.3 per cent. of the early 1950's and the pre-war 10.8 per cent. Indeed, the total of cash and call money was as low as 15.7 per cent. as compared with the 17 per cent. of 1952 and the rather higher percentages of pre-war years. With a rising stock market and prosperous business conditions, it is clear that the banks have felt able to relax their usual caution.

The principal counterpart of the new money created in the past 15 years has been Treasury financing, but this has taken different forms during the post-war years, so that plain figure comparisons are misleading. There have been Treasury Deposit Receipts, standing half-way between bills and investments; but the total of Treasury and trade bills and investments gave 54 per cent. last year or 4 per cent. more than a year before.

But the movement of bank advances is peculiar. Last year, their percentage to deposits was 27.7 and there has been no rise this year, while, in the year 1952 in which stringency was applied, the banks actually devoted over 30 per cent. of their resources to accommodating their customers. But the current percentage of advances is substantially higher than the 25 per cent. ruling four years ago, though comparison cannot be made with pre-war years (when advances were nearer 40 per cent. of deposits), because Government financing has altered the pattern. The heavy advances of 1952 indicated the *needs* of business *in* a year of recession, while the current level of advances indicates rather the prosperity of industry and the continued rise in production. Where the banks *themselves* can determine the level of advances, their own policy is clearly reflected. Thus, their financial loans which had jumped to some £200 million in 1951 were cut back to £177 million in 1952 and are now creeping back towards £200 million again. On the other hand, personal loans, which had climbed well over £400 million by 1951, were cut back sharply in 1952, continued their fall in 1953 and have still hardly reversed their trend.

Behind the confidence of the banks is the strength of the stock markets and back of that is the extraordinary resilience of production as shown by the indices. The all-industries index for March registers over 132 per cent. of the 1948 datum—an increase of 5 points since January and giving an average for the first three months of 130 per cent. This figure compares with 121 per cent. for the first quarter of last year and 120 per cent. for the same period in 1952. Over each of the past four quarters since the turn in prosperity began a year ago, the indices have risen 6.3 per cent., 8.7 per cent., 8.5 per cent. and now 7.4 per cent. over the corresponding figures for the previous year. This steady improvement over a year of between 7 and 8 per cent. in production is extremely good and fully warrants the optimism which the banking system is at present revealing.—*All Rights Reserved.*

AMERICAN LETTER

U.S. CAN MEET THE ECONOMIC CHALLENGE

MONEY RATES EASE—CREDIT SURVEY DISCLOSES NO CAUSE FOR PESSIMISM

(From Our Own Correspondent)

NEW YORK, *29th April*

THE last few weeks saw a continued easing of money rates. Most of the twelve Federal Reserve Banks reduced their rediscount rates from 1½ to 1½ per cent., while commercial banks throughout the country cut their prime lending rate from 3½ to 3 per cent. This is all within the pattern of stemming the recession in business and making it easier for individuals and businesses to borrow.

While there is no question that there is a moderate increase in unemployment and production, some indices would seem to point to an early revival of greater activity. Business spending for plant and equipment during 1954 is officially estimated at $27,200 million, which is only slightly under the record year of 1953. These are Government figures based on records supplied by business and industry. In line with the usual increase in business during the spring, an improvement is looked for in nearly all lines. Automobile manufacture is up and even steel-scrap prices, which declined earlier in anticipation of production declines, have risen for the first time since October.

Retail business is anxiously awaiting the results of the excise tax cuts enacted by Presidential signature. With the usual variations, allowing for different dates for various religious holidays, sales this year have about equalled those of 1953. The excise tax cuts involve such items as electrical appliances, furs, jewellery, cameras and lipstick, to mention only a few. The President of the United States stated that the excise tax cuts, together with income-tax reductions from 1st January, would total $7,400 million, on the basis of previous receipts, the largest tax reduction the U.S. has ever achieved. Many retail concerns announced promptly that the excise cuts would be passed on to consumers. Among others, New York Telephone Company estimated the tax cut would save its customers an average of 55 cents on their monthly bills and business houses, generally, were cautiously hopeful that the tax savings would show up in final Easter buying statistics. Easter, next to Christmas, is a very heavy U.S. buying period, because it has become somewhat of a custom to buy new outfits at least for the female members of the family. Although the Government has, so far provided only incentives—and that is all it can do—and although it has no control over individual intentions to save money or to spend it, there seems to be general agreement that the tax savings and accelerated buying will be better in the second quarter of the year than in the first one.

War in Indo-China

A disturbing element in the general business atmosphere is the war in Indo-China and the wholly inconclusive statements of the Geneva Conference. Opinions aired by Secretary of State John Foster Dulles have left no doubt that Washington regards the situation as critical to the point where, in the last few days, the question of direct participation has been raised, including the employment of U.S. military personnel in all sorts of tasks which would support the French forces. The hydrogen bomb explosion disclosures added another element of caution to the scene, but the general consensus in financial and business quarters seems to be that the chances of outbreak of all-out war of the atomic and hydrogen variety are less than they were two years ago.

The stock market certainly seems to take an optimistic view of the contemporary scene. Prices of equities have risen to their highest level since 1929 and 1930, depending on the averages used for comparison, in a general movement which can be described only as a bull market. Freeing of exchange restrictions in Britain and Germany helped to bolster optimism. It is regarded as a step nearer convertibility of Western currencies. Foreign trade in the U.S., however felt the effect of reduced activity by lower imports and exports. But the domestic price structure, showed a remarkable degree of stability which was not known to such an extent in previous "recessions."

"Recession" is hardly the word. But that is a matter of semantics. Some call it disinflation, others un-boom, still others a dip, but the economy as a whole continues to bear up well despite all small and learned talk. To be sure, business activity has eased in recent months, as compared with 1953, but, in a good many instances, it is still higher than in 1952 which happened to be a very good year.

Consumer Financing

So far as the consumer is concerned, signs of prevailing strength are found in the ninth annual survey of the Federal Reserve Board on consumer financing. These polls have proved an accurate gauge in the past. The 1954 survey shows that, almost 70 per cent. of consumers consider their financial situation as good or better than a year ago. That happens to be a drop of 3 per cent. from early 1953, but the current figure is well above any other post-war year.

Opinions as to whether this is a good or bad time to buy goods or services are not too much at variance from a year ago. The number of families planning to buy new automobiles is smaller than a year ago, according to the Federal Reserve survey, but it is still larger than in 1951 and 1952. Current plans are consistent with new car sales at the rate of more than 5,000,000 a year. As is usual, in a period of relatively declining prices, more consumers look for lower prices and are, therefore, in no hurry to buy, according to their own statements. All told, the survey reveals strong markets for attractive products at high prices.

Business Readjustment

As mentioned above, there is a feeling that lower taxes should stimulate private purchases and this would, naturally, exert an increasing leverage on the markets for consumer and capital goods. All these trends add up to the conclusion that the business readjustment, certainly, has not got out of hand in the first place and shows no signs of so doing. Inventories are being worked off at a rapid rate. Capital goods activity promises to level out and consumer markets are holding up quite well, to be sure. There is the old American economic challenge in the air—not a novel one, by any means—how to generate a new wave of expansion. Business trends in recent weeks hold out the hope that this challenge will be met, even if it means a new inflationary wave of whatever proportions. —*All Rights Reserved.*

(Concluded from next column)

1953-54 amounts to 8.81 million tons, as against the 7.80 million tons reported in the third forecast of the previous year, which represents an increase of 13 per cent. The final forecast for 1952-53 placed the rice crop estimate at 8.15 million tons. The rise in rice production is due partly to an increase in area, from 22.18 million acres to 23.69 million acres, and partly to improvement in per-acre yield. The acreage reported in the final forecast for 1952-53 was 23.02 million.

The improvement in the rice crop has been brought about by four factors, namely, favourable weather conditions, availability of adequate supplies of water at the time of sowing, high prices of rice, and grow-more-food campaign. The bulk of the improvement in rice crop has occurred in East Bengal.

A trade agreement between Pakistan and France was signed in Karachi on 15th April, 1954. Details of the agreement are not available. It is, however, gathered that the agreement covers a period of 18 months ending June, 1955. The object of the new pact, a Pakistan Government announcement says, is to expand the trade between the two countries for their mutual benefit.

Arrangements have been completed by Pakistan for the purchase of cloth worth Rs. 4.5 lakhs from Syria, Beirut and Egypt. The cloth is expected to arrive in Pakistan next week. Among the varieties of cloth for which orders have been placed are grey shirting, striped shirting and chintz.

PAKISTAN NOTES

SUI GAS PROJECT

£2 MILLION PIPELINE ORDER PLACED WITH A BRITISH FIRM

ANOTHER important stage in the implementation of the Sui Gas Project in Pakistan has been completed with the placing of a contract with a British firm for over 350 miles of seamless pipe for the gas transmission line. The contract involves an aggregate tonnage of over 40,000 and the value exceeds £2 million. Shipments of the 16" diameter pipe, which is required for the construction of a pipeline from the natural gas field at Sui (in Baluchistan) to Karachi are expected to commence in about three weeks' time. The pipeline will commence operation some time in 1956.

The Sui gas field, it will be recalled, was discovered recently in the course of exploration for petroleum in Pakistan. The field has very rich reserves of natural gas which is to be used as fuel for industrial purposes. The Sui Gas Transmission Company was incorporated in Pakistan a few weeks ago. The shareholders of this Company include the Pakistan Industrial Development Corporation, the Commonwealth Development Finance Co., Ltd., and the Burmah Oil Company.

State Bank Branch at Khulna

A notable event in the activities of the State Bank of Pakistan is the opening of a branch at Khulna, an *important navigation* centre in East Pakistan. Khulna has recently emerged as a great business and industrial centre. With the development of Chalna anchorage, several jute companies, match factories and other industries have been established at Daulatpur. A substantial part of foreign trade is also passing through Khulna. As a result of the growing commercial importance of this region thus, the need for adequate banking facilities has been felt for some time now. This need has since been met by the opening of the new branch of the State Bank of Pakistan.

The new branch has now only two departments dealing respectively, with deposit accounts and public accounts. The former maintains current accounts of Scheduled banks, besides making available to them remittance, credit and other services as bankers' bank. The Public Accounts Department manages Government receipts and disbursements. It is also proposed to set up an exchange control department.

Five-year Plan for Sind

A Five-year Plan for Sind, it is reported, has been prepared by the Provincial Government. It will be submitted shortly to the Pakistan Government Planning Board for approval. The aggregate capital outlay of the Plan is estimated at Rs. 122 crores. The Plan is said to be a very comprehensive one covering all aspects of economic development, including agriculture, irrigation, industry, transport, community project, rehabilitation and social service.

Ganges-Kobadak Project

The Government of East Bengal has sanctioned the implementation of the first phase of the six-year Ganges-Kobadak Scheme designed to provide irrigation facilities for agriculture. The first phase covers an area of about 250,000 areas of land in the Kushtia and Jessore districts bounded on the north by the river Garai and on the south by the river Kumar. The whole of the area is to be irrigated by pumping water from the Ganges river. The outlay on the scheme is estimated at Rs. 1.65 crores. About Rs. 39 lakhs have already been spent for the preliminary survey of the area. It will be recalled that 15 F.A.O. experts toured East Bengal recently to carry out the survey work in connection with the Ganges-Kobadak Project.

The U.S. Foreign Operations Administration is reported to be involved in negotiations to assist in this project. Equipment and machinery worth Rs. 65 lakhs are expected to be provided by foreign aid schemes. The East Bengal Government has applied to the Centre for a development loan of Rs. 110 lakhs on the receipt of which the first phase of the project will be undertaken.

Pakistan Rice

The production of rice in Pakistan during the current (1953-54) season would be considerably higher than that in the previous season, if the official forecasts were to prove correct. According to the third All-Pakistan forecast, the aggregate yield of the rice (clean) crop during

(Continued in previous column)

PAY SCALES OF BANK EMPLOYEES

APPELLATE TRIBUNAL'S DECISION

THE decision of the Labour Appellate Tribunal (Banks), announced last week, modifies some provisions and confirms certain other provisions of the earlier award, known as the Sastry Award, in respect of the emoluments of those employed in banking offices in India. The Appellate Tribunal consisted of Mr. F. Jeejeebhoy (President) and two other members, Mr. D. E. Reuben and Mr. A. Dasgupta. With the announcement of the Appellate Tribunal's decision, the working conditions of the banking staff have been examined, on an all-India basis, no less than three times; the earlier tribunals, which investigated their conditions, are the Sen Tribunal and the Sastry Tribunal.

The Central Government constituted, it may be recalled, an *ad hoc* tribunal in June, 1949, with Mr. K. C. Sen as Chairman and Mr. S. P. Varma and Mr. J. N. Majumdar as members, to make an award in respect of the disputes as to the terms of the service and conditions of work between the banks and their employees. In August, 1949, the Government nominated Mr. N. Chandrasekhara Iyer, in place of Mr. S. P. Varma, whose services had ceased to be available. The Sen Tribunal's award, which was made in August, 1950, was declared void by the Supreme Court, in April, 1951, on a point concerning its composition. After an infructuous attempt at constituting another tribunal, the Government finally constituted the Sastry Tribunal in January, 1952, with Mr. S. Panchapagesha Sastry as Chairman and Mr. M. L. Tannon and Mr. V. L. D'Souza as members. Against the award of the Sastry Tribunal, published in April, 1953, both banks and the employees of banks appealed to the Appellate Tribunal. The present decision is a sequel to this appeal.

The general consideration that has weighed with the Appellate Tribunal in arriving at its decisions is that "no bank clerk should receive less than a wage which would not only provide him with the bare necessities of life but also give him at least a small measure of comfort." The Tribunal has further held that "fair wages must have priority over profits," though it has admitted that the factors which determine the quantum of "fair" wages include the "capacity of a concern to pay." The problem, according to the Tribunal, is to assess the "reasonable wage level of a bank clerk having regard, on the one hand, to the actual cost of living with adequate neutralisation and to the necessity of keeping wages in tune with wages of comparable concerns on the other."

Such, in the main, are the considerations which the Appellate Tribunal has borne in mind in its approach to the question of salaries and allowances for bank employees. In giving its decision, the Tribunal has taken over the classification of banks as well as areas, laid down by the Sastry Tribunal. The Sastry Tribunal classified India into three areas: Class I Area: Calcutta, Bombay, Madras, Delhi and Ahmedabad; Class II Area: towns and cities (other than those included in Class I) which have a population of one lakh and more; Class III Area: all other places. Again, the Tribunal divided the banks into the following four classes:

A Class: A bank with working funds of Rs. 25 crores and more; B Class: a bank with working funds of between Rs. 7½ crores and Rs. 25 crores; C Class: a bank with working funds of between Rs. 1 crore and Rs. 7½ crores; D Class: a bank with working funds of less than Rs. 1 crore. Now the wage scales and dearness allowance for the employees of different banks, as fixed by the Appellate Tribunal, are as follows:

Class "A" Banks:

Area I: Rs. 85-5-100-6-112-7-140-8-164-9-227 E.B.—9-245-10-265-15-280.

Area II: Rs. 77-4-85-5-100-6-112-7-140-8-164-9-209 E.B.—9-245-10-255.

Area III: Rs. 73-4-85-5-100-6-112-7-140-8-164-9-200 E.B.—9-245.

Class "B" Banks:

Area I: Rs. 77-4-85-5-100-6-112-7-140-8-164-9-209 E.B.—9-245-10-255.

Area II: Rs. 69-4-85-5-100-6-112-7-140-8-164-9-191 E.B.—9-236.

Area III: Rs. 66-3-69-4-85-5-100-6-112-7-140-8-164-9-182 E.B.—9-227.

Class "C" Banks:

Area I: Rs. 69-4-85-5-100-6-112-7-140-8-164-9-191 E.B.—9-236.

Area II: Rs. 63-3-69-4-85-5-100-6-112-7-140-8-164-9-173 E.B.—9-218.

Area III: Rs. 60-3-69-4-85-5-100-6-112-7-140-8-164 E.B.—9-209.

Class "D" Banks:

(Till 31st March, 1959, and as for "C" Class Banks thereafter):

Area I: Rs. 57-3-69-4-85-5-100-6-112-7-140-8-156 E.B.—8-164-9-200.

Area II: Rs. 54-3-69-4-85-5-100-6-112-7-140-8-148 E.B.—8-164-9-191.

Area III: Rs. 51-3-69-4-85-5-100-6-112-7-140 E.B.—8-164-9-182.

The combined running scale will, therefore, be as follows:

Rs. 51-54-57-60-63-66-69-73-77-81-85-90-95-100-106 - 112 - 119 - 126-133-140-148-156-164-173-182-191-200-205-218-227-236-245-255-265-280.

The scale of dearness allowance for employees in "A", "B" and "C" Class banks and in "D" Class banks is as follows:

"A", "B" and "C" Class Banks

Area	Minimum		Maximum
I ..	Rs. 50	1st slab of Rs. 100	50%
		2nd ,, ,, ...	40%
		Thereafter	35%
II ..	Rs. 45	1st slab of Rs. 100	45%
		2nd ,, ,, ...	35%
		Thereafter	30%
III ..	Rs. 40	1st slab of Rs. 100	40%
		2nd ,, ,, ...	30%
		Thereafter	25%

*Dearness Allowance for "D" Class Banks**

Area	Rate	Minimum	Maximum
I	33⅓%	Rs. 35	Rs. 70
II	33⅓%	Rs. 30	Rs. 60
III	33⅓%	Rs. 25	Rs. 40

* This scale will continue till 31st March, 1959, and thereafter, the scale will be the same as for employees in Class "C" banks.

No change has been made in respect of the scales of house rent allowance. Thus, the scales will continue to remain as follows:

Pay*	Calcutta and Bombay	Other places with population of more than 7 lakhs
(a) Upto Rs. 100 ..	Rs. 8	Rs. 6
(b) Between Rs. 100-200 ..	Rs. 12	Rs. 8
(c) More than Rs. 200 ..	Rs. 16	Rs. 12

* Pay includes basic pay, special allowance and officiating allowance.

So far as the members of the subordinate staff are concerned, the Appellate Tribunal has decided to retain the wage scales, recommended by the Sastry Award, but has increased the scale of dearness allowance for this group of employees. The new scales of dearness allowance for subordinate staff will be as follows:

Dearness Allowance

	Area I Rs. a.	Area II Rs. a.	Area III Rs. a.
Class "A" Banks ..	42 8	40 0	37 8
Class "B" Banks ..	40 0	37 8	35 0
Class "C" Banks ..	37 8	35 0	32 8

Let LLOYDS BANK look after *your* interests

Lloyds Bank Limited • Incorporated in England

As regards the subordinate staff of Class "D" banks, the scales of dearness allowance and house rent allowance, as given by the Sastry Tribunal, will remain in operation for five years from 1st April, 1954, as in the case of clerical staff, after which period the scales of the "C" Class banks will be applicable to them.

The net effect of the changes, made by the Appellate Tribunal, may be illustrated by a reference to the total emoluments (basic pay plus D.A. plus H.R.A.) which an employee in Class A bank in Area I will get now. In the first year of his service, he will get Rs. 143, as against Rs. 128 which he would have got under the Sastry Award or Rs. 129½ under the Sen Award. In his twenty-fifth year of service, he would get Rs. 414, as against Rs. 366 under the Sastry Award and Rs. 368½ under the Sen Award. If the bank is situated in Area II, an employee, in the first year of his service, will now get Rs. 122, as against Rs. 103 under the Sastry Award and Rs. 119 under the Sen Award. In his twenty-fifth year of service, he will get Rs. 351½ as against Rs. 305 under the Sastry Award and Rs. 338½ under the Sen Award. If the bank is situated in Class III area, an employee, in the first year of service, will get Rs. 113, as against Rs. 91 under the Sastry Award and Rs. 83 under the Sen Award. In his twenty-fifth year of service, he will get Rs. 326, as against Rs. 267 under the Sastry Award and Rs. 244½ under the Sen Award. The members of the subordinate staff also gain from the new award as compared to what they would have been entitled to get under the Sastry Award or the Sen Award.

The Tribunal has steered clear of the workmen's apprehension that the efficiency bar, provided in the time scale, will be utilised as a cloak to victimise workers and the employers' fear that automatic scales of pay, without any check upon efficiency, might well result in cases of indolence, indifference and inefficiency. It says: "Neither apprehension has been proved to be based on facts but both apprehensions have a latent basis." For the operation of the efficiency bar, it has, therefore, laid down certain conditions which include:

(1) The efficiency bar shall be applied very sparingly.

(2) The circumstances necessitating the proposed imposition of the bar shall be communicated to the employee, and the employee shall be given an opportunity to submit an explanation which shall be duly considered.

On the question of bonus, the Appellate Tribunal has quoted from its Full Bench decision, in a previous case, and has held that "bonus is not an *ex-gratia* payment but is a claim to an additional wage which would mature if, and only if, the concern has had a prosperous year." It has further held that it is "unrealistic" to regard bonus as a share of profits in view of the fact that bonus "has no fixed relation to the profits of a year, is so removed from the amount of gross or even the net profits and is so dependent on an 'available surplus' and thereafter subject to so many considerations." The Tribunal admits that its own efforts to discover a "relatively simple" formula for the ascertainment of bonus of banking companies have failed because of the diversity of factors in several banks. The Tribunal has, therefore, concluded that the "bonus issue of each bank will have to be taken up separately."

As regards medical aid and expenses, the Tribunal has decided that it is unnecessary to alter the figures fixed by the Sastry Tribunal. But, in order to ensure that the amounts which are small may be of real assistance, the Appellate Tribunal has decided that the "amounts fixed by the Sastry Tribunal shall be allowed to accumulate to such figures as do not exceed three times these amounts."

Finally, in an appeal to banks and their employees, the Tribunal says:

"The matters covered by the Award and by our decision are long-term arrangements. We have endeavoured to the best of our ability to supply a set of terms of employment and conditions of labour which would do justice to the employees and yet permit the banks to carry on their business successfully. We trust that we have succeeded.

"The success of a scheme of this character depends a good deal on the manner in which it is worked and we trust that with the experience of the past and the hopes of the future both parties will now settle down to a proper basis of mutual relationship in a business which requires high qualities at the top and loyalty and devotion to work of the staff.

"We trust, that the rapidly changed relationship of employer and employee will be more generally recognised, as indeed it has been recognised

(*Continued on next page*)

PROGRESS OF BANK OF BIKANER MAINTAINED

DEPOSITS AT RECORD LEVEL

AN all-round improvement in business during the past year is indicated by the audited accounts of the Bank of Bikaner Ltd. (General Manager: Mr. Satya Dev, Bikaner) for the year ended 31st December, 1953, thus maintaining the steady progress achieved by the Bank in the earlier years. Reflecting this is the rise of Rs. 51.42 lakhs in the balance-sheet total as at the end of 1953. This rise is, of course, very much smaller than that (Rs. 1.14 crores) witnessed in the previous year; nonetheless, it is satisfactory in the context of the difficult business conditions that prevailed during the year under review. The deposits of the Bank, which have been expanding year after year, show a further rise of Rs. 73.31 lakhs. This expansion has been well utilised to increase the advances by Rs. 27.56 lakhs and at the same time to strengthen the liquid assets. The investments have thus been raised by Rs. 28.56 lakhs and cash balances by Rs. 6.54 lakhs. The Bank's profit has gone up by Rs. 21,000, in refreshing contrast to the experience of many other Scheduled banks. The reserves have been strengthened sizably and the dividend is kept unchanged at 3 per cent.

The following comparative table gives an idea of the Bank's progress in the past three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950

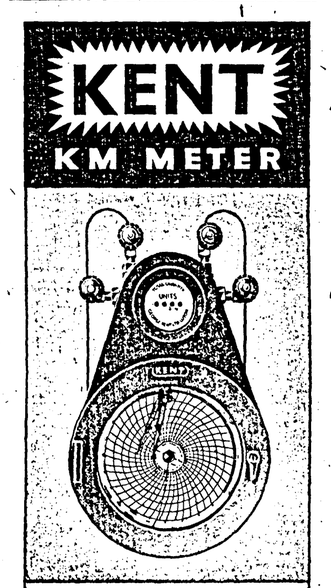
Cash	16.2	16.6	24.2	20.7

The upward trend in the Bank's total earnings noted since 1949 has been well maintained during the year under review also. This improvement has been shared by the two main sources of income. The working cost of a bank mainly consists of, as the Chairman pointed out in his address to the shareholders of the Bank at their annual general meeting held recently, interest paid on deposits and the emoluments of staff. Due to abnormal increases under both these heads of expenditure, the profits of most banks for the year under review have appreciably dropped. Though the outgo by way of interest paid and administrative expenses has been higher in the case of the Bank of Bikaner also, the rise in these has not offset the increase in earnings. Consequently, the Bank's profit has gone up from Rs. 7.47 lakhs to Rs. 7.68 lakhs. After providing Rs. 2 lakhs for taxation, as in the previous year, the Directors have increased the statutory allocation to the reserve fund under section 17 of the Banking Companies Act, 1949, from Rs. 1.50 lakhs to Rs. 1.70 lakhs, but have reduced the transfer to the general reserve fund from Rs. 2 lakhs to Rs. 1.30 lakhs. They have, on the other hand, provided Rs. 65,000 to the contingency account which received nothing in the previous year.

After the aforesaid useful addition to the statutory and general reserves, the Bank's reserves stand at Rs. 17 lakhs, as against a paid-up capital of Rs. 50 lakhs. As already pointed out, the deposits of the Bank have gone up by Rs. 71 lakhs to Rs. 11.83 crores, a record in the history of the Bank. Of these deposits, fixed deposits and 3-year cash certificates have together accounted for a rise of Rs. 54 lakhs, savings bank deposits for Rs. 16 lakhs, and current and other accounts for Rs. 1 lakh. As against a rise of Rs. 71 lakhs in deposits, advances show an increase of only Rs. 27 lakhs. Referring to the rise in advances, the Chairman said, "while demand for funds during the year under review has been moderately good, the main problem was to find avenues yielding a higher rate of income to meet the growing all-round expenditure without affecting safety adversely in any way. I have to assure you that the continued protection of our assets is uppermost in our minds at all times." To afford adequate liquidity to the increased resources, the investments have been strengthened by Rs. 28 lakhs. Cash balances also are higher by Rs. 6 lakhs. The combined total of investments and cash balances represent 128 per cent. of the demand deposits and over 60 per cent. of the total deposits.

JAIPUR BANK'S PROFIT HIGHER

A refreshing feature of the audited accounts of the Bank of Jaipur Ltd. (General Manager: Mr. S. L. Kothari, Jaipur) for the year ended 31st December, 1953, is the rise of Rs. 41,000 to Rs. 4.40 lakhs in its profit, as compared with that for the previous year. This is a creditable performance in the context of the rising cost of banking operations. With this improvement in profit, the declining trend in the Bank's profit noted since 1946 has been not only arrested but reversed. Thus, from Rs. 7.11 lakhs for 1946, the Bank's profit had dropped to a low of Rs. 3.99 lakhs for 1952. The improvement in earnings for the year under review has been due not a little to the expansion in its business rendered possible by an increase in its resources, as witness the rise of Rs. 1.45 crores in deposits as at the end of the year under review. A perceptible rise in the Bank's advances and bills business is also noted and this has enabled the Bank to offset the rise in expenses and higher outgo by way of interest paid. The dividend has been



An accurate industrial instrument for measurement by the differential pressure method, of flows of water, steam, air, gas, oil and other fluids whatever the quantity or pressure. KM meters are supplied in many combinations for indicating, recording, totalising and controlling flows, and may be fitted with a pressure recorder.

* After taking into account investments earmarked against borrowings from other banks.
† Paid out of dividend equalisation fund.

The rise in income from the two main sources of earnings has been offset, to a large extent, by the increase in interest paid and expenses. The statutory addition to the reserves under section 17 of the Banking Companies Act has been raised from Rs. 95,000 to Rs. 1 lakh, while the transfer to other reserves has been reduced from Rs. 1.40 lakhs to Rs. 1 lakh.

The most striking feature of the Bank's balance-sheet as on 31st December, 1953, is the rise of Rs. 1.45 crores in its deposits, which is shared by all classes of deposits. Thus, fixed deposits have gone up from Rs. 1.77 crores to Rs. 2.25 crores, savings bank deposits from Rs. 58.86 lakhs to Rs. 60.37 lakhs and current and other accounts from Rs. 2.80 crores to Rs. 2.75 lakhs. This break-up analysis of deposits indicates that the Bank has evinced keener interest in strengthening the least expensive class of deposits. It may be also noted that this is the first time since 1947 that the Bank's deposits have shown an upward trend. In consonance with the rise in deposits, the Bank's advances have gone up by Rs. 71.22 lakhs, investments by Rs. 22.90 lakhs and cash balances by Rs. 46.23 lakhs. Investments are shown at book value. The market value of the same at the end of the year under review was Rs. 205.51 lakhs, the depreciation being of the order of Rs. 5.05 lakhs. The combined total of investments and cash balances gives a comfortable coverage of 56.6 per cent. to total deposits.

10-YEAR NATIONAL PLAN CERTIFICATE

The Government of India has announced the issue of a new series of 10-Year Savings Certificates, called the National Plan Certificates as part of the National Plan Loan. These certificates will be sold from 10th May, 1954, onwards and so long as the National Plan Loan remains open, at all Post Offices throughout the country conducting savings banks business.

The new issue is intended to provide facility for the small investor, particularly the investor in rural areas and will be sold in only two denominations, namely, Rs. 25 and Rs. 50. The maximum amount that an individual can invest will be limited to Rs. 1,000. At the end of 10 years from the date of issue, a certificate of Rs. 25 will be redeemed for Rs. 36-4 and a certificate of Rs. 50 for Rs. 72-8. If held to maturity, these certificates will earn simple interest at 4½ per cent. per annum. While the holder can, if he so desires, encash this certificate any time after a period of one year after issue, the yield from time to time has been so arranged as to offer an inducement to the holders to retain these certificates till maturity. For the small investor this issue has also the advantage that the interest on it is free of income-tax. The Government of India trusts that the new issue will enable the humblest citizen of the country to make his contribution towards the National Plan Loan.

The National Plan Certificates are only a temporary issue and are not intended to replace the 7-year or 12-year National Savings Certificates which will continue to be issued as before.

(*Concluded from previous page*)

by many of the banks, so that their approach to the problems of dealing with the staff is inspired by a sympathetic understanding of their circumstances.

"On the other hand, we do not disguise our strong objection to indiscipline which in the long run will hurt labour most of all, and we trust that the staff will now realise that they have reasonable terms which are a long-term measure and to which they must adjust themselves for some years to come. Employees must give a fair day's work for a fair day's wage. To do less would be to invite disaster either by removal for inefficiency or by a general lowering of wages. This is the writing on the wall for all to see in the context of our country's present economic situation."

COTTON TEXTILE MACHINERY INDUSTRY

CLAIM FOR CONTINUANCE OF PROTECTION

AFTER enjoying protection for four years and five months, the Indian cotton textile machinery industry is now before the Tariff Commission with a plea for continuance of protection. A public enquiry into this question was held by the Commission on Saturday last. It was nearly eight years ago—in July, 1946 to be precise—that this industry's claim for protection was first referred to the erstwhile Tariff Board. As, however, a reasonable estimate of cost could not be made, on account of the very low level of domestic output, the Board suggested that a fresh enquiry could be held in 1948. The suggestion was accepted by the Government. In 1948, an enquiry was held and the Board, in its report submitted in October, 1949, recommended protection for the industry, which then consisted of ring frames, spinning frames, spindles and plain looms, for a period of three years ended March, 1953, by an imposition of 10 per cent. *ad valorem* import duty. The Government accepted the recommendation and announced protection with effect from 19th December, 1949. In order that the import duty on complete ring frames might be fully effective, the Government extended the application of that duty to all parts of ring frames including fluted and tin rollers.

The question of granting substantive protection to fluted and tin rollers, independently of the protection to complete ring frames, was investigated by the Board in 1950-51. The investigation revealed that the duty of 10½ per cent. *ad valorem* (inclusive of 5 per cent. surcharge levied under the Finance Act of 1951) on the two items afforded adequate protection to the domestic industry. It was accordingly suggested that the import duty on the two items should remain in the protected category so long as complete ring frames continued to enjoy protection and should have the same duration as the duty on complete spinning frames, that is, upto the end of March, 1953. The Government accepted this suggestion. Protection to the industry was first extended upto 31st December, 1953, and subsequently, on the recommendation of the Tariff Commission, for a further period of one year.

Progress of the Industry

By the end of this year, the Indian cotton textile machinery industry will have thus grown under the shelter of protection for full five years, not to speak of the adventitious aid from import restrictions on balance of payments considerations and, since January, 1953, from a complete ban on imports of spinning ring frames, spindles, looms, fluted rollers and tin rollers. It was most appropriate, therefore, that Mr. M. D. Bhatt, Chairman of the Tariff Commission, should have laid stress on the need for carefully reviewing the progress made by the industry and examining its various problems, in order to determine whether continuance of protection beyond 31st December, 1954 was necessary.

The review of the progress of the cotton textile machinery industry, as made by Mr. Bhatt, reveals that the number of units engaged in the manufacture of protected items has risen, from 10 at the time of the previous enquiry to 14 at present, of which 6 are in Bombay, 2 each in Saurashtra, Madras and West Bengal and 1 each in Madhya Bharat and Mysore. The total capital invested in the industry now stands at Rs. 5 crores, as against Rs. 2.8 crores in 1949, and the number of workers employed at 4,700, as against 3,600 four years before. The capacity of the industry and the extent to which it is being utilised is indicated below:

	Capacity		Production			
	1949	At present	1949	1951	1952	1953
Ring frames ..	..	756	213	807	803	209
Spindles ..	175,000	876,000	..	394,412	349,733	351,059
Spinning rings ..	..	540,000	..	273,854	419,658	601,422
Looms ..	9,900	9,040	1,938	2,576	1,933	1,922
		152,000				
Fluted rollers	..	plus 4,800 lines	..	86,576	106,057	147,186
Tin rollers ..	..	4,000	..	1,945	2,124	1,127

It will be evident from the above figures that, barring spinning rings, the capacity of the units manufacturing other items of textile machinery is not being utilised fully. In fact, the rate of output falls considerably short of the capacity. Mr. Bhatt did well to call upon the representatives of the producers, importers and consumers of textile machinery to help in the assessment of the various factors which are effectively, or are likely to affect, production in 1954 and in the coming years, particularly the extent to which restrictions on installation of automatic looms impinge on production in the looms section of the industry. He also did well to make, in this connection, a pointed reference to the manufacture of almost all the components of textile machinery as ancillary industries. "This feature of the organisation of the industry," to quote him, "seems to be bound up with the volume of offtake of the production in the future, but we would like to know the extent to which purchases of parts are being made, or can be made, from indigenous sources."

Scope of the Enquiry

Incidentally, it may be noted that, besides plain looms, India is producing, at present, automatic, semi-automatic and drop box looms. As these are not included in the protected category, Mr. Bhatt said that the question whether all these types of looms should now be brought within the scope of the present enquiry had to be examined. There are also the following other points which require to be discussed and to which Mr. Bhatt drew attention.

(1) Whether plain silk looms, which are interchangeable with plain cotton looms should be treated in the same manner as plain looms for the purpose of protection;

(2) whether doubling ring frames or twist ring frames or such of their parts as cannot be used for spinning ring frames, spinning rings or spindles should be treated in the same manner for the purpose of assessing the protective duty as spinning rings, looms and spindles; and

(3) whether all types of spindles, such as slubbing, roving and loom spindles, should be included within the scope of the enquiry or whether the enquiry should be confined only to certain types of spindles.

The different sections of the cotton textile machinery industry have placed varying emphasis on different forms of protection and assistance. Describing these, Mr. Bhatt said:

"Some producers have asked for continuance of protection for another five years and also for an increase in the rate of protective duty. Strong emphasis has been laid by several producers on the continuance, and even intensification, of import restrictions until such time as the indigenous industry is able to compete with the foreign manufacturers. Assistance is sought in respect of sufficient supply of required quality and grade of pig iron and also in respect of the supply of non-rationalised sections of steel required by the industry. The producers of ring frames and looms have also asked for the removal of restrictions laid down by Government regarding installation of new ring frames and looms in the cotton mills. The producers have asked, too, for better railway transport facilities for the movement of raw materials, stores and finished products. Further, it has been suggested that concessional freight rates should be allowed to the manufacturers of cotton textile machinery for carrying raw materials, consumable stores and finished products."

There are three essential criteria for determining the question of protection for the cotton textile machinery industry, as that for any other industry, namely, domestic demand, quality and price. As regards demand, the available estimates show wide variations. The estimated demand for ring frames, for instance, varies from 500 to 1,375 per annum and that for looms from 2,500 to as much as 20,000 per annum. Unless therefore, accurate and agreed estimates of demand—current and future—are available, the Commission will be in a difficult position to determine the basis for protection.

Quality

Similarly, there are varying opinions regarding the quality of the indigenous products. These, in the words of Mr. Bhatt, are as follows:

"The producers have generally claimed that they have effected improvement in the quality of their products, which are now as good as the imported products. They claim to have installed the necessary testing equipment for raw materials and finished products and to have introduced other modern equipment in their plants. The Development Wing of the Ministry of Commerce and Industry have stated that the quality of the indigenous products is believed to be satisfactory and that no complaint from the users in respect of the protected categories of machinery have been received by them during the past two years. The views of the cotton textile mills and the associations of millowners vary from complete satisfaction to considerable complaint, particularly in respect of the quality of the individual items, while the importers think that the quality of the main components, such as fluted rollers, spindles and rings of indigenous manufacture, leaves much scope for improvement and that the U.K. manufactures of spinning machinery can offer a large number of variable specifications as against the limited range available in the country.

"The deficiencies specifically pointed out in the indigenous *ring frames* are that creel guide rods, in short lengths, become loosened after a short run; tin roller guards are not provided; there is no locking arrangement for gearing covers; underclearer springs are of too soft material and do not allow proper removal of bonda waste taken up by the rollers; starting handle screw does not allow quick movement of belt from fast to loose pulley and vice versa and no brake pulley is provided; arbour springs of the loose bosses inside the 'Casablanca' apron are in many cases too tight; copping mechanism is not provided with a cover; tubes in one shot lubrication have to be frequently renewed, etc.

"In respect of indigenous *spindles*, one consumer has complained that, at spindle speeds in excess of 9,500 r.p.m., there was marked frame vibration.

"About *spinning rings*, it is stated that, since their manufacture has commenced only recently in this country, definite opinion about their quality cannot be expressed but each ring should be previously subjected to Rockwell Hardness Test and examined for service condition.

"As regards the quality of indigenous *looms*, it is mentioned that they are much heavier than the imported ones; their component parts are not properly tuned; the casting used is not as good as in the imported loom; the component parts are not standardised and not even properly machined and looms do not run as smoothly as imported looms.

"In respect of *fluted rollers*, the main deficiencies pointed out are lack of uniformity in quality, pronounced roughness and want of parallelisation in the flutes; lack of accuracy in the dimensions of the boss adjacent to the roller neck so that correct fit to the cradle in the case of 'Casablanca' drafting cannot be obtained; lack of precision in the cut of saw teeth; slight eccentricity in roller joints when put together; fast wearing out of flutes as well as of the rollers, etc.

"The indigenous *tin rollers*, are stated to be heavier than the imported ones and to consume more power; soldering is found to give way to joints and at high speeds they are stated to suffer vibration and to go out of alignment."

An assessment of the quantum of protection necessarily involves the comparison of the fair ex-works prices of the indigenous products with the c.i.f. prices and the landed cost of imported products. Allied to this question are the issues relating to the selling prices of indigenous and imported cotton textile machinery and the selling arrangements made by the indigenous producers. All these, we are told, will be examined by the Tariff Commission.

Raw Materials

The Tariff Commission has also to consider the question how far production of the component raw materials and consumable stores, which are now being imported, can be developed within the country. Drawing attention to the importance of this question, Mr. Bhatt gave the following facts.

Most of the principal raw materials and consumable stores are available from indigenous sources, but some of them will have to be imported for some time to come. Pig iron is indigenously available, but the manufacturers complain that they are not allotted their full requirements of graded pig iron, that is, grades I and II and that, whatever quantity of graded pig iron they are allotted, they are not able to obtain it. They have, therefore, to use off-grade pig iron which not only does not give satisfactory results, but raises cost, because of the ferro-alloys which have necessarily to be used with it. Another difficulty put forward by the manufacturers relates to the supply of the required sizes of bright flats for making the serrated steel for warp stop motions. One producer has also complained about the non-availability from indigenous sources of non-rationalised sections of steel required for the manufacture of fluted rollers. As regards the principal raw materials and consumable stores which are being imported, namely, spindle steel, steel for fluted rollers, free cutting steel, bright drawn flats and bars, cold rolled tubes, aluminium tubes, nickel, alloy steel bars, celeron sheets for gears, different types of springs required for looms, ring temples, weft forks and grates, grinding wheels and segments in special sizes, heat treatment chemicals, lubricants, alloy tool, special steels, etc., we are informed that the industry has no difficulty in meeting its requirements. Either these articles are put on the Open General Licence or the licences for their imports are being granted freely except in the case of grinding wheels and segments. Springs, certain types of ball bearings, chains required for frames and temples required for looms have also to be imported at present. It has been suggested that it would be desirable for an industry like the cotton textile machinery industry to obtain its raw materials and consumable stores and such of the components as it purchases from outside, from indigenous sources as far as possible.

The foregoing account serves to emphasise the wide and varied aspects of the cotton textile machinery industry which the Tariff Commission will have to examine dispassionately before determining the question of continuing protection beyond 31st December, 1954. This industry, as readers are aware, plays a vital and important role in the industrial economy of India not only as one of the very few industries producing capital equipment but also as an adjunct to the well established cotton textile industry. It has already made considerable advance and has definite achievements to its credit. Fully acknowledging this aspect, Mr. Bhatt opined that the industry should, in the coming years, be able to consolidate its position firmly, by further improving the quality of its products and by reducing their prices, and thereby bringing within the range of realisation "the aim of complete national self-sufficiency in the matter of capital equipment required by the cotton textile industry."

TEXMACO (GWALIOR) LTD.

In an article, entitled "Development of Textile Industry—A Case for Allowing Expansion in Looms," contributed by Mr. C. V. Narahari Rao, published in our issue dated 17th April, 1954, (vide page 728), a reference was made by the author to the productive capacity of Texmaco (Gwalior) Ltd. According to the Company, there is a slight inaccuracy in the author's account. Thus, in a letter address to us, the Company observes as follows:
