"The writer has very rightly and effectively put his argument against the present policy of the Government not to allow expansion in looms. This policy is undoubtedly not in the best interests of the country. There are, however, certain inaccuracies in the article regarding the productive capacity of the Indian loom manufacturing concerns. The productive capacity of Texmaco (Gwalior) Ltd. has been given as 2,700 looms a year. This was so upto the year 1949 when the new plant of this Factory had not come into operation. Since then, however, a completely new workshop has been put with the latest and most modern foundry and workshop machinery suitable for manufacturing all types of weaving appliances such as plain looms, automatic looms, underpick looms, semi-automatic looms, dobbies, drop boxes, jacquards, etc., and the full capacity of the Factory is 6,000 looms a year. The plain looms manufactured by this Company have already been working all over India with the utmost efficiency and are in no way inferior to any of the imported looms. The latest production of our automatic looms, a large installation of which has been made in one of the leading mills in Northern India, also compares extremely favourably with the imported automatic looms. With the full capacity of Texmaco (Gwalior) Ltd., it will, therefore, be seen that it will not be necessary to allow any import of any type of looms, plain or automatic. Indian manufacturers are prepared to give a guarantee of their machinery working equally efficiently as the foreign machines."

JOINT CORPORATION OF ART SILK MILLS

Commenting on the suggestion for the establishment of a joint corporation of all the art silk mills which Mr. Murarji J. Vaidya, Vice-Chairman of the Silk and Art Silk Mills Association, Bombay, put forward some time ago, we observed—*vide* page 154 of *Commerce* dated 30th January, 1954—that, in the absence of more details, it was difficult to say whether the scheme would be implemented with success. Mr. Vaidya has since worked out the details of the scheme. The scheme envisages the setting up of a corporation as a private limited company with an authorised capital of Rs. 1 crore, divided into 40,000 shares of Rs. 1,000 each. Of this, the issued and subscribed capital will be Rs. 25 lakhs. The number of shareholders should not ultimately exceed 50, but, in the beginning, it will be limited only to 20. The basic qualification for membership is the possession of at least 50 looms, complete with dyeing and finishing equipment. Those who wish to be members of this corporation should be capable of producing reliable and quality goods which have a good reputation in the market. The aggregate contribution to the capital will be equal for all the member-mills joining the scheme, namely, Rs. 1.25 lakhs.

The objects of the Corporation are: (1) to organise the joint purchase of yarn, (2) to evolve a system of allocation of qualities of art silk fabrics to be manufactured by the mills with a view to avoiding duplication and/or over-production of fabrics of particular qualities, and (3) to organise joint-marketing of the finished products.

The above scheme is expected to confer great advantages on the art silk mills. It is, for instance, calculated that the profits accruing from joint purchase of art silk yarn will bring in sufficient amount to enable the members to subscribe to the capital of the company out of these profits alone. Here are the figures cited by Mr. Vaidya in support of this conclusion:

On the basis of, say, about 5,000 looms for 20 members who will join the group, the yarn quota will be Rs. 77,90,000 at the rate of Rs. 1,558 per loom for January-June and July-December, 1953 periods. The 3 per cent. *plus* 1½ per cent. rebate or discounts to be received from Messrs. Italviscosa will provide Rs. 3,50,550. Therefore, an additional sum of about Rs. 1,50,000 will have to be found by the 20 members, which would mean a contribution of Rs. 7,500 only by every member mill from their own resources for making up the initial capital of Rs. 5,00,000. The production of the 5,000 looms at the rate of Rs. 60 per double shift per day would amount to at least Rs. 9,00,00,000 per annum. The raw material, that is, yarn required for this production would be at least Rs. 5 crores. Further, purchases such as stores, etc., will amount to Rs. 2 crores. Therefore, if, on the purchases amounting to Rs. 7 crores, a saving of 10 per cent. is made on these purchases, it will amount to Rs. 70,00,000 per annum. Then, again, on the sales side, even if a saving of 2 per cent. is made, or a benefit of price to the extent is made, it will amount to Rs. 18,00,000 a year. It will thus be seen that, in a year's time, the joint group can easily collect Rs. 88,00,000 out of its products.

The organisation of joint marketing of the finished product is also expected to be of a great advantage. It will, it is claimed, result in a considerable saving in selling expenses by ensuring direct contact between the mill and the genuine merchants. Further, it will go a long way towards maintaining stability in prices of art silk fabrics by avoiding any unhealthy competition among the mills.

ART SILK YARN IMPORT POLICY

Art silk yarn interests met at a conference in Bombay on Friday last week, under the auspices of the Federation of Indian Chambers of Commerce and Industry, to discuss the Government's import policy for art silk yarn. The conference assumes special significance, inasmuch as it has been held on the eve of the Import Advisory Council meeting scheduled to be held in New Delhi on Saturday next. The conference has not yet issued any statement to the Press regarding the deliberations or the decisions taken thereat. But from such information as is available, we gather that the art silk consuming interests urged the Government to liberalise imports of art silk yarn to the extent necessary for fully meeting the domestic requirements, besides ensuring a reserve of 5 million lbs. The plea is based chiefly on two grounds. First, the rate of production of art silk yarn is only 13 million lbs. per annum, which is too inadequate to meet the domestic requirements, estimated at 40 million lbs. Secondly, with the grant of the drawback of import duty on art silk yarn, exports of piecegoods will receive great stimulus, which means enlarged demand for yarn.

The art silk yarn interests are reported to have also urged the authorities to reimpose restrictions on imports of bemberg yarn, since this would be produced in abundant quantities in India itself shortly. Further, they supported the Government's policy of granting import quotas for 120 and 150 denier yarns to the extent of 25 per cent. and 5 per cent., respectively, of the face value of licences. It is pointed out that, as these yarns are being produced by the indigenous units also, the quota allotted will be sufficient to meet the needs of domestic weavers.

Meanwhile, the negotiations for renewing the bulk purchase agreement of art silk yarn beyond 30th April, 1954, between the National Rayon Corporation and the Silk and Art Silk Mills Association, Bombay, have so far yielded no results. Under the previous agreement, it may be noted, the Corporation was every month selling 400,000 lbs. of yarn, out of the monthly output of 625,000 lbs., on this basis. The chief factor responsible for the failure is, as is only expected, the price issue. The Corporation is willing to sell yarn of 150 deniers and 120 deniers at Rs. 3-10 and Rs. 4 per lb., respectively, including ½ per cent. discount and payment of sales tax. The prices quoted come to Rs. 3-8 and Rs. 3-14 per lb., which are only As. 2 less than the price it received on the previous arrangement. The current market rates, it may be noted here, are Rs. 3-12 per 150 deniers and Rs. 4-4 for 120 deniers. This offer, however, has not been accepted by the Association, as it wants yarn at lower rates. Its contention is that the imported cost of the corresponding counts of yarn is considerably lower than those that prevailed at the time of the last agreement and that, therefore, the National Rayon Corporation, too, should make a corresponding reduction in the prices of its yarns.

TEXTILE WORKERS' CLAIM FOR MORE WAGES

ALLEGED JAPANESE "PIRACY" OF LANCASHIRE CLOTH DESIGNS

(By A Special Correspondent)

MANCHESTER, *27th April*

MANCHESTER LETTER

AN industry-wide wage claim affecting the 290,000 operatives in Lancashire cotton spinning and weaving mills is likely to be initiated soon. The Central Committee of the Weavers' Amalgamation decided unanimously in Manchester last week-end to accept a resolution from Nelson calling for a "substantial" wage increase for more than 100,000 workers in the cotton and rayon weaving industry.

Mr. Lewis Wright, General Secretary of the Amalgamation, said that after the resolution was endorsed by the Amalgamation's General Council, the procedure would be for consultations with the Northern Counties' Textile Trades' Federation and also with the two main spinning unions, the Cardroom Amalgamation and the Operative Spinners' Amalgamation.

Any application would follow the pattern of the last application when the unions put forward a uniform demand, said Mr. Wright. The last wage advance negotiated for cotton workers was one of five per cent. last August. Employers estimated that it would add £4,000,000 a year to the industry's wages bill.

It has been known for some time that the union leaders have been assessing the wages position in the light of the cotton industry's improved trading situation and the recent financial results of the leading companies.

Cotton Supplies

Another stage in the freeing of cotton supplies from the restrictions which have bounded purchasing for more than a decade has been reached. The Cotton Act having become law, even contracting-in spinners are no longer tied to the Raw Cotton Commission and can now obtain their requirements as and where they please.

In the circumstances, the Commission has made its position clear by describing its plans for future importation and the extent of its current stocks. But it intends, at first, to retain its supplies for the benefit of contracting-in users until the end of June, after which any buyer can purchase from the organisation.

The latest stock figure of cotton held in this country is 199,000 tons at the end of last year. The Commission itself holds sufficient stocks of United States cotton to satisfy normal requirements of contractors-in to the end of October. Brazilian cotton is also available to the same extent and no further purchases are to be made. East African varieties from Uganda (other than B.P. 52) are available until March next year and no further supplies will be bought.

Contracts for Pakistan cotton can be made for delivery up to the end of the first quarter of 1955 and allocations will shortly be made for Nigerian cotton for delivery to the end of February next. Stocks of sundry other American type growths held by the Commission are now very low and no more will be purchased.

Spinners who are still using the Commission's cover scheme have been given alternative arrangements for the transitional period of 3½ months while the futures market and the cover scheme operate at the same time. They will be able to use either the futures market or the cover scheme at will on the understanding that any outstanding positions at the end of August will be closed out at the cover prices ruling on 1st September.

Details of the arrangements regarding stocks of Egyptian-type cotton are not yet to hand, but are promised shortly. Users of long-staple growths are understandably anxious as to their future prospects and little has happened in the past few weeks to reduce their anxiety.

Copying Designs

At the suggestion of Mr. Peter Thorneycroft, President of the Board of Trade, three leading organisations in the British textile industry—the Cotton Board, Manchester Chamber of Commerce and the British Rayon and Synthetic Fibres' Federation—have met and agreed on concerted action for dealing with commercial malpractices by Japanese traders, it was disclosed last week.

Following complaints of a resurgence of Japanese copying of Lancashire export designs since the recent Anglo-Japanese Payments Agreement, more than 1,000 textile firms were asked in a letter to provide as much detailed information as possible, producing actual cuttings of Lancashire designs and Japanese copies. A spokesman of the Manchester Chamber of Commerce said that in recent weeks some 20 complaints had been lodged with the Chamber about Japanese "piracy" of Lancashire designs.

In addition to taking all possible steps to deal with cases of design infringement, the three organisations also intended to enquire into other forms of commercial malpractices, including pricing methods and "dumping" of goods. Under the arrangements now made it was believed that the President of the Board of Trade would receive fully-documented information from the trade on the extent of Japanese copying.

Private Cotton Buying

Moves to take advantage of the freer trading facilities in raw cotton which will be available next month when the Liverpool Cotton Market reopens are being taken by leading Lancashire spinning mill groups.

Following the registration of L.C.C. (Liverpool) Ltd., the Atherton amalgamation of Combined English Mills (Spinners) Ltd. has formed a new company to enable it to qualify for membership of the Liverpool Cotton Association. This is Combined English Mills (Liverpool) Ltd., the object of which is "to enter into and guarantee the performance of contracts for the purchase and sale of cotton and other fibrous and non-fibrous substances for future delivery, and to subscribe for and acquire membership of the Liverpool Cotton Association Ltd. and Cotton Clearing Association of Liverpool Ltd." Nominal capital of the new company is £10,000 in £1 shares. Its directors are Sir John Reynolds, Bart., Chairman of Combined English Mills (Spinners), Mr. Ernest Hirst, Managing Director and Mr. J. T Porritt and Mr. P. J. D. Toosey, Directors of the group.

Anglo-Pakistan Trade

A delegation of Pakistan textile experts is expected in Lancashire next month for talks which may lead to an expansion of trade in cotton and cotton goods between Pakistan and this country. Their proposed visit follows an invitation by the Lancashire-Pakistan Cotton Commission, set up by the Cotton Board with the aim of studying ways of fostering trade between the cotton industries of the two countries.

Lancashire hopes to persuade Pakistan to take a greater volume of cotton piecegoods from its mills and Pakistan textile leaders would like Lancashire spinners to purchase more raw cotton from them. The 12-man delegation is expected to reach Manchester towards the end of May.

A slight improvement occurred in exports of cotton cloth last month, their value being £10,565,260 compared with £10,550,744 in March last year. The progress made, however, is still severely restricted and gives no indication of any substantial expansion in the near future.

Cloth shipments for the month of March were 63,774,000 square yards, valued at £7,965,927, as compared with 56,283,000 square yards, worth £7,136,820 a year ago. Yarn exports amounted to 3,459,857 lb., valued at £1,436,370, as against 3,114,500 lb., worth £1,241,552, in March, 1953.

The situation at the end of the first quarter of the year is that shipments are slightly higher than at the corresponding stage twelve months ago but exports of cloth remain below the levels reached in both the third and fourth quarters last year. The following table shows recent quarterly comparisons:—

		Cloth Sq. yds.	Yarn Lbs.
1953 1st quarter		173,407,000	9,870,281
2nd "		161,004,000	9,942,300
3rd "		182,020,000	9,087,300
4th "		183,925,000	12,388,400
1954 1st quarter		176,756,000	11,174,884

Leading buyers have so far been:—Cloth: Australia, 30,231,000 square yards; South Africa, 23,133,000 square yards; and Nigeria 17,079,000 square yards. Yarn: Australia, 1,726,887 lb.; Germany, 1,046,140 lb., and Irish Republic, 942,842 lb.

Imports of foreign grey cloth in the quarter were more than double the quantity arriving in the same period last year, being 40,825,000 square yards, as against 19,144,000 square yards. Yarn imports exceeded 3,000,000 lb. as against less than 275,000 lb. in the first three months of 1953.

CANARA MUTUAL ASSURANCE COMPANY, LIMITED

UNHEALTHY COMPETITION FROM STATE-SPONSORED INSURERS DEPLORED

MR. P. PADMANABHA RAO'S SPEECH

THAT mutualisation of insurance companies provides a happy mean between nationalisation, on the one hand, and private ownership, on the other, was the view expressed by Mr. P. Padmanabha Rao, Director of the Canara Mutual Assurance Company, Ltd., who, in the absence of Mr. B. Vaikunta Baliga, Chairman of the Company, presided over the Annual General Meeting of the Company held at Udipi, on Friday, 30th April, 1954. He deplored that the Government-sponsored insurance departments should compete with Indian insurers and add to their difficulties, especially when they (Indian insurers) were already facing keen competition from foreign insurers. Referring to the fifth valuation of the Company, he revealed that, despite valuation on a stringent basis, it disclosed a surplus which made it possible for the management to declare a sizable bonus at the rate of Rs. 18 per Rs. 1,000 per year for whole life policies and Rs. 15 per Rs. 1,000 per year for endowment policies.

The following is the text of Mr. Padmanabha Rao's speech:

"FRIENDS,

"The year 1953 began with the hope of seeing some new approach towards world peace and ended with that hope only because no tangible progress was made in that direction. Instead, the power blocks, viz., the U.S.A. and the U.S.S.R. have been acquiring new recruits into their camps and new weapons in their armoury to attain their own ends. In this manner the cold war has been spreading and enveloping in its fold an ever-increasing area of this planet. But for the shining statesmanship displayed by India in maintaining peace in this sub-continent of ours and holding it forth before the world also for its adoption, the future picture of the world would have still remained dismal and gloomy. In this regard we really feel proud of our present leaders.

"In the economic sphere, 1953 was a year of relative stability and increased production. Our Company too had the same experience and during the year under review proposals of the aggregate value of Rs. 59,47,500 were received. Out of these, as also out of the proposals pending on hand at the beginning of the year, a business of Rs. 50,04,400 resulted in new policies. The remaining proposals were either rejected or accepted on terms not agreeable to the proponents or were awaiting completion at the close of the year. The premium income and income from interest and other sources amounted to Rs. 17,93,848 and Rs. 3,34,081-4-9 respectively. The life fund at the close of the year stood at Rs. 93,80,044-2-4 in addition to the investment reserve fund of Rs. 3,79,400. The net addition to the life fund during the year was Rs. 11,31,474-11-11 after transferring Rs. 6,000 to the investment reserve fund for meeting the fluctuation in the value of the Government securities and other investments.

"The progress of the life insurance fund from 1942 to 1953 is shown below:

Valuation on	*Life fund* Rs.	*Percentage Increase*
31-12-1942	5,24,878	—
31-12-1946	23,42,141	346
31-12-1950	61,91,192	1,079
31-12-1953	93,80,044	1,687

"So much about the balance-sheet that is before you for your adoption.

Valuation Report

"News of vital import to the policyholders is the brilliant result disclosed by the Company's fifth valuation as on 31st December, 1953. The surplus disclosed at this valuation is sufficient to declare a bonus of Rs. 18 and Rs. 15 per thousand per year for whole life and endowment respectively under all profit participating policies. The basis of this valuation has been retained at the same stringent level as in 1950, viz., 2½ per cent. interest with a view to keeping intact the strong reserve position of the Company. Still the result is excellent and our policyholders can really feel proud of it. During the valuation period of 1951 to 1953 all insurance companies had to suffer heavy depreciation on their investments due to change in the Bank rate, but our Company suffered comparatively less. Besides, the mortality experience of the Company for this period was very favourable, the interest yield being better and the expense ratio remaining low. All these factors contributed to the substantial surplus and the Consulting Actuary has rightly made the following observations.

"'The valuation results are excellent. It is a matter of pride for a company of your size to be in a position to declare substantially high bonuses without relaxing the strong reserve position which you have been maintaining for the past many years. At the present time when many companies are busy reducing the premium scales in the light of favourable working conditions it is very opportune and gratifying that you will be passing on the past benefits to your existing policyholders by way of enhanced bonus. The new premium rates that you have already put into force would be helpful in cheapening the cost of insurance and thus attracting more and more policyholders.'

"This much about the latest valuation.

One Among Privileged Few

"Glancing through the *Indian Insurance Year Book*, 1953 (a publication of the Government of India), we find that there are 167 life insurance companies in India, out of which 165 had undergone valuation. Of these 165, only 112 companies had shown a surplus. Of these 112 companies, only 73 companies were able to declare a bonus and out of these 73, only 10 companies with a life business in force of Rs. 3 crores and above were able to declare bonus on a stringent valuation basis of 2½ per cent. interest or less and yet out of these 10 companies only a handful could claim to have paid a bonus for every year since inception and amongst these privileged few, the Canara Mutual is one.

"Coming to the question of nationalisation of insurance, today one feels that this idea is obsolete. Recently in Norway, a well advanced European country, which was thinking in terms of nationalisation, mutualisation was recommended by the Royal Commission appointed to investigate the future of life insurance in that country. What we repeatedly recommended from year to year at these meetings, viz., mutualisation, has come to stay in this country as also elsewhere, as aforesaid. One insurance company in South India has already mutualised itself and shortly one of the biggest proprietory companies in India might get mutualised. Thereafter, this movement will gather momentum and many more will be mutualised. Mutualisation has come to stay, because it strikes a healthy balance between nationalisation on the one side and private ownership on the other.

Unhealthy Competition

"Then, again, there is the problem of State and Central Governments entering into unhealthy competition with the Indian insurers. In this connection, I have to emphasise the supreme importance of our appealing to and persuading the said Governments to stand by the Indian insurers by closing down their Postal and State insurance departments. At a time when Indian insurers are facing very keen competition from foreign insurers under conditions which are very favourable to the foreigners, these attempts of the State and Central Governments to further increase the difficulties of the Indian insurers are really deplorable. Governments of highly advanced and insurance-minded countries like the U.K. and the U.S.A. have failed in their attempts to popularise State insurance, in spite of its being cheaper than private insurance. Therefore the Government of a comparatively less insurance-minded country like India or its States cannot so easily popularise State insurance. Experimenting in and subsidising such schemes at the expense of the taxpayer is not only going to be a strain on the State revenues but also contribute to the growth of unemployment by depriving regular insurance agents of their dues and jobs.

Selection of Agents

"Selection of insurance agents is by far an important aspect of our business. The better the selection, the better will be the business and the morale of the insurance world as such. It is also likely that the total annual output of Indian insurers will go up, if care is taken by them to select only quality salesmen. As selection standards are raised, the double purpose of building up public goodwill and removing the ill-will caused by the less competent agents in the past will be served very well. Today the total new business produced by Indian insurers is slowly going down from year to year compared with that produced by foreign insurers. One of the main reasons for this is that the foreign insurers select a definitely better class of salesmen than Indian insurers. Another important reason for this fall in the total of the Indian insurers' new business is the fast diminishing or vanishing of the spirit of *swadeshi* among Indians. With the advent of political freedom, many of our countrymen have begun to forget the need for nurturing the spirit of *swadeshi*. Political independence does not imply economic independence and until a nation becomes economically free, it will not be a really free nation. So our first duty today is to build the economic freedom of our country and that can be done to a certain extent by increasingly patronising Indian insurers. Today Indian insurers stand on a par with foreign insurers, if not excel them. Therefore, it is quite essential that Indians should patronise indigenous insurers only.

"During the last official year, the mutual insurance companies in India through their Association, of which the Managing Director of this Company, Mr. T. R. A. Pai, was the President for two consecutive years, have represented to the Taxation Enquiry Commission set up by the Government of India, various reasons for exempting mutual insurers from income-tax on the same basis as the co-operative insurers. In countries like the U.K., the U.S.A., and Canada, mutual insurers are exempt from income-tax for the reason that the members forming these companies carry on their business among themselves and so no profit can arise in their operation. But, strange enough, in India this protection is denied to mutual insurers and so it has become necessary to convince and persuade our Government to desist from taxing the surplus of mutual insurance companies. Let us hope these efforts will bear fruit in due course.

Future of the Company

"Finally, I have to point out that the future of our Company is very bright because of its incorporation as a mutual company, its excellent bonus record and its efficient and able management under the capable stewardship of Mr. T. R. A. Pai, the Managing Director of the Company. Before I conclude let me thank you all, the policyholders of the Company, whose number has been growing from year to year. I feel very happy to point out to you that every new policyholder of the Company is making it more and more broad-based. The reduced rates of premium and the increased rates of bonus have made Canara Mutual policies cheaper and profitable. Therefore, please recommend this Company to your circle of friends.

"Let me congratulate the Managing Director, Mr. T. R. A. Pai, whose tactful and honest efforts have resulted in excellent bonus figures, etc., and won the best of encomiums for the Company in the Indian insurance world. Our thanks are also due to the Chief Agents, viz., The Commercial Corporation of India, Ltd., and the field force for their enthusiastic and splendid work. The Company's achievements and progressive developments reported here could not have been realised without the loyal support and competent service of our staff personnel. To them I convey our sincere appreciation."

Emphasising the importance of the agency system in selling life assurance, the Rt. Hon. Winthrop W. Aldrich, American Ambassador in the U.K., observed, in the course of his recent speech at the Insurance Institute of London, as follows:

"The agency system is one of the things which American firms adopted from you in Britain and for which they have long been grateful. A trained agent, they feel, is the most effective means of reaching the public. For that reason, a great deal of time and effort is devoted to agent training. Both intensive and extensive programmes for training have been developed by the companies singly and by the industry collectively. Many companies have special schools and special courses for the instruction of both their agents and their supervisory personnel. One result of this intensive training is that the agent becomes professionally-minded, a fact which contributes to greatly reduced turnover. But more important is his greater ability to serve the policyholder. All the companies use other channels of information to reach the public—advertising, press releases, publications—but the agent remains the most effective point of contact."

INTERNATIONAL SUGAR SITUATION

F.A.O. ON LONG-TERM PROSPECTS

SINCE the International Sugar Agreement came into force four months ago—on 1st January to be precise—not much has been heard about its actual working. It is, therefore, not possible to say anything definite as to what it has done to bring about stability in the world sugar markets. But the recent behaviour of these markets reveals that the downward trend in prices witnessed towards the closing months of last year has somewhat abated. In fact, prices have lately shown a slight improvement. Cuban sugar, for instance, is now quoted at 3.37 cents per pound (F.A.S.), as against 3.30 cents at the end of December, 1953. But, as compared with the price prevailing in May, 1953, the present price is lower by 0.27 cent per pound. In 1951, it will be recalled, the price was as high as 5.67 cents per lb. This, of course, cannot be taken for purposes of comparison, inasmuch as it relates to a period which was marked by abnormal conditions in the world sugar markets following the Korean War boom.

It is true that the share of the "free" market sugar (supplied mostly by the low-cost producers) in the world sugar trade and production is only a fraction, being only 5 million tons out of the annual world exports of 12 million tons and production of 38 million tons. Nevertheless, the changes in the supply of and demand for sugar in this market have wide repercussions on the trend of world prices generally. Stability in world sugar prices, therefore, depends largely on the conditions in the "free" market. It is precisely for this consideration that the actual working of the International Sugar Agreement will be watched with interest. In this connection, the remarks made by the U.N. Food and Agricultural Organisation (F.A.O.) is pertinent. Commenting on the long-term prospects for sugar, in its recent report, *The State of Food and Agriculture*, 1953, the F.A.O. observes:

"Although some expansion of North American imports seems probable by 1956-57, projected increases in production may limit any increase in European import requirements. On the export side, the restrictions on production in Cuba are outweighed by projected increases in other Latin American countries and the Far East. Although sugar consumption is increasing, a continuation of present marketing difficulties seems likely, unless the situation is stabilised by the Sugar Agreement."

Sugar is one of the commodities which is expected to record an improvement in output by 1955-56 as compared with 1952-53. Thus, the aggregate world output of sugar (raw) in 1955-56 is estimated at 42.8 million metric tons—a record figure—as against 36.0 million tons in 1952-53 and the pre-war average of 27.9 million tons. How this anticipated increase in sugar output will be shared by the principal sugar-producing areas is indicated in the following statement:

(In million metric tons)

	1934-38 Average	1948-50 Average	1952-53 Provisional	1956-57 Estimate
Latin America ..	7.2	12.2	12.4	15.8
Far East (excluding China) ..	6.6	5.3	6.8	7.9
North-Western and Southern Europe ..	4.0	4.8	5.5	6.2
North America ..	2.8	3.0	3.0	3.8
Africa	1.0	1.3	1.4	1.7
Oceania	1.1	1.1	1.1	1.4
Near East	0.2	0.4	0.5	0.6
Other areas	5.0	4.8	4.8	6.4
World total	27.9	33.1	36.0	42.8
Per capita production (in kilograms) ..	16.4	17.1	17.9	16.9

It will be evident from the above figures that all the areas are expected to account for a rise in sugar output. The rise is particularly marked in "other areas." These estimates, however, are not forecasts made by the F.A.O. They merely represent what the Governments of the sugar-producing countries have planned to do or what is expected to happen, given normal weather conditions. Some of the plans may have to be modified if circumstances warrant. The actual production may fall short of the 1956-57 estimates or exceed them. In this connection, the F.A.O. has made the following interesting observations:

"These production targets, however, are likely to be considerably modified. The expansion of production in Europe, greatly stimulated by good weather in 1953-54, may be deterred by the increasing availability of cheaper cane sugar from non-dollar sources; the targets of some countries in this area have, in fact, already been reduced from their original levels. Eastern Europe's probable surplus may be largely absorbed by the U.S.S.R. where the very high production target seems unlikely to be reached, though these two areas have between them a total export quota of nearly a million tons under the new International Sugar Agreement. As a result of this Agreement, some production programme will probably be scaled down, as participating exporters have agreed to adjust their production in accordance with domestic consumption, permitted exports and a specified level of stocks."

Be that as it may, the rise of 19 per cent. in the world sugar output anticipated for 1955-56 is not expected to be accompanied by any commensurate expansion in demand. The quantity of sugar to be imported by the "net importers" in 1956-57 is estimated at not more than 8.3 million tons, as against 8.0 million tons in 1948-52. Consequently, the supplies available for exporters are expected to be substantially larger, being 10.6 million tons, as against 8.4 million tons in 1948-52. The table below indicates the anticipated trend of world trade in sugar in 1956-57, as compared with the period 1948-52 and the pre-war years:

(In million metric tons)

	1934-38 Average	1948-52 Average	1956-57 Estimate
Net exporters—			
Latin America ..	4.7	7.4	7.5
Far East (excluding China) ..	1.5	..	1.1
Oceania	0.6	0.4	0.7
Other countries ..	0.7	0.6	1.3
Total ..	7.4	8.4	10.6
Net importers—			
North America	4.0	4.5	5.1
North-Western and Southern Europe	2.6	2.7	2.6
Other countries ..	0.6	0.8	0.6
Total ..	7.2	8.0	8.3

Commenting on the world trade in sugar, the F.A.O. says:

"Production in North America (including Hawaii) is not expected to increase as sharply as in other regions and import requirements seem likely to rise by up to 0.7 million tons over the average post-war level. On the other hand, the projected expansion in North Western and Southern Europe, the other major importing region, would, if achieved, leave import needs at little more than their present level, even if the United Kingdom regains its pre-war consumption after the end of rationing. Net import requirements of all regions in 1956-57 are likely to be somewhat less than 9 million tons. On the other hand, if all the production targets are realised, more than 11 million tons may be available for inter-regional export. The limitation of Cuban production is largely offset by projected expansion elsewhere in Latin America. Australian and South African exports are expected to expand considerably, and the production estimates for the Far East imply a substantial recovery of the region's pre-war level of exports. Eastern Europe may be able to export as much as a million tons."

The one conclusion that emerges from the foregoing account is that, if the estimates for 1956-57 were to be realised, there would be a more abundant supply of sugar than at present. This conclusion must, however, be heavily qualified. For much will depend on the general economic conditions, as well as on weather. Much will also depend on the extent to which efficiency of production increases in the coming years. The F.A.O. points out that, unless market demand and prices are favourable, the farmers—and often Governments—have little incentive for further investment, while, in North America and N. W. Europe, limitations of demand are already retarding agricultural development. In view of these, the F.A.O. advocates a close watch on the supply and demand situation in each region and preparation of frequent outlook reports for the information of those responsible for planning production. It also wants collection of precise information on changes in demand in response to price movements. All these point to the heavy responsibility that devolves on the International Sugar Council, the body which actually administers the International Sugar Agreement.

COAL STATISTICS FOR 1953

EXPORTS RECORD SHARP FALL

THE latest available statistics relating to coal in the year 1953 disclose a slight fall in raisings and despatches, as compared with those in the previous year. Thus, raisings in 1953 were 35.8 million tons, as against 36.2 million tons in 1952 and despatches 30.7 million tons, as against 31.1 million tons. Production in Bengal and Bihar collieries showed a slight decline, because of the ceiling on the output of metallurgical coal upto grade II. Although total despatches of coal during 1953 were slightly smaller than in the previous year, internal supplies revealed, on the whole, some improvement. There was ample movement capacity "down country" from the collieries. An increase in despatches of soft coke and brick-burning coal, in particular, was recorded. Coal supplies to certain areas, however, continued to be unsatisfactory, because of limitations on rail capacity beyond Waltair, Katni and Moghul Sarai. The stocks of coal at colliery pitheads at the end of 1952 were higher at 3,193,653 tons, as against 2,976,253 tons at the end of 1952.

The slight fall in the overall despatches of coal was chiefly due to a sharp drop in exports. The volume of exports in 1953 was 1.99 million tons, as compared with 3.30 millions in 1952. The decline, despite the abolition of surcharge on coal exports to Pakistan in March, 1953, and subsequently on exports of coal to all other destinations in May, 1953, is, indeed, disquieting. One of the reasons for the decline in exports during 1953 was the disappearance of abnormal conditions in 1952 which led to increased exports. Further, during 1953, there was increased production of coal in Europe and severe competition from South Africa. Besides, Australia, China and Formosa emerged as competitors in foreign markets.

The following table shows the exports to some selected countries during 1953, as compared with those in 1952:

(In tons)

	1953	1952
Pakistan	764,833*	1,143,875
Burma	255,766	200,069
Hongkong	88,145	214,031
Singapore	45,345	123,650
Australia	—	205,846
Japan	429,793	765,767
Egypt	—	30,543
Ceylon	211,208	277,833
Aden	—	41,750
United Kingdom	—	36,954

*Approximate.

Thus, it is clear that, on the export front, the coal industry suffered a setback to the tune of more than a million tons. The decline in exports to Pakistan was due, to a considerable extent, to the withdrawal by the Government of Pakistan of nearly 500 wagons on the Indo-Pakistan route. It may be noted, in this connection, that under the Indo-Pakistan Trade Agreement, which was concluded last year, it was expected that Pakistan would buy 81,000 tons of Indian coal a month. Actual exports from October, 1953, to February, 1954, however, were much less, being a little short of 55,000 tons a month.

It will be noted from the above table that some of the countries which had imported coal from India in 1952 did not take anything in 1953. The more notable among these were Australia, Aden and the U.K. Even Japan from which much was expected imported much less than in 1952.

It is difficult to forecast the trend of events in the current year, that is, 1954. The output and despatches depend on three important factors, namely, (1) the pace of increase in internal demand for coal, (2) the capacity of transport for movement of coal, and (3) the demand from overseas countries. Present indications are that neither internal demand nor the transport capacity is likely to record any sharp rise during 1954. So far as exports are concerned, Pakistan, the biggest importer of Indian coal, has turned out to be an unreliable market. Even the new arrangement, effective from the 1st of this month, under which Pakistan will buy coal from India on an open tender system, instead of on a Government-to-Government basis, is not expected to result in any substantial increase in exports to Pakistan. In regard to exports to other countries also, it is doubtful whether the steady increases noted in the past few months would be maintained, though in February, 1954,

JUTE DELEGATION TO UNITED STATES

MARKET CONDITIONS TO BE STUDIED

THE decision of the Indian Jute Mills' Association to send a delegation to the U.S. and Canada will be welcomed by the jute industry and the trade. The delegation, which will consist of Mr. J. G. Walton, Deputy Chairman, Mr. D. P. Goenka, Vice-Chairman, and Mr. M. P. Birla, President of the Federation of Indian Chambers of Commerce, Calcutta, will study the present position of jute goods in the U.S. market in the light of current economic trends and particularly the competition which the goods face from other jute manufacturing countries and from substitute packaging materials.

The delegation proposes to make wide contacts with representative organisations and consumers in the U.S. It will also attend the summer meeting of the Textile Bag Manufacturers' Association at Hot Springs and will have discussions with other trading interests in New York. Again, it will visit some of the main consuming areas, notably New Orleans and Houston in the south, Los Angeles and San Francisco in the west and St. Louis in the midwest. Towards the end of the trip, the delegation proposes to visit Montreal to discuss prospects of burlap in the Canadian market. While in the U.S., the delegation will examine the results of the public relations campaign which has been in force during the last 18 months and will also consider the possibility of establishing continuous research in the U.S. into new industrial uses for jute goods. On its way back to India it will visit the U.K. and discuss the latest developments in trade and industry and mutual problems in this important market.

Substitutes

This delegation is the second of its kind to be sent to the U.S. in recent years, the first one being a Goodwill Mission in 1952. The importance of this trip will be evident from the fact that since the war, cotton and paper bags have made serious inroads into the markets which have for long been served almost entirely by Indian jute goods. Besides, there is stiff competition from Continental jute mills. So keen was the competition last year from the Continental manufacturers and from substitutes for jute goods that India's share of American imports fell from 82.3 per cent. in 1952 to 77.9 per cent. in 1953, although American consumption was maintained, at 825,000,000 yards. The total U.S. hessian imports from India amounted to 599,800,000 yards in 1953, as compared with 720,400,000 yards in 1952. This decline in Indian exports in the face of the reduction in export duty, first in 1952 and then in 1953, is indeed disquieting. More so is the report that Japan has recently begun to sell jute goods of excellent quality at low prices.

The failure of exports to reach a more satisfactory level is all the more disturbing, because the prices of hessian and sacking goods have all along been held at reasonable levels. Indeed, the price level during the first five months of 1953 was the lowest since 1946. It is, therefore, dangerous to be complacent. There is urgent need not only to explore the causes for the failure of demand last year to react to cheap supplies, but also to discover new fields of consumption.

A significant fact to be noted in this connection is that, by reason of the enormous advantages which jute goods, especially burlap bags, score over their substitutes, the delegation should find little difficulty in bringing conviction to the consumers of the U.S. of the superiority of burlap over paper bags. In fact, burlap bags are, in many ways, superior to any other kind of packing material. What is needed is, therefore, to publicise this essential fact and to induce the U.S. importers, as well as the manufacturers and dealers, to increase their efforts in various consuming fields to regain the markets which have gone over to paper and other bags during the last few years.

Mere publicity about the volume and utility of jute goods, however, is not enough. For the ultimate strength of the Indian jute mill industry lies in its ability to sell goods in foreign markets at rates which, while yielding a modest profit, would also be sufficiently low in order to enable the goods to compete effectively with bulk handling, foreign-made jute goods and substitute packaging materials. This demands toning up of the working of the jute industry to the pitch of the highest possible efficiency. This is dependent in the long run on three factors, namely, (1) raw jute supplies and the manner in which they are marketed, (2) modernisation of mill equipment, and (3) the whole range of labour policy. If raw jute is not available at reasonable prices, little can be achieved by mere modernisation of equipment. The cost of labour is an important factor which determines the price of the manufactured product. Hence the need for higher productivity.

JUTE MILLS CENSUS

A report on the Census of Jute Manufacturing Industry, recently released by the Directorate of Industrial Statistics, gives useful data on production, capital outlay, cost of raw materials and the number of employees of jute mills in India during 1951. The census was compiled out of returns received from 105 jute factories employing 20 or more persons and using power. The capital outlay of the 105 establishments aggregated to Rs. 77,77,44,327, of which fixed capital accounted for Rs. 28,56,76,595, and working capital Rs. 49,20,67,732. The number of workers employed was 271,662 and of other employees 15,393—the former group receiving Rs. 22,30,83,494 as wages and the latter Rs. 3,10,66,403 as salaries. The output of jute manufactures in 1951 was 889,411 tons, valued at Rs. 2,12,42,38,487. The cost of raw materials consumed was Rs. 1,54,81,32,487, of which raw jute alone accounted for 9,37,446 tons, valued at Rs. 1,46,50,45,658.

U.P. PLAN FOR SEED MULTIPLICATION

The Jute Development Department in Uttar Pradesh has decided to build up a stock of 1,500 maunds of seeds by multiplying the improved strains of *C. Capsularis* (white jute) obtained from the Jute Agricultural Research Institute and the West Bengal Directorate of Agriculture. The mechanised farms under the State Government as well as some private farms have been selected for the purpose of multiplication. It is proposed to bring 415 acres of land under the seed multiplication plan, which is expected to yield 1,500 maunds of improved seeds for the next year's sowing.

RAW JUTE ARRIVALS

Imports of raw jute into Calcutta and mill stations during February, 1954, amounted to 21,63,000 maunds, which were 3,24,000 maunds lower than the previous month's arrivals.

From Indian sources came 16,01,000 maunds, a decrease of 2,73,000 from 18,74,000 maunds in January, while only 5,62,000 maunds were imported from Pakistan as compared with 6,13,000 maunds in January. During February, 1953, imports from India and Pakistan were estimated at 16,03,000 maunds and 3,94,000 maunds.

Aggregate imports of raw jute during July-February, 1953-54, amounted 1,88,04,000 maunds, of which 1,34,01,000 maunds were of Indian, and 54,03,000 maunds of Pakistani origin. In the corresponding period of the previous season (1952-53), total arrivals were 1,87,55,000 maunds of which Pakistan accounted for 51,06,000 maunds, the remainder having come from Indian sources.

U.K. JUTE INDUSTRY

The Government of the U.K. was closely watching the needs of the jute industry, said Lord Viscount Woolton, Minister of Materials, in the House of Lords the other day, when questioned about the policy for decontrol. Reiterating the Government's intention to continue public trading in imported jute goods until safeguarding measures for the industry could be introduced, Lord Woolton emphasised that this course might "take some time." Lord Barnby suggested that the present policy amounted to a substantial subsidy to the jute industry at the expense of the Exchequer. Lord Woolton disagreed with the contention that the Ottawa agreement would prevent country from putting any duty on manufactured goods from within the Commonwealth and expressed the hope that the Exchequer would not have to make any payments as a result of present conditions in the jute industry.

SWEDISH JUTE IMPORTS

Sweden's jute imports in January, 1954, aggregated 847,912 kilos, valued at 1,053,174 crowns. This compares with 464,659 kilos, worth 587,184 crowns in the previous month. Details of country-wise imports in January, 1954, were as follows: West Germany 5,390 kilos worth Kr. 3,450; U.K. 900 kilos worth Kr. 1,174; Pakistan 751,353 kilos worth 925,529; and India 90,269 kilos worth Kr. 123,021.

AGRICULTURAL INCOME-TAX ON PLANTATIONS

U.P.A.S.I.'S REPRESENTATION

A DEPUTATION on behalf of the United Planters Association of South India waited last week on the Chief Minister of Madras, the Finance Minister and the Revenue Minister of the State and made representations to them in respect of the proposed levy of agricultural income-tax on some of the plantation products. The deputation consisted of Messrs. A. Atkinson, C. M. Kothari, S. Simnonds, N. B. Athrey, S. Subbu and P. S. Subramaniam.

The proposal to levy agricultural income-tax on plantation products like tea, coffee, rubber and cardamom was included in the Madras Budget for 1954-55 submitted to the State legislature on 26th February last. The details of the measure have not yet been announced, but the State Finance Minister disclosed in his Budget speech that the tax will be levied more or less on the basis of the Act already worked in Travancore-Cochin State. A Bill embodying the proposal is expected to come up before the forthcoming session of the Madras legislature.

The deputation on behalf of the U.P.A.S.I. represented to the Ministers that the proposed tax would hit the plantation industry, especially coffee and tea, very hard. It was also submitted that the proposed levy at the rate obtaining in Travancore-Cochin would be very high, having regard to conditions in plantations in the Madras State at the present juncture. The total revenue receipts from this tax, in the opinion of the U.P.A.S.I. would be far in excess of what was anticipated by the Government. It was estimated to bring about Rs. 10 to Rs. 12 lakhs. But, according to the deputationists, the income from this source would go up to at least Rs. 1 crore. In case, however, the Government insisted on having an agricultural income-tax in place of the existing levy, it was submitted, the Government should make the levy at lower rates.

It is reported that, in the course of the discussion that ensued, a number of suggestions, including increasing the present revenue assessment, were put forward. The deputationists are reported to have stated that they would submit information regarding these suggestions after examination. They further requested the Government to defer the proposed levy of agricultural income-tax until the Taxation Enquiry Commission and the Sub-Committee appointed by the Central Government to enquire into the financial condition of plantations had completed their enquiry and submitted their reports.

The proposal to levy agricultural income-tax in Madras was not altogether unexpected. For the Subramaniam Committee had recommended more than two years ago the levy of agricultural income-tax. It is, therefore, felt, in some quarters, that it was as overdue. But what is painfully surprising is that the levy comes on top of many other burdens already cast on plantations in recent years under the Minimum Wages, Plantation Labour and Provident Fund Acts. Furthermore, in the case of the coffee industry, in particular, the levy of agricultural income-tax will not only prove burdensome but will be a source of litigation. For it was recently reported that the income-tax officers in some districts of Madras and Mysore served notices to coffee growers asking them to state why a portion of their income should not be taxed on the ground that it is derived by industrial processing. If the coffee growers in some of the districts of Madras are assessed income-tax on a portion of their income, can these growers be asked to pay agricultural income-tax also on that portion of their income which had already borne income-tax? Be that as it may, in view of the fact that the entire question is being examined in great detail by the Taxation Enquiry Commission, the U.P.A.S.I.'s request to the Madras Government to stay its hand till the Commission's findings are made known is a reasonable one.

SALE OF RUBBER TO RUSSIA

The export of rubber from the U.K. and Singapore to the Soviet bloc has been freely allowed without any restriction on the quantity from Monday this week. The relaxation does not apply, however, to exports to Communist China. There was no ban on export of rubber to Russia, but a limit was placed some months after the outbreak of the Korean war. The extent to which such exports were restricted was never officially disclosed. The ceiling on export was placed in order to ensure that Russia should be allowed to acquire enough rubber for normal business requirements, but not sufficient to enable the building of a military stockpile.

AUTOMOBILE INDUSTRY IN INDIA

DETAILS OF MANUFACTURING PROGRAMME

THE Government of India has given its approval for the manufacturing programmes submitted by the various automobile units for a period of three years commencing from 1954. It will be recalled that the Government of India had accepted the recommendation of the Tariff Commission on 31st May, 1953, to the effect that the demand for vehicles in the country should be concentrated on the firms which have manufacturing programmes. As a result of this, General Motors and Ford Motors, which did not intend to embark on the manufacture of automobiles in India, had to wind-up their business.

When the Tariff Commission took up the case for protection and assistance to the automobile industry, there were five firms which had manufacturing programmes. These were: (1) Hindustan Motors Ltd., (2) Premier Automobiles Ltd., (3) Standard Motor Products of India Ltd., (4) Automobile Products of India Ltd., and (5) Ashok Motors. Hindustan Motors had already made substantial progress in the manufacture of essential components of "Hindustan 14." None of the programmes, however, included either the manufacture of baby cars or heavy trucks.

After its decision to grant protection and assistance to the automobile industry, the Government of India called upon the automobile firms to submit their detailed programmes, with a view to testing the technical soundness and feasibility of these programmes. Meanwhile, the Tata Locomotive and Engineering Company, Ltd., in combination with Daimler-Benz of Germany, submitted a programme for the manufacture of diesel trucks. All these programmes have been approved.

Vital Components

The programmes, as approved, provide for the manufacture of vital components like engines, transmission, front and rear axles, etc. The details of the manufacturing programme of three of the aforesaid manufacturers are as follows:

(1) *The Hindustan Motors, Ltd.*—(a) Studebaker—(big car), (b) Hindustan 14—(light car), and (c) Studebaker—(medium truck).

(2) *The Premier Automobiles Ltd.*—(a) Dodge, De Soto, Plymouth—(big car) and (b) Dodge, De Soto, Fargo—(medium truck).

(3) *The Standard Motor Products of India, Ltd.*—Standard Vanguard—(medium car).

The Hindustan Motors claim to have already attained, in the case of "Hindustan 14," an indigenous content of 65 per cent. by value. They propose to import only 50 per cent. of value of knocked down components for the Studebaker cars and trucks at the end of the three-year period. Similarly, in the case of the Premier Automobiles and the Standard Motors, the imported components will, at the end of the three-year period, be of the order of 50 per cent. of the c.i.f. value or less.

Apart from these vehicles, the Government has provided for the manufacture of baby cars and heavy duty vehicles. While generally accepting the recommendations of the Tariff Commission regarding the types of vehicles to be manufactured and the firms which should undertake such manufacture, the Government did not consider that the manufacture of baby cars need be confined to one manufacturer. Accordingly, it called for programmes for the manufacture of baby cars by September, 1953.

The following are the three schemes for the manufacture of baby cars which have been approved by the Government as being technically sound and feasible:

(1) Morris Minor—The Hindustan Motors Ltd.;

(2) Fiat 1100—The Premier Automobiles Ltd.; and

(3) Standard 8—The Standard Motor Products of India Ltd.

As these Programmes were submitted by manufacturers, who had approved programmes, the Government accepted all the programmes and permitted them to proceed with their implementation. These programmes are also approved for a period of three years commencing from 1954. At the end of 1954, the percentage of imported components in all these cases is expected to be of the order of 50 per cent.

So far as the manufacture of heavy duty vehicles is concerned, the position as explained by the Government in its Press note is as follows:

"The programmes for the manufacture of heavy duty diesel vehicles were received by Government from different firms. The heavy duty vehicles should have an engine of 90-120 b.h.p., tyre size 9.00-20 and a gross vehicle weight of approximately 10 tons (22,000 lbs.). After scrutinising the schemes received, the Government approved the programme submitted by the Ashok Motors, Limited, for the manufacture of Leyland 'Comet' and at a later stage the Leyland 'Tiger Cub' in collaboration with the Leyland Motors of the U.K. As the volume of demand for this type of vehicle is estimated to be less than 1,000 per annum, Government did not consider it desirable to permit more than one unit to undertake its manufacture since it would not be economical to do so. The Leyland Motors of the U.K. will be investing a considerable amount of capital in the project. According to the programme, within a period of five years, this firm will be manufacturing most of the essential components. At the end of the fifth year, the indigenous content of this truck will be about 53 per cent. of the c.i.f. price."

It will be noted from the account given so far that the schedule of work for four out of the five manufacturers mentioned at the outset has been laid down. As for the fifth, namely, the Automobile Products of India, this company had not taken any steps towards the implementation of their programme. It has, therefore, had to close down its operations.

Light Cars

With the exit of the Automobile Products of India from the field of manufacture, a certain gap was created for light cars and medium trucks. With the approval of the three programmes for baby cars, this gap in the field of cars was filled to a certain extent. The Tata Locomotive and Engineering Co., Ltd., Jamshedpur, had, in the meanwhile, submitted a programme for the manufacture of Tata Mercedes-Benz diesel trucks in collaboration with the Daimler-Benz of Germany. These trucks can develop a maximum b.h.p. of 108 and have a gross vehicle weight ranging from 14,771 to 18,750 lbs. They usually use tyres of 7.5-20 or 8.2-20 sizes. On scrutiny, the programme, it is stated, was found to be extremely satisfactory and the technical collaboration contemplated by the TELCO was with a German firm of good reputation, the technical experience of which was quite welcome to this country. As there was already a gap in this field created by the withdrawal of the Automobile Products of India, Ltd., the scheme submitted by TELCO was, it is stated, approved by the Government. This scheme contemplates the manufacture of all the components of the vehicle within a period of four years. At the end of the fourth year, they will not be importing any components.

The only type of vehicle for which no manufacturing programme has been approved so far relates to jeep. Mahindra and Mahindra Ltd. has been assembling jeeps in the country from components imported in completely knocked down condition. With a view to ensuring plentiful supplies of jeep type vehicles at all times, the Government is now freely licensing their import in completely knocked down packs.

The Tariff Commission had recommended that a special officer possessing high qualifications in automobile engineering and practical experience should be appointed to watch and report on the progress of the industry, the implementation of the manufacturing programmes and the quality of the products of the industry. A Development Officer of the Development Wing, Ministry of Commerce and Industry, was specially looking after the work connected with the automobile industry till recently. Now that the programmes have all been finalised and approved, Government has selected and appointed a Special Officer to watch the implementation of the programmes approved by the Government and to take such steps as may be necessary from time to time towards the development of this industry.

OIL PROSPECTING IN WESTERN AUSTRALIA

Following the recent discovery of oil in Western Australia, there has been increased activity in prospecting in the State. Western Australian Petroleum Pty. Ltd. plans to sink 11 additional wells in the north-west area this year, and more than £A2,735,000 will be spent on the operations. Additional rigs and drilling equipment will arrive in Australia in the first half of this year. One of the rigs will be used to drill six developmental wells to 3,000 feet on the structure at Rough Range, location of the original strike. The second rig will drill three exploratory wells on known geological structures in the area between Rough Rand and Carnarvon, the port at the mouth of the Gascoyne River.

KOSI PROJECT

INDO-NEPALESE AGREEMENT

DETAILS of the recent agreement between the Governments of India and Nepal on the construction of the Kosi Project and other relevant matters are now available. The agreement provides for a number of concessions by India to Nepal in return for the provision by Nepal of all facilities to construct a barrage at Hauman Nagar and other appurtenant works in East Nepal. The agreement is a commendable example of co-operation between the two sovereign States for their mutual advantage.

The Government of Nepal, will receive, under the agreement, royalty in respect of power generated and utilised in the Indian Union; no royalty will, however, be paid on power sold to Nepal. It will also be entitled to receive payment of royalties in respect of stone, gravel, and ballast obtained from the territory of Nepal and used in the construction and future maintenance of the barrage and other connected works at rates to be settled by agreement. Further, Nepal will be entitled to use upto 50 per cent. of the power generated at the barrage site power house on payment of such tariffs as may be fixed for the sale of power by the Union of India, in consultation with the Government of Nepal. Acquisition of land in Nepal for the purpose of constructing the Kosi barrage and replacement of displaced persons will be done at India's expense. While the Indian Government will be the owner of all lands acquired, the rights of sovereignty and the territorial jurisdiction of the Government of Nepal in respect of such lands shall continue to remain unimpaired by such transfer. Besides, all navigation rights in the Kosi River in Nepal will rest with its Government. So also, all fishing rights in the Kosi River in Nepal, except within two miles of the barrage. The Government of India will pay compensation to the Government of Nepal (a) for the loss of land revenue as at the time of acquisition in respect of the area acquired and, (b) to whomsoever it may be due, for the lands, houses and other immovable property acquired for the project and transferred to the Union. The Nepal Government has also been given an assurance that, in respect of employment of personnel and contractors, priority will be given to Nepalese to the extent that they are available and suitable in the opinion of the Government of India for the construction of the project. The Government of India, however, will be at liberty to import labour of all classes to the extent necessary.

The agreement assures Indian officers all facilities required "before, during and after the construction of the project." They can undertake such investigations as may be necessary. These include aerial and ground surveys, hydraulic, hydrometric, hydrological and geological surveys. The Government of Nepal will also authorise and give necessary facilities for the investigation of storage or detention dams on the Kosi and its tributaries, soil conservation measures, such as check dams, afforestation, etc., required for a complete solution of the problems presented by the Kosi River. The Government of India has the right to regulate all the supplies of water in the Kosi River at the barrage site and to generate power at the same site for the purpose of the project; this will not, however, prejudice the Nepal Government's right to draw for irrigation or any other purpose in respect of such supplies of water as may be required from time to time. India can construct roadways, tramways, railways, ropeways, etc., required for the construction of project. Subject to the territorial jurisdiction of the Government, the ownership and control of the metalled roads, tramways and railways shall vest in India. The Nepal Government shall be responsible for the maintenance of law and order in project areas within the territory of Nepal.

Differences of opinion between the two States in regard to the implication or/and working of the agreement will be referred to arbitration by two persons—one to be appointed by Nepal and the other by India—whose opinion will be binding. In the event of disagreement between the arbitrators, the differences are to be settled by an umpire to be jointly appointed by the two arbitrators.

A supplementary agreement provides for the establishment of a co-ordination committee, which will consist of three representatives from each country to be nominated by the respective Governments. The Chairman of the committee will be a Minister of the Government of Nepal and the Administrator of the Project will be the Secretary. The committee will consider matters of common interest, including land acquisition, rehabilitation of displaced persons, maintenance of law and order, soil conservation measures and such other items as may be referred to the committee for consideration by the Government of either Nepal or India from time to time.

SWEDEN'S FIRST ATOMIC REACTOR

Sweden's first atomic reactor is nearing completion and will start operating this summer. The entire plant has been blasted down into the granite rock to a depth of 120 feet, and its rock roof has a thickness of 40-50 feet. The safeguard against radiation contains 1,500 tons of iron ore. So-called reflector walls containing 60 tons of graphite surround the heavy-water tank. The reactor contains three tons of uranium and the aluminium tank holds seven tons of heavy water, bought from Norway at a cost of Kr. 7,000,000 (£483,000). The plant is immediately connected with the subterranean laboratory of the Academy of Engineering Sciences in Stockholm's Science City. Some 20 persons will be employed at the reactor proper. Atomenergi has hitherto received grants of Kr. 32,000,000 (£2,207,000) for completing it.

NEW PRODUCTS AND PROCESSES

Detection of Neutrino

THE neutrino, the atomic "ghost particle" needed for years to preserve sub-atomic balance, has at last been detected, according to reports submitted recently to a meeting of the American Physical Society in New York. The search for this, it is stated, has so far been one of the most difficult searches for atomic particles ever undertaken. To find evidence for the neutrino, a particle so small that it has practically no mass and no electrical charge, the physicists used a scintillation counter—a great tank with chemical liquids that would promote the reaction in which neutrinos play such a small but balancing part. This counter was exposed to the intense bombardment of radiation from one of the Atomic Energy Commission's giant atomic reactors at Los Alamos. The physical authentication of the neutrino came about during tests that consisted of taking readings when the reactor was producing an immense radiation blast and when it was shut down. Because the readings were significantly higher when the reactor was running and neutrinos abounded, the scientists are confident that, in this way, they have "seen" the elusive neutrino.

Vinyl Plastics

Vinyl plastics, which were first used in the United States about 10 years ago to make unbreakable phonograph records, are now finding a steadily increasing number of new applications. Some of the fast-growing new uses are in linoleum floor coverings and in cheaper oilcloth made of paper or felt coated with the plastic. Vinyl-plastic garden hose is now seen in every American hardware store. There is an increasing production of vinyl-plastic piping for use in home plumbing and in chemical plants, where it is of special value because it resists corrosive acids. Another new use for vinyl plastics is to coat fibres used in weaving rugs and carpets. The plastic coating is invisible but helps the fabric wear longer and resist dirt.

Structure of Cotton Fibre

A new approach to the problem of ascertaining the structure or constitution of the individual fibres of cotton has been developed at the Raman Research Institute in Bangalore, founded by the distinguished Indian scientist and Nobel Prize winner for Physics, Mr. C. V. Raman. The technique of the new method is the use of light diffracted by a strongly-illuminated fibre to reveal its inner structure. The diffracted cations record themselves on a photographic film held in the path of the illuminating pencil of light. The diffraction pattern of cotton in particular, is highly characteristic of this material and reveals its inner fibre. It is stated that tte wide range of applicability and the essential simplicity of the new technique, taken in conjunction with the fact that it yields information of a kind not otherwise accessible, holds out promise of its becoming a useful tool of study and research in this field.

Plane Communications

Transistors are being used to make a new microphone that improves the clarity of radio communication between airplane pilots and airport control towers, according to the Remler Company, a United States electronics firm. Transistors are the tiny devices, no bigger than the eraser on a lead pencil, that can do much the same work as electron tubes. They are now being used in hearing aids. The new microphone, its manufacturers say, makes voice messages more intelligible when planes are flying in "instrument weather." Frequently, due to control-tower clatter and outside noises from aircraft motors, the range of present microphones is inadequate and talking with a pilot is difficult. The new transistor microphones keeps down the extraneous noises and more than triples the range, it is claimed.

Hydraulic Bumper Jacks

Hydraulic bumper jacks for passenger cars are being manufactured by J. de Koning Az., Oostdijk, 4, Oud-Beyerland (the Netherlands). The owner-driver in particular will find it a great advantage that he can raise or lower his car with a few strokes of the lifting mechanism, without soiling his hands or clothes.

The base, which is of sturdy construction, is profiled, so that it can be safely used on any road surface.

A couple of aluminium stopblocks, which are included in the supply, prevent the car from moving forward or backward.

A fork-shaped attachment to be used with the jack can be supplied for the various European types of car which can be jacked up under the chassis. In that case it is necessary to state make and model of the car.

Carbo-hydrates From Lichens

Carbo-hydrates have been prepared from Indian lichens by research workers of the Department of Chemistry, Delhi University. By using Indian lichens as the source, they have obtained pure lichenin and iso-lichenin in the form of colourless powders. Both of these yield glucose on acid hydrolysis. It may be noted that several lichens have been used from ancient times as fodder for animals and as food for human beings. In certain parts of India, a type of lichen is commonly used as component of various food preparations. The value of lichen in this respect is due to the presence of considerable quantities of special types of carbo-hydrates, the more important of which are lichenin and iso-lichenin.

A completely new type of cast iron . . .

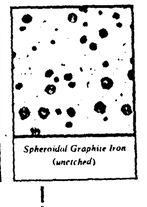
ta/sg1

SPHEROIDAL GRAPHITE IRON

. . . which, in many ways, behaves more like steel, is now in commercial production. It is much stronger than conventional cast iron and is tough and ductile. These remarkable properties are the result of a process whereby the graphite flakes, a source of weakness and brittleness in conventional cast irons, are replaced by spheroids.

Properties which may be expected in commercial production fall within the following ranges:—

Flake Graphite Iron (unetched)



Spheroidal Graphite Iron (unetched)

	Maximum Stress t.s.i.	Yield Point t.s.i.	Elongation %
As Cast (Pearlitic)	35—45	25—35	1—5
Annealed (Ferritic)	27—35	20—25	10—25

The field of application is wide and includes many uses for which malleable cast iron or carbon steel is at present employed.

Spheroidal Graphite Cast Iron is manufactured under licence and is the subject of patents and patent applications in the name of The Mond Nickel Company Limited.

Licensees in India:

The Indian Standard Metal Company Ltd., Chinchpokli Cross Lane, Bombay 27.

TWIN AIMS OF INVESTMENT POLICY OF BRITISH INSURERS

SAFETY OF FUNDS AND BENEFIT TO NATION

FROM time to time, many persons, both insurers and others, *not* directly connected with insurance, make the criticism that insurers are prevented from utilising their funds for the cause of industrial expansion as they are compelled by law to invest a large proportion of the funds in Government securities or other securities, shares and debentures approved by Government. There might be some substance in this criticism, considering that the investments of insurers in this country are largely governed by the Insurance Act. In the U.K., where there is no comparable statutory obligation, insurers are nevertheless criticised for being somewhat unmindful of the need for providing risk capital to industries. British insurers have, therefore, been at some pains this year to explain the major objectives of their investment policy, to show that they have not altogether neglected the needs of industry and to restate the fundamental principle of investment of insurance funds, namely, the security of the policyholders' funds.

The first mis-statement about the investment policy of insurance companies that should be cleared is that, since insurers have large funds at their disposal, they could or should make liberal advances to industries. Referring to this view in his statement to shareholders, Mr. W. Proctor Smith of the Refuge Assurance Company, Ltd., said:

"In some quarters, it seems to be thought that, because life assurance offices have money to invest and because certain projects deemed advisable in the quarters concerned require money, the money should be provided by the life offices without further consideration. The first duty of the directors of any life office is the protection of the interests of their policyholders. While they must and do examine objectively with this interest in mind any investment proposition put to them, they must not allow themselves to be influenced merely by the considerations, so often of a purely political character, which sometimes sway persons not bearing their responsibilities. This is not to say that life assurance companies should not invest a proportion of their funds in the 'risk capital' of industry (all companies regularly make such investments) but merely that there is a definite limit to the amount of such new investments which can be made by any office. This limit depends not only on the other investments already made by the office in question, but also on the character of the contracts with policyholders for the fulfilment of which these investments are the security."

Indeed, the primary aim of the investment policy of insurers should be the safety of the policyholder's money. This is a principle which insurers should constantly bear in mind. In this country, there have been some unfortunate instances where insurers have brought disrepute upon themselves and given a severe jolt to public confidence in insurance companies by wrong investment policies. Mr. Proctor Smith emphasised that the life offices were the trustees of the savings of their millions of policyholders and the funds, which they hold, represent the reserves held against "contracts some of which will continue for a very long period of years." He stressed that in investing these funds, the "paramount consideration must be the ultimate benefit of the policyholders who have provided the money to be invested." This point was elaborated by the Hon. R. M. Preston of the London and Lancashire Insurance Company, Ltd., in his statement to the shareholders. Mr. Preston said:

"The overriding aim must always be security of principal, but *this is not to be regarded as* synonymous with a narrow outlook or with an unduly restricted range of investment. On the contrary, insurance carries into the field of investment its underwriting principle of spreading the risk, both as regards the type or class of investment in which funds are employed and the limit of amount which may prudently be put into the issues of any single authority, company or undertaking. These are the prime factors which govern our investing policy."

Next in importance to the security of capital is that of *a high return on* investments. The importance of a high return on capital arises, as Mr. C. H. Shuttleworth, Chairman of the Royal London Mutual Insurance Society, Ltd., pointed out, in the course of his speech at the annual meeting of the Society, from the fact that bonuses to policyholders depend to a substantial extent on earning a high rate of interest on the funds. Thus, security of capital and high return on investments form the "yardstick" by which every investment of a life office must be measured. Mr. Shuttleworth also emphasised that, in the matter of investments of funds, the directors of a life office should regard themselves as *acting in* the "capacity of trustees." He regretted that "many otherwise well-informed" people fail to appreciate this aspect of the problem of investment of insurance funds. He was obviously referring to the criticism that insurers do not provide risk capital to industries. This, of course, is not a valid criticism at all. It is certainly not the function of insurance offices to risk the money which belongs to the policyholders. In this connection, Mr. Shuttleworth observed:

"The provision of 'risk capital' was, in past years, mainly the function of the private investor, who was prepared to risk losing his money to the hope that he would make a profit. Owing to the heavy taxation of the higher income groups, the supply of this private capital is now very much restricted. Life assurance offices can never completely take the place of these private investors, for the taking of undue risks would not be consistent with their duty to conserve the security of the policyholders' savings."

It would, however, be a mistake to think that to invest funds safely is necessarily to ignore the industrial or national interest. Consistent with the main aim of providing for the safety of investments, insurers do take into account the vital needs of really sound industrial concerns. Mr. J. A. Jefferson, Chairman and Managing Director of the Britannic Assurance Company, Ltd., affirmed, in effect, in the course of his speech at the annual meeting of the Company, that "national interest" was not something different from policyholders' interest. He said: "I believe that, by investing in the best interests of the policyholders, which means investing in the best securities and the most efficient industries, we are, at the same time, investing in the national interest."

That British insurers are utilising their funds, without in any way sacrificing the interests of policyholders, to build up British industries as well as to speed up *Commonwealth development* was the theme of the speech made by Mr. L. E. D. Bevan of the National Provident Institution for Mutual Life Assurance. Mr. Bevan said:

"One factor that is *certainly common* to all offices is that, while their first concern is to invest policyholders' funds for the security and benefit of the policyholders, investments are made with the national interest and the Commonwealth economy well in mind. Many examples could be quoted, but it will be sufficient if I mention only a few of our own investments. Development loans in *Dominions* and Colonies are necessary for the proper expansion of natural resources in those countries. By investing there, we play our part in creating new assets in those countries, from which will flow goods or services to aid their economies and to increase international trade. Public services, such as electric power, are being developed in Canada and Jamaica, fresh mineral deposits are being worked in Rhodesia and in South Africa. At home, certain of your funds last year were used for such diverse purposes as the *erection of oil* refineries, the building of new factories, the manufacture of *chemicals*, and the construction of road-making plant. On the one hand, your funds have helped towards building the most modern types of aircraft, which speed the benefits of international communication; on the other, they have aided the *expansion of services which touch* our everyday lives such as the relaying of wireless programmes to hospital wards and factories. Funds have also been made available to British industry to open up factories in other parts of the Commonwealth."

It will thus be clear that British insurers are playing an increasingly important role in the development of the British and Commonwealth economy. The premium income from all classes of insurance has risen from £90 million in 1938 to £500 million today. And the insurers are alive to the fact that they owe it to the policyholders to invest these funds safely, and that they owe it to the nation to aid sound economic development, both at home and in the Commonwealth. It reflects great credit on British insurers that they are able to do this without being told by the Government how the funds should be invested. Speaking at a recent meeting of the Institute of Actuaries, London, the Rt. Hon. Peter Thorneycroft, President of the Board of Trade, stated, in effect, that the Government would leave it to the good sense of the insurers to aid industry. He said: "It is not the policy of the present Government to tell insurance companies how much they should invest in industry, still less, to tell them the particular branches of industry they should select, though I welcome the fact that companies have found it sound policy to increase their equity holdings. I am confident that the importance of maintaining industrial expansion will continue to be in the forefront of your minds." There is no doubt that British insurers have, by and large, justified the confidence reposed in them by their Government.

MOTOR INSURANCE

The general experience of insurers all over the world is that it is difficult to operate motor insurance at a profitable level. Indian insurers, too, complain frequently against the large number of accidents that take place and the heavy cost of repairs to damaged vehicles and the consequent losses or meagre profits in the motor insurance departments. They will no doubt be interested to hear what a successful motor insurer has to say about the way he conducts his business. Thus, the Chairman of the Cornhill Insurance Company, Ltd., London, Sir William Christie, in the course of a statement circulated among the shareholders of the Company, says that the Company has successfully avoided deficits in its motor insurance department. Explaining how the management has been able to establish such a creditable record in their motor insurance department, Sir William says:

"That we have succeeded in avoiding deficits during the post-war period is due mainly to good underwriting, and it is a tribute to the skill and experience of our officials that 1953 shows the best surplus for a long time—on a premium income now exceeding one million pounds. We have not attempted to conduct this account by the application of averages to broad classifications of vehicles. Successful motor underwriting seems to us essentially a matter of individual selection, involving a serious attempt to assess the 'risk' of the drivers of the insured vehicles. Interesting light was shed on this by an internal investigation we carried through recently. We considered some hundreds of accidents where there was serious personal injury to the third party, and the negligence of the driver of the vehicle we insured caused, or substantially contributed to, the accident. We then extracted such information as was available to us about the previous records of the drivers concerned. In about one-third of the cases, we had no evidence of the drivers having been involved in a previous accident within five years, or in that period. In nearly as many cases, however, the drivers had been involved in two or more previous accidents, and a large percentage of these drivers had been convicted of a driving offence on a previous occasion. Our knowledge of drivers' records is necessarily incomplete, and the probability is that fuller information would show that the numbers in the category of drivers with previous accidents would be increased. We are left with a confirmed impression that the proportion of serious accidents caused by drivers who, for one reason or another, and to a greater or less degree, are accident-prone, is by no means negligible, and that, accordingly, our underwriting methods must seek to differentiate between individuals. In considering the social problem of road safety and the authoritative forecast that, if the 1952 casualty rate continues, something like four million persons will be killed and injured on the roads during the next 20 years, it is essential to remember how large a part the human factor plays. Although much may be done by wise public expenditure on improved road engineering and similar projects, the fact remains, that finally it is nearly always the dangerous act of a driver, cyclist, or pedestrian, which precipitates disaster."

THE BANK OF JAIPUR, LIMITED

(INCORPORATED IN JAIPUR, LIABILITY OF MEMBERS BEING LIMITED)

DIRECTORS' REPORT TO SHAREHOLDERS

The Directors beg to submit the audited Balance Sheet and Profit and Loss Account of the Bank of Jaipur, Limited, for the year ended 31st December, 1953.

After providing for all expenses and making necessary provisions, the net Profit of the Bank for the year amounted to Rs. 4,40,353-9-8 to which is to be added Rs. 35,324-7-10 brought forward from last year making a total of Rs. 4,75,678-1-6 available for distribution. The directors recommend its appropriation as under:—

	Rs.	a.	p.
Reserve under Section 17 of the Banking Companies Act	1,00,000	0	0
Other Reserves	1,00,000	0	0
Dividend at 2½ Tax Free	1,50,000	0	0
Provision for Taxes	75,000	0	0
Contribution towards Rajasthan Famine Relief Fund	2,500	0	0

and the balance of Rs. 48,178-1-6 be carried forward to next year's account.

The working of the Bank during the year continued to be satisfactory.

The following Directors of the Bank retire under Article 114 of the Articles of Association and being eligible offer themselves for re-election:—

(1) Shri Ramnath A. Podar. (2) Shri Sunderlal Tholia.

The Directors wish to convey their thanks to the members of the various Local Boards for their guidance, the depositors for their valuable support and the members of the Staff of the Bank for their devoted and efficient services.

Shareholders are requested to appoint Auditors for the ensuing year and fix their remuneration.

For and on behalf of the Board,
RAMNATH A. PODAR,
Chairman.

JAIPUR, 29th March, 1954.

BALANCE SHEET AS AT 31st DECEMBER, 1953

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the above Balance Sheet of the Bank of Jaipur Ltd., as at 31st December, 1953, and also the above Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the authenticated returns from branches, and report that:—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory;
(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;
(c) the returns received from branch offices of the Bank have been found adequate for the purposes of the audit;
(d) in our opinion, the above Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;
(e) such Profit and Loss Account shows a true balance of Profit for the year;
(f) such Balance Sheet exhibits a true and correct view of the state of affairs of the Bank according to the best of our information and the explanations given to us and as shown by the books of the Bank, and
(g) in our opinion, books of account have been kept by the Bank as required by Section 128 of the Indian Companies Act.

Chartered Accountants.

WHITHER NATIONALISED INDUSTRIES?

PROBLEM OF RECONCILING ENTERPRISE WITH STATE CONTROL

(By M. R. MASANI)

(Last week, we made a brief reference to the thought-provoking speech which Mr. M. R. Masani of the Tata Industries Ltd., made at a symposium on "Nationalised Industries," organised by the Institute of Management, Bangalore. In the text of the speech, which is given below, Mr. Masani has covered a very wide ground, and raised many important issues involved in the running of State undertakings. It is significant that this study, impartial and unprejudiced as it has been, leads him to the conclusion that it is in the national interest that the Government should desist from "further hasty acts of nationalisation."—Ed.)

DURING the last few years, the Government of India and the State Governments have set up a number of important industries as State enterprises. The Sindri Fertiliser Factory, the Chittaranjan Locomotive Works, the Hindustan Machine Tools Factory, the Hindustan Shipyard, the Hindustan Cables, the Indian Telephone Industries, the NEPA Mills, and the multi-purpose river valley projects, like the Damodar Valley Project, the Bhakra Nangal Project, and the Hirakud Project, are prominent examples of these enterprises. The recently formed Airlines Corporation must also be included in the list.

Besides, these new State enterprises, the Government of India has been managing the Railways and the Posts and Telegraphs, and States like Hyderabad and Mysore have been managing a few industries producing commodities like sugar and steel. The Hindustan Aircraft Limited was taken over by the Government of India from private management in 1942 and was converted into a limited company at the end of the year.

From the point of view of management, the existing State enterprises can, broadly speaking, be classified under three categories, namely, (a) enterprises owned and managed by the Government Departments, (b) enterprises owned and managed by public corporations, and (c) enterprises owned by the Government wholly or in partnership with private agencies and managed as private limited companies.

Apart from the Railways and the Posts and Telegraphs, an important instance of a State enterprise managed by a Government department is the Chittaranjan Locomotive Works. The general trend, however, as far as one is able to make out, is towards the management of State enterprises either through public corporations or through private limited companies. The Airlines, the Damodar Valley Project and Shipping are run by public corporations, while most of the industrial enterprises proper are run by private limited companies. The management of public corporations has to be carried out according to the specific provisions of the Acts establishing the corporations while the management of private limited companies is subject only to the provisions of the Indian Companies Act which also regulates the management of industries under private enterprise. "It is a form of management combining what is best in business with what is best in public service for the attainment of the public good." This is from a report on the work of the Ministry of Production published by the Government itself.

Lack of Adequate Information

It is too early to say how State enterprises in general are doing. Most of the public corporations and private limited companies have been established during the last few years and quite a number of them have not yet commenced operation. The greatest difficulty, however, in attempting any assessment is the lack of adequate information on the working of these enterprises. In fact, one of the objections which is being increasingly voiced against public corporations and private limited companies is that the community, the owner of these enterprises in the last resort, gets very little information on their working.

Some information is available regarding the working of the Damodar Valley Corporation which shows that the Statute which created the Corporation was faulty in several respects, and as a result the freedom of action of the Corporation appears to have been severely curtailed. Besides, owing to constant friction between the Ministry concerned and the Members of the Board, the working of the Corporation has been greatly handicapped. From the experience of the D.V.C. it is possible to discover some of the pitfalls in the working of a public corporation, but it is difficult as yet to say whether and how far they are unavoidable. The *Hindustan Times* wrote on 12th April, 1954:

"The Ministry of Production has now under its care eight manufacturing enterprises. Of them the housing factory has clearly not been much of a success. Two of the more important undertakings—the steel and machine tool factories—are not yet in production and in both cases there have been prolonged delays in the taking of initial decisions and the clearance of preliminaries. The steel scheme in fact got its first effective start only late last year when an agreement with the German consultants was signed. The machine tools venture, after struggling through many infructuous starting dates, is now expected to go into production by the middle of this year. The penicillin and D.D.T. factories are still in the construction stage, while the scheme for the manufacture of cables is slightly more advanced. The two important State undertakings which are already in effective operation are the shipyard at Vizag and the fertiliser factory at Sindri. Of the two, the former was taken over from private enterprise as a going concern, while the latter's planning and construction dates back to a period before the Five-year Plan was thought of.

It will already be obvious from the rather sketchy and tentative survey of the existing position which has been attempted that we are discussing this matter in the absence of adequate information and perhaps, at too early a stage, in the history of State enterprises in this country to be able to arrive at a sound evaluation of the direction in which these State enterprises are proceeding. Even if this were not so, I for one would not feel qualified to sit in judgment on the progress made by these enterprises or on their strong and weak points and to forecast their likely development. Rather than attempt such a personal assessment which in any event would not be worth very much, I would prefer to raise certain issues in regard to the future development of State enterprises and to indicate what in my view might be sound principles, by which they should be guided.

Functions of State Enterprises

What are the proper functions and objectives of a State enterprise in the "mixed economy" in which it today functions in India? Obviously, the first obligation of such an enterprise would be—consistently with its responsibilities to the tax-payer to run its affairs in a business-like way—to serve the consumer by providing for the manufacture of the best quality of goods and making them available at the cheapest possible price. While this may be obvious, it is yet necessary to stress this primary obligation since, in certain countries such as Soviet Russia where nationalisation has been the order of the day, this primary function has been altogether overlooked.

A second objective must surely be that of giving a fair deal to labour employed in the establishment. This can be implemented in a variety of ways but among these must inevitably be the provision of a fair wage and decent conditions of employment alongside of the maintenance of joint consultation and free and unfettered collective bargaining. State enterprises have unrivalled opportunities to become pioneers in the fostering of all that is sound in the notion of "industrial democracy" since in their case co-operation between management and workers need not be impeded by the supposed "profit motive" of the management. As it happens, however, it is open to question whether any State enterprise has gone nearly so far towards attaining this supposedly specific advantage of public ownership as the best private firms.

Thirdly, a State enterprise is a national trust and has the additional obligation of serving the national interest in the broadest sense of the term. So long as we function in a "mixed economy" and judge the merits of different forms of industrial organisation pragmatically on a basis of taking each case on its merits and being guided by the experience achieved, an important function of existing State enterprises in India is to make the experience of the effort available to the public so that public opinion may be enlightened and guided in the choice it exercises in the years to come. Such experience can obviously not be made available unless the manner in which a State enterprise is run is such as to provide a fair basis of comparison with units in that industry which may be run by free enterprise.

What is the form of structure which will best permit a State enterprise to-perform the functions and further the objectives outlined above? In attempting an answer there are, in my view, two overweening considerations to be kept in mind. The first is the imperative necessity of maintaining that business efficiency and flexibility without which the very purpose for which such an enterprise is founded, namely, the manufacture and supply of goods at the cheapest possible prices, would be frustrated. I suppose it is generally agreed that the last thing that anyone in charge of a business enterprise can wish is that it should become the sport of politicians. So too, there will be agreement that the virtues required in a civil servant and those required to run industries are by no means identical

The second consideration is the maintenance of democratic control permitting the community—the real owner of the enterprise—to exercise an intelligent and effective control through democratic processes and to prevent it from becoming a close preserve of the prototypes of the "managerial revolution."

Structure of Control and Management

While there is general agreement on the validity of these two considerations, there is room for considerable difference of opinion as to the way in which these two aims can be reconciled. In other words, the problem is whether it is possible to devise a structure of control and management of a State enterprise which will permit of such reconciliation. It is by this yardstick that I suggest that we measure the virtues and merits of the various possible forms which a State enterprise might take.

So far, as we saw earlier, one of three alternatives has been adopted for the corporate structure of a Government undertaking in India. The first is to run it as a department of the Government under the direct control of the appropriate Ministry. I suppose it will be agreed that this is no way to run a business or an industrial enterprise. The direct departmental control under which All India Radio, the State broadcasting monopoly, is at present run has been the subject of widespread and legitimate criticism and there can be no question that an autonomous body on the lines of the British Broadcasting Corporation provides a more suitable model for the running of even such a public utility service.

There remain two main variants—a joint stock company under the Indian Companies Act or a Statutory Corporation established by an Act of Parliament. Most of the State enterprises today fall under one or other of these categories and a lot can undoubtedly be urged in favour of or against each.

Each of these forms, it is obvious, has its own advantages and disadvantages. The statutory corporation, which is popular in Britain, has the important advantage that the law under which it operates can be tailor-made to fit the exact requirements and circumstances of a particular process. On the other hand, this very circumstance brings with it certain disadvantages which may well outweigh the advantages. Since a statute can only be amended by an Act of Parliament, the constitution of a statutory corporation is necessarily rigid. It is only too likely that the enterprise may soon grow out of its statutory framework.

The strength of the joint stock company, which is more common in the countries of Europe, is that it is managed entirely on commercial lines, adopts commercial forms of accounting, and is operated, financed, taxed and audited in the same way as a company in the private sector. "The more Parliament debates the problems of its own control over the nationalised industries," writes the *Financial Times*, "the better adapted the company system seems to the administration of modern industry on a large scale. In the public company, a device has been hit on which gives the management the necessary freedom to act, while at the same time providing just the right amount of check on efficiency. . . . In the Public Board, on the other hand . . . Parliament seems to have invented something which even its supporters now feel to be neither fish, flesh, nor good red herring."

By and large, there appears to be a great deal to be said in favour of adopting the joint stock company as the normal structure for an industrial enterprise owned and managed by the State. It has been urged that such companies, in which the President of the Republic is the only shareholder, do not provide for responsi-

bility and accountability to Parliament and the public. There is undoubtedly some force in that objection. It should be possible, however, to supply this missing link by parliamentary conventions and administrative measures. What is essential is that the annual report and the balance-sheet should become available to Parliament and through it to the public who are the real shareholders of such companies.

In cases where it is found that the joint stock company would not be able to fulfil its obligations to the people or to Parliament without special provisions which do not exist in the Companies Act, the formula of a statutory corporation would be worth considering. A great deal can be learnt by a detailed study of the several public corporations formed in the U.K. in connection with air, rail and road transport, broadcasting, coal and gas.

The Problem of Parliamentary Control

Whether the form of the public corporation or the joint stock company is adopted, the relations that are established between the State enterprises and the political system that controls them on behalf of the nation will decisively influence the well-being of the community and the success of State enterprise in the future. "How are these enterprises," it has been asked, "to be guaranteed the vitality, spontaneity and sense of service to the consumer which have hitherto been the marks and tests of efficient private enterprise guided under competitive conditions by the 'profit motive'?" On the other hand, since the mere fact that an industry becomes a public concern in one sense converts into a public concern in a quite different sense, how is the State enterprise to be made accountable to Parliament in an effective manner?

In the U.K., the Labour Government was inclined to the view that a full-scale inquest into each of the nationalised industries every seven years would serve the purpose. Shortly after taking office, the present Government, however, found the situation so unsatisfactory that it appointed a select committee to examine the question. This committee recommended that a new standing committee of the House of Commons consisting of 21 members should be set up at the beginning of each session to undertake the task of providing Parliament with the information it needs about the aims, activities and problems of the nationalised industries but not of controlling their work. It was recommended that the Committee's staff should include an officer of the status of a Controller or Auditor General who would examine the reports and accounts of the nationalised industries in order to direct the attention of the standing committee to matters requiring examination.

When the report was discussed in Parliament, it was found that, while front-benchers belonging to all parties were against parliamentary interference, back-benchers on both sides were for a certain measure of direct control of Parliament. The report met with strong dissent. Mr. Herbert Morrison, a veteran parliamentarian, said he "would die for Parliament," but was apprehensive about the kind of scrutiny proposed, which would tend to develop in the business men running publicly-owned industry a "red-tapish, unadventurous and conventionally civil service frame of mind", which may be all right in Government departments but is wrong in public corporations." Lord Reith expressed similar apprehensions and thought the prospect was "terrifying." Sir Geoffrey Heyworth provided a comment from the point of view of a business man helping the running of a State enterprise: "The more I felt some one was looking over my shoulder all the time and was going to examine these things at any time later, the less I would be inclined to take a decision and the less decisive I would become—and pretty well certainly the less would be the results." In the end, while there was general understanding of the fact that the compliment of the State corporation's responsibility to Parliament must be a self-denying ordinance on the part of Parliament in the exercise of its authority, the House of Commons had to adjourn its discussion on the subject without being able to arrive at a decision.

In our own country, this problem is coming to the fore. There was an interesting discussion in the Council of States on 18th September, 1953, when Mr. K. C. Reddy, Minister for Production, replying to Mr. B. C. Ghose of the Praja-Socialist Party, said: "There is no doubt that Parliament should be given full information regarding the activities and policies of Government undertakings. It would not be appropriate, however, for the Minister to answer questions on matters which completely fall within the competence of the Board of Directors." While the Minister's answer is reasonable enough, it is obvious that the difficult problem of reconciling the two parts of his own statement still remains to be tackled.

A later discussion in Parliament brought forth a statement from Mr. Chintaman Deshmukh in the House of the People on 10th December, 1953. The hurried setting up of a Parliamentary committee to control public corporations on lines recommended by the Select Committee in the U.K. was described by the Finance Minister as "throwing the baby out with the bath-water." He gave the assurance, however, that the budgets of the State enterprises could be made available to the House. That could be done by giving executive instructions to these bodies and the House would have an opportunity to scrutinise them either during the Budget debate or by raising special discussions. "It is in our thoughts," said Mr. Deshmukh, "that at the appropriate moment either we might come forward with legislation authorising the setting up of State corporations for carrying on business or industry by the Government or alternately we might introduce in the Company Bill, which is before the House, a separate chapter in regard to companies which are owned either wholly or predominantly by the State. . . . A certain amount of balance has to be struck between the desirability of ensuring that public funds are well spent and the desirability of eliminating red-tape." All of which shows that we too have come up against the same snags that have brought the process of nationalisation in the U.K. to a standstill.

Solution to the Problem

The question arises whether with the best will in the world there is a solution to this problem. Is it not possible that the irreconcilable nature of political control with business efficiency and fluidity is inherent in the situation and that whatever efforts may be made they are doomed to failure? Thus, writing about the attempts to give autonomy to State enterprises, Mr. A. D. Gorwalla, an experienced administrator and an outstanding commentator, wrote in the *Statesman* of 19th June, 1953:

"The independence is illusory and, whatever the outer appearance, essentially there would seem to be no difference between this arrangement (corporations) and management by a department of Government or by a committee of secretaries and other Government officials under a department of Government, assisted in both cases by an advisory council consisting of non-official members. The flexibility and business aptitude which the corporation form is designed to conserve are most unlikely to be really operative in such an arrangement. Interference by the Government in day-to-day working will be inevitable and the corporations are hardly likely to be left alone to do their work."

It is perhaps considerations such as these that impelled Dr. John Matthai, Chairman of the Taxation Enquiry Commission, speaking in Bombay on 21st September, 1953, while criticising the absence of parliamentary control over the officials who have been put in charge of State-owned companies, to come to the conclusion that "where a business calls for energy, drive, enterprise and specialised management, the proper solution is not to shelter officialdom from parliamentary scrutiny, but to leave such business in the hands of private enterprises subject to the general control of Government."

An escape is probably to be found not in legal demarcations of the sphere of authority of the Minister and the State enterprise but in recognising that these demarcations are not sufficient safeguard of the public interest and that other checks and balances will have to be evolved for the purpose of fortifying the structure of State enterprise. "Having neither a carrot before it nor a stick behind it, is it not likely," it has been asked, "that the monopolist public corporation will just go to sleep, or at least fall into a leisured jog-trot?"

Checks and Balances

The system of checks and balances suggested may consist of three sets of machinery. Advisory bodies to hear and marshal consumers' complaints are the first requirement. In Britain, all the recent nationalisation measures establish such bodies which would provide the means of organising consumers' pressure on the enterprise. Secondly, there should be a system of quasi-judicial tribunals—statutory bodies independent of the political authority with power to ratify or reject scales of prices or charges and to review the quality of goods or services produced, operating according to principles defined by the Government and open to discussion in Parliament. The Railway Rates Tribunal, which now survives in Britain as the Transport Tribunal, is an example.

Thirdly, there would be need for any agency, independent of the State enterprise and the Government alike, to conduct a periodical "efficiency audit" of the undertaking. In the absence of economic competition, this is a vital means of keeping the State enterprise on its toes and of satisfying the public just as the Tribunal referred to earlier is a guarantee to the consumer of protection against the arbitrary behaviour of a monopoly. This would require the creation of an independent and specialised body which would apply standards of efficiency appropriate to the particular undertaking. Some would be technical, some financial or statistical and some pragmatic. It could compare the corporation's performance with its own past performance and that of other comparable undertakings in private hands. It may be mentioned that advisory bodies provide no substitute for quasi-judicial tribunals standing outside the political system.

Equality of Opportunity

Whether the State enterprise be given the shape of a joint stock company or a public corporation and whatever the other machinery set up, the extent to which two fundamental considerations are given weight in actual operation will determine to a large extent the future success or failure of State enterprise. One is the need for the fullest autonomy from interference by the bureaucracy and by the politicians in office. This point is now well appreciated and need not be laboured.

The other need is for a policy of non-discrimination as between a State enterprise and units operating under free enterprise. It is difficult to stress the importance of this principle sufficiently. For one thing, if the mixed economy—with public and private sectors both functioning in the national interest—has any meaning, it would be wrong to discriminate between units functioning in one or other sector. It is not, however, only a desire for fairplay to non-State units that determines this principle. The overriding national interest is equally affected. Unless there are equal opportunities and facilities for free competition with equal taxation, how can there be any basis for comparison to be drawn between the efficiency and utility of State enterprise on the one hand and free enterprise on the other?

The very basis of the mixed economy is a pragmatic approach to the question of whether or not a particular product is best produced under free or State enterprise. The experience that can be obtained through free and equal competition is an essential element in enabling public opinion and Government to decide such issues as they arise from time to time. If differential prices or rates were to be permitted or a State unit were to be exempt from tax in circumstances where a free enterprise unit did not enjoy similar concessions, it would be a discriminatory act striking at the very root of the mixed economy and showing a bias that would vitiate the whole experiment embodied in India's Five-year Plan.

A situation in which the application of this principle would become relevant is where two or more units exist in a particular industry, including some run by the State and some by free enterprise. When there is need for expansion of production, what principle should decide whether a State or a private unit should be given permission to expand? The only answer can be that this should be done on a pragmatic basis of deciding which will give the best and most productive returns. It may be asked whether, when the State itself is thus involved, one may expect an objective appraisal to be made by Government. The solution obviously would be to provide for the matter being decided by some such authority as the Tariff Commission or by a body of a quasi-judicial nature.

Problems of Management

One of the sad discoveries made by British trade unionists and other advocates of nationalisation in the U.K. and by Yugoslav communists in recent years has been that nationalisation solves no problems of management, all of which still remains to bedevil the new controllers of the enterprise. A problem on the correct solution of which a great deal depends is the proper staffing of the board of directors or governors and of the chief executive in charge of the day-to-day administration of State enterprises.

Since the board of directors or governors represent the owner of the concern, they should naturally be nominated by the Government. In the case of a joint stock company under the Indian Companies Act, the procedure for election of directors is simple and well known. The

Stock Fast Running Out:
Calcutta Stock Exchange Official Year Book 1954
Complete
Contains complete information about all companies quoted on the Calcutta Stock Exchange. No other book contains that.
Accurate
Checked and rechecked to ensure maximum of accuracy.
Up-to-date
Brought up to the minute.
Informative
Contains information about date of foundation, business and property, management and directorate, managing agents' remuneration and qualification, capital structure, date of meeting, names of auditors, condensed balance-sheets for two periods, and summary of profit and loss account for ten periods of all companies known to the Stock Exchange.
Special Features
Comprehensive Statistics on National Economy and Five-Year Plan: Rates of Income-tax and Super-tax: Summary of Estate Duty Act and Estate Duty Rates: Stamp Duty Schedules: Stock Exchange Holidays, List of Members and Bye-Laws: Interest Calculator: Rupee-Sterling Exchange Table: A List of Companies having Preference Dividends in Arrears: A List of Companies in Liquidation since 1939 with names and addresses of Liquidators: Latest Amendments to Trustee Investment Rules: Approved Securities under Insurance Act: Financial Provisions Governing Electricity Companies: Complete Information about Rubber Companies and so forth.
Indispensable
Invaluable to Banks, Insurance and Financial Companies, Joint Stock Corporations, Governments and Local Bodies, Investors and Stock-brokers, Accountants and Businessmen, and Students and Teachers of Commerce and Economics.
Statesman, Calcutta: "This compilation of facts and figures can be strongly recommended not only to investors but to all interested in industrial and commercial enterprise."
Price Rs. 12-8. Postage Rs. 1-12 extra.
Order from The Secretary, Calcutta Stock Exchange Association Ltd., 7, Lyons Range, Calcutta-1.

real difficulty lies, however, in the selection of appropriate personnel to serve on such boards. In Britain, some, though not all of the members, including the chairman, of the boards of statutory corporations are usually appointed on a wholetime paid basis. Such a course may not be possible in the case of a country like India where there is a great dearth of experienced business administrators willing to leave their own business and join a State corporation as paid directors. It would therefore be desirable that, apart from the managing director who might be a full-time executive, the Board should consist of others with experience in business, industry or public administration who would only have to attend board meetings. Alongside of this, there would be representatives of appropriate ministries or departments of the Government.

It has been alleged that recently the boards of State enterprises are being loaded more and more heavily with Government officials who are in no way specially qualified to be in charge of the affairs of an industrial unit, and who must of necessity function under the orders of the Government. If this is so, it is a tendency to be deprecated in the interest of State enterprises themselves. The best model that can be found is that provided by the Reserve Bank of India where, apart from the Governor, Deputy Governors and another official, the large majority of the Directors are non-officials and of these again, a majority consists of business and industrial representatives. Why should this model not be adopted or adapted in other State enterprises?

The shortage of trained and experienced personnel is even more noticeable when it comes to the appointment of chief executives of State enterprises possessing the necessary competence, integrity and experience appropriate to the functions of responsible management. In this context, we in this country will have to reconcile ourselves for many years to the need for employing foreign experts in responsible executive posts which cannot be filled from within the country. An alternative may sometimes be provided by the method of associating an existing unit in industry with the management of a new State-owned enterprise.

Both in the U.S.A. and in the U.K., during the last war, the expedient of entrusting the management of a State-owned factory to free enterprise for a period was resorted to with considerable success. It might be worth while to obtain from those countries details of such arrangement with a view to considering whether it would not be useful to enlist the co-operation of free enterprises in India in a similar manner. Here again, a joint stock company provides a form which would best permit of an arrangement of this nature, since it leaves open the details of management to the board of directors, unlike the statutory corporation where provisions for management are apt to be laid down in detail in the statute. In the case of joint stock companies, however, it is possible to appoint an existing industrial concern as managers or secretaries and treasurers to provide the top administrative machinery.

It is possible that legal difficulties might come in the way of the management of a new concern, both administrative and technical, being entrusted to an existing manufacturing company. Section 87H of the Indian Companies Act prevents a company engaged in a particular business from taking over a managing agency of another company engaged in the same business if it is directly competitive. Since the kind of possibility discussed here was obviously not contemplated when the Companies Act was framed, it may be worth considering whether the Act should not be amended so as to exempt such cases as we are here concerned with from the purview of section 87H.

It is obvious that such an arrangement would serve little purpose if it was not for a period long enough to make it worthwhile for the firm or company concerned to undertake the effort and responsibility involved in establishing a new industry. Perhaps, 20 years, which is the usual period for managing agency agreements, would be appropriate.

There are alternative ways in which the remuneration of such a firm or concern could be effected. A commission on profits would be unsuitable as a basis for remuneration in the conduct of State-owned enterprises since the managing firm would have little control over policy and prices. In general, the payment of a fixed annual or monthly fee commensurate with the importance and responsibility of the business supplemented by an additional commission to provide an incentive for increased output or efficiency could be recommended.

Conclusions

What are the conclusions to which this somewhat sketchy review brings us? There can be no doubt that in Britain where the experiment has had a longer life there has been general dissatisfaction with the results of nationalisation. The British T.U.C. has already shown

(Continued on page 915)

THIS IS NOT A PROSPECTUS BUT ONLY AN ANNOUNCEMENT

A copy of this Prospectus has been filed for registration with the Registrar of Companies, Bombay, as required by section 92 (2) of the Indian Companies Act of 1913

"Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving the consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them."

The special feature of this Company is that it is the only Company that is engaged in carrying out diamond mining operations on up-to-date and modern mechanised basis. Furthermore, extensive geological tests and prospecting work which in the normal course should cost the Company initially lakhs of rupees have already been done over a period of three years by the private limited company, thus saving a huge amount of initial unproductive capital outlay. The new Company has taken over a going concern with potentialities and possibilities tried and established. Extensive mining operations at Panna are already in progress.

THE PANNA DIAMOND MINING SYNDICATE LTD.

AUTHORISED AND ISSUED CAPITAL - - Rs. 1,00,00,000

DIVIDED INTO

2,00,000 Ordinary shares of	.. ..	Rs. 25 each
25,000 Cumulative Preference Shares, 6 per cent. tax-free, redeemable in 15 years, of	.. .. ..	Rs. 100 each
25,000 Cumulative Preference Shares, 6 per cent. tax-free irredeemable, of	.. .. ..	Rs. 100 each

The shares are offered for public subscription on the footing that for Ordinary share Rs. 25 (Rupees twenty-five) only per share and for Preference Shares Rs. 100 (Rupees one hundred) only per share shall be payable on application.

Out of the 2,00,000 Ordinary Shares, shares of the value of Rs. 20,36,000 have been taken up and allotted to the existing shareholders of the Panna Diamond Mining Syndicate Ltd. (Private) in lieu of their old shares, at par. Applications for Ordinary Shares are invited in units of four shares or multiples of four.

LIST OF DIRECTORS

(1) His Highness Col. YESHWANTRAO BHAUSAHEB MAHARAJ PAWAR, Maharaja of Dewas, Junior Branch].
(2) Bahadur C. B. TARAPORVALA, Financial Adviser to H.E.H. the Nizam of Hyderabad and Berar.
(3) M. G. KULKARNI, Bombay.
(4) Shri M. B. REGE, Indore.
(5) Shri RAMRAO M. DESHMUKH, M.P., Amraoti.
(6) Shri RANGARAO J. SAWANT, Bombay.
(7) Shri SHAMJI KARAMSI, Bombay.
(8) Shri BHANJI MONJI SHAH, Jabalpore.

MANAGING AGENTS:

Messrs. M. G. KULKARNI, People's Building, Sir P. Mehta Road, Bombay 1.

BANKERS:

IMPERIAL BANK OF INDIA, Bombay.

SOLICITORS:

Messrs. NANDLAL PATWARI & Co., Medows House, Medows Street, Bombay 1.

AUDITORS:

Messrs. DALAL AND SHAH, Apollo Street, Bombay 1.

REGISTERED OFFICE:

PEOPLE'S BUILDING, SIR P. MEHTA ROAD, BOMBAY 1.

I. OBJECTS

The Company is converted from a Private Limited Company to a Public Limited one for the purposes set out in the amended Articles of Association and Memorandum of the Company, and in particular, to carry out the following business:

1. To expand the existing mining operations at Panna by the most up-to-date and modern machinery; to attain, gradually, milling capacity of 10,000 tons per day.
2. To acquire all-India rights for the mining of other diamond fields in India, namely Golkonda and areas of Madras, Andhra and Hyderabad States. Certificates of Approval for these areas have been obtained and prospecting licence is being applied for.
3. To start subsidiary industries involving the use of diamond—gem and industrial—like Diamond Cutting and Polishing and Diamond Tool Manufacturing, for which a large market exists in India. Bismond Tools used in the manufacture of all the precision tools and heavy industrial equipment are being imported from foreign countries of the value of approximately Rs. 30 lakhs annually and by starting an industry for manufacturing these diamond tools, the produce of the Company will find a ready market.
4. To undertake mining of other profitable minerals.

II. SHORT HISTORY

The Panna Diamond Mines are situated in the centre of India in Vindhya Pradesh. The entire territory has been prospected and tested in regard to the quality and quantity of the diamondiferous ore and the diamond deposits. Scientific investigations have satisfied the promoters of the Company of the potentialities.

The Panna Diamond Mining Syndicate Ltd. was established in 1936 as a Private Limited Company. The Company has so far spent Rs. 15,36,000 on prospecting and development work of the Panna Mines and the results achieved have been good. This was because of the wide experience and sound knowledge of the modern methods of mining operations possessed by the experts employed, by the Company in the operational field.

Shri M. G. Kulkarni, the Managing Agent of the concern, has himself firsthand knowledge and experience of working in the African mines and since he took over the direction and control of this organisation in 1950, results have been so encouraging that the promotors have taken a more farsighted and long-range view of the diamond mining industry as such.

Extensive prospecting has proved that there are twenty-two mining blocks in this area to be fully exploited. Of these, the Majgawan Mines definitely is one of the main sources of Diamond.

Hitherto a large part of the income from the operations had been ploughed back into the business for development purposes but experience has shown that this method of financing a planned expansion and development programme is uneconomical, and even underproductive. Therefore, it is necessary to have much larger resources at the disposal of the Company, so that the programme of planned development and expansion during the next four years can go ahead, according to schedule, without having to depend upon the uncertain factor of operational surpluses. The proposed Five-year Plan will cost nearly Rs. 50 to Rs. 60 lakhs. The target is to complete the programme of full mechanisation before the end of 1958.

III. PRINCIPAL FEATURES

1. The present mining lease of the Company is for a period of fifteen years, covering an aggregate area of ten square miles.
2. The whole area is within easy reach of the present operational set-up which is now being expanded to keep pace with the expansion programme.
3. The estimated ore reserve according to geological experts is expected to last for a long period.
4. The average yield is expected to be ten carts of 100 tons of ore treated.
5. The average value of diamond will be Rs. 150 per carat.
6. In India experience has shown that the recovery of gem diamonds is more than that of industrial diamonds as compared to other mines of this kind abroad.
7. The intrinsic value of gem diamonds is much more than that of industrial diamonds.

IV. PROSPECTS

Diamond Mining, as an organised industry, had not been tried in India on any scientific and mechanised basis. Whatever mining activities there have been, were of a primitive and sporadic character, confined to local digger's handpicking of a few stones immediately after the rains.

The Panna Diamond Mining Syndicate Ltd. is the first enterprise that attempted on a limited scale to organise diamond-mining operations on a mechanised basis. Even those limited mechanised operations were started as recently as 1950. With the arrival in 1950 on the scene of Shri M. G. Kulkarni, with experience in modern methods of mining operations, geological surveying and prospecting the whole area were undertaken. Eminent Indian and foreign experts, who participated in these prospecting activities, have firmly confirmed the potentialities of these Mines.

The Panna Diamond Mining Syndicate Ltd. though handicapped by the limited capital resources available to them, have been able, by systematic prospecting, to locate twenty-two diamond-bearing blocks. They have been luckily successful in striking the almost perennial source of diamonds, the Majgawan Pipe, which, according to expert opinion, may produce crores of rupees worth of the coveted treasure.

The limited resources of a private limited company were considered too inadequate for large-scale mining operations and, therefore, the Directors of the Company have decided to seek public co-operation and support by widening the basis and ownership of the Company with the association of a large body of the public in this vital undertaking.

In pursuance of this policy of broad-basing the ownership of this undertaking, the Directors have converted it into a public limited company with authorised capital of Rs. 1,00,00,000.

An undertaking of this scope, character and dimensions has normally to start almost from scratch but in this case, there is a ready-made organisation, already having done a great amount of valuable research and prospecting work.

Full particulars and form of application may be obtained from the Registered Office of the Company or its Bankers. Those who wish to take up the agency for sale of shares should apply immediately.

REFORM OF COMPANY LAW—II

PROXIES—DIRECTORS' REPORT—AUDITORS —DIRECTORS' POWERS

(By A. RAMAIYA, Advocate, Madura)

IN actual practice, the only use to which proxies are ordinarily put is to make them serve as an effective weapon in the hands of the management to silence and put down any diligent shareholders who choose to attend any general meeting in person and try to raise their heads and voice any grievance against bad management. The real evil underlying proxies consists in the procuring of blank proxy forms by the management signed by shareholders and keeping them as pocket bombs ready to be thrown against any opposition at shareholders' meetings. The Company Law Committee made no attempt in its Report to deal with the misuse of proxies and the present Bill simply translates the Committee's suggestions into statutory form and goes no further.

Though it is difficult for legislation to make adequate provision against the misuse of proxies, it appears to me that, for guaranteeing the genuineness of proxies, a provision should be inserted to the effect that every proxy lodged with the company should be dated and authenticated in the same manner as affidavits. This may prove an effective check against the present practice of obtaining undated blank proxy forms bearing the signatures of the shareholders. Section 167(5) may be amended by adding to clause (a) "and dated" after the word "writing" and inserting as clause (c) "and attested by witness giving his full name and address and the place where he attested the same."

Section 167(7)—Inspection of Proxies: The provision here is defective. It is provided that proxies may be inspected "during the period beginning 24 hours before the commencement of the meeting. . . ." If the meeting is fixed at 5 p.m. on a day, inspection can be made only for a few hours before the meeting. Though the expression "twenty-four hours" is used, not more than a few hours will in practice be made available. The words "twenty-four" may be replaced by "forty-eight." This will not inconvenience the company in any way, as the proxies would have been lodged prior thereto.

Section 202—Directors' Report: Directors and managing agents are in a specially advantageous position as regards the dealings in the shares of the company under their charge. They use inside information for the purpose of acquiring or disposing of shares to their own private advantage. Sometimes by "rigging," sometimes by "churning" the market for the shares of the companies under their charge, they manipulate the market value of such shares to their own advantage and amass large private fortunes for themselves. The examples are legion in South India of the managing agents of textile mills with puppet directorate under their control and by planned deals declare far lower dividends than the profits of the companies under their management would warrant, thereby depressing the market value of the shares and acquiring and accumulating in their own hands and the hands of their nominees and relatives the bulk of the shares of the companies under their control.

The shareholders are kept in the dark as to the operations of the managing agents and the directors in respect of the latters' dealings in the shares of the company.

It is absolutely necessary that shareholders should be put in the know of the dealings in shares by the managing agents and the directors during any year and the directors' report for the year must be made to disclose and certify the truth or correctness of the extent of the sales and purchases of the company's shares by the managing agents and the directors during the year under review.

In this connection, the proviso of section 283 are not effective enough. Sub-section (5) of that section unduly restricts the right of members to inspect the register of directors' shareholdings for a period of 14 days before the annual general meeting. A specific mention in the directors' report of the actual dealings of the directors and managing agents during the financial year under review would bring home the position to the minds of the shareholders. Even though there is room for evasion by buying and selling in the names of nominees, information as to their direct dealings has its own value.

Section 210—Appointment and Removal of Auditors: Shareholders are given no right to look into the proceedings of the directors or the books of account of the company in which they have invested their moneys, except to the extent disclosed in the balance-sheet and profit and loss account. Auditors are watch-dogs of shareholders and their duty is to bring to the notice of the general body any irregularity in the management of the company's affairs and, though, in theory, they are supposed to be elected by the shareholders at the annual general meeting, in practice they are almost invariably the nominees of the management and, when they indicate the slightest inclination to assert themselves and choose to say anything about the management in their report, they stand to lose their job. This embarrassing position of the auditors has time and again been pointed out by various associations of accountants in England and other countries, but no satisfactory solution has been found so far. In such a state of affairs, even the small right of the general body to elect such auditors as they may choose at the annual general meeting is sought to be taken away by the restrictions imposed by this section. While the retiring auditor may be free to make his own representations at the meeting, the shareholders must have the right to elect an auditor of their own choice.

The section may be redrafted as follows:

1. "Every auditor, except the first auditor, who shall hold office until the first annual general meeting, shall be elected by the company in general meeting, and he shall ordinarily hold office for three years, unless the company at any general meeting otherwise decides, and shall be eligible for re-election.

2. "An auditor who is about to retire or who is sought to be removed may be present at the meeting and make any representation touching his reappointment or removal.

3. "Any auditor other than a retiring auditor intending to be appointed as auditor of a company at any general meeting shall give notice of such intention to the company, not less than fourteen days before the date of the meeting at which the appointment is to take place."

In order to make effective provision against bad management and its being screened by a subservient audit, it is also very necessary to add a new section as follows, after section 210:

"Where, in the interests of any company, the Central Government thinks it expedient, it may appoint an auditor additional to the one appointed by the company, having the same powers and exercising the same functions as the other auditor; and his remuneration shall be paid by the company, or by such person as the Central Government may determine."

Section 214—Signing of Audit Report, etc.: In very many cases, while a company ostensibly appoints a well-known auditing firm as its auditor, in reality the auditing is done by some subordinates, and the shareholders are hoodwinked into believing that the affairs of their company have been audited by a reputed firm. There is no guarantee of efficient and honest audit in several cases. In view of the fact that the shareholders have themselves no access to the accounts and have to rely only on the auditor's scrutiny and report, it is necessary that only the auditor who actually made the audit should sign the report, etc., and he should also be required to attend the annual general meeting in which the balance-sheet and profit and loss account to which his report is attached are laid before the company. A statutory obligation to be present at the meeting and answer questions put to him at the time touching any of the matters covered by his audit will go a long way towards ensuring an honest audit. In actual practice, auditing in the case of many companies is superficial. What happens is that the actual audit is done by one or more clerks of the auditor and they make notes and prepare the balance-sheet and profit and loss account and the auditor scrutinises them and subscribes his signature almost invariably to a stereotyped report, which he attaches to the balance-sheet. If he is compelled to attend the annual general meeting at which the balance-sheet and profit and loss account are laid, he can certainly be expected to be more careful in his audit.

Section 248—Share Qualification of Directors: One of the ways in which the managing agent gains or retains control of the company under his management is to get his own nominees elected as directors. From out of his own accumulations, he transfers the necessary number of qualification shares to such of his men as he wants to bring in as directors, at the same time protecting himself by getting from them blank transfers signed by them and when he wants to substitute other men in their places, he simply gets the transfer of the qualification shares effected in the names of the substituted men and so on.

The point to be noted here is that persons who have no beneficial interest are brought in and made to figure as directors only to serve as the right-hand men of the managing agents. This is the general practice adopted in very many companies in South India, to my personal knowledge. This evil must be put an end to, if companies are to be governed in the interests of the shareholders, and the only way of doing this is to amend section 248 of the Bill. After sub-section (3) of this section, the following has to be added:

"In determining the share qualification of a director, no share in which he has no beneficial interest shall be included; and every candidate standing for election as director shall make a declaration as to the number of shares in his name in which he has a beneficial interest."

This will, of course, exclude trustees of shareholders from standing for election as directors. My answer is: "Why should trustees for any shareholders be allowed to be elected as directors?" Beneficial interest must be a condition for directorship, as such interest alone will make a person take a genuine living interest in the affairs and welfare of the company in which he has a stake.

Section 242—Directors' Power to appoint Additional Directors: The exercise of this power may possibly be abused on occasions. For example, the articles of a company fix the number of directors between, say three and sixteen, and the company may work with six directors, four elected and two nominated by the managing agent. In such a situation, the directors may, if they want to have their way, either detrimentally to the company or to the managing agent, proceed to appoint any number of additional directors upto ten. The board may thus be swayed by the appointed directors and the annual election by the shareholders of one director by rotation will have no significance. The device of appointing additional directors upto the maximum every year after the annual general meeting, will make a mockery of the powers of the general body of shareholders. The scope for the possible abuse of the power of appointing additional director, may be limited by adding a further proviso to sub-section (2) in some such terms as follows:

"Provided further that the power of appointing additional directors shall not be exercised except to the extent necessary in the interests of the company; and the reasons for the same shall be disclosed in the directors' report."

Section 246—Consent of Director to be Filed with Registrar: The wording of the section would seem to require every candidate standing for election to file the consent in writing, whether he ultimately succeeds or not. For it requires the consent to be filed "*before* appointment," that is, before being elected.

If the words "acting as" are substituted for the words "being appointed" there will be no hardship, while at the same time satisfying the intention of the section, namely, that a director who is elected or otherwise appointed shall not be entitled to act before he files his consent.

Sections 253 to 257—Limit on Number of Directorships: The recommendation of the Committee which is simply adopted in these sections is arbitrary, ineffective and mere eyewash. They say that a person should not hold more than twenty directorships, not including private companies. In practice, this will not affect more than a few persons in the whole country. If a director should really render useful service to the company for which he is elected, he will not be in a position to do so if he is a director of more than, say, half a dozen companies, public or private or both. The bogey of want or scarcity of capable men to occupy the position of directors is baseless and belittles the talents available in the country. There may be a case for directors being paid decent remuneration in proper cases, but to give statutory permission to a person to hold upto twenty directorships in public companies and in addition, in an unlimited number, possibly over another twenty private companies, is simply fooling the public. The office of director is not a merely honorary office. A director is entitled to have access to the account books and all other documents relating to the company, and jointly with the

PROBLEMS OF OILSEEDS INDUSTRY

NEED FOR INCREASING OUTPUT HIGHLIGHTED

THE problems facing the oilseeds industry were highlighted at the annual general meetings of the Bombay Oilseeds Exchange and the Central Organisation for Oil Industry and Trade, held at Bombay last week. Addressing the members of the Exchange, Mr. Ramdas Kilachand, President, called upon the Governments to take energetic measures for increasing the output of oilseeds and a change in export policy with a view to helping India retain its vanishing export markets and increasing the standard of living of the masses. He also made out a case for the resumption of hedge trading in oilseeds such as groundnuts, linseed and castorseed. Presiding over the annual general meeting of the Central Organisation for Oil Industry and Trade, Mr. Naval H. Tata detailed the problems of the crushing industry in particular and the oilseeds industry in general. The Organisation adopted the following four important resolutions:

1. The Government of India should not accept the recommendations of the All-India *Khadi* and Village Industries Board that a cess of Re. 1-4 should be levied on every maund of oil produced by power-driven oil mills and that a ceiling on crushing oilseeds by oil mills at the present level of crushing should be fixed through legislation, with a view to developing the *ghani* industry.

2. The Railway Board should adopt the basic and fundamental principle of allotting rail wagons between mineral oil traffic and vegetable oil traffic on the basis of their respective volume of traffic over the railway system.

3. The Government of India should provide for exemption of inter-State trade from the scope and purview of sales tax legislations of the various State Governments. The Constitution of the country should be amended, if necessary.

4. An enquiry committee, consisting of the representatives of the Ministries concerned of the Government of India, the Planning Commission and interested State Governments, the Indian Central Oilseeds Committee, oil crushing industry and trade, technical experts and other interests should be appointed to enquire into the conditions of the crushing industry, which is deplorable, and to suggest remedial measures, with a view to assuring a planned, rational and scientific development of the oil crushing industry in India.

That there is great need for increased production of oilseeds will be evident from the fact that, according to available statistics, the *per capita* consumption of oil in India is less than 7 lbs. per annum. This compares very unfavourably with the optimum figure of 45 lbs. said to be necessary for maintaining normal health.

Output of Major Oilseeds

At present, there are about 27 million acres under major oilseed crops, namely, groundnuts, sesamum, rape and mustard, linseed and castor, their aggregate production ranging between 4.8 million and 5.2 million tons. As in the case of other crops, the yield per acre is very low, as compared with what it is in many foreign countries. In the case of groundnuts, for instance, the average yield per acre in India in 1950-51 was 713 lbs., whereas the corresponding figure for China was 1,666 lbs. and that for the U.S. 893 lbs.

Increase in output is possible by extending the acreage or by intensive cultivation or by both. Any significant increase in acreage would neither be possible nor very desirable so long as topmost priority is to be given to food production. It is, therefore, necessary to concentrate on better methods of cultivation. What is the extent to which production of oilseeds should be stepped up? Answering this poser, Mr. Ramdas Kilachand said:

"Oilseeds have now come to occupy a very important place in our economy. Since our consumption of vegetable fats is still very low, there is the likelihood of continued increase in internal demand as a result of better standard of living of the masses. I would even venture to say that a target of at least 50 per cent., that is, 7½ million tons more production in the immediate future for oilseeds should be aimed at, so that we are able to meet our own needs and are also able to regain our position as the chief exporter in the international market. This target is not difficult to attain, particularly with the several major and minor irrigation projects which will bring a large number of tracts under irrigation and also if efforts are made to increase the production per acre by intensive and better cultivation methods. We are all aware that the yield per acre of oilseeds in India is probably one of the lowest in the world. Therefore, by devising suitable methods of cultivation and proper use of good fertilisers and improved strain of seeds, it should not be difficult to increase our production by 30 to 35 per cent. even on the same acreage."

India was one of the premier exporters of oilseeds before and during World War II and held an important position in international markets. Since then, the Government of India has adopted the policy of allowing the export of oils only, as far as possible. But, even here, the Government has been bungling. Either the export quotas are announced before time or too late in the season, so that the country has not been able to take full advantage of world market prices for their commodities. Again, the export policy has been vitiated by too many drawbacks. Latterly, the export policy in regard to castor oil, in particular, has come in for a good deal of criticism. To quote Mr. Ramdas Kilachand in this connection:

". . . the Government has been announcing its policy for short periods. It has always been represented to the Government that there should be policies for six-monthly periods and that there should be no change therein during such periods. We are now at the end of April and yet the Government's policy for May onwards is still not announced. This is detrimental to the interest of trade and I would, once again, request the Government to announce its policy; first, in time; secondly, for a fairly long period, at least for six months; and lastly, after the announcement of the policy, no change should be made therein."

Export Duties

The levy of duties on exports of oils is another subject about which the oilseed interests have been highly critical. Export duties are not promptly readjusted to meet the changing conditions in world markets, with the result that they have been retarding the flow of exports to a great extent. Mr. Tata, therefore, urged the Government to review the position from time to time, in relation to internal price structure and trend in world markets consistent with the interests of Indian industry.

Of late, the oil crushing industry, which derived considerable fillip during the last world war, has not been passing through good days. The very fact that many crushing units have to close down their operations for some time during the year for one reason or another, such as shortage of raw materials, and that the crushing industry has not been in a position to earn even normal manufacturing profits regularly throughout the year tells its own tale. It is high time, therefore, that a committee was appointed to enquire into the affairs of this industry and to suggest measures for placing it on a sound economic footing.

The need for developing the *ghani* industry, with a view to providing employment for the unemployed manpower in the villages, is understandable. But the question is whether it should be at the cost of the mill industry, especially when its economic position is on tenterhooks. Certainly, as the Central Organisation has pointed out, "any further financial burden on the oil crushing industry would prove to be the proverbial last straw on the camel's back and would deal the death-blow to the industry, which is functioning only upto a portion of its total installed capacity."

It is alleged that the oil crushing industry has not received a fair deal in the allotment of tank wagons operating in different railway zones in the country. How true this charge is will be evident from the following extract of a resolution adopted at the annual meeting of the Central Organisation for Oil Industry and Trade: "Whereas the vegetable oil traffic works out roughly to one-fourth of the mineral oil traffic, it has been allotted a meagre number of tank wagons, namely, 264 on broad-gauge and 38 on metre-gauge, as against 3,336 and 1,391, respectively, allotted to the mineral oil traffic, which allotment, that is, the allotment to vegetable oil traffic, works out to only one-sixteenth of the tank wagons allotted to mineral oil traffic."

INTERNATIONAL PRINT AND PAPER FAIR

The second DRUPA—International Print and Paper Fair, is to be held at Duesseldorf, West Germany, from 15th to 30th May. More than 700 exhibitors, including more than 100 foreign undertakings from the United States, Great Britain, France, Belgium, Denmark, Holland, Italy, Austria, Sweden, Switzerland and Finland, ensure the DRUPA its world-wide importance; 667,360 sq. ft. of hall space raise it to the largest market for print and paper in the world. Sub-divided into four main groups, namely, machines and accessories, paper and paper products, printing inks and the printing trade, this Fair will demonstrate the systematic development of technical knowledge, the improvements and inventions which have resulted in more rational methods of working, new developments and reductions in costs. These will be shown here to the international trade world for the first time.

IMPORT OF CIGAR WRAPPER TOBACCO

Since the removal of the item "cigar wrapper tobacco" falling under serial No. 96, Part IV of the Import Trade Control Schedule, from Open General Licence No. XXXI, cigar manufacturers have been finding it difficult to import wrapper tobacco from Pakistan, since many of them are not established importers of unmanufactured tobacco. A notification issued last week by the Joint Chief Controller of Imports and Exports, Calcutta, has drawn attention to the provision that already exists against serial number 96, Part IV, for the issue of licences to actual users in regard to the import of unmanufactured tobacco from soft currency countries, including Pakistan. Cigar manufacturers may, therefore, apply to the licensing authorities for import of cigar wrapper tobacco from Pakistan for their full requirements.

U.S. AID TO NATIONAL LABORATORIES

Two Operational Agreements were signed on 29th April in New Delhi between the Governments of India and the United States of America, under which specialised equipment will be made available to India's national laboratories and also to certain technical service departments of the Government of India. The total joint cost of the project will be $2.7 million, and Rs. 27.75 lakhs. Out of this amount, a sum of $700,000 and Rs. 8,75,000 will be utilised for providing technical assistance and equipment to the Indian Institute of Technology, Kharagpur, while the rest of the amount, namely $2 million and Rs. 19 lakhs, will be for several National Laboratories, the Survey of India, the Geology Survey of India and the Bureau of Mines.

EXPORTS OF MANGANESE AND IRON ORES

The Government of India has reviewed the export policy of manganese and iron ores from the port of Calcutta in the light of availability of wagons and the accumulations at the port of Calcutta. Since substantial quantities of these ores from the previous allotments still remain to be transported, it has been decided to extend the period of validity of the quota slips for purpose of allotment of wagons up to the end of May, 1954. The concession announced in the Press note dated 3rd April, 1954, that *ad hoc* consideration would be given to requests for grant of supplementary export licences from shippers and mineowners, who have completed shipment against the previous allotments and who do not require any transport facilities for the additional quantities applied for, will also be continued.

PROTECTION TO COATED ABRASIVES INDUSTRY

The Government of India's resolution on the Tariff Commission's report on the continuance of protection to the coated abrasives industry has been published in the *Gazette of India* dated 1st May, 1954. The Government has accepted the Commission's main recommendation that protection to the industry should be continued for a further period of one year, i.e., up to 31st December, 1955. It has further accepted the recommendation that the protective duty on abrasive papers and rolls, etc., covered by item No. 30 (9) of the Indian Customs Tariff should continue to be levied at the existing rates of 25-1-5 per cent. *ad valorem* (preferential) and 37-4-7/5 per cent. *ad valorem* (standard), inclusive of surcharge, and that the protective duty on emery cloth and abrasive rolls, etc., covered by item No. 30(10) should be reduced from 37½ per cent. to 31½ per cent. *ad valorem*, inclusive of surcharge. A notification giving effect to the reduction in the duty has been issued. The Government has also accepted the other ancillary recommendations of the Commission.

INDUSTRIAL CLAY DEPOSITS IN RAJASTHAN

About 544,000 tons of industrial clay are available in the Barmer district of Rajasthan, according to investigations conducted by the Geological Survey of India. There are three different types of clay, namely Bentonite, White Clay and Fuller's Earth.

Reserves of Bentonite are estimated at 344,000 tons. Bentonite has found application in a number of industries such as oil drilling and refining, foundries, as a puzzolina in cement etc. The Barmer bentonite, particularly from the Akli and Thumbli deposits compare favourably with foreign bentonite. The White Clay reserves are estimated at 100,000 tons. Tests at the Central Glass and Ceramic Institute show that this clay possesses good plasticity and is useful for pottery industry.

AUDITORS' REPORT TO SHAREHOLDERS.

We have audited the above Balance Sheet of the Bank of Bikaner Ltd., as at 31st December, 1953, and also the Profit and Loss Account for the year ended that date in which are incorporated the audited returns from Bombay (Fort), Bombay (Zaveri Bazar), Calcutta, Delhi, and Bikaner Branches and the authenticated returns from other branches. We report that:—

(a) We have obtained all the information and explanations we have required;

(b) In our opinion the above Balance Sheet and Profit and Loss Account are drawn up in conformity with the Law;

(c) Such Balance Sheet exhibits a true and correct view of the state of the Bank's affairs according to the best of our information and explanations given to us and as shown by the books of the Bank;

(d) In our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913;

(e) The information and explanations required have been found to be satisfactory;

(f) The transactions of the Company which have come to our notice have been within the powers of the Company;

(g) The returns received from the branch offices of the Company have been found adequate for the purposes of the audit; and

(h) The Profit and Loss Account shows a true balance of Profit and Loss for the period covered by such account subject to Taxation and the appropriations made.

HINDUSTAN COMMERCIAL BANK LIMITED

MR. PADAMPAT SINGHANIA'S SPEECH AT ANNUAL GENERAL MEETING

PAYMENT OF HIGH RATES OF INTEREST ON CALL DEPOSITS DEPRECATED

THE tendency among some of the banks to secure money at all costs to meet their requirements was deprecated by Mr. Padampat Singhania, Chairman of the Hindustan Commercial Bank Ltd., in the course of his speech at the Tenth Annual General Meeting of the Bank held at Kanpur on 29th April, 1954. The new feature of accepting call deposits at 3 per cent. plus a brokerage, he thought, was not a healthy feature, since it would further add to the already high cost of banking operations and leave little margin of profit. Warning against this feature becoming a permanent part of the banking operations in the country, Mr. Singhania urged not only those who controlled Indian banking but also the Reserve Bank of India authorities to pay special attention to the question.

Analysing the financial results of his Bank, Mr. Singhania observed:

"GENTLEMEN,

"The net banking profits for the year, including the balance of Rs. 10,608-13 brought forward from the last year and after meeting all working expenses and providing depreciation, amounted to Rs. 2,70,682-13-1. A sum of Rs. 2,35,522-14-1 has been utilised for writing off bad debts and furniture and stationery in respect of Pakistan branches, and the balance of Rs. 15,159-15 has been carried forward to the next year's account. Our policy of consolidation of our resources and of riggling out of all odds, resulting from the change-over of the economic conditions created by the post-war effects followed by the Korean war and the partition of the country, continues. I must, however, say that we are making a solid and satisfactory improvement, and the time is not far off when we shall be able to place ourselves in the list of the first-rate banking institutions of the country. The overall working position of the Bank during the year has been stationary and a careful study of the monetary and banking conditions in India will indicate that further development was not possible in the circumstances. I should hope that the year 1954 will usher in the betterment of banking in the country, as, of late, greater attention is now being directed by all concerned towards this direction and we are bound to have our share of the same.

Cash

"Cash in hand and in current account with banks amounted to Rs. 67.5 lakhs and that represents 15.5 per cent. of our demand liabilities. The ratio of cash in hand and with bankers, including the unencumbered securities, to the total deposits will amount to about 39 per cent., which is far above the statutory requirement, and I must say, should be deemed as satisfactory. The Bank's demand liabilities are, however, fully covered by its cash resources. We have throughout tried to work on that position, as the maintenance of a sound liquid cash position is an essential part of sound banking.

Investments

"In the matter of the securities of the Central and State Governments, the position continues to be the same. The face value or the value on maturity fully covers the book value and the small difference was provided for out of the profits of the year 1952. . . . As regards the investment in shares of the joint-stock companies, we were able to effect some improvement in the nature of these investments by converting our investments from the ordinary shares from Rs. 13.86 lakhs to Rs. 8.44 lakhs. Fully paid-up preference shares advanced from Rs. 26 lakhs to Rs. 31.28 lakhs. . . . The present money market conditions have forced the Government's hands not only to raise the Bank rate from 3 per cent. to 3½ per cent. but also to raise their borrowing rates from 3½ per cent. to 4 per cent. and at times to issue them at a little below par. This will also explain away the Bank's position of high borrowings as the present market conditions do not permit our disposal of the same which otherwise we would very much like to do. We have got, therefore, to be losers by lower yield on our investments and to secure money at a higher rate of interest to cater to the needs of our clientele. It should not be forgotten that, even otherwise, the rates of deposits have gone up, due to stringency in the money market, our yields from these investments continue to be on the old basis. If the market conditions permitted disposal of a part of our investments both in Government securities and in the variable yield securities, we could positively have better income.

Advances

"The advances of the Bank, amounting to Rs. 2.54 crores at the close of the year, excluding those outside India, represent 58.42 per cent. of our deposits. The amount invested in the demand bills, amounting to Rs. 28.28 lakhs in India, represent a temporary short-term investment, and they go a long way towards controlling the overall cash position of the Bank's branches. Most of our advances are of seasonal character against commodities and are of the nature of self-liquidating according to the times. This proportion will vary according to the classification of banks and is bound to be lesser in the case of big deposit banks as against the medium-sized or the small ones. We, however, keep a vigilant eye over this feature of the banking operations, and I have explained elsewhere that the sound liquidity of our cash resources has always been well maintained. Your Directors in this respect have always followed a cautious and conservative policy not only from the point of view of the safety of our funds but also to maintain a liquid cash position.

"A disclosure in the balance-sheet with regard to the particulars of the outstanding advances indicates a satisfactory position. Our strenuous efforts for the recovery of advances in Pakistan continue and their realisation is more a matter of relationship between the two neighbouring countries. We are quite hopeful that the time is not far off when better understanding will prevail and when we should be in a position to realise our dues which were largely covered by the assets left behind by our borrowers, and which are now in the charge of the Custodian-General of Evacuee Property, Pakistan. As to the debts due by the companies or firms in which your Directors are interested, representing Rs. 21.27 lakhs, the bulk thereof amounting to Rs. 15.84 lakhs is covered by the Bank's own deposits and Rs. 3.46 lakhs represent demand bills purchased which have since been paid. This indicates a happy position.

Investment in Land and Buildings

"There is no change in the Bank's investment in land and buildings during the year under review. In spite of the drop in property prices, the present market values of these assets exceed the amount invested, and the return therefrom is highly satisfactory. We have not so far been able to put up our Head Office building in Kanpur, due to non-availability of proper materials, the need whereof is acutely felt, but I assure you that the same is being taken up shortly.

Deposits

"The total deposits of your Bank stand at Rs. 4.35 crores, which, as compared to those of the previous year, reveal a stationary position. You will, however, notice that there has been no change in the matter of time deposits, the little drop is in the current accounts. The continued stringency in the money market stood in the way of further development and a comparative study of the Scheduled Banks' deposits will reveal that the downward tendency during the year has been checked and, we hope, our efforts will now bring fruit and we should have our due share of the advancing deposits, tendency towards which direction is being slightly noticed. With regard to the classification, our deposits position is quite happy and indicates a porportion of Rs. 240 to Rs. 194 crores between the time and demand liability.

Foreign Exchange Business

"We continued to operate in the arena of foreign exchange business to the extent the commercial banks of the country could and should. This being a specialised subject fits mainly the foreign exchange banks or such big banks of our country as have large surplus funds and have also entered foreign countries by opening regular offices or by having made proper agency arrangements. I congratulate them on their enterprise and strongly hold that they must be given all-out support by our Government. Unless they have that patronage and the confidence of our national Government, they cannot create confidence in the outer world. While on the subject, I still hold the old view that the Indian banks should start an exchange bank of their own with the help and all-round patronage of our National Government, as, in the present circumstances of the exchange controls and the foreign trade being mainly conducted at the Government level, such an institution could only fit in and serve the country's needs.

Profit and Loss Account

"A comparison of the particulars of the expenses and income between the years 1952 and 1953 reveals a stationary position, the total thereof in the year 1952 was Rs. 30.37 lakhs and for the last year continues to be Rs. 30.34 lakhs. This, of course, does not come up to our expectations, but, looking to the times, this cannot be said to be an unsatisfactory result.

"In the matter of establishment charges, the expenses incurred are almost the same, in spite of the curtailment made here and there. There is an increase in the matter of interest paid on deposits and borrowings, which element is self-explanatory, due to the higher rates of interest on borrowings, coupled with the increase in the interest rates on deposits. . . . It has been our earnest endeavour to exercise every possible economy in our expenses, without, of course, impairing the efficiency and standard of services to the clientele. Our endeavours in that respect shall continue and the Board of Directors and the management will always welcome any suggestions which you, our friends and well-wishers, may have to make now or at any stage.

"By the closing down of some of the unremunerative branches, we had to incur losses in their winding-up, which were even more than the expenses incurred in the shape of preliminary opening expenses, but this was considered necessary in the interest of the Bank to avoid future losses. Change of circumstances and also the trading conditions rendered some of the business places unsuitable for banking operations and added to that have been the ever-increasing cost of establishment."

Role of Banks in Economic Life

Mr. Singhania drew attention to the vital role played by the banks in the economic life of the country and said:

"The institutional investors, particularly the banks, have always discharged their responsibilities in a creditable manner and co-operated highly to make the Government's flotations, Central and Provincial, successful. Last year, cash contributions to the extent of Rs. 58.1 crores were made, besides conversion to the extent of Rs. 54.6 crores in the matter of both Central and State loans. The banking system requires pumping up with the monetary supply from out of the savings of our people and the circulation thereof has got to be increased to the maximum and also the credit system of the country, which alone could solve the present stringency and cater to our future planning requirements. There should not be any suspicion as regards the money which people put out for deposits in banks or otherwise invest in the private sector. All types of enquiries and suspicion by the Income-tax Department are adding to the fears of the investing public and forces hoarding at home. That alone will curb the present characteristic shyness and the hoarding habit of those who possess money.

"An all-out effort should be made to put our Indian banking system on a sound basis and all concerned should extent their fullest patronage and confidence in our own banks. While I say that, I could also urge all those managing the affairs of the banks to rise up to the national level and inculcate a spirit of service to further the cause of national prosperity. Banks are the only credit institutions which call, to attract for trade and planning purposes, the wealth and savings of the people. It is necessary even from the Government's point of view, as it should not be forgotten that, out of the present bank deposits, about 40 per cent. is invested by them in the Government securities. The more money they are able to attract to their coffers the larger will be the money at the disposal of the Government without incurring any recurring expenses of their own."

Expansion of Banking Activity

Emphasising the need for expanding the sphere of banking activity, Mr. Singhania remarked:

"In the matter of foreign banks, two more were added to the list of the Scheduled banks and, at present, there are 91 Scheduled banks and, number of offices of all the banks, including the Exchange banks and the Imperial Bank of India, is 2,710. Looking to the vastness of this subcontinent and the population of 368 million people, this number presents a very poor picture of banking in our country. Moreover, a very large number of them is concentrated only in the big towns and cities. Vast tracts requiring banking services from the trade and commercial point of view and also from the point of view of attracting deposits go unserved. This accounts for the underdeveloped banking and monetary position of our country. Even on the Government's side, the various means and methods adopted in the matter of Post Office Savings Bank deposits, National Savings Certificates, ten-year Savings Certificates, etc., have not attracted much money, excepting that they have retarded the commercial bank's deposits and acted as a competitor to these private enterprises. After independence, the development of banking on the basis of our own requirements and system should have received the priority attention of our national Government and leaders for making India a welfare democratic state and add to day-to-day prosperity of our people. While I do not discourage in the least the inviting of foreign capital and the securing of aid given by the foreign nations to the underdeveloped countries, I strongly feel that we have got to make all out efforts to secure independence on this front if we have to place ourselves amongst the progressive nations of the world. May be that the present system of the existing banking institutions may require a complete overhauling and the sooner it is done the better in the interest of the country. It may not be forgotten that, with the limited means and scope that the present banks possess, they have since the time of independence been out for the maximum service and co-operation in all respects to improve the economic condition and to add to the national prosperity of the country."

Alluding to the question of agricultural finance, Mr. Singhania said:

"Agriculture is a very important feature in our economy, ours being mainly an agricultural country. This question has been the responsibility of the Reserve Bank of India since its inception, but, for years together, nothing in that direction was ever contemplated or done. Of late, the Reserve Bank of India has started taking interest in this respect and has now made itself eligible to give accommodation for agricultural, cottage and small industries. Such credit facilities have now been availed of in a number of States mainly through the co-operative societies. I am glad that a beginning has been made, but the scope will have to be widened progressively to provide all types

(Continued on page 905)

PREMIER CONSTRUCTION COMPANY, LIMITED

PROSPECTS PROMISING

ADDRESSING the shareholders of the Premier Construction Company, Ltd., at their Thirty-fourth Annual General Meeting, held in Bombay on 4th May, 1954, Mr. Gulabchand Hirachand, Chairman of the Company, said:

"It must have been a matter of satisfaction to you that the balance transferred to the balance-sheet in the profit and loss account for this year amounts to Rs. 11,04,504, as against Rs. 8,71,422 in the previous year. This increase in the net profits of your Company has been due to better dividends received by your Company on its investments. This rise in profit has been responsible for a higher provision of Rs. 75,000 for taxation. In this respect I cannot help drawing your attention to the fact that there is inordinate delay in the assessments for income-tax of public companies. So far, this assessment has been completed only up to 1949. The provision in the balance-sheet for the purpose of taxation, therefore, represents liability of tax for four years—1950 to 1953. Representations have been made by your Company with regard to this delay.

"Looking at the balance-sheet you will find a new item of works-in-progress amounting to Rs. 22,722. You would be glad to know that your Company has made a start of undertaking construction activity directly in the nature of cement guniting work. It has secured a contract in connection with guniting 57-inch steel pipes at the Tulsi Pipe Road from the Bombay Municipality. The amount spent up to the end of the year has been carried forward as it is, because a substantial part of this work still remained to be done at the close of the Company's year.

"With regard to the future, you must be aware of the all-round expansion of economic activities under the first Five-year Plan. The second Five-year Plan will carry this expansion much further. This is bound to have its effect on the prospects of all industrial concerns and especially of those engaged in constructional engineering and manufacture of machinery and other requisites for this kind of engineering activity. Unless there is a drastic change in the attitude of the authorities to the private sector or there is an addition of appreciable burden by way of taxation or further concessions to workers, the future of industry as a whole, including of those in which your Company is financially interested, cannot, therefore, be said to be in any way discouraging.

"Before I conclude, I want to draw your attention to an item of expenditure of Rs. 1,00,000, to which your attention has already been drawn under para 4 of the Directors' report. This amount represents part payment of Rs. 1,50,000 sanctioned by your Directors as donation to the Seth Walchand Hirachand Memorial Trust. You would be glad to know that this Trust has been created to perpetuate the memory of a great pioneer in the world of Indian industry, who laid the foundations of your Company along with a number of other outstanding industries and nursed them with great care and ability."

Notices

THE SIMPLEX MILLS COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE last date for submission of Coupons for one-third of Ordinary Shares and one-third of Fractional Shares for conversion into Fully Paid and Fractional Shares, respectively, has been extended from 28th April, 1954, to 28th July, 1954.

By Order of the Board,
SAHU JAIN LTD.,
Managing Agents.

CALCUTTA, 26*th April*, 1954.

BILL TO AMEND AND CONSOLIDATE COMPANY LAW

AN ATTEMPT TO ORGANISE PRIVATE SECTOR

THE Company Law Bill was taken up for discussion by the House of the People on 28th April last, after a lapse of nearly eight months since it was introduced in the House on 2nd September, 1953. It is one of the longest measures in recent legislative history containing, as it does, 612 clauses and 12 schedules. It is a lengthy one, because it is both an amending measure and a consolidating one. This is the first opportunity since 1913 for the consolidation of the Companies Act and, as the Finance Minister put it, in his speech moving the Bill for reference to a Select Committee, "advantage, therefore, has been taken of this opportunity to re-draft the Act comprehensively." The re-draft of the Bill and rearrangement of the existing chapters in the Companies Act in a more logical order have, the Finance Minister said, resulted in a noticeable improvement in the form of the Bill and should facilitate a better understanding and appreciation of the scheme of the future Indian Companies Act. After a four-day debate, the Bill was referred to a Joint Select Committee of both the Houses of Parliament, consisting in all of 33 members.

The Company Law Bill is based largely on the recommendations of the Company Law Committee appointed by the Government of India at the end of 1950, modified in a few particulars by the comments received from trade and industrial associations to whom the report was circulated. During the last months, after the Bill was introduced in the House, the officers of the Finance Ministry were engaged in further studies and informal discussions with the interests concerned. The Finance Minister also gave, during this period, some further thought to some of the issues arising out of the Bill and he proposed, at the appropriate stage, to bring up to the Select Committee any changes in the provisions of the Bill, which seemed to him to be worthy of consideration in the light of this further examination.

Moving the Bill for reference to the Joint Select Committee, Mr. C. D. Deshmukh, Finance Minister, referred to the salient provisions of the Bill and elucidated the basic principles underlying some of its main provisions, which related to six aspects, namely, (*a*) company promotion and formation of capital structure of a company, (*b*) company meetings and procedure; (*c*) presentation of company's accounts and their auditing and the powers and duties of auditors; (*d*) inspection and investigation of the affairs of the company; (*e*) formation of board of directors, their powers and duties, and (*f*) terms and conditions of appointment of managing agents, their powers and duties.

Company Formation

In regard to company formation, the provisions of the Bill make considerable changes in the existing legislation in regard to prospectuses, allotment of shares, terms and conditions on which companies may be floated and the capital structure of companies. In regard to company prospectus, for example, Schedule II of the Bill, which replaces section 93 of the Companies Act, greatly enlarges the particulars that will have to be disclosed in future in the prospectus. To give an instance, the Bill requires that the previous consent of experts should be obtained before their views can be reproduced on a prospectus issued to the public and that, in the case of companies managed by managing agents, the subscribed capital of the managing agency companies should be disclosed. All material contracts into which a company promoter may have entered or proposed to enter on behalf of the company are required to be disclosed. The new provisions relating to allotment of shares are designed to improve the machinery of the new issue market by prescribing the form and manner in which an application for an allotment of shares should be made and by regulating the commissions to be paid to the promoters and underwriters of new issues. Commending these provisions, the Finance Minister said:

"The effect of all these provisions under the general head relating to company formation is to impose on directors and others concerned with the promotion of a company a much higher degree of vigilance than is at present required of them, and to place the investors in a much better position than they are at present to assess the intrinsic merit of a new issue. It is not necessary for me to argue the point whether the principle of disclosure underlying these provisions could adequately safeguard the interests of prospective investors or ensure sound company flotation, but, I am sure, all hon'ble members will agree that disclosure of essential information is a first step in this connection and cannot by any means be said to impose any burden on private enterprise."

Clauses 79 and 87 of the Bill contain the most important changes relating to the capital structure of a company, under which the share capital of a company shall, in future, be only of two kinds, namely, equity capital and preference capital, and voting rights should ordinarily be conferred only on the holders of equities. Disproportionate voting rights are also sought to be eliminated, except where the conferment of such rights is considered necessary in the public interest by the Central Government.

Company Meeting and Procedure

The present provisions relating to company meeting and company procedure are stated to have provided a ".prolific source of litigation" and to no small extent, Mr. Deshmukh admitted, has this been due to the uncertainties of the present law. The new Bill attempts "to remove the existing obscurities and to try and hold the scales even as between company managements and shareholders in regard to the exercise of their rights in company meetings." Two important changes relating to these introduced in the Bill are: (1) abolition of extraordinary resolutions, so that, in future, company resolutions will be either ordinary or special resolutions, and (2) extension of the period of notice for general meetings from 14 to 21 days.

The provisions relating to company accounts and audit of company funds require the presentation, in the balance-sheets and profit and loss accounts, of such additional items of information as will reveal the true financial position of a company and its state of affairs as a going concern. The Company Law Committee's recommendations on this subject were largely based on the advice it received from the accountancy profession. Referring to this aspect, Mr. Deshmukh disclosed that, lately, some further discussions had taken place on this subject between the officers of the Finance Ministry and the representatives of the profession. "In due course," Mr. Deshmukh added, "we shall place before the Select Committee our ideas on one or two issues which, if accepted, will involve some minor changes in the provisions of the Bill. . . . These are, in my view, such as are calculated to promote sound financial practices by joint-stock companies and also to ensure a higher standard of auditing of company accounts in future."

The provisions relating to the appointments, qualifications, duties and powers of auditors are intended to secure the independence and integrity of the auditors. They seek to create conditions under which auditors would be able to discharge their statutory duties without fear or favour.

Perhaps no other aspect of the present company law has attracted so much adverse comment from the public as the one relating to the inspection and investigation of the affairs of companies. Under the provisions of the new Bill, it will be open to the Central Government not only to initiate investigation of its own motion in suitable cases, but also to apply to a court of law for redress in cases where a company acts in a manner prejudicial to its interests or in a manner which is oppressive to any part of its members. The existing powers of shareholders to apply for investigation or to seek relief in a court of law are also enlarged. Mr. Deshmukh said that some recent cases exposed the inadequacy of the powers now conferred on inspectors to investigate the ownership of shares in a company and demonstrated the necessity for the enlarged powers. These are sought to be achieved by the provisions of the new Bill.

Directors

The Finance Minister next referred to another set of controversial issues, namely, the provisions of the Bill relating to directors and managing agents. The provisions which deal with directors are designed to ensure (1) constitution of independent board of directors consisting of representatives of management and shareholders without domination of the former over the latter, (2) selection of directors, who could devote sufficient time and thought to the affairs of the company, (3) adequate control of directors over the managing agents where day-to-day management of the company was in the hands of the latter, and (4) prevention of the misuse by directors of powers which they were entitled to exercise on behalf of the company.

As regards the last mentioned objective, Mr. Deshmukh said that past experience had shown that some control was needed over the exercise of some of these powers, e.g., the power to make loans, the power to enter into contracts, the power to sell, lease or otherwise dispose of property, the power to limit or extend the date of payment of debt; and the power to borrow on behalf of the company.

Touching upon the controversy which the aforesaid provisions relating to directors have given rise to, Mr. Deshmukh sought to remove the fears which the critics of the Bill might have over their restrictive nature. Thus, he said:

"The House is not unaware that some of these provisions have given rise to acute controversy and that it has been argued on behalf of the managements that they unduly restrict their initiative and enterprise, and might in the long run prove to be detrimental to the interests of the companies themselves. To what extent these fears are justified will depend on the view one takes of the detailed provisions of the Bill relating to these matters. I do not like to anticipate the recommendations of the Select Committee, but, I am sure, I have the support of the House in saying that nothing is farther from the thoughts of anyone here than to impose unnecessary restrictions on *bona fide* business. Our proposals on this subject have been formulated only to prevent abuses and malpractices and not to hinder sound and honest management of companies. I am always prepared to give further thought to representations on this matter. Of course, I need hardly assure the critics that I shall welcome a full consideration of these by the Select Committee."

The Finance Minister also mentioned, in passing, the provisions of the Bill relating to the age-limit of directors and the number of directorships which a person can hold. The first one, he said, closely followed the provisions of the English Act on this subject. The latter was intended to ensure that adequate attention was paid to the affairs of a company by its directors. These two provisions, he said, had received prominence in current discussions quite out of proportion to their importance in the scheme of reform envisaged in the Bill. However, he left it to the Select Committee to weigh the pros and cons of these issues set out fully in the report of the Company Law Committee in the light of such guidance as the House gave in due course and to arrive at a decision.

Managing Agency

The provisions of the Bill relating to managing agency cover a wide range of topics such as the terms and conditions of appointment of managing agents, their remuneration, the powers of managing agents *vis-a-vis* the directors and the powers and duties of managing agents in regard to borrowing, loans, contracts, sales and purchases. The main object of the proposed regulations, the Finance Minister said, was to prevent the widespread abuse of the powers conferred on managing agents on these subjects, which took place all over the country, more particularly since the commencement of World War II. Referring to the importance of these provisions and the Government's views on the managing agency system and justifying the need for the provisions, Mr. Deshmukh observed:

"I am sure all of us will agree, irrespective of our attitude towards the managing agency system, that these provisions are of key importance in the scheme of reforms envisaged in the Bill. Government are in agreement with the unanimous view of the Company Law Committee that under the present economic structure of the country, the managing agency system will continue to have its uses for some time to come and that, cleansed of the abuses and malpractices which have disfigured its working in the recent past, the system may yet prove to be a potent instrument for tapping the springs of private enterprise. This view is based not only on history and tradition but also on an objective assessment of the present structural organisation in our trade and industry, and the obvious gaps in our institutional set-up, particularly in the closely related fields of company investment and company finance—gaps which it will take us some years to close. It is, therefore, of the utmost importance that the system should be purged of the evils, which have crept into it, as early as possible, so that it can play a worthy role in the future development of the private sector. Here again, as in the case of directors, the problem before us is one of striking a balance between the admitted case for regulation and control and the need for preserving the initiative and resilience of the honest managing agent. This is not the place to go into details, but, by and large, the provisions

(*Continued on page 913*)

Points From The Chair

Rationalisation of Textile Industry

"THE problem of rationalisation has been much to the fore in recent months. I am fully conscious of the fact that, in a country like ours where avenues of employment under present conditions are limited, the problem of rationalisation cannot be treated in isolation from its reaction on the community as a whole. But the manner in which this problem has been discussed so far reveals a lack of proper understanding of its real meaning and purpose. In its limited application to the cotton textile industry, it cannot, by any stretch of imagination, result in sudden and widespread unemployment. In the first place, there are very few mills in the country which have today the financial resources to embark upon any large-scale renovation of labour-saving plant and machinery, and secondly, even if a number of units simultaneously decided to install such machinery, it can only be made available over a period of years. Therefore, the fears of thousands of men being thrown out of employment suddenly are entirely misconceived. On the other hand, a gradual rationalisation of the industry will certainly result in cheapening the cost of production and making available to the masses of this country one of the ordinary necessities of life, namely, cloth, at cheaper prices. No scheme of rationalisation can ever be considered reasonable or successful unless it results also in improving the earnings of the workers employed."

A. D. SHROFF,
Swadeshi Mills Co., Ltd.

Money Supply and Deposits of Banks

"The amount of money in deposit with the Scheduled banks in our country is rather low in comparison to the total amount of money in circulation. The reason for this seems to be that more money is in the rural areas where there are very few banks. So, to attract the monies in the hands of the people of the country in rural areas, rural banking should develop and rural areas should be served by banks. Besides, people living in rural areas should be made to realise the importance of banking and they should be made bank-minded. By attracting monies in the hands of the rural population, banks will make these monies available to trade, industry and commerce and this will tend to improve the economic wealth and position of the country. Another reason is a fairly large amount of money is in hiding and it doesn't come in for circulation as the holders of such money are afraid of making use of them, lest they might be assessed to tax thereon."

R. SUNDARAM IYER,
Indian Bank Ltd.

Prospects for Constructional Engineering

"With regard to the future, you must be aware of the all-round expansion of economic activities under the first Five-year Plan. The Second Five-year Plan will carry this expansion much further. This is bound to have its effect on the prospects of all industrial concerns and especially of those engaged in constructional engineering and manufacture of machinery and other requisites for this kind of engineering activity. Unless there is a drastic change in the attitude of the authorities to the private sector or there is an addition of appreciable burden by way of taxation or further concessions to workers, the future of industry as a whole, including of those in which your Company is financially interested, cannot, therefore, be said to be in any way discouraging."

GULABCHAND HIRACHAND,
Premier Construction Co., Ltd.

Saving for Investment in New Plants

"At the present time investment in new plant and factories in this country compares unfavourably with that being undertaken by our competitors. The reason for this appears to be twofold. In the first place, there still appears to be reluctance on the part of some British business to scrap old plant and replace it by newer, more efficient machinery. In the second place, despite the striking increase which has taken place in savings in the past two years, their level is still, in my view, below that required to maintain a satisfactory flow of capital into industry, taking into account the housing programme and other capital expenditure to which the Government is committed. To build new factories and to equip them with the latest machinery of the most modern type requires a steady flow of new investment provided by savings. I hope that in this direction that offices such as ours link up with British industry."

C. H. SHUTTLEWORTH,
Royal London Mutual Insurance Society Ltd.

Mutualisation Has Come To Stay

"Coming to the question of nationalisation of insurance, today one feels that this idea is obsolete. Recently, in Norway, a well advanced European country, which was thinking in terms of nationalisation, mutualisation was recommended by the Royal Commission appointed to investigate the future of life insurance in that country. What we repeatedly recommended from year to year at these meetings, namely, mutualisation, has come to stay in this country as also elsewhere, as aforesaid. One insurance company in South India has already mutualised itself and shortly one of the biggest proprietory companies in India might get mutualised. Thereafter, this movement will gather momentum and many more will be mutualised. Mutualisation has come to stay, because it strikes a healthy balance between nationalisation, on the one side, and private ownership, on the other."

P. PADMANABHA RAO,
Canara Mutual Assurance Co., Ltd.

COMPANY MEETINGS AND DIVIDENDS

TIDE WATER OIL CO., (INDIA) LTD. Half-yearly General Meeting, Calcutta, 11th May, 1954. Dividend: *Nil*. Transfer books remain closed from 8th to 11th May, 1954, both days inclusive.

ORIENT PAPER MILLS LTD. Half-yearly General Meeting, Calcutta, 14th May, 1954. Dividend: Re. 1 per share. Transfer books remain closed from 1st to 14th May, 1954, both days inclusive.

NEW MANBHOOM COAL CO., LTD. Half-yearly General Meeting, Calcutta, 17th May, 1954. Dividend: *Nil*. Transfer books will remain closed from 10th to 17th May, 1954, both days inclusive.

GANESH FLOUR MILLS CO., LTD. Annual General Meeting, Delhi, 23rd May, 1954. Transfer books will remain closed from 10th to 23rd May, 1954, both days inclusive.

INDO-BURMA PETROLEUM CO., LTD. Annual General Meeting, Calcutta, 27th May, 1954. Final dividend: Rs. 8 per share (making a total of Rs. 8 per share for the year). Transfer books will remain closed from 10th to 27th May, 1954, both days inclusive.

HINDUSTAN WOOLLEN MILLS LTD. Annual General Meeting, Calcutta, 31st May, 1954. Transfer books will remain closed from 17th to 31st May, 1954, both days inclusive.

SURAT ELECTRICITY CO., LTD. Final dividend: Rs. 4-8 per share for the half-year ended 31st December, 1953 (making Rs. 7 per share for the year) and proportionate to the amounts called-up. Transfer books will remain closed from 14th to 28th May, 1954, both days inclusive.

CENTRAL PROVINCES RAILWAYS CO., LTD. Transfer books will remain closed from 31st May to 12th June, 1954, both days inclusive.

TRAVANCORE OGALE GLASS MANUFACTURING CO., LTD. Dividend: *Nil*. Transfer books will remain closed from 14th to 26th June, 1954, both days inclusive.

TRAVANCORE RUBBERS LTD. Dividend: Rs. 2 per share. Transfer books will remain closed from 12th to 20th May, 1954, both days inclusive.

REFORM OF COMPANY LAW—II

(*Concluded from page 894*)

other directors, he has the duty to direct the management and affairs of the company. If a director is to discharge his duty conscientiously, he cannot fairly, honestly and efficiently justify his holding the office in more than seven, or eight or ten companies at the most, however extraordinarily energetic he may be. The limit of twenty directorships fixed by the present section will practically leave the position as it is. Further, there is no reason why, in counting this "twenty," directorships of private and other companies are to be excluded. If its directors are to be useful to a company, they must be in a position to devote themselves to the affairs of the company entrusted to their charge. I would, therefore, suggest that, in sections 253 to 257, wherever necessary, for the words "twenty" the word "six" should be substituted.

(*Concluded.*)

QUESTION HOUR IN PARLIAMENT

World Bank Loan to I.F.C.

EFFORTS to get a loan of $8 million from the World Bank for the Industrial Financial Corporation have been given up. The total amount utilised till 31st March, 1954, of loans, so far granted by the World Bank is $54.7 million. So far as the efforts of the Indian mission of senior officials which had gone to Washington are concerned, the Trombay Project and the Koyna Project are being studied by the International Bank.

* * * *

American Loan Fund

The American Loan Fund was built up by the sale of the American wheat loaned to the Government of India. It was originally thought that the total amount would be Rs. 90.43 crores, but, due to capital loss owing to subsidised sale of the food-grain, the amount credited to the Fund was actually Rs. 73 crores. In the ceilings for Central assistance to States each year on schemes approved by the Planning Commission, medium-term loans are being met from the Fund. There is no question of any cases for assistance from the Fund coming up as such. The amount paid during 1953-54 out of the Fund for mostly irrigation, power and other development schemes included Rs. 85.87 lakhs to Assam, Rs. 100 lakhs to Bihar, Rs. 311 lakhs to Bombay, Rs. 40 lakhs to Madhya Pradesh, Rs. 175 lakhs to Madras, Rs. 95 lakhs to Orissa, Rs. 75 lakhs to the Punjab, Rs. 100 lakhs to Uttar Pradesh, Rs. 149 lakhs to Mayurakshi Project and Rs. 200 lakhs to West Bengal. Rs. 39 lakhs were given to Madhya Bharat, Rs. 152 lakhs to Mysore, Rs. 97 lakhs to Rajasthan, Rs. 123 lakhs to Saurashtra and Rs. 225 lakhs to Travancore-Cochin.

—*Parliamentary Secretary to Finance Ministry*

I.F.C. and Industrial Loans

The International Monetary Fund Mission has recommended that the Industrial Finance Corporation should collaborate with banks in granting industrial loans. The matter has been under the consideration of the Government. The Government is also awaiting, in this connection, the report of the Shroff Committee, which was appointed by the Reserve Bank of India with the approval of the Government, to examine, among other things, the possibility of providing bank finance for development in the private sector. The Industrial Finance Corporation has also contacted commercial banks to find out what has been done in the matter, particularly on the question of debentures issued by the Corporation. Reactions of the banks in regard to debentures appear to be satisfactory.

—*Deputy Finance Minister*

Second Five-year Plan

Plans and schemes for inclusion in the Second Five-year Plan would require greater study and investigation. Surveys and studies of resources, needs and practical possibilities are a normal and continuous aspect of planned development. The States have been asked to indicate the irrigation and power schemes which they have in view to the next plan and, in respect of each scheme, the stage reached in its investigation. The States have also been addressed on the manner in which investigations should be carried on and the information made available. A Central official is also to be deputed to go round the States, so that his advice in respect of investigation may be available on the spot. These steps are being taken to avoid delay that may occur if the investigation and surveys are incomplete and additional information has to be called for. States are also being addressed on the subject of preparation of district and local plans which would call for surveys of local resources and needs. In respect of these, the local people may also be associated. With the assistance of the States, a large number of investigations into social and economic problems has been initiated through universities and other research institutions under the direction of the Research Programmes Committee of the Planning Commission.

—*Deputy Minister for Irrigation and Power*

More Aircraft

A further advance of Rs. 3.37 lakhs will be given to Air-India International Corporation during 1954-55 towards the payment of the price of Super-Constellation aircraft. The Government has already advanced Rs. 266.55 lakhs to the Corporation, Rs. 89.55 lakhs as loan and Rs. 177 lakhs as capital. Out of this, Rs. 227 lakhs represent instalments paid towards the cost of five Super-Constellation aircraft which have been ordered by the Corporation. The Government's share in the paid-up capital of the Company is Rs. 102 lakhs.

—*Deputy Communications Minister*

Aid to Travancore-Cochin

The Centre has promised assistance of Rs. 275 lakhs in the current year to the Government of Travancore-Cochin for the execution of development projects in the State.

* * * *

China's Debt to India

The Government of India has taken up with the Peking Government the question of repayment to India of Rs. 10,80,103, being the sum owed to India by the former Chinese Government. This debt was incurred during the war and post-war period. The claim is admitted by the former Chinese Nationalist Government. It has now been taken up by the Indian Ambassador in Peking with the Chinese Government and also by the Indian Government with the Chinese Embassy here. The Embassy has stated that the matter has been referred to the Chinese Government and their decision is awaited.

—*Deputy Finance Minister*

RESULTS OF VISHNU COTTON MILLS DISAPPOINTING

MODERN MILLS MAINTAINS DIVIDEND

Vishnu Cotton Mill Ltd.

THE directors of the above Company (Secretaries, Treasurers and Agents: The Bombay Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December, 1953.

The accounts show a profit for the year of Rs. 2,69,069 (Rs. 13,39,541) to which must be added balance brought forward from last year Rs. 2,21,881 (Rs. 2,21,813) and net surplus on sale of old machinery, etc. Rs. 33,480 (*nil*) giving a total of Rs. 5,24,430 (Rs. 15,13,354) after payment of interim dividend of Rs. 3 per share. The directors have transferred from reserve for taxation Rs. 40,000 (*nil*) being the provision made in previous years no longer required and from depreciation, renewal and extension fund Rs. 1,15,000 (*nil*) making available a sum of Rs. 6,79,430 (Rs. 15,13,354). From this sum they have transferred to depreciation Rs. 6,63,691 (Rs. 6,68,602) and gratuity fund Rs. 13,000 (Rs. 24,000) leaving a balance of Rs. 738 (Rs. 5,26,752), after providing Rs. 2,50,000 for taxation and Rs. 44,000 for depreciation, renewal and extension fund). They have transferred from the dividend fund Rs. 2,10,000 (*nil*) making available a sum of Rs. 2,10,738 (Rs. 5,26,752). Out of this balance the directors recommend a dividend of Rs. 35 (Rs. 35) per share less income-tax on 3,133 preference shares, and a dividend for the year of Rs. 4 (Rs. 7 final) per share on 32,000 ordinary shares, free of income-tax absorbing Rs. 2,08,870 (Rs. 3,04,870) and to carry forward the balance of Rs. 1,868 (Rs. 2,21,881).

Forfeited dividends amounting to Rs. 2,576-4 have been added to reserve fund.

Trading conditions were stable during the early part of the year, but in the second half there was a considerable decline in the cloth market; although there has been some improvement since November last, conditions continue to be very difficult as regards coarse, medium and fine varieties of cloth, and the weak selling policy of other local mills has contributed to these difficulties. The Company continued to do a fair business for export throughout the year, but here again conditions have become increasingly competitive.

Old buildings which cost Rs. 5,693 have been demolished. Additions to buildings during the year amounted to Rs. 1,13,042 and to machinery Rs. 13,24,908. The main items were: erection of a new bungalow, extensions to loom-shed, dye-house, folding room and workshops, loom-shed humidification, 8 new ring frames, conversion of 5 doubling frames, and replacement of spindles. Erection of the new boilers continues. They are expected to be under steam later this year.

The workers received a bonus of 12½ per cent. of basic earning in respect of 1952.

The Company's contribution to the Employees Provident Fund was Rs. 3,23,837, which compares with Rs. 49,578 in 1952, during only two months of which the Act was in force. Dearness allowance to workers and staff totalled Rs. 36,69,596 which is Rs. 4,36,571 in excess of the amount paid in 1952.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	47,66,500	Block ...	44,86,278

Reserve for taxation ...	2,99,355	Stores ...	18,44,318
Liabilities ...	85,27,802	Debts, deposits and advances ...	35,41,959
Profit and loss account ...	2,10,739	Investments	6,62,167
		Cash ...	21,084
Rs.	1,85,38,531	Rs.	1,85,38,531

Modern Mills, Ltd.

The directors of the above Company (Managing Agent: Messrs. N. Sirur & Co., Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st October, 1953.

The result of the Company's operations during the year shows a profit of Rs. 2,37,648 (Rs. 3,14,514) which with Rs. 24,034 (Rs. 31,305) brought forward from the previous year's account makes a total of Rs. 2,81,682 (Rs. 3,95,267) after taking into account profit on sale of machinery Rs. 45,189 and surplus bonus provided in 1943 Rs. 4,259. From this sum the directors allocated to provision for taxation Rs. 27,700 (Rs. 27,700), depreciation on buildings Rs. 65,950 (Rs. 15,000) and part depreciation on machinery Rs. 1,88,032 (Rs. 60,000 in full) leaving a balance of *nil* (Rs. 2,45,339 after transferring Rs. 47,228 for machinery rehabilitation fund).

In order to provide for balance of depreciation due on machinery and to enable payment of a dividend at Rs. 5 (Rs. 5) per share on 44,261 ordinary shares of Rs. 50 each and to carry forward a small sum to next year, the directors propose to transfer from the reserve fund (which has already been taxed in previous years) Rs. 5,95,000 (*nil*) to be disposed of as under:

Balance of depreciation on machinery Rs. 3,61,518 (*nil*), dividend of Rs. 5 (Rs. 5 per share (free of income-tax) on 44,261 ordinary shares of Rs. 50 each Rs. 2,21,305 (Rs. 2,21,305) and to carry to next year's account Rs. 12,177 (Rs. 24,034).

Although price and distribution controls on cloth and yarn were completely removed from 10th July, 1953, the working of the Mills was adversely affected by the serious depression in the cloth trade during the last four months of the year under report. Moreover, the Employees' Provident Fund Scheme came into force at the commencement of the year under report and the Company's contribution to the Fund amounting to Rs. 1,80,507 was an additional charge on the earnings of the Company.

The property and stocks at the Mills at Parel and Mahalaxmi are insured for the sum of Rs. 3,37,48,525 and the profits and standing charges for Rs. 45,00,000 for 24 months' benefit, that is, Rs. 22,50,000 annually.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	22,13,050	Block ...	62,04,772
Reserves ...	41,30,928	Stock-in-trade	93,16,611
Debentures ...	12,00,000	Stores, spares, etc. ...	9,66,659
Provision for taxation ...	55,495	Debts, deposits and advances ...	7,45,873
Liabilities ...	96,48,367	Investments	2,20,368
Profit and loss account ...	2,33,482	Cash ...	26,839
Rs.	1,74,81,322	Rs.	1,74,81,322

Lakhshmi Cotton Manufacturing Co., Ltd.

The directors of the above Company (Secretaries, Treasurers and Agents: The Bombay Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December, 1953.

The accounts show a profit for the year of Rs. 14,87,256 (Rs. 18,47,514), to which must be added balance brought forward from last year Rs. 1,99,524 (Rs. 2,77,995) giving a total of Rs. 16,86,780 (Rs. 21,25,489). The interim dividend of Rs. 10 per ordinary share paid in November, 1953 absorbed Rs. 1,28,000 (Rs. 1,28,000) leaving a balance of Rs. 15,58,780 (Rs. 19,97,489). From this amount the directors have transferred to depreciation Rs. 8,06,271 (Rs. 953,966) reserve for taxation Rs. 2,30,000 (Rs. 3,60,000), engine and machinery fund Rs. 46,142 (Rs. 48,000) and gratuity fund Rs. 13,000 (Rs. 25,000). Out of the balance of Rs. 4,63,367 (Rs. 6,10,524) the directors recommend a dividend of Rs. 12-8 (Rs. 12-8) per share less income-tax on 6,400 preference shares, and a final dividend of Rs. 27-8 (Rs. 27-8) per share on 12,800 ordinary shares (making Rs. 37-8 (Rs. 37-8) per share for the year) free of income-tax, absorbing Rs. 4,11,000 (Rs. 4,11,000) and to carry forward the balance of Rs. 52,367 (Rs. 1,99,524).

The amount transferred to engine and machinery fund covers the estimated amount of taxation saved by the allowances for initial depreciation. This does not affect the value of the block.

A sum of Rs. 2,953, representing surplus on sale of old machinery, has been credited directly to engine and machinery fund, and forfeited dividends amounting to Rs. 3,081-1-8 net have been added to reserve fund.

Trading conditions were stable during the early part of the year, but in the second half there was a considerable decline in the cloth market; although there has been some improvement since November last, conditions continue to be very difficult as regards coarse, medium and fine varieties of cloth, and the weak selling policy of other local mills has contributed to these difficulties. The superfine section of the Mill has not been subjected to this competition, and has consequently shown better results. The Company continued to do a fair business for export throughout the year, but here again conditions have become increasingly competitive.

Additions to buildings during the year cost Rs. 25,497 and to machinery Rs. 5,08,221. The main items were new dyeing machinery and 5 carding engines.

In respect of 1952 workers received a bonus of 12½ per cent. of basic earnings.

The Company's contribution to the Employees Provident Fund amounted to Rs. 3,38,071, compared with Rs. 51,902 in 1952 during only two months of which the Act was in force.

Dearness allowance to workpeople and staff aggregated Rs. 30,82,003, which is Rs. 2,36,885 in excess of the amount paid in 1952.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	48,00,000	Block ...	41,63,221
Reserves ...	71,10,521	Stock-in-trade	77,42,183
Reserve for taxation ...	6,54,366	Stores ...	14,83,508
Liabilities ...	47,31,988	Debts, deposits and advances ...	35,88,121
Profit and loss account ...	4,63,367	Investments	7,73,175
		Cash ...	10,034
Rs.	1,77,60,242	Rs.	1,77,60,242

Belsund Sugar Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bangur Bros. Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th September, 1953.

The result for the year, after providing for depreciation shows a profit of Rs. 6,13,792 (Rs. 7,32,732) from which has been deducted for taxation Rs. 2,90,000 (Rs. 3,25,000) leaving a balance of Rs. 3,23,792 (Rs. 4,07,732). To this has been added the carry forward from the previous year Rs. 2,37,248 (Rs. 2,24,419) leaving at credit of profit and loss account Rs. 5,61,040 (Rs. 6,32,151). This sum the directors recommend should be disposed off as follows:

Transfer to reserve Rs. 2,00,000 (Rs. 2,00,000) in payment of dividend at As. 12 (As. 12) per share free of income-tax for the year ended 30th September, 1953, Rs. 1,94,902 (Rs. 1,94,902) and carry forward to the next account Rs. 1,66,138 (Rs. 2,37,248).

The factory commenced crushing on 6th December, 1952, and finished on 7th May, 1953, with a total crush of 2,833,894 maunds of cane. The quality of cane available was normal and the recovery was 10.5¼ per cent. as compared to 10.86 per cent. in the previous year.

The cane price was reduced to Re. 1-5 per maund at the factory and Re. 1-3 per maund at outstations. Cane cess was levied at As. 3-3 and cane co-operative society commission was 9 pies per maund of cane.

Building and machinery were maintained in good order and necessary additions and alterations were made at the factory.

The minimum cane price for the season 1953-54 is increased though the difference in price of gate and outstation cane is maintained. Due to flood condition in cane areas the cane supply during the current season has been considerably reduced. Sugar market is steady and it is considered it would continue like that.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	19,49,050	Block ...	10,37,959
Reserves ...	3,00,000	Stocks	21,00,389

Rs.	48,24,712	Rs.	48,24,712

Bokaro and Ramgur, Ltd.

The directors of the above Company (Managing Agents: Messrs. Anderson Wright (Ramgarh), Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th June, 1952.

The working of the half-year after deduction of all working charges shows a profit of Rs. 35,273 (loss of Rs. 30,195) which has to be set off against the debit balance from previous half-year carried forward Rs. 1,46,405 (debit of Rs. 56,998) leaving a debit balance of Rs. 1,11,132 (debit of Rs. 87,184). After adding provision for depreciation Rs. 25,000 (Rs. 25,000), there is a debit balance of Rs. 1,36,132 (debit of Rs. 1,37,184).

In view of the fact that the Company could earn no substantial profit during the half-year ended 30th June, 1952, the Board records with regret that no provision for debenture redemption reserve can be made during this half-year.

The output during the half-year was 43,982 tons as compared to 55,572 tons during the previous half-year and 62,956 tons during the corresponding period of 1951. Raisings continued to be restricted owing to the existing large stocks of coal at both Dhori and Pipradih Collieries.

Despatches during the half-year were 24,750 tons as compared to 42,774 tons and 40,001 tons respectively. Despatches of coal and coke during the half-year continued to be very unsatisfactory due to acute wagon shortage and in common with most other colliery companies trading results suffered accordingly.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	16,00,000	Block ...	28,41,613

		Profit and loss account ...	75,180
Rs.	3,13,762	Rs.	3,13,762

N.B.—Figures within brackets relate to the corresponding period of the previous year.

MONEY MARKET STRINGENT

(From Our Own Correspondent)

BOMBAY, 5th *May*

There was no sign of any easing of the stringency of the short-term money market during the week under review. If anything, it was little more stringent, with a further subscription of Rs. 14 crores to the National Plan Loan, during the second week, causing further shrinkage in the volume of floating funds. Banks were, therefore, keen borrowers in the inter-bank call money sector. In the absence of any lenders, there was very little activity in this section, and the rate was maintained at 3 per cent.

With the issue of a new series of 10-year savings certificates called the National Plan Certificates as part of the National Plan borrowing programme, in order to attract people of smaller means, it is expected that the deposits of banks, particularly savings bank deposits, will be diverted to these savings certificates. Presumably, in order to keep themselves supplied with enough funds, some of the banks were reported to have offered higher rate of interest for short-term deposits of longer periods. Three months' deposits were bid at the self-same rate of 3 per cent. The rate of 2½ to 3 per cent. became more common for 4 to 6 months. The rate for longer periods, say upto 12 months, was anything from 2 to 2½ per cent. One of the banks was even said to have offered upto 3 per cent. for 12 months' deposits.

A further contraction of Rs. 3.50 crores in notes in circulation is disclosed by the statement of affairs of the Reserve Bank of India for the week ended 30th April, 1954, following the fall of Rs. 9.32 crores noted in the previous week. Notes held in the Banking Department are higher by Rs. 3.64 crores. The next increase in total notes issued is covered by a rise of Rs. 14 lakhs in rupee coin. In the Banking Department, deposits of the Central Government show an increase of Rs. 26.50 crores which is explained by the subscriptions to the National Plan Loan. Deposits of other Governments are lower by Rs. 35.86 lakhs. Deposits of banks have also gone down by Rs. 4.16 crores, which may be due to the bank's subscription to the Loan. On the assets side, cash balances show an increase of Rs. 3.66 crores, reflecting the rise in notes held in the Banking Department. Balances held abroad are also higher by Rs. 33 lakhs. Ways and means advances to Governments' have declined by Rs. 90 lakhs, while other loans and advances have gone up by as much as Rs. 14.63 crores, a good part of which is due to advances to Scheduled banks against usance bills. Total amount of such advances during the week was Rs. 11.50 crores, but the net increase over the week is only Rs. 8.90 crores. Investments have risen by Rs. 3.05 crores.

The Scheduled banks' statement for the week ended 23rd April, 1954, as compared with that for the previous week, discloses a rise of Rs. 4.22 crores in demand deposits and of Rs. 75 lakhs in time deposits. Inter-bank borrowings have declined by Rs. 95.52 lakhs. Borrowings from the Reserve Bank show an increase of Rs. 1.12 crores, while those from the Imperial Bank reveal a fall of Rs. 74 lakhs. Advances have gone down by Rs. 31 lakhs, while bills purchased and discounted have risen by Rs. 1.70 crores, so that the rise in total advances is of the order of Rs. 1.39 crores. Investments have gone up by Rs. 1.34 crores. Cash on hand and balances with the Reserve Bank have together accounted for an expansion of Rs. 1.34 crores and balances with other banks in current account for Rs. 86 lakhs, while money at call and short notice have gone down by Rs. 1.15 crores.

The Gilt-edged market displayed a further weakening of prices during the week under review. There was no sign of an improvement and prices declined further for want of buying. 3 per cent. 1957 dropped As. 3 to Rs. 98 and 3 per cent. 1958 1957 dropped As. 3 to Rs. 98 and 3 per cent. 1958 1957 dropped As. 3 to Rs. 97-15. 3 per cent. 1959-61 was marked down by As. 2 to Rs. 96-4. 3 per cent. 1963-65 was on offer As. 8 lower at Rs. 92-12. 3 per cent. 1964 was, however, unchanged at Rs. 92-12. 3 per cent. 1966-68 was placed at Rs. 90-2, As. 2 lower than last week. 3 per cent. 1970-75 fell back by As. 3 to Rs. 86-6. 3 per cent. 1986 Conversion Loan found sellers and lost As. 5 to Rs. 81-11. 3½ per cent. 1961 National Plan Bond was quiet at Rs. 98-13 as against Rs. 98-14.

Subscriptions to the 3½ per cent. National Plan Loan 1964 during the period 26th April to 1st May, according to reports received upto the 3rd May, amounted to about Rs. 14 crores. The total subscriptions since 19th April amounted to about Rs. 45.5 crores.

In the foreign exchange section, the spot rate for the rupee-U.S. dollar exchange rate was unchanged at Rs. 475 per $100 (banks' selling) and Rs. 471¼ (banks' buying). In the New York market, sterling ruled strong in terms of the dollar. The spot rate improved from $2.81½-$2.81¾ to $2.81-15/16-$2.82, but shaded off yesterday to $2.81-13/16-$2.81-15/16. Similarly, the forward rate for three months closed ¼ per cent. higher at $2.81-11/16-$2.81-13/16, after touching $2.81½-$2.81-13/16. Transferable sterling was, however, a fraction lower at $2.79¼-$2.79½.

LINSEED STOCKS SCARCE

(Messrs. A. Bradley & Co.)

CALCUTTA, 3rd *May*

A somewhat quiet tendency has prevailed in the linseed market during the week. Although prices have shown little change, conditions appear to be generally steady. Trading has been slack with ready stocks very scarce, owing to poor arrivals from upcountry. There has been a fairly good demand for ready delivery, but only small business has resulted, thanks to scarcity of supplies. Local demand for linseed oil remains poor while bills purchased and discounted have risen and activity has been very limited. Latest quotations are: Ready Rs. 19-8 and June-July Rs. 20 per maund.

BULLION TURNS WEAK

(From Our Own Correspondent)

BOMBAY, 5th *May*

After last week's sharp rise, bullion values developed a sagging tendency during the week under review, under the impact of continuous unloading in silver by bull operators and selling by a prominent bear operator of Calcutta. Option dealers also hurried to liquidate their interests. Though, at the close, there was a smart recovery in silver, it was not sufficient to cover the earlier losses. Over the week, therefore, the white metal lost Rs. 2-13 per 100 tolas. Gold also turned weak and stood on balance Rs. 2-10 per tola lower.

It seems strange that, when the floating stocks of silver were reported to have dwindled very much, some of the main bull operators preferred to unload their holdings. This change of attitude was said to be due to lack of sufficient offtake. The bear operators seized the opportunity to depress the market further. Upcountry advices also were far from inspiring. Another cause for the heavy unloading in silver was said to be the heavy loss suffered by a group of operators in castorseeds. This group had gone long in silver too and had to lighten its commitments, with a view to cutting its losses.

Large arrivals in gold, without sufficient offtake to absorb them, were the main damper in the gold section. The weakness of silver also affected sentiment in this section.

Silver for forward delivery (19th May settlement) opened on a quiet note and the pressure of selling brought it down to Rs. 170-6 on Friday last. The attempts at recovery early on Saturday, in which process forward silver came up to Rs. 171-11, proved futile and further reaction set in from Monday this week onwards, dragging the price to a low of Rs. 167-2 yesterday. Today, there was some replacement buying, on account of which the forward rate recovered to Rs. 168-9 at the close.

Ready silver (.996 Mint) opened at Rs. 169-1. The premium of ready over the forward widened early in the week from As. 10 to As. 12, but soon narrowed down to As. 8. The floating stocks of silver in Bombay are estimated at 1,500 bars. The daily average offtake was no more than 15 bars.

Forward gold (18th May settlement) began at Rs. 93-7, but, after a momentary rise to Rs. 93-12, relapsed to Rs. 90-8 today before closing at Rs. 91.

The opening and closing levels of ready gold were Rs. 94-7 and Rs. 92, respectively. The premium of ready over the forward which stood at Re. 1 narrowed down to As. 12 in mid-week due to an increase in arrivals, but regained to Re. 1 at the close, following the decline in the pace of arrivals. The floating stocks of gold are estimated at 20,000 tolas. The daily average arrivals were 5,000 tolas, while the offtake was no more than 4,000 tolas on an average.

In the London market, the spot silver moved between 73¾d. and 73⅞d. per fine ounce and closed at 73¾d., with a loss of ⅛d. per ounce. Similarly, the forward was lower by ⅛d. at 73¾d. per ounce. The price of gold dropped initially from £12 9*s.* 4*d.* to £12 8*s.* 11½*d.*, but recovered to close yesterday at £12 9*s.* ½*d.*

The following comparative table shows the trend of the market during the week under review:

		5-5-54	Highest	Lowest	28-4-54

TEA DUSTS IRREGULARLY EASY

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 1st *March*

The offerings in dust sale "H", which was held on Tuesday, 27th April, amounted to approximately 140,000 lbs. There was a good general demand, but the market was irregularly As. 1 to As. 2 easier, except for good grainy black types which were fully firm.

London Market.—Market steady.

Colombo Market.—Active demand. Low-grown brokens firm to dearer. Others lower following quality.

Calcutta Market—Export.—No sale this week.

Dust.—22,000 packages. Fair general demand. Market irregularly half anna easier. C.T.C. and bright liquoring teas strongest feature.

Special Licence.—Business in special licence has been effected here at 40 pies, but sellers are scarce.

1954-55 *Export Quota.*—There has been a further appreciation in the price of new quota and business has been done here at 48 pies which remains today's quotation.

Forthcoming Auctions.—Sale No. 9 will be held on Tuesday, 4th May, and dust sale "I" will be held on Tuesday, 11th May, 1954.

As we go to press, Messrs. Forbes, Ewart and Figgis, Ltd. wire:—

"*Sale 9.*—11,45,000 lbs. Less demand. Market irregular and easier. Common and low medium half to one anna down. Medium and good medium As. 2 to As. 3 easier. Best liquoring considerably lower following quality."

SPOT COTTON FIRM

(From Our Own Correspondent)

BOMBAY, 5th *May*

As anticipated last week, apprehensions regarding heavy tenders were set at rest, at least so far as the first delivery day was concerned. With the premium for August over May assuming formidable proportions, it was naturally more profitable to transfer sales to the later delivery than to tender cotton against sales in the expiring contract. This transfer had in itself a salutary effect on the position of the market, by way of both reducing the quantity of cotton tendered on the opening day and reducing the premia to a certain extent in the initial days of the week. The high prices commanded by many of the tenderable varieties in the spot market have reached a stage where tendering cotton against hedges in the forward market has become unprofitable. With a greater emergence of buying on the part of mills and investors in the spot market, not only has any danger to the May contract been averted, but it has emerged with some added strength. One of the reasons for this change in sentiment is the fact that, during the recent fall, most of the weak holders on the long side were shaken out and those who remained were parties with substantial resources to absorb deliveries. While the May position is still vulnerable because of certain technical considerations, there is a steady current running beneath the surface.

With the extinction of practical interest of the general run of operators in the market in the May contract, the August position has come to receive good attention. Opinion in this sector is divided. Those basing their opinion on purely statistical position foresee a good rise in the final contract of the season, as supplies of cotton get diminished. There are, however, others who contend that, as there is little scope for a rise in the rates of premia in the spot market now, any effort at rigging up prices of the August contract will not only bring large-scale hedging but also create possibilities of greater deliveries three months hence. Still on balance, the sentiment in the market points to firmness. Although one cannot say to what extent the August contract will go up, it looks as though one can safely say that an appreciable decline from the level of Rs. 700 could be safely ruled out. Buyers also will have to be careful, inasmuch as this is the last contract of the season, and, if the opening of forward trading in the new crop deliveries is delayed, as it was last year, there may be no alternative left to weak holders to taking delivery except that of squaring up their outstanding purchases at ruinous prices. On the other hand, the course of forward trading for the next two months will depend very largely on the development in the monsoon trends. Good rains may act as an important bearish factor, just as any unfavourable development with regard to sowings at the start would tend to push up prices. To this extent, trade in August will partially be a gamble on the rains.

In the Sewri market, mills have been consistent buyers, as in the previous week, in all the staple varieties. News from the cloth market has also been encouraging. Knowing that good cotton is fast disappearing, mills have turned their attention to all the upcountry centres in the producing areas and they are mopping up what is left there, in view of the shortage in supplies likely to arise at a later date. Investors have also infiltrated the ranks of spot merchants and, as the busy season will soon be over, this tendency to invest in a safe commodity when money is plentiful would naturally be on an increase. It is believed that, with the exceptional premia paid by mills and investors for some varieties, ceilings will soon be reached in these cases.

It is now foreseen that, whether they wish it or not, mills will soon have to turn their attention to imported cotton and the imports may go up as a result of this. The ruling prices for Sudanese cotton, though still high, may become attractive, if Indian cotton of good quality is not to be had. At present, however, interest is centred in U.S. cotton, but, with any appreciable rise in the prices of this, the mills may switch over to Sudanese and East African varieties.

Listless conditions prevailed in the cotton futures market during the first three sessions of the week. Transactions were mostly of a squaring up nature. Values, therefore, moved within narrow limits. On the 3rd instant, however, the market picked up some strength, following continued short-covering and purchases by offices inspired by smaller issuance of tenders. The firmness persisted in the early hours the next day also, but, towards the close, profit-taking set in and values drifted lower. The downward trend continued today too, although, at the beginning, a somewhat slightly steady tone was in evidence. Over the week, the May contract did not experience any marked change in price, while August contract recorded some improvement. I.C.C. May opened the week at Rs. 673-8 and, after advancing to Rs. 685 yesterday, receded to Rs. 674 today before finishing a shade higher at Rs. 675. August contract improved from Rs. 694-8 to Rs. 706-8. Thereafter, it fell down to Rs. 700-12. At the close, however, it was better at Rs. 702-8. The spread between the two contracts widened appreciably from Rs. 21-8 at the close of last week to Rs. 27-8 today.

The following table shows the trend of prices in the forward section during the week under review:

		Closing 28-4-54	*High*	*Low*	*Closing* 5-5-54
I.C.C. May ...	Rs.	673¾	685	671	675
I.C.C. Aug. ...	Rs.	695½	706½	694	702½

Latest available quotations from the spot section are: Bengal *Deshi* Rs. 620-625; Khandesh Rs. 847; Berar Rs. 795-800; 320F Punjab Rs. 892; California St. Mdlg. Rs. 1,550.

At Karachi, prices have hardened appreciably in both *deshi* and staple varieties. This is sur-

prising, in view of the announcement by the U.S. Secretary of Agriculture that American cotton will be available to most of the countries against payment in their own currencies, because this would cancel the one advantage which Pakistan cotton has been enjoying for many years. In spite of this, Pakistan has decided to increase its present output of cotton by nearly a million bales during the next three years on the strength of Japan's willingness to purchase cotton in big bulk.

Latest available quotations from the Karachi cotton market are: Sind deshi Rs. 75; Punjab deshi Rs. 72; 4 F. Punjab R.G. Rs. 76-8; S.G. Rs. 79-8; L.S.S. Punjab R.G. Rs. 77; S.G. Rs. 81; N.T.R.G. Rs. 77-8; S.G. Rs. 81-8; 289 F. Punjab R.G. Rs. 80-8; S.G. Rs. 84.

At Alexandria, no significant change is generally expected in the buying policy of the Egyptian Government for the new crop. Arrangements for the financing of the purchase of this crop by the Government are also believed to have been completed. Shippers and local mills will be required, as in the current year, to obtain their requirements from the Cotton Commission. From the last week of June, selling prices will be based on the October position at New York, with 40 per cent., increase for good Karnak and Menoufi and 12½ per cent. for other varieties, over the closing prices at New York in the previous week. This shows an increase of 10 per cent. in the case of higher staple varieties and 7½ per cent. for others over the percentages for increase in prices fixed for the current year. As the price range at New York, owing to restricted acreage, is likely to improve as time goes on, Egyptian cotton next year is likely to cost considerably more for Indian importers than in the current year.

The position at New York has changed once again. While the improvement in the current crop prices has continued, the new crop positions which were losing ground on account of favourable weather reports, have gone up. Spot cotton is gaining in strength and this has led many observers to expect a good rise in the July position, due to shortage of supplies, once the May contract is out of the way. Demand for export has been steadily on the increase and there may be a rush for U.S. cotton during the closing months of the season.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	4-5-54	27-4-54	20-4-54
Spot	35.35	35.45	35.20
May	34.53	34.53	34.10
July	34.42	34.33	34.22
October	33.87	33.87	33.78
December	33.82	33.83	33.76

* * * *

A new textile policy designed to increase exports and hold down prices on the local market has been approved by the Japanese Ministry of Trade and Industry, according to reports from Tokyo. The target for cotton exports for the fiscal year 1954 has been set at the equivalent of 780,000 bales. This includes about 1,000 million yards of cotton cloth, compared with the 915 million yards of cotton cloth exported in 1953. This is in spite of reduced imports of raw cotton fixed for 1954 at 2.1 million bales. The Ministry will fix a cotton goods export target for each quarter and will allot foreign currency to traders strictly according to the ratio between their exports and that target. When the amount is exceeded extra foreign currency will be allowed for the following quarter. Conversely, foreign currency allocations will be cut back when production falls below the target.

The new policy fixes monthly production of cotton goods at 180,000 bales, of which from 115,000 to 120,000 bales will be for domestic consumption. The link rate for raw cotton imports will be raised to an average of 15 per cent. from 12.5 per cent. last year to encourage exports. Any traders who extend markets will be awarded from 3 to 4 per cent. additional allocations of raw cotton. There will be no extra allocation, however, if expansions are made at prices considered to be "unreasonably low," even in new markets.

ART SILK YARN FIRM

(From Our Own Correspondent)

BOMBAY, 5th *May*

After remaining easy during the first three sessions of the week under review, the art silk yarn market exhibited a firm tone on Tuesday which persisted today too. The initial easiness was induced chiefly by continued slack demand from consuming centres and heavy arrivals of imported yarn. Reports of large bookings for forward delivery by various Japanese and Continental suppliers also acted as a damper to the market. The selling pressure that ensued as a consequence brought about a fall in art silk yarn prices. The downward trend was, however, halted yesterday, when the market picked up considerable strength, following the confirmation of the reported breakdown of negotiations for bulk purchase of yarn between the National Rayon Corporation and the Silk and Art Silk Mills Association (S.A.S.M.A.). Not only were the previous losses completely recovered but the closing quotations today stood very much higher than those a week ago.

In the spot section, 150 Japan forged ahead from Rs. 4-9 to Rs. 4-15 per lb. 120 Japan and 150 Italy gained an anna each to Rs. 4-13 and Rs. 3-14-6, respectively. 120 Italy, however, receded by As. 2-6 to Rs. 3-15-6 for want of support. In the forward section, 150D May contract, after moving down from Rs. 762 to Rs. 750 per case of 200 lbs. on Tuesday, recovered to finish at Rs. 776. The net gain for the week was Rs. 14.

It is reported that the negotiations with the S.A.S.M.A. having failed, the National Rayon Corporation is trying to have a bulk deal with the Yarn Merchants' Association and Exchange Ltd., Bombay. It will appear that no concrete proposals regarding prices, etc., have yet been made by the Company.

Referring to the reported bulk purchase agreement between the S.A.S.M.A. and the Italian firm, we stated, in the report dated 13th April, 1954—*vide* page 752—that the latter had agreed to supply art silk yarn at 40d. per lb., as against the average rate of 43d. at which it had sold Rs. 1 crore worth of yarn last year. In this connection, the Italian firm, Italviscosa Eastern Trading (Branch Office), Bombay, in a communication addressed to us, says:

"It is likely that you are mixing up the prices of the yarn made up on cones (43d. per lb. for 120 den. bright) and in cakes (40d. per lb. for 120 den. bright). It is not true that we are now supplying the yarn at a price lower than last year. As a matter of fact, the present prices are higher than those of last year, taken as a whole, and correspond exactly to the quotations valid for August-December, 1953. The price of 43d. per lb. cannot be taken as an average for all counts, since the greater proportion of Indian purchases are made in finer counts, the prices of which are much higher than 43d. per lb. We should like to add that, even at the present rates, India is receiving rayon yarn at lower prices than those quoted by us or by other producers of rayon yarn to other countries."

Staple fibre yarn was subjected to selling pressure induced by heavy pressure of sales by cotton mills, larger arrivals and poor enquiries from consuming areas. Prices, therefore, tended to move down. Staple fibre yarn (40 x 2) May contract receded by As. 11 Rs. 677 per case of 200 lbs. In the spot section, Vasanta, Sriram, and Sitaram lost nine pies each to Rs. 3-7, Rs. 3-6-6 and Rs. 3-7-3 per bundle of 10 lbs., respectively. New Great was half an anna lower at Rs. 3-8-6. Among foreign yarns, Suico and Shinco fell by nine pies each to Rs. 4-1 and Rs. 4-0-6, respectively. Fuji and Aurora were each half an anna easy at Rs. 4-0-6.

Enquiries for almost all kinds of Indian cotton yarns continued to remain satisfactory. Turnover was rather limited on account of high prices demanded by the producers. Offtake in coarse counts of cotton yarns continued to be limited, on account of poor demand. In the case of medium and fine counts upto and including 40s, demand remained steady, but buyers were afraid of making large purchases on account of present high level of prices. In the case of superfine yarns, however, prices remained unchanged, due to very limited offtake. Mills were quoting hgher prices for forward deliveries, but the business resulting was very limited. Among 10s, Podar was half an anna higher at Rs. 13-5 per bundle of 10 lbs. Modern was steady at Rs. 13-6. Among 20s, Seksaria advanced by As. 3 to Rs. 17 and Hind by As. 2 to Rs. 17-8. Among 30s, Madura rose by As. 8 to Rs. 25-8. Among 40s, Meenakshi was specially favoured at and moved up by Rs. 1-6 to Rs. 29-12. Madura hardened by As. 14 to Rs. 29-4 and Meenakshi by As. 6 to Rs. 27-4. 60 count yarns suffered losses. Sri Ram receded by As. 12 to Rs. 56-4. Seksaria lost As. 2 to Rs. 46-14. Among 80s, Finlay dropped As. 6 to Rs. 64-10. Elphinstone and Shri Ram fell by As. 4 each, the former to Rs. 60-8 and the latter to Rs. 61-4.

The table below gives the prices of art silk, staple fibre and cotton yarns quoted today, as compared with those seven days before:—

	5-5-1954	28-4-1954
	Rs. a.	Rs. a.
Art silk yarn—		
150 April (per case of 200 lbs.)	—	758 0
150 May	776 0	762 0
120 Japan (per lb.)	4 13	4 12
150 Japan (per lb.)	4 15	4 9
120 Italy (per lb.)	3 10½	4 2
150 Italy (per lb.)	3 14	3 13½
Staple fibre yarn—		
40 x 2 April (per case of 200 lbs.) ..	—	683 0
40 x 2 May	677 0	688 0
Suico (per lb.)	4 1	4 1½
New Great (per lb.)	3 8½	3 9
Cotton yarn (per bundle of 10 lbs.)—		
10s Modern	13 6	13 6
20s Seksaria	17 0	16 13
30s Madura	25 8	25 0
40s Meenakshi	29 12	29 0
60s Sri Ram	56 4	57 0
80s Finlay	64 10	65 0

CRISIS IN CASTOR FUTURES

(From Our Own Correspondent)

BOMBAY, 5th *May*

The most depressing development of the week is the failure of a prominent bear to honour his commitments in castor futures in May contract. The difference of Rs. 4 between the latest settlement rate fixed at Rs. 115 on Wednesday, the 28th ultimo, and the previous one, ought to have been paid by Monday the 3rd May. It would appear that the operator concerned has failed to honour his commitments. The amount involved is estimated at Rs. 5 lakhs. Consequently, trading in this section had to be suspended. The Board of the Oilseeds Exchange, which reviewed the situation on Tuesday, deferred its decision till this afternoon, as the brokers involved asked for 24 hours' time. But, this afternoon again, they requested another 48 hours' time which too has been granted.

The suspension of trading in the castorseeds section had its reaction in other sections as well. The same bear is said to be involved heavily in groundnut and linseed ready contracts also. Operators, therefore, preferred to suspend trading in these sections also. The market will remain closed for the next two days.

The groundnut section displayed a steady trend. Although arrivals have been fairly encouraging, they do not seem to have any decisive influence in easing prices. Khandesh quality, after narrow fluctuations, closed quiet at Rs. 37-4. Bold F.A.Q. ready, however, lost As. 8 to Rs. 36-4. April-May delivery was unchanged at Rs. 35-12, while June-July gained an anna to Rs. 35-12. Groundnut oil ex-mill was colourless at Rs. 18-6. Railway receipt declined by As. 2 to Rs. 18-2. May delivery was low by As. 2 to Rs. 18-3 and June by an anna at Rs. 18-6.

Although the rise in castor futures in the past few days is hardly Rs. 8 per candy, there were heavy sales. The outstanding business of the defaulting bear operator is placed, in market circles, at about 30,000 candies. May delivery, which opened quiet at Rs. 117-12 as against Rs. 116-10, fluctuated between Rs. 118-4 and Rs. 115, before closing at Rs. 116-6. September delivery was higher by As. 4 at Rs. 122-14; the highest and the lowest touched were Rs. 124-2 and Rs. 121-10, respectively. Ready Madras quality gained As. 6 to Rs. 23-6. Castor oil B.S.S. was steady at Rs. 12-12. First Pressure improved by As. 6 to Rs. 12-8, while Commercials lost an anna to Rs. 11-11.

The linseed section, however, witnessed an upward trend. This was mainly due to scarcity of offers and the firm trend in the mustard markets in the U.P., Delhi and Punjab. Bold ready improved from Rs. 26-12 to Rs. 27-4. April-May and June-July gathered As. 4 to Rs. 26-12 each. Indores gained As. 8 to Rs. 27-6. Linseed oil, however, lost As. 4 to Rs. 15-5.

The following table shows the prices of oilseeds and oil on the 5th inst., as compared with those at the end of the previous two weeks:

	5-5-54	28-4-54	21-4-54
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—			
Khandesh Quality Bold Ready (per cwt.)	37 4	37 4	38 0
April-May	35 12	35 12	36 4
June-July	35 12	35 11	36 0
Linseed—			
Bold Ready (per cwt.) ..	27 4	26 12	26 10
April-May	26 12	26 8	26 12
June-July	26 12	26 8	26 12
Castorseeds—			
May 1954 (per candy)	116 6	116 10	114 2
September 1954	122 14	122 10	120 8
Madras (per cwt.)	23 12	24 2	23 14
Groundnut oil—			
Ex-mill Ready (per quarter) ..	18 6	18 6	19 0
Castor Oil—			
Commercial (per quarter) ..	11 11	11 12	11 12

SUGAR STEADY

(From Our Own Correspondent)

BOMBAY, 5th *May*

Despite the Government of India's decision to reduce the price of imported sugar by Re. 1 to Rs. 30 per maund with effect from the 15th inst., heavy arrivals and expectation of the unloading of 32,000—35,000 tons of imported sugar in the harbour by the 10th of next month, the Bombay sugar market presented a steady trend during the week under review. Prices were generally well maintained. In the spot section, bold grain sugar was quoted at Rs. 101-106 per bag, as against Rs. 100-105 last week. Among foreign sugars, Cuban was up by As. 6 to Rs. 40-4 per 100 lbs. British refined sugar was fully steady at Rs. 95 per bag of 2 cwts. and Mexican at Rs. 43 per 110½ lbs. Small and medium grain sugars (Government stocks), however, were lower. Thus, the former was quoted at Rs. 92-3 per bag, as against Rs. 97, and the latter at Rs. 93-1, as against Rs. 98-99.

In the forward section, *Vaishak* delivery improved from Rs. 87-14 to Rs. 88-8 per bag before tract commenced today. It is now quoted at Rs. 85-12.

Arrivals of sugar into the Bombay market was larger than those in the past three weeks, the quantity actually arriving being 10,000 bags. Arrivals in the previous three weeks were 500 bags, 4,600 bags and 3,000 bags, respectively.

The Union Food Ministry has announced that imported sugar will be marketed at Rs. 30 per maund, irrespective of whether fresh imports arrive before or after the 15th inst. It is reliably understood that about 32,000—35,000 tons of sugar will be unloaded in the Bombay harbour in the next five weeks. Of this quantity, British refined sugar accounts for three shiploads and Spanish and Peruvian sugar for one shipload each. It is also understood that no release order for indigenous sugar will be issued after the delivery of imported sugar is commenced. It, therefore, remains to be seen how the zonal allocation of sugar will be fixed to meet the pre-monsoon demand for sugar, which is actually very heavy, as also the demand during the monsoon when no imported sugar will be arriving in the harbour.

The world raw sugar market has been presenting a distinctly steady tone for some time now. Demand is reported to be fairly good. Not only is there no competition for Cuban sugar, but the Cuban sellers are themselves reserved in making offers. Formosa is said to be out of the market until next month so far as raw sugar supplies are concerned. The question of making offers for shipment in bulk is still under discussion in Cuba. Cuban raw sugar is quoted at 30s. 4½d. to 30s. 7½d. per cwt. c.i.f. U.K. India continues to be a buyer of refined sugar.

As these lines are written, a meeting is being held today in London to review the position of the International Sugar Agreement. It is widely reported in the sugar trade, says the latest review of the sugar market by Messrs. E.D. and F. Man, that the Cuban delegation to the London meeting will press for a further 3 per cent. reduction in export quotas, bringing the original quotas to 20 per cent., the maximum allowed under the Agreement. It is even reported that the delegation may put forward a proposal seeking to alter the Agreement in such a way as to give the International Sugar Council wider powers to reduce quotas by more than 20 per cent., should the Council deem it necessary. To what extent Cuba will be able to persuade the other participants to support its proposal remains to be seen.

PEPPER PRICES RECEDE

(Messrs. Parekh & Co.)

BOMBAY, 5th *May*

On the first day of the week under report, Malabar black pepper showed improvement at all centres, owing to the international situation and in sympathy with *New York* where dealers are reported to have bought from India a sizable quantity for afloat and for shipment during the first half of May at $0.71 to $0.69, respectively. Next day, however, the U.S. withdrew and the prices in India once again exhibited a downward trend with business thin, there being lack of enthusiasm on the part of the *Indian* exporters to take position, as they had on their hands a sizable quantity still unmarketed. May shipment was done at as low as $0.65. June shipment was traded down to $0.62, while July found difficult buyers even at $0.60, though, *earlier*, Messrs. Volkart Bros. had bought some 30 tons for July shipment at $0.63.

Growers in *Travancore-Cochin* areas are reported to be less anxious to liquidate their holdings than their counterparts in North Malabar for two reasons. First, they have already marketed a fair quantity of their produce. Secondly, they have greater holding capacity. In the opinion of growers in general and of some of the dealers, in particular, the present prices are low and, therefore, they hesitate to press sales at cut prices. They are awaiting development and are willing to sell at any upturn. The total export of Malabar black from November, 1953 to April, 1954 is estimated at 8,300 tons, as against 7,100 *tons* in the same period last year. Though the export to the U.S. this year is considered poor, shipments to Russia and China reached a new high level of 2,600 tons.

There is a section of trade which believes that there are possibilities of a great increase in the consumption of pepper in India, because of the present low prices and the likelihood of the removal of trade restrictions between India and East Pakistan, one of the largest *consumers of* pepper. They think that the inland consumption may reach the high figure of 10,000 tons and, if so, the statistical position of Malabar pepper is not so pessimistic as made out by some of the bears in the trade. The reported difficulty of one of the merchants at Alleppey has created some nervousness in the market and, at the time of writing, there are more sellers and few buyers for June shipment at $0.61½ and July shipment at $0.59. In the delivery section, prices have sagged down to Rs. 1,030, Rs. 1,020 and Rs. 1,000 for May, June and July delivery, respectively.

The nominal quotations are: Ready Rs. 165 per Bengal maund: *May* delivery Rs. 1,030-50, June Rs. 1,020-40 and July Rs. 1,000-1,020 per *candy* of 5½ cwts., respectively.

JUTE EASY

(From Our Own Correspondent)

CALCUTTA, 4th *May*

Following the reserved attitude of buyers of both raw jute and jute goods, a markedly easier trend prevailed in all sections of the market. The fact that most of the jute districts in Assam and West Bengal had the benefit of the first showers of the season, followed by sunny days, accelerated *sowing operations* and the earlier ideas of the crop have now changed entirely. It is now expected that a bigger crop will be sown and that there would be plenty of raw jute in both Pakistan and India, notwithstanding the fact that the carry-over this year has been less. Reports from East Bengal indicate that sowings have proceeded satisfactorily and, wherever rains have been experienced, sowings are substantially higher than at this time last year.

The market has noted the declaration of Mr. Fazlul Huq, the East Bengal Premier, that he desires to remove the artificial barriers now existing between the two wings of Bengal. If Mr. Huq *were to succeed* in implementing his desire, the jute mills would be enabled to get the superior qualities of raw jute from East Bengal at the ruling market prices there. This would mean that the advantage over prices for raw material which the Continental mills *enjoy* would be removed and, with this, a factor which enables Continental mills *to offer* competition to Indian producers would also be removed. There was, therefore, no surprise in the reserve of mills against buying jute now, which made quotations fall by As. 8 to Re. 1-8. For which made quotations fall by As. 8 to Re. 1-8. For *jute goods* successfully and to find new markets. The following table gives the latest quotations of the more important varieties, with the rates prevailing a week ago provided in brackets:

	Middles	*Bottoms*
Northern	Rs. 31-8 (32)	Rs. 28-0 (29)
Assam Upper	,, 30-8 (31-8)	,, 27-8 (28-8)
Assam Lower	,, 31-0 (32-8)	,, 28-0 (29-8)
Western	....	,, 25-0 (26)
Murshidabad ..	....	,, 26-0 (27)
Daisee	,, 33-0 (34-8)	,, 30-0 (31-8)
Jungli	....	,, 24-8 (25)
Orissa	,, 31-8 (32-8)	,, 28-8 (29-8)
Uttar Pradesh ..	....	,, 24-8 (25)
Pakistani Northern ..	,, 31-8 (32)	,, 27-8 (28)
Pakistani Jat ..	....	,, 29-8 (30)

Bimli f.a.q. gave way from Rs. 25 to Rs. 23-8, and business took place in Pakistani jat cross bottoms at Rs. 24-8. In spite of the earnest plea of the jute mills to drop the measure, the Assam Government has announced the fixation of 1st June as the date from which the tax of As. 8 per bale of jute transported by road and inland waterways in the State would be levied. This means that the new tax would be realised from the new crop, as, before 1st June, the movement of old stocks would have been completed.

Conditions in jute goods were also dull and uninteresting, and there was no business of importance with foreign buyers. Prices for all constructions fell and the decline was accentuated by profit-taking in the *Fatka*. Ready B. twills fell from Rs. 114-2 to Rs. 112-8, the forward rates sympathising with the decline. D.W. flour bags were quoted lower at Rs. 138-8, as were green-striped heavy cees at Rs. 130-8. Ready 40" 10 oz. hessian at Rs. 43-15 was lower by As. 9. The 8 oz. was priced at Rs. 36-12 f.a.s. and at Rs. 39-6 f.o.b. From the point of view of the industry, the fall in the prices of both the raw material and the finished products are welcome, as the recent additions were due to the machinations of the speculative elements which made foreign buyers of jute goods withdraw from the market

FURTHER FALL IN FOODGRAIN PRICES

(From Our Own Correspondent)

HAPUR, 3rd *May*

Foodgrain markets all over the country continued to remain quiet to bearish and there was a further fall in prices. Larger seasonal supplies in all principal markets and the general apathy of the public to augment stocks were the factors responsible for the downward tendency. The inflow of indigenous wheat to the markets in the Punjab, Uttar Pradesh, Madhya Bharat and Madhya Pradesh adversely affected the demand for coarse grains and, consequently, there was more perceptible fall in coarse grain prices than in wheat.

Hoarders of grains in surplus areas are reported to be unnerved and anxious to liquidate their possessions as early as possible. Besides, coarse *grains yield is better than last year, while threshing* results relating to wheat do not seem to be equally promising. There is reported to be distress selling on a small scale of wheat in Madhya Bharat while in general prices in the Punjab and U.P. are substantially below the Government prices. Bihar and Orissa also report of a general fall in prices. There has been some fall in rice prices also with the increased availability. It is, however, reported that the demand for Burmese rice has not improved in the surplus areas, because of its high prices. Gram prices have declined in U.P. So also *prices of nearly* all the pulses, excepting *urd*. Pulses futures too have reacted bearishly and speculative support has not kept pace despite the fall in prices.

The Union Minister for Food and Agriculture has declared that the food situation in the country has improved in recent months to such an extent that the *Government* is wondering if the surplus States should continue their procurement programmes. Foodgrain prices are falling, just as other articles, he added, and the State Governments may have to reduce their procurement prices. The Union Minister thought that, if the State Governments desired to ensure fair prices to the producers, they should bring down the statutory price, taking into consideration the prevailing market conditions. Mr. Kidwai has assured the State Governments that the Centre would honour its commitment as far as possible to lift the grains already procured at the price allowed by the State Governments at the beginning of the *kharif* year.

It is now announced that the Government of India proposes to build up a rice reserve of one million tons during the year 1954. Some of the State Governments are reported to have a surplus of about 1.2 million tons, while the requirements of the deficit areas are between 900,000 and 1,000,000 tons. About 900,000 tons of rice are expected from Burma.

The position regarding the different foodgrains controls as they exist today has been officially stated to be as follows:

Coarse grains and gram have been completely decontrolled, except that the export of coarse grains from Madhya Bharat, Saurashtra and Amreli District of Bombay, and the eleven districts in U.P. is not permissible. Wheat has also been completely decontrolled, except that restrictions on its inter-State movements continue. With effect from 1st May, 1954, a zone comprising Punjab, P.E.P.S.U., Delhi, Himachal Pradesh and Bilaspur has been formed for free movement of wheat within it. The *policy of allowing increased relaxations* within the framework of control on the procurement and distribution of rice is being continued.

The Government of Bombay has lifted all quantitative restrictions on rice sales in the State with effect from the 2nd inst. The announcement came as ships carrying large consignments of Burmese rice were off the high seas approaching Bombay Port. With the removal of quantitative control on rice, there is now virtually decontrol of foodgrains in the State. In 11 rationed cities, however, rice will be issued through ration shops, but, in rural areas, through authorised shops.

The West Bengal Government has so far purchased from the *free market* 251,000 tons of rice. The Government may, however, have to purchase another 30,000 tons from the Central pool. Meanwhile, due to continued drought, the price of rice has gone up slightly throughout the State.

The *crop outlook* for Madras this year is reported to be very promising. The total area sown with paddy in 1953-54 in the State is estimated at 6,378,000 acres. This is an increase of 12.6 per cent. over last year's figure. The yield per acre for the current year is estimated higher than that of the last year, the increase being 23.7 per cent. in the *case of the first crop* and 12.6 per cent. in the case of the third crop. The condition of the standing crop is reported to be generally fair.

Latest quotations in the Hapur market are: ready wheat Rs. 14 to Rs. 15; gram Rs. 12; barley Rs. 8-8; *bejhar* Rs. 8-12; rice: *basmati* Rs. 30, *sela* Rs. 24 and coarse Rs. 19; peas: *dara* Rs. 10-2 and white Rs. 13 to Rs. 16; *arhar* Rs. 10-10; *urd* Rs. 14 to Rs. 18; *moong* Rs. 14; *masoor* Rs. 12-8. *Rabi* crop arrivals are in full swing in all principal markets.

SUGAR BEARISH

(From Our Own Correspondent)

HAPUR, 3rd *May*

Crystal sugar markets, which had been unsettled for over a week, following the announcement of the Government's new sugar distribution *scheme on* 13th April, showed *more normal conditions* this week. There has been a general fall in prices all over the country, induced by a contraction in offtake in all principal markets. The Government of India has been freely allotting sugar *against tenders received from* different parts of the country and the present position is that, at many places, sugar received through these tenders is actually being sold at a price slightly lower than the Government rate of Rs. 31 per maund.

There is a section of sugar traders which believes that the Government's sugar distribution scheme will fail sooner or later, and it will not be able to honour its price schedule. It is somewhat sceptical about the *flow of imported sugar* on the scale needed and they foresee a period of scarcity and high prices.

The Government of India has once again declared that it does not contemplate reviving control on sugar. Its fivefold policy to maintain continuity in sugar supply and stability in prices has also been reiterated, which includes advice to the factories to expedite despatches of sugar already released for free sale, and warning to the stockists to clear their stocks by 31st May, 1954, and threat to requisition uncleared stocks of sugar as and when necessary after that date.

Over 3,978,000 maunds of sugar were produced in Bihar in 1953-54, as against 7,433,000 maunds in 1952-53. About 40 million maunds of cane were crushed in 1953-54, as against over 74 million maunds in the previous season. The fall in the production of sugarcane followed the reduction in acreage in cane cultivation in 1952-53, consequent on the heavy reduction in the minimum prices of cane and also on damage caused to cane crop by floods. A portion of the cane had also been diverted to the manufacture of *gur* on account of its high prices.

Gur prices also reacted bearishly in sympathy with the downward trend in crystal sugar prices. The fall in prices was shared by both the ready and the futures sections. With the close of the *gur* manufacture season, arrivals from the interior were also considerably reduced. Enquiry from importing areas, though on a somewhat reduced scale, continued and there were some despatches too. With reduced *gur* production this year, the supply position is expected to continue tight and no appreciable fall in prices is anticipated. Pansera *gur* at Hapur is quoted at Rs. 19-8 per maund.

Gur futures at Hapur moved within a narrow range. Although the general trend did not favour speculator bulls, support was not wanting at lower levels. *Baishak* is presently quoted at Rs. 17-13, as against the week's high of Rs. 18-2-3 and low of Rs. 17-9-3. *Pahagan* is now quoted at Rs. 15-2.

HINDUSTAN COMMERCIAL BANK LTD.

(*Concluded from page* 898)

of facilities for the improvement of this industry. Like the financing corporations, it may be considered a welcome step if agricultural credit corporations are also established in the various States of the country.

"The tendency has been to fulfil this need through the agency of the co-operative system and the supply of money from the States. It is also contemplated to use this agency and that of the rural post offices for tapping the rural savings resources. My experience is that the people in our country, particularly the rural folks, are more enamoured by local operations and attracted to help schemes and undertakings promulgated in their own respective areas. I would, therefore, suggest the establishment of rural banks on an organised sub-divisional basis in each State. These banks should be shareholders' banks and work as subsidiaries of the big Scheduled banks, which should mainly contribute to their share capital along with the State Governments and the people of that area. With the knowledge of accountancy and the banking system with which these Scheduled banks are already equipped, they could create better local support and interest.

"In the matter of providing credit and financing, the *panchayat* system would not work on the standard of lending principles devoid of all personal considerations. Whereas the theory of mutual help sounds high, it has hardly a place in the matter of providing credit facilities. It is essential to watch and see that these lending facilities are purely utilised for production and marketing, and no part of it should be utilised for so many social purposes to which our society particularly in the rural areas, is very much inclined. Credit facilities utilised for unproductive social purposes, howsoever needed, may well hit at the very root of the whole system. Those who have an inner experience of these things will bear me out in this direction. We have just to make a beginning in this direction, and the elementary stages, State help both in the matter of supply of adequate funds and to cover up additional reasonable losses is very essential. In any case, an experiment of this nature will be less expensive and open to lesser risk and will also be more useful to serve the real objective of the rural areas. The Planning Commission has laid great stress on the necessity of stimulating co-operative activities in the rural fields and contemplates a real credit to the extent of Rs. 100 crores per annum by the Government and the Reserve Bank through the co-operative institutions. I submit that the proposed rural banks functioning in close association with the commercial banks will succeed not only in collecting savings but also in operating money supply."

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. e.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share." *Accounts:*—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. a Sales and amount written off. (b) Investments. ‡ For ten months ended 31st December 1951.

(1) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Rs. 1-10 per share on 2,40,000 shares of which 1,28,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 916 in the debentures section:—

(a) Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(c) Option of repayment at any time at 3 per cent. premium,

(b) Bearer bonds of Rs. 1,000 each repayable at par,

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952 or on any subsequent interest date at one month's notice.

(e) Redeemable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955 on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par,

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months notice

MARKET GOSSIP

(Concluded from page 867)

dismissed by the Labour Appellate Tribunal. It will be recalled that the lower court's award resulted in an increase in the minimum basic wage from As. 9 to As. 14-3, though the dearness allowance remained unchanged at Re. 1-4 per worker. Following the Appellate Tribunal's decision, the increased wages are payable with retrospective effect from 1st October, 1952. This will make a substantial addition to the burden of standing charges of the Deccan factories. This is not all. Soon, the lower court will be taking a decision on the workers' remaining demands pending before it; these include, among others, standardisation of wages, provident fund contribution and retention allowances.

* * * *

Diamond is valued not only as an article of luxury but as an article of extensive industrial uses, particularly in modern precision tools and equipment, thanks to its hardness. There are diamond mines in Panna (Vindhya Pradesh), Golkonda (Hyderabad State) and other areas of the South. Diamond mining, as an organised industry, has not been tried in India on any scientific and mechanical basis. It is the considered opinion of some that, if these mines are properly tapped and developed, India can produce diamonds in sufficient quantities not only to satisfy the country's domestic needs but even cater to the world markets, where Indian diamonds can fetch a higher price. The Panna Mining Syndicate Ltd., as a private company, has already made a valuable contribution in this direction. It is now proposed to convert this company into a public concern, by offering its shares to the public.

* * * *

The authorised and issued capital of the Company is Rs. 1 crore, made up of 200,000 ordinary shares of Rs. 25 each, 25,000 6 per cent., tax free, cumulative preference shares of Rs. 100 each —these are redeemable in 15 years—and 25,000 6 per cent., tax-free, irredeemable preference shares of Rs. 100 each. Out of the 200,000 ordinary shares, shares of the value of Rs. 20.36 lakhs have already been allotted to the existing shareholders of the Panna Diamond Mining Syndicate Ltd. (private company) in lieu of their old shares at par. The balance of ordinary shares, along with the two classes of preference shares, is being offered for public subscription.

* * * *

It is claimed that this is the only company in India that is engaged in carrying out diamond mining operations on up-to-date and modern mechanical basis. A notable feature of this venture is that extensive geological tests and prospecting work have already been done over a period of three years by the private company, at a cost of Rs. 13.36 lakhs, and the results achieved are said to be encouraging. This initial unproductive capital outlay has thus been saved for the public company. There are twenty-two mining blocks in the Company's mining area at Panna to be fully exploited. A planned development and expansion programme is envisaged at a cost of Rs. 50 to Rs. 60 lakhs. The full mechanisation programme is expected to be completed before the end of 1958. The present issue to the public is for the purpose of financing this development programme. Besides expanding the existing operations at Panna, the Company proposes to acquire all-India rights for mining other diamond fields in India, namely, Golkonda, and areas of Madras, Andhra, and Hyderabad States. It is also proposed to start subsidiary industries for diamond cutting and polishing and diamond tool manufacturing.

COMPANY AFFAIRS

(Concluded from page 900)

of the Bill under this head embody, in our judgment, a reasonable compromise."

Administrative Set Up

Explaining the Government's plans for setting up a machinery for administering the Companies Act in future, Mr. Deshmukh agreed with the views of Lord Cohen, Chairman of the well-known Cohen Committee in the U.K. and a great authority on commercial and mercantile law in that country, that a strong and competent civil service was necessary for the satisfactory administration of a modern system of company law. As a first necessary step in the scheme of reorganisation the Government had already accepted the recommendation of the Company Law Committee that the Central Government should resume its responsibility for the administration of joint stock companies which it had delegated to the State Governments. The Government, however, does not seem to feel the immediate necessity of setting up a statutory authority at the Centre under the new Act, as recommended by the Bhabha Committee, for the administration of the company law and for the discharge of other related functions. The Government considers that, for the time being at any rate, it is desirable to set up an organisation directly under the administrative control of Government and to defer the confernment of statutory status on the organisation to a later date. Explaining the set-up of this organisation, Mr. Deshmukh said:

"In pursuance of this decision, a central organisation has been set up under the Department of Economic Affairs. This organisation will have regional offices in important centres of trade and industry and will be in overall charge of the administration of the Companies Act through these regional offices. The Registrars of Joint Stock Companies will be under the direct control and guidance of this central organisation. This organisation is now in the process of being built up, and it is my hope that, when it is fully established, it will constitute an important administrative reform and will be a major step in strengthening and improving the administration of the Companies Act all over India."

Commending the Bill as "the first comprehensive attempt, after prolonged investigation and deliberation, at a basic reorganisation of the private sector of our economy," Mr. Deshmukh ably summed up the principle behind the Company Law reform. In this connection, he also drew the attention of the House to the observations of the Company Law Committee on the objects of these reforms and of the Planning Commission which said that private enterprise had to visualise for itself a new role and accept in the larger interest of the country, a new code of discipline. Referring to the ends which the reforms seeks to achieve, Mr. Deshmukh said:

"In this view, the basic problem of company law is to consider to what extent it is possible to adjust the structure and methods of the corporate form of business management with a view to weaving an integrated pattern of relationship as between promoters, investors and the management is that the following ends may be secured: (a) the efficiency of corporate business may be increased, as measured by accepted standards; (b) managerial efficiency may be reconciled with the legitimate rights of investors; (c) the interests of creditors and other partners in production and distribution may be duly safeguarded, and (d) the attainment of the ultimate ends of social policy may be helped and not hindered by the manner in which the corporate form of business organisation works in this country."

The fundamental problem underlying the Bill was, Mr. Deshmukh said, one of balancing private and social interests, a problem which was never easy of solution, and, in the issue of company law, had been rendered more difficult by the contemplated nexus of relationship which had been built up over the years between the promoters, the investors and the management of a company. In view of the criticism that the present disorganised state of the private sector made it difficult for it to fulfil its assigned role in the economic development of the country, Mr. Deshmukh sought the co-operation of the House for the fulfilment of the effort made by the Bill to reorganise the private sector in the shortest possible time.

WHITHER NATIONALISED INDUSTRIES?

(Concluded from page 892)

lack of enthusiasm for further nationalisation. The *Sunday Times* of 18th August, 1953, wrote:

"The consumer and employee complains alike, the one that charges are higher and services are worse than before; the other that he is less free than he was under private employers. Nor do the broader requirements of the public interest seem to have been better met. . . . There would also remain a hard core of difficulties inherent in working nationalised industries under a political democracy. The indications are that, although in certain cases nationalisation cannot now be dispensed with, even there its working raises many problems; and until they are solved there is no case for extending it."

The British Prime Minister, Sir Winston Churchill, confirmed this judgment a little later, on 11th October, 1953. He said:

"There is no doubt that it (nationalisation) has been proved a failure, hampering the competitive power of our industry, rendering an inferior service to the public and weakening the just and necessary influence of the trade unions by confronting them not with private employers but with the power of the State."

In our own country, it will be agreed that it is yet too early to judge of the success or failure, the strong and the weak points, of State enterprise. It would be wise to suspend judgment, but in that event it would also be wise not to rush into further action until the material is there on which such judgment can be exercised. The State in India is weak in its resources, both of finance and trained personnel. It should learn to walk before it can attempt to run. In the opinion of many who are qualified to judge, it has already bitten off a larger sector of the national economy than it can hope to chew. Wisdom dictates that these limited resources be concentrated in making the existing State enterprises successful and thus furthering the implementation of the Five-year Plan.

Recent parliamentary probes have revealed the weakness of the administrative machinery which has often resulted in estimates being greatly exceeded and the time schedule put out of gear. Pending a review of the entire position at an appropriate time, it is clear that the national interest will be served by desisting from further hasty acts of nationalisation or expansion of State enterprise.

Market Reports

BASE METALS HESITANT

(From Our Own Correspondent)

CALCUTTA, *4th May*

Although prices of base metals were steady during the week, buying activity was markedly low. Stockists were reserved and disinclined to discount rates. Attention was given to the Geneva Conference, the outcome of which was awaited. Higher prices are supported by international political considerations, especially those from the developments in Indo-China, but consumers are in no mood to carry heavy stocks.

Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. LXXXVIII. No. 2256 BOMBAY, 15 MAY, 1954 PRICE Rs. 1/8

NO NEED FOR SUGAR REFINERY

THE move to establish a sugar refinery in Bombay figured in the Upper House last week during question hour. From the replies given by both the Minister for Agriculture and the Food Minister, certain interesting bits of information have emerged. These are: a Bombay firm has sought permission for setting up a "bonded sugar refinery" in Bombay State for refining approximately 70,000 tons of imported raw sugar annually. The proposal is still under the consideration of the Government. It is incorrect to say that the licences for importing the required machinery have already been issued. The Food Minister, Mr. Kidwai, is very much in sympathy with the proposal and he wishes the necessary licences were issued. In his opinion, the existing shortage of sugar will continue for the next few years, thereby necessitating import of sugar. If, instead of importing finished sugar, raw sugar were to be imported and refined in the country, it would provide another avenue of employment. Once the country produces enough sugar, the refinery would stop importing raw sugar from abroad and refine the indigenous product. It is thus obvious that the Government is seriously considering the proposal for the establishment of a refinery. Experience shows that, when Mr. Kidwai fancies a thing, he invariably gets it. The coming into existence of a refinery is, therefore, almost a certainty. In this connection, his remark that he had not consulted the sugar industry on this question, as it was sure to oppose the move, is highly significant.

Nevertheless, it is not too late to examine the question whether or not India needs a sugar refining industry. It will be misleading to consider it only in terms of the proposed plant, for, in the present context of sugar shortage, estimated at 400,000 tons, this plant may appear to be a small one, though its productive capacity is equal to nearly half the quantity of sugar produced in the Bombay State, which is of the order of 150,000 tons. What is involved is the principle behind it. In his statement in the Council of States, Mr. Kidwai has succinctly stated the reasons for permitting a refinery to come into being. There is a shortage of sugar in the country which is likely to continue for some years. Since the gap can be bridged only by imports, why not import raw sugar and refine it, thereby providing a new outlet for employment and saving a part of the foreign exchange now being utilised for importing white sugar?

On the face of it the argument sounds convincing. But the assumption on which it is based is questionable, because the assumption itself proceeds on the dubious conclusion that there is no prospect of India being in a position to produce, in the near future, all the sugar it wants. Is such a conclusion right? Did not India produce as much as 1,500,000 tons of sugar two years ago? Has not India facilities to produce more sugar? Are these facilities being fully utilised? If not, who is responsible for it? Answers to these posers will show how absurd is Mr. Kidwai's fancy for a sugar refinery and how Mr. Kidwai is following the path of least resistance, instead of courageously tackling the obstacles in the way of India deriving full advantage to itself of the vast market it has for sugar.

The Indian sugar industry has sufficient capacity to produce the requirements of the country. What is standing in its way is lack of adequate supply of cane. Efforts must, therefore, be made to increase the production of sugarcane by both intensive and extensive cultivation. Enough is not being done in this direction. Detailed plans have been suggested in this regard, but the State Governments concerned have paid scarcely any attention to them. The worst culprits in this respect are the U.P. and Bihar Governments. They seem to be more interested in pampering the cane growers in their area than in helping them to grow better varieties of cane and increase the yield per acre. Other State Governments are not free from blame either. They are not doing all they can to secure an expansion in the cane grown in their respective areas. The Governments of Bombay, Hyderabad, Andhra, Mysore and Madras, that is, the Governments of States which are ideally situated for growing sugarcane, could have done a lot more than they have to bring about an increase in sugarcane production and to bring into existence more sugar factories. They could have, for instance, increased the supply of irrigation water in areas suited for growing sugarcane and encouraged manufacturers to expand their capacity or to establish new factories by giving them certain concessions in regard to land, taxation, etc. But, instead of providing incentives, they have actually been taxing the sugar industry and sugarcane growing out of existence. The Bombay Government, in particular, has been placing all possible disincentives. Till a few weeks ago, this Government was compelling the sugar factories to devote a third of the land in their sugarcane farms to foodgrains, although the necessity for it had disappeared long ago. It has increased the rates for irrigation water and been levying a heavy cane cess. Its laws governing the disposal of molasses are unrealistic and needlessly restrictive. In short, all State Governments have come to regard the sugar industry as their milch cow, without doing anything worthwhile to keep it hale and hearty.

It is not suggested here that Mr. Kidwai is not aware of all this. He knows as well as anyone in the sugar industry does that India can produce all the sugar it needs. If, despite this, he is in favour of establishing a sugar refinery, it is an admission of his failure to induce the State Governments to toe the line. He must have realised the futility of asking his colleagues in the States to follow a realistic policy, designed to secure a larger production of sugar at a price that will suit the pockets of the people. No one who had watched the developments in the field of sugar during the past two years can fail to pity Mr. Kidwai in his plight. As Minister in charge of food, he is responsible for providing the people with sugar, but he has no power to compel the State Governments to do what he feels should be done for bringing about an increase in domestic production. He may have come to the conclusion that the only way to knock some sense into the heads of the intransigent State Governments and to silence the vociferous, inefficient sugarcane growers, who, like Oliver Twist, continue to ask for more and still more price for their cane, is to plant in the country a competitor in the shape of refineries.

This attitude is quite understandable, but, instead of yielding the expected results, it may produce unhealthy repercussions. There is a danger of the country tending to rely more and more on foreign countries for its supply of sugar. This danger is real, because the present State Governments are not half as conscious of the need for increasing sugar production as those under the British regime. How indifferent they are towards this industry is evident from the absence of protest against Mr. Kidwai's idea regarding the refinery from any of the State Governments. If any further proof of their indifference is needed, one has only to compare and contrast the attitude of the present Bombay Government towards the sugar industry with that of its predecessor some 20 or 25 years ago.

While Mr. Kidwai's stand is understandable, it cannot be said to be correct. Appreciation of one's difficulties does not amount to an approval of the remedy suggested for them. In a planned economy, there is no excuse for the failure of States to fall in line with the Plan. It is the duty of the Centre to see to it that the State Governments pursue appropriate policies for bringing about more production of sugar.

It can be rightly argued that, since the sugar industry is no longer a protected industry, it cannot complain against a move designed to introduce a certain measure of competition. To them it should be immaterial whether this competition takes the shape of imports of white sugar or brown sugar. The issue, however, is not so simple as all that. The sugar industry cannot object to fair competition, but it can legitimately demand that it should be freed from all controls and the crushing burden of taxation which it is compelled to carry now. This is a very pertinent point so far as the Deccan factories are concerned, inasmuch as it is these factories that will have to face the competition from the proposed refinery. There is also another point that has to be considered. One of the reasons put forward in support of the refinery is its employment potential. But the employment potential will be definitely greater if supply of sugar in the country is sought to be increased through higher domestic production. It should be obvious that, if this remedy is followed, more people will find employment not only in sugar factories but also in the farms growing sugarcane. Finally, even if it is conceded that imports of sugar will be necessary for some years and that this necessity should be utilised for increasing employment in the country, the object could very well be realised by importing raw sugar and processing it into white sugar in

the existing sugar factories during the off season, without wasting capital—a scarce commodity—on establishing a refinery. In fact, this seems to be a quicker and a more convenient way of raising domestic supplies through imports of raw sugar than establishing a refinery. There is, of course, nothing new in this suggestion; it had been placed before the Government months ago by a number of sugar factories in the Deccan and in South India. But Mr. Kidwai, for reasons best known to himself, has cold-shouldered the idea, though at one time he was inclined to give it a fair trial.

NUCLEAR POWER

THE Parliamentary debate on Dr. Meghnad Saha's proposal for a larger expenditure on atomic research, which took place this week, served at least one useful purpose. It made the Prime Minister, Mr. Nehru, to reaffirm India's faith in the peaceful uses of atomic energy. Indeed, India, as an underdeveloped country, is more vitally concerned with the development of nuclear power than even the industrially advanced nations which probably set greater store by the strategic importance of atomic energy than by its peace-time uses. Mr. Nehru rightly said that atomic energy was of "greater importance to power-starved or power-hungry countries like India."

That India which, despite its backwardness, has made some notable contribution to the world of science, has been attracted to the idea of developing atomic energy should occasion no surprise. The Prime Minister himself is known to take keen interest in scientific development. Although the development of atomic power is a highly technical process, the broad principles of the process have been known for a considerable time now. Atomic energy is released by the fission of the nuclei of uranium in which process a considerable quantity of radioactive substances is formed, besides a new element, plutonium. It is possible to liberate and use atomic energy through the fission of the nuclei of uranium, thorium and plutonium. Perhaps, many other substances will be used for this purpose in future.

The chief advantage of the nuclear power process lies in its compactness. One kilogram of any atomic substance contains, it is computed, a potential supply of atomic energy equal to the chemical energy of 2.7 million tons of coal. Thus, only a small quantity of such substance is needed to generate nuclear power, as against the several thousand tons of coal needed for generating thermal power, or the elaborate arrangements or geographical advantages needed for generating hydro-electric power. There is also no difficulty of transport of coal over long distances such as would be met with in the case of a thermal power unit. Because of its compactness, a nuclear power set is of great advantage in rockets, submarines and aeroplanes. Nor are its advantages to other fields, industrial, medical and agricultural, less impressive. Indeed, the wider utilisation of atomic energy, it is confidently predicted, would some day be able to banish poverty and economic backwardness from this planet.

Leaving the remote possibilities of the use of atomic power severely alone, the immediate question, which all nuclear enthusiasts have to face, is how far atomic energy is a feasible economic proposition. Unfortunately, the data on this problem are too obscure to enable one to estimate the economics of atomic power. In fact, it is this uncertainty that has so far deterred private enterprise from engaging itself in the task of generating nuclear power. It should, of course, be clear that, in an area which is situated at a great distance from coal-fields or which possesses no facilities for generating hydro-electric power, nuclear power would be of great value. The question is whether nuclear power would be advantageous even in areas which are well equipped to generate either thermal or hydro-electric power.

No hard and fast answer can be given to this question. Nevertheless, it is interesting to note that some comparative data on the costs of generating nuclear and thermal powers are available. The data refer to the U.K. which means that several adjustments would be needed if they were to be applied to this country. In the U.K., it is computed that a nuclear power plant could generate electricity at a cost of 1d. per kw.h. which compares with the average cost of 0.54d. per kw.h. of coal-generated electricity. But this estimate does not take into account the revenue that would become available through the sale of by-products in the generation of nuclear power. The capital cost of establishing a nuclear power plant, it is again computed, would be two to three times that of a normal thermal station. Again, uranium which is needed for generating nuclear power is a costly metal. It is estimated that, if the U.K.'s whole electric supply, which absorbs 36 million tons of coal and coke, were to be based on natural uranium reactors, it would need 4,000 tons of uranium; uranium oxide costs about $3.5 a lb. or £2,800 a ton, while the natural uranium metal made from it would cost £10,000 to £20,000 per ton. Also, the procurement of uranium may create many new problems. In this connection, it may be noted that the total world reserves of uranium metal are at present estimated at about 25 million tons. These considerations led Mr. B. L. Goodlet of the British Atomic Energy Commission to state recently that, although nuclear power was a certainty and economic nuclear power a possibility, it would never be a cheap source of energy.

It should, therefore, be clear that, although nuclear power is technically feasible, it is wrong to overestimate its immediate importance as an aid to industry and agriculture. Nevertheless, science may alter the whole picture and improve the economic feasibility of atomic power. From this point of view, it is necessary to pursue relentlessly the research on the atoms. And this many countries in the world are doing irrespective of the costs involved. India cannot certainly afford to spend as much money as it might wish on this very costly enterprise. The Atomic Energy Commission in India is engaged in setting up an atomic energy establishment at Trombay. It has also sponsored fundamental research in nuclear physics. Its raw materials division is engaged in the survey of selected parts of the country for atomic minerals. The Commission was instrumental in setting up the Indian Rare Earths Ltd., which operates a monazite processing factory at Alwaye. Mr. Nehru admitted that the research work should be expedited, particularly the work connected with geological and other surveys. The progress of atomic research in India will be greatly facilitated if the advanced Western nations, notably the U.S., and the U.K., decide to share with this country their own research results and, in particular, the results of research in applied atomic physics. Unfortunately, this raises a whole host of political problems. Till they are solved, India has to depend on its own resources and the genius of its own scientists. As both are limited, no quick results can be expected.

LAND CENSUS

THE move to hold a Land Census does not seem to be making much headway. The replies submitted by the State Governments to the Union Ministry of Agriculture reveal considerable differences of opinion on the size of land holdings for the purpose of the Census, although all the States, with the exception of Travancore-Cochin, have agreed to hold the Census. The Travancore-Cochin Government is reported to have expressed the view that there is no use taking a census of holdings because it has already formulated a land policy on the basis of reports of the various committees which have gone into the matter thoroughly. Evidently, the Government is satisfied with the findings of the previous enquiry committees and feels that it has adequate and reliable data to implement its programme. Further, the attitude of this Government suggests that the Praja-Socialist Party, now in charge of the administration of the State, wants to follow its own programme and not that of the Congress. Here is an instance of what may happen when a State passes under the control of a party which holds a minority position in the rest of the country. Be that as it may, following the non-co-operation of the State, the Land Census figures for the country will be incomplete.

It may be noted that the holding of a Land Census has been considered necessary by the Planning Commission for several reasons. It would help, according to the Commission, the fixation of ceiling on existing land holdings not only for rehabilitation of agriculture in India but also for the fulfilment of the dubious social objective of redistribution, among the landless workers, of land held by persons in excess of the limit. Besides, a census of land is needed because the information available regarding the distribution and size of holdings in India is inadequate. The available data do not distinguish between cultivated land and uncultivated land. Nor is it generally known how much area is held by tenants and how much under the personal cultivation of owners. Again, no information is available about the quality of land. Consequently, the Union Ministry of Agriculture has proposed that (*a*) the Census should relate to agricultural lands comprised in owners' holdings; (*b*) it should be carried out by the revenue agency in each State as a special operation; and (*c*) the responsibility for carrying out the Census should rest with the State Governments.

In addition to these broad directives, the Ministry has given some clear definition with a view to introducing a certain measure of uniformity in the Land Census. Thus, it has defined agricultural land as "area comprised in a holding including groves and pastures." Area owned is to include "land held as owner as well as land held under rights of occupancy." Area owned under personal cultivation is to include "owned land other than that leased for a period of one year or more." An area of land held by two owners—one superior and the other inferior —should be shown in favour of the latter. Area owned by each member of the family is to be treated as a separate holding. The Ministry further proposed that the area held by a person in all villages of a *patwari* circle should constitute a holding for the purpose of the Census.

These proposals of the Union Ministry have been referred to here in somewhat detail, because it is these proposals that have given rise to differences of opinion among the States and the Centre. Contrary to the views of the Ministry, the Bombay Government, for instance, holds that the area held by a person in any district should be termed a holding instead of the smaller *patwari* circle. For it feels that, if the *patwari* circle is taken as the unit, the area available for distribution will be small. Again, the U.P. Government thinks that the land owned by a joint family should be taken as a holding and not the share of each co-sharer. These differences of opinion, however, are not so serious as to defy solution. A conference of representatives of the States and the Union Government would help remove these differences. While composing these differences, however, the officials concerned should, in no circumstances, lose sight of the fundamental objective before the country, namely, making agriculture more productive. That the danger of losing this perspective is in prospect is evident from the move on the part of the Congress Party to mix productivity with redistribution of land, two objectives which are not reconcilable with each other. For redistribution seeks to break up farms, while productivity prospers well on large-scale farms. Yet the Prime Minister, who is also the President of the Congress Party, observes:

> "I am quite positive in my mind that there should be a ceiling on land and that the sooner it is brought about the better, although what that ceiling will be depends so much on the quality of land and so many factors. . . . Of course, you have to think immediately of possible co-operative ways of dealing with land so as to make it more productive. We must remember that this question is an important and vital question. It is an urgent question. It is a question which got rather bogged up in our States, and they are chiefly concerned with it."

The general terms in which the problem has been explained above by the Prime Minister do not carry one far. They do not give a correct lead and, therefore, it is not surprising that the question has "bogged up" in the States. In the present circumstances in the country, the thing that needs to be done first is consolidation of small farms and not cutting of large holdings into small bits. It will be readily conceded that it is only the former that is consistent with the need for raising agricultural production. If this is followed up by relieving pressure of population on land through extensive industrialisation, the necessity for redistribution of land, which is relatively scarce in India, will not arise at all. The psychological discontentment among the landless classes and the evils of absentee landlordism can be tackled very well through suitable tenancy reforms and conciliation agencies for settling disputes between owners of land and their tenants.

BANK RATE IN BRITAIN LOWERED

POSITION IN INDIA—EXPORT DUTIES—EGYPT'S COTTON POLICY

THURSDAY, 5 P.M.

THE stalemate that we saw in the Share Market last week has yielded place to a distinctly downward trend. This is due to the fact that the bulls, who were sitting on the fence last week, decided to book their profit. Indian Irons have lost nearly a rupee and a half over the week. Tata Ordinaries have shed about Rs. 4, Bombay Dyeings Rs. 11-4, Centurys Rs. 12, Kohinoors Rs. 7-8, National Rayons Rs. 7-8, Scindias As. 9-6 and Bombay Burmahs Rs. 11-4. Even an investment scrip like Belapurs have dropped Rs. 2-8. It is reported that one of the big operators, who had accumulated several lakhs of Indian Irons, has been liquidating his purchases and that the fall in the rate would have been much heavier but for the covering by a leading bear. It seems that the bull has not yet completely sold out his holdings and it remains to be seen whether the market can easily absorb his remaining holdings without a further setback in values. It was only a fortnight ago that market men were talking up the Indian Irons to Rs. 40; but today the bulls are on the run. This is exactly what happens to a scrip which is boosted far beyond its intrinsic merits. Why have the other scrips also suffered? The answer is simple. When the leading speculative counter drops, others also experience selling pressure.

MARKET GOSSIP

• • • •

There have been no new developments in the money market. Supply of funds is still very limited, as the National Plan Loan seems to be absorbing more than what returns to the market by way of seasonal repayment of trade advances. It would appear that the authorities are maintaining a close check on all new issues and that they are reluctant to give permission even for issue of bonus shares. Evidently, they feel that announcement of bonus issues may divert the investible funds to equities, thereby having an adverse effect on the flow of funds into the new loan.

• • • •

The news of the week is undoubtedly the reduction today in the British Bank rate from 3½ per cent. to 3 per cent. This is the second reduction after an interval of some eight months. The previous cut took place on 17th September, 1953, when the rate was reduced to 3½ per cent. from 4 per cent., to which level it had been raised on 12th March, 1952. The first post-war increase in the British Bank rate took place in November, 1951 when it was stepped up from 2 per cent. to 2½ per cent. Thus, during a period of 2½ years, the Bank rate in Britain has been altered four times, upward in the first two occasions and downward in the last two occasions. The present rate of 3 per cent. is still half per cent. above the one that prevailed between November, 1951, and 12th March, 1952.

• • • •

The official explanation for the reduction in the Bank rate is not available at the time of writing. Last time (that is, in September, 1953) when it was reduced, the reason given was that it was lowered to conform with the fall that had taken place in other rates of interest. British money market commentators argued last week, when everyone was expecting a reduction in the Bank Rate only to be disappointed, that there was a close parallel between the situation then and now, there having been a reduction in other interest rates over the past few weeks. But a more important reason this time seems to be the wide disparity between the interest rates in London and other centres, particularly New York. Since short-term interest rates in London have been higher than in other centres, there have been for some time past large transfers of funds to London for interest arbitrage. The disparity in interest rates between London and New York widened considerably last week, when, in the latter centre, the yield on 91-day Treasury Bills fell to a record low of 0.773 per cent. and when the Treasury was successful in raising $2 billion of new money, in addition to putting through a conversion operation of about $7 billion worth of issue falling due shortly at exceptionally low rates of interest. The new issue was for a period of 4¼ years and carried interest at the rate of 1½ per cent. The conversion of maturing issues was allowed either with this new issue or with one year certificates carrying interest at no more than 1½ per cent. The interest rates on these two types of investments are the lowest for comparable issues for several years. The flow of funds from New York to London for taking advantage of higher rates of interest itself began to pull down the short-term interest rates in London, thereby placing the Bank rate at 3½ per cent. out of line with other interest rates. Even then, the margin between the yields in the London and New York markets was at least ½ per cent. in favour of New Yorkers, even after providing for the cost of covering the exchange risk.

• • • •

It is true that, in course of time, this margin might have disappeared but not before a lot of short-term funds had found their way to London. Upto a point the flow of such funds would have been welcomed, but it is distinctly disadvantageous to have too much of money which can be withdrawn at a moment's notice. When this money flows back, it may have a certain amount of unhealthy repercussions on London financial markets, though not necessarily on the exchange value of the pound sterling, as most of those who switch funds for the sake of a turn in interest rates simultaneously cover their exchange risk by a forward transaction. Apparently, the British authorities must have felt that a stage had been reached when it was no longer safe to stimulate further flow of short-term funds into London.

• • • •

Another reason that might have prompted the British authorities to lower the Bank rate is the need for increasing the competitive capacity of British exporters. Lower interest rates in other centres give the exporters in those countries a definite advantage over their British confreres. All this does not mean that Britain has cut the Bank rate without some risk. In recent months, business in Britain has by no means been dull. On the contrary the business trends have been mostly upward. Industrial production has been rising and unemployment falling. Industrial profits are high, with all leading companies stepping up their dividends in a handsome fashion. Stock markets are distinctly bullish. In these circumstances, a cut in Bank Rate could be dangerous and may lead to inflation. Moreover, a lower Bank rate is not conducive to increased savings. It is true that, in the last two years, savings in Britain have been rising, due, to a considerable extent, to the higher Bank rate itself. Nevertheless, they are still not large enough, considering Britain's needs for re-equipping its industries and for financing investment in the Commonwealth and colonies. Considering these factors, as well as the fact that interest rates in the U.S. are now at record low levels, it looks as though the scope for any further cut in the Bank rate in Britain is very, very limited.

• • • •

Now that there has been a further reduction in the British Bank rate, the school of thought, which is in favour of a lower Bank rate in this country also, will feel emboldened to raise its voice again. But conditions in India are different from those in the U.K. London has now practically regained its pre-war status of being a world financial centre. The Bank of England rate is, therefore, governed by developments in other centres with which London has to compete. India has no such problem. Again, the Bank rate in India has always been one per cent. higher than the British Bank rate. This has enabled India to have the benefit of obtaining funds from the London market for financing its trade and industry. The present resources in the Indian money market are by no means so large as to dispense with this assistance. With a large programme of deficit financing on hand, it will be dangerous to reduce the Bank rate. Unlike in Britain, frequent changes in Bank rate in India will upset the confidence of investors. India needs, more than Britain, a large volume of savings and a lower bank rate will not be conducive to the promotion of the savings habit. In Britain, a cut in the Bank rate has been preceded by other tangible forms of incentives to production, such as a reduction in taxation, liberal depreciation allowances and active encouragement to re-equipment of British industries, even through subsidies in some instances. In India, the Government has not done any of these things and does not propose to do anything in this direction until the findings of the Taxation Enquiry Commission are known. A mere reduction in the Bank rate, in the absence of these incentives, will not help industries to any appreciable extent. On the contrary, it may give a fillip to inflationary forces, thereby leading to an increase in the cost of production. In any case, the cost of bank credit in India did not go up to the same extent as it did in Britain when the Bank rate was raised. These are some of the chief reasons why there need not be a reduction in the Bank rate in India.

• • • •

A reference was made in these columns last week to the remarkable strength of the pound sterling which was then standing at the top rate of $2.82. Since then, there has been a fall in the rate to $2.81-13/16. This slight recession has been due to the slackening of demand for sterling consequent on the categorical denial by the British Treasury officials of the rumours that Britain was intending to go beyond the permitted range of fluctuations under the I.M.F. rules. In fact, a good part of the "hot money" that had come to London in the hope of making a swift profit on the exchange rate is reported to have already left that city.

• • • •

The Union Government's announcement relating to the readjustment of export duties is of vital importance to the oilseeds market, because, apart from the reduction in the export duty on black pepper to Rs. 65 per cwt., and the abolition of the duty on cheroots and cigars, the Government's decision refers mainly to oilseeds and oils. Thus, the export duty on mustard oil, rapeseed oil, linseed oil, kardiseed oil, nigerseed oil and cottonseed oil has been abolished. The export duty on castor oil has been reduced from Rs. 300 per ton to Rs. 200 per ton. A duty of Rs. 150 per ton has, however, been imposed on exports of kardiseed and nigerseed. All these changes came into effect from 12th May, 1954.

• • • •

Announcing these changes, an official Press note says that the Government has, in accordance with its policy of keeping export duties under constant review, decided to readjust export duties in respect of these commodities. It is clear that the Government's decision to free exports of the vegetable oils concerned from all duties stems from a desire to promote exports of manufactured goods rather than of raw materials.

• • • •

The local seeds and oils market, as was only to be expected, reacted bullishly to the official announcement relating to the abolition of export duty on oils. Thus, castorseed May delivery, which had closed at Rs. 116-2 on 11th May, moved up to Rs. 121 on the following day. Similarly, castorseed, September delivery, improved by Rs. 5-2 to Rs. 126. Fractional gains were witnessed in other seeds and vegetable oils, though there was a slight decline in nigerseed and kardiseed, thanks to the fact that an export duty of Rs. 150 per ton has been imposed on them. But today, the gains were all partially wiped out, which suggests that the market has felt, on second thoughts, that the rise had been overdone. Castorseeds May closed today at Rs. 119, September at Rs. 124-2. Groundnut, Bold ready, was fractionally marked down to Rs. 35-8. Vegetable oils too, were quoted at lower levels; groundnut oil at Rs. 17-14, and castor oil (Commercial) at Rs. 11-12. Only linseed oil was somewhat better at about Rs. 15-6.

• • • •

It is too early yet to predict whether and, if so, how far the Government's decision will promote exports in seeds and oils. The relief is, of course, welcomed. Only, the reimposition of the export duty on kardiseed and nigerseed is regarded as a heavy burden, because these seeds are low-priced varieties. It is somewhat anomalous that kardiseed, quoted at Rs. 19, nigerseed at Rs. 29 and groundnut at Rs. 40, should all bear the same burden of export duty of Rs. 150 per ton. Nevertheless, it is felt that kardiseed oil exports may get a fillip through the abolition of the duty. As regards mustard oil and rapeseed oil, the high duty was a major incentive for smuggling these oils across the Indian border into Pakistan. The abolition of the duty should check this nefarious activity. Little can be predicted about the prospects for castor oil, in view of the fact that the Government has not yet announced its export policy. This is a regrettable lapse on the part of the Government, for it allowed the latest policy in relation to the exports of castor oil to expire (on 30th April 1954) without letting the shippers know the Government's mind on this question for the current period. For many of the other vegetable oils, export quotas are valid only upto June, 1954. The shape of the export trade in these oils will become known only after the Government's announcement of its export policy.

• • • •

As regards linseed oil, the prospects for its export are none too bright, for, even after the abolition of the duty, the Indian prices for linseed oil are at a higher level than the prices in world markets. No export may be possible unless the Indian prices go down or there is an upward adjustment in foreign markets. In this connection, it is reported that the U.S. authorities are still sellers of fairly large quantities of linseed oil, and that they may continue to do so for some time to come. It would appear that the original tonnage of about 225,000 has been sold already and that about 150,000 tons, held in stockpile, has been transferred to the Commodity Credit Corporation for export sales. It is, however, difficult to predict whether this will lead to a decline in linseed oil prices. On the contrary, reports from London suggest that the price outlook over a period of some months is considered firm. But world prices will have to firm up considerably before export trade in linseed oil from this country can take place.

• • • •

The Egyptian Government has, it is learned, announced a further increase in the prices to be paid by the Egyptian Cotton Commission for the 1954-55 cotton crop. The Government has raised the buying prices for Ashmouni and similar varieties by two tallaries and for Karnak and other long-staple varieties by three tallaries. The is the second time that an increase in buying prices for the forthcoming crop has been announced. It will be recalled that, in February, the Government announced an increase of four tallaries per cantar for Karnak and three tallaries per cantar for other varieties (of the 1954-55 crop). The latest announcement does not specifically mention anything about selling prices. It is, therefore, understood that the selling prices will be the same as those announced in February.

• • • •

In February, 1954, the Government had stated that the selling prices for the next crop would continue to be based on the New York futures market. But the premium to be paid for the crop was stepped up. Thus, the premium for the crop, it was stated, would be raised from 5 per cent. to 12 per cent. in respect of the Ashmouni-Giza 30 crop and from 30 per cent. to 40 per cent. in respect of the Karnak-Menoufi crop.

• • • •

In raising the buying prices for the next crop, the Government, according to an official statement, has been influenced by the consideration that the growers should be given the "most advantageous" prices which, in turn, could "enhance their purchasing power." In this connection, it is interesting to note the efforts that have been made by the Government at stabilising cotton prices. The Government has passed a law setting up a committee to run the Cotton Prices Stabilisation Fund. The Commission will transfer 25 per cent. of the profits it makes to this fund. If any losses are incurred in future seasons, they will be met from out of this fund. The balance of the profits, namely, 75 per cent., will be returned to producers. It would appear that such profits amount to £E4 million this season. It is not clear how the profit will be distributed among the growers. The Government,

EQUITIES DRIFT LOWER

HEAVY SELLING PRESSURE IN INDIAN IRONS

(From Our Own Correspondent)

BOMBAY, 13*th May*

THE cautious note in equities noted last week gave place to a relatively weaker trend during the week under review. The change-over was due neither to any major bearish factor in the domestic economic sphere nor to any disturbing development in the international political situation. In the absence of any ostensible reason, the downward movement may be attributed to a technical correction, initiated by a few minor factors, such as lack of buying enthusiasm, continuous selling of Indian Irons by a prominent Calcutta operator to the extent of several lakhs of shares, the weakness of the bullion and commodity markets, lack of sustained demand for cloth in the overseas markets and persistent stringency in the money market. Intermittent attempts at recovery on short-covering and small replacement buying were not sustained, but only brought forth fresh liquidation. In the result, almost the entire list of equities showed sizable losses.

The steel section was dominated by selling orders in Indian Irons. From Rs. 31-4, the shares slipped back to Rs. 30-10½ on Tuesday morning. Lower Calcutta advices, attributed to rumours of labour unrest at Burnpur (since reported to be baseless), caused a sudden drop to Rs. 29-14 yesterday. Though in the subsequent recovery they came up to Rs. 30-4, the closing was once again weak at Rs. 29-15. Tata Irons declined from Rs. 197 to Rs. 195 early in the week, due to end-of-account considerations. They, however, opened the new account on a promising note at Rs. 197-8, but failed to consolidate the initial advantage due to the weakness of Indian Irons. Consequently the shares moved down to a low of Rs. 193-4 at the close today.

The textile section proved vulnerable to the general reactionary trend. Bombay Dyeings, which came in for special attention in the previous week and rose by Rs. 20 to Rs. 436-4, failed to attract buyers during the week under review. With occasional upsurges, they closed the week lower by Rs. 11-4 at Rs. 425. Kohinoors drifted from Rs. 321-8 to Rs. 314. Centurys had a loss of Rs. 12 at Rs. 325. Central Indias dropped Rs. 7 to Rs. 175. Finlays Rs. 3-8 to Rs. 246, Gokaks Rs. 2 to Rs. 252-8 and Indu Ordinaries As. 7½ to Rs. 10-12. Indore Malwas declined by Rs. 5-10 to Rs. 107-8, Lakshmis by Re. 1-4 to Rs. 580 and New Greats by Rs. 4-8 to Rs. 169. Simplex were taken down by Rs. 4-8 to Rs. 156-8 and Standards by as much as Rs. 7-8 to Rs. 315. Swadeshis passed hands Rs. 5-8 lower at Rs. 278.

Bank shares were easy. In the absence of any buying support, business put through was small. Central Banks were a shade lower at Rs. 55-4, but their new shares were unchanged at Rs. 59-8. Imperial Fully Paids lost Rs. 30 to Rs. 1,770 and Partly Paids Rs. 3-12 to Rs. 440. Indias were lower by Rs. 2 at Rs. 144. Barodas were, however, unchanged at Rs. 108, United Commercials were put through Re. 1-4 lower at Rs. 44.

General inclination to sell and restricted activity characterised trading in electricity shares. As offerings were well absorbed, no serious losses were noted on balance. Ahmedabad Electrics were placed As. 10 lower at Rs. 112-3. Amalgamated Electrics were, however, a fraction better at Rs. 10-12. Bombay Suburbans changed hands at Rs. 121-4, as against Rs. 121-14. After an initial spurt from Rs. 128-2 to Rs. 133-2, Surat Electrics relapsed to Rs. 130. Andhra Valleys closed on balance unchanged at Rs. 1,365. Tata Hydros were a rupee down at Rs. 143. Tata Powers moved down by Rs. 3-12 to Rs. 1,442-8.

Barring a decline of Rs. 140 to Rs. 7,660 in Orientals on reports of a hitch over the mutualisation of the Company, there was nothing noteworthy in the insurance section. New Indias were unaltered at Rs. 44-12; so also Empire of Indias at Rs. 635 and Jupiters at Rs. 7-8. Indian Mercantiles were maintained at Rs. 40-8, and Industrial and Prudentials at Rs. 36-2. Vulcans were done As. 2 higher at Rs. 13.

In the miscellaneous section, sugar shares had an easy spell, Belapurs being marked down from Rs. 274-8 to Rs. 272 and Phaltans from Rs. 106-4 to Rs. 103. Walchandnagars were, however, maintained at Rs. 176-4. Among cement shares, A.C.C. moved in a narrow range and closed As. 8 lower at Rs. 157-4. Digvijays dropped from Rs. 123 to Rs. 120. In the engineering and mining section, Alcock Ashdowns, after an advance from Rs. 350-10 to Rs. 353-12, wound up at Rs. 350. Premier Constructions had a loss of Rs. 3-4 at Rs. 130-8. Tata Locomotives looked down from Rs. 122-8 to Rs. 121. B.B. Petrols were quiet at Rs. 3-7½, as also Indian Coppers at Rs. 3. Shivrajpurs drifted lower by a rupee to Rs. 65. Among miscellaneous industrials, Bombay-Burmahs had a setback from Rs. 406-14 to Rs. 395-10 and their new shares from Rs. 138-12 to Rs. 135. B.I.Cs. dropped As. 2½ to Rs. 8-0½. National Rayons tumbled down from Rs. 164-8 to Rs. 157. Tata Chemicals stood As. 8 lower at Rs. 14-1 as also Tata Oils at Rs. 40. Wimcos were done at Rs. 197-8 *ex-div.* (dividend Rs. 11) as against Rs. 210 *cum-div.* last week. Shipping shares were quiet, Scindias were done As. 9½ lower at Rs. 17-10½, India Steamships softened from Rs. 8-7½ to Rs. 8-4 and Bharat Lines from Rs. 96-8 to Rs. 96. Among automobile shares, Hindustan Motors were marked down from Rs. 8-7½ to Rs. 8-4½ and Premier Automobiles from Rs. 72-8 to Rs. 70. Killick Industries proved an exception in recording a small rise of Rs. 4 to Rs. 183 on yield considerations.

• • • •

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, 12*th May*

Trading on the Calcutta Stock Exchange during the week under review was featureless. Quotations were easy, and the volume of business was further affected. The main cause for such a trend was the absence of institutional investment which found its way to the tap loan. In the present lethargy, weak holders turned sellers although the prudent operator utilised the opportunity to buy first class counters coming to hand, at attractively lower prices on the expectation that the uptrend was bound to develop sooner or later.

Jute shares were weak, and both investors and operators are watching what action the Government proposes to take on the report of the Jute Enquiry Commission. The future of the jute industry depends on the implementation of at least the main recommendations of the Commission, i.e., those relating to modernisation of mills, lowering output costs, drawing up specifications for the different construction of goods, and freeing raw jute from sales taxes and other provincial levies.

Interest in sugar shares was subdued, although the outlook for the sugar industry was not in doubt. Output of sugar this season would certainly record a decline because of the lower cane yield. This factor, it is felt, would not affect working results of mills in view of the higher price that the sweet commodity realises. The general weakness affected teas also, and prices gave way. However, export prospects for tea are good, and there is no reason why teas should not move up when once the general weakness is driven away.

In the engineering section, speculative Indian Irons searched lower levels. Opening at Rs. 31-4 last Thursday, the rate gradually receded to Rs. 30-11 but closed for the week-end at Rs. 31-2. Trading in the last two days was lethargic, and the quotation eased to Rs. 30-3. From Rs. 11-8 Texmacos declined to Rs. 10-12. At Rs. 7-6 Marshalls lost As. 6, and Braithwaites were brought down to Rs. 16-4 from Rs. 16-7. Jessops were quiet at Rs. 28-10.

Among shares of shipping companies, Calcutta Landing and Shippings spurted to Rs. 23 from a previous rate of Rs. 21-2 following satisfactory dividend news and the recommendation of a bonus of As. 8 per share. India General Navigations were unchanged at Rs. 72, and India Steamships realised Rs. 8-7.

Jutes lacked interest, Howrahs lost to Rs. 24-2 from Rs. 24-9. Unions at Rs. 173 were lower by six points, while Presidencies at Rs. 6 put on As. 2 on sporadic enquiries. Agarparas were shaded to Rs. 14-14 from Rs. 15-6, as were Nationals to Rs. 24-5 from Rs. 24-10.

In the coal section, Western Bengals were fractionally better at Rs. 6-3, Burrakurs being quiet at Rs. 8-15. Raneegunges were as low as Rs. 11-2, while Central Indias, after being better at Rs. 6-2, gave way to Rs. 6. Pench Valley at Rs. 25-9 were an anna higher, while Khatras Jherriahs lost Rs. 45-8 from Rs. 46. South Karanpuras were unchanged at Rs. 9-3.

Miscellaneous industrials were not devoid of features, although the general pull was in the downward direction. N.I.C.O's were a buoyant counter, and the keen interest shown pushed the rate to Rs. 19 from Rs. 18-3. National Rolling and Steel Ropes belonging to the same managing agency as N.I.C.O's were another feature with a rise from Rs. 14-13 to Rs. 15-4. British Burma Petroleums fully maintained the improvement at Rs. 3-11 although, for a time, they were quoted, fractionally lower at Rs. 3-10. Rohtas Industries moved down to Rs. 15-11 from Rs. 16-4. Rallis were quiet at Rs. 55-12. Earlier, F. & C. Oslers recovered to Rs. 18-4 from Rs. 17-10 but subsequently gave way to Rs. 17-7. Indian Cables were better at Rs. 20-6, as against Rs. 19-15 a week ago, and Eastern Investments at Rs. 144 as against Rs. 143.

In the paper mills section, India Paper Pulps were Re. 1 better at Rs. 203. Titaghurs receded to Rs. 39-4 from Rs. 41. After being fractionally higher at Rs. 24-8, Shree Gopals were put down to Rs. 23-12. Orients were put to business at Rs. 16-15.

Among sugar shares, Ramnugger Canes gave way to Rs. 22-8 from Rs. 23-4 but subsequently changed hands at Rs. 22-12. Belsunds were one anna better at Rs. 8-10, while Carews were quiet at Rs. 7-15.

Excepting for yesterday when a steady trend was in evidence, teas were easy. East Indias were lower at Rs. 20-2 and Banarhats were quiet at Rs. 448. Batelis at Rs. 18-3 were better by As. 2. Earlier Dimakusis were put through at Rs. 40-10 and Tezpores at Rs. 22. At Rs. 265, Gungarams gave way 3 points. Hantaparas moved down to Rs. 218 from Rs. 218-8.

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, 11*th May*

After last week's easiness, the Madras Stock Exchange staged a mild recovery and presented a somewhat cheerful appearance, with sporadic enquiries from buyers. Textile scrips were in good demand resulting in a spurt in the values of select scrips. Teas, among plantings, came in for renewed support, on reported possibilities of increased offtake of tea by the U.S. in the current year. Rubbers came in for scattered enquiry, while coffees were almost out of shape. Sugars, however, came into favour occasionally. Miscellaneous scrips reported some stray deals. The undertone remained steady.

In distinct contrast to the previous week's easiness, the textile section fared better this week. Radhakrishnas, Rs. 100 paid-up, shot up from Rs. 162 to Rs. 172 and 'B', Rs. 50 paid-up, from Rs. 80 to Rs. 86. Dhanalakshmis gained Rs. 9 to Rs. 236 and Premiers Rs. 7 to Rs. 102. Lakshmis, Rs. 50 paid-up, advanced by Rs. 4 to Rs. 116 and were higher by Rs. 3 at Rs. 143 and R. C. Ambikal by Rs. 4-8 at Rs. 138-8. Bangalore Woollens, however, lost Rs. 3 to Rs. 396.

Among plantings, teas were the brightest. Nilgiri Teas improved by As. 10 to Rs. 14-2. Peermades and Peninsulars put on As. 6 each to Rs. 34-12 and Rs. 12-8, respectively. Udayagiris too were up by a similar amount at Rs. 9-12. Chandramalais were higher by one anna and a half at Rs. 3-11. Parksides were done at Rs. 17 *ex-div.* as against Rs. 18-2 *cum-div.*

Rubbers came in for scattered enquiry. Travancore Rubbers improved by As. 4 to Rs. 16-8 *cum-div.* and Vaikundams by As. 2 to Rs. 15-8. Kailas gathered an anna to Rs. 4-8. Cochin Malabars were unchanged at Rs. 7-3 and Be Bes at Rs. 2-14. Malankaras were quiet at Rs. 37-4.

Coffee scrips ruled dull. Consolidated Coffees lost As. 4 to Rs. 17-12 and Coffee Lands As. 2 to Rs. 10-8. Puthuthotams, however, put on an anna to Rs. 3-6½. Mysore Coffees were fractionally better at Re. 1-2.

Sugars were in keen demand. Deccan Sugars, Rs. 10 paid-up, were up by As. 4 at Rs. 10-4 and Rs. 25 paid-up, by As. 12 at Rs. 25-4. E.I.D's 'B' Rs. 10 paid-up, by As. 8 to Rs. 27-8.

Among miscellaneous scrips, Rallis gained Re. 1 to Rs. 57 and Mysore Chemicals and Manufacturings As. 8 to Rs. 13-10 *cum-div.* General Papers and Aluminium Industries put on As. 5 each to Rs. 8-1 and Rs. 14-5, respectively. Mysore Papers, however, lost As. 2 to Rs. 18-2.

Notice

ALLIANCE JUTE MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE One hundred and Eighteenth Ordinary General Meeting of the Shareholders of ALLIANCE JUTE MILLS COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Wednesday the 2nd June, 1954, at 4-15 p.m., for the following purposes:—

(1) To receive the Directors' and the Managing Agents' Report and the Auditors' Report, and to pass the Accounts for the half-year ended 31st December, 1953.

(2) To declare Dividends.

(3) To elect a Director. Mr. G. L. Bangur retires by rotation and, being eligible, offers himself for re-election.

(4) To appoint Auditors and to fix their remuneration.

The Share Transfer Books of the Company will be closed from 20th May to 2nd June, 1954, both days inclusive.

By Order of the Board,

McLEOD & Co., LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, 12*th May*, 1954.

Note.—Payment of the proposed dividends, if declared, will be made only to those members whose names are registered in the Books of the Company on the 2nd June, 1954, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

NEWS IN BRIEF

THERE were 803,266 licensed radio sets in the country at the end of 1953. The revenue earned through licence fees during the year exceeded Rs. 1.18 crore.

Indian shipping moved 2,500,000 tons of cargo in the coastal trade during 1953. Out of this, coal alone accounted for about 1,200,000 tons.

The revised draft of the Inter-State River and River Valleys (Development and Regulation) Bill is being circulated among the States for their comments and may be introduced in the next session of Parliament.

The Government of Andhra has sanctioned a scheme for the establishment of a regional oilseeds research station at Anantapur at an estimated cost of Rs. 89,000, allocated by the Indian Central Oilseeds Committee.

A survey for a rail link between Dindigul and Gudalur has been completed. The proposed line has been included in the list of projects which will be considered for inclusion in the second Five-year Plan. This information was given in the House of the People the other day by Mr. O. V. Alagesan, Deputy Minister for Railways and Transport.

According to British cement manufacturing experts, Mr. J. A. Mackintosh, Deputy Managing Director of the Tunnel Portland Cement Company, and Mr. A. B. Jorgenson, Director of F. L. Smith and Company, who arrived in Nigeria recently, a cement works can be built at Nkalagu in Eastern Nigeria. It is estimated that the plant to be installed there will have a capacity of 100,000 tons a year. At present, cement is imported into Nigeria; last year, imports aggregated 300,000 tons. The Nigerian Government has voted £1,200,000 for the setting up of a cement factory. The Eastern Regional Production Board has also voted £500,000.

The Government of India has readjusted export duties, with effect from the 12th inst., in respect of a number of commodities. According to a Press note issued by it, the export duties on mustard, rapeseed, linseed, *kardi* seed, *niger* seed and cotton seed oils, cigar and cheroots have been abolished. Castoroil has been exempted from so much of the export duty as is in excess of Rs. 200 per ton and black pepper from so much as is in excess of Rs. 65 per cwt. A rate of Rs. 150 per ton has been reimposed on exports of *kardi* and *niger* seeds.

The Spices Enquiry Committee has made separate recommendations in regard to each of the six crops investigated by it. The main recommendations of the Committee are: (1) A Central Development Fund should be set up for developing the production and marketing of pepper and cashew-nut, which are the most important dollar-earning commodities, according to an integrated ten-year plan; (2) special agencies should be set up in the U.S. and the U.K. for publicity and sales promotion, and (3) a Central and State Advisory Committee should be set up to organise development of spices.

The question of the Government of India taking over the manufacture of boilers and locomotives from the Tata Engineering and Locomotive Company is still under consideration. The Company has fallen behind the production schedule envisaged in an agreement between Government and the Company, but no ad hoc advances have been made to the Company. Provisional payments against bills submitted by it for work done have been made from time to time in terms of the Agreement. A settlement is now reached on important outstanding issues. It is expected that the provisional payments will be finalised shortly.

It is learned that the Indian Air Lines Corporation has decided that integration of all the existing lines should be secured speedily in a single step, instead of evolving at first a regional set-up to be replaced later by a completely unified system of administration. For this purpose, in general, and for more effective administration, in particular, an organisation is being set up at the headquarters of the Corporation in New Delhi, which will assume direct responsibility for initiating and implementing proposals designed to secure uniformity in all important matters concerning policy, programme and procedure. The Chairman of the Corporation will also function as General Manager, in addition to his duties, and the departmental heads will be responsible to him for proper and efficient discharge of their duties.

The Government of India has constituted a nine-member Board of Directors for the Bharat Electronics Ltd., which was registered on 19th April, 1954, in Bangalore, as a company. Mr. M. K. Vellodi will be the Chairman of the Board of Directors. Mr. A. K. Ghosh has been appointed as the Managing Director. Early last year, it will be recalled, the Government of India entered into an agreement with a French firm, *Campagnie General De Telegraphie Sans Fil*, to set up a large-scale industry for the manufacture, within the country, of a wide range of wireless equipment capable of meeting major requirements of the armed forces and other Ministries of the Central Government and States. The entire capital, amounting to nearly Rs. 9 crores will be provided by the Government of India. Jalahalli, near Bangalore, has been selected for establishing the factory.

The Government of India has fixed the maximum extra charges payable by buyers of controlled categories of iron and steel, on account of railway freight, at Rs. 60 per ton in respect of rail-head stations within the Indian Union, with effect from 10th May, 1954. The main object of this step is to give relief to industrial consumers and fabricators in the north-western parts of India who, as a result of the Partition, have so far had to pay higher freight charges (about Rs. 85 per ton) than what they had to pay before the Partition (about Rs. 69 per ton), when Karachi was the port nearest to this region. The selling prices of steel are fixed with reference to the main ports and the price payable at any inland station is calculated by adding the freight charges from the nearest main port to the selling price.

From Abroad

The O.E.E.C. Council of Ministers has agreed in principle to renew the European Payments Union for one year from 30th June, 1954.

Sale of tea in the U.S. during the first quarter of 1954 rose by 25 per cent., as compared with the corresponding quarter of 1953.

The final report of the U.S. Bureau of Census shows that the ginnings of the U.S. cotton crop of 1953 aggregated 16,317,126 running bales of 500 lbs. each.

The World Bank has decided to give Norway a loan of $25,000,000, primarily to finance payments for ships built abroad. The rate of interest will be 4½ per cent.

Spain has concluded an agreement with Poland for bartering 300,000 tons of iron ore against 200,000 tons of coal. The value of this deal is put at £1.6 million.

Representatives of 20 nations who recently met at Strasbourg decided to set up a European Commission of Civil Aviation to ease inter-European air travel.

The directors of cottage industries from 11 Asian countries have begun a four-week tour of Japanese workshops, experimental stations and co-operatives. They plan to draw up recommendations for developing cottage and small-scale industries in their own countries.

The consumption of coffee in the United States, traditionally a nation of coffee-drinkers, reached a record total of 103.3 million lbs. in 1953. Tea imports in 1953, at 105 million lbs., were 11 per cent. higher than in 1952, when they were 12 per cent. more than in 1951.

Trade talks are going on between Western Germany and Sweden, aiming at an agreement for the period 1st July, 1954, to 30th June, 1955. If these talks materialise, Sweden is expected to export more wheat to Western Germany and buy a larger number of German cars.

Production of rayon in the U.K. during March, 1954, broke all records, the exact quantity produced being 40.2 million lbs. This is 5.4 million lbs. higher than the peak reached in October, 1951. The total of 40.2 million lbs. is made up by 20 million lbs. of staple fibre and 20.2 million lbs. of continuous filament yarn.

The Advisory Committee of the European Coal and Steel Pool has approved the proposal of the High Authority to appropriate $1 million to each of two research projects on blast furnace technique. One will deal with the quality of coke to be used, and the other with the operation of blast furnaces under pressure.

The Dunlop Rubber Company (U.K.) has just completed a contract which involved the lining with 170 tons of corrosion-resistant rubber of the Associated Ethyl Company's new plant in the Isle of Anglesey. The value of the contract is stated to run into six figures. The plant has been built to produce bromine from sea water. Bromine is used for ethylene derivatives which are mixed with tetra-ethyl lead in the production of petrol additives.

Sweden and Japan have signed a new trade agreement running until 31st March, 1955. Under the agreement, Sweden will export less—$8 million compared with $10 million—than in 1953-54, but Japan's exports will rise from $10 million to $12 million. The difference will be used to help pay Japan's debt to Sweden, amounting to nearly $8 million originally, of which about $3.2 million has been paid in dollars.

The International Labour Organisation is undertaking extensive consultations with Governments to ascertain the technical assistance needs of Asian countries during 1955 in the various fields within the Organisation's scope of activities. In this connection, Mr. Richard M. Lyman, Director of the Asian Field Office in Bangalore, will shortly visit Burma, Thailand, Hong Kong, Formosa and the Philippines, as the first of a series of programme planning missions to Asian countries.

The U.S. Department of Agriculture has announced its readiness to sell its surplus stocks of butter for export at world price. This announcement marks a departure from the policy followed hitherto, under which the U.S. was selling butter for export only at its domestic price of 60.5 cents a pound. The present average overseas price is 47 cents a pound. The surplus stocks of butter in the U.S. are placed at 363 million lbs. All these stocks are for sale, including to countries belonging to the Soviet bloc, provided exporters to this bloc obtain an export licence from the Commerce Department. By selling butter at world prices, the U.S. Government will be enabling foreign consumers to buy butter cheaper than the consumers in the U.S.

The chartered banks in Canada are discussing a plan for the creation of a money market. All banks are expected to join the scheme, sponsored by the Royal Bank of Canada. The banks are now completing their plans, which, it is hoped, all will adopt. It is reported that the Bank of Canada would not step out of the picture entirely, if and when the chartered banks agree on their new policy, but would be available if required. Jobbers would have the assurance of the Central Bank's purchase and resale offers, though they would be kept in the background. The Bank of Canada would also retain its facilities for the purchase or sale of bills in the short-term markets, and this would provide another instrument whereby the Bank of Canada could exercise control over the supply of cash and credit.

The U.S. Government has completed a review of its shipping policies and submitted a lengthy report to the Congress. The principal features of this report are:—No drastic changes have been made in the subsidy policies established by the Democrats, but greater reliance will be placed on private capital to finance new ship construction. The Randall Commission's suggestion that the 50 : 50 shipping provisions in foreign aid legislation should be discarded if a suitable alternative can be devised, has been accepted by the President in principle. The latter has, accordingly, directed the Commerce Department to study the matter and report as to whether direct aid to steamship companies can be substituted for indirect aid granted through the 50 : 50 scheme.

Although the European consumption of wine has generally risen since the war, the long-term trend of world consumption of wine is downward, according to a F.A.O. study. This trend is causing serious concern to a number of the world's most important wine-producing countries. In France, an unconsumed surplus of about 370 million gallons is expected on the 1953-54 production. In an attempt to cope with this surplus, the French Government has ordered distillation into alcohol of 150 million gallons of wine and compulsory storage of further quantities. These measures can only be carried out at a considerable cost to wine producers and a substantial loss to the Government. French national consumption of wine is at only 138 litres per head, as compared with 163.4 litres before the war. In Italy, wine production is above pre-war levels and consumption is rising, too, but, at 95.3 litres per head in 1952, it is still well below the 1911-13 average annual per head consumption rate of 123 litres. In Spain, about 150 million gallons of wine will probably be carried over unconsumed from the 1953 production.

PERSONAL

MR. A. B. Waring, Chairman and Joint Managing Director of Joseph Lucas (Industries) Ltd., has been elected President of the Society of Motor Manufacturers and Traders, London.

Sardar Datar Singh, Additional Secretary to the Union Ministry of Food, has been attending, on behalf of India, the five-day co-ordinating meeting of the F.A.O. which commenced on the 10th inst.

Mr. Nakul Sen, I.C.S., has been appointed to officiate as Secretary to the Central Ministry of Rehabilitation, in place of Mr. C. N. Chandra, who has gone on leave. Mr. Sen was the Joint Secretary to the same Ministry at the time of his appointment.

Dr. C. Popp, Chief Engineer of Demag, arrived in India last week from Geneva, with a view to submitting the preliminary report on the proposed Rs. 72-crore steel plant of the Hindustan Steel Ltd., to be set up at Rourekela in Orissa, jointly by the Government of India and Krupps and Demag, the German firms.

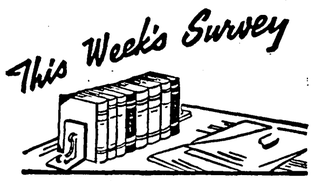
"COMMERCE" 1929

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 18*th May*

Government and Mill Strike

The Government of Bombay are certainly doing everything in their power to bring about a settlement of the mill strike. They are keenly watching developments, and His Excellency the Governor, after receiving various deputations, called a round table conference at the Bombay Secretariat in the middle of the week—though the proceedings were *in camera*. At the time of writing, Sir George Rainy, Commerce Member of the Government of India, is expected in Bombay in connection with the strike. It is a happy sign that the Central Government will also leave no stone unturned in their efforts to find the path to peace. At the moment, the total number of mills which are working either completely or partially is 42, employing about 40,000 operatives, and this state of affairs shows a great improvement on the previous few days—though it may, of course, be very much changed by the time this appears in print. One of the hopeful features is that there is no panic on the market, and no tendency by speculators to sell mill shares at a loss. One thing which helped the 1928 strike to last so long was that the "Back-to-the-villages" slogan, preached by the labour leaders, proved very successful. At present, however, the villagers would probably not be very pleased to see their Bombay relations, as there is not much doing on the land. It is easy enough to easy that it is only the poor mill operatives and *mazdis* who have been bringing Bombay's good name into disrepute; but there are men of education and wealth in Bombay loud in their declamation of the riots who, by teaching and example, have—unwittingly and undesignedly—helped to create a contempt for law and order which prepares the soil for mob rule and riots.



RUBBER BOARD

THE Union Minister for Commerce and Industry, Mr. T. T. Krishnamachari, convinced no one, except himself, of the need for amending the Rubber (Production and Marketing) Act. Moving the Bill to amend the Act, he stated, in Parliament last week, that despite all the "sins of commission and omission," the Government and the interests concerned had served the industry well. In 1953, the output of rubber was 21,136 tons, as against consumption of 22,200 tons. The output is likely to rise to 25,000 tons this year. He paid a tribute to the foreign owners of rubber estates. He said: "The European is very efficient and it is a question of emulating him." If there is any shortfall in output, the industry will have to import rubber. This should impose no great strain on the industry, since Malayan rubber is available at a price lower than that fixed for Indian rubber. He recognised that not all rubber growers get the price fixed for rubber (Re. 1-6 per pound); only the "middlemen, with money and organisation" get the price. Nevertheless, the growers, he stated, had been served better than previously.

For all this, it would seem that there is no urgent need to change the present legislation affecting the rubber industry. But the Minister thinks otherwise. He said, generously enough, that "a lot can be done" for the rubber growers and that it had not been done. He was also frank enough to admit that he could not altogether absolve himself of "responsibility for this inaction." Unconscious of the consideration that the charge that he, like a bad workman, was quarelling with his tools might be levelled against him, he said, "I plead that the instrument I have at my disposal is not good enough." The only explanation he gave for moving the Bill, which seeks to give powers to the Government to appoint the Chairman and the Vice-Chairman of the Rubber Board instead of their being elected from among the non-official members and for raising the cess on rubber, was that he had disagreed with the Board because both he and the Chairman, Mr. Kurien John, were "blunt" men, though he recognised that Mr. John had done "good work." Apparently, between a blunt Minister and a blunt Chairman, it is the latter that must go.

All this sounds too amateurish a sentiment for a Minister to give expression to. Indeed, it would be dismissed as such but for the fact that it raises certain fundamental issues. Mr. Krishnamachari claimed that a non-official chairman would not serve the Board well enough, since he would have other preoccupations. Apart from the fact that the work of the chairmanship of the Board may not justify a full-time worker, it may be wondered whether a bureaucratic chairman with no firsthand knowledge of the industry and practical experience in the field, could do better work than a man who is engaged in the industry. The best that could be said in favour of an official chairman is that he is likely to be disinterested. But then, disinterestedness is no substitute for intimate knowledge. In any case, the Government has ample powers, at present, to modify, amend and even reject the Board's recommendations.

By seeking to alter the principle of election to the highest posts of the Board, the Minister only invited the understandable, though obviously ungenerous, criticism that he wanted to appoint some "favourites" to the office. Several members rightly wondered why the Bill should be brought forward at a time when a commission was enquiring into the conditions in the plantation industry. Nor is the criticism totally unjustified that the Minister is anxious to have more and more power in his hands. Mr. Krishnamachari started off his ministerial career with a diatribe against the non-official element in the Silk Board and entrusted the work of the Board to the Government. This has worked no miracle in the silk industry. He followed it up by the formation of an ineffectual Tea Board with a strong official element. It is unlikely this Board too will perform any miracle. The Minister's attitude towards industry in general and the plantation industry in particular, has been: "I know better than you what is good for you. I can do things better than you. I can also do things which you cannot." This attitude does not inspire confidence. It augurs well neither for the Minister no for the Government nor for the industries concerned.

PLANS FOR DISTRICTS

Economic planning can either commence at the top levels of administration and work itself downwards, or spring from the people whom the plans must ultimately benefit, so that the necessary co-ordination is done at top levels. The essence of all true planning in a democracy is of the latter variety. The chief disadvantage of this type of planning is that it is likely to be cumbrous, slow-moving and that it may frequently involve overlapping. In any case, it will lack the "finish" which a plan, imposed from above, may possess. But it makes up for this deficiency by enlisting popular enthusiasm in the cause for economic planning, by making the people conscious that the plan is theirs and that it is they that will benefit by it and will, therefore, have to work it. The basic weakness of India's First Five-year Plan was that, despite the fact that the best minds were harnessed to the task of planning, it was essentially an "imposed" plan. It is, therefore, gratifying to note that this defect is sought to be remedied by the authors in the Second Five-year Plan.

The Planning Commission states, in a circular to State Governments, that the district will be the pivot of the Second Five-year Plan. Thus, at the district level, there should be information and guidance about the programmes contemplated by the State Government. Within the district, guidance should also be available for the plans of villages or groups of villages with reference to their special conditions. Local bodies should be actively associated with planning so that each of these has a plan of its own which is an integral part of the district plan. The Commission expects that, by the end of the second planning period, the entire country will be provided with the National Extension Service. In working out the details of the district plan, this aim, it is stated, should be kept in view. In National Extension areas, intensive village planning and development can be undertaken to a greater extent than in other areas. The aim, it is suggested, should be that every family has a plan of improvement of its own, becomes a member of a co-operative society, and devotes a portion of its time and resources to the benefit of the community.

Among the specific items suggested for consideration by village planners are: use and production of improved seeds; use of manures and fertilisers; consolidation of holdings; village irrigation works; reclamation of waste lands; contour-bunding and soil conservation; introduction of new crops; improved cattle; development of subsidiary occupations and the improvement of village industries; village communications and other local works programmes. District plans will reflect local resources and requirements. The Commission suggests further that each district may be divided into a few convenient "planning" areas. The special problems of each "planning" area should be carefully assessed and taken into account in preparing village programmes.

Each town, according to the Commission, should have a plan of its own, which has a defined part in the district plan. Each municipal authority, it is accordingly suggested, should work out plans for developing services, augmenting its own resources and integrating the programme of urban development with other activities under the State plan. The Commission contemplates the setting up of development committees at the district level, and the strengthening of these committees, where they are already functioning. The Commission recommends that rural local bodies like district and taluka boards should be associated more fully with these committees. Plans for districts and villages will be fitted into State plans which, in turn, will take cognizance of the national plan.

Such, in broad outline, are the Planning Commission's suggestions for harnessing "local effort and resources" in formulating as well as in implementing the Second Five-year Plan. There is, however, one important consideration, namely, finance. If the village plans turn out to be too ambitious, it is likely that the plans may fail to be implemented, and the rural communities may lose much of their original enthusiasm. What is needed is to see that they prepare plans which are within the bounds of practicability. From this point of view, it is necessary to implement the Commission's suggestion that each village plan should specify the contributions in terms of money, labour and supplies which the villagers themselves are prepared to make and the help which would be required of Government in the matter of technical advice, supplies and finance.

TREND OF PRICES IN 1953-54

On the purchase of every rupee's worth of goods and commodities, the consumer in India had to pay about nine pies more in the financial year 1953-54 than in the previous year. This additional burden on the consumer was the result of a rise of 4.4 per cent. in commodity prices. The general index of average wholesale prices (base: August, 1939=100) for the year under review was higher at 397.5, as against 380.6 for 1952-53. In fact, at one time—during the week ended 8th August, 1953, to be precise—the index had touched the highest level of 412.0.

The upward trend in prices during 1953-54 was rather strange, considering the improvement in the supplies of several commodities, especially foodgrains, and the return of the buyers' market, as reflected in the downward trend in world commodity prices. The increase in the index number is remarkable also because the Government adopted several measures in order to check the rising tendency in prices. These included a ban on sugar and *gur* exports, restriction on groundnut oil export, liberalisation of imports of coconut oil and copra, reduction in import duties on palm oil, copra, sugar and cotton seed oil, opening of fair price shops, increase in the quantum of rations and reduction in the price of imported wheat supplied by the Centre. The effect of these measures was nullified, to a great extent, by the following four factors:

(1) Substantial relaxation in control over prices and distribution of several consumer goods, including cloth, sugar and foodgrains and certain categories of iron and steel manufactures;

(2) reduction in export duties and liberalisation of export policy with a view to maintaining and stimulating external demand for Indian products;

(3) upward revision in the prices of pig iron, steel and rubber;

(4) expectation of lower output in certain important commodities such as sugar, black pepper, cotton and groundnut; and

(5) large demand for commodities like sugar and cotton, owing to increased internal consumption.

To revert to the trend of prices. The prices started rising continuously from the beginning of the year 1953-54, when it stood at 384.9, to reach the highest level of 412.0 during the week ended 8th August, 1953. Thereafter, a gradual fall was noticed and the index touched 389.4 in December, 1953. In the following month, however, it again rose steeply to 398.5 before closing the year lower at 394.0. Taken as a whole, 1953-54 witnessed, as already noted, a rise of 4.4 per cent. in wholesale prices. The rise was shared by all the constituent groups, barring manufactures the index of which fell by 1 per cent. to 367.4. The increase was particularly marked in the case of "miscellaneous" group, being 11.8 per cent.; its index was 686.6. The index of food articles improved by 7.4 per cent. to 384.4, of industrial raw materials by 7 per cent. to 467.7 and semi-manufactures by 4.5 per cent. to 359.2.

Despite the sizable fall of 11.2 per cent. in the prices of pulses, the index of food articles was higher. This was due, in the main, to the continued advance in the prices of food articles such as tea, coffee, sugar, *gur* and salt, and partly to the rise in prices of cereals. The increase in the index number of industrial raw materials was brought about mainly by an improvement in the prices of fibres (cotton, wool, jute and silk), oilseeds and other raw materials. The average for minerals, however, fell, owing to lower export prices of manganese ore, mica and iron ore. The indices for coal and rubber were unchanged. Among semi-manufactures, prices of leather, mineral and vegetable oils, metals, oilcakes and others were higher, while those of cotton yarn were lower. In the manufactured articles group, excepting cotton goods and metal products, all the other items suffered a fall in prices. The decline in jute goods alone was to the extent of more than 7 per cent. Among miscellaneous articles, *vanaspati*, spices and condiments, betelnuts and tobacco leaf all registered an improvement in prices. Cashewnuts, bricks and tiles, on the other hand, moved downwards.

ELECTRICITY UNDERTAKINGS IN THE SOUTH

The Madras Government has published the Madras Electricity Supply Undertakings (Acquisition) Bill, 1954, and the Andhra Government the Andhra Electricity Supply Undertakings (Acquisition) Bill, 1954. Both the Bills seek to re-enact as far as possible all the provisions of the Madras Electricity Supply Undertakings (Acquisition) Act of 1949, which was declared *ultra vires* recently by the Supreme Court.

It will be recalled that several provisions of the 1949 Act were challenged in two batches of civil miscellaneous petitions. In the first batch of cases relating to company licensees, the High Court of Madras held that the power conferred upon the Government to appoint an accredited representative, where the shareholders failed to appoint one, nullified the rights of the company and the directors and was, therefore, invalid. In the other batch of cases, the High Court held that the Act, in so far as it provided for differential treatment of local authority licensees in the matter of payment of compensation in respect of the undertakings of the local authorities taken over by the Government, the procedure was *ultra vires* the Constitution. When the case went in appeal to the Supreme Court, Their Lordships held that the whole Act was *ultra vires* as the Provincial Legislature had no legislative competence under the Government of India Act, 1935, to enact the impugned law in the absence of notification by the Governor-General.

The present Bills seek to re-enact all the provisions of the 1949 Act, excepting those which the High Court has declared invalid and provides for making such minor alterations as are considered necessary, as a result of the actual working of the Act. The subject of "acquisition or requisition of property" falls under entry 36 of the State list in the seventh schedule to the Constitution, and the subject of "principles on which compensation for property acquired or requisitioned for the purposes of a State is to be determined and the manner in which such compensation is to be given" falls under entry 42 of the current list. The State Legislature is thus, competent to enact a law for the acquisition of electrical undertakings.

The 1949 Act permits the Government to take over, in the interests of the public, the generation and supply of electricity in the whole of the State of Madras. According to the statements of objects and reasons of the Bills referred to above, the Government considered, in 1949, that, for the proper development of electricity supply over the vast rural areas, large resources were required. The company or the local authority licensees could hardly ever command such resources. Besides, small-scale distribution of power would neither be effective nor economical. Consequently, the Madras Electricity Supply Undertakings (Acquisition) Act, 1949, was enacted by the Madras Provincial Legislature. The re-enactment of almost all the provisions of the Act by the Andhra and Madras legislatures will restore virtually the original position. Although the States may thus reacquire powers to take over electricity undertakings, it is to be hoped that the powers will be used only sparingly. It is needless to add that, if private undertakings are enabled, through appropriate fiscal and other reliefs, to make the generation and supply of electricity a profitable enterprise, the State Governments will be freed from a heavy responsibility.

COMMUNITY PROJECTS

A five-day Conference of the Development Commissioners of the State Governments, who are concerned with the implementation of the Community Programme and the National Extension Service, is scheduled to be held at Ootacamund on 27th May. The main object of the Conference is to consider, for the first time, the expansion of the Community Programme and the National Extension Service during the second Five-year Plan. The Commissioners will also consider the operational position, that is, the progress of community projects and the National Extension Service in the various States and the extent to which the programme for training the project personnel which has been initiated has helped in the implementation of the Programme and the steps to be taken to accelerate training. Further, they will enquire into adjustments needed in the administrative set-up of the community projects and extension blocks, with a view to making them function smoothly and efficiently as an integral part of the normal governmental machinery. An important subject for discussion will be the extent of people's parti-

(*Continued on page 963*)

OFF THE RECORD

(By "ROVER")

SUGAR is in a sorry mess once again. All the desperate but misguided efforts of the Food and Agriculture Ministry for bringing down the cost of sugar have failed miserably. For the small domestic consumers, sugar is selling in a greater part of the country today, exactly a month after the heroic scheme of the authorities to flood the country with cheap sugar was announced, at more or less the same rate at which they were obtaining it, before. Even apart from the consumers, the wholesale market quotations for Indian sugar even in the port city like Bombay is several rupees higher than the rate at which Government is supplying sugar practically to anybody who cares to apply for an allocation and pays the requisite deposit of Rs. 5 per maund.

All that the Government has succeeded in doing is to arrest the further rise in prices which might have followed and to transfer some profits from the factory to the traders and to pocket a part of it itself. It was, indeed, both cynical and callous of the Government to have utilised the distress of the people for making a few crores of rupees by way of profits by requisitioning sugar at an uneconomical price from the factory and assigning it to the trade at a higher price. The average cost of rail transport per maund is bound to be less than the difference of Rs. 3-14 now and Rs. 2-14 per maund after the middle of this month, which the Government is earnings from what it ironically calls a strictly commercial transaction between the factory and the sugar merchant to whom this sugar is allotted.

A few months ago, when sugar prices were rising, the Government of India played the same trick of making several crores of rupees as profit, under the guise of rushing to succour the public in distress. The obvious thing to do then was to sell the imported sugar at cost, to break the back of the swiftly soaring price range. The Food Ministry is today paying Rs. 27-2 per maund, ex-factory, to the sugar mills. If this be a fair price in its opinion, it should have sold imported sugar at port towns at a price in parity of this price for Indian sugar, which would have come to about Rs. 77-8 per bag at the most, including transport and town duty, etc. Instead, it chose to sell it at Rs. 82-8, i.e., about more than Rs. 50 higher per ton. Even at the price of Rs. 77-8 per bag, there would have been a very wide margin of about Rs. 5 per bag left for the Government, besides the handsome amount it was earning by way of customs duty.

Had the Government been more alert and businesslike in arranging for imports of sugar and had it sold it at a price, which it considered would be fair to the sugar industry in the country on parity, the abnormal rise in prices which has been witnessed since March would have never been there. Incidentally, the higher price at which the Government sold imported sugar and coolly pocketed a few crores, under the plea that it did not want to injure the industry in the country, goes to prove that the price at which it is requisitioning as much as a quarter of the production of sugar from the mills today must be distinctly ruinous for the indigenous industry. In making a profit on this requisitioned sugar, the Ministry of Food is not merely a self-confessed profiteer, but it can as well be held guilty of injuring the industry in the country also.

It is for the Ministry to state in clear terms whether the price of Rs. 27-2 per maund which it is paying today is a fair price for the factory or not. If it is, the Food Ministry stands self-condemned for profiteering on a vast scale in imported sugar and for victimising the public whom it is supposed to protect. If it is not a fair price, it is unfair to the sugar industry. If the Government needs more revenue, there are fair and constitutional means open to it for levying taxes. This quixotic and misplaced zeal, on the part of a Ministry not connected with finance and revenue, to augment the income of the Government by robbing the consumer, exactly when, by Mr. Rafi Ahmed Kidwai's own showing, he is being distressingly squeezed, is a matter of which the Taxation Enquiry Commission which is in session should take note. In the meantime, it is poor consolation for the consumer of sugar that, though he is being systematically bled, the one who is doing it is not the rapacious merchant or the greedy manufacturer, but his own benign Government who has rushed to his assistance.

It might be interesting to examine why a scheme, which was loudly claimed to be foolproof, has failed even after a month to produce some tangible results. To start with, the Ministry being inexperienced in the ways and machinery of commerce and industry, did not know that, in times of emergency, it never pays to disturb and disorganise the delicate fabric of trade. The officials, being, perhaps, ignorant of the fact that ours is a very vast country of great distances with thousands and thousands of small and big towns, each with a number of sugar merchants, did not realise the stupendous task of directly supplying these innumerable merchants stocks of sugar for them to distribute to crores of consumers spread over seven lakh villages. What the selling organisations of one hundred and fifty factories and the vast and complicated wholesale, semi-wholesale and retail trade organisation in the country, with years of experience and specialised ability, is doing for distribution of sugar from the factory to the small wholesaler, who deals in lots of one or two hundred bags, the Secretariat of the Ministry tried to do single-handed with disastrous results.

The Ministry should have known that the factories would naturally carry out their orders, but there was no reason to expect that they would be enthusiastic and efficient about this. Not knowing anything about established trade practices, it devised, to start with, a fantastic system of payment for supplies, which put the back of the factories up. By this time, all the weird and bizarre provisions of about sixteen or more State Sales Tax Acts started a witches' dance on their own. Being totally innocent of this nightmarish legislation, the officials naturally forgot to take into account the agonies they would create for everybody concerned. Heavy allocations in the name of some of the sugar trade orgnisations in Bombay and their efforts to transfer the transactions in the name of their constituents to avoid the barbed wire entanglements of the State Sales Tax Act, gave rise to irritations and delays, which have not yet been got over. It was impossible for the Ministry's officials stationed in Delhi even to understand the difficulties experienced by the factories in complying with their release orders for supplies to these trade bodies and much more so to find a way out of them.

Knowing these difficulties and complications, I am not in the least inclined to blame the officials of the Ministry for the clumsy way in which the machinery of the Ministry has tried to tackle this hopeless job. The Secretariat, though it may be efficient and well conversant with its usual chores, cannot be expected to handle matters beyond its ken and experience. A large part of the sugar, which has been requisitioned on paper, is still lying in the godowns of the factories. In the meantime, the usual releases from the mills for free sales, which kept the markets supplied, have been stopped and all their sugar frozen. The rains will soon be upon us and transport of an easily perishable commodity like sugar will be both more difficult and risky in the monsoon. As the old stocks are consumed, new pockets of scarcity are being created every day in the countryside. The lucky few, who are able to secure supplies against their release orders on mills within reasonable time, will begin a fresh wave of profiteering.

What this new brain wave of the Ministry of Food has achieved so far is not to bring down prices, but to create conditions of an artificial famine in sugar in a large number of towns, which would help the traders in gradually pushing up prices for consumers, to a level higher than where they stood when the grandiose scheme was conceived. In normal times, each factory dealt with a few reliable and selected dealers in a few big towns and despatches were quick and in large quantities. Now, they have been ordered instead, to deal with quite a large number of unknown merchants in scores of towns and to supply each of them a small quantity. The trade channel through which sugar used to flow smoothly having been thus blocked up, the sugar will still overflow on the sides, but with delay, difficulties and damage. All this turmoil and torture would not have been gone through in vain, if it teaches our politicians and bureaucrats that the established trade machinery also performs a valuable social service and that it is necessary to know and study it, before presuming to control it.—*All Rights Reserved.*

UNION GOVERNMENT'S PREPARATIONS FOR SECOND FIVE-YEAR PLAN

INDUSTRIAL SECTOR LIKELY TO RECEIVE MORE EMPHASIS

(From A Special Correspondent)

NEW DELHI, 11*th May*

THE Planning Commission has now begun to think of the second Five-year Plan. It has sent a circular to all the State Governments inviting suggestions, proposals, information, etc., regarding the next Plan. It is anxious that the next Plan should be a well-thought-out and well formulated one. The first Plan was, it will be remembered, formed on an *ad-hoc* basis, and most of the schemes it began to implement were those which had been discussed and to some extent given shape by the previous Government. For instance, the Damodar Valley Scheme was more or less ready for implementation, the project having been born as a result of the devastating floods of this river in 1943. Similarly, the Hirakud Dam was thought necessary to control the floods of the Mahanadi. The Bhakra-Nangal Project was conceived before the Partition and priority was given to this project, not only because of its usefulness but also on account of the necessity to provide work for the vast refugee population. The Tungabhadra Project in the South, the foundation-stone for which was laid by His Excellency Sir Arthur Hope (Madras Governor) in about 1943, was essentially a war-time scheme. Many of the big industrial projects were also a war-time conception. For example, the Sindri Fertiliser Project was conceived following the terrible Bengal Famine of 1943. The Hindustan Aircraft Factory or, for that matter, the Vizag Shipyard, was started during war-time. Again, when the idea of the first Plan was being mooted, the country was in the grip of a galloping inflation, the wholesale index number standing at the peak figure of 462 in April, 1951. The food question became the foremost problem while the supply of raw materials to the two leading industries of the country, namely, jute and cotton textiles, was causing considerable headache to the Government.

DELHI LETTER

Disinflationary Measures

It was against this background that Mr. C. D. Deshmukh, Finance Minister, began to tread the ground slowly and cautiously but steadily upward. He undertook a number of disinflationary measures so as to attain stability on the financial front and at the same time, began to pursue a progressive expansion policy. Within two years his policies began to bear fruit, which were greatly helped by the two favourable agricultural seasons during 1952-53 and 1953-54. Despite these improvements in the general economy of the country, certain undesirable features have become manifest in the country during the fourth year of the Plan. The foremost is the unemployment problem which has now reached staggering proportions. The educated unemployment in the urban centres has taken a menacing shape, providing a first class breeding ground to all extreme leftist doctrines. In the villages also, the position of the landless labourers and the low fixed-income group people has become precarious due to the prevalence of an inflationary economy in the country for well over a decade. At the same time, there has been a phenomenal rise in the consumption of a number of daily necessities such as sugar, vegetable oils, tea and coffee.

Under these circumstances, the Government of India has been anxious to formulate the second Plan in such a manner as to tackle all these problems effectively. It has a twofold objective. One is to strengthen the general economy of the country as much as practicable. The second is to generate the enthusiasm of the masses for the ideas of planning and progress. With this end in view, the Planning Commission wants to pursue a sort of decentralised policy. The local people should be enabled to contribute as much as possible both with their brawn and brain, not to speak of money also. It is proposed to take a district as a unit in this connection which will be asked by the Government to formulate its own plans, as also the ways and means by which they should be implemented. In other words, the initiative for planning will be given to the district. The Government of India has now begun to feel this policy will be productive of results. If the enthusiasm of the villagers and local people is harnessed, the sum total of achievements all over the country will become colossal. Since the improvement in the food production in the country during the last two years has been, to a considerable extent, the result of the success of the minor irrigation plans, it is suggested that the district plans will show substantial progress eventually in different spheres.

Multi-purpose Projects

At the same time, the big multi-purpose river valley projects will be fully implemented. When the second Five-year Plan commences, most of the present multi-purpose projects such as the Bhakra-Nangal, Damodar, Hirakud, etc., will be in the final stages of completion while others such as the Kosi, Chambal, Rihand and Krishna projects, will be in the first stage of execution. In the formulation of these projects, the Government of India has to bear in mind certain factors. For instance, in the next few years India has to step up appreciably its raw cotton and sugar production. Now that the consumption of indigenous cotton has risen to about 40 lakh bales per annum, it has to revise the production target of raw cotton to about 60 lakh bales during the next Plan period because of the possibilities of higher domestic offtake and export demand. Sugar production will have to be doubled from the present scale in view of the steady increase in the domestic consumption in recent years and for this purpose, the irrigation projects in Andhra, Deccan, Hyderabad, etc., should be given top priority. Intensive cultivation methods have to be pursued in respect of jute and other commercial crops such as groundnut, linseed, etc., and these commodities must also be included among those that figure in the crop competition list.

The industrial sector is likely to receive greater emphasis than hitherto. Since steel is the very basis of all the industries, its production target will have to be fixed at about five million tons. Not only should the Bilhai Project in Madhya Pradesh be taken in hand, but one or two plants in Hyderabad and South India also should be set up. Now that the lignite resources of South Arcot district can provide good fuel resources, plans should be prepared to utilise the aluminium and iron ore resources of Salem by setting up two factories for this purpose. Similarly, the possibilities of the expansion of the Bhadravati Steel Works in Mysore State could also be explored. These expansions are necessary not only because of defence and strategic requirements but also with a view to removing the transport bottleneck in the South. By developing sugar industry in the Deccan and the South considerable transport economy could be obtained. Again, till now very little has been done to stabilise and improve the dollar-earning commodities such as pepper, cashewnuts, etc. Similarly, the development of the Malnad in the Mysore and the Bombay areas has become necessary in view of the possibilities of stepping up the exports of coffee. In regard to railways, the necessity for the electrification of some sections has become imperative with a view to effecting economies in the consumption of coal. In the industrial sector, the Government is anxious to bring about a close integration between the public and private sector in order to improve the general economy of the country. Special encouragement is expected to be provided for establishing industries in which private capital has not been forthcoming in adequate measure.

Financial Aspect

In the financial sphere, the second Five-year Plan will continue to present certain difficulties. Now that the national income of the country is around Rs. 10,000 crores, the total outlay in the fourth year of the first Plan at Rs. 545 crores works out roughly at 5.5 per cent. Next year, the percentage of the expenditure will be raised to slightly above 6 per cent., while in the first three years of the Plan period, it worked out to 3.15 per cent. per annum on an average. When the second Five-year Plan commences, the expenditure under the Plan may be around 7 per cent. of the national income, that is about Rs. 700 crores. This rate of expenditure is necessary in order to maintain the economic tempo in the country. If the ratio of expenditure to the national income were to be increased by about 1 per cent. every year during the second Plan period, the aggregate expenditure will amount to Rs. 4,500 crores as against Rs. 2,244 crores during the present Plan. In other words, the total outlay is expected to show a hundred per cent. increase during the next Plan. The Finance Minister will continue to find it difficult to raise sums of this magnitude, through taxation and public borrowings. No doubt the income from these sources will improve with the increased economic activity in the country, but the Finance Minister will have to depend partially on deficit financing for achieving his objectives since the possibilities of external aid during the coming years may not be adequate to met the deficit needs of the Plan. In other words, the principle of deficit financing for development purposes has come to stay in the country.

The Industrial Disputes (Amendment) Bill, which was introduced in the Council of States on the 6th inst., provides for extension of the original Act to plantation workers. According to the statement of objects and reasons of the Bill, the Industrial Committee on Plantations has recommended that these provisions should be applied to the plantation industry with effect from 1st April, 1954, subject to the condition that none of the provisions of the Act derogated from the effect of any statutory notifications issued by Governments or of any agreements or contracts entered into between the parties requiring the provision by employers of a minimum number of days of work or of wages or of compensation to workers. The Bill is intended to give statutory effect to this recommendation. The Act, as amended last year, provided for payment of lay-off compensation to workers in factories covered by the Factories Act, 1948, and in mines coming under the Mines Act, 1952.

Publishing in August, 1954

New and Enlarged Edition of

INDIA — AT A GLANCE

The First Comprehensive Reference Book on India

Size: Demy 4to. Pages 1900. **Price Rs. 40/-**

Managing Editor: **G. D. BINANI**

Editor: **T. V. RAMA RAO**

This is what Others Said of the First Edition

"... contains a great deal of information about our country and will be found useful as a reference book."
DR. S. RADHAKRISHNAN,
Vice-President of Indian Union.

"... Extremely useful as a work of reference on many matters concerning the country."
DR. JOHN MATTHAI,
Former Finance Minister, Govt. of India.

"... An admirable publication."
Amrita Bazar Patrika, Calcutta and Allahabad.

"... a book of outstanding merit."
Hindusthan Standard, Calcutta and Delhi.

"... monument to diligence ..."
Capital, Calcutta.

"... directory to end directories ..."
Sunday Standard, Madras, Bombay and Delhi.

"... For sheer variety of information and wealth of detail under each division, there is, perhaps, no other book that compares with this publication."
Commerce, Bombay.

"... An indispensable Book."
Bharat Jyoti, Bombay.

"... It is much more than a Reference Book ... Excellent editing." *Hindusthan Times*, New Delhi.

"... A useful addition to the Reference Literature on India."
Hindu, Madras.

"... presents an up-to-date picture of all aspects of Indian life from Religion to Industry."
Financial Times, London.

"... covers in a wealth of detail—in addition to being an encyclopedia ... it is also a trade guide and gazetteer."
Ceylon Daily News, Colombo.

Pre-Publication Price **Rs. 35/-**

INDIA IN BRITISH INDUSTRIES FAIR

ENTERPRISING DISPLAY

(From Our Own Correspondent)

LONDON, 8*th May*

INDIA has come back to the British Industries Fair with a vengeance. For the last two years its stand has left a gap in the otherwise complete displays of the Commonwealth countries, and it seems that the reason has been it was reorganising its technique of presenting itself commercially to the outside world. There is, of course, a permanent Indian commercial exhibition centre in the heart of London but it is no substitute for representation at the British Industries Fair. There, this year's Indian stand has stolen the thunder of every other country represented. It is not only the largest; it is also the most tastefully arranged, and the most interesting. In its centre fountains play coolly in blue-tiled lily ponds, and arranged round these are exhibits of jute and textiles, handicraft industries, leather, timber, cotton and silk manufactures, carpets and so on; each a special group and yet each homogeneously blending with the rest. The enterprising display of carpets includes the exhibit of a shoddy carpet as a warning to the public of what not to buy. The coir and coir products have aroused the greatest interest, particularly from continental buyers, and a completely novel feature is the display of machine tools by a Bombay firm. It is most interesting to find that, although handicrafts play their part in the exhibition, in the enquiries made by visitors the principal emphasis is on the products of India's modern industries.

LONDON LETTER

India is also indirectly represented in the large exhibit of the successful Everest 1953 Expedition which fills the centre of the largest exhibition building. Here are shown all the products used on the Expedition and around the exhibit the firms which contributed to the products and to the success of the Expedition have a comprehensive display of their wares—the special types of clothing, the tents, the specially prepared foods and the means for heating them, and the oxygen and medical supplies.

Attendance Figures

This year's Fair in London is by way of contrast smaller than its most recent predecessors, and the figures for the first few days show a drop in the attendance of both home and overseas buyers. The attendance figures for the first four days are: Overseas buyers 4,600 as against 4,900 last year; home buyers 15,000 as against 20,000 last year.

It may be that this is simply a reaction from the heavy attendances of recent years, but it is also reflected in the show-cases which many firms have set up this year instead of stands which require staffing. Yet this smaller exhibition has numerous examples, of which the piano section is the most outstanding, of very great interest being shown by the buyers who have come. There are few piano manufacturing firms which have not sold the whole of their stands and booked very substantial orders for all parts of the world.

Much of the interest of this year's exhibition lies in the concentration on quality in design. It may be that the many firms making different goods who have decided to stay away have shown up the remainder, but the British Council of Industrial Design has undoubtedly contributed to the interest of the displays by its own "Design Centre" which groups together a great number of domestic and industrial products ranging from door handles and furniture to machinery and where special attention has been given to pleasing design as well as efficient functioning.

Another feature of the exhibition is the growth in the variety and size of prefabricated buildings. Originally designed to alleviate the post-war housing shortage in this country, the technique of prefabrication has now been applied to high quality permanent houses for erection in this country and to buildings for erection abroad either in connection with some development scheme such as the townships that grow up when a great dam has to be built or even a large exhibition manned, or to houses and hospitals for the tropics. Wherever the erection of buildings from local labour and materials on the site presents difficulties, it is now possible to have the building produced in this country and put up rapidly where wanted. A good example of this is the very fine house for erection in the tropics built with light steel and aluminium sections, and special weather and ant-resisting plasterboard, with movable glass panels as an important feature for light and ventilation. But if a buyer wants his house fully mobile, he can now have a caravan 50 feet long which can be split into two parts for towing, or he can have one 12 feet long which in a confined space can give him as luxurious a home, including a bath set into the floor, as he could hope to have in the most permanent of buildings.

Other travellers are catered for by a section for sailing craft, the principal one of which is a large auxiliary sloop 35 feet long and 12 tons in weight, with a mast towering 50 feet high. This will cost the buyer over £3,000, but for little more than single figures he can buy a collapsible canoe which he can take to the roughest seas and the fiercest rapids anywhere in the world.

Conventional Displays

The other displays are more conventional. British firms have always led in the production of office appliances and machinery for the printing and allied trades. These exhibits are even better than in most past years. The British watch and clock industry shows the latest advances in competition with the Swiss, and it is a maker of British watches who can claim that it was one of his products that was used to tell the time on the top of Everest on the 29th May last year!

The scientific instruments section is smaller than usual, nuclear research having apparently decided to give the B.I.F. a miss this year, and the heavy chemical industries and allied products are notable by their absence. They may have decided that they are too busy this year and have concerted together to keep away. The pottery and glasswares section are as unrepresentative as usual of what the British industry can really do when it sets its mind to it, and the textiles section, though large, has no special feature about it this year.

The buyer, however, has rather more room in which to move and, in most cases, rather better products on which to concentrate. The British Industries Fair was certainly getting overcrowded, and it will be interesting to see whether the firms which have given the Fair a miss this year decide to come back to it in force next. Meanwhile, from all reports, those buyers who have made the trip to London are fully satisfied that their journey has been worthwhile.

STERLING AREA TRADE IN 1953

The volume of sterling area trade in 1953, according to the U.K. *Board of Trade Journal*, showed little overall change from the previous year. Exports were worth slightly less than in 1952, although their volume was maintained. The demand for primary commodities was barely maintained at the reduced level to which it fell in 1932. Any further fall was prevented, however, by increased industrial activity in Europe and purchases by East European countries. Increased prices brought bigger earnings for wool and tea. Imports were worth 9 per cent. less than in 1952, but the various import cuts imposed in 1952 were largely restored and the volume of imports gradually recovered to the early 1952 total. The value of exports to non-sterling area countries was some 4 per cent. lower than in 1952, although volume was about the same. Imports from non-sterling countries was valued at 15 per cent. below that in 1952 and 25 per cent. below the 1951 level. There was, however, a marked increase during 1953 from the low fourth quarter of 1952, accompanied by falling prices and the volume of sterling imports from the rest of the world may not have been much lower in 1953 than in the previous year. There was an appreciable improvement in the sterling area's balance of visible trade with the rest of the world—imports on a trade basis (c.i.f.) exceeded exports by £116 million in 1951, £968 million in 1952 and £492 million in 1953. Exports exclude Middle East oil, amounting to some £150-£200 million (f.o.b.) in 1952. The reduction of £24 million in U.K. exports to non-sterling countries concealed a rise of £27 million (7 per cent.) to the dollar area and £49 million (7 per cent.) to O.E.E.C. countries.

(Concluded from next column)

Pakistan has also obtained a special credit of £10 million from the U.K. and loans aggregating $30.45 million from the World Bank. In addition to the direct economic assistance and loans, Pakistan has received aid in the form of wheat gifts. Australia has supplied £A.2 million worth of wheat and Canada $5 million worth. The U.S. has supplied 700,000 tons of wheat.

PAKISTAN NOTES

DEVELOPMENT OF SHIPPING

ECONOMIC AID FROM SWEDEN LIKELY

THE assumption of responsibility for the establishment of shipyards and the reorganisation of ship-repairing activities in East Bengal by the Pakistan Industrial Development Corporation (P.I.D.C.) marks a new phase of development in the sphere of Pakistan shipping. This is in pursuance of the agreement signed some time ago between the P.I.D.C., on the one hand, and the Central and East Bengal Governments, on the other. The P.I.D.C., in consultation with German technical advisers, is reported to have decided to build two shipbuilding and ship-repairing yards in East Bengal, one at Khulna and the other at Narayanganj. Work on the construction of the former is understood to have commenced already.

The dockyard at Narayanganj is to be modernised to cope with the increasing traffic move efficiently. The Narayanganj shipyard will not only specialise in the repairs of diesel engines and riverine craft but also manufacture boats to meet the requirements of the Province's inland transport system. The Khulna shipyard will have seven shipways to enable the hauling of seven boats at a time for underwater repairs. This shipyard will also be equipped with a dry dock large enough to take in the boats that are presently being used or are likely to be used in East Bengal. A shipbuilding company is also likely to be floated by the Pakistan Industrial Development Corporation, in which the East Bengal Government will hold shares and will be represented on its Board of Directors. The total investment in the proposed project is estimated at about Rs. 1.25 crores.

Road Development

The Government of Pakistan has decided to grant Rs. 5 crores to the Provincial and State Governments for implementing the programmes of road development. The programmes envisage the construction and improvement of about 1,348 miles of selected arterial roads in the country. The aggregate capital outlay on these programmes amount to Rs. 10 crores. About Rs. 1.11 crores have already been spent. In the programmes, high priority has been accorded to the Karachi-Lahore-Peshawar road which is the principal highway of West Pakistan.

Aid From Sweden

Questions relating to economic aid from Sweden to Pakistan were discussed recently by a Swedish delegation with the representatives of the Pakistan Government. The proposed aid is expected to have the form of the establishment of a centre for training young men in specific fields of small-scale industries in which Sweden has particular skill and experience. A special feature of the scheme, it is claimed, is that it will turn out not technicians looking for jobs but men who will be qualified and actually prepared to set up small units of production. Accordingly, the training covers instruction on management and economics of small industries. The basic objectives are to augment production and supply of consumer goods within the country and to assist the small *entrepreneurs* to establish industries on sound and scientific lines. The centre is also to provide short-term courses and consultant services for men and units already engaged in the field.

Foreign Assistance

So far, Pakistan has received over Rs. 29.2 crores as direct economic assistance under the Colombo Plan and the U.S. Point Four Programme. The bulk of the assistance, amounting to Rs. 14.6 crores, is accounted for by the U.S. and has been utilised for implementing the major agricultural, industrial and power development projects. Among these, mention may be made of the fertiliser plant at Daudkhel, village aid project, Karachi water-supply and distribution scheme, and college exchange programme. Canada has provided Rs. 9.6 crores, the major portion of which has been spent on the construction of a cement factory at Daudkhel, the Warsa project and the aerial survey. Contributions from Australia and New Zealand amount to £A.5.7 million and £750,000, respectively. The former has been utilised for importing diesel tele-communication equipment and the latter for erecting a cement factory at Hyderabad (Sind), as also for executing the development projects in Baluchistan.

(Continued in previous column)

WORLD'S GOLD AND FOREIGN EXCHANGE RESERVES

RISE OF $1.5 BILLION IN 1953

THE improvement in the world's gold and foreign exchange reserves witnessed in 1952 gathered further momentum during 1953. Thus, the gold and foreign exchange holdings of central banks, stabilisation funds and other Government institutions of countries outside the Soviet bloc as at the close of 1953 were substantially higher by $1.5 billion (American) at $47.8 billion as compared with those a year before, according to the latest issue of the *International Financial Statistics*. This represents a record, surpassing the previous figures attained in 1951 by $800 million. The improvement will be even more perceptible if the holdings of the international agencies also are included. The aggregate world gold and foreign exchange holdings as at the end of 1953 stood at as high as $56.7 billion, which compares very favourably with $54.50 billion a year before and $53.75 billion two years before.

Of the rise of $1.5 billion in reserves during 1953, foreign exchange holdings accounted for the major portion, the exact quantity being $1 billion. Addition to gold holdings was to the extent of $450 million, which is the largest in any post-war year.

Trend of Improvement

The table below indicates the trend of improvement in gold and foreign exchange reserves during 1953 as compared with the position that obtained in the previous two years, as also in 1938:

(In million U.S. dollars)

	1938	1951	1952	1953
GOLD				
U.S.A.	14,592	22,873	23,252	22,091
Canada	186	842	885	986
Latin America	690	1,932	1,805	1,980
E.P.U. countries	6,060	4,010	4,495	5,100
U.K.	2,877	2,200	1,500	2,300
Other sterling countries	535	627	620	612
Rest of the world	945	960	920	840
International agencies	14	1,710	2,047	2,047
Total	25,900	35,150	35,500	35,950
FOREIGN EXCHANGE				
U.S.A.	84	984	979	840
Canada	100	1,140	1,310	1,550
Latin America	440	3,160	3,850	4,850
E.P.U. countries		174	453	246
U.K.	635	4,426	3,830	4,225
Other sterling countries	450	2,710	2,430	2,220
Rest of the world		6,014	6,118	6,763
International agencies				
Total	1,700	18,600	18,950	20,700
Grand total of gold and foreign exchange holdings	27,600	53,750	54,500	56,650

The foregoing statement reveals that the aggregate world gold reserves as at the end of 1953 stood at $35.95 billion, which represent approximately half the total world gold production. In the previous years, the rise in the official gold reserves accounted for smaller proportions of new gold output. The apparent decline in the demand for gold by private individuals is reflected in the fall in the price of gold in the free markets of the world. The premium on the official price of $35 per ounce in Brussels at the end of 1953, for instance, was less than 5 per cent. a year before and 30 per cent. in June, 1950. Incidentally, the price of bar gold in the Brussels market converted to its U.S. dollar equivalent at free exchange rates has been taken as an example of the world free market price of gold.

An idea of the gross foreign exchange assets of the world can be had from the following table:

(In million U.S. dollars)

	1950	1951	1952	1953
Dollars	4,338	4,064	5,195	6,047
Sterling	8,132	7,901	6,520	6,966
Credit to E.P.U.	402	665	1,077	1,272
Balances with B.I.S.	250	192	364	353
Errors and omissions	—97	—222	—306	—713
Gross assets	13,125	12,000	12,850	13,925

It will be seen from the foregoing figures that the liabilities of the U.S. to foreign official agencies increased by about $850 million, of E.P.U. to member-Governments by $200 million and of the U.K. to all foreigners—official and private—by $450 million. The total rise of $1,500 million thus exceeds the increase in the world's official holdings by $500 million. The gross asset data include also other currencies, the holdings of which appear to have declined during 1953. The U.K. liabilities figure is somewhat large, because it includes liabilities to private holders, an element that probably grew appreciably during 1953. The greater readiness of private banks and individuals to hold sterling is indicated by the higher level of the "free" exchange rates for sterling in 1953 than in earlier years. The discount in the exchange rate for transferable sterling in New York from the official rate for convertible sterling has been taken as an example of the "free rate for sterling."

The rise of $450 million in the value of the world's official gold reserves was, however, concurrent with a decrease of over $1 billion in the gold holdings of the United States. Consequently, the gold holdings of the world other than the U.S. and the Soviet bloc increased by more than $1.5 billion during 1953. The whole of the increase of $1.5 billion of foreign exchange is held by countries other than the U.S. Hence, the total gold and foreign exchange holdings of these countries increased by about $2.7 billion, or over 10 per cent., to a total of $25.7 billion, and their holdings of gold and dollars rose by more than $2.4 billion, or approximately 15 per cent., to a total of $17.9 billion.

Balance of Payments

The main balance of payments transactions of the three largest trading nations—the U.S., the U.K. and Canada—together with a column for the rest of the world, computed as an offset to the transactions of the three countries, is indicated in the table given below:

(In million U.S. dollars)

	United States	United Kingdom	Canada	Rest of World
Goods and services	290	390	—584	—96
Private capital and donations	—530	—520	430	350
Errors and omissions	270			
Non-monetary gold exports	80	—130	—154	254
			144	306
Government capital and grants	30	—130	—10	560
Increase in short-term liabilities to—	—2,160	130	—10	1,990
Independent countries—Official holders	850	440		
Others	30			
Colonies		100	—20	—410
Decrease in net private short-term assets	90			
Increase in gold and foreign exchange (that is reserves)	—1,160	590	—40	2,140

The figures relating to the aforesaid three countries cover transactions with one another, as well as with all other countries, while those for the rest of the world are estimates of transactions with the three countries plus an estimate of gold production (less consumption and absorption in hoards) in the world outside the three countries.

The increase in the official net reserve position of the rest of the world approximately equalled exports of non-monetary gold and the U.S. Government grants and loans. The reserve accounts of Canada were nearly stable, since its large deficit on goods and services was offset by receipts of private capital. The U.K. increased its official reserves by almost $600 million, but this was offset by an increase in the U.K.'s foreign liabilities in sterling. For "the rest of the world," U.S. Government grants and loans to these countries were approximately equal to the rise in their gold and foreign exchange holdings, while exports of non-monetary gold approximately equalled the estimated reduction in their short-term liabilities to foreigners and increases in their private holdings of exchange.

Data Inadequate

Though detailed, the foregoing account is not so comprehensive as to cover the whole of the world's gold and foreign exchange holdings. For the figures for each of the areas are only estimates which are subject to "reservation." For several countries, no data are available and estimates are incorporated in the totals. Thus, for Argentina, no data are published for the period after 1948, and for France no data are published on the holdings of the Stabilisation Fund. However, most of the other countries for which data must be estimated do not have large official gold and foreign exchange assets. The dollar component of the foreign exchange holdings of the U.K. contained in these tables is the difference between the U.S. Federal Reserve Board's estimates of the U.K.'s gold holdings and the U.K.'s reported holdings of gold and U.S. and Canadian dollars.

The estimates of dollar liabilities are also subject to reservation. Data are available from U.S. sources for the total of U.S. liabilities to all official agencies, but for each country only the sum of liabilities to official agencies and other banks is published. Canada, Cuba, Germany, Japan, the Philippines, and Thailand publish data relating to their official holdings of U.S. dollars, and these have been incorporated in the regional totals of dollar assets. The U.K.'s dollar holdings are obtained from the estimate described above. Estimates for the dollar countries of Latin America are derived by dividing the total U.S. liabilities to Governments and banks in all those countries, in the proportion that the total holdings of foreign exchange are divided between the central and other banks in the ten Latin American countries for which this information is available.

RENEWAL OF E.P.U.

The life of the European Payments Union has been extended for one more year from 30th June next. The extension was the outcome of the two-day discussions on the E.P.U. held in Paris on the 5th and 6th inst. by the O.E.E.C. Council of Ministers. From the discussions also emerged certain general principles accepted by the Council. These include: (1) immediate cash payments by different countries in part settlement of their deficits; (2) the funding of a substantial proportion of the remaining balance on conditions to be established separately for each case by bilateral negotiations between each debtor and creditor; (3) the creditors will be entitled to mobilise in international markets the funded balances, provided agreement to this end is reached with the debtor concerned; (4) part of the E.P.U.'s own resources (originating from the earlier special U.S. grants to some small countries) will be used to reimburse fresh advances by creditor countries; (5) the percentage of gold payments by the E.P.U. in the settlement of surpluses will not be increased above the existing percentage (50 per cent. when the quota is exceeded).

The agreement embodying these general principles represents a modified version of the British proposals, with changes originating from the Swiss compromise formula discussed at the meeting of the Council. Details of the E.P.U. renewal are yet to be worked out.

Commenting on the implications of the agreement to Britain in particular, the *Financial Times*, London, observes:

"So far as can be judged, the conditions on which the renewal has been agreed are broadly in line with the proposals made by this country. Germany, the principal creditor, has agreed both to extend further credits and to take steps to counter the other O.E.E.C. countries. The United Kingdom, on its side, has undertaken to make a cash payment in part settlement of its debt—presumably the £30 million which it had already offered—and has secured agreement in principle that a large part of the remainder of the debt should be funded. This part of the agreement cannot, of course, be judged finally, until it is known what this will mean in practice. But since the negotiations are to be bilateral, the United Kingdom will be able to press strongly on the Germans the pattern of the proposal that creditors should receive a higher proportion of gold payments has been resisted."

TAXATION OF BANKING COMPANIES

A CASE FOR SPECIAL TREATMENT

(By A Correspondent)

WHENEVER banking companies demand tax concessions or reliefs for the purpose of strengthening themselves, they are told that, if such concessions or reliefs are granted to them, in justice they will have to be granted to other joint-stock companies also and that this will mean excessive loss of revenue, which the Government cannot afford to bear. When this argument is advanced for not granting tax concessions or reliefs demanded by banking companies, it is forgotten that banking companies hold a special position in the country's economy, which is not held by other joint-stock companies and which justifies the grant of tax concessions or reliefs to them to the exclusion of other joint-stock companies. In the interest of the economic welfare of the country, therefore, it is very desirable that the authorities as well as the public should appreciate the special position of banking companies. The following paragraphs are meant to elucidate this special position.

While each of other joint-stock companies confines itself to a particular activity, banking companies, being credit institutions, perform the national service of providing a part of the finance required by agriculture, trade, commerce and industries, which are carried on by individuals, partnership firms and/or joint-stock companies. Without such finance, all these sectors of the nation's economy would be unable to pursue their respective activities to the same extent. Thus, whereas the stock-in-trade of other joint-stock companies consists of particular kinds of goods, the stock-in-trade of banking companies is money, which is needed by all joint-stock companies for pursuing their respective activities. This is seen from the fact mentioned in an article entitled "Bank Advances: June 1953" prepared by the Research Department of the Reserve Bank of India and published in the October 1953 issue of the *Reserve Bank Bulletin*, that, on 30th June, 1953, the total advances of Scheduled banks amounted to Rs. 544.87 crores, out of which advances to industrial concerns amounted to Rs. 188.96 crores; the advances made to the cotton industry, jute industry, other textiles, engineering, sugar, vegetable oil industry and chemicals and dyes were Rs. 50.76 crores, Rs. 11.92 crores, Rs. 12.47 crores, Rs. 14.58 crores, Rs. 32.74 crores, Rs. 8.65 crores and Rs. 8.44 crores, respectively; the total advances of non-Scheduled banks amounted to Rs. 41 crores, out of which advances to industrial concerns amounted to Rs. 6.05 crores. The special position of banking companies and the service which they are rendering to all other joint-stock companies have been recognised by the Planning Commission. According to the Five-year Plan, banking companies are expected to make Rs. 150 crores more in the form of working capital available to industrial companies in the private sector, which has been assigned an important role in the Plan.

Special Responsibilities

Further, the terms of reference of the Committee recently appointed by the Reserve Bank of India, with the approval of the Government of India, under the chairmanship of Mr. A. D. Shroff, bring out the special position of banking companies. The terms are "to examine how increased finance, particularly bank finance, can be made available to the private sector, through sources other than those which are under the consideration of the Taxation Enquiry Commission."

The special position of banking companies is again indicated by the fact that, while other joint-stock companies are subject only to the provisions of the Indian Companies Act, banking companies are subject not only to the provisions of the Indian Companies Act, but also to the much stricter provisions of the Banking Companies Act. Further, additional provisions were incorporated into the latter Act in 1953, so as to impose special responsibilities, which are very onerous, upon the directors of banking companies. Directors of other joint-stock companies are free from such responsibilities. The more important special responsibilities imposed upon directors of banking companies, which are in liquidation, are as follows:

1. The depositions made by directors in their examination before a High Court can be used in evidence against them in all proceedings, civil or criminal.

2. When a *prima facie* case is made against a Director, the High Court can make an order against him to repay and restore the money or property, unless he proves that he is not liable to make the repayment or restoration either wholly or in part.

3. There is no period of limitation for the recovery of arrears of calls from any director of a bank which is being wound-up or for the enforcement by the bank against any of its directors of any claim based on a contract, express or implied; and in respect of all other claims by the bank against its directors, the period is 12 years from the date of accrual of such claims.

Contribution To Economic Development

Furthermore, banking companies are performing the very important function of collecting money from the people of the country and making it available to the Central and State Governments for economic development in the public sector by investing it in Government securities. This is seen from the fact, mentioned in an article entitled "Investments of Banks: June 1953" prepared by the Research Department of the Reserve Bank and published in the September 1953 issue of the *Reserve Bank Bulletin*, that, in June 1953, the investments of Scheduled and non-Scheduled banks in Government securities amounted to Rs. 321.06 crores and Rs. 10.50 crores, respectively.

Indian banking companies have a special position as regards their foreign branches also. Indian traders have done business in foreign countries for centuries but, until recently, the financing of foreign trade was in the hands of non-Indian banks. Indian trading firms and companies have had branches all over the world for a long time, but it is only recently that Indian banks have opened branches abroad. This is an innovation greatly to be desired, as it is much to the benefit of Indian banking and trade, but it costs a lot of money for Indian banks to establish and maintain foreign branches. Hence, there is a good case for giving special encouragement to Indian banks to do so, until they become established abroad on something like the scale of foreign banks.

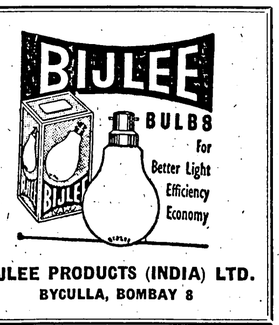
Indian companies and firms are different from banks. They are already established abroad and there is no need for a policy of giving encouragement to them. Their overhead charges need not be anything like those of a bank and they can not only establish branches without difficulty, if such branches cease to pay. A bank cannot close a branch abroad, without, at least, loss of prestige and it is not the policy of a bank to close a foreign branch because of a temporary period of bad trade. With a trading firm or company, such considerations would not matter much.

Onerous Taxation

Taxation on bank profits is onerous and where a foreign branch of an Indian bank is established in a country where taxation is higher than in India, the bank has to pay the higher taxation of the country and gets no relief from it in India. If taxation is lower in the country in which the branch is established than in India, the bank is required to pay in addition in India the difference between the foreign rate and the Indian rate.

The best method of assisting Indian banks having foreign branches would be to allow each foreign branch to pay the tax levied in the country in which the branch is established, no additional Indian taxation being levied if the rate of the foreign tax is lower than that of the Indian tax. This is not much for Indian banks with foreign branches to ask. It is a benefit which Indian firms and companies trading abroad substantially receive at present, by establishing a separate firm or company in the foreign city. This method is not open to a bank, because a small separate banking company established in the foreign city would not have the resources of, or command the confidence in, the parent bank and would, perforce, have to do less business and make lower profits.

Thus, it becomes clear that, if banking companies are enabled to strengthen themselves by the grant of tax reliefs or concessions to them, they will be able to give larger financial assistance to agriculture, trade, commerce and industries of the country.



BIJLEE PRODUCTS (INDIA) LTD.
BYCULLA, BOMBAY 8

NATIONAL PLAN CERTIFICATES

Subscriptions to the National Plan Certificates, recently announced by the Central Government, commenced on Monday last at all post offices conducting savings bank business. These Certificates form a part of the National Plan Loan floated by the Centre on 19th April, 1954, and will remain open for subscription for the entire period during which the Loan continues. The chief objective behind the issue of these Certificates is to provide an opportunity for investors, especially small investors, "for helping in the national development."

The Certificates are in the denomination of Rs. 25 and Rs. 30. The minimum amount that one can subscribe is Rs. 25 which, in 10 years' time, will fetch Rs. 36-4. The maximum for an individual that can be subscribed is upto Rs. 1,000 which will bring in Rs. 1,450 at the end of 10 years. Two persons acting jointly can purchase upto Rs. 2,000. The redemption value of the Certificates works out at nearly 4½ per cent. per annum which is better than any other investment Government has so far offered. The interest that accrues on these Certificates is income-tax free and the Certificates are encashable at any time after a period of one year from the date of a subscription. As it is in the interest of the holder not to encash the Certificates, if he can, before the period of maturity, its surrender value has been so arranged as to offer an inducement to him to retain it for the entire 10-year period.

The new National Plan Certificates are a temporary issue and are not intended to replace the 7-year and the 12-year National Savings Certificates which will continue to be issued as before. Authorised agents and others who receive commission for the National Savings Certificates will be entitled to similar commission for these Certificates also.

Subscription to the 3½ per cent. National Plan Loan 1964 during the period 3rd to 8th May, 1954, according to reports received so far, amount to approximately Rs. 11.76 crores. The total subscriptions since 19th April, 1954, thus comes to about Rs. 57.26 crores.

Hereafter, Press *communiques* regarding the new Loan will be issued in the first week of each month in respect of the subscriptions received during the previous month.

CO-OPERATION IN BOMBAY

The Government of Bombay has created a Statistical Section in the Co-operative Department. This section is entrusted with the work of collection, compilation and collation of statistics relating to different types of co-operative organisations, particularly those included in the Five-year Plan. The other duties of the section include: (1) Analysis and interpretation of the data so obtained, (2) assessment of the results of the various activities of the Co-operative Department based on the data collected, (3) investigation of special problems, e.g., pilot survey of one or two cottage industries or the incidence of indebtedness in particular areas, or the assessment of the economic conditions of a particular village or villages and the determination of the nature and extent of their indebtedness, etc., and (4) other items of work such as the determination of the agricultural practices in a particular area, the conditions of soil, productivity of lands, etc., included in co-operative farming of lift irrigation societies, etc.

HALI SICCA CURRENCY

Only about Rs. 13 crores of Hyderabad's Hali Sicca (local currency) are at present in circulation in the State. Giving this information an official spokesman recently revealed that Rs. 42 crores of this currency were in circulation as on 1st April, 1953. The Hali Sicca continues to be legal tender up to 31st March, 1955. The Government may consider, if necessary, the question of accepting the Hali Sicca currency even after 1st April next for exchange purposes, though not as legal tender, he added.

The prospect for gold on a strip of land measuring about 40 miles in length and approximately one mile in width in the Champua sub-division of Keonjhar District, in Orissa, which was started in July, 1953, by the Indian Bureau of Mines, has been progressing well. The results of manual washing of the rock material, which has so far established an incidence of 3 to 4 grains of gold per ton, are encouraging. It is expected that, with improved methods of washing, the recovery of gold might improve.

In exercise of the powers conferred by section (3) of the Travancore-Cochin State Aid to Industries Act, 1952, ((XIX of 1952), the Government of Travancore-Cochin has constituted a State Aid to Industries Board consisting of nine members.

EXPORTS OF INDIAN COTTON TEXTILES

ABOLITION OF LICENSING PROCEDURE URGED

AMONG the several subjects to be discussed at the meeting of the Export Advisory Council tomorrow, that relating to exports of cotton textiles will undoubtedly stand out as the most prominent. This fs so because of the setback which exports of piecegoods have once again experienced in the past two months. The quantity of cloth shipped during the month of April, 1954, for instance, was distinctly lower at 69.4 million yards, as against 78.9 million yards in March and 82.8 million yards in February.

The following table indicates the trend of cloth export during the first three months of the year as compared with that in the corresponding month of 1953:

	Coarse	Medium	Fine	Superfine	Total
1953					
January	17.7	15.0	9.7	1.0	43.4
February	15.0	11.6	11.3	0.8	38.6
March	23.8	17.5	11.7	0.9	53.9
Total ..	56.5	44.0	32.7	2.7	135.9
1954					
January	21.9	24.2	..	..	81.0
February	21.0	46.8	..	..	82.8
March	17.0	66.5	..	..	78.9
Total ..	59.9	149.5	27.9	5.4	247.7

It is true that, as compared with the corresponding quarter of 1953, the performance in the first quarter has been quite encouraging. But the point is that exports in April and March of this year have been lower than those in January and February, 1954, thereby giving rise to the impression that the Indian mills are once again losing their overseas markets. The chief factor responsible for the decline is, as is well known, the growing competition from Japan, which has been making vigorous efforts to boost its export considerably. Japan's target for cotton goods exports for the fiscal year 1954-55 has been set at the equivalent of 780,000 bales. With a view to achieving this target, the Japanese trade and Industry Ministry has launched a new export policy. Under this policy, export targets for cotton goods will be fixed for each quarter and traders will be allotted foreign currency for their imports according to the ratio between their exports of cotton manufactures and the targets. Where the amount exceeds, extra foreign currency will be allowed for the following quarter. Any trader who extends markets will be awarded an additional allocation of raw cotton import.

Higher Tariffs

It is not the competition from Japan and other countries alone that is hampering India's export trade in cloth. The raising of the import duty, effected by some of the countries which are traditional sources of markets for Indian cloth, has also been equally responsible. It was only recently that the Government of Afghanistan doubled the export duty on cloth imported from India.

In view of the changed position in the world cotton textile export thus, a bolder and more rational export policy is needed, if India is to hold its position as one of the world's leading cotton textile exporters. Naturally enough, the deliberations of the Export Advisory Council will be watched with considerable interest.

The representatives of the cotton textile export trade attending the meeting are expected to press for the removal of licensing procedure for exports. Considering the present high level of production of cloth in the country and the need for promoting exports, the present system of licensing is said to be anomalous and unduly restrictive in operation. It is accordingly felt that, barring a few items, exports of cotton piecegoods should be placed under an open general licence. In this connection, it is pointed out that the question of the Government losing the revenue derived by way of licensing fees should not deter the authorities from considering the matter favourably, since the chalans were first introduced by the Government not so much for getting additional revenue as for restricting the number of applications for the issue of export licences.

The exporters are also expected to put forward the following two suggestions for the special consideration of the meeting:

(1) Piecegoods upto 180 yards sent as samples by air freight or sea parcel should be excluded from the licensing procedure for exports;

(2) the export duty should be collected on the net f.o.b. sale price to the overseas buyer. For, in cases where certain overseas buyers purchase goods at f.o.b. price less discount, the customs authorities insist on the collection of export duty on the gross value which is not justified.

Another important aspect to which the exporters are expected to draw the pointed attention of the Government relates to the difficulties experienced by exporters in the matter of refund of excise duty on cloth exported out of India. In administering excise regulations and procedural rules, the excise authorities levy penalties on exporters even for their unintentional, *bona fide* or technical lapses. The penalties, it is alleged, are so heavy and deterrent as to take away the incentive to expand export business. To quote one report: "There are some cases where goods are cleared on invalid bonds through oversight or mistake on the part of the mills, or the excise inspectors posted at the mills, but the exporters are penalised for no fault of their own." Consequently, exporters are subjected to considerable hardship. This can be avoided if the inspectors posted at the mills are advised to verify whether the cloth cleared under A.R. 4 forms is against the valid bonds, so that the claims for refund of excise duty will not be refused or rejected by the excise authorities.

MR. NEVILLE WADIA ON FUTURE OF COTTON MILL INDUSTRY

Apprehensions regarding the future of the cotton textile industry and trade in India have been expressed by several millowners for some time past. These apprehensions have stemmed from the failure of demand to keep pace with the steady upward trend in production. It is no wonder, therefore, that Mr. Neville N. Wadia, one of India's leading cotton textile industrialists and Deputy Chairman of the Millowners' Association, Bombay, should have posed and answered, in the course of a talk which he broadcast from the All-India Radio on Monday last, the question: What about the future of the cotton textile industry? Evidently, Mr. Wadia has been provoked by the fact that, while the rate of production has been mounting up from year to year, beating the all-time record, and outdistancing the target set in the Five-year Plan, the level of *per capita* domestic consumption has not reached even the pre-war figure of 15-16 yards. Nevertheless, Mr. Wadia is confident that the cotton textile industry can have an assured future if—a big "if" indeed—a wider demand is created for its product.

How can the demand for cotton textiles be stepped up? There is no gainsaying the fact that the most important factor which has kept down the level of consumption of cloth, not merely in the domestic market but also in overseas markets, is the high level of prices, thanks to the heavy cost structure. Mr. Wadia did well to make a pointed reference to this aspect. He said: "The obvious remedy for this state of affairs is to reduce cloth prices which can be done by scaling down production cost." This, no doubt, is a correct appraisal of the position. But the point is whether, in the present context of cost inflation, the mills can successfully curtail cost of production. Mr. Wadia says that such is not possible and, in support of this contention of his, he observes:

"In the present state of inflation, however, the manufacturer finds it difficult to curtail his costs, as the prices of every item that goes into the manufacturing charges, namely, cotton, fuel, electricity, mill stores and wages, have gone up four to five times. You will be interested to know how each rupee of gross income is being expended by the industry. Raw materials and stores alone account for 66.57 per cent., while wages claim 24.36 per cent., leaving a balance of only 9.07 per cent., out of which the producer has to make provision for such varied items as depreciation, taxes, reserves, dividends and agents' commission, which is only 0.92 per cent. of the total. You will, therefore, appreciate that the only way of making a reduction in cloth prices is by reducing the cost of labour."

Mr. Wadia is, of course, not suggesting a reduction in the workers' wages. Only he emphasises the need for what he characterised as "streamlining production by improving the manufacturing technique." He remarks:

"It is perhaps not widely known that most of the plant and machinery now in use by the industry are more than 25 years old and were subjected to very heavy wear and tear during the last war. Such debilitated equipment vitiates the quality of yarn and cloth, increases the cost of production, and imposes a heavier strain than necessary upon the worker. All this can be avoided by re-equipping the mills with modern machinery. . . . Apart from the fact that other countries are taking full advantage of the latest technological developments, modernisation of the premier industry of India is in the best interests of all. Nobody, much less labour, would desire that the existing machinery should be worked to a standstill and then consigned to the scrap-heap. That would be a retrograde step and would hurt our national economy, besides accentuating the unemployment problem. On the other hand, mills equipped with modern machinery can achieve the twofold object of efficiency and economy in production, in addition to affording proper incentive to workers to increase their productivity and earn higher emoluments. By stimulating a higher rate of consumption, the industry would be in a much better position to give employment to a greater number of people."

In this connection, Mr. Wadia sought to dispel the fears entertained by labour that rationalisation will result in total displacement of labour. For, according to him—and few will dispute his statement—modernisation is a product and long-term process, as the capital costs involved are prohibitively high. It is estimated that the industry as a whole would require about Rs. 300 crores in order to make good the immense arrears of machinery modernisation, but the funds at its disposal are hardly one-third of the staggering sum.

Rationalisation of cotton mills is imperative, especially in the present context of growing competition in world markets. As, Mr. Wadia rightly stressed, price and quality are the most decisive factors in the export market. To quote him again:

"The secret of Japan's formidable competitive strength lies in its efficient machinery, in the scientific development of labour, and in an all-out drive to capture foreign markets and retain them. In these circumstances, we cannot possibly wage our export battles with outmoded weapons" . . . India has set before herself an export target of 1,000 million yards of mill-made cloth per annum. This goal must be reached, not only because it will enable the country to earn foreign exchange, which, on an average, amounts to about Rs. 75 crores a year, but also because it affords a sure means of maintaining production and employment at current high levels. Exports, in fact, provide employment to about 150,000 textile mill workers."

This, indeed, is plain speaking. As we have ourselves stressed ere now, it is of the utmost importance that the productive equipment of the cotton mill industry should be geared to the highest light of competitive efficiency. Given first class productive equipment and a stable export policy, there is no reason why India cannot achieve the target of 1,000 million yards a year never more.

"TERYLENE" HOSE FOR FOREST FIRES

British high-pressure hose made of "Terylene" is to be used to fight forest fires in Canada. The British Columbia Forestry Commission, which has placed an order for a quantity of this new hose from George Angus & Co. Newcastle-on-Tyne, is interested in hose which withstands twice the normal working pressures and which can be used efficiently over great distances—distances sometimes of over a mile from the source of water. The specifications for the hose are that it should have a working pressure of 600 lbs. per square inch and a burst strength of 1,000 lbs. per square inch. "Terylene" is selected as the fibre most able to meet these severe requirements economically, an excellent example of the new British synthetic fibre being employed to produce greater efficiency and economy in industry.

Messrs. George Angus & Co. has pioneered the production of fire hose made with synthetic fibres and, during the last two years, it has worked closely with Imperial Chemical Industries Ltd. towards the manufacture of "Terylene" hose.

ADDITIONAL SALES TAX ON COTTON TEXTILES IN MADRAS

It will be recalled that the levy of an additional sales tax of 15 per cent. in the rupee on all mill-made cloth of 17 counts and above was one of the new tax proposals which the Finance Minister of Madras announced while presenting the budget for the year 1954-55 about two months ago. This proposal is now sought to be given effect to in two ways, that is, by amending the Madras General Sales Tax Act (1939)—the principal Act—and by enacting a new Act called the Madras Medium Cotton Mill Cloth (Sales Act) Act 1954. Under the former, the Madras Government will levy an additional sales tax of 15 pies in the rupee on the first sale of the following varieties of cotton textiles:

(1) Cloth, whether of silk, artificial silk, wool, flax or any other material not being cotton, made in mills in which the count of warp yarn employed (excluding the border) is 17s or finer—whether single or folded;

(2) cotton cloth made in mills in which the count of warp yarn employed (excluding the border) is 36s or finer—whether single or folded.

In the case of goods imported into Madras, either from abroad or from any other State in India, an additional tax will be levied on the first sale effected in the State by a seller after the cloth is imported into the State.

INCREASE IN EMPIRE COTTON SUPPLY

LABOUR LEADER CRITICISES U.K.'S PACT WITH JAPAN

(By A Special Correspondent)

MANCHESTER, *4th May*

EMPIRE cotton crops continue their good work of providing supplies not only for Lancashire mills but other countries. According to the latest annual report of the British Cotton Growing Association, the average output over the past three years has been just over one million bales annually. Of this about 400,000 bales has been the longer staple varieties and 600,000 bales of American type cotton.

MANCHESTER LETTER

The main reason for an increase of 26,000 bales in output last year was the sharp advance in production in the Sudan, where the second largest crop ever produced was recorded at 463,600 bales. Unfortunately, this improvement was offset by a drop in American type cotton output in the main growing countries of East, Central and West Africa.

It is encouraging to read in the report that transport facilities for carrying the bales and seed to the ocean ports have improved during the year. Slow movements of supplies has frequently handicapped Empire crops in the past. The continuance of quicker transport will be a vital factor, especially in the more competitive times to come, now that freer trading in cotton is at hand.

Meanwhile, as promised, the Raw Cotton Commission has now indicated its supply position and future intentions regarding Egyptian type cotton. Unsold stock is to be retained for the use of contractors-in up to the end of July, an extra month compared with American type cotton. Spinners of long-staple varieties hardly need the Commission's reminder that from August the only price cover available will be on fluctuations in American cotton rates.

As for stocks, the Commission says it can provide for normal requirements of Karnak, Giza 30 and Ashmouni to the end of November, but that little remains of supplies of Menoufi or Zagora. Small to moderate stocks of most Sudan cotton are held and in any case spinners can now make their own arrangements to secure supplies at the local auctions. Californian cotton will be available up to the end of the year from the Commission, while supplies of Peruvian Tanguis will be offered up to May and Uganda B.P. 52 up to April next year.

Cloth Imports

India has become the leading overseas supplier of cotton grey cloth to the United Kingdom. Following shipments of more than 5,600,000 square yards in January, India's exports to this country in February aggregated 10,727,000 square yards. Including 311,000 square yards of finished cloth, India accounted for 11,038,000 yards of the total imports of 18,719,000 yards for the month.

India's lead over other suppliers is spotlighted by figures for supporting countries, which included Western Germany (1,516,000 square yards), Belgium (1,575,000) Hong Kong (866,000) and France (782,000). All the Indian cloth is for the home market. Japan—once Britain's biggest supplier—shipped only 681,000 yards to the U.K. in February. Larger supplies of cotton cloth continue to reach Britain from overseas, the quantity during the first quarter being more than 50,000,000 square yards, of which 40,000,000 yards was grey unbleached material.

It is significant that the proportion of grey cloth for processing and re-export has fallen compared with earlier years when it was practically all imported on this understanding. In the first two months this year, out of total arrivals of nearly 26,000,000 square yards of grey cotton cloths, barely 7,000,000 yards were purchased for finishing and later shipment abroad.

Textile Plant Exports

The contraction in shipments of textile machinery from Britain which has been in evidence during the past two years has continued in the first quarter of 1954. To the end of March shipments amounted to 426,829 cwt. against 471,511 cwt. in the same period last year. The value of these goods dropped from £11,281,645 to £10,355,081.

As a result of the more detailed information now provided by the Board of Trade in connection with overseas business in textile plant, it is clear that machinery for the cotton industries of foreign countries is not being taken up to the same extent as plant for the processing of other fabrics. Exports of machinery for spinning and twisting cotton and staple fibre have, for example, fallen from 73,207 cwt. in the first quarter last year to 34,556 cwt. in 1954. In contrast, shipments of the same type of machinery for wool and other textiles have increased.

The same tendency is as pronounced in the case of processes preparatory to spinning. A sharp decline has occurred in the export of machinery for making synthetic fibres, shipments this year being only 726 cwt. against nearly 18,000 cwt. in the first quarter of 1953.

India remains the biggest consumer of textile plant made in Britain, having so far absorbed 86,740 cwt. compared with 99,337 cwt. a year ago. Pakistan has taken 47,744 cwt. against 51,805 cwt. and Italy 43,188 cwt. against 29,288 cwt. A severe slump has occurred in overseas trade with Brazil, the purchases of which this year have barely exceeded 3,000 cwt. against 50,000 cwt. in the first three months of 1953.

Union Viewpoint

Warning that the Lancashire textile industry was fighting a battle for existence, Mr. William Roberts, of Bolton, said in his presidential address at the opening of the annual conference of the United Textile Factory Workers' Association at Morecombe that in negotiating the recent trade pact with Japan the British Government's concern "seemed to be more for the economic difficulties in Japan than for the difficulties of their own people."

"This agreement opens the gate to our great rival of the past with whom we are in free competition once more—free competition but not fair competition," Mr. Robtrts told 250 delegates. He added:

"Already we hear of Japan moving away from the international standards of behaviour which indicates that their trading methods have not changed and we may expect the kind of competition we had before the war. The Japanese trade agreement stands for twelve months from the date of signing. At the end of that period we shall expect the Government to strengthen the safeguards against their unfair practices and if they continue the Japanese should be told we cannot be bound by our part in the agreement."

Strongly criticising the decision to abolish the Raw Cotton Commission, Liverpool, Mr. Roberts said:

"I am not satisfied that there is a change of heart among the Liverpool market fraternity who piously point to the promised land of Hope and Tory. We are not deceived. We remember the slippery slope to abuse, gambling and speculation which was associated with Liverpool in the past and their repercussions in the industry."

With the Raw Cotton Commission everyone was served alike and cotton in short supply fairly allocated. "I cannot imagine the same procedure under the resuscitated free market, in which many directors of spinning firms have an interest in Liverpool merchanting firms," said Mr. Roberts.

German Competition

West German textile firms are selling corduroy cloth in important Lancashire export markets at below manufacturing cost in an effort to capture some of Lancashire's trade.

In Denmark, Norway and Sweden, all of which are valuable markets for British-made corduroy, the Germans are selling at as much as 1s. 9d. a yard below Lancashire prices, Mr. A. N. de Thier, Chairman of the firm of Balstone, Cooke and Rayonese, which has mills at Oldham and Halifax, told the annual meeting in Manchester. "We know they are selling at a loss to try and get certain of our markets," he said.

One result of undercutting of Lancashire prices by the Germans is that buyers are delaying placing orders for autumn delivery. When orders do eventually start to flow in it could mean a bottleneck in the dyeing section and delays in delivery. "If that happens, it might give the Germans a chance to sell their goods in Britain also," said Mr. de Thier later.—*All Rights Reserved.*

Reopening of the Liverpool cotton futures market on the 18th May was described as a "red letter day" of world-wide interest by Mr. A. J. Kentish Barnes, President of the Liverpool Cotton Association. "Lancashire will get all the cotton she wants," he declared. "What is more, she will get the quality she wants, when she wants it."

They did not want trade to come to the new market with a great rush, but in a gradually expanding volume. They did not want vast speculative orders, but the co-operation of the trade of Lancashire. Eventually they would build up a market in which the entire world had faith, as it used to have. Mr. Barnes stated that he did not think it was the official view of the Labour Party that, if returned to power, it would revert to centralised cotton buying. He could not conceive responsible statesmen wanting to shoulder the taxpayer with another burden of £52 million within two years, as had happened with the Raw Cotton Commission.

SALES TAX ON COTTON IN BOMBAY STATE

MAIN PROCEDURE EXPLAINED

THE Bombay Sales Tax (Amendment) Act, 1953, which has come into force with effect from 1st April, 1954, has been assailed by its critics as a very complicated measure, while its supporters assert that it is just as simple as the measure it replaces. Be that as it may, the Act should be carefully studied by all cotton men, in view of the fact that its provisions apply to cotton as well. Since there are many classes of persons who deal in cotton, such as agriculturists who grow cotton, traders who buy and sell cotton, millowners who purchase cotton for consumption in their mills, exporters and importers of cotton, it is necessary to examine how the new measure affects the different cotton interests. In this connection, a note on the Bombay Sales Tax (Amendment) Act, 1953, prepared by the Cotton Buyers' Association, will be read with interest, inasmuch as the note deals with the Act primarily from the point of view of the cotton interests.

The Act is based, as is well known, on a two-point scheme of sales tax and provides for the levy of three principal varieties of tax: (1) Sales tax at the first stage of transactions; (2) general sales tax on transactions at the last stage, and (3) purchase tax on transactions at the first stage. Under the amended Act, every dealer whose turnover of "sales" or "purchases" has, during the period commencing from 1st April, 1953, and ending with 31st March, 1954, exceeds the prescribed limits is liable to pay tax from 1st April, 1954. The prescribed limits are: (1) Rs. 10,000 in the case of a dealer, who brings goods into the Bombay State or to whom goods are despatched from any place outside the Bombay State; (2) Rs. 10,000 in the case of a dealer who produces, collects, extracts, manufactures or processes any goods for sale, and (3) Rs. 25,000 in the case of any other dealer.

For purposes of assessment of general sales tax and purchase tax, raw cotton has been classified into (1) unginned cotton or *kapas* and (2) ginned cotton which may be either in pressed or unpressed condition. Sales of unginned cotton originates from agriculturists. Since an agriculturist is not a dealer, in terms of the Act, sales by agriculturists do not attract any tax. Section 2(b), which defines a dealer, specifically exempts an agriculturist. It says: "An agriculturist who sells exclusively agricultural produce grown on land cultivated by him personally should not be deemed to be a dealer within the meaning of this clause."

Purchases of unginned cotton (*kapas*) by a registered dealer from an agriculturist or from an unregistered dealer attract purchase tax. If the *kapas* so purchased is meant for resale without altering or processing it, then it does not attract purchase tax. If the registered dealer gets such cotton processed, that is, ginned, he becomes liable to purchase tax, though under the Bombay Sales Tax (Exemptions set off and Composition) Rules, 1954, he is entitled to either refund or remission of purchase tax, if the ginned cotton is for resale. Sales of *kapas* by registered dealers are subject to general sales tax. But, if the sales are confined to registered dealers who hold a declaration in form 'K', the question of payment of this tax does not arise. The form 'K', it may be mentioned here, provides for declaration by the dealer concerned to the effect that the goods are meant for resale. Thus, the liability to pay this tax arises only when sales are effected to (1) unlicensed dealers and (2) to persons who purchase the cotton for purposes of consumption, say mills, irrespective of the fact whether they are holding licences or not.

When a registered dealer purchases ginned cotton, in pressed or loose condition, whether from an agriculturist or from an unregistered dealer, the transaction attracts purchase tax. If ginned cotton so purchased is meant for resale, it is again exempt from the tax. Also, sales of ginned cotton by registered dealers are subject to general sales tax, though, where the sales are confined to registered dealers who have executed declaration in form 'K', the payment of this tax by the sellers does not arise. In fine, the general sales tax is levied on the last sale and is, therefore, payable only by the last seller.

As regards the position of exporters under the Act, the cotton required by a shipper for export may be purchased (*a*) from registered dealers and/or (*b*) from persons not registered under the Act. When an exporter purchases cotton from a registered dealer, the exporter need not pay general sales tax to the dealer concerned, provided he furnishes to the dealer a declaration in form 'K'. If the shipper purchases cotton from an unregistered dealer, there is a liability on the part of the shipper to pay purchase tax to the Government, although the cotton in question is intended for purposes of export. In other words, sales of cotton to shippers who are holding licences are exempt from the general sales tax, if the shipper executes a declaration in form 'K'. When the shipper sells the cotton so purchased to overseas buyers, the sales of such cotton to overseas buyers, which fall under the provisions of section 46 of the Act, are exempt from general sales tax.

Section 46 of the Act, it may be noted here, restates the constitutional position in respect of sales tax and also incorporates the Supreme Court's decision on inter-State trade. Thus, section 46 says that no tax on any sale or purchase of goods may be imposed when "such sale or purchase taken place (*a*) (1) outside the Bombay State or (2) in the course of the import of the goods into the Indian territory or the export of goods out of such territory, or (b) in the course of inter-State trade or commerce except in so far as Parliament may by law otherwise provide." A sale or purchase, it is further explained, shall be deemed to have "taken place in the State in which the goods have actually been delivered as a direct result of such sale or purchase for the purpose of consumption in that State, notwithstanding the fact that under the general law relating to sale of goods the property in the goods has by reason of such sale or purchase passed in another State."

Imports of cotton, like exports of cotton, are governed by section 46 of the Act and are, therefore, exempt from taxes leviable under the Act. In this connection, it may be pointed out that licences for import of raw cotton are issued (*a*) against prior sale to mills and (*b*) on consignment basis. When an importer imports cotton against prior sale to mills the question of paying any tax does not arise so long as imports are governed by an import licence which is known as the "actual user's licence"; in this form of licence, the name of the consumer party to which the goods should be delivered for purposes of consumption is specifically mentioned in the licence. The licensed importer in such cases will not be liable to pay sales tax provided the relevant documents, such as bills of lading and others, are transferred to the "actual user" before the goods are cleared over the customs frontier. If the licences have been issued to the importer on "consignment basis," the question of payment of tax does not arise, if the documents are similarly endorsed during the time the goods are still on the high seas.

If the imported cotton is despatched by the importer to places outside the Bombay State for consumption in the respective States, then also the question of payment of general sales tax by the importer does not arise. The importer concerned is, however, liable to pay tax, if any, which is provided under the sales tax law of the State where the delivery of cotton takes place. If the importer sells the cotton he imports to dealers who hold licences against declaration in form 'K', then also, there is no liability to pay general sales tax. Further, the dealers who purchase cotton from the importer on the strength of declaration in form 'K' and send the cotton so purchased to a place outside the Bombay State are also not liable to pay general sales tax under the Bombay Act. But they may be liable to tax, if any, levied by the delivery State in respect of the cotton so delivered.

IMPORT OF RAW COTTON

That the licences for the import of cotton from the dollar area, which were revalidated for shipment upto the 30th June, 1954, should now be utilised before the end of the stipulated period, warns a notice issued by the Joint Chief Controller of Imports. Importers are also informed that any failure to utilise these licences before 30th June, 1954, will be taken into consideration in the disposal of applications from importers for further import of foreign cotton in future.

Another notice, issued by the same authority, states that the import of dollar area cotton by importers on their own account will be permitted with immediate effect (that is, from 7th May, 1954). Hitherto, import licences, it may be noted, were issued to importers only against evidence of prior sale to mills. Importers obtaining licences to import on their own account are required to inform the Textile Commissioner, Bombay, and the Joint Chief Controller of Imports, Bombay, of the arrival of the cotton and the price at which purchase has been made. They will not be permitted, without the prior sanction of the Textile Commissioner, to sell the cotton to persons other than mill consumers.

RAW COTTON TRADE IN U.K.

The freeing of British trade in raw cotton advanced one stage further on 5th May, with the announcement from the Board of Trade that from 12th May, imports of raw cotton into the U.K. from non-dollar sources will be permitted under the open general licence. Imports from dollar countries will be permitted on the same basis from 1st September, 1954. The announcement says that the new Cotton Act repeals, among others, those sections of the 1947 Cotton (Centralised Buying) Act which conferred monopoly powers on the Raw Cotton Commission in regard to the import and sale of raw cotton in Britain. "It thus makes possible a full return to private trade in raw cotton," the statement adds, recalling that the Minister of Materials announced in the House of Lords last November, that facilities would be provided in the way of free access to cotton from all sources, including the U.S.A., and that the Raw Cotton Commission would cease to engage in new trade at the end of the current buying season—31st August, 1954.

EGYPTIAN COTTON

The Egyptian Government has announced their selling differentials for the 1954-55 cotton crop. Differentials for grade Good to Fully Good and others have been reduced in the case of Karnak by 1¼T., Menoufi by 7T., Giza 30 and Ashmouni by 2T. per cantar. As from 26th June, 1954, the Egyptian Cotton Commission will base its sales of old crop and new crop cotton on New York October futures plus 40 per cent. for long-staple cotton and plus 12½ per cent. for other varieties.

OUTLOOK FOR WOOL IN UNITED STATES

FIBRE'S PRESTIGE AND QUALITY BEING REAFFIRMED

(By RUTH JACKENDOFF, Director, Department of Economics and Statistics, Wool Bureau Inc.)

DURING 1953, the U.S. wool textile industry consumed approximately the same quantity of raw wool as in 1952. Total fibre consumption however, declined, and resulted in 7 per cent. less yardage, the net of a 69 per cent. reduction in Government apparel yardage and a 7 per cent. increase in civilian apparel and non-apparel yardage. The relative importance of virgin wool and animal hairs in total fibre consumption of wool textile mills improved from 62 per cent. in 1952 to 65 per cent. in 1953, reflecting an improvement in the worsted system. Wool top production gained 7 per cent. over 1952, in contrast to a decline of 9 per cent. in consumption of wool for woollen yarn.

During the second half of 1953, the rate of wool consumption in woollen mills and the value of retail sales of apparel stores and clothing sections of department stores declined steadily. The manufacturers' new orders for men's and women's wear apparel fabrics made of wool declined sharply from first half-year levels, reflecting the lack of demand from cutters and retailers. A mild autumn and winter slowed consumer demand and led to retail inventory surpluses.

Policy of Under-commitment

The uncertain economic outlook anticipated in 1954 led to a general policy of under-commitment. Retail buying orders were curtailed below normal seasonal needs, cutters ordered cloth at a correspondingly low rate and mills purchased wool for immediate needs only. As a result, imports of apparel wools declined by 33 per cent., the Commodity Credit Corporation stocks of 1952 wools remained almost intact at 92 million lbs. (actual weight), while about 33 million lbs. of the 1953 clip entered the loan programme. In mistaken anticipation of a decline in world wool prices, mills ate into trade stocks and ended the year in the lowest stock position relative to consumption since the end of World War II.

According to an estimate published by the U.S. Tariff Commission, apparel wool trade stocks at the beginning of the year were about 67 million lbs. (clean basis), or the equivalent of about 13 weeks' consumption. This is below the level of 15 weeks' requirements considered as the minimum consistent with efficient operations.

There was a significant shift in the sources of apparel wool imports from 1952 to 1953. Imports from the British Dominions declined from 70 per cent. of total United States' imports in 1952 to 48 per cent. in 1953, while imports from South America rose from 25 per cent. to 46 per cent. of the total. The countervailing duties of 18 per cent. on Uruguay wool tops succeeded in reducing these imports to insignificant quantities. Recently, this duty was cut to 6 per cent. and it remains to be seen whether this will stimulate imports again.

Apparel fabric imports during 1953 of 24.3 million square yards exceeded the 1952 imports of 24 million square yards, and represented a lower percentage (6.2 per cent.) of civilian apparel fabric production than that of 1952 (6.5 per cent.).

Carpet Wool

The carpet wool situation was substantially better than that of apparel wool. Carpet mills consumed 9 per cent. more wool during 1953 than during 1952, while production of carpets and rugs increased by 8 per cent. Although the second half of 1953 was not as satisfactory as the first half, consumption of carpet wool held up better than that of apparel wool. Imports of carpet wool during 1953 were 8 per cent. higher than during 1952 and, like apparel wool imports, showed important shifts in countries of origin. Argentina's share of the total rose from 27 per cent. in 1952 to 47 per cent. in 1953, while New Zealand's share declined from 15 per cent. to 9 per cent.

When the combined consumption of apparel and carpet wool is compared with the consumption of man-made staple fibres, wool's position in the textile economy appears somewhat more favourable than when viewed by itself. Wool consumption increased by 3 per cent., whereas rayon and acetate staple plus non-cellulosic staple consumption declined by 2 per cent. It is thus apparent that the outlook for wool is, to a large extent, dependent on the outlook for all textiles. The ratio of consumer clothing expenditures to disposable income reached a post-war low during 1953, indicating a further diversion of part of the clothing dollar to other areas of consumer expenditures. A recovery in this ratio is a prerequisite to a significant recovery in overall textile demand.

The scant data available for the opening of the current year—limited almost entirely to January—give some hope for a recovery. The value of women's and children's retail clothing sales turned up very remotely from the fourth quarter of 1953, and that of men's and boys' clothing somewhat more (13 per cent.). The improvement was based more on clearances of surplus inventories than of regular priced merchandise; nevertheless, it opened the way for spring merchandise.

Fabrics

The manufacturers' new orders for men's and women's wear fabrics of wool also reversed their declining trend, but still compared very unfavourably with January, 1953. Preliminary figures for the month of February indicated a further rise of moderate proportions. Mill consumption of both apparel and carpet wool was somewhat higher in January than in December, while increased American purchases in Dominion markets during the 1954 sales to date indicate that a moderate raw material restocking movement is taking place.

Production of men's tailored clothing in January was especially favourable to wool's competitive position. Summer-weight suits made of 50 per cent. or more wool increased by 94 per cent. over January, 1953, compared with a gain of 32 per cent. in those made of man-made fibres. Separate trousers made of wool showed a gain of 36 per cent., compared with those of other fabrics. No comparative statistics are as yet available on 1954 production of women's wear.

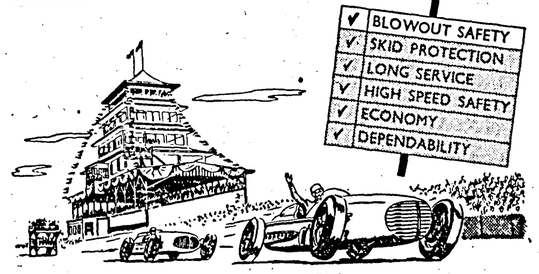
Fine wool prices have been relatively stable and, at the most recent date, the average of domestic and Australian types on the Boston market stood at $1.83. However, since the reduction of the higher-priced non-cellulosic staple fibres in January, 1954 (Orlon from $1.90 to $1.50, Dacron from $1.80 to $1.60, nylon from $1.80 to $1.50, Acrilan from $1.85 to $1.40), wool has lost its competitive price standing with these fibres.

In other respects, wool's prestige and quality is being reaffirmed. According to trade reports, designers' and manufacturers' dissatisfaction with many characteristics of the synthetic fabrics during the various stages of design and production of apparel has resulted in a noticeable return to wool and other natural fibres. The consumer, too, is much more sophisticated in his attitude towards synthetics today than two years ago, and it has become evident that his choice from the wide array of available fabrics is being guided by established standards of quality and service.

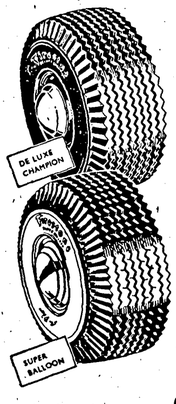
A challenging development during the past year is the accelerated programmes of the cotton and rayon interests to offset the competition of the newer synthetics. The acknowledgment of this competition is stimulating new fabric designs and uses and improved finishes of infinite variety with the apparent intention of making these fabrics adaptable to a wider variety of apparel end uses than ever before.

There was a marked rise in imports of raw wool and wool tops into India during 1953, the quantity, actually imported being 13.8 million lbs., as against 9.7 million lbs. in 1952. New Zealand and Australia were the main sources of supply for raw wool and the U.K. for wool tops. Imports of yarn and knitting wool also were larger, being 1,876,000 lbs., as compared with 925,000 lbs.

WHAT do you WANT in a TYRE?



YOU'LL FIND IT WITH Firestone



BLOWOUT SAFETY
Exclusive new *Super Gum-Dipping* process, proved in the laboratory, on test fleets, and in such world-famed speed events as the Indianapolis race, gives up to 60% stronger cord body to resist impacts; protects against bruises, separation, and the effects of heat.

You Get These Advantages, Too:

SKID PROTECTION - The Safti-Grip tread design on passenger tyres, and the appropriate tread for the job on truck tyres, assure quick positive stops on wet, slippery streets or roads.

LONG SERVICE - New, improved, extra tough tread rubber, cooler-running cord body and long mileage designs combine to give extra service at no extra cost.

HIGH SPEED SAFETY - Firestone's unparalleled success in racing has led to the adoption of racing tyre principles to regular production. New American speed records of 255.4 miles per hour were recently established on Firestone Tyres.

DEPENDABILITY - In world-famed auto races, where victory depends on the safety and dependability of tyres, champion race drivers buy and use Firestones. "Safety-Proved on the Speedway for Your Protection on the Highway."

ECONOMY - The extra features of Firestone Tyres — greater strength, resistance to impacts, cooler running, tougher rubber, long-wearing designs —all add up to lower cost per mile or kilometer.

THE ONLY *Super Gum-Dipped* TYRE

MINIMUM WAGES FOR DECCAN SUGAR LABOUR

APPELLATE TRIBUNAL JUSTIFIES LOWER COURT'S DECISION

A BRIEF reference was made in our last issue to the Labour Appellate Tribunal's judgment on the appeal filed by the Deccan sugar factories and employees against the minimum wages award of the Bombay Industrial Court. The details of the judgment are now available and it is proposed to refer to them at some length here. It was more than a year ago—on 8th April, 1953, to be precise—that the Bombay Industrial Court announced its award fixing the minimum wage of an unskilled worker in the seven sugar factories at Rs. 23-2-6 per month of 26 working days or As. 14-3 per day on the pre-war level of prices. Against this award, both the managements of factories and the workers appealed to the Appellate Tribunal. The former contended that the lower Court had fixed the minimum basic wage at a very high level and that it should be reduced to Rs. 11 or Rs. 12 per month. The latter, however, contended that the wage should be raised to Rs. 30 for a month of 26 working days when the cost of living index was at 105 and that retrospective effect should be given to the new scale with effect from 1st October, 1949. The Appellate Tribunal has dismissed both the appeals and upheld the lower Court's decision.

In the opinion of the Tribunal, the minimum basic wage fixed by the Industrial Court cannot be said to be higher than that fixed in other industries in the neighbouring localities nor is there any good reason for enhancing the minimum as contended on behalf of the employees. In support of this contention, the Tribunal observed:

"In fixing the minimum wage, the learned lower Court took into consideration the needs of a worker, that is, good house, rent, fuel and lighting, clothing, bedding, footwear, etc., as was done in the case of the textile industry, while fixing the minimum wage . . . the learned lower Court was quite right in its approach. After all, the elementary requirements of a worker are the same whether he is working in the textile or in the sugar industry . . . the concept of minimum wage has recently undergone a progressive change. It is no longer based upon the subsistence theory according to which the minimum wage equals the cost of commodities necessary to feed and clothe a worker and his family. The minimum wage now includes not only the bare physical necessities but also a modicum of comforts, otherwise known as conventional necessities."

Incidence on Factories

Viewed purely from the human angle, the aforesaid observations are perfectly sound and unobjectionable. The point, however, is that this will add to the cost of sugar at a time when it requires to be reduced. The industry can have no objection to pay the wage fixed by the Court, provided the burden of taxation on it is reduced. As a result of this judgment, the factories have to pay, with retrospective effect from 1st October, 1952, a minimum fair wage of Rs. 23-2-6 for a month of 26 days, whereas, hitherto, they were paying about Rs. 11 only, the actual rise being Rs. 12-2-6 per labourer per month or Rs. 145-14 per annum. Incidentally, it is said that about 10,000 workers are employed in the factories, and 40,000 in the field. On this basis, the additional burden on the Deccan sugar factories as a whole works out to as much as Rs. 72.94 lakhs, not to speak of the corresponding increase in dearness allowance which is linked to the basic wage.

It is, however, gratifying that the Tribunal should have rejected labour's demand for giving effect to the scale of wages fixed by the lower Court with effect from 1st October, 1949, instead of from 1st October, 1952. It says: "In order to avoid a heavy burden on the sugar factories, the learned lower Court thought it proper to give effect to the new scales of wages from 1st October, 1952. We see no valid ground to interfere with the discretion exercised by the learned lower Court. In fixing the date from which the new scale of wages should have effect, we must bear in mind the effect upon the finances of the concern also."

The Labour Appellate Tribunal has dismissed the plea for making a distinction between a factory worker and a farm worker by paying a lower minimum wage to the latter. The chief considerations which weighed with the Tribunal in deciding so are as follows:

"... the factories carry on sugarcane cultivation in an organised and more or less on a mechanised system. The workers there have supervisors over them and they cannot afford to work in a leisurely manner as they can when working under ordinary landlords. Moreover, the rate that has been fixed by the learned lower Court is the rock-bottom figure and, from the mere fact that they are engaged in agricultural operations, it does not follow that their minimum needs are less than those of the factory workers. Some of the workers engaged on the farm have to do mechanical work also, as, for example, those who are engaged in tractor operations or in operations connected with lifting of water by mechanical means. Reliance is also placed upon the fact that the assessors, in fixing the dearness allowance, made a distinction between a factory and a farm worker. While this is true, it may be noted that they made no distinction in regard to basic wages. We are not concerned in the present appeal with dearness allowance and it is not necessary for us to express any opinion on that point. It was argued also that farm workers had other supplementary sources of income. But for this, we were referred to no evidence. Having regard to all the circumstances, we see no good reason to make any distinction in the matter of basic wages between a factory and a farm worker."

There is considerable force in the above line of reasoning and it is difficult to rebut the Tribunal's argument in a manner that will carry conviction.

Male and Female Workers

Similarly, the Tribunal has rejected the demand for a distinction between a male and a female worker for purposes of paying minimum wages. It says:

"It was strenuously urged before us that the scale of wages for females should be lower. No evidence was adduced before the learned lower Court to show that the work performed by females was less strenuous or that they did not put in the same hours of work as males. Clause (d) of Article 39 of the Constitution provides that the State shall direct its policy towards securing that there is equal pay for equal work for both men and women. Clause (a) of the same Article further provides that the citizens, men and women equally, have the right to an adequate means of livelihood. Further, Article 15 provides that the State shall not discriminate against any citizen, *inter alia*, on grounds of sex. When there is no evidence that the women workers do less work than men or put in less hours of work, we see no good reason, in view of the aforesaid provisions in our Constitution, to make any distinction between male and female workers in the matter of basic wages.

"We have been referred to the notifications issued by the State Governments of Delhi, East Punjab and Himachal Pradesh under the Minimum Wages Act, 1948, wherein a distinction has been made in the matter of minimum rates of wages between male and female workers. It may be that the distinction was made by those Governments, because the work done by the female workers was less strenuous or because they worked for lesser hours. It is difficult to believe that, in the face of clause (d) of Article 39 of the Constitution, a lesser wage was prescribed for female workers, even though their output of work was the same as that of male workers. We have been referred to Appendix V of the Assessors' report from which it appears that, at present, the sugar factories pay the female workers at lower rates. By the mere fact of the payment to the female workers at lower rates, we cannot infer that they work less than the males. The female workers might have been exploited in the past and, now that the matter has come for adjudication this exploitation cannot be allowed to continue any longer.

"Learned counsel on behalf of the factories requested that the case should be remanded to the lower Court for evidence on the point as to the output of, and hours of work put in by, female workers. The employers had ample opportunity to adduce evidence before the Assessors and then before the lower Court. No reason has been assigned by them as to why such evidence was not produced in the lower Court. If the factories did not avail of the opportunity, we see no good reason to prolong the dispute by remanding the cases. It may be noted here that, in the notification issued by the Government of Bombay under the Minimum Wages Act, no distinction has been made between a male and a female worker. For the reasons given above, we hold that no distinction should be made in the matter of minimum basic wages between male and female workers of these seven factories."

These observations also are essentially sound. For, looked at from any angle—legal, economic or social—the principle of equal pay for equal work stands justified. There is, however, a practical problem to which we referred while commenting on the lower Court's award in our issue of 2nd May, 1953. We then stated:

"Now that the implementation of the award entails additional expense by way of increased wages and dearness allowance, there will be a tendency to avoid employment of women when male workers are readily available for the same wage. The elimination of female workers will almost halve the earnings of most of the workers' families, of which both husband and wife usually work on the farms. This, in its turn, would affect adversely the standard of living of these families, defeating thereby the very purpose of the award, namely, to improve the living standards of the working classes."

It will be interesting to see whether the above reading of the situation will be borne out in the coming months. It is to be hoped that somebody will some day study the effects of the award on the employment of women labour and see who has been right, the Industrial Court or this journal.

SUGAR PRICES

Commenting on the speech of Mr. Gulabchand Hirachand at the recent annual meeting of the Walchandnagar Industries Ltd.—*vide* page 732 of the issue dated 17th April, 1954—we observed that even the current prices of sugar in India were higher than what the people could afford to pay and also higher than the world price. We also posed the question as to how long did he expect the people to pay such prices. These remarks have evoked some comments from Mr. Gulabchand. Thus, in a communication addressed to us, he says:

"In the first place, you are aware that the high price of sugar is due to heavy taxation and the high price of cane. The manufacturing cost, as well as the margin left with the factories, forms only a small part of the price to the consumers. While every effort is being made to reduce the manufacturing cost, any possible economy in this direction would be so small as hardly to affect the price of sugar. With regard to the price of sugar-cane, the industry's hands are tied and it is equally helpless with regard to the mounting cost of taxation, wages, bonus and other amenities, all being gradually increased by the central and the State Governments. It is rather strange that every other factor contributing to the cost of sugar should be allowed to increase this cost by pitching their demands higher and only the industry should be asked to restrict its profits which, as I said in my speech, are required not for raising dividend but for internal finance for rehabilitation. Your question regarding how long our people are to be asked to pay high prices should more properly be addressed to the Central and the State Governments, the workers and to the cane growers, who are primarily responsible for the rise in price. In fact, many factories in Bihar and U.P., because of short supply of cane, are working very short seasons and, even at the present prices, they are making a loss.

"I am also somewhat intrigued about your statement that the price of sugar is higher than what the people can afford to pay. As the prices have risen, consumption has risen at even a higher rate. If prices were higher than what the people can afford, there should have been a definite fall in the consumption of sugar, as we always see in the case of cloth when the prices go up. I am not trying to justify high prices in commodity; but I am only trying to draw your attention to this aspect of the question also. As you must have observed, the ex-factory price of sugar has been increased from the beginning of this month by doubling the sales tax. The total burden from this tax alone comes to about Rs. 5-8 to Rs. 6 per bag. Cane cess, which was imposed only a few years ago accounts for another Rs. 5. The Central excise was also raised from Rs. 3 per cwt. to Rs. 3-12. Irrigation charges have been raised from time to time to an enormous extent. A new tax on electricity has been levied. The cost of manure during certain years was artificially boosted up by Government action of a predatory nature. If you add to all this, the increase granted in wages, dearness allowance, bonus and other amenities under awards, you will find that they, together with the increase in the price of cane, would account for whatever increase that has taken place in the price of sugar. It is for responsible and enlightened journals like yours, to bring this fact both to the notice of the public and the authorities, instead of asking the manufacturers to bring down the cost of sugar, when they have practically no say in the matter."

We fully agree with Mr. Gulabchand that the heavy cost structure of the sugar industry has been due, in large measure, to the high level of taxes—Central and State. We also agree with him on the need for enabling the industry to build up adequate rehabilitation finance. And these are aspects which we have ourselves amply emphasised on more than one occasion ere now. But the real solution to the problem lies not in an upward revision of sugar prices, which are already high in all conscience, but in a downward revision of taxes. Mr. Gulabchand must, therefore, go at the Governments and not at the consumers.

CO-OPERATION IN SUGAR

The Central Government has extended, upto the 31st inst., the time limit for the submission of applications for licences for the establishment of new factories, expansion of existing ones and erection of refineries. While the parties interested are busy working out the details regarding their schemes, the Honorary Secretary, Bombay Provincial Co-operative Institute, has issued a statement to the Press in which he has urged the Government not to issue any new licences for setting up sugar factories on individual or joint-stock enterprise basis but to encourage the establishment of sugar mills on co-operative lines. The plea is based on the following two grounds:

(1) The problem of labour is already presenting considerable difficulties in the areas where privately-owned factories are working.

(2) There are conflicts between the cane growers and the factory owners, as in U.P., or lands to sugar factories on long lease and have

(*Continued on page 934*)

WORLD COAL SITUATION

RECENT DEVELOPMENTS ANALYSED

THE recent developments in the world coal situation make disappointing reading. According to latest available statistics,* there was a sharp drop in world production, consumption and trade during the three years 1951-53. Thus, the output of coal, which was at a record high level of 1,475.2 million metric tons in 1951, declined to 1,444.2 million metric tons in 1952 and further to 1,442.0 million metric tons in 1953. Gross consumption also fell, from 1,470.4 million metric tons in 1951 to 1,442.4 million metric tons in 1952, though in 1953, it recorded a slight increase of 5.6 million metric tons to 1,448.0 million tons. But, as compared with 1951, the output in 1953 was lower by 22.4 million metric tons. The aggregate volume of international trade in coal and briquettes eased from 127 million metric tons in 1951 to 120 million metric tons in 1952, and further to 112 million metric tons in 1953.

The decline in production during the three-year period was largely due to changing conditions in North America, more especially to the strike in the U.S. steel industry in mid-1952, dieselisation of railways that took place during the period and the rapid extension of natural gas works. The output in North America fell from over 535 million tons in 1951 to 470 million tons in the following year. It further declined to 447 million tons in 1953. It is true that there was some improvement in the position elsewhere, but it was not such as to affect the decline in North America. The following table discloses the world output of coal region-wise and the percentage of world total in the year 1953, as compared with those in the previous two years.

	Output in million metric tons			Percentage of share in world output		
	1953	1952	1951	1953	1952	1951
Africa ..	33.0	32.3	30.4	2.3	2.2	2.1
North America ..	447.0	469.5	534.7	31.0	32.5	36.1
Latin America ..	7.0	7.4	6.9	0.5	0.5	0.5
Asia ..	95.0	90.9	88.0	6.5	6.3	6.0
Western Europe ..	479.0	483.7	471.8	33.2	33.5	32.0
Eastern Europe and U.S.S.R. ..	361.0	340.1	326.0	25.0	23.6	22.1
Oceania	20.0	20.8	17.4	1.4	1.4	1.2
World total ..	1,442.0	1,444.2	1,475.2	100.0	100.0	100.0

World consumption of coal and briquettes very nearly balanced with production in each of the years 1951, 1952 and 1953. Within each of the regions, except Latin America which imported a relatively large part of its coal supply, consumption and production corresponded rather closely throughout the period. The net trade of all other areas resulted only in small percentage changes in supplies. The table below gives the consumption of coal region-wise in the year 1953, as compared with those in the previous two years.

	1953	1952	1951
Africa	34.0	33.3	30.8
North America	445.0	451.6	501.0
Latin America	10.0	10.4	10.6
Asia	95.0	92.9	91.6
Western Europe	490.0	502.6	508.2
Eastern Europe and U.S.S.R. ..	364.0	321.5	315.8
Oceania	20.0	19.1	17.9
World total ..	1,448.0	1,442.4	1,470.4

The total international trade in coal and briquettes in 1951, amounting to 127 million tons, was 23 million tons more than in 1950 and only 13 million tons below the level reached in 1929. This trade declined in 1952 to 120 million tons, of which 84 million tons consisted of shipments between countries within the same region; another 8 million tons moved from East Europe and the U.S.S.R. to West Europe. Excluding these latter movements, the large-haul trade accounted for only about 28 million tons, consisting chiefly of shipments from the U.S. to Western Europe, Asia and Latin America.

International trade continued to shrink in 1953. The total trade fell to about 112 million tons, while inter-regional movement fell to about 22 million tons and the large-haul trade to less than 15 million tons. Much of the decline in the last mentioned category was due to improved position of Western European suppliers, who increased their intra-regional exports by more than 7 million tons during 1953.

Most of the world's export coal originates in the U.S., Poland, the U.K., West Germany and the Saar. These countries, together, provided 90 per cent. of the world's export coal in 1952 and 88 per cent. in 1953. Their respective contributions to the total were as follows in the two years (in percentages of world exports):—

	1952	1953
United States	39.6	29.5
Poland	22.9	25.0
United Kingdom	10.4	12.9
Western Germany	10.3	12.5
Saar	6.6	7.9
Total ..	89.8	87.8

World import requirements are much less concentrated. Close to 100 countries are regular importers of more than one thousand tons of coal annually, and, of these, about 20 normally take more than a million tons per annum. In 1952, the West European countries, together, imported 65 million tons of coal, while the shares of particular regions and major importing countries in total imports of coal and briquettes were as follows:—

Distribution of World Coal Imports in 1952

(Percentage of total coal imports)

Regions		*Principal Importers*	
Western Europe ..	53.9	Canada	18.7
North America ..	18.9	France	10.9
E. Europe and U.S.S.R.	16.5	Western Germany	9.8
Asia	5.3	Italy	7.3
Latin America	2.7	Netherlands ..	4.6
Africa	2.3	Sweden	3.9
Oceania	0.4	Denmark ..	3.5

Canada alone imported more than 22 million tons. Combined imports of the East European countries and the U.S.S.R. appear to have amounted to about 20 million tons, while Asia imported 6 million tons, chiefly for Japan, and Latin America and Africa each about 3 million tons.

*U.N. *Monthly Bulletin of Statistics, March*, 1954.

STANDARD SPECIFICATION FOR HARD COKE

The Indian Standards Institution (I.S.I.) has announced the publication of standard specification for hard coke. This standard prescribes various requirements such as moisture content, ash content, volatile matter content, sulphur and phosphorous content, etc., for the material commercially known as hard coke, for use in foundries and blast furnaces. Methods of sampling and test have also been indicated in the standard. In order to cover coke for other purposes, such as gasification in gas producers, steam raising, etc., the I.S.I. expects to issue a separate standard. In this standard, coke has been graded on the basis of its composition and physical characteristics irrespective of the method of manufacture adopted. The I.S.I. took up the thread of the work involved in the preparation of this Indian Standard from the Indian Railway Fuel Committee, which originally took up the task of preparing a standard specification for coke used in Indian railway workshops and foundries. The railways' requirements have, therefore, been specifically kept in mind in the preparation of this standard.

EMPLOYMENT IN COAL MINES

As many as 353,231 persons were, on an average, employed daily in 844 collieries and 8 coke plants in February, 1954, thus representing an increase of 19,473 persons over the previous month's figure. The overall percentage of absenteeism was 12.29—a drop by 1.37 over the previous month's percentage. In January 840 collieries and 8 coke plants worked. The production of coal increased by 152,563 tons during the month. As much as 3,055,847 tons of coal and 316,674 tons of soft, hard and other kinds of cokes were produced, as compared with 2,903,284 tons and 349,121 tons, respectively, produced in January 1954. The output per man-shift for miners and loaders increased from 1.04 in January, 1954, to 1.05 in the month under review.

Frequent repair bills and high running costs of Electric Fans will be a source of worry to the owner of any establishment — big or small.

This could easily be avoided by installing IEW Fans which need no looking after and give troublefree service for years.

Besides being sturdily made with a lucrative finish IEW FANS consume 60% less electric energy.

MARKETING OF JUTE IN INDIA

VIEWS OF ENQUIRY COMMISSION

IT is common knowledge that the Indian cultivator does not get a fair share of the prices realised by his crop from the consumer. Even today his position, in spite of all the various measures adopted by the State Governments through their Agricultural Departments, does not show any marked change from what it was decades ago. The jute grower is no exception to this general tendency. This is confirmed by the findings of the Jute Enquiry Commission, which examined his position in detail a few months ago. In its Report published last week, the Commission observes that market conditions and practices have remained unchanged and that deductions and allowances and use of non-standard weights still persist. These remarks are rather disquieting—and call for some serious reflection on the part of the authorities concerned, as the country which is depending for the bulk of its earnings of foreign exchange on jute goods can hardly afford to neglect the welfare of the producer of this raw material. The findings of the Commission are, therefore, worth recording here.

The jute growers in villages sell, according to the Commission, about 75 per cent. of their crop at their doors to *farias* and *beoparies*, who constitute the first link in the chain of intermediaries engaged in supplying jute to the up-country *kutcha* balers. A small percentage of growers take their produce to primary markets, but hardly any hold their stocks and sell in secondary markets. The average crop sold by growers is seldom over 20 maunds per head. The middlemen often perform subsidiary functions such as financing the growers and arranging for storing, sorting and transport of jute to the market. The *farias* and *beoparies* sell the jute to *aratdars*, who are themselves balers or who in turn sell to *kutcha* balers, and these latter sell the jute to mills. This procedure is generally the pattern, but local variations exist in each State.

Mill Purchases

Mills purchase their requirements from dealers through brokers. Brokers and dealers complain that mills do not nowadays stock raw jute to the same extent as before the war. In fact, mills now carry less than three months' stocks, and the bulk of the stocks during a season is held by intermediaries. The mills state that they are unable to carry such large stocks, as they used to in the past, because of the reduced offtake of manufactured goods. They argue that, if they were to hold more stocks, such would shift the burden of financing them (stocks) from the intermediaries to the mills and, therefore, would not improve the cultivator's prospects of securing a better price. The Commission is of the opinion that the elimination of unnecessary intermediaries will result in the grower realising a better price.

Basis of Prices

The prevailing price of jute in Calcutta forms the basis on which prices in the primary markets are determined. Accordingly, any fluctuation in prices in the Calcutta market will have its immediate effect on the prices quoted in the secondary and primary markets, as also in the villages.

Transport is another vital factor which plays an important part in the determination of prices in the growing centres. In Purnea and Saharsa Districts of Bihar and certain areas of West Bengal and Orissa, the jute-growing tracts are cut off from the primary markets during the rainy season, and till October *kutcha* roads are not usable for movement of jute. In this period, the village dealers are sole buyers of jute and enjoy a position of vantage. Needy growers would have to accept, in the circumstances, the prices and the terms dictated to them by the dealers. Thus transport difficulties tend to bring about a fall in prices.

Again, in the primary markets, no proper allowance is made for factors like quality and grading. Consequently, prices are determined on *andazi* basis of the composition of the particular parcel of jute. Discount, however, is made if the quality is below the mark. Deductions are made for excess of moisture and for short fibre. This explains the lack of incentive on the part of the jute grower to improve the quality of the jute he grows. The grower's share is also cut by deductions for commission for *aratdars*, and for weighing, assorting, and baling charges. Besides these, different unauthorised weights are also adopted in different localities. In order to end these malpractices, the Commission has advocated the introduction of regulated markets and standard weights.

It has been stated above that, in marketing jute, transport difficulties figure prominently to the disadvantage of the grower. The Commission has, therefore, done well in dealing with this aspect, in greater detail. In Orissa, Bihar and Assam, where roads become impassable in monsoons, the cost of transport, even by bullock carts, increases considerably. Before the war, the cost varied between two and five pies per maund-mile, whereas now it is as much as six pies to one anna. This increase is stated to be one of the biggest handicaps. Again, before the war, the average freight did not exceed As. 8 per maund by steamer and Re. 1 by train. At present the incidence has increased on account of the fact that jute is carried over the longer Assam rail-link route. Practically, all trade associations connected with jute marketing have mentioned that the present rates, whether by rail or river transport, are high. The present freight rates on jute from Assam to Calcutta are stated to be more than the sea freight from Calcutta to the U.K. and only slightly lower than that from Calcutta to the U.S.! The Committee, therefore, recommends that the railway authorities should consider a change in the classification of jute so as to effect a due reduction in freight rates. It feels that river transport companies should evolve a more equitable freight schedule for jute despatches to Calcutta. It has suggested that no positive encouragement should be given to jute cultivation in areas where transport facilities are not available or can be provided only at prohibitive cost.

Indebtedness

The previous enquiries into the conditions of jute marketing revealed that the burden of indebtedness, as a result of receiving advances from brokers, acted heavily on the small grower. It is encouraging to note from the present enquiry that the grower is today less indebted, thanks to the general increase in prices of agricultural commodities. In *bimli*-growing areas, his position is stated to have improved considerably. Nevertheless, it is true to say that, generally speaking, the growers are not free from indebtedness. In West Bengal 30 per cent. of cultivators are indebted; in U.P. the percentage is 40, while in Bihar it is as high as 95. In all these cases, despite legislation against usury, the rates of interest are still high. The State Governments are, therefore, urged to enforce the laws against usurious practices more strictly.

It is pointed out that the handicaps of the grower are due more to his lack of holding power and levy of unauthorised discounts and deductions than to lack of market information regarding current prices. The supply of information through broadcasts, telegrams and the Press is considered to be quite adequate to give an idea of the current price trends to the growers.

Absence of proper standards of grading for loose jute is one of the chief handicaps of growers in the primary markets. The quality of fibre for grading is governed by factors such as length, strength, colour, fineness, stiffness, proportion of barky root-ends or cuttings and proportion of faults (specks, knots, runners, hard crop, and moss). An accurate assessment of any of these features by hand-and-eye methods is scarcely possible. Nevertheless, the Expert Committee, appointed some time ago, has graded the jute into tops, inters, middles, bottoms and low bottoms. This classification has been criticised as involving too many grades. The Enquiry Commission has, however, recommended that the specification of the I.S.I. regarding grades of jute should be adopted and applied by the trade and industry. It has also advocated a rational utilisation of the storage accommodation available at Calcutta. For this the buying agencies and dealers are required to buy regularly in secondary markets and move their stock to Calcutta throughout the season.

Regulated Markets

For bettering the conditions of the cultivator, the Commission has, as stated already, recommended the establishment of regulated markets in important centres in the jute-growing areas of each State. The benefits of such markets are: (a) provision of cheap storage facilities to the grower, (b) assurance of a fair deal between buyers and sellers, (c) use of standard weights and measures, (d) elimination of improper allowances and deductions, (e) reduction of market charges to the minimum, (f) supply of market information, and (g) quick settlement of disputes. To be successful such markets can only be set up under the authority of a State law, and their efficient function could be ensured only by their being linked to a local body or a licenced marketing authority. Steps should also be taken to set up approved warehouses at all regulated markets. This will also facilitate the the organisation of co-operative effort to improve the position of cultivators. While making all these suggestions, the Commission has not forgotten to add that, in view of the importance of jute as a raw material, the State Governments should not levy sales tax on this commodity.

SUGAR

(Concluded from page 932)

been turned as mere labourers for factories, as in the Deccan.

The conflicts, the Secretary observes, can be avoided if the primary producers (cane growers) are encouraged to form co-operative sugar factories. In this connection, he points to the co-operative sugar factory at Loni in Ahmednagar District, which, he claims, is working satisfactorily. He also points to the registration of another co-operative sugar factory on the Godavari canal and the few more schemes reported to be under the consideration of the Bombay Government.

The above suggestion is preposterous, in that it amounts to asking for statutory protection for the Co-operative Movement against private enterprise and a closed field for the Movement. At present, nobody prevents co-operative societies from coming up. The fact that the protagonists of the Movement have found it necessary to ask for State intervention is itself a striking indication of the efficiency of sugar factories established under the joint-stock company system. The salutary instance of a factory at Loni run on co-operative lines is not proof enough to convince us that the Co-operative Movement can deliver the goods. One swallow does not make summer. It will be interesting to conduct a critical study of the working of this factory and compare its efficiency, its contribution to the well-being of the society in its area and the taxes paid by it to the State with a factory run on joint-stock lines. We have no doubt that the Government of India will respectfully reject the suggestion made by this Bombay co-operator as being impracticable and against the very principles of Co-operation.

EXPANSION OF SODA ASH PRODUCTION

FACTORS THAT NEED TO BE CONSIDERED FOR LOCATING A THIRD PLANT

[*By Dr. L. A. BHATT, M.Sc., Ph.D. (London), D.I.C., A.I.I.Sc.*]

SODA ash is one of the basic chemicals required as a raw material in the production of glass, enamelware, ceramics, caustic soda, silicates and other chemicals, as also in the finishing processes of textile industry. Considerable quantities are required by the laundry trade and washerman. It must, therefore, be available at as cheap a price as possible so that productions in which it enters do not become unduly costly. If it is realised that even today the price of soda ash in the U.K., the U.S. and on the Continent is between Rs. 130 and Rs. 160 per ton and that in India it is Rs. 460 per ton, the difficulties of the consumer industries can well be appreciated, especially when such consumer industries have to be sustained through tariff protection.

Prices of soda ash in India are high because of two factors. First, soda ash production has been granted tariff protection and, secondly, the cartelisation methods followed by producers in the U.K. and on the Continent demand high prices from Indian importers. Tariff protection granted to an industry presupposes that, within a reasonable period of years, the industry will be able to take care of itself and survive the foreign or internal competition. Let us, therefore, examine if the industry, as it exists in India today, is capable of fulfilling this role in future.

As it happens at present, the total Indian requirements of soda ash are of the order of 115,000 tons annually. As against this, local production by two units in Saurashtra has been steadily going up during the last few years, with the result that, in 1953, soda ash production reached 55,822 tons, as against the established productive capacity of 54,000 tons. This is due mainly to the Government of India's policy of regulating imports very judiciously.

The target capacity indicated in the first Five-year Plan is 150,000 tons by the year 1955-56. As against this, the two existing units of soda ash are increasing their capacity from the present 54,000 tons per annum to 80,000 tons per annum. Even assuming that their plans will be successfully implemented, there will be, at the present rate of consumption, a gap of 35,000 tons which will need to be bridged by imports from outside. If the figure of the first Five-year Plan materialises and consumption reaches a total of 150,000 tons annually, India will require an import of 70,000 tons per annum.

Normally, such a situation, wherein a country produces half its requirements and imports the balance, should lead to healthy competition by which the consumer benefits. In this particular instance, however, the traditional source of supply to India, namely, the U.K., raised the c.i.f. value to India to bring the price in parity with the sale price of Indian manufacturers, as fixed by the Indian Tariff Commission. It did so, evidently because it knew that India must import this basic chemical and that, in a cartelised product, India must pay the price it demands. Thus, protection to the soda ash industry in India has proved an all-round costly measure to the consumer industries.

Before analysing the reasons for the very high costs of soda ash produced in India, let us get acquainted with the economics of production. For every ton of soda ash produced, two tons of salt and one and a half ton of good grade limestone are required. Also one ton of coal and 1.5 ton of coke are needed for process steam, power and lime burning. Availability of salt and limestone at cheap costs is, therefore, a necessary pre-requisite for economic production of soda ash, as the quantities of raw materials required are much larger than the end product and also coal and as such cannot bear haulages over long distances. It will be pertinent to recall here that the Alkali and Chemical Corporation plant located at Khewra (now in Pakistan) had to pay only As. 8 per ton by way of royalty for using the mineral salt in the Punjab. This is the price at which mineral salt of a much purer grade than sea salt is available to American manufacturers of soda ash at Pennsylvania.

In India, apart from the high cost of salt, namely, Rs. 15-0-0, per ton, the Government collects a cess of Rs. 3-6-0 per ton of salt consumed by the soda ash industry. A well planned salt production from the sea near the factory site of soda ash should not cost more than Rs. 6 per ton. But the Government must exempt this industry from the levy of cess on salt. Similarly, an adjacent source of limestone mechanically querried should be capable of delivering limestone to the factory site at Rs. 5 per ton maximum. In the U.S., cement factories get their limestone delivered to them at a price of 20 to 30 cents (Re. 1 to Re. 1-8) per ton. The present manufacturers of soda ash have to secure their limestone from sources more than 100 miles away from their factory sites, with the result that their limestone costs them Rs. 18 per ton delivered to their factory site. All these facts are given to indicate that all is not well with the cost of raw materials of the two units manufacturing soda ash in Saurashtra because of mislocation of their plants.

As against the cost of raw materials, the quantities of raw materials actually consumed by units of uneconomic size are much more than the normally accepted requirements per ton of soda ash produced. Indian plants consume on an average two tons of salt and 1.8 ton to 2 tons of limestone per ton of soda ash produced. These findings by the cost-accounting section of the Tariff Commission should warn the future *entrepreneurs* in this field against uneconomic units and any long-distance haulage of salt and limestone for the unit production of soda ash.

To produce salt economically, the site selected must have a minimum rainfall and a maximum number of sunny days in the year. There should be adequate breeze, preferably from the seaside, for the removal of water vapour generated from the evaporation of brine in shallow basins. Temperature data of the location needs to be studied, for the higher the temperature the better is the evoporation by solar heat. Facilities must be provided for economic pumping of the brine and removal of the crystal salt, by adequate trolly transport to the adjacent factory site. Limestone required for soda ash must be dense and capable of remaining hard ever after burning in suitable kilns. It must be minimum 90 per cent. and must not contain siliceous impurities exceeding 3 to 5 per cent. silica content. It must be as cheap as possible and hence should be nearest to the proposed factory site of soda ash.

Adequate quantities of soft water, to the extent of two million gallons per day, should be there for a unit of 400 tons soda ash per day. The quantity of water required can be reduced to some extent, if concentrated brine is taken into process, instead of taking salt and dissolving it in water so as to use it in the process. The process of refining brine by treatment with chemicals will, however, prove costly, as against natural refining occurring while salt is crystallising out of brine. If adequate source of water is available, it is better to use crystal salt than brine—the partly concentrated sea water.

So far as fuel is concerned, it is Hobson's choice. Freight structure adopted by the Government of India makes coal available at Rs. 38 per ton at likely sites in Saurashtra or in South India. The losses during haulage and transhipment, which are as high as 10 to 15 per cent. ash content and are of poor thermal value, bring the cost of coal in parity with the price of furnace oil which is available at Rs. 140 per ton. There is not much to choose between the two forms of fuel, except that, in any future emergency, at least some supplies of coal, which is an indigenous product, will be available as against the likely stoppage of supply of imported fuel oils. In any case, for a fairly large unit of soda ash production, namely, 400 tons a day, the quantity of coal required will be 400 tons per day, as against at least 600 tons of limestone and 800 tons of salt. On the return trip, the wagons bringing coal can carry soda ash upcountry. A part of soda ash can also be sent by sea to the consuming centres such as Bombay and Calcutta. Transport of coal by rail-*cum*-sea route is prohibitive in these days, as the cost this way amounts to Rs. 65 per ton to Saurashtra, as against Rs. 38 per ton by the all-rail route.

In the light of considerations stated above, the south coast of Saurashtra becomes an ideal location for any new soda ash project. Places between Jafarabad and Veraval could produce salt for at least 300 working days in a year, as the average annual rainfall in the area varies from 15 to 20 inches. The south-east coast of India can scarcely be considered suitable for establishing salt production and, even if it could be done, it would be a high-priced glory. The very fact that no worthwhile quantity of salt is being produced on that coast these days shows that the economics of salt production on that coast are not favourable. Again, as compared with the enormous quantity of good-grade limestone available all along the cost of Saurashtra stretching from Porbander to Veraval and Jafarabad—an area where production of the cheapest salt is already established and can be expanded at short notice—the availability of good quality limestone in sufficient quantity on the east coast of South India yet remains to be 'proved.'

There is a general belief that there is water scarcity in Saurashtra, as compared with other parts of India. This particular coastline between Porbander and Jafarabad, however, is blessed with a fairly easy supply of sub-soil water, thanks to the Gir Forest area. In fact, the required quantity of good water will not be a difficult proposition. The Saurashtra Government is at present engaged on the task of evaluating all the economic factors discussed above, in order to arrive at a location with optimum benefit of each individual factor. It is only then that a claim based upon proved data should be made for locating the third soda ash plant in Saurashtra.

The main arguments against location of a third unit in Saurashtra are of strategic considerations and transport bottlenecks. Transport is a problem all over India to a smaller or greater extent. It has got to be eased by the authorities concerned. The major industries consuming soda ash are located in U.P., Bombay and Calcutta area. If Soda ash production is contemplated in South India, its transport to northern, western and eastern parts of India is as big, if not a bigger, headache as that to be faced if production is expanded in Saurashtra. The argument based on strategic grounds is one which becomes quite handy when no other convincing arguments are available. The very fact that the Government of India has decided on developing Kandla as a main port, in spite of its being on the northern side of Saurashtra, should silence all arguments about the strategic suitability of Saurashtra for this plant. If argued in the same fashion, the whole of the jute industry located in West Bengal is strategically unsound. For an industry to develop in a particular area, it is the availability of natural facilities that decides the location on an economic basis.

There is a general belief that the existing factories in Saurashtra producing soda ash suffer from lack of adequate supplies of limestone and water. This belief, which is true to an extent in the case of the two existing units, create an immediate reaction against the location of a third unit there. Those who decide the location for a third unit should learn at least from the experience of these two units. This experience is available in concrete shape in the records of the Tariff Commission's enquiry into this industry. Let us, therefore, pause for a while and assess the economic cost of production of a very basic and important chemical such as soda ash before deciding one way or the other. The Government of India has taken a very wise decision in appointing an expert as its adviser on this matter and in asking him to study all the aspects of locating a third unit. Let us hope that this will enable the Government to help the *entrepreneurs* to proceed on the right lines and build the industry on sound lines.—*All Rights Reserved.*

NEW PRODUCTS AND PROCESSES

Portable Atomic X-ray Unit

DEVELOPMENT of a portable X-ray unit using thulium in place of electricity has been announced by the Argonne National Laboratory of the U.S. Atomic Energy Commission. Weighing 10 pounds, the unit produces rays comparable to a 100,000-volt X-ray machine without the need of a power source. Its light weight makes it possible for a doctor to carry the unit to isolated areas where electricity is not available and to take X-ray pictures of persons who cannot be moved. The active component of the instrument is a tiny particle of thulium which has been made radioactive in the heavy water nuclear reactor at Argonne. Thulium is a rare material which heretofore has found little practical application. The thulium is mounted in a source holder and shield equipped with a shutter mechanism in order that X-ray photographs may be made. The shutter is operated by a standard photographic cable release. The instrument does not require an electrical power supply as does conventional X-ray equipment. In addition, it is quite inexpensive. Exclusive of irradiation charges, the total cost of the first model was $40. For diagnostic purposes, equipment of this type will be of greatest value in isolated locations such as army field hospitals, naval vessels and isolated construction projects. Industrially, it has potential use as a density determinant. It may find considerable use in the determination of levels and densities of liquids in closed systems.

Trees Fed Through Their Bark

According to Michigan State College Scientists, fruit trees can be benefited and their diseases overcome by feeding fertilising materials to them through their trunks and branches. The scientists incorporated "tagged atoms" or radio-active isotopes into soluble fertilisers. They soaked cotton gauze in the solutions and tied the strips around branches of fruit trees. Within a few hours, the material was detected within the branches and several inches from the point of application. Entry occurred most easily when the bark was scraped and the fertiliser held in place in the form of a plaster or paste. The scientists, however, point out that roots are still the principal nutrient-absorbing organs of plants. Nevertheless, the fact that nutrients may enter plants through the bark as well as the roots means that several nutritional troubles, such as deficiencies of zinc and magnesium, can be corrected. Also, winter-injured and under-nourished trees can be given prompt supplies of needed nutrients.

Mobile Truck Factory

A mobile truck factory method of manufacturing plastic pipe is being used by Basson Industries Corporation in New York to reduce freight costs. Materials needed for the manufacture of plastic pipe are transported by truck and trailer to the area where the pipe is needed and the product made on the spot. One truck is loaded with the necessary chemicals, chopped glass, coagulate material and resin. The other truck carries the moulding equipment. Sections of pipe can be turned out in a complete cycle of about 20 minutes. Most of the field-produced pipe is used for the transport of oil. But pipe for sewers and carrying corrosive liquids can also be supplied more economically by the truck-factory process in some instances.

Magnetic Tape Broadcasts TV Programme

The Radio Corporation of America (R.C.A.) has broadcast a colour television programme which was first "photographed," or recorded, on magnetic tape. The new technique, it is stated, is the first major step into an area of electronic photography in which motion pictures will be produced quickly and economically without photographic development or processing. The first use of the method is expected to be for making recordings of television programmes for later broadcasting. This will replace the present method of using films made by regular photographic processes.

Electronically-controlled Crane

A special electronically-controlled crane that keeps its load from swinging back and forth has been developed at the Argonne National Atomic Energy Laboratory at Lemont, Illinois (United States). The sway in the crane is prevented by a pair of metal fingers that straddle the crane's cable. When the cable moves to one side and hits one of the fingers, a motor sets into motion to return the crane carriage to the middle position. The crane was designed to protect workers handling radio-active machinery.

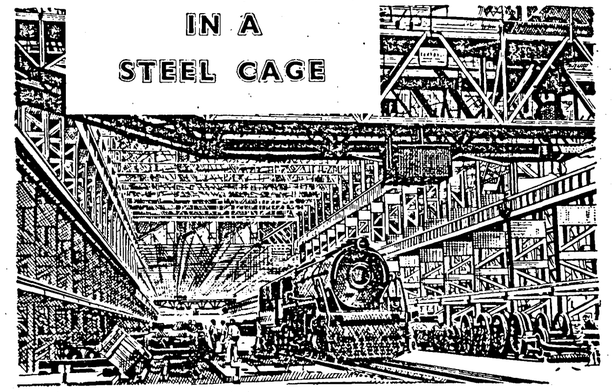
Window-type Air Cooler

The United States Air Conditioning Corporation of Minneapolis, Minnesota, is marketing a new window-type air cooler made of glass fibre. The parts of the cooler, both inside and out, are made of fibrous glass reinforced with plastic. The manufacturing firm states that this construction results in lighter weight and elimination of rust and corrosion with no loss in structural strength.

Jet-propelled Towboat

A jet-propelled towboat is being tested by the Magnolia Motor and Logging Company, of Portland, Oregon (U.S.). The 30-foot towboat can travel in very shallow water since the jet nozzle extends only nine inches below the bottom of the boat. Water is drawn into the boat, pressurised and expelled at the rear of the craft through a nozzle.

THE IRON HORSE IN A STEEL CAGE



Chittaranjan is the largest locomotive manufacturing unit in Asia, designed to build 120 locomotives and 50 spare boilers every year under single shift production. In the construction of these immense workshops no less than 11,000 tons of STEEL were used.

The largest structure in the whole Project is the Main Assembly Shop, which measures 1560 feet long, 212 feet wide and rises to a height of 75 feet. From this massive workshop roll India's locomotives—the visible results of the new industrialisation of India.

GENERAL INSURERS URGED TO ADOPT POLICY OF "LIVE AND LET LIVE"

MR. B. K. SETALVAD ON EVIL OF REBATING

THE reduction in premium rates for life assurance, recently effected by nearly all the insurers in the country, has led many people to ask whether a similar reduction cannot be effected in the field of general insurance. The rates for "general risks," it is held, are high enough to permit such a reduction. It is also argued that the evil of rebating could be substantially checked, if not altogether eliminated, through a downward adjustment in the tariff rates. This view seems to be held in official circles where the men concerned have noted with dismay the fact that, despite the adoption of several measures designed to check the evil of rebating, there are no signs of its complete eradication. Small wonder, then, that the problem of reducing the rates and of the persistent nature of the evil of rebating figured prominently in the speech of Mr. B. K. Setalvad, Chairman of the General Insurance Council of the Insurance Association of India, made at the annual general meeting of the Council, held in Bombay last week.

At the outset, Mr. Setalvad reviewed the situation in the insurance market. Although the administrative machinery to supervise the observance of the Code of Conduct promulgated for the working of the general insurers has been functioning for nearly a year now, no "unbiassed" student of current insurance affairs, as Mr. Setalvad said, will fail to be struck by the fact that this machinery has "made little or no difference in market conditions." It is true, as Mr. Setalvad himself admitted, that allowance has to be made for the necessarily slow progress that can be made in the direction of the eradication of the evil of rebating. After all, the evil has persisted too long to be eradicated in a day. Mr. Setalvad rightly warned that, unless "things improve radically," the insurers run the risk of "complete regimentation by more and stricter general regulations." He added: "Unless we put our house in order, it is quite obvious that the time is not far distant when we will not be permitted the liberty of running our business as best suits our needs and abilities." Proceeding, Mr. Setalvad observed:

"The impression has gained ground that rebating is possible, because tariff rates are too high and leave insurers a big margin which can be used for obtaining business by unfair means. But you all know that motor car business is not particularly profitable and that private car comprehensive rates had to be increased last year in view of the adverse claims experience. You are also aware that, in order to meet overseas competition, tariff insurers in this country have had to slash their marine rates to uneconomic levels. It would appear, therefore, that the criticism in regard to the rates being too high can only be meant to apply to rates in the fire section of the tariff. Restrictions on exports and imports and falling prices have resulted in lower premia while the trade recession apparent since 1951 has done little to improve matters. This would show that the margin of profit in fire insurance business, which is supposed to pay for rebating, is illusory. Even assuming, without admitting, that the fire rates all round are too high, I personally am of the opinion that the remedy now suggested is unlikely to eradicate the disease. Recently, we have had experience of reduction in tariff rates in the marine section which did not have the anticipated result of any appreciable improvement in the market conditions. In the past, we had similar experience in the fire department. I do not expect much better results if the present move is carried to finality. As I said before, the answer to the whole problem lies within ourselves and our attitude to each other. If we trust each other and are willing to adopt the policy of "live and let live," I am sure there is room for all of us. If, however, there is a desire on the part of some of us to expand at any cost, the chain reaction is certain to be a fight for survival at any cost on the part of the smaller units. "I, therefore, once again repeat the appeal which I have made earlier to take what business one can get without resorting to unfair means and be satisfied with it.

Fervent Call

This is a fervent call to insurers to desist from countenancing or encouraging the evil of rebating. Nevertheless, it may be asked whether any valuable results can be expected from such exhortations, considering that past experience shows that the call for good behaviour has been made in vain. It must, at the same time, be admitted that a reduction in tariff rates is not necessarily the best way to check the evil of rebating. Those who strongly hold the view point out that, although the rates were reduced in 1937, it had only a temporary effect in checking the evil of rebating.

Among the three main classes of general insurance—marine, accident and fire—the tariff rates for marine insurance, as Mr. Setalvad emphasised, have been reduced without any marked effect on the evil of rebating. Nor should it be forgotten that, in marine insurance, it is wrong to go by the experience of a few years, for a period of favourable experience may well be followed by a prolonged period of unsuccessful underwriting. It is necessary that insurers should be allowed to build up ample reserves when times are good, so that they may be able to meet the losses in a subsequent period. In accident insurance, the claims experience has not been particularly happy, although the recent upward revision of rates may have gone some way towards averting serious losses. It is only in fire insurance that most insurers are able to show anything like an encouraging level of profits. But any sizable reduction of rates will involve many marginal insurers in serious losses.

Tariff Rates

It should, therefore, be clear that the question of reducing tariff rates should be tackled with a certain degree of caution. In this connection, it may be noted that some healthy reduction in fire tariff rates has been effected in the case of cinemas, some classes of restaurants and residential buildings. An abrupt and sizable reduction in rates might not also achieve the anticipated results. This is because the smaller insurers might be tempted, in the event of reduction in tariff rates, to practice the evil of rebating even more vigorously than now, in order to increase the volume of their business and thereby earn a larger premium income. It looks as though the two problems—the problem of reduction in tariff rates and that of checking the evil of rebating—are best tackled separately. But it is essential that an attempt should be made to tackle the former problem without in any way relaxing the efforts that are now being made to tackle the latter problem. From this point of view, the Council's decision to appoint four regional sub-committees to examine the rating structure is a commendable one. It is to be hoped that the sub-committees will deal exhaustively with the problem assigned to their charge, and they will be able to suggest some healthy measures for revising the rate structure.

The efforts that are being made to reorganise the rating structure are a logical growth of the present approach to the problem. But one wonders whether the present approach itself is the correct one. Its failure so far has led some men to ask the question whether a more satisfactory, even if inconvenient, solution is not to let the insurance industry find the correct level of rates through the restoration of free competition. Unhampered by the "Code of Conduct," which is now more honoured in the breach than in its observance, and by a whole series of governmental controls, the industry will, under free competitive conditions, emerge cleaner and healthier than now. If this means the mortality of the weaker and uneconomic units, it may prove a necessary, though painful, price to pay for freedom from inhibiting restrictions on insurance. Perhaps, those who advocate the scraping of all codes of conduct and urge freedom from all controls as the only way out of the present impasse may yet prove to be the correct prophets.

(Concluded from next column)

panies have devoted millions of dollars to research concerning one of the major causes of death—cardio-vascular diseases. At the same time, individual companies have contributed to research on cancer, tuberculosis and other diseases.

Finally, the Ambassador referred to the intimate connection between insurance and national economy. He said: "Like other basic elements in the economy, insurance prospers when the economy as a whole is doing well." The prosperity of American insurance is only one index of the general economic prosperity of that country which has been the leader of private enterprise and economic and political freedom. Insurance in the U.S., as in all countries, is vitally concerned in natural prosperity. It has, as the Ambassador said, a "vested interest in prosperity."

LIFE ASSURANCE IN U.S.

HOW IT AIDS NATIONAL ECONOMY

LIKE all things, life assurance in the U.S. is a gigantic enterprise. Its rapid growth and development form a remarkable chapter in the history of American economic institutions. The experience of insurance companies in the U.S., as in other countries, has followed the development of national economy. Indeed, in this very process of national economic development, the companies have played a notable role. Some idea of the magnitude of the insurance enterprise in the U.S. and also for its distinguishing features can be had from the very illuminating lecture which the Rt. Honble Winthrop W. Aldrich, American Ambassador to U.K., delivered at the Insurance Institute of London.

At the outset, the Ambassador acknowledged the general indebtedness which the U.S. life assurance business owes to the U.K., to the large list of British actuaries, executives and others whose work laid the foundations for American insurance. Secondly, he emphasised the "extraordinary importance" of the role which insurance plays in the "welfare and destiny" of both the U.K. and the U.S. Describing the magnitude of American life assurance business, the Ambassador said that the combined commercial companies have some insurance in force on about one-half of the U.S. population. The business in force amounted, at the end of 1953, to about 316,000 million dollars, that is, about double the volume with which it emerged from World War II, or about 25 times as much as in 1907. Of this total, the large part consisted of ordinary life assurance (195,000 million dollars). Industrial assurances accounted for 40,000 million dollars and group life assurance for 85,000 million dollars.

At the end of 1953, the combined assets of the U.S. companies were 78,600 million dollars. There are now some 800 companies selling life assurance in the U.S. which collect nearly 11,000 million dollars gross premium a year on various kinds of life, accident and health and annuity policies. The premium income, together with other sources of income like investment income, made a total of 14,000 million dollars. The companies handling the business have a total work force (office employees, agents and others) of approximately 350,000.

State Laws

American insurance, as is well known, is governed by State laws. Some co-ordination of insurance supervision is achieved through the activities of the Association of the Insurance Commissioners of the individual States, but there are no national laws and supervision. Again, the laws and regulations of the States confer a somewhat narrower latitude upon the executive judgment of the company boards and officers than do British laws and regulations. The laws of American States have set limits on insurers' investment in ordinary shares (known as common stock in the U.S.), whereas no such restrictions prevail in the U.K. American companies hold hardly one per cent. of their assets in such shares in contrast to about 12 per cent. in the U.K. Another feature which distinguishes American insurance enterprise from the British is that the former is not so international in character as the latter.

Since World War II, the U.S. companies have invested most of their new moneys in mortgages, corporate lands and notes. The total of mortgages in portfolio more than trebled, from less than 7,000 million dollars soon after the war to over 23,000 million dollars in 1953. Nearly one-third of the American insurers' assets are in mortgage, as compared with about one-tenth of the British. Again, about one-third of the investments of American companies are in Government securities as compared to less than one-fifth of British companies. The net rate of interest earned on their total assets by American companies moved upward to an all-time peak of some 5 per cent. in the 1920's. It touched a low of 2.9 per cent. in 1947. Since then, it has moved up to about 3.1 per cent.

American insurers are keenly alive to the importance of promoting national health. Individual companies and groups of companies have shown a growing interest in, and responsibility for, health conservation, disease prevention and prolongation of life. Recently, the companies have placed greater emphasis in research into current disease and health problems. It would appear that both the U.S. and Canadian com-

THE INDIAN BANK LIMITED

CHAIRMAN'S SPEECH AT FORTY-SEVENTH ANNUAL MEETING

PLEA FOR SUBSIDISING EXPANSION OF RURAL BANKING

THE various economic and monetary trends during the past year, which have an important bearing on banking, were reviewed by Mr. R. Sundaram Iyer, Director of the Indian Bank Ltd., who presided over the Forty-seventh Ordinary General Meeting of shareholders of the Bank held in Madras on 1st May, 1954. Referring to industrial financing, Mr. Sundaram Iyer expressed the hope that banks would willingly contribute their mite for the economic advancement and development of the country. He also stated that there was more money in rural areas and, if this was tapped successfully, there would be enough funds for financing trade, industry and commerce and the country could even do away with foreign aid. If banks were to expand their activities to rural areas—the reason for non-development of rural banking was the high cost of branch banking—the Government, he said, should subsidise banks.

The following is the full text of Mr. Sundaram Iyer's speech:

"GENTLEMEN,

"It is really very kind of you to have voted me to the chair for the second year in succession to preside over this forty-seventh annual general meeting of the Bank and I am grateful to you for it.

"The balance-sheet of the Bank as at 31st December, 1953, the profit and loss account for the year ended 1953 and the Directors' report thereon have been with you now for over a fortnight and I am sure you would have studied them with attention and I believe that there will be no necessity for me to read them here again and that you will allow me to take them as read.

"The past year marks a definite turn for the better in the post-war readjustment in almost all countries of the world and India is not an exception to it. Here in India, nature was kind and merciful, there was a good monsoon and, as a consequence, there was increased foodcrop and as a result of it, India had to import less of foodgrains which enabled her to conserve foreign exchange for other important purposes. Trade which was rather dull during the early part of the year, was brisk during the last months of the year. Demand for money for trade was not very high and in consequence, profits of banks generally were lower than in the previous year with, of course, few exceptions. While the volume of export trade in India remained more or less the same in the year under review, the amount realised on account of exports stood reduced by reason of the fall in prices of the exported commodities. India exports raw products and the prices of raw products in world markets had gone down. Anyway, the balance of trade on imports and exports was not disturbed.

Cost of Living

"The cost of living index in the year 1953 has not come down. It will come down only if the level of prices goes down and the present inflationary prices are reduced. To bring the level of prices to normality, there should be greater production of consumer goods and industrial activity. Until such time as India reaches her maximum productive capacity, price levels are not likely to go down. Price level is the result of two factors: one is that of the supply of goods and the other is the fund of money available for purchase of commodities. Increased wages and salaries are demanded to meet the higher cost of living and when the demand is met, more money is available in the hands of the countrymen, and when larger amount of money is made available in their hands, prices of commodities which are of a fixed quantity, rise in competition. So it is a vicious circle. More wages and more salaries mean inflationary prices. The only solution to check these inflationary prices is to make more consumer goods and commodities available by means of larger production. It is to achieve this end that our Union Government has started the Five-year Plan to improve the economic condition of the people of this country by initiating multi-purpose schemes of irrigation, electricity, etc., so that there may be larger production of foodstuffs and other industrial goods to satisfy the growing needs of an ever-increasing population of this country. The Union Government should be complimented on the very bold scheme of the Five-year Plan they have undertaken, and they have in full measure the sympathy and co-operation of the people of this country.

"Unemployment is on the increase. To solve the unemployment problem to some extent, in addition to the Five-year Plan, the Union Government is proposing to start two Industrial Development Corporations with a view to enabling the private sector also to take part in the industrial development of the country, so that more men may be employed and thereby the unemployment position in the country may be eased. Banks may be expected to take a share in the proposed industrial development and expansion in the private sector and it is hoped that banks will willingly contribute their mite to the economic advancement and development of the country.

Bank Deposits and Money in Circulation

"The amount of money in deposit with the Scheduled banks in our country is rather low in comparison to the total amount of money in circulation. The reason for this seems to be that more money is in the rural areas where there are very few banks. So, to attract the moneys in the hands of the people of the country in rural areas, rural banking should develop and rural areas should be served by banks. Besides, people living in rural areas should be made to realise the importance of banking and they should be made bank-minded. By attracting moneys in the hands of the rural population, banks will make these moneys available to trade, industry and commerce and this will tend to improve the economic wealth and position of the country. Another reason is a fairly large amount of money is in hiding and it doesn't come in for circulation as the holders of such money are afraid of making use of them, lest they might be assessed to tax thereon. If all such moneys which are now underground are made to come out, there will be greater availability of money for use by industry, trade and commerce and there will be greater supply of money for economic advancement instead of our country being placed in the position of going in for foreign aid to a great extent. As Mr. G. D. Birla, the Chairman of the United Commercial Bank, pointed out in his speech, the Union Government might issue bearer debentures for the purpose of bringing out such hidden moneys and making them productive.

"To encourage rural banking, Government should subsidise the opening and operation of such rural branches of banks. The reason for the non-development of rural banking is that the cost of branch banking is very high and banks cannot afford to expand their activities in rural areas, unless Government comes to their help by way of subsidy in order to induce them to open branches in rural areas.

"Coming to our own State, in October last year the State of Andhra was formed and now we have, in the place of the old composite Madras State, the Andhra State and the residuary Madras State. Though politically there are now two States out of the old Madras State, economically both are one and the States are interrelated through trade and commerce. The citizens of both these States were living all these years as brothers and the same relationship is bound to continue. We have a number of branches of our Bank in the newly formed Andhra State and our branches there will, I am sure, take their part in the financing of trade and commerce and the development of industries in the newly-formed State.

"Coming nearer home to our own State, there has recently been a change in the Ministry. Mr. C. Rajagopalachari who was invited to become the Chief Minister of the State at a time when trouble was apprehended, has just retired on grounds of health and we wish him a long and well-earned rest. His place has been taken up by the Hon'ble Shri K. Kamaraja Nadar who is a veteran Congressman, who was for many years the President of the Tamil Nad Congress Committee and who has his life and soul in the Congress from a very early age. With his experience, tact and knowledge and judgment of men and things we are sure he will acquit himself very creditably in his new office. We take this opportunity to assure him of our co-operation and support and he has our best wishes.

Balance-sheet

"Next, I have to turn to the balance-sheet and the profit and loss account. You will be gratified to find that the deposits of the Bank have increased at the end of the year by nearly Rs. 1½ crores and the increase is nearly 7 per cent. The total working funds have increased in the year by over a crore. The liquid position of the Bank is high. The combined total of unencumbered investments and cash balances gives a liquid coverage of 56.7 per cent. to the deposits and it is almost equal to the average ratio of liquid assets to deposits of all Scheduled banks put together. The paid-up capital of the Bank stands increased from Rs. 55,40,000 to Rs. 57,80,000 and the reserve fund also has been increased by appropriation of Rs. 2½ lakhs from out of the profits, to Rs. 58 lakhs. You will be pleased to find that our borrowings from other banks stand considerably reduced to Rs. 15 lakhs and the reason for such high liquidity and and lesser borrowings is due to there not being much demand for money from trade. Turning to investments, depreciation in securities is about Rs. 61 lakhs. These are terminable securities and about three-fourths of our holdings in such securities mature within a period of 10 years. While the difference between the market value and the book value is about Rs. 61 lakhs against the Bank, the difference between the face value of the securities and their book value is about Rs. 12,80,000. When the securities are redeemed, there will be a loss of about Rs. 12,80,000 and to meet this loss the sinking fund has been created in which there is now a provision of Rs. 9½ lakhs after the addition of half a lakh this year out of the profits. By the time these securities mature for redemption, we hope to augment the sinking fund by transferring moneys out of the profits of future years every year and thereby bring it up to Rs. 13 lakhs, so as to set off the loss we might incur when the securities are redeemed. The investments stand increased by nearly Rs. 73 lakhs and this increase was necessitated by reason of our not being able to utilise funds profitably consequent upon the demand for money from trade being less. We hope things will be better this year and we will be able to find more profitable channels of investments. Advances show an increase of Rs. 60 lakhs in the year over that of 1952.

"Now turning to the profit and loss account, you will be glad to find that the published gross income of the Bank is greater by Rs. 2,25,000 than that of 1952. This published gross income is after making provision in the year for bad or doubtful debts and other usual and necessary provision. Unusually, we had to make a larger provision for bad or doubtful debts in the year under review and consequently the published gross income shows only a small increase over that of the previous year. The net profit also is shown as Rs. 12,91,000, while in the previous year it was Rs. 14,17,000 and the net profit is, therefore, less by Rs. 1,26,000. The lower net profit is mainly due to the higher cost of deposits and increase in salaries and allowances to staff. Consequent upon the Government coming out for borrowing in the market at higher rates, banks are obliged to pay higher rates of interest on deposits and there is thus keen competition between banks for deposits at higher rates. As regards salaries and allowances to staff, they are mounting up and increase under this item over the figure in the previous year amounts to nearly Rs. 3 lakhs. For your information, I wish to give you a comparison of the position of the Bank fifteen years ago and now, i.e., at the end of 1938 and end of 1953. While capital, reserves, net profit and depreciation in the value of securities have increased 4½ times, deposits, total working funds, deposits' interest have increased 6½ times, and gross income has increased 7½ times, salaries, gratuity and bonus to staff have increased 11 times. So, the increase under the head 'establishment charges', as you will see, has been very considerable. That is one of the reasons why the net profit has gone down.

Bank Awards

"There has been a number of awards touching the service conditions of bank employees. There was the Sen Award, then the Sastry Award and now the Award of the Labour Appellate Tribunal, Bombay, on the appeal against the Sastry Award. The Labour Appellate Tribunal has delivered its judgment only a couple of days back. It is bound to throw additional burdens on banks as you will see from the abstract of the judgment published in the Press. The basic wages have been increased and the dearness allowance has been enhanced. Until we see the full report of the judgment of the Labour Appellate Tribunal and study its implications, it is not possible to know now the extent of the additional burden our Bank will be called upon to shoulder. But one thing is clear: that further burden will have to be borne by us and to meet that burden our earnings will have to go up. Unless that is done, the net profit is likely to go down. We hope that everyone connected with the Bank will put forth his best efforts and do his utmost to improve the earnings of the Bank and maintain its profits, notwithstanding higher costs and higher burdens.

"You will be gratified to find that the book value of the Bank's properties stands at Rs. 1,40,000 after writing off Rs. 25,000 from out of this year's profits and I am sure they will be worth about Rs. 7 to Rs. 8 lakhs. We have, therefore a secret reserve therein.

"You will all appreciate that the Board of Directors have provided in full for all apprehended bad and doubtful debts out of the profits before arriving at the net profit, and have still maintained the dividend at 12 per cent. They have not starved the allocation to reserves which takes Rs. 2½ lakhs and also to sinking fund to which also half a lakh of rupees has been transferred. The staff has not been forgotten and they have been given a bonus of one month's salary. Though the Directors will be pleased to give more to the staff by way of bonus, the profits of the Bank will not allow of greater amount of bonus being paid to them. So, taking account of all these factors, I am sure you will all agree with me when I say that the Bank has, in spite of the several handicaps, worked successfully and has produced satisfactory results.

"During the year, two offices in the City of Madras and five offices in the mofussil were opened. The Bank has, besides the head office, 91 branches, sub-offices and pay offices.

Foreign Exchange Department

"It is now two years since the Foreign Exchange Department of the Bank was started and we are glad to tell you that the department is making satisfactory progress. We hope that in course of time we will develop the Foreign Exchange Department still further with a view to taking a greater part in financing the import and export trade of our country.

"Our overseas branches in Ceylon and Malaya are working fairly well, notwithstanding the recession in prices of tin and rubber in Malaya consequent on the stoppage of stock-piling in the United States of America due to the cessation of war in Korea.

"I am sure you will all be proud along with me, that this Bank which was started in 1907 with a capital of Rs. 10 lakhs, has successfully steered all these 46 years clear of all storms, withstood all shocks and has come up to a position of one of the big nine banks in India. It is my fervent prayer and the prayer of my colleagues on the Board and, I am sure, it is also the prayer of all of you and of those who serve the Bank, that the Bank will grow from strength to strength in the years to come and will acquire further higher position in the comity of the leading banks in India.

"Before I conclude my speech, I have to pay a tribute on my behalf and on behalf of my colleagues on the Board, to all the members of the staff for their loyal and efficient services. Our thanks are also due to the Members of the Local Advisory Boards at all places where we have such Boards for their help, advice and support to the institution.

"Now, gentlemen, I have great pleasure, in moving, the adoption of the Directors' report and the balance-sheet for the year ended 1953."

Messrs. K. Balasubramania Aiyar, Rao Sahib E. M. Muthappa Chettiar, L. Alagusundaram Chettiar and P. V. RM. Kulandayan Chettiar were re-elected Directors of the Bank.

Messrs. M. K. Dandekar & Co., Messrs. Sundaram and Srinivasan, Messrs. V. Soundararajan & Co. and Messrs. Brahmayya & Co. were elected auditors of the Bank for the year 1954.

MONEY SUPPLY IN FRANCE

A preliminary report of the Conseil National du Credit indicates that the money supply in France increased from 4,159 billion francs on 31st December, 1952, to 4,627 billion francs on 31st December, 1953. This increase of 468 billion francs (11 per cent.) was somewhat less than the increase of 481 billion francs (13 per cent.) in 1952. The ratios of notes and deposits to the money supply, which had been remarkably stable in the preceding year, tended to be less stable in 1953, as deposits increased by 14 per cent. while currency increased by 9 per cent. Bank credit to the Government increased by 253 billion francs in 1953, and bank credit to business increased by 242 billion francs. For the year as a whole, gold and foreign exchange holdings of the Bank of France declined by 11 billion francs, although they ceased to decline in the third quarter and increased by 19 billion francs in the fourth quarter. An important development was the increase of 185 billion francs in bank credit to business in the last three months of the year, which was in sharp contrast to the decline in the early months. The increase in bank credit to the Government, on the other hand, was mainly in the first half of the year. The report also noted that certain forms of savings in 1953 were greater than in 1952. Most marked was the increase in savings bank deposits (179 billion francs in 1953, as against 124 billion francs in 1952). Treasury bonds subscriptions by individuals and time deposits were also higher than in 1952.

THE EMPLOYERS' LIABILITY ASSURANCE CORPORATION LTD.

DOMESTIC AND FOREIGN BUSINESS SHOWS ENCOURAGING IMPROVEMENT

THE RT. HON. LORD COURTAULD-THOMSON'S STATEMENT

THE Employers' Liability Assurance Corporation Ltd. has had a "fair measure" of success in achieving the objective of greater spread of business both as between fire and casualty and also geographically, according to The Rt. Hon. Lord Courtauld-Thomson, K.B.E., C.B., Chairman of the Corporation. This view has been expressed by the Chairman in his annual statement to the shareholders, accompanying the Directors' report and statement of accounts of the Corporation for the year ended 31st December, 1953.

The following is the text of the Chairman's statement:

"On 31st December this year, after thirty years as a Director and twenty years as Chairman, I propose to retire from the chairmanship of the Corporation, and it is the unanimous wish of the Directors that Viscount Knollys should be invited to become Chairman in my place. For many reasons the Board would have been glad if Lord Knollys could have continued his notable and successful services as Managing Director. Lord Knollys, however, wishes to relinquish this post, to which he was first appointed twenty-one years ago, because he feels the time has come to facilitate promotion. He has, therefore, for some time, in co-operation with the Directors, been making arrangements for the appointment of a successor as Chief Executive and the consequential changes. In this connection, it is generally recognised that, if promotions and appointments in any organisation are unduly delayed, those involved in the changes might in some cases be too old to embark on the new duties which they are called upon to undertake.

Active Chairman

"Lord Knollys, amongst many other qualifications, has very exceptional knowledge of the United States, where so much of our business lies, as well as of Canada and other business areas overseas, and the Board are glad to feel that as an active Chairman he will still be in a position to provide this experience and knowledge to a special degree, not least in maintaining contact with our overseas business by means of those personal visits which have been invaluable in the past.

"We are glad to announce that it is the Board's intention to appoint Mr. C. E. Keysell chief executive officer of the Corporation with the title of General Manager. With his fine record of service, his knowledge of our business overseas and his long co-operation with the Managing Director, we feel sure that Mr. Keysell will prove successful in the highest degree.

"In order to facilitate and synchronise with these changes, I have stayed on as Chairman somewhat longer than is usual, and in order to complete the sequence of these arrangements the Directors have asked me to submit my name for re-election as a Director at this meeting. Should I be re-elected I would remain on as Chairman until 31st December, this year but would then retire. The Board have expressed a wish that I should then become Honorary President of the Corporation. I need scarcely say how much I should appreciate this honour.

"The combined premium income of our group of companies for 1953 was £27,664,156, an increase of £1,935,333 on that for 1952:

	£
Fire	2,590,511
Motor	10,239,014
Workmen's Compensation ...	5,258,609
Other Casualty	6,974,164
Marine	496,906
Life	2,104,952
Total ...	£27,664,156

"The Corporation's own underwriting profit for the year was £915,828. Our share of the life profits of the Clerical, Medical and General Life Assurance Society was £55,816, and the gross interest on our investments amounted to £849,851. After making a contribution of £320,000 to the staff pension account and charging sundry other expenses of £43,386, there was a total trading profit of £1,458,109, the largest figure ever recorded by the Corporation. From this amount we have provided £885,891 for United Kingdom taxation, leaving our net profit for the year at £572,218. With the balance of £750,667 brought forward from last year, we thus have available a total of £1,322,885. The Directors have appropriated £250,000 to general reserve and recommend the payment of a final dividend at the rate of 3s. per share, making a total dividend for the year of 4s. 6d. per share, less income-tax. This would cost £190,463 net, leaving the carry forward at £882,422, an increase of £131,755 on the year. The Directors have also, this year, approved the transfer of a further £500,000 from inner reserves to the general reserve. With the transfer of £500,000 made from inner reserves last year and the above transfers, the general reserve amounts to £4,250,000.

"Having regard to the present strength of the reserves, the Directors feel that the time has now come to pay up the uncalled capital of 15s. per share on the existing shares by capitalising £1,154,317 10s. from general reserve, in respect of which the appropriate resolution is being submitted to the annual general meeting.

"We are informing the shareholders separately of an issue of fresh capital which we are making. Apart from a small internal issue in 1928, the Corporation's paid-up capital, which is now £384,772, has not been changed since 1921. In this period its premium income has increased from £5,500,000 to almost £25,000,000 per annum and fresh capital is now desirable. Such additional capital would enable the Corporation to continue even more actively its policy of world-wide development, particularly in fire business, to the full extent which its organisation is capable of in all other respects.

"As the result of these operations the total issued share capital will be increased to £2,000,000, which, with the general reserve and carry forward, will then give a total of over £7,500,000.

Fire

"We have continued our policy of the steady expansion of our fire business, and the premiums in this account again showed a considerable increase at £2,443,350, £338,825 higher than in 1952. Although the results in this class were generally favourable, the margin of profit, at £119,266, was no greater than that of the previous year, largely because our United States business, much of which is of a long-term nature requiring high reserves, has continued to develop rapidly.

Accident and General

"The premiums in this account have increased by £1,531,358 to £22,402,866 and the underwriting profit amounted to £796,562 compared with the corresponding figure of £233,171 a year ago. This welcome advance is due mainly to a more profitable experience in the United States, and to a very considerable improvement in the results from Canada, which has returned to its normal role as a source of steady profit.

"Of the separate classes included in this account, motor business was, as usual, the largest, with premiums of £10,239,014, £954,816 more than in 1952, and I am glad to be able to tell you that it has, overall, provided us with a reasonable amount of profit—a welcome reversal of the general experience of recent years.

"Workmen's compensation premiums showed a small decrease of £159,837 at £5,258,609. The modest profits realised in this class from certain of our branches and agencies was almost exactly balanced by correspondingly small losses in other parts of the world.

"Other casualty business included in this account—public liability, personal accident, burglary, plate glass and fidelity—amounted to £6,905,243, an increase of £736,379. These classes generally have again provided satisfactory results.

"Our United Kingdom business continued to go ahead. The premium income was once more some 10 per cent. higher on the year, and the overall profit was bigger. The Home fire account, which was again a good one, showed the best results for several years. Motor business continues to cause concern, but we are hopeful that the increasing attention which is being given to road safety, coupled with our policy of careful selection of risks, will lead to improved results. In respect of our Employers' Liability portfolio, we trust that the revised rates of premium which are being applied will help to place the business on a profitable basis.

"In the United States the improvement in results shown in 1952 continued into 1953, and the experience of companies in general was the best for some years. I am glad to say that the tide has again turned for motor business, the class which has the greatest influence on our total results, although we must expect it, like all tides, to continue to ebb and flow. Increases in 1951 and 1952 have brought rates to a level which appears to have been adequate for the experience of this particular year, although the profit is not sufficient to counteract the loss suffered on balance in the previous few years. In 1953 there was no material change in these rates except for a welcome increase, applicable in 1954, for the compulsory motor insurance in Massachusetts, of which we write a substantial amount. We shall, therefore, receive at least as much by way of premium per risk in 1954 as we received last year and, provided that there is no extraordinary trend in claims, this may again give us the opportunity of making a profit on our United States motor business. The delayed effect of the rate increases granted in previous years assisted towards the 10 per cnt. increase shown in our premiums, which would have been even larger in total if we had not pursued our programme of careful selection of risks.

Casualties

"As many of you may be aware, the death roll on the roads in the United States was over 38,000 in 1953, and 1,300,000 were injured in that year. These are very much higher figures than those for the total casualties in the whole of the Korean war. This terrible record stands in spite of many local road safety campaigns. Now President Eisenhower himself has launched a nation-wide campaign by calling on each State Governor down to the leaders in every small community to take effective measures to reduce accidents. We all earnestly hope to see the desired result.

"Workmen's compensation business did not run as favourably for us as in 1952 and we were able only to break even as the result of the year's transactions. Other classes as a whole made their usual satisfactory contribution to the year's profit.

"Our fire business showed a substantial growth and, consequently, a much heavier charge in the provision for unexpired risks, which is carried at a high proportion of the annual premium income. . . .

"Whilst our business from overseas territories other than the United States does not show so marked an increase as last year, it is nevertheless progressing well, and has contributed substantially towards the total underwriting profit for the year. In Canada, the still appreciable growth in premium income has been accompanied by a notable improvement in the results of our casualty business but, although the Canadian fire business in general maintained the standards of recent years, the results were adversely affected by a severe tornado in the Province of Ontario in May, 1953. This inflicted great damage in the town of Sarnia, where we have substantial connections, resulting in several hundred claims. The return to a profitable basis of operation, after the previous year's unexpected loss, must be very gratifying to Mr. Curtis, our Canadian Manager, to whom we extend congratulations on a good year's work.

"In Australia, too, our growth has continued on a substantial scale, although at a slightly slower rate than we have been accustomed to in recent years, and the profit again yielded by the year's transactions is proof of the general quality of our business there. Our Manager, Mr. Keysell, was able to see at first hand, during his recent visit, the progress which is being made in that country and the satisfactory share which we are taking in its development.

"In August, last year, we received the sad news of the death of Mr. Harry S. Hopkins, who held the Chief Agency for the Corporation in Rhodesia for so many years. Our close association with the firm of Harry S. Hopkins & Co. will continue. Following the creation of the Federation of Northern and Southern Rhodesia and Nyasaland, the Corporation has opened a branch at Bulawayo to assist in the development of our business in these territories.

"In South Africa, difficulties continue to be experienced with our casualty business, a large part of the income of which is derived from motor insurance, and the efforts of our Managers, Joseph Liddle (Pty.) Ltd., to improve this class are indicated in the recent trend.

"Both in India and in Malaya, where trading conditions during the past year have not been at all easy, it is satisfactory to be able to record that our energetic and capable representatives have maintained their premium incomes at a higher level than could have been anticipated, and that both territories yielded profitable results.

"Elsewhere in the overseas markets outside the United States our operations have reflected the local difficulties, but although our motor business in many areas, and particularly in Israel, East Africa and Jamaica, continues to be a source of some anxiety, it is satisfactory to be able to say that our business generally has been well maintained and has contributed its quota to the profits of the year.

Life

"Our associated life office, the Clerical, Medical and General Life Assurance Society, continues to do well. Net new business for 1953, at £7,302,053, showed an increase of £583,933 on the 1952 figure, and the annual premium income exceeded £2,000,000 for the first time. The life assurance fund of £22,046,492 is up by £935,715, and the combined life and capital redemption funds now total £24,447,901.

"During the year there was a considerable appreciation in the value of the Society's existing investments but this was, however, associated with greater difficulty in finding remunerative outlets for new money. In spite of this the gross yield on the Society's investments, as a whole, increased by 2s. 7d. to £5 4s. 8d. per cent. and the net yield by 1s. 9d. to £4 1s. per cent.

Marine

"The results of our marine subsidiary, The Merchants Marine Insurance Company, Ltd., continue to be satisfactory. The net marine premiums totalled £496,906 and the marine fund, at the end of the year, amounted to £698,568, or 140 per cent. of the premium income.

"The drop of over £100,000 in the premium income is due mainly to the fall in world commodity prices and to the general reduction in cargo rates. The widespread rate-cutting in this class of business continues, and rates have reached a new low level. Unless something is done by the market to remedy this state of affairs, it is very likely that this hitherto profitable side of marine business will be running at a loss. In spite of the good work of the Joint Hull Committee, it is doubtful whether hull rates are yet adequate to meet the ever-increasing cost of repairs. There are signs, however, of some improvement in the length of time taken before repairs are put in hand, with a consequent trend towards a reduction in the number and the total cost of settlements made after the third year of account.

"The fire and casualty business, with premiums of £215,823, continued to develop profitably.

"I am glad to say that the improved position of this company has enabled it to declare a dividend at the rate of 5 per cent. in respect of 1953, the whole of which will come to the Corporation as sole owners of the shares.

Aviation

"Our main interest in this market is still through our shareholding in the Aviation and General Insurance Company. The business of this company continued to develop satisfactorily and its operations have again resulted in a profit.

Investments

"The Corporation's total investments (including property and subsidiary and associated companies) amounted to £32,579,590, showing an increase of £3,050,584 on the year. I can report, with pleasure, that their total market values at 31st December, 1953, showed an even greater appreciation than last year over their total book values.

"While in the United States last year, Lord Knollys was able to meet the members of our Executive Committee there on more than one occasion and to discuss with them our investments, which they supervise, so successfully. The prospects of a serious business recession and its possible effects on our portfolio are given watched regularly and carefully, but no material change in our investment policy seems to be called for at the present time. We are fortunate in that the Chairman of our United States Executive Committee, Mr. Lewis Douglas, pays periodical visits to this country, thus enabling us to hear from him personally about our investment problems.

"Last year I indicated that we had considered it best to hold a proportion of short-term securities in the United States. During 1953 we felt that we could, with advantage, transfer a part of these funds, at maturity, into long-term corporate obligations.

"The continuing economic development of Canada has encouraged us to enlarge once more our portfolio in that country by the purchase of further carefully selected bonds and stocks.

Directorate

"We were pleased to be able to announce, in September last, the appointment of Mr. A. G. Stewart to a seat on the Board. Mr. Stewart is Chairman of Stewart and Lloyds Ltd., President of the British Employers' Confederation and President-elect of the British Iron and Steel Federation, and his wide business experience will be of great help to the Corporation.

Overseas Visits

"Lord Knollys paid his customary visit to the United States and Canada last autumn. In Canada, in addition to visting Montreal, Toronto and Quebec, he made special journeys to centres of activity in the development of Canada's natural resources. He visited Arvida, in Northern Quebec, where operates the largest aluminium smelter in the world, as well as spectacular power stations, and many paper mills, and also Sudbury in Northern Ontario, where almost all the world's nickel is produced, and where we have a recently opened branch office. He also made a tour of the area in South Western Ontario where such striking industrial development has taken place, and was able to meet our representatives and agents in such growing towns in that promising district as Hamilton, London and Windsor.

"The Manager, Mr. C. E. Keysell, visited our United States Branch in October last in the course of a long tour of our branches and agencies in Australia, Malaya, Ceylon and Pakistan, while the Assistant Overseas Managers, Mr. A. Wanford and Mr. G. W. Norris, have between them, made journeys to the Far East, East Africa and the Rhodesias.

"By reason of the universal interest aroused by the Coronation last year, we had the great pleasure of entertaining even more of our overseas friends from many parts of the world than usual, and we hope that they retain very happy memories of their stay in this country. Our North American Managers, Mr. Larner from the United States and Mr. Curtis from Canada, were very welcome visitors and, during the year, we were glad to see, among others, General H. D. G. Crerar, C.H., C.B., D.S.O., and Mr. Shirley Dixon, O.B.E., Q.C., two of our Canadian Local Advisory Directors, Mr. Normand Hill, an Australian Local Advisory Director, Mr. E. S. A. Mathie, Managing Director of Joseph Liddle (Pty.) Ltd., our Managers for South Africa and several of our overseas Agents, including M. René Giblain of Le Havre, Mr. Roland Holst of Amsterdam and Mr. Donald Vincent of Nairobi. We were particularly pleased to have with us again Senator Edward C. Stone, who was, for many years, our United States General Manager and who is now the Vice Chairman of our United States Executive Committee.

"I know that you would wish me to take this opportunity of again expressing our warmest thanks to our managers, agents and staff in all parts of the world, whose keenness and efficiency have contributed so much towards the success of our year's work.

General Review

"I think it would be of interest, and appropriate, on this occasion to review some aspects of the progress of the Corporation during the past twenty years.

"Our total premiums in 1934 were almost entirely in casualty business, and 83 per cent. of our premiums were in the United States. It was then our aim gradually to achieve a greater spread of our business both as between fire and casualty, and also geographically. This did not mean, of course, that we were anything but proud of the leading position in casualty insurance which we had attained largely because of our energetic pioneer work in this type of business (The Employers' wrote the first liability policy in North America in 1886) for although insurance grows all the time, liability and, indeed, casualty business in all its variety has made special progress. Its total premiums exceed those of fire, and fresh kinds of cover are constantly being called for. These modern requirements we are everywhere well equipped to supply, not least because of our long and wide experience in these classes and our old-established agency connections.

"Nor can we fail to be gratified at our outstanding position in the United States. I am sure that we are fortunate in being so widely and firmly established throughout a country where the opportunities for an insurance company such as ours to march forward with the inevitable economic development of that country are so obvious. One fact alone illustrates what can lie ahead in this field. The population of the United States is now approximately 160 million—twenty years hence it is estimated that this figure will inevitably have increased to 200 million. I do not underrate the difficulties involved in underwriting in the United States, nor in the fluctuations in results which are typical of carrying on insurance business in that country. But our own growth is steady, our assets there have increased to over $100,000,000, and over the years we have traded, and, I am sure, shall continue to trade, at a profit. We can indeed congratulate ourselves that we are able and equipped to continue to advance in the United States in step with the natural development in that country.

"This thought applies equally in the case of Canada, where we have a large and profitable business and can look forward to having our share in the unfolding of the magnificent prospects which exist there to a greater degree, perhaps, than anywhere else in the world.

"But nonetheless we have over the last twenty years thought it wise, as I have already indicated, to increase the spread of our business not only as between casualty and fire, but geographically. I think I can say that we have had a fair measure of success in achieving this, not by writing less casualty or less in the United States, but in writing more fire business and more of all classes in other parts of the world.

"We have, as I have said, aimed at increasing our fire portfolio, and a good opportunity to do this has occurred within the last few years owing to the change in the United States law which has permitted a casualty company for the first time to write fire business in its own name. We have taken full advantage of this and have built up a satisfactory amount of attractive fire premiums.

"We must not forget, too, the very satisfactory progress of our associated companies, the 'Clerical, Medical and General' and the 'Merchants Marine,' through whom we transact life and marine business.

"We are very proud of these achievements of 'The Employers' over the years, particularly because they have been largely accomplished through the splendid team-spirit of our executive management and staff throughout the world. Those qualities, even more than mere figures and records, are the best assurance of success in any business enterprise.

"In this connection, the Board wish to pay a special tribute to Viscount Knollys. Lord Knollys became Managing Director of the Corporation so long ago as 1933 at a comparatively early age and, in regard to his tenure of office, the following facts and figures speak for themselves. In 1934 our total premiums were less than £7,000,000, almost entirely in casualty lines, and some 83 per cent. of them were in the United States. Twenty years later, in 1953, our total premiums were close on £25,000,000. While, however, our casualty business more than trebled, our fire business has grown over sevenfold. In the United States our premiums increased from about £5,500,000 to £19,000,000, but the proportion of total premiums written outside the United States rose during the same period from 17 per cent. to nearly 24 per cent. In addition our free reserves progressively increased up to the present comfortable figure.

"With regard to the past, I should like to say that my long association with the Corporation will always remain in my mind as a privilege and a very happy memory. As to the future, I am confident that Lord Knollys, with his outstanding qualities and widespread experience, will make an ideal Chairman, under whose leadership, supported by our distinguished colleagues on the Board and our most excellent staff, we can look forward to the future with hope and ample assurance."

PROBLEMS OF GLASS INDUSTRY

CONTROVERSY REGARDING AUTOMATIC VS. SEMI-AUTOMATIC MACHINES

ALTHOUGH the overall industrial production in India during 1953 was the highest in any year since independence, there was still a large number of industries in which the trend of production was far from satisfactory. A recent analysis of over 150 industries during the first three years of the Five-year Plan has revealed, we are told, a substantial increase in installed capacity accompanied by a decline in production levels in a large number of them. In these industries, the heavy accumulation of idle capacity has not only resulted in the contraction in employment opportunities, but tended to weaken the competitive status of such units. A typical instance of these disquieting trends is provided by the Indian glass industry. An idea of the hardships facing this industry can be had from the speech of Mr. B. B. Sarkar, President, Bengal Glass Manufacturers' Association, delivered at the tenth annual general meeting of the Association recently held at Calcutta.

One of the factors which have hard hit the industry is stated to be the disequilibrium between the cost and price structure. The rigidity of the cost structure in the face of a recession in demand, resulting in continued fall in selling prices, is considered to be responsible for the closure of a number of units during 1953, adding thereby to the accumulation of heavy unused capacity. According to Mr. Sarkar, out of 36 factories in West Bengal, not more than half the number is working at the moment, and that too, much below their rated capacity. The Draft Report on the Glass Industry prepared by the Ministry of Commerce and Industry has estimated the output of glass goods in 1953 at only 83,156 tons, as against the target of 127,500 tons fixed by the Planning Commission for the year. "It is possibly in consideration of this decline in production," says Mr. Sarkar, "that in the Draft Report, the production target has been revised downward to only 140,000 tons for 1955-56 against the target of 168,510 tons originally fixed by the Commission." He doubts the feasibility of reaching even this reduced target, as (a) high and inelastic cost of production, and (b) decline in the purchasing power of the masses have stood in the way of increasing the volume of output.

Mr Sarkar seeks a solution to the difficulties mentioned above in the adoption of two measures, namely, reduction in costs and increase in the *per capita* income of the country. The reduction in costs is, to a certain extent, within the reach of the industry, in so far as it relates to economies in the cost of raw materials, fuels and labour. With regard to raw materials, the price of furnace oil has gone up, it is stated, by 100 per cent. Again, the freights on coal, sand, lime and finished goods have also recorded considerable increase in recent times. He regrets that innumerable representations made to the Government seeking some degree of relief in respect of raw materials, fuel and freight have been of no avail. He, therefore, feels that both his Association and the All-India Glass Manufacturers' Federation should approach the Government, once again, and put forward effectively, the case of the industry before the appropriate authorities. To quote Mr. Sarkar: "The glass industry is now at the cross roads and there is urgent need to chalk out its future plans and programmes of development through close collaboration of the Government and the industry on sound lines with the aid of fully automatic and semi-automatic units with reservation of respective spheres of activity."

Future of Semi-automatic Units

The future of semi-automatic factories would appear to be causing considerable headache to the glass industry. In foreign countries, with the advent of full automatic machine, accounting for 90 per cent. of the total output of glass, semi-automatic factories went out of existence within a decade. In India, most units are semi-automatic factories, but there is a growing demand for products manufactured by full automatic factories. One leading factory has started production through these machines. Others may follow suit. But Mr. Sarkar seems to be rather apprehensive of this growing trend towards modernisation, although he does not seem to be totally opposed to the installation of automatic machines. He thinks that indiscriminate installation of such machines may recoil adversely on the full automatic factories themselves The attitude of Mr. Sarkar towards this problem is better assessed by his own analysis of the problem. He states:

"It is at times argued that, since industrial efficiency is much higher on full automatic machines, such factories should be allowed to replace semi-automatic units. Though this opinion is not being directly aired, an indirect effect of this nature is bound to operate, unless the number of full automatic units is controlled. Even if there is a feeling somewhere high up that, for the sake of greater industrial efficiency, full automatic plants should be allowed to replace semi-automatic machines, justifications for the continuation of factories equipped with semi-automatic machines are not lacking. First, the labour absorbing capacity of the semi-automatic factories is much larger than that of fully automatic units. Secondly, semi-automatic factories have attained an efficiency of production by virtue of which, I feel, they are in a position to meet the requirements of a large majority of consuming industries and the general public. Finally, judged by the criterion of cost of production or sale price, semi-automatic factories have successfully reduced the prices of their finished wares to levels which are still far below those of products of fully automatic factories. Finally, a huge amount of national wealth has been invested in the semi-automatic factories and, in case of their going out of production, the entire capital invested will have to be written off and the bulk of the labour force will be thrown out of employment.

"I am not sure whether it is too early for me to take up this line of argument. I have done so only to emphasise the possible reactions of complete mechanisation of production and also to bring to the limelight the desirability of striking a balance between full automatic and semi-automatic factories in a planned way. The first Five-year Plan has already completed three years of its operation. I would suggest the adoption of necessary steps at this stage to work out a plan of balanced development. I am slightly afraid that, in the huge mass of estimates of installed capacity, anticipated demand and production target, the paper evidence in support of more than the necessary number of full automatic factories may be brought forward. I would request the Association, the Federation and interested persons to be on guard regarding any complacent sanction for full automatic machines which may cause confusion and ultimately bring disaster for the Indian glass industry."

It is evident from the foregoing that the controversy regarding the relative merits of using automatic and semi-automatic machinery in the glass industry is more or less similar to the controversy relating to the cotton mill industry and the handloom industry. The protagonists of the semi-automatic factories may find support from the Government which has been biased in favour of labour intensive units. But that does not necessarily mean that their arguments are sound and progressive. The semi-automatic factories may employ more labour but they may not be able to pay this labour as well and provide for its comforts as much as the more efficient units. Nor will they be in a position to make quality products on a large scale, bringing down the cost of production and build up an expanding market.

In the sphere of labour too, the position of the glass industry is not encouraging. As in many other industries, in this industry also, the number of workers employed is far too large in comparison with the capital resources or the value of output. The capital investment per worker being one of the lowest in the glass industry, there is virtually no margin to accommodate even the occasional demands of workers. Again, the leadership of labour unions have been responsible for gross indiscipline of workers. Further, labour laws initiated by Government for the promotion of labour welfare on a scale not commensurate with the industry's ability to bear the burden of these laws have also adversely affected the progress of the industry.

Imports

Despite the numerous handicaps mentioned above, the industry would appear to have achieved considerable success with regard to quality and diversification of production. Thus, the requirements of various types of glass for pharmaceutical bottles, ink bottles, mineral water bottles, excise and milk bottles, penicillin vials, vacuum flasks, etc., have been produced in large quantities and in much better quality. But, the industry complains of competition from foreign products. It is stated that the import policy of the Government should be so adjusted as to help diversification of output and increase in production. Steps should be taken to see that foreign imports do not adversely affect the position of the indigenous units manufacturing diversified products. As raw material such as heavy soda ash, borax, selenium, etc., are not available at home, the Government is requested to ensure the industry of adequate supply of these raw materials at competitive prices. Besides, the refund on duty on imported soda ash which the industry so far enjoyed has been, it is stated, not only withdrawn, but the duty has been enhanced to the detriment of its progress.

Mr. Sarkar further points out that rationalisation of the glass industry has been slow. At the moment, too many factories are making very many things, requiring a large number of different chemical composition, from one and the same furnace. This practice, prompted by the instability of the market, has been adopted, he says, as a security measure so as to ensure quick switch over in times of difficulty regarding sale and transport for any particular type of products. Nevertheless, there is, we are told, full agreement amongst member-factories regarding the desirability of rationalisation. The only difficulty is, according to Mr. Sarkar, the lack of better organisation and adequate resources. The Central Glass and Ceramic Research Institute is stated to have done very good work which could be turned to the advantage of the industry, but old habits and methods of the existing units are in the way. Besides, the Institute is new and a tradition of seeking and giving aid can be built up only in the course of some years of painstaking work. The problem of technical personnel suitable to Indian conditions remains yet to be solved. The foreign-trained technicians have been found to be suited to large-scale factories only. Mr. Sarkar, therefore, suggests that the Institute should chalk out a scheme of industrial research and training under the auspices of the Institute and that factories desiring to depute their experts to work on any of their specific problems should be allowed to take advantage of the facilities available in the Institute.

FIRE * MARINE * ACCIDENT

MR. S. P. JAIN ON SOME PROBLEMS OF INDUSTRY

The problem of modernisation of industry has become the burning topic of the day. Proposals for rationalisation have evoked country-wide protests from labour leaders on fears that modernisation would lead to large-scale unemployment in the country. These protests have been so vociferous that even those in authority seem to have been swayed by them, as witness the remarks on the subject of the Minister for Commerce and Industry during the discussion on the Finance Bill in Parliament a fortnight ago. An analysis of the stand taken by labour leaders discloses that they are guided more by fears of displacement of labour rather than by a careful study of the effects of modernisation on employment. In this context, it is worthwhile pointing out that this aspect has found full emphasis in the speech delivered by Mr. Shanti Prasad Jain, as President of the Bihar Industries Association, at the annual meeting of that body held on Sunday last at Patna. Mr. Jain admitted at the meeting that the process of rationalisation involved some displacement of labour, but it was not retrenchment as it was understood at present. Rationalisation hinged, he observed, on the need for the highest possible productivity and equally for achieving lower production costs. Although some amount of labour would be displaced from work, there would be better efficiency and improvement in the earning capacity of workers. Further, those who were apathetic to rationalisation overlooked the fact that it was not something which could be achieved overnight. It had to take place over a period of years in any industry, as there was always the overriding consideration of finance. And complete modernisation

Notices

THE VELLORE ELECTRIC CORPORATION LIMITED

INTERIM DIVIDEND ANNOUNCEMENT

NOTICE IS HEREBY GIVEN THAT THE Directors have declared:

(a) An interim dividend of 5 per cent. or Re. 0-8-0 per share tax-free on Ordinary Shares, for the year 1953-54.

(b) An interim dividend of 3 per cent. less tax on Preference Shares, for the year 1953-54.

The Dividend Warrants will be posted on or after 1st June, 1954, to those shareholders, whose names stand on the register of members as on 31st May, 1954.

The Share Transfer Books of the Company will be closed from 22nd May to 31st May, 1954, both days inclusive.

By Order of the Board,
CHANDRIE & CO., LTD.,
Managing Agents.

MADRAS, *6th May*, 1954.

THE BORREA COAL COMPANY LIMITED

AT A MEETING OF THE BOARD OF DIRECtors held on the 29th April, 1954, the following Dividends were recommended to be paid for the half-year ended 31st December, 1953, without any deduction for Income-tax paid by the Company:—

On Preference Shares—6¼ per cent. per annum.

On Ordinary Shares—20 per cent. per annum plus 4 annas Bonus per share.

PROFIT OF AZAM JAHI MILLS IMPROVES

OSMANSHAHI CUTS DIVIDEND ON DISAPPOINTING RESULTS

THE performances of the two textile mills under the management of the Industrial Trust Fund, Government of Hyderabad, namely, the Azam Jahi Mills Ltd. and the Osmanshahi Mills Ltd., during the year ended 30th September, 1953, have not been quite uniform. While the earnings of the Azam Jahi have been higher than those for the previous year, those of Osmanshahi show a contraction. Thus, the gross profit of the former has registered an increase from O.S. Rs. 7.92 lakhs for 1951-52 to O.S. Rs. 11.77 lakhs, which, it may be noted incidentally, is the highest in the past five years. The gross profit of the latter has suffered a shrinkage of I.G. Rs. 3.10 lakhs to I.G. Rs. 7.67 lakhs.

The dividend to the shareholders of the Azam Jahi Mills has been maintained at 6 per cent., a rate which was paid for the previous two years, after it was raised from 5.5 per cent. paid for 1949-50. The distribution to the shareholders of the Osmanshahi Mills, which had been raised successively from 5.5 per cent. for 1949-50 to 6.5 per cent. for 1950-51 and to 7 per cent. for 1951-52, has been cut to a modest rate of 4 per cent. for the year under review. It may be noted that the dividend for 1952-53 is the lowest for the last 13 years.

The following comparative tables, giving the salient features of the results of the two mills for the last four years, give an idea of their progress in these years:

AZAM JAHI MILLS

(In lakhs of O.S. Rs.)

	For the year ended 30th September			
	1953	1952	1951	1950
Sale proceeds (net)	176.77	518.62	162.71	141.81

* Including provision for taxation.

The year under review was not entirely free from controls on textile goods. The controls on prices of a number of varieties of cloth were first relaxed in October, 1952, but it was not until July, 1953, that the entire control on prices and distribution of cloth was removed. Thus, for only three months of the year under review, the two companies enjoyed the freedom from all controls over prices and distribution. Referring to the trading conditions that prevailed during the year under review, the Directors observe:

"In order to protect the handloom industry, Government introduced the *Dhotis* Control Order, whereby mills are restricted in the production of *dhotis* to 60 per cent. of the previous production, this resulting in overproduction of other qualities, which again affected prices adversely. The net result of decontrol of cloth, however, was that prices declined and a buyers' market resulted. The movement of cloth, especially after the summer, has been extremely slack and with mounting stocks, the industry was faced with tremendous difficulties. During the year, your mill was fortunate to obtain a quantity of Government orders at remunerative prices which helped to increase the profit. On representations made by the industry, Government removed all restrictions on exports and licences were freely issued. Considering that the year under review has been a difficult trading year, your Directors feel that the results have been satisfactory. The Mills continued to work three shifts throughout the year and production has been well maintained."

It will be observed that there has been a rise of O.S. Rs. 18.15 lakhs in the sale proceeds of the Azam Jahi Mills. The rise in sale proceeds of the Osmanshahi Mills, however, is no more than I.G. Rs. 5 lakhs. The saving in cotton consumed, on the other hand, is greater in the case of Osmanshahi. There has been a substantial increase in expenses of both the mills, but the rise in expenses of the Osmanshahi has more than offset the increase in sale proceeds and the saving in cotton consumed. This accounts for the shrinkage in profit of the Mill.

The balance-sheet of the Azam Jahi as on 30th September, 1953, shows that the reserves and surplus aggregate O.S. Rs. 52.05 lakhs against a paid-up capital of O.S. Rs. 71.94 lakhs. The gross block of the value of O.S. Rs. 206.07 lakhs has been written down to O.S. Rs. 155.54 lakhs. The current assets aggregate O.S. Rs. 118.70 lakhs as against the current liabilities amounting to O.S. Rs. 150.24 lakhs. Of the current liabilities, loans from bank secured by hypothecation of movable assets and guaranteed by the Industrial Trust Fund account for O.S. Rs. 113.49 lakhs.

During the year, the building work of the Azam Jahi Mill was completed and the whole of the spinning machinery and all but 60 looms were erected and most of the extended plant came into operation towards the later part of the year. New machinery of the value of O.S. Rs. 9.72 lakhs was received during the year and most of it has been erected.

The latest balance-sheet of the Osmanshahi Mills discloses that, as against the paid-up capital of I.G. Rs. 87.08 lakhs, the reserves and surplus aggregate I.G. Rs. 62.06 lakhs. The gross block of the value of I.G. Rs. 164.48 lakhs has been written down to I.G. Rs. 101.86 lakhs. The current assets amount to I.G. Rs. 120.03 lakhs and exceed current liabilities amounting to I.G. Rs. 72.80 lakhs by a wide margin of I.G. Rs. 47.23 lakhs.

During the year under review, the installation of the whole spinning plant and all but 67 looms was completed and most of the extended plant came into operation towards the close of the year. New machinery of the value of I.G. Rs. 4.66 lakhs was received and erected during the year.

SHOLAPUR MILLS

On Wednesday last week, the Government of Bombay handed over the management of the Sholapur Spinning and Weaving Co., Ltd., back to Messrs. Morarka & Co., the former Managing Agents. Negotiations for this purpose had been going on for some time. The transfer of control has become necessary on account of the Supreme Court's ruling in its judgment on 17th December, 1953, holding that the Ordinance and the subsequent Act under which the administration of the Company was taken over by the Government were *ultra vires* the Constitution.

The Government of India, it may be recalled, took over the management of the Company, under Ordinance (Emergency Provisions) No. II of 1950, in January, 1950. The Ordinance was later replaced by an Act on 10th April, 1950. By another order, the Government of India delegated its powers to the Government of Bombay which, in pursuance of the powers vested in it, issued an order dated 10th January, 1950, appointing a board of Directors, with Mr. Vithal N. Chandavarkar as Chairman. Since that date, the Company has been managed by the said Board nominated by the Bombay Government.

(Concluded from next column)

amenities reserve and workers' gratuity reserve. In fact, the Directors, have not added anything to the general reserve during the last seven years, except a sum of Rs. 2.15 lakhs, being the balance of sinking fund added two years ago. The distribution to the shareholders has, however, been raised from 7½ per cent. to 10 per cent. because the Directors have felt that the "average return to the shareholders on their investments is very poor."

The balance-sheet of the Company as on 31st December, 1953, discloses that the reserves remain to be augmented considerably. As against a paid-up capital of Rs. 53.71 lakhs, the reserves and surplus aggregate no more than Rs. 8.75 lakhs. The gross block of the value of Rs. 75.79 lakhs, including additions to the extent of Rs. 3.08 lakhs during the year, has been written down to Rs. 39.89 lakhs. The current assets, at Rs. 49.24 lakhs, exceed the current liabilities and provision for taxation amounting to Rs. 26.68 lakhs in all, by a wide margin of Rs. 22.56 lakhs.

ANDHRA CEMENT'S RECORD PROFIT

SHAREHOLDERS TO GET MORE

AN increase of Rs. 3.58 lakhs to Rs. 21.89 lakhs in gross profit is disclosed by the financial results of the Andhra Cement Company, Ltd. (Managing Agents: The Andhra Engineering Company, Ltd., Madras), for the year ended 31st December, 1953. This rise in profit is less marked than that of Rs. 4.32 lakhs noted in the previous year and of Rs. 10.68 lakhs two years ago; it is, nevertheless, satisfactory, considering that a reduction in the price of cement was effected during the year. Moreover, with this increase the Company's profit has reached a record level in its history of 16 years. The net profit, after making provisions for Managing Agents' remuneration, depreciation and taxation, is, however, fractionally lower at Rs. 5.10 lakhs, as compared with Rs. 6.07 lakhs for the previous year. The distribution to the shareholders is proposed to be stepped up from 7½ per cent. paid for the previous two years to 10 per cent. by paying a bonus of 2½ per cent.

The following comparative table provides an idea of the Company's progress in the last three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950
Sale proceeds ..	94.01	71.50	51.05	21.77
Expenses ..	72.08	53.27	37.56	19.86
Gross profit ..	21.89	18.31	13.49	3.31
Managing Agents' remuneration ..	1.34	1.49	1.07	0.29
Depreciation ..	10.00	10.00	7.76	1.13
Taxation ..	5.45	0.75	..	..
Net profit ..	5.10	6.07	5.16	1.89
Reserves ..	..	2.15	1.15	..
Dividends—				
Preference ..	0.15	0.15	0.15	0.15
Ordinary ..	5.10 (D. 7½% + B. 2½%)	3.88 (D. 7½%)	3.83 (D. 7½%)	1.91 (D. 3½%)
Carry forward ..	0.02	0.20	0.25	0.22

It will be observed that the Company's sale proceeds of cement have gone up sizably, representing, as they do, an increase of Rs. 22.51 lakhs over the year, thus maintaining the upward trend since 1950. The sale proceeds have thus gone up by Rs. 72.24 lakhs in the course of the last three years. The increase in sale proceeds during the year under review is due to the satisfactory progress made in production. Evidently, the two kilns of the Company were put into continuous operation without any trouble, unlike in the previous year when there was intermittent trouble in the running of the new kiln. The efficiency of the plant was also improved.

Commenting on the results achieved during the year, the Directors, in their report to the shareholders, observe:

"Your Directors have pleasure in reporting that by their untiring efforts and other favourable circumstances, they have been able to achieve satisfactory progress in production and also clear a good portion of the accumulated stock of clinker by a substantial increase in the sales. This has not, of course, been reflected correspondingly in the year's profits, as the price of cement was reduced during the year. Production costs continued to remain high owing to the rising spiral of wages. The prices of packing as well as of the raw materials also remained high."

Last year, despite the increased production, sales were hampered to some extent by transport difficulties. Referring to the transport bottleneck, the Chairman had said, in his speech at the last annual general meeting, that the Company was making arrangements for providing additional railway siding facilities to cope with the increased traffic. The Company's accounts for the year under review show that a sum of over Rs. 85,000 has been spent for this purpose.

Of the rise in expenses, power and fuel consumed account for Rs. 1.19 lakhs, salaries, wages and bonus for Rs. 0.35 lakh, maintenance and other charges for Rs. 0.60 lakh and packing, forward and commission for Rs. 0.85 lakh.

Notwithstanding the rise in gross profit, the managing agency remuneration is lower. This is because of the reduction in managing agency commission in terms of the agreement between the Company and the Managing Agents, according to which the latter agreed to forgo, for the time being, 37½ per cent. of the annual commission. The net profit is lower because of the increase in the provision for taxation. No addition to the reserves has been made out of the profit for the year under review. The allocations to the reserves made in the previous two years represented provisions made for workers'

(Continued in previous column)

PODAR MILLS' PROFIT SHRINKS

FINANCIAL POSITION COMFORTABLE

THE progressive rise in gross profit of the Podar Mills Ltd. (Managing Agents: Messrs. Podar Sons Ltd., Bombay), noted since 1949, that is, from Rs. 15.96 lakhs for 1949 to Rs. 21.90 lakhs for 1952, suffered a setback in the year ended 31st December, 1953, the exact decline being Rs. 2.24 lakhs, to Rs. 19.66 lakhs. Though this drop in profit is in distinct contrast to the experience of many other mills, it may be noted that it is relatively much smaller than in the case of a few others. In conformity with this recession, the net profit has also contracted by Rs. 1.04 lakhs to Rs. 8.77 lakhs. This is the second year in succession in which the net profit shows a fall, having declined from Rs. 10.93 lakhs for 1951 to Rs. 9.81 lakhs for 1952. Consequently, the allocation to reserves, which had been reduced slightly from Rs. 6.00 lakhs to Rs. 5.51 lakhs in the previous year, has been cut further to Rs. 2.63 lakhs. The dividend, however, has been maintained at 10 per cent. per annum paid for the previous two years.

The sale proceeds of cloth, yarn and waste have all gone up, those of cloth from Rs. 115.59 lakhs to Rs. 139.32 lakhs (gross), of yarn from Rs. 16.70 lakhs to Rs. 19.08 lakhs and of waste from Rs. 1.58 lakhs to Rs. 1.91 lakhs. Offsetting the increase in sale proceeds is the rise of Rs. 6.21 lakhs in value of cotton consumed and of Rs. 4.40 lakhs in expenses. It may be noted, in this connection, that the value of cotton consumed has been arrived at after taking into account the expenses incurred in connection with the purchase of cotton and gain or loss on forward contracts for purchase of cotton. In the year under review, the Company has incurred a loss on such forward contracts, whereas in the previous year there had been a gain.

The following comparative table containing the salient features of the Company's accounts for the past four years, shows at a glance its progress during these years:

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950
Sale proceeds (net) ..	154.09	146.65	159.74	123.84
Cotton consumed ..	84.47	76.26	94.68	72.03
Expenses ..	52.51	47.91	44.74	37.08
Loss on shares ..	0.14	1.06	0.42	0.10
Gross profit ..	19.66	21.90	20.92	16.13
Managing Agents' commission ..	1.09	2.09	1.93	1.43
Provision for—				
Depreciation ..	1.00	1.00	0.50	0.50
Taxation ..	8.00	9.00	7.50	6.00
Net profit ..	8.77	9.81	10.93	8.14
To reserves ..	2.63	5.51	6.00	4.16
Dividends—				
4 per cent. preference ..	0.40	0.40	0.40	0.40
Ordinary ..	4.00 (10%)	4.00 (10%)	4.00 (10%)	3.80 (9%)
Carry forward ..	2.99	1.25	1.26	0.83

In consonance with the decline in gross profit, the Managing Agents' commission is lower, and so also the provision for taxation. The transfer to depreciation, which had been raised from Rs. 40,000 to Rs. 1 lakh last year, has been maintained at Rs. 1 lakh. Out of the net profit, the allocation to the reserve fund amounts to Rs. 1 lakh, having been reduced from Rs. 4 lakhs. The dividend equalisation fund has been provided with Rs. 1 lakh, the same as in the previous year. The rehabilitation fund receives Rs. 63,213 as against Rs. 51,467 last year. In addition to the aforesaid sum provided out of the profit, a sum of Rs. 36,787 has been transferred to the rehabilitation fund from the net E.P.T. post-war refunds received during the year. The distribution of 4 per cent. preference dividend absorbs Rs. 40,000 and the ordinary dividend at 10 per cent, Rs. 4,00,000. The larger sum left to be carried forward, at Rs. 2.99 lakhs, as against Rs. 1.25 lakhs brought in, shows that the dividend has been comfortably maintained.

The Company's latest balance-sheet shows a comfortable financial position. The reserves and surplus aggregate Rs. 46.62 lakhs, after capitalisation of a sum of Rs. 30 lakhs during the years 1943 to 1947, and are equal to over 93 per cent. of the paid-up capital of Rs. 50 lakhs. The gross block of the value of Rs. 24.64 lakhs has been provided with a depreciation fund of Rs. 22.50 lakhs; in other words, the gross block has been written down to the extent of nearly 92 per cent. The current liabilities amount to Rs. 24.42 lakhs and provision for taxation to Rs. 17.57 lakhs. These together are covered more than three times by current assets aggregating Rs. 136.47 lakhs. Of these current assets, cash balances alone account for Rs. 51.20 lakhs and exceed the current liabilities and provision for taxation by a decent margin.

The Rs. 100 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 153-12 *cum-div.* On an *ex-div.* basis, the latest dividend gives a yield of about 7 per cent. per annum, free of tax.

Points From The Chair

Trade Union Politics

"THERE are disturbing factors in the industrial life of England today which cast a dark shadow over our future and which demonstrate only too clearly the moral *malaise* from which we are suffering. Let me give you one or two examples which have occurred (not, I'm glad to say, in the cement industry) in recent weeks. A man honours his obligation to his employer and refuses to cease work for a day at the behest of union leaders. He is, thereafter, shunned by his workmates and later leaves his jobs for new employment with a nationalised industry. There, after a few days, his new workmates demand his dismissal under threat of a strike and the employer weakly dismisses him. Such incidents are by no means confined to the nationalised industries. Have employers in these cases neither guts nor self respect? Have they no sense of loyalty to a loyal employee?—for loyalty should be a two-way traffic. There can be but one answer to a threat if the threatened is to retain any vestige of self-respect. A few weeks ago, we heard of a man who did an honest week's work and was fined by his union for doing too much. A man is paid his wages to do his best; if he deliberately does less than that by 'go-slow' tactics or otherwise, he is in every moral sense indistinguishable from one who pilfers the petty cash—a thief; and he should be labelled as such. Similar incidents abound today, yet the country remains unmoved. Tyranny is allowed to triumph in the land where freedom once flourished. I am not by nature a pessimist, but I confess that I see no worthwhile future for a nation, whose moral senses are so dulled that such things are passed by with indifference. We seem to have let principle fly out of the window, while we fling wide open the front door and put down a 'welcome' mat to expediency."

HALFORD W. L. REDDISH,
Rugby Portland Cement Co., Ltd.

American Tariff Policy

"Last year, I ventured to say that if we and our partners in the free world are to build the kind of economic and military strength we need for our security, we must all co-operate to reduce and minimise barriers to trade between us. World trade, freely conducted by private enterprise, increases material well-being, promotes higher standards of living and develops friendly intercourse among free peoples. The strength of all free peoples today lies in unity; their danger is discord. We look to the U.S.A. as a powerful creditor country to give the lead in freer international trade. And it is gratifying to know that, while she built up her prosperity as a debtor country with tariffs, now that she is a powerful creditor country President Eisenhower has seen wise to present plans to Congress within the last few weeks for an annual 5 per cent, cut in selected American tariff duties over the next three years. His own party has rather frowned on his proposals, but, in contrast, the Democrats have praised the President for his boldness in challenging his own party and have promised their support. He has also asked for power to reduce by 50 per cent. tariffs on products imported in negligible volume. The President, who used Mr. Butler's 'Trade not Aid' slogan, warned Congress that if the United States failed in its trade policy 'We may fail in all.' Let us hope that President Eisenhower may succeed. . ."

J. F. A. SWANSTON,
The English Association of American Bond and Shareholders, Ltd.

Rationalisation

"As for the prospects for the current year, . . . the sellers' market has given place to a buyers' market. This situation calls for a radical approach and it is now recognised that, if we are to face the present keen competition, emphasis must be laid on production of quality goods, lowering of production costs, and improving the productive effort of labour. With regard to bringing down costs of production, I am glad to tell you that various active measures are being taken to effect economies in all possible manner and, added to it, the technical and supervisory staff have been strengthened recently. With regard to improving the productive effort of labour, this can be achieved only if labour realise that it is in their own interests to give their wholehearted support to a scheme of rationalisation for increasing production and minimising cost."

VINAYAKRAO KORATKAR,
Osmanshahi Mills Ltd.

Mica Industry

"The position of the mica industry is, I understand, extremely difficult. India used to enjoy monopolistic position in the world mica market. With the fall in demand for mica splittings which make the bulk of the trade, judging from the value of exports and foreign buyers asking for upgraded qualities, many of the mica mines, especially the smaller ones, have been severely affected in this country. Stocks have accumulated and retrenchment and closure have had to take place. I feel that while efforts may be made to improve the export market, the possibilities of utilising mica as a raw material in this country itself by starting new industries must be seriously investigated. The mica industry is one of national importance and its development should receive the earnest consideration of both the State and Central Governments. The Bihar State must take particular interest in this industry. To facilitate the development of the industry and easy movement of materials, etc., Government have to assist by constructing good roads in the mica fields. The industry is contributing for the purpose, but the benefit in return is practically nothing."

SHANTI PRASAD JAIN,
The Bihar Industries Association

COMPANY MEETINGS AND DIVIDENDS

NEW MANBHOOM COAL CO., LTD. Half-yearly General Meeting, Calcutta, 17th May, 1954. Transfer books remain closed from 10th to 17th May, 1954, both days inclusive.

SOCIETE GENERALE INDUSTRIELLE DE CHANDERNAGOR (SOCIETE ANONYME) (GONDALPARA MILL). Annual General Meeting, Calcutta, 18th May, 1954. Dividend: Rs. 15 per share. Transfer books remain closed from 4th to 18th May, 1954, both days inclusive.

PORT SHIPPING CO., LTD. Half-yearly General Meeting, Calcutta, 19th May, 1954. Dividend: As. 8 per share. Transfer books remain closed from 6th to 19th May, 1954, both days inclusive.

SEEBPORE COAL CO., LTD. Half-yearly General Meeting, Calcutta, 20th May, 1954. Dividend: As. 14 per share. Transfer books remain closed from 10th to 20th May, 1954, both days inclusive.

ALBION JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 21st May, 1954. Dividend: Rs. 12 per share. Transfer books will remain closed from 15th to 21st May, 1954, both days inclusive.

NEW CENTRAL JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 21st May, 1954. Dividend: Rs. 12 per share. Transfer books will remain closed from 15th to 21st May, 1954, both days inclusive.

GODFREY PHILLIPS (INDIA) LTD. Annual General Meeting, Bombay, 21st May, 1954. Transfer books remain closed from 8th to 21st May, 1954, both days inclusive.

RESULTS OF MCLEOD GROUP JUTE COMPANIES

IMPRESSIVE PERFORMANCE BY I.B. PETROLEUM

Alexandra Jute Mills, Ltd.

THE directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1953.

The accounts show that the profit for the half-year, after making provision for doubtful debts Rs. 25,000 (*nil*) and providing for depreciation Rs. 1,60,000 (Rs. 2,20,000), amounts to Rs. 3,27,301 (Rs. 1,65,685). Deducting therefrom the debit balance brought forward from the previous half-year Rs. 59,046 (Rs. 3,29,636) there is a balance of Rs. 2,68,255 (debit balance of Rs. 1,63,951), to which must be added the amount received on account of post-war E.P.T. refund (net) Rs. 58,574 (*nil*), making a total of Rs. 3,26,829 (debit balance of Rs. 1,63,951). From this the directors have transferred to general reserve account Rs. 1,55,000 (*nil*) leaving an available balance of Rs. 1,71,829 (debit Rs. 1,63,951). Out of this sum the directors recommend a dividend on 9,000 preference shares at 7 per cent. per annum for two years ended 31st December, 1952 and 31st December, 1953, or Rs. 14 per share Rs. 1,26,000 (*nil*) and a dividend on 6,000 ordinary shares at 5 (*nil*) per cent. per annum for the half-year ended 31st December, 1953, or Rs. 2-8 per share Rs. 15,000 (*nil*) leaving to be carried forward Rs. 30,829 (debit Rs. 1,63,951).

Unsettled labour conditions prevailed throughout the period.

During the period trading conditions remained difficult with an upward trend in prices of both raw jute and manufactured goods towards the end of the year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,00,000	Block ...	18,32,099
Reserves ...	5,35,000	Stocks ...	29,01,445
Debentures ...	6,00,000	Stores ...	5,56,812
Liabilities ...	33,15,452	Investments ...	70,000
Profit and loss account ...	30,829	Debts, deposits and advances ...	5,40,207
		Cash ...	80,718
Rs.	59,81,281	Rs.	59,81,281

Chitavalsah Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1953.

The accounts show that the profit for the half-year, after providing for depreciation Rs. 1,35,000 (Rs. 1,70,000) and taxation Rs. 1,45,000 (Rs. 2,10,000) amounts to Rs. 1,29,234 (Rs. 3,15,097) to which must be added the credit balance brought forward from the previous half-year Rs. 1,06,004 (Rs. 60,392), amounts over-provided in respect of liabilities in previous periods Rs. 1,22,174 (*nil*), amount transferred from reserve for jute stocks Rs. 6,50,000 (*nil*) and amount transferred from taxation reserve Rs. 2,40,000 (Rs. 1,50,000), making a total of Rs. 12,47,412 (Rs. 5,25,489) from which the directors have transferred to general reserve account Rs. 10,000 (Rs. 1,25,000) and reserve for machinery renewals Rs. 9,75,000 (*nil*) leaving an available balance of Rs. 2,62,412 (Rs. 2,50,489 after providing Rs. 1,50,000 for taxation reserve). The directors recommend out of this sum a dividend on 5,000 preference shares at 7 per cent. per annum for the half-year ended 31st December, 1953, or Rs. 3-8 per share Rs. 17,500 (Rs. 17,500) and a dividend on 3,01,500 (1,00,500) ordinary shares at 10 (25) per cent. per annum for the half-year ended 31st December, 1953, or As. 8 (Re. 1-4) per share Rs. 1,50,750 (Rs. 1,25,625) leaving to be carried forward Rs. 94,162 (Rs. 1,07,364).

Considerable labour reductions have been effected during the half-year and a large number of old workers have left the mill service taking their gratuities and retrenchment relief. This position continued into 1954. Total amount paid on these accounts during the half-year ended 31st December, 1953, amounted to Rs. 2,02,550.

In terms of the resolutions passed at the Extraordinary General Meeting of the Company held on the 8th December, 1953, the general reserve of the Company was capitalised to the extent of Rs. 20,10,000 by the issue of bonus shares in the proportion of two fully paid ordinary shares for every existing ordinary share held on that date.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	31,00,000	Block ...	25,83,119
Reserves ...	48,00,000	Stocks ...	32,18,037

Profit and loss account ...	1,24,120	Debts, deposits and advances ...	27,49,485
		Cash ...	4,90,822
Rs.	1,05,23,361	Rs.	1,05,23,361

Empire Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1953.

The accounts show that the profit for the half-year, after making provision for doubtful debts Rs. 25,000 (*nil*) and providing for depreciation Rs. 1,00,000 (Rs. 1,20,000) and taxation Rs. 1,35,000 (Rs. 1,75,000), amounts to Rs. 1,64,573 (Rs. 2,57,674) to which must be added the credit balance brought forward from the previous half-year Rs. 57,631 (Rs. 45,656) making a total of Rs. 2,22,204 (Rs. 2,82,730). From this the directors have transferred to general reserve account Rs. 50,000 (Rs. 1,25,000) leaving an available balance of Rs 1,72,204 (Rs 1,57,730). Out of this sum the directors recommend a dividend on 10,000 preference shares at 7 per cent. per annum for the half-year ended 31st December, 1953, or Rs. 3-8 per share Rs. 35,000 (Rs. 35,000) and a dividend on 1,50,000 ordinary shares at 10 (10) per cent. per annum for the half year ended 31st December, 1953, or As. 8 (As. 8) per share Rs. 75,000 (Rs. 75,000) leaving to be carried forward Rs. 62,204 (Rs. 47,730).

During the period labour conditions were unsettled. A strike occurred, the mills being closed from 22nd to 24th December, 1953.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	25,00,000	Block ...	20,55,470

Kelvin Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1953.

The accounts show that the profit for the half-year, after making provision for doubtful debts Rs. 25,000 (*nil*) and providing for depreciation Rs. 2,10,000 (Rs. 1,15,000) and taxation Rs. 2,30,000 (Rs. 2,65,000), amounts to Rs. 2,86,300 (Rs. 3,51,267) to which must be added the credit balance brought forward from the previous half-year Rs. 1,05,320 (Rs. 1,07,129), making a total of Rs. 3,91,620 (Rs. 4,58,396). From this the directors have transferred to general reserve account Rs. 75,000 (Rs. 1,50,000) leaving an available balance of Rs. 3,16,620 (Rs. 3,08,396). Out of this sum the directors recommend a dividend on 10,000 preference shares at 7 per cent. per annum for the half-year ended 31st December, 1953, or Rs. 3-8 per share Rs. 35,000 (Rs. 35,000) and a dividend on 21,000 ordinary shares at 15 (15) per cent. per annum for the half-year ended 31st December, 1953, or Rs. 7-8 (Rs. 7-8) per share Rs. 1,57,500 (Rs 1,57,500) leaving to be carried forward Rs 1,24,120 (Rs 1,15,896).

During the period labour conditions were unsettled. Due to the commencement of double shift working on modern machinery a strike occurred, the mills being closed from 21st to 24th December, 1953.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	31,00,000	Block ...	25,83,119

Nellimarla Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1953.

The accounts show that the profit for the half-year, after providing for depreciation Rs. 96,000 (Rs. 1,20,000) and taxation Rs. 1,80,000 (Rs. 2,14,000) amounts to Rs. 2,68,391 (Rs. 4,92,438) to which must be added the credit balance brought forward from the previous half-year Rs. 31,895 (Rs. 21,345) amounts over-provided in respect of liabilities in previous periods Rs. 84,354 (*nil*), amount transferred from reserve for jute stocks Rs. 2,50,000 (*nil*) and amount transferred from taxation reserve Rs. 1,50,000 (Rs. 1,00,000) making a total of Rs. 7,84,640 (Rs. 6,13,783) from which the directors have transferred to reserve for machinery renewals Rs. 5,50,000 (*nil*), leaving an available balance of Rs. 2,34,640 (Rs. 2,13,783 after providing Rs. 3,00,000 to the general reserve and Rs. 1,00,000 for taxation reserve). This sum the directors recommend should be distributed as follows:

Dividend on 5,000 preference shares at 6 per cent. per annum for the half-year ended 31st December, 1953, or Rs. 3 per share Rs. 15,000 (Rs. 15,000), dividend on 2,62,500 (75,000) ordinary shares at 7½ (20) per cent. per annum for the half-year ended 31st December, 1953, or As. 6 (Re. 1) per share Rs. 98,438 (Rs. 75,000) and carried forward Rs. 1,21,202 (Rs. 1,23,783).

Jute stocks are shown at or under cost. Sold stocks of goods have been calculated at contract sale price and goods unsold on 31st December, 1953, have been valued at market rates.

The Company's mills continued to work in accordance with the Main and Supplementary Working Time Agreements of the Indian Jute Mills Association.

During the period trading conditions remained difficult with an upward trend in prices of both raw jute and manufactured goods towards the end of the year.

In terms of the resolutions passed at the Extraordinary General Meeting of the Company held on 8th December, 1953, the general reserve of the Company was capitalised to the extent of Rs. 18,75,000 by the issue of bonus shares in the proportion of five fully paid ordinary shares for every two existing ordinary shares held on that date.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	31,25,000	Block ...	8,51,654
Reserves ...	22,75,000	Stocks ...	27,01,107

Waverley Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1953.

The accounts show that the profit for the half-year, after making provision for doubtful debts Rs. 10,000 (*nil*) and providing for depreciation Rs. 1,43,000 (Rs. 2,70,000), amounts to Rs. 2,93,256 (loss Rs. 17,727) to which must be added the credit balance brought forward from the previous half-year Rs. 57,059 (debit balance of Rs. 47,909), making a total of Rs. 3,50,315 (Rs. 65,636), from which the directors have transferred to general reserve account Rs. 2,00,000 (*nil*), leaving an available balance of Rs. 1,50,315 (debit balance of Rs. 65,636). Out of this sum the directors recommend a dividend on 15,000 preference shares at Rs. 2-8 per share for the year ended 31st December, 1952 Rs. 37,500 dividend on 15,000 preference shares at Rs 2-8 per share for the year ended 31st December, 1953, Rs. 37,500 (*nil*), an additional dividend on 15,000 preference shares at 1½ per cent. per annum for the year ended 31st December, 1953, i.e., As. 10 per share Rs. 9,375 (*nil*) and a dividend on 2,50,000 ordinary shares at 6¼ per cent. per annum for the year ended 31st December, 1953, i.e., As. 1 per share Rs. 15,625 (*nil*), leaving to be carried forward Rs. 50,315 (debit balance of Rs. 65,636.

During the period labour conditions were unsettled. A strike occurred, the mills being closed from 20th to 25th July, 1953.

During the period trading conditions remained difficult with an upward trend in prices of both raw jute and manufactured goods towards the end of the year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Block ...	19,36,825
Reserves ...	3,45,000	Stocks ...	30,57,175

Liabilities ...	39,28,677	Investments	60,000
Profit and loss account ...	50,315	Debts, deposits and advances ...	5,46,129
		Cash ...	1,05,967
Rs.	63,23,992	Rs.	63,23,992

Indo-Burma Petroleum Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Steel Brothers and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1953.

After providing Rs. 4,61,438 (Rs. 4,34,921) for depreciation on plant, motor vehicles, chattels, etc., allocating Rs. 4,00,000 (Rs. 8,00,000) to general reserve, Rs. 8,469 (*nil*), capital reserve and providing Rs. 44,00,000 (Rs. 27,15,902) for taxation liabilities there remains at the credit of profit and loss account the sum of Rs. 23,51,443 (Rs. 21,61,601) of which Rs. 4,03,476 (Rs. 2,10,329) was brought forward from the previous year.

The usual dividends on preference shares have absorbed Rs. 2,58,125 (Rs. 2,58,125) (net), while the interim dividend of Rs. 2 (Re. 1-8) per share which was paid on the ordinary share capital, on 8th December, 1953, accounted for a further Rs. 5,00,000 (Rs. 3,75,000). The directors recommend the payment of a final dividend of Rs. 6 (Rs. 4-8) per share on the ordinary share capital, payable on 28th May, 1954 which will absorb Rs. 15,00,000 (Rs. 11,25,000) and that the sum of Rs. 93,318 (Rs. 4,03,476) be carried forward to 1954. The profits for the year have again been at a high level, to some extent due to better trading results in Burma and taking into profits a contingent liability on trading provided required. Taxation liabilities have also increased. The directors feel justified in recommending an increase in the dividend on the satisfactory results of the year.

The Company's sales volumes of oil products in all spheres of our trading showed some increase especially in Burma where more settled conditions prevailed.

The Company received during the year a final *ex gratia* payment of Rs. 41,531 from H. M. Government towards the war damage suffered in Burma, and this sum has been placed to capital reserve as was the initial grant received in 1950. A further sum of Rs. 8,469 has been allocated from the profit and loss account this year to round off the amount in capital reserve.

In previous reports the directors have referred to negotiations between the Oil Companies and the Government of the Union of Burma for the latter's participation in the Oil Industry in Burma. Shareholders will doubtless have seen references in the press in January, of this year to the successful conclusion of these negotiations in Rangoon. The Government of the Union of Burma will now become a shareholder, along with the Oil Companies in a new Company which has been registered under the name of Burma Oil Company (1954) Ltd., for the production and refining of oil in Burma.

The directors expect to be able to inform shareholders shortly how the Company will be affected by the new arrangements, which of course are in respect of the operations in Burma only.

The suit against the Government of the Union of Burma relating to the Company's claim for compensation for war damage has, according to the directors, made no further progress during the the year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,50,00,000	Block ...	27,54,901
Reserves ...	1,57,97,964	Stocks ...	35,00,693

Liabilities ...	1,48,34,869	Other assets	1,36,96,433
Profit and loss account ...	93,318	Debts, deposits and advances ...	38,30,614
		Investments ...	63,40,833
		Cash ...	1,78,92,247
Rs.	4,95,62,829	Rs.	4,95,62,829

Port Shipping Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1953.

After providing Rs. 11,761 (Rs. 12,391) for depreciation and Rs. 6,000 (Rs. 7,500) for taxation, the accounts for the half-year show a profit of Rs. 13,071 (Rs. 79,660). After adding Rs. 55,848 (Rs. 50,539) brought forward from the previous half-year and Rs. 1,82,604 (*nil*) for E.P.T. refund (net), there is a balance at the credit of the profit and loss account of Rs. 2,51,523 (Rs. 1,30,199). Out of this amount the directors have transferred Rs. 1,25,000 (*nil*) to general reserve and recommend payment of a dividend of As. 8 (As. 8) per share, absorbing Rs. 70,411 (Rs. 70,411) and leaving a balance of Rs. 56,112 (Rs. 59,788) to be carried forward.

Freight earned during the period shows a considerable decrease compared with the previous half-year, due principally to the fact that the amount of scrap being exported from Calcutta has declined with a consequent effect upon the earnings of the Company.

Owing to inter-Union rivalry, there was considerable unrest amongst the boatmen during the period under review. This resulted in an illegal stoppage of work for one day in September and five and a half days in December, 1953.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	14,08,220	Block ...	26,51,511
Reserves ...	26,00,000	Stores ...	1,05,212
Provision for taxation ...	87,026	Stock of foodstaffs ...	2,131
Liabilities ...	6,35,952	Debts, deposits and advances ...	7,98,335
Profit and loss account ...	56,112	Investments ...	6,28,270
		Cash ...	6,01,851
Rs.	47,87,310	Rs.	47,87,310

Seebpore Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1953.

After providing Rs. 91,000 (Rs. 1,05,000) for depreciation and Rs. 58,000 (Rs. 1,01,000) for taxation and cesses and after transferring to capital reserve Rs. 4,310 (*nil*) being profit in investment account on realisation of the Company's investments, there remains a balance at the credit of profit and loss account of Rs. 66,956 (Rs. 80,584) out of which the directors recommend:— 80,584)

Dividend on 4,000 5 per cent. non-taxable cumulative preference shares Rs. 10,000 (Rs. 10,000), and dividend of As. 14 (Re. 1) per share on 40,000 ordinary shares Rs. 35,000 (Rs. 40,000) leaving to be carried forward Rs. 21,956 (Rs. 30,584).

Raisings for the half-year were 55,749 (73,523) tons as compared with 69,928 tons in the previous half-year and despatches 60,861 (88,132) tons as against 51,645 tons.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,80,000	Block ...	12,65,854
Reserves ...	6,81,598	Stock of coal	2,08,182

Liabilities ...	5,43,781	Debts, deposits and advances ...	4,21,571
Profit and loss account ...	21,956	Cash ...	20,667
Rs.	20,04,242	Rs.	20,04,242

Surat Electricity Co., Ltd.

The directors of the above Company (Agents: Killick Industries Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December, 1953.

The final call of Rs. 25 per share on the 13,750 ordinary shares of the last issue was made payable on 1st October, 1953, making this issue fully called up.

There was no change in the basic rates of supply. A special rebate of 5 per cent. was, however, allowed on the gross amounts of all bills for energy consumed after the meter readings in September, but not applicable to the coal surcharge.

1,303 new consumers were connected to the mains bringing the total number to 21,596, an increase of 5.61 per cent. over 1952.

The quantity of energy sold during the year was 23,619,224 kw.h., as against 16,652,609 kw.h., in 1952, an increase of 41.83 per cent. over the year. The sales for private lighting and fans registered an increase of 4.07 per cent. Low tension motive power sales improved by 29.38 per cent. mainly due to the withdrawal of restrictions by Government. Sales to high tension consumers increased by 1.15 per cent. One more such consumer was connected bringing the total to 10.

Negotiations with the Surat Borough Municipality over the interim tariffs were concluded, and a new contract for the supply of energy, was entered into with effect from 1st August, 1953.

The gross profit for the year amounts to Rs. 4,99,077 (Rs. 5,57,542) after charging depreciation, in accordance with the provisions of the Electricity (Supply) Act, 1948, amounting to Rs. 2,38,236 (Rs. 2,14,366). After providing Rs. 1,20,000 (Rs. 1,32,000) for taxation, Rs. 22,928 (Rs. 40,267) for statutory contingencies reserve and writing off Rs. 1,632 (Rs. 1,439) from new share capital issue expenses, there then remains a balance of Rs. 3,54,517 (Rs. 2,70,398 after providing Rs. 85,000 to dividend fund and Rs. 28,388 for gratuities reserve) which together with Rs. 5,222 (Rs. 2,552) brought forward from last year's accounts, makes a total of Rs. 3,59,739 (Rs. 2,72,950). From this sum an *ad-interim* dividend of Rs. 2-8 (Rs. 2-8) per share, free of income-tax, proportionate to the amounts called up on the ordinary shares and half-yearly dividend on the preference shares which together absorbed Rs. 1,22,823 (Rs. 90,952), are to be deducted. The balance thus available amounts to Rs. 2,36,916 (Rs. 1,81,998) which it is proposed to apply as follows:—

To payment of a dividend for the second half-year ended 31st December, 1953, at the rate of 6¼ per cent. per annum, free of income-tax, on preference shares Rs. 16,250 (Rs. 16,250), to payment of a dividend for the second half-year ended 31st December, 1953, at the rate of Rs. 4-8 (Rs. 4-8) per share (making 7 (7) per cent. for the year), free of income-tax, proportionate to the amounts called up, on ordinary shares Rs. 2,20,081 (Rs. 1,60,570) and balance to be carried forward Rs. 605 (Rs. 5,178).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	56,23,200	Block ...	63,38,924
Reserves ...	12,37,056	Capital issue expenses ...	24,486
Provision for taxation ...	1,76,205	Stores, tools, etc. ...	19,49,619
Liabilities ...	22,72,278	Debts, deposits and advances ...	7,61,987
Profit and loss account ...	605	Investments ...	1,00,500
		Cash ...	1,33,848
Rs.	93,09,344	Rs.	93,09,344

Bengal Jute Mill Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Sorajmull Nagarmull, Calcutta) submit the audited accounts of the Company for the year ended 30th June, 1953.

The accounts showed a gross profit of Rs. 18,46,832 (Rs. 10,33,746) after providing Rs. 2,72,998 (Rs. 2,19,380) for depreciation and Rs. 3,53,121 (Rs. 2,56,297) for interest, commission, allowance and other expenses there was an available balance at credit of profit and loss account of Rs. 12,20,713 (Rs. 5,58,069). To this was added the amount brought forward from the previous year of Rs. 4,28,770 (Rs. 4,07,701) making a total of Rs. 16,49,483 (Rs. 9,65,770). From this sum was deducted provision for bad and doubtful debts and advances, Rs. 2,50,000 (*nil*), and reserve for taxation and (income, super-tax, etc.) Rs. 5,36,000 (Rs. 2,51,000) leaving a balance of Rs. 8,63,483 (Rs. 7,08,770. Out of this the directors paid a dividend of 5½ per cent. per annum on 10,000 redeemable cumulative preference shares for the year ended 30th June, 1953 (free of income-tax) Rs. 55,000 (Rs. 55,000) and a dividend on 4,50,000 (2,25,000) ordinary shares of Re. 1-4 (Re. 1) per share (free of income-tax) for the year ended the 30th June, 1953 Rs. 5,62,500 (Rs. 2,25,000) leaving to be carried forward a sum of Rs. 2,45,983 (Rs. 4,28,770).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	55,00,000	Block ...	27,38,937
Debentures ...	20,00,000	Stocks ...	34,61,633
Reserves ...	35,95,000	Stores and spare parts	11,80,101
Provision for taxation ...	67,89,417	Other assets	14,44,039
Liabilities ...	50,12,476	Debts, deposits and advances ...	74,53,334
Profit and loss account ...	13,99,483	Investments ...	5,000
		Cash ...	80,13,332
Rs.	2,42,96,376	Rs.	2,42,96,376

N.B.—Figures within brackets relate to the corresponding period of the previous year.

By Order of the Board,
SAHU JAIN LTD.,
Managing Agents.

DALMIANAGAR, 3rd *May*, 1954.

NEW PUBLICATIONS

Post-war Agricultural Problems and Policies in India. By S. Thirumalai. Sole Distributors in India: Vora and Co. Publishers Ltd., 3, Round Building, Bombay 2. Price: Rs. 12.

THIS book, which has been published by the Institute of Pacific Relations in co-operation with the Indian Society of Agricultural Economics, gives up-to-date details and extensive analysis relating to India's agricultural problems and policies. The first part of the book provides a historical background of Indian Agriculture, outlining the conditions that used to prevail under the British rule and the developments resulting from the Second World War. The second part relates to a detailed study of the basic factors in Indian Agriculture such as land utilisation, rainfall, particulars of crops raised, level of food consumption, trends in yields of crops, etc. The third part of the book deals with the present-day agricultural problems and farm organisation, technological improvements in Indian agriculture, credit facilities, and plans for social change and rural welfare as exemplified in the Community Development Projects.

A book which seeks to attempt a meticulous survey of the vast field of agricultural problems within a space of about 300 pages cannot, by its very nature, be expected to deal in detail with all the problems, including agricultural credit. Still one cannot help feeling that the author's treatment of the subject of agricultural credit, which is a pivotal problem in the scheme of agricultural development, is somewhat cursory and inadequate. One may not agree with the author's view about the need for State control of the co-operative movement, but the author has rightly emphasised the need for systematic supervision of co-operative credit societies. Further, the author is of the yiew that there is no need for any duplicating organisation for provision of agricultural credit in various States when there is a complete integration of the co-operative movement with the Reserve Bank of India. This is doubtless the correct view of the situation; after all, credit and farm development are parts of one whole issue in the evolution of long-term credit policy in agriculture. The important problem is one of proper integration and nationalisation at all levels of the institutions for development of co-operative system.

The book as a whole gives an interesting overall picture of Indian Agriculture and will prove to be very useful to the students who wish to carry on a systematic and dispassionate research relating to the solution of agricultural problems. To administrators and policy-makers alike, this book may prove to be an important guide for evolving a scientific policy for the reconstruction of agriculture. The author deserves to be complimented for the charts and graphs which he has used for bringing out, in telling manner, certain important statistical data relating to such subjects as trend of prices, pattern of agriculture, Five-year Plan, etc. The book is attractively got up but rather heavily priced. In short, it provides in "capsule form" the various problems facing Indian Agriculture, with up-to-date statistics.—T. S. K. CHARI.

The Economic Development of the Great Powers and India (Third Edition). By Dr. S. G. Panandikar. Publishers: Kitab Mahal, 56-A Zero Road, Allahabad. Price: Rs. 5-8.

The importance of this book is mainly historical and academic. For it pertains to a period which is four decades old. Thus, in this book, Dr. S. G. Panandikar, the well-known Indian economist, has portrayed the economic development of the great powers and India from the early times up to 1914. The author would have done well if he had brought the review more up-to-date, that is, by incorporating the changes that have occurred in the economies of the countries during the last forty years, especially since the Second World War. This should not, however, detract the intrinsic worth of the publication, since its aim is, as the author says, to focus, within a reasonable compass, the readers' attention on the fundamental economic and social forces at work in India and other countries, so that the reader can study the causes of the great contrast in the nature of economic development in these countries.

Before analysing the features of the modern economic order, Dr. Panandikar describes the old economic system and studies the influence of the social and religious institutions on economic life. He then studies the Industrial Revolution in the West and in India. In the subsequent three chapters, he studies the revolutions in the spheres of transport, commerce and agriculture. Aspects relating to the agrarian developments in India in the modern era are discussed in a separate chapter. There is an interesting chapter dealing with the factory laws in several countries, besides a brief account of the trade union movement and social insurance. The concluding chapter is devoted to the changes of economic thought and policy in modern times—*laissez faire*, State intervention and commercial policies. That the book has run into three editions shows that its utility as a text-book in economic history, continues undiminished.

Britain—An Official Handbook. Prepared by the Central Office of Information, London. Available in India: British Information Services, Eastern House, Mansingh Road, New Delhi. Price: Rs. 4-8 plus Rs. 1-2 Postage.

Do you want to know more about Britain today—its people, institutions, administration, economy? A factual handbook of some million and a half words has been produced in London which will answer all your queries. Entitled *Britain—An Official Handbook*, it presents, in condensed, easily readable form, a wide range of basic reference material dealing with British Government and administration, the national economy, transport and communications, labour and management, social welfare, religion, science and the arts, broadcasting and the press.

The book presents a word-picture of the British scene which has never been attempted before. It will prove invaluable to the traveller —business man or holiday-maker—who comes to the United Kingdom. Its reference index will enable him to make a quick and simple assessment to help him to understand the people, the culture, and the institutions of the country. For the writer and journalist, the book is important, as it can provide a pick check on facts. For the ordinary reader who takes an interest in British affairs, the book is a "must".

Among its hundred and one paragraphs, it tells how the British are governed, how much they pay in income-tax, how research is developed, how much is spent on national defence; how law and order is maintained, the connection between Church and State; the size of the Hindu and Muslim communities, how trade and industry are organised, who own British newspapers and how many people buy them, what Britain does for its youth, and so on. Its extensive bibliography should prove useful to the reader whose appetite for British affairs the handbook has whetted.

(Concluded from next column)

four of them to find out if they are suitable for small-scale farming. Exports from India during the last few months since the conclusion of the trade treaty amounts to Rs. 4 lakhs, while imports into India from the U.S.S.R. are valued at Rs. 22 lakhs. No capital goods were imported during the period. It is left to importers in India to import whatever they like.

—*Commerce Minister*

Investment in Tata Locomotives

There is no proposal under consideration at present for further Government investment in the Tata Locomotive and Engineering Company, Ltd. The total investment in the Company is approximately Rs. 7 crores, out of which the Government's share is Rs. 2 crores. No dividend has been declared so far.

—*Minister for Railways and Transport*

***Branches at* Bombay, Madras and other important centres in South India.**

R. F. WISHART,
Managing Director.

QUESTION HOUR IN PARLIAMENT

Sugar Refinery

I AM in sympathy with the application for granting a licence for the setting up of a sugar refinery in India, but it is still under the consideration of the Government. The application is for setting up a refinery to refine approximately 70,000 tons of imported raw sugar annually. I have not consulted the sugar industrialists on the subject, as they are sure to oppose it.

* * * *

Shifting of Sugar Mills

I have been trying to persuade several factory owners whose factories are situated in areas in North India where cane supply is difficult to shift to South India.

—*Minister for Food and Agriculture*

New Sugar Mills

Licences have been issued to three industrial undertakings in Madras to set up new sugar factories. The application of another undertaking is under consideration. The Government wants to increase the indigenous production of sugar by another 400,000 tons. While no time limit is fixed for the parties who have been given licence, they are expected to install their factories within a reasonable time.

—*Minister for Agriculture*

Disclosure of Concealed Income

The amount of concealed income discovered under the Voluntary Disclosure Scheme during the three years 1951, 1952 and 1953 was Rs. 71.16 crores. The respective figures for the three years were Rs. 24.20 crores, Rs. 37.04 crores and Rs. 9.92 crores. The aggregate concealed income discovered by the Income-tax Investigation Commission was Rs. 18.12 crores in 1951, Rs. 10.89 crores in 1952 and Rs. 5.92 crores in 1953.

* * * *

Loans to Co-operative Banks

During the period 1st July, 1953 to 5th March, 1954, the Reserve Bank of India sanctioned to the different State co-operative banks for seasonal agricultural operations and marketing of crops an advance of Rs. 1,494.9 lakhs. Out of this, Rs. 1,019.2 lakhs were actually drawn till that date. The State-wise break-up of the amount advanced was: Madras Rs. 190.6 lakhs, Bombay Rs. 439.3 lakhs, Andhra Rs. 259.7 lakhs, Madhya Pradesh Rs. 20.9 lakhs, U.P. Rs. 48.6 lakhs, Orissa Rs. 21 lakhs, West Bengal Rs. 18 lakhs, Punjab Rs. 15.2 lakhs, Hyderabad Rs. 4 lakhs and Saurashtra Rs. 2.7 lakhs. It is not possible for the Reserve Bank to impose any conditions on the rate of interest which the co-operative banks should charge the agriculturists for loans, but the Reserve Bank is giving the loans to the co-operative banks at the rate of 1½ per cent., although the Bank rate is 3½ per cent. The position regarding the rate of interest charged by the co-operative banks, particularly in view of the fact that the Finance Minister himself has admitted that the rate ranges from 6 to 25 per cent. has improved considerably. So far as the organisation of co-operative banks in the States is concerned, it is a matter for the State Governments to deal with.

—*Deputy Minister for Finance*

Loans to Punjab

A sum of Rs. 75 lakhs has so far been advanced as loan to the Punjab Government for the construction of the capital at Chandigarh. The amount to be given in 1954-55 has not yet been decided. The Punjab Government has, however, requested for a loan of Rs. 168 lakhs for the capital project in 1954-55 and the matter is under consideration.

—*Parliamentary Secretary to Finance Minister*

Centre's Aid to Kashmir

A sum of Rs. 8,63,05,000 has so far been advanced to the Jammu and Kashmir Government as interest-bearing loans. About Rs. 233.8 lakhs have been given in connection with development schemes. The rates of interest on the loans vary from 3 to 4 per cent.

—*States Minister*

Chambal Project

The revised estimate of the Chambal Project has been received, according to which the cost of the project will be Rs. 52 crores, instead of Rs. 34 crores. Some estimates and plans have been submitted by the Rajasthan and Madhya Bharat Governments for the purpose of submitting a unified scheme to the Planning Commission. The Chief Engineers of the two States are preparing the combined project report and have promised to submit it by the end of this month. The commanded area has been surveyed in detail. Maps for the major portion of the area have been prepared and those for the remaining portion are under preparation. The expected financial returns are being worked out. The extent of Central assistance will be determined after the final estimate and project report are ready.

—*Deputy Minister for Irrigation and Power*

Indo-Russian Trade

Soviet Russia has offered to supply Indian traders with hydraulic turbines and the offer has been communicated to the Indian Federation of Chambers of Commerce and Industry. Russia has also offered 12 horse-power tractors, and the Ministry of Food and Agriculture proposes to buy

(Continued in previous column)

FUNDS FLOW INTO NEW LOAN

(From Our Own Correspondent)

BOMBAY, 12th *May*

The National Plan Loan, on tap since 19th April last, continued to have its adverse effect on the money market for the third week in succession. Subscriptions to the loan received during the week were of the order of Rs. 10.5 crores. With this, the total subscriptions now stand at Rs. 56 crores.

Such a large flow of funds into the new loan has reduced the volume of floating funds to next to nothing, although there was an influx of funds this week from Calcutta on account of sales of jute and tea bills. The banks have been falling back on the Reserve Bank for accommodation. Inter-bank call money rate is, therefore, unchanged at 3 per cent. Short-term deposits are still being bid at 3 per cent. for one to three months and 2½ per cent. for four to six months. The rate for 12 months' deposit is anything between 2½ per cent. and 3 per cent.

Borrowing by the Government through weekly Treasury Bill auctions remained suspended this week also.

The National Plan Certificate scheme, referred to in this report last week, was officially opened on Monday this week. As the redemption yield on these certificates will be as much as 4½ per cent., a good response is expected from small investors. Banks seem to be expecting diversion of some funds from fixed deposits to this small savings scheme.

The statement of affairs of the Reserve Bank of India for the week ended 7th May, 1954, discloses a marked rise of Rs. 16.55 crores in notes in circulation, contrary to the downward trend in the previous two weeks. There is nothing special about this rise, as it is a common occurrence in the first one or two weeks of every month. Notes held in the Banking Department are, however, down by Rs. 8.2 crores. The net increase in the total notes issued, namely, Rs. 8.3 crores, is covered by a rise of Rs. 10 crores in foreign securities and a fall of Rs. 11.42 lakhs in rupee securities and of Rs. 1.58 crores in rupee coin. In the Banking Department, deposits of the Central Government, as also of those of other Governments, reveal a recession of Rs. 2 crores and Rs. 7.27 crores respectively. But deposits of Banks, as also those of others, have gone up by Rs. 40 lakhs and Rs. 50 lakhs respectively. On the assets side, cash balances show a fall of Rs. 8.36 crores. So also the balances held abroad which have declined by Rs. 8.79 crores. This fall is due to the transfer of sterling securities to the Issue Department. Other loans and advances, however, show a marked rise of Rs. 10 crores.

The Scheduled Banks' statement for the week ended 30th April, 1954, as compared with that for the previous week, reveals a marked fall of Rs. 9.3 crores in demand deposits. Borrowing from other banks have risen by just Rs. 68 lakhs, while those from the Reserve Bank have shot up by Rs. 14.5 crores. Advances have risen by Rs. 5.9 crores. There has been a marked increase of Rs. 9 crores in investments. Total cash, including balances with the Reserve Bank, has contracted to the tune of Rs. 2.45 crores.

The Gilt-edged market presented an easy trend during the week with most loans being on offer at lower rates. The market was bereft of support, with the continued flight of funds to the new loan as stated at the outset. 3 per cent. 1986 Conversion loan had sellers at Rs. 81-8, as against Rs. 82 last week. 3 per cent. 1957 and 1958 were marked down by As. 3 and As. 2, respectively, to Rs. 97-15. 3 per cent. 1959-61, had sellers, As. 5 lower, at Rs. 96-2. 3 per cent. 1963-65 lost As. 3 to Rs. 92-11. Some business was done in 1966-68 at Rs. 90, as against Rs. 90-3 a week ago. 3 per cent. 1970-75 was quoted at Rs. 86 with sellers. 3½ per cent. 1961 National Plan Bonds were available at Rs. 98-11-8, as compared with Rs. 98-12.

Among the State loans, there were buyers for the 4 per cent. 1963 Bombay Loan at Rs. 100-12. There were also enquiries for the 4 per cent. 1963 Madras loan at Rs. 99-10.

In the foreign exchange section, the rupee-U.S. dollar exchange rate was unchanged at Rs. 475 per $100 (banks selling) and Rs. 471¾ (banks buying). In the New York market, sterling fluctuated narrowly in terms of the dollar, but closed a fraction lower on balance. Thus, spot sterling finished at $2.81¾-$2.81¾ per £, as against $2.81-13/16-$2.81-15/16. The forward sterling (three months) dropped from $2.81-11/16-$2.81-13/16 to $2.81¼-$2.81⅛ and transferable sterling from $2.79¼-$2.79¼ to $2.79-$2.79⅛.

TEA DUSTS FARE BETTER

(From Our Own Correspondent)

CALCUTTA, 11th *May*

Steady conditions were in evidence during last week's auctions for domestic consumption, when dusts made available to the market amounted to 25,000 chests. Moderate attention was shown to best C.T.C. dusts, prices of which improved by half anna to one anna. C.T.Cs. with poor appearance and inferior liquors were a quiet market. Better liquoring sorts improved by an anna, while medium Assams improved by half an anna and Dooars were quoted at firm rates. The quotations were: Best Assam C.T.C. Rs. 2-2-6, medium Assam grainy dust Rs. 2-1-6 to Rs. 2-2, and medium Dooars Rs. 2-0-6 to Rs. 2-1. Conditions in the leaf market were somewhat mixed. Old season's offerings aggregated 650 chests, mainly consisting of poor liquoring residue types. Demand was strong. New season's offerings amounted to 148 chests, of which Darjeelings were sold at higher rates. The remainder of the new season's teas had to be withdrawn, as buyers offered prices only below brokers' valuations.

HIGH PREMIUM FOR SPOT GOLD

(From Our Own Correspondent)

BOMBAY, 12th *May*

The bullion market presented a mixed trend during the week under review. Activity in the market was dominated mainly by gold which staged a sharp rise over the week, on good offtake and reports of heavy confiscation of smuggled gold at Ratnagiri, Bombay and Calcutta. The white metal, however, ruled weak on heavy liquidation by bulls. In fact, on the first day of our week, namely, Thursday, the bears had to pay a margin at the rate of Rs. 500 per bar as the closing rate on that day was Rs. 7 below the previous settlement rate.

A notable feature of the week was the heavy premium of Rs. 2-3 (per tola) commanded by ready gold over the forward. This reflects the shortage of floating stocks on smaller arrivals and good offtake. Gold ready, which opened at Rs. 92, as against Rs. 91 on the last day of the previous week, fluctuated between Rs. 93-11 and Rs. 90-11, before closing at Rs. 93-8. Forward gold began at Rs. 90-15, as against Rs. 91 and declined in an erratic fashion to a low of Rs. 89-9 early in the week. It then staged a gradual recovery and touched a high of Rs. 91-6 on Monday. Thereafter, it moved between Rs. 91-5 and Rs. 90-1 and finished at Rs. 91. Arrivals of gold, including those from Kolar, were about 5,000 tolas per day, as against an offtake of 7,000 tolas. The floating stocks of gold are 15,000 tolas.

The carry forward rates also were heavily against the bears. They were Re. 1-4 today, as against Re. 1-14 yesterday and Re. 1-2 on the 10th inst.

The undertone of silver was essentially downward though price fluctuations were rather wide and erratic. Over the week, ready silver has lost Rs. 2-5 and forward Rs. 3-1. Although the offtake was not unsatisfactory, the market tended to remain bearish, because some leading operators chose to sell short in anticipation of a fall in demand for silver in the coming weeks. Bulls, too, decided to cut their losses. Even though the carry forward charges were heavily adverse to bears and the floating stocks were small, none had the courage to rig up the market.

Forward silver began the week on a firm note but soon collapsed, the rate after moving up from Rs. 168-10 to Rs. 168-12, slumped to Rs. 166-12 on the first day itself and still further to Rs. 165-7 on the second day. Thereafter, it moved within a range of Rs. 2 between Rs. 165-5 and Rs. 167-6, but closed weak at Rs. 165-8, as against Rs. 168-9 a week before. Ready silver (.996 Mint) opened the week at Rs. 169-10, as against Rs. 169-1 end of last week. After a temporary advance to Rs. 169-12, it declined by quick stages to Rs. 166-9 on Tuesday and finished today at Rs. 166-12.

The floating stocks of silver in the local market are estimated at 1,300 bars. The daily offtake from Bombay was about 25 bars and from all over India 75 bars.

The carry-over charges were As. 14 today against the seller. At one time during the week, they were as high as Re. 1-4 per 100 tolas.

The London market presented virtually a dull appearance. Gold was quoted at £12 8s. 11½d. per ounce, the same as Wednesday the 5th inst. Silver spot was quoted at 73½d., as against 73½d. and forward at 73d. as against 73¼d.

The following comparative table shows the trend of the market during the week under review:

	12-5-54	Highest	Lowest	5-5-54
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	93 8	93 11	90 11	92 0
Forward	91 0	91 6	89 9	91 0
Sovereign	60 13	60 12	60 8	60 12

New York Ready ..	85c.	—	—	85¼c.

RESTRICTED BUSINESS IN METALS

(From Our Own Correspondent)

CALCUTTA, 11th *May*

With buyers adopting a cautious attitude, business that was done in the metal market during the week under review was limited to small quantities. Stockists were, however, in no mood to discount quotations. Reports from the United States indicated that the proposed stockpiling would commence soon. A higher trend in metal prices is, therefore, expected. Electrolytic copper was done at Rs. 180 after opening at Rs. 182. The easiness was due to expected arrivals of Chilean copper. Demand for copper is bound to improve as the wire drawing industry which has been buying only day-to-day requirements should appear on the market sooner or later to buy on a larger scale than at present. Mercury was a steady market, and the price quoted was Rs. 865 a flask. Lead was maintained at Rs. 66, and business put through was moderate. Electrolytic zinc realised Rs. 57-8. If London advices are any guide, the price may move down. During recent weeks, speculators had bought substantial quantities in anticipation of higher prices. This anticipation has so far not materialised, and there is nervousness among weak holders. An irregular price movement is in evidence in tin. After opening at Rs. 480 the rate moved down to Rs. 474. At this stage, an upward trend set in and the quotation improved to Rs. 481. This improvement could not be maintained and the closure was lower on balance at Rs. 476. It is reported that stocks with railways have diminished.

SPOT COTTON FIRM

(From Our Own Correspondent)

BOMBAY, 12th *May*

With the reluctance on the part of shorts to deliver cotton in the May contract, as was impressively pointed out by the delivery of only 200 bales of cotton on Monday last, which was the third delivery day, it is not the longs who are worried about being burdened with unwanted cotton, but the shorts about transferring their sales from the May contract to the August contract. This has changed the whole position in the market and the difference between the two contracts first narrowed to about Rs. 20-21 and later to Rs. 17. Trading in the August contract will thus be influenced for some time not by the merits of the situation but by the lengthening or shortening of the shadow of the May contract till the time the latter expires. In spite of every factor making for a bullish trend in the market for August, the prices are subdued due to this temporary complication. The turnover in the forward market has also suffered as a result of this. With only one contract left and no straddle operations possible, the turnover for the next three months also is likely to remain on the low side.

In the case of cotton, unlike other commodities, the interest has shifted from the forward to the spot market. Mills have continued to be active buyers both at Sewri and at upcountry centres. It is now certain that the mills will not be able to obtain as much Indian cotton as they need and they will have to choose foreign cotton to make up the total quantity required by them. There is, however, only restricted demand for fine and superfine cloth, which discourages the mills from going in for imported cotton on any substantial scale. There are also uncertainties regarding the world price level of cotton during the next season. Production is expected to increase in every country and, in view of lower prices quoted for the new crop cotton, Indian mills cannot at this stage enter into commitments beyond their present requirements. In this connection, it is significant that Egyptian Karnak from the next crop, though offered at a rate considerably lower than that commanded by it for ready delivery, has met with little enthusiasm from Indian mills. This concentration on home-grown cotton has naturally encouraged a higher range of premia for Vijay, Surti and other staple varieties. The only imported cotton conspicuously favoured at present is East African, which has been purchased at prices higher than those a week ago. There is, however, a feeling in the spot market that, finally, it will be the U.S. cotton which will have to be sought for by the mills to satisfy their requirements for the next six months.

The cotton futures market presented a dull appearance, in the absence of any fresh stimulus. Reports from the bullion and piecegoods markets also were not encouraging. Turnover was, therefore, greatly restricted. Over the week, prices tended to look down. This tendency was more pronounced in I.C.C. August contract. Tenders against the May contract were negligible, being only 5,640 bales so far, thanks to reduced arrivals and excellent demand in the spot section. I.C.C. May contract began the week steady at Rs. 676¼, as against Rs. 675 at the close of last week, improved to Rs. 679, but receded to Rs. 670 today. At the close, however, it was better at Rs. 675. The net loss was Rs. 2. I.C.C. August opened a rupee higher at Rs. 703-8 and, after fluctuating between Rs. 704 and Rs. 689, finished the week at Rs. 692. The net loss over the week was to the extent of Rs. 10-8. The spread between the two contracts, therefore, narrowed down from Rs. 27-8 at the close of last week to Rs. 19 today.

The following table shows the trend of prices in the forward section during the week under review:

	Closing 5-5-54	High	Low	Closing 12-5-52
I.C.C. May ...	Rs. 675	679	670	673
I.C.C. Aug. ...	Rs. 702½	704	689	692

Latest available quotations from the spot section are: Bengal *deshi* Rs. 640; Berar Jarillas Rs. 820; Khandesh Rs. 850; Vijay Rs. 920; Oomra *deshi* Rs. 750; Moglai Rs. 735.

At Karachi, the recent reduction in quotations for various varieties has revived some interest on the Continent, though the reduction is not regarded as sufficient to produce actual business. What happens at Karachi is that the slightest interest evinced by other countries, by way of enquiries, immediately tends to send prices up, with the result that enquiries do not result in any effective business. Conditions in this market have on the whole been dull and it is living in the hope of Japan becoming a big buyer in future. Exports from Karachi upto 22nd April amounted to 841,608 bales, as against 1,088,950 bales in the same period last year.

Latest available quotations from the Karachi cotton market are: Sind *deshi* Rs. 75; Punjab *deshi* Rs. 71-8 to Rs. 74-8; 4F Punjab Roller Rs. 73-12 to Rs. 75-12; S.G. Rs. 78-4 to Rs. 81-4; L.S.S. Punjab Roller Rs. 76-8; S.G. Rs. 81-8; N.T. Roller Rs. 77-4; S.G. Rs. 81-12; 289F Punjab Roller Rs. 79-12; S.G. Rs. 84-12.

At Alexandria, with the announcement by the Government of the selling differentials for the next season's crop, activity has revived to a certain extent. Differentials for 'good' to 'fully good' cottons, in the case of Karnak, have been reduced by 1½ T., in that of Menouf, by 7 T. and in that of Giza 30 and Ashmouni, by 2 T. per cantar. On the other hand, the Egyptian Government has decided to raise its buying prices for cotton by 2 T. for Ashmouni and 3 T. for all other varieties. Moderate activity is reported from Alexandria, as a result of some new interest shown by China and the U.S. Consumption of Ashmouni by the local mills also is encouraging. Exports from Alexandria aggregated 749,000 bales, as against 601,000 bales till the end of April last year.

At New York, after a long period of featureless trading, there seems to be an increase of acti-

vity in the market with the opening of this week. The price of July jumped up by 10 points last Monday and fell by almost as many on Tuesday. Previous to that, prominent operators appeared to be sitting on the fence, possibly because of the international uncertainties. Some of them appear to have entered the market. The only development of note on the political side is the announcement, by the Secretary of Agriculture, that he is not prepared to make any statement with regard to export subsidy after the end of July this year. All that he has said is that there will be no subsidy during the 1953-54 cotton year. Till this question is finally decided, buyers from abroad are not likely to enter into heavy commitments with regard to new crop cotton. The price trend during the coming weeks is likely to be shaped by international developments with regard to South-East Asia.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	11-5-54	4-5-54	27-4-54
Spot	35.15	35.35	35.45
May	34.29	34.55	34.53
July	34.51	34.42	34.33
October	34.22	33.87	33.87
December	34.23	33.82	33.83

CASTORSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, 12*th May*

There were two outstanding developments during the week under review. One was the end of the deadlock over the settlement of May contract in castorseeds, and the other the announcement of the Government's export policy regarding oilseeds. The market has welcomed, with a sigh of relief, the reduction in export duty on mustard, rape, linseed, *kardi* seed, *niger* seed and cottonseed oils and the exemption of castor oil from payment of so much of duty as is in excess of Rs. 200 per ton, with effect from 12th inst. It has, however, viewed with considerable disappointment the imposition of an export duty of Rs. 150 per ton on *kardi* and *niger* seeds.

The settlement of the deadlock with the debtors agreeing to pay their creditors As. 6 in the rupee was generally welcome, as it paved the way for the resumption of trading which had remained suspended for four days, although there were a number of jobbers who were discontented with the terms of the compromise. During the three days of the week on which the market was in session, trading, however, remained restricted, with values revealing narrow fluctuations.

The groundnut section moved rather erratically. Bold ready was done today at Rs. 36 as against Rs. 36-4 on the 3rd inst. April-May and June-July were also lower by As. 4 each at Rs. 35-8. Khandesh quality suffered a loss of As. 6 at Rs. 36-14. Groundnut oil ex-mill eased from Rs. 18-6 to Rs. 18. May and June were done at Rs. 18-1 and Rs. 18-3, as against Rs. 18-3 and Rs. 18-6, respectively.

Trading in castor futures was resumed on Monday last. The tone was generally firm on reduction of export duty by Rs. 100 to Rs. 200. May delivery, which opened at Rs. 116-8 as against Rs. 116-6, fluctuated between Rs. 121-12 and Rs. 114-12, before closing at Rs. 121. September delivery opened in the 10th inst. at Rs. 122-8 as against Rs. 122-14. Thereafter, it declined to Rs. 119-12 on the next day. Today, however, it shot up to Rs. 126-14, before finishing at Rs. 126. Among spots, Madras quality gained As. 12 to Rs. 24-8.

In the linseed section Bold ready changed hands at Rs. 27-8 today as against Rs. 27-4 on the 3rd inst. June-July delivery lost As. 6 to Rs. 26-6, while April-May was done later at Rs. 26-12. Linseed oil eased Rs. 15-5 to Rs. 15.

Among others, *kardi* Bold gained As. 10 to Rs. 19-10, while June-July lost As. 2 to Rs. 19-4. *Niger*, Madras, eased from Rs. 28-12 to Rs. 28-8.

The following table shows the prices of oilseeds and oil on the 12th inst. as compared with those at the end of the previous two weeks:

	12-5-54	5-5-54	28-4-56
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—			
Khandesh Quality Bold Ready (per cwt.)	36 14	37 4	37 4

ART SILK YARN BEARISH

(From Our Own Correspondent)

BOMBAY, 12*th May*

Following the open sale of 500,000 lbs. of art silk yarn at rates lower than the landed cost of imports by the National Rayon Corporation Ltd., the art silk yarn market ruled distinctly bearish during the major part of the week under review. Expectation of a liberalised imports policy in the ensuing half-year and lack of encouraging advices from the rayon fabrics market also acted as a damper on the market. Traders were, therefore, more inclined to lighten their commitments, while buyers were somewhat reserved in anticipation of a further fall in prices. Art silk yarn values, as a result, tended to move down. The decline persisted till the close yesterday when lower levels evoked some support. Consequently, values staged a feeble recovery, which, however, failed to move up the previous losses. Today's closing rates were, therefore, lower than those a week ago.

Art silk yarn (150D) for May delivery slumped from Rs. 776 to Rs. 763 but recovered to Rs. 770 today. June contract was quoted at Rs. 767. In the spot section, 150 Japan dropped As. 3 to Rs. 4-12 and 120 Japan As. 2 to Rs. 4-11. 150 Italy lost an anna to Rs. 3-13-6. 120 Italy was half an anna easy at Rs. 3-15.

The negotiations with the Silk and Art Silk Mills Association (S.A.S.M.A.) with regard to the renewal of the bulk sale agreement having failed, the National Rayon Corporation Ltd. has now commenced the sale of its product in the open market. It has already sold 500,000 lbs. of 120 and 150 deniers. As reported in last week's *Commerce*, the chief factor responsible for the failure of negotiations between the S.A.S.M.A. and the Corporation is the price issue. At a Press Conference in Bombay, on Monday last, Mr. P. M. Chinai, of the Corporation, stated, for instance, that the price of 150D art silk yarn quoted by the Corporation to the S.A.S.M.A. was Rs. 3-10 per lb., which was lower than the landed cost of imported yarn. He made it clear that the Corporation could not sell yarn at rates lower than Rs. 4 per lb. for 120 deniers, because the cost of production was higher. Explaining the reason why the landed cost of this denier was lower, Mr. Chinai said that it was due to the competition of foreign manufacturers who had offered it at the same price as 150 deniers.

In sympathy with art silk yarns and as a result of slackness in demand from consuming countries, the staple fibre yarn section also ruled weak. 40 x 2 May contract was hammered down from Rs. 683 to Rs. 656. June contract was transacted at Rs. 659. In the ready section, City and Phœnix fell by As. 2 each to Rs. 3-8 and Rs. 3-4-3, respectively. New Great lost an anna and a half to Rs. 3-7. Hirji was lower by a like amount at Rs. 3-4-6. Among foreign yarns, Suico dropped As. 3 to Rs. 3-14. Shinco, Fuji and Aurora declined by As. 2-6 each to Rs. 3-14.

Easy conditions prevailed in the cotton yarn market this week. The easiness was due to dullness in the piecegoods market as reflected in lower exports. Recession in art silk and staple fibre yarn prices was another unhelpful factor. Consequently, cotton yarn prices drifted lower. Among 80s, Seksaria receded by As. 8 to Rs. 56-4, Elphinstone and Sri Ram declined by As. 4 each to Rs. 60-4 and Rs. 61, respectively. Among 60s, City and Finlay finished the week As. 8 lower, the former at Rs. 49-2 and the latter at Rs. 58. Among 40s, Seksaria and Madura lost As. 2 each to Rs. 27-2 and Rs. 29-2, respectively. Among 30s, Girdhandas and Madura eased from Rs. 23-6 and Rs. 25-8 to Rs. 23-2 and Rs. 25-4, respectively. Among 20s, Seksaria declined by As. 2 to Rs. 16-14. Hind and Edward lost an anna each to Rs. 17-7 and Rs. 16-14, respectively. Among 10s, Podar was half an anna lower at Rs. 13-4-6.

The table below gives the prices of art silk, staple fibre and cotton yarns quoted today, as compared with those seven days before:

	12-5-1954	5-5-1954
	Rs. a.	Rs. a.
Art silk yarn—		
150 May (per case of 200 lbs.)	770 0	776 0
150 June	767 0	—
120 Japan (per lb.)	4 11	4 12
150 Japan (per lb.)	4 12	4 15
120 Italy (per lb.)	3 15	3 15½
150 Italy (per lb.)	3 13½	3 14
Staple fibre yarn—		
40 x 2 May (per case of 200 lbs.) ..	656 0	677 0
40 x 2 June	659 0	—
Suico (per lb.)	3 14	4 1
New Great (per lb.)	3 7	3 8½
Cotton yarn (per bundle of 10 lbs.)—		
10s Modern	12 6	12 6
20s Seksaria	16 14	17 0
30s Madura	25 4	25 8
40s Meenakshi	28 12	29 12
60s City	48 2	49 4
80s Finlay	64 8	48 10

SUGAR STEADY

(From Our Own Correspondent)

BOMBAY, 12*th May*

The steady trend, which prevailed in the Bombay sugar market last week, persisted during the week under review also. This was due chiefly to reports that no shipments of sugar would be reaching this harbour earlier than the 17th inst. There were, besides, helpful factors such as reduced arrivals and renewed buying enquiries from interior centres. Consequently, prices of sugar tended to look up, the rates prevailing at the time of writing the report being generally higher than those a week ago.

In the spot section, Cuban sugar is quoted at Rs. 41-4 per 100 lbs., as against Rs. 40-4 last week. Mexican sugar has improved from Rs. 43 to Rs. 43-8 per 110½ lbs. British refined sugar, however, has receded by a rupee to Rs. 94 per bag of 2 cwts., on reports that the first ship carrying British refined sugar would reach Bombay by about the 20th inst. The price of "free" market sugar ranges from Rs. 100 to Rs. 108 per bag, as against Rs. 101-106. The Government stocks of sugar are being made available at rates varying from Rs. 92-3 to Rs. 93-9 per bag according to varieties.

In the forward section, *vaishak* delivery shot up from Rs. 87-12 to Rs. 90-8 per bag. But it is now quoted slightly lower at Rs. 90. *Jeth* delivery advanced by Rs. 2-4, but is currently standing at Rs. 87-8. The improvement in price is due to buying support induced by the expectation that allocations of sugar to tenderers who have applied for very large quantities of sugar to the Regional Directorate (Food) in this city would be considerably small.

The Bombay Sugar Merchants' Association has announced the procedure for allocating the balance of 37 per cent. of the quota of sugar allotted to it by the Government for distribution. The basis of allocation is said to be the aggregate actual spot turnover of a member over a period of three consecutive years. Accordingly, out of the 35 A class members of the Association, one will get 9.15 per cent. and another 7.10 per cent. Five members will get about 2 per cent. each and ten others less than 1 per cent. each. Another member will get just 1 per cent. From this, it is evident that a couple of leading members of the Association have tried to secure as large a quantity of sugar as possible, thereby ignoring the interests of the small members.

POOR BUSINESS IN JUTE GOODS

(From Our Own Correspondent)

CALCUTTA, 11*th May*

The week under review was highlighted with the publication of the Jute Enquiry Commission's report, which has received a warm reception both by representatives of the jute mills industry and market circles. Most of the remedies suggested by the Commission to place the industry on a sound basis have often been put forward before the authorities by the industry and trade, and their reiteration by the Commission, it is expected should go a long way in convincing New Delhi that, at present, all is not well with the jute industry and that immediate action is necessary to help the mills.

Market circles have particularly noted with satisfaction the Commission's desire that State Governments should not levy sales tax or similar taxes on raw jute. It was only recently that the Assam Government decided to levy a tax of As. 8 a bale on jute transported by road and inland waterways in the State. Traders in raw jute are expecting the Assam Government to cancel this tax in view of the Commission's recommendation. The trade has always felt that a well-regulated futures market for jute goods is necessary, and the Commission has recommended this. Government has not expressed any contrary views in this regard, and the ban on futures trading in Calcutta was due to the heavy speculation done in futures, which brought about violent fluctuations in the prices of jute goods and which placed the industry in serious difficulties very often. A futures market on the model of the East India Cotton Association in Bombay would be a welcome addition to Calcutta's markets. The Commission takes a serious view of the contraction of markets for jute goods, and has rightly suggested rationalisation and lowering output costs as the only remedies.

The trade, however, regrets that no mention has been made by the Commission regarding the export duties levied on jute goods. Both the industry and trade are of the unanimous view that, in the present circumstances when prices should go down to attract foreign buyers, an immediate relief can be given only by cancelling the export duties. The industry should carry on and expand production. Labour costs are already high, and lowering them is difficult, but with some sacrifice of revenue, New Delhi should be able to do away with the outmoded duties.

With reports of further rains and satisfactory sowing conditions from the jute districts, the raw jute market was dull and easy. Although fresh arrivals were limited, stockists were keen on selling, their holdings but mills were reserved. For, reported satisfactory, and with the lower trend in prices of jute goods, mills desired to wait before entering into commitments. Prices declined further by As. 8 to Re. 1 as evidenced in the latest quotations given below as against the rates a week ago in brackets:

	Middles Rs.	*Bottoms* Rs.
Assam Upper ..	29-8 (30-8)	26-8 (27-8)
Lower ..	30-0 (31)	27-0 (28)

Pakistani ..	....	24-0 (24-8)
Pakistani Northern ..	31-8 (32)	27-8 (28)
	31-0 (31-8)	27-0 (27-8)

Business was done in Dhubri bottoms at Rs. 28. *Bimli* f.a.q. was lower at Rs. 23, as against Rs. 23-8 previously. Pakistani cuttings invited interest at Rs. 72 a bale.

Business in jute goods was poor, as foreign buyers postponed entering into commitments. There was some covering demand, and this made quotations firm for a time. Ready B. twills opened better at Rs. 118-6 last Tuesday and thinly opened Rs. 113-12. Subsequently, the pull was in the downward direction, and the closure yesterday at Rs. 111-14 was the lowest on balance during the week. Stocks of sacking held by mills as at the end of April were only 57,500 tons, showing a decline of 3,900 tons and representing production of just six weeks. This is the lowest level touched since August, 1952. Sales during April was satisfactory. On the other hand, stocks of hessian increased to 32,400 tons from 35,200 tons, and this despite the transfer of a portion of the hessian looms to sacking. From Rs. 44-4 ready 40" 10 oz. hessian gave way gradually to Rs. 43-8.

TEA EASY

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 8*th May*

The offerings in sale No. 9, which was held on Tuesday, 4th May, amounted to approximately 11,50,000 lbs. With quality showing a further seasonal decline, there was less demand, and the market was easier throughout. Low and low medium were half to one anna easier, and medium and good medium teas declined by As. 2 to As. 3. High-grown teas continued to receive weak support, and sold at As. 2 to As. 6 below valuation following quality. Whole leaf grades met a poor market, particularly O.Fs. and F.O.Ps. which were As. 1 to As. 2 easier.

The following are the quotations:—

	1954	1953
	Rs. a. p.	Rs. a. p.
Low-grown Travancore B.O.P.	2 8 6	1 11 6
Medium Travancore B.O.P. ...	2 9 0	1 14 0
Anamallais B.O.P.	2 11 6	2 1 0
Best liquoring Nilgiri B.O.P.	3 4 0	2 9 0
Well made black leaf O.P. ...	2 12 6	1 15 0

London Market.—Commons farthing to ½d. Better sorts ½d. to 1d. dearer.

Colombo Market.—Active and general demand firm to dearer except stalk and thin liquoring sorts.

Calcutta Market—Export.—No sale this week.

Dust.—19,800 packages. Good demand. Market fairly firm. Black leafy types and best liquoring teas strongest feature. Commonest steady.

Special Licence.—Small business in special licence has been effected here at 45 pies and sellers remain scarce.

1954-55 *Export Quota.*—There has been a further appreciation in the price of new quota and business has been effected at 49 pies, which remains today's quotation.

Forthcoming Auctions.—Dust sale "I" will be held on Tuesday, 11th May, and sale No. 10 will be held on Tuesday, 18th May, 1954.

As we go to press, Messrs. Forbes, Ewart and Figgis wire:

"*Dust Sale* 1.—2,00,000 lbs. Market very irregular and easier As. 1 to As. 2."

FOODGRAINS BEARISH

(From Our Own Correspondent)

HAPUR, 11*th May*

Foodgrain markets all over India remained quiet to bearish during the week under review, reflecting an excellent overall supply position in respect of both wheat and rice. The Indian Food Minister has announced that the country has no more need to import wheat and that the prospects of the new wheat crop are very good. He has disclosed that India's rice position is so comfortable that it can spare 500,000 tons for exports. The total quantity of rice procured this year up to the end of April was 1,009,950 tons. Foodgrain prices all over India tended to fall. Wheat prices in Punjab steadied very slightly, due to large-scale movements to Delhi. In U.P., wheat arrivals are in full swing in all the important assembling centres. Already, at some places, *dara* wheat is now quoted at Rs. 13. There may be some further fall in the near future. Gram prices have also tended to fall, due to improved supplies position. Bombay and Madhya Pradesh States have reported good fall in prices. Madras has also been getting good supplies of gram. The immediate needs having been satisfied, prices tend to fall.

The position in regard to rice is quite bearish. Owing to the probabilities of India exporting superior grade rice shortly, prices of this grade have shown slight improvement. Trader-stockists are of late showing eagerness to liquidate their stocks, on fears that their dreams of realising very high prices may never be fulfilled.

The food position in U.P. continues to be very satisfactory. It is claimed that U.P. will alone be able to meet nearly half the food deficit of India by the end of the first Five-year Plan period. The area under monsoon fallow in the State comes to about 10 million acres. These are being replaced by green manure crops, especially those of those kinds which yield some food before being ploughed in. It is expected that, by the end of the first Five-Year Plan, about half this area will be under these crops resulting in an increase of about one million tons from such crops and about 500,000 tons from the crops that would follow. An additional production of 1,143,000 tons in the chief crops in the State took place during the five years ended 1952-53. This increase was 12 per cent. of the State's production of crops.

A five-year scheme to raise the quality and yield of the maize crop through breeding is under way at research stations of the Agriculture Department in U.P.

Over 300 culture, including 52 new samples are given trailed observation plots and one of the biggest and diverse genetic collection of this crop has been evolved, following experimental work spread over four years.

About 66,000 tons of wheat were imported into U.P. last year, as against a target of 300,000 tons. This included over 58,000 tons of wheat stored in the State by the Central Government which was taken over. During the same period, the State exported 44,650 tons of rice, 5,550 tons of gram, 19,733 tons of milo and over 4,000 tons of bajra to other deficit States.

Rabi grain arrivals are in full swing in all the assembling centres of the State. Wheat arrivals are particularly good. The fall in prices is common to gram, barley, *bejhar* and other coarse grains. Pulses remained unsteady, due to poor offtake. There was some enquiry for peas from Madras and Assam side, but *arhar* was nowhere in demand. Pulses futures moved within a narrow range, but the trend was not bullish in any sense. The latest quotations in the local market are: Wheat Rs. 13-4 to Rs. 13, gram Rs. 11 to Rs. 12, barley Rs. 8-8 to Rs. 9, *bejhar* Rs. 8-12 to Rs. 9, maize Rs. 10, *bajra* Rs. 11, *jowar* Rs. 8-4, *guwar* Rs. 9, rice Rs. 33-8 to Rs. 19, peas green Rs. 9-12, white Rs. 12-12, *arhar* Rs. 10-2, *urd* Rs. 15 to Rs. 16, *moong* Rs. 14-8 and *masoor* Rs. 12-8.

SUGAR LOOKS UP

(From Our Own Correspondent)

HAPUR, 11*th May*

Crystal sugar markets in general presented a normal condition this week. The bearish enthusiasm of the previous week had subsided and prices in the different markets seemed to get stabilised at current levels. There were panicky purchases by consumers and also by profit-seeking traders. At places, notably Calcutta and Baghalpur, stockholders were reported to be eager to liquidate their stocks. The offtake was generally poor.

It is now disclosed that India's sugar imports from Cuba, Formosa and other countries may exceed 300,000 tons. About 20,000 tons of imported sugar are expected to be unloaded at Bombay and Madras ports by the end of this week and imports by the end of June may aggregate about 100,000 tons. Early imported sugar is scheduled to be distributed in Bombay, Hyderabad, Madhya Pradesh and Saurashtra. It has been decided that this sugar will be supplied at Rs. 30 per maund ex-dock or f.o.r. destination, as the case may be, even if the deliveries of sugar brought by these ships are effected before the 15th inst.

The U.P. Government is reported to be perturbed over the steadily declining sugar production in the State and it is learned that the Centre is also anxious to find out the reasons for this decline. During the 1951-52 season, U.P. produced 22.75 million maunds of sugar. The quantity was reduced to 19.05 million maunds in 1952-53 and to 15.00 million maunds in 1953-54. It is said in official circles that the P.S.P. sponsored sugarcane growers' strike in the State did not materially affect sugar production. At worst, might have accounted for a fall of 225,000 maunds only. The sugar production season being over, all concerned are now engaged in finding out the reasons for this fall in output. One of the reasons given is reduced sugarcane acreage this year in the State and the low per acre yield which affected the overall sugarcane supplies. Another reason given is that due to the prevailing high rate of *gur* throughout the season, much of the sugarcane got diverted to *gur* production. The State Government is, it is learnt, concentrating attention on improving the per acre yield of the cane and, for this reason, it has planned to distribute improved varieties of seed and fertilisers to producers to encourage improved methods. Recent experiments carried out by the State Agricultural Department have revealed that a more liberal application of ammonium sulphate on cane fields will raise yields. It has, therefore, been decided to launch a special drive for top-dressing of sugarcane fields with this fertiliser early in July. Diseased sugarcane varieties such as CO-312, COS-186, CP-419 and CO-331 are being replaced during the next season.

The trade union workers of 60 sugar factories in Uttar Pradesh, of 30 in Bihar and of 12 in P.E.P.S.U., Rajasthan, Bhopal, Bengal and Bombay belonging to the Indian National Sugar Mill Workers Federation have urged the sugar industry and the State Governments to declare bonus for the season 1953-54, in view of the large profits which the industry had made, due to high prices. A tripartite conference of representatives of cane growers, sugar factory owners and the U.P. Government will be held very shortly to decide the basis on which the cane-growers should share excess profits earned by the sugar factories as a result of the increase in sugar prices. The main problems which the conference will have to tackle are whether the formula of profit-sharing should be applied on a permanent basis and also applied to profits made in the 1952-53 season and, if so, what should be the basis for sharing the profits. The cane-growers' representatives, it is learned, have demanded that a formula of profit-sharing should be evolved on a permanent basis which should also be applied to profits earned by the factories in 1952-53. The sugar factory owners, however, seem reluctant to accept the proposal for sharing on a permanent basis.

Ready *gur* markets ruled quiet to steady. There was sustained enquiry from Gujerat, Karnatak, Khandesh, Bombay and Madhya Pradesh States, but actual stock movement was only small, due to railway booking restrictions. The *gur* manufacture season has come to a close in South India also. Stock accumulations in the South Indian markets are comparatively better than in the north, as railway booking difficulties in the South had been more irksome. Arrivals in the West U.P. *mandies* were very small. Ready *gur* prices moved between Rs. 19-8 and Rs. 20 at Hapur, Meerut and Muzaffarnagar. *Gur* futures moved erratically, but the undertone was not very unsteady and speculative coverings did not fail to appear at reduced prices. The volume of trade, however, was small.

An additional financial provision is being made by the U.P. Government for widening the scope of schemes of the Directorate of Cottage Industries for the development of manufacture of *gur*, including palm *gur*. The manufacture of *gur* is the biggest cottage industry in the field of agriculture in U.P. It is, however, scattered and disorganised and methods employed are crude and wasteful. The authorities have accordingly implemented a scheme which aims at reducing avoidable losses in the manufacture of *gur* by introducing improved methods and appliances.

LINSEED QUIET

(Messrs. A. Bradley & Co.)

CALCUTTA, 10*th May*

A somewhat quieter tendency developed in the linseed market during the week and prices registered a small decline. The demand for ready goods from crushers was limited even at lower price levels. Sellers showed keener interest, owing to better arrivals from upcountry, but activity was poor. The oil section was very dull and price levels were appreciably lower, owing to lack of buying support. Little trading was recorded.

Latest quotations are: Ready Rs. 19 and June-July Rs. 19-8 per maund.

KIP PRICES HARDEN

(From Our Own Correspondent)

MADRAS, 10*th May*

Kip prices in the local market have hardened by an anna per lb., as shippers have been active. U.K. buying has been restricted, though the dressers have paid ½d. to 1d. advance on certain lines, despite the fact that they are not getting down their stocks. Tanners think that the market has touched the bottom, but U.K. buyers are cautious. Arrivals of buffs have been small and prices have advanced by an anna per lb. There are stray enquiries for cow calf and buff calf, but prices were 5 per cent. too low. The tanned skins market has ruled steady with good clearance.

Shipments during the month of April, 1954 were: To the U.K.: 3,754 bales td. cow hides, 275 td. cow calf, 72 td. buff hides, 433 td. buff calf, 1,082 td. goat and 931 td. sheep; to the Continent: 334 bales tanned goat, 60 tanned sheep and 1 bale D/S goat; to the U.S.A.: 50 bales td. cow hides, 165 td. buff hides, 67 td. buff calf, 226 td. goat, 138D/S goat and 15 bales tanned snake skins; and to Japan: 136 bales tanned sheep skins.

TEXTILES

(Concluded from page 928)

Under the Madras Medium Cotton Mill Cloth (Sales Tax) Act, 1954, medium cotton mill cloth is defined as cloth made in mills in which the count of warp yarn employed (excluding the border) is 17s or finer, but is less than 25s—whether single or folded. On the first sale of such cloth in the State of Madras, the seller who is not exempt from taxation under sub-section (3) of section 3 of the principal Act, must pay a tax of 15 pies in the rupee. This is in addition to the tax which he is liable to pay under the said sub-section. In the case of cloth imported into the State, either from abroad or from any other State in India, the tax will be levied on the first sale effected in the State by a seller, who is not exempt from taxation under the said sub-section, after the import into the State. The burden of proving that the sale is not the first sale made in Madras by a person not exempt under the sub-section or is not the first sale effected by such persons after the import, as the case may be, must lie on the persons concerned.

DEVELOPMENT OF HANDLOOM INDUSTRY

The Government of India has sanctioned a further grant of Rs. 75,610 to the Mysore State Government for the development of the handloom industry. Of this sum, Rs. 50,000 are to be utilised for rebates on sales of handloom cloth and Rs. 15,000 for providing improved equipment. Of the remaining, Rs. 5,000 will be utilised for publicity and propaganda, Rs. 3,000 for the supply of standard reeds, and Rs. 2,610 for organisational expenses. Assam gets a further grant of Rs. 6,400 for opening handloom sales depots in the State.

The total grants and loans sanctioned by the Government of India to 22 States in 1953-54 amounted to Rs. 2,96,55,976-8. Madras received the largest amount, being Rs. 92,51,354, followed by Andhra and Uttar Pradesh which received Rs. 38,95,283 and Rs. 38,49,958, respectively. Bombay got Rs. 31,57,020. The other States which received grants and loans were: Mysore Rs. 6,21,900; Travancore-Cochin Rs. 9,73,000; Saurashtra Rs. 2,67,187-8; Orissa Rs. 6,66,206; Madhya Bharat Rs. 2,36,411; Tripura Rs. 79,385; Bihar Rs. 14,22,780; West Bengal Rs. 16,12,000; Madhya Pradesh Rs. 16,44,017; Assam Rs. 4,78,225; Manipur Rs. 38,400; Coorg Rs. 1,500; Bhopal Rs. 15,500; Hyderabad Rs. 13,39,300; Punjab Rs. 24,160; Ajmer Rs. 47,037; P.E.P.S.U. Rs. 21,818; Delhi Rs. 12,575. None of these States have fully utilised the amounts sanctioned, but the unutilised amount will be made available to them during the current financial year. Only four States, Rajasthan, Himachal Pradesh, Vindhya Pradesh and Kutch, did not receive any amount, as they did not send any schemes in time.

For the current financial year (1954-55), the Government has made a budget provision of Rs. 5 crores, of which Rs. 3 crores will be sanctioned as grants and Rs. 2 crores as loans. These sums will be allocated to the States on the same basis as last year. Generally, the Government gives financial assistance for specific schemes, if they conform to the general principles laid down for this purpose.

ART SILK YARN IMPORTS

While the meeting of the Import Advisory Council is being held in New Delhi today, the Bombay Yarn Merchants' Association and Exchange Ltd. has put forward a strong plea for liberalising import of art silk yarn during the ensuing half-year, that is, July-December, 1954. In a communication addressed to the Government of India, the Association has urged for the grant of liberal licences to established importers at least upto 50 per cent. of the last year's import. The plea is based chiefly on the acute shortage of yarn supplies in the country and the consequent high level of prices. It is based also on the fact that, as a result of the restricted import policy now in vogue, the established traders, who, it is said, constitute an essential source of supply to the small handloom weavers, have been put to much hardship. In view of these and with a view to preventing any upward tendency in prices, the Association has, as already stated, urged for liberalisation of art silk yarn import policy.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share.'

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. ‡ Sales and amount written off. (h) Investments. † For ten months ended 31st December 1951.

(i) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Rs. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 916 in the debentures section:—

§§ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(c) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952 or on any subsequent interest date at one month's notice.

(e) Redeemable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955 on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months notice

MARKET GOSSIP

(Concluded from page 919)

it is stated, is drafting a law organising the distribution of profits to producers. It is further stated that small growers and co-operatives will be accorded priority in regard to the distribution of profits.

• • • •

It is gratifying to note that cotton exports from Egypt are being well maintained. Till 28th April, 1954, exports aggregated 5.03 million cantars, as against 3.92 million cantars during the same period in 1952-53. During the current season, the crop is estimated at 7.08 million cantars, as against 9.9 million cantars in 1952-53. Total supplies in the current season are placed at about 10 million cantars, as compared with about 12 million cantars last year. This suggests that the Government will have less difficulty than it had last year in selling its cotton stocks.

SURVEY

(Concluded from page 923)

cipation needed to make the Community Programme and the National Extension Service a success.

Thus, the agenda before the Conference covers the whole range of the Community Programme and the National Extension Service. The Community Programme, which began with 55 projects, equivalent to 165 development blocks, in October, 1952, has now been extended and covers nearly 24,000 villages, with a population of about 22 million, while the National Extension Blocks, inaugurated in October last year, covers about 25,000 villages with a population of nearly 17 million at present. Thus nearly 39 million people in about 49,000 villages —roughly one-eighth of the total rural population of India—have been covered under these two programmes. The target for the first Five-year Plan is to cover one-fourth of the rural population. During the remaining two years of the Plan, the programmes, we are told, will be extended to reach the target.

The ensuing conference, the third of its kind to be held since the initiation of the Community Programme, represents the culmination of the series of regional seminars of community project officers that began last year. Few will deny that these seminars—four of which have so far been held at Batala in the Punjab (I), Gandhigram in Madras, Rajgir in Bihar and Aurangabad in Hyderabad—have resulted in new ideas and new approaches to problems that have arisen in the wake of the implementation of the Programme. The Development Commissioners are expected to take common counsel, on measures to tackle the problems at the forthcoming conference.

The selection of Ootacamund for this all-India Conference has been made in pursuance of the policy, followed by the Community Projects Administration, to hold inter-State meetings in different parts of the country in rotation, so that personal contacts are established and the officials not only get to know each other, but also learn by the experience of actual working of the Community Programme in different regions. The two previous conferences of the Development Commissioners, it will be recalled, were held—one in May 1952 and the other in April 1953—at New Delhi.

Much hope is laid on the future of the Community Programme and the National Extension Service. The Community Development is the method and the National Extension the agency through which the Five-year Plan has sought to initiate a process of transformation of the social and economic life of the villages. The task before the Development Commissioners is indeed great. And the Conference will certainly facilitate the exchange of experience among, and the pooling of knowledge of, the participants in the Conference.

SALES TAX IN MADRAS

An important judgment, which is likely to produce far-reaching changes in sales tax procedure, was delivered by the Madras High Court on 5th April, 1954, in Messrs. Gannon, Dunkerley & Co., Ltd.'s case, when it was held that the State Legislature had no power or jurisdiction to enact provisions with a view to bringing "works contracts" within the scope of sales tax nor to levy sales tax on the sale of foodgrains by employers to employees at cost price.

It was in 1947 that the Madras General Sales Tax Act was amended so as to include "works contracts" within the scope of the sales tax. A "works contract" was defined as "any agreement for carrying out for cash or for deferred payment or other valuable consideration the construction, fitting out, improvement or repair of any building, road, bridge or other immovable property, or the fitting out, improvement, or repair of any movable property." The Madras Government's action in thus bringing "works contracts" under the scope of the Sales Tax Act was strongly criticised by business interests at the time as being completely outside the scope of this legislation. The Government did not, apparently, take any notice of the criticism.

In the case under reference, Messrs. Gannon, Dunkerley & Co., were a company carrying on business as engineers and contractors with their head office in Madras and work-spots all over South India. Their business consisted mainly of execution of contracts for construction of buildings, bridges, roads and structural contracts of all kinds. To facilitate the execution of their works and to provide amenities for their workmen, they also distributed to their workers foodgrains and debited the cost thereof against the wages which they had to pay to the workers. A canteen was also run for the supply of foodstuffs to their employees at the work-spots, and the Company did not derive any profit from such sales.

The Deputy Commercial Tax Officer assessed the Company in 1951 on a turnover, which included the value of "works contracts" executed by the Company, as well as the sale of foodgrains to their employees. An appeal to the Sales Tax Appellate Tribunal having failed, a revision petition was lodged in the High Court.

In their judgment, their Lordships Mr. Justice Satyanarayana and Mr. Justice Rajagopalan observed that the contention of the petitioners as regards the turnover on works contracts was that the amended Act of 1947 was beyond the legislative competence of the Provincial Legislature, as the works contracts executed by the assessees were not contracts of sale of goods and, therefore, the Provincial Legislature had no jurisdiction or power to enact the impugned provisions, with a view to bringing works contracts within the scope of taxation.

The Amending Act of 1947 had added the following to the definition of sale in section 2(h): "It includes also a transfer of property in goods involved in the execution of a works contract." The point to be considered was whether the contracts of the assessees, which were mostly building contracts, constituted contracts of sale of goods and contained any element of the nature of sale of goods to justify the imposition of the tax upon them. Contracts which involved labour and work might relate to a chattel such as building a ship or an engine or may relate to immovable property such as building contracts, contracts for the construction of bridges, etc. A contract for the supply purely of labour and work was not a contract of sale of goods, as labour and work could not be deemed to be goods in any sense of the term. There was no element of sale of the materials in a building contract and the contract was one and entire and indivisible. The building contracts which the assessees entered into in the assessment year on which the turnover was calculated did not involve any element of sale of the materials and were not in any sense contract of the sale of goods as understood in law. Therefore the levy of a tax under this head was not justified in law. "If the amendments introduced in 1947 by the Provincial Legislature are intended to catch in the net of tax contracts of the n

INDIA'S FOREIGN TRADE POLICY

THE ministerial speeches and the discussions that followed at the meetings of the Import and Export Advisory Councils held at New Delhi last week-end revealed nothing new either in the matter of policy or in that of procedure, except that the Government is now more inclined to liberalise the restrictions on imports than in the past. The absence of any new features reflects two things. One is that both the administration of controls and the trend of trade have been generally satisfactory. The other is that whatever alterations the trade considers necessary in the Government's policy are the same as those advocated by it at the last meetings of these Councils, the passage of time having witnessed no fundamental change in the circumstances. Thus, on reading the account of the proceedings of the meetings, one finds that business men reiterated the need for abolition of export duties, relaxation in export controls, and removal of the class distinction among the traders participating in foreign trade, such as established traders, newcomers and users. A certain section of the mercantile community again voiced its view that protection for indigenous industries through import controls was necessary in some cases and that the Government should not fight shy of giving such protection.

The lack of any serious complaints from trade quarters about the administration of import and export controls redounds to the credit of the Ministry of Commerce and Industry. Both Mr. T. T. Krishnamachari and Mr. D. P. Karmarkar, as well as the officials in charge of these controls, deserve to be complimented for the smooth working of controls which once constituted a source of serious discomfort, if not nightmare, to those engaged in foreign trade. Mr. Krishnamachari mentioned, with justifiable pride, a few facts to show the continuous improvement that has been taking place in the administration of import controls. During the first four months of the current licensing period, as many as 80,000 applications were disposed of, that is, 10,000 more than the figure for the corresponding previous period. At the end of April, only 4,994 applications remained to be dealt with. The old quota certificates have been changed into new typed quota certificates, made out on security paper. The licences are neatly typed with "Superriters Gothic pin point," so that they cannot be easily tampered with. Arrangements are being made to maintain a quota register at all the ports, giving particulars of the established quotas of established importers. Steps have been taken to form a self-contained unit under the Special Police Establishment to help the import control organisation to carry out investigations into fraudulent activities and attempted breaches of import control. In consultation with the Finance Minister, arrangements have also been made to minimise the difficulties experienced by importers at the Customs House while clearing the goods. The list of items open to newcomers has been widened. They have been given repeat licences, so that they may continue to exist. Importers have been permitted to import allied and ancillary items against licences for particular categories of goods and facilities have been given to persons employed in some avocations to import their requirements directly from abroad.

On the export side, too, administration of controls has been simplified. Mr. Karmarkar gave some instances of the useful modifications that have been made. The small sector in which control is exercised has been further narrowed. A number of items has been freed from the scope of export control. The Open General Licence has been expanded by the addition of a few more items. A number of goods has been transferred from the restricted to the free licensing list. The distinction between imported goods and indigenous goods has been removed and exports are now licensed irrespective of the origin of the goods. The Export Control Order has been revised and stream-lined. All the notifications dealing with export controls have been brought together in one place. The schedule of controlled commodities has been rearranged and indexed. A more comprehensive edition of the handbook on export trade control has also been published, in order to assist the intending exporters. The Sea Customs Act has been amended, with a view to encouraging exports of manufactured goods by granting rebates of the duty paid on imported raw materials and components. Besides these welcome relaxations, the Government has taken some positive steps, too. Special attention is being paid to stimulate exports of handloom cloth, tobacco and tea by opening emporia in a number of foreign countries, conducting market research, as well as propaganda, and participating in trade exhibitions.

While the Government has thus gone a long way towards easing the difficulties of importers and exporters caused mainly by inefficient administration of controls, it has not done all it can to promote exports. There can be no two opinions on the need for stepping up India's export trade. It is true that during the past one year, India's foreign exchange position has not given rise to any anxiety and that its sterling balances today at Rs. 755.50 crores are Rs. 36 crores higher than those a year ago. But this is due more to a fall in its imports than to any significant rise in exports. And, as both the Commerce Ministers took care to point out, this state of affairs cannot continue much longer. Increased imports will be necessary to offset the effects of increased domestic expenditure in the public field, not to speak of the large deficit financing budgetted for 1954-55. Again, an adverse monsoon might upset all our calculations, forcing India to import more food and raw materials. With increasing population, consumption also is rising, necessitating a larger supply of goods. The present foreign exchange resources are not large enough to meet all these contingencies. It is, therefore, necessary to increase the export trade.

There is considerable truth in Mr. Karmarkar's statement that "there are obvious limits to what Government can do in the matter of export promotion" and that "only determined and sustained efforts on the part of the trade can deliver the goods." It is, of course, the job of the trader to conduct market research, establish contacts with foreign markets and popularise the goods in those markets through publicity, propaganda and so on. There is a growing realisation of all this among the traders, though they cannot claim to be as active and skilful as their competitors. The delay in the establishment of Export Promotion Councils is largely due to the lack of drive and earnestness of business men themselves. But, at the same time, it cannot be denied that the Government, too, is slow in removing the impediments in the way of free flow of exports. Take, for instance, the question of export duties. The Government has rarely reacted promptly to the changes in world market conditions and removed or reduced the duties in good time. It has invariably acted only after a lot of agitation and loss of markets to competitors. In a buyers' market, one has to steal a march over one's competitors by entering the field first. Such an action will never be possible so long as export duties are retained. Today, India's exports chiefly consist of tea, jute goods, cotton textiles and spices. And it is only these goods, in addition to some non-edible oils, that India is in a position to spare for building up a large export trade. India has by no means a monopoly of these goods. Yet, they are being subjected to export duties at varying rates. Repeated representations to the authorities to the effect that exports of castor oil, jute goods and coarse cloth should be free from export duties have yielded no results. Exports are being adversely affected also by lack of proper transport arrangements, inadequate port facilities, high dock charges and defective freight rates. The solution to these handicaps lies in the hands of the Government and not in those of the business community. Another factor that tells on the competitive capacity of Indian exports is the Government's labour policy, which is not conducive to improving the productivity of Indian industries.

Most of the business men who plead for stimulating India's exports do not fully realise that foreign trade is a two-way traffic and that it is unrealistic to expect an increase in exports, while pleading for a restriction on imports. Mr. Krishnamachari, therefore, did well to remind our business men of this economic truism. He was equally right in strongly deploring the tendency on the part of some of our business men to consider that it is quite legitimate to expect protection for their industries through import controls. Characterising this dependence on import controls for industrial progress as unhealthy, he declared that such would sap the internal vitality of industry and jeopardise the interests of consumers. Proceeding, he remarked: "Freedom from competition has acted as a drag on progress and the temptation so provided for some industries to exploit the situation, by charging high prices from the consumer or by persistently maintaining poor quality standards, should not, in the interests of the healthy industrial development of the country, become a permanent feature of our economy." We fully endorse this statement. Protection for domestic industries against foreign competition should be granted only after due investigation by the Tariff Commission and that in the form of tariffs; only in exceptional cases of great national importance or when there is a proved case of dumping and unfair competition should it be afforded in the form of a closed market.

LIVERPOOL COTTON EXCHANGE

THE century-old Liverpool Cotton Exchange which had lain dormant since 1941, reopened on Tuesday this week. This marks yet another stage in Britain's march towards freedom for private enterprise and a striking indication of the present rulers' faith in the efficacy of this system. Ever since the Conservative Party came to power, it has been taking several measures designed to restore economic freedom to trade and industry. Perhaps, a Labour Government would have been more chary of removing the shackles on trade, though it was not a Conservative Government that restored freedom to rubber, the first commodity to gain it. Rubber, it may be recalled, regained its freedom in 1946. The other commodities, which were freed later, are: Coffee (July 1947); tin (November, 1949); cocoa (January, 1951); lead (October, 1952); raw sugar (November, 1952); zinc (January, 1953); grains (June 1953); copper (August 1953); and wool (wool futures opened in April, 1953).

That cotton should have been the last of the commodities to earn freedom need occasion no surprise. Not only is cotton not grown in the U.K., but its purchases entail an expenditure of dollars, a scarce currency. To use a phrase which has come into current usage, cotton is a commodity with a relatively large "dollar content." Further, until recently, the world supply position of cotton was not comfortable enough to allow resumption of futures trading. The restoration of freedom was, therefore, delayed, until the Government was certain that it could take the risk of freeing the market for this commodity. The ground was prepared by restoring partial freedom to the mills either to buy their requirement from the State-sponsored cotton dealers, the Raw Cotton Commission (R.C.C.) or to make their own private arrangements for the importation of cotton. In 1952, mills, which accounted for nearly 30 per cent. of the cotton consumption in the U.K., walked out of the fold of the R.C.C.; they "contracted-out" of the Commission. In 1953, this proportion increased, for mills which account for over 50 per cent. of the total cotton consumption decided to make their own arrangements for buying cotton. This encouraged the Government to go ahead with the programme for conferring freedom on cotton.

But there are three considerations which seem to have finally weighed with the Government in deciding to reopen the Liverpool Market. The first was the unequivocal declaration by the Hopkins Committee (Chairman: Sir Richard Hopkins), appointed last year to examine the working of the prevailing system of cotton trade, that it was "intrinsically undesirable that public funds should be risked to provide cover for the cotton spinning industry." The second consideration was the loss sustained by the R.C.C. During the 13 months ended August, 1952, the Commission reported a loss of £28.5 million. What surprised the cotton men was not so much the fact that a loss was sustained as the magnitude of the loss. The Government obviously felt that it was wrong to risk taxpayers' money for performing a duty which the spinners themselves should discharge and which they can be reasonably expected to carry out without serious difficulty. The third consideration was the marked improvement in supply position of cotton.

The main features of the new contract are: (1) The basis of the contract is U.S. Middling 15/16" cotton. Allowances will be added or deducted in respect of tenderable qualities other than the basic quality, according to Liverpool official value quotations to be published regularly. (2) There are four trading positions, *vaidas* as they are called here. These are October-November, December-January, March-April and May-June. (3) Prices will be quoted in pence per lb. (4) The maximum permitted range of fluctuation in any one day's trading will be 1d. per lb. above or below the previous close and 1d. per lb. between the highest and lowest quotations during the day. (5) The trading unit will be 100 bales, weighing 48,000 lbs. net.

It may be noted here that, before the war, there were three main grades of cotton—two American and one Egyptian. The Liverpool Cotton Association has thus not provided a long-staple cotton contract for the time being. This is due to the uncertain situation in the Egyptian and Sudan cotton markets, both of which, as is well known, do not enjoy a freedom of movement similar to the one enjoyed by the cotton markets in the U.S. Nevertheless, the authorities seem to be alive to the need for such a contract. A joint committee of spinners and raw cotton interests has been formed to consider the objectives of opening such a contract. The authorities of the Association are confident that, once the American contract has been successfully launched, a "strong base will exist from which to launch an Egyptian type contract, even without its counterpart in Egypt."

Some observers have raised a few doubts about the success of even the present step. They ask, for instance, whether the traders will be in a position to hold the large stocks that would be needed for providing a continuous supply of raw material to the British textile industry. It cannot be that the authorities have not taken this factor into account before permitting the resumption of forward trading. In any case, it must be remembered that cotton trading in the U.K. does not start from scratch. A ready market in cotton has functioned for some time now, thanks to the spinners' decision to contract-out of the R.C.C. Private imports of cotton in 1952-53 aggregated 442,587 bales, as against 900,134 bales imported by the R.C.C. Objection has also been raised on the ground that it is wrong to make American cotton the basis of contract, since this variety of cotton forms only a minor part of the total consumption of cotton in the U.K. In 1952-53, the U.K. imported in all 1,342,721 bales, as against 1,926,057 bales in 1951-52. Of these imports, American cotton accounted for only 350,633 bales in 1952-53 and 654,835 bales in 1951-52. Some are, therefore, not happy about the establishment of a contract tenderable against a growth of cotton which accounts for only about 30 per cent. of total imports of cotton. But the authorities' decision relating to the present basis of the contract has been prompted, as already stated, by the consideration that the American cotton market is a free market, and that American cotton prices still influence world prices to a marked extent.

Fears have also been expressed about the possibility of a large dollar drain. But the exchange control authorities have devised a scheme which will reduce such a drain. Under the scheme, cotton can, no doubt, be imported from any part of the world. But, if a dollar cotton is resold to a non-dollar country, payment must be obtained in dollars. One effect of this regulation is that, although dollars can be spent when they are needed for buying cotton for home consumption, it does not permit the exchange of dollar cotton for sterling. This condition does not make any difference to buyers of American cotton through Liverpool, for, if they were to buy direct from the U.S., they would have to pay in dollars. They could, therefore, as well buy in the Liverpool market if they were to find it more convenient to do so than in the New York market. Another effect of the grant of freedom for purchasing cotton from any part of the world is that British textile manufacturers will no longer be compelled to pay the premium that is sometimes demanded for sterling cotton. This will increase the competitive capacity of British mills. More than these gains, the chief advantage of the resumption of trading in the Liverpool Cotton Exchange is that this city once again becomes a live centre of international cotton trade. This will enable Britain to perform other ancillary services also, such as shipping and insurance, for the world trade in cotton and thereby increase its invisible exports.

CENTRAL TRACTOR ORGANISATION

AN inestimable service rendered from time to time by the Estimates Committee is to spotlight the defects in the working of the various Central Ministries and to make positive and constructive recommendations for improving their work. The Committee's Report on the Ministry of Food and Agriculture, released last week, examines mainly the work of the Central Tractor Organisation (C.T.O.). The Committee has unearthed quite a few scandals in regard to the C.T.O. All this must be disconcerting to those who had pinned much faith on this organisation as a powerful aid in the fight for reclaiming hard, difficult uncultivated land. But there there will be much satisfaction that, if the Committee has been understandably devastating in its comments, it has also been quite constructive in its suggestions for improvement.

The C.T.O. is one of those bodies which owe their birth to the post-war enthusiasm for new ideas. The war-time shortages in food had compelled the Government to examine the possibility of bringing back into cultivation large areas of weed-infested land for the production of foodgrains. The Union Government prepared a scheme for the reclamation of 10 million acres of land. The first phase of work envisaged reclamation of three million acres with 375 tractors operated during a period of seven years; this, it was estimated, would yield an additional food production to the tune of one million tons. The Government negotiated a loan of 10 million U.S. dollars with the World Bank. Of this only $7.5 million is being used; $1.5 million has already been surrendered and $1 million is proposed to be surrendered. The C.T.O., which now consists of a headquarters office at New Delhi, two base workshops, located at Delhi and Bairagarh (Bhopal), and three regional offices (two at Bairagarh and one at Jhansi), had cleared upto 31st March, 1953, only about 800,000 acres of *kans*-infested land and 33,000 acres of jungle. This is very slow progress indeed. At this rate, it will take several years to hit the target of three million acres, instead of just seven years as originally planned.

Even conceding that this achievement is good, it has cost the Exchequer a great deal more than it might have if the work had been properly organised from the beginning. The cost of *kans*-clearance per acre has gone up by more than a third, from Rs. 40 (originally fixed) to Rs. 54 now. This will no doubt be recovered from peasants. Even so, it will be "unfair" to be indifferent to the mounting cost of the C.T.O.'s operations, because the high cost of clearing the land will affect the return to the farmer whose ability to pay is very limited.

The major defects of this organisation are: top-heavy administration, establishment of workshops for which no suitable work can now be found, and purchase of unsuitable tractors and stores. The Land Reclamation Scheme is estimated to cost Rs. 2.08 crores in 1953-54, out of which the salaries and allowances of officers and establishment charges amount to as much as Rs. 45 lakhs. The Delhi workshop is an "uneconomic" proposition, in that it is not able to manufacture "any spare parts except a few for ploughs." And even here, a farmer who used the ploughs "brought them back in a damaged condition complaining they could not stand up to the rough use for which they were intended." The Committee has urged that the Delhi workshop should examine the possibility of manufacturing light tractors, agricultural implements and spare parts. It has also made a number of recommendations for reducing the establishment charges of the C.T.O.

The C.T.O. has, on the whole, been a very imprudent enterprise. For the three years ended 1952-53, its losses are estimated at Rs. 68 lakhs. The loss may conceivably be more, if the State Governments refuse to "pay in full the dues amounting to Rs. 5.16 crores outstanding against them on 31st March, 1954," and if the surplus stock to the tune of Rs. 1 crore (book value), is not sold at prices that will at least cover the cost. Indeed, this surplus stock weighs like a millstone round the neck of the C.T.O. The Committee is sharply critical of the Organisation's "unco-ordinated and unplanned" policy in the matter of purchase of tractors, spare parts, equipment, etc. The Committee says: "Without sufficient data to guide them and without possessing the technical knowledge of the tractors, purchases were made involving a capital expenditure of Rs. 95,73,384 (excluding freight, etc.). Subsequent experiments conducted by the C.T.O. have proved these tractors to be uneconomic." The result has been that surplus stores to the tune of over Rs. 1 crore have accumulated. Even the inventory of these stores has not been completed; about 500 boxes have not been opened at all.

The Ministry, it would appear, has not been able to give "any adequate explanation" why, when very heavy capital expenditure was involved in the purchase of tractors, no question of experiment and trial was considered necessary. The Committee asks, very rightly, it would appear, how "enormous quantities of stocks" estimated at 70 to 80 per cent of the cost of tractors, came to be bought, considering that the general policy of the C.T.O., based on the World Bank's suggestion, has been to order, at the first instance, spare parts to the tune of only 25 per cent. of the capital cost of tractors. The Committee has, therefore, urged upon the Government to punish the guilty officials. Perhaps, a more important recommendation is that an advisory committee should be constituted for scrutinising indents for fresh stocks of spare parts and equipment. It is to be hoped that this recommendation will be expeditiously implemented, for it may avoid at least further loss to the country on the project.

HESITANT FEELING IN SHARE MARKET

TREND OF COMMODITIES—OUTLOOK FOR TEA—STERLING CONVERTIBILITY

THURSDAY, 5 P.M.

AFTER making a somewhat promising start and staging a smart rally in the latter half of the week, the share market has finished on a distinctly quiet note. This may be due to the approach of the fortnightly settlement which invariably results in squaring up operations by the bulls. But, fundamentally, the market seems to have reached a state of exhaustion. Although bears are not as active in this market as in other markets, the bulls are in no mood to venture further. Unless some new developments take place, equities cannot make much headway for the present. In fact, one of the grounds on which equity values had moved up in recent weeks, namely, inflation arising from deficit financing, seems to be receding. At any rate, one may not find signs of inflation for several months to come. This view is based on (a) the large subscriptions to the new loan, (b) the decision of the Government to step up imports, and (c) the U.S. Ambassador's optimistic hope that the American Congress will agree to the Administration's request for economic aid to India to the tune of $104 million. Further, most of the leading counters have now gone up to levels at which the yields are just about the current ideas. The technical position of the market, however, is healthier in the sense that the large speculative positions that had been built up in recent months have been liquidated. Accordingly, it can be regarded as highly susceptible to both bearish and bullish developments.

MARKET GOSSIP

• • • •

The Gilt-edged market is a shade steadier than last week, thanks mainly to the sporadic and slight support extended by the Reserve Bank. The pressure on money market seems to be easing, though no firm evidence of it is yet available. But, even if the seasonal return of funds were to start in right earnest, it might not have any marked effect on short-term interest rates, as the banks have already borrowed against it and bought the new National Plan loan. In the absence of official *communique*, it is not possible to say how this loan has been faring. There is, however, an impression in knowledgable circles that its progress is not so satisfactory as was expected and that, sooner or later, the authorities would have to consider seriously the question of closing the list. They feel that, by keeping the loan open, considerable damage is being done to the existing loans which in turn has an adverse effect on the sentiment of investors in Government securities. In their opinion, the judicious thing to do will be for the Reserve Bank to take up a large block of the new loan, say, Rs. 50 crores or Rs. 75 crores, and close the list. This will mean a total subscription of Rs. 110 to Rs. 125 crores. The Reserve Bank can then gradually sell its block in the market as and when there is a demand for it. The sale of new National Plan Certificates, however, could be continued for some more time, as they are primarily meant for small savers. It is not known how far this suggestion will appeal to the Government.

• • • •

The bullion and commodity markets are distinctly weak. There has been heavy short-selling in both silver and gold, as a result of which there has been a loss of Rs. 2-2 in forward gold and Rs. 2-11 in silver. In both the sections, ready positions have been relatively better. This is especially so in gold, as witness the heavy premium of Rs. 3-4 (per tola) commanded by ready over the forward. The carry-forward rates in silver and gold alike were heavily against the bears. This, however, does not seem to have disheartened them. It is stated that, in silver, one operator has gone short to the tune of 8,000 bars and that, in gold, another operator has sold about 200,000 tolas. Although these sales are far in excess of the floating stocks, the operators are banking on the hope that ere long the slack season for bullion will set in, with the off-take declining to negligibly low levels. They are further believed to be of the opinion that the bulls are mostly scattered and weak and that, with the money market remaining tight, the chances of their being squeezed out are slender. It will be interesting to see to what extent their optimism will be justified in the coming weeks.

• • • •

Among commodities, oilseeds as well as cotton have gone down. The reduction in the export duty on castorseed which the abolition of that on linseed oil have had no effect on prices. On the contrary, both the oils have declined, the fall being heavier in the respective seeds. In so far as linseed is concerned, India has already missed the bus and Argentina has got in long ago. The only way to capture the market now is to allow exports of linseed oilcake which the crushers maintain India can now afford as the cattle-feed situation is comfortable. As regards castor oil, it is still out of parity with the world markets. The reduction of Rs. 100 per ton in export duty on this oil, that is, from Rs. 300 to Rs. 200 per ton, has evidently been inadequate. Of all the commodities in the world, oilseeds have been one of the few to follow a downward trend in recent weeks, as the world surplus of these is fairly high. It is, therefore, no use in the Government of India not facing the fact and taking the necessary measures for stimulating exports of the non-edible vegetable oils before it is too late. In cotton, it is only the forward section that has shed quite a few points, but the spot section is steady. Both I.C.C. May and August have declined, the former from Rs. 678 (a week ago) to Rs. 665-8 and the latter from Rs. 693-8 to Rs. 683-8. The continued weakness of the futures section, in striking contrast to the firm trend of the ready section has evoked critical comments on the character of the contract as well as the method of its working. It is reported that even the Textile Commissioner, who ought to know better than many in the trade, has asked the Board of the E.I.C.A. to explain the marked discrepancy in the behaviour of the futures contract, as compared with the ready section. The Board is expected to consider this issue tomorrow.

• • • •

Despite the doleful warnings of gloomy prophets of an American recession and its possible devastating effect on world markets, there are no signs—at least, not yet—of any depression around the corner. Nay, the markets are all in good form. The undertone of Wall Street is firm. Dow Jones Industrial averages finished last week at a fresh peak of 322.5. London shows unmistakable signs of good health. The *Financial Times* index of ordinary shares (Base: 1st July 1935=100) touched a high of 149.9 towards the close of last week. Commodities are no less firm, wheat, oils and sugar being the only exceptions. An almost continuous rise has been seen in commodity markets since the beginning of the year. The *Financial Times* index of sensitive world commodity prices (Base: 1st July, 1952=100) rose from about 88 at the beginning of the year to 93.80 on 12th May. At the end of last month, the *Economist* commodity price indicator (Base: 1952=100) touched 100.2, the highest level seen during the last two years.

• • • •

Is then American recession a thing of the past? Does it no longer constitute a real danger to world markets? Can one be certain that there is no likelihood of an American recession? These questions continue to dominate business men's thoughts the world over. No hard and fast answers could be given for them. The U.S. Administration still believes that a large-scale recession is out of the question. In fact, President Eisenhower himself described the situation as one in which there is a "preponderance of favourable signs." But it must be admitted there has been a certain setback to American economy for some time now, though, more recently, there has been some notable improvement.

• • • • •

It is highly remarkable that the commodity and share markets have managed to present an upward trend despite the slight American recession. Explaining this resilience of world markets, the *Economist* says that the effect of the U.S. recession has not spread throughout the American economy. Further, the coming of the recession had been so long expected and the post-Korean decline in markets so prolonged that prices and consumers' stocks were already low. Again, business men now appear to be confident that the recession is no more than an inventory adjustment. A revival, once begun, tends to feed on itself; it encourages buying. Finally, the fear that Indo-China might become another Korea has strengthened several markets.

• • • •

The general upward trend in commodity prices is best reflected in coffee, cocoa, tin, copper, cotton and rubber. Coffee, cocoa and tea, the *Economist* observes, have soared to their "highest prices in history." This is attributed to the fact that production of these commodities has "either dropped this season or failed to respond to the growth in population." With the threat of surplus out of the way, tin has recovered. Copper is also firm, thanks to recovery in American consumption and other favourable factors. Both tin and copper are, however, below their last year's levels. Nevertheless, the significant fact is that both have improved since the beginning of the year. A similar trend is noticeable in rubber. Cotton is firm. World cotton consumption, the journal says, is "rising to near boom levels." Wool has been the best feature among the textile fibres and has recorded sizable gains. Only wheat, sugar and certain edible oils and fats are either stagnant or falling. Again, wheat prices have declined since March this year.

• • • •

An interesting feature of this trend, as our London contemporary points out, is that the rise in prices has benefited the sterling commodities more than the dollar commodities. Will this favourable trend continue? Any hopeful conclusion, it says, rests on two main assumptions: that the American recession does not go much further; and that the American Government will hold its huge surpluses off the market. It adds: "The first assumption is reasonable but no certainty. The second is a matter for serious concern, for American eagerness to unload surpluses of agricultural commodities is already apparent. Such action would have to be weighed against the American decision to expand its strategic purchases of industrial materials. At this juncture, no one can tell whether the U.S. will take away with one hand more than it gives with the other."

• • • • •

Seldom have the fortunes of a commodity changed so satisfactorily as those of tea. Only two years ago, the market for tea was so very weak that many thought that the closure of many a garden was inevitable. Within a period of a year, tea forged ahead. Since 1953, tea has consistently enjoyed a firm market. At the first sale for the new season, held this week, at Calcutta, it is reported that there was good demand for Darjeeling whole leaf grades. There was relatively less demand for brokens and fannings. Clean Common B.P. was quoted at Rs. 2-10½, as against about Re. 1-12 this time last year. What are the prospects for tea in 1954? The prospects, according to the well-known tea and commodity brokers, Messrs. J. Thomas & Co., Ltd., of Calcutta, "can seldom, if ever, have looked brighter than they do at present." This is because world consumption is definitely on the increase. In the U.K., the leading tea consuming country, consumption is estimated to have increased by 50 million lbs. This is attributed mainly to the derationing of tea. One of the reasons for this increase, the firm says, is "probably that the consuming public in the U.K. drink more tea in the evenings while watching the television programmes." Consumption in the U.S. is estimated to have increased by 10 million lbs.

• • • •

At the moment, one of the main reasons why world consumption of tea is in excess of production, according to the firm, is that "tea is still the cheapest drink of its type available in the world." It adds: "The industry must ensure, therefore, that the price of tea does not become too high as this would cause consumer resistance and coffee and other beverages would then begin to regain their popularity, with the result that the present rate of production would far exceed world demand." It also warns that it would be dangerous to forget how the 1952 slump was overcome. The slump, it may be noted, was overcome by reversion to fine plucking and careful manufacture. Emphasising that nothing should be done to reverse this trend, the firm observes:

"....the temptation to make large crops and take further advantage of the high prices at present reigning on the world markets is great and the use of artificial manures and large amounts of replanted young tea coming into bearing may easily have the same effect as the increased garden acreage planted out prior to 1929. It is our forecast that the market will start at a very high level and continue to rise while the second and third flush teas are still being sold. However, it is possible that an increase in the August crop figure over the previous year may lead the buyers to presume that a much larger crop is being harvested. In that event, the market in September and October may show a decline. It does not at the moment seem probable that world production will increase to such an extent as to pass world consumption, but the lessons of 1952 and 1953 are that the balance between supply and demand is a delicate adjustment. However, the very wide fluctuations in prices which have occurred between October, 1951 and March, 1953 can only be considered as unsettling factors to the whole structure of the industry and all sections of the trade would surely welcome a more stable price level. In conclusion, 1954 has every appearance of being a boom year for the tea industry but, as the key to the complex position of world supply and demand would seem to lie with North-east India, some form of crop regulation to ensure against large amounts of badly manufactured tea flooding the market would seem advisable. It would also seem essential, however, for producers to ensure that enough tea is produced to keep the price of this commodity at a level which will maintain its popularity with the public."

• • • •

There are some aspects of the world economic situation that are worth watching. Apart from the improvement in world commodity prices, particularly sterling commodity prices, to which reference has been made on this page, there is the U.K.'s progress in its march towards freedom for commodities, the reopening of the Liverpool Cotton Exchange being a significant stage in this march. Then, there is the strength of sterling itself, and the improvement in the sterling area's gold and dollar reserves, to which reference has been made in these columns before. Now, the restoration of freedom for commodities in the U.K. represents, it should be remembered, a move, limited though it is, towards convertibility of sterling. There are, of course, different degrees of convertibility envisaged in these measures. Thus, for cotton, it is only limited convertibility in that dollar cotton may be freely bought but not sold for sterling. But in the case of other commodities, such as lead, zinc or copper, there is full freedom to buy and sell them anywhere in the world. To this extent, sterling becomes truly convertible.

• • • •

From all this, it is reasonable to expect that complete convertibility will no longer be delayed; at least, it may not be delayed indefinitely as was feared once. Indeed, some financial observers predict such a development in the course of the next 12 months, and even earlier, before the end of the current year. It is, of course, pointed out that such a decision will rest on a continuing favourable trend in the U.K.'s and the sterling area's gold and dollar reserves, a fresh improvement in American economic activity and absence of any factor that will tend to make the U.S. more protectionist-minded. The sterling area's gold and dollar reserves now stand at over $2,000 million. This would have to rise, it is estimated, to about $5,000 million before the U.K. could risk convertibility. It is argued that even if this level is not attained through the area's own efforts, convertibility could still be contemplated, if the I.M.F. granted a credit of $1,300-1,400 million. This credit, together with $3,250 million, to which level the area's gold and dollar reserves might rise before the end of this year, would give a comfortable supply with the aid of which to restore convertibility to the pound.

• • • •

This line of reasoning implies that the I.M.F. would be willing to make the necessary grant. This would require relaxation of the present restrictions which limit a member's withdrawal from the I.M.F. only to 25 per cent of the member's quota. The I.M.F. has, in the past, seldom used the discretion it has for waiving this condition. More recently, however, the authorities have relaxed some of the restrictions on the Fund's activities. Thus, they

EQUITIES RULE DULL BUT STEADY

ALCOCK ASHDOWNS SLUMP

(From Our Own Correspondent)

BOMBAY, 20*th May*

DULL conditions prevailed on the Stock Exchange during the week under review. After last week's reaction, the market displayed a tendency to settle down around the lower levels. Persistent offerings of Indian Irons, weaker advices from bullion and commodity markets, the uncertainty in the international political situation and the continued stringency in the money market were the main factors which curbed the enthusiasm of the operators. Many operators, however, feel that the market is in a more healthy position than a few weeks ago, as the leading operators are said to have almost squared up their outstanding positions. The undertone, therefore, remained steady, with fluctuations confined to a narrow range.

In the steel section, Tata Steels were unimpressive. Opening at Rs. 193-4, they reacted to Rs. 191-4 on Saturday, but revival of fresh enquiries and short covering lifted them up to Rs. 196-4 on Tuesday. Lack of follow-up support and fresh weakness in Indian Irons pushed them back to Rs. 193-8 at the close. Indian Irons began the week at Rs. 29-13, but gave way to Rs. 29-5¼. After a short-lived recovery to Rs. 30-2 yesterday, due to replacement buying, the shares once again relapsed to Rs. 29-11¼ at the close of the week.

Textile shares were subdued on fears of dull market for cloth. Bombay Dyeings moved between Rs. 430-10 and Rs. 421-4 before closing at Rs. 422-8, a loss of Rs. 2-8 over the week. Kohinoors were depressed in the earlier part of the week due to selling by a large holder of the shares. They fell sharply from Rs. 314 to Rs. 306-12, and recovered to Rs. 312-4 before closing lower at Rs. 308-8. After an early rise from Rs. 325 to Rs. 329 Centurys reacted to Rs. 323-8, at which level there was some good resistance. Consequently, the scrips closed better at Rs. 326-8. Central Indias were marked down by a rupee on balance to Rs. 174. Finlays lost Rs. 4 to Rs. 242, Gokaks Rs. 2-8 to Rs. 250 and Mysore Spinnings Rs. 5-8 to Rs. 114-8. Phœnix stood Rs. 7-8 lower at Rs. 127-8, Podars Rs. 3-12 at Rs. 150 and Srinivas Rs. 3 at Rs. 207-8. Simplex receded by a rupee to Rs. 155-8, Standards by Rs. 2-8 to Rs. 312-8, Svadeshis by a similar extent to Rs. 275-8 and Swans by Rs. 5 to 325. Indu Ordinaries were steady at Rs. 11-2, Indore Malwas at Rs. 107-8 and New Greats at Rs. 169-8.

Activity in bank shares was low, but the undertone was steady with slight marking up in values, presumably on expectations that banks would get some relief to compensate the effect of the Award. Imperial Fully Paids picked up Rs. 12-8 to Rs. 1,782-8, while their Partly Paids lost Re. 1-4 to Rs. 438-12. Bank of Indias gained Re. 1-4 to Rs. 145-4. Barodas were maintained at Rs. 108. Central Banks were held at Rs. 55-4, while their 'A' shares hardened by As. 12 to Rs. 60-4. United Commercials were, however, a shade lower at Rs. 43-12.

Insurance shares were steady, though little increase in activity was reported. Orientals had buyers Rs. 30 higher at Rs. 7,690 on reports that the mutualisation proposal would be carried out soon. New Indias dropped As. 8 to Rs. 44-4. All-India Generals gained As. 8 to Rs. 3-12 and B.I.G. As. 2 to Rs. 13-4. Vulcans changed hands As. 2 lower at Rs. 12-14.

Electricity shares attracted moderate enquiries and fractional gains were noted in most scrips. Ahmedabad Electrics improved by As. 10 to Rs. 112-13 and Amalgamated Electrics by As. 3 to Rs. 10-15. Bombay Suburbans stood unchanged at Rs. 121-4. Surat Electrics gained As. 10 to Rs. 130-10. Tata Hydros were marked up by a rupee to Rs. 144. Andhra Valleys, however, dropped Rs. 15 to Rs. 1,350 and Tata Powers Rs. 2-8 to Rs. 1,440.

The miscellaneous section presented a mixed pattern and price variations, except in selected shares, were small. Sugar shares were slightly lower. Belapurs eased by Rs. 3 to Rs. 269 and Phaltans by Re. 1 to Rs. 102. Walchandnagars were down by As. 10 at Rs 175-10. Bhopals remained neglected at Rs. 12-8. Among cement shares, A.C.C. drifted lower by Rs. 2-8 to Rs. 154-12 and Digvijayas were dull at Rs. 119-8. In the engineering and mining sections, Alcocks were conspicuous with a heavy slump in price due to liquidation induced by adverse rumours about dividend. After an initial rise from Rs. 350 to Rs. 355, the shares dropped to a low of Rs. 312-8 today. Premier Constructions came into demand on reports that the Company would shortly get a big contract for dam construction. Consequently, the shares were bid at Rs. 128-4 *ex-div.* (dividend Rs. 6) as against Rs. 130-8 *cum-div.* last week. British Burma Petrols gained As. 2 to Rs. 3-9½ on expectations of a better interim dividend. Indian Coppers were dull at Rs. 2-15½. Shivrajpurs declined by As. 12 to Rs. 64-4. Shipping shares were steady. Scindias moved between Rs. 17-8½ and Rs. 17-13½ and closed at Rs. 17-11. India Steamships gained As. 3 to Rs. 8-7 on reports that the scrip had been included in the forward list of the Calcutta Stock Exchange. Bharat Lines had buyers at Rs. 96. The Company has maintained the dividend for 1953 at 5 per cent. Among automobile shares, Hindustans were unchanged at Rs. 8-3. Premier Automobiles were fractionally better at Rs. 69.

Among miscellaneous industrials, Bombay Burmahs dropped Re. 1-14 to Rs. 393-12. B.I.Cs. were steady at Rs. 8-1. Killick Industries were well held at Rs. 183. National Rayons lost a fraction to Rs. 156-4. Operators in this scrip are watching with interest the signing of an agreement by the Company with the S.A.S.M. Association for bulk deal contract. Tata Chemicals were in keen demand on news of good working of the Company and rose by As. 13 to Rs. 14-14. Tata Oils moved up by As. 8 to Rs. 40-8. Wimcos declined by Rs. 3-2 to Rs. 194-6.

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, 19*th May*

The performance of the Calcutta Stock Exchange was disappointing this week too. The initial enthusiasm among the operators, following the cut in the Bank rate in the U.K., tapered off gradually. This was due to a mild wave of selling pressure that ensued subsequently, as a result of weak commodity advices. The brightest spot in the market was provided by the tea scrips, which staged a moderate rally on better prices fetched at this week's auctions. Jutes were generally neglected. Engineering scrips were caught, at one time, in a bull-bear tussle. Miscellaneous counters were steady. Activity in the market, on balance, was limited and price movements were narrow.

Tea scrips, as stated at the outset, changed hands at improved levels. On the declaration of 25 per cent. dividend, Hansqua was done better at Rs. 23-10. Hantapara were done at Rs. 227, as against Rs. 218. Batelis were well in demand at Rs. 27. Attals met with support at Rs. 4-3 and Tengpani at Rs. 25-5.

Jutes lacked support. Indias lost Re. 1 to Rs. 128. Nationals were practically lower at Rs. 24-3. Presidency, however, gained As. 2 to Rs. 6-2. Howrahs improved from Rs. 23-14 to Rs. 24-6. Chitavalsahs were done at Rs. 11-1 and Hooghly at Rs. 41-4.

In the engineering section, Indian Irons were lower by As. 2 at Rs. 30-1. Preference shares were done at Rs. 108-8, as against Rs. 107-8. Textile Machinery gained As. 3 to Rs. 11-14. British Burmah Petroleum improved by an anna to Rs. 3-10. Indian Coppers was quiet at Rs. 3, while Consolidateds was a shade better at Rs. 2.

Among coals, Burrakur gathered an anna to Rs. 9-1, while West Bengal was quiet at As. 6. Central India was done at Rs. 5-14 and Raneegunge at Rs. 11-4. Bengal Coal was enquired at Rs. 485, as against Rs. 501.

In the sugar section, Ramnugger cane gathered Rs. 2-2 to Rs. 24-12, while Carew & Co., was quiet at Rs. 7-14. Dharbhanga was done at Rs. 12-9.

Miscellaneous scrips were steady. India Steamship improved by As. 3 to Rs. 8-8 F. & C. Osler also gained a similar amount to Rs. 18-10, whereas Rohtas Industries were lower by As. 11 to Rs. 16-5. B.I.C. was unchanged at Rs. 8-1. Orient Papers were done at Rs. 18-2 and Sree Gopal at Rs. 23-8. Indian National Airways changed hands at Rs. 4-7 and Martin Burn at Rs. 20-6.

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, 19*th May*

The mild activity witnessed last week in the Madras Stock Exchange gathered momentum this week. There was some enthusiastic buying in many scrips. Textiles led the rest, on reports of better offtake from important consuming centres. Select scrips among them registered sizable profits over the week. Planting shares put on a cheerful appearance. Of them, the performance of tea scrips was notable. For, following the increase in duty by Ceylon on exports of tea leaves, Indian and Indonesian tea leaves have begun to enjoy some advantage over those of Ceylon in the export market. Rubbers came in for some speculative support. Coffee scrips were dull. A levy up to Rs. 6 per cwt. as cess has been proposed under the revised Coffee Bill. This depressed considerably the sentiment of the operators. Among the miscellaneous scrips, sugars continued to meet with selective demand; the performance of others, were, however, not encouraging.

The textile section came in for substantial support. Buckinghams gained Rs. 2 to Rs. 145 and Lakshmis, Rs. 50 paid up, Rs. 4 to Rs. 120. Metturs moved up from Rs. 251 to Rs. 258-8 and Radhakrishnas from Rs. 172 to Rs. 180. Rajalakshmis advanced by Rs. 2-12 to Rs. 109. Coimbatore Cotton improved from Rs. 219 to Rs. 220 and Pioneers from Rs. 166 to Rs. 171. Coimbatore Spinnings rallied Re. 1 to Rs. 45-8. Coimbatore Kamalas, however, eased from Rs. 85-8 to Rs. 85. Dhanalakshmis declined by Rs. 8 to Rs. 228 and Saradas by Rs. 2-8 to Rs. 72-8. Travancore Rayons were done lower at Rs. 9-4, as against Rs. 9-6½.

Teas, among planting scrips, were the highlight. Blue Mountains and Chandramalas advanced by an anna each to Rs. 3-1 and Rs. 3-12, respectively. Devasholas gathered As. 3 to Rs. 20-14. Nilgiri Tea changeds hands at Rs. 14-3, as against Rs. 14-2, and Udayagiris at Rs. 10-4, as against Rs. 9-12.

Rubbers enjoyed a steady market. Cochin Malabars improved by As. 2 to Rs. 7-5. Thirumbadis were also up by a similar amount at Rs. 3-7. Rajagiris disclosed a gain of As. 11 at Rs. 12-3. But Pullangodes, however, eased from Rs. 3-2½ to Rs. 3-1. Nenmenys were quiet at Rs. 10-9.

Among coffees, Consolidated Coffee declined from Rs. 17-12 to Rs. 17-8. Mysore Coffee was unchanged at Re. 1-3 and Puthuthotams at Rs. 3-6½. Nil Neerugundis (tea and coffee) advanced by As. 3 to Rs. 4-3.

In the miscellaneous section, Dalmia Cement, Rs. 10 paid-up, advanced from Rs. 8-10 to Rs. 8-13. Deccan Sugars, Rs. 10 paid-up, improved from Rs. 10-4 to Rs. 11-14, and E.I.D. 'A' from Rs. 15-8 to Rs. 15-12. Travancore Sugars, however, lost As. 4 to Rs. 5-5. Rallis declined from Rs. 57 to Rs. 56 and Mettur Chemicals from Rs. 5-8 to Rs. 5-5. But Spencers gained an anna to Rs. 16-9. Mysore Papers were quiet at Rs. 18-2.

GOLD SMUGGLING

Mr. Shantilal Sonavala, a leading bullion merchant of Bombay, in the course of a communication to us, observes as follows:

"The Government of India has been very lucky in seizing large quantities of smuggled gold, thus placing a check on this illegal trade. It is estimated that about 1 lakh tolas, worth about Rs. 90 lakhs, have been captured by the authorities in the months of April and May alone. This large seizure reveals symptoms of the disease, a cure for which is still to be found. By seizing at the point of selling to the consumers, the source of entry is hardly affected, as the vast land and sea frontiers of the country make it difficult to check this trade. But it is still a moot point how far the traders, once goods have entered into this country, can be considered responsible for handling this business at the last point. Gold is a commodity which finds buyers everywhere and, even if smuggling is checked in the regular channels, it finds a market all over India in centres outside Bombay, where this gold reaches consumers in various other forms. In other words, seizing of gold after it has come into the country not only leads to an indirect business in that commodity but creates a scare among genuine traders of repute.

"Smuggling of gold on a very large scale into India is due chiefly to the disparity in price between India and abroad. London market can supply gold at an equivalent parity of $35 per ounce (which comes to Rs. 62-8 per tola) against receiving dollars. The sale of gold against dollars to a non-resident amounts to returning to the orthodox gold specie standard in countries outside the sterling area. It accepts in practice the need for supplying bullion to individuals. It partly nullifies the pious hopes of the authorities of the International Monetary Fund to divert all the newly mined gold to the reserves of the central banks only. Thanks to the sale of large quantities of gold by Russia in the sterling area and also due to coordinated and vigilant policy of the sterling area countries, especially the Commonwealth countries, to keep the balances of payments position with the dollar area countries under strict observation and control, the gold position of the sterling area has substantially improved. The position of trade balance has also been very favourable.

"Conditions in India have improved in all sectors of production too. The Five-year Plan is well ahead. Still a large programme of development is to be completed which is to be financed by deficit financing. The Five-year Plan and other relief measures pump in the purchasing power into the hands of workers, peasants and small men, who prefer a part of their earnings to be invested in bullion. This is reflected in the substantial demand for the precious metals, to the tune of Rs. 25 to Rs. 30 crores per year. At present, the stocks of silver and gold are meagre, while the demand is unsatisfied. It is said that the financial authorities believe that the Indian people should not make investment in bullion. Is this a reality? The London authorities used their far-sighted policy and took a lead. It is to be hoped that the Indian authorities would follow the example and permit imports of gold against submission of dollars to the Reserve Bank of India. The liberalisation of import policy is an instrument to be used as an anti-inflationary measure to combat the effects of deficit financing. Import of bullion, therefore, deserves to be given priority, as it does affect the indigenous industry, as will be the case in respect of consumer goods industries, if free imports of other consumer goods are allowed. It is for the authorities to weigh the advantages and disadvantages of allowing bullion imports and take a realistic view in regard to placing this trade on a regularised manner."

MARKET GOSSIP

(Concluded from previous page)

have promised Peru that they will make available $12.5 million at any time, in the next 12 months, although the Fund's rules permit the grant of a stand-by credit over a maximum period of only six months. If the Fund has thus developed a flexible attitude towards its operations, it should not be difficult for this organisation to relax in favour of the U.K., its restrictions relating to the quantum of stand-by credit that the Fund is now authorised to grant to a member-country. If any request for such relaxation comes from the U.K., the U.S., it is stated, would be willing to support it, particularly because the U.S. itself is keen on seeing that convertibility is restored to sterling as early as possible.

• • • •

The reduction in the British Bank rate has benefited the Indian exporters to some extent, as the interest rates for discounting bills in the London money market have fallen. The benefit of this fall has been passed on to exporters by the banks lowering the rupee-sterling exchange rate for buying 60 days' sight and 120 days' sight bills by 1/32d. for all deliveries.

• • • •

Apropos the report that appeared in these columns some time ago that Tatas have reached an understanding with Bayers, a German firm, for the manufacture of basic raw materials for dyes at Jamshedpur, the Public Relations Officer of Tata Industries Ltd. says that there is no truth in it.

NEWS IN BRIEF

THE strength of Indian shipping stood at 435,000 gross registered tons in 1953.

The Rajasthan Government has set up a State Advisory Council of Farmers to advise the Government in regard to development of agricultural production.

The average per-acre yield of rice in India in 1953-54 was about 790 lbs., as against 680, 635 and 595 lbs. in 1952-53, 1951-52 and 1950-51, respectively.

The Government of India has decided to fix the price of imported British refined, Cuban and Formosan sugar at the rate of Rs. 30-8 per maund. The price for other qualities of imported sugar shall remain at Rs. 30 per maund.

The House of the People approved last week of a resolution moved by the Railway Minister suggesting the setting up of a Parliamentary Committee to review the rate of dividend at present payable by the railway undertaking to the general revenues. The Committee, comprising 12 members, will also look into other ancillary matters connected with the separation of railway finance from general finance. The Committee will make its recommendations by 30th November, 1954.

The Government of India has decided to consider applications from actual users for import of all types of boards falling under serial number 45-A, Part V of the Import Trade Schedule, except straw board, mill board, grey board and single-faced corrugated board. This is in modification of the earlier provision in the import policy for January-June, 1954, under which applications from actual users for import of special types of boards falling under the serial number 45-A, Part V, namely, paste board, mill board, card board and straw board—all sorts—were to be considered.

Andhra has abundant resources of structural minerals used primarily for building and in civil engineering, according to an article by Dr. A. K. Dey, of the Geological Survey of India, published in the latest issue of the *Indian Minerals* issued by the Survey. The reserves of limestone suitable for cement-making or lime-burning are of the order of 11,795 million tons in the various districts of Andhra. Limestone for cement manufacture is also available in the Godavari valley.

The Committee appointed by the Government of India to deal with the proposed foundation of the Industrial Development Corporation with the assistance of the World Bank will be able to finalise the draft agreement by the middle of July. Disclosing this, Mr. A. Ramaswami Mudaliar, Chairman of the Committee, who paid a two-day visit to Bombay last week-end and held discussions with Mr. A. D. Shroff, a member of the Committee, said that a full Committee meeting will be held at the end of this month.

The Union Finance Minister is reported to have agreed to refer to State Governments for their sympathetic consideration the suggestion, made by a deputation of the United Chamber of Trade Associations, that the levy of inter-State sales tax be postponed till the Taxation Enquiry Commission submits its report. He is also said to have asked a Secretary of his Ministry to collect data of the estimated yield of inter-State sales tax, expenses of collection and the hardship imposed on trade with a view to assessing whether the yield was worthwhile.

Indian sugar will be available for sale to retailers and consumers in the city of Bombay at the rate of Rs. 90-14 per bag weighing 2¼ maunds net on the basis of E.27 Grade, subject to grade price differentials fixed by the Government ex-godowns of the Government nominees appointed for the purpose. This will be inclusive of the cost of gunny. The godown addresses of the Government nominees are: (1) Messrs. Hansraj Hari Ram, 104-114, Frere Road, Bombay and (2) Messrs. Arpit Ltd., 104-114 Frere Road, Bombay. The sale to one party shall be limited to a minimum of one bag and a maximum of eight bags. Distribution at the above rate has already started.

The President of India has sanctioned the appointment of a four-member expert committee of scientists to advise the Central Government on the technical side of the penicillin project. The Committee will examine this question from the production, as well as research, aspects and advise the Government from time to time on the steps necessary to ensure technical excellence of the project. The President has also sanctioned the appointment of another 11-member committee to study and advise the Government on the extent and type of penicillin to be produced at the factory, the influence of the types on production, mechanism, and recommend such other technical matters of health importance as might fall within the Committee's competence.

The Government of India has decided to form another wheat zone, comprising the States of Bombay (excluding Bombay City), Madhya Bharat, Madhya Pradesh, Rajasthan and Bhopal. The State Governments concerned have been asked to issue necessary notifications to implement this decision with immediate effect. Wheat will now move freely within this zone on trade account, but its export from the zone will not be permissible. Bombay City has been excluded from this zone in order to avoid excessive demand on the availability of wheat in the zone. This city will continue to be fed by imported wheat. This is the second free zone to be formed, the first comprising the States of the Punjab, P.E.P.S.U., Delhi, Himachal Pradesh and Bilaspur. It is not proposed to form any more free wheat zones.

The Government of India's tube-well constructions programme is going ahead satisfactorily. Of the 965 tube-wells in Uttar Pradesh, Bihar and the Punjab, for which the contract had been given to a foreign firm in December, 1950, 941 has already been constructed, while the remaining 24 wells are expected to be completed by the end of June next. Of the 2,000 well projects taken up under the Indo-American Technical Assistance Programme for 1952, in respect of which contracts were signed with three foreign firms in August, 1952, 763 tube wells have so far been drilled, as against 637 scheduled to have been completed by 30th April. In all, 1,505 tube-wells have been given in contracts and the remaining 495 are being constructed departmentally by the Governments of U.P., the Punjab and Bihar. Of the wells entrusted for departmental construction, 203 have already been drilled, including 150 out of 295 in Uttar Pradesh, 23 out of 100 in Bihar and 30 out of 100 in the Punjab. Under another scheme for 650 tube-wells in the States of Uttar Pradesh, Bihar, the Punjab and P.E.P.S.U., under the Indo-U.S. Technical Assistance Programme for 1953, a French combine of contractors has undertaken to construct 482 tube-wells. The remaining 165 tube-wells will be constructed departmentally by the Governments of Uttar Pradesh and Bihar.

A request to the Government of India to install a Commercial Wood Seasoning and Wood Preservation Unit at Delhi to give a lead to the establishment of these industries on an all-India basis was made by the Executive Committee of the Timber Dryers' and Preservers' Association of India at its first meeting held last week at the Forest Research Institute, Dehra Dun. The other resolutions passed by the Committee called upon the Central Government, (1) to prepare a code of practice on the prophylactic treatment of timbers and maintenance of timber depots under hygienic conditions, with a view to controlling the heavy losses of timber due to fungal and insect infection during transit and storage, (2) to prepare a note on the large-scale production of seasoned and preserved wood so as to enable Government Departments to insist on Government contractors to supply such materials for their use with effect from 1st January, 1956, (3) to prepare a detailed scheme for the popularisation of seasoned and treated wood by the public, (4) to prepare technical standards for the timber seasoning and preservation operations, and (5) to devise practical means for the speedy and sustained supply of wooden sleepers for the railways. Several sub-committees were set up to prepare detailed schemes for the execution of these resolutions.

• • • •

From Abroad

The population of the United States reached 161,763,000 as on 1st April, 1954, according to the latest U.S. Census Bureau report. This is an increase of 2,746,000 or 1.7 per cent. over the estimate as on 1st April, 1953.

A great increase in Commonwealth oil output has been announced in London by the Petroleum Information Bureau. In the first quarter of this year, Commonwealth countries produced 5,200,000 tons of oil (including natural gasolene). This compares with an output of only 4,000,000 tons in the first quarter of 1953, though production over last year as a whole averaged approximately 5,000,000 tons a quarter. The leading producer was Canada, which supplied, 2,890,000 tons in the first three months of this year, as against 1,940,000 tons in the corresponding period of 1953. After Canada, the most important producers were British Borneo, with 1,250,000 tons in the first quarter of 1954, and Trinidad, with 800,000 tons—both approximately the same as in the first quarter of last year.

Eight Indian mine managers have started a year's training in Britain under the Technical Co-operation Scheme of the Colombo Plan. They are taking an academic course at Sheffied University. Practical training is being arranged for them by the National Coal Board during the summer vacation and, if further experience is considered necessary, after the university course. The course follows a request by the Government of India to the Colombo Plan Technical Co-operation Bureau for facilities for the training of selected Indian mining officials (holders of mine manager's certificates and university graduates).

The Norwegian Trades Union Federation and the Norwegian Employers' Federation have reached an agreement on proposals for renewing for two years all wage agreements expiring between 1st January and 1st June this year. The proposals cover about 470 agreements affecting 173,000 workers. The proposals, which will now be submitted to the workers and employers for acceptance or rejection, include provisions for compensation at the rate of 25 shillings for men and 20 shillings for women for religious and other occasional holidays not falling on Sundays. Provision is also made for workers to receive pay during absence caused by accidents occurring at work. Wage rates for young workers are proposed to be improved. Further, it is agreed that, if the cost of living index rises or falls by 7 points or more by March or September next year, as compared with the index figure for March this year, negotiations can be started with a view to adjusting wage rates generally.

PERSONAL

MR. Homi Mody, Chairman of the Central Bank of India, Ltd., left for London last week.

Mr. H. A. Twist, the newly appointed Deputy High Commissioner for the U.K. in Bombay, took charge of his office on Monday this week, shortly after his arrival from London.

Mr. S. Dutt, the erstwhile Ambassador of India to Bonn, has assumed charge as Commonwealth Relations Secretary, Ministry of External Affairs, Government of India.

Mr. Gulabchand Hirachand, Chairman of the Premier Construction Co., Ltd., left for the U.K. early this week *en route* to the United States of America, on a business tour.

Mr. A. D. Shroff, Chairman of the New India Assurance Co., Ltd., and a Director of Tata Sons, Ltd., left for Ootacamund on a short holiday on Sunday this week.

Mr. F. C. Badhwar, Chairman, Railway Board, who is leading the Indian delegation to the 16th International Railway Congress, meeting in London from 19th to 26th May, left for London on Saturday last.

Mr. M. P. Birla passed through Bombay on Tuesday this week to the U.S. where he will join the delegation of the Indian Jute Mills' Association which will be studying the trend of jute markets in that country.

"COMMERCE" 1929

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 25*th May*

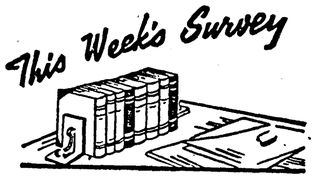
Indian Agriculture (1927-28)

When one takes into consideration that 256 million acres of land are under cultivation in British India, one can well appreciate the difficulties in bringing about any striking improvement in the process of agriculture under the existing conditions. The review of Agricultural Operations during the year 1927-28 by Dr. D. Clouston, Agricultural Adviser to the Government of India, modestly points to the activities of the Departments of Agriculture in India and the achievements that may be credited to them. In actual operations on the soil the progress, judged by outturns, has not been appreciably great. On the other hand, the outturns in such commodities as rice and wheat the two main articles of staple food, suffer by comparison with the figures for the preceding year. The reduction of 6 per cent. in the outturn of rice is atributed to bad monsoon, and cloudy weather is responsible for the reduction in yield of 14 per cent. In wheat in an area which exceeded that of the previous year by 3 per cent. There was a distinct improvement in cotton, but the strike in Bombay was responsible for the reduction in consumption. A decrease of 1 per cent. in yield is recorded in sugarcane, although the area under cultivation was 1 per cent. to the good. There was decrease both in the acreage and production to the extent of 12 and 16 per cent., respectively, in jute. Congressmen in Bengal may lay the soothing unction to their soul that this was the result of their agitation for restricted cultivation of jute, but the cause of this shrinkage should be found elsewhere. It was due to the record crop of 1926 which resulted in a drop in the price of the raw product. Other agricultural products maintained their positions, more or less, as compared with the previous year. But if the departments have failed to show any reasonable results in actual operation, they have made marked progress in scientific research, and in the distribution of improved varieties of staple crops of the country.

The World Bank will shortly send a mission to Rhodesia and Nyasaland to make a detailed study of the finances of the new Federation. The Mission is expected to pay particular attention to hydro-electric power projects. It is expected that the Bank will agree to provide the major portion of the capital needed for the initial stages of hydro-electric power projects in the Zambesi Basin.

Steel production in the U.K. during April this year reached a record annual rate of 19.15 million tons, as compared with that of 18.97 million tons in March and of 18.78 million tons in the first quarter. Pig iron production also reached a new peak, the annual rate being 12.07 million tons. With new capacity coming into operation, the Iron and Steel Board states that there should be sufficient for the production of 18.5 million tons of steel in 1954, if such an output were required.

Industrial development in the Netherlands showed marked progress in 1953. The production (total, as well as output per worker) and the turnover (of home and of foreign sales) substantially increased in comparison with 1952 and preceding years. The Index of industrial production for the year 1953 was 163 as against 147, 145, 139 and 126 for the previous four years, respectively. The index of output per worker in industry was 107 for 1953, as compared with 98, 95, 93 and 88 for the previous four years, respectively. For the first time in 1953, the pre-war level of output per worker was exceeded and that by a considerable extent.



SPICES INDUSTRY

THE Spices Enquiry Committee (Chairman: Mr. K. R. Damle), a summary of the findings of which is published elsewhere in this issue, has done well to recommend the setting up of regional committees for carrying out measures designed to improve and extend the cultivation of India's chief spices, pepper, cardamom, ginger, turmeric, lemongrass oil and cashewnut. In view of the fact that these commodities are grown largely in Travancore-Cochin, Madras, Bombay and Mysore States, the Committee has suggested three regional advisory committees—one for Travancore-Cochin, another for Malabar and South Kanara and a third for Mysore, including Coorg and South Kanara. This is a welcome suggestion, considering that a central committee of the type that exists for other commodities, like tobacco, could hardly be expected to function effectively when it has to deal with as many as six commodities, the cultivation of which is spread over all the States of South India.

Besides the general recommendation for the setting up of regional committees, the Damle Committee has made quite a few specific suggestions for individual commodities. As regards pepper, it suggests the creation of a central fund of Rs. 1 crore from out of the revenue from the export duty on this commodity. The Committee suggests the establishment of two regional research stations for extending as well as improving the cultivation of pepper. India accounts for nearly 50 per cent. of the total world supply of 43,500 tons (93,500 tons before the war). Pepper derives its importance not only from the fact that it is an export commodity—its exports fetched Rs. 27 crores in 1952-53—but also from the consideration that it is a good dollar earner.

The scope for extending the export trade in cardamom and lemongrass oil is somewhat limited. Cardamom crop is normally of the order of 1,800 tons, as against an average demand for 1,200 tons, though further research into the utilisation of cardamom oil may lead to an extension of the market for this commodity. India produces about 700 tons of lemongrass oil which forms the basic raw material for many aromatic substances used in soaps and cosmetics. The oil is also used in synthesising Ionones and Vitamin-A. The Committee suggests that this process should be undertaken in India itself in order to improve the internal offtake of this commodity. As an export commodity, turmeric has less value, since only 10,000 tons out of the total output of 120,000 tons are exported. It would, however, appear that the Committee could not gather much data on this commodity. The subject is, as the Committee suggests, well worth pursuing. Indian ginger, the output of which is estimated at 10,000 tons, suffers in the world markets by comparison with the produce of other countries by reason of its larger fibre content and higher price. This is a matter which should engage the attention of the Agricultural Departments of the State Governments concerned.

Finally, there is cashewnut. India holds the pride of place in world cashewnut trade; it supplies 95 per cent. of the trade. Since the cashewnut processing industry is dependent partly on raw nuts imported from East Africa, it is necessary that imports should be liberally permitted. But the long-term solution, as the Committee suggests, lies in increasing the production of cashewnuts in the country. In this connection, the Committee recommends that a development fund of Rs. 25 lakhs should be earmarked for being spent on a ten-year development programme aimed at increasing and improving cashewnut cultivation in India. Whether a fund is set apart or not, it is necessary that cashewnut cultivation, as well as the processing industry, ought to be encouraged in all possible ways. This is because, while cashewnut is a good cash crop, the processing industry can contribute to India's export trade, besides producing cashewnut-shell oil, capable of being put to many industrial uses.

ART SILK FABRICS

The breakdown of the negotiations between the Silk and Artsilk Mills' Association and the National Rayon Corporation in respect of the bulk purchase arrangements for rayon yarn has unfortunately been followed by mutual recriminations. The controversy now seems to include not merely the question of price at which the rayon yarn is to be sold by the National Rayon Corporation but such related questions as the quantum of rayon yarn imports that should be allowed and the quality of the Indian-made rayon fabrics. On behalf of the National Rayon Corporation, Mr. P. M. Chinai contends that they cannot possibly sell 150D yarn at less than Rs. 3-10 per lb., since this level is itself less than the landed cost of similar yarn. Nor can the manufacturer take less than Rs. 4 per lb. for 150D yarn. He places the yarn output at 15 million lbs. and the consumption of yarn at 40 million lbs. In other words, he wants the imports to be limited to the difference, namely, to 25 million lbs., though he concedes that larger yarn imports may be allowed if exports pick up. He believes that the present scarcity of yarn is due more to maldistribution of yarn than to any other factor. He feels that the quality of Indian rayon fabrics is low and favours also the import of fabrics. He has also urged an enquiry into the installed loomage working on art silk yarn and other aspects of the art silk weaving industry in order to find the precise level of the country's yarn requirements.

These conclusions and assumptions have been disputed by Mr. Murarji, J. Vaidya, Vice-President of the Silk and Artsilk Mills' Association. He contends that the figure of rayon yarn requirements (40 million lbs.), quoted by Mr. Chinai, is a gross underestimate, inasmuch as even the Tariff Commission places it at 70 million lbs. He emphasises that what the industry needs is an "adequate supply of raw materials." In this connection, he says that any decision on the question of raw material supply to the weaving mills, arrived at by the Federation of Indian Chambers of Commerce and Industry, will not be binding upon the Association. He joins issue with Mr. Chinai over the latter's demand for permitting imports of rayon fabrics. He believes that it will be a waste of foreign exchange. But consumers of these fabrics may want the same treatment to be extended to them as he wants in regard to imports of rayon yarn. He does not, however, belittle the importance of quality. Although a few mills produce cheaper qualities to suit the demand of particular areas, the quality of Indian-made fabrics compares in quality with the best that are imported. He is also proud of the sizable contribution of Rs. 45 lakhs which the Association has made towards the establishment of a research institute for the industry.

From all this, it should be clear that the two unresolved but important issues are the price of yarn and the quantum of imports. The first issue is an internal arrangement between the rayon yarn producing unit and the rayon yarn consuming industry. In a buyers' market, it is not surprising that they are unable to reach an agreement mutually satisfactory to both. The fact seems to be that, so long as there are uneconomic and inefficient units in the weaving industry, there will always be a tendency, in any bulk purchase arrangement, to beat down prices. It is much better that the really uneconomic units are allowed to close down than that an artificial bulk purchase agreement should be concluded. Accordingly, there should be no bulk purchase agreement and prices for the yarn should be left to be determined by the free market forces. As regards the question of the level of yarn imports that should be allowed, it is wrong to resist the weaving industry's demand for an adequate supply of raw materials.

TRADE WITH CHINA

A significant feature of the report of Mr. Harold E. Stassen, Director of Foreign Operations Administration, U.S., on the working of the Battle Act submitted to the Congress last week, was that the U.S. would not coerce its allies to place a total embargo on trade with China. The American policy throughout the six months under review was to continue its total embargo on exports, strategic and non-strategic, to China and North Korea. Mr. Stassen points out that, though the policies of other major free Governments regarding trade with Communist China had not been identical with its own, the U.S. had not attempted to bring about conformity through coercion. Proceeding, he says that other free Governments had agreed to maintain the ban on exports of strategic goods to China and "such relaxations as took place did not affect the multilateral embargo." Mr. Stassen has characterised as baseless the rumours current from time to time in various countries to the effect that the U.S. had decided to relax its embargo or was under irresistible pressure to do so and that American cars were reaching the Chinese mainland by way of Japan.

Mr. Stassen's assurance that the U.S. will not attempt to bring about conformity through coercion is welcome. For, outside the U.S., there are few countries which are in a position to sever trade connections completely with China purely on ideological grounds. Another reason for the readiness of some of the countries to trade with the Communist block, in general, and China, in particular, is the hope that the removal of trade obstacles will help reduce international tension. Most of the free countries, however, are agreed that a wholesale removal of restrictions is impolitic. The present attempts on the part of the free countries, other than the U.S., at widening the area of trade between the two major rival blocks are in the nature of a limited investigation into expanded trade possibilities without undermining military security.

There is a feeling that a "historic" increase in the size of trade between the two blocks is taking place. This feeling is due to a flurry of new trade agreements between Russia and the non-Communist countries concluded last year. A feature of these agreements is that they cover a large volume of goods. But the actual outcome of these agreements is different. The report, accordingly, argues that this "impression seems hardly justified." The agreements usually merely authorise, but do not guarantee the exchange of goods. Mr. Stassen says, in effect, that there has been no significant improvement in East-West trade. As far as trade with China is concerned, there is actually a substantial fall both in imports and exports, though some countries have benefited at the expense of others. According to the report, the countries which were able to sell more to the Chinese in 1953 than in the previous year were Western Germany, France, Japan and the U.K. Western Germany's exports to China rose from $2,800,000, in 1952 to $25,000,000 in 1953. Those of France increased from $3,300,000 to $12,400,000 and those of Japan from $500,000 to $4,500,000. Exports from the U.K. to China rose from $12,800,000 to $17,500,000. But exports from Hongkong, the traditional gateway of commerce, to, and imports from, the mainland of China, fell drastically in the second half of 1953.

TRADE MARKS

The infringement of trade marks has been a popular and profitable pastime in this country for a long time now. It has, however, grown to menacing proportions in recent years. The Trade Marks Owners' Association is naturally perturbed by the increase in this crime, and more particularly, by the fact that the procedure against the offenders is slow. In any infringement that may be effected for punishing the guilty, it is necessary to see justice is done irrespective of the consideration whether the affected interests can bear the loss or not.

In his address at the annual general meeting of the Trade Marks Owners' Association of India, held at Bombay on the 17th inst., Mr. K. T. Chandy, Chairman of the Association, rightly warned against discrimination in the matter of protecting trade marks owners. He held that discrimination against groups as, for instance, national against foreign, and small against big, enterprises and *vice versa* was not only bad in law but in practice and that it would be destructive of the initiative and enterprise of honest traders and harmful to the development of export trade. He pointed out that, if India were to show scant respect for the goodwill of business enjoyed by foreign traders here, it cannot expect anything better in foreign markets. He reiterated that the urgent need was more effective remedies against infringement of trade marks, with a view to safeguarding the interests of the consumer and encouraging honest business practices. Mr. Chandy said:

"Trade marks are not a tangible property, the loss of which to one is gain to another. It is essentially a symbol of goodwill and the loss of one's goodwill is not the gain of another. Goodwill is of the consumer which can only be acquired by strict and consistent adherence to uniform and high standards of quality and the adoption of fair trade practices. Trade marks do not create goodwill, but only represent it, and goodwill can only be created by honesty and efficiency in trade, and quality in goods. It is, therefore, wrong to assume that goodwill can be acquired by deceptive copies of trade marks. On the contrary, the habit of copying only betrays the lack of honesty on the part of the person who does the copying and his incapacity to manufacture something of good quality which would be accepted on its own merits. A nation's prosperity cannot be built up on dishonesty. Such vulgarisation of national interest will, I am sure, receive no support from the Government or from any right-thinking persons among the public . . . . What an infringer does is not merely to attack my rights, but the equally important and co-related rights of the consumer."

After all, there is no more nefarious form of industrial brigandage than the infringement of trade marks and sale of spurious drugs. And yet the evil has persisted with a remarkable resilience, worthy of a better cause. The evil should be put down with a stern hand. Justice will thereby be done not merely to the trademarks owner but to that defenceless individual, the consumer. In this connection, the report of the Trade Marks Enquiry Committee which has been submitted to the Government will be awaited with interest.

COFFEE MARKET EXPANSION BILL REVISED

The Coffee Market Expansion (Amendment) Bill, 1952, which was introduced in the House of the People in December, 1952, has now been revised and a new Coffee Market Expansion (Amendment) Bill, 1954, was introduced in the House last week. According to the statement of objects and reasons appended to the new Bill, the Act of 1942 was passed to meet the situation which confronted the coffee industry on the outbreak of World War II when most of our European markets for coffee were lost. This resulted in a surplus of coffee in the country and a slump in prices. The situation today was entirely different. The internal consumption of coffee had increased considerably and it was of utmost importance to step up production, in order to meet the increasing demand of the home market, keep prices at reasonable levels and to meet our export requirements. The problem now was, therefore, one of the development of the industry rather than of marketing.

The Indian Coffee Board also had to be reconstituted to ensure better co-ordination between the Board and the Central and State Governments and a more equitable representation of all the interests concerned by altering the present method of according individual representation, by name, to various associations on the Board. The nature of the future work of the Board would entail the appointment of a whole-time chairman, and power was therefore taken for Government to appoint the chairman.

There were many small-sized coffee estates the economic position of which being weak needed some special help; this required additional funds. The present duty of excise and customs was only Re. 1 per cwt. It is, therefore, proposed that the Central Government should have powers to levy a higher rate of duty, subject to a maximum of Rs. 6 per cwt.

Clause 6 of the Bill, dealing with the composition of the Board, provides that the Board shall consist of a chairman to be appointed by the Central Government, four representatives of the States Governments to be appointed by those Governments, 12 representatives of the coffee-growing industry to be nominated by the States Governments concerned, four representatives of coffee trade interests, three of labour, two of consumers and two of other special interests, all to be nominated by the Central Government. It is thus seen that there is practically no change in the composition of the Board, compared to the provisions of the original Bill.

Clause 9 provides for the payment to the Chairman of such salaries and allowances and laying down such conditions of service in respect to leave, pension, provident fund, etc., as may be fixed by the Central Government. It also provides for the election of a vice-chairman from amongst the members of the Board. This is an important change from the previous Bill and now follows the principle adopted in the new Tea Act. In clause 10, power is sought to increase the present duties of customs and excise up to Rs. 6 per cwt. if required. This should not be mistaken for the excise duty on coffee which is Rs. 21 per cwt.

Provision is made in clause 12 for the payment of the proceeds of the duty of customs and excise and of any fees levied under the Act, less the cost of collection, to the Board for being utilised for the purposes of the Act, provided that Parliament so provides by appropriation made by law in this behalf. This alters the provision in the previous Bill, in that the funds collected can now be regarded as fully earmarked for the use and benefit of the coffee industry.

One other significant feature is that some of the provisions in the original Bill which enables Government to take action without consulting the Board continue to remain so in the revised Bill.

In a "financial memorandum" attached to the new Bill, it is pointed out that the levy of a duty of excise and customs at Re. 1 per cwt. is expected to yield Rs. 5 lakhs. The average annual expenditure on the Board and on measures taken for promoting agricultural and technological research is about Rs. 4 lakhs. The balance of the proceeds realised by levy of a duty at a higher rate will be earmarked for granting assistance to coffee estates. In another memorandum attached to the Bill it is stated that, in the matter of nomination of members of the Board, the nominating authorities should consult the representative organisations of interests concerned before making the nominations.

The Government of India has decided, on a review of the policy for regulating exports of castor oil, to release a further quantity for export for the period ending 31st July, 1954. Export allotment will be given to established shippers for quantities equal to one-fourth of the total shipments effected by them during the calendar year 1953.

OFF THE RECORD

(By "ROVER")

IT must, indeed, be very gratifying to the vast business community scattered all over the country that, with the election of Mr. B. M. Birla, as President of the Federation of Indian Chambers of Commerce and Industry, a new dynamic note of activity and sober optimism has been sounded by this somewhat somnolent body. Perhaps, the period of seven years after independence was not propitious for a change in approach or traditional policy. The business community itself was bewildered, both by the radical change in the political set-up and the successive problems posed by a difficult post-war era. The Governments were too much in a hurry to bring down heaven on earth and to put scores of their pet but untried theories into practice to listen to any sane advice, especially from a quarter on which they looked with some distrust and no little contempt.

The atmosphere was charged with suspicion, jealousy and passive, if not an overt and active hostility towards private enterprise, which in spite of shackles in the shape of numerous controls, had emerged fattened from the lean years of the war. Apart from the fact that commerce and industry were in no condition to think clearly or to act rationally, at least during the first five years of this period, it is not improbable that any constructive and co-operative approach on its part to the authorities would have met with a humiliating snub from power-drunk politicians. A period of frustration and some heart-searching was necessary for both the sides to get their bearings afresh.

The Governments have experienced enough failures in their ambitious plans and have had to suppress so many scandals hinting at waste, nepotism and corruption in their brief career that the wise ones amongst the politicians, capable of learning from experience, have realised their limitations and shed some of their erstwhile airs of moral superiority. Barring lone and tragic figures like the Chief Minister of Bombay or the former Chief Minister of Madras, others, high up in the hierarchy of the Governments, have learnt, not without making the country pay a heavy price in toil and tears though, that they have to carry both the public and the business community with them in their efforts at economic regeneration of the country.

Industrialists and financiers, on the other hand, have also learnt that the old days of unrestricted exploitation of men and materials, without any regard to social justice and welfare of the community as a whole, are gone for ever. They too have painfully realised that the divine rights of employers and of those who control the means of production have been swept away during the turbulent forties, along with the divine rights of the princes. Both the politicians and the business men, though still divided in their outlook and approach, are at least in a salutary mood today to work together, if not enthusiastically, at least in an accommodating manner, for the limited objective of restoring the economy of the country to an even keel.

It was evident during Mr. B. M. Birla's recent visit to Bombay that he was out, on the one hand, to offer sincere co-operation to the Government and to educate and consolidate the business community, on the other. He tried, while here, to understand the basic problems of various trades and industries, because he transparently believed that, if properly and painstakingly put before it, the Government would try to be helpful in solving them to the extent that it lay in its power to do so. If further evidence of this attitude was necessary, it is furnished by the preparation and publication of a valuable monograph on *Imports And Industrial Development* last week by the Federation secretariat. Coming as this useful compilation did on the eve of the Imports Advisory Council, this brochure, packed with well analysed and interpreted statistics, is bound to prove helpful to the Ministry which is engaged in regulating imports and still more so to the designers and builders of the country's Second Five-year Plan.

It is one of the functions, to my mind of important business organisations in the country to educate the Governments and the public in the intricacies of practical economics. I welcome this effort on the part of the Federation as an earnest of what it might do in this direction. I have no doubt that studious and conscientious men, like Mr. D. P. Karmarkar at the Ministry of Commerce would appreciate the value of this contribution and give it the attention it deserves. Though not openly acknowledged as an accepted official principle, regulation of imports has also become an important instrument of our policies regarding tariffs and protection. The authorities ought to feel grateful to the body for this ready-made piece of research, which can serve as a plank in the new bridge, which its young and enthusiastic president hopes to build to remove the estrangement and the occasional bitterness, which have characterised the relations between the Government and business men in general in the not very distant past. In matters like this, an ounce of logic and reliable statistics is worth a ton of aimless propaganda. Now that the Federation has launched its efforts in this direction, let us hope for a whole series of factual and objective monographs on important problems of industry and commerce, leaving the task of pursuing the more controversial and polemical side to the recently formed Council of Industry.

Vulgar Display of Wealth

It is said of ancient Rome that, before it began to disintegrate and to crumble to pieces, it had given itself over to the pursuit of pleasures and a luxurious way of life. A similar demoralisation is believed to have overtaken France in the two decades prior to World War II. I have been painfully reminded of this by the lavish and at times even vulgar display of wealth and hospitality at marriage celebrations by some leading men of the business community, who have made fortunes during the war years and later, by exploiting shortages of materials and the distress of large masses of people. This exhibitionism amongst the new rich has, during the current season, broken all bounds of moderation as well as discretion, if not decency.

In a country reputedly poor and struggling painfully to stabilise its economy, a country still dependent on foreign aid for the completion of its important projects, where necessities of life like houses, education, medical relief, roads and even food and clothing for millions of unfortunate ones are grieviously in short supply, waste on a colossal scale on loud and garish illuminations, entertainment and decorations, is bound to wound the susceptibilities of the sensitive and cultured sections of the community and to drive to despair and desperation the countless who have to struggle hard to keep themselves alive at a mere animal level of existence.

When we ask for more houses to be built to provide a modest home for those who are herded together in slums and hovels or on the pavements, those who command the resources ask for adequate returns and incentives. When the National Plan Loan for urgent needs of the country is still on tap and has not reached the stage of even a hundred crores, it should be regarded as a matter of shame to throw away large chunks of money on an evening's reception. I wonder what returns by way of profit or dividends these people, who spend lakhs on marriage celebrations, expect from their investments. And if these huge sums could be spared for objects of such ephemeral value or of no value at all in the context of the country's plight, why could similar amounts be not forthcoming on the basis of moderate or token returns for what the country needs badly and urgently?

I have neither the desire to preach austerity to those who are favoured by fortune, nor the intention of thrusting moral values on them, which their present stage in evolution would not enable them to understand to appreciate. But I do certainly want to appeal to their own sense of self-preservation, which no successful business man could be devoid of. If considerations of citizenship and fellow-feeling fail to move them, let their dormant sense of enlightened self-interest warn them of the disaster they are inviting by drawing the attenion of the multitudes and the authorities to their vast possessions and hoarded wealth.—All *Rights Reserved.*

CEYLON RAISES EXPORT DUTY ON TEA

The Government of Ceylon has raised the export duty on tea by 15 cents to 60 cents per lb. (flat rate) with effect from the 13th inst. This increase would yield an additional revenue of about Rs. 18 million during the rest of the current financial year and of Rs. 50 million in 1954-55. The internal price of tea is not likely to be affected by this alteration in export duty. It will be recalled that a sliding scale of export duty was in force until the end of October, 1953, when a flat rate of 45 cents per lb. was introduced. The sliding scale of duty had been opposed by the tea trade not only on account of its severity but also because of the great deal of paper work involved. In response to representations made by the tea trade, a Parliamentary Commission of Enquiry was appointed. This Commission had recommended a lower scale of duty. Its enquiry showed that payment of export duty could be avoided at higher levels in various ways. In order to protect revenue, therefore, the Government introduced a flat rate of export duty.

According to reports from London, the price of tea in Britain will not be affected by the Ceylon Government's decision to raise the export duty on tea. Tea merchants in London will continue to pay the world price of tea at the Colombo auctions. One tea merchant is quoted as having said: "It is something which the producers will have to bear. The Ceylon Government realises that the tea producers are doing very well and it is their way of sharing in the planters' prosperity."

MEETING OF TRADE COUNCILS

IMPORTS TO BE LIBERALISED—EXPORTS TO BE STIMULATED

(From A Special Correspondent)

NEW DELHI, 18*th May*

THE biannual meetings of the Import and Export Advisory Councils which were held this week in the Capital provide, generally speaking, a forum for the exchange of views between Government and the mercantile community on the progress of trade in the country during the preceding six months. From the point view of Government, these meetings serve as a sort of stocktaking of the working of the import and export controls and also help it to formulate the import control policy for the following six months. From the consumers viewpoint, they give them the much needed opportunity to ventilate their grievances against the trading community caused by such acts as cornering of stocks and spreading news of artificial scarcity. From the point of view of the general public, the speeches and discussions at these meetings give an indication of the economic progress of the country.

DELHI LETTER

The improved economic position of the country during the last one year is fully reflected in the speeches of the participating members of both the Councils. There was satisfaction at the general success of the policies that had been pursued by Government in recent years with the result that most of the members began to approach the problems now confronting them in a constructive manner. At the same time, some broad indications of the Government policy were also made at these meetings by the spokesmen of the Government, Mr. T. T. Krishnamachari, Mr. D. P. Karmarkar and Mr. H. V. R. Iengar. What was noteworthy was the spirit of understanding that animated the speeches of Government spokesmen. They were not only receptive to the views of the mercantile community but were anxious to solve the difficulties of traders in pushing up India's exports to foreign countries.

The Minister for Commerce and Industry, Mr. T. T. Krishnamachari, informed the Import Advisory Council that the Government was anxious to maintain stability as well as continuity in its import trade policy. With the disappearance of large-scale imports of foodgrains at exorbitant prices, as well as a moderate cut in the intake of foreign cotton, the foreign exchange position was becoming comfortable, with the result that the opportunities of trade on private account would show a gradual expansion in the coming months. "Increased imports," the Minister said, "will be necessary to offset the effects of increased domestic expenditure in the public field, not to speak of deficit financing which is estimated to be of the order of Rs. 250 crores in 1954-55." The same idea was, as it were, repeated and endorsed by Mr. Karmarkar, Minister for Commerce, when he suggested before the Export Advisory Council to the effect that "we will doubtless have to provide for increased imports to meet what seems to be a clear indication of an increase in the purchasing power of the people and to offset maleffects of deficit financing." Mr. Krishnamachari deprecated the idea of import control as a means of protection to industries and pointed out that the policy of token imports was on the whole exercising beneficial effects on the industrial situation in the country. In this connection, he drew the attention of the members to the fact that the liberalisation of imports in as many as 69 commodities since March, 1953, had, apart from satisfying the discriminating consumer and contributing a sizable sum to the exchequer by way of import duties, helped "to focus the industries' attention on the continuing need to lower costs and to improve quality."

Another remark of the Minister is worth attention. He said: "Fiscal duties cannot obviously provide in every case a reliable substitute for import controls from the point of view of the interests concerned, but I feel very considerable scope exists for an extended application of this policy." It is, therefore, likely that the Government of India will liberalise import control in such a manner as to earn more revenues to Government by way of enhanced import duties. In this connection, Government would do well to take note of the criticisms of Mr. B. M. Birla, President of the Federation of Chambers of Commerce and Industry. Mr. Birla was of the opinion that imports could be made freer by the raising of the tariff rates, so that this policy would lead to competition and prices would be reduced to the consumer. Monopolies in export-import trade should end, he said. There is considerable force in this suggestion. For instance, in certain consumer articles such as safety razor blades, etc., advantage is being taken by importers to charge high prices on reports of diminished stocks in the country. Although Government does not like the policy of import control being utilised as protection to industries, it can, as an experimental measure, do away with import control in some consumer goods after raising the customs duties of these goods to an appreciable extent. In these cases, it is the Government which has been the loser, for, while the consumer does not benefit, the middlemen continue to make substantial gains in respect of a number of foreign imported articles.

Mr. D. P. Karmarkar, Minister for Commerce, was the principal speaker at the Export Advisory Council meeting. He did not take a complacent view of the improvement in certain spheres of the export trade, but urged the exporters to take the initiative from the Government's hands in developing new lines of export in the coming years. Diversification of exports is doubtless a desirable thing and it is a slow process depending ultimately on the country's ability to quicken the pace of industrialisation. At the same time, it has to fight against innumerable difficulties and prejudices in developing export trade in manufactured goods. The Minister for Commerce made some noise about the necesssity of establishing export promotion councils in respect of a number of articles, but he did not explain why the formation of these councils has been taking an unconscionably long time for coming into existence. For over a year the Government has been announcing from time to time that an export promotion council for textiles would be set up shortly, but it has not yet come into being. The Minister informed the Advisory Council members that the Government had been taking steps to set up export promotion councils in respect of art silk industry and engineering goods, while, in regard to tobacco, the Central Tobacco Committee had already appointed an Export Promotion Sub-Committee.

The Secretary for Commerce and Industry, Mr. H. V. R. Iengar, filled up the gap in the Ministers' speeches when he clarified Government's point of view more lucidly, particularly in regard to the exports of major commodities such as jute goods, cotton cloth and tea. He admitted that Pakistan was going ahead with its plans for establishing stable jute and cotton textiles industries and that it was only a question of time when India would be called upon to face keen competition in respect of these commodities. He assured the Council that the Government of India was keenly alive to these facts and it had been keeping itself in close touch with the Indian Jute Mills' Association, particularly in regard to the steps to be taken for meeting the eventual competition from Pakistan in the export trade of jute goods. According to Mr. Iengar, the Government was anxious to maintain and even to augment the exports of cotton cloth and was in close touch with the trend of this trade. It would also undertake such measures as would be necessary to achieve its purpose. The demand for the abolition of export duty on coarse cloth was a complicated one, inasmuch as it involved the question of quality control, the question of cotton production, etc. Mr. Iengar agreed with the Bombay millowner, Mr. Neville Wadia, that there was always a tremendous gap between the number of licences issued and the actual exports. According to the January figure, so far as coarse cloth was concerned, the licences were issued for about 61 million yards but the actual exports amounted to only 27.7 million yards. According to him, Government would bear in mind Mr. Wadia's suggestion that the abolition of the export duty on coarse cloth would rectify this sort of disparity in the export trade of the country.

BANK RATE FLEXIBILITY

SIGNIFICANCE OF LATEST CHANGE

(From Our Own Correspondent)

LONDON, 15*th May*

THE announcement by the Treasury nearly a fortnight ago that the Sterling Area's gold and dollar reserves had risen by nearly £50 million to a total now well over £1,000 million—the highest point for nearly three years—gave rise to a good deal of comment about the source of the funds. Little more than £5 million could be directly ascribed to sources other than the balance of payments, for this total was received partly as defence aid from the U.S. and partly the monthly gold settlements from the E.P.U.

LONDON LETTER

It was quite clear that, although this country is enjoying an active balance of payments, the surplus cannot produce anything like £50 million in one month, nor even like the £100 million by which the gold and dollar reserves have increased since the beginning of the year. What has been happening, in fact, this year has been a repetition of the time-honoured process of foreigners investing short-term funds at the attractive rates available on the British market. Even after the reduction of the Bank rate to 3½ per cent. last September, which coincided with, and no doubt partly contributed towards, the slackening off in the rise of gold reserves last year, British short-term money rates remained attractive. Their relative attractiveness to those obtainable on the Continent or even in the U.S., where the American Government borrows on Treasury Bills well under 1 per cent., has steadily increased.

Naturally this inflow of foreign funds seeking investment here has caused market rates to weaken somewhat. But, with the Bank rate remaining at 3½ per cent. and thus pegging the commercial banks' loan rates, there has not been much scope for movement. However, a week ago, there was a general feeling that the Bank rate would at last be reduced to match the trend in money rates and commercial money rates underwent a further weakening, as, indeed, did the yields on Gilt-edged and the best industrials. When the Bank of England made no change in its rate, it was not unnatural that the question should be asked whether the Government had in mind to allow the rate for sterling, which for some time has been up against the upper pegged limit, to strengthen. The talks in Bonn and the agreements reached between the British Chancellor and Western Germany gave additional rise to the suspicion that some upward valuation of sterling might be contemplated.

All these doubts were resolved this week when the Bank rate was dropped a further ½ per cent. to 3 per cent. Market rates have dropped in sympathy, but not as much as ½ per cent., since a part of the fall had already been discounted. For instance, the Treasury Bill rate, which a week ago was running at over 2 per cent. was, this week, 1.7 per cent., enabling the Government to borrow its short-term money at a cheaper rate than it has been able to do for over two years. Gilt-edged and first class industrials have all appreciated, but, on balance, by rather less than ½ per cent. in price.

There is no need to look in this movement in the Bank rate for any particular intentions of the Government towards industry. Production is rising and has no need of monetary stimulus; exports are not particularly strong and require no handicaps in the form of additional incentives to consume at home; but one effect of the drop in the Bank rate will be to cheapen loan rates and the rates charged on business and personal over-drafts. If the industrial criteria had been used to determine whether to move money rates or not, it is quite certain that the Chancellor would have left the Bank rate alone. In brief, the recent move has been a straightforward response to a drop in market rates which, in turn, have reflected the inflow of foreign funds. It does this country no particular good to accumulate gold and dollar reserves which can be melted away at short notice on call from their overseas owners. The Bank and the Treasury have taken a realistic view of the situation, adapted the Bank rate to the present trends, and brought about a money structure more in line with that in financial centres overseas. The incentive to bring "hot" funds in will be weakened, but the move is certainly not one likely to induce any outflow.—*All Rights Reserved.*

AMERICAN LETTER

U.S. INDUSTRIES PLAN EXPANSION AND MODERNISATION

PROBLEMS OF FAR EAST RECEIVE MUCH ATTENTION

(From Our Own Correspondent)

NEW YORK, 13*th May*

BUSINESS conditions in the United States will be good for the rest of the year, despite smaller volume in some lines. This has now become an almost universally accepted theory. It is borne out, in fact, by earning reports for the first quarter of 1954 which were much better than expected. Also, unemployment dropped 260,000 last month, the first decline since the fall of 1953.

The seasonal spring upsurge is, of course, in part responsible for the fact that more people are working. Two big surprises which became fully evident lately concerned industrial spending and construction. A whole new series of plant expansion and modernisation plans were announced. Also, the building and construction boom which was not recognised in its true scope became apparent, far larger than envisaged, which will be aided by a Federal outlay of nearly $2,000 million under the new highway aid law. These two categories of spending have been principal mainstays of business activity and employment for years and they promise to fulfil that function again in 1954.

The fast and furious new equipment spree, planned by industry, is partly based on the rapid technological refinements being developed these days. As a result, a machine which represented the latest development five years ago, may be obsolete today in some lines of business. In an era of greater competition, as at present, the need for up-to-date machinery is also greater than it was several decades ago.

The Federal U.S. highway programme has a two-pronged aim. One is an attempt by the States to create a series of through highways to take the load off the otherwise antiquated highway system of the U.S. in the face of the growing number of motor vehicles. Secondly, Federal support is designed also to bring the traffic arteries of the U.S. which had been neglected during the last war to a point where they can more adequately take care of cars and trucks with higher speeds—also to provide a stimulus for construction and employment.

Disturbing Notes

This cheerful domestic picture is marred somewhat by the fall of Dien Bien Phu in Indo-China and the warnings by official quarters here that a Western defeat in that country may mean the eventual loss of all South-East Asia to the Communists. A second disturbing note to U.S. business and industry was the belligerency of the Soviet and satellite delegates to the Geneva Conference which left no doubt that the Moscow offensive against the West has not been relaxed.

The demand of Communist China for the Western powers to get out of the Far East, for some reason, was interpreted here as less reminiscent of the Monroe Doctrine than of the *pronunciamenti* of Hitler. It was regarded as an ominous note. Reports of worsening conditions inside Russia and the satellites put an even more sinister interpretation on these remarks since dictators have often used wars as a diversion from internal difficulties. Thus, the threat of disturbance remains throughout the world, but for the time being people in the U.S. do not pay too much attention to it. The hydrogen bomb explosions in the Pacific which are now concluded added another element of caution to the scene. However, the general consensus in financial and business quarters still seems to be that the chances of all-out war of the atomic or hydrogen variety are less today than they were, say, two years ago.

The stock markets here certainly have been most optimistic in their interpretations. New 24-year highs were established in recent weeks. Though buying has been quite selective, companies with good earning reports fared better, price-wise, than those with poorer profits. Good "blue chips" have been favourites for some time and the "cat and dog" variety of equities has not done so well. This is easily understandable by the increasing institutional character of the stock market and the decreasing element of personal speculation.

Fall in Consumer Credit

Public psychology continues to play an important part in the markets. Consumer credit, for example, fell $327 million in March for the third straight consecutive monthly drop. However, savings of all categories continued to rise, not as steeply as a year ago, but still in very appreciable amounts. In line with this trend, airlines in this country experienced a decline in first class travel, but this was fully offset by the rise in air coach service. The latter, however, has a very narrow margin of profit and cannot stand losses sustained on half empty planes on first-class flights.

It cannot be overemphasised, however, that domestic and international political factors are influencing business and must be given no less consideration in appraising future business conditions than the normal, constantly operating forces.

The dispute between Senator McCarthy and the U.S. Army has had much of an influence on public opinion and the consensus, somehow, seems to be that there is lack of leadership from the White House and that such a performance would never have been permitted to take place under President Roosevelt or President Truman. What is certain, however, is that the problems of the Far East are receiving here much wider attention than they did before—over and above those of Europe.—*All Rights Reserved.*

President Eisenhower has just signed into law a record federal highway construction Bill aggregating $2,000 million. The funds will be made available to the States to aid road building during the next two fiscal years starting 1st July.

• • •

The House Ways and Means Committee of the U.S. Congress has approved a Bill to continue for another two years until 30th June, 1956, the present suspension of the import duty of two cents per pound on copper. Under the present law, the President will be required to put the duty back in effect, if the average U.S. copper price for any calendar month dropped below 24 cents per lb.

• • • •

The United States has made its final payment of $1,645,812 towards its total contribution of nearly $13 million to the United Nations Expanded Technical Assistance Programme for 1953. The United States had pledged to contribute 60 per cent. of the total of all contributions for the 1953 technical assistance programme that was pledged before 1st April, 1953. On that date, the total was $21,278,375.

(Concluded from next column)

and that last year more than one ton of forage was produced on each dunnum.

Import of Coal

The Government of Pakistan has asked for 68,012 tons of coal from India during the current month. It has made arrangements for the procurement of coal from May, 1954, by tender system directly under the Indo-Pakistan Agreement, 1953. Under the new arrangement payments for coal and coke as also railway freight will be made not by the Deputy Coal Commissioner but by the appointed agents of the Pakistan Government, in whose favour letters of credit will be opened by the Government of Pakistan. The import of coal by Pakistan from India during April, 1954, was estimated at 70,796 tons, as against 71,831 tons in the previous month.

PAKISTAN NOTES

LABOUR UNREST IN EAST PAKISTAN

INCREASE IN JUTE ACREAGE EXPECTED

THE labour unrest at Narayanganj and the crisis in the Sind Cabinet have given a rude shock to Karachi. Two members of the Central Cabinet have already arrived in Dacca to study the situation. It is alleged that Communists and other subversive elements have been behind the riots, in which over 200 lives were lost. The significant feature of the riots is that they were not preceded by any labour demands. Nor were strike notices served on the management. The riots at the Adamji Jute Mill and the Chandragona Paper Mills started, it is stated, without any provocation whatsoever. There are reports that the Centre might ban the Communist party in Pakistan. The crisis in the Sind Cabinet is deepening. It is also stated, that all is not well even with the Punjab Cabinet.

Jute Acreage

The acreage under jute in Pakistan, according to a survey conducted by the Ministry of Commerce, is expected to increase by 100 per cent. The Jute Board is reported to have informed the Government that the demand for Pakistan jute has recently been steady and the same is expected at least to be maintained, if not improved. It is likely that there will be no carryover of stocks from the present jute season. The estimated world demand for jute is about 9 million bales. The production of India this season amounted to just over 3 million bales, while that of Pakistan was officially estimated at 2½ million bales. It is stated that Pakistan will have to produce 6 million bales during the next season, if it is to meet both foreign and internal demand. Under the trade agreement between Indian and Pakistan, the former will buy 1.8 million to 2.5 million bales. About 1 million bales will be required by Pakistan for its own consumption.

Rayon Factories

The Pakistan Rayon Corporation is engaged in making arrangements for the establishment of two rayon factories, which are together estimated to cost about Rs. 5 crores. One of the factories will be set up in East Pakistan and the other in the North-West Frontier Province. About 200 acres of land, it is stated, have already been acquired at Tongi, 15 miles away from the city of Dacca, for this purpose. Reports from Dacca indicate that machinery worth Rs. 3.71 crores will arrive shortly in Pakistan. Mr. Ralph S. Von Kohorn, Vice-President of Von Kohorn International Corporation, New York, and Mr. J. I. Duplant, have been in Pakistan to advise in connection with the erection of the rayon plants.

Bagasse and wood-pulp, which could be used as raw materials for the production of rayon, are available in both wings of Pakistan. The sugar mill of Mardan crushes about 30 million tons of sugarcane every season and the bagasse produced thereby could form the raw material for the rayon yarn industry. An abundant supply of wood-pulp is available from the vast forest areas in East Pakistan. Another essential need is water; this also is available in the region. Each of the factories, according to the present planned capacity, will consume about 1.5 million gallons of water daily.

Water-spreading Training

A group of technicians from Pakistan are attending a three week water-spreading training programme, which commenced on 3rd inst., at Jordan. Afghanistan, Egypt, Iran, Iraq, Jordan, Lebanon and Saudi Arabia are the other seven Middle Eastern countries represented at the training centre. The centre is sponsored by the U.S. Foreign Operations Administration and the Government of Jordan is acting as host. The programme is the outgrowth of keen interest evinced by countries of the area in a water-spreading project that has helped Jordan develop a barren tract into a fertile grass-growing area. Under this project, Jordanian and American technicians have constructed an earthen dyke system for irrigation in an area where there was no record of grass ever growing before. At the opening of the training centre on the 3rd inst., Mr. Tracy Welling, F.O.A. Director in Jordan, pointed out that 20,000 dunnums of land in Jordan are now under water-spreading dykes

(Continued in previous column)

PUNJAB FINANCIAL CORPORATION

FACTORS LIMITING ITS ROLE IN AIDING INDUSTRIES

IT is generally believed that, once a financial corporation is started in a State, the problem of financing industries will automatically solve itself. That such belief is no more than an illusion, is evident from the Directors' report of the Punjab Financial Corporation covering the period from 1st February, 1953, to 31st March, 1954. This Corporation represents the first experiment in the sphere of organising financial credit to small and medium-scale industries at State level. The experience of patiently tackling a number of teething troubles, legal hurdles, lack of appreciation on the part of the borrowers of its statutory obligations, etc., gained by the infant Corporation, is worth the attention of those engaged in the establishment of such Corporations in other States.

The first six months or for that matter the entire period under review, may be taken as essentially a period of preparation and organisation. Considerable time and effort had to be spent on attending to such matters as issue of capital, framing of rules and regulations in consultation with the Reserve Bank of India with the previous sanction of the State Government, recruitment of staff, preparation of applications and instruments evidencing the security to be taken for loans and advances. There is, of course, nothing new in these preliminaries as, in fact, they must be gone through at the initial stage of starting every business concern, financial or otherwise. But these should be borne in mind, as they cause delay in the progress of operations of such concerns.

The Punjab Financial Corporation is intended to undertake, among others, the business of underwriting the issue of stocks, shares, bonds and debentures by industrial concerns. It can also sell bonds or debentures or invite deposits. It can also raise large additional funds at reasonable rates of interest. For one reason or another none of these was taken up by the Corporation during the period under review. Thus, no requests were made for issue of stocks or bonds by any industrial concerns, nor was the Corporation keen on undertaking such requests, as the conditions of the money market were not favourable for doing so. It did not attempt to raise large additional funds either, as it had money to meet its present requirements.

Granting Loans

The main business activity of the Corporation was, therefore, confined to granting loans and advances to industrial concerns. The first loan application was sanctioned on 6th June, 1953. In all, 84 applications for a total sum of Rs. 108.05 lakhs were received by the Corporation. Of these, 14 applications, valued at Rs. 26.87 lakhs, were from those engaged in the textile manufacturing and processing industry. There were also 19 applications worth Rs. 19.05 lakhs from the metal engineering industry. Twelve applications were from the hosiery manufacturers for a total of Rs. 6.71 lakhs. Two electric supply companies and three cold storage companies applied for loans of Rs. 4 lakhs and Rs. 9.5 lakhs, respectively. Among others, applications were received for smaller loans from utensils undertakings, cotton ginning and pressing factories, sports, wood working, glass, oilseeds crushing industries, electric goods, wood and machine screw manufacturers, woollen yarn spinners, etc. The sugar industry came in with a request for Rs. 10 lakhs. The applicants included 7 public limited companies, 14 private limited companies, 31 partnership concerns, 10 joint Hindu family businesses and 22 sole proprietorships.

Of the 84 applications for an aggregate loan of Rs. 108.05 lakhs, as many as 40 applications for a sum of Rs. 22.88 lakhs, or about 47 per cent. of the applications amounting to 21 per cent. of the loans, were rejected. The reasons for rejection covered a variety of grounds, such as absence of adequate security and scope for further expansion, insufficiency of profit-earning capacity to repay the instalments of principal and interest, unsatisfactory financial position, unfavourable credit deposits, bad management, etc.

The number of applications sanctioned, however, was 20, covering an amount of Rs. 28.52 lakhs. Four applications for loans amounting to Rs. 10.55 lakhs were sanctioned in favour of the textile industry. Five hosiery manufacturers were granted a loan of Rs. 3.67 lakhs. Three metal engineering concerns received Rs. 4.10 lakhs. Among others were a cold storage company which got a loan of Rs. 1.5 lakhs, two utensil making concerns, Rs. 1.8 lakhs, one glass company Rs. 2.5 lakhs, one electric goods and manufacturing company, Rs. 80,000 and one wood and machines screw making unit Rs. 3 lakhs.

Again, out of the total sum of Rs. 28.52 lakhs sanctioned by the Corporation, an amount of Rs. 3.45 lakhs comprising four parties was subsequently cancelled, either because there was a change in the financial position of the concern or because the terms of the loan were not applicable to the applicants.

The minimum amount that was sanctioned to any individual concern was Rs. 12,000 and the maximum Rs. 7.5 lakhs. Of the 20 loans sanctioned, six went to companies, 12 to partnership concerns, one to a joint Hindu family concern, and 1 to a sole proprietorship. Again, of the total amount of Rs. 28.52 lakhs sanctioned, only a sum of Rs. 8.84 lakhs was actually disbursed, thereby leaving an amount of Rs. 16 lakhs undistributed as on 31st March, 1954.

Some Limitations

From the foregoing details of the Corporation's operations, one notable feature emerges, namely, that the actual financial accommodation provided to industry was only Rs. 8.84 lakhs, as against a sum of Rs. 108 lakhs for which applications were submitted. The causes for this wide disparity are summed up below:—

(1) In order to save payment of interest, the industrial concerns do not generally draw the entire amount in a lump sum, but prefer to avail of their requirements in instalments, as and when their obligations mature. Consequently, the amount actually disbursed will be low.

(2) The time taken in the registration of the industrial concerns and in the taking of a licence by them under the Industries (Development and Regulations) Act, 1951, cabses delay in disbursements.

(3) The Corporation also does not consider it desirable to make the full amount of the loan available in a single instalment, as it is anxious to see that the sums lent are spent on purposes for which they are specified.

(4) In some cases, the amount sanctioned is reduced on receipt of the valuation report of the assessor, if he assesses the value of the assets at less than that shown by the application.

(5) The most common cause of delay is the lack of sufficient care on the part of industrial concerns to examine the titles to the land on which the factories are to be built. Time is, therefore, taken to rectify this defect which is essential to safeguard the interests of the Corporation as mortgagee of the property. Sometimes, properties do not stand in the names of concerns but in the personal names of the partners or other persons. In these cases, the Corporation is forced to the necessity of making such partners or persons in whose name the property stands as parties to the mortgage.

(6) The interest charged by the Corporation is as high as 7 per cent. per annum for amounts upto Rs. 2 lakhs and 6½ per cent. per annum for amounts above Rs. 2 lakhs. It allows a rebate of ½ per cent., if the instalments of principal and interest are paid on due dates. Again, under the Stamp Duty Act, a duty equal to one per cent. of the consideration money has to be paid on mortgages without possession, and this constitutes additional charge on the industrial concerns which obtain medium-term or long-term accommodation from the Corporation. For financial reasons, the Corporation considers it not practicable to reduce its rates of interest and other charges on the loans These charges when added together constitute a fairly heavy burden on the industrial concerns. These latter, therefore, think twice before drawing the sums sanctioned.

(7) A fairly large section of the inhabitants of the Punjab consists of displaced persons, who have settled or are endeavouring to settle in industries. These persons seem to regard the Corporation not as a statutory credit institution designed to discharge certain obligations but as Refugee Rehabilitation Finance Administration. Applications for loans are submitted with the object of finding accommodation without offering any security. Considerable time and energy are spent in making them understand the legal limitations under which the Corporation has to function.

(8) The Corporation insists upon the mortgage of fixed assets such as land, building, plant and machinery, as, under this arrangement, there is not the same necessity for maintaining a day-to-day watch over the securities offered and keeping contact with the activities of the borrowing concern. On the contrary, if the Corporation were to accept hypothecation of goods over a large area, such would necessitate the setting up of a large local organisation which is well beyond the financial resources of the Corporation. These limitations of finance and organisation of the Corporation tend to restrict the sphere of its activities. Small-scale industries in outlying areas with no proper securities to offer cannot find assistance from the Corporation. The small industries have to look for aid to the co-operative credit institutions.

(9) Loans applicants seem to be indifferent to maintenance of their accounts and other records according to the accepted standards of industrial banking, and are unwilling to submit to a certain amount of discipline which alone can enable the concerns to take advantage of the Corporation's assistance. In some cases, no proper system of accounts exist at all. In others, some sort of books are kept, but they are in the nature of scrolls from which it is impossible to get the exact postion of the concern.

(10) Unlike the Industrial Finance Corporation of India, the State Corporation is authorised to deal with not only limited companies and co-operative societies, but also concerns which are organised as private limited companies, partnerships, joint family businesses and sole proprietorships. It is easier for the Corporation to deal with concerns which have a well defined constitution and status. But, in the case of others, the difficulties to be met are many. Joint families, for instance, are broken up without proper partition deeds; partnerships are made and unmade, without dissolution deeds or documents, showing the settlement of accounts between partners. If the Corporation has to help concerns owned by these, it will have to go into a number of details, in order to see to it that its position as a mortgagee would not become vulnerable at a subsequent date.

It will thus be noted from the foregoing limitations that the Corporation's role in the industrial development of the State is considerably restricted. It can provide financial assistance only to those selected industries which are organised and are able to offer tangible assets as security. This means, as has been rightly pointed out by Mr. N. D. Nangia, Managing Director of the Corporation, in his report, that the Corporation "can merely supplement the existing capital resources of an industry and there will always be need, on the part of the industrial concerns, to raise a substantial part of their requirements from other sources. The extent of assistance that the Corporation will be able to offer in furthering the industrial development of the State will, therefore, depend on the sufficiency of private capital investment in the industry, as also on the efficacy of the measures that are taken, from time to time, to the development of fresh investment opportunities in the industrial sector of the State and, generally, to strengthen and stabilise the industries and to improve their efficiency and competitive power."

Mr. Nangia has also drawn attention to the repercussions of national and international factors on industries, particularly to the fiscal, trade, monetary, freight and social policies of the Government which continue to react on the industrial sentiment in the State and on the Corporation's capacity to assist industries. He warns

the State Government, industrialists and leaders that, if they do not handle the situation with care and tact, they may have to face the prospect of losing the great asset the State possessed so long, in the industries and willing labour force. He wants those State Governments which are sponsoring industries all over the country to recognise the need for seeking more distant markets under severe competitive conditions. He, therefore, observes that vigorous efforts should be made to overcome transport bottlenecks, difficulties in obtaining a steady supply of raw materials at proper time and at competitive prices and other factors required for keeping industrial production and employment opportunities at a high and expanding level.

UNITED STATES GOLD POLICY

Mr. Randolph Burgess, Deputy to the Secretary of the Treasury, and Mr. W. McC. Martin, Jr., Chairman of the Board of Governors of the Federal Reserve System, appeared before a sub-committee of the Banking and Currency Committee on 20th March, 1954, to state their positions on four legislative proposals to amend U.S. gold policy. Mr. Burgess said that, at present, the United States was on an international gold bullion standard. Since the removal of unnecessary restriction on the citizen is an objective of the administration, the current regulations concerning gold were being reviewed with a view to simplification, but without involving any change in the general gold policy.

Mr. Burgess rejected the view that the gold in Fort Knox was idle and useless. It was the legal reserve of the Federal Reserve System against its deposits and currency in circulation. He observed that the knowledge that the U.S. dollar had at the back of it this stock of gold, coupled with the intention and assured ability to maintain a constant price for gold, was one firm basis for measuring world values, and a major reason why the dollar could be used everywhere to settle international transactions. The continuing and unchanging link between gold and the dollar was more important than the redeemability of currency into gold. It would not be wise to take the risk of a major relaxation of restraints on the use of gold, so long as a large part of the world's new gold production continued to vanish into hoards and became unavailable for monetary reserves. Until the public temper was one of greater security, it would be unwise, he warned, to expose U.S. gold freely to the hoarder. If gold coins were circulated, they would be subject to the pull of demand from overseas sources—a demand which would rise and fall with every political and economic turn of events. He, however, added that, when more restrictions on trade and payments had been removed and convertibility had been restored at least among the principal currencies, the United States would be freer to consider a return to gold redemption. Gold payments were the seal of approval of good money, and the free world had not yet gone far enough in the achievement of good money. Mr. Burgess was doubtful whether gold redeemability should be considered until other major countries were ready and able to do likewise.

Mr. Burgess contended that similar reasoning applied to the proposal to open a free gold market. If such a market were established, either the U.S. Government would stay out of it, in which case the price would depend on the demand for a relatively small amount of gold production, and there would be more instability instead of more stability, or the Government would buy and sell gold at the official price to prevent fluctuations, which would mean in effect full convertibility of the currency into gold.

Mr. Burgess was convinced that an increase in the price of gold would be against the best interests of the United States and of its foreign friends. It would be contrary to the programme of maintaining stability in the economy. Revaluation of the gold stock could set in motion long-term inflationary forces and would upset a relationship of great importance both to the United States and to the world. It would be a grievous error, particularly at a time when the world was achieving some element of stability, to open up the possibility that the United States was prepared to make periodic devaluations of its currency.

In his evidence before the Committee, Mr. Martin said that no advantage was to be gained today from further safeguarding the dollar by establishing gold redeemability. If the country's solvency were in question, if there were a flight from the dollar, it might help to regain confidence to make the dollar redeemable as part of a programme of fiscal and monetary reformation. He felt that the universal confidence that now existed could not, however, be enhanced by this measure, and that it was not worth while to take the risks involved.

COMPTOIR NATIONAL D'ESCOMPTE DE PARIS

A small contraction of Rs. 72,000 to Rs. 3.11 lakhs in the profit of the Comptoir National D'Escompte de Paris (Acting Manager for India: E. Finot, Bombay) is disclosed by the audited accounts of the Bank for the year ended 31st December, 1953. This decline follows the sharp fall of Rs. 4.90 lakhs noted in the previous year, but this is inevitable in the context of the very difficult trading conditions. In fact, there has been a distinct fall in the total earnings of the Bank during the year under review, presumably due to a recession in the turnover.

The gross income of the Bank, which had gone down from Rs. 33.28 lakhs to Rs. 30.08 lakhs in the previous year, has declined further to Rs. 24.63 lakhs in the year under review. Interest and discount earned show a fall of Rs. 4.25 lakhs to Rs. 13.16 lakhs and commission and exchange to Rs. 2.10 lakhs to Rs. 10.48 lakhs. The drop in the two main sources of income would have seriously affected the profit of the Bank had it not been for the decline in the outgo, interest paid on deposits and borrowings showing a fall of Rs. 2.58 lakhs to Rs. 6.73 lakhs and establishment expenses Rs. 2.15 lakhs to Rs. 14.79 lakhs. The profit, after providing for all expenses, amounts to Rs. 3.11 lakhs, as compared with Rs. 3.83 lakhs for 1952 and Rs. 8.73 lakhs for 1951, the whole of which has been merged with head office and inter-branch balances.

The following table gives the salient features of the Bank's accounts for the past three years:—

(In lakhs of rupees)

	For the year ended 31st December		
	1953	1952	1951
Interest and discount earned..	13.16	17.41	14.18
Commission and exchange ..	10.48	12.58	18.95
Interest paid	6.73	9.31	4.80
Expenses	14.79	16.94	19.65
Profit	3.11	3.83	8.73
	As on 31st December		
	1953	1952	1951
Deposits	317.24	337.68	234.57
Borrowings from other banks.	0.67	..	166.83
Bills for collection	83.40	73.98	103.71
Acceptances	72.96	110.86	273.71
Advances	241.01	210.60	411.80
Investments	88.18	60.99	39.56
Cash	52.58	125.62	57.56
Ratio to deposits of—	%	%	%
Advances	76.0	62.4	188.03
Investments	27.8	18.1	17.0
Cash	16.6	37.2	24.4

The Bank's deposits, which had shown a sharp increase of Rs. 1.03 crores as at the close of 1952, show a decline of only Rs. 20 lakhs as on 31st December, 1953, so that they are still well above those at the end of 1931. Borrowings from other banks reveal a small outstanding of about Rs. 67,000. These borrowings are unsecured and have been made outside India. The increase of Rs. 9 lakhs in bills for collection has been more than offset by the decline of Rs. 38 lakhs in acceptances on behalf of customers. Notwithstanding a drop in deposits, advances as at the end of the year under review show a rise of nearly Rs. 31 lakhs, of which loans, cash credits and overdrafts account for about Rs. 17 lakhs and bills purchased and discounted for Rs. 14 lakhs. Investments, which are shown at market value, disclose a rise of Rs. 27 lakhs. The investments are entirely in Gilt-edged securities, of which securities of the face value of Rs. 20.50 lakhs have been deposited with the Reserve Bank of India under section 11(2) of the Banking Companies Act, 1949, and of Rs. 4 lakhs as security against guarantees given on behalf of clients to Government Departments. Cash balances, on the other hand, have shrunk by Rs. 73 lakhs, but the cash coverage is still at the comfortable level of 16.6 per cent.

ITALIAN BANKING ORGANISATION

Three hundred and fifty Italian banks have joined the new banking cartel, which came formally into existence early in February. These banks hold about 98 per cent. of the bank deposits of Italy. Obligatory interest rate standards would be established by the cartel, because of the recent unhappy experience of the Italian banking system, which has permitted interest rates to be driven up by competition for deposits.

PROFIT OF UNITED BANK OF INDIA SHRINKS

LIQUIDITY RATIO HIGH

THE year ended 31st December, 1953, was the third year of working for the United Bank of India Ltd. (General Manager: Mr. B. K. Dutt, Calcutta), since it was formed by the amalgamation of four Scheduled Banks of Bengal towards the close of 1950. The first two years of its working constituted a period of consolidation of its position as one of the major banking units in India. The year under review, however, proved to be a difficult one for the Bank and, in common with many other Scheduled Banks in this country, the Bank suffered a setback in the financial results. The profit for the year under review was lower, amounting to Rs. 12.07 lakhs, as against Rs. 20.21 lakhs for the previous year, a fall of Rs. 8.14 lakhs. The shrinkage in earnings naturally meant a cut in the allocation to the reserve fund, but the return to the shareholders has been kept unaltered at the very modest level of 3 per cent.

The following comparative table, presenting the salient features of the profit and loss accounts and balance-sheets of the Bank for the past four years, gives a bird's-eye view of the Bank's progress:

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950
Interest and discount earned ..	92.12	98.38	102.16	115.60
Commission and exchange ..	22.01	25.58	25.03	17.20
Other income	13.14	10.73	10.92	10.72
Interest paid	26.87	29.01	27.81	37.99
Expenses	84.98	84.44	86.47	82.61

	(3%)	(3%)	(3%)	(3%)
Carry forward	1.64	1.58	1.89	4.34
	As on 31st December			
	1953	1952	1951	1950
Capital	269.43	269.28	268.77	264.62
Reserves	104.00	103.00	102.00	101.00
Deposits	26,02.33	26,66.24	29,36.47	28,89.52
Borrowings from other banks ..	..	..	..	2,86.00
Bills for collection and acceptances	2,64.81	2,46.50	3,33.35	2,42.34
Advances	13,84.02	13,24.50	14,31.81	13,09.06
Investments	13,36.16	13,16.13	14,21.00	14,23.08
Cash balances	4,00.76	3,90.79	4,75.80	4,54.58
Balance-sheet total	34,72.60	34,16.35	38,46.44	36,93.33
Ratio to deposits of—	%	%	%	%
Advances	44.5	40.7	48.5	51.6
Investments	49.5	49.2	48.2	55.0
Cash	14.9	14.6	16.2	16.7

The gross income of the Bank for the year under review amounts to Rs. 127.27 lakhs, a drop of Rs. 7.36 lakhs over the year. Interest and discount earned show a fall of Rs. 6.26 lakhs and commission and exchange Rs. 3.50 lakhs. The shrinkage in income on these two accounts has been offset to some extent by the increase of Rs. 2.41 lakhs in "other income." On the expenditure side, the outgo by way of interest paid has risen by no more than Rs. 0.36 lakh. Expenses also have gone up by only Rs. 0.54 lakh. It will thus, be seen that, unlike many other banks, the profit of the Bank has declined due more to the fall in income than to a sharp increase in interest paid and expenses.

It will be noted from the foregoing table that the reserves of the Bank (including investment reserve) as at the close of the year under review show an increase of only Rs. 1 lakh over the year, and of Rs. 3 lakhs over the last three years, although a sum of Rs. 10.68 lakhs has been transferred to the reserve fund in the last three years, besides Rs. 8.50 lakhs added to the investment reserve. The deposits have risen by about Rs. 27 lakhs, in contrast to the decline of Rs. 2.70 crores noted in the previous year. The increase in deposits has not been shared by all classes of deposits. Fixed deposits and cash certificates account for a rise of Rs. 5 lakhs and current accounts, contingency accounts, etc. for Rs. 28 lakhs, while savings bank deposits have recorded a fall of Rs. 5 lakhs. As against an increase of Rs. 27 lakhs in deposits, advances disclose a rise of Rs. 10 lakhs. Investments and cash balances also have been strengthened by Rs. 22 lakhs and Rs. 10 lakhs, respectively. The investments are shown at book value, while their market value is lower by Rs. 37 lakhs. This depreciation is covered by a similar amount in the investment reserve. It will be noted from the table that the total liquidity ratio has been maintained at a very satisfactory level.

ADDITIONAL LEVY ON MILL CLOTH IMPOSED IN MADRAS

CALCULATED MEASURE FOR PROTECTING HANDLOOMS

IT has been clear for some time now that the Madras Government is actuated by a single-minded devotion to the cause of the handloom weavers. No measure of assistance, granted by the Centre is considered sufficient. With a sense of economic chivalry worthy of a better cause, the Government has been at considerable pains to prop up the handloom weaver. The Madras Legislature has now passed the Madras General Sales Tax Amendment Bill and the Medium Cotton Mill Cloth (Sales Tax) Bill, the provisions of which were outlined in these columns last week, in order to provide an additional levy of sales tax to the tune of one anna three pies in the rupee on sales of mill-made cloth of counts 17 and over.

Protectionist Measure

It is somewhat surprising that the statement of objects and reasons of the Bill emphasises only the need for "augmenting the revenues of the State." For the Bill is, in all conscience, a frankly protectionist measure, intended to buttress the position of the handloom industry against the mills. Indeed, the Government spokesmen themselves have made no secret of their desire to assist the handloom industry at the expenses of the mills. Presenting the Madras State budget, Mr. C. Subramaniam, Finance Minister, referred, on 26th February, 1954, to what he called the "agonising competition" which the handloom industry had to face from their mills and stated that the only "lasting remedy" for this situation was to provide "this widespread and important industry with a sheltered internal market." The levy (of one anna three pies in the rupee on sales of mill cloth), he thought, would secure a "further measure of protection" to the industry in his State—that is, in addition to what the Central Government was doing in order to assist the industry. He further announced that, when the levy came into force, the sales tax of 1½ pies in the rupee, levied on handloom products, would be given up. He said:

"Handloom products will now gain a substantial margin per rupee over mill-made cloth, made up of 1½ annas as rebate on the sale of handloom product from out of the cess fund, 2 annas as sales tax on mill-made cloth at all points put together and 3 pies as cess on mill cloth now being levied by the Centre. This should go a long way to ensure a sheltered market for the handloom."

Mr. Subramaniam made the point even clearer in his reply, made on 6th March, to the Assembly debate on the Madras budget. He said that the levy was intended to remove the "unfair competition" between the mill cloth and the handloom. The State Government, he said, had certain powers within the State sphere and they could exercise these powers to give protection to the industry. He emphasised that it was only by making mill cloth more costly that they could give some protection to the handloom product. In justification of the high rate of levy, he said that, as the handloom weavers were a "weak sector," the levy had been fixed at one anna three pies in the rupee, in order to "afford sufficient protection."

"Greatest Enemy"

Mr. C. Rajagopalachari, the State's then Chief Minister, was no less explicit on the issue. Speaking on 10th March, in the Legislative Council, he said that they could not allow the "machine-made product to beat down the whole body of weavers." He declared: "The second biggest industry in our country—the first is agriculture and the second, handloom weaving—must be protected. And we must protect it, whatever the difficulty in doing so." He said that the textile mills of Bombay and Ahmedabad and elsewhere got protection against foreign competition in the past, and that they, not content with keeping foreign cloth out of the country, had today become the "greatest enemy of a large, widespread, vital industry in India itself." He defended the levy of an additional sales tax on cloth on the ground that it will provide a "protected market" for the handloom product. He added that the object of introducing the tax was that the "market for the mill cloth might shrink a little and the market for the handloom cloth might expand a little more."

There is, therefore, no getting away from the fact that the additional levy on mill-made cloth, which the Madras Government has adopted, is intended to provide protection to the handloom industry. Now, this raises the very important issue whether, and if so, how far, a State Government is entitled to use the Sales Tax Act as a protectionist device. Before we refer to the economic implications of the issue, it is necessary to examine its legal and constitutional implications. Since the levy imposes an additional burden on cloth, which has been declared by the Central Government as an essential article under the Essential Goods Act, and also interferes, in an indirect manner, with the smooth flow of trade in cloth between the Madras State and other States, it also offends the spirit of Article 286 of the Constitution, which governs States' sales tax legislation in respect of inter-State trade and commerce. The legal and constitutional implications of the new levy have been ably analysed by one of our readers, Mr. C. V. Narahari Rao, who, in a communication addressed to us, observes:

"It cannot be denied, that one of the consequences of this legislation will be an involuntary imposition of some restrictions on inter-State trade, but the Bill does not seek to impose these restrictions, as restrictions pure and simple. We have also to remember that the judgment of the Supreme Court in the United Motors case has considered Article 304 with Articles 286(2) and 286-1(a) read along with the explanation to the last. It has recognised the right of the State wherein delivery and consumption have taken place to levy sales tax on the non-resident dealer. It might be said that the Bill seeks to levy the tax only on the first sale in this State and as such the two clauses of Article 286 referred to above have no relevancy.

"In this connection, two points have to be remembered. The Supreme Court decision has not made any observations with reference to Article 304 read with Article 286(3) of the Constitution, which latter speaks of States' legislations in respect of essential goods declared as such by Parliament. The other point is whether the present legislation itself is not against the spirit (though not the letter) of Article 286(3) of the Constitution even as regards the additional levy on intra-State trade in medium mill-made cloth, which is a recognised essential article under an Act of Parliament.

"For bringing a Bill in the State Legislature to enable taxation of an essential article, no previous sanction of the President is made necessary under Article 286(3) of the Constitution, but such a measure cannot be put into effect unless and until it has been reserved for the consideration of the President and has received his assent. The proposed Madras legislation will, therefore, become effectual, only if the President's assent to it is secured after the Bill is passed.

"Now, is the President bound normally to give his consent? The State Government, here or elsewhere, in similar circumstances might put forth all the argument in its power supported by special circumstances of the case to get his assent. Theoretically, the President can withhold his assent, but practically would he be able to withstand the pressure, especially when he is informed that otherwise the States' finances would be wrecked? Whatever may be the practical side of it, legally I should think the President could signify his assent only if the measure is not against the letter as well as the spirit of the Constitution. Article 60 of the Constitution strictly enjoins on the President to discharge his functions so as 'to the best of his ability preserve, protect and defend the Constitution and the law.' His discretion is not unrestricted.

"In this connection, it would also be pertinent to understand what is stated in Article 286(2) itself. All State Governments' fiscal measures which were in force before the commencement of the Constitution were allowed to be continued to be enforced till only a fixed time, namely, 31st March, 1951, with the President's direction in this behalf, notwithstanding that such continuation was repugnant to the Constitution. The lesser of two evils being preferred, this exemption was meant only not to upset a whole order of existing things, a time limit being given to States to get ready for the new order, and in any case, the spirit being not to perpetuate what is clearly opposed to the spirit of the Constitution.

"Reference further on in Article 286(3) to the President's assent could not have been intended to have a different purpose and concede an unlimited time to State Governments to approach the President for his assent in every case for whatever reason. To my mind, the time limit here should be taken as the time till Parliament has declared by law any commodity as an essential article. With the passing of the Essential Goods (Declaration and Regulation of Tax on Sale or Purchase) Act, I should think this enabling provision of the Constitution under Article 286(3) for the benefit of the several States should be taken to have lapsed, at least in principle. Already there is a widespread feeling in the country that the Essential Goods Act has been by-passed too often, and it will be really unfortunate if the idea gets further strengthened.

"Surely, the attempt of the Madras Government should be a pointer to the desirability of overhauling the entire sales tax legislations and evolve as far as possible a uniform measure, if need be, by amending the Constitution itself. Such a drastic remedy, I am afraid, has already been delayed too much."

Economic Issues

Now that sums up the legal and constitutional position. The economic issues raised by the levy are no less onerous. Is it right to subject so basic a necessity as cloth to so penal a levy? Will the levy really help the handloom industry? Is an artificial stimulus to the handloom industry at the expense of the mill industry the only means open to the Government in order to assist the handloom weavers? These are only a few of the questions for which the State Government has provided no answer yet. In all the Ministers' pronouncements, one may look in vain for an answer to these questions. And yet, no set of questions is more worthy of a reply. The fact must be faced that what has been done is not calculated to make cloth cheaper for the consumer. The measure is avowedly meant to make it dearer for him. The consumer must bleed in order to cure the handloom weaver of his economic anæmia. Nobody paused to enquire whether such transfusion of blood is either possible or desirable. Nor did they even examine whether the measure was not calculated to raise the prices of yarn for the handloom weaver. If yarn prices rise—as they undoubtedly will, considering that the handloom weaver has been assured a comfortable margin of profit—then will not the measure cease to be of any help to the handloom industry? On the other hand, if the mills succeed, through reduced costs, in breaking the barbed wire fence which the State Government has built around the handloom industry, of what avail will the Government's assistance be to the industry?

Economic Balkanisation

A far more important question is the implication of this measure to national economy. If every State seeks to protect, through its Sales Tax Act, its cottage industry against large-scale industry or the industry within its borders against the industry outside it, what will be the repercussions of such a series of measures on national economy? For instance, what can prevent a predominantly *gur*-producing State from taxing sugar in order to keep the latter commodity out of its borders? India will then present a sad spectacle of States hurling Sales Tax Acts at one another. Indeed, sales tax law in this country has become a muddle, a travesty of economic justice. Surely, it is time that somebody cried halt to the tendency for sales tax legislation in the States to run riot, before it leads to the economic Balkanisation of the country. The President has powers to veto the Madras Bill. It is to be hoped that he will not hesitate to do so.

NO YARN EXPORT QUOTA

The Government of India has decided, according to a Press note issued by the Textile Commissioner, not to grant any export quota for export of cotton yarn during the first part of 1954—that is, during the period January-June, 1954.

TRANSITION FROM STATE TRADING TO PRIVATE ENTERPRISE IN COTTON

A NEW RECORD IN CLOTH OUTPUT

(By A Special Correspondent)

MANCHESTER, 11*th May*

THE next few days will be an eventful time for many people connected with the cotton trade in Lancashire, providing them with an opportunity to discuss mutual problems with visitors from distant lands. At the end of the week the Golden Jubilee Congress of the International Cotton Federation begins at Buxton where only a couple of years ago the major cotton textile producing nations met in conference to discuss their future trade prospects.

MANCHESTER LETTER

This new international gathering, important as it is, does not plan to cover as wide a field as its predecessor. The delegates come mainly from European countries and the topics to be considered at the open sessions of the Conference are on more general lines. As in so many other meetings of this kind, however, there will be plenty of opportunities for informal talks between groups and individuals dealing with problems in which all are interested.

Coinciding with the Congress is the long-awaited reopening of the cotton futures market in Liverpool. The event was arranged so that as many foreign delegates as possible could be in Britain to attend this memorable function. In addition to those who will be visiting Buxton, representatives of cotton interests in the United States, India and Egypt will watch the official reopening ceremony in Liverpool next week.

To expect startling developments from a market which has been in abeyance for more than a dozen years would be asking a good deal, but there is naturally intense interest as to how prices will react when trading recommences. The traditional hedging facilities offered by the futures system have been maintained through the cover scheme organised by the Raw Cotton Commission. As a result the market will be required to function from a very early stage at a fairly high level of activity. Using a motoring metaphor, the Liverpool Cotton Association has likened the situation to "starting in top gear with a cold engine."

Technical experts are a little apprehensive about the initial dealings if there is a tendency in any large degree to switch hedges from the cover scheme. Excessive selling pressure may depress prices but this trend should be corrected in due course by professional straddle operations.

A further move to ease the transition from State trading to private enterprise has been taken by the Board of Trade enabling cotton from dollar sources to be obtained on open general licence after the end of August. Other types of cotton can be obtained on these terms immediately. It will be interesting to observe whether the tendency, already noticeable since private buying was resumed, to purchase more cotton from the United States will be intensified when the futures market starts to function once more.

More Cloth Woven

The Lancashire weaving industry produced more cotton and rayon cloth in the first three months this year than in any first quarter since the war.

A survey of output over the quarter shows that the mills turned out 723,870,000 yards of cloth—over 1,000,000 yards more than the previous record established in 1951, when cotton had its "boom" year.

The first three months this year contained three more working days than the similar period three years ago and this is the chief reason for the new record. It has nevertheless been achieved with 13,000 fewer weavers in the mills than in 1951. A Cotton Board spokesman said: "It should not, however, be taken as an indication that this year the industry is going to beat its post-war record output in 1951."

Figures of cotton, rayon and mixture cloth production in the first quarter of the last four years are: 1951, 722 million yards, 1952, 709 million yards, 1953, 631 million yards and 1954, 723 million yards. Over that period rayon and mixture cloth output has increased from 187 million yards to 207 million yards in the first three months this year.

A warning to Lancashire not to let its present prosperity obscure the fundamental need for a wider variety of industry in the areas overdependent on a single industry, has been given by Sir Alfred Shennan, Chairman of the Lancashire and Merseyside Industrial Development Association. Sir Alfred, speaking at a meeting of the Association's General Council, cited the textile towns of East Lancashire, the shipbuilding towns of Barrow and Birkenhead, and the colliery districts of South Lancashire as examples. At times like this, when their basic industries were working to capacity, these localities found it difficult to make much progress in establishing new industries. He said: "As the 1952 textile recession showed, however, localised unemployment can quickly become severe in areas which have specialised on one industry."

At the moment, the industrial outlook for Lancashire, according to Sir Alfred, is fairly bright, but it would be a bad policy to wait for the storm to break before taking any action to reduce the exposure of some parts of the area to any adverse economic weather. He expressed confidence in the ability of Lancashire's industries, both old and new, to adapt themselves to the continually changing demands made upon them and to meet the challenge of foreign competition.

Empire Cotton Supplies

Vigorous help in boosting Empire cotton crops by assisting in the production of cotton in new areas was pledged by Lord Derby, President of the British Cotton Growing Association, at the annual meeting in Manchester.

Projects completed or sanctioned for various Empire countries meant that over a period of seven years new capital expenditure would amount to £200,000. Some of this money had been spent in the erection of new ginning factories up to 200 miles away from the nearest railway. Lord Derby said:

"The Association is not just living on the achievements of the past but is prepared to—and does—assist the production of cotton in new areas by providing the necessary processing facilities at distant points where there is quite an element of risk."

Empire cotton production in the three years 1951-53 averaged slightly over 1 million bales—an average never before achieved and 170,000 bales higher than the previous best performance for three successive years.

Jobless Lower

A further drop in unemployment in the Lancashire cotton industry is recorded in Ministry of Labour figures for the month to mid-April, just released. The out-of-work total in cotton spinning now stands at 870 of which 50 are temporarily stopped, while weaving unemployment is down to 460 of which 53 are on short time. In the finishing section, 60 operatives are on short time out of an unemployed total of 290.

Labour requirements in textiles remain higher than those in any other individual industry in the North-West. Vacancies in spinning number 5,260, the weaving section has a manpower requirement of 2,300 and in finishing 500 more workers are needed. More full-time workers joined the Lancashire cotton spinning industry in Easter week than in any week for eight months, according to the Cotton Board. Recruitment exceeded losses by 380, but this was partly offset by the loss of 50 part-time operatives.

Output of cotton and rayon yarn during the week aggregated 16,910,000 lbs. as compared with 16,330,000 lbs. in the previous week and 15,560,000 lbs. in Easter week last year.—*All Rights Reserved.*

WORLD CONSUMPTION OF COTTON EXPECTED TO INCREASE

I.C.A. COMMITTEE'S FORECAST

A RECORD level of consumption of cotton in the current season (from 1st August, 1953, to 31st July, 1954) by the world's textile industry has been forecast by the International Cotton Advisory Committee, Washington. Thus, the Committee visualises a consumption of 34.4 million bales (of 478 lbs. each), as against 33.4 million bales in 1952-53 and 32.3 million bales in 1951-52. The increase in cotton consumption, it is predicted, will be shared by the free world and the non-communist countries. The share of the former is likely to move up to 26.6 million bales, as against 25.9 million bales in 1952-53, and of the latter from 7.5 million bales to 7.8 million bales. It may be noted that the average consumption in the pre-war years 1934-35 to 1938-39, in the communist countries was 7.1 million bales.

The following table gives the consumption of cotton in the free world in 1934-38 (average), 1951-52, 1952-53, and 1953-54:

(In thousand bales of 478 lbs. each)

Continent and country	1934-38 Average	1951-52	1952-53	1953-54*
N. America	6,969	9,920	10,226	9,450
U.S.†	6,454	9,196	9,461	8,750
Canada	286	343	371	300
Others	240	381	394	400
S. America	742	1,615	1,506	1,590
W. Europe	7,465	6,757	6,549	7,200
U.K.	2,741	1,759	1,564	1,500
France	1,203	1,228	1,180	1,250
W. Germany ..	1,193	965	1,073	1,200

Africa	105	445	458	465
Total ..	22,270	25,197	25,898	26,600

* Preliminary estimates. † In bales of 500 lbs. each.

The high level of free world cotton consumption during the current season, according to the Committee, may have greater significance from the longer-term point of view than the high level of consumption in the 1950-51 boom year. This is because the high level of consumption in 1950-51 was in "no small measure, the result of speculative influences." On a rising market, textiles were produced in anticipation of demand and stocks accumulated. When the boom collapsed, textile production was curtailed. The present pattern of textile production is fundamentally different. Increased textile production in most countries, the Committee points out, is moving into consumption channels and stocks of cloth and yarn show no tendency to get out of line with actual offtake. The current expansion of textile production in many countries is, therefore, on a "sounder foundation' than in 1950-51.

The present pattern is also significant from another point of view. The consumption of cotton—that is, textile production—is expanding outside the U.S. and Canada. It is taking place in countries having lower standard of living and where, in the long run, the "opportunity for a more permanent increase in cotton consumption is unlimited." Not only is the *per capita* consumption in many of these countries still very low but the population also is rapidly increasing.

Yet another significant feature of the present increase in cotton consumption, according to the Committee, is that it is occurring in countries where competition from rayon and the synthetics is strongest. Explaining this feature of cotton consumption, the Committee says: "In general, this may be due to the enhanced competitive position, resulting from price reductions in cotton yarns and cloths in many markets plus a greater consciousness of the need for promotional activities in this field."

A geographical analysis of consumption trends in cotton reveals that, in contrast to other textile producing countries, the U.S. and Canada are presently undergoing a period of contraction in their respective textile industries. Thus, the consumption of cotton in the U.S. and Canada aggregated during the August-January 1953-54 period, 4.42 million bales (of 500 lbs. each) and 0.16 million bales (of 478 lbs. each), respectively, as compared with 4.74 million bales and 0.19 million bales in the corresponding period of 1952-53. The decline in cotton consumption in the U.S. is attributed to decrease military procurement and exports and also to the overall decline in economic activity in recent months. Canadian textile industry, it is stated, is facing keen competition from foreign textiles. Indeed, the textile situation is "still serious." Some mills are completely shut down and there is large-scale unemployment within this industry.

In Western Europe and in Asia, however, cotton consumption continues to increase. During the August-January, 1954 period, the consumption of cotton aggregated 0.91 million bales in the U.K., 0.66 million bales in France, 0.61 million bales in Germany and 0.42 million bales in Italy, as against 0.74 million bales, 0.57 million bales, 0.53 million bales and 0.42 million bales, respectively in the corresponding period of 1952-53. In the U.K. there has been considerable recovery in textile activity, though the limiting factor is shortage of labour.

A further "significant increase" in cotton consumption in Asian countries has been forecast by the Committee. In Japan, cotton consumption has rapidly expanded in recent years. Trade sources, however, think that cotton consumption in the future may be "influenced by the tighter money policy and retrenchment plans and by difficulties in respect of raw cotton imports." As regards India, the Committee believes that the relief in import duties on imports of foreign cotton may influence the demand for finer qualities of cloth though the "recent increase in excise duties on cotton textiles may result in dearer textiles to the domestic market." On present indications, according to the Committee, there "is not likely to be any significant change in the volume of cotton consumption this season as compared with the 1952-53 total of 3.9 million bales."

ESTIMATE OF INDIAN COTTON FOR 1953-54

The current year's (that is, for the year 1953-54) cotton acreage and production have been placed at 16,266,000 acres and 3,658,000 bales (of 392 lbs. each) of cotton lint by the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, which has released the fourth estimate for cotton. The corresponding adjusted estimates of acreage and production for 1952-53 are 15,013,000 acres and 2,905,000 bales. The current year's estimate thus shows an increase of 1,253,000 acres or 8.3 per cent. in area and 753,000 bales or 25.9 per cent. in production over last year. This estimate, it may be mentioned here, covers the period up to the end of January, 1953. Again, it must be remembered that the official estimate has always been below the trade estimates which, as experience shows, are much nearer the real magnitude of the crop. The value of the official estimate lies in the fact that it gives a continuous estimate of the crop, both during a year, and year after year, and also in the fact that it shows the relative importance of different varieties of cotton. The production of cottonseed during 1953-54 is estimated at 1,280,000 tons, as against 1,018,000 tons in 1952-53.

The following two tables give the details in terms of trade descriptions of the varieties and staple lengths of current and previous year's estimates:

Trade Descriptions

	Area (In 000 acres)		Production (In 000 bales of 392 lbs. each)	
	1953-54 Fourth estimate	1952-53 Adj. Fourth estimate	1953-54 Fourth estimate	1952-53 Adj. Fourth estimate
Bengals	965	1,092	421	454
Americans	2,771	2,447	812	690
Jarilla (including Virnar)	2,231	2,176	408	306
H. 420	293	260	52	44
Oomras	293	216	53	37

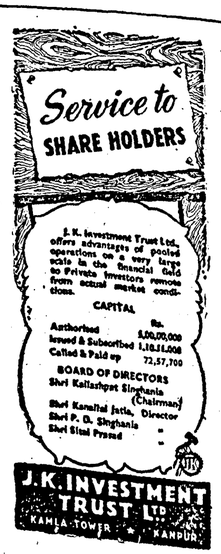
Total ..	7,644	7,899	1,673	1,253
Short-staple				
Bengals	965	1,092	421	454
Oomras	2,278	1,965	405	301
Dholleras	209	172	48	37
Southerns	243	281	89	99
Comillas	58	60	27	25
Total ..	3,753	3,520	925	840
Grand Total ..	16,266	15,013	3,658	2,905

It will be seen from the tables above that the increase in production has occurred mainly in Americans, Jarilla (including Virnar), Dholleras and Oomras. As regards staple lengths, the increase in production is shared by long-staple, medium-staple and short-staple varieties, particularly by the long and medium-staple growths. It would appear that the increase in acreage during the current year has been reported by almost all the cotton-growing States, more particularly by Madhya Pradesh, Hyderabad, Bombay, Saurashtra, Madhya Bharat, the Punjab and Mysore. This increase is attributed mainly to timely and sufficient rains at the time of sowing operations. The increase in production, it is stated, is more marked in Bombay, Madhya Bharat, Saurashtra, Madhya Pradesh and the Punjab.



ROLE OF INSTALMENT-CREDIT IN STIMULATING DEMAND

NEED FOR POPULARISING THE SYSTEM IN INDIA

(By S. R. SARNA)

RETAIL trade under a free economy, carries the heavy responsibility of arranging the distribution of goods and meeting the fluctuating, as also variegated, needs of an anonymous and widespread clientele. In addition, it is responsible for translating production into consumption. These two requirements have made the retail-business, irrespective of the size of the business undertakings to search new methods and to find new avenues of marketing activity. In this enterprise advertising is used to make the wares widely-known and help in expanding sales; house-delivery and mail-order business is availed to minimise the distance between the market and the customers; fair-price stores and co-operative stores vouchsafe customers' benefits.

But the buyers' resistance, underlined by the deficiencies in the purchasing power, could still persist and influence the market. To overcome this obstacle, sales on instalment-credit have been introduced. Instalment credit is a system which amounts to an extension of credit towards the purchase of goods and commodities, under some form of contract or agreement, whereby the price is agreed to be paid in partial payments or instalments, at stipulated intervals. The convenience in the mode of payment gives a relief to the shrinking family-budgets and thereby the restrictions on effective demand recede away. This business is also called "hire-purchase business," or "deferred payment plan" or "sales on extended credit"or "sales through easy payments."

The instalment-credit business is a recent growth. In the past, it was enjoined, under the orthodox economics of marketing, that a person who has not got sufficient funds to purchase a commodity or manufactured goods should better go without it or should postpone the purchase until he could accumulate sufficient savings to afford the payment. Credit, in the parlance of orthodox economics, should be confined to the sphere of production, where increased value can be created by providing credit to productive enterprise, and can meet the financial obligations of interest, rent, wages and profit. Therefore, the purchase of consumer goods on credit were frowned upon, and application of credit was considered unproductive and therefore uneconomic. This argument fared well in normal marketing conditions.

Effect of Depression

But the bottom was knocked off when the marketing conditions became difficult. The development of slump and "buyers' market" compelled the people engaged in marketing and distribution to find out ways and means for expanding sales. It was then realised that a pretty large number of consumers, in the lower brackets of income-groups, were going unattended, because they had not got sufficient funds or savings to make outright purchases. For such people, the only *via media* was a plan of deferred payments, which was, in fact, a reversal of the idea of "first save and then purchase."

Since then, it has been found that the effect of sales under instalment credit system upon the total demand is invigorating and stimulating. Its mechanism is, essentially, purchase now and pay later. This easy method of acquiring anything, on small monthly payments, tempts the purchasers to go in for what they may require or not, and what they may afford or not. Through this additional sales promotion, sales are liable to expand and consumption is liable to increase, whereby the business activity reaps added benefits.

Another important advantage of the sales on instalment credit is intimately, though indirectly, connected with national savings. People with small incomes, in the middle classes, generally find it difficult to put something aside or save on voluntary basis, and feel awry of the compulsory savings schemes. Sales, on easy payment basis, imply a methodology of "deferred payments" which in effect amounts to small-savings from family budgets for clearing the "extended credit." These savings in the form of fixed monthly payments are expected to play a prominent part in capital formation, which further supplements the productive investments. This economic phenomenon is liable to inject new vigour in the national economy.

Instalment-credit is, in its elementary functions, a credit business, where credit is given in the form of goods through credit-sales, contrary to credit in the form of cash. To provide safety-cushions to the risks involved, screening of the customer's reliability and paying capacity is done before entering into the deal. After preliminary enquiries have been completed, agreements are finalised and signed. The most popular form of contract or agreement, in instalment business, is the conditional sale agreement, which is signed by the purchaser and contains three salient features: (1) the title of ownership is vested in the seller, (2) the possession of the goods is held by the purchaser and (3) the title of ownership is passed on to the purchaser when payments have been realised in full and final terms. If the purchaser fails to make full settlement of the payments, the seller is entitled to repossess the goods and cannot be compelled to refund the payments already made, unless specifically agreed otherwise. Where conditional sale is not allowed by law, a chattel-mortgage or a lease-plan is entered upon to finance the sales on instalment-credit basis. In this case, the purchaser is considered to have leased the article and payments are made in the form of lease rent until final settlement. This is also called hire-purchase business.

Credit Goes to the U.S.

The credit for starting this business goes to the U.S.A. In the beginning, this sales-plan was started by American furniture-business in the early decades of the nineteenth century. Then, the infection spread far and wide. Eventually, the sales on easy payment basis have extended to all spheres of marketing and all types of goods, including books, clothing, jewellery, sewing-machines, pianos, radios, gramophones, stoves, washing-machines, vacuum-cleaners, refrigerators, bicycles, automobiles and immovable property. After the First World War (1914-19), there has been a tremendous expansion in the volume of business conducted on instalment-plans. To some extent, the immense proportions of mass-production in the U.S. are responsible for encouraging sales-promotion through instalment-credit.

Inspite of the setbacks caused by the slump in 1930-31 and inflation in the Second World War, the volume of sales on instalment-credit in the U.S. has been rising steadfastly and has become the accepted method of buying and selling. Large manufacturing concerns have opened subsidiary establishments to transact credit-sales of their products. Banks, insurance companies credit unions and other sales-finance companies have also entered the field of instalment credit and have lent large amounts. Department-stores and other stores have invested enormous amounts in these transactions. It has been estimated that the total instalment-credit in the U.S. during 1939 was $4.503 million, out of total consumer-credit of $7,222 million. In 1952, the instalment-credit had gone up to $18,639 million, out of the total consumer-credit of $25,705 million.

(Source: *Federal Reserve Bulletin.*)

Hire-purchase in the U.K. has not achieved the popularity it enjoys in the United States. The main reasons for this state of affairs seem to be Government policy and social prejudice. The method of buying durable consumer goods on the instalment system is still suffering from taboos and regarded as not desirable by many people. The official policy is also not encouraging this method of sales on credit, and, in certain respects, it is proving restrictive. As part of the policy for restricting consumer credit, a recent enactment stipulates that durable consumer goods, such as radio and television receivers, domestic electrical apparatus, etc., except furniture, could be sold on hire-purchase, subject to the condition that there should be a minimum deposit of 33.3 per cent. and a repayment period of not more than 18 months. Another measure under the same policy has fixed that the Capital Issue Committee would not allow any company specialising in hire-purchase finance to raise new capital.

Steadily Progressing

Inspite of these restrictions and regulations, it has been observed that hire-purchase business is steadily progressing. Approximately 80 per cent. of new furniture sales and between 33 and 50 per cent. of radio and television sales are new channelised through instalment credit. Similarly, in the field of agricultural and industrial equipment, there is a growing tendency to acquire new equipment through hire-purchase system, and it can be anticipated that, on account of working capital being depleted by taxation and death-duties, this trend will record still higher levels of business transactions. The profit records of many furniture stores and other domestic equipment stores bear ample evidence that this outlet of sales is proving profitable. Moreover, taking into account that, on an average, the amount outstanding per hire-purchase account is not very large, the risks involved in this business are generally very small in a period of national full-employment. There are, therefore, good reasons to believe that in the U.K., too, hire-purchase finance will continue to play increasing part in industrial as well as individual accounts.

Instalment-credit is becoming more and more popular in West Germany. This country has gained a lead over all other countries of the world, with the exception of the U.S., in the sphere of sales on monthly instalments. The economic structure of Germany emerged, after the holocaust of 1939-45, in shattered conditions and on the brinks of chaos and ruin. The political division of the State into two hostile camps, followed by reparations, made matters still worse. The hire-purchase system, in those dark days, provided a welcome-relief and has been playing an important role in bringing about the country's celebrated economic miracle, that is the rapid increase in production-programmes and mass-distribution. The total amount, advanced towards instalment-credits in Western Germany, is nearly 6,000 million Deutsche Marks (almost Rs. 680 crores) which represents approximately 10 per cent. of the total national income available for all consumer expenditures.

Position in India

Coming to India, we find that the instalment-credit business is still in its infancy, though more than 30 years have passed since Messrs. Govan Bros. opened the first commercial enterprise, specialising in automobile-sales on hire-purchase basis. Perhaps, the lethargy in the promotion of instalment credit business or hire-purchase business is explained by the ignorance, and hence the absence of interest, in this institution in commercial and financial circles. The main drawback is the virtual non-existence of the finance company, which is the mainspring of the instalment-credit mechanism. Similarly, the subsidiary companies or units and independent undertakings or companies are also conspicuous by their virtual absence. It may be explained that subsidiary companies are organised by the parent manufacturing enterprises for the sole purpose of financing sales of their own products, while the independent companies deal in one or more than one product, manufactured by others. In India, manufacturers have taken little interest in promoting sales of their products, on hire-purchase basis, through their own subsidiary units. So far as large retails-stores are concerned, they have been concentrating upon cash-sales, or charge-account sales. Banks and other financial institutions have completely overlooked this sector of business. The overall position can be summarised as follows:

(*a*) *Subsidiary units.*

1. Singer Sewing Machine Company started the sale of sewing machines on monthly payments in India nearabout the First World War. But this activity came to an abrupt stop when the Second World War flared up, on account of restrictions placed upon imports.

2. Phillips radios are being sold on instalment credit basis, under a sales campaign organised by the manufacturing concern, Phillips Electric Coy., of India Ltd.

(*b*) *Independent companies.*

1. Sale of radio-sets, sewing machines and bicycles, on hire-purchase basis, is now being established in Delhi, Calcutta and Bombay.

2. Sale of furniture, on hire-purchase terms,

(*Continued on page 1011*)

INTERNATIONAL SUGAR COUNCIL MEETS

EXPORT QUOTAS OF MEMBER-COUNTRIES CUT BY 5 PER CENT.

AFTER deliberating for full three days, the International Sugar Council concluded its session at London on the 7th inst. The session was presided over by Baron Kronacker. Besides the representatives of 25 countries, an observer from the U.N. Food and Agriculture Organisation also attended the session. This session is of particular significance, inasmuch as it marks one more major step by the Council since the World Sugar Agreement came into force nearly six months ago to bring about stability in the world sugar market. The Council took two decisions of outstanding importance. First, the export quotas of the member-countries have been cut by a further 5 per cent. of the basic export tonnages, bringing the total reduction of quotas to 20 per cent., the maximum allowed under the Agreement. Secondly, the exporting countries have been asked to limit their exports during the first eight months of the current calendar year to 75 per cent. of their initial quotas. The chief object of these measures is to impart a certain measure of stability to sugar prices in the free market by reducing the quantity of sugar that flows into that market. It will be recalled that the International Sugar Agreement seeks to contain the price variations in the market within a floor of 3.25 (U.S.) cents a pound and a ceiling of 4.35 cents a pound f.a.s. Cuban port. A feature of this Agreement is that the Council has powers to raise or lower export quotas, even while the ruling market prices are within this range. Evidently, this freedom is intended to render the holding of the limits easier. In deciding to lower the export quota last week, the Council has apparently exercised this option, for, so far as this year is concerned, the price of sugar has mostly been over 3.30 cents a pound and had not touched the floor of 3.25 cents. The other highlights of last week's London meeting were:

(1) The Governments which had ratified the International Sugar Agreement decided to bring into force.

(2) London was selected as the seat of the Council and the U.S. was appointed to fill the vacant seat on the Executive Committee.

(3) The Council adopted an estimate of 3,864,000 metric tons of sugar (raw value) as the free market requirements for 1954.

(4) The Council did not consider it appropriate to have additional measures, in view of the poor outlook for European beet crop; the situation will be re-examined at its next meeting scheduled to be held before 8th September, 1954.

Cuba's Anxiety

The reduction of a further 5 per cent. in the export quotas and the limitation of exports to three-fourths of the initial quotas are a sequel to the vigorous plea put forward by some of the world's leading sugar producing countries, especially Cuba, which have been concerned over the prospect of sugar prices falling below the minimum. It will be remembered that, before the World Sugar Agreement was signed in August, 1953, the various exporting countries had asked for a total export of over 7 million tons. But, by the time the Agreement was finally signed, the combined basic export quotas of the 16 exporting countries participating had been reduced to a little over 4.6 million tons. As this quantity was considered to be still well above the likely outlet, a 15 per cent. scaling down was applied—for certain countries, it worked out to 10 per cent. only—with the consequent quota cuts aggregating about 684,000 tons.

The scaling down in export quotas thus, however, was not considered by some countries as quite adequate. Cuba, for instance, urged a further cut of 5 per cent. "in order to bring supply into line with demand and keep the price from falling below the minimum envisaged in the Agreement." In support of this plea, Cuba said: "While demand is as low as it is at present, it is especially easy for countries outside the Agreement to capture markets." In fact, this country is reported to have even urged altering the Agreement in such a way as to give the Council wide powers to reduce quotas by more than 20 per cent., should the Council deem it necessary. This plea, however, did not find favour with some of the other participants to the Agreement.

While Cuba's anxiety is quite understandable, the solution advocated by it is not. Reduction in export quotas to the free market will, of course, reduce the quantum of sugar available to the market and may prevent the price from falling further. But that does not help producing countries, such as Cuba, to sell their surplus stocks. How will these stocks be disposed of? Since there is no buffer stock scheme, the producing countries themselves will have to carry the stocks which in turn will act as a drag on the market. It remains to be seen how this tangle will be solved. The success of the International Sugar Agreement is, therefore, still in doubt.

The Present Position

It will be interesting to note here that the Cuban authorities have so far released only 750,000 tons for sale in the world free market and have held back the remaining 1.2 million tons. Alluding to the implications of this large carry over, the Commodity Market Editor of the *Financial Times*, London, has made a few interesting observations. He says:

"Unless she markets this sugar in 1954, Cuba will be unable to carry forward her international agreement quota into next year. Already, in the past few years, Cuba has restricted her output to 5 million tons or less, as compared with a potential production under favourable conditions of fully 7 million tons. Even so, it is estimated by Czarnikow, the well-known London sugar brokers, that this year's (1953-54) world crop will reach 38.9 million tons, an increase of over 3 million tons on the 1952-53 level. This is largely due to excellent beet yields in Europe. That such yields will be repeated at the end of this year is doubtful. On balance, therefore, Europe should be a much larger importer of sugar next year.

"There are other hopeful factors. India, which is normally more or less self-sufficient, has this year been a heavy buyer of refined sugar from U.K. and other refiners. This is partly because of poor domestic crops, but there is another reason. At present world prices, sugar is one of the cheapest energy foods in the world and, to both the people and the authorities of the poorer countries, this is an important factor tending to increase effective world demand. In Japan, the high domestic price at which sugar can be sold has made it a favourite medium in barter and triangular deals designed to sell Japan's dearer export goods. Despite this loading of the price paid by consumers, Japanese demand is a major factor in the world market."

In the circumstances, it is believed that Cuba may try to dispose of its surplus sugar this year by "unorthodox deals." But "the world market," to quote the *Financial Times*, "is still suffering from last year's special sale of 1.4 million tons to the U.K. Ministry of Food, a sale which preceded rationing." As a result of this, U.K. stocks of sugar have reached a record of over 1.8 million tons. Home beet sugar output and Commonwealth imports are together estimated at 2.40 million tons, as against the consumption requirements of 2.65 million tons. In view of the need to reduce stocks, the U.K.'s imports of Cuban sugar for home consumption are considered unnecessary for some years. As far as import of sugar for refining and re-export are concerned, business is, for the present, diverted from Cuba, owing to the latter's unwillingness to allow bulk shipment.

To revert to the cut in export quotas and limitation of exports. These may no doubt bring about the desired effect of preventing any downward tendency in the "free" sugar prices. But these are only negative solutions. The positive solution to the problem confronting the countries which are surplus in sugar supplies, as, for example, Cuba, lies in lifting up the level of consumption which is, at present, very low, especially in the underdeveloped countries. This can be achieved by bringing down the prices of sugar. The International Sugar Council will do well to examine dispassionately the question of reducing the minimum price of 3.25 cents per pound (f.a.s. Cuba).

It may be mentioned, in passing, that, although originally 25 countries had signed the International Sugar Agreement, only 17 of them have ratified it and agreed to bring it into force. Again, some of the leading producing countries, including Peru and Indonesia, have not even signed the Agreement. It is true that the Council has enough voting strength to enable the Agreement to work. But the non-participation of some leading producing countries might lead to the creation of a sufficiently large market outside the Agreement, thereby making it difficult for the Agreement to be a success.

PETROL FROM COAL

NEW COMMITTEE TO EXAMINE PROJECT REPORTS

MR. Jawaharlal Nehru, Prime Minister, disclosed, on the 10th inst., in the Council of States, that a council of experts and non-experts had been appointed, under the chairmanship of Mr. K. D. Malaviya, Deputy Minister for Natural Resources and Scientific Research, to study the reports and schemes relating to the manufacture of petrol from coal and advise the Government on the installation of a plant. It is reported that a number of well-known American and British firms have submitted proposals for the establishment of a synthetic petrol plant. If the Government were to decide on the erection of a plant, it is expected that it will most probably be situated in the Ondal area, the coal of which is stated to be most suitable for the purpose, according to a special investigation conducted by the Geological Survey of India some years ago. According to Mr. Malaviya, valuable data and experience has been gained in the research on a laboratory scale, on the production of synthetic petrol by the Fischer Tropsch and Berggius process carried out at the Fuel Research Institute, Digwadih. It is also stated that some experiments for the production of synthetic petrol are being carried out at Jamshedpur by Tatas.

The proposal to set up a synthetic petrol plant in India goes as far back as 1948, when the Government invited Messrs. Koppers Inc., submit a project report for the manufacture of liquid fuel from low-grade coal. Later, a German expert, Mr. D. Grimme, was also asked to advise it on the same proposal. Subsequently, a committee of expert industrialists was appointed by the Council of Scientific and Industrial Research to enquire into the question. All their reports are before Government. There was also a report, in the later half of 1951, that a private firm had proposed to install and work, in co-operation with a German and a few French firms, a 10,000-ton plant in Orissa.

It is true that petrol extracted from coal will generally be costlier than imported natural petrol and, consequently, it will be waste of money in investing in such a project. But the countries, which are engaged, or propose to engage, in this manufacture, do so chiefly for considerations of defence. Even this consideration will not be valid if a country were to have a few allies among those that are producing oil. But that is a contingency which cannot be forecast and depended upon.

Be that as it may, where there are abundant local supplies of coal, the production of synthetic petrol from coal may in the long run prove to be an economically useful proposition. So far as India is concerned, the reserves of coal are beyond anxiety. They are estimated as follows:—

(In million tons)

Total reserves of coal in the Indian rock-formations, upto a depth of 2,000 feet ...	60,000
Total reserves of available coal, of all grades, which are considered workable by present methods	
Reserves of first-grade coal, workable ...	20,000
Reserves of coking coal suitable for metallurgical use	5,000
Present-day annual consumption of coal, of all grades	1,750 to 2,000
Annual consumption of metallurgical grade coal (coking coal used both for metallurgical and non-metallurgical purposes)	35
Consumption of coking coal purely for metallurgical purposes	about 8 to 12
	about 3

Thus, it is clear that India has reserves of 2,000 million tons of high grade and coking coal. This should last, if their consumption were restricted to the use in the iron and steel industry and other metallurgical purposes, for a period of 650 years. But India is using coking coal today for ordinary furnace and railway purposes, for domestic fuel and some industrial uses to the extent of about 10 to 12 million tons per annum. At this rate, the life of coking coal will be reduced to 160 years only.

But as petrol is sought to be extracted from low-grade coal, the reserves of high-grade and coking coal are not germane. What is more relevant is the position in respect of low-grade coal of good quality. The reserves of these varieties of coal are ample, inasmuch as they will last for several hundreds of years even after taking into account the possible increase following industrial expansion in the country.

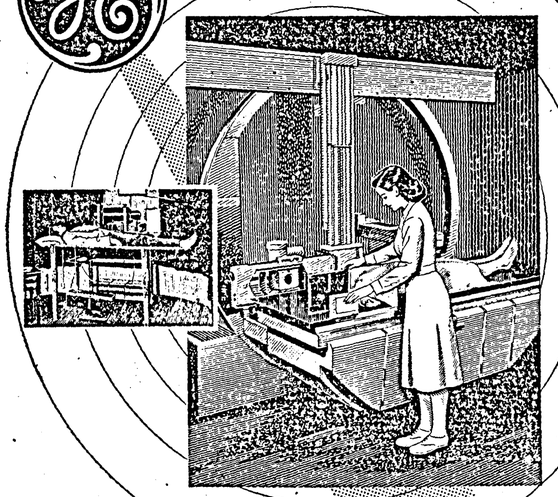
RAYS THAT CURE



In 1896, just a year after Roentgen discovered X-ray radiation, General Electric introduced to the public the X-ray tube with automatic vacuum attachments. In 1913, when G. E. Research Scientist, Dr. W. D. Coolidge, devised the hot cathode tube, X-ray technique metamorphosed from an uncertain art into an exact science. Since then hundreds of developments have enabled General Electric to produce today various types of X-ray equipment for radiography, therapy and physical research.
A midget 60-KV Coolidge tube for dental radiography ... a 70-mev synchrotron for cancer therapy ... a 100-mev betatron or a 300-mev synchrotron for physical research ... following these typical products of General Electric research the latest is the Imperial Table rightly described as the radiologist's dream.
Over 3,000 G. E. X-ray equipments are functioning throughout India today, offering the results of G. E. research to the relief of the sick and infirm.

EXPORT DUTY ON JUTE GOODS

ENQUIRY COMMISSION'S VIEWS DISAPPOINTING

THE jute industry and trade in India have not hesitated to lay the blame for the miserable plight in which the industry finds itself today on the jute goods export policy of the Government of India. Ever since the Government raised, in September, 1949, the export duty on jute goods to abnormally high levels, the wisdom of the Government in imposing such heavy export duties as Rs. 1,500 per ton on hessians and Rs. 350 per ton on sackings has been questioned. Although these duties have since been reduced gradually about two years, indeed, the controversy persists even now and the demand for the total abolition of the duties has not yet subsided. What has the Jute Enquiry Commission, which recently went into the affairs of the industry, to say on this subject? The Commission has unfortunately not carried out a *post-mortem* examination of the effects of the Government's export duty policy on the industry's future and given its verdict on the controversy. This is rather disappointing. It has, however, crisply remarked that there is no justification for the demand for abolition of export duty. The Commission observes: "There have been demand from many quarters that the export duty on jute goods must be removed. It has been stated that there is pressure for this even from overseas buyers. On the evidence of informed witnesses with firsthand knowledge of continental markets, we are satisfied that, with the existing rates of duty, it would not be possible for overseas manufacturers to undersell Indian goods. We, therefore, do not support the demand for the removal of the existing duties."

More Elbow Room Needed

Considered against the background of the weighty reasons put forward by the jute industry for the abolition of export duties, the foregoing quotation from the Report makes very poor reading. It has dismissed the demand on the ground that the present level of duties does not stand in the way of Indian jute goods overcoming the competition in foreign markets. This view has a familiar ring, as it has been stated so often by the Government whenever the question of abolition of the duties figured prominently in Parliamentary discussions. Further, in arriving at the decision, the Commission states that it has the evidence of informed witnesses with firsthand knowledge of continental markets to support its stand. Unfortunately, no details have been made available in the Report about either the informed witnesses or the type of evidence they tendered to the Commission justifying its views. It may, however, be pointed out here that the industry is not unaware of the reason put forward by the Commission. More than anybody else, it is fully aware that, with the existing rate of duties, the overseas manufacturers will not be in a position to undersell Indian goods. If despite this, it has demanded the removal of the duties, it is because of the need for more elbow room in the overseas markets and for building up resources for the rehabilitation of its plant and machinery. Had the Commission cared to examine the issue from this angle, it would have reached a different conclusion.

Industry's Case

It will, however, not be inappropriate to recall here the overwhelming arguments of the industry to have the export duties totally removed. At the beginning of this century and till the end of the First World War, the jute manufacturing industry enjoyed a virtual monopoly. Subsequently, other countries, especially the European, entered the field of manufacture, and these found opportunities for expansion under the shelter provided by the heavy export duties imposed by the Government in 1949. These manufacturers gained a firm foothold in the U.S. and European markets and were able to compete with Indian mills, even after the reduction of the duties, thanks to their modern equipment and economic working facilitated by full utilisation of their plant. In this task of theirs, the jute policy of Pakistan which discriminated against India came in handy. They were at times able to purchase Pakistan fibre at rates lower than those paid by the Indian mills. Under these stimulating conditions, the Philippines, Cuba, many South American countries, Spain, Egypt, Australia and even Thailand and Burma sought either to expand their existing units or to open new ones. The entry of Pakistan into the field of manufacture with its command over the raw material was facilitated by the imposition of an export duty on Indian jute goods over a prolonged period. Being no longer a sole supplier of goods in these circumstances, the industry desires the duty to be abolished, so that it may have a good start in recovering its lost markets.

There is also another good reason which justifies the demand for abolition of the export duties. The industry has already lost considerable ground to substitute materials such as cotton and paper. The export tax has only resulted in enabling these materials to invade and establish new markets at the expense of jute, and competition from paper is now much keener than that it was some years ago. Besides, bulk handling, too, though a natural development in countries such as the U.S., Canada and Australia, where crops are large and labour expensive, has been directly and greatly encouraged by shortage of jute goods and high prices occasioned by the heavy duties, speculation, etc. The inroads of these substitutes into the markets formerly served by Indian jute have been quite disturbing. In 1948, for instance, India supplied more than 95 per cent. of the total imports of hessians into the U.S. This dropped to 87 per cent. by 1950. In August, 1953, it was only 71 per cent. The industry feels that the reduced prices resulting from the removal of duties would tempt consumers of substitute materials to stage a comeback to the use of gunny. It is needless to add that it will be difficult, if not impossible, to win over the consumers to the use of gunny bags, if they are allowed to get accustomed to the use of substitutes for a long period.

Policy of Gradual Reduction Harmful

The Government's policy of lowering the rates of export duty by gradual stages may be said to have done more harm than that done by the duty levied at the maximum rate. The inadequate cuts in duties give rise to cries of further cuts and foreign buyers become reluctant to enter the market in the expectation of further cuts. For, according to the terms of the contract under which all sales of jute goods are made to foreign buyers, all changes in the export tax are on account of the buyers. When a cut in the tax is made, it depreciates the value of the holdings of importers all of a sudden. No importer will, therefore, be anxious to buy from a country in which the export policy is subject to vacillation and if at all he buys, he will buy only the minimum that is required by him. What is more, this particular tax on jute goods in India, being a specific duty, did not vary with prices. Its incidence becomes heavier with every fall in the price of jute goods, and importers resented paying a price the bulk of which went to fill the exchequer of a foreign country. Thus, the import duty, acted, and has been acting, as a psychological disincentive to consumers of jute goods in foreign countries. In the result, sales declined, goods accumulated and production diminished, thereby aggravating the upward trend in the cost of production. Having been subjected to this sad experience, the industry would not but blame the Government's policy for most of its difficulties.

It is now eight months since the duty on hessians was last brought down. The stock position, according to the I.J.M.A. figures for April, 1954, discloses that the falling trend of hessian production, as a result of switch-over to sacking, has not stopped the mills' stocks of these from rising. This tendency reflects, to a certain extent, the hesitancy on the part of importers to place new orders in expectation of a further relief in the export levy on hessians. The Government will, therefore, do well to review its jute goods policy *de novo* in order to give the much needed fillip to the jute mills.

(Concluded from next column)

held that the best way to stimulate greater use of rubber was by improvement and extension of road transport. It laid stress on the importance of furthering measures designed to strengthen the competitive position of natural rubber by replanting the existing estates with high-yielding strains, by establishing new plantations and by constant research in the production as well as utilisation of the commodity.

INTERNATIONAL RUBBER STUDY GROUP MEETS

U.S. URGED TO REVISE PRICE OF G.R.-S. RUBBER

THE eleventh session of the International Rubber Study Group concluded its deliberations on Tuesday last week, after a week-long sitting in Colombo. Seventy delegates, representing 21 countries, participated in the discussions. It was an important session, inasmuch as it met in one of the large natural rubber producing countries and offered an opportunity to the representatives of the synthetic rubber producing countries, the most important of which is the U.S., to see for themselves the problem of natural rubber producers.

The main problem before the natural rubber producers at present is the effect of the violent fluctuations in prices of natural rubber. At the Colombo session, the I.R.S. Group set before itself the task of evolving means of stabilising world rubber markets. The most important means discussed was a buffer stock scheme. The *communique* issued by the Group at the end of the session shows that the Group has failed in this task. No agreement was reached on this scheme, though the Group agreed that the work done on the draft buffer stock agreement had been valuable and should be borne in mind in the event of the present balance between demand and supply being disturbed by unforeseen circumstances.

As regards the short-term remedies recommended by the Management Committee of the International Rubber Study Group at its special meeting held in London in October last, the Group noted that rubber stockpile rotation practices of the U.S. Government were revised in December, 1953, and in May, 1954, and that the U.S. was prepared to give sympathetic consideration to specific proposals for the assistance of the producers for planting or replanting with high-yielding strains, reducing costs and improving the efficiency of production and marketing. It was recognised that such measures could, in the long run, enhance the competitive position of natural rubber producers.

Another matter of vital importance to natural rubber producers is the price relationship between the synthetic and natural rubber. This is particularly so in countries which are mainly dependent on the export proceeds of their natural rubber for their economic welfare and development. Representatives of natural rubber producing countries, therefore, urged that the raising of the G.R.-S. price would help them to re-equip their industry. This was not the first time that such a request was being made to the U.S. At the last meeting of the Rubber Study Group held in October, 1953, a similar plea was made, but no action has so far been taken by the U.S. Regretting this, the Colombo session of the Group held that, even at this late stage, an increase in price of the G.R.-S. rubber would be of great assistance to natural rubber producers in encouraging them to rehabilitate their plantations and to place their product on a more competitive footing so as to meet the probable future world demand. In view of the important relationship between synthetic and natural rubber, the Group decided to entrust the Management Committee with the task of keeping the relationship between synthetic and natural rubber prices under close scrutiny and to draw the attention of member-Governments to any important change in the situation. If the reported view of the U.S. delegate to the Colombo session is any indication, it is clear that the U.S. authorities do not yet appreciate the necessity for raising the price of their synthetic rubber. It is stated that the U.S. delegate, while agreeing to communicate the request of the I.R.S. Group to his Government, pointed out that the outlook for rubber was such that the natural rubber industry could be developed satisfactorily without artificial or arbitrary increase in the price of G.R.-S.

The Rubber Study Group estimates the world production of natural rubber during 1954 at 1,705,000 long tons, and of synthetic rubber at 706,000 long tons. World consumption in 1954 is estimated at 1,681,000 long tons of natural rubber and 714,000 tons of synthetic rubber, apart from synthetic rubber produced in non-member countries. The balance of estimated production over estimated consumption of both natural and synthetic thus amounts to 16,000 tons, which will be available for absorption into governmental and commercial stocks. The Rubber Study Group

DEVELOPMENT OF WATER RESOURCES

E.C.A.F.E. TECHNICAL CONFERENCE AT TOKYO

THE five-day regional technical conference of the Economic Commission for Asia and the Far East on the development of water resources, which commenced on the 17th *inst.*, at Tokyo, is of considerable interest to this country as it has embarked on a vast programme of construction of big multi-purpose river valley projects. The Conference is expected to help evolution of common standards, which can be adapted to the nations concerned with suitable modifications. The exchange of ideas will certainly be of great help in improving techniques for planning and executing the various phases of development of water resources. The subjects for discussion include:—

1. *Economic and social aspects of multi-purpose river basin development*: Criteria for justification of projects, or for the selection of a project from among alternative proposals; benefit-cost analyses; and methods of reimbursement.

2. *Hydrologic problems*: The necessity of sufficient basic hydrologic data for appraising available water resources and planning water resources development projects; *minimum length* of records and minimum number of stations required in planning; *methods* for the indirect computation of run-off from rainfall and other records in lieu of records of direct discharge measurement; and other important hydrologic problems.

3. *Selection of types of hydrologic structures*: Experience gained in the selection of types of structures in water resources development with special reference to the availability of labour and material and to local conditions in countries of the E.C.A.F.E. region.

4. *Planning of sediment control works*: Technical features and economic justification (check dams, torrent control works, desilting works, and other sediment control structures).

5. *Recent progress in multiple-purpose projects*: Salient features of important water resources development projects (planned or constructed) in countries of the region with special reference to multiple-purpose projects.

6. *Organisation for water resources development*: Organisation for the effective execution of river basin development; relative merits and suitability of various kinds or organisation such as, autonomous and semi-autonomous valley authorities, joint management by related States or Provinces, execution of work separately by various departments or provinces under a joint co-ordination board, corporation or company under State ownership or joint ownership of the State and private sector.

7. *Component parts of multiple-purpose river basin development.*

8. *Hydrologic standards*: Standards of methods, records and terminology of hydrologic measurements as proposed by the Bureau of Flood Control and Water Resources Development for interim use in the E.C.A.F.E. region.

9. *Programme of work and priorities for the Bureau of Flood Control and Water Resources Development.*

The Conference will be followed by study tours for a period of about one week to the various river basin development projects in Japan. The Japanese Government has organised an exhibition of hydraulic and hydrological instruments and construction machinery manufactured in Japan for use on river valley projects.

It is common knowledge that water is the governing factor of all human existence and activities. It is the priceless source on which all growing things depend. In fact, it is the life blood of civilisation. Where there are ample supplies of good water, vigorous nations flourish, farms thrive and cities prosper. Where the supply of water fails, farms are abandoned and cities and cultures die, leaving crumbling ruins to mark past glory.

If we were to exclude the very slow recession of glaciers, the sea is the source of all moisture. The distribution of rainfall is controlled by the availability of atmosphere, which, in turn, is determined by the energy received by the sun. The average rainfall for all land areas in the world is 26 inches. The average rainfall continent-wise is as follows:

	Inches
South America	53.1
Africa	26.1
Europe	24.3
North America	23.7
Asia	25.4
Australia	16.5

Variations within the continent may be great. In India, for instance, the annual rainfall ranges from 5 inches in Rajputana to 500 inches in Chirapunji. In the dry regions of Australia, rainfall has, in individual years, varied from about 1 inch to 20 inches. Distribution is generally erratic. Rain does not always fall when required by agriculture. Experts put the minimum limit of rainfall for successful agriculture, without irrigation, at 20 inches per annum.

This, however, does not mean that plentiful supplies of water will solve all problems. The solution, for the problem lies in conservation, which does not mean hoarding but wise utilisation. Conservation is a wall set up for static defence against distant and doubtful dangers. Certain general guides for conservation and utilisation, as indicated by Mr. Krugg in his address to the U.N. Scientific Conference on conservation and utilisation of resources held at Lake Success, New York, in August, 1949, which hold good even today, are as follows:

First, most natural resources are interrelated and must be developed and conserved together for maximum benefit. It is folly and waste to build flood control dams without at the same time doing soil and forest conservation to slow up the rainy season run-off and to prevent the reservoirs from filling with silt. It is not wise utilisation to build such flood control dams without also developing hydro-electric power, irrigation, and navigation which may be possible. In water control developments, frequently, the integrated whole shows much greater benefits than the sum of its parts.

Secondly, faster economic progress and greater social values are obtained from the combined development of industry and resources during the same period than in the usual pattern where there is no such co-ordinated development. This is a matter of proper timing. Roads, harbours, power plants and other public improvements will not pay for themselves until industry is ready to utilise them. The opening up of a new era requires demonstration of the new opportunities and advantages of industry and agriculture so that business men and farmers will have their projects ready to go as soon as the basic developments are ready.

Thirdly, natural resources are the basis for the strength, the growth, the very future of every nation and people. The private owners of such resources have certain rights but, if free Governments are to survive, individual citizens cannot have the right as private owners of essential resources to imperil the future of the nation by short-sighted practices in developing these resources. No individual has the right to damage his fellow citizens irreparably by reckless and wasteful use of resources. For example, overgrazing the range and clear cutting the forests can dump water and floods on people downstream, silt up vital control reservoirs, pollute the streams and endanger future supplies of food and fibre. Until we come to the place where we recognise the real damage of such acts to the property and lives of others and find a practical way to prevent them, it is useless to talk about full conservation in any competitive society.

The multi-purpose river projects are a very important phase of combined resource development of a river valley. It serves some or most of the following functions:

(a) Irrigation;

(b) generation of hydro-electric power for low cost supplies to homes, farms and industry;

(c) flood control and navigation;

(d) stabilised fresh water supply for municipal and industrial uses;

(e) fish and wild-life protection and propagation;

(f) recreation, drainage, pollution, abatement and silt control; and

(g) salinity repulsion in areas affected by ocean tides.

Other supplementary functions may be prevention of soil erosion, sedimentation control, sewage and industrial waste control and malaria control in tropical and temperate areas. In most multi-purpose projects, one or two functions are of major importance and are accorded priority in various phases of planning over other benefits obtained from the same project.

Intelligent allocation of water resources is the key to the future development of any country. And a single national policy in the conservation and utilisation of available water resources will go a long way in this direction. Broadly speaking, the fundamentals of a sound water policy are today the same as those that were set forth by the U.S. Water Committee of the National Resources Committee during President Roosvelt's regime. These fundamentals hold good for any river valley. In brief, these are:

(1) Water control should not be considered an end in itself but only a means for the promotion of social welfare. Without a conscious pursuit of this goal, no expenditure to control the behaviour of water would be justified.

(2) Wherever feasible, every project must be planned and constructed so as to yield every possible benefit. Not to promote the maximum integrated control and use of water is to invite waste of potential wealth and so is incompatible with the public interest.

(3) The entire drainage basin of a river system should as a rule be treated as the unit area of operation. For a "chain of connected problems extend from the source of each tributary to the mouth of the main river." It follows that the optimum overall results can be achieved only through a well integrated programme comprising all the problems of the entire drainage basin.

(4) Co-operation between the Federal Centre and the States is essential in the development of inter-State streams.

(5) Study of facts must be regarded as an essential prerequisite to sound action. Plans for the development of large river systems must invariably be based on the most careful study of adequate data covering every aspect of the problem involved and never on mere opinions, no matter how widely held.

(6) In judging the economic soundness of projects, not only specific but also all general and potential benefits must be taken into consideration. "Social accounting should take its place with economic accounting."

There are two important aspects relating to multi-purpose projects and they are financial and technical. If river valleys are financed from public loans, it is generally held that they must pay the rate of interest which has to be paid on the specific loan raised for this purpose. If this is not done, it may lead to borrowing from future generations and placing their financial position in jeopardy. This aspect is particularly important in a democratic government where those responsible for the policy may be in power for a limited period. On the other hand, whenever it is possible to finance these projects from revenue budgets of the Centre or the States, it should be necessary to apply the test of economic feasibility only, i.e., total benefits to the nation must exceed total costs. It is only in very rare cases that projects which do not meet the economic test should be authorised.

As regards technical aspects the first aspect relates to preparation of project report. Side by side with the financial, a resources budget also needs to be prepared. This should include the assessment of technical manpower, not only in superior grades, but also in regard to auxiliary personnel.

A detailed project report may be divided into two parts, general report and technical report. The general report should be complete in itself and should be concise and informative to non-technical, as well as technical readers. Primarily, it should consist of a statement of facts and conclusions, with reliance upon the detailed technical report for proof or justification. The report should consist of, among others, general description of physical features, climate, etc., present development of land and water uses, problems of the areas, potential development, economic analysis of benefits, and related investigations.

The detailed technical report, which should accompany the general report, should present discussions of the subjects necessary for a thorough understanding of the findings, conclusions and recommendations made in the general report. This report should be in sufficient detail to substantiate, for the technical reader, the facts and conclusions contained in the general report. The technical report should present not only the results of the investigations but also the basis of analysis and computations and reference to methods used.

THE PUNJAB NATIONAL BANK LTD.

(Estd. 1895)

Head Office: 8, UNDERHILL ROAD, DELHI.

STATEMENT OF ACCOUNTS AS ON 31-12-1953.

LIABILITIES		Rs.
(i) Paid-up Capital		87,50,000
(ii) Reserve Fund		90,00,000
(iii) Deposits		65,31,18,035
(iv) Other Liabilities consisting of Acceptances, Endorsements, Bills Payable, Bills for Collection, etc..		12,69,54,164
Total ..	Rs.	79,78,22,199
ASSETS		Rs.
(i) Cash and Balances with Bankers.		7,47,49,531
(ii) *Investments*	Rs.	
(a) Securities of the Central and State Governments and Other Trustee Securities ..	35,24,28,070	
(b) Other Investments	89,98,924	
		36,14,27,003
(iii) Loans and Advances		25,54,91,216
(iv) Other Assets including Bills Receivable, etc.		10,61,54,449
Total ..	Rs.	79,78,22,199

B. N. PURI,
General Manager.

NEW PRODUCTS AND PROCESSES

Sands for Glass Manufacture

INVESTIGATIONS on the beneficiation of sands from South India in glass manufacture have been conducted by the Central Glass and Ceramic Research Institute, Calcutta. They have disclosed that sands of high iron and titania contents from South India consist of black mineral particles, some of which have been magnetic and some non-magnetic. It has also been found that by simple process of sieving and magnetic treatment, considerable improvement can be effected in the quality of the sand. The sands, after processing, can be used for the manufacture of commercial colourless and light coloured glasses, sheet glass, etc. The cost of processing is small and the increase in the cost of production of glass is negligible. A simple procedure has also been worked out to reduce further the iron content of the sands.

Milk for Heart Patients

Patients suffering from heart and circulatory diseases, who are denied fresh cow's milk by their physicians, because of its high sodium content, may soon, according to the American Heart Association (A.H.A.), which conducts through private donations a nation-wide fight against heart diseases, be drinking milk again as the result of a new process which eliminates 90 per cent. of the offending sodium. Sodium is the factor that often eliminates table salt from the diets prescribed for patients with heart disease.

Through the process, heart and circulatory patients have a milk low in sodium content that looks and tastes like any other wholesome fresh milk. It is already available in Los Angeles, where it is delivered to hospitals, and under a doctor's prescription, to homes. It is expected to be produced soon in other parts of the country. Until now, according to the A.H.A., persons on low-sodium diets who still want part of the food value of milk have had to use powdered milk products. The new process, developed by Dr. A. L. Chaney, a Glendale, California, chemist, provides a fresh fluid milk with 90 per cent. of the sodium content removed. A single dairy organisation is now producing the new milk for the Loss Angeles area. It is the only present producer, but arrangements are being made with major milk companies to produce the milk in other large U.S. marketing areas.

At present the new product retails at approximately twice the price of fresh fluid milk. It is still cheaper—and generally more palatable—than most powdered, low-sodium content milks.

Atomic Radiation Preserves Meat

Meat can be kept fresh longer by treating it with gamma rays, according to experiments recently conducted by the U.S. Atomic Energy Commission. Gamma rays, given off by radioactive materials, are similar to X-rays, but of shorter wave length. The Commission's experiments indicate that meat which now normally stays fresh for three days can be kept fresh and wholesome for 15 days, "by exposing it to a modest pasteurisation dose of gamma radiation." The experiments are part of the Commission's programme to speed development of the many peaceful uses of atomic energy.

New Engine for Helicopters

A new and powerful "baby gas turbine," which is expected to increase the flight capacity of helicopters, has been developed in the United States by the General Electric Company. The new engine is about the size of an automobile engine but seven or eight times more powerful, developing 600 to 800 horse-power. This makes it suitable for helicopters carrying from six to ten passengers. Gas turbines are similar to jet engines, but drive a propeller shaft instead of using a jet thrust. They are especially suitable for helicopters, engineers believe, because helicopter engines must operate at full capacity when the craft is moving vertically or hovering. This is difficult for the piston engines now used, most of which are designed to operate best at about 60 per cent. of full power. The gas turbine, on the other hand, does its best work at 80 per cent. or more of full power. For this reason, it may become the most practical engine for standing the stresses and strains of helicopter operation.

Machine-tool Vice

A vice for machine tools that can be closed by hand and then tightened by hydraulic power is being distributed by the American Tooling Corporation of New York (U.S.). As soon as the jaws of the vice are manually closed on the clamped object, a clutch is automatically activated and more force is applied hydraulically. To prevent work from being crushed, the jaw of the vice is adjusted to move no more than one-thirty-second of an inch once the hydraulic action takes place.

"Sting Chemical" Makes Arthritis Drug

The chemical that gives the sting to ants and nettles plays a key role in a new method of synthesising the latest hormone for the treatment of arthritis. The hormone is known as hydrocortisone, or Compound F. Announcement of the new synthesis, as affording a "potentially cheap and plentiful supply" of the drug, was made recently by the Schering Corporation of Bloomfield, New Jersey (U.S.). The ant and nettle sting chemical, formic acid, is used in the new process to yield a substance which previously was obtained from ox bile. This substance goes through later steps in the synthesis of hydrocortisone without destruction of the complicated molecular structure which makes the compound active and effective against arthritis.

DEVELOPMENT OF ROAD TRANSPORT

PLEA FOR REDUCTION OF TAX BURDEN

THE symposium on road transport held at Bombay by the Indian Institute of Road Transport, a few days ago, provided a welcome opportunity for discussing threadbare the causes for the present stagnation in road transport and suggesting remedies for them. Mr. D. K. Kunte, Speaker of the Bombay Legislative Assembly, presided on the occasion. Mr. E. A. Nadirshah, Chief Engineer, Concrete Association of India, Mr. B. V. Vagh, Member of Council, Indian Roads and Transport Development Association, Mr. N. Salivateeswaran, Member, Bombay Legislative Assembly, and Mr. Manohar Singh Dhody, Singh Transport Company, Bombay, participated in the symposium.

A significant feature of the symposium was the recognition that stagnation in road transport, which has been persisting for long, was responsible for the slow pace of development of the nation both in the industrial and agricultural sectors, as roads were what the arteries are to the human body. It was clearly admitted that the development of roads should form a part of a co-ordinated plan for the development of all forms of transport in India.

There are five forms of transport, namely, roads, railways, waterways, air and underground system. Air transport is too costly for the carriage of freight for a country like India, the standard of living of which is too low. River traffic is still to be developed. There are, however, no underground communications in India as in the West. Consequently, the only two important forms of traffic are the railways and the roads.

Railways

So far as the railways are concerned, their capacity is far below the requirements and there are no prospects of their coping with demand in the new future. The present rail mileage is hardly 34,000 miles and, for a country of vast size like India, this is very meagre. The roads too are not adequately developed. India has 201 miles of roads per 100 sq. miles, as compared with 2,017 in the U.K. and 3,988 in Japan. The number of automobiles, which are the quickest means of road transport, is, as pointed out by Mr. Salivateeswaran, about 250 per 1,000 sq. miles, as against 650 in the Philippines, 850 in Malaya, 1,300 in Ceylon, 7,000 in France, 12,000 in the U.S. and 30,000 in the U.K. The number of automobiles works out to 93 per lakh of population in India, as compared with 386 in the Philippines, 500 in Ceylon, 780 in Malaya, over 3,600 in France and the U.K. and 26,000 in the U.S. India is thus backward in road transport not only as compared with Western countries but even as compared with some of the Asiatic countries. Small wonder, therefore, that there have been frequent reports of bottlenecks in transport all over India.

Apart from the lack of roads, there are three other reasons, which are retarding the development of road transport. These are: (1) the intolerably heavier tax burden, (2) the physical restrictions imposed by the Motor Vehicles Act, 1939, and (3) the policies of the Central and State Governments regarding nationalisation of road transport.

All the speakers agreed that the tax burden on motor vehicles was so heavy as to retard development. According to Mr. Salivateeswaran, the annual tax per vehicle in India works out to Rs. 1,913, as against Rs. 409 in the U.S. The higher taxation is responsible for the high cost of operation, which is 42.73 pies per mile in India, as against 34.03 pies per mile in the U.S., in spite of the high wages paid there.

There was also unanimous agreement in regard to the fact that the Motor Vehicles Act, 1939, imposed severe restrictions on the private operators operating vehicles through different regions and States. How restrictive are the provisions of the Act will be evident from the following extract from the speech of Mr. Nadirshah:

"In 1939, the Government of India passed the Indian Motor Vehicle Act which, with one stroke of the pen, removed from our midst the numerous long-distance services by road which till then operated between Bombay and Calcutta, Bombay and Delhi, Bombay and Madras, Peshawar and Bombay, etc. The scheme of the Act is to bottle up available road transport in small regions within States, so that a vehicle cannot even operate from one end of a State to the other without specific permission from several regional transport authorities. Such permission, of course, is rarely given. This being the case, inter-State transport has practically ceased to exist. In addition to restrictions on the area of operation of vehicles, the regional authorities are given discretionary powers to limit the number of vehicles permitted to operate in their respective regions. The Motor Vehicles Act, by creating numerous authorities in charge of small regions, has created a vested interest in the fragmentation and restriction of road transport. Many of these restrictions form permissive and not mandatory provisions of the Act. Immediately after the creation of the authorities, however, there was a continuous flow of memoranda from the Government of India recommending that the powers be used for the benefit of the railways; and today many authorities, by force of habit, continue to exercise their powers and impose restrictions with little rhyme or reason, ignoring the fact that lack of transport facilities is doing incalculable harm to the country."

Nationalisation

Referring to nationalisation, Mr. Nadirshah, Mr. Vagh and Mr. Singh held that the threat of extension of nationalisation had muzzled private enterprise and thereby retarded the development of road transport. While declining to comment on the question of nationalisation, Mr. Salivateeswaran nevertheless admitted that nationalisation was being carried out in a haphazard manner. Proceeding, he observed:

"The State transport undertakings own only 10,000 buses, while over 40,000 buses are owned by private operators. It is impossible for the State Governments to take over all these 40,000 buses. Therefore, even if the nationalisation policy is pursued by the State Governments, it will take years before they completely nationalise the roads so far as passenger traffic is concerned. Coming to the goods traffic, no Government has nationalised it. A few Governments, including Bombay, have put in a few hundred vehicles on the roads. They do not in any way compete with the private operators. Including private carriers, there are nearly 85,000 vehicles of which about 50,000 are public carriers. In my opinion, there should be no nationalisation of goods traffic for another 10 years at least, so that, the problem of bottleneck can be completely solved. A 10-year period should enable the private operators to carry on their trade in an efficient manner and recover the money invested in this trade. Road transport is entirely owned and financed by Indian nationals. The money invested is over Rs. 130 crores. I do not think that any Government will alter this industry, in spite of the nationalisation programme, if the private undertakings form co-operative societies and run efficiently. After all, Government is interested in the welfare of the people. If private operators can give them the best amenities at a lower cost, there will be no justification for any Government to interfere."

Remedies

What then are the remedies? First, everybody agreed that there should be considerable relief in taxation. Mr. Vagh wanted a 50 per cent. cut in the present taxation on goods vehicles immediately and then gradually to one-third. Further, he suggested abolition of octrois and wheel taxes and substantial reductions in taxes on petrol and tyres. Mr. Salivateeswaran suggested that the Centre should straightaway give relief to the States by guaranteeing half of their revenues in this regard, which he claimed would amount to Rs. 9 or Rs. 10 crores, to enable the States to reduce the taxes and abolish tolls and wheel taxes imposed by local bodies. Secondly, there was also unanimity of opinion on the need for amending the Motor Vehicles Act, 1939, with a view to eliminating the restrictive provisions. Finally, the consensus of opinion of the speakers was that, for a considerable period, at least, goods transport should be assured immunity against nationalisation.

Summing up the position, Mr. Kunte deplored that, while asking for a reduction of taxes, no speaker had looked at the problem from the point of how the State managed its finances. Referring to restrictions on automobiles in their movement from region to region, he appreciated the operators' difficulties and said that they deserved to be looked into. He referred also to the suggestion that there was need for reorientation of road transport policy. He held that human considerations would have to be taken into account, while taking any step in this regard. To quote him: "To do a thing in a better way is not always to do it in a speedier way but to do it in human ways." Further, he added that planning should neither be for speed nor for improvement of individual economy, but for the uplift of the society as a whole.

INVESTMENT PATTERN OF INDIAN INSURERS

MORE THAN FOURFOLD INCREASE IN TOTAL ASSETS

A QUESTION which is asked from time to time is whether insurers in the country could not possibly utilise the large funds at their disposal for promoting industrial development. The implied assumption is that their funds are largely invested in Government securities. Before any definite answer to the question of deciding how insurers may devote their funds to greater advantage can be given, it is necessary to know the present disposition of their assets. Such knowledge should form the basis for any further discussion of the question. In this connection, it is interesting to note that an excellent piece of investigation into Indian insurers' investments has been conducted by Mr. C. R. Cirvante of the Monetary Research Division of the Reserve Bank of India. An article in the April issue of the *Reserve Bank Bulletin* gives the results of the investigation, with special reference to war-time and post-war shifts in the investment pattern of Indian insurers.

In India, there are 178 insurance companies (as on 30th November, 1953) doing life insurances, of which 161 are Indian and 17 non-Indian. Besides insurance companies, there is a number of small provident societies which undertake life insurance business. But the volume of business they transact is very small; at the end of 1952, these societies had policies for an aggregate amount of Rs. 3.50 crores in force. The Government of India operates the Post Office Insurance Fund for Government and semi-Government employees; such business in force amounts to about Rs. 23 crores. Some States like Mysore (since 1891) and Rajasthan (since 1943) have compulsory life insurance schemes for Government employees.

The total business in force in India of reporting Indian and foreign companies (excluding the aforesaid type of insurers) rose from Rs. 142 crores in 1929 to Rs. 272 crores in 1939 and to Rs. 916 crores in 1952. The new annual business also increased from Rs. 29 crores in 1929 to Rs. 47 crores in 1939 and to Rs. 146 crores in 1952. There has also been a gradual rise in the average sum assured per policy. In the case of Indian companies, the average rose from Rs. 1,473 in 1939 to Rs. 2,526 in 1952. In the case of non-Indian companies, it rose from Rs. 3,717 to Rs. 7,388. Nevertheless, the number of policies in India forms less than one per cent. of the total population, while the *per capita* insurance coverage is Rs. 25. In the U.S., the *per capita* insurance, it may be noted, is as high as $1,900 (about Rs. 9,000).

The annual amount of new funds available to the Indian and foreign companies for investment has shown a continuous increase from Rs. 7.14 crores in 1939 to Rs. 15.49 crores in 1945 and Rs. 27.05 crores in 1952. The following table gives the annual insurance in life funds available for investment over the 1939-52 period:

TABLE 1

Annual Increase in Life Funds

(In crores of Rs.)

Year	Indian Insurers	Non-Indian Insurers	Total
1939	5.93	1.21	7.14
1940	6.26	1.21	7.47
1941	6.97	1.33	8.30
1942	7.27	1.22	8.49
1943	8.99	1.59	10.65
1944	10.07	1.75	11.82
1945	13.21	2.28	15.49
1939-45 (Average)	8.88	1.68	9.91
1946	16.05	2.11	18.16
1947	16.16	1.15	17.30
1948	18.51	0.93	19.44
1949	19.43	0.88	20.31
1950	20.39	1.68	22.07
1951	22.62	1.90	24.52
1952	24.84	2.21	27.05
1946-52 (Average)	19.71	1.65	21.26

The aggregate assets of all Indian insurance companies, comprising life, composite and non-life insurance companies, amounted to Rs. 295.37 crores at the end of 1952, as against Rs. 138.27 crores and Rs. 69.58 crores at the end of 1945 and 1939, respectively. There has thus been more than a fourfold increase in the insurers' total assets since the war. In 1952, a great bulk of the assets was held in the form of Central and State Government securities which amounted to Rs. 138.52 crores (46.9 per cent. of the total assets), followed by industrial securities which amounted to Rs. 41.79 crores (14.1 per cent.). Approved securities (other than Government securities) amounted to Rs. 23.26 crores (7.9 per cent.), land and house property, loans on policies and mortgages each constituted 4 to 7 per cent. of the total assets. In the U.K. also, insurers, as is well known, invest their funds largely in Government securities. But industrial securities, as channels of investment, are more important than in India. They account for 29.9 per cent., as against 14.1 per cent. in India. In the U.S., industrial securities and mortgages occupy a much more important place than Government securities, their percentage to total assets in 1952 being 43.1 per cent., 29.0 per cent. and 17.4 per cent., respectively.

Because the provisions of the Insurance Act, 1938, lay down rigid restrictions relating to the investment of insurers' funds, there was a "significant shift" in the pattern of this investment in the war years. Thus, investment in Government securities rose continuously (except in 1940) from 53.7 per cent. in 1939 to an all-time high of 63.8 per cent. in 1945. Industrial securities also increased from 6.8 per cent. to 9.4 per cent. during the same period. On the other hand, the percentage of investments in semi-Government securities, mortgages, real estate, loans on policies and in stocks and shares showed a decline.

The following table gives the distribution of assets of Indian insurers (life, composite and non-life insurers) in 1939, 1945, 1951 and 1952:

TABLE 2

Distribution of Assets of Indian Insurers

(Rs. in lakhs)

	1939	1945	1951	1952
Total Assets	69,58 (100.0)	138,27 (100.0)	272,00 (100.0)	295,37 (100.0)
Of which				
Central and State Government securities	37,37 (53.7)	88,15 (63.8)	129,66 (47.7)	138,52 (46.9)
British, Colonial and Foreign securities	80 (1.1)	1,81 (0.9)	4,73 (1.7)	5,04 (1.0)
Municipal, Port Trust, Improvement Trust securities,	5,62 (8.1)	9,96 (5.0)	14,00 (5.5)	17,67 (6.0)
Shares of joint-stock companies and co-operative societies.	4,72 (6.8)	13,04 (9.4)	39,11 (14.4)	41,79 (14.1)
Mortgages on property ..	2,04 (2.9)	1,36 (1.0)	10,91 (4.0)	13,27 (4.5)
Land and house property ..	4,09 (6.7)	5,55 (4.0)	13,48 (5.0)	15,20 (5.1)
Loans on policies	5,27 (7.6)	6,72 (4.9)	15,82 (5.8)	19,74 (6.7)
Agents' balances	2,65 (3.9)	5,51 (4.0)	14,54 (5.3)	14,62 (4.9)
Deposits, cash and stamps	2,61 (3.8)	6,37 (4.6)	16,86 (6.2)	17,39 (5.9)

N.B.—Figures within brackets refer to percentages.

In post-war years, there has been a reversal of the war-time trend. Gilt-edged securities accounted for only 46.9 per cent. of the insurers' assets in 1952, as against 63.8 per cent. in 1945. Relatively higher yields on industrial securities and mortgage loans on property prompted insurance companies to step up their investments in these channels. The proportion of investments in securities of joint stock companies, etc., to total assets rose from 9.4 in 1945 to 14.1 in 1952. The percentage of investments in mortgages also rose sharply from 1 in 1945 to 4.5 in 1952. Loans on policies increased from 4.9 per cent. to 6.7 per cent. The post-war trend in the pattern of investment of life insurance funds in the U.S. and the U.K. was also somewhat similar to that of India—a decline in the proportion of Government securities and a rise in the proportion of industrial securities, mortgages and real estate. In the U.S., investment in Government securities declined from 50.3 per cent. in 1945 to as low as 17.4 per cent. in 1952; in absolute terms, this meant a decline from $23 billion to $13 billion. Investment in business and industries rose from 24.7 per cent. in 1945 to 43.1 per cent. in 1952, (from $11 billion to $31.6 billion). Mortgages rose from 14.8 per cent. to 29 per cent. In the U.K. also investment in Government securities declined from 41.9 per cent. in 1945 to 30.6 per cent. in 1952. But the absolute amount showed a rise as in the case of India.

The net rate of interest earned on mean life funds by Indian companies has declined over the last 10 years. Thus, it declined from 4.68 per cent. in 1939 to 3.02 per cent. in 1948. This is attributed to the reduction of the yields on gilt-edged securities, increased investments by insurers in these securities necessitated by the statutory obligation under the Insurance Act, 1938, and increase in the income-tax and super-tax on insurance companies from 42 pies in the rupee in 1939-40 to 63 pies during the period 1942-46. The combined rate of income- and super-tax was, however, reduced to 60 pies in 1946-47 and still further to 54 pies in 1950-51, but was again increased to 65.4 pies for proprietory companies and 69.4 pies for mutual companies in 1951-52.

Since 1948, however, there has been a steady rise in the net rate of interest earned by Indian companies. It has risen from 3.02 per cent. in 1948 to 3.43 per cent. in 1952. The increase is attributed to a rise in the yields on gilt-edged securities, particularly since the raising of the Bank rate in November, 1951, and to considerable switch-over by insurance companies from gilt-edged to equities. The following table gives the trend of net rates of interest earned by Indian companies, non-Indian companies and insurers in the U.S.:

TABLE 3

Net Rate of Interest

(Per cent.)

Year	Indian companies	Non-Indian companies	U.S.
1914	4.2	N.A.	4.77
1919	5.3	N.A.	4.68
1929	5.5	N.A.	6.05
1939	4.68	N.A.	5.54
1940	4.37	3.66	5.45
1941	4.17	3.63	5.41
1942	3.94	3.50	5.40
1943	3.89	3.70	5.29
1944	3.84	3.35	5.19
1945	3.48	3.22	5.07

1950	3.16	3.11	2.94
1951	3.33	3.19	3.00
1952	3.43	3.35	2.99
			3.07

N.A.—Not available.

The data relating to the maturity distribution of Indian and non-Indian insurers shows that securities which mature within 5-10 years account for the largest single group of investments; this group accounts for 22.6 per cent. of the insurers' investments. The following table gives the maturity distribution of investment of controlled funds in Government and other approved securities at the end of 1952:

TABLE 4

Maturity Distribution of Investments

(Rs. in crores)

Maturity groups (years)	Indian Insurers		Non-Indian Insurers		Total	
	Amount	Per cent. of total	Amount	Per cent. of total	Amount	Per cent. of total
0–5 ..	16.87	11.1	10.86	28.4	27.73	14.6

It will be seen from the table above that next in importance to securities with a maturity period of less than 10 years is the group of securities with a maturity period of 10 to 15 years, which account for 20.2 per cent. of the insurers' investments. It is significant that securities with a maturity period of 30 to 35 years account for as much as 16.2 per cent. This is only another index of the essentially long-term nature of insurers' operations.

THE EMPLOYERS' LIABILITY ASSURANCE CORPORATION LTD.

Judged even by the admittedly high standards of British insurance companies, the Employers' Liability Assurance Corporation Ltd. (Managing Director: The Rt. Hon. Viscount Knollys) has shown, during the year ended December, 1953, a remarkable improvement in its premium income as well as trading profits. Thus, the premium income in the fire department moved up from £2.10 million in 1952 to £2.44 million in 1953 and so also that of the accident department advanced from £20.87 million to £22.40 million. The Corporation's own underwriting profit—that is, as distinguished from its share of the profit from its subsidiary, the Clerical, Medical and General Life Assurance Society—more than doubled to £915,828 (as against £353,566 in 1951). The increase was mainly accounted for by the accident and general department. The fire department's profit was slightly lower at £119,266 whereas there was nearly a threefold increase in the accident department's profit at £796,562. As a result of this and other favourable factors, the Corporation's trading profit moved up from £890,877 to £1,458,139; this level, according to the Chairman, the Rt. Hon'ble Lord Courtauld-Thomson, is a record one in the annals of this seventy-three year old company. But, in the best British traditions of conservative dividend policy, the Directors have only maintained the dividend at 4½ per share (paid-up value 5s.), inclusive of the recommended final dividend of 3s. per share.

The slight decline in the fire department's profit is attributed to the fact that a large part of the Corporation's business in the U.S. is of a "long-term nature, requiring high reserves." The sizable improvement, which has taken place in 1953, in the accident department's profit, is the more creditable, because the Corporation actually suffered a loss to the tune of £919,219 in the department in 1951. This increase in underwriting profit reflects the Corporation's "profitable experience"

(Continued on page 998)

DEVELOPMENT OF SPICES INDUSTRY IN INDIA

DAMLE COMMITTEE SUGGESTS RS. 1.25 CRORE CENTRAL FUND

THE creation of a separate fund of Rs. 1.25 crores for purposes of developing the pepper and cashewnut industries in India has been suggested by the Spices Inquiry Committee, the report of which was released early this week. The Committee emphasises that the fund should be utilised for developing the production and marketing of these crops as part of an integrated ten-year plan. The Committee (Chairman, Mr. K. R. Damle, Additional Secretary to the Government of India), it may be recalled, was constituted in 1951 by the Indian Council of Agricultural Research at the instance of the Planning Commission and the Union Ministry of Food and Agriculture.

The Committee also recommends the constitution of three regional advisory committees for organising the development of these industries in the States of (a) Travancore-Cochin, (b) Malabar and South Kanara, and (c) Mysore, including Coorg and North Kanara. For co-ordinating the activities of these regional committees, a small advisory committee at the Centre has also been recommended.

From the evidence gathered, the Spices Committee has come to the conclusion that organisations such as the central commodity committees or statutory bodies like the Indian Coffee Board, are not suitable for the speedy development of these industries. The regional committees have been recommended mainly with a view to enlisting public co-operation in all the developmental plans and to make the maximum use possible of all the available resources in the producing States.

Promoting Sales

The Committee is convinced of the lack of publicity for these products in the foreign markets and has accordingly recommended the setting up of two special agencies, one in the U.S.A. (New York) and the other in the U.K. (London) for purposes of publicity and promotion of sales of these products.

The Committee separately deals with the problems of pepper, cardamom, ginger, turmeric, cashewnut and lemongrass oil and recommends the opening of additional research stations in the different producing areas for providing greater scientific aid to these industries. The report points out how the yields per acre in India are low and mentions the scope for stepping up production. It emphasises that, in order that India may be able to maintain its present favourable position in world trade in regard to these commodities, it should pay particular attention to reducing the production costs and standardising the quality of its products.

Export Trade

The bulk of these crops are exported to foreign markets, the total value of these exports amounting to Rs. 33.939 crores, Rs. 36.980 crores and Rs. 31.738 crores in 1950-51, 1951-52 and 1952-53 respectively. Of this, the hard currency earned amounted to Rs. 22.523 crores, Rs. 19.651 crores and Rs. 20.169 crores. On an average, the total value of exports of these six commodities, during the triennium ending 1952-53, amounted to Rs. 34.219 crores, of which Rs. 20.781 crores or 60.7 per cent. were earned in hard currency. Of this dollar income, pepper alone accounted for Rs. 13.126 crores, the balance being earned mostly by the export of cashew kernels.

Pepper and cashewnuts are the most important dollar-earning commodities of South India, and the Committee has, therefore, recommended that their scientific development should be undertaken for the benefit both of the producing States and the Central Government.

Terms of Reference

The Committee's wide terms of reference included an examination of the entire position regarding the production and marketing of the six dollar-earning crops of South India. It was specially asked to consider whether centralised direction was necessary and feasible, and, if so, the form in which the desired improvements should be brought about. The Committee first prepared a comprehensive questionnaire and circulated it to the State Governments concerned, Directors of Agriculture, growers, merchants, trade associations and other interested individuals. As the response was not very encouraging, it decided to visit nearly all the producing States and study the problems of these industries by making on-the-spot enquiries.

The Committee first visited Travancore-Cochin, the most important producing area for most of these crops, and conducted public enquiries at Cochin, Alleppey, Kottayam, Quilon and Trivandrum. The next study tour was confined to the smaller producing areas of Coorg and Mysore. Malabar and South Kanara districts, which form the remaining major spice-producing area on the west coast, were visited last.

Keen Interest

During these tours, the Committee took evidence of leading cultivators, traders, representatives of co-operative societies and Government officials. Throughout the investigations, it was impressed by the keen interest shown by all concerned in bringing about a rapid improvement in these industries. The Committee observed a general sense of awareness on the part of all the parties interviewed of the importance of these commodities in the agricultural economy of the tract, particularly in the coastal region. There was a feeling among them that these agricultural products, which had assumed great importance in the economy of the country, particularly as dollar-earners, had not received proper recognition and that no organised effort had hitherto been made for developing these industries on scientific lines. The need for better planning, more agricultural research and co-ordinated effort in executing developmental measures were pointedly brought to its notice as measures which should substantially increase production and result in financial gains both to the growers and the Governments concerned.

The Committee has, therefore, recommended that the development of these six commodities should be considered as an important aspect of agricultural development work in the regions where these commodities are grown and that urgent steps should be taken in this regard. While the tours and enquiries have enabled it to make an exhaustive study of the problems of these industries, it has made recommendations only in respect of such measures as could easily be implemented by Government, without undue difficulty, in the course of the next five to ten years.

Black Pepper

World supplies of pepper have declined considerably during the post-war period and this has resulted in a phenomenal increase in its price. As against 93,500 tons of commercial pepper produced before World War II, the present supply has gone down to 43,500 tons, the reduction being largely due to the loss of Indonesian crops. Nearly half of this quantity is produced in India, the bulk of indigenous production being exported to overseas markets. The average annual exports from India during the triennium ended 1952-53 amounted to 14,000 tons, valued at Rs. 27.17 crores. This spice has become the most important dollar-earner, the average amount earned as hard currency during the corresponding period being Rs. 13.13 crores.

The Committee has come to the conclusion that the present increased demand or price cannot be maintained for long unless the Indian pepper industry takes early steps to reduce the cost of production and offer more competitive prices to foreign consumers. It has recommended that two regional research stations should be started in the important producing areas of Travancore-Cochin and Malabar and two substations at Sirsi in North Kanara and some suitable hill area in Assam. In order to increase internal production, it has urged encouragement being given to (1) intensive methods of cultivation, (2) replacement of old and uneconomic vines, and (3) extension of cultivation wherever possible.

To provide the necessary inducement, the Committee has recommended that the Government of India should create a Pepper Development Fund and earmark from the export duty levied on this article a sum of not less than Rs. 1 crore, which should be utilised for organising and subsidising these developmental measures, which should be carried out according to a detailed integrated ten-year plan.

The Committee has pointed out the wide differences noticed between the official crop estimates and those given by the trade, particularly in regard to the annual outturn of the crop. As such conflicting estimates react unfavourably on the export prices, it has suggested early steps being taken to conduct pilot sample surveys for determining the normal yield of pepper in the different producing areas and arrive at a more scientific basis for estimating the total area and yield of the crop in India.

Cardamom

India is the principal source of cardamom supply in the world. The normal crop is expect-

(Continued in next page)

ed to be 1,800 tons, while the average demand for this spice in the world markets is reckoned at hardly 1,200 tons annually. Since the bulk of this demand is already being met by supplies from India, the scope for further expansion of India's foreign trade is limited. The Committee has, therefore, recommended that research should be carried out by the National Chemical Laboratory at Poona and the Council of Scientific and Industrial Research to find out alternative uses of cardamom and cardamom oil and for greater utilisation of this spice in India itself. It has also suggested the opening of two additional research stations for conducting agronomic and botanical researches on the crop, one in the Saklaspur region of Mysore State and the other in the Cardamom Hills of Travancore-Cochin.

More than in any other commodity, the Committee noticed lack of market intelligence in the case of cardamom, and has emphasised the urgent need of market news service being organised in all the important assembling centres. It has also recommended that the State Governments concerned and the Central Government should provide adequate storage and credit facilities and encourage the formation of co-operatives for the marketing of the produce.

Ginger

Although ginger is widely cultivated, the bulk of annual production in many countries is consumed locally, either as green ginger (*adrak*) or in the preserved form, while only a small proportion is converted into dry ginger (*sonth*). In India, the preparation of commercial dry ginger is largely confined to Travancore-Cochin and Malabar on the west coast, and the average annual supply from these sources is reckoned at 10,000 tons, as against 1,500, to 2,500 tons available from Sierra Leone and 1,000 to 1,500 tons from Jamaica. There is, however, a preferential demand for Sierra Leone and Jamaican ginger in the world markets. This is largely attributed to the larger fibre content of the Indian product as well as to its relatively higher price. Any further expansion of India's export trade in dry ginger is largely dependent on improvement in the quality of indigenous varieties as also in the cost of the product. The opening of research stations in all typical producing areas has, therefore, been recommended by the Committee.

One of the main handicaps in increasing the production of ginger was found to be lack of adequate credit facilities for financing seasonal agricultural operations. Therefore, the Committee has recommended that the Governments of the States concerned and the Central Government should assist in removing all the restrictions in the working of co-operative societies so as to make adequate production credit available to the cultivators. There is considerable scope for stepping up production, if such seasonal credit facilities are provided. The Committee has also recommended financial assistance being given by the Government to co-operative societies for the construction of a sufficient number of warehouses in all the important marketing centres, fumigation of the product before export and provision of an efficient market intelligence service to the producers.

Turmeric

The average area under turmeric cultivation in India is estimated at 1,35,000 acres and the total annual outturn of dry cured turmeric at 1,20,000 tons. Out of this, 10,000 tons are exported and the rest of the quantity utilised in internal trade. This crop has, however, minor importance in the agricultural economy of the west coast. As the Committee could neither visit important producing areas in Andhra State, Orissa, Bombay and Hyderabad nor obtain adequate evidence concerning the problems of this industry, it has recommended a further detailed survey by the Central Government for a comprehensive study.

Cashew-nut

With the growing demand for cashew kernels in America and Europe, the Committee envisages a bright future for this industry. India is its principal source of supply in the world markets and accounts for more than 95 per cent. of the international trade in this product. The processing factories are also concentrated in India, but the main problem confronting the cashew-nut industry in the country is the shortage of supplies of raw cashew-nuts experienced by these factories.

Out of the 26,012 tons of kernels processed in India during 1951-52, nearly half the quantity was extracted from raw cashew-nuts imported from East Africa, the value of imports being of the order of Rs. 3.3 crores. In spite of the large quantities imported, the processing factories remain idle for two to three months in a year for want of raw material. The more urgent problem of the industry is to reduce India's dependence on foreign imports by taking early steps to step up indigenous production of raw nuts and enable the factories to work to their maximum installed capacity.

The Committee urges encouragement of extensive cultivation of the crop on a plantation basis on the east coast of Madras, the coastal districts of Ratnagiri and North Kanara in Bombay State and parts of Coorg and Mysore. The forest and public works departments in the major producing areas have also been asked to undertake extension of cultivation of the crop in suitable lands under their jurisdiction.

The Committee has recommended that the Central Government should prepare a co-ordinated ten-year cashew-nut plantation scheme, in consultation with the State Governments concerned, and execute it expeditiously. The Centre should also create a development fund for the purpose and earmark a sum of Rs. 25 lakhs for a period of ten years for extending cashew-nut cultivation and other developmental measures concerned with the industry.

The Committee has asked the Central Government to make adequate additional funds available to enable the States of Madras, Bombay and Travancore-Cochin to start systematic studies at their respective regional research stations at Mangalore, Ratnagiri and Kottarakara sanctioned by the I.C.A.R. for a scientific development of the crop. It has also urged the railway authorities to provide greater facilities for quicker transport of raw nuts to the processing factories from the assembling centres or ports.

Quality of Kernels

The main complaint heard about the quality of cashew kernels exported from India, the Report says, is that these products get wormy in certain cases by the time they reach foreign destinations. In order to minimise such complaints, the Committee has suggested that the factory-owners should (i) pay greater attention to environmental hygiene in the manufacturing premises, (ii) use new tin-containers for packing kernels, and (iii) adopt airtight packing for the export of kernels to foreign countries. The need for publicity both in the internal and foreign markets has also been emphasised by the Committee.

An important by-product of the cashew-nut processing industry is the cashew-shell liquid. This oil is directly used as a preservative in the painting of boats, fishing nets and light woodwork. It is also used as a waterproofing agent. The distillation products of this oil are used in various industries, such as the manufacture of insulating varnishes, typewriter rolls, industrial flooring tiles and automobile brake linings. As the industrial utilisation of this by-product presupposes a uniform quality, the Committee has recommended the adoption of standard specifications for its manufacture.

Lemongrass Oil

India is the largest supplier of lemongrass oil in the world markets, the main producing areas being Travancore-Cochin and Malabar. From a few tons produced before the war, the annual supply of this oil has gradually increased to over 700 tons now. Although the bulk of this oil used to be exported to foreign markets, the demand for it has declined since last year. This is attributed partly to larger supplies received from Guatemala and partly to curtailment of demand from the manufacturers of Ionones and synthetic Vitamin-A in America and other foreign countries. Lemongrass oil is also an important basic raw material for the manufacture of many aromatic substances used in soap, perfume and cosmetic industries, and unless arrangements are made for synthesising these products in India itself or finding alternative uses for this oil, the prospects of this industry are not bright.

Preliminary investigations carried out by the Government of Travancore-Cochin have indicated the possibility of utilising Indian lemongrass oil for synthesising Ionones and Vitamin-A. The Committee has, therefore, recommended that a pilot plant should be set up in this State for the commercial manufacture of these synthetic products. The Central Government should subsidise this project and encourage the use of these products by Indian industries.

Although Indian lemongrass oil contains as high as 85 per cent. of citral content and is considered to be superior in quality, the producers do not realise the premium for this superior quality mainly because, according to the shipping contract terms, the shippers try to guarantee only a minimum of 75 per cent. citral content in the consignments exported to foreign markets. This encourages adulteration and affects the reputation of the high quality of Indian oil.

The Committee has, therefore, recommended that the shipping contract terms should be suitably amended to guarantee a minimum of 75 per cent. citral content and provide for higher allowances above this minimum limit. Necessary arrangements should also be made by the Central Government to prevent the export of sub-standard qualities of lemongrass oil under the provisions of the Sea Customs Act.

UNITED BANK OF INDIA LTD.—*(Continued)*

Schedule of particulars required under the Banking Companies Act, 1949, attached to and forming part of the Balance Sheet as at 31st December, 1953

AUDITORS' REPORT.

We have audited the Balance Sheet as on 31st December, 1953, and Profit and Loss Account for the Year ending 31st December, 1953, of United Bank of India Ltd., as above and in attached sheets set forth Balance Sheets as on 31st December, 1953, and Profit and Loss Accounts for the year ending 31st December, respectively with Books of Accounts as kept at the Head Office with which are incorporated the Branch 1953 (both in India and Pakistan) as audited, certified and reported to by the respective Auditors and reports that—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory.

(b) The transactions of the Bank which have come to our notice have been within the powers of the Bank.

(c) The Balance Sheets and Profit and Loss Accounts and the relative returns received from branch offices of the Bank have been found adequate for the purpose of the audit.

(d) The Balance Sheet and the Profit and Loss Account are drawn up in conformity with the Law.

(e) Such Profit and Loss Account shows a true balance of Profit for the year.

(f) Such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and explanations given to us and as shown by the Books of the Bank.

(g) In our opinion the Books of Account have been kept by the Bank as required by *Section (130)* of the Indian Companies Act, 1913.

REORGANISATION OF EMPLOYMENT EXCHANGES

SHIVA RAO COMMITTEE'S REPORT

THE Report of the Training and Employment Organisation Committee provides, for the first time, a plan for the reorganisation of employment exchanges. It will be recalled that, following the recommendation of the Planning Commission, the Government appointed in November, 1952, a Committee with Mr. B. Shiva Rao, M.P., as Chairman, and seven members, including representatives of workers and employers, to examine and report on the changes in character, methods and organisation of the employment organisation. The Committee submitted its report on 28th April, 1954, that is after an interval of about a year and a half.

Although the recommendations of the Committee are generally sound, there are some which need to be critically examined. Few can dispute its principal recommendation, namely, that the employment exchange organisation should be developed into a full-fledged national service, on a permanent footing and with enlarged powers. For a national employment service is indispensable for solving manpower problems arising out of economic and social developments. It necessarily plays a central role in the whole manpower programme. Where there is no effective employment service, the Government concerned will have little knowledge of what its manpower problems are, where they are and how to deal with them. An employer cannot be sure that he is selecting his workers from those best suited to his needs. Neither will the worker have any means of knowing where his most favourable opportunities lie. Certainly, the whole community will suffer directly or indirectly from the lack of good employment service, in that it will have to bear the continuous burden of unsolved manpower problems and of the dissatisfaction among employers, who cannot find suitable workers, and workers who cannot find suitable jobs. In fact, a competent employment service is vital to successful economic development. Effective employment of workers, including skilful placement of workers in jobs which demand their full capacity, can raise the whole standard of national production and productivity.

Decentralisation of Administration

The Committee has recommended decentralisation of administration, so that the States may be entrusted with the day-to-day administration, with the Centre being responsible for laying down policy and standards and for co-ordination and expansion of the work of employment exchanges. This, it is stated, is necessary, if the employment exchange organisation is to continue to function as a nation-wide system and, at the same time, be integrated with the plans and programmes of the States. This recommendation, however, is of dubious value. For, in the developing economy of a vast country like India, an important factor to be recognised is the maintenance of mobility of labour, so that labour might freely flow from States with surplus population to States where an increase of manpower resources is sought. Since the administration will be in the hands of State Governments, the employment exchanges might develop a narrow provincial outlook, so that it would be difficult, if not impossible, to draw workers, say, needed by the Bhakra-Nangal Project in Punjab (I) from the Madras State or the Travancore-Cochin State. This is not a stock argument based on a prejudicial view of our administrations. In the present state of affairs, the danger is real, as witness the remarks made by the Mysore Census Commissioner in his report on the population trends of Mysore State. He has given such a mischievous twist to the migration of workers from other parts of the country to Mysore that it has given rise for an agitation by a section of the public that no more non-Mysoreans should be employed in the Mysore State. It is common knowledge that one of our serious failings is that, in making appointments, those in authority are prone to favour persons of their own clan, community or State. This virus will gather considerable strength if the administration of the proposed national employment service is left to be managed by the State Governments.

This danger is far more serious than the ground on which decentralisation has been recommended by the Shiva Rao Committee. In any case, it is not clear as to how the integration of the employment service with the States' plans for development will not be a feasible proposition, if that service is Centrally administered. The task is purely one of collaboration between the officers of State Governments and those of the employment service. In this context, the State figures as an employer in the same way as firms and companies do in the private sector. If, therefore, the employment service is to be rational, in every sense of that word, it must be administered by the Centre and not by the States.

A significant recommendation of the Committee is that, although the subsidy being paid by the Centre to the States is sought to be restricted, the Centre shall foot the major portion of the expenditure of the exchanges. The Committee has recommended that, for the present, the subsidy to be paid to a State Government should be restricted to 60 per cent. of the expenditure on the regional headquarters and employment exchanges in the States, subject to a maximum of the amount provided for in the budget for 1953-54 or the actual expenditure incurred during 1952-53, whichever may be of greater advantage to the State Government concerned. Within this amount, the State Governments should be free to reorganise their respective employment service organisations, except that the closing down of the exchanges not considered necessary and the opening of new exchanges, where the need exists, would require the prior approval of the Central Government. The Central Government should share 60 per cent. of the cost of these district employment exchanges also which in some States are, at present, financed entirely by the State Governments concerned. The Central Government should continue to bear the entire cost of the Central headquarters, while the State Governments should provide, at their cost, the necessary accommodation for the employment exchanges. The expenditure of the Central Government on the employment exchange organisation should not, on the whole, be reduced from the present level.

Functions

The Committee has recommended a wide range of functions for the employment exchanges. These are briefly summarised below:

Employer relations: Maintaining good relations with the employers and employees groups; soliciting and taking orders (applications for workers) and subsequently following them through until placements are effected.

(2) *Registration of applicants*: Supervising and assisting registrants and conducting necessary tests.

(3) *Selection and referral of applicants*: Maintaining live files, renewals and revivals, selecting and referring suitable applicants to employers and maintaining placement records.

(4) *Clearance of labour*: Receiving orders in clearance and referring such orders to the appropriate sections for selection and referral, placing orders in clearance and receiving applications thereon.

(5) *Employment information*: Collecting information regarding employment opportunities and making such information available, with a view to assisting workers seeking employment and employers seeking workers. The exchanges are also to maintain and publish employment statistics and to forecast the trend of employment.

There is, however, one recommendation which restricts the scope of the exchanges as well as coverage of unemployment statistics. This relates to the procedure recommended for adoption by the exchanges in respect of unskilled workers. The Committee says: "Vacancies for unskilled workers should not be formally registered, nor should any formal submission be made against them. It should suffice if such vacancies are brought to the notice of employment-seekers by announcements or other means. Thereafter, applicants should approach the employers direct. No statistics should be maintained of those who assemble at the exchange each day, nor of the number of vacancies involved in the announcements." Perhaps, this recommendation might have been a sequel to the enormous burden that will fall on the exchanges, if they were to register unskilled workers, whose number runs into millions.

Government and semi-Government Departments should recruit through the exchanges the required staff. As regards private industry, the Committee has observed as follows:

"The working and the results of the recommendation regarding recruitment by Government and semi-Government employers through the exchanges should be watched for a time before enforcing compulsion on the private sector also. Private employers should, however, be required on a compulsory basis to notify to the exchanges all vacancies, other than vacancies for unskilled categories, vacancies of a very temporary duration and vacancies proposed to be filled through promotion. The obligation to notify vacancies should apply equally to firms engaged on Government contracts, undertakings in respect of which Governments hold a part of the stock, and establishments which have received aid/subsidy from the Governments. Until the employment exchange coverage is made more intensive, it should be optional on the employers located in the areas distant from the exchanges to notify their vacancies. Such employers should, however, be required to furnish the staff strength returns. The Central Government should decide, in consultation with State Governments and the various employers' and workers' organisations, the particular industries and the categories and size of industrial establishments, which should be brought under the operation of the suggested measures of compulsion. The suggested measures of compulsion may, if necessary, be embodied in a suitable legislation."

In other words, the private sector may, in due course of time, be brought within the scope of the employment exchanges, by compulsion, if need be.

Training of Personnel

Some important recommendations relating to the training of personnel have been made by the Committee. The employment service, according to the Committee, should develop standardised aptitude and trade tests to assess, wherever necessary, the aptitude and/or proficiency of applicants desiring training or employment in skilled trades. Side by side with the development of trade tests, the employment service should undertake, in collaboration with technical experts and representatives of workers, industry and the Government, the task of standardising definition of skills and functions of the different types of tradesmen. The "Guide to Occupational Classification" should eventually be developed into a comprehensive dictionary, which would provide both nomenclature of trades and occupations as well as their definitions. The exchanges should further develop a counselling programme, with a view to advising the prospective employee the choice of a career or an occupation.

So far as training of craftsmen and instructors are concerned, the Committee has suggested that the training facilities now provided in the centres run by the D.G.R. & E. should be integrated with similar facilities provided by State Governments, the administrative responsibility for the D.G.R. & E. scheme being also transferred to State Governments. In respect of the latter, the whole expenditure excluding the cost of the Central headquarters (to be borne fully by the Centre) should be shared between the Central and State Governments in the ratio of 60 : 40.

The Committee has further suggested the establishment of National Trades Certificate Board to act as an advisory body to the Ministry of Labour in framing the training policy. The co-ordination function of the Central Government, such as prescription of standards and methods of training and the drawing up of the curricula for training in different trades might be entrusted to the Board and necessary powers delegated to it to enable it to discharge its functions. In fact, training of all craftsmen in technical and vocational trades of national importance throughout the country should be co-ordinated through the Board. Further, the Committee has proposed a small cess on employers, the proceeds of which should be utilised for the supervision of apprenticeship training and other connected expenditure. Industrial undertakings which are operating their own programmes of apprenticeship training, it says, should be allowed a rebate upto the level of their expenses, subject to prescribed ceiling limits. Employers will have no objection to pay this cess provided they are sure that the proceeds of cess are utilised for the purpose for which they are meant. Unfortunately, the behaviour of State Governments in this respect is found wanting. If proof of this is needed, one has only to examine how the cess collected for development of sugarcane, roads, cotton, etc., are being used.

Finally, it may be mentioned here that the employment service itself is not a panacea for manpower problems. It works within the existing economic and social framework. After all, the employment exchanges cannot create jobs. They can only direct the unemployed who are capable and available for work, but unable to obtain suitable employment, to jobs if available and notified to it. The extent of jobs available is dependent on measures taken for the development of national economy.

PROTECTION TO SAGO INDUSTRY

PERIOD EXTENDED AND QUANTUM RAISED

THE protection to the sago (tapioca globules) industry, due to expire at the end of 1954, has been extended by two more years, that is, till the end of 1956. A decision to this effect was taken by the Government of India on the recommendations of the Tariff Commission and it came into force as from the 1st inst.

The quantum of protection to be enjoyed by the industry during the period of production, beginning from 1st May, 1954, has been raised. Sago globules and tapioca pearls were, upto this date, subject to a preferential rate of duty of 24 per cent. *ad valorem* in respect of imports from a British colony, the standard rate being 36 per cent. *ad valorem*. In addition, there was a surcharge of 5 per cent. of the total duty in both cases imposed for revenue considerations. As suggested by the Tariff Commission, the Government has raised the preferential rate to 36 per cent. *ad valorem* plus 5 per cent. surcharge. With regard to the standard rate, the Commission had suggested that the rate of duty on imports from countries other than British colonies should be fixed in accordance with the provisions of the Indo-British Trade Agreement. On this basis, the Government has fixed the rate of 46 per cent. *ad valorem* plus the 5 per cent. surcharge.

The scope of the Commission's enquiry, which preceded the above decision of the Government, was confined to sago globules manufactured from tapioca only and did not include sago flour. For sago palm is not grown in India, and sago globules are manufactured entirely from tapioca root.

The particulars furnished to the Commission disclose that the industry has made considerable progress since the previous enquiry held in 1950. The number of units engaged in the manufacture of sago globules in that year was 40, employing about 3,000 workers. It now stands at 175, providing employment for about 8,000 workers.

Rated Capacity

The rated capacity of the industry is estimated at about 30,000 tons and the annual production is about 18,000 tons. The demand for sago globules is also estimated at 18,000 tons. As sago globules do not constitute a staple food and are used largely during fasts or religious ceremonies in parts of Central India, Bombay and Bengal States and by individuals, the Commission thinks that the demand in the future is not likely to increase appreciably, unless there is a reduction in the price of sago globules.

Although the quality of the globules is fairly satisfactory, there is still much room for improvement in technique and condition of manufactures. The bulk of them is stated to be produced under unhygienic conditions.

The price of the globules could be considerably reduced, if the per-acre yield of tapioca, grown extensively in Travancore-Cochin and certain States of Madras, is increased by means of improved methods of cultivation. The average yield in this area is about 3.11 tons per acre, as against 10 to 15 tons per acre in Java and Malaya.

The fair ex-works price of sago globules is estimated by the Commission at Rs. 38.33 per cwt., representing an increase of Rs. 395 per cwt. over the ex-works price estimated by the Tariff Board in 1950. The increase is attributed to lower realisation on the sale of the by-product and the increase in the price of tapioca roots. As the consumption of tapioca globules is on a large scale in Bombay and Bengal, the industry contended that the average freight from Salem, where the industry is most concentrated, to Bombay and Calcutta should be taken into account for the purpose of comparison of the ex-works price of indigenous tapioca globules, with the landed cost of sago globules from Malaya. Considering this contention reasonable, the Commission allowed a freight differential of Rs. 2.25 per cwt. The fair ex-works price of indigenous sago globules was thus estimated at Rs. 40.577 per cwt. As against this, the landed cost (without duty) of imported sago globules at Bombay and Calcutta amounted to Rs. 29.071. Thus, the indigenous industry required a differential of Rs. 10.876 per cwt. or 37.4 per cent. of the c.i.f. price to protect itself against competition from the imported sago globules. On the basis of this figure, the Tariff Commission fixed the protection duty at the rate of 36 per cent. *ad valorem* plus 5 per cent. of the total duty. In recommending the duty, it said: "This cottage industry is of considerable importance to the people in Salem District, in which it is concentrated, as it provides employment to surplus labour during the slack season and additional source of income to the agriculturists during the off season. We consider it essential that this industry, in the rural area, should not be jeopardised by foreign competition at this stage of development."

Since the previous enquiry in 1950, there has been a ban on imports of sago globules on consideration of foreign exchange. Drawing attention to this fact, the Commission observes that, whenever any changes are made in the import restrictions, the Government should regulate the import of sago globules taking into account the capacity of the industry to meet the entire requirements of the country and the scope for its further expansion in the future.

The Commission has further suggested that the Government of Madras should send one of its officers to study the methods of tapioca cultivation and manufacture of globules in Malaya. The Government is asked to start an experimental farm in Salem for introducing improved methods of cultivation. As the manufacture of sago globules is carried on on a cottage-industry basis, the various producers have been advised to form co-operative societies to further their economic interests.

SOME IMPORTS LIBERALISED

In a review of the import policy for the current half-year, the Government of India has liberalised the imports of certain items. These include copper pipes below 3/8" and above 5" diameter, copper sheets wider than 4 feet, and copper sheathing thinner than 34G, brass tubing below 3/8" and above 5" diameter, brass sheets wider than 4 ft. and brass sheathing thinner than 34G, palm oil, para amino-salicylic acid (P.A.S.) and its salts, photographic negatives and printing paper, excluding X-ray films, photographic instruments, apparatus and appliances other than cinema, all sorts, N.O.S. and empty gelatine capsules.

It has also been decided to grant additional licences to established importers for reasonable amounts in suitable cases in respect of the above items. Newcomers are also permitted to apply, and their case will be considered on merits. The Government notification to this effect appears in the *Gazette of India Extraordinary* dated 11th May, 1954.

By a notification published in the *Gazette of India*, dated 15th May, 1954, the Government of India has exempted industrial undertakings engaged merely in the processing, blending or in the repacking of dyestuffs from the registration and *licensing provisions of the* Industries (Development and Regulation) Act, 1951.

ROPE INDUSTRY IN INDIA

SOME PROBLEMS FACING IT

BOTH in peace and war ropes are of vital importance. The multifarious uses to which ropes, big and small, are put, have created such a demand that rope manufacturing in India has developed into a large-scale industry. According to Mr. K. N. Mukerjee, President, Indian Rope Manufacturers' Association, Calcutta, the combined capacity for production of ropes and cordages, made of Manila, sisal and aloe fibres, of the members of this Association, is stated to be 12,000 tons per year. Over and above this, these firms are also capable of producing every year further 5,000 tons of ropes and cordages from coir, jute, hemp and cotton. Unfortunately, actual production of ropes by these member firms is stated to be considerably below their installed capacity. The industry is today facing a slump to tide over which Mr. Mukherjee, in his address at the annual meeting of the Association held at Calcutta on the 11th inst., has made certain notable suggestions which fully merit the attention of the Government.

With a view to utilising its idle capacity, the industry seems to be anxious to develop its export markets. Exports of coir ropes, it is stated, are satisfactory, but export business in sisal and aloe ropes remains, we are told, meagre. Besides, there is a ban at present on export of Manila ropes. The ban was imposed at a time when the fibre itself was scarce in the world markets. The country could not afford to sell the manufactured product in markets which fetched sterling against dollars spent on imported Manila fibre. Mr. Mukherjee says that today conditions have so changed that other sterling countries are exporting these ropes abroad. He, therefore, suggests that India too should remove the ban, so that the manufacturers can sell the ropes in neighbouring countries and thus mitigate, to a certain extent, their existing difficulties.

Freight Rates

Another grievance of the industry is the heavy freight rates for ropes of different categories by rail. These rates were upgraded a couple of years ago, after a reference to the Railway Rates Tribunal, on the ground that the fibre from which the ropes were manufactured was itself in a higher classification than the manufactured ropes. Since then, it is stated, there has been a very progressive and substantial fall in the price of ropes, on which the case of ropes was heard by the Tribunal. The Railway Board is requested to assist the industry by restoring the old freight rates which were in force before the reference to the Tribunal.

So far as the raw materials for the industry are concerned, it is freely utilising indigenous fibres such as coir, aloe, cotton, jute and sunn. Of these indigenous fibres, permission granted to export aloe fibre has worked to the disadvantage of the industry. As this fibre is stated to be just sufficient for the use of the existing rope factories, the rope makers want the Government not to allow indiscriminately the exports of this fibre. Apart from these fibres, the rope industry is consuming large quantities of imported Manila and sisal fibres. The licensing policy in respect of these two fibres is subject to periodical revision. The current O.G.L. is to expire at the end of September next. Unless this period is extended, it would not be possible for the rope industry which needs these fibres throughout the year, to take advantage of price fluctuations in world markets. According to the New York Cordage Institute, the outlook for the current year appears to be not quite bright, as both the fibres may be in short supply, their prices depending on the policy of such buyers as the U.S., the U.K. and Japan. The industry desires that the Government should keep the O.G.L. for Manila and sisal fibres operative for long periods so that the industry may be free to take advantage of a fall in their prices whenever it occurs.

It is alleged that there has been considerable decline in the quality of Manila fibre received from Manila. As the low quality affects maintenance of uniform quality of ropes, the industry is subjected to dangers of rejection by rope indentors on test. Mr. Mukerjee suggests that the Indian Trade Mission in Manila should take up this question with exporters and producers there and impress upon them the necessity to maintain the quality of fibres up to the specified standards.

COATED ABRASIVES INDUSTRY

PROTECTION FOR ONE MORE YEAR

THE Government of India has, as briefly mentioned in these columns a fortnight ago, accepted the recommendations of the Tariff Commission in regard to continuance of protection to the coated abrasives industry. The Commission, which enquired into the industry's claim, recommended as follows:—

(1) Protection to the industry should be continued for a further period of one year, *i.e.*, upto 31st December, 1955. The protective duty on abrasive papers, covered by I.C.T. item No. 30(9) should be continued at the existing preferential rate of 25-1/5 per cent. *ad valorem* inclusive of surcharge, the standard rate being fixed in accordance with the provisions of the Indo-British Trade Agreement; and the protective duty on abrasive cloth covered by I.C.T. item No. 30(10) should be fixed at 31½ per cent. *ad valorem* inclusive of surcharge.

(2) The existing concession enjoyed by the industry, viz., duty-free import of emery and kraft paper, should be continued.

(3) The Indian Standards Institution should be requested to finalise specifications for abrasives manufactured in India as early as possible.

While accepting these recommendations, the Government has stated that it will take necessary steps for implementing them as far as possible. At the same time, the Government has impressed upon the industry the need for taking up and expanding the production of waterproof abrasive papers and waterproof abrasive cloth.

Although protection is to continue for only one year more, as against two to three years asked for, it is expected to enable the industry to consolidate its position by rationalising production techniques, improving the quality of the product and reducing the cost of production. The industry has various schemes of technical collaboration with foreign manufacturers and, if these were to materialise, it would not be difficult for the industry to improve its competitive capacity and to produce bonded abrasives of the same quality as those produced in the U.K. and the U.S.

The present scheme of protection to the coated abrasives industry covers abrasive paper, emery cloth, abrasive rolls, coils, discs, belts, shapes, tapes, etc. Of these, emery fillets are not manufactured in India and they had, therefore, been excluded from the scope of the Commission's enquiry. There are four units engaged in the manufacture of coated abrasives. They are (1) Ajax Products Ltd., Madras; (2) Krishnalal Tirani & Co., Ltd., Calcutta; (3) National Sand Paper Mills Ltd., Rawalpindi; and (4) Straw Board Manufacturing Co., Ltd., Saharanpur. The capacity of these four units is estimated at 86,000 reams, on the basis of eight hours a day and 300 working days in a year. No information is, however, available about the capacity of cottage producers. The demand for abrasives of all types in 1953 was estimated at about 73,000 reams. It is, however, expected to be a little higher at 80,000 reams for 1954, and, on the basis of an assumed annual increase of 25 per cent., the demand for 1955 is put at 100,000 reams. The production of abrasive paper and cloth during January-June, 1953, was 29,549 reams and assorted sizes of abrasives 37,015 (in numbers); the output in 1952 was 55,060 reams and 61,795, respectively.

The raw materials required for the manufacture of coated abrasives may be classed under the following heads:

(*a*) Natural abrasive minerals, such as flint, garnet, quartz, corundum and emery;

(*b*) synthetic abrasive minerals, such as silicon carbide (carborundum) and aluminium oxide grains;

(*c*) backing materials such as kraft paper, cloth and vulcanised fibre; and

(*d*) bonding materials, such as hide-glue, technical gelatine and synthetic resin.

Flint, garnet, quartz and corundum are available from indigenous sources. Natural emery occurs in certain parts of Bihar (near Gaya) and South India (near Bangalore), but the quality is not of the required standard. Consequently, manufacturers have been importing emery in the form of lumps from Turkey and also in the form of grains and powder from the U.K. and Holland. During the last two years, the Shevaroy Bauxite Products Company, Ltd., Salem, have supplied to some of the manufacturers synthetic lumps and grains made from the bauxite mineral by them, which are similar to the lumps and grains of natural emery imported from abroad. Silicon carbide (carborundum) and aluminium oxide grains are imported mostly from the U.S.

As the indigenous kraft paper is not upto the standard required, it is imported from the U.S., Sweden and the U.K. Backing cloth is manufactured by the Buckingham and Carnatic Mills Ltd., Madras, but their supplies of this cloth to the manufacturers of coated abrasives are stated to be irregular, as well as inadequate. The requirements of vulcanised fibre are met by imports. The Rohtas Industries, Ltd., Dalmianagar, it is stated, have recently started manufacturing thick quality fibre, but this is not suitable for the abrasives industry. Hide-glue is available from indigenous sources and is suitable for ordinary quality abrasives, but not for special quality abrasives, such as discs, belts, rails, etc. In the case of abrasives which are used for operation in power-driven machines, technical gelatine is required and this is imported from the U.K. Resin bonded abrasives are not manufactured in India at present, as the process involved is highly technical, but when the schemes of the Ajax Products Ltd. and Krishnalal Thirani & Co., for securing foreign collaboration materialise, it is expected that this deficiency will be removed.

SOVIET TRADE POLICIES

The Kremlin's use of foreign trade as a political as well as an economic weapon is noted in the Report on "East-West Trade Trends" submitted to Congress on the 16th inst. by the Foreign Operations Administration (F.O.A.). Soviet promises of big and attractive deliveries of machinery—whether fulfilled or not—the Report states, were made with this in mind. The Report recalls the case of Yugoslavia, pointing out that, "in 1948, it was possible for the Kremlin first to reduce and then to cut off all trade between Eastern Europe and Yugoslavia as a part of the attempt to bring Marshal Tito to his knees. The Kremlin in its propaganda make much of Western trade restrictions," the Report continues. "But the West's limited controls over the shipment of strategic goods did not come into existence until long after the Kremlin had begun using trade as a cold-war weapon." Even then, the Report points out, Western controls were designed only to foster security "by withholding, from aggression-minded Governments, the important war-building materials that would make aggression easier." The semi-annual Report covers operations through December, 1953, under the Mutual Defence Assistance Control Act, usually referred to as the Battle Act, which provides for control by the U.S. and co-operating nations of exports to Soviet bloc nations. F.O.A. Director Harold Stassen, in a foreword, stresses that "the soundness of East-West trade policy is to be judged not primarily on the amount of trade, but more on what kind of goods move back and forth, and on what terms they move." Pointing out that for more than four years the United States and certain other countries have been working together to withhold strategic goods from the Soviet bloc, the Report defines strategic goods as "those goods which would make a significant contribution to the war-making power of the Soviet bloc." In the cases of Communist China and North Korea, the U.S. maintains a total embargo on all exports—strategic or non-strategic. In this connection, the Report says: "Though the policies of other major free Governments regarding trade with Communist China have not been identical with our own, the U.S. has not attempted—and will not attempt—to bring about conformity through coercion. This is true of all of our relations with other countries not merely our relations with them on the issue of Communist China."

Reviewing the Kremlin's recent trading activities, the Report notes that Moscow has "tried to fasten closer economic ties with Asia and Latin America." It says one device used by Soviet trade bosses has been to build "lavish exhibits" at trade fairs, especially in South Asia. The Report says: "On an increasing scale, since 1951, the Soviet Union and its satellites have been using trade fairs for a double purpose—to promote the kind of trade the bloc desires and to propagate Communist ideas." Another Soviet device "was to join hands with a key nation of each continent in a brand-new impressive trade agreement which seemed to offer attractive benefits to that nation and which might stimulate neighbouring countries to hanker after similar opportunities. The Kremlin chose India and Argentina." Nothing that proposals to deliver certain kinds of machinery were contained in Soviet agreements with India, Argentina and Iran, the *Report observes*: "Machinery, as we know, is what the Soviet rulers go to extreme pains to import. If they were serious now about exporting it, and if they really intended to deliver large quantities and not mere tokens, it would be something new, although even then they would probably not be exporting the advanced types which they usually seek to obtain in the West . . . But one could only suspect that the promises of big and attractive deliveries—whether fulfilled or not—were made in large part for the purpose of weakening the ties of those countries with the rest of the world." A primary objective of the Soviet bloc, the Report says, is to increase the reliance of non-Communist nations on the bloc for markets or supplies, "and thus make the free world more vulnerable to bloc pressures." Pointing out that the U.S. basic policy on controls, which is primarily dedicated to strengthening the security of the free world, is subject to a continual process of review, the Report states: "International trade in general can be a broad highway to better living standards and more peaceful relations. It has served humanity well. There should be more of it. But it takes two to trade, and trade is not necessarily a road to peace unless both parties wish to make it so."

NEED FOR FREER TRADE

A Report issued on the 17th inst. by the Twentieth Century Fund, a well-known economic research organisation, asserts that reduction of trade discrimination and establishing freely convertible currencies will strengthen the free world in the struggle against communism. Entitled *Foreign Exchange in the Post-war World*, the study is the work of Raymond F. Mikesell, Professor of Economics at the University of Virginia and consultant at many international monetary conferences. The Report states: "Trade discrimination and exchange restrictions on current transactions are not only economically harmful, but they are responsible for a misallocation of resources which the free world can ill afford if it is to defend itself against internal and external aggression."

Prof. Mikesell contrasts what he describes as the chaotic trade and currency practices of the free world with the rigid methods of the "Moscow dictatorship" which runs its economic machine according to a *unified plan of action*. He says: "The free world cannot compete with the Soviet sphere in this struggle for world power without some kind of an organising principle. In the absence of political unification the principal co-ordinating force available to the free world economy is the operation of unfettered markets for goods and capital. In the broadest sense, therefore, the defence of the free world and its institutions depends upon the creation of a payments mechanism which will permit the *unrestricted* operations of these market forces." Specifying what such a mechanism might seek to accomplish, Prof. Mikesell says, "all free world trade should be financed solely in currencies or means of payment which are readily available for use in any currency area, so that the need for discrimination on currency grounds will disappear . . . ."

According to the Report, the creation of a new international organisation is not the solution to the problem. Prof. Mikesell believes, however, that "a programme of convertibility would require the co-ordinated efforts of existing institutions, including the European Payments Plan, the British Commonwealth, Conference, the Monetary Fund the General Agreement on Tariffs and Trade, the Organisation for European Economic Co-operation and the North Atlantic Treaty Organisation. . . ."

Summarising, Prof. Mikesell observes: "It should be emphasised that the world's payments problems cannot be dealt with apart from a vast complex of other international economic and political issues. Currency convertibility is not likely to be achieved by pious resolutions. . . . It must be achieved by concerted action of the leading countries of the free world to create a system of universal multilateral settlements. . . . Above all, there must be the will among the major nations of the free world—including the U.S.—to adopt the policies and programmes which are essential to the creation of an orderly system of world payments."

TENDERS FOR UREA AND NITRATE PLANTS AT SINDRI

Only four firms out of five invited to submit tenders for the establishment of urea and ammonium nitrate plants at Sindri have submitted, it is stated, their tenders. The tenders are now being examined by the team of experts to which has been entrusted the work of establishing the plants.

This team, consisting of the representatives of the Government of India and the U.S. Technical Co-operation Administration, visited important countries where urea and nitrate plants are in operation, such as Japan, North America, and Europe. After studying there the different processes of manufacture of these two fertilisers, the team had recommended the names of five firms to submit tenders. This recommendation was accepted by the Government of India and, on invitation of tenders from them, only four chose to respond to the invitation, as stated at the outset. The team of experts now examining these tenders consists of Mr. B. C. Mukerjee, I.C.S., Dr. Nagaraja Rao, Industrial Adviser (Chemicals), Ministry of Commerce and Industry, and Mr. C. C. Sharma, Plant Manager, Sindri Fertilisers. Representing the T.C.A. on the team is Dr. Chalkley. This team was appointed by the Government of India last year to study all the processes available for the manufacture of urea and ammonium nitrate. It recommended the processes to be adopted for refining or cracking of oven gases in the ammonia urea and nitrate plants.

Ten million cubic feet of coke oven gas will be available from a coke oven battery which is under erection at Sindri and is expected to go into production in 1954. Out of this 10 million c.ft. of gas, 4 million c.ft. will be utilised for the present for firing the coke ovens and the balance of 6 million c.ft. is proposed to be converted into ammonia. By fully utilising this 6 million c.ft. of gas, it is considered possible to produce 90 tons of ammonia per day, which will be further processed to give 70 tons per day of fertiliser grade urea and about 110 tons of ammonia nitrate or 35 tons per day of fertiliser grade urea and about 150 tons of ammonia nitrate.

EARNINGS OF SHREE NIWAS MILLS IMPROVE

CUT IN DIVIDEND PARTIALLY RESTORED

A RISE of 1½ per cent. to 14 per cent. in the return to shareholders has been recommended by the Directors of the Shree Niwas Cotton Mills Ltd. (Managing Agents: The Marwar Textile (Agency) Ltd., Bombay), for the year ended 31st December, 1953. The increase does not fully restore the cut effected last year in the dividend from 17½ per cent. to 12½ per cent., but brings it to the level paid for the year 1950. The partial restoration of the cut in dividend is only in consonance with the welcome improvement in the fortunes of the Company during the past year, as compared with those for the previous year. The gross profit of the Company for the year 1953, at Rs. 32.77 lakhs, shows an increase of Rs. 9.46 lakhs over that for 1952, but represents only a little less than half the profit (Rs. 65.68 lakhs) for 1951. As compared with the profit for 1950, at Rs. 40.46 lakhs, the profit for the year under review is lower by Rs. 7.69 lakhs. Judged from this trend of profits for the last four years, the distribution of a dividend of 14 per cent. for the year under review is indeed a generous one.

The better results for 1953 is not a peculiar feature of the Shree Niwas Cotton Mills alone, but is in conformity with the general trend of financial results of cotton mills. The Directors' report indicates that the profit of the Company would have been better but for some adverse factors. Thus, they observe: "The working results for the year under review are considerably better than last year, but the high-priced stocks of foreign cotton which the Company held at the beginning, together with the slump in the cloth market during the latter part of the year, have affected the final results." In the circumstances, the results shown for the year under review can be considered to be quite satisfactory.

The salient features of the Company's performance for the year under review are presented against the background of those for the previous three years in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950
Sale proceeds	838.12	862.81	401.92	232.63
Stocks	123.56	110.04	114.85	125.67
Expenses	807.47	840.07	246.72	257.50
Gross profit	32.77	53.31	65.68	40.46
Managing Agents' remuneration	3.69	2.90	8.21	5.00
Provision for—				
Depreciation	7.98	9.97	7.49	4.41
Taxation	8.50	2.50	18.00	12.50
Net profit	12.70	7.94	31.98	18.49
To reserves	2.00	..	22.00	9.00
Dividends—				
4 per cent. preference	0.19	0.19	0.19	0.19
Ordinary	8.40	7.50	10.50	8.40
	(14%)	(12½%)	(17½%)	(14%)†
Carry forward	2.70	3.44	3.19	3.10

* Approximate.
† On the increased capital of Rs. 60 lakhs raised in February, 1951, by the capitalisation of reserves.

A notable feature is the improvement in profit notwithstanding a decline in sale proceeds and an increase in stocks. This is due to a significant drop in expenses, of which only an approximate estimate can be had from the published accounts. But wages and Company's contribution to workers' provident fund have gone up by Rs. 10.92 lakhs and establishment charges by Rs. 2.42 lakhs. Another noteworthy feature is reduction of Rs. 2 lakhs in the provision for depreciation. As is only to be expected, a substantial part of the increase in profit has been utilised to raise the provision for taxation. Out of the net profit of Rs. 12.70 lakhs, which shows an increase of Rs. 4.76 lakhs over the previous year, the Directors have transferred to the renewal and replacement reserve a sum of Rs. 2 lakhs which did not receive anything in the previous years. No addition to any other reserve has been made.

The paid-up capital of the Company is unchanged at Rs. 64.80 lakhs, made up of 60,000 ordinary shares of Rs. 100 each and 4,800 4 per cent. redeemable preference shares of Rs. 100 each. It may be noted here that as much as Rs. 36 lakhs of the Company's equity capital and the entire preference capital of Rs. 4.80 lakhs represent capitalisation of resources in the course of the last ten years. Even after such a large capitalisation, the reserves and surplus as at the end of the year under review stand at the impressive level of Rs. 68.90 lakhs. The gross block of the value of Rs. 87.30 lakhs has been written down to a book value of Rs. 41.49 lakhs, the depreciation so far provided being Rs. 45.81 lakhs. The current assets aggregating Rs. 146.81 lakhs exceed the current liabilities and provision for taxation, amounting to Rs. 100.41 lakhs, by a margin of Rs. 46.40 lakhs. An analysis of the current liabilities shows that loans from banks account for Rs. 42.69 lakhs, showing a rise of Rs. 21.92 lakhs over the year. Of these loans, those against pledge of shares of joint-stock companies amount to Rs. 10.19 lakhs, borrowed presumably for the acquisition of a substantial interest in the firm of Messrs. Hall and Anderson Ltd., proprietors of the Shree Madhusudan Mills. The Company has purchased 298,750 fully paid-up ordinary shares of Rs. 10 each at a cost of Rs. 15.11 lakhs. The Company has also advanced to Messrs. Hall and Anderson Ltd. a substantial sum which, as at the end of the year under review, stands at Rs. 26.67 lakhs. The Directors report that since the acquisition of the substantial interest in Messrs. Hall and Anderson Ltd., the Shree Madhusudan Mills Ltd. has been working under the guidance and supervision of the Shree Niwas Cotton Mills Ltd. and is making steady progress and the present working is satisfactory.

The Rs. 100 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 212-8 *cum-div.* On the *ex-div.* basis of Rs. 198-8, the latest dividend gives a yield of over 7 per cent. per annum, free of tax.

COMPANY FORMED TO PROCESS FOOD BY ELECTRONIC RADIATION

A new company has been formed in the United States for the processing of fresh meats, vegetables and fruit by electronic radiation. The Company, the Applied Radiation Corporation, of Walnut Creek, California, is headed by four scientists. They are building a new machine—an electron linear accelerator—to handle the operation. It will be ready for testing by September and is expected to have a deep impact on the food industry, medical therapy and other electrical applications.

The scientist-businessmen say that radiation not only destroys bacteria, but in sufficient strength interrupts enzyme action. Food preserved in this fashion, they say, loses none of its natural flavour or nutritional qualities. Two years ago, scientists at the University of Michigan and the Massachusetts Institute of Technology discovered that food treated by radiation from radioactive materials could be kept without refrigeration. But the danger and difficulty of handling radioactive substances and the high cost have prevented commercial application. As a result of further research and the new machine, the Company says, radiation now can be controlled easily and accurately. The new radiation process, it is said, can be made to penetrate wood to kill worms or termites or to penetrate grain bins to kill weevils and even rodents.

DUNLOP RUBBER CO., LTD.

The Dunlop Rubber Company, Ltd., London, has earned a net profit (after taxation) of £3,509,842 for the year 1953, as against £1,969,358 for the previous year, representing an increase of 78.2 per cent. A sum of £1,800,000 has been transferred to the general reserve, which compares well with £520,000 added last year. The Directors have declared a dividend of 12 per cent. and a bonus of 2 per cent. on the ordinary capital of £19,280,974 increased in January last by a 50 per cent. free scrip issue, as compared with a dividend of 15 per cent. and a bonus of 2½ per cent. paid last year on the old capital of £12,853,969. The sum left to be carried forward is £1,488,893, as compared with £1,472,438 brought in.

BHARAT LINE LTD.

The Directors of the Bharat Line Ltd. have decided to maintain the dividend for the year ended 31st December, 1953, at Rs. 5 per share, after having raised it last year to that level successively from Rs. 3 per share paid for 1950 and Rs. 4 per share for 1951.

The Board of Directors of the Century Spinning and Manufacturing Company, Ltd., has approved of a proposal to set up a five-ton rayon yarn plant.

(*Concluded from next column*)

the Company capitalised in March, 1954, a sum of Rs. 104.87 lakhs out of the reserves and issued 1,048,750 fully paid up ordinary shares of Rs. 10 each to the existing shareholders in the ratio of three shares for every two shares held. The new shares are not entitled to the dividend declared in respect of the half-year under review, but are eligible for it for the subsequent half-year onwards.

SETBACK IN PROFIT OF ORIENT PAPER

DIVIDENDS, HOWEVER, UNCHANGED

THE audited accounts of the Orient Paper Mills Ltd. (Managing Agents: Messrs. Birla Brothers Ltd., Calcutta) for the half-year ended 30th September, 1953, disclose a sharp fall in the earnings of the Company, as compared with those for the previous half-year, the gross profit having declined from the record level of Rs. 71.58 lakhs to Rs. 49.65 lakhs. The fall in profit for the half-year under review is almost as precipitous as the rise was in the previous half-year from Rs. 47.86 lakhs to Rs. 71.58 lakhs. What is more, with this shrinkage in profit, the upward trend in earnings noted since the six months ended 30th September, 1951, has been reversed. The setback in results has not affected the return to the shareholders which is maintained at 20 per cent. per annum for the sixth half-year in succession.

The steady dividend policy which the Company has been pursuing over a number of years irrespective of the fluctuations in the fortunes of the Company has enabled it to pay an assured return for the last 13 years without a break during its history of 17 years. Established in 1936, the Company paid a maiden dividend of 10 per cent. per annum for the half-year ended 31st March, 1941. In the next half-year, the dividend was stepped up to 15 per cent. per annum and this rate was maintained till the half-year ended 31st March, 1950. The dividend was doubled for the six months ended 30th September, 1950. In March, 1951, the ordinary capital of the Company was doubled to Rs. 41.95 lakhs, as a consequence of which the rate of dividend was reduced to 20 per cent. per annum for that half-year and this has since been maintained.

To revert to the working of the Company during the half-year under review. The adverse results for the half-year are attributed to "lower production by reason of water shortage during summer season in the river Ib." Reflecting the lower exports are the decline in sale proceeds, stocks and expenses, as will be seen from the following comparative table:

(In lakhs of rupees)

	For the half-year ended			
	30-9-53	31-3-53	30-9-52	31-3-52
Sale proceeds (net)	154.22	177.56	153.75	137.70
Stocks	9.19	12.42	5.42	8.70
Expenses	103.89	117.81	103.42	144.87
Loss on sale of investments	6.50	..	..	..
Gross profit	49.65	71.58	47.86	88.89
Managing Agents' remuneration	4.84	7.01	4.57	8.77
Depreciation	5.00	5.00	5.00	5.00
Taxation	16.00	31.00	10.00	7.00
Net profit	23.80	28.57	28.29	23.12
To reserves	15.00	20.00	20.00	15.00
Dividends	2.40	2.23	2.00	2.00
Preference	..	..	..	..
Ordinary	1.77	1.77	1.77	1.77
	4.19	4.19	4.19	4.19
	(20%	(20%	(20%	(20%
Carry forward	p.a.)	p.a.)	p.a.)	p.a.)
	2.71	2.27	10.91	1.68

Although the gross profit shows a decline of Rs. 21.93 lakhs, the net profit is down by only Rs. 4.77 lakhs. Out of the net profit, a sum of Rs. 15 lakhs has been transferred to the dividend equalisation account which was created in the previous half-year by the allocation of Rs. 20 lakhs from the profit.

The paid-up capital of the Company as at the close of the half-year under review stands at Rs. 121.95 lakhs, made up of 419,500 ordinary shares of Rs. 10 each, 20,000 5½ per cent. (tax-free) cumulative preference shares of Rs. 100 each and 60,000 5½ per cent. (taxable) cumulative preference shares of Rs. 100 each. As against this capital, the reserves and surplus aggregate Rs. 240.92 lakhs, that is, nearly double the paid-up capital. Of these resources, as much as Rs. 100.70 lakhs represent capital reserve, Rs. 100 lakhs being the result of the revaluation of fixed assets in 1950. General reserve amounts to Rs. 56.50 lakhs, repairs and renewals reserve Rs. 45 lakhs and dividend equalisation fund Rs. 35 lakhs. There is a debenture liability to the extent of Rs. 1 crore. Provision for taxation stands at Rs. 87.09 lakhs and current liabilities at Rs. 54.81 lakhs. The gross block of the value of Rs. 342.04 lakhs has been written down to Rs. 262.03 lakhs. The current assets amount to Rs. 342.74 lakhs and exceed the current liabilities and taxation by a very wide margin.

As will be seen from the foregoing analysis of the latest balance-sheet, the paid-up capital amounts to only Rs. 121.95 lakhs, as against a gross block of Rs. 342.04 lakhs. With a view to bringing the capital structure in conformity with the size of the capital assets and turnover,

Points From The Chair

Subsiding Production of Cycle Components

"THIS Development Council has to consider the manufacturing targets of the cycle industry and various other problems regarding small-scale cycle parts manufacturers, etc. During the war, when there was a great dearth of bicycles and components, the manufacture of odd parts was encouraged so that some sort of reclamation work could be done to cycles which required repairs and for which the parts could no longer be imported. Having allowed the starting of manufacture of some components, vested interests have necessarily grown. The problem still arises as to what part these small-scale manufacturers of components should be allowed to play in the promotion of the cycle industry, and whether it is proper to lay any burden on the regular manufacturers of cycles, towards the maintenance of the small-scale industry. There is an idea that the manufacturers of odd cycle components in different parts of India should be subsidised by the major cycle manufacturers and, I think, it will be disastrous to the cycle industry if this is done."

A. RAMASWAMI MUDALIAR,
T. I. Cycles of India Ltd.

Trend of World Output and Consumption of Aluminium

"Free world production of aluminium in 1949 was 1,240,000 tons and is estimated to be 2,000,000 tons in 1954—a 110 per cent. increase over the period. When contrasted with the recorded growth in demand over several decades—the historical growth of trend—it becomes immediately apparent that the recent surge in production is exceptional. Historically, demand and production have approximately doubled every ten years. Even assuming the continuance of this favourable growth rate, recent production increases exceed by substantial margins the nominal growth in demand measured by the same historical standards. One is consequently led to question the ability of the market to consume the enlarged production capacity in the near term. Today, and for several months, there has been adequate primary aluminium to meet all demands in fields of consumption. Consumption has, however, been supplemented and may continue to be supplemented by Government stockpiling. The stockpiling programmes bring an important, but unknown, factor into the determination of current and near-term demand. What these stockpiling reserves are at the moment, what they may be in future years, and how they may be handled are matters of conjecture."

NATHANAEL V. DAVIS,
Aluminium Limited.

Outlook for Insurance

"I have already mentioned that the economic conditions now prevailing will not give rise to the rapid growth of income that we have experienced in recent years. Lower values inevitably result in lower premiums and, moreover, it is as well to remember that premium rates are constantly being modified as new methods of building construction or improvements in the manufacturing process diminish the risks of fire or accidents. However, we live in an age when commercial and industrial enterprise all over the world is seeking to promote new ventures and business activity. Such developments bring with them fresh markets for insurers and with our extensive organisation, we hope to participate in these new opportunities."

LT.-COL. JOHN LESLIE,
Commercial Union Assurance Company

High Cost Economy of Britain—A Danger

"We are still a good way from reaching the desired objective of having a really strong free currency so that we can feel assured that our economy is built on durable foundations able to meet all shocks. Our greatest danger is that we shall find our costs too high to meet the severe and continued competition we must expect, not only from American industry but, more particularly, from industry in Germany, Japan, Switzerland and other countries. Since our people are as intelligent and efficient as any others, there is no inherent reason why this danger should not be overcome if they are well led both on the employers' side and by their own trade union chiefs and if, as it is at present, the Government's internal economic policy is directed to the right ends."

THE RT. HON. LORD BRAND,
North British and Mercantile Insurance Co., Ltd.

Higher Wages Must be Recompensed by Extra Effort

"Indeed, in my opinion, we shall be fortunate if the recent increase in wages, especially in the nationalised industries which contribute comparatively little to export business, but vitally affect export costs, do not presage a period of further inflation. In our own case, the increase must obviously add to the costs of our products at a time when they should be reduced if, in future, we hope to retain our export business and compete effectively in overseas markets. Employers in the heavy engineering industry are anxious to give their employees a just return for their labours, but at the same time, the principal objective of employers must be to maintain a satisfactory order book and so to ensure full employment in future years. Both these endeavours will be in serious jeopardy, if higher wages are not recompensed by extra effort, and we all know that, if our national exports fall away, this country will once again be faced with a most critical and dangerous situation."

W. LIONEL FRASER,
Babcock and Wilcox Ltd.

COMPANY MEETINGS AND DIVIDENDS

SHREENIWAS COTTON MILLS LTD. Annual General Meeting, Bombay, 26th May, 1954. Dividend: Rs. 14 per share, payable on and after 1st June, 1954. Transfer books remain closed from 11th to 26th May, 1954, both days inclusive.

CLIVE BUILDINGS (CALCUTTA) LTD. Annual General Meeting, Calcutta, 26th May, 1954. Dividend: Rs. 3 per share. Transfer books remain closed from 20th to 26th May, 1954, both days inclusive.

UPPER JUMNA VALLEY ELECTRIC SUPPLY CO., LTD. Half-yearly General Meeting, Calcutta, 26th May, 1954. Dividend: As. 8 per share plus an additional payment of As. 2 per share; free of income-tax. Transfer books remain closed from 20th to 26th May, 1954, both days inclusive.

INDO-BURMA PETROLEUM CO., LTD. Annual General Meeting, Calcutta, 27th May, 1954. Dividend: Rs. 8 per share (including interim-dividend of Rs. 2 per share).

CALCUTTA LANDING AND SHIPPING CO., LTD. Half-yearly General Meeting, Calcutta, 28th May, 1954. Dividend: Re. 1-2 per share (including a bonus of As. 6 per share). Transfer books remain closed from 17th to 28th May, 1954, both days inclusive.

MYSORE CHEMICAL MANUFACTURERS LTD. Annual General Meeting, Bangalore, 29th May, 1954. Dividend: Re. 1-4 per share, payable on and after 1st June, 1954. Transfer books remain closed from 17th to 29th May, 1954, both days inclusive.

ALLIANCE JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 2nd June, 1954. Transfer books remain closed from 20th May to 2nd June, 1954, both days inclusive.

SURAT ELECTRICITY CO., LTD. Annual General Meeting, Bombay, 2nd June, 1954. Dividend: Rs. 7 per share (including the interim-dividend of Rs. 2-8) free of income-tax, payable on and after 25th June, 1954. Transfer books remain closed from 14th to 28th May, 1954, both days inclusive.

ROHTAS INDUSTRIES LTD. Annual General Meeting, Dalmianagar, 2nd June, 1954. Dividend: Re. 1-2 per ordinary share (12½ per cent.). Transfer books will remain closed from 25th May to 2nd June, 1954, both days inclusive.

ONDAL COAL CO., LTD. Half-yearly General Meeting, Calcutta, 2nd June, 1954. Dividend: Re. 1 per share. Transfer books remain closed from 19th May to 2nd June, 1954, both days inclusive.

BORREA COAL CO., LTD. Half-yearly General Meeting, Calcutta, 2nd June, 1954. Dividend: Re. 1-4 per share (including a bonus of As. 4 per share). Transfer books remain closed from 19th May to 2nd June, 1954, both days inclusive.

STANDARD COAL CO., LTD. Half-yearly General Meeting, Calcutta, 2nd June, 1954. Dividend: Re. 1 per share. Transfer books remain closed from 19th May to 2nd June, 1954, both days inclusive.

BHULANBARAREE COAL CO., LTD. Half-yearly General Meeting, Calcutta, 2nd June, 1954. Transfer books remain closed from 19th May to 2nd June, 1954, both days inclusive.

SENDRA COAL CO., LTD. Half-yearly General Meeting, Calcutta, 4th June, 1954. Transfer books remain closed from 21st May to 4th June, 1954, both days inclusive.

KARANPURA DEVELOPMENT CO., LTD. Half-yearly General Meeting, Calcutta, 4th June, 1954. Transfer books remain closed from 21st May to 4th June, 1954, both days inclusive.

BENGAL PAPER MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 4th June, 1954. Dividend: Re. 1-9 per share.

MINERVA MILLS LTD. Annual General Meeting, Bombay, 9th June, 1954. Dividend: Rs. 7 per share, including bonus. Transfer books remain closed from 17th May to 8th June, 1954, both days inclusive.

SASSOON AND ALLIANCE SILK MILL CO., LTD. Dividend of As. 12 per share, for the year ended 31st December, 1953.

VELLORE ELECTRIC CORPORATION LTD. Interim dividend of As. 8 per share, for the year 1953-54. Transfer books remain closed from 22nd to 31st May, 1954, both days inclusive.

EAST INDIAN COAL CO., LTD. Interim dividend of As. 12 per share, for the year ending 30th April, 1954. Transfer books remain closed from 18th to 31st May, 1954, both days inclusive.

COMPANY REGISTRATIONS

AMAR DYE-CHEM LTD. (First Director: Mr. A. K. Doshi.) Business: Manufacture, Produce, Process, Sell and Deal in Synthetic Organic Dyestuffs, Colours, etc. Authorised capital: Rs. 1,00,00,000. Address: 11, Sprott Road, Ballard Estate, Bombay.

POORNIMA AGRICULTURAL AND INDUSTRIAL CORPORATION LTD. (First Director: Mr. Shamrao Sitaram Samant.) Business: Manufacturers of Manure, Fertilisers, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Kolhapur (Laxmipuri, Kolhapur).

KANWAL & CO., LTD. (First Director: Sardar Bahadur Bakshi Dilip Singh.) Business: Importers, Exporters and Dealers in Taximeters and all kinds of Motor Spare Parts, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 16, Arthur Bunder Road, Colaba, Bombay 5.

The transfer books of the Company will be closed from the 28th May, 1954, to the 10th June, 1954, both days inclusive.

By Order of the Board,
ASPINWALL & CO., LTD.,
Managing Agents.

FORT COCHIN, 14*th May*, 1954.

BENGAL PAPER MILL COMPANY LIMITED

THE DIRECTORS HAVE DECIDED TO RECOMMEND to the forthcoming General Meeting of the Shareholders to be held on 4th June, 1954, dividends for the half-year ended 31st December, 1953, as follows:—

(a) Dividend on Cumulative Preference Shares at 7 per cent. per annum, free of Income-tax,

(*b*) Dividend on "A" Cumulative Preference Shares at 7 per cent. per annum, free of Income-tax,

(c) Dividend on "B" Cumulative Redeemable Preference Shares at 6 per cent. per annum, (subject to deduction of Income-tax),

(*d*) Dividend on Ordinary Shares at 12½ per cent. per annum, free of Income-tax.

By Order of the Board,
BALMER LAWRIE & CO., LTD.,
Managing Agents.

21, NETAJI SUBHAS ROAD,
CALCUTTA.

GONDALPARA MILL HALVES RETURN TO SHAREHOLDERS

POOBONG TEA RESUMES DIVIDEND

Societe Generale Industrielle De Chandernagor (Gondalpara Mill)

THE directors of the above Company (Managing Agents: Messrs. Gillanders Arbuthnot & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1953.

In accordance with the Indian Jute Mills Association's main and supplementary working time agreements the mill worked 42½ hours per week with 12½ per cent. looms sealed throughout the year.

The export duty on hessian goods was reduced from Rs. 275 to Rs. 120 per ton on 14th September, 1953, but the benefit of this went mainly to the consumer, although Calcutta Hessians are again competitive in world markets.

During the year, raw jute prices were not in parity with sacking goods and this is the reason for the poor result shown.

Jute in stock and process has been taken into account at rates corresponding with forward sales of manufactured goods, and manufactured goods have been taken into account at contract or market rates.

In view of the difficult conditions prevailing during the year, the agents have waived the sum of Rs. 1,00,000 (Rs. 1,50,000) from the commission due to them by the Company.

The result of the year's working was a profit of Rs. 1,17,550 (Rs. 63,630) to which was added the credit balance brought forward from previous year of Rs. 41,193 (Rs. 25,156) making a total of Rs. 1,58,743 (Rs. 2,49,193). Out of the above sum the directors paid a dividend at the rate of 5 (10) per cent. per annum (or say Rs. 15 (Rs. 30) per share) without any deduction in respect of income-tax payable by the Company Rs. 54,000 (Rs. 54,000), transferred to depreciation reserve Rs. 1,00,000 (Rs. 1,00,000), and carried forward to next year Rs. 4,743 (Rs. 41,193).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,80,000	Block ...	24,01,104
Debentures ...	1,800	Stocks ...	16,65,202
Reserves ...	28,00,000	Stores ...	5,37,819
Provision for taxation ...	2,57,066	Other assets ...	1,429
Liabilities ...	20,58,613	Debts, deposits and advances ...	16,24,546
Profit and loss account ...	1,58,743	Investments ...	79,089
		Cash ...	47,033
	Rs. 63,56,222		Rs. 63,56,222

Poobong Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1953.

The accounts disclose a profit of Rs. 22,051 (loss of Rs. 55,548). On transfer of this sum to profit and loss account and after sundry adjustments, there is a balance at credit of that account amounting to Rs. 30,328 (credit of Rs. 335) of which the directors have transferred Rs. 10,000 (nil) to revenue reserve and Rs. 5,000 (nil) to buildings and machinery reserve. The directors recommend that a dividend of 2½ (nil) per cent. be declared at the annual meeting, leaving Rs. 7,828 (Rs. 335) to be carried forward.

Crop weighed out at 1,845 maunds as compared with 2,237 maunds in 1952 and the average selling price was Rs. 2-3-9 per lb. as against Re. 1-13-7 per lb. in the previous year. Hail damage in March, caused a loss of leaf estimated at 550 maunds pucca tea. Planted area remains at 500.43 acres.

Estimates for 1954 provide for a crop of 2,200 maunds for an outlay of *Rs. 3,43,170 including* inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,00,000	Block ...	2,85,000
Reserves ...	3,03,709	Stores and supplies ...	27,073
Provision for taxation ...	21,063	Tea sales receivable	63,672
Liabilities ...	36,101	Other assets	7,393
Profit and loss account ...	7,828	Advances and deposits	21,797
		Investments	1,38,714
		Cash ...	1,25,052
	Rs. 6,68,701		Rs. 6,68,701

Ondal Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. F. W. Heilgers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1953.

During the half-year July to December, 1953, a total of 74,888 tons of coal were raised and 68,186 tons were despatched.

The Secretaries report that some success has been achieved subsequently in movement from this area, but wagon supplies are still much below productive capacity.

The profit and loss account after providing *Rs. 73,384 (Rs. 1,05,119)* for taxation, transferring *Rs. 74,764* (nil) to general reserve and including the sum of Rs. 1,06,566 (Rs. 1,23,852) brought forward from last half-year shows an available balance of Rs. 1,84,912 (Rs. 1,81,995) which the directors propose to dispose of as follows:—

In paying a dividend on the preference shares at the rate of 6½ per cent. per annum without any deduction for income-tax paid by the Company Rs. 6,500 (Rs. 6,500), in paying a dividend on the ordinary shares at the rate of 20 (20) per cent. per annum without any deduction for income-tax paid by the Company Rs. 75,000 (Rs. 75,000) and in carrying forward Rs. 1,03,412 (Rs. 1,00,495).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,50,000	Block ...	1,20,000
Reserves ...	11,26,866	Debts, deposits and advances ...	3,37,465
Provision for taxation ...	1,45,989	Investments ...	22,86,259
Liabilities ...	4,30,033	Cash ...	12,576
Profit and loss account ...	1,03,412		
	Rs. 27,56,300		Rs. 27,56,300

Standard Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. F. W. Heilgers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1953.

The case before the Appellate Tribunal is still to be heard, but no indication of the probable result can be given.

The profit and loss account, after providing Rs. 1,000 (nil) for depreciation, Rs. 94,168 (Rs. 71,144) for taxation, transferring Rs. 29,572 (Rs. 50,000) to general reserve and including the sum of Rs. 87,018 (Rs. 74,094) brought forward from last half-year, shows an available balance of Rs. 1,64,141 (Rs. 1,66,379) which the directors propose to dispose of as follows:—

In paying a dividend at the rate of 20 (20) per cent. per annum without any deduction for income-tax paid by the Company Rs. 80,000 (Rs. 80,000) and in carrying forward Rs. 84,141 (Rs. 86,379).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Block ...	1,47,060
Reserves ...	14,19,545	Debts, deposits and advances ...	10,20,323
Provision for taxation ...	3,55,661	Investments	17,79,312
Liabilities ...	3,12,492	Cash ...	25,144
Profit and loss account ...	84,141		
	Rs. 29,71,839		Rs. 29,71,839

Bhulanbararee Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. F. W. Heilgers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1953.

As much as 63,363 tons of coal were raised and 76,334 tons were despatched during the half-year in comparison with 72,010 tons and 68,457 tons in the previous half-year. Raisings were affected by mining difficulties, which however, the directors report, are gradually being overcome. It was referred in the last report to the necessity for augmenting sand-getting arrangements. Plant is now installed.

Although there are indications that Government is aware of the difficulties under which stowing collieries are labouring, alleviation is not yet forthcoming. Meanwhile the Company continues to follow the best known method of coal conservation, but it must be appreciated that this is very costly.

The number of wagons available daily for coal loading in the Bengal-Bihar fields was 3,119. *This is 16 wagons more than for the previous* period.

In order to assist forward planning, the Coal Industry has informed the Planning Commission that in its opinion, transport to the extent of an additional 2 million tons per year for the next 10 years will be required if the Industrial expansion programme is to be fulfilled. This programme will necessitate very early action by the authorities.

While the directors give their full support to reasonable improvement in the conditions under which labour works in so far as these improvements fall within the capacity of management to pay, they can only suggest that the criterion is the capacity to pay, and this is governed first and last by labour's willingness to do a fair day's work for the many benefits which are now available in return for services rendered.

As this report is written the Industry is under the orders of a Tribunal set up by Government in response to demands formulated by labour (or 'their leaders) which, if acceded to *in toto*, will increase the pit-head price of coal to Indian Industry by about 50 per cent.

The profit and loss account, after providing Rs. 26,270 (Rs. 22,607) for depreciation, writing back Rs. 11,071 (nil) over-provided previously against taxation and including the debit balance of Rs. 41,494 (credit of Rs. 3,437) brought forward from last half-year, shows a debit balance of Rs. 1,36,897 (debit of Rs. 43,876) which the directors propose to carry forward.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,15,000	Block ...	15,40,869
Reserves ...	14,30,111	Stock of coal	2,19,387
Liabilities ...	7,24,791	Stores ...	2,07,044
		Debts, deposits and advances ...	6,66,504
		Investments ...	64,105
		Cash ...	35,096
		Profit and loss account ...	1,36,897
	Rs. 28,69,902		Rs. 28,69,902

Borrea Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. F. W. Heilgers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1953.

As much as 72,733 tons of coal were raised and 75,298 tons were despatched during the half-year July-December, 1953, in comparison with 72,735 tons raised and 71,086 tons despatched during the previous half-year. Raisings at this colliery continue to be controlled by Government's Conservation plans. There is the seasonal increase in production costs owing to monsoon pumping.

The number of wagons available daily for coal loading in the Bengal-Bihar fields was 3,119. This is 16 wagons more than for the previous period.

In order to assist forward planning, the Coal Industry has informed the Planning Commission that in its opinion transport to the extent of an additional 2 million tons per year for the next 10 years will be required if the Industrial expansion programme is to be fulfilled. This programme will necessitate very early action by the authorities.

While the directors give their full support to reasonable improvement in the conditions under which labour works in so far as these improvements fall within the capacity of management to pay, they can only suggest that the criterion is the capacity to pay, and this is governed first and last by labour's willingness to do a fair day's work for the many benefits which are now available in return for services rendered. As this report is written the Industry is under the orders of a Tribunal set up by Government in response to demands formulated by labour (or their leaders) which, if acceded to *in toto*, will increase the pit-head price of coal to Indian Industry by about 50 per cent.

The profit and loss account, after providing Rs. 30,244 (Rs. 36,392) for depreciation, Rs. 1,37,839 (Rs. 99,248) for taxation, transferring Rs. 6,000 (Rs. 8,000) to tax contingency reserve, Rs. 29,423 (nil) to general reserve, Rs. 30,000 (Rs. 30,000) to development reserve, Rs. 15,000 (nil) to dividend equalisation reserve and including the sum of Rs. 1,06,183 (Rs. 1,07,078) brought forward from last half-year, shows an available balance of Rs. 2,10,952 (Rs. 2,13,084), which the directors propose to dispose of as follows:—

In paying a dividend on the preference shares at the rate of 6½ per cent. per annum without any deduction for income-tax paid by the Company Rs. 13,000 (Rs. 13,000), in paying a dividend on the ordinary shares at the rate of 20 (20) per cent. per annum without any deduction for income-tax paid by the Company Rs. 75,000 (Rs. 75,000), in paying a bonus of As. 4 (As. 4) per share on the ordinary shares without any deduction for income-tax paid by the Company Rs. 18,750 (Rs. 18,750) and in carrying forward Rs. 1,04,202 (Rs. 1,06,334).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	11,50,000	Block ...	16,55,516
Reserves ...	21,01,000	Capital expenditure-in-progress	2,24,701
Provision for taxation ...	1,72,756	Stock of coal	52,414
Liabilities	6,75,210	Stores ...	2,33,549
Profit and loss account ...	1,04,202	Debts, deposits and advances ...	12,82,140
		Investments	7,15,324
		Cash ...	39,524
	Rs. 42,03,168		Rs. 42,03,168

New Manbhoom Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel and Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th September, 1953.

The revenue account showed a loss of Rs. 45,544 (Rs. 80,869) as a result of the half-year's working and after debiting and crediting sundry items as detailed in the profit and loss account there was a gross loss for the half-year of Rs. 81,629 (Rs. 1,07,232). After adding the balance brought forward from the previous half-year and also Rs. 18,248 (Rs. 2,058) on account of sundry adjustments in respect of previous half-years, there is a debit on profit and loss account of Rs. 1,60,595 (debit of Rs. 7,595). This has been adjusted against a transfer of Rs. 1,70,000 (Rs. 3,00,000) from general reserve, leaving Rs. 9,405 (debit of Rs. 7,595) at credit of profit and loss account to be carried forward.

The raisings for the half-year, amounted to 59,771 tons, despatches being 50,377 tons. This compares with 62,429 tons and 68,079 tons respectively for the previous half-year and with 59,003 tons and 62,321 tons respectively for the corresponding half-year in 1952.

It was unfortunate that during the half-year, the coal raised from 16 and 16A seams was downgraded from grade I to grade II, the latter having a lower selling price and a more limited demand than the former. Despatches during September, were disrupted owing to the strike at the Works of the Indian Iron and Steel Co. Ltd., who are the main consumers of selected "B" grade coal.

The Coal Board restricted the colliery output which was pegged during 1953 to 1,56,000 tons. For the current year the output is restricted to 77,000 tons selected "B" coal and 50,000 tons grade II coal.

A considerable amount of development was done during the period and this should be reflected in increased raisings in the future.

It is also noteworthy to record that the fire area in 14 and 15 seams closed in 1936, has been recently re-opened and as a result of this considerable areas containing selected "B" coal are now available for working. The re-opening of these areas is a very creditable achievement on the part of the colliery management.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	12,83,965
Reserves ...	1,60,000	Stock of coal	3,17,095
Liabilities ...	14,84,939	Stores ...	2,64,774
Profit and loss account ...	9,405	Other assets	14,557
		Debts, deposits and advances ...	3,05,683
		Investments	36,932
		Cash ...	31,438
	Rs. 22,54,344		Rs. 22,54,344

Bridge & Roof Co., (India) Ltd.

The directors of the above Company (Managing Agents: Messrs. Balmer Lawrie & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st December, 1953.

The profit for the half-year after providing for debenture interest, depreciation and taxation, was Rs. 1,89,926 (Rs. 1,13,131) to which was added items relating to preceding half-years Rs. 34,608 (nil) and balance brought forward Rs. 91,681 (Rs. 91,200) making a total of Rs. 3,36,195 (Rs. 2,04,331). Out of the above sum, the directors have set aside Rs. 1,50,000 (Rs. 25,000) to general reserve. This left a balance of Rs. 1,86,195 (Rs. 1,79,331) at the credit of profit and loss account, which the directors dealt with as follows:

Paid a dividend at the rate of 15 (15) per cent. per annum Rs. 90,000 (Rs. 90,000) and carried forward the balance of Rs. 96,195 (Rs. 89,331).

In addition to normal structural steel and building work the Company is now engaged on an instructional order for railway wagons.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,00,000	Block ...	9,84,901
Debentures ...	2,00,000	Materials and stores ...	4,99,226
Reserves ...	12,30,000	Work-in-progress ...	23,66,325
Provision for taxation ...	7,29,700	Debts, deposits and advances ...	19,22,135
Liabilities ...	33,73,176	Investments	28,617
Profit and loss account ...	96,195	Cash ...	10,27,867
	Rs. 68,29,071		Rs. 68,29,071

Upper Jumna Valley Electricity Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September, 1953.

The following schedule, in respect of sale of electricity and revenue for the past three years, indicates that normal progress has been maintained during half-year under review.

Half-year Ended	*Units* Sold	*Revenue* Rs.
31st March, 1951 ...	3,185,992	6,39,499
30th September, 1951	3,339,707	6,53,129
31st March, 1952 ...	3,174,549	6,49,675
30th September, 1952	3,635,698	6,66,947
31st March, 1953 ...	3,537,022	6,96,433
30th September, 1953	3,659,582	6,96,992

After complying with the provisions of the Electricity (Supply) Act, 1948, and making adequate provision for liabilities, there remains a balance of Rs. 62,274 (Rs. 59,958) including Rs. 26,460 (Rs. 26,502) brought forward from the previous half-year available for distribution and this the directors recommend be disposed of as follows:—

Payment of a dividend at the rate of 10 (10) per cent. per annum free of income-tax Rs. 24,875 (Rs. 24,875), an additional payment of As. 2 (As. 2) per share free of income-tax Rs. 6,218 (Rs. 6,219) and in carrying forward to next half-year Rs. 31,181 (Rs. 28,864).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,98,750	Block ...	6,00,868
Reserves ...	4,42,237	Stores ...	3,79,462
Provision for taxation ...	1,23,736	Tools and instruments ...	8,956
Liabilities	15,50,343	Debts, deposits and advances ...	6,39,571
Profit and loss account ...	62,274	Investments	24,349
		Cash ...	10,24,134
	Rs. 26,77,340		Rs. 26,77,340

Godfrey Phillips, India, Ltd.

The directors of the above Company (Chairman and Managing Director: Mr. D. S. Barron, C.I.E., Bombay) submitted the audited accounts of the Company, for the year ended 31st December, 1953.

The Company made a net profit after provision for taxation, depreciation and all other charges, of Rs. 9,96,198, to which was added the balance brought forward from last year of Rs. 13,38,984. A sum of Rs. 57,537 was deducted for short provision for bonus in the year 1952, and Rs. 2,47,369 provision for taxation no longer required was added, making a total of Rs. 25,25,014. The directors transferred to rehabilitation and replacement reserve Rs. 1,00,000, and reserve for gratuities Rs. 60,000, leaving a balance of Rs. 23,65,014. Out of this sum the directors paid a dividend on the preference shares at 5½ per cent. per annum subject to tax Rs. 1,21,688, paid a dividend on the ordinary shares at 17½ per cent. per annum Rs. 7,00,000 and carried forward to next year a sum of Rs. 15,43,326.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	70,00,000	Block ...	36,07,768
Reserves ...	6,35,000	Goodwill ...	62,587
Provision for taxation ...	8,10,265	Stock-in-hand	99,73,543
Liabilities ...	61,11,061	Goods-in-transit	29,561
Profit and loss account ...	15,43,326	Debts and advances ...	23,40,157
		Cash ...	76,036
	Rs. 1,60,99,652		Rs. 1,60,99,652

United Flour Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th November, 1953.

The Company's profit for the half-year, after the inclusion of Rs. 6,922 (Rs. 35,699) brought forward and Rs. 3,565 reserve for taxation no longer required, was Rs. 25,591 (Rs. 57,687). Out of this sum the directors made payment of a dividend, free of income-tax, at the rate of 10 (25) per cent. per annum, absorbing Rs. 12,500 (Rs. 31,250) leaving to be carried forward Rs. 13,091 (Rs. 25,781).

In July, new arrangements were entered into with the Assam Government, and the better margin allowed under these arrangements, coupled with increased demand for atta in Assam enabled the Company to make a modest profit, in spite of the *fact that the mill was almost completely idle during* the first two months of the half-year, before the new system came into force.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,50,000	Block ...	3,24,265
Reserves ...	6,71,506	Stock ...	49,263
Liabilities ...	16,22,681	Stores ...	27,005
Profit and loss account ...	13,091	Debts, deposits and advances ...	3,28,848
		Investments	1,95,812
		Cash ...	16,32,085
	Rs. 25,57,278		Rs. 25,57,278

Aruna Mills Ltd.

The directors of the above Company (Agents: Messrs. P. M. Hutheesing and Sons, Ahmedabad) submitted the audited accounts of the Company for the year ended 31st December, 1953.

The profit for the year amounted to Rs. 6,53,531 (Rs. 1,02,765) to which was added last year's balance Rs. 1,761 (Rs. 5,872) making a total of Rs. 6,55,292 (Rs. 1,08,636). From this sum was deducted provision for taxation Rs. 3,00,000 (Rs. 30,000), transfer to reserve fund Rs. 30,539 (nil) and transfer to dividend equalisation fund Rs. 80,000 (Rs. 1,80,000) leaving an available balance of Rs. 2,44,753 (Rs. 2,38,636). The directors made payment of a dividend of Rs. 12 (Rs. 12) and a bonus of Rs. 8 (Rs. 8) per share income-tax free on 10,000 ordinary shares for the year ending 31st December, 1953 Rs. 2,00,000 (Rs. 2,00,000), made payment of a dividend on 10,000 5 per cent. cumulative preference shares for the year ending 31st December, 1953, (less income tax) Rs. 36,875 (Rs. 36,875) and carried forward to next year's account a sum of Rs. 7,878 (Rs. 1,761).

The directors trust that the result of the working of the mills will be found satisfactory.

The Company's properties have been insured against fire, excepting a certain risk, which is carried by the Company. The standing charges and profits have also been insured. The Mills have 42,768 spindles, 1,452 doubling spindles and 912 looms and complete dyeing and bleaching plants.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Block ...	89,83,424
Reserves ...	90,53,638	Stock-in-trade ...	61,67,748
Depreciation fund	65,39,067	Stores ...	9,25,825
Provision for taxation	3,09,076	Other assets	1,28,318
Liabilities ...	32,20,501	Debts, deposits and advances ...	41,73,673
Profit and loss account ...	2,44,753	Investments	8,53,383
		Cash ...	3,34,664
	Rs. 2,13,67,035		Rs. 2,13,67,035

N.B.—Figures within brackets relate to the corresponding period of the previous year.

Notices

THE HOOGHLY FLOUR MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Eighty-sixth Ordinary General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, at 4 p.m. on Wednesday the 9th June, 1954, for the following purposes:—

(1) To receive the Directors' Report and the Audited Accounts for the half-year ended 31st December, 1953.

(2) To declare a Dividend.

(3) To elect a Director.

The Transfer Register will be closed from the 2nd to the 9th June, 1954, both days inclusive.

By Order of the Board,
SHAW WALLACE & COMPANY, LIMITED,
Managing Agents.

CALCUTTA, *3rd May*, 1954.

NEW INDIA INVESTMENT CORPORATION, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Seventeenth Ordinary General Meeting of the Shareholders of New India Investment Corporation Ltd. will be held at the Registered Office of the Company at 9, Brabourne Road, Calcutta, at 4 p.m. on Thursday the 10th June, 1954, for the purpose of receiving the Directors' Report, passing the Audited Accounts for the year ended 31st December, 1953, declaring dividends recommended by the Directors, electing Directors, appointing Auditors and for transacting any other ordinary business of the Company.

The Share Transfer Register of the Company will be closed from 1st June to 10th June, 1954, both days inclusive.

By Order of the Board,
RAMDUTT RAMKISSENDASS,
Secretaries.

9, BRABOURNE ROAD,
CALCUTTA, 13*th May*, 1954.

THE NEW INDIA ASSURANCE COMPANY, LIMITED

BOMBAY

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the Company will be closed from 29th May to 25th June, 1954, both days inclusive.

By Order of the Board,
B. K. SHAH,
General Manager.

BOMBAY, 17*th May*, 1954.

NEW PUBLICATIONS

Demographic Yearbook 1953: Published by U. N. Department of Economic Affairs: Price: $ 5·00.

THE population of the world in the middle of 1952 is estimated to have numbered around 2,469 million, an increase of approximately 30 million since the corresponding estimate for 1951, according to the 1953 edition of the *Demographic Yearbook* published by the U.N. Statistical Office. This estimated increase, according to the *Yearbook*, indicates an annual rate of increase between one and one and a half per cent. If this rate of increase should continue, it would take less than 70 years for the world to double its present population.

Population trends are one of the features of the fifth edition of the *Yearbook*, which contains 280 pages of statistical tables giving basic demographic data for most countries of the world. Other features include trends in births, stillbirths, deaths, marriages and divorces, and a new compilation of data showing the increase in expectation of life that has taken place since the turn of the century. According to the *Yearbook*, the trend towards higher birth rates in the early reproductive years among women seems to continue in areas where such data are available, while there is a notable, in some instances quite steep, decline among women in the middle and later part of the child-bearing ages. Although the post-war rise in fertility has levelled off in most areas, birth rates are still in excess of those prevailing before World War II.

In a large majority of countries the trend towards lower death rates continued, according to the *Yearbook*. This is especially noticeable as far as infantile mortality is concerned. Here countries already having a very low rate continued to reduce the losses occurring during the first year of life. The differences between countries with a relatively high proportion of the population in the older ages as against countries with a young population is perhaps most strikingly demonstrated by the table listing causes of death, the *Yearbook* reveals. In the former, the large share in the death toll taken by cancer and heart disease is especially notable. Also, the continuous downward trend of deaths caused by tuberculosis is remarkable throughout the large majority of countries listed.

According to the *Yearbook*, the highest life expectancy at birth shown is for white women in the United States during 1950: a life expectancy of 72.4 years. The highest figure shown for men is 69.4 years for the Netherlands during the period 1947-48. The improvement in longevity that has taken place in most parts of the world since the turn of the century is well exemplified by Austria, where the expected life span of a newborn girl baby increased from 41 years in 1901 to 67 years in 1951, a gain of 26 years. This increase in longevity has been caused primarily by a sharp reduction of infantile and childhood mortality, but all ages have benefited from the general improvement in health that has taken place in recent decades, the *Yearbook* notes.

Besides its statistical tables, the *Yearbook* contains an introductory chapter of technical notes in English and in French and an extensive bibliography of 75 pages giving references to the most recent published census returns, sources of periodic and other demographic statistics since 1920 and life tables since 1900 for all countries in the world where such material is being published.

(*Concluded from page 986*)

in the U.S. and the improvement in its Canadian operations. Considering that the trend of motor profits of insurers the world over has been downward in recent years, it is gratifying to hear that the Corporation's motor business, the largest of the Corporation's different accounts, has provided a "reasonable amount of profit."

For the year 1953 the Corporation's own underwriting profit was, as already stated, £915,828 which, together with its share of profit from its subsidiary company (£55,816) and income from interest and dividends (£849,851), made in all £1,821,495. From this amount, the Directors have transferred £320,000 to staff pension fund, while sundry expenses absorb £43,386. The trading profit thus amounts to £1,458,109. Taxation absorbs £885,891, leaving a net profit of £572,218. This net profit, together with £750,667 brought forward from the previous year, gives a total of £1,322,885. Out of this, the Directors have transferred £250,000 to the general reserve. The payment of the dividend of 4½ per share (less income-tax) absorbs £1,90,463, leaving a sum of £882,422 to be carried forward to the current year's accounts.

In view of the global nature of the Corporation's activities, the Directors have decided to reorganise its capital structure in order to enable it to "continue even more actively its policy of world-wide development." The Corporation's issued capital now consists of 1,539,090 shares of £1 each, but as only 5s. per share are paid-up, the paid-up capital is £384,772. The Directors propose to capitalise £1,154,318 from the general reserve in order to make the shares fully paid up. They are also proposing to invite subscriptions for an issue of fresh capital. By these changes, the total issued share capital will be raised to a total of £2 million. This capital, together with the general reserve and carry forward, will give an impressive total of over £7.5 million as the owned resources of the Corporation.

QUESTION HOUR IN PARLIAMENT

Gold Haul

THE Bombay Customs authorities seized during 1953 10,323 tolas and 140 grains of gold valued at Rs. 8,86,252.

Foreign Exchange Facilities

Foreign exchange equivalent of about Rs. 1.28 crores was made available during the period April, 1953 to February, 1954, to students who had gone abroad for studies. Figures for March, 1954, are not yet available.

Statistics of Overseas Trade

It is the intention of the Government of India that collection of statistics relating to overseas trade should be done by official agencies only as far as possible. Such collection is being done by the Custom Houses at all major ports except Bombay, where the Bombay Chamber of Commerce has been doing it for a number of years. The question of taking over of this work by the Custom House is under consideration.

Loans to Co-operative Banks

Abstention from trading activities has not been made a condition precedent to the grant of any loan to State Co-operative Banks by the Reserve Bank of India. It is, however, the policy of the Reserve Bank to discourage State Co-operative Banks and Central Co-operative Banks from undertaking trading activities along with their banking activities as the combination of trading and banking is fraught with danger.

—*Deputy Minister for Finance*

Textile Research

The Bombay Millowners' Association has proposed the establishment of a textile research institute in Bombay. The proposal has been approved by the Cotton Textile Fund Committee. The details of the scheme are being worked out. The Bombay millowners have agreed to collect a sum of Rs. 50 lakhs for the purpose, but as regards Government's contribution, the matter has not yet been decided. It is still under consideration of the Cotton Textile Fund Committee.

State Trading in Handloom Cloth Exports

A proposal is under the consideration of the Government to establish a State Trading Corporation to undertake the export of handloom cloth and certain selected small-scale and cottage industry products. For the first time an attempt at State trading is being made. It is too early to say when the matter will be finalised. This matter is taken up as a result of the recommendations of the State Trading Committee. The State Governments have given their views and these are being processed here.

Tin Agreement

India will shortly be signing the International Tin Agreement. The Agreement is worked out at the U.N. Tin Conference. As for the other participating countries, the Government has been informed that the U.S. will not be a signatory to the agreement. The Government has no information whether the other participating countries have signed the agreement or not. The floor and ceiling prices have been fixed at £380 and £640 per ton, respectively, and the buffer stock will so operate that the prices will not fluctuate beyond this range.

Markets for Tobocco

Representations have been received by the Government urging upon them to send a deputation abroad and the Government is considering the question. The question of expenses, composition of the delegation and the places it should visit have not yet been definitely fixed. The Government has reason to believe that a delegation might be sent to Eastern Asia, Japan and China. It will be a composite delegation consisting of officials and non-officials. The Government is trying to develop export markets for Indian tobacco and the sending of a delegation was one of the measures through which the Government wants to promote exports. Regarding European markets, reports have been called for from Indian Trade Commissions which are still awaited.

—*Minister for Commerce*

Prohibition

The Planning Commission is arranging a study of certain aspects of the programme of prohibition. At a later stage in the study, the appointment of a committee would be considered.

—*Deputy Minister for Irrigation and Power*

Own-Your-Own-Wagon Scheme

The Own-Your-Own Wagon scheme has been dropped after the feasility of implementing the scheme had been considered.

British Technicians

Eleven British technicians have joined the Chittaranjan Locomotive Works under the Technical Co-operation Scheme of the Colombo Plan. The technicians have been appointed for one year, but the appointment may be extended to two years. The British Government bears the full cost of the technicians' salaries and allowances and passage to and from India, while the Government of India provides them with free furnished accommodation and free travel facilities within this country.

Visakhapatnam-Bimlipatam Line

The proposal to construct a railway line between Visakhapatnam and Bimlipatam will be considered for inclusion in the projects to be undertaken in the second Five-year Plan.

Payment of Municipal Taxes

The railway administration has been paying whatever taxes they have been liable to pay before 26th January, 1950, at the rates in force before that date. Taxes demanded by municipalities in respect of new properties or at higher rates in respect of old properties are not being paid in the absence of permissive legislation as required by the Constitution. The Government has since devised a formula on the basis of which taxes to various municipalities should be paid. The issue of necessary orders is now under the consideration of the Finance Ministry in consultation with other Ministries concerned.

Transport of Cement and Coal

The movement of coal during March and April this year, taken together, was slightly in excess of the quota fixed for the two months. But in the case of cement the movement was less than the quota mainly due to transport conditions on the rivers having adversely affected the ferry capacity.

—*Deputy Minister for Railways and Transport*

Bombay-Singapore Air Service

It is proposed, after the receipt of Constellations by Air-India International to start a Bombay-Colombo-Singapore air service and a Bombay-Calcutta-Hongkong-Manila-Tokyo service.

—*Deputy Minister for Communications*

Oil Prospecting in Bengal

Proposals have been received from the Caltex and the Burma Oil Companies in regard to the rights for oil prospecting in the Bengal Basin. The Assam Oil Company has also sent proposals. Another oil company's proposals have been received. These proposals are under consideration of a negotiating committee appointed by the Government. Aeromagnetic survey has been completed. Seismic and other surveys will be carried out by the company with which agreement is reached.

—*Deputy Minister of Natural Resources and Scientific Research*

Ceiling on Land Holdings

The Central Agricultural Ministry has issued a circular to the State Governments cautioning them against fixation of ceilings on land holdings at too low a figure, so as not to reduce an individual to a status which, the Government thinks, will not give him a living wage.

—*Minister for Agriculture*

Pakistan's Debt to India

It is proposed to resume, as early as circumstances permit, the negotiations that the Finance Minister had been having with the Finance Minister of Pakistan on the question of payment of debt to India by Pakistan and other financial issues outstanding between the two countries. The exact amount of Pakistan's Partition debt to India has not yet been determined. This debt is repayable in 50 annual equated instalments of principal and interest beginning on 15th August, 1952. No payment so far. Apart from the drawing down of its rupee balance with India by Pakistan, there is no transaction or commitment of financial nature between the two countries during the last two years.

—*Finance Minister*

Tungabhadra Project

Construction equipment worth about Rs. 21 lakhs has been received from abroad for the Tungabhadra Project up to 31st March, 1954. The sale proceeds of the Australian wheat gift were given to the Hyderabad Government as a loan to the earthmoving machinery, which the Australian Government has agreed to make available for the Project, will be about £A900,000 and this also will be treated as loan to the Hyderabad Government.

—*Finance Minister*

Hindustan Machine Tools Factory

The Hindustan Machine Tools Factory, Bangalore, is expected to go into initial production by July this year. As regards the recruitment of technical staff for the factory it is understood right from the beginning that certain amount of top technicians have to be recruited from abroad. The agreement envisages that every effort to train Indian personnel should be made, so that within a period of ten years from the start, there will be sufficient number of Indians available to hold not less than 85 per cent. of the posts.

—*Minister for Production*

GILT-EDGED STEADY

(From Our Own Correspondent)

BOMBAY, *19th May*

There was no perceptible change in the complexion of the short-term money market during the week under review from that noted in the earlier weeks. Though there was some return of funds during the week, such was not enough to relax the stringency, in view of the diversion of funds to the National Plan Loan, which remained on tap throughout the week. There was, however, an air of confidence that there would be fresh flow of funds in the coming weeks, thanks to the reduction of the Bank rate in the U.K. from 3½ per cent. to 3 per cent. on Thursday last.

So far interest rates, however, have remained unchanged. Inter-bank money continued to be bid at 3 per cent. among all sections of banks, though on Saturday and today some deals were reported at 2½ per cent. House money was also placed at 3 per cent. Short-term deposits were wanted at 3 per cent. for one to three months and at 2½ per cent. for four to six months.

A contraction of Rs. 4.92 crores in notes in circulation is disclosed by the statement of affairs of the Reserve Bank of India for the week ended 14th May, 1954, in contrast to the rise of Rs. 16.56 crores noted in the previous week. Notes held in the Banking Department are, on the other hand, up by Rs. 4.62 crores. The consequential decline in total notes issued is covered by a fall in rupee coin. In the Banking Department, deposits of the Central Government show an increase of Rs. 4.36 crores, while those of other Governments have fallen by Rs. 30 lakhs. A rise of Rs. 3.54 crores is noted in deposits of banks. On the assets side, cash balances and balances held abroad have both gone up by Rs. 4.68 crores and Rs. 2.13 crores, respectively. Ways and means advances to Governments are higher by Rs. 86 lakhs. The total amount of advances availed of by Scheduled banks against usance bills since 1st January, 1953 is Rs. 84.07 crores, which is more than double that of Rs. 40.09 crores in the corresponding period of last year. It has even exceeded the total amount availed of during the whole of 1953, namely, Rs. 65.84 crores, by about Rs. 18 crores. Investments reveal a rise of Rs. 2.92 crores.

The Scheduled banks statement for the week ended 7th May, 1954, reveals a further fall of Rs. 7.62 crores in demand deposits, following the decline of Rs. 9.32 crores noted in the previous week. Time deposits have, however, risen by Rs. 46 lakhs. Inter-bank borrowings repayable on demand are lower by Rs. 95 lakhs, while those of a time nature are up by Rs. 21 lakhs. There has been a sharp increase of Rs. 10.06 crores in borrowings from the Reserve Bank and of Rs. 2.57 crores in those from the Imperial Bank. Advances disclose an increase of Rs. 4.09 crores, but there has been no worthwhile change in bills purchased and discounted. Investments are better by Rs. 40 lakhs. Total cash balances are down by Rs. 99 lakhs, balances with other banks by Rs. 14 lakhs and money at call and short notice by Rs. 1.34 crores.

After four weeks of successive recession in prices, the Gilt-edged market presented a steady tone. Though there was no expansion in activity, a change in sentiment was noted, following the reduction in the British Bank rate. It was widely felt here that the Reserve Bank would not follow suit, but a section of operators in Calcutta seemed to think otherwise. There was, therefore, consistent enquiries for the 3 per cent. 1986 Conversion Loan from that centre. This led to an improvement in the undertone of the market. 3 per cent. 1957 improved by As. 2 to Rs. 98. 3 per cent. 1958 which had declined early in the week from Rs. 97-15 to Rs. 97-13, remained unchanged during the rest of the week. Likewise, 3 per cent. 1959-61, after dropping an anna to Rs. 96-1, stood at that level. 3 per cent. 1963-65, and 3 per cent. 1964, reacted from Rs. 92-11 to Rs. 92-10, but revived to close at Rs. 92-11. 3 per cent. 1966-68 was well maintained at Rs 90, as also 3 per cent. 1970-75 at Rs. 96. 3 per cent. 1986 Conversion Loan picked up As. 4 to Rs. 81-12. 3½ per cent. 1961 National Plan Bond gained an anna to Rs. 98-13.

In the foreign exchange section, the rupee-U.S. dollar exchange rate stood unchanged at Rs. 475 per 100 (banks' selling) and Rs. 471¾ (banks' buying). In New York, there was again a slight hardening of the sterling in terms of the dollar. The spot sterling improved from $2.81¾—2.81¾ to $2.81¼—2.82 per £, but closed yesterday a shade lower at $2.81-13/16—2.81-15/16. The forward sterling (three months) gained strength from $2.81¼—2.81⅜ to $2.81-11/16—2.81-13/16. The transferable sterling, however, relapsed from $2.79—2.79½ to $2.78½—2.78⅝.

LINSEED DECLINES

(Messrs. A. Bradley & Co.)

CALCUTTA, *17th May*

Prices have reacted to lower levels during the past week; trading has been on a very small scale and generally easier conditions have prevailed. Arrivals at this centre are better and there have been keener sellers for forward deliveries. The local offtake has been small, owing to a very poor local demand and sellers have been interested mainly in covering against previous sales. In the oil section, a general dullness prevails, largely owing to lack of buying support. There are still no fresh enquiries from overseas.

The latest quotations are as follows: Ready Rs. 18-8 and June-July Rs. 19 per maund.

BULLION WEAK

(From Our Own Correspondent)

BOMBAY, *19th May*

The forward section of the bullion market ruled weak during the week under review, the sentiment having been affected adversely by persistent bear hammering in both silver as well as gold. Over the week, forward silver disclosed a drop of Rs. 2-12 per 100 tolas and forward gold Re. 1-5 per tola. The heavy liquidation in spite of the steady demand for both metals, is attributed to expectation by leading Calcutta operators of a fall in demand for the metal in the coming weeks. The ready position, however remained strong, as witness the premium of As. 12 commanded by silver and of Rs. 2-10 by gold at the close. However, the bulls could not take advantage of the statistical position and resist the onslaught of the bears.

The trading on the Bullion Exchange during the week thus offered an interesting spectacle. It will be interesting to note here that, only four weeks ago, when the floating stocks of silver in Bombay amounted to 1,700 bars, forward silver stood at a high of Rs. 173-13, while now when the floating stocks are less than 1,000 bars, it has been brought down to a low of Rs. 161-10, a drop of over Rs. 12 in four weeks. Similarly, forward gold is standing today at a low level of Rs. 87-15, when the floating stocks of the yellow metal are 10,000 tolas, as against Rs. 98-1 on 10th April last when the stocks were 15,000 tolas. One leading bullion merchant attributed this trend to two factors, namely, (1) the rules of the Bullion Association are very rigid for the bull operators to corner the stocks and squeeze the market and (2) the sales tax payable on bullion is heavy. Be that as it may, the bear operators seemed to be sure of their grounds and hammered down prices, even at the cost of having had to pay as heavy a carry forward charge as Rs. 2-2 in gold. In silver, they succeeded in outwitting the bulls by exacting a carry forward of As. 2 in their favour today, as against As. 15 they had to pay a week ago.

Forward silver (19th May settlement) opened the week at Rs. 165-3 and moved down to a low of Rs. 164-8 on Friday. After a short-lived revival to Rs. 168-4 on Saturday, it relapsed to Rs. 161-10 yesterday. It, however, closed higher today at Rs. 162-12, at which rate the settlement ran out. Business in the next settlement opened at Rs. 164-6. After touching a low of Rs. 161-10, this settlement wound up the week at Rs. 162-14. As the closing rate for the first settlement stood yesterday at Rs. 162-8, that is more than Rs. 5 below the previous clearing rate, a special clearing was ordered.

Ready silver (.996 mint) opened at Rs. 166-3 and the closing was done at Rs. 163-8. The floating stocks of silver are placed at 800 to 900 bars. The daily average offtake was estimated at 25 bars.

Opening at Rs. 90-8, gold for forward delivery (18th May settlement) reacted to close at Rs. 89-13 yesterday when the settlement ran out. Business for next settlement (17th May) began the week at Rs. 89-6, but at the close today it was done at no higher than Rs. 88-7, after having touched a low of Rs. 87-12 yesterday.

Opening and closing rates for ready gold were Rs. 92-4 and Rs. 91-1, respectively. The floating stocks of gold are reported to be 10,000 tolas. The daily average arrivals were 3,500 tolas, while the offtake was 4,000 tolas on an average.

In London, there was a notable decline in silver prices during the week spot silver dropping from 73¼d. to 72¼d. yesterday and forward silver from 73d. to 72¼d. Gold prices also suffered a setback from £12 9s. to £12 8s. 11d. after having touched £12 9s. 1d. early in the week.

The following comparative table shows the trend of the market during the week under review:

	19-5-54	Highest	Lowest	12-5-54
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	91 1	92 7	89 15	93 8
Forward	88 7	90 15	87 12	91 0
Sovereign	60 8	61 0	60 8	60 12

New York Ready	—	—	—	88½c.

METALS RULE FIRM

(From Our Own Correspondent)

CALCUTTA, *18th May*

Although consumers were interested in buying their day-to-day requirements only, prices were firm at lower levels. Better advices from New York were reflected in the local quotation for electrolytic copper which improved from Rs. 182 to Rs. 188. Supplies of scrap will be needed to do away with an expected shortage of fire-refined copper which the Government has bought in a moderate quantity. Copper sheets were quoted firm, in view of the difficulty in locating supplies, while brass sheets were a shade easy on account of fresh arrivals. On reports of shortage of mercury in overseas markets, the local quotation improved from Rs. 865 to Rs. 870 a flask. As it stands, a further rise is expected. Tin was featureless, and lack of demand made the rate fall from Rs. 480 to Rs. 478. Electrolytic zinc was As. 8 lower at Rs. 57. The decline was due to selling by weak holders. On the other hand, virgin lead firmed up from Rs. 66-8 to Rs. 67-8 due to the tightness in the ready position, consequent upon the satisfaction of Government's demand for a moderate quantity.

COTTON EASY

(From Our Own Correspondent)

BOMBAY, *19th May*

The most important event in the cotton world was the opening of the Liverpool Cotton Futures Exchange yesterday in the U.K. after 13 years. In the old, pre-war days, Bombay, New York and Liverpool was the constantly active triangle for straddle trading in cotton. Since then, many regulations not only with regard to the trade, imports, exports and cultivation of cotton, but even regarding exchange and export duties, subsidies, etc., have rendered forward trading on an international basis a very difficult, if not an altogether impossible, proposition.

It is to be seen how far forward trading in cotton at Liverpool will succeed in a world which is constantly in flux. Very wisely, the Liverpool Exchange authorities have decided to confine trading to the single basis of Middling 15/16" U.S. cotton to be quoted in pence per pound, with a trading unit of 100 bales. Before the war, three main grades for trading had been recognised, two American and one Egyptian, even though the spot trade today has extended to various other growths from many climes. Today, in a country like the U.K., not producing any cotton, it would be very hazardous to base forward trading on any other basis, because the other varieties lack absolute stability and often do not reflect world price because of State intervention. There is, however, a possibility of adding a new basis for forward trading at Liverpool in the form of some Egyptian variety after some negotiations with the representatives of the Alexandria cotton market, who are to go to U.K. next week.

There will be four delivery periods at Liverpool. Amongst the restrictions on day-to-day trading would be the maximum limit of 100 points above or below the previous close in any one day and also a maximum limit of 100 points between the highest and the lowest point in the quotations touched during any day. The inauguration ceremony by the Earl of Derby, though simple, created good enthusiasm at the end of Government control over the cotton trade which had come as an emergency war-time measure. It coincided with the jubilee celebrations of the Congress of International Cotton Spinners and Manufacturers' Associations where representatives from 14 countries are participating at present at Buxton and the presence of these additional guests at the opening ceremony made it more representative than it would have been otherwise.

At home, after an uncertain behaviour during a greater part of the week under review and conditions of some easiness there was a feeling of steadiness growing in forward trading at Kalbadevi. The current week opened on a weak basis but a good deal of strength was lent to it as a result of disinclination on the part of stockholders to hedge their cotton. But before this feeling had a chance to stabilise itself, there was a sudden onrush of selling, possibly because of the continued slump in the other commodity markets, which are passing through a period of bearishness. The Stock Exchange also has not got over its jitters. There is still about a week left for adjusting outstanding positions in the May contract and this factor will prevent operations in the August contract from being completely normal. After all, the May positions have been liquidated, the market is likely to pass more under the influence of the spot market at Sewri. Last Monday, only 900 bales were tendered for delivery and this led to some short-covering in the May position bringing down the difference in favour of August from Rs. 19 to Rs. 17.

In the spot market also, there was a lull in the enquiries during the week under review, though premia rates were well maintained. Reports from the cloth market were not very encouraging and the speeches by chairmen at the annual meetings of some textile mills gave rather a gloomy picture of the future of the cotton industry. On the whole, however, interest in Indian cotton by the mills is likely to remain well sustained and if the pressure from the mills and the textile trade on the Government to reduce export duties or coarse cloth succeeds in winning some concession, the demand for Indian cotton by those mills, which have still some quotas left unfilled, is likely to go up. In any case, there is little for holders of quality cotton in the spot market to worry about, because even if there be stagnation in the coming weeks, there is bound to be a sizable demand later. In the import section, while Sudans still continue to be completely ignored, there was a slight revival of enquiries for Egyptian small lots. Main interest, as usual, however, was centred on East African and Californian cotton.

Perhaps the Government has been lethargic in its response to the request from the trade to allow imports of cotton from dollar areas on their own account. Had this response come earlier, importers would have arranged for supplies from the U.S. when the prices were more attractive there and the object of the Government to build up stocks in the country as an insurance against a poor monsoon might have been served better. There is little enthusiasm at present on the part of the spot trade to make large purchases in the U.S., especially because prices there might fall suddenly, if the Administration decides to boost exports of new season's cotton by way of subsidies.

I.C.C. May opened the week at Rs. 672½ and moved up, on speculative support, to Rs. 679 on 15th inst. But reports of slackness in cloth offtake soon led to liquidation at higher levels. The contract declined, to touch a low of Rs. 665½ today. I.C.C. August opened at Rs. 691 and fluctuated between Rs. 695 and Rs. 683½. The following is the trend of prices in the local forward market during the week under review:

	Opening	High	Low	Closing
I.C.C. May (Rs.) ...	672½	679	665½	665½
I.C.C. Aug. (Rs.) ...	691	695	683½	683½

Latest available quotations from the spot market are: Bengal Deshi Rs. 620; Berar Jarilla Rs. 820; Khandesh Rs. 840; Vijay Rs. 910; Oomra Deshi Rs. 740; Moglai Rs. 725.

At Karachi, while there has been a decline in the prices of *Deshi* varieties, the staple American seed varieties have all registered a good rise, as a result of some enquiries from the Continent. Apart from this there has been no further development of note during the week under review so far as cotton is concerned in Pakistan.

Latest available quotations from Karachi are: Sind *Deshi* Rs. 73¼; Punjab *Deshi* Rs. 70¼; 4F Punjab R.G. Rs. 70; S.G. Rs. 74; L.S.S. Punjab R.G. Rs. 73¼; S.G. Rs. 77¼; N.T.R.G. Rs. 74; S.G. Rs. 78¼; 289 F. Punjab R.G. Rs. 76¼; S.G. Rs. 81.

At Alexandria though India's interest has practically vanished in view of the present high prices, the export trade is doing well and some export business with the Continent has taken place during the week. There has also been some interest in the new crop Karnak but, transactions are few and far between. Sudan is holding an auction this week and it is expected that about 27,000 bales will be offered.

At New York, it has been a week of small and in some ways irregular fluctuations. The undercurrent, however, has been steady and internal industrial demand for new crop is gathering strength. Export demand, however, is slack and bound to remain so, till the question with regard to the subsidy for the new crop is finally settled one way or the other by the authorities.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	18-5-54	11-5-54	4-5-54
Spot	35.40	35.15	35.35
July	34.44	34.51	34.42
October	34.26	34.22	33.87
December	34.26	34.23	33.82
March	34.39	—	—

CASTORSEEDS WEAK

(From Our Own Correspondent)

BOMBAY, 19*th May*

Those who had expected free export policy for castor oil were disappointed by the official announcement on the 15th inst. to allot further export quotas for the period ending 31st July, 1954, to established shippers for quantities equal only to one fourth of the total shipments effected by them during the calendar year 1953. Besides, there was virtually very little demand from overseas countries for castor oil. As a result, there ensued selling pressure and prices naturally slumped. Even the groundnut section witnessed an easy trend, on reports of increased arrivals in the leading South Indian market centres. There was lack of demand from *vanaspati* interests. The linseed, *kardi* and *niger* seed sections proved no exceptions.

Liquidation by bulls and continued hammering by bears depressed the prices of castor futures. Castorseed May delivery eased from Rs. 121 to Rs. 113-12, the lowest touched in the week. September delivery which opened at Rs. 125-6, as against Rs. 126, fluctuated between Rs. 126-2 and Rs. 118-8; it closed the week at the latter level. F.A.Q. lost As. 14 to Rs. 23-2 and Madras quality Re. 1-4 to Rs. 23-4. Castor oil First Pressure was lower by As. 8 at Rs. 12-2. *Commercials too* were lower by a similar amount at Rs. 11-10. Despite the reduction of export duty on castor oil and the announcement of export quotas, the much advertised business from the U.S. has not materialised.

The groundnut section was devoid of interest. Bold F.A.Q. fell from Rs. 36 to Rs. 34-4. April-May and June-July deliveries were done lower at Rs. 34 and Rs. 33-8, respectively, as against Rs. 35-8 each. Khandesh quality eased from Rs. 36-14 to Rs. 35. Groundnut oil ex-mill was down by As. 8 at Rs. 17-8 and June delivery by As. 11 at Rs. 17-8.

The linseed section was also easy. Bold steady disclosed a loss of As. 12 at Rs. 26-12. April-May and June-July eased from Rs. 26-12 and Rs. 26-6 to Rs. 26 and Rs. 25-8, respectively. Linseed oil was lower by As. 4 at Rs. 14-12.

Among others, *kardi* Bold sustained a loss of Re. 1-10 to Rs. 18 and June-July of As. 12 to Rs. 18-4. Niger F.A.Q. fell from Rs. 28-12 to Rs. 28. Ready Madras quality was lower by As. 8 to Rs. 28.

The following table shows the prices of oilseeds and oil on the 19th inst. as compared with those at the end of the previous two weeks:

	19-5-54	12-5-54	5-5-54
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—			
Khandesh Quality Bold Ready (per cwt.)	35 0	35 14	37 4

Ex-mill Ready (per quarter) ..	17 8	18 0	18 6
Castor Oil—			
Commercial (per quarter) ..	11 10	12 2	11 11

SHARP FALL IN STAPLE FIBRE

(From Our Own Correspondent)

BOMBAY, 19*th May*

A feature of the yarn market during the week under review was the sharp decline in the prices of staple fibres. This was due to the hammering by bears on continued absence of demand from weavers and the consequent decline in despatches of yarn to Surat, Khandesh and Punjab. It is also attributed to a tendency on the part of weavers in the Punjab (I) to switch over from 40/2 staple fibre yarn to 20s and 30s yarn of the same quality. Curiously enough, the fall in demand in staple fibre yarn has coincided with upward trend in its production. The imports of staple fibre or fibro from which staple fibre yarn is manufactured have increased considerably during the last four months; this has led to accumulation of stocks with the dealers. Small wonder, therefore, that prices slumped heavily.

Staple fibre 40 x 2 May contract declined from Rs. 658 to Rs. 620. June contract was transacted at a low of Rs. 624, as against Rs. 659. In the ready section, City was lower by As. 2 at Rs. 3-6. Phœnix and Hirji were each down by As. 1-6 at Rs. 3-2-9 and Rs. 3-3, respectively. Centurys declined by As. 1-3 to Rs. 3-3-9. Among foreign yarns, Suicos and Shincos lost an anna each to Rs. 3-13.

Among art silk yarns, the futures which opened firm tended to look down presumably in sympathy with staple fibres, while ready showed minor fluctuations. Scarcity of goods and heavy purchases by one or two prominent operators, as also the general eagerness on the part of the operators to take delivery of goods by the end of the month, were factors which served to arrest a slump in art silk yarns. 150D May which opened at Rs. 776, as against Rs. 770, declined to Rs. 766 on the 17th inst. Thereafter, it recovered to Rs. 770 before declining again to close at Rs. 768. 150D June was lower by Rs. 9 at Rs. 758, the highest and the lowest touched during the week were Rs. 773 and Rs. 756, respectively. In the ready section, 120 Japan was unchanged at Rs. 4-11, while 150 Japan put on As. 1-6 to Rs. 4-13-6. 150 Italy was higher by an anna at Rs. 3-14-6 and 120 Italy by half an anna at Rs. 3-15-6.

Cotton yarns presented an easy trend on the announcement by the Government of India that it would not grant any quotas for export of the yarn during the first half of 1954. There were also reports of restricted offtake from consuming centres. General weakness in raw cotton also contributed to the easiness in cotton yarns. Among 80s, Finlays disclosed a loss of As. 12 at Rs. 63-12, while Elphinstones put on As. 4 to Rs. 60-8. Sri Rams were unchanged at Rs. 61 and Seksarias at Rs. 56-4. Among 60s, Finlays lost As. 12 to Rs. 56-4 and City As. 6 to Rs. 48-12. Raghuvamshi was down by As. 2 at Rs. 52-4 and Sri Rams by As. 4 at Rs. 56. Among 40s Meenakshis gained As. 8 to Rs. 29-4, Maduras As. 6 to Rs. 29-8 and Seksarias As. 2 to Rs. 27-4. Among 30s, Maduras eased from Rs. 25-4 to Rs. 25, while Girdhardas were unchanged at Rs. 23-2. Among 20s, Edwards put on As. 2 to Rs. 17 and Hind an anna to Rs. 17-8. But Maduras lost an anna to Rs. 16-13. Among 10s, Moderns, Podars and Elphinstones were unchanged at Rs. 13-6, Rs. 13-14-6 and Rs. 12-12, respectively.

The table below gives the prices of art silk, staple fibre and cotton yarns quoted today, as compared with those seven days before:

	19-5-1954	12-5-1954
	Rs. a.	Rs. a.
Art silk yarn—		
150 May (per case of 200 lbs.)	768 0	770 0
150 June	758 0	767 0
120 Japan (per lb.)	4 11	4 11
150 Japan (per lb.)	4 13½	4 12
9/120 Italy (per lb.)	3 15½	3 15
150 Italy (per lb.)	3 14½	3 13½
Staple fibre yarn—		
40 x 2 May (per case of 200 lbs.) ..	620	656 0
40 x 2 June	624	659 0
Suicos (per lb.)	3 13	3 14
New Great (per lb.)	3 6	3 7
Cotton yarn (per bundle of 10 lbs.)—		
10s Moders	13 6	13 6
20s Seksaria	16 13	16 14
30s Madura	25 0	25 4
40s Meenakshi	29 4	30 12
40s City	48 12	49 8
80s Finlay	63 12	64 8

SUGAR PRICES DECLINE

(From Our Own Correspondent)

BOMBAY, 19*th May*

The most significant development during the week under review was the nomination by the Central Ministry of Food of two established spot houses to distribute indigenous sugar to retailers and consumers in this city at almost half the margin allowed to the two trading bodies in the City. There has been extremely bitter opposition to this arrangement from the two trading bodies, because their members would now be hardly able to make both ends meet on the aggregate allocation of 50,000 bags to them. It is understood that protests have been lodged with the Food Ministry against this decision.

The following were the reasons why the Food Ministry took this speedy decision.

(1) In spite of the allocation of 50,000 bags to the two trade bodies about four weeks ago, less than 50 per cent. of sugar had actually been despatched and the prices had continued to rule high in the City and the neighbouring countries.

(2) There was an urgent need to bring the sugar promptly from the factory sites to the City, in order to check the rising spiral of prices which was having a demoralising effect on everybody. The Government was convinced that the nominees chosen by it were competent enough to fulfil this task and deliver the goods.

(3) Negotiations with the trade bodies for getting their consent to work at a smaller margin of profit would obviously be protracted resulting in a further delay which the Government could not afford in the face of rising market.

The Government's swift action and distribution of sugar through its nominees, coupled with the proximity of the date of arrival of imported sugar, have acted as a powerful deterrent to any further rise in price. In fact, prices have already declined to levels which are equal to no more than the cost of landing sugar in the City from the factories. At the time of writing, the rates for spot sugar are Rs. 90 per bag for small grains, Rs. 92 for medium grains and Rs. 100 for larger grains. A week ago, these varieties were being sold at rates ranging between Rs. 100 and Rs. 108 per bag.

In the forward section, *vaishak* delivery was squared up at Rs. 86 per bag; this rate compares with Rs. 90-8 a week ago. *Jetha* delivery, which had advanced by Rs. 2-4 last week to Rs. 87-8 collapsed to finish at Rs. 85-12, on receipt of news that at least three shiploads of imported sugar would be discharged into this harbour before the end of the month. The undertone of both the spot and forward sections is distinctly weak.

PEPPER MARKED DOWN

(Messrs. Parekh & Co.)

BOMBAY, 19*th May*

During the fortnight under review, Malabar black pepper ruled weak with downward tendency, afloat and nearby shipments having been sold at from $0.66 down to $0.57. Business in June shipment was done as low as at $0.54. Malabar black pepper being the cheapest, the dealers in New York started buying May-June-July shipments in equal monthly lots from $0.60 to $0.63, but lack of support from grinders, easy selling policy of Indian growers and change in export duty ceiling from Rs. 75 to Rs. 65 were some of the causes responsible for their present holding back and indifferent attitude. Importers in New York are reported to be marking time and will restart buying more seriously as soon as market in Malabar becomes steady round about a certain level. The present heavy fall in the prices of garbled and ungarbled at Cochin is said to be due to nervous liquidation by growers from North Malabar who are anxious to bring down and sell as much pepper as possible before monsoon. It was reported that they preferred to store more prospective commodities rather than pepper which seems to have passed through a bull period of seven years and to be entering upon a bear period in the price-cycle of the commodity.

In the delivery section, prices gave way under pressure of liquidation by bulls, May delivery having reached a record low price of Rs. 900. In the A.S.T.A. section, an averaging down by bears has brought about the fall in the prices, the continuous fall at Cochin from Rs. 250 to Rs. 205 per cwt. for garbled pepper having afforded necessary incentive to Bombay bears. The following are today's nominal quotations:—

Ready delivery Rs. 140 per Bengal maund, June delivery Rs. 890-1,010 and July delivery Rs. 875-95 per candy of 5½ cwts.

TEA DUSTS EASY

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 15*th May*

The offerings in dust sale "I", which was held on Tuesday 11th May, amounted to approximately 2,00,000 lbs. The market was very irregular with less demand and closed easier by As. 1 to As. 2, except for good grainy black types which were half to one anna dearer.

London Market.—Very strong, ½d. to 1d. dearer.

Colombo Market.—Strong demand. Brokens and fannings dearer; leaf firm.

We have received a report from Colombo informing us that the export duty on tea has been raised from 45 cents to 60 cents.

Calcutta Market—Export.—No sale this week.

Dust.—11,200 packages. Strong general demand. Commons and mediums half anna to one anna dearer. Commonest irregular. Black leafy types and any good liquoring teas strongest feature.

Special Licence.—There has been a slight decline in the price of special licence and business has been effected here at 44 pies, sellers remain scarce.

1954-55 *Export Quota.*—There has been a decline in the price of new quota and business has been done at 47 pies which remains today's quotation.

Forthcoming Auctions.—Sale No. 10 will be held on Tuesday, 18th May and dust sale "J" will be held on Tuesday, 25th May, 1954.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd. wire:—

"*Sale* 10.—15,25,000 lbs. Market strong and active, particularly for low and low medium. Prices irregular and sometimes lower following quality. Clean black leaf dearer. Whole leaf much weaker."

JUTE GOODS DULL

(From Our Own Correspondent)

CALCUTTA, 18*th May*

Dull conditions continued to prevail in the jute markets this week, the only feature being the sizable decline in the price of B. twills which erased completely the recent gains brought about by speculation. This is only as it should be, as the higher price kept away buyers, despite lower month-end stocks of sacking. The market may now be expected to rule steady and attract export business. In the meantime, the market's attention has been drawn to this week's meeting of the Export Advisory Council, at which the Commerce Minister spoke in appreciative terms of the heartening recovery of the export trade in jute goods as also the level of monthly production almost equalling or just surpassing demand.

It should be noted that the phrase of "heartening recovery" has been coined after a comparison with 1952-53 which was one of the worst years for the jute industry and trade, as the high export duties made foreign consumers of jute goods buy as much of their requirements as possible from

Continental production. However, the reduction in the export duty on hessian in September last brought about a welcome change and the trade was soon able to attract more and more business from abroad. Trade circles strongly feel that, if only the duties on hessian and sacking had been abolished altogether, the results would have been more impressive and the industry could have been enabled to work 48 hours a week, instead of the present restricted 42½ hours which would have given incentive for the producers of jute to grow more and which would have provided more employment.

From the trend of the speech of the Commerce Minister to the Export Advisory Council, it does not appear that the Government is likely to accede to the demand of the industry and trade for abolition of the duties. As such, whether the recovery would be maintained during the next year is open to doubt. Whenever the question of revision of export duty had arisen in the past, the Government had waited unduly long to give a decision, and only when the duty had affected the industry for over a period better counsels had prevailed among the authorities in New Delhi. Up to such a time, the advice given by the industry and trade had always fallen on deaf ears. If, therefore, past experience is any guide, Government may consider abolition of the duties at about the end of 1954 or early 1955 when statistics are likely to reveal a marked decline in the foreign earnings of the industry. Market circles put forward the question: will new Delhi read the writing on the wall and do the right thing at the right moment? An affirmative answer can only be official action. It is to be hoped that the passing on to the West Bengal Government of the Jute Inquiry Commission's report by the Central Commerce and Industry Ministry for examination will be made use of by the West Bengal Government as an opportunity to consider this question and advise New Delhi to do the right thing so that the jute industry can be saved.

During the week, only small business took place for export. This is nothing unusual in a declining market, as foreign buyers enter into commitments only in a steady market as far as jute goods are concerned. Expectations of a further decline and uncertainty as to the Central Government's action on the Jute Inquiry Commission's report imparted a cautious feeling among foreign buyers. The fall in the prices of raw jute as well as the recurrence of rain in the jute districts of West Bengal and Assam were noted and induced the buyers of jute goods to be reserved. Ready B. twills opened last Wednesday at Rs. 110-4 and, by Friday, had given way to Rs. 108-8. The week-end saw a fractional improvement to Rs. 108-12, and today there was a further increase to Rs. 109-4. The July-September position, after giving way to Rs. 106 from Rs. 107-14, was quoted at Rs. 107. D.W. flour bags at Rs. 130 were lower by Rs. 2, while green-striped heavy cees improved to Rs. 123-4 from Rs. 122-12.

The price of hessian was more or less steady, as the recent speculative rise was not shared by it. However, a business of importance took place. It is reported that a new order would be placed on behalf of the Argentine. Ready 40 oz. hessian was quoted at Rs. 43-11 and declined at one time to Rs. 43-4. The closing for the week-end was, however, better at Rs. 43-6. When it opened after the week-end, there was a spurt to Rs. 44, with the f.o.b. rate being at Rs. 48-1. The 8 oz. hessian was quoted at Rs. 36-2 f.a.s. and at Rs. 39-6 f.o.b.

Prices of sackings gave way, despite the fact that demand is higher than production. The production in April was only 40,500 tons while despatches from mills for export as well as for local consumption aggregated 43,721 tons. On the other hand, hessian produced was 31,800 tons, while deshatches on both accounts were no more than 29,275 tons. Such a position shows that, irrespective of whether there is tightness in supply or not, consumers are not prepared to pay higher prices however much the speculative elements raised the quotations and endeavoured to maintain them at higher levels.

Although, over the week-end, moderate business took place in raw jute, prices were easy, the decline over the week under review being about a rupee. Upper Assam bottoms fell to Rs. 25-8 from Rs. 26-8, while the new crop forward was priced at Rs. 26.

NEW SEASON'S TEAS WELL BID

(From Our Own Correspondent)

CALCUTTA, 18*th May*

The first export sale of the new season was held yesterday when offerings aggregated 14,500 chests. There was a fair general demand, and prices were up fractionally. Judging from this trend earlier expectations that prices would advance to high levels in view of the keen export demand are likely to materialise. Keen competition was offered to Dooars, of which stylish whole leaf grades and teas possessing first flush were buyers' favourites. Prices realised were between Rs. 2-11 and Rs. 3. Fannings and brokens were steady. Darjeelings were keenly sought, and whole leaf grades secured high prices. The offerings from Assam and Cachar were insignificant. The quotation for clean common B.P. was Rs. 2-10-6.

There was a strong general demand during last week's auctions for internal consumption when 11,204 packages of dust were offered. These consisted of 10,737 and 467 packages of old and new seasons' teas, respectively. Medium Assam and clean common Dooars were bought at rates higher by ½ to 1 anna. Black leafy exportable teas were very steady. The new season's teas realised As. 2 above those realised by old season's teas. The smaller types of the former were well favoured by buyers. The commonest residue grades were somewhat irregular. Medium Dooars were quoted at Rs. 2-1-6, and medium Assam grainy dusts at Rs. 2-2-6. Since no good liquoring best Assam C.T.Cs. were on offer, the quotation at Rs. 2-6 was nominal. The leaf market was also steady. The market was offered 781 packages of old season and 337 packages of new season teas. The residue types of old season teas were sold at last rates, while the new season teas crossed brokers' valuations.

Notices

SRI KRISHNARAJENDRA MILLS LIMITED, MYSORE

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-fourth Ordinary General Meeeting of the shareholders of Sri Krishnarajendra *Mills, Ltd.*, will be held at the Registered Office of the Company, Bangalore Road, Mysore, on Saturday the 19th June, 1954, at 3 p.m., to transact the following business:—

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nomination, n.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. s Sales and amount written off. (b) Investments. ‡ For ten months ended 31st December 1951.

(1) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Rs. 1-16 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 1012 in the debentures section:—

§§ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable a par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952 or on any subsequent interest date at one month's notice.

(e) Redeemable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1953 on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at 3 per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months notice

ROLE OF INSTALMENT-CREDIT IN STIMULATING DEMAND

(Concluded from page 979)

is conducted extensively in Calcutta. It has been started recently in Delhi also.

3. Sale of watches, jewellery and woollen-suitings and other valuable consumer goods is not much practised in this country.

(c) Housing.

The Hindustan Co-operative Insurance Society, Calcutta, started a scheme of housing in Calcutta, in 1935. This scheme was dropped during the war. After the Partition of India, in 1947, and the resultant influx of millions of displaced persons from Pakistan, a huge demand for houses was created. To relieve the housing shortage, the Rehabilitation Ministry of the Government of India launched many schemes of refugee-housing and refugee colonies. One of these schemes was based upon hire-purchase system for construction and sale of houses on monthly payments. The Jungpura Extension Scheme in New Delhi was started on these lines. Later, Delhi Land and Finance, a housing concern, was started in New Delhi by private enterprise to cater for residential houses, on hire-purchase lines. Now, a dozen or more colonisation concerns are working for housing on hire-purchase methods in Delhi and its suburbs. Similar efforts are being made in Calcutta and Bombay. In the rest of the country, hire-purchase business in housing is not very prominent.

(d) Automobiles.

Sales of automobiles on instalment credit basis, through financing companies in India, can boast of being more popular than other lines. As already mentioned, this business was established nearly 30 years ago by Messrs. Govan Bros. in New Delhi. At present, hire-purchase sales of automobiles occupy an important position in the total volume of automobile sales. This business has been working on organised lines in Delhi, where the concerns working at Lahore before the Partition have also shifted. There are, at present, nearly 15 companies in Delhi, engaged in financing hire-purchase of automobiles. Their working capital is in the neighbourhood of Rs. 1.3 crores. Their business circle extends over the neighbouring States of the Punjab, P.E.P.S.U., Rajasthan and Uttar Pradesh. Instalment credit on automobiles in the Bombay State is working on a lower key, as compared with its business potentials. In the rest of the country, there is no organised attempt at promoting sales through instalment credit.

Why is it so? The main reason for this deplorable state of affairs is that the idea of instalment-credit or hire-purchase business in India is bracketed with money-lending, and not another channel of sales, forgetting that the fundamentals of the device, that is, sales on easy payments, are to promote sales and to attract the border-line customers. The present trend in the hire-purchase business is to surcharge a higher marginal profit on the sales, in addition to high rates of interest on the amount transacted, thus making it a highly unattractive liability to be shouldered. It is no surprise, therefore, that customers prefer to take cash-loans for utilising the money towards purchasing essential requirements.

The Other Side

But the hire-purchase dealers explain that instalment-credit is, in essentials, a risk-capital going under the garb of sales on deferred payments. The repayment of the money thus advanced is not always certain and not always without trouble, because people do not care to pay back regularly, or do not pay in full. The paying-capacity, as also the purchasing power, of the public being not very high, a large number of hire-purchase agreements end in evasions, and, consequently, in legal-proceedings. Therefore, higher rates of interest are representative of high-collection charges and risks involved. But, in spite of this dismal position, the hire-purchase business needs to be made less-costly and more attractive, if it is to flourish in this country.

The present facet of the economic weather, it may be added, is most opportune for introducing the system of instalment-credit in this country. The market-conditions, after a long period of inflationary spirals and controls, are changing from a "sellers' market" to a "buyers' market." The buyer's resistance is slowly making itself felt. Consequently, the retail-trade is finding it very difficult to check the downward swing in the sales, the producers are finding it difficult to dispose of the accumulating stocks of the finished products. This development can be assessed from the following statement of stocks of finished goods with producers, taken from the *Fourth Census of Indian Manufactures* (1949), published recently by the Directorate of Industrial Statistics, Government of India.

Stocks of finished products with producers

(Value in lakhs of rupees)

Year	Bicycles	Sewing Machines	Electric Fans
1946	10.7	5.4	22.8
1947	28.5	6.9	41.5
1948	29.1	11.8	57.4
1949	40.3	21.2	65.6

From the trend of events, it can be assumed that India is entering the era of recession, if not of slump. Already the money-market has become tight, the demand is slackening, stocks are piling up and sales are going down. In these circumstances, instalment-credit business can provide a welcome relief and it is high time this business was given a vigorous push in India. It was practically in similar economic conditions that instalment-credit gate-crashed into the retail-trade in U.S. and West Germany.

It will not, however, be out of place to suggest here that a comprehensive legislation should be put on the statute-book for legal and other assistance to the instalment-credit business. At present, there are many legislations affecting directly or indirectly, this business but a full-fledged Hire-purchase Act is conspicuous by its absence. Specific legislation, in the U.S., the U.K. and West Germany, for regulating the various operations of the instalment-credit business have been passed, especially for (1) the terms of the agreement, (2) fixation of initial payment, (3) number of monthly instalments in proportion to the total amount, (4) the rate of interest, (5) provision for collection charges, and (6) default. Similar provisions are required to be provided for the regulation of the business in India. It has been found from experience that the litigation of suits, arising from default, is tending to become very expensive and unduly prolonged. The administration, in the absence of specific regulations, is unable to give any active help in cases, where default has occurred, for execution of the decrees or possession of the goods (motor-vehicles, in particular) and other contingencies. These hardships tend to block the working-capital and hinder the smooth-working of the operating concerns. These problems should, therefore, be suitably tackled for creating a healthy atmosphere in which instalment-credit may operate and achieve its ultimate objective, that is, more and still more consumption of goods on terms convenient to every pocket.—*All Rights

MUST BANK RATE BE REDUCED?

THE recent reduction in the British Bank rate has, once again, brought to the forefront the question whether the Bank rate in India, too, should be lowered. If the views publicly expressed so far on this question are any indication of the general run of thought in this country, it would appear that the consensus of opinion is not in favour of India following the footsteps of Britain. This view is not based on any political considerations or fear of being teased by the critics that, even after attaining independence, India is blindly copying Britain. It is based solely on the conclusion that circumstances in India do not warrant such a course. The absence of any open demand for a reduction in the Bank rate does not, however, mean that there is no section which wants such a change. On the contrary, there is evidence to believe that an influential section is not only in favour of a downward revision of the Bank rate but has informally impressed upon the authorities the need for it at an early date. The slow response to the National Plan Loan has given this section additional ground to press its demand for reducing the Bank rate to 3 per cent. Will the authorities, who are anxious to secure a large measure of support to the new Loan, be tempted to accept this demand? Events alone can provide an answer to this poser. It will, however, be apposite to examine the question whether or not a lowering of the Bank rate is essential in the present circumstances.

The economic fashion of the day is flexibility of interest rates. It is held that, in a free economy, the Bank rate should be flexible if it is to play the traditional role of a stabilising factor. When a country is affected by inflationary tendencies, the Bank rate is increased in order to counteract such tendencies. The higher Bank rate leads to an increase in the cost of carrying stocks or of financing new constructions, establishment of new plant and industries on *borrowed money*, thereby reducing the internal investment demand and inducing liquidation of stocks. It may also stimulate savings, as higher rates of interest will be available on investments. Conversely, reduction in Bank rate is generally made when there is deflation. A lower Bank rate stimulates investment through expansion of bank credit, though it may serve as a depressant to savings. This, in brief, is the theory of Bank rate. But, in actual practice, the effects of changes in Bank rate on savings and investment are far more complex, as they depend upon several other factors. The fundamental point to be borne in mind here is that the effects of a change in Bank rate are only marginal. Their value will be nothing if the circumstances or the policies of the State are not conducive to the achievement of the object in view. The anti-inflationary effect of a higher Bank rate will be felt only if the State does not follow an inflationary policy in other respects, such as its expenditure. Similarly, a lower Bank rate will be a useful stimulus to economic activity only if there is a disposition on the part of business men to invest and to expand their activities. If this disposition is not there owing to some reason or other, a reduction in Bank rate will have been in vain. Another important point to be borne in mind is that the results of a decrease in Bank rate, or those of an increase in it, will not necessarily be of the same degree even in a highly developed economy with a well integrated capital market, let alone in a semi-developed economy such as India. Experience has shown that, invariably, an increase in Bank rate is far more effective than a decrease in Bank rate. Whereas an upward revision of Bank rate produces quick results, a downward revision takes quite a long time to yield results. This is especially so with the underdeveloped and undeveloped economies.

At this stage, it will pay one to pause and consider why the Bank rate in Britain was reduced a fortnight ago. The main consideration, according to Mr. Butler, Chancellor of the Exchequer, was the fall in money rates in various centres since the last reduction. This means that, as rates of interest in London were higher than in the U.S. and many other Continental countries, there was a large flow of short-term funds from these countries and it was mainly in order to check this flow that the Bank rate was reduced. The object was not to prevent a recession or to stimulate the British economy further. There was no recession at all in the U.K. nor was its economy such as to necessitate the use of an artificial stimulus by way of a cut in the Bank rate. If, however, these advantages were to flow from the latest action, they would be purely incidental. In fact, when Britain was faced with a slump in the first quarter of 1952 and when its balance of payments position was desperate, demanding an increase in exports, the Bank rate was not lowered but raised, and raised sharply. It did so because, a higher Bank rate could, by reducing domestic demand, stimulate exports and moderate the demand for imports, thus correcting the balance of payments deficit. Indeed, there are many in Britain today who fear that the present lower Bank rate might stimulate domestic consumption, thereby discouraging exports and encouraging imports. This school of thought, however, admits, but regrettably, that a reduction was necessary in order to stave off hot money. At the same time, it has warned the authorities that they should not go too far in wielding the weapon of Bank rate for this purpose, as it might lead to inflationary conditions.

It will be no exaggeration to say that, generally speaking, a lower Bank rate is an index of prosperity; that is to say, a lower Bank rate is the natural outcome of larger production and greater savings. It is only when there is excessive savings that interest rates decline and such a development is healthy up to a point. If today money in the U.S. is cheaper than in the U.K., it is because the savings in the former country are greater than in the latter. A country should, therefore, try to achieve cheap money conditions, that is, low interest rates, through more production, greater employment and larger savings. A forced reduction in interest rates through the Central banking institution will bring no lasting benefits and the main beneficiaries will invariably be the speculators and middlemen.

Conditions in India today are by no means ideal for trying to boost the economy by such an artificial method as a reduction in Bank rate. Neither the *per capita* national income nor the level of savings are so large as to say that a Bank rate of 3½ per cent. is excessive. This point will be readily appreciated by those who concede that the trend of savings has some bearing on interest rates. If the Bank rate were to be reduced now, say, to 3 per cent., all those life insurance companies which have lowered their premium rates would soon have to put their rates up and this, in turn, would affect the savings that are represented by life insurance business. While this result is almost certain, it is not equally certain that a cut in Bank rate will automatically lead to any perceptible improvement in genuine business activity. As already mentioned, such an improvement will depend upon other climatic conditions, such as the Government's fiscal, taxation and labour policies. If these conditions are not favourable, as they certainly are not in this country now, a cut in Bank rate will be in vain. It may have a bullish effect, perhaps short-lived, on equities and Gilt-edged securities, as well as on commodities, to some extent. But this development will not induce any appreciable new investment, without which there can be no improvement in the country's economic conditions. It will benefit only the existing holders of shares and securities and speculators who enter the market as bulls in anticipation of a reduction in Bank rate. The banks will, of course, be one of the important beneficiaries, as their investments will gain in value. But this advantage will in all probability be more than offset by disadvantages to the other sectors of the economy.

It is common knowledge that cheap money encourages speculation. This is particularly so in this country, where overtrading is one of the main failings of its business community. The margin on the turnover of middlemen is generally small and it is because of this small margin that merchants, wholesalers and commodity speculators operate on a large scale. This small margin will be wiped out when interest rates are high, whereas it will become quite attractive when interest rates are low. This is a very pertinent point that cannot be lightly dismissed at a time when the Government has taken the risk of resorting to deficit financing on a fairly large scale.

In all Western countries and even in the U.S., to some extent, a reduction in Bank rate has followed an intensive phase of economic development fostered mainly through appropriate budget and employment policies. Britain, the Netherlands, Belgium and Germany, all these gave liberal relief in taxation and other direct incentives to stimulate production, expand business and encourage savings. Even the U.S. has reduced the burden of taxation. The reduction in Bank rate was only a minor instrument which they adopted to bring about improved business conditions. The Governments of these countries have realised that a mere reduction in the cost of credit to the business community would not

encourage it to go forward and increase its commitments, if it were assailed by doubts and uncertainties about the future. Similarly, in India, too, the authorities must first reduce the burden of taxation, follow a labour policy which will not hinder expansion in production and employment, give up the policy of placing a premium on inefficiency under the pretext of protecting the small producer and provide a large measure of freedom from bureaucratic controls. To give relief in interest rates through a reduction in Bank rate before these measures are implemented will tantamount to placing the cart before the horse. In saying this, we do not minimise the value of a correct monetary policy for economic development, but what is more important here is not so much a reduction in the cost of bank credit as an increase in the availability of credit.

FINANCIAL CONTROL—I

IT has been clear for a long time now that, although the Indian civil servants, the higher and the lower ranks alike, are in no way inferior, as a class, to any body of administrators in any part of the world, there have been lamentable lapses of efficiency, inordinate delay in dealing with issues, particularly economic issues, and quite a few instances of extravagant, and even improper, expenditure. Since the "good" things that are done are always forgotten in the public outcry against a few wrongs that are committed, it is necessary to emphasise that the Indian administration is basically sound and efficient. There might be, as the Deputy Home Minister said, in the course of a Parliamentary debate on a non-official resolution demanding an enquiry into the Central administrative machinery, "instances here and there of black sheep" but, taken, as a class, the men are efficient and patriotic. The lapses, such as there have been, are to be attributed primarily to the bewildering complexity of the tasks which the civil service, trained originally to collect a small revenue and to maintain law and order, has been called upon to perform.

The war, the Partition and the Five-year Plan are the three important events in recent Indian history, each of which would, in itself, put any nation's civil service to a serious test. Considering that these events came in quick succession, it is scarcely to be wondered at that many grave mistakes have been made. But it must be said to the credit of the Government that it has permitted the fullest scope for Parliamentary bodies, such as the Estimates and the Public Accounts Committees, and for that independent officer, the Comptroller and the Auditor-General, to probe into departmental ways and expose the inner workings of the Government and its undertakings to public view. And it has also made no secret of the fact that it wants to level up the efficiency of the service, in order that they may be able to do things in a more efficient manner. First, the late Mr. Gopalaswamy Iyengar was asked to submit a report on the *re-form of the administrative machinery*. Later, the Government received the reports of Mr. A. D. Gorwala and Mr. Appleby.

Now, these reports have been followed by the report submitted by Mr. A. K. Chanda, Secretary, Production Ministry and Auditor-General-designate. The Prime Minister, Mr. Nehru, felt that there was need to overhaul the financial procedure, in order to expedite the implementation of the Five-year Plan and of the various projects undertaken, or that may be undertaken in the future by the Government. It was at his instance that Mr. Chanda investigated the procedural and other problems in Governmental administration. Although his report has not been published, it is stated that it deals with such subjects as financial control, delegation of authority and functions, reorganisation of the railway administration, the services, the pay structure and the Secretariat. The report is now under the Government's consideration. Meanwhile, the Organisation and Methods Division has initiated a combined operation to improve the speed and quality of the work done in the Secretariat. The Institute of Public Administration, it is stated, will set up joint teams of officials and non-officials for a detailed study of different aspects of public administration.

By far the most intractable problem has been the institution of a financial procedure which will ensure that work is speedily done, but public money is spent to the best public advantage. There are at least four issues involved here: (1) The need for forethought in planning expenditure and expeditious execution of a plan that has been carefully prepared; (2) the maintenance of a proper system of accounts and the adoption of correct financial procedure—public tender system, for instance—at every stage in the execution of the plan; (3) the need for separating audit from accounts; and (4) the adoption of a "commercial and business-like" attitude in the administration of commercial enterprises, partly or wholly owned by the Government. Now each of these issues is important, in its own way, but it is necessary that all of them must be tackled more or less simultaneously, if the country is to derive full value for the money spent by the Government.

The delay in the execution of projects in the public sector has been attributed to the Finance Ministry. It is stated that the Ministry is a little too fastidious in raising objections and that it is a stickler for minute details. It is easy for other Ministries to call the Finance Ministry as wooden and unimaginative, and to condemn it as the "villain of the piece." But public sympathy will unhesitatingly express itself in favour of the Finance Ministry. As the watch-dog of public money, the Finance Ministry should certainly see that what is spent is well spent and that the sanctioned expenditure is not exceeded. It is true that conformity to financial procedure may be overdone. But more mistakes have been committed by non-conformity with procedure than by an excessive insistence on conformity. Nevertheless, it should be possible to evolve a procedure that will be a happy mean between the attitude of an impatient administrator who wants to get things done quickly, irrespective of considerations of cost, and that of a punctilious officer who is a stickler for procedure. Both these types of officers are needed to run the machinery of Government, even as an automobile has to be fitted with an accelerator as well as brakes, if it has to run well. The point is that haste should be avoided as well as excessive delay in dealing with issues.

Government officers do give the impression that they are engaged in a leisurely, stubborn and almost interminable game of shuttlecock, the files flying from one office to another, back and forth. Surely, it is in nobody's interest that this game should be continued from year to year. In this connection, a correspondent to the *Hindu*, who subjected the whole issue to an impartial scrutiny, made quite a few notable suggestions for reform of financial procedure. These suggestions, which are worthy of study by the Central Government, are:

"(i) The Finance Ministry must apply the same yard-stick in measuring the cases of all Ministries. (ii) The need for an independent financial scrutiny and control is greater today than it ever was. Examination, in some detail, of various cases will bring to light large sums of the tax-payers' money saved by such scrutiny. (iii) The Finance Ministry does, in several cases, raise petty objections on matters of little consequence. This should be remedied by (a) making Financial Advisers share, with the administrative Ministries, responsibilities for the efficient progress of development schemes and (b) by restricting the number of times cases are allowed to move to and from the Finance Ministry, senior officers on both sides being brought into the picture with as little delay as possible. (iv) Important cases, before they go to the Finance Ministry must be seen by senior officers in the administrative Ministry itself; this will ensure that schemes have been carefully worked out and thereby lessen the chances of objections from the Finance Ministry. (v) On receiving a case, the Finance Ministry should examine it fully and bring out all comments and/or objections in the very first instance. The raising of objections piecemeal should be treated as an indication of perfunctory examination. (vi) Financial Advisers should personally look into a case which is supported by the Joint Secretary or Secretary of an administrative Ministry, before advising against any such proposal. To ensure this, the number of such Advisers should be increased, so as to give each only a manageable charge. (vii) Undue interference and delays in other branches of the Finance Ministry in dealing with proposals agreed to between an administrative Ministry and the Financial Adviser should be strongly discouraged. Such differences as may arise should be quickly settled by discussion at equal levels and failing that, at Minister's level. (viii) As many schemes may not be ready for inclusion in the budget, token grants should be allowed in respect of such of those schemes as are likely to be ready for execution during the following financial year. This will, of course, be followed by a fuller examination and submission of detailed supplementary demands during the year in which the implementation of the scheme is actually undertaken. (ix) Personal discussions should take place much more frequently than at present. As far as possible, such discussions should take place at each level, or at the next higher level, immediately after one unsuccessful exchange of notes has taken place."

The subject of financial control has also engaged the attention of the Estimates Committee, the latest report of which on this subject has been rightly hailed as the most important document of its kind. The Committee makes two notable suggestions for facilitating the process of financial control: (i) Before a scheme is embarked upon, it should be properly planned and it should be ascertained whether the money required for it is available or can be made available at the proper time. Detailed plans and estimates should be worked out fully, so as to enable the Finance Ministry to approve the scheme and accord financial concurrence. (ii) After the scheme is concurred, from the financial point of view, it should be included in the Budget Estimates of the Ministry concerned and, thereafter, there should be no further embargo on reappropriations within the various sub-heads of the scheme so long as the total amount sanctioned for the scheme is not exceeded. The State Governments, the Committee points out, should be asked to send consolidated proposals for all the schemes for the financial year in advance of that year. This will ensure a careful examination of the schemes sponsored by the State Governments.

On more than one occasion, the Comptroller and Auditor-General has emphasised that it is anomalous that both the accounting and audit functions should be concentrated in the same department. Bifurcation of the functions has been rightly demanded on grounds similar to those that are urged in favour of the separation of the judiciary and the executive. In this connection, the Estimates Committee has suggested that urgent steps should be taken to see that (a) the Comptroller and Auditor-General concerns himself with audit functions only; (b) the accounting and payment functions devolve on the Ministry concerned; (c) the present audit and accounts organisation should be bifurcated and the accounts files placed under an Accountant-General or Director of Accountants under the Ministry of Finance for the time being; and (d) the present system of treasuries should be abolished. Their payment functions should be taken over by the branches of the Imperial Bank of India or where a branch of the Imperial Bank does not function, by a branch of some other Scheduled bank in consultation with the Reserve Bank. Where there is no branch of any Scheduled bank in existence, the treasury office itself should be converted into a pay office of the Imperial Bank.

Yet another reform that has been suggested by the Estimates Committee is decentralisation of functions. As all good executives know, the essence of sound and expeditious administration is a wise devolution of functions to subordinates, so that they themselves are free to concentrate on broader policy issues. At no time was the need for such devolution of power to subordinate members more necessary than now. A multiplicity of functions and a plethora of duties, all concentrated at the top, tend to create an administrative system which, like an inverted pyramid, is in perpetual danger of a grievous fall. Wisely, the Committee has stressed that, in the administrative departments concerned and within the service itself, there should be as much decentralisation as possible, and that the authorities, at different levels, should be encouraged to take decisions. This might conceivably lead to some mistakes being made in the beginning, for subordinate officials, who have been trained for long to look for decisions from the top, might be found unequal to the new task. Nevertheless, the experiment is worth trying. For, if the subordinate officers are allowed to work under the guidance of more trained officers, it should be possible to instil in them, in course of time, a habit of taking decisions as well as the responsibility for the decisions.

BUYERS' MARKET IN SHARES EMERGING

WHEAT AGREEMENT IN PERIL?—MOVE TO STABILISE WORLD COTTON PRICES

THURSDAY, 5 P.M.

THERE have been no outstanding developments in the Share Markets. In the absence of any fresh support, the trend is quiet. Earlier in the week, there was a feeble rally, but, as the week advanced, the gains were lost, the closing rates in the case of most of the shares showing modest losses. Steels have fared relatively better, but textiles have been the worst sufferers, as reports about the outlook for cotton textiles are not quite encouraging. There are fears that the mills are now producing more than what they can sell both in the external and the internal markets. Foreign advices, too, point to the same conclusion; competition may increase in the event of the Japanese yen being devalued. The delivery of large blocks of leading textile counters in the last settlement came as a painful surprise to the market, for that indicated some investors are booking their profit at these levels. Even in the steel section, Indian Irons have become a soft spot on account of disquieting reports about the labour situation at the Company's works. It is stated that inter-union rivalry is threatening to disturb the peace and that section 144 has been promulgated at both Burnpur and Kulti. Although sales returns of the T.I.S.Co. for the first 9 months of the Company's last accounting year are satisfactory, this scrip is meeting with considerable resistance whenever it crosses the Rs. 193-level, because the dividend for 1953-54 is expected to be no more than Rs. 11 per share.

MARKET GOSSIP

• • • •

The fact that equities have not been able to make much headway in the past three weeks suggests that a buyers' market is surely and steadily emerging in shares, too. It is true that the general economic situation in the country is satisfactory and that all the major industries, as well as agriculture, are doing well. But the current prices of equities have already discounted this to a considerable extent and the yields have declined. Expectations of an increase in the dividends for the current year constitute the main factor that is keeping up the present level of prices, but it is yet too early to be sure that they will materialise. From this point of view, the coming two months will be crucial ones. They will show how the year will end for most of the industries. They will also show to what extent the authorities are prepared to readjust their policies in order to improve the competitive capacity of Indian industries. During this period, a clearer picture of the international political situation will also emerge.

• • •

It is now clear that the Government is unlikely to close the list for the National Plan Loan in the near future. Renewed efforts are being made to stimulate the investors' interest in it. The Congress Working Committee has called upon all Congress men to do their best for making the loan a success. Fresh instructions have been given by the State Governments to the district officials to intensify their drive. An appeal has been made to the people, especially to the women, to sell their jewellery and invest the proceeds in the new loan. The Government is trying to make arrangements with banks for accepting subscriptions to the new loan in gold ornaments and other jewellery.

• • • •

It is not known how far this novel move by the Government will succeed. Many are critical of it and the banks are very reluctant to undertake this additional responsibility. In fact, a number of big banks have already turned down the Government's request, as they are afraid it may provide an easy source for malpractices and they have no desire to run the risk of their name being tarnished. Moreover, they regard this as a dubious way of inducing the people to invest in the new loan. Even today jewellery constitutes a form of savings for a large section of the people in the country and they may not wish to exchange it for Government paper. Among the well-to-do, many have deliberately invested a part of their savings in precious metals and stones as a hedge against inflation. Having announced from the house tops that deficit financing is inevitable, it is too much to expect this class of people to sell these and buy the Government loan. Those who have gone in for these metals and stones to hide their ill-gotten wealth will certainly not respond to the Government's call for fear of their being caught. The Government, of course, cannot give amnesty to them by saying that it would not question the source of their wealth if they were to invest their hoards in the National Plan Loan. For, apart from placing a premium on dishonesty, such would mean an open invitation to evade taxes. In view of all this, many wonder how the Government was persuaded to accept a suggestion of such doubtful value.

• • • •

Readers of this column are aware of the efforts that are being made by some of the Indian banks to avoid unhealthy competition for deposits and to reach a gentlemen's agreement for regulating the rate of interest on short-term deposits. A number of meetings had taken place in recent weeks, both among the banks themselves and with the Reserve Bank. The Exchange banks also were invited to extend their co-operation. After protracted discussions, it was agreed, at a meeting held early this week at which the Exchange banks' representatives were present, that the move was a desirable one and that a sub-committee of bankers should evolve a scheme for achieving the object. This sub-committee has completed its task and a meeting of the full committee of bankers will be held early next week to consider the scheme. Details of the scheme are not available, but it is understood that, if that scheme were adopted, there would be a ceiling on the rate of interest for time deposits; no interest would be paid on current accounts, except under certain conditions and in some specified cases, and the present vicious practice of accepting call deposits would cease. It is further understood that the medium- and small-sized banks will be exempted from these conditions, in order to make the scheme workable.

Although many of the world commodity markets have been steady to firm, there is no doubt that the uncertainty over the U.S. farm surplus policy has continued to cast a shadow over the markets for agricultural produce. Recently, the world grain markets were disturbed by the report that the authorities of the U.S. Commodity Credit Corporation would offer maize for export. It is true that the report has not unduly depressed the market but a feeling of concern persists. Three reasons are given for the absence of any big drop in prices. In the first place, the U.S. authorities have not tried to force the market down by offers of sale at prices considerably below world prices. It would appear that the prices at which the authorities are willing to sell are competitive, particularly for near positions, but the difference is not so large as to have any depressing effect. Secondly, no large transactions are possible, as buyers are not so keen; they are inclined to wait till the full effects of the U.S. move become known. Thirdly, the weather in the U.K. and other countries has not been particularly favourable to the cultivation of feed grain. Besides maize, the U.S. authorities are also reported to have offered linseed. Some business has been done with the U.K. and the Continent at lower rates. The result of these transactions has been a decline of $6 to $8 in linseed prices which stand at $105 a ton c.i.f. Further, it is feared that the decline may gather momentum in the coming weeks, since the U.S. linseed stocks are large and the new crop prospects bright. Owing to these developments, the Indian linseed markets are distinctly weak.

• • • •

It is not the grain markets alone that are disturbed by the presence of heavy surplus stocks. The wheat market also is in the same plight. In fact, during the last two months, there has been a heavy fall in prices. Taking the Chicago near futures position, the price in mid-March rose above $2.30 a bushel, the highest figure since January, 1953. It has now declined to $1.96, that is, a drop of 34 cents, in two months, which is in striking contrast to the general upward trend of commodity prices discussed in these columns last week. Explaining the causes for this fall and its implication to the International Wheat Agreement, Oscar R. Hobson, City Editor of the *News Chronicle*, observes:

"As usual both supply and demand factors enter into the explanation. So far as the Northern Hemisphere harvests are concerned, the outlook seems generally satisfactory. Owing to acreage cuts, the United States crop will not reach last year's high figures, but the latest yield estimates indicate an improving position. In Canada, as in this and other European countries, the spring has been late and the growth of cereals retarded, but there is nowhere anything to suggest any failure of crops. At this stage in the crop year, however, it is the bird in hand which counts and the supply factor which is really important is that the four great wheat-exporting countries (U.S., Canada, Argentina, Australia) had between them a carry-over, on 1st April, of 1,800 million bushels which represents 20 months' consumption and is nearly double the normal figure. On the side of demand, the remarkable feature is the degree to which the importing signatories to the International Wheat Agreement have neglected to make their guaranteed purchases. The total of these for the wheat year 1953 was 421 million bushels—which, of course, is also the guaranteed sale obligation under I.W.A. terms of the four exporting countries. Of this 421 million bushels only 190 million had been taken up in the first nine months of the year, leaving 230 million, say 55 per cent., to be taken up in the final three months. Some importing signatory countries had not bought a single bushel of I.W.A. wheat. India, the country with the second biggest import quota, had taken up under 1 per cent. of her 36 million bushels.

"It is now certain, of course, that the sales and purchases of I.W.A. wheat will this year show a great shortfall from the guaranteed quantities. The I.W.A., in fact, if not in imminent danger of breakdown, is faltering badly. Its selling price has been stepped down from the maximum of $2.05 to $1.85 without any obvious effect in stimulating demand. Is it now to be lowered again towards or even to the $1.53 minimum? And, if not, why not? Certainly, Britain has as yet no reason to blame herself for taking the stand that she did fifteen months ago when she came out of the agreement rather than commit herself to pay a price of over two dollars. She has got her wheat cheaper than she would have done had she signed and almost certainly by refusing to sign she has pushed down the price for other importing countries as well. She has reason to be grateful to Major Lloyd-George for his courage."

There is strong dissatisfaction among up-country sugar merchants over the indifferent manner in which the Government is treating them in regard to their applications for supply of sugar. In accordance with the Government's notification, these merchants had submitted their tenders to the Regional Directorates with the necessary deposits. These tenders were duly transmitted to New Delhi for disposal, but the Food Ministry has so far taken no decision on these tenders, though several days have passed. Repeated reminders have produced no results. The merchants concerned have now submitted to the Government certain alternatives. These are: (a) The Government should allocate forthwith the quantity of sugar they had asked for or (b) refund the deposits or (c) transmit their call deposit receipts to the Regional Directorates for allocation from the imported sugar. These are, indeed, fair propositions and the Government should soon make up its mind one way or the other. It is really difficult to understand why the Government is sleeping over this matter for such a long time. After all, these merchants must be having their own commitments to honour.

• • • •

An important subject that will be taken up for discussion at the forthcoming meeting of the International Cotton Advisory Committee, scheduled to be held at Sao Paulo (Brazil) on 7th June, is stabilisation of world cotton prices and supplies through an international agreement—a subject which has occupied the attention of exporting and importing countries for several years. It may be recalled that, at the meeting held last year at Washington, the member-Governments rejected the idea of signing an international agreement. They, however, agreed that some form of agreement to stabilise prices and supplies was desirable. The Committee, therefore, directed its staff to prepare a draft agreement for study at this year's meeting. It is not known whether the new proposals are substantially different from those which were discussed last year. Washington experts, however, have admitted that there was still considerable disagreement as to whether any form of international pact would change the peculiar characteristics of the cotton trade—wide and sudden fluctuations between the extremes of surpluses and low prices, on the one side, and shortages and price increases, on the other.

• • • •

The two proposals, which were put forward last year, it may be mentioned, were: (1) a scheme of multilateral contract and (2) an international buffer stock scheme. Under the first proposal, maximum and minimum prices for cotton are to be fixed by agreement countries. Buying and selling of definite quantities of cotton during the agreement period are to take place between these limits: When prices touch the maximum level, importers can ask exporters to sell the undelivered quota at the maximum price. If prices touch the minimum level, the exporters can ask the importers to buy cotton at that level. An exporting country is free to sell in the free markets any surplus above its guaranteed exports. This scheme is similar to the International Wheat Agreement. Under the second proposal, the countries acceding to the agreement will decide on the limits to be set to price fluctuations. An international executive is to be set up to buy a stock of cotton large enough to exert a powerful influence on world prices. When prices weaken in times of abundant supply, the executive will buy cotton and, when they tend to fall, it will release stocks.

• • • •

Many experts felt then that it might be difficult to apply the principles of wheat agreement to cotton, since cotton, unlike wheat, is used to make another commodity, namely, cloth, which itself has an international market. Other factors, which militated against an international agreement for cotton were then stated to be: the existence of price support legislation in different countries and the system of differential prices in terms of different currencies for identical varieties of cotton, and the continuing difficulties in the balance of payments position in different countries. Although conditions in regard to the last-mentioned point have eased to a certain extent this year, it cannot be said that the difficulties in the way of an agreement, which were pointed out last year, have ceased to exist. It will, therefore, be interesting to see what decisions the Committee takes this year on the subject.

• • • •

Meanwhile, the British and European spinners, who meet this week at Buxton (U.K.) at the Congress of the International Federation of Master Cotton Spinners' and Manufacturers' Associations, have affirmed their opposition to an international cotton agreement. The Federation stated that its views on this question remained what they were when it met at Copenhagen last year. Although the Federation admitted that the stabilisation of cotton prices at a level fair to growers, manufacturers and consumers was a highly desirable ideal, it felt that the proposals suggested would encounter great practical and financial difficulties, owing to the more varied nature of cotton in contrast to more uniform agricultural products. The Federation added that an agreement of this kind on cotton would restrict development of the trade in the raw material and mean that prices might be maintained at an uncompetitive level with other natural or synthetic fibres.

• • • •

An account of I.C.I's profit-sharing scheme, which is given in this week's letter of our London Correspondent, will be read with interest in this country; for the scheme is an excellent instance of what a far-sighted management can be expected to do for its workers. No one can, however, claim

EQUITIES CLOSE WEAK

TEXTILES MARKED DOWN

(From Our Own Correspondent)

BOMBAY, *27th May*

EQUITIES on the Stock Exchange experienced a two-sided movement during the week under review. In the first two sessions of the week a cheerful sentiment was seen creeping over it and, as a result, leading counters scored handsome gains, especially on Monday, on accumulation of buying orders. Heavy covering by shorts in steels, fresh buying interest in textiles, better advices from Calcutta and technical considerations were all factors responsible for the firmness on that day. Thereafter, during the rest of the week, a reactionary trend was in evidence. The main body of shares drifted down listlessly on lack of follow-up support and heavy unloading. The selling was initiated in the textile group, on reports of heavy delivery in some of the leading textile counters and on disquieting advices from cotton and piecegoods markets. Weakness of the bullion market was another additional adverse factor to dislodge the sentiment of operators. Moreover, the keeping of the National Plan Loan on tap was considered unhelpful to the share market. The announcement that the Government would give facilities for subscribing to the loan in the form of gold and jewellery was interpreted bearishly in market circles. The recourse to this new method of attracting funds was, in fact, taken as an indication of poor response to the loan and this in turn, gave rise to fears regarding the possibilities of the Government adopting sterner measures to make the loan a success. This fear psychology, coupled with the other discouraging factors, induced operators to keep their commitments light.

In the steel section, Tata Steels hardened from Rs. 193-8 to Rs. 197-12 on short covering, but reacted to close at Rs. 194. Indian Irons were lifted from Rs. 29-11½ to Rs. 30-15½ on sustained buying, but fell away to Rs. 30-2½ at the close.

After being slightly active textile shares turned weak subsequently. Heavy selling, particularly in the last two days, for reasons already stated, brought about sharp declines in the values of these shares. Bombay Dyeings drew good support early in the week and rose from Rs. 422-8 to Rs. 428-2, but slumped to Rs. 415 at the close. Similarly, after advancing from Rs. 308-8 to Rs. 313-12, Kohinoors reacted to Rs. 305-8. Centurys closed at Rs. 322-8 with a loss of Rs. 4 after having been done up to Rs. 331-8. Central Indias were done today at Rs. 172-8, as against Rs. 174 a week ago. A similar loss was noted in Finlays at Rs. 240-8, though they passed hands higher at Rs. 246 earlier. Gokaks were, however, unchanged on balance at Rs. 250. Indu Ordinaries dropped an anna to Rs. 11-1, Indore Malwas Re. 1-4 to Rs. 108-12, New Greats Rs. 2-8 to Rs. 167, Shree Niwas moved down from Rs. 207-8 to Rs. 206-4. Simplex were lower by As. 8 at Rs. 155. Standards disclosed no change over the week at Rs. 312-8, although they had business at Rs. 316-4 earlier. Swans suffered a decline of Rs. 5 to Rs. 320. Bradburys moved down from Rs. 957-8 to Rs. 952-8.

Barring some selling in selected counters, bank shares were generally steady on fair enquiries. Central Banks were marked down by As. 12 to Rs. 54-8 and their new shares by As. 4 to Rs. 60. Bank of Indias were in good demand and gained Re. 1-8 to Rs. 146-12. Imperial Fully Paids picked up Rs. 2-8 to Rs. 1,785, but their Partly Paids lost Re. 1-4 to Rs. 437-8. Barodas were a shade better at Rs. 108-4. United Commercials rose by a rupee to Rs. 44-12 and Unions As. 1½ to Rs. 6-7½. Eastern Banks reported business Rs. 10 higher, at Rs. 112.

Trading in the insurance section was quiet and price changes were *nil* in almost all the counters. New Indias were an exception with a rise of Re. 1 to Rs. 45-4. Orientals stood unchanged at Rs. 7,690 and Empires at Rs. 655. British India Generals were held at Rs. 13-4, Indian Mercantiles at Rs. 40-8, Industrial and Prudentials at Rs. 36-2, and Jupiters at Rs. 7-8.

Mild selling pressure was noted in the electricity section. Ahmedabad Electrics were on offer on the announcement of fresh capital issue and lost Re. 1-4 to Rs. 111-9. Bombay Suburbans were, however, better by As. 10 to Rs. 121-14. Surat Electrics were unchanged at Rs. 130-10. Andhra Valleys were done at Rs. 1,322-8 *ex-div.* (dividend Rs. 30), as against Rs. 1,350 *cum-div.* a week ago. Tata Powers had business at Rs. 1,405 *ex-div.* (dividend Rs. 30), as against Rs. 1,440 *cum-div.* and Tata Hydros at Rs. 140 *ex-div.* (dividend Rs. 3) as against Rs. 144 *cum-div.*

Notwithstanding the adverse conditions in the latter part of the week under review, several counters in the miscellaneous groups emerged brighter over the week. The sugar group was featureless. Belapurs moved within a narrow range between Rs. 270-8 and Rs. 268-8, before finishing at Rs. 269. Phaltan shed Re. 1-8 to Rs. 100-8. Bhopal Sugars stood at Rs. 12-8 *ex-div.* and Walchandnagars at Rs. 175-10. The cement section was steady with a moderate gain in values. A.C.C. hardened by Rs. 2-4 to Rs. 157 and Digvijays Re. 1-4 to Rs. 120-12. In the engineering and mining group, Alcocks staged a good recovery on fresh buying attracted by the low levels touched last week and rose from Rs. 312-8 to Rs. 331-4, but fell back to Rs. 322-8 at the close. Premier Constructions were a fraction better at Rs. 129. Tata Locomotives found buyers at Rs. 116. Shivrajpurs were a shade higher at Rs. 64-8. B.B. Petrols were in good demand and rose by As. 3½ to Rs. 3-13. Indian Coppers were steady at Rs. 3. In the shipping section, Scindias were quiet at Rs. 17-9½, after having been done up to Rs. 18. But Bharat Lines were unchanged at Rs. 96. India Steamships provided a steady feature at Rs. 8-7½. Automobile shares were in demand, Hindustan Motors being bid at Rs. 8-5, as against Rs. 8-3 a week ago, and Premier Automobiles at Rs. 71, as against Rs. 68. In the miscellaneous industrial group, Bombay Burmahs advanced early in the week from Rs. 393-12 to Rs. 405, but reacted to Rs. 396-14. B.I.C.'s were unchanged at Rs. 8-1. Killick Industries gained Rs. 2 to Rs. 185, and their Partly Paids Rs. 12-8 to Rs. 155. After rising from Rs. 156-4 to Rs. 161, National Rayons shed part of the gain and closed at Rs. 157-4. Tata Chemicals were in demand up to Rs. 15-5, as against the previous week's closing of Rs. 14-14, but receded to Rs. 14-11. Tata Oils were quiet at Rs. 40-4. Wimcos had a rise of Rs. 5 to Rs. 200. Larsen and Toubros had business at Rs. 11-3 and Hind Cycles at Rs. 125.

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, *26th May*

Fairly steady conditions were in evidence on the Calcutta Stock Exchange during the week under review. The number of transactions also recorded an increase. The rise in quotations was by fractional stages, the money available in the market being limited, in view of the vigorous drive for collection for the National Plan Loan. Here and there, weak holders appeared, and were interested to take quick but sure profits when, according to them, the going continued to be good. Closing levels were, however, higher on balance.

Teas were extremely buoyant counters. Attractive gains in prices were noted, despite a mild profit-taking. The section had the distinction of recording the longest list of transactions on all days of the week. This was due to good prospects for export especially to the hard currency area. Another reason for the good attention shown to tea shares was the recent publication of company reports, many of which showed good working results.

Among jutes, selected counters were in the forefront and the fact that prices of heavy goods were again on the increase this week made buyers pay more attention to shares of mills producing a higher percentage of sacking than hessian. Operators desired to wait for the views of the Government on the recommendations of the Jute Enquiry Commission. More interest was shown to textiles on the publication in New Delhi of satisfactory export figures relating to cotton piecegoods for January to April.

Good lead was given to the market by speculative Indian Irons, while miscellaneous industrials maintained a firm trend.

In the large number of transactions recorded in the tea section, Patrakolas were lifted from Rs. 180 to Rs. 190-8. Hantaparas were steady at Rs. 246 and Nagaisurrees hardened to Rs. 247 and New Dooars to Rs. 450. Birparas hardened from Rs. 98 to Rs. 128. Among the light-weights, Jutlibaris were supported up to Rs. 13-4. Nagri Farms were bid at Rs. 24-8, as against Rs. 23 earlier. After realising Rs. 24-12, Batelis were taken back to Rs. 23-2. At Rs. 9-13, Sonai Rivers were higher by one point. Other features were:

	Latest quotation	*Rate as on or before 20th May*
	Rs. a.	Rs. a.
Ananda Assam	24 0	21 12
Betjan	32 12	29 8
Brooke Bond	12 12	12 0
Dhelakhat	16 8	15 0
Dhunseri	15 15	14 2
East Indian	22 12	20 2
Hansqua	24 8	23 8
Hasimara	35 12	33 13
Killcott	19 14	17 12
Rajabat	21 4	20 8
Teloijan	17 0	16 0
Teesta Valley ...	27 0	24 8
Tezpore	25 8	22 0

In the textile section, Kesorams advanced from Rs. 23-4 to Rs. 23-8. Elgin Mills were higher at Rs. 15-2, as against Rs. 14-12 earlier. Dunbars, on the other hand, were transacted at Rs. 202, as against Rs. 210 previously.

Shares of paper mills were steady, Orients being the most impressive feature with a rise from Rs. 17-6 to Rs. 19-8, before reacting yesterday to Rs. 19-1. Titaghurs were nearly two points higher at Rs. 41-2, and Shree Gopals changed hands at Rs. 23-9. Bengals came to business at the lower level of Rs. 60.

Indian Irons opened at Rs. 29-13 last Thursday and rose to Rs. 30-11 on Saturday. On Monday, the rate touched a high of Rs. 30-15 after which a decline set in to bring the rate down to Rs. 30-8 on Tuesday. Texmacos were wanted at Rs. 11-12 and Braithwaites fetched business at Rs. 16-15. Jessops improved from Rs. 28-5 to Rs. 28-14, and Kumardhubi were steady at Rs. 10-2.

In the miscellaneous section, Niccos were shown keen attention and in the process were raised from Rs. 18-12 to Rs. 20-2; subsequently profit-taking brought them back to Rs. 19-15. One of the most impressive features was provided by Indo-Burma Petroleums which spurted from a previous rate of Rs. 97 to Rs. 107. British Burma Petrols were steady at Rs. 3-13. National Tobaccos were wanted at Rs. 10-4, Dunlop Rubbers at Rs. 33-12, and Sone Valley Cements at Rs. 7-1. After rising to Rs. 16-7, Rhotas Industries reacted to Rs. 15-15. Metal Boxes at Rs. 16-12 were better by As. 4, National Rollings at Rs. 16, and Ramnugger Canes at Rs. 25.

Among Jutes, Nationals were taken from Rs. 24-1 to Rs. 26-7, following expectations that this counter would be placed on the forward list, while Fort Glosters were lower at Rs. 394 and Deltas Rs. 241. Howrahs were crossed at Rs. 24-10, Unions were quiet at Rs. 173, and Kamarhatty 'D' were steady at Rs. 171.

More interests was shown to Coals, where Raneegunges hardened from Rs. 11-3 to Rs. 12-3 and East Indians were better at Rs. 27-13. At Rs. 34-4, Equitables showed a gain of As. 12, while Jherriahs were supported at Rs. 484. Khatras Rs. 45-6 earlier. Bharats were steady at Rs. 8-5.

• • • •

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, *25th May*

Brisk trading in textiles and firmness in plantings were the main features of trading in the Madras Share Market during the week under review. The postponement by the Government of Madras, of the levy of agricultural income-tax on plantation products and improved prospects of Egyptian purchases of Indian tea were responsible for enlivened activity in planting shares. Among these, select tea and rubber shares came in for good buying support and their prices, as a result, recorded sharp increases. The encouraging investment demand for textiles was attributed to handsome dividends already declared by some companies and expectations of similar announcement by many others. Sugars too were in good demand. Favourites among the miscellaneous scrips had buyers even at higher rates. On the whole, business reported done in the market was, therefore, very encouraging and prices disclosed notable gains.

Textiles came in for brisk enquiry. Balasubramanias, Rs. 40 paid-up, gained Re. 1 to Rs. 42 and Buckinghams Rs. 2 to Rs. 147. Coimbatore Spinnings rallied Re. 1-8 to Rs. 47. Coimbatore Pioneers were done at Rs. 174 *cum-div.*, as against Rs. 171 *ex-div.* The Directors have recommended a dividend of 15 per cent. for the year ended 31st December, 1953 as against 9 per cent. for the previous year. Lakshmis, Rs. 50 paid-up, improved from Rs. 120 to Rs. 122 and Rajalakshmis from Rs. 109 to Rs. 113. Premiers advanced by Re. 1 to Rs. 105. P. Andavar 'A' changed hands at Rs. 91-8 *ex-div.*, as against Rs. 103-8 *cum-div.* and 'B' at Rs. 138-8 *ex-div.*, as against Rs. 155 *cum-div.*, as compared with Rs. 258-8 *ex-div.* The Directors have declared a dividend of 12½ per cent. and a special bonus dividend of 10 per cent., thus making a total of 22½ per cent., for the year ended 31st March, 1954, as against 12½ per cent. for the previous year.

Teas, among plantings, enjoyed the major share of the market's attention. Of them, Chandramalais improved by As. 2½ to Rs. 3-14½ and Blue Mountains by an anna to Rs. 3-2. Emerald Valleys rallied an anna and a half to Rs. 5-8. Highland Produces disclosed a gain of As. 12 at Rs. 13-8, Parksides put on As. 4 to Rs. 17 and Periakaramalais as Rs. 214, as against Rs. 210. Devasholas, however, lost an anna and a half to Rs. 20-12½ and Nilgiri Teas an anna to Rs. 14-2.

Among rubbers, Thirumbadis were enquired at Rs. 3-14½ *cum-right.*, as against Rs. 3-7. The Directors have proposed to capitalise a sum of Rs. 3,05,100 out of reserves and issue bonus shares in the proportion of one new ordinary share for every Re. 1 of ordinary stock held to holders as on 19 June, 1954. Thamaraparly changed hands at Rs. 24 *cum-div.*, as against Rs. 23-8 *ex-div.* The Directors have recommended a dividend of 30 per cent. for the year ended 31st December, 1953, as against 25 per cent. for the previous year. Malankaras advanced by As. 6 to Rs. 37-10 and Vaikundas by As. 8 to Rs. 16. Pullangodes rallied an anna and a half to Rs. 3-3½ *cum-div.*

In the coffee section, Consolidated Coffees disclosed a gain of As. 4 at Rs. 17-12 and Coffee Lands As. 2 at Rs. 10-10. Puthuthotams were fractionally better at Rs. 3-7, while Mysore Coffees were unchanged at Rs. 1-3½.

Sugar shares also attracted good support. Indian Sugars Rs. 10 and Rs. 5 paid-up put on Re. 1 each to Rs. 28-12 and Rs. 18-8, respectively; Deccan Sugars, Rs. 25 paid-up, and E.I.D. 'A' gathered As. 4 each to Rs. 27-4 and Rs. 16, respectively. Travancore Sugars, however, lost an anna to Rs. 5-4.

Selective buying was in evidence in the miscellaneous shares. Aluminium Industries gathered As. 2 to Rs. 14-12 and Dalmia Cements As. 11 to Rs. 9-8. F.A.C.T.'s were enquired at Rs. 4-0½, as against Rs. 3-14½. Jeypore Minings were higher by Rs. 10 at Rs. 230. Travancore Cements, however, lost an anna and a quarter to Rs. 6-2 *cum-div.* Rallis were unchanged at Rs. 56 and Parrys at Rs. 4-12.

NEWS IN BRIEF

IT is proposed to build a railway line connecting Rampur and Rudrapur Kaldawani to serve the Terai colonisation area under the second Five-year Plan. The line will be 50 miles long.

The Government of India has decided to allow export of rice products like murmura, chirwa and poha, freely on trade account from the surplus States of the Punjab, P.E.P.S.U., Hyderabad and Madhya Pradesh to other States.

The Estate Duty (Controlled Companies) Rules, 1953, and Estate Duty Rules, 1953, framed by the Central Board of Revenue in exercise of the powers conferred by sections 20 and 85 of the Estate Duty Act have been printed in book form.

The Madras Legislature has passed the Madras Electricity Undertakings (Acquisition) Bill, 1954, which sought to re-enact as far as possible all the provisions of the Madras Electricity Undertakings (Acquisition) Act, 1949, except those which had been held invalid by the Madras High Court and the Supreme Court.

The Government of India has set up Deck Passenger Welfare Committees in the ports of Bombay, Calcutta and Madras. This is in accordance with the Government's acceptance of the recommendation of the Deck Passenger Committee appointed in 1950 to investigate into conditions of travel on ships, accommodating deck passengers, and to make recommendations on the subject.

A tripartite labour conference concerning the sugar industry will be held at Naini Tal on 8th and 9th June next. The subjects to be discussed include bonus for 1953-54, revision of standing orders, leave rules and provident fund. Besides, Government representatives, there will be nine invitees to represent factories and nine representatives of employees.

A sugar mill situated at Hamira in P.E.P.S.U. is being shifted to Iqbalpur in U.P. Confirming this, Dr. P. S. Deshmukh, Union Minister for Agriculture, said in Parliament last week, that the Government of P.E.P.S.U. and the Punjab were consulted before according permission to shift and they were not in favour of shifting. The ground on which permission to shift had been given was that there was no reasonable certainty of the factory getting the required sugarcane.

According to the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, the all-India final estimate of dry ginger (*Zingiber officinale*) for 1953-54 puts the current year's area and production at 47,232 acres and 14,601 tons, as against the partially revised estimate of 45,563 acres and 13,634 tons for 1952-53. The current year's estimate, compared to last year's, thus shows an increase of 1,667 acres or 3.7 per cent. in area and 967 tons or 7.1 per cent. in production.

The Andhra State Assembly has passed a Bill empowering the State to acquire electricity undertakings in the State. The enactment of the measure became necessary after a similar legislation enacted by the composite Madras Assembly was invalidated by the Supreme Court on the ground that the President's assent to the introduction of the Act in the Assembly had not been secured. Most of the electricity undertakings in Andhra have already been taken over by the Government and the Bill merely seeks to regularise this acquisition.

A new method for increasing the viscosity of linseed oil has been evolved by the Lakshmi Narayan Institute of Technology, Nagpur, under a research scheme of the Council of Scientific and Industrial Research. Linseed oil is used in varnish, paint, enamel and ink industries. For different uses, oils of different viscosities are required. The viscosity of the oil is increased through heat treatment. Generally, this treatment takes 35 to 54 hours and consumes a large amount of fuel. The new method reduces the period of operation for a particular batch to about one-sixth and, consequently, saves an appreciable amount of fuel.

The Indian Council of Agricultural Research has given a grant to the Andhra State Government for the opening of a saline rice research station at Masulipatam. Work in this station will commence next month. The object of starting this research station is to evolve suitable paddy strains for cultivation in saline soils in the State. From Nellore in the south to Visakhapatnam in the north, all along the coast in Andhra State, there are large stretches of saline soil. These stretches are, it is stated, for the most part left uncultivated or are utilised for cultivating coarse varieties of paddy which are poor yielders. At present, there are already a few saline-resistant strains of paddy and the idea behind starting the research station is to evolve new suitable varieties by hybridization experiments.

The Central Board of Revenue has brought out the eleventh edition of the *Indian Income-tax Manual*, Part I, containing the Indian Income-tax Act, 1922, as amended up to 30th April, 1954, the Indian Investigation Commission Act, extracts of all the Finance Acts from 1922 to 1954 and other Acts and ordinances relating to income-tax as amended up to date. One of the special features of this book is the revival of the procedure adopted in 1943 of giving reference to rules in the margins of appropriate sections. Further, the footnotes giving references to the changes effected by the various amending Acts are a little more explanatory than in the previous editions, giving, wherever necessary, the date from which the particular amendment took effect. It is proposed to keep this edition current by issuing supplements as and when any subsequent amending legislation is passed.

The accumulation of rice stocks in Orissa and non-lifting of the quota by State Governments formed the subject matter of a motion in the House of the People last week. In his reply, Mr. M. V. Krishnappa, Deputy Food Minister, said that the Orissa Government had declared a surplus of 260,000 tons of rice and the entire quantity had been reserved partly for the Central Reserve and the rest for deficit States. 1,23,000 tons had already been allowed to leave and the balance of 1,37,000 tons of rice remained in Orissa. It was true that the West Bengal Government suddenly surrendered a part of its quota because of improved supply position in the State. This had partly led to the present accumulation of stocks in Orissa which was further increased by record procurement. During the first three months of 1954, Orissa procured 1,80,000 tons of rice against 1,38,000 tons in the previous year. Some of the mills had not been able to cope with the heavy arrivals. In order to meet the situation the Central Government had agreed to take a substantial quantity of paddy for the Central Reserve. Movement for Madras and Travancore-Cochin was in excess of the quota. Rice was going to the Central Reserve depots of Calcutta and Hyderabad in a simultaneous movement in two directions. The movement had started and would be in full swing within a week.

From Abroad

The Canadian Government has authorised the export of 9,850 tons of rayon wood-pulp—used in the manufacture of textiles—to the Soviet Union since 1st January, 1953.

A five-year project for research on the preservation of food by atomic radiation has been taken up by the U.S. Army. If the research is successful, atomic preservation may revolutionise food processing, packing, transportation and storage.

The U.N. Technical Assistance Administration spent $7,059,225 on its programmes last year. Some 494 experts from 50 countries were sent by T.A.A. to 54 countries during 1953. T.A.A. fellowships were awarded to 627 nationals of 78 countries and territories.

The large soda ash industry to be established in northern Holland by the Royal Netherlands Salt Industry, the State mines and other concerns, with financial help from the Dutch Government, will be completed in 1956-57. It will have a capacity of 160,000 tons per annum, as against an estimated home consumption of about 90,000 tons.

The American Synthetic Rubber Corporation, a new venture formed by a group of 29 companies, proposes to place a single bid to buy one of the Government-owned synthetic rubber plants. The Corporation has a capital of $6.6 million. Each participant will receive 500 tons of rubber yearly for every $50,000 invested.

The British Government has refused licences for export of fish factory ships to Russia on the ground that the ships can be converted into submarine depot ships in war-time. This refusal has resulted in a deadlock of the negotiations for a contract by a shipbuilder in the U.K. to build three fish factory ships for the U.S.S.R. worth $4 million in British yards.

The world's civil airlines carried more passengers during 1953 than ever before—and more safely —according to the International Civil Aviation Organisation. The number of passengers carried by scheduled airlines was 52 million over 28,000 million passenger-miles, an increase of 16 per cent. in the number of passengers over that in 1952, with 10 per cent. fewer passenger casualties.

The U.S. Foreign Operations Administration has set up a training centre for South Asian and Far Eastern technicians and officials in Tokyo, Japan. About 200 persons will study improved techniques in public health, agriculture, public administration, community development, education and industry at the Japanese centre in the next 12 months.

A British textile machinery firm will supply between 50 and 60 per cent. of the £7 million Russian order for British textile machinery. This is the largest single order in value that the firm has obtained in the face of keen competition from other European countries. Deliveries of the machinery will start towards the end of this year and will be completed by 1957. Payment, so far as the contracting firms are concerned, will be in cash.

A delegation of six German industrialists and bankers is scheduled to leave for Moscow on 7th June next to discuss general conditions of payment and other terms of future German trade with Soviet Russia. The visit is sponsored by the Eastern Trade Committee for German Industry and follows the recent German-Soviet trade talks held in Geneva. This is the first time since before the war such a delegation from Germany is to visit Moscow.

Continuing its all-out attack on world markets against overseas competition, the British motor industry exported again in April this year a large part of its rising production of cars, commercial vehicles and agricultural tractors. Notwithstanding the Easter holidays, almost 34,000 cars, only 500 less than in March, were shipped abroad. Both commercial vehicle exports at just over 11,000, and tractors, at nearly 10,350, in fact, slightly exceeded the number sent in March. More than 14,500 cars a week were made in British factories in April; the average for commercial vehicles was over 4,500.

PERSONAL

MR. Ras Imru Haile Salassie, Ambassador-designate of Ethiopia to India, arrived in New Delhi early this week.

Mr. George V. Allen, Ambassador of the U.S. to India, has returned to New Delhi after a three-week visit to the U.S.

Dr. G. Blank has been appointed Trade Commissioner of the Federal Government of Germany in Bombay. He assumed charge of his office on the 14th of this month.

Mr. Naval H. Tata, Chairman, Tata Mills Ltd., left for Geneva on Tuesday this week to attend the meeting of the Governing Body of the I.L.O. and the main conference to be held in June next.

Mr. N. G. Abhyankar, former Collector of East Khandesh, Bombay State, has been appointed Director, Division of Programming and Financial Management with the U.N. Technical Assistance Board in New York.

Mr. D. L. Mazumdar, Officer on Special Duty in the Union Finance Ministry in connection with the Company Law Reforms Committee, has been appointed officiating Secretary, Department of Economic Affairs, Finance Ministry, *vice* Mr. K. G. Ambegaonkar who has proceeded on leave.

Sir Alexander Roger, Chairman of the British Insulated Callender's Cables Ltd., will retire from the chairmanship of the Company after the annual meeting on 10th June. Mr. W. H. McFadzean, the Deputy Chairman and Chief Executive of the Company, will succeed Sir Alexander.

The following members of the House of the People have been declared elected to serve on the Committee on Estimates for the year 1954-55, commencing from 30th June, 1954.

Mr. Kamal Kumar Basu, Mrs. B. Khongmen, Mr. Radhelal Vyas, Mr. K. Raghuramiah, Mr. Balvantray Gopaljee Mehta, Mr. H. V. Pataskar, Mr. T. Madiah Gowda, Mr. Diwan Chand Sharma, Pandit Balkrishna Sharma, Mr. Mohanlal Saksena, Dr. Syed Mahmud, Mr. Upendranath Barman, Mr. Nityanand Kunungo, Mr. Nalla Reddi Naidu, Miss Annie Mascarene, Dr. Ram Subhag Singh, Mr. C. P. Mathew, Dr. Lanka Sundaram, Mr. M. D. Ramaswami, Mr. V. B. Gandhi, Mr. M. R. Krishna, Mr. Ahmed Mohiuddin, Dr. Natabar Pandey, Mr. P. N. Rajabhoj and Mr. K. Kelappan.

The following members of the House of the People and of the Council of States have been declared elected to serve on the Committee on Public Accounts for the year 1954-55, commencing from 30th June, 1954.

Mr. B. Bas, Mr. Tribhuvan Narayan Singh, Mr. Ramananda Das, Mr. S. N. Agarwal, Mr. S. N. Das, Mr. B. S. Mehta, Mrs. Ammu Swaminadhan, Mr. Khandubhai K. Desai, Mr. Amarnath Vidyalankar, Mr. S. V. Ramaswamy, Mr. Uma Chandra Patnaik, Mr. Choitharan Partabrai Gidwani, Mr. V. P. Nayar, Dr. Indubhai B. Amin and Mr. U. M. Trivedi.

Members of the Council of States: Mrs. Violet Alva, Diwan Chaman Lall, Mr. K. S. Hegde, Mr. P. S. Rajagopal Naidu, Mr. Ram Prasad Tamta, Mr. Mohamed Valiulla and Mr. J. V. K. Vallabharao.

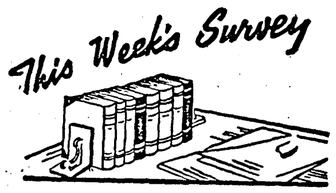
"COMMERCE" 1929

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *1st June*

Share-hawking in India

The Bombay Shareholders' Association has addressed an interesting letter to the Government of India in the Department of Commerce, on the subject of the sale in India of shares and debentures of foreign companies. In it, the Committee of the Association lay stress on the highly objectionable methods adopted by some foreign companies in pushing the sales of their shares and debentures in this country. In a recent Bombay case, in which a foreign company was involved, Mr. Justice Mirza, of the Bombay High Court, described, in his judgment, the company in question as a bond-hawking company. His Lordship found that the plaintiff company had employed a large number of sub-agents all over the country for the purpose of selling debentures and, this system had been described by His Lordship as being one which would be regarded in any civilised country as a scandal. His Lordship added that the defendant in the suit had justified his statement that the bonds which the Company were attempting to sell were worthless to their knowledge. As no official copy of the judgment has yet been obtained, we refrain from referring to it at further length. The evil effects of the objectionable bond or share-hawking practices resorted to by some companies cannot be exaggerated. They play upon the credulity of a section of the investing public, particularly the middle class and the middle lower class, who are not in close touch with the bazar and ultimately discourage indigenous investment and saving. They divert the country's surplus funds from beneficial indigenous investments to investments abroad of a very shady or undesirable nature. The Bombay Shareholders' Association do not doubt that the Government are alive to all these aspects of the situation and contend that these practices are possible owing to the unsatisfactory state of the law as it exists in this country.



POOR DEFENCE OF C.T.O.

THE Union Minister for Agriculture, Dr. Punjabrao Deshmukh, has now made an elaborate statement which is intended to be a reply to the charges of gross negligence and waste of public funds levelled against the Central Tractor Organisation by the Estimates Committee. That the Ministry was anxious to defend the C.T.O., even before the Estimates Committee's probe was completed, is evident from the fact that it set up a parallel departmental committee, the Zaidi Committee, to investigate the C.T.O.'s affairs. This compelled the Speaker to remark that it was "not correct for any Ministry whose affairs were being examined by a Financial Committee of Parliament to appoint a parallel committee, wholly or partly of members of Parliament, to examine the same matter at the same time, without the knowledge of the Committee." The Zaidi Committee, the report of which has not been published, is reported to have pointed out that "some mistakes were inevitable in an enterprise of the magnitude undertaken by the C.T.O., with no precedents and traditions." Dr. Deshmukh's statement is inspired by precisely this sentiment, for he too emphasised that "one has to pay a certain price for acquiring experience in a new field." This might be an extenuating circumstance, but hardly a justification. In any case, it is poor consolation for the taxpayer who finds that the C.T.O.'s losses, during the three years ended 1952-53, amount, on a very conservative estimate, to as much as Rs. 68.32 lakhs. The question is whether the "experience" has not been too dearly acquired. Yet another way of looking at the question is to ask whether the management in a private sector would have been permitted to commit the same mistakes without inviting the wrath of the shareholders and even Government's intervention.

Only a few of the specific charges made by the Estimates Committee have been answered by the Union Minister. Thus, the Estimates Committee had complained that the C.T.O. indulged in "indiscriminate purchase of four different makes of heavy tractors and accessories." The Union Minister's defence is that the types of tractors bought by the C.T.O. were the only types that were then available, and that they were approved by the World Bank. It is not clear whether other types were not available at that time. The Estimates Committee, however, affirms that many types "were then available in the world market outside the U.S." The Estimates Committee has also raised the point as to why "when very heavy capital expenditure was involved, no question of experiment and trial was considered" by the Ministry. To this charge, Dr. Deshmukh says that trial would have meant two years of work, and that the need to augment food production was too urgent to brook delay. Perhaps, the Minister is exaggerating the difficulties in carrying out trials. The Committee has asked why experiments, even on a "modest scale," were not found necessary. The question is whether a "modest" experiment could not have saved valuable money without, in any way, holding up the progress of the campaign for reclaiming waste land.

As regards spare parts, the Committee emphasised that "one direct result of the unco-ordinated and unplanned policy which has been followed is the accumulation of a huge surplus of spare parts, equipment and stores, etc., estimated at over a crore of rupees." The Minister's reply to this makes strange reading. More spare parts were needed, he says, because the "tractors were not designed to do the type of work for which we had purchased them." He is giving the case away. If they were not designed for the purposes which the Ministry had in view, why were they bought at all? It would appear that since the Ministry had no experience in the working of the tractors, it relied on manufacturers' advice regarding the quantum of spare parts needed. More spare parts were also bought because the Ministry decided to "err on the side of safety" in order to see that the C.T.O.'s work was not held up. Even so, it is not clear why the World Bank's advice which, he says, was followed in the matter of purchase of tractors, was not followed in the matter of purchase of spare parts. The World Bank, it is stated, had suggested the purchase of spare parts to the tune of 25 per cent. of the cost of tractors, whereas the Ministry bought spare parts to the tune of 70-80 per cent. of the tractors' cost. The Minister, however, is proud of the fact that, whereas many privately-owned tractors are not working for want of some spare part or other, such disaster has not befallen the C.T.O. Private owners of tractors, it is well to remind him, have no taxpayers' money to build up an Everest-like pile of spare parts.

MARKETING OF COFFEE

The Coffee Market Expansion (Amendment) Bill, which has been referred by Parliament to a Select Committee, is intended to ensure better co-ordination between the Board and the Government and to empower the Government to increase the present cess of Re. 1 per cwt. to a maximum of Rs. 6 per cwt. of coffee. The Chairman of the Board is to be a full-time officer, appointed by the Government. The Union Minister for Commerce and Industry, Mr. T. T. Krishnamachari, who piloted the Bill, reviewed the position of the coffee industry and indicated briefly the reasons which prompted the Government to alter the constitution of the Board.

Mr. Krishnamachari said that the lowest level of production of coffee was touched in 1946-47, when the output was 15,300 tons, whereas this year there was a bumper crop of 27,000 tons. Out of the 235,000 acres under coffee plantation, about 85,000 acres were small estates owned by 27,800 people. The average production of coffee, he said, was 8 cwts. per acre in big estates and 1½ cwts. in small estates. Normally, about 18,000 tons of coffee were consumed in the country, though the level of consumption declined to 15,600 tons in 1953. He attributed this decline to increase in prices. The floor price was Rs. 180 per cwt. and any higher price realised would go to the pool and be distributed to the producers. He calculated that, on an average, the price paid by the consumer was Rs. 225 per cwt. Any increase in the price paid by the consumer, he said, acted as a direct benefit to the producer. He added that "it stood to reason that a Board dominated by the producers would welcome an increase in the price of coffee." The increase in coffee prices affected the lower middle-class people. The Board, he contended, had done little to bring down prices. He asked the House to remember two cardinal factors: (1) Prices shot up and the determination of prices was entirely in the hands of the Board; and (2) development of the industry had not been even. The Government, he revealed, was thinking in terms of further expanding the acreage by 100,000 and raising the yield of small-sized estates from 1½ cwts. to 2½ cwts. per acre.

More than one member of Parliament raised objection to the provisions of the Bill which seek to give powers to the Government not only to appoint a Chairman for the Board—instead of his being elected—but also to nominate the members. It was argued that it would lead to more bureaucratisation of the Board. The Minister's only defence seemed to be that the Board was dominated by producers and that too by large producers. He said, in effect, that the Government ought to have greater control over the Board. Although the Government could veto any decision now, it had, he remarked, no powers to initiate any measures.

In considering the effect of the proposed legislation, it is necessary to bear in mind some distinguishing features of the coffee industry. The price of coffee in India is lower than in the world markets. It is only 30 to 35 per cent. of the world market price. In this respect, it differs from many other commodities such as silk, sugar and rubber, the prices of which are considerably higher in the Indian market than in the world market. Again, coffee is the only commodity for which there is a body (Coffee Board) which enjoys the monopoly over its sale. The Coffee Board takes over the entire coffee crop produced each year and sells it on behalf of the growers. In the Act, as it stands at present, the Central Government has to fix the maximum or minimum prices "after consultation with the Board." The Bill seeks to omit the words "after consultation with the Board," so that it is open to the Government to fix any price it thinks best. Thus, not only will the Board consist wholly of Government's nominees, but the producers are denied the right to be consulted in matters relating to price-fixation. Apart from the legal question, whether it is right for any Government-nominated body to compel producers of a relatively non-essential item like coffee, to part with their produce at a price, in the determination of which they have no voice, there might be many practical difficulties in giving effect to the Government's powers. If the prices are high, the consumers will complain. If the prices are low, the producers will suffer. The basic problem in coffee is that demand has outstripped production. No improvement in the scheme of marketing, by giving greater representation to either consumers or small producers or both, will solve the problem of high prices for coffee.

* * * *

Commenting on the debate on the Coffee Bill in Parliament, our Plantation Correspondent writes as follows:

"It is clear from the debate on the Indian Coffee Market Expansion (Amendment) Bill, 1954, in the House of the People, that the Government has not furnished adequate reasons for the far-reaching changes proposed in the Bill. The main provisions of this Bill were published in these columns last week. In his speech introducing the Bill, the Minister for Commerce and Industry referred to the fact that a considerable proportion of the acreage under coffee in India was in the hands of small growers and also to the wide disparity in the yields per acre of the small grower and big grower. He, therefore, proposed that the levy of the increased cess up to Rs. 6 per cwt., as against the existing cess of Re. 1, should be used to help the small estates to increase their production. The manner in which this help might be rendered in practice was not disclosed by the Minister.

"The Minister then went on to say how the consumer had maintained the industry when the export markets were closed during the war. He also explained how the Government had succeeded in bringing down the price of coffee to the consumer and claimed that, in the first four months of this year, the total consumption had increased to 8,400 tons. It is difficult to accept his contention that the increase in consumption during the four months is entirely due to a little reduction in price. He conveniently ignored the fact that it was the Government which was mainly responsible for the sudden rise in the price of coffee in the previous year.

"Opposition to many of the provisions of the new Bill was strongly voiced by some members. Mr. Asoka Mehta said that efforts were being made to subordinate the Board to Government and that the Board was sought to be completely emasculated. He did not know where was the necessity for the Board itself, when the Government could run it as a Government Department. He regarded the proposals in the Bill as of a retrograde character. Mr. C. P. Mathen paid a tribute to the Board's work in the past. He did not know why the growers' representatives in the Board could not be elected by their organisations. Other members also criticised the Minister's attitude regarding growers' representation, pointing out that the growers should have an important say in the affairs of the Board which took away the whole of the production of the growers.

"Mr. Krishnamachari's reply to the debate, as reported in the Press, was hardly an answer to the criticisms. He did not deal with some of the main objections to the Bill raised by the industry. As far as the question of nominations of growers' representatives to the Board was concerned, he said that the State Governments may be advised to select representatives out of panels of names submitted by growers' organisations. But he did not say why the present system of growers' associations nominating their own representatives could not be continued. Nor did he give any reasons for the proposal to give up the present practice of the Government consulting the Board before taking important decisions affecting the industry. It is difficult to appreciate the reasons for the Minister not dealing with these matters.

"It is to be hoped that the Select Committee, to which the Bill has been referred, will go into the objections raised and put the Bill into a shape in which it will be acceptable to the growers and others concerned."

PROGRESS OF T. I. CYCLES

An impressive instance of healthy development achieved by the cycle industry is provided by the performance of the T.I. Cycles of India Ltd. If the monthly average output of completed bicycles in the country has improved from 9,523 in 1951 to an impressive figure of 22,014 in 1953, such improvement is not a little due to the progress made by the T.I. Cycles. When this Company was started four years ago, it was expected that it would take five or six years at least before most of the components could be manufactured in the country. But today, in its fourth year of existence, the Company is in the happy position of claiming that practically all the essential components, except three or four, are capable of being manufactured in its factory, which was recently opened by His Highness the Maharaja of Mysore.

Much of this speedy progress would not have been possible by the mere erection of the factory or the installation of the machinery, as it depends more on the trained staff appointed to handle the machines. Training enables the workers to manufacture, as was pointed out by the Chairman of the Company, Mr. A. Ramaswami Mudaliar, in his address at its annual meeting held a few weeks ago, "those very complicated components of the cycle with precision and accuracy which alone can give strength to the cycle." Accordingly, the Company has not hesitated to have its best men trained not only by sending them to England but also by securing the services of expert technicians from the U.K., for short periods, to supervise the work going on in the Indian factory. These visits have been very valuable for the Company by enabling it to produce the Indian "Hercules" as good as its English counterpart.

Mr. Ramaswami Mudaliar, however, scents a possible danger to the progress of the industry and that is the prospect of being called upon to bear the burden of subsidising small-scale manufacturers of odd cycle components. These manufacturers appeared on the scene during the last war when there was dearth of bicycles and components. Having entered the field, they have now their own problems, and Mr. Mudaliar fears that their cries for assistance may result in the Government's compelling the organised units to buy the parts manufactured by these small-scale producers. Considering the way in which the Government has been trying to pamper small-scale industries in other sectors at the cost of organised units, the fears of Mr. Mudaliar are not unfounded. It is needless to add that any move of the kind feared by him would certainly impede the progress of this infant industry on sound lines.

EQUAL PAY FOR WORK OF EQUAL VALUE

The Government of the U.K. has decided to implement the principles of equal remuneration for men and women doing work of equal value. This principle, which was accepted as far back as in the twenties of this century, is expected to be implemented before the end of March, 1954. It will, according to Press reports from the U.K., be introduced gradually. The form it will take will depend on the result of the negotiations that will shortly commence between the Treasury and the Civil Service unions.

The Government's decision has had a mixed reception. While the labour ranks have hailed it as a welcome measure, the private employers have begun to view the decision with concern. Labour ranks aver that equal treatment of men and women as regards remuneration would facilitate the distribution of labour supply according to the capacities and abilities of workers and would promote mobility of labour in the interests of production. This is so, especially because women in the U.K. represent an integral and substantial part of the labour force.

The employers' concern at the Government's decision is based on the possible increase in the wage bill. They point out that, at a time when the need for reducing the cost of production is urgent, the present decision would impose additional financial burden on the employers. It is true, they admit, that the decision of the Government is confined only to its servants. But this, they point out, is bound to have repercussions on the private sector. Thus, there will be a demand for equal pay from women teachers and from women employed by local authorities and private enterprises. It is also possible that men with dependents who find their standard of living falling below those of women workers might clamour for increased family allowances, a fear which was responsible for the Labour Government postponing the implementation of the principle when it was in power.

The immediate effect of the decision is that about 130,000 women who are employed in the Civil Service will get a pay rise equal to the present difference between the pays of women and men for work of equal value done. Even the other 100,000 women employed in the Civil Service on women's rate for women's work may get a sympathetic increase. The implementation of the principle is estimated to cost the Civil Service £13 million and school authorities £17 million. If that is so, the cost to private enterprise, which is the largest employer of women labour, would naturally be very large.

INTERNATIONAL TIN AGREEMENT

The Government of India's ratification of the International Tin Agreement is welcomed in British circles. According to a spokesman of the British Ministry of Materials, India's position as a disinterested consumer might influence a number of other countries, which have been hesitant to participate in the Agreement, and thus make it workable. The ratification by India brings the number of countries which have so far accepted the Agreement to four, with a total consumer vote of 224. As nine consumer voters are needed with their total of 333 votes, there is still insufficient consumer signatories to make the Agreement effective. The last date for the ratification of the Agreement is 30th June, 1954.

The agreement, it may be recalled, envisages the creation of a buffer stock in tin and the allocation of export quotas among producing countries on the basis of an estimated surplus of 25,000 tons per annum. The Agreement is expected to stabilise the price of tin on a basis which will secure long-term equilibrium between supply and demand and, at the same time, ensure adequate supplies of tin at reasonable prices at all times.

Of the countries that do not desire to participate in the Agreement, the U.S. is the most important. Its attitude, which is presumed to follow the recommendations of the Randall Commission, is, however, far from being hostile and is described as "benevolent neutralism." It is true that the Agreement is also so framed as not to make its execution depend on the concurrence of the U.S. Nevertheless, it is held that the scheme will lose much of its substance without active American support, as the U.S. is the largest consumer of tin.

OFF THE RECORD

(By "ROVER")

MY lexicon tells me that etymologically the word 'bonus' in English is borrowed from the Latin. In the latter tongue it means 'good.' In the context of present employer-employee relations, very little, if any, of the original meaning remains attached to this word. Instead of indicating harmony, cordiality and well-being, it has gradually come to acquire and gather round it an evil connotation of discord, coercion and strife. Bonus has, perhaps, created more disputes and ill-feeling than any other single issue in our history of industrial relations during recent years. It is hardly appropriate to designate a veritable bone of contention, a hardly annual of evil repute, a seed of many a potent discord and active strife, as bonus, meaning something good. A subsequent reference to the dictionary on my desk has, however, enabled me to discover a grim appropriateness in the adoption of this term 'bonus' for the ex-gratia payment that an employer makes to his worker. Bonus, it says, also means a bribe. It is possibly asked for and conceded more in this secondary sense than in its primary sense of a gift as a token of goodwill.

I was led to undertake this diverting research in etymology by the Press report regarding the award in the dispute regarding 'bonus' between the Millowners' Association at Ahmedabad and the textile workers in that industrial beehive. It was given by Mr. H. V. Divatia, an Ex-Chief Justice of Saurashtra and now Vice-Chancellor of the Gujerat University. Mr. Divatia was also for a long time a judge of the Bombay High Court, but I doubt if he would want this decision of his to be taken and interpreted as a judicial pronouncement. As he has himself called it, it is an *ad-hoc* award, following no principle and laying down none. Some newspapers have called, what he has given to the workers of 22 units of the textile industry in Ahmedabad, a 'gesture bonus.' I would not call it so. A gesture indicates a state of feeling or attitude on the part of one making it. It would have this significance and some value if the millowners had given it off their own bat. There is little point and no value in an umpire making it on behalf of one of the contestants. It could not and would not, in this instance, be taken either as voluntary or spontaneous. It would, therefore, set no bones, if any were broken.

Whatever one might think of this demonstration of generosity, while admitting in the same breath that there was little in the earnings of these units to justify it, I consider Mr. Divatia's award as very valuable and its contents, taken as a whole, including the *obiter dicta*, as opportune. I do so not because it is likely to maintain peace in the textile industry at Ahmedabad. It may or may not do so. From the vehement and extravagant manner in which it has been denounced as "a cruel joke on workers" and the call given to reject it by a small section of workers there, it might quite conceivably lead to some trouble, in spite of this somewhat gratuitous gesture.

I consider it valuable and timely, because Mr. Divatia has underscored, with all the emphasis resulting from a deep study of the conditions in the industry, the present unsatisfactory nature of the law, procedure and practice of deciding whether any bonus is due, and, if so, the quantum of it. It is scandalous that, in spite of the Centre and the States passing lorry-loads of legislation for regulating industrial relations in the minutest details, it has never occurred to the benign authorities to define bonus and to lay down clear and precise principles governing its fixation. Laws are meant to avoid disputes or to settle them when they do happen to arise. Most of our recent laws have created new disputes and resolved none of the old ones.

Love for fractious litigation has been accepted as one of the main causes of rural poverty in our country. Not content with this evil trait in our character, the authorities themselves have helped to import this spirit in our towns and cities, in order, perhaps, to bring them on a level with the ruined countryside. It is little use striving strenuously for securing peace in industry, when, with every new Act you put on the statute book, you create a vast new field for unending disputes for compulsory adjudication. A cynic might justifiably aver that it would be kinder to let the score be settled once for all by a clean fight than to create conditions which would perpetuate bickerings and feed the fire of ill feeling. While I do not subscribe to this counsel of desperation, I do feel tired of the present state of suppressed hostility seeking numerous outlets and vitiating the atmosphere necessary for peaceful and plentiful production.

The trouble with our overwhelming volume of legislation on industrial relations is not necessarily confined to the question of bonus. Both the psychological and economic effects of hurried enactments, for a hot-house improvement in the standard of life of the workers, have tended to arrest industrial expansion at the cost of millions of people who, every year, attain the age for work and for whom it is necessary to earn their living. This has aggravated the problem of unemployment and brought about frustration and disillusionment for countless youths, at the very threshold of their working life. This is by no means the right way of breeding good citizens and it is the next generation which will have to pay the heavy price for turning our bright lads and bonny lasses into twisted and tortured souls.

It is time our public leaders, as well as the vast army of unemployed in search for a living of sorts, realised that every additional anna which is being given to the workers in jobs today is not at the expense of the industrialists, but at that of those who are out of work or who have never known gainful employment. How does it help a man who is starving, if his brother, who already has a loaf, is given a savoury to make him relish his bread better. The time for distributing wealth is after it is produced. It is poverty and hunger we have to distribute equitably today, not wealth. Our distribution of poverty, even amongst the limited ranks of the poor, is becoming monstrously inequitable and grossly unjust. If our Governments and the labour leaders believe that adding burdens on industry for workers' welfare in any way pinches the wealthy, they are grievously mistaken. All that they are doing, in the present circumstances, by this ill-conceived policy is to pinch the consumers to whom the burden is passed on and to arrest expansion, thereby closing the door for employment of the out-of-work. While the gain for the few is illusory, the hurt for the many is very real.

In this connection, I have just received from a kind friend a cutting from the *New York Times*. I learn from it that conditions in Cuba in this respect are very similar to our own. They too need new investment and new industries to solve their problem of growing unemployment. Not unlike us, they in Havana had also rushed headlong towards welfare legislation after the war. They have, however, discovered in time that the atmosphere which resulted from this was an obstacle to industrial expansion. The Government, after listening to the representatives of industry and the workers, have proposed revolutionary modifications of the existing labour laws. The right to dismiss workers, long denied to employers in Cuba, is soon to be restored as a part of the proposed change. Enlightenment does come to every one in the end. Some can sense a tornado from the flight of a straw. Others, less wary or more obstinate, wait for the proof till they are overtaken by the storm. All a poor scribe can do is to congratulate Dr. Carlos Saladrigas, Minister of Labour at Havana, and to lament for the lack of forethought and foresight of our own popular leaders.—*All Rights Reserved.*

INDUSTRIAL DEVELOPMENT CORPORATION

SOME UTOPIAN PROPOSALS OF ESTIMATES COMMITTEE

(From A Special Correspondent)

NEW DELHI, *25th May*

THE much dreaded North Indian summer has descended on the capital this week. The mercury has been hovering between 110 and 113 degrees during the peak period of the day. The incessant heat waves have been making life extremely unpleasant and driving the citizens away from the main thoroughfares during noon and early afternoons. Perhaps being unable to stand the strain caused on account of an enervating summer, members of Parliament left immediately after the close of the Budget session for their respective home towns. The official exodus has also begun in right earnest, the first to set the example being the President of the Republic who has left the Capital for salubrious Simla for a five-week sojourn. The Prime Minister has followed him for a week's stay in that Himalayan hill station while the Finance Minister, always bent on business, has also left Delhi for Bombay and other places in order to make a personal study of the progress of the Five-year Plan in a number of States. He is likely to return to the Capital some time at the end of June. It is likely that many other Central Ministers will be leaving the Capital in the next few days, under one pretext or another, mainly to avoid the rigours of the summer. The top-ranking officials will not also be immune from the contagion of the summer exodus. Since the closing of schools generally synchronises with the advent of the summer here, the lower rungs of officialdom have also developed a tendency to be out of the Capital during the worst part of the summer. This is borne out from the fact that the railway authorities have been compelled to resume the *Janata* service to the South, which had remained suspended for the last few months.

DELHI LETTER

A start has been made by the Government of India this week in connection with the establishment of an Industrial Development Corporation, as envisaged by the Minister for Commerce and Industry. Mr. Boothalingam, until now Joint Secretary of the Ministry, has been promoted as Special Secretary to look after the work of this Corporation and to give it practical shape, especially in its initial stage. It is likely to take a couple of months before the skeleton of this organisation is completed. In the next few days, the Corporation will be formally registered with a capital of Rs. 1 crore. Immediately after this the Directors of the Corporation will be chosen, who will be asked to select for public ownership and expansion, such of those industries as could not attract private capital and initiative. It is likely that this Corporation will try to attract foreign participation in the capital structure of the new industries that are proposed to be established, as also the technical know-how. Although it is now proposed that the Government should hand over the entire structure to private enterprise after a few years when the industry becomes fully established, it is extremely doubtful that Parliament will give its consent to such a proposal, now that the sphere of the State in the economic life of the nations has more a tendency to expand rather than to contract, and since the managing agency system has not found favour among some sections of the public as a fit organisation to continue to adorn the mantle of industrial leadership in the present-day industrial world, it is very unlikely that the new industries nursed by the State would be handed over to it.

Commercial and Industrial Services

The successful development of the Industrial Development Corporation pre-supposes a well-knit organisation to manage State enterprises not only in a businesslike manner but also with utmost efficiency and speed. In order to fill up this lacuna as it were, the Estimates Committee has recommended the setting up of an Indian Commercial and Industrial Service to look after State undertakings. The Estimates Committee is of the view that the personnel to man this cadre should be drawn from business, commerce, industry and trade. It further adds: "The present practice of appointing officers from Services either on the Board of Directors or as Managing Directors should be done away with, and in any case, the Secretary or the Joint Secretary of Ministries who are concerned with advising the Minister or Government on matters of policy and otherwise to keep effective control on the various activities of the Ministry should not be associated with the day-to-day execution of their policies either in connection with State undertakings or otherwise." It may be mentioned that for some time past, the Government has been considering the establishment of two Services called the Economic and Statistical Service and the Industrial Management Service. A definite decision has not yet been taken in the matter, and now that the Estimates Committee has also favoured the above proposal, it is hoped that Government will expedite the constitution of this Service. The Estimates Committee has laid down a number of fundamentals for the efficient and proper running of State undertakings. There should be a separate Board for each industry, the directors of which should be reputable people in their line. The Comptroller and Auditor-General is asked to issue instructions in regard to the maintaining of proper accounts. Another useful recommendation is the setting up of an Institute of Costs and Works Accountants for the purpose of training a sufficient number of men in this line with the modern and up-to-date methods suited to the various types of undertakings. Besides, with a view to improving the efficiency of the governmental work, the Estimates Committee has stressed the need for the constitution of a Standing Civil Establishment Committee consisting of representatives from different Ministries to see that there is no overlapping or duplication in the functions assigned to different Ministries and undertake a review of the strengths of the Ministries and Departments of the Government of India every three years, suggesting increases or decreases in the number or rationalisation of their duties and improvement in methods of work and the like. The Committee should also examine periodically the structure of pay scales of the various categories of staff, etc. If this scheme is implemented, it will lead to greater efficiency in administration and bring about uniformity of approach to staff problems, methods of procedure, quantum of work done by the employees, and avoid duplication or waste. Another important recommendation suggested by the Estimates Committee is concerned with the setting up of an expert organisation for purchasing goods abroad for Government requirements. It does not favour the principle of purchase organisations being run as part of Government Department or as consular offices in the U.K. and the U.S.

Ceilings on Salaries in Private Concerns

These apart, many of the recommendations and suggestions of the Estimates Committee are either conventional or completely utopian in character. When it has recommended that early steps should be taken to examine the question of prescribing the ceilings on salaries in private employment, consistent with the policies and principles adopted for public service, it has allowed itself to tread on slippery ground. This is impracticable, to say the least, since it is not only the question of demand and supply but the enforcement of such things is beyond the practical possibilities of Government. There is not also any notable precedence in this respect in any of the democratic Governments. Further, why should Government lay down a scheme along the rationalisation of salaries in private sectors, qualifications and other conditions of employment for various services, etc. Again, when the Committee has desired the nationalisation of the Imperial Bank, it has put on the mantle of expert financiers, for which task the members are least qualified.

(Concluded from next column)

employees of this size, that it cannot possibly do any harm to the relations between employees and management, and that it may have the effect of strengthening staff loyalties. In any event, they have been very wise in attaching no strings to their bonus, and in letting the merits of the scheme bring their own reward. Other industries will await with interest reports of the Directors on the effects of the operation of the scheme which may quite easily be a forerunner of numerous similar attempts by other industrial giants.—*All Rights Reserved.*

I.C.I'S SCHEME FOR SHARING PROFITS

NO STRINGS ATTACHED

(From Our Own Correspondent)

LONDON, *22nd May*

THE classical example of profit-sharing in British industry up to date has been the famous John Lewis Partnership. It was not at all uncommon after the war to hear of many cases of "demobbed" officers who announced proudly that they had now become partners in a large department store. But the John Lewis Partnership adopted the technique of the benevolent despot. They did good but it had to be in the way that the management and Mr. John Lewis, in particular, thought desirable. Although profit-sharing in some form or other has been tried by many small industrial concerns, it has in no other case been adopted by a really substantial enterprise and the experiment which Imperial Chemical Industries is undertaking is a piece of pioneering work.

LONDON LETTER

From the point of view of the I.C.I. shareholders, they are, in practice, increasing the wages of the employees by one per cent. for every one per cent. by which the actual dividend exceeds a datum figure of five per cent. Looked at this way, the cost cannot be regarded as great, since that one per cent. increase might easily have been claimed in other directions and it is in any case a very small price to pay if the objective of the Directors is realised, which is to give a greater identification of interest between employees and shareholders.

The exact form of the proposal to share profits is to issue bonus shares to the employees in the ratio of one per cent. of their annual earnings less tax for every one per cent. by which the dividend exceeds five per cent.; the payment to be made after deduction of tax in the same way as if the bonus were wages. Where the sum provided is not enough to purchase a minimum of 25 £1 shares, then it is put aside in a fund until it is sufficient for this purpose. The shares have themselves to be bought on the market at market prices and the employee is left free to do whatever he wishes with them, that is, to sell them and spend the proceeds, if he wants. For its part, the Company expects to have the payments rank as allowable expenses for Income-tax in exactly the same way as if they were wages. That is why the scheme is essentially one for paying additional wages *pro rata* to the increase in profits, but paying these wages initially in the form of shares. If an employee is not particularly interested in remaining a shareholder in I.C.I., he can sell the shares, and the test of whether or not the scheme is achieving its purpose can only be judged by the percentage of retention of shares by the employees.

As a matter of interest, the five per cent. which has been selected as the datum above which the bonus is paid is calculated after the capitalisation of some £80 million of reserves. Clearly I.C.I. want to be in no danger from any take-over bids. The capitalisation of these reserves will in effect double the capital and make a future five per cent. dividend equivalent to a current 10 per cent.

As far as the employees are concerned, the merit of the proposal is that they are being given without any strings attached. It is a straightforward increase in income to match a given level of profits; and, since I.C.I. is a Company from which one can expect relatively stable *dividends*, there is not the danger from which so many schemes suffer that employees tend to accept the bonus as part of their wages and to treat it as a cut in wages if the bonus does not materialise because there are not sufficient profits. But the fact that the bonus is paid in shares instead of in cash is a further safeguard underlining the fact that the payment is something separate from the ordinary wage payment.

As far as the Company is concerned, they have always believed in individual incentives—as, indeed, does every progressive industrial concern in England today—and nearly half of I.C.I.'s pay-roll benefits from incentive schemes. It would be pointless to look for a precise result from the incentive payment. The I.C.I. Directors are no doubt taking the sensible view that the Company can afford a bonus payment to its

(Continued in previous column)

PAKISTAN NOTES

COMMISSION TO ENQUIRE INTO LABOUR UNREST AT NARAYANGANJ

U.S. AID WILL NOT AFFECT COTTON TRADE WITH CHINA

THE East Pakistan Government has decided to appoint a three-man enquiry commission, comprising a judge of the Dacca High Court, an official of the rank of district judge and a non-official to go into the causes of the recent rioting in the Adamjee Jute Mills at Narayanganj. The managers of the two mills of the Company, along with two other officials of the mills, have been arrested in connection with the riot.

American Embassy sources in Karachi are reported to have stated that the U.S. military aid to Pakistan "does not affect" Pakistan's current cotton trade with Peking. The above statement was in reply to queries from business circles on a clause in the agreement which reads: "In the interest of their mutual security, the pact was designed to control trade with nations which threaten the maintenance of world peace." Business men were naturally anxious to know whether the clause would have the effect of stopping their dealings with China. During the last few years, China has been importing 200,000 bales of cotton out of Pakistan's annual average production of 1,500,000 bales. The statement of American Embassy sources is in contrast to the attitude of the U.S. towards Ceylon, which was recently reported to have been told by the U.S. that if it stopped exports of rubber to China, the U.S. would give economic aid to it.

The Pakistan Government is still examining the question of concluding a new trade agreement with India. This was disclosed in Parliament during question hour on Monday this week by the Pakistan Education Minister speaking on behalf of the Commerce Minister. The three-year agreement with India covering jute and coal concluded in March, 1953, is still valid. He said that the one-year agreement covering minor commodities signed was extended upto 30th September, 1953, on condition that Pakistan would issue import licences only for the items which conformed to its general import policy. Pakistan, according to the Minister, asked for further extension of this agreement upto 31st December, 1953, on the same conditions, but India did not agree and insisted that import licences should be issued also for certain items which were not being licensed under Pakistan's general import policy, but were included in the agreement.

An Industrial Research and Development Centre will shortly be established in Lahore. This is in terms of the agreement signed between the Government of Pakistan and the U.S. Foreign Operation Administration. The former will spend Rs. 11.36 lakhs and the latter will contribute $727,000 towards this project. The Centre will cater to the needs of small-scale industries by the supply of reliable tools and dies, designing and improvement of manufacturing equipment, training of technicians in modern production methods, etc. The owners of small industries will send one or more of their personnel to the Centre for specialised training, in order that the industrial units can acquire the knowledge of new methods and techniques. The trainees will manufacture tools, dies, jigs, spare parts and other necessities of small industrial firms. These products will be made available to industries at cost price.

Pilot production plants for various purposes will also be installed at the Centre in due course and will be available for demonstration and sale to small *entrepreneurs*. The Centre will also provide technical, managerial and marketing advice to private industries, while hoping to increase the technical skill of workers, particularly in those trades in which there is an actual shortage. Besides, it will carry out research in the use of raw materials and the development of new processes in the manufacture of consumer goods for the common man.

At present the Centre will be staffed by Pakistan instructors with advisers from the U.S. The latter will be furnished under contract with one of the outstanding non-profit industrial research organisations in the U.S. like the Armour Research Foundation. It is expected that a similar centre will be established shortly in East Pakistan.

Another important step towards rapid industrialisation of Pakistan is the proposal to set up a power development corporation with the object of providing cheap power for industries. This was announced by the Minister for Industries in Parliament last week. Parliament has allowed the Pakistan Industrial Development Corporation to develop power from gas and Sui field, which will be distributed by the Sui Gas Transmission Company. The transmission project will cost £10 million. The World Bank has agreed to provide £5 million. The balance will be provided by the Pakistan Industrial Development Corporation, Burmah-Shell Oil Company and Commonwealth Development Finance Company. This Sui Gas Company, which was incorporated a few weeks ago, recently placed a contract with a British firm for laying 350 miles of seamless pipe for the gas transmission line. The value of the contract exceeds £2 million.

A large consignment of machinery for the Tanharabad Sugar Factory has been received. The factory is expected to do its first crushing in November this year.

About 8,400 tons of cement have also been received from the U.K. for use, mostly in the construction of the shipbuilding yard at west wharf, Karachi, and the cement and fertiiser factories at Dandkhel.

The Governments of Pakistan and the U.S. have signed an agreement providing for the construction of modern facilities for storage of foodgrains in both East and West Pakistan. The Government of Pakistan will contribute Rs. 24 lakhs and the U.S. $1,485,000 towards this project. It is proposed to construct three steel silos each of 10,000 tons capacity at the ports of Karachi and Chittagong and at Lyallpur. The construction of these three silos will form the first step in a programme of building a network of modern storage facilities throughout the country. The modern storage elevations are claimed to provide for foodgrains safe storage over a long period. They are equipped with mechanical cleaning equipment which will improve the quality of grain and make the surplus more marketable as well as enable carrying over the surplus to periods of scarcity. It has been decided by the Government to keep a national reserve of at least 500,000 tons of wheat in West Pakistan and 100,000 tons of rice in East Pakistan. The storage facilities will be made available both for grains purchased on Government account and for those bought on private account, so that there will be a constant supply of grains to the people of the country.

The erection of modern storage facilities for foodgrains is an indication that the country not only has overcome successfully the food crisis that faced the country last year, but will soon have a surplus of food. This prospect has also been responsible for the current conversion of the "Grow More Food" Emergency Committee, appointed in April, 1953, into an Agricultural Development Committee. The functions of the latter Committee are more varied than those of the former. The Committee will look after all aspects of agricultural economy of the country, including increased production of food and cash crops as well as the development of livestock, poultry and fisheries.

Pakistan and Saudi Arabia, it is stated, have entered into a special payments agreement for promotion of a greater volume of trade and increasing the number of pilgrims for Haj. Under this agreement, Saudi Arabian Government will not convert the foreign exchange carried by Pakistan pilgrims into sterling as hitherto, but will use it exclusively for import of goods from Pakistan. The agreement has been entered into in order to meet the request of a large number of Pakistani pilgrims to perform Haj and of the Arabian Government to receive a large number of pilgrims. Due to shortage of sterling, the Pakistan Government has so far not been able to send all the pilgrims desiring to do so for Haj, but, with the present arrangement, it will not only be possible to send a large number of pilgrims but to enlarge its export trade with Saudi Arabia.

DEVELOPMENT OF KENYA

U. K. TO FINANCE

WITHIN the next decade or two, the African farmer should become Kenya's major producer of coffee, pyrethrum and pineapples. This is the expected result of a scheme to increase both acreage and production of cash crops in the colony. The scheme forms part of Kenya's new five-year plan to intensify African farming by employing the £5,000,000 loan that Britain has provided for the purpose. The cash crop scheme, the biggest single item in the plan, is expected to use more than £1,000,000 of the British loan. Other projects under the plan aim at bringing more wealth to the pastoral tribes of the semi-arid districts like the northern frontier, which constitute two-thirds of the colony's area. These pastoralists now own most of the 6,000,000 head of cattle in the territory. A target has been set of increasing the value of cattle from between 30s. and 50s. each to as much as 200s. and 300s. each.

As a result of a recently conducted survey, it is considered that no vast areas of Kenya remain to be settled. In fact, in the semi-arid areas, wherever population or stock increase above the optimum, denudation and near-desert conditions are created. Large irrigation schemes are contemplated under the five-year plan. These involve the spending of over £500,000 on irrigation surveys and works, of which Nyanza, Central and Southern Provinces each would have £150,000 of the total.

The grand total of schemes to exploit more fully the colony's water resources adds up to £1,764,000, but over four-fifths of the money will come from Kenya's own finances. Included in the water resources scheme are such items as £300,000 for two new dam construction units to serve Rift Valley and Central Provinces. £260 000 for more boreholes and water pipelines and £420,000 for rural water and irrigation development (surveys and planning).

Most of this money is expected to come from the increase in cash crops. Fluctuations in crop prices make it difficult to gauge the likely extent of this new-found wealth. But its aim is the raising of the surplus output of some 600,000 African families from around £10 a year to £100 or more apiece—a jump from £6,000,000 a year to £60,000,000 in production from the most fertile parts of Kenya.

In detail, the plan for the phased development of cash crops in the African areas involves five main crops—coffee, pyrethrum (for insecticides), tea, pineapples and sisal.

Coffee: Coffee is to be expanded in five years from the present 4,000 acres to 18,000 in 1958, and 43,000 in 1966, with a possible 71,000 in 15 years' time.

If the planting target of 71,000 acres is achieved, the crop should yield from 15,000 to 20,000 tons of cleaned coffee a year additional to Kenya's present crop of 10,000 to 12,000 tons, raising the export value of African coffee to £1,500,000, assuming a low price of £100 a ton or as much as £4,500,000 at £300 a ton.

Pyrethrum: The pyrethrum flower which is in demand for the manufacture of insecticides is suited to high altitude cultivation and can be grown over a large area of the African lands of Kenya. Over the next 10 to 15 years, the present African acreage will be increased from 1,300 to 48,300, produced by 96,000 growers. Should the total area be fully developed, it would yield 10,000 tons of dried pyrethrum flowers valued at £1,800,000 as compared with the present total Kenya production of 2,500 tons.

Tea: Because of the high cost of tea factories, the plan contains a warning that tea growing by Africans must be approached with the greatest caution and allows for a development of only 12,000 acres in the next 15 years out of a potential 70,000 acres.

Pineapples: The aim is to expand the pineapple-growing area from its present 3,000 acres to 15,000.

Sisal: Sisal is already a flourishing industry, and the five-year plan aims at considerable expansion. Seven schemes are envisaged, and when all are in full production they will turn out between 8,000 and 10,000 tons of sisal a year worth about £700,000 or more.

These are the major cash crops to be encouraged in the African areas but other proposals are under consideration for crops like sugarcane, cotton, tobacco, maize, pulses, rice, oilseeds, horticultural crops and coastal tree crops.

Out of the £1,025,000 which is to be spent on the cash crop drive within the next five years, the biggest single item will be the three sisal factories aggregating £350,000, but staff to develop the cash crop programme will cost some £384,000. An expenditure of £50,000 is budgeted for "bird control" for the benefit of the rice-growers, while £80,000 will be spent on tea nurseries if the pilot scheme at Nyeri proves a success.

IMPLEMENTATION OF BANK APPELLATE TRIBUNAL'S DECISION DEFERRED

A BANKER'S ASSESSMENT OF THE EFFECTS

THE Government of India has done well in postponing action on the decision of the Labour Appellate Tribunal (Banks), announced on 29th April last, for the repercussions of the Tribunal's decision on the country's economy when implemented will be serious enough to merit calm and careful consideration. Under section 15 of the Industrial Disputes (Appellate Tribunal) Act, 1950, the Government have the power to give effect, if it thinks necessary, to the whole or part of a tribunal's decision or to modify it. But such modifications should be made before the expiry of 30 days from the date on which the Tribunal's decision is pronounced; otherwise, its decision becomes enforceable. The Government feels that this period of 30 days given to it by the law to make up its mind on the various aspects of the Tribunal's judgment is not adequate. It has, therefore, decided to issue an Ordinance amending the section 15 above so as to extend the period of 30 days by a further three months. Ordinarily, the Tribunal's decision should have come into force on the 27th inst. by when the period of 30 days granted to the Government to express its views would have been completed. Now that the period has been extended by three months, the Government must come to a decision by 27th August next, unless it decides to take more time in the meanwhile. Pending the Government's final decision, the existing position in regard to salaries and other conditions of service of bank employees will remain unchanged.

Evidently, the Government does not want to take a hasty decision on the vital issues involved in giving effect to the award. For the Tribunal's judgment covers a very complicated dispute, the adjudication of which required the establishment of three different tribunals presided over by three judges, namely, Mr. K. C. Sen, the late Mr. S. Panchapagesa Sastry and Mr. F. Jeejeebhoy. It may be noted that the Sen Tribunal was appointed in June, 1949, but its award was declared void by the Supreme Court. Thereafter in January, 1952, the Sastry Tribunal was constituted. The award of this Tribunal was published in April, 1953, but both banks and employees were dissatisfied with it and went in appeal to the Appellate Tribunal presided over by Mr. Jeejeebhoy which pronounced its verdict on 29th April last. Thus, the adjudication of the dispute has taken, in all, a period of five years.

Protracted Settlement of Disputes

This protracted settlement of the disputes between employees and managements of banking companies underlines the difficult nature of the issues and their far-reaching importance. Besides, the Appellate Body's decision affecting, as it does, a very important sector of the country's economy and a large number of banking companies, cannot be dealt with in a hurried manner. And in taking its decision on the various aspects of the Tribunal's judgment, the Government can ill afford to overlook its effect on the cost of banking service and the capacity of banks to build up reserves for meeting future contingencies. Further, the Government will have to consider the repercussions of the Tribunal's verdict on the other employment sectors where persons of comparable qualifications are engaged. If this verdict were accepted and implemented, it could encourage demands for higher salaries from the staff in Government offices and other commercial establishments, thereby giving fresh fillip to the vicious spiral of wages, cost and prices. The country cannot afford the cost of this chain reaction at a time when the sellers' market is a thing of the past and when its industries have to sell their products in highly competitive world markets. It may be noted here that, in other parts of the world, cost of bank credit is declining following lower bank rates. Here the cost of banking service would increase if the award were to be enforced. In the circumstances, the power sought by the Government to extend the period for the consideration of the Tribunal's decision by three months is quite justified.

It is reported that the Central Cabinet which went into the details of the Tribunal's decision and its possible repercussions on bank finance has appointed a Cabinet Sub-Committee to examine the various implications and suggest the lines on which it should be modified in the interest of the economic well-being of the country as a whole. This development follows the strong representations made to the Government on behalf of the business community as well as of the banks. Last week, the President of the Indian Banks' Association, accompanied by some of the leading bankers, paid a flying visit to the capital and submitted to the Finance Minister a clear picture of the effects of the award on the banks, in particular, and business in general. This was followed by an interview with the Finance Minister by Mr. B. M. Birla, President of the Federation of Indian Chambers of Commerce and Industry. Mr. Birla is reported to have expressed grave concern at the prospects of an increase in bank charges and a curtailment of banking facilities, should the award be implemented in its present form. The business community is strongly of the opinion that, if these prospects were to materialise, the entire area of commercial and industrial activity would be affected. It is also claimed by knowledgeable sources that the Reserve Bank, too, concurs with the views of banks. It seems to have good reasons to feel that if the Appellate Tribunal's decision were to be implemented the expansion of banking service would receive a serious setback.

Entire Economy Affected

It will thus be seen that the question is not one which concerns the banks and their employees alone. It vitally affects the entire economy. The Government is, therefore, fully justified in wanting to examine the possible consequences with great care. Banking employees will no doubt realise that their welfare is dependent upon the progress of the country as a whole, and that they should not insist upon a scale of emoluments which is not in consonance with the country's general economic conditions and which will retard its progress. They will also appreciate that the Government is not treating their case in any light-hearted manner, as witness the fact that it is being considered by a Cabinet Sub-Committee. That, in taking time to consider the Appellate Tribunal's decision, the Government is not showing any partiality towards the employers will be clear from the fact that, in the past, this very Government compelled the banks, through special legislation, to follow the directions of the Sen Award in the matter of emoluments to staff, even though that Award was declared null and void.

The public still has only a vague idea of the effects on banks of the Labour Appellate Tribunal's verdict on the Sastry Award. We, therefore, give below an extract from a careful assessment of these effects made by Mr. B. T. Thakur, General Manager of the United Commercial Bank Ltd., in a detailed memorandum circulated to Cabinet Ministers and others:—

"Labour Appellate Tribunal's award directly affects clerks and subordinate employees in banks, but its indirect effect will be to create discontent amongst junior officers of banks, who, at the present moment, are getting less than the maximum provided for the clerical staff or slightly more than the maximum. Banks will have to upgrade terms of employment of their assistants and junior officers, who have been loyally and faithfully carrying on the burden of responsibility in banks.

Burden Increases

"It is estimated that implementation of the Award will increase establishment expenses by 15 per cent. over their existing establishment charges, taking consequential increases to assistants and junior officers. Total establishment expenses of Indian Scheduled, Non-scheduled and foreign Exchange banks, during the year 1952, as given on pages 17, 18 and 19 of the *Statistical Table Relating to Banks in India*, published by the Reserve Bank of India, amounted to nearly Rs. 17 crores. The figure for 1953 is not available, but that will probably be at least 2 per cent. more than the 1952 figure, or, in other words, the 1954 expenses, on the basis of the Award, would be 17 per cent. more than the 1952 establishment expenses. In terms of money this would mean an increased burden on banks of the order of Rs. 2.89 crores.

"The establishment expenses of banks in 1948, according to the Reserve Bank's publication, referred to above, were Rs. 12.86 crores. In the four years 1948-52, there was an increase in these expenses of the order of Rs. 4.14 crores or 32 per cent. The estimated expenses for 1954 under the Labour Appellate Tribunal's Award, will show an increase of over Rs. 7 crores since 1948 or an increase of 58 per cent. No business can bear such a heavy increase.

"These figures of mounting establishment charges do not tell the whole tale. No bank makes provision for gratuity payable to its 'staff,' in its annual establishment charges. If this were made, expenses would be higher. Estimated increases given in the preceding paragraphs are in this sense underestimates.

Net Profit Falls

"The net profit of Indian Scheduled banks, Exchange banks, and Non-scheduled banks in 1952 was Rs. 11.6 crores. In arriving at this figure no provision is made for payment of gratuity on actuarial basis nor is adequate provision made for depreciation in the value of Government securities held or investment by banks. If these provisions were made, the real figure of net profit would be less. Figures for 1953 are not available, but it is estimated that the profits for 1953 would be down by about Rs. 1 crore. Assuming that conditions for profit of banks for 1954 remain the same as in 1953, the increased establishment expenses due to the Labour Appellate Tribunal's Award, would mean reduction in profit by Rs. 2½ crores on the 1953 figure. In other words, the net profit of banks which stood at Rs. 13 crores in 1948, Rs. 11.6 crores in 1952, and is estimated at Rs. 10.6 crores in 1953, will further dwindle to Rs. 8 crores in 1954 or even less. Apart from such serious repercussions which this fall in profits will have on the price of banks' shares and stability of banks, this will mean a deterioration in income-tax receipts of the Government of India to the extent of about Rs. 1.50 crores on the 1952 basis. Establishment expenses of banks in India, as compared to their deposits and their gross profits, are much heavier than even in the richest country of the world, the United States of America. In 1952, establishment expenses of Indian Scheduled banks worked out to 1.8 per cent. on their deposits, as compared to only 0.84 per cent. in the case of American banks. From the point of gross profit, establishment expenses of Indian Scheduled banks absorbed 50.86 per cent. of such profit as compared to 33.1 per cent. in the case of American banks. These percentages, in the case of American banks, have remained practically unchanged during the five years 1948 to 1952, but in the case of Indian banks, they were in 1948 only 1.09 per cent. and 44.81 per cent, respectively, showing that the load of establishment expenses on deposits has increased by 65 per cent. and in point of gross profit they absorb 14 per cent. more. Banks in India have already been working on very thin margin, and this would again become much thinner as a result of the Award, endangering the very stability of banks. Banks are subject to substantial losses due to adverse events in market conditions and sudden depreciation in the value of their investments. The capacity of banks to bear such shocks, which is already low in India, would further deteriorate as a result of the Appellate Tribunal's Award.

Costs of Banking Services Will Rise

"To meet the increased burden of establishment expenses, banks may have regretfully to increase their charges for banking services to the public. Such increase would no doubt be borne by industry, merchants, consumers, exporters, etc. On account of decreased activity, it may mean even decrease in exports because export market is highly competitive. At a time when money rates are being deliberately reduced in the world money market, the latest being a fall of ½ per cent. in the Bank of England rate which is now 3 per cent., increase in bank charges would adversely affect production, employment and payments of balance position. No doubt, such increase is to be regretted, but the banks have no other alternative.

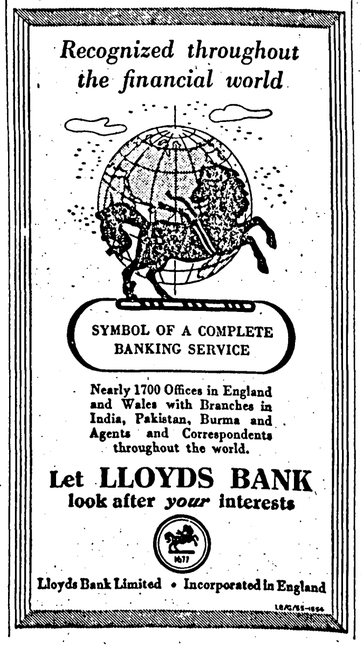
"Another result of the implementation of the Labour Appellate Tribunal's Award would be that banks will not only not open new branches so necessary for the national economy, but they will have to close down several of their existing branches, which will reduce facilities of banking services to the public and throw out of employment thousands of men. Exact particulars are not available, but it looks that on the basis of 10 per cent. closure, nearly 400 offices of banks, out of 3,900 at the end of 1952, may be closed. Assuming 10 employees on an average, are employed at each of these branches, nearly 4,000 people may be thrown out of employment. Over and above the people actually working at these branches there will be surplus, due to closure, in the supervisory and inspection staff; and the number of men to be retrenched may be anything between 6,000 and 10,000. India needs tremendous expansion in banking activities and enlargement of avenues of employment. Not only both these objectives would be completely frustrated by the Award, but on the contrary there would be worsening in the present position.

"Recommendations of the Rural Banking Enquiry Committee could not be implemented because of heavy establishment charges imposed by labour awards. Banks and business men alike represented to the Shroff Committee that emoluments of bank clerks and subordinates were beyond the capacity of banks and the present condition of the country's resources. The Appellate Tribunal's Award has made the position much worse. If this Award continues, the recommendations of the Shroff Committee will be equally infructuous. The Five-year Plan will itself be in danger, let alone the difficulties of the private sector, which will be further accentuated."

It will be seen from the foregoing extracts that Mr. Thakur has based his calculations on facts collected by the Research Department of the Reserve Bank and that as such his conclusions are not just wild conjectures.

In the introduction to the memorandum, Mr. Thakur pertinently points out that "it is a mistake to consider clerical employment in banks as industrial employment. Clerks are far superior in education and intelligence to workmen in factories. In factories and mills a workman remains a workman all his life. In banks, it is gathering of experience from days of clerkship upwards, so that personnel may be built up through actual work and experience. This process of building up competent bankers, with a sense of responsibility, is completely frustrated by application of labour legislation to banks which has removed incentive and created laziness and indiscipline."

He, therefore, concludes that industrial legislation should not be applied to banks.



PROSPECTS FOR EXCHANGE CONVERTIBILITY

The adequacy of monetary reserves for convertibility and ways for supplementing them are discussed in a staff paper presented by the I. M. F. to the U.S. Commission on Foreign Economic Policy. After discussing the progress already made towards relaxing discriminatory import restrictions and, to some extent, towards the convertibility of other currencies into U.S. dollars, the question is raised whether the U.S. Government would be prepared to grant special stabilisation credits to the United Kingdom and, perhaps, to a few other Western European countries. The basic purpose of such credits, according to the authors of this paper, would be not to finance dollar deficits (except perhaps those that might temporarily be associated with the introduction of convertibility itself), but to strengthen confidence in the convertible currencies, and to discourage speculative pressure at subsequent periods of temporary balance of payments setbacks and thereby to minimise the possibilities of a breakdown of convertibility or of a tightening of import restrictions.

The concept of adequacy of reserves can have meaning only within a framework where there are occasional temporary fluctuations of a self-reversing character in the balance of payments of a country which is in a fundamentally "strong" or balanced payments position. Every country has a certain "rockbottom" level below which it will not normally allow its reserves to fall; but after allowance for "rockbottom" needs, reserves to be adequate must be sufficient not only to finance the current deficits that might periodically arise, but also to maintain confidence in the currency and thus discourage speculative pressures.

So simple statistical criteria can be laid down for determining the adequacy of reserves in any given case. If U.S. private imports of goods and services were to fall 10 per cent. below the 1953 level, it might be expected, on the basis of past experience, that U.S. imports from the sterling area would fall by about 15 per cent. and imports from Continental Western Europe by about 10 per cent. This would mean a decline in the dollar earnings of the sterling area by about $350 million in one year, and in those of Continental Western Europe by less than $300 million. The drain on reserves in one year would amount to about 9 per cent. of the present gold and dollar holdings of the sterling area, and 3 per cent. of the reserves of Continental Western European countries as a whole. At the same time, speculation would probably accentuate the drain on reserves, as it did in 1949, by expediting payments for imports and retarding receipts from exports. It may be assumed that this drain would be no greater than that due directly to the decline in U.S. imports. If there were no other pressure on reserves, say the authors of the paper, the present level of reserves in the sterling area and in Western Europe appear to be adequate to finance temporary deficits associated with moderate and short-lived declines in U.S. imports, without the need for tightening import restrictions. If, however, the setbacks were more severe or prolonged, the present reserves, especially those of the sterling area, would be inadequate.

Commenting on sterling convertibility in particular, the staff paper says:

"The uncertainties of the 'impact effects' of a sudden establishment of convertibility, which would give foreign earners of a currency the privilege of spending it in the United States if they so desired, are particularly pertinent to the United Kingdom. The sterling area's imports of goods and services from the rest of the world are more than $12 billion per annum. Exporters who receive about three-quarters of this total are, for the most part, permitted at present to spend their proceeds only in non-dollar countries. If convertibility were established, it is not an extreme assumption to suppose that 10 per cent. of their earnings would be converted into dollars in the first year of convertibility, which would involve a drawing upon the central reserves of the sterling area of more than one-third. It, therefore, appears that sterling area reserves are not now adequate to underwrite the risks of sterling convertibility. It may be presumed that no Western European country would make its currency fully convertible into dollars unless sterling were convertible. Probably their reserves are relatively more adequate for this purpose than those of the sterling area; yet, in many cases, the degree of adequacy may not be enough.

"The system of 'stand-by-credits,' recently inaugurated by the International Monetary Fund, is described as 'highly suited for assistance to members contemplating a significant movement toward convertibility.' These arrangements, if of sufficient magnitude, could help underwrite the uncertain demands on the convertible currency. Their very existence would tend to encourage confidence and discourage speculative movements against the newly convertible currency. It is conceivable that the Fund might be prepared to set aside as much as one-third to one half of its present gold and convertible currency holdings, that is, $1 billion to $1.5 billion, as a stand-by credit to the United Kingdom. This would require a waiver of the condition which limits drawings during any one year to 25 per cent. of a member's quota. Without a waiver, the United Kingdom and other Commonwealth members of the sterling area could together draw about $525 million in any one year. This might be of great assistance in the event of a recession, but appears insufficient to support the achievement of convertibility. Supplementary financial support for convertibility might be obtained by increasing the resources of the Fund, which would involve additional contributions by the United States and other member-countries, by U.S. Government stabilisation credits granted through the Treasury or the Foreign Operations Administration, or by stabilisation credits to foreign central banks from the Federal Reserve System. The requirements for credit backing for some of the Western European currencies which might arise if a concerted move for convertibility were to be undertaken without the E.P.U. might be satisfied by making available the Fund's holdings of European currencies, including sterling, which amount to the equivalent of about $2.8 billion."

HOUSING FOR RESERVE BANK EMPLOYEES

The Byculla Housing Colony for the clerical staff of the Reserve Bank of India, declared open by Mr. Chintaman Deshmukh, Finance Minister, Government of India, on the 25th inst., is undoubtedly an achievement of high ambition. Although intended to cater to the needs of clerical and upper subordinate staff of various pay scales, the Colony has been designed to foster community life among the residents. It consists of 11 multi-storied reinforced cement concrete structures, with 565 flats, capable of housing 2,800 people. The central clubhouse, with a card room and canteen, the underground storage reservoir, the covered badminton court, the dispensary, the servants' quarters, the cooperative stores and the open spaces and lawns provided in the Colony, all should contribute richly towards promoting the social, economic and community life of the families housed in the Colony. If the scheme has not provided for a school to educate the children, it is because of limitations imposed by considerations of language. But this lapse may be said to have been made good by the decent surroundings in which the children will be brought up there. The Governor of the Reserve Bank of India, Mr. B. Rama Rao, is, indeed, justified in characterising the Colony as "the first of its kind in the country for clerical staff." The rent to be collected from the staff would not even cover, it is stated, the annual maintenance cost of the buildings and the quantum of subsidy provided by the Bank is estimated to be equal to two-thirds of the economic rent for the kind of accommodation now provided for the staff. The example of the Reserve Bank in starting this Colony deserves to be emulated by other employers in the country. The cost of the colony is estimated at Rs. 1.27 crores.

Declaring open the Colony, the Finance Minister spoke in an apologetic tone for the Government's inability to give a high priority in the first Five-Year Plan for a deserving purpose like the implementation of an ambitious housing scheme, on account of inadequate resources. He, however, hinted, at the possibility of the second Five-year Plan laying greater emphasis on housing than in the first, as, by then, he hoped that the two essential needs of the community, namely, food and clothing, would have been met. He added that, in determining priorities, the needs of persons in the low-income groups should be attended to first. He opined that, in doing so, new slums should not be allowed to arise and that, in building houses, one should always aim at slightly higher standards than at present, so that at least the minimum facilities could be assured to tenants.

Mr. Deshmukh expressed the hope that the employees of the Reserve Bank housed in the Colony would approach their work with renewed enthusiasm. He did not, however, forget to add that, as Finance Minister, he would have to take notice, in future, of the amount the Reserve Bank was spending on the housing of its staff. But even the present housing Colony can accommodate only 40 to 50 per cent. of the clerical and upper subordinate staff in the Bombay office. Besides, the employees of the Bank in other branches also will expect similar accommodation. Thus, the Bank has yet to go a long way in fulfilling its ambition. Failure to do so will cause discontentment among the employees of the Bank who have not been fortunate enough to get housing accommodation. The Bank, therefore, cannot afford to defer the completion of the housing programme for any appreciable length of time.

BOMBAY STATE FINANCIAL CORPORATION

The Bombay State Financial Corporation (Managing Director: Mr. R. S. Bhatt, Bombay) has earned a gross profit of Rs. 14,826 during the first four months of its working upto 31st March, 1954. After making a provision of Rs. 6,950 for taxation and transferring Rs. 1,000 to the reserve fund, there is a balance of Rs. 6,876 available for appropriation. The Directors propose to utilise this sum towards payment of a dividend of 3¼ per cent. guaranteed by the Bombay Government. As the aforesaid sum is not sufficient to pay the guaranteed dividend, the Directors have decided to request the Government of Bombay to give subvention for the balance of Rs. 80,619 to make up the distribution for the three months ended 31st March, 1954.

The Corporation was established by a notification of the Bombay Government dated 30th November, 1953, for the purpose of providing financial assistance for industrial development in the State. During the four months under review, the Corporation was mainly engaged in making arrangements for the issue of share capital and in doing the preliminary work of framing regulations in consultation with the Reserve Bank of India and formulation of policy and procedure for its authorised business. The Corporation has so far received 35 applications which are under consideration of the Executive Committee. Those applications which are eligible and contain sound propositions will be disposed of as expeditiously as possible.

The Corporation is authorised to grant financial accommodation to industrial concerns engaged in (1) manufacture of goods, (2) preservation of goods, (3) processing of goods, (4) mining, (5) generation or distribution of electricity or any other form of power. The financial accommodation will, in the first instance, be by way of loans or advances to our subscription to debentures of industrial concerns. The Corporation is authorised to grant accommodation to a single industry of not more than 10 per cent. of the paid-up capital of the Corporation, but in no case more than Rs. 10 lakhs. However, in order to make an equitable distribution of its resources, it has been decided that, ordinarily, the maximum financial accommodation to a single individual concern should be Rs. 5 lakhs and the minimum Rs. 10,000. The rate of interest chargeable on this accommodation has been fixed at 6 per cent. per annum. The period of loan will not exceed 10 to 12 years and the principal amount will be repayable in instalments which will be specified according to circumstances of each case. The amount of loan will be about 50 per cent. of the net value of fixed assets of the industry concerned. The Corporation primarily grants accommodation for acquisition of fixed assets, but it may give loans for working capital in exceptional and specified cases. It will not, however, give advances against hypothecation of raw materials and stocks of finished goods.

The Corporation is mainly intended to cater to the needs of medium- and small-scale industries. As the information regarding the present position and problems of these industries is meagre, the Corporation has not been able to draw up a list of priorities. The Directors have, therefore, decided that, in the matter of priorities, the Corporation's approach in the initial stage should be flexible and its general policy will be to encourage development and expansion of industries according to the programme of industrial development of the Planning Commission and the industrial policy of the Government of Bombay.

U.S. INVESTMENTS ABROAD

The United States investments in foreign countries reached a total of $39,500 million at the end of 1953, showing an increase of nearly $21,000 million since 1946. During this same post-war period, foreign investments in the United States increased by almost $8,000 million, making a total of $23,600 million. According to a summary prepared by the Commerce Department's Office of Business Economics, the increase in U.S. foreign investments was about evenly divided between private investments and Government credits and subscriptions to the International Bank and Monetary Fund. U.S. private investments abroad gained $10,000 million since 1946 and at the end of last year aggregated $22,100 million. Ninety per cent. of this increase was through direct investments in other countries.

Outstanding U.S. Government post-war credits to other countries amounted to about $12,000 million at the end of 1953. Subscriptions to the International Bank and Monetary Fund accounted for another $3,400 million.

TASK FOR EUROPEAN TEXTILE INDUSTRIES

DR. KROESE'S ANALYSIS AT WORLD COTTON CONGRESS

THAT the cotton manufacturing countries of Western Europe, including the U.K., are faced with the difficult task of retaining their place in a shrinking world market was the view expressed by Dr. W. T. Kroese, Netherlands Representative, in the course of his speech at the International Cotton Congress, which met recently at Buxton (U.K.). Dr. Kroese referred to the rise of the cotton industry in countries which were formerly purely agricultural. After referring to the role which Japan has played in the textile history as a 'formidable' competitor to the European cotton industry and also to India's rise as a textile manufacturing country, he commented: "Whether in course of time it will be India who will take over this role (as a formidable competitor) and push Japan out, so that Japan penetrates even further into the West European sphere of competition, only the future will show."

The International Cotton Congress, it may be mentioned here, is the Jubilee Congress session of the International Federation of Master Cotton Spinners' and Manufacturers' Associations, at Buxton. The members of the International Federation, which was formed in 1904, are England, Denmark, Finland, Italy, Sweden, France, Austria, Germany, Norway, Egypt, Switzerland, Belgium, Holland and Spain. It has influenced the development of raw cotton growing and international policies inseparable from this and other aspects of a world-wide industry. At the beginning of the century, the world's cotton crop was 15 million bales (of 500 lbs. each); it is now almost 40 million. The International Federation besides its promotion work in several countries for improved and increased cotton crops, has also concerned itself with the quality of cotton delivered to spinners, and has helped to achieve higher standards. From its formation, it instituted a world statistical service. Since 1905, it has collected half-yearly statistics (except during the world wars) on cotton spindles and raw cotton consumption; and to these have been added, periodically, figures of the world's power-looms, the last such review being in 1952. The work of the Federation was interrupted by the two wars, and its latest revival was brought about in 1948. Its headquarters have always been in Manchester, so it is appropriate that Jubilee year should be celebrated by holding the Federation's 23rd Congress in England. Of 22 congresses and conferences held in 14 different countries, this Congress is only the second to be held in England; the first was in 1905. The English host organisations are the Federation of Master Cotton Spinners' Associations Ltd., of which Mr. W. T. Winterbottom is President, and the Cotton Spinners' and Manufacturers' Association, of which Mr. E. W. Cockcroft is Chairman. Both bodies have headquarters in Manchester.

To revert to Dr. Kroese's address. He is probably right in thinking that W. European textile industries would find it increasingly difficult to hold their position in a shrinking world trade for textiles. While this might be true in the context of the growing domestic textile industries in countries which were formerly the main markets for W. European textile industries, it must be admitted that there are still many regions where the *per capita* textile consumption is at an abysmally low level. If the problem of raising the living standards in these regions is tackled realistically, it should be possible for W. European textile industries to retain their markets, at least in certain specialised lines of textile manufactures, without in any way endangering the progress of the domestic textile industries in these regions. This calls for a high level of economic statesmanship on the part of the industrially advanced nations.

Be that as it may, Dr. Kroese was certainly right when he emphasised the importance of the problem of raw material supply to the textile industry. If the industry has to expand it must be assured of a reasonable supply of raw cotton. In this connection, Dr. Kroese said that, since the rapid growth in world population would in most cases require priority for the growing of foodstuffs, it was logical to assume that the supply of natural raw materials, such as cotton and wool, should be supplemented by production of man-made fibres. The fact that the course of prices of the new fibres had shown greater stability while becoming relatively more attractive was a warning to cotton growers all over the world to show great caution. Discussing world stocks of cotton, Dr. Kroese said the international textile industry was entirely in the dark as to how the American Government as the holder of the largest part of the stocks, intended to solve this cotton problem. He added that it was not only of great importance to American farmers and industrialists that a satisfactory way out of the impasse should be found, but also to cotton producers and consumers in other parts of the world.

Besides Dr. Kroese's address, another important contribution to the discussions at the Congress was an excellent survey of the problems of the use of machines in the sphere of cotton cultivation. This survey formed the subject of a paper read by Mr. W. T. Winterbottom, President of the Congress. The importance of this subject to cotton spinners arises from the fact that, if mechanisation could lead to lower prices for cotton, it would naturally mean lower prices for cotton textiles. Machines are used for preparing the ground, for sowing seed and for picking the cotton crop. Mr. Winterbottom dealt particularly with mechanical harvesting of cotton. He said that it was generally recognised that mechanical harvesting lowered the quality of the lint. The usual estimate was that, approximately one grade by universal standards was lost. "It is obviously absurd," he said, "to waste available shipping space in bringing this useless trash across the Atlantic. Many of the U.S. mills have installed additional screening machinery to deal with the trash in machine-picked cotton."

The spinner, Mr. Winterbottom said, had to make up his mind whether to insist on hand-picked cotton at higher prices, or whether to concentrate on machine-picked cotton and rely on the lower price to compensate for the cost of additional machinery and higher waste losses. Mr. Winterbottom thought that it was most unlikely that the trend towards mechanisation in cotton growing could be reversed. Machine harvesting, however, would not necessarily lead to low cost of production of cotton in the future. The pressure of economic circumstances, particularly the difficulty of getting adequate supplies of labour for work on the farms, he said, was forcing the extension of mechanisation in the United States and elsewhere.

It should, therefore, be clear that the use of machines in the harvesting of cotton creates a new problem for spinners. From all this, it should be easy to appreciate Mr. Winterbottom's conclusion that, until the many obstacles to complete mechanisation in production, harvesting and processing of cotton can be removed, "it cannot be said that mechanisation will lead to cheap cotton or cheap yarn."

LEVY ON MILL CLOTH

The new levy on mill cloth imposed by the Madras Government would not, according to Mr. L. Srinivasan, Vice-President of the Madras Retail Piecegoods Merchants' Association, help the handloom industry. The extra sales tax (As. 1-3 in the rupee), he said, would affect the wholesale dealers, since they sold on credit but would be called upon to pay the tax long before they could recover the amount from the buyers. This would result in the blocking of capital and decline in the offtake of cloth. He believed that the levy would encourage retailers to purchase cloth from the neighbouring States, which did not impose any sales tax, and realise the tax from the consumers in the State at the first sale. The Government would lose revenue by removal of the wholesale link from the chain of traders; the additional revenue from the tax would not be worth much, considering the damage it did to trade.

In view of the prevailing impression that the handloom factories suffer considerably from the competition from the mill industry's products, it is interesting to note Mr. Srinivasan's analysis of the problem. He pointed out that there was no competition to the handloom industry in many of its products like silk *saris*, coloured *saris*, bed-sheets, furnishing fabrics and lace bordered *dhotis*. Handloom *saris* were now exported to other States in the Union. The only item in which there might be some competition was *dhotis*. If the Government wanted to protect the handloom industry, he said, then a tax on each mill *dhoti* sold might have been levied. The Government, he thought, might also insist on a minimum quality control of handloom goods and help improve their designs.

PROMOTING EXPORTS OF TEXTILES

ADVISORY COUNCIL'S SUGGESTIONS

ON a study of the proceedings of the Export Advisory Council, in so far as they related to textile exports, one is struck by the fact that more than one member of this important body should have been compelled to stress the desirability of removing the export duty on coarse cloth. This is not surprising, in view of the fact that the textile producing countries the world over have recognised the return of the buyers' market for textiles, so that the question they are now considering is not one of removing any obstacle to export trade but of providing positive incentives for exports. Thus, Dr. Kroese, whose address at the World Congress is summarised on this page, is reported to have emphasised that, if European textile industries must retain their export markets, they must realise that "attack is the best form of defence." The Indian textile industry might well adopt this maxim as its motto for retaining the export markets it has won in recent years.

It must, however, be realised that the textile industry cannot adopt this motto without prompt and effective assistance from Government. It is true that exports of piecegoods continue to be a bright spot in India's export picture. During 1953-54, India's exports aggregated 769 million yards as against 620 million yards in the previous year. But they were very much below the target of 1,000 million yards. The Government is also alive to the need for promoting exports of cloth. The Government has set up the Export Promotion Council. The Union Minister for Commerce, Mr. D. P. Karmarkar, expressed, in the course of his address at the meeting of the Export Advisory Council, the hope that the Council will "begin to function effectively." The Government has also abolished the import duty on foreign cotton.

Textile exporters are not, however, certain that these measures, commendable as they are, are enough to encourage a large flow of Indian-made textiles to foreign countries. Mr. B. M. Birla, President of the Federation of Indian Chambers of Commerce and Industry, and member of the Council, emphasised that the heavy duty on coarse cloth should be abolished in the interests of the export trade. Mr. N. N. Wadia struck a realistic note when he said, in effect, that the recent creditable performance in the sphere of textile exports should not lull the country into a sense of complacency. He estimated that, in May, the exports would hardly exceed 40 to 50 million yards, as against 70 to 80 million yards in the previous months. He thought that the export of coarse cloth would be less han 10 million yards in the near future. This meant that the country would be deprived of a large amount of foreign exchange. The loss would far outweigh the revenue the Government would earn by the export duty on coarse cloth. Again, they should remember the bad effect of removing the duty on one sector of the textile goods and retaining the duty on the other. The industry would be losing goodwill in the overseas market. He, therefore, appealed to the Government to do away with the duty on coarse cloth and make an announcement as early as possible.

Mr. Wadia referred to the importance of rationalisation of the textile industry in the context of possible competition from Pakistan. Like India, Pakistan had an advantage of growing short-staple as well as medium-staple cotton. In addition, Pakistan was building up the industry very rapidly, far more efficiently and in a highly rationalised way. Pakistan would suddenly come into the picture and take India by surprise. During two or three years, the capital of Pakistan's most modern machinery with automatic looms would be practically written off by profits made by them. The Indian industry should start taking steps right now and he thought that "with proper rationalisation without tears, we can achieve it."

The question of export duty on coarse cloth should be considered in the light of its effect both on domestic production and on export trade. As regards domestic production, the duty has encouraged the output of pseudo-medium cloth. Again, it has encouraged overseas importers to discard certain popular varieties of Indian cloth and prefer certain other duty-free varieties or to buy cloth of non-Indian origin. The fact is that, although the duty may not be a very onerous burden, it should be removed, if it distorts the normal production pattern in the country or interferes with the sales of the varieties for which India has established a well deserved reputation for quality. Mr. H. V. R. Iengar, Secretary to the Ministry of Commerce and Industry, however, denied that there was substantial shift in favour of pseudo-medium cloth. He said that it was still a matter of conjecture. Many mills had, according to him, actually refused to produce pseudo-medium cloth, although their refusal meant diminution of their export trade. This does reflect great credit on the Indian textile industry. Nevertheless, if the effect of the duty is to initiate a tendency towards the production of pseudo-medium cloth, it is necessary that the duty should be abolished. From this point of view, it is gratifying to note that, although Mr. Iengar affirmed that no "single solution" would solve the problems of the textile export trade, the Government would take all possible steps in order to enable the industry "to maintain and possibly improve its competitive position."

Several intricate procedural matters were raised by Mr. N. L. Kara, of the All-India Exporters' Association and member of the Council. Mr. Kara

FINE YARN SPINNERS' CONCERN OVER HEDGING FACILITIES FOR COTTON

REPORT ON EUROPEAN TEXTILE INDUSTRY

(From A Special Correspondent)

MANCHESTER, 18*th May*

THE main event concerning the cotton trade in Lancashire, if not the international cotton textile scene, this week, has been the reopening of the Liverpool cotton futures market. This important development is not likely to have any effect on conditions in other parts of the world, but it paves the way to freer trading facilities in various directions.

MANCHESTER LETTER

Now that the decision to reopen trading has been taken, the main object is that the spinning mills of Lancashire should have at their disposal all the cotton of the right type they require. The re-establishment of an adequate supply of spot cotton at Liverpool is an important factor in this connection but it is doubtful whether the necessity to have something like 1,000,000 bales available, as before the war, now arises. The financial burden in keeping such stocks ready for possible use is so much heavier in view of the much higher level of values.

Throughout the negotiations leading up to the reopening of the market the position of spinners of fine yarns using Egyptian-type cotton has been fraught with difficulty. The news that talks are to open with Egyptian cotton interests with the long-term object of reopening the Alexandria futures market has therefore been welcomed in Lancashire. It is felt that as soon as the three basic cotton futures markets—in Liverpool, New York and Alexandria—are once more functioning, the sooner will price stability and real freedom in trading be attained.

No doubt it will take some considerable time for any real progress to be made in easing the Egyptian cotton situation but there are hopes that the Egyptian Government will agree to some form of reopening at Alexandria in the 1955-56 season. If the venture at Liverpool is successfully launched it will have an important bearing on raw cotton affairs in many other parts of the world.

Empire Cotton

One of the other points at issue during the controversy over the freeing of raw cotton buying has been its effect on future output and distribution of supplies grown in Empire countries. It does seem likely that at least in the early stages after Liverpool reopens there will be a movement towards the greater use of cotton grown in the United States. The fact that only a purely American contract is being offered is bound to react on imports in this way.

The sponsors of the switch to private buying have their own views as to how the system will operate. They believe it may be possible to obtain relatively cheap dollar cotton and this will allow the prices of outside growths to find their correct levels. It may be that other countries with an excess of sterling and perhaps a shortage of dollars will prefer to buy from British Commonwealth sources and this will in turn stimulate higher output, particularly in Africa. The increased purchasing power of the native population in these territories could, therefore, be translated into more buying of Lancashire-made textile fabrics.

There are numerous problems facing the market during its transitional stage and after September, when futures trading will be the only way of obtaining cover. The "new-old" system is on trial but it has had a sympathetic send-off. Spinners have had the experience of centralised purchasing and distribution for more than a decade and now must accustom themselves to fresh methods. Some give-and-take between raw cotton merchants and their customers will be required and adjustments may be necessary as experience dictates but it is essential for the well-being of the industry as a whole that the venture is made to work.

Trade Survey

A comprehensive document setting out the past, present and future of the cotton industry was presented to the delegates attending the Jubilee International Cotton Congress at Buxton last week. It was prepared by Dr. W. T. Kroese, Netherlands representative on the International Cotton Committee.

Tracing the history of the International Federation of Master Cotton Spinners' and Manufacturers' Associations during the past 50 years, Dr. Kroese pointed out that the organisation was originally founded as an international defence front of industrialists to counter an attempt to corner the American cotton crops.

Steps were taken in Lancashire by temporarily reducing consumption through short-time working to defeat the American speculators and support was sought from European countries. The foundation of the Federation was thus due to an attempt by the cotton consumers to break a monopoly in the trade and to ensure greater continuity in the supply of cotton.

But although the organisation was originally founded to deal with processing of cotton, after three decades of further development since their creation man-made fibres must now be classified as raw materials for the cotton industry in the widest sense and Dr. Kroese's survey dealt with all types of fibres.

Over the 50 years, he continued, there was a great contrast between increasing world cotton consumption and a decreasing total number of spindles. In Lancashire, the birthplace of the cotton industry, declining capacity to a certain extent was accompanied by decreasing production. In the United States, however, a completely opposite tendency was noticeable. During the past 25 years capacity had been reduced to two-thirds of what it used to be, while production was not less than 40 to 50 per cent. greater than in 1928.

Weaving capacity was apparently being ever more intensively utilised. The number of looms in the world was gradually diminishing, while at the same time cotton consumption increased. In North America with a weaving capacity reduced to 57 per cent. of what it was in 1930, production was at least 40 per cent. more than in the 1930's. Another striking fact was the greatly increased weaving capacity of some important cotton-growing areas, including India, Mexico and several South American and Middle Eastern countries.

Early Starters

In an endeavour to assess the future of the cotton industry, largely from the European viewpoint, Dr. Kroese said: "Our disadvantage is that we started early. We have seen the part we once played grow smaller in the last 25 to 30 years. Our early start has indeed hampered our progress."

Since the rapid growth in world population would in most cases require priority for the growing of foodstuffs, he continued, it was logical to assume that the supply of natural raw materials such as cotton and wool should be supplemented by production of man-made fibres. The fact that the course of prices of the new fibres had shown greater stability while becoming relatively more attractive was a warning to cotton growers all over the world to show great caution.

Yarn Price Scheme

In an indictment of the minimum selling price schemes operated in the spinning and doubling branches of the Lancashire cotton industry, the yarn section of the Cotton and Rayon Merchants' Association, in its Annual Report, declared that export orders were being lost to Britain as a result. The Report said:

"On many occasions business has been lost to Continental suppliers, who being aware of the rigid minimum price levels of United Kingdom yarns have secured orders at prices which only needed to be fractionally lower than U.K. prices. Strong competition is being encountered from European producers, particularly Belgian and Italian."

Expressing the "grave concern" of the section's executive at the effect of the price schemes on Britain's competitive power, the report urged that some flexibility should be introduced into the scheme. The approach of completely free buying of raw cotton made the problem even more urgent and the executive was taking active steps in the matter.

Defending the minimum price agreements, Mr. John Lindley, President of the Yarn Spinners' Association, said in a trade review that the cotton recession year of 1952 would live in spinners' memories "not only as a year of trial but also as a year of achievement." He added:

"Whatever critics may have said about our Association they were confounded by the loyalty and solidarity shown by its members. Any crack in our defences at that time, any indication of weakness in our organisation would have had a dire effect on our future. I am convinced that the stability given to the price level by the Association proved a benefit to the whole of the textile industry and created a confidence which curtailed the period of the recession."—*All Rights Reserved.*

MILLS LIKELY TO CONSUME MORE COTTON IN FUTURE

IMPLICATIONS TO INDIAN ECONOMY

AS readers are already aware, the Indian cotton mills continue to consume, during the current year (1953-54 season), larger quantities of cotton than in the previous season. Thus, during the five months ended January, 1954, the mills consumed 1.92 million bales of cotton (of 400 lbs. each) as against 1.89 million bales in the corresponding period of the previous season. Again, mills are consuming more Indian cotton than they did in the previous season, which itself was a season of record consumption of Indian cotton. Indian mills consumed during the 1952-53 season 3.61 million bales of Indian cotton and 850,000 bales of foreign cotton, as against 2.99 million bales and 1.1 million bales respectively in the previous season. During the five-month period ended January, 1954, the mills consumed 1.64 million bales of Indian cotton, as against 1.53 million bales in the first five months of the previous season.

In the light of the increased consumption of cotton, particularly Indian cotton, by Indian mills, it will be interesting to examine the prospects of cotton consumption in the Indian Union. Such an examination has been ably made by Mr. M. S. Natesan, Assistant Secretary, Indian Central Cotton Committee, in an article contributed to the *Journal* of the International Cotton Advisory Committee. The record mill consumption of cotton last season, as Mr. Natesan points out, was facilitated by the easier supply position of cotton in the country, lower price level of Indian and foreign cottons, better labour relations, removal of distribution control on cloth and reduction in export duty on cloth. As regards the prospects for the current season, he relates how the internal and export demand for cloth was somewhat sluggish in the first two months of the season and how it improved subsequently, following the Government's decision, in October, 1953, to abolish the export duty on medium cloth and to reduce the excise duty on superfine cloth and to permit the drawback of import duty on foreign cotton used in the manufacture of cloth and yarn exported to overseas countries. Internal demand for cloth, too, has broadened considerably. Discussing the availability of cotton and prospects of consumption of Indian cotton in the current season, in terms of bales of 478 lbs. each, Mr. Natesan says:

"As regards the availability of supplies of cotton, although the current season's cotton crop is not expected to be as high as that anticipated earlier in the season, it is quite on the cards that a commercial crop of about 3.4 million bales (excluding 220,000 bales utilised for extra-factory consumption, which is usually left out from both supply and distribution) will be realised. Adding the opening stocks of cotton with the mills and the trade, as on 1st September, 1953, the total supply for the season may be estimated at 4.8 million bales. The mill consumption of cotton during the first three months of the current season amounted to 934,000 bales, of which 775,000 bales represented Indian cotton, the relevant figures for the corresponding period of the previous year being 897,000 bales and 680,000 bales respectively. On this basis and on the assumption that the present rate of production of coarse and medium varieties of cloth will be maintained, the total consumption of cotton during the whole season may be estimated at about 3.8 million bales, of which 3.2 million bales might be Indian cotton.

"Exports of cotton for the whole season are not expected to exceed 164,000 bales, while imports of foreign cotton may be placed at 492,000 bales. This would mean that stocks of foreign cotton in the country at the end of the season would be lower by 82,000 bales than those on the corresponding date of the previous year. Though the removal of the import duty on foreign cotton under the budget proposals for 1954-55 recently announced would enable mills to use more foreign cotton, this concession is largely offset by the simultaneous increase in the excise duty on superfine cloth by six pies per yard. Besides, it is felt that the cheaper prices of Indian cotton and the increasing demand for coarse and medium varieties of cloth would tend to maintain the consumption of Indian cotton at the current level."

From what is stated above, it will be seen that, in Mr. Natesan's view, Indian cotton consumption is likely to be maintained at the current level. This is amply borne out by the latest figures of cotton consumption quoted at the outset. These figures will show that, if anything, the consumption of Indian cotton is likely to exceed last season's level. As regards the long-term prospects, say, after a period of five years, Mr. Natesan emphasises that the possibility of a sizable expansion of the mill industry cannot be ruled out. Between 1948 and 1953, the installed spindleage increased from 10.27 million to 11.72 million. The effect of the development schemes under the First Five-year Plan and the Second Five-year Plan will be to raise the living standards. He, therefore, anticipates a further increase in cotton consumption. Proceeding, he points out that, since the highest monthly consumption of all cottons has been of the order of 328,000 bales (of 478 lbs. each), even under present conditions wherein only 42 per cent. of the mills have been working three shifts, it is reasonable to expect that "under optimum conditions, the annual rate of mill consumption of all cottons might reach 4.1 million bales." Again, the increased consumption will largely be accounted for by Indian cotton as the "bulk of the increased demand for cloth will be confined to coarse and medium varieties." The implications of this conclusion to the Indian cotton economy should be obvious. There should be, as Mr. Natesan himself points out, a "corresponding expansion in the production of cotton in the country."

SALES TAX ON COTTON: EXPORTERS' LIABILITY

Apropos the article on sales tax in Bombay State, published in our issue of the 15th inst., wherein it was stated that an exporter is liable to pay purchase tax to the Government, if he buys cotton, even with the intention to export it, from an unregistered dealer, Mr. M. H. Parikh of the Gujarat Chamber of Commerce, observes, in a letter to us, as follows:

"If the exporter purchases cotton from an unregistered dealer, whether an agriculturist or a small village merchant, with a view to exporting it in the same form in which it is purchased, (that is, without its being processed in any way), the purchase does not attract purchase tax. Purchase tax is payable when goods falling under entries 1 to 80 of Schedule B are purchased from unregistered dealers by registered dealers for manufacturing or processing purpose. But if such goods are purchased for sale or resale in the same form, either in the State of Bombay or outside, the purchase tax is not payable on goods falling under entries 1 to 18 (both inclusive) and its payment in respect of goods falling under entries 19 to 80 is optional. In the case of those goods, if the purchaser elects, under section 10A of the Act, to pay purchase tax on his purchase he will not be liable to pay sales tax on sale of these goods which he would otherwise be liable to pay as that would be the first sale of these goods in the State of Bombay by a registered dealer and if he elects to pay sales tax when the goods are sold he will not be liable to pay purchase tax.

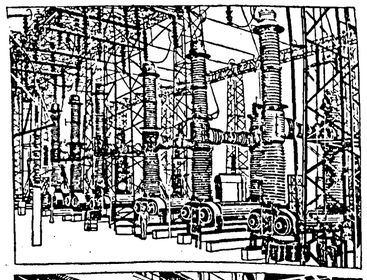
"But in the case of goods falling under entries 1 to 18 (and "cotton-ginned or unginned" is an article under entry No. 1) no purchase tax is leviable or liable to be paid if the goods are for sale or resale or are sold after purchase—*vide* proviso to section 10 of the Act reading as under:

"'Provided that no purchase tax shall be levied under clause (a) on the purchase of any goods specified in entries 1 to 18 (both inclusive) of Schedule B if such goods are sold by the dealer after such purchase.'

"Hence, as far as dealings in exclusively one or more of the goods falling under these first 18 entries are concerned, since no purchase tax is leviable on such goods if they are meant for sale or resale or are sold after purchase, it is not necessary for such a dealer to make a selection under section 10A as to whether he would like to pay purchase tax on his purchase or sales tax on his sale. This is because there is no sales tax payable on sales of these goods. These goods are liable to general sales tax at the time they are sold by a licensed registered dealer to an unlicensed registered dealer or an unregistered dealer or person in the State of Bombay. But if his purchaser is again a dealer who is a resident outside the State of Bombay and if the goods are despatched to such dealer or in accordance with his instructions to a place outside the State of Bombay no general sales tax will be payable by the selling dealer.

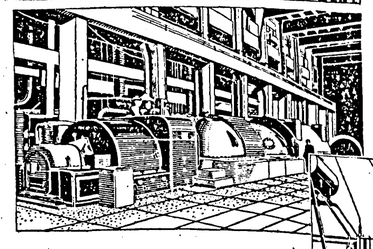
"In the Amendment Act it is explained that a sale or resale includes a sale which does not take place within the State of Bombay. No purchase tax will be payable by the exporter, who is engaged in the transaction we are considering, because he sells that cotton. This case is amply covered by the proviso to section 10 of the Act."

Complete Plant and Equipment for THERMAL and HYDRO-POWER STATIONS

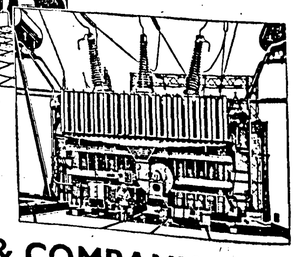


(a) Airblast Circuit Breakers 500 Amp. 230 KV, 6,300 MVA

(b) Turboset 110.000 KW, at 3000 R.p.M. 1250 p.s.i., 970° F. — Alternator for 14.500 Volts, 50 Cycles



(c) Three-phase Transformer 100.000 KVA, 220/150/15 KV. with on-load tap changer



Manufactured by the members of the French Electrical and Mechanical Federation for India (FEMFI), comprising a group of leading French manufacturers.

New and Enlarged Edition of

INDIA — AT A GLANCE

The First Comprehensive Reference Book on India

Size: Demy 4to. Pages 1900. **Price Rs. 40/-**

Managing Editor: G. D. BINANI

Editor: T. V. RAMA RAO

This is what Others Said of the First Edition

"... contains a great deal of information about our country and will be found useful as a reference book."
DR. S. RADHAKRISHNAN, *Vice-President of Indian Union.*

"... Extremely useful as a work of reference on many matters concerning the country."
DR. JOHN MATTHAI, *Former Finance Minister, Govt. of India.*

"... An admirable publication."
Amrita Bazar Patrika, Calcutta and Allahabad.

"... a book of outstanding merit."
Hindusthan Standard, Calcutta and Delhi.

"... monument to diligence ..."
Capital, Calcutta.

"... directory to end directories ..."
Sunday Standard, Madras, Bombay and Delhi.

"... For sheer variety of information and wealth of detail under each division, there is, perhaps, no other book that compares with this publication."
Commerce, Bombay.

"... An indispensable Book."
Bharat Jyoti, Bombay.

"... It is much more than a Reference Book ... Excellent editing." *Hindusthan Times*, New Delhi.

"... A useful addition to the Reference Literature on India."
Hindu, Madras.

"... presents an up-to-date picture of all aspects of Indian life from Religion to Industry."
Financial Times, London.

"... covers in a wealth of detail—in addition to being an encyclopedia ... it is also a trade guide and gazetteer."
Ceylon Daily News, Colombo.

SUGARCANE CESS IN BOMBAY STATE

UTILISATION OF PROCEEDS IMPROPER

AN *important aspect of the sugar policy of* State Governments which has evoked bitter criticism for a considerable time now from the sugar industry relates to cess on sugarcane. The States in general have laid themselves open to the universal complaint of continuing to spend only a negligible portion of the total cess collected on sugarcane development, despite the specific recommendation of the Tariff Board (1950) that the cess proceeds should be utilised exclusively for such work. In fact, all States except Bihar, are using the sugarcane cess for general budget purposes and not for the development of sugarcane exclusively. An index of this nature is provided by the consolidated statement of expenditure from the cess in the State of Bombay during 1952-53, as given below, which was made available to the Deccan Sugar Factories Association recently:

Details of provision of Rs. 50,67,354 (Rs. 51 lakhs in round figure) to be met from the Bombay State Sugarcane Cess Fund

Budget head and description of item	*Provision for 1952-53 (In Rs.)*
1. Minor irrigation works financed from the State Cess Fund	*4,80,000*
2. Agricultural expériment and research ..	6,95,354
3. Subsidies to co-operative societies undertaking schemes of lift irrigation ..	15,00,000
4. Civil works : cement concreting of roads..	6,19,000
5. Construction of drainage works	2,73,000
6. Loans to co-operative societies undertaking schemes of lift irrigation	15,00,000
Total ... Rs.	50,67,354

It is clear from the above that hardly 10 per cent. of the total cess fund was spent on research and cane development works, while more than 50 per cent. of the total amount was spent on subsidies and loans to co-operative societies. The rest was spent on drainage and communications, but not necessarily in the sugarcane-growing area. The explanation given by the State Government is that, though the direct expenditure on cane development is only a small fraction of the total collection of the cess, a large amount is being spent for extending facilities for irrigation and communications, etc., which confer an indirect benefit on cane development. It justifies its action on the basis of sub-section 2 of section 11 of the Bombay Sugarcane Cess Act, 1948, which reads as follows:

"The Fund shall be expended in such manner and under such conditions as may be prescribed for the purposes of development and improvement of the cultivation, growth and marketing of sugarcane and other irrigated crops, for the development of sugar industry and for the improvement and development of agriculture in general in the Province of Bombay."

This explanation does not carry conviction, because the law itself is defective. The proceeds of a specific tax have to be spent only for a specific purpose. There are other taxes, such as irrigation cess, cotton cess, road and petrol taxes, which are being levied and utilised for specified purposes and there is no reason why the cess on sugarcane alone should be treated differently. The fact is that this is being used as a device to tax the sugar industry. Nowadays the State Governments are in the habit of debiting a part of the expenditure on road development to the cane cess fund and arguing that the proceeds of cane cess have been properly utilised. Questioning the appropriations of this allocation, the Deccan Sugar Factories Association points out that cement concreting of roads even in the sugarcane area is not a legitimate item of expenditure from the sugarcane cess fund. While the Association is prepared to agree that better roads in this area would be of great assistance in marketing sugarcane, it points out that roads are not used exclusively for transport of sugarcane and, as such, they cannot form a legitimate charge on a specialised fund. In the first place, the responsibility for providing roads for general traffic, whether it be in the sugarcane area or other areas, is on general revenues. But, apart from this, when the tax on motor vehicles and sales tax on petrol have been specifically raised to unheard of and unprecedented heights for the purpose of building roads, any diversion of a special fund like the cane cess for this purpose is certainly unjustifiable under any canons of public finance. Further, the sugarcane growers including the sugar factories are contributing a huge amount in the form of local cess on land revenue and irrigation charges to the District Local Boards, the primary responsibility of which is to provide feeder roads in rural areas. Thus, when there is a special collection for Central and State roads in the form of Central excise and State sales tax on motor fuel and vehicle tax on all motor vehicles, besides local cess for subsidiary and feeder roads, there can be no justification for diverting any part of the cane cess fund for this purpose, especially so when large credit balances in the road fund have remained unspent. Further, these amounts are being spent on roads already existing for general purposes which are already a charge on general revenues. There might have been some justification for utilising a part of the cane cess for this purpose, if there had been no money available in the road fund. The Association, therefore, finds it difficult to justify the expenditure of Rs. 6,19,000 from the *cess fund on cement concreting of roads*. If, however, in spite of the foregoing facts, the Government were still to insist upon spending a portion of the State sugarcane cess fund for the cement concreting of highways, like Ahmednagar-Manmad road, the Association would urge that priority be given for constructing feeder roads connecting the sugar factories to the surrounding villages to facilitate transport of cane to the factories from their adjoining areas.

Subsidies to Co-operative Societies

As regards the provision of Rs. 15 lakhs for subsidies to co-operative societies undertaking lift irrigation, it is not clear that this irrigation facility is for the specific purpose of sugarcane growing. Consequently, the Association has asked for an assurance from the Bombay Government that lift irrigation is for sugarcane growing. It has further pointed out that, even though some of the factories are undertaking schemes of lift irrigation, no subsidies are being given to them for this purpose. On the contrary, the request of the sugar factories not to increase the very heavy charges on lift irrigation has been ignored. If it is the intention of the State Government to encourage and assist lift irrigation in the State and if more than 25 per cent. of the proceeds of the cane cess is devoted to this purpose, the sugar factories should have the first claim on it and should benefit from such an expenditure. "It is, indeed, an anomaly," says the Association, "that lift irrigation charges should be increased in the case of sugar factories, while cane cess extracted exclusively from them should be largely utilised to give subsidies for lift irrigation schemes to cane growers other than sugar factories."

Referring to the sum of Rs. 15 lakhs provided for loans to co-operative societies undertaking lift irrigation works, the Association wonders how loans could be described as expenditure. The Association has also questioned the appropriateness of debiting the cane cess fund with Rs. 4.80 lakhs for minor irrigation works, as this expenditure should be financed from ordinary revenues, according to the accounting head itself, and as proceeds of the sugarcane cess are not supposed to form part of the general revenues. Similarly, the sum of Rs. 2.73 lakhs for maintenance of works connected with irrigation should, the Association states, be debited to revenues from irrigation works and not to the cane cess fund.

It is thus evident that the sole purpose of the sugarcane cess, namely, development of sugarcane growing, is being defeated both in law and spirit. Small wonder, then, that the State has no achievement to its credit in the sphere of sugarcane research. If, despite this, sugarcane growing in the Bombay Deccan has not suffered any deterioration, it is solely because of the enormous amounts and effort put in by the factories themselves for increasing the quality of cane and the yield per acre. Really speaking, therefore, the State Government has no moral right to levy a cess at all. It is simply using its power to collect a cess on agriculture for raising additional revenue from the factories.

Tax on Raw Materials

It is one of the accepted canons of taxation that raw materials should be exempted from tax, though a small cess may be imposed on such raw materials for the purpose of improving its yield, quality or and marketing. To quote the significant words of the Tariff Board:

"The levy of a tax on a raw material is as a rule wrong in principle and it is particularly objectionable when it is imposed on the raw material of an industry (sugar industry) which has been nursed by the consumers all over the country for a period of 18 years for which they have made a heavy sacrifice during all these years."

And yet the State Government collects a cess at a rate which works out to Rs. 5 per ton of sugar. The power given to the State Government for collecting a small rate of cess is thus being utilised for levying it at a rate which is big enough to be described as excise duty. Can there be a more glaring instance of misuse of powers by State Governments? If the Bombay Government has any sense of justice, the least that it should do is to reduce the rate of cess and use it solely for the purpose of expanding sugarcane production, both quantitatively and qualitatively so that, in course of time, there will be more sugar at a cheaper price.

The Association had asked for the constitution of an Advisory Committee to advise the Government on matters relating to the expenditure of the cess fund, on which the sugar interests are represented. It wanted also that cane development should be carried out under the supervision of the Committee. We are told that the Government has refused to comply with this request. This is understandable, because no Government responsible to an elected legislature can permit any form of control on the expenditure of its revenue by a private agency. It is, however, gratifying to hear that the Government has volunteered to consider the suggestions put forward by the factories for building roads in the rural areas adjacent to the factory, to be financed from the sugarcane cess fund. This is, indeed, a small mercy, but something is better than nothing.

SUGARCANE PRICE

In a memorandum to the Prime Minister, 58 members of Parliament belonging to the Opposition, which includes National Democratic, Praja Socialist and Communist Parties, have pleaded for the fixation of sugarcane price at Re. 1-12 per maund, and for making arrangements whereby cultivators could get a share in the excess profits of sugar mills. They have pointed out that during the period of peak production in 1952, the Government-fixed prices of Re. 1-12 per maund of cane and Rs. 31 per maund of sugar (ex-factory) gave not only reasonable profits to factories, but also provided some incentive to the cane cultivator to grow cane on adequate area and to practice improved method of cane cultivation by the use of fertilisers, insecticides, etc. But the sudden cut of 25 per cent. in the price of sugarcane in 1952, against the advice of the Indian Central Sugarcane Committee, brought about demoralisation in the industry. The memorandum says that, if the price of Re. 1-12 had been continued, growers would have been satisfied, there would have been no setback to cultivation, the mills would have got the required quantity of cane, the Government would have got full revenue, the country would not have to import sugar and the consumer would not have to pay a higher price. It suggests that the Government should declare its policy for the next five years so that cane-growers are not kept in suspense from season to season. It also asks for the appointment of a committee consisting of some members of Parliament and experts to suggest ways and means to place the industry on a sound footing.

SUGAR PRODUCTION AND STOCKS

The opening stock of sugar with factories in India on 1st March, 1954, was 5.93 lakh tons, as against 8.65 lakh tons on the corresponding date of the previous season, but arrivals of foreign sugar up to 31st March, 1954, aggregated 2.54 lakh tons. The production of sugar in the country and arrivals of foreign sugar during the month of March, 1954, were 1.55 lakh tons and 0.08 lakh tons, respectively. Out of the stock with the mills, 1.31 lakh tons were despatched during the month under review, as against 1.51 lakh tons during the corresponding period of last year. The closing stock with the factories on 31st March, was 6.17 lakh tons, as against 9.82 lakh tons on the same date last year.

LABOUR WELFARE IN COLLIERIES

REPORT FOR 1952-53

THE detailed report on the activities of the Coal Mines Labour Welfare Fund for the year 1952-53 discloses a rise in the number of persons treated in hospitals, a drop in the morbidity rate of malaria, an increase in educational and welfare schemes for women and children and better housing facilities. Collection of cess aggregated Rs. 1,26,49,098. This amount was credited to the Fund during the year and distributed between the General Welfare account and the Housing Account in the ratio of 7:2. The welfare cess continued to be levied at the rate of As. 6 per ton of coal and coke despatched by collieries. On despatches by rail, the cess was collected by the railways and on those by means other than rail, it was collected departmentally from individual collieries. A total sum of Rs. 56,45,426 was spent from the Fund during the year under review.

The Central Hospital at Dhanbad commenced working in full swing during the year under review and treated 1,680 indoor and 8,343 outdoor patients. Four other regional hospitals and maternity and child welfare centres at Tisra and Katras (Jharia coalfields) and at Chora and Searsol (Raniganj coalfields) treated 19,683 indoor and 41,650 outdoor patients. Two T.B. clinics at Katras and Searsol, each having accommodation for eight beds, were completed during the year. The campaign against malaria continued and the mortality rate dropped further in Jharia coal fields from 57.09 per 1,000 in 1951 to 53.65 in 1952. As many as 13 pithead baths and 21 creches were completed, thereby bringing the total to 105 baths and 140 creches by the end of March, 1953. Seven miners' institutes were completed. Of the eight new centres for the welfare of women and children sanctioned during the year, seven were opened. As regards housing, following the increase in the rate of subsidy to colliery owners from 20 to 25 per cent. of the cost of construction, 31 companies applied for the construction of 1,652 houses. Under this scheme, 2,465 houses were sanctioned to be set up in 12 coalfields. Out of these, 282 were completed and 504 were under construction.

A consolidated abstract of receipts (provisional) and expenditure under the two accounts of the Coal Mines Labour Welfare Fund, namely, (a) General Welfare Account, and (b) Housing Account, from their inception up to the 31st March, 1953, is as follows:

(A) General Welfare Account

(In Rupees)

Year	*Receipts*	*Expenditure*
1944-45	70,867	2,01,452
1945-46	*68,29,343*	*2,25,284*
1946-47	43,42,500 (a)	57,15,531
1947-48	50,70,964	22,93,034
1948-49	63,05,351	41,07,528
1949-50	47,11,298	55,22,048
1950-51	51,97,793	37,07,383
1951-52	86,03,634	55,47,111
1952-53	1,07,91,891	46,81,970
Total ..	Rs. 5,09,23,641	3,20,01,341

(a) It includes Rs. 40,00,000 *ad-hoc* transfer from Housing Account.

Closing balance on 31st March was Rs. 1,89,07,764. This excludes Rs. 52,662 transferred to Contributory Provident Fund Account of employees on account of their subscriptions and includes Rs. 38,127 transferred from Housing Account on account of security deposits.

(B) Housing Account

(In Rupees)

Year	*Receipts*	*Expenditure*
Ad-hoc transfer from the General Welfare Account ..	40,00,000	..
1947-48	11,18,862	6,48,485
1948-49	16,73,673	18,52,417
1949-50	66,99,159	30,26,547
1950-51	78,19,114	11,80,394
1951-52	22,76,949	14,36,660
1952-53	29,81,805	9,63,456
Total ..	Rs. 2,64,69,562	91,05,959

Closing balance on 31st March, 1953, was Rs. 1,73,25,476. This excludes Rs. 38,127 transferred to General Welfare Account.

A significant development of the year under review was that the Coal Mines Labour Welfare Fund Act, 1947, which was in force throughout India, except in the State of Jammu and Kashmir, was extended to the United Khasi and Jaintia hill districts. More important was the amendment to the Coal Mines Labour Welfare Rules, 1949, so as to provide for the following:

(a) Delegation to the Coal Mines Welfare Commissioner of powers to sanction expenditure on new welfare and housing schemes not exceeding Rs. 10,000 non-recurring and Rs. 1,000 per annum recurring in each case;

(b) exemption of colliery owners from furnishing monthly returns of despatches of coal and coke by means other than rail in certain specified cases;

(c) refund of excise duty collected on raw coal during the course of its transport to washery, where the excise duty was again collected on despatch of the washed coal from the washery to the consuming centres; and

(d) the re-opening of assessment cases of excise duty on despatches of coal and coke by means other than rail in certain cases.

BRITAIN'S DEPENDENCE ON COAL WILL DIMINISH

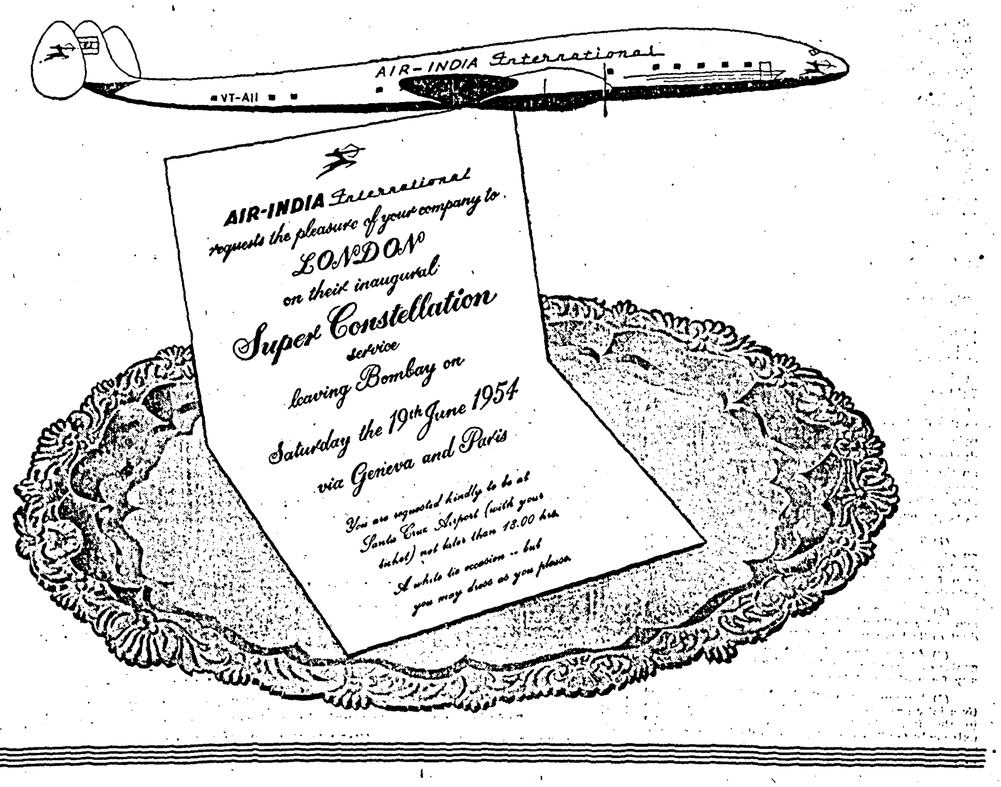
Britain has "entered a new age which provides new sources of power," says the *Daily Mail*. "Our dependence upon coal will not last for ever. Already atomic energy is waiting its turn upon the stage of history. Until recently it was thought this would not be available for perhaps 10 years. Now it is expected that the first atom power station in Cumberland may be working in two years. So brilliant have been the results of British research that the breeder-reactor station in Scotland may be feeding power into the national grid system within three years.

"Then," says the *Daily Mail*, "there is oil. In the first quarter of this year, the British Commonwealth produced 5,200,000 tons of oil, as against 4,000,000 in the same period of 1953. Most of that spectacular increase came from Canada, whose vast reserves have as yet scarcely been tapped. There has been a promising 'strike' in Australia—and, of course, Persia is reappearing on the scene. More and more machinery and transport will desert coal and turn to oil. The proposal to scrap London's trolley buses in favour of Diesel-engined vehicles is a sign of the times. British railways have embarked on a plan to convert 573 shunting Diesel-electric locomotives....

"It would be foolish to imagine that these changes will be rapid," adds the Paper. "Coal is still a vital element in our industrial strength, and will remain so for many years. But every encroachment on its domain lessens by that much our complete dependence on it. We are on the threshold of an era in which, eventually, no man will have to dig for light, heat, and power in the dark recesses of the earth."

COAL AND COKE STATISTICS

The output of coal and coke in India increased from 3,059,794 tons and 316,674 tons, respectively, in February, 1954, to 3,071,088 tons and 333,186 tons in March, according to the Chief Inspector of Mines in India. During the month, 848 collieries worked, employing on an average 326,581 workers daily. The output per man-shift for miners and loaders increased from 1.05 tons in February, 1954, to 1.08 tons in the month under review. The overall percentage of absenteeism was 13.96, representing an increase of 1.67 over the previous month's percentage.



DIRECT EXPORTS BY JUTE MILLS INADVISABLE

NEED FOR STANDARDISATION AND STABILITY STRESSED

BESIDES analysing the position of raw jute in India, the Jute Enquiry Commission has examined not only the organisation and set-up of the jute mill industry, but also the various methods of costing of jute goods. Further, it has suggested a basis for determining fair prices for raw jute in relation to the price of jute goods.

At the outset, the Commission draws attention to the capacity of the mill industry which has doubled between 1880 and 1900 and again between 1900 and 1930. Of the 84 mills in the Indian Union, as many as 73, with a complement of 95 per cent. of the loomage, are located around Calcutta and its suburbs. Andhra has four mills, Bihar three, U.P. three and Madhya Pradesh one. The total productive capacity of the mills is estimated at 100,000 tons per month on the basis of single shift of 48 hours a week. But production has been consistently below this capacity since May, 1949.

The value of output of the industry is over Rs. 150 crores a year. The industry's share in the export trade of India is the largest for any single commodity, accounting for Rs. 129 crores and representing 23 per cent. of the total export trade during 1952-53. It is also the biggest dollar earner. About three lakh workers are provided with employment by the industry. Its demand for raw materials furnishes the means of livelihood to nearly two million families. The collective welfare of the industry is looked after by the Indian Jute Mills Association. About three-fourths of the mills are under the control of a dozen managing agency houses, of whom four control 45 per cent. of the loomage. The main types of manufacture are hessians and sackings, the size and width of the cloth and the texture being according to the specifications prescribed by buyers. Under sackings, the main variety is "B twills." Other popular varieties are heavy cees, Australian corn sacks, Cuban sugarbags, and Australian woolpacks. Other manufactures include canvas, yarn and twine. In regard to hessians, the production lines are in accordance with the foreign markets' appreciation of the output of a mill.

The functionaries in the gunny trade include shippers, dealers and merchants. A shipper normally buys according to orders he has secured from abroad. A dealer generally buys and sells in the Calcutta market and sometimes engages himself in export business. There is also the broker, an intermediary working on commission basis, which he collects from the seller. These functionaries handled the export trade in gunnies before the last war. Since the end of the war, the mills have directly entered into the export business, with the help of their own export personnel. About 42 per cent. of the total exports are now carried out by mills themselves. This entry of the mills into the sphere of intermediate functionaries has been criticised by a section of the trade.

The contention of the middleman is that, as only some mills have the advantage of direct export connections, and as the benefit of valuable contacts which exporters of long standing in the trade can provide is a factor for stabilising the level of exports, there should not be large-scale displacement of the trade in the field of exports. The Commission attributes the entry of the mills in the sphere of export trade to the desire on the part of mills to keep export prices as low as possible and to even out price fluctuations as much as possible. This attempt on the part of mills to check speculation is, however, considered by the Commission as inadvisable. The reasons given by it are convincing indeed. They are:

(1) The export trade in jute manufactures is an extremely intricate business. It has been built up by the trade over the past 50 years. If the manufacturers were to export now, the established valuable contact by the trade will be lost.

(2) From a practical point of view, direct export by mills will be impossible, because individual mills have not the necessary finance.

(3) Any system of joint export would antagonise overseas buyers, especially in the U.S. where any form of cartel is anathema.

(4) Bureaucratic methods of business conducted by a joint organisation would be quite inappropriate to the trade in jute goods which requires an extremely flexible organisation to deal with a number of overseas markets to cope with rapid changes in the market situation.

(5) A central selling organisation in the exporting country would certainly result in the establishment of a central buying organisation in the importing country as a means of retaliation.

(6) The trade also would be hostile to such controls on export trade.

For the same reasons mentioned above, the Commission rules out the establishment of State trading also. It observes, and rightly so, that "in a free economy, we are left with no alternative to allowing the establishment of proper futures markets operating under regulations and conditions approved by the Government." In holding this view, the Commission has the full support of the I.J.M.A. Although those mills which have established their own export departments have so far succeeded in their efforts at direct exports, such is due to the fact that there has been a steady decline in the stocks of ready jute goods over the past one decade. But, when once the volume of trade expands, following an increase in the output of jute goods, the financial and other risks of an expanding market are bound to impose limitations on the export trade activities of these mills. It will, therefore, be in their own interests, in the long run, to take recourse to the established trade channels which are experienced in dealing with changes in trading conditions and fluctuations in prices.

Pattern of Mill Production

The Commission has done well in spotlighting attention on changes which have occurred in the pattern of mill production since the last war. To a certain extent, the manufacture of jute goods has been conditioned by the availability of the raw material as also by its variety. Thus, before Partition, the mills obtained the bulk of their raw material from areas now in Pakistan. Now the mills have switched over to the utilisation of the types and varieties of jute that could be grown in India. For instance, daisee jute, which was formerly exported to Dundee, is now extensively used by the mills. Jat varieties of Pakistan have yielded place to Assam and Bihar jute in the absence of supplies of the former. Further, the use of *jungli*, *mesta* and *bimli* jute is now on the increase in the manufacture of jute goods in India and it is stated that the use of these could be extended further by means of technological improvements.

Changes in the offtake of goods in the overseas markets have also caused changes in the types of goods manufactured by mills. Early in 1953, the mills had heavy accumulation of stocks, both hessian and sacking. Subsequently, offtake improved and accumulation of stocks tended to decline. Towards the close of the year, the mills reduced the production of sacking und increased that of hessian. This position, however, seems to have been reversed in the first quarter of this year, as the output of sackings has gone up steadily owing to the switching over to the manufacture of these from hessians.

But the production of jute goods is stated to be not in accordance with well defined standard specifications. It is regretted that this country, though the biggest producer of jute goods, has not taken the lead in fixing necessary and adequate specifications for its standard products. The non-observance of standards has given rise to complaints, particularly in regard to exports of heavy goods, where most of the trade is now done on the basis of the vague trade description, "fair average quality." Although a draft Indian standard specification for hessians has been drawn up, progress has been halted, as the trade is not supporting the standard. In this context, the Commission observes that "it is difficult to avoid the impression that the Indian jute industry is taking a complacent attitude on the question of specification, because as far as the hessian market is concerned, the classification of Bemis Brothers satisfies the main U.S. market." It has, therefore, stressed the need for proper standardisation in the manufacture of all types of goods. Besides, standardisation is also necessary for the conduct of a sound futures market.

Costs and Prices

The enquiry into the cost-price structure of jute goods by the Commission has resulted in providing one of the stimulating chapters of the report, as so far no comprehensive account of the subject was available. At present, there is no uniform system of cost accounting by mills. The standard cost system, although adopted for purposes of cost control by a large section of the mills, is not regarded by the industry as offering a suitable basis for pricing.

In order to measure the trends in costs, the Commission obtained from mills an analysis of their costs for the years 1951-52 and 1952-53 for two popular constructions, namely, hessians 40" × 10 oz. and B twills. On the basis of data thus collected, the costs estimated for the two varieties by the Commission are as follows:

Items of cost	Estimate for 100 yards hessian 40" × 10 oz.	Estimate for 100 bags B Twill 44" × 26½" GE2½ lbs.
	Rs.	Rs.
(1) Labour (direct and indirect)	7.5000	20.00
(2) Other materials		
(3) Works on cost excluding depreciation	7.000	21.00
	14.5001	41.50
(4) Administrative overhead assessed	1.000	1.50
	15.500	43.00
(5) Depreciation	1.110	3.00
	16.610	46.00
(6) Brokerage	0.330	0.75
	16.940	46.75
(7) Managing Agents' commission	0.180	2.88
	17.120	49.63
(8) Interest on working capital at Rs. 13.8 per ton of hessian and 44 per cent. on 800 per ton for sacking	0.880	1.35
	17.000	50.98
(9) Return on block at Rs. 64 per ton of hessian and 8 per cent. on Rs. 800 per ton of sacking	1.780	6.40
	19.380	57.38
(10) Raw jute	24.321	57.07
Total cost	Rs. 43.000	114.45

Thus, in a standard estimate based on the price of raw jute at Rs. 26 to Rs. 27 per maund, the cost to consumers of 100 yards of hessian 40" × 10 oz. works out, as shown in the table above, to Rs. 43.6, of which Rs. 24.32 represents the cost of jute and Rs. 19.28 the processing cost, overheads and profits. A similar estimate for 100 bags of B. twill shows a total cost of Rs. 114.45, comprising Rs. 57.07 as cost of jute and Rs. 57.38 as element of processing, overheads and profits.

The Commission observes that, during the last three years, the majority of mills has continued to declare reasonable dividends, although there has been a steady downward trend in prices of jute goods, barring occasional spurts.

The Commission considers that it is not desirable to prescribe ceilings for prices of jute goods. As 80 per cent. of jute goods are produced for export, such a ceiling would not be advantageous to the Indian consumer. It has not recommended fixation of prices to raw jute also. It, however, supports the view that prices should be allowed to stabilise themselves over a long period and the advantages to the grower should come from other positive measures for removing the handicaps under which he suffers. The Commission's emphasis on stabilisation is based on the fact that stable prices would be more welcome to foreign buyers than a drastic cut in prices. In this context, it draws attention to the presence of a few factors which, in the long run, would help stabilisation of prices. In the case of raw jute, increase in Indian production and the position of Pakistan as the largest supplier of jute would combat the effect of speculative factors. Similarly, in the case of jute goods, the strong position of producers overseas and the emergence of Pakistan as a producer of jute goods would also restrict the scope for speculation. Further, by providing the facilities of a regulated futures market, the scope for violent fluctuations of prices could be minimised as a result of hedging operations of those interested in jute and jute goods. As a measure of stability could thus be achieved, the Commission rules out the need for price controls.

EUROPEAN COAL AND STEEL COMMUNITY

NEED FOR LONG-TERM INVESTMENT AT LOW RATES OF INTEREST

THE annual session of the Common Assembly of the European Coal and Steel Community was held at Stasbourg recently. Although full details of the proceedings are not available, Press reports show that M. Monnet, President of the High Authority, reviewed the progress made by the Community so far in establishing a common market in an atmosphere of free enterprise and also gave an account of the investment needs for developing the coal and steel industries in the pool area.

It is now twenty months since the High Authority and the other institutions of the Schuman Coal and Steel Community were created and a year since a common market for coal and steel was established. This is too short a period to permit a correct assessment of the achievements of the Community. Nevertheless, there have been many tangible results in all the fields of action of the High Authority, which redound to the credit of M. Monnet and his colleagues, who have been striving hard to make the Community a success. Summing up the balance-sheet of the results achieved, the High Authority's Second General Report on the activities of the Community (13th April, 1953 to 11th April, 1954) observes as follows:

"Not all the problems have been solved, not all the difficulties overcome, but each stage that has been passed—with all the precautions necessary to avoid causing serious disruption in the economic life of the six countries—has brought the Community nearer to its fundamental objective: increase of production, free and equal access for all consumers to the sources of production, improvement of living and working conditions for labour. By these achievements, the Community has given proof of the effectiveness of the first supra-national European institutions for obtaining the ultimate goal and of their flexibility for adapting themselves to the various situations which they meet. That certainly is the essential fact which emerges from the balance-sheet of one year of the common market and 20 months of functioning of the institutions which govern it. The results achieved in the as yet limited field of coal and steel foreshadow visibly those that would follow from the creation of that broader and closer community whose initial foundations must be laid by the European Coal and Steel Community."

An outstanding feature of the working of the High Authority so far is that, in the case of several steel products, internal prices of the European Coal and Steel Community have declined below those of the British producers who are the major competitors of the Continental steel makers. In the case of certain varieties, the prices of the Community's products are slightly higher than those of the British, but, by and large, they compare favourably. A comparison with the prices of American steel products shows that, barring strips and sheets, all the others are definitely cheaper. The Community's internal steel prices for billet sheet bars and wire rods are less than those of British producers. The following table gives a comparison of the internal prices of the Community's steel with those of the U.K. and the U.S.:

TABLE I

*Comparison of Internal Prices**

(In dollars per metric ton)

	Community† (Basic-Bessemor steel)	United Kingdom (Open-hearth steel)	United States (Open-hearth steel)
Billets ..	64.00	67.85	68.35
Sheet-bars ..	66.35	67.70	68.35
Merchant bars.	85.00	75.75-86.10	91.50
Sections ..	84.70	75.75	90.40
Wire rods ..	83.00	85.05	99.75
Strip	96.35	89.10	86.65
Plates ..	94.75	80.80	90.40
Medium sheets.	97.00	90.40	90.40
Thin sheets ..	113.80	111.10	86.65

* Prices ex-works or basing point at the end of March, 1954. The comparison between basic Bessemor steel and open-hearth steel is considered to be justifiable, as, apart from shipbuilding plates and a few special products, consumers in the Community use basic Bessemor steel instead of open-hearth steel.

† Lowest prices.

Even in the export markets, the prices charged by the producers in the Community have fallen during the last ten months. In the U.K., the difference between home and export prices has been declining continuously. Export prices are lowered all the time, while home prices are tending to rise, under the influence of increased wages and transport costs. The table below shows the export prices of steel of the Community, as compared with those of the U.K. and the U.S.

TABLE II

*Comparison of Steel Export Prices**

(In dollars per metric ton)

	Community† (Basic Bessemor steel)	United Kingdom‡ (Open-hearth steel)	United States§ (Open-hearth steel)
Billets ..	66.00	..	79.35
Sheet-bars ..	69.50	..	79.35
Merchant bars.	82.00	87.50-88.25	105.15
Sections ..	82.00	91.00	103.60
Wire rods ..	84.00	..	110.90
Strip	95.00	..	100.30
Plates ..	98.00	104.70	103.60
Medium sheets.	98.00	121.25	103.60
Thin sheets ..	131.30	128.00	121.90

(In order to compare these export prices with the home prices of corresponding countries, the prices taken here are f.o.b., which, therefore, include to a greater or lesser degree the cost of transport.)

* Prices f.o.b. North Sea port.

† Prices fixed by agreement between producers and given here by way of indication; the real prices are lower by varying amounts.

‡ The U.K. producers are authorised to lower export prices to the level of home prices.

§ Prices in force at the end of 1953: since reduced from 1 to 10 per cent.

It is less easy to make comparisons in regard to export prices in view of the differences from one transaction to another. The prices given above should be considered as maximum prices for all practical purposes. They show that exporters of the Community are generally in a position to meet British competition, except as regards thin sheets. Despite the recent reductions, the prices charged by American exporters would seem to be still somewhat higher than those quoted by the Community.

The first European common market has opened up new opportunities for investment. In fact, investment is clearly a key factor, partly because a large proportion of steel goes into investment of one kind or another and partly because of the close dependence of the general level of activity and the rate of increase on investment. It will be recalled that, according to an agreement entered into between the U.S. and the High Authority, on 23rd April, 1954, the former will loan $100 million to the Community. Spread over a period of 25 years, the loan bears interest at the rate of 3¼ per cent. and will be repaid in 22 equal instalments beginning from the fourth year. The High Authority is exploring new means by which private capital both in the U.S. and in Europe can be mobilised for investment in Europe's basic industries. Western Europe's need of the hour is long-term capital at reasonable rates of interest. At present, the coal and steel industries' development is being financed by short-term bank loans carrying high rates of interest. To quote the views of M. Monnet on the subject as adumberated in the speech to the special session of the Common Assembly held in January last:

"The statistics of both coal and steel finance show that the enterprises are finding it more and more difficult to manage and are able to carry out essential work only by increasing recourse to ever more uncertain and costly financing. Rates of interest charged are now as high as 7 per cent. or 8 per cent. (sometimes even higher) for loans frequently running for less than five years, whereas those which extend to ten or fifteen years are described as long-term loans. It need hardly be pointed out that a ten-year loan at 6 per cent. represents a gross financial burden of nearly 14 per cent. per annum, which has inevitable repercussions upon prices and must, in the final analysis, be paid by the consumer. How can basic industries, whose costly investments can only be amortised over a long period, continue to pay such high rates of interest for such short-term loans? At the same time, companies in the U.S. can readily obtain loans at between 3 per cent. and 4 per cent., redeemable in up to twenty-five years. In Great Britain, loans for similiar periods bear a rate of interest of between 4 per cent. and 5 per cent. It is obvious that the High Authority can only make a partial contribution to the total financing requirement, but this contribution will, in our opinion, be vital, for, whether by contracting loans or granting guarantees, its sole purpose will be to open up for the enterprises new financial sources to which they would normally have no access. The High Authority will do its best to make capital available to the enterprises at more favourable rates of interest and for longer periods than those which they are today generally obliged to accept. It intends to offer loans on standard terms to all enterprises engaged upon similar activities. In the belief that this additional supply of capital at a standard rate of interest may be an incentive to our industries to harmonise their financing methods, and at the same time a first effective contribution towards the much-needed transformation of the European capital market.

"Whatever the success of these efforts on the part of the High Authority, they will not automatically solve all the financing problems. Investment in heavy industries such as those of the Community cannot be depended upon in the long run while capital is so costly and so hard to come by in Europe itself. Both this problem of finance and that of increasing the consumption of coal and steel require joint action by the High Authority and the Governments. The expansion and improvement of production, readaptation measures, the finding of new sources of capital—never before have these various problems been tackled so resolutely and from the point of view of Europe as a whole. Such action will have a profound effect upon the business conditions of every enterprise and upon the very life of the workers. It will act as a leaven in the expansion and modernisation of the economies of our countries. The success of this policy presupposes a tenacious and unremitting campaign to change old habits. The High Authority is under no illusion regarding the difficulties before it. It appeals to industrialists and workers alike for their understanding, to the Governments for their co-operation and to your Assembly for its support, so that by our combined efforts we may be equal to this great undertaking."

The negotiations which M. Monnet has been carrying on with the U.S. for some time past for getting financial assistance are expected to yield good results. As stated earlier, the U.S. has already sanctioned a loan of $100 million. Some more loans are expected to follow as a result of the present talks. Be that as it may, the $100 million which the U.S. has loaned will go not a small way in strengthening M. Monnet's hands in his tussle with the cartels and in boosting up the prestige of the Coal and Steel Community.

The Tables III and IV reveal the investment in the Community as on 1st January, 1953 and 1954 and the means of financing at the disposal of the enterprises of the Community. As will be seen from Table IV, the enterprises have been able to obtain 75 per cent. of the funds needed by them outside their own resources; about $500 million in 1952 and $600 million in 1953 came from sources which cannot be considered as normal, because they came either from short-term bank loans or American aid and public funds. Furthermore, these funds can often be obtained only at extremely high rates, frequently rising as high as 8 to 9 per cent. and even higher. These facts clearly reveal the gravity of the problem of financing investments in the Community and the urgency with which a solution for it requires to be found.

TABLE III

Investments in the Community (1)

(In millions of dollars)

	As on 1st January, 1953		As on 1st January, 1954			
	Total expenditure involved (2)	In percentage of expenditure involved	Total expenditure involved (2)	In percentage of total expenditure involved	Expenditure yet to be made: Amount	Expenditure yet to be made: In percentage of amount of each industry
Hard coal industry (3) (4)	1,791	40.5	1,497	40.9	727	48.6
Iron and steel industry (3)	1,715	38.8	1,220	33.3	654	53.6
Coking plants (5)	397	9.0	388	10.6	150	38.7
Lignite industries (3) (6)	400	9.0	461	12.6	346	75.0
Iron ore mines	120	2.7	96	2.6	54	56.3
Total ..	4,423	100.0	3,662	100.0	1,931	52.7

(1) Excluding construction of workers' housing.
(2) Excluding interest on capital during construction.
(3) Including thermal power stations, but excluding cokeries.
(4) Including patent fuel plants.
(5) All coking plants producing metallurgical coke.
(6) Including plants for producing low-temperature coke.

TABLE IV

Means of Financing at the Disposal of the Enterprises of the Community

(In millions of dollars)

	1952			1953		
	Total	Public issues and loans for more than 5 years: Amount	Public issues and loans for more than 5 years: In percentage of total	Total	Public issues and loans for more than 5 years: Amount	Public issues and loans for more than 5 years: In percentage of total
Iron and steel industry	353.3	83.1	25	428.7	98.4	23
Coal-mining industry	305.0	70.8	23	344.1	100.2	29
Iron ore mines	6.5	2.4	37	12.4	1.2	10
Lignite mines	8.0	..	..	25.1	..	..
Total ..	654.8	156.3	24	810.3	199.8	25

The figures are concerned not with the net amount of investments but with all the work undertaken by the enterprises and thus include, in particular, replacements and major repairs costing more than $500,000 (E.P.U. units). Thus, the idea of investment as used here is rather that of gross investment—less variations in the value of stocks and repairs costing less than $500,000.

POLLUTION OF SEA BY OIL

The first steps towards the prevention of oil pollution of the world's beaches on an international basis were taken in London on the 12th inst., when the International Conference on Pollution of the Sea by Oil agreed to fix zones in which dumping of oil by ships would be banned. Forty countries including India were represented at the Conference, which opened on 29th April. The problem of oil pollution is not one which presently affects India so seriously as it does the U.K. or some other European countries. Nevertheless, it is felt that it is essential that India also should take steps to guard against the problem assuming any serious proportions in the near future owing to the tendency in the world to use more and more oil fuels for ships' propulsion and more particularly as in some major Indian ports, oil refineries will soon go into production, necessitating imports of large quantities of crude oil by tankers.

The main source of pollution of the sea beaches by oil is tankers which discharge tank washings and sludge and oil contaminated ballast water from cargo tanks. Another important source is the oil-contaminated ballast water from bunker fuel tanks of dry cargo, passenger and other vessels. Among the ill-effects of oil pollution are the spoiling of beaches and the amenities of coastal resorts, destruction and injuring of sea birds, damage to fish, shell fish and larvæ, fouling of boats, fishing gear, piers, quays, etc., and risk of fire in harbours and other enclosed waters.

The London Conference has drafted a convention and it was agreed among the representatives of the countries who took part in the Conference that from the date the Convention is to take effect there should be zones throughout the world within which the discharge of certain oils—crude oil, fuel oil, heavy diesel oil and lubricating oil—must be prevented. The Convention covers all registered ships except those under 500 tons, those for the time being used as naval auxiliaries and those used as whalers. It covers tankers as well as dry cargo ships for which separate zones have been agreed. Three years after the Convention comes into force, ships will have to carry record books giving an account of any operation resulting in oil discharge. The Convention will come into force after it is signed by 10 countries including five having a tanker tonnage of not less than 500,000 tons. The U.K., which is affected very seriously by pollution of its beaches by oil, has been the first to sign the Convention. The British Government proposes to introduce immediately legislation required to put the measures proposed by the Convention into force. It may be noted, in this connection, that a previous international conference on oil pollution convened at Washington by the United States Government in 1926 failed to come to any agreement regarding the steps to be taken to prevent pollution of sea beaches by oil.

SUPER-CONSTELLATION FOR AIR-INDIA INTERNATIONAL

Air-India International will shortly receive the first Super-Constellation, already named "Empress Nurjehan", which will commence its first flight from Bombay to London on 19th June, 1954. Developed by the Lockheed engineers in co-operation with the internationally famous designer organisation, namely, Henry Dreyfuss, the Constellation provides speed with luxurious comfort; it will have a maximum speed of about 375 miles per hour.

A point of interest to passengers in this big new Lockheed transport is the club lounge providing seating accommodation for eight members. It offers passengers such new travel pleasure features as (1) fine-arts murals for decoration and diversion, (2) partitions of rich-grained wood, replacing cold metal, (3) low-backed sofas upholstered in interesting materials, (4) etched translucent panels as a design highlight, (5) contrasting colour schemes, and (6) fingertip control curtains.

The new aircraft will place Air-India International in line with the leading airlines in the world which operate luxurious aircraft. The fuselage of the Super-Constellation is the longest among the world's commercial transports. The interior of the plane can be rearranged quickly and easily to provide tourist accommodation if desired; each of the three passenger compartments may be converted quickly for high density tourist traffic (five abreast) or for low density air travel in berthable seats (four abreast and seats respaced for maximum leg room).

2½-MILE SUBMARINE PIPELINE LAID

The first stage in the gigantic operation of launching submarine pipelines, connecting the Butcher Island Marine Terminal and the 2-million-ton Burmah-Shell Refinery at Trombay, has now been completed. These 20,000-foot long steel lines, 12,000 ft. of which are below water level, cover the distance between Butcher Island and the mainland, and will be used for importing crude oil in addition to exporting finished products.

Working against great difficulties, the Bombay Port Trust contractors succeeded in laying one 12-inch and two 16-inch steel pipelines. These are three of the final seven concrete-encased steel lines that will connect the two Trombay Refineries with the Marine Oil Terminal where the 30,000-ton super-tankers will discharge. One 8-inch and three 24-inch pipelines are expected to be laid after the monsoon.

The laying operation is very complicated and considerable thought and research goes into this operation before plans for actual laying of the lines can be taken in hand. For instance, strong wind, current, tide movements and other marine factors in the channel separating the Butcher Island from the mainland, had to be ascertained before launching the pipeline. After this, a thorough investigation was made by soundings with the help of echo-meters to determine the nature of the seabed on which the pipelines will temporarily rest before they are trenched below the seabed.

POST-WAR RAILWAY DEVELOPMENT

SIMPLIFICATION OF EQUIPMENT IN U.K.

(By MAXWELL TAYLOR)

THE biggest problem which British railways are having to tackle is how to make up for the accumulated deficiencies of a period of more than 30 years which included two world wars. This is a problem shared by many countries. Paradoxically, the greater the damage suffered by a nation's railway system, the easier it is to repair for, with nearly total destruction, so much equipment that is becoming obsolete and inefficient is swept away, giving greater opportunity for new works and up-to-date equipment. Conversely, where the greater part of a railway system remains intact, renewals and replacements take a lower priority in rehabilitation plans. British railways, by the end of World War II, were sadly deficient in up-to-date motive power and rolling stock, while track renewals and maintenance were considerably in arrears. But nowhere was it impossible to provide services well in advance of minimum requirements. Thus, plans to overtake arrears were hampered by severe restrictions on capital expenditure and shortage of raw materials—particularly steel—with comparatively low priorities in each field.

New Locomotives

In the matter of motive power, the most interesting post-war development has been in the new standard locomotives. Six years ago, the motive power of British railways consisted of more than 20,000 locomotives of some 400 different types. The average age of the locomotives was about 30 years. This multiplicity of types meant an even greater multiplicity of non-interchangeable working parts, and to replace old locomotives according to their original type was not only undesirable but impossible. British railways, therefore, set about designing and constructing 12 standard types to replace the existing 400.

Each of the 12 types was designed to give maximum route availability, maximum efficiency in the light of the need for economy in initial costs, simplicity in maintenance and ability to run efficiently on varying grades of coal. Many components of each of the 12 types are interchangeable with those of one or more of the other types. Naturally, a complete change-over to the standard types will take several years, but the largest of the standard engines, the "70,000" or "Britannia" class, designed for both fast passenger and freight work, has already established itself as an excellent locomotive.

The new standard locomotives are all steam engines. Why does Britain persist in relying mainly on steam when so many other countries are turning towards diesel-electric locomotives or electrification? Countries favouring extensive electrification generally have available abundant supplies of hydro-electric power; those changing over to diesel-electric traction have indigenous oil supplies; Britain has neither in any considerable quantities. To convert the country's whole railway system to a motive power dependent on imports—as would happen if a change were made from steam to diesel-electric traction—would be unsound economically and strategically.

This is not to say that Britain has no electrified system. Some 2,500 miles of track—mainly in densely populated areas—are electrified, and more is planned. There are hundreds of diesel-mechanical locomotives in service for shunting and a few diesel-electric engines are in use on main lines. But the main source of motive power is still the steam engine, and is likely to remain so for many years.

All-steel Coaches

Standardisation, with its resulting economies and simplification, is not confined to motive power. New types of standard rail are gradually replacing the old type of "bull head" rail. The standard flat-bottom rail is stronger, longer lasting and simpler. As compared with the present "bull-head" type of rail, each mile of the new track will require nearly 17,000 fewer components. The number of different types of passenger stock is also being reduced and new designs are a considerable improvement on the old. New coaches are of all-steel construction giving increased strength and consequently greater protection to the passenger.

But all this conversion to better methods and better equipment can only be undertaken as existing equipment becomes obsolete; there can be no question of scrapping equipment which is still capable of service. The British Transport Commission might be glad to do so, but neither capital nor materials is available.

A criticism often heard is to the effect that United Kingdom trains are not as fast as they used to be. This is undoubtedly true, but each twice-yearly issue of new time-tables shows improvements as track renewals are completed and new equipment becomes available. It is very unlikely, however, that the very high speed trains familiar in Britain before the war will be restored, and the reasons for not restoring them are sound ones.

Britain has more railway per square mile than any other country in the world, except Belgium; British railways carry more than twice as many passengers as all the railways in the United States of America. This means that the tracks are densely occupied. Now, an abnormally high speed train must have more head room than an ordinary express for reasons of safety. That is to say, it needs more space between it and the next train in front of it. This head room is, in effect, waste of space, and it has been decided that more and fast is better than fewer and faster. And it must be noted that, apart from the 24,000 passenger trains which run daily in Britain, there are 16,000 freight trains to be fitted into a tight daily schedule. Running spectacular services may be nice for the few who can use them, but they are a nuisance to everyone else. British railways have a impressive safety record. An examination of post-war figures has shown that passengers travelled over 850,000,000 miles for each fatality in a train accident.

COMPENSATION FOR BANK EMPLOYEES INVOLVED IN ACCIDENTS

APPELLATE TRIBUNAL'S DECISION

AWARDS of industrial courts, which seek to increase employees' emoluments and improve their conditions of service, will generally be welcomed by insurers. For insurers, as a class, stand to benefit from any improvement that may take place in the economic status of any section of the population. The recent decision of the Appellate Tribunal in respect of the salaries and service conditions of the bank staff, however, may not be welcome to them, as it has inspired their employees to agitate for an increase in their emoluments. Nevertheless, it should be welcome to them from the business point of view, inasmuch as the effect of the decision will be to place the sixty and odd thousand employees of banks in a better economic position than they have enjoyed till now.

There are two issues in respect of the insurance of bank employees. The one relates to life assurance of bank employees, pure and simple. The second relates to the insurance of these employees against accidents which might occur in the course of the performance of their duties. Although the Tribunal has decided neither of these two issues, it should be clear that both are important from the point of view of bank employees. As regards the question of life assurance, it should be possible for life insurance agents to persuade the employees, especially the younger section, to take up life policies for modest sums. It should be noted that, while the conditions of their service, in particular the permanency of their service, have improved greatly, even their emoluments have increased out of all proportion to what a bank clerk used to receive in pre-war years. A clerk in a class I bank, in Area I, for instance, will now start on Rs. 143 (inclusive of pay and allowance) and rise to Rs. 414 in the twenty-fifth year of his service. This scale compares favourably with what an ordinary clerk in a Government Department can hope to get.

Payment of Premium

The question as to how the premium should be paid was discussed both by the Sastry Tribunal, against whose award the appeal was filed, and the Appellate Tribunal. On behalf of the banks' staff, it was contended the banks should share 50 per cent. of the premium in respect of "insurance against old age, sickness or injury from accident in the course of the discharge of duties." The Sastry Tribunal held that, inasmuch as it had already recommended two retirement benefits, namely, provident fund and gratuity (or pension), the banks should not be burdened with the cost of insuring the members of the staff. But the Tribunal recommended that the banks should "allow the workmen to utilise their contributions to the provident fund towards the payment of premium on life assurance policies taken by them." The Appellate Tribunal also does not interfere with the decision. Thus, it is for insurers to take advantage of this recommendation and persuade bank employees to take up insurance. Premiums may be paid out of the employees' personal savings or out of their provident fund.

The second issue relates to the death or injury of bank employees which may take place in the course of the discharge of their duties. Now, this is a very serious matter, for bank raids and bank robberies have been quite a few in recent years. It is not right that a loyal member of a bank's staff should be exposed to risks of injury and death and that he, in the case of injury, or his family, in case of his death, should receive no compensation for loyal performance of duties. It is true that banks, even private bankers, are invariably generous in rewarding their employees who suffer injury or death in accidents of this type. The banks, as the Sastry Tribunal itself emphasises, "have not failed to recognise their moral obligations in such circumstances." It is, however, necessary in the interests of both employees and bankers that the whole arrangement for compensation should be placed on a more regular basis. The Sastry Tribunal considered the question whether it should recommend that bank employees should also receive benefits similar to what industrial employees get under the Workmen's Compensation Act. But it felt that to issue such directions would tantamount to a "kind of private legislation extending the Workmen's Compensation Act to bank workmen," and that it should "not assume such legislative functions."

The Sen Tribunal, which considered the question before the whole dispute between the banks and their employees was referred to the Sastry Tribunal, gave an award which extended the benefit of compensation as per scales fixed under the Workmen's Compensation Act to bank employees. But the Sastry Tribunal did not endorse this view. Apart from the legal difficulty in applying the Act to bank workmen, to which a reference has been made above, the Sastry Tribunal cited yet another difficulty. It said:

"The Act provides a well considered scheme of compensation with several safeguards and also an appropriate machinery for deciding the amount and for distribution amongst the workmen and certain of dependents. Our award cannot possibly take in all the safeguards, including the services of a Commissioner and an appeal to the High Court in matters relating to the amount of compensation. It will not be right to adopt one section of the Act without the necessary safeguards where the benefits that are being given are substantially of a monetary character. The proper method will be to apply to the Government to have the Act extended with such modifications as may be necessary so as to apply to certain categories of bank employees, as well. A well considered scheme in its totality is not before us."

Complex Issue

The Appellate Tribunal also felt that the issue of compensation to bank employees involved in accidents in the discharge of their duties was a complex one. It said:

"The materials before us are meagre and no scheme has been placed before us which would merit consideration. The subject has many difficulties, and it is doubtful whether the liability of the banks under the common law could be extinguished by taking out an insurance for a certain amount against loss of life or limb of an employee resulting from, say, an armed attack on the bank. Each individual case would present its own features, not only as to the extent of the physical harm but also as to the compensation which would attach to such injury. The analogy of the Workmen's Compensation Act fails, without the administrative and judicial machinery, to support it. In such circumstances, it is not possible for us to give any directions on this issue, which for the purposes of this appeal has been limited to the question of injury or death, arising in the course of the bank's work, like an armed raid or an armed hold-up outside the bank. The banks do not repudiate their moral obligation nor do they deny their liability to compensate the workmen in such circumstances. And all we can, therefore, do is to repeat the obvious, namely, that the banks should be generous in compensating the employees when such occasions arise."

It should, therefore, be clear that if both the Sastry Tribunal and the Appellate Tribunal have not been able to arrive at any decision on the question of compensation to bank employees, it is partly due to legal difficulties and partly to the absence of a proper scheme for insurance. But it should not be difficult for insurers to evolve a scheme that will provide for payment of compensation to bank employees involved in such accidents for a certain consideration by way of a small premia. Such a scheme will also be beneficial to banks, since they would then not have to set apart, under a sense of moral obligation, sizable sums for payment of compensation. But this implies that all the banks do consent to pay the premia, for any sound scheme of insurance implies that the risk is as widely spread as possible. The whole issue calls, therefore, for joint consultation between banks and insurers.

MOTOR ACCIDENTS

Motor insurers are vitally concerned in any move designed to prevent motor accidents on the roads and to improve the "road sense" of pedestrians. They will be interested to know that the Government is contemplating to produce a film on "road sense." This was revealed in Parliament by Mr. Shah Nawaz Khan, Parliamentary Secretary to the Railway Ministry, who said that the film would be ready for release by the end of June. He also gave information about automobile road accidents in the country. The total number of accidents in 1950-51 was 42,816 in which 2,479 persons were killed and 23,194 injured. Among States, West Bengal accounted for the highest number of accidents; its share was 26,409 accidents involving 249 deaths and 7,884 persons injured. For subsequent years, the figures given excluded West Bengal. In 1951-52, there were 17,298 accidents, involving 2,293 cases of death and 14,784 cases of injuries. In 1952-53, there were fewer accidents, such being 16,373. These accidents involved 1,841 deaths and 13,521 cases of injuries.

HEALTH INSURANCE SCHEME

NEED FOR GRADED EXTENSION

THE Employees' State Insurance Scheme is, as is well known, at present in operation in Kanpur, Delhi and seven industrial centres in the Punjab. It concerns industrial workers in these areas. The authorities of the Employees' State Insurance Corporation have been at some pains to extend it to other industrial centres in accordance with a programme of expansion which has been drawn up. The facilities, which the Scheme offers, are now confined only to industrial workers. Nevertheless, the scheme, as the Director-General of the Corporation, Col. V. M. Albuquerque, emphasised, at a recent interview in Madras, must be regarded as the nucleus of a health insurance scheme which will expand gradually to cover the general population of the country.

The need for interpreting widely the term "industrial worker," particularly in India, where agricultural industry claims the largest proportion of workers, was recognised by the Employees' State Insurance Act, 1948. In that Act, provision has been made for extension of its operation "to any other establishment or class of establishments, industrial, commercial, agricultural or otherwise." Although the corporation has, at present, no intention whatever of extending the Scheme to agricultural labour, its aim is to cover eventually all workers in the country. Explaining the objectives of the Corporation, the Director-General said that it would function as a co-ordinating link between the Ministries of Labour and Health for the development of an "integrated health organisation" in order to promote a positive sense of well-being among the workers.

Need for Research

Although the Corporation will certainly aid workers when they become sick or are involved in accidents, the aim must be to prevent avoidable sickness and accidents. This implies research in industrial hygiene and the adoption of prophylactic measures. Also, safety first precautions should be observed more universally than now if accidents are to be kept at a minimum level. Again, working conditions in factories must be improved. Reviewing, in the light of these considerations, the organisation of factory inspection, and the work done in the sphere of industrial health, Col. Albuquerque said, that under the Factories Act, there was already the Chief Adviser of Factories with a specialised branch for co-ordinating factory inspection work in the States. There was also an engineering branch which dealt with such aspects of factory work as lighting, ventilation, temperature, humidity, dust control, accident prevention, and other environmental factors affecting the health of the worker. The information branch collected and disseminated technical information relating to health, safety, and welfare of workers, besides training of factory inspectors, safety officers and welfare officers. The Factory Act also provides for the appointment of whole-time medical inspectors who should be integrated into the factory inspectorate. He pointed out that Bombay and Bihar were the only two States which had so far appointed full-time medical inspectors.

Factual Surveys

As regards industrial health, the Director-General said that a number of factual surveys were recently carried out in certain factories by the industrial medical officer attached to the Chief Adviser of Factories for the detection of health hazards and for promoting the development of techniques and preventive measures to obviate or, at any rate, to reduce these risks. The first survey was on environmental and medical studies in the storage battery industry. The survey covered 16 factories; 492 workers were examined. Out of these, 10.6 per cent. showed clinical evidence of lead poisoning, 56.5 per cent. showed urine lead values in excess of the normal, 48.7 per cent. had blood lead values in excess of the recognised standard and 57.0 per cent. showed the presence of prophyrinuria. The second survey carried out was on the incidence of occupational diseases in the manfacture of dichromate and in the mining of chromate. The survey was confined to 631 workers in seven factories which showed skin affections in 20.8 per cent., typical skin ulcers in 19.7 per cent., nasal cartilage perforations in 20.9 per cent. and nasal ulceration in 20.6 per cent. The third survey on silicosis in mica mining in Bihar revealed that out of 329 miners examined, 33.1 per cent. were suffering from nodular and conglomerate silicosis which was directly related to the degree of dustiness of the occupations. Pulmonary tuberculosis, which is a well-known complication of silicosis, was discovered in 18.6 per cent. of the miners.

Industrial medicine is fast becoming a highly specialised branch of medicine in the West. As India becomes more and more industrialised, it would be necessary to take special precautions to see that industrial workers are well protected. In this task, the Corporation should be able to give the correct lead to the country, for, when its services are extended to all regions, it will acquire extensive basic data relating to the health problems of industrial workers.

INDUSTRIAL VACUUM CLEANERS

NEW INDIA STORIES FROM LIFE 1

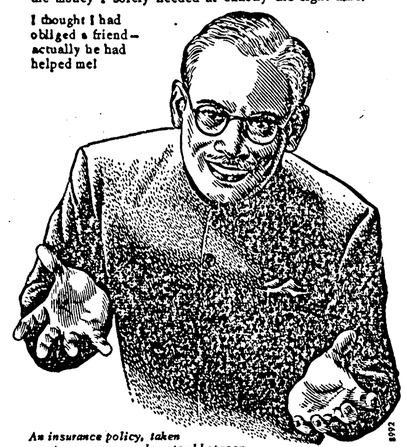
'My good turn helped me most'

MY FRIEND'S son came to sell me insurance. My business was doing well, and I thought I did not need any. But the boy was so young and enthusiastic, that just to encourage him and please his father, I agreed to take out a policy.

Some years later, business slackened and everything I touched seemed to fail. My business took some hard knocks; and my partner got too ill to share my problems. I had to reorganise, but where was the necessary capital to come from? The only solution was to sell our house—and it was my wife's pride and joy.

Then my young friend dropped in to remind me that my New India Endowment Assurance policy would mature shortly. What a wonderful relief! I would get the money I sorely needed at exactly the right time.

I thought I had obliged a friend—actually he had helped me!



An insurance policy, taken out now, may one day stand between you and disaster. For full information write to

THE MANAGING AGENCY SYSTEM

IT IS STILL VITAL FOR THE DEVELOPMENT OF THE COUNTRY

[The recent debate on the Company Law Bill in both the Houses of Parliament was marked by strong criticisms against the managing agency system. Several members even pleaded for the abolition of the system. In spite of the Finance Minister's plea that the system should not be ended but only mended, there are some in the country who feel that the managing agency system should be scrapped. Only a few days ago the Indian National Trade Union Congress, for instance, demanded the abolition of the system. In this context, the following note, detailing the origin and utility of the system, prepared by the Secretariat of the Federation of Indian Chambers of Commerce and Industry and published in its fortnightly bulletin, Notes and News, *will be read with interest, as it provides the other side of the picture.—Ed.]*

THE managing agency occupies an important place in our industrial structure. The total number of companies in India is estimated to be over 28,500 and the total capital invested in all kinds of productive activity, including mines and plantations, is estimated to be about Rs. 1,600 to 1,700 crores, if valued at original cost. The figure would, of course, be much larger, if assets are revalued at current prices. Of the total productive assets of companies in India, nearly 80 per cent. are estimated to be in companies which are managed by managing agents. It is also estimated that about 60 per cent. of the managing agency concerns are limited liability companies. In other words, the managing agency system is a vital part of the present structure of our industrial organisation and today its stake in the use and management of productive capital runs into many hundred crores.

It also deserves to be noted that, although managing agents as such are not common features of British or American company management, in certain categories of industries, particularly in the shipping industry, companies have been managed by 'managers' or 'agents' under managing agreements somewhat similar to the managing agency contracts. Actually, the recent U.K. Companies' Act of 1948 recognises the status of managing agents even in a British company. In the United States, where industrial development has been more rapid than in the U.K., the system of management in the larger groups of companies more closely approximates to the managing agency system. Under this system, the holding or controlling company which has interest in one or more industries provides technical, managerial and financial advice and control at top levels to various managed companies. The managing company also receives a fee based on gross revenue, net profits or other basis for the services rendered. The important point, therefore, is that, in essentials, the managing agency system is not something unique to this country nor something which we can dispense with easily and without harm to the growth of industries.

In the absence of an organised capital market and also for want of a sufficiently large investing class, it is difficult in India today to float a company without the backing of an industrial house. The promoters of a company have generally to take up substantial blocks of shares, arrange for working finance and generally undertake the management of the affairs of the company guaranteeing its commitments where required and nursing the project till it is established. The managing agency arrangements take the form of an agreement between the company and the promoter, usually called the 'managing agents.' These managing agents are usually persons of means and are prepared to pledge their own credit to obtain finance for the companies they manage. It is pertinent to refer here to some of the wholesome practices which have developed with the working of a managing agency system and which make for stability, are conducive to expansion and new developments and generally inspire confidence in shareholders and the public alike. Some of the important services rendered by the managing agents are:

(*a*) They undertake all preliminary investigation and enquiry into the scheme before promotion. If, as often, the industry is new or difficult and complicated, such investigation extends over many years and the managing agents always provide the finance to carry out such investigations. For instance, the iron and steel, hydro-electric and chemical industries were all set up after many years of preliminary investigation and on many occasions after investigation the scheme had to be given up, in which case the managing agents bore the burden of preliminary expenses. Further, as a result of the preliminary investigations undertaken by the managing agent, a company comes to be floated only when a project is mature so that the lag between the flotation of a company and its normal working is reduced. This always helps the interests of the shareholders.

(*b*) As pointed out earlier, the managing agency system enables a substantial proportion of the issue to be taken up by the managing agents, their friends and associates thereby inspiring a measure of confidence in the investing public. It is the experience of all persons connected with industry that the ordinary middle class investor comes into the picture at a later stage when the company has started functioning and earning profits. But till then, the managing agents, his friends and associates have to provide the brunt of the finance.

(*c*) Under the managing agency system, management is not confined only to top level, but at various administrative levels. The managing agents have their own organisations to supplement, advise, guide and direct the affairs of the company.

(*d*) The managing agency system makes available to the managed companies the services of the administrators, financial, economic and legal experts and generally engineering and technical services which some of the larger managing agency houses have been able to build up as a result of long experience in various fields of industry. Thus, services which the resources of one single company could not afford become available to it through its association with a large firm of managing agents.

(*e*) The managing agents apart from contributing capital themselves, provide guarantees for obtaining overdrafts and other credit facilities from banks and in support of other borrowings. Even in the case of borrowings from Governmental institutions like the Industrial Finance Corporation in large number of cases, the security of the managing agents (in some cases together with that of individual directors) is required.

(*f*) The managing agents are often required to make sacrifices including the surrender of their managing agency commission and locking up of capital in long-term industrial development. They do so in the hope of profits when the industries become well established. Instances can be quoted of numerous concerns which are today in the forefront, but which would not have survived, but for the care and support rendered by its managing agents.

Sometimes it is argued by certain sections that managing agency system should be abolished. It is difficult to understand, however, why the system which has been responsible for whatever industrialisation there has been should be destroyed particularly when the country is short of administrators and technical experts in various fields. Two arguments are often put forth. First, it is argued that managing agency system has resulted in malpractices and that its abolition would help improve the confidence of the investor. While there may have been some adverse developments in the organisation and management of joint stock enterprise in immediate post-war years, one must bear in mind the real incidence of such developments which has been very small indeed. There is no point in adopting new stringent provisions, particularly because the existing law with a few modifications would be in a position to check effectively any misuse of position by the managing agents. Secondly, it is sometimes argued that such services as the managing agents have rendered have to be paid for at a very high price. It is contended that the managing agents take an unduly large share of the profits arising out of business and thus act to the detriment of the rights of shareholders, on the one hand, and the interests of the consumer, on the other. An analysis of the balance-sheets of companies would dispel such an impression. An analysis of profit and loss account of a large number of companies indicates that in industries like textiles (cotton, jute, and silk), printing, cement, paper, matches, manganese and limestone, and fanneries the proportion paid to the managing agents is between 1 and 2 per cent. of the total income of the companies. On the whole, therefore, it cannot be said that for the services rendered the managing agents take an unduly large slice of a company's income. Further, in connection with the income of the managing agent, it deserves to be noted that such income is the source of strength to the managing agency house. In order that an entrepreneur may venture out into new lines, it is first of all necessary that he has the financial resources for doing so. It is doubtful whether it is desirable to make the terms and conditions of managing agency agreements so stringent as to make it practically very difficult for the managing agency system to undertake the necessary pioneering activity.

If the purpose is to modify the legislation relating to companies in such a manner as to ensure efficient management, this purpose will not be achieved by the virtual elimination of the managing agency system or by reducing the status of a managing agent to a point close to extinction. It would be better to adopt certain suitable safeguards against exploitation of the funds and resources of the company at the instance of interested parties who try and secure the control of a company in order to utilise its funds in their own interests and contrary to the interests of the company.

WORLD BANK PRESIDENT IN LONDON

During his three-day visit to London last week, Mr. Eugene Black, President, the International Bank for Reconstruction and Development, held discussions with Mr. R. Maudling, Economic Secretary to the U.K. Treasury, and Mr. R. A. Butler, Chancellor of the Exchequer. He visited several financial institutions in the city.

One of the main points Mr. Black discussed with the British Ministers was the future use of £60 million of Britain's local currency subscription to the Bank's capital, which the British authorities had released early in 1953 for lending to sterling area countries. In a Press interview, Mr. Black admitted that only slow progress had been made in putting this sum to use. He was of the opinion that the Bank should be allowed to use this sum for lending to non-sterling countries, since the Bank had no sterling available to lend to these countries. But he saw no immediate prospect of a change in British policy on this question.

Mr. Black admitted that, at the moment, the statutory obligation placed on the Bank to levy an additional charge of 1 per cent. per annum, for strengthening its reserves, on all its loans, had the effect of making its advances more costly to sterling area countries than loans raised by them in the London capital market. But, at the same time, he took care to add that the Bank was authorised to abolish the commission charge ten years after it had come into existence. He, therefore, felt that in the next two or three years the Bank would be able to quote competitive rates for its advances.

Asked whether the Bank would insist upon such countries as Greece and Argentina settling their existing debts before they are allowed to have access to the Bank's resources, Mr. Black pointed out that it usually preferred not to make loans until a country had settled defaults on its outstanding public debt. In some instances, it might be advantageous to all parties not to wait until this stage had been reached. The Bank did not want to be regarded, he remarked, as a debt collecting agency. It was naturally interested in all matters affecting the credit standing and credit-worthiness of an intending borrower, but, in general, its main interest was whether or not the publicly issued loans of a country were in default or not.

The Durga Bank Ltd., Chhindwara, and the Dass Bank Ltd., Calcutta, both non-scheduled banks, have been refused licences to carry on banking business in India. The refusal of a licence makes it obligatory on a bank to cease transacting banking business and receiving deposits from the public.

NEW PRODUCTS AND PROCESSES

Element 100 Discovered

THE discovery of the 100th element in the periodic table of substances has been announced by scientists of the University of California. The new element, long predicted by scientists, is the eighth element to be discovered beyond uranium, the heaviest element existing in nature. All of the elements beyond uranium have been produced artificially through the use of cyclotrons, popularly known as atom smashers, or through the bombardment of natural substances in atomic furnaces.

Element 100 was discovered in research sponsored by the U.S. Atomic Energy Commission in a programme to carry on fundamental research on nuclear structure. The new element was produced in the National Materials Testing Atomic Reactor in Idaho. The new element is highly radioactive and decays rapidly. It has a half life of three hours, the scientific period of measurement in which half of its energy disappears. Element 100 has a mass number of 254, as compared with uranium which has a mass of 238. Experiments leading to discovery of the new element were made by a group of scientists headed by Dr. Glenn T. Seaborg, Professor of Chemistry at the University of California. Dr. Seaborg has been identified with the discovery of all of the new elements beyond uranium. Element 99 was produced in cyclotron experiments at the university laboratory earlier last month. The two new elements have not yet been named.

Hyper-Sensitive Balance

Two scientists at Johns Hopkins University in Baltimore, Maryland, have developed a laboratory balance that is just as responsive to the weight of dust particles as it is to the weight of heavy samples.

Dr. Alsoph H. Corwin, a Professor of Chemistry, and Joseph Walter, an instrument designer, have devised this instrument which is mounted in an aluminium box, where the temperature does not vary more than one-hundredth of a degree. The balance is so highly sensitive that its scale must be read through a 200-power microscope, where weight can be read to millionth of a gram. The heart of the Corwin-Walter instrument is a triangular strip of boron carbide, set apex-down across the bottom of the balance beam. Boron carbide was selected, because of three reasons, namely, (1) its hardness is second only to that of diamonds, (2) it does not absorb moisture from the air, and (3) it can be finely ground to a sharp, near-permanent edge.

Versatile Metal Alloy

The development of a new and versatile heat-resistant metal alloy, which eventually may become "almost as common as iron," has been announced by the U.S. Naval Ordnance Laboratory at Washington.

Made of aluminium and iron, the new alloy, called Thermenol, may be used in items ranging from electric toasters to jet engines and airplane parts. It is light in weight and has high resistance to heat, oxidation and chemical corrosion. Thus, it appears likely that it may take the place of many present high-temperature alloys. Thermenol is of particular value as it does not need the relatively scarce metals, such as cobalt, nickel and chromium that are used in other high-temperature alloys. In addition, its electrical sensitivity is 50 per cent. higher than that of the nickel-chromium alloy used in electrical appliance heating elements. This should make it valuable in such appliances as toasters, hot plates, coffee makers and electric stoves.

Radioisotopes to Measure Liquids in Tanks

Radioactive atoms or radioisotopes are being used by many United States industries to measure the height of liquids within closed tanks. Radioisotopes are ordinary substances, such as iron or phosphorus, the atoms of which have been made radioactive in an atomic pile. They give off rays, which can be detected by a Geiger counter.

The height of a liquid within a closed tank is measured by placing a radioisotope on the outside of one side of the tank and a Geiger counter on the other side, opposite it. When there is no liquid in the tank between the radioisotope and the counter, there is little material to absorb the isotope's radiations. Consequently, the Geiger counter registers a high radiation reading. When the liquid rises between the isotope and the counter, however, a large portion of the radiation is absorbed by the liquid and consequently the reading on the counter is lower. The radiation that reaches the counter can also be used to open and close valves by remote control, so that automatic control of the liquid level can be achieved. This type of gauge is particularly valuable for the measurement of very corrosive liquids or of liquids in tanks that must have no openings from which gas or vapour can escape.

Natural Teeth Fillings

Instead of using gold, silver amalgam or porcelain, dentists of the future may use materials that allow calcium and phosphate mineral crystals to grow into the teeth, according to two Brooklyn (New York) doctors. These doctors aver that they have synthesised in a test tube the chemical ingredients responsible for mineral deposition in teeth. The synthesis was accomplished by combining collagen, a protein found in the bone and skin and widely used in the manufacture of gelatin, with a solid, insoluble substance called chondroitin sulfate. The latter is believed to be a promoter of chemical processes in the body, similar to the enzymes. The findings of the Brooklyn researchers were part of a long search for the key chemicals that cause minerals to deposit in the form of hard crystals in the sponge-like framework of organic matter present in teeth and bones.

T. I. CYCLES OF INDIA LIMITED, MADRAS

SIR A. RAMASWAMI MUDALIAR'S SPEECH AT FOURTH ANNUAL MEETING

THE commendable progress made by the T.I. Cycles of India, Ltd. in the erection of the factory, the installation of the necessary plant and machinery and the organisation of the manufacture of cycle components well ahead of the original schedule was referred to by Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon.), Chairman of the Company, in the course of his address to the shareholders at their Fourth Annual General Meeting held in Madras on 30th April last. He held out the hope that the shareholders might look forward to a small dividend being paid to them next year. He expected the Company to reach, in the course of the current year, the target of a minimum output of 100,000 cycles per year.

The following is an extract from Sir Ramaswami Mudaliar's speech:

"GENTLEMEN,

"The Directors' report and the audited accounts and balance-sheet for the year ended 31st December, 1953, have been before you for some time. With your permission I shall take them as read.

"It is very rare in these days, that a chairman has the pleasure of reporting continued and satisfactory progress of any of the industrial concerns in this country, and I am in the happy position today of reporting continued progress that has been made, in erecting the factory, in installing the necessary plant and machinery and in organising the manufacture of cycle components in the T.I. Cycles of India Ltd., factory. The progress that has been made is somewhat unique.

"I remember that, at the first annual meeting, I stated after consulting our British Directors, that it will take five or six years at least before most of the components could be manufactured and released, but within the course of two years after the first factory was completed, we are in a position to state that practically all the essential components except three or four are capable of being manufactured in the Factory 'B,' which was opened by His Highness the Maharajah of Mysore. You will realise that not only has the progress been satisfactory, but it has been achieved at hectic speed.

"The essential thing is not merely to erect a factory, not merely install the machinery, but, as I have repeatedly stated, it is to so train the staff that they are able to manufacture those very complicated components of the cycle with precision and accuracy which alone can give strength to the cycle. We have so far deputed for training in the United Kingdom night trainees for various periods and they have returned with full knowledge, and, if I may say so, full of enthusiasm, to their work. We had also to send our Engineer, Mr. T. Viswanath, to Great Britain for a refresher course during last year and that refresher course has considerably helped him in organising, under the guidance of the Works Director, the manufacture of these component parts. Our British Directors have been good enough to send from time to time various technicians for short periods to supervise the work that has been going on here and these visits have been vastly helpful in organising our manufacture on a proper basis. I should take the opportunity of specially paying my compliments to Mr. T. A. Yapp, who is one of the foremost technicians in Birmingham and a Director of The Hercules Cycle and Motor Company, Ltd., for having organised the components factory on a proper and adequate basis.

"I have repeatedly stressed that it is our ambition to produce an Indian 'Hercules' as good as the English Hercules and I am glad to say that we are achieving it. I trust we shall continue to maintain for all time the quality of the cycles that we have put on the Indian market.

"I had to report last year that the Works Director, Mr. Powell, passed away under very tragic circumstances, owing to a motor accident, when he was visiting certain factories in Germany. I am glad to report that we have Mr. Hatton to take his place.

"In the early years, I had to tell you that we were suffering losses, but I took care then to say that they were not real losses. They included certain initial expenses and the amount written off for depreciation on the full scale. On this basis, the losses came to about Rs. 7 lakhs and odd at the time we presented our accounts last year. This year we have changed the method of providing for depreciation. We have chosen a seven-year period as the basis to write off the major portion of the capital assets, prorated equally every year and at the end of that time limit, the total provisions we will have made for depreciation will equal the total allowable under the income-tax rules and, therefore, the full benefits will accrue to the Company, but on a different method, which the Directors feel will be equitable and just. The result of that is, the entire losses of about Rs. 7 lakhs and odd in the last year's account has been wiped out, leaving a small net profit of about Rs. 23,000. That brings to me the hope that from, say, next year the shareholders may look forward to a small dividend being distributed to them. The finances of the Company are on a sound footing, as is established by the accounts themselves. Our capacity is at the minimum, 100,000 cycles per year and I have great hope that we shall meet the target in the course of this year.

"There are one or two factors which I would like to refer to. We have recently had a tariff enquiry regarding the cycle industry and we trust that the Tariff Board has taken due consideration of all the difficulties which the cycle industry has to face. Arising out of the Tariff Board enquiry, a Development Council for the bicycle industry has been set up and my friend and colleague Mr. Murugappa Chettiar is a member of this Development Council. This Development Council has to consider the manufacturing targets of the cycle industry and various other problems regarding small-scale cycle parts manufacturers, etc. During the war when there was a great dearth of bicycles and components, the manufacture of odd parts was encouraged so that some sort of reclamation work could be done to cycles which required repairs and for which the parts could no longer be imported. Having allowed the starting of manufacture of some components, vested interests have necessarily grown. The problem still arises as to what part these small-scale manufacturers of components should be allowed to play in the promotion of the cycle industry, and whether it is proper to lay any burden on the regular manufacturers of cycles towards the maintenance of the small scale industry. There is an idea that the manufacturers of odd cycle components in different parts of India should be subsidised by the major cycle manufacturers and I think it will be disastrous to the cycle industry, if this is done.

"I have referred to the progress that your industry has made and is making. The Prime Minister is very keen on one thing and, as President of the Planning Commission, he strongly feels that the Five-year Programme should be completed within the period and there should be no falling back. So far as T.I. Cycles is concerned, I must say categorically that we shall play our part fully and worthily in reaching the target and our wholehearted co-operation will be behind the Prime Minister in making the Five-year Plan, in regard to this industry, at least, complete. I give that assurance not merely as one interested in the private sector of an industry, but also as one who is patriotic enough to realise that the Five-year Plan must somehow be accomplished and carried through.

"I would like to refer to the keen interest and great co-operation our British Directors have extended to us throughout these years. It was our privilege to welcome Mr. I. A. R. Stedeford, Chairman and Managing Director of The Tube Investments Ltd., and Mr. Arthur Chamberlain, Director of Tube Investments Ltd., and Managing Director of The Hercules Cycle and Motor Co., Ltd., at the time of the opening of our components factory in January this year. Their advice and enthusiasm have been as great as that of ourselves and they are equally anxious to do their best to see that T.I. Cycles of India, Ltd., accomplishes its target and thereby fulfils its part in the Five-year Plan of the Prime Minister. They, as Directors of this Company, are as much responsible to you as we are and the assistance and co-operation they have extended deserve the highest praise.

"I would like to express on behalf of the Directors and on your behalf our appreciation to the devoted services of all the members of the staff of the factory, administrative office and its branches and to the workers, skilled and unskilled, for their enthusiastic co-operation."

BETTERMENT LEVY ON AGRICULTURAL LANDS

ABSENCE OF UNIFORMITY IN STATE ACTS

THE Madras and Andhra State Governments have proposed betterment levies on lands, the values of which have appreciated as a result of measures taken by them for improving the productivity of land. The Madras Irrigation (Levy of Betterment Contribution) Bill, 1954, which was introduced in the State Legislative Assembly on the 18th inst., has since been referred to a Select Committee. A similar Bill is under consideration of the State Legislative Assembly in Andhra. The imposition of a betterment levy is no new thing in India. Already Bombay, Hyderabad, Punjab, P.E.P.S.U. and Rajasthan have passed legislation authorising the executives to levy betterment fees. A betterment fee on lands under irrigation has been in practice in Mysore since 1888. Many other States have accepted the principle underlying the levy and are, it is understood, taking steps to put the principles into practice.

Although the levy in India came into vogue as far back as in 1888, the question of its imposition received prominence following the observations of the Planning Commission in its draft report that the States should take effective steps to levy a betterment fee on lands irrigated by the various river valley projects. The main object of the levy is to secure for the States concerned a share in the unearned appreciation in land values through the availability of better irrigation facilities. According to the Planning Commission, this fee is to be levied only once when irrigation facilities are provided for the first time, as the value of land increases appreciably on this account. It may, however, be recovered either in a lump sum or in instalments spread over a number of years.

Right to Levy

There is a school of thought which is against the betterment levy. The States, according to this School, have no right to levy betterment fee, as the extra facility provided is only the belated discharge of a longstanding obligation. But this is a view which cannot be considered reasonable. Few can deny that it is natural for the State Governments to expect some reasonable return from those parts of lands for the development of which they have invested considerable sums. There is nothing wrong on the part of a Welfare State in asking these regions, which benefit from the projects constructed from the finance at the disposal of the public exchequer, to share the cost of development.

Although there is a general agreement as to the need for betterment levy, opinion seems to be divided on the rate of contribution which the regions benefiting by the new projects should pay. Should it depend on the principle of charging "what the traffic can bear" or any other equitable principle? In the United States, a special assessment of this sort is subject to the judicial principle that no special assessment may exceed the cost of improvement or the special benefit whichever is lower. Again, the assessment, it is stated, should be distinct and measurable.

The application of the principle of betterment levy in the U.K. was at first confined to particular improvements carried out at the expense of the public exchequer. It was subsequently extended to cases where property had increased in value "by the operation of any provision contained in any scheme (of town planning)," whether that involved public expenditure or not; it is now generally understood to include enhancement in the value of property arising from the general community of influences, such as growth of urban population. According to the Uthwatt Committee, which recently enquired into the theory and practice of betterment levy by the U.K., "the term 'betterment' may now be taken in its technical sense to mean any increase in the value of land (including buildings thereon) arising from the Central or local Government action whether positive, e.g., by the execution of public works, or negative, e.g., by the imposition of restriction on other lands.

A brief review of the Acts and Bills passed by the various States in India discloses that the betterment levy is confined to benefits arising from particular works of improvement of irrigation and drainage, as defined therein. Generally speaking, irrigation works as defined in the Acts and Bills include all canals, channels, lakes, reservoirs, ponds lift irrigation arrangements, etc., used for the supply or storage of water and all works, embankments and structures therewith constructed, owned or controlled by the State. Drainage works include channels for the discharge of waste or surplus water, escape channels from irrigation works, dams, weirs, embankments, sluices and all works for the protection of lands from floods or erosion.

Lack of Uniformity

In the various State legislations, there is a marked lack of uniformity both in the basis for determining the levy and in the rate of assessment thereof. In the Bombay Act, and the Madras and Andhra Bills, the increase in the value of land is the sole criterion, for the assessment of betterment levy. In other States, however, the increase in value is not the sole basis for assessing the levy. In the Punjab, Rajasthan and P.E.P.S.U., for instance, the Acts provide that, in the determination of rate of betterment charged, regard should be had to "the type of irrigation and improvement in irrigation." It is, however, laid down in these States that the amount of the levy should not exceed one half of the value of lands ascertained in the prescribed manner. Thus, in these States, though the increase in value does not constitute the sole basis for the assessment of the levy, the rate of assessment is still determined in terms of such increase. Dealing with these aspects in an article entitled "Betterment Levy on Agricultural Lands", published in the March issue of the *Agricultural Situation in India*, Mr. C. Radhakrishnadas observes as follows:

"The determination of the levy involves (i) fixing of the 'base value' from which the increase in value may be calculated, (ii) ascertaining the increase in value, and (iii) the determination of the quantum of betterment to be taken by the Government. The base value should naturally relate to the value of land prior to the commencement of the work of improvement. Where proposals for a project are known long before the actual commencement of the project, it is to be expected that lands will rise materially in value in anticipation of the proposed development and, in some cases, it may so happen that such increment will have been realised by their owners through sale. It is, therefore, necessary that the 'base value' should be so fixed that the Government is enabled to recover its full share of the betterment. The Acts in Bombay, Punjab and P.E.P.S.U. expressly empower the State Governments to fix the dates with reference to which values of lands, prior to the commencement of the work and after its completion, have to be ascertained or estimated for determining the extent of betterment. A very important step in the assessment of betterment levy is the mode of ascertaining the extent of betterment. Since it is the special benefit accrued to the assessee in the form of enhanced value of his lands that constitutes the justification, limit and measure of the levy, the efficiency and equity of the system of betterment levy depends on the degree to which the estimated increment in the value of lands approximates the actual benefit accrued to the assessee. A forecast about future values of lands is always difficult. Moreover, there are always numerous factors that determine the market values of lands and to isolate and prove that a part or whole of the betterment is due to a particular improvement is no easy task. It is also necessary that the mode of estimating betterment be such that the scope for the subjective influences of the assessing authority is reduced to the minimum."

The Madras Bill treats 10 times the net annual increase in gross produce as the increase in the capital value of lands, while the Andhra Bill defines the appreciation in the capital value of lands as 25 times the net additional income minus the expenses incurred on making the land fit for irrigation. In the Punjab, the rules provide that the value of the land shall be calculated at 30 times the net assets as defined in the Land Revenue Act, 1886. The net asset will be calculated on the basis of the owner's share being limited to one-third of the divisible produce.

Amount of Levy

The maximum amount proposed to be recovered as betterment levy in all enactments is invariably half the enhanced value. Thus, in Bombay and Madras, it is half the value. In Andhra, it is stated that the recovery shall not exceed half the increase in the value of land. Dealing with other States, Mr. Radhakrishnadas points out that only the upper limit is laid down, leaving the actual amount to be levied in a prescribed manner. In the Punjab, P.E.P.S.U. and Rajasthan, for instance, it is to be determined having regard to (i) the type of irrigation, (ii) the improvement in irrigation, and (iii) the extent of betterment accruing to the lands, but subject to the maximum limit of one-half of the increase in value. In the Hyderabad Act, it is provided that the contribution should not exceed one-half of the increase in the capital value of land. The rules made under the Act, however, make a distinction between the lands served by the irrigation works and the old wet lands and lay down the maximum limit on the contribution at one-half in the case of the former and one-fourth in the case of the latter. In determining the amount of contribution, the rules require the assessing authority to take into account such factors as the market rate of dry land and wet land in the area, the nature of the soil, its productivity and fitness for irrigation, the wet crops that can be grown economically, proximity to market, village or road, the probable expenditure to be incurred in converting the dry land into wet land and the like. It will thus be seen that the provisions in the Bombay Act and the Madras and Andhra Bills are more definite in regard to the determination of the actual amount of the levy and do not leave scope for the play of subjective element in its assessment. When once the actual betterment, that is, the enhancement in the value of land is ascertained or estimated, the quantum of the levy could be determined with definiteness.

Madras Bill

A feature of the Madras Bill which has come in for considerable criticism is the provision envisaging the assessment of betterment contribution on the basis of the average prices of agricultural produce over the previous three years. Thus, the *Hindu* of Madras points out that "the violent fluctuations in the price of a commodity like tobacco, over the past three years, indicate the difficulty involved in adopting any short period for the purpose of determining average prices which are to be the basis of a levy which is to be collected over a period of 20 or 30 years." Proceeding, it states that "while the anxiety of the State Government to recover at least a part of the capital expenditure incurred by them on irrigation schemes is understandable, the method adopted for the purpose must have relation to the peculiar characteristics of agriculture, the income from which is subject to various vicissitudes from year to year."

The Madras Bill provides for the betterment contribution to be paid in 20 instalments, while the Andhra Bill provides for 30 instalments. Where the entire amount is paid in one lump sum, the Madras Bill provides for a discount of 20 per cent., while the Andhra Bill provides for 10 per cent. The rules in Bombay require the landowner to state the number of annual instalments, not exceeding 20, in which he could pay the charges. According to the rules in the Punjab, the owner can pay the charges in half-yearly instalments spread over a number of years as decided by the Government, the maximum number of instalments not exceeding 30. All the States, except Hyderabad, provide for charging interest on the outstanding instalments at prescribed rates. In Hyderabad, the rules provide that the amount shall be paid in 15 instalments free of interest and a rebate of 10 per cent. shall be allowed in case the entire amount is paid in a lump sum within six months.

FARMERS CONFER AT NAIROBI

Farm leaders from a number of Commonwealth countries, including India, are attending the seventh conference of the International Federation of Agricultural Producers, which commenced its nine-day session at Nairobi on the 20th inst. The delegates will enquire into the methods of reducing economic friction between friendly countries. They will discuss the co-ordination of farm and trade policies for the promotion of a healthy and expanding economy, and will consider the problem of mounting surpluses of agricultural produce. The delegates will further examine various ways of promoting the consumption of food and fibre surpluses, including the provision of food and fibres for workers on development projects in "hungry areas". The agenda also includes questions relating to wheat, sugar, cotton, fats, oils, feedingstuffs, wool and dairy products; the international trade and payments position, with particular reference to agricultural products; markets and production in various countries; reports from member organisations; and inter-governmental activities in food and agriculture.

The P.E.P.S.U. Government has put into operation the P.E.P.S.U. Tenancy and Agricultural Lands Act of 1953, aimed at raising a very large number of tenants to the status of full proprietors or permanent tenants. This and the other two Acts, namely, the Abolition of *Ala Malkiyat* Rights Act and the Occupancy Tenants (Vesting of Proprietary Rights) Act are intended to achieve the land-to-the-tiller objective after the expiry of five years. The *Ala Malkiyat* Rights Act abolishes intermediaries and rights of *ala malkiyat* or superior proprietors. Compensation payable to the former superior proprietors has been fixed at five times the annual rent. By virtue of the Occupancy Tenants Act, occupancy tenants automatically become full proprietors over an area of about three lakh acres. Compensation payable under this Act has been settled at 12 times the annual land revenue.

How banking serves the SPICES INDUSTRY

There is tremendous demand throughout the world for pepper and cardamoms and South India produces the bulk of these spices. One-third of the entire world demand for pepper is grown between Karwar and Cape Comorin ; and in 1951-52, India's exports earned more than Rs. 27 crores.

Within the last ten years there has been a remarkable increase in cardamom growing, particularly in the South Indian states of Mysore and Coorg, and the districts of Madura, Tinnevelly, Malabar and Coimbatore.

The Indian spices industry has a happy future, and banking will naturally help to expand and improve it. The facilities and guidance of a good bank, such as the availability of ready funds when needed and the collection of dues from any part of the country, have become part of efficient organisation in every industry.

We at Palai are proud that many spice growers of South India employ the *complete* banking service we offer:

Current Accounts—Demand Drafts—
Telegraphic Transfers—Investments—
Letters of Credit—Bill Collection—
Deposits—Loans & Overdrafts—
Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.
(Incorporated in Travancore-Cochin with Limited Liability)
Head Office: PALAI, TRAVANCORE.
Branches at: Madras, Cochin, Quilon, Trivandrum, Alleppey, Mangalore, Bangalore, etc. *Also at:* Delhi & New Delhi.

ORIENTAL
OFFERS 3 PLANS
TO ENSURE RELIEF FROM ESTATE DUTY

1. ESTATE DUTY POLICIES for the specific payment of Estate Duty, issued from age 18 to 60 nearer birthday. The proceeds of these Policies to the extent of the Duty payable but not exceeding Rs. 50,000 are exempted from Duty.
2. GIFT POLICIES: Issued from age 18 to 65 nearer birthday, our Two-Year Temporary Policies provide for payment of Duty on property transferred as absolute gifts, which for two years from the date of the gift, attract Duty.
3. MARRIED WOMEN'S PROPERTY ACT POLICIES: Issued from age 18 to 60 nearer birthday for the sole benefit of the wife and/or children, the proceeds of these Policies, under section 34 of the ESTATE DUTY ACT are not aggregated with the rest of the property, thus substantially reducing the incidence of Duty

Premiums under all our schemes have now been greatly reduced.
For the benefit of those with property which may attract Duty on death, ORIENTAL offers confidential advice on the best method of conserving their estates for their heirs. This advice is absolutely free and tendered solely in the interest of estate owners.
First name in Insurance *Last word in Security*
ORIENTAL GOVT. SECURITY LIFE ASSURANCE CO., LTD.
Transacting all classes of life assurance and annuities

INDIA'S LEADING INSURANCE COMBINE

NATIONAL FILM BOARD FOR INDIA

GOVERNMENT'S ACTION ON PATIL COMMITTEE REPORT

IT is gratifying that, at long last, that is, three years after the Film Enquiry Committee's Report was submitted, the Union Government has come forward with a statement showing the action taken by it on the recommendations of the Committee. The statement which was presented to both Houses of Parliament by Dr. B. V. Keskar, Minister for Information and Broadcasting, Government of India, on the 19th inst., reveals that the majority of the recommendations has been accepted with certain modifications in some, while in regard to certain others orders have already been passed for their implementation.

It may be noted that the Film Enquiry Committee was appointed by the Government in September, 1949, under the chairmanship of Mr. S. K. Patil, President, B.P.C.C., to examine the position of the industry. He was also deputed to visit a number of foreign countries to study conditions there. The Committee completed its deliberations early in 1951 and it submitted a comprehensive report to the Government. The film industry then faced many odds. The box-office collections were adversely affected by the high living costs which reduced the funds available to the public for amusement. Besides, lack of adequate exhibition facilities and difficulties in securing the increased capital outlay required to construct new theatres and to obtain supplies of raw films and machinery continued to be the main obstacles in the way of the industry's progress. There was also the apathy of film-goers to visit picture houses as frequently as they used to in pre-war years, mainly on account of the distaste created by the stereotyped films put on show by mushroom producers who had crowded the field following the post-war boom. Coming on top of these was the heavy incidence of taxation.

Film Finance

Viewed against this background, the statement presented to Parliament by Dr. Keskar, though very encouraging in certain respects, should be disappointing to the film industry, at least in one important respect, that is in relation to its demand for the establishment of a Film Finance Corporation. Referring to this demand, the Minister stated as far back as in July, 1952, at the All-India Film Conference organised by the Film Federation of India, that the Government had under its active consideration the issue of starting a Film Finance Corporation. This assurance had given some hopes to the industry, but the statement referred to above points out that, having regard to the priorities of expenditure to meet the urgent requirements of the development projects and programmes of the Five-year Plan, the Government at this stage do not find themselves in a position to spare funds for a corporation for film production which by its very nature is fraught with greater risks. The Minister, however, added that the Government would be prepared to provide suitable machinery by legislation, if the producers were inclined to find some ways and means of securing the necessary funds by contributions or otherwise.

We think this is the maximum that the Government can do in this direction. The problem of finding finance is the function of the producer, and if he is efficient and honest and runs his show on strictly business lines, there is no reason why he should not be able to get finance through the normal channels. It is too much to expect the Government to start separate finance corporations for financing each industry, especially for industries which are unorganised. If the film magnates are united, they can, however, join together and form either a co-operative venture or a joint-stock corporation with the assistance of some of those individual financiers who are at present providing the funds needed by the industry. To ask for material assistance from the State in this direction is to court State control. Does the industry want to lose its freedom? The solution for this problem lies in its hands. It must improve its creditworthiness.

The views of Mr. S. S. Vasan, President of the Film Federation of India, on this question are interesting. Commenting on the Government's decision, he says: "As regards the formation of a Film Finance Corporation, responsible members of the industry must be relieved to find that the Government of India have officially realised that financing film production is 'by its very nature fraught with great business risks.' This statement must put a definite stop to the wrong notion prevailing in many quarters that the film industry is an extraordinarily profitable business."

The film industry in India has been urging all along that the Government should reduce the entertainment tax to 20 per cent. of gross takings, abolish separate taxes levied on cinema shows, eliminate double taxation, reduce fees for censorship to a nominal amount and, finally, give facilities for the construction of new cinemas on a population basis. It further requested the Government to introduce a certain measure of uniformity in entertainment tax. The Film Enquiry Committee, too, had endorsed more or less these demands of the industry. With regard to the fixed percentage of entertainment tax, the Government of India has stated that the whole question of taxation is now before the Taxation Enquiry Commission for further investigation.

Income-tax

The industry has suggested that the formula to be adopted for amortisation of the cost of films, while assessing income-tax on producers, should be so changed as to avoid taxation on income from films on which producers incur a loss. Following the Committee's recommendation supporting this plea of the industry, the Government appears to have viewed the issue somewhat sympathetically. For arrangements have been made, says the statement, to treat, in a flexible manner, the present procedure of amortisation of the cost of production of films, namely, 60 per cent. in the first year, 25 per cent. in the second year, and 15 per cent. in the third year and to vary it in favour of the assessee if he is able to prove that the earning capacity of the film was extinguished much earlier than the period assumed in that formula. The statement further says that the Income-tax Act and Rules have already been so amended as to include the cost of furniture and fittings in cinemas, as well as the cost of renovation, for purposes of rebate in assessment of income-tax.

Commenting on the industry's claim that a special deduction should be allowed for professional expenses from the earnings of the artistes, the statement observes that, though there is no difference between film artistes' profession and any other profession such as that of a lawyer or a doctor, the question whether special instructions are necessary can be considered on receipt of details.

As regards the demand for providing facilities for the construction of cinema theatres, it is stated that the Union Government has requested State Governments to include cinemas in the list of items eligible for building materials, subject to priorities. The latter Governments have also been requested to encourage touring cinemas and to put up open-air theatres.

The Committee had recommended the establishment of a Film Council of India on a statutory basis. The Government, however, feels that, in the present state of the industry with its diverse elements in different stages of development and with the attendant difficulty of reconciling several interests, it would not be advisable to make a beginning to set up a representative statutory council at the top. It is felt that such a council would, at this stage, have great difficulty in wielding authority and taking responsibility for shaping the affairs of the industry. If a council dealing with the diverse activities in the field of film production, distribution and exhibition is at all to be useful eventually, it would be necessary, observes the statement, first to develop the various functional units. The working of such units would provide opportunities for co-operative endeavour and would give experience which would be useful for the emergence of a council in future. Besides, there will be difficulty in persuading State Governments to agree to any division of the revenues from the entertainment tax for financing a council as suggested by the Committee. The Government, therefore, proposes to concentrate its attention in the development of basic functional units such as the production bureau, the film institute, etc.

With a view to developing the film as a medium of national culture, education and healthy entertainment, a National Film Board, will, however, be set up. This Board will direct and supervise the work of the Film Production Bureau and the Film Institute as also the existing three Regional Offices of Film Censors. The functions of the Central Board of Film Censors will also be taken over by the Board.

The Film Production Bureau referred to already, besides giving advice on scripts, will provide guidance to producers on various aspects of production such as story, scenarios, artistic talent, cost of estimates, etc. It will also provide a nucleus of a library and research service. The functions of the Bureau will be purely advisory. The Film Institute will, on its part, impart training in direction, photography, sound engineering, editing and other aspects of production. The Institute will be equipped with a small studio to enable practical training to be given to students. Suitable legislation will be undertaken, we are told, for the constitution of the Board and its constituents, namely, the Bureau and the Institute, as soon as possible. Welcoming this aspect of the Government's decision, Mr. Vasan observes that the formation of the Board, the Institute and the Bureau will be of real help to the industry as a whole. He is, however, critical of the Government's decision that the National Film Board should take over the functions of the Central Board of Film Censors as well. And he has given a pertinent reason for his misgiving. He says: "It may not, perhaps, be advisable that a board vested with statutory authority to censor films should also supervise an advisory body like the Production Bureau." Mr. Vasan is extremely modest in voicing his misgiving thus. There is no doubt that it is based on very good ground. It is to be hoped that the Government will heed his advice and keep the Board of Film Censors as a separate entity.

INDO-BRITISH TRADE DURING JANUARY-MARCH, 1954

India's exports to the U.K. in the first three months of this year, were valued at £41,239,000, and its imports from Britain, at £30,092,000. Total trade between the two countries (including a small amount of British re-exports) amounted to £71,425,000 compared with £51,586,000 in the first quarter of 1953. The figures for March were: exports to the U.K. £11,627,000; imports from the U.K. £11,691,000.

As usual, India met the major part of Britain's tea requirements; in March the U.K. imported 414,670 cwts. of tea, of which India provided 273,885 cwts. valued at £5,273,000. This brought India's tea exports to Britain for the quarter to 1,097,129 cwts. (worth £22,083,000) compared with 665,695 cwts. in the first quarter of last year. During the three months Britain imported, in all, 1,492,811 cwts. of tea of which only 44,097 cwts. came from non-Commonwealth sources.

The second largest group of India's exports to the U.K., in the first three months of this year, came under the heading "miscellaneous textile manufactures" (including jute fabrics and yarn and coir products). India sent Britain £2,306,000 worth of these commodities in March, bringing the quarter's total to £5,661,000—three times the figure for the same quarter last year.

Leather took the third highest place in Britain's first-quarter imports from India. Under the heading "leather, leather manufactures and dressed furs," India sent Britain £1,184,000 worth in March, bringing the three months' total to £4,068,000—an increase of about 25 per cent. on the same three months of 1953.

Wool was another commodity showing an increase: Britain imported from India 1,223,000 lbs. of wool in March, valued at £284,000. The total for the quarter rose to 6,651,000 lbs. (worth £1,520,000), as compared with 4,867,000 lbs. in the first three months of last year. Cotton sent to the U.K. by India in March—4,052,000 lbs. valued at £306,000, nearly all of it of 1 inch staple and under—brought the total for the quarter to 12,803,000 lbs. to the value of £962,000.

Metalliferous ores and scrap imported from India by the U.K. in the first quarter aggregated 63,278 tons, worth £905,000. This included the March figure of 7,150 tons of manganese ore (costing £107,000) that brought the three months' total to 29,245 tons (£518,000).

Other Indian exports to Britain in March included 483,164 lbs. of tobacco (worth £87,000)—bringing the quarter's total to 2,365,000 lbs. (£319,000)—and £116,000 worth of miscellaneous textile fibres (including jute, hemp and coir) making the quarter's total £205,000.

Machinery headed the list of India's imports from Britain in March—139,372 cwts. of machinery other than electric, (£2,735,000), bringing the quarter's total to 379,196 cwts. worth £7,410,000; and £1,595,000 worth of electrical machinery and apparatus out of the quarter's total of £4,154,000. The former group included £1,084,000 worth of power-generating machinery—boilers and boiler house plant, steam and internal combustion engines—weighing 76,126 cwts., an increase of one-quarter over that in the same period last year; 21,786 cwts. of metal-working machine tools worth £313,000; and 86,740 cwts. of textile machinery (£1,875,000).

The electrical machinery, apparatus and appliances India took included 17,374 cwts. of generating sets, generators and motors (£556,000); £599,000 worth of telegraph and telephone equip-

OF SENSATIONAL ECONOMY AND OUTSTANDING EFFICIENCY

The new Studebaker Trucks fitted with V8 (120 B.H.P.) engine are renowned for their sensational economy—in operation, initial cost and maintenance. They are specially designed for real Heavy Duty operation in Indian weather and road conditions. For greater ruggedness, the following equipments are supplied at no extra cost :

- 19 Plate Battery
- Auxiliary rear spring
- Heavy duty, five-blade fan
- Heavy duty radiator
- Heavy duty spring
- Front shock absorbers

this amazing protective packing material — gives you all the answers

'Alkathene' Film, the revolutionary new packaging material, now made in India, has *just* the properties you demand to meet your specific baling problems.

★ 'Alkathene' Film is flexible and yet tough enough to stand up to the pressure and strain of packing operations. Ordinary waterproof papers may crack, split or burst at this stage.

★ 'Alkathene' Film has a lower water permeability factor than any other alternative material. By using 'Alkathene' Film you can obtain complete protection for your textile bales during the long exposure which they inevitably undergo in transit.

★ In addition to saving on costs of packaging materials, feather-weight 'Alkathene' Film reduces the weight of packaging material used in each bale, and saves on freight costs too.

★ 'Alkathene' Film can be cut and heat-sealed easily. The elimination of tar-lamination prevents any possibility of textiles being stained and spoiled.

★ 'Alkathene' Film is transparent and shows the contents of bales to advantage at first glance when the outer wrappings are removed.

And, best on all counts, 'Alkathene' Film costs no more than any waterproof packing material. Test 'Alkathene' Film, try it, prove its utility for yourself, as many other Textile manufacturers have already done.

the revolutionary new protective packaging material

'ALKATHENE' Film

TOUGH • WATERPROOF • INEXPENSIVE

Surely you will want to know more about 'Alkathene' Film! Write, phone or call for free detailed literature and samples. Our Technical Service Department will be glad to help you put 'Alkathene' Film to best use.

ROHTAS INDUSTRIES RAISE DIVIDEND LEVEL AGAIN

EXPANSION PROGRAMME PLANNED

FOR the second year in succession, the dividend on the ordinary shares of the Rohtas Industries Ltd. (Managing Agents: Messrs. Sahu Jain Ltd., Dalmianagar, Bihar) is proposed to be stepped up. After having remained off the dividend list for four years, the Company resumed payment with a distribution of 7½ per cent. for the year ended 31st October, 1951. This was raised to 10 per cent. for the year 1951-52 and is now proposed to be stepped up further to 12½ per cent. for the latest year, namely, 1952-53. The dividend for the year under review is by no means a record; for, in 1942-43, a record return of 15 per cent. was paid. It must, however, be noted that the dividend for 1952-53 is on the increased capital raised by the capitalisation of Rs. 30 lakhs and by the issue of fresh capital to the extent of Rs. 54 lakhs, both in November, 1944.

The resumption of the dividend distribution for 1950-51 was enabled by the substantial rise in the Company's earnings for that year, the gross profit having jumped up from Rs. 26.65 lakhs for the preceding year to a record level of Rs. 89.09 lakhs. Though the profit for 1951-52 was a little lower at Rs. 84.58 lakhs, the dividend level was enhanced. The profit for the year under review amounting, as it does, to Rs. 84.10 lakhs, is very near the previous year's level.

The Company has a wide variety of interests, namely, manufacture of sugar, cement, paper and boards, asbestos, and caustic soda, and production of electricity. The following comparative table shows the output of the important units during the past three years, as well as in the first half of the current year:

		Year ended 31st October			Six months ended April, 1954
		1951	1952	1953	
Paper	(tons)	11,127	13,644	12,801	7,998
Cement	(tons)	234,345	835,029	302,746	180,801
Asbestos	(tons)	..	..	2,924	1,530
Caustic soda ..	(tons)	1,353	1,388	1,357	809
Power	(kw.h.)	60,084,870	74,869,502	73,612,180	40,222,500
Sugar	(maunds)	171,988	845,202	861,640	171,844
Sugar recovery ..	(%)	10.10	9.80	9.73	9.72

The decline in the output of paper is more apparent than real. For, during the year under review, the Company resorted to production of new varieties of paper, as the consumption of the Company's regular products of boards had declined considerably. The production of the new varieties work out in terms of tonnage to much less than that of boards manufactured earlier. Besides, the German Yankee machine for the manufacture of tissue paper, which was expected to go into production in August, 1953, could not do so as scheduled, on account of the delay in the arrival of the electric drive. The installation could be completed only by the end of 1953 and production commenced early in 1954. Output of cement was affected during the latter half of the year under review due to special overhauling of the plant. Though the output of sugar shows an improvement, full advantage of the transport facility for movement of sugarcane provided by the laying of a 16-mile railway line between Dalmianagar and Nasriganj could not be gained, due to meagre supply of cane in the area covered.

The following comparative table shows at a glance the results of working of the Company during the last four years:

(In lakhs of rupees)

	For the year ended 31st October			
	1953	1952	1951	1950
Sale proceeds	5,43.08	6,03.90	4,73.81	3,62.78
Other income	5.61	5.83	4.76	6.79
Stock-in-trade	67.07	83.32	51.11	25.83
Raw materials, stores, etc., consumed	3,02.79	3,96.45	2,78.92	2,25.86
Other expenses	1,47.44	1,60.92	1,35.53	1,01.15
Gross profit	84.10	84.58	89.09	26.65
Managing Agents' remuneration	5.60	5.73	5.42	0.67
Depreciation	41.06	39.70	35.89	14.40
Net profit	37.44	39.15	46.78	11.58
Transfer from reserves ..	..	1.15	23.25	..
To reserve	35.00	50.00	1.10	..
Dividends—				
Preference	5.41	5.41	15.14	..
Ordinary	14.25	11.40	8.55	..
	(12½%)	(10%)	(7½%)	
Carry forward	0.78	12.59	33.65	—11.55

The provision for depreciation, which had been substantially raised in the previous years, has been increased further and amounts to nearly 50 per cent. of the gross profit. No provision for taxation has been made; evidently because there is substantial amount of unabsorbed depreciation on account of initial, additional and triple shift allowances, due to various extensions and installation of new plants in recent years. A sum of Rs. 35 lakhs has been transferred to the general reserve, as against Rs. 50 lakhs added in the previous year. A rather unusual procedure is being followed by the Company in the distribution of dividend on the two classes of preference shares. Last year, although the profit, along with large undistributed surplus brought in, was large enough to pay the preference dividends out of the same, the Directors paid them out of the capital reserve. They have again recommended the payment of preference dividends for the year under review from the capital reserve.

The latest balance-sheet of the Company shows that the reserves and surplus aggregate Rs. 103.48 lakhs, against a paid-up capital of Rs. 218.76 lakhs. There is a debenture liability to the extent of Rs. 122 lakhs. Current liabilities aggregate Rs. 202.63 lakhs, of which loans from banks account for Rs. 153.21 lakhs. The gross block of the value of Rs. 670.23 lakhs (including an addition of Rs. 49.60 lakhs during the year under review) has been written down to a book value of Rs. 412.37 lakhs. Current assets amount to Rs. 239.92 lakhs and exceed current liabilities by Rs. 37.29 lakhs.

The outlook for the Company seems to be promising. The trend of production in the first half of the current year has been encouraging. A further expansion and modernisation programme is on hand. The first cement kiln is proposed to be modernised on the lines of the second kiln. The Directors report that "it should result in improved coal consumption and higher output by about 15 000 tons per year." The Company also proposes to import some quantity of raw sugar for refining before the next crushing season. It is planned to extend the siding of about 14 miles of the Dehrl-Rohtas Light Railway. This will improve further the supply of sugarcane and also connect the cement factory to certain new limestone quarries. The development programme for paper and paper board is, according to the Directors' report, as follows:

"In accordance with plans for additional improvements and extensions, your Directors have finalised arrangements for extending the capacity of both your pulp plant and paper factory. The pulp plant is being modernised as to result in higher recovery of chemicals and saving in steam and extension of capacity to meet the increased requirements. The quality of pulp will improve, giving a whiteness of lasting character. In regard to paper production, your Company is placing an order for two paper machines which will concentrate on production of those qualities of paper which are largely being imported now. Your Company is further planning to extend the capacity of the board unit by 50 per cent., thus keeping the production capacity of your plant ahead of the demands in the country. It is expected that the increased production of the board plant will be available from the middle of 1955 and the two paper machines will come into production by the end of 1955 and the beginning of 1956. Thus, the stepped up production will be available gradually in the next two years. With the completion of the various plans it is expected that the total production capacity of your paper factory will increase to about 44 000 tons."

The power plant also is proposed to be modernised by the end of 1954. The Directors hope that the financial results of the Company for the current year will be substantially better and that, with the expansion that is planned and is on hand, there will be a steady improvement.

The Rs. 10 paid-up shares of the Company are being currently quoted at Rs. 16-4 *ex-div.*, at which rate and on the basis of the proposed dividend for the year under review, the yield works out to 7.7 per cent. per annum, free of tax.

T.I. CYCLES WIPE OFF ACCUMULATED LOSS

The Directors' report and audited accounts of the T.I. Cycles of India Ltd. (Managing Agents: T. & M. Industries Ltd., Madras), for the year ended 31st December, 1953, reveal an all-round improvement in the Company's affairs. Production, sales, and trading results have all been encouraging as compared with those for the previous year. The trading profit for the year under review, amounts to Rs. 15.27 lakhs, as against Rs. 11.29 lakhs for 1952. The profit before providing for depreciation, at Rs. 8.32 lakhs, compares favourably with Rs. 6.15 lakhs for the previous year. A sum of Rs. 39,863 has been provided for depreciation, as against Rs. 5.53 lakhs a year ago. The balance of profit, namely, Rs. 7.92 lakhs, has been utilised to wipe off the loss of Rs. 7.68 lakhs brought in from the previous year and to carry forward a tiny sum of Rs. 23,654 to next year.

The lower provision for depreciation, noted above, is due to a revision of the basis for providing for depreciation. Alluding to this, the Directors observe, in their report to the shareholders as follows:

"The income-tax basis that has been fully adopted in the previous years, results in very heavy depreciation rates in the earlier years and very insignificant ones in the later years. They (the Directors) recommend that an ideal period within which to provide for depreciation on this basis will be seven years, at the end of which period it would be possible to take full advantage of the provisions for initial, extra and normal depreciations on building erected and on plant and machinery installed each year and so equal the total amount permissible under income-tax regulations. The seven-year period will commence from 1952 and since, according to the new basis, a substantial excess provision has been made in the previous years, the provision for depreciation for the year 1953 is very low. The Directors feel that this provision is sufficient and is in the best interests of the Company."

Now that the accumulated loss brought in from the previous years has been written off, the shareholders may, as the Chairman stated in his speech, an extract of which is published elsewhere in this issue, "look forward to a small dividend being distributed to them."

The production and sales of the Company's product, "Hercules-India" bicycles, are reported to have increased substantially during the year under review. It is gratifying to note that the Company reached 50 per cent. of the rated capacity of the plant even during the second year of its manufacturing activities. It is expected that the Company will be able to reach, during the current year, its minimum capacity of 100,000 cycles per year. The construction of the second factory for the manufacture of bicycle components has been completed and almost all the machinery and equipment have been installed in position. The automatic nickel and chrome plating plant, which is claimed to be the only one of its kind operating in the East, has been installed and bright finishing of all metal parts is now being done. "With the commissioning of the second factory fully equipped and the installation of the plating plant," the Directors add, "the Hercules-India bicycle will be an almost fully Indian product, and its strength, quality and finish will be comparable to its British counterpart 'Hercules,' as ture and the technical processes involved are the raw materials used, the methods of manufacidentical in both brands of bicycles."

TIRUMBADI RUBBER TO CAPITALISE RESERVES

The Directors of the Tirumbadi Rubber Company Ltd. (Agents and Secretaries: Messrs. Peirce, Leslie & Co., Ltd., Kozhikode), propose to reorganise the capital structure of the Company by (1) sub-dividing the existing unissued ordinary shares, (2) capitalising a part of the reserve fund, and (3) converting the ordinary shares into ordinary stock. The present authorised capital of the Company amounts to Rs. 3,50,000, made up of 4,490 ordinary shares of Re. 1 each and 308,000 ordinary stock units of Re. 1 each, of which only the ordinary stock has been issued and subscribed.

The Directors propose to split the 4,490 unissued shares of Rs. 10 each into 44,900 ordinary shares of Re. 1 each. Thereafter, they propose to capitalise a sum of Rs. 3,05,100 being part of the undivided profits standing to the credit of the reserve fund (this amounts to Rs. 5,50,000 as on 30th September, 1953) and issue 305,100 ordinary shares of Re. 1 each, as capital bonus to the holders of the existing ordinary stock as on 19th June, 1954, in the proportion of one new share for every unit of ordinary stock held by them. In order to carry out the proposal to capitalise the sum of Rs. 3,05,100 from out of the reserves, the authorised capital of the Company needs to be raised. The Directors, therefore, propose to increase the authorised capital from Rs. 3,50,000 to Rs. 6,10,200 by the creation of 260,200 ordinary shares of Re. 1 each. After the aforesaid proposals are carried out, the Directors propose to reconvert the entire ordinary shares into ordinary stock, thus, the 305,100 ordinary shares of Re. 1 each issued as capital bonus to the holders of the existing ordinary stock will become ordinary stock in units of Re. 1 each. The authorised and issued capital of the Company will be Rs. 6,10,200 in ordinary stock. The new stock issued will rank in all respects *pari passu* with the existing ordinary stock. Thus, the new ordinary stock will participate in the dividend to be declared for the year ended 30th September, 1954.

It may be recalled that, in the year 1939, the 30,510 ordinary shares of Rs. 10 each were converted into ordinary stock units of Re. 1 each.

The object of converting ordinary shares into stocks is evidently to provide easy marketability. Whereas, in the case of shares, transactions usually take place on the Stock Exchange in units of a lot fixed for them, depending on their face value, there will be no such marketable lot in the case of stocks. Transactions even in single unit of stock will be possible without any difficulty and considered a complete transaction by the Stock Exchange authorities.

CENTURY MILL TO MANUFACTURE ART SILK

The Directors of the Century Spinning and Manufacturing Co., Ltd. (Managing Agents: Messrs. Birla Brothers Ltd., Bombay), have decided, subject to the approval of the shareholders, to extend the business of the Company by putting up a plant for the manufacture of artificial silk. They feel that there is good scope in the country for manufacturing artificial silk which is now being imported in large quantities. Having considered the matter at great length, they have decided to proceed with the project.

EARNINGS OF BHARAT LINE DROP

DIVIDEND, HOWEVER, MAINTAINED

A DECLINE of Rs. 11.28 lakhs to Rs. 42.71 lakhs in the gross profit is recorded by the audited accounts of the Bharat Line Ltd. (Managing Agents: Messrs. Dinshaw Ltd., Bhavnagar) for the year ended 31st December, 1953. With this decline, the upward trend in profit of the Company, noted from its inception, has been reversed. Thus, from Rs. 79,067 in the first year of its operation, namely, 1946, the gross profit had risen to a record level of Rs. 53.99 lakhs for 1952. But the decline in profit for the year under review has been inevitable in the face of 'an all-round reduction in freight rates and high cost of operation and maintenance. Nevertheless, the profit for 1953, at Rs. 42.71 lakhs, is almost the same as that earned in 1951. The setback in earnings has not affected the distribution to the shareholders, which is proposed to be maintained at the modest rate of 5 per cent., to which level it had been raised successively from 3 per cent. for 1950 and 4 per cent. in 1951. The Company, it may be recalled, paid a maiden dividend of 3 per cent. for 1947, the second year of its operation, and this was maintained for the next three years.

The following comparative table shows the progress of the Company's working during the last three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950
Freight	214.97	205.95	162.24	160.29
Charter hire and other Income..	8.00	7.11	7.21	4.26
Expenses	180.26	158.86	126.70	133.27
Gross profit	42.71	53.99	42.75	31.23
Managing Agents' remuneration.	3.09	4.40	2.59	0.36
Depreciation	34.51	45.17	35.36	28.30
Taxation	..	..	1.00	..
Net profit	5.11	4.42	3.80	2.62
Dividend	5.00	5.00	4.00	3.00
	(5%)	(5%)	(4%)	(3%)
Carry forward	0.69	0.59	1.17	1.37

The rise in freight earned, notwithstanding an all-round reduction in freight rates, reflects the larger number of units that were in operation. The benefits of intensive employment of the Company's ships seem to have been more than offset by higher expenditure caused by delays at loading and discharging ports and high maintenance costs, which rose in the aggregate by Rs. 21.40 lakhs. A substantial part of this increase—Rs. 12.69 lakhs to be precise—is accounted for by hire of chartered steamers. Stevedoring charges, etc., had gone up by Rs. 4.40 lakhs, marine dues, light dues and customs charges by Rs. 4.35 lakhs and salaries, wages and establishment charges by Rs 2.51 lakhs. There was, however, a drop in expenses in other directions. Thus, coal, fuel oil, stores and victualling account for a decline of Rs. 1.22 lakhs and repairs, survey expenses and dry dock charges for Rs. 2.15 lakhs.

The latest balance-sheet of the Company shows that the paid-up capital is unchanged at Rs. 1 crore. There are no reserves, except a fleet replacement reserve of Rs. 11.18 lakhs created during the year under review from the profit on sale of a ship, after adjusting the depreciation provided for the previous year's accounts. The borrowings, secured and unsecured, as at the close of the year show an increase of Rs. 66.42 lakhs to Rs. 99.07 lakhs, of which loans from the Government of India, secured by mortgage of five ships, amount to Rs. 90.95 lakhs, as against Rs. 57.56 lakhs a year ago borrowed against two ships. The gross block shows an increase of Rs. 57.02 lakhs to Rs. 337.25 lakhs, of which Rs. 36.20 lakhs represent additions to the fleet, after deducting the cost (Rs. 18.57 lakhs) of ship sold during the year, and Rs. 38.94 lakhs, payment on account of ships under construction. As against this gross block, there is a depreciation reserve of Rs. 160.90 lakhs, after adjusting the depreciation (Rs. 18.62 lakhs) on ship and vehicle sold. The current assets (excluding deferred revenue expenditure amounting to Rs. 7.09 lakhs) aggregate Rs 51.81 lakhs, as against current liabilities amounting to Rs. 141.38 lakhs.

In order to secure fresh avenues of activities, the Company has, since the close of the year, entered the Persian Gulf-India-Burma trade on fortnightly-liner-service basis. But it is expected that, for some time, the Company will not be able to secure a sure and satisfactory footing in this trade, on account of severe competition from long-established foreign interests. The Government of India is reported to have promised its full support for the Company in this venture. This requires the employment of at least four ships and the Government of India has approved the acquisition of this additional tonnage with the help of loans from its Ships Purchase Loans Project. This approval is subject to the condition that the Company will place an order for one ship with the Vizag shipyard, in addition to the one nearing completion. The order has to be placed before the end of 1954 against a separate loan from the Government. The Directors had already placed an order for an 8,000-tonner at the Hindustan Shipyard, in replacement of a ship sold during the year. The delivery of this ship is expected in July, 1954. The Company lost, on 1st April, 1954, a ship through grounding in the Gulf of Cambay. The Directors are arranging to secure a suitable ship to replace the same.

Points From The Chair

Reopening of London Gold Market

"THE gold-mining industry welcomes the reopening early in the current year, of the London gold market which had been closed since the outbreak of hostilities in 1939. With the re-establishment of this market, the arrangements for the sale at enhanced prices of a portion of the industry's gold output for industrial and artistic purposes were discontinued. I should, however, like to make it clear that this source of additional revenue, which fell away latterly owing to the disappearance of the premium, is not lost to the industry, as gold is now sold for its account by the South African Reserve Bank on the London market, or elsewhere if the conditions are more favourable. Prices on the London market are not determined by the official dollar-sterling exchange rate and have, in fact, varied from 248s. 3½d. to 249s. 1d., thus providing a small, but comparatively satisfactory, premium over the price based on the rate of exchange."

W. M. FRAMES,
Rand Mines, Ltd.

Dangers of Wholesale Government Assistance

"You may perhaps have noticed that the chairman of a conference of the world's airlines said, in effect, to the Governments of the various countries represented, 'Give us more subsidies so that air fares can become even more attractively uneconomic than they are today.' This hardly seems advantageous from the point of view of our national economy if traffic is to be drawn from British passenger ships which are making a very considerable contribution to the invisible exports of this country. I quite realise that State-aid to air is a world-wide and not merely a national phenomenon and that for a very long time it has been stated that our air corporations will cease to be dependent on State support in the course of 'a year or so.' It seems to me, however, that the danger of the wholesale assistance given by Governments to air, at the risk of doing serious damage to longstanding national assets like shipping, must be so obvious to all nations that it cannot be long before a halt is called. When the two forms of transport are left alone to fit into their proper economic places in the world's transport system, I, personally, should expect both to be the gainers from each other's progress."

A. I. ANDERSON,
Orient Steam Navigation Co., Ltd.

Mexican Government's Fiscal Policy

"I sometimes wonder if the Mexican Government knows where it is going with its fiscal policy towards the mining industry in Mexico. The industry has always been, and still is, one of the mainstays of the whole Mexican economy. And yet the Government's fiscal policy has time and again been apparently aimed at curtailing all new enterprises and reducing the productive capacity of existing enterprises in this important field. It seems to me that a completely new approach by the Mexican Government to the question of taxation of the mining industry and a real reduction in the total rate of tax paid by it is now essential if the industry is to prosper and thus continue to be the important prop to the Mexican economy which it has been in the past. The industry has been pressing its claims on the Mexican Government to this end. Let us hope the Government will listen."

C. E. TEMPERLEY,
San Francisco Mines of Mexico, Ltd.

Cable Manufacturing in India

"Included in the B.I.C.C. Group is the Indian Cable Co., Ltd., in which your Company holds a substantial interest with the great bulk of the balance owned by Indian nationals. Early in 1923, the Company commenced production of the first Indian-made copper conductors and rubber-insulated cables. From small beginnings it has grown considerably and the factory at Tatanagar now stands in an area of 170 acres as a thriving township with well-designed workers' housing and medical, recreational and educational facilities for its 1,300 employees. Farseeing post-war plans for expansion are now coming to fruition. The new non-ferrous rod rolling mill went into production early in 1953, while nearby, a spacious building has been erected to house plant and equipment for the manufacture in India for the first time of paper-insulated power cable. These developments represent a major contribution to India's Five-year Plan and a consolidation of our long and happy association with that great country."

SIR ALEXANDER ROGER,
British Insulated Callender's Cables Ltd.

The Company proposes to install a small workshop at Calcutta, adequately equipped to attend to urgent jobs. Heavy jobs such as annual and special surveys will, however, be carried out at its main workshop in Bombay. This is being done as a measure of economy. For the Company's ships usually ply between Bombay and Calcutta and occasionally, when urgent repairs are required at Calcutta, it experiences great delays apart from heavy costs. For this purpose, a private limited company, under the name "Ship Repairers Ltd.," with a capital of Rs. 1 lakh, has been registered as a subsidiary to the Company.

An indication of the short-term outlook of the Company is given by the Directors in their report. They say: "In view of the persistent demand for further reductions in freight rates and in the absence of any counterbalancing factors, your Directors anticipate a further fall in earnings and profits in the coming year."

COMPANY MEETINGS AND DIVIDENDS

ALLIANCE JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 2nd June, 1954. Dividend: Rs. 5 per share. Transfer books remain closed from 20th May to 2nd June, 1954, both days inclusive.

ETHELBARI TEA CO., (1932) LTD. Annual General Meeting, Calcutta, 4th June, 1954. Dividend: *Nil.* Transfer books will remain closed from 1st to 4th June, 1954, both days inclusive.

BAGHMARI TEA CO., LTD. Annual General Meeting, Calcutta, 4th June, 1954. Dividend: *Nil.*

SUNGMA TEA CO., LTD. Annual General Meeting, Calcutta, 4th June, 1954, Dividend: *Nil.*

MANABARRIE TEA CO., LTD. Annual General Meeting, Calcutta, 8th June, 1954. Dividend: Rs. 10 per share. Transfer books remain closed from 29th May to 8th June, 1954, both days inclusive.

HANSQUA TEA CO., LTD. Annual General Meeting, Calcutta, 8th June, 1954. Dividend: Rs. 2-8 per share. Transfer books remain closed from 29th May to 8th June, 1954, both days inclusive.

PULLANGODE RUBBER AND PRODUCE CO., LTD. Annual General Meeting, Fort Cochin, 8th June, 1954. Dividend: As. 4-4/5 per share. Transfer books remain closed from 28th May to 10th June, 1954, both days inclusive.

HOOGHLY FLOUR MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 9th June, 1954. Transfer books will remain closed from 2nd to 9th June, 1954, both days inclusive.

NEW INDIA INVESTMENT CORPORATION LTD. Annual General Meeting, Calcutta, 10th June, 1954. Transfer books will remain closed from 1st to 10th June, 1954, both days inclusive.

KHARDAH CO., LTD. Half-yearly General Meeting, Calcutta, 10th June, 1954. Dividend: Rs. 7-8 per share. Transfer books remain closed from 27th May to 10th June, 1954, both days inclusive.

DAWN MILLS LTD. Annual General Meeting, Bombay, 10th June, 1954. Dividend: Rs. 6 per share, payable on and after 14th June, 1954.

PHŒNIX MILLS LTD. Annual General Meeting, Bombay, 11th June, 1954. Dividend: Rs. 8 per share, payable on and after 17th June, 1954.

SRI KRISHNARAJENDRA MILLS LTD. Annual General Meeting, Mysore, 19th June, 1954. Transfer books will remain closed from 8th to 20th June, 1954, both days inclusive.

BIRLA JUTE MANUFACTURING CO., LTD. Annual General Meeting, Calcutta, 23rd June, 1954. Transfer books will remain closed from 7th to 23rd June, 1954, both days inclusive.

DEVASHOLA (NILGIRI) TEA ESTATES LTD. Final dividend of Re. 1-8 per share, for the year ended 31st December, 1953. Transfer books will remain closed from 7th to 14th June, 1954, both days inclusive.

SRI VENKATESA MILLS LTD. Dividend of Rs. 7 per share, for the year ended 31st December, 1953. Transfer books will remain closed from 30th May to 14th June, 1954, both days inclusive.

GNANAMBIKAI MILLS LTD. Dividend of Rs. 6 per share, for the year ended 31st December, 1953.

PALANI ANDAVAR MILLS LTD. Dividend of Rs. 12 per 'A' ordinary share and Rs. 18 per 'B' ordinary share, for the year ended 31st December, 1953.

NEELAMALAI TEA AND COFFEE ESTATES LTD. Interim-dividend of As. 6 per ordinary share, for the year 1953-54. Transfer books will remain closed from 1st to 7th June, 1954.

COMPANY REGISTRATIONS

SARAT PRESS LTD. (First Director: Mr. H. P. Goenka.) Business: Printers, Publishers, etc. Authorised capital: Rs. 5,00,000. Public Company. Address: 12, Dalhousie Square East, Calcutta.

NU-BILT FURNITURE LTD. (First Director Mr. K. B. Casyab.) Business: House Furnishers, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 3, Chowringhee Road, Calcutta.

GENERAL MERCANTILE CORPORATION LTD. (Mr. H. P. Murarka.) Business: General Importers. Authorised capital: Rs. 5,00,000. Public company. Address: 5, Clive Row, Calcutta.

NAV BHARAT COMMERCIAL CORPORATION LTD. (First Director: Mr. M. C. Mimani.) Business: Dealers in Absorbent Cotton, etc. Authorised capital: Rs. 5,00,000. Public company. Address: 86/10, Wellesley Street, Calcutta.

SENDRA COAL SUFFERS LOSS AGAIN

MYSORE CHEMICAL MANUFACTURES PAY MORE

Sendra Coal Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. F. W. Heilgers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1953.

As much as 67,480 (71,051) tons were raised and 61,143 (63,539) tons were despatched during the half-year in comparison with 71,691 tons and 64,928 tons in the previous half-year.

The smaller despatch figure for the period under review reflects the difficulties with collieries which are not prepared to give rebates have to meet.

Sand was received as usual from the Burrakur Coal Co. Ltd.'s Loyabad Ropeway. This satisfactory though expensive method of conservation of the country's coking coal reserves has not yet received from Government the financial recognition that it deserves.

The number of wagons available daily for coal loading in the Bengal/Bihar fields was 3,119. This is 16 wagons more than for the previous period.

In order to assist forward planning, the Coal Industry has informed the Planning Commission that in its opinion transport to the extent of an additional 2 million tons per year for the next 10 years will be required if the Industrial expansion programme is to be fulfilled. This programme will necessitate very early action by the authorities.

While the directors give their full support to reasonable improvement in the conditions under which labour works in so far as these improvements fall within the capacity of management to pay, they can only suggest that the criterion is the capacity to pay, and this is governed first and last by labour's willingness to do a fair day's work for the many benefits which are now available in return for services rendered.

As this report is written the Industry is under the orders of a Tribunal set up by Government in response to demands formulated by labour (or their leaders) which, if acceded to in toto, will increase the pit-head price of coal to Indian Industry by about 50 per cent.

During the half-year July to December, 1953, a total of 74,888 (68,970) tons were raised and 68,186 (62,807) tons were despatched from the Company's subsidiary Company, viz., The Karanpura Mining Syndicate. The secretaries report that some success has been achieved subsequently in movement from this area, but wagon supplies are still much below productive capacity.

The profit and loss account, after providing Rs. 15,436 (Rs. 21,736) for depreciation, writing back Rs. 14,089 (nil) over-provided previously against taxation and including the debit balance of Rs. 1,59,849 (credit of Rs. 10,379) brought forward from last half-year, shows a debit balance of Rs. 2,06,478 (debit of Rs. 70,471) which the directors propose to carry forward.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Block ...	10,45,768
Debentures	2,00,000	Capital expenditure-in-progress ...	16,556
Reserves ...	8,74,358	Stock of coal	4,68,998
Liabilities ...	7,48,551	Stores ...	1,34,055
		Debts and advances ...	5,55,197
		Investments	1,77,074
		Cash ...	20,283
		Profit and loss account ...	2,06,478
Rs.	26,24,409	Rs.	26,24,409

Mysore Chemical Manufactures, Ltd.

The directors of the above Company (Managing Agents: Messrs. Krishna & Co., Ltd., Bangalore) submitted the audited accounts of the Company for the year ended 31st March, 1954.

After providing a sum of Rs. 32,680 (Rs. 19,382) for depreciation and Rs. 48,898 (Rs. 36,000) for taxes (Rs. 43,000 for income-tax and Rs. 5,898 for sales tax) out of the current year's profits, the net profit of the Company amounted to Rs. 64,626 (Rs. 55,106), which, together with the balance of Rs. 42,388 (Rs. 29,283) brought forward from last year's account makes up a total of Rs. 1,07,014 (Rs. 84,388) which the directors disposed of as follows:—

In payment of a dividend of 6 per cent. per annum for the year under report on 20,000 6 per cent. cumulative preference shares, free of income-tax Rs. 12,000 (Rs. 12,000), in payment of a dividend of 12½ (10) per cent. per annum for the year under report on 30,000 ordinary shares, free of income-tax Rs. 37,500 (Rs. 30,000) and carried forward to next year's account Rs. 57,514 (Rs. 42,388).

The probable loss on redemption of the investments on 4 per cent. Mysore Government Loan Bonds is expected to be Rs. 31,406 which is amply covered by the amount carried forward.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	2,14,987
Reserves ...	4,00,000	Stock-in-trade	1,36,327
Provision for taxation ...	53,349	Stores ...	2,17,893
Liabilities ...	78,824	Debts, deposits and advances ...	1,78,985

		Cash ...	55,589
Rs.	11,39,187	Rs.	11,39,187

Churulia Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. F. W. Heilgers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1953.

During the half-year July to December, 1953, a total of 74,888 (68,970) tons were raised and 68,186 (62,807) tons were despatched from the Company's subsidiary Company, viz., The Karanpura Mining Syndicate. The secretaries report that some success has been achieved subsequently in movement from this area, but wagon supplies are still much below productive capacity.

The profit and loss account, after providing Rs. 7,732 (Rs. 591) for taxation and including the sum of Rs. 19,867 (Rs. 28,918) brought forward from last half-year, shows an available balance of Rs. 9,056 (Rs. 18,661) which the directors propose to dispose of as follows:—

In paying a dividend of 6 (6) pies per share without any deduction for income-tax paid by the Company Rs. 4,688 (Rs. 4,688) and in carrying for ward Rs. 4,368 (Rs. 13,973).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Investments	7,26,037
Reserves ...	1,42,075	Debts and advances ...	5,393
Liabilities ...	12,952	Cash ...	27,965
Profit and loss account ..	4,368		
Rs.	7,59,395	Rs.	7,59,395

Karanpura Development Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1953.

There has been some improvement in the transport position in the Karapura field. There was little change from the previous period in the income from analysis work on coal exports. Amongst the Company's other activities however there was an improvement in results from proving work carried out by drilling in adjacent areas.

It is expected that the Company's appeal to the Supreme Court against the decision of the Patna High Court will come up for hearing in the latter half of this year.

During the period under review 3,99,107 (4,11,048) tons of coal were raised and 3,76,337 (4,10,311) tons were despatched from the undernoted properties.

As previously, on the advice of the Company's lawyers the directors do not recommend the payment of any dividend. For the same reason the managing agents do not propose to draw their commission for the half-year and the amount in question will be carried forward.

The directors referred a year ago to the income-tax appeal which was under submission to the Appellate Tribunal. They regret to report that the decision went against the Company, but the matter is now being taken to the High Court as it is considered to be in the shareholders' interest to do so.

The profit and loss account after providing Rs. 8,059 (Rs. 6,705) for depreciation, and transferring Rs. 31,500 (Rs. 22,500) to bad and doubtful debts reserve shows a debit balance of Rs. 18,034 (credit of Rs. 1,27,234) which is carried down to profit and loss appropriation account. A sum of Rs. 98,514 (nil) has been transferred from general reserve to the credit of profit and loss appropriation account and a sum of Rs. 1,32,500 (Rs. 30,135) has been taken to provision for taxation for additional income and super-tax raised on the Company. Including the sum of Rs. 72,147 (Rs. 1,15,795) brought forward from last half-year, there is available a balance of Rs. 20,127 (Rs. 1,27,234) which will be carried forward.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Block ...	31,49,003
Reserves ...	26,81,896	Stores ...	79,693
Provision for taxation ...	2,76,752	Stock of lime, etc. ...	3,565
Property sales suspense ...	4,63,480	Other assets	23,627
Liabilities ...	19,12,653	Debts, deposits and advances ...	15,58,690
Profit and loss account ...	20,127	Investments	25,04,900
		Cash ...	35,430
Rs.	73,54,908	Rs.	73,54,908

Tropical Plantations, Ltd.

The directors of the above Company (Managing Director: P. T. Thomas, Esq., Kottayam) submitted the audited accounts of the Company for the year ended 31st December, 1953.

The tea crop harvested during the year amounted to 3,49,212 (3 61,402) pounds (736 pounds per acre). The production cost is 115.745 (131.813) cents (Rs. 1-2-6.231) per pound, and the average price realised is 158.453 (112.348) cents (Rs. 1-9-4.229) per pound.

The rubber crop obtained during the year is 8,15,244 (8,15,107) pounds (456 pounds per acre) at a cost of 57.095 (54.472) cents (9 as. 1.622 ps.) per pound and the average price realised is 122.734 (120.661) cents (Rs. 1-3-7.649) per pound.

After providing Rs. 1,80,814 (Rs. 1,48,414) for taxation and after charging depreciation, bonus to staff and remuneration to the managing director, the net profit for the year amounted to Rs. 3,52,117 (Rs. 2,07,346). This together with Rs. 9,921 (Rs. 2,575) brought forward from the previous year aggregated to Rs. 3,62,038 (Rs. 2,09,921). Out of this, the directors have transferred Rs. 120,000 (nil) to general reserve, leaving a balance of Rs. 2,42,038 (Rs. 2,09,921) available for distribution. The directors made payment of a dividend of 12 (10) per cent. [Rs. 3 (Rs. 2-8) per share], free of income-tax and agricultural tax, absorbing Rs. 2,40,000 (Rs. 2,00,000) and carried forward the balance of Rs. 2,038 (Rs. 9,921) to 1954 accounts.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Block ...	19,92,551
Provision for taxation ...	1,81,674	Stock-in-trade	3,49,006
Liabilities ...	1,81,068	Stores and spare parts	1,15,187
Profit and loss account ...	3,62,038	Nurseries ...	1,209
		Debts, deposits and advances ...	37,702
		Cash ...	2,29,125
Rs.	27,24,780	Rs.	27,24,780

Shahjabanpur Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th September, 1953.

The revenue account shows a profit on the year's working of Rs. 88,391 (Rs. 1,09,816) and after deducting from this the appropriation under the Electricity (Supply) Act, 1948 Rs. 3,057 (Rs. 5,416), gratuity to retired employees Rs. 383 (nil), provision for taxation Rs. 33,000 (Rs. 22,500) and reserve for deferred taxation Rs. 14,700 (Rs. 17,300) there is a credit balance of Rs. 31,236 (Rs. 54,059). After adding to this Rs. 27,279 (Rs. 16,895), the adjusted balance brought forward being the amount transferred from reserve for tariffs and dividends control in accordance with paragraph II (2) of the sixth schedule to the Electricity (Supply) Act, 1948, there is a balance of Rs. 71,282 (Rs. 70,954) at credit of profit and loss account, which the directors recommend be disposed of as follows:—

Pay a dividend at 5 (5) per cent. for the year ended 30th September, 1953, without any deduction of income-tax paid by the Company Rs. 45,500 (Rs. 45,500), transfer to general reserve Rs. 20,000 (Rs. 20,000) and carry forward the balance of Rs. 5,882 (Rs. 5,454).

A continuous supply of energy was maintained throughout the year, and an increase of approximately 6 per cent. in the number of units sold was recorded as compared with the previous year. Information received appears to indicate that the State Government intend to make a bulk supply of electricity available to the Company within the next twelve months. The Company's future prospects are considered good.

The number of consumers connected to the Company's system at 30th September, 1953 was 1,919 representing a connected load of 2,420 kw. as compared with 1,825 with a connected load of 2,350 kw. at the close of the previous financial year. These figures include bazar lighting consumers numbering 101 as against 104 at 30th September, 1952.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,10,000	Block ...	7,44,487
Reserves ...	2,52,974	Stores ...	2,81,827
Provision for taxation ...	55,206	Other assets	28,229
Liabilities ...	3,41,560	Debts, deposits and advances ...	1,51,253
Profit and loss account ...	71,381	Investments	3,16,743
		Cash ...	1,08,582
Rs.	16,31,121	Rs.	16,31,121

Walford Transport Ltd.

The directors of the above Company (Manager: Mr. E. A. Smith, Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1953.

After writing off Rs. 37,957 (Rs. 32,842) for depreciation, the available profit for the year is Rs. 2,15,622 (Rs. 2,73,239) including Rs. 1,96,536 (Rs. 1,38,488) carried forward from the last account. There is a nil amount on account of taxes. The directors recommend that this sum be dealt with as follows:—

Payment of a dividend of 8¼ (8¼) per cent. per annum on 2,10,200 preferred ordinary shares, absorbing Rs. 17,867 (Rs. 17,867), payment of a dividend of 7 (7) per cent. per annum on 8,40,800 ordinary shares, absorbing Rs. 58,856 (Rs. 58,856) and carry forward Rs. 1,38,899 (Rs. 1,96,536).

The year under review was an extremely difficult one for most companies engaged in the automobile distributing business, including the Company. The effects of policies propounded by the Government of India as far back as 1950, referred to in previous reports, were felt with increasing severity during the ensuing period and culminated, early last year, in a Tariff Commission Enquiry into the Automobile Industry in India. Meantime, because of the restriction on import licences pending formulation of policies based on the Commission's findings, supplies from the Factories dwindled or ceased altogether. These facts rendered the profitable operation of the Company difficult indeed. Further, on March 31st of this year, General Motors India Ltd., pioneer automobile assemblers in this country and the Company's most profitable connection, closed down their Bombay plant being unable to comply with the Government's demands concerning the manufacture of vehicle components within the Indian Union. There is no indication at this stage that General Motors' vehicle products will again be available after stocks now in the hands of dealers are sold.

A not dissimilar situation exists in regard to Automobile Products of India, Ltd., Rootes Group Concessionaires in India, another important source of vehicle supply for the Company. In their case, however, it would appear that, although the Rootes Group as such have withdrawn from the field, arrangements are contemplated for the passing of the control of Automobile Products of India, Ltd., to Indian hands. If this materialises, then it seems that Rootes Group products will again be available to the Company, but as the new owners will still be required to satisfy the Government in regard to a programme of ultimate manufacture of components in India, the quantum of supplies is likely to be small for some time.

Foreseeing these situations, certain other selling lines were taken on during the course of last year, i.e., Willys-Overland Jeep and David Brown Agricultural Tractors and Implements. Factory supplies of the Jeep, however, have been below the demand to date, and an improvement cannot be expected before July next.

Considering the situation in the Indian Automobile Industry described, which was foreseen, the wisdom of curtailing dividends in 1952 and providing for as large a carry forward balance as possible to the 1953 accounts will be agreed. On this occasion also the directors feel that the same policy should obtain in view of the uncertain future.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,51,000	Block ...	4,29,347
Reserves ...	17,33,073	Stocks ...	24,82,213

Liabilities ...	9,52,243	Goods-in-transit ...	1,62,545
Profit and loss account ...	2,15,622	Work-in-progress ...	11,554
		Debts, deposits and advances ...	7,46,345
		Investments	26,800
		Cash ...	1,09,185
Rs.	39,92,383	Rs.	39,92,383

Sassoon and Alliance Silk Mill Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. David Sassoon & Co., Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st December, 1953.

The result of the year's working showed a loss of Rs. 71,025 (Rs. 20,049). Against this loss, the directors have transferred the following sums to the credit of the appropriation account:—

From general reserve Rs. 70,000 (nil), from equalisation of dividend reserve Rs. 37,500 (nil) and added the balance brought forward from the previous year of Rs. 3,615 (Rs. 3,162) making a total of Rs. 1,11,115 (Rs. 96,164). From this amount is deducted the loss for the year 1953, of Rs. 71,025 (Rs. 20,049) leaving a balance of Rs. 40,090 (Rs. 66,115 after transferring Rs. 10,000 to replacement of machinery reserve). Out of this balance, the directors paid a dividend of As. 12 (Re. 1-4) per share, free of income-tax, absorbing Rs. 37,500 (Rs. 62,500) and carried forward to 1954 account Rs. 2,590 (Rs. 3,615). The directors have also transferred a further sum of Rs. 4,000 (nil) from the general reserve to the provision for gratuity to employees on retirement.

The directors regret that the working of the Mill has resulted in a loss. This adverse result, however, is not peculiar only to this Company, but reflects the general trend of the serious depression which has overtaken the Art Silk Industry during the past two years.

Although the trading year opened with a slight improvement, unfortunately this position was not maintained as conditions deteriorated in sympathy with the world-wide recession in textiles during the latter half of the year.

With increased labour costs, augmented by several imposts placed by Government on the Industry, slackness in the demand and the steep fall in prices of artificial silk fabrics, the Company passed through a period of grave difficulties.

In the last Budget the Government placed a further burden in the form of an excise duty and cess on artificial silk fabrics and this has dealt a crippling blow to the progress and welfare of the Art Silk Industry. In the circumstances, it is difficult to foresee any appreciable improvement in the near future unless some relief is offered in the high labour costs and imposts and there is a better demand with more remunerative prices for cloth. All taxation upto and including the Company's year 1952, has been finalised and paid to the income-tax authorities.

The Mill buildings, plant and machinery, inclusive of electrical installation and furniture having been fully written down in past years, no further depreciation has been considered necessary by the directors, except in the case of the motor vehicle. The Mill properties including buildings, machinery and stocks are fully insured against fire, riots and civil commotion. Prospective profits and fixed charges are covered as usual.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	2,21,409
Reserves ...	8,44,062	Stock-in-trade	7,32,242
Provision for taxation ...	398	Stores ...	1,46,349
Liabilities ...	2,67,335	Debts, deposits and advances ...	2,84,161
Profit and loss account ...	2,590	Cash ...	2,30,224
Rs.	16,14,385	Rs.	16,14,385

Bengal Flour Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Balmer Lawrie & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st December, 1953.

The profit for the half-year, after providing for taxation and depreciation was Rs. 2,41,103 (Rs. 68,992) to which has to be added items relating to previous half-years Rs. 1,706 (Rs. 24,576) and balance brought forward Rs. 35,086 (debit of Rs. 16,619) making a total of Rs. 2,77,895 (credit of Rs. 86,382). The directors have transferred Rs. 1,00,000 (nil) to general reserve, leaving a balance of Rs. 1,77,895 (Rs. 86,382) available for distribution. Out of the above balance the directors paid a dividend on 1,20,000 shares at 17½ (12½) per cent. per annum Rs. 1,05,000 (Rs. 75,000) and carried forward Rs. 72,895 (Rs. 11,382).

There has been a good demand for the Company's products during the half-year. The controlled milling of wholemeal atta on account of the West Bengal Government ceased in November and since that time both Mills have been engaged fully for the manufacture of wheaten products for free sale.

The Mills have run satisfactorily under electrification and the changeover has shown economy and more constant output.

Reference was made in the last report to the announcement by Government permitting mills to export flour but owing to competition from Australian mills, the Company has been able to make little headway in its export programme.

A recent order of Government in allowing the same wheat to be issued at different prices for the milling of "Fines" and of wholemeal atta has created difficulties in the market. Representations have been made to Government that wheat should be at one price and the Company is continuing its efforts to this end.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,00,000	Block ...	7,20,100
Reserves ...	5,20,000	Stock-in-trade	5,270
Provision for taxation ...	1,89,700	Stores and spare parts	2,38,700
Liabilities ...	19,55,232	Debts, deposits and advances ...	24,02,401
Profit and loss account ...	72,895	Investments	34,649
		Cash ...	5,36,707
Rs.	39,37,827	Rs.	39,37,827

Tide Water Oil Co. (India) Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st October, 1953.

After providing for depreciation and having brought in the debit balance from the last half-year, there was a debit balance on profit and loss account of Rs. 50,315 (credit of Rs. 316 after paying dividend at As. 8 per share, absorbing Rs. 30,000) which the directors carried forward.

In their report for the half-year ended April, 1953, the directors referred to the difficulty experienced in meeting price competition and said their efforts were being directed to reducing the cost of putting the products on the market. The directors are pleased to say that after prolonged negotiations arrangements have now been completed for importing products in bulk and the reduced transport and handling costs which will result from this should enable the Company to trade competitively.

The directors regret any inconvenience to shareholders by reason of the late presentation of the accounts for the half-year to October, 1953. They felt that it was desirable to await completion of the negotiations mentioned before issuing their report for that period. The Company has taken credit in the profit and loss account of a special allowance of Rs. 1,57,521. This represents the amount allowed by the Company's principals to cover the gap between costs and market price for the period during which negotiations were proceeding.

In these circumstances, and as the new arrangements will only commence during the current trading period, the directors have thought fit not to draw on reserves in closing the accounts for the October, 1953 half-year. They would also point out that the adverse trading conditions have affected the whole of the April, 1954 half-year just ended.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	81,613
Reserves ...	8,95,899	Stocks ...	17,53,504
Provision for taxation ...	14,295	Debts, deposits and advances ...	12,50,500
Liabilities ...	20,63,855	Cash ...	2,38,117
		Goodwill ...	2,00,000
		Profit and loss account ...	50,315
Rs.	35,74,049	Rs.	35,74,049

N.B.—Figures within brackets relate to the corresponding period of the previous year.

Notices

THE INDIAN WOOD PRODUCTS COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-fourth Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office, Clive Buildings, Netaji Subhas Road, Calcutta, on Friday the 18th June, 1954, at 12-15 p.m., for the following purposes:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 30th September, 1953.
2. To declare a Dividend.
3. To elect a Director.
4. To appoint Auditors and fix their remuneration.
5. To transact any other ordinary business of the Company.

NOTICE is also hereby given that the Register of Members of the Company will be closed from the 4th June, 1954 to the 18th June, 1954, both days inclusive. Dividend Warrants will be sent only to Registered Shareholders or their mandatees.

By Order of the Board,
For GILLANDERS ARBUTHNOT & CO., LTD.,
K. R. FETTES,
Managing Director,
Managing Agents.

CLIVE BUILDINGS,
NETAJI SUBHAS ROAD,
CALCUTTA, 18*th May*, 1954.

NASKARPARA JUTE MILLS COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 42nd Ordinary General Meeting of the Members of the Company will be held at the Registered Office of the Company at No. 8, Dalhousie Square East, Calcutta, on Monday the 21st June, 1954, at 5 p.m. for the purpose of receiving the Directors' Report, passing the Audited Accounts for the half-year ended the 31st October, 1953, electing Director, appointing Auditors and for transacting any other business of the Company that may be brought forward.

The Share Transfer Register of the Company will be closed from the 14th June, 1954, to 21st June, 1954, both days inclusive.

By Order of the Board,
For and on behalf of
NASKARPARA JUTE MILLS CO., LTD.,
HOWRAH TRADING CO., LTD.,
Managing Agents,
K. D. JALAN,
Director.

THE TATA IRON AND STEEL COMPANY, LIMITED

NOTICE

THE TRANSFER BOOKS OF THE COMPANY will be closed from Monday the 28th June to Thursday the 22nd July, 1954, both days inclusive.

The dividends for the year ended 31st March, 1954, when sanctioned, will be made payable to those shareholders whose names stand on the Share Registers of the Company, on Thursday the 22nd July, 1954.

By Order of the Directors,
TATA INDUSTRIES LIMITED,
Managing Agents,
J. D. CHOKSI,
Director.

BOMBAY, 27*th May*, 1954.

SHREE NIWAS COTTON MILLS LIMITED

MR. G. D. SOMANI'S SPEECH AT NINETEENTH ANNUAL MEETING

A FERVENT plea for the adoption of rationalisation measures in the long-term interest of labour, consumers and the industry was made by Mr. G. D. Somani, M.P., Chairman of the Shree Niwas Cotton Mills Ltd., at the Nineteenth Annual General Meeting of the shareholders held in Bombay on the 26th inst. Referring to the recent trends in textile trade, Mr. Somani wished that the export duty on coarse varieties were withdrawn. He also made a strong appeal for liberalisation of depreciation allowance for old units, in order to enable them to meet the heavy cost of rehabilitation and renovation.

The following is the full text of Mr. Somani's speech:

"GENTLEMEN,

"I have great pleasure in placing before you for adoption the audited balance-sheet and profit and loss account for the year ended 31st December, 1953. Since these have been in your hands for some time, I will, with your consent, take the same as read.

"I would at the outset like to draw your attention to the reference made in the Directors' report about the Company having acquired substantial shares of Messrs. Hall and Anderson, Ltd., which owns the Shree Madhusudhan Mills which has 61,516 spindles and 1,640 looms, with 1,01,113 square yards of freehold land. This mill, formerly known as Pearl Mill of the Fazalbhoy Group, was regarded as the best of the group's mills. The mill, however, during the last few years changed hands several times and its working was very unsatisfactory at the time its control and management was assumed by your Directors. The mill machinery had been almost starved of its proper maintenance and there were several technical irregularities in the departmental working. The new management had thus to face manifold problems during the initial period, but I am glad to be able to report that, after several months of intensive and sustained all-round efforts, we have turned the corner and are hopeful of steady and gradual improvement in its working.

"Turning now to general matters, I cannot help making a few observations on the important problem of rationalisation which has caused so much controversy in the recent past. I agree that we cannot afford to aggravate our unemployment problem by any large-scale retrenchment by having recourse to any drastic and hasty measures of rationalisation, but, on the other hand, we cannot also lose sight of the hard fact that, in the ever-growing competition both here and abroad, any total ban on the installation of modernised equipment and rationalised working will prove disastrous to the very cause of maintaining maximum employment which we want to serve. It is quite clear from the history of the introduction of rationalisation measures in other countries that, in the long run, this has resulted in substantial improvement in working conditions and creation of better and more employment in the industry. Indeed, if the industry is to be forced to continue to employ obsolete machinery and old methods, the time may not be far off when the working of the industry may be so adversely affected by economic factors as to result in widespread unemployment, caused by enforced curtailment of production. I maintain, therefore, that, apart from many other benefits that are bound to follow, the rationalisation measures will be found ultimately to be as much in the interest of labour as of consumers and industry. I am confident that, with a little goodwill on both sides, a scientific formula on a long-term basis may be worked out which, while not unduly disturbing the present employment position, will ensure adoption of gradual methods under which labour will secure better working conditions in producing superior quality at cheaper cost.

Export Duty on Coarse Cloth

"Immediately after the export duty on medium varieties was withdrawn in October last, there was a good revival of export demand and the export figures during the first few months showed encouraging trends. However, the latest position again reflects the difficulty which the industry is facing in overseas markets and it is feared that, unless the export duty on coarse varieties is withdrawn, we may not be able to achieve the target. It is extremely desirable, therefore, that Government should keep a very close watch over the situation and take effective measures before it is too late to ensure that the industry does not lose any ground in the export markets.

"There are at present too many Government restrictions and regulations coming in the way of prompt execution of mills' extension plans. It is desirable, in the interest of industrial development of the country, that the whole complicated chain of formalities necessary in this connection should be simplified to avoid delays.

"Much has been said from time to time from so many quarters about the vital need for liberalising the depreciation allowance for old units to meet the huge financial requirements of rehabilitation and renovation. I would like to make a reference in this connection to the very valuable concession given by the U.K. Chancellor of the Exchequer in his last Budget, whereby any investment now in new machinery will entitle the industry concerned to a 20 per cent. investment allowance. It should be appreciated that the present liberal allowance for new machinery and plant here does not mean any real concession, because the depreciation allowance does not go beyond 100 per cent. and it is only a concession of deferred payment of tax liabilities. The present investment allowance as granted by the U.K. Government will, however, be over and above the 100 per cent. depreciation allowance and is thus a substantial incentive to encourage investment in new machineries. The need here in our country to stimulate investment is much more than in the U.K. and I hope that the Taxation Enquiry Commission and our Government will give still more liberal incentive to the industry here, so that the pace of new investment may be accelerated.

"The textile industry has just celebrated its centenary and this premier industry, after passing through a long period of hard struggle, can today rightfully claim a prominent position in the national economy. While the industry is still faced with a number of complicated problems, it can certainly look forward with confidence to a still more glorious future. What is, however, wanted is that those of us, who are in charge of management, should fully appreciate the spirit of the changing times and should make every endeavour to conform to the highest standard of managerial efficiency and integrity, so that we can make our due contribution in building a new India."

COMMERCE AND INDUSTRY

(*Concluded from page 1040*)

ment; 83,740 cwts. of insulated cables, wires, strips and strands (£927,000); and 42,782 cwts. of converting and rectifying machinery, transformers and switchgear valued at £1,030,000.

The second largest group of British products imported by India in March included chemical elements and compounds worth £547,000 bringing the quarter's figures to £1,275,000; £241,000 worth of dyestuffs, pigments, paints and varnishes, bringing the quarter's total to £636,000; and medical and pharmaceutical products to the value of £338,000, taking the quarter's total to £771,000. India's total imports of British chemicals in March were valued at £1,563,000, and in the March quarter, at £3,760,000, as compared with under £2,500,000 in the first quarter last year.

Indian imports of British vehicles also showed an increase. During March India took 2,148 tons of railway vehicles, bringing the quarter's total to 5,703 tons worth £1,012,000; and £1,254,000 worth of "road vehicles and aircraft" taking the total for the quarter to £2,704,000. The latter group included 900 motor cycles in March, bringing the quarter's total to 2,920 (valued at £342,000) compared with 917 in the same period last year; and 170 chassis for goods vehicles, bringing the quarter's total to 302 (£367,000).

Other leading British exports to India during the first quarter of this year, included 24,311 tons of iron and steel (£1,605,000) compared with 12,954 tons in the same quarter of last year; £1,440,000 worth of the wide range of products headed "manufactures of metals"; wool products to the value of £1,386,000 (including £1,180,000 worth of wool tops compared with £983,000 in the same period of last year); £1,367,000 worth of petroleum products compared with £755,000 in the first quarter of 1953; and goods under the heading "scientific instruments, photographic and optical goods, watches and clocks" to the value of £523,000.

SCHEME FOR HANDICRAFT TRAINING CENTRES

The Executive Committee of the All India Handicrafts Board has approved, and recommended to the Ministry of Commerce and Industry, a scheme for the establishment of three mobile handicraft training centres. The Committee has also approved schemes for supply of conch shells to artisans in West Bengal, the establishment of a training-cum-production centre for *Jamdani saris* and for the setting up of classes for toy making and cloth printing.

The mobile handicraft centre provides for training in lacquer and wood carving, button making, manufacture of shell products and for production of utility and artistic goods from bamboo cane grass, straw and various other locally available fibres. It is proposed to establish three different centres to cover all these handicrafts. Each of these centres will admit a number of trainees each year and give them full training for one year. The centres will move from one place to another, particularly in those areas where there are large concentrations of traditional artisans, or where local people show keen interest in such handicrafts.

RELIEF FOR TOBACCO GROWERS

The Andhra Government is considering a proposal to start a cigarette factory in order to provide a market for the tobacco grown in the State and thus relieve distress of tobacco growers. It also intends to request the Centre to give financial aid for starting a Finance Corporation for the benefit of tobacco growers. Further, it has represented to the Union Government that the imposition of a flat rate of excise duty, irrespective of the grades of tobacco, has militated against the disposal of lower grade tobacco. It has, therefore, asked for a graduated rebate of excise duty on the purchases of existing stocks of low grade tobacco.

Messrs. J. H. Fenner & Co. (India) Ltd., Calcutta, state that their associates, Messrs. J. H. Fenner & C. (Overseas) Ltd., Hull, England, have made arrangements to establish, as soon as possible, a factory at Madural, Madras State, in the name of Fenner Cockill Ltd., for the manufacture of woven belting, V-belts and spindle tape. The necessary licence has been obtained, it is stated, from the Ministry of Commerce and Industry, New Delhi.

TEXTILES

(*Concluded from page 1024*)

is reported to have stressed that the licensing procedure should be modified so as to remove uncertainty in regard to the grant of export licences. He also emphasised that piecegoods, except the prohibited varieties, should be placed on the O.G.L. and that the fact that the Government would lose the revenue from licensing fees should not deter the authorities from taking a favourable view of the demand. He is also reported to have demanded that the export duty should be collected on the net f.o.b. sale price to the overseas buyer. He drew the Government's attention to the difficulties experienced by exporters in the matter of refund of excise duty on cloth exported out of India. Mr. Iengar assured the Council that the Government would examine the existing procedure and see whether it could not be made simpler in order that the procedure caused the least inconvenience to the mills and the trade.

Finally, the question of promoting the exports of handloom goods engaged the Council's attention. Mr. Karmarkar stated that a scheme for the marketing of handloom cloth had been evolved and that marketing officers would be posted at Colombo, Bangkok, Rangoon and Singapore. Emporia for the sale of handloom goods, he said, would also be set up in foreign countries. Mr. M. Somappa, a member of the Council representing the handloom industry, suggested that a goodwill mission should be sent to Burma to explore the possibility of promoting sale of handloom cloth from India, particularly *lungis*.

While any attempt made to promote the export of handloom cloth might be welcomed, it is necessary to see that the measures do not interfere with the normal exports of mill-made cloth. There is at least one measure, the present restriction on the exports of mill-made *dhotis*, which, it is stated, helps neither the handloom industry nor the mills. The restrictions were presumably intended to benefit the handloom industry in order to promote export of handloom *dhotis*. While the industry is not in a position to derive any advantage through this measure because it cannot prevent competition from other countries in mill-made *dhotis*, the Indian mills which can export these varieties are unnecessarily made to suffer. This is an excellent instance of the "dog-in-the-manger" policy which the handloom interests sometimes advocate. It is well to remember that the "handloom *versus* mills" controversy is a domestic issue, and that any attempt at compulsion of overseas buyers to toe the Indian Government's line in this matter will be futile as they cannot be so compelled, and that it will cause serious injury to the domestic mill industry without conferring any benefit on the handloom industry.

STRINGENCY IN MONEY EASES

(From Our Own Correspondent)

BOMBAY, 26th *May*

Signs of a slight easing of the stringency in the short-term money market were noted during the week under review. The return of funds from the trade was perceptible, while the demand for funds had somewhat slackened. With the National Plan Loan still kept on tap, however, the effect of these developments on interest rates was not appreciable. Indications of the lessening of pressure on the market are seen in the latest bank statements. These show a sizable contraction in notes in circulation, an enlargement in deposits of banks and a drop in their advances.

Inter-bank call money which had been generally bid at 3 per cent. and occasionally at 2½ per cent. in the previous week, was bid at 2½ per cent. during the week under review. At times, some of them offered 3 per cent. also. House money, however, continued to fetch 3 per cent. Short-term deposits were taken at 3 per cent. for one and two months and at 2½ per cent. for three and four months.

The statement of affairs of the Reserve Bank of India for the week ended 21st May, 1954, as compared with that for the previous week, discloses a shrinkage of Rs. 13.27 crores in notes in circulation, following the fall of Rs. 4.92 crores in the previous week. Notes held in the Banking Department have risen by Rs. 13.55 crores and the consequent increase of Rs. 28 lakhs in total notes issued is covered by a similar change in rupee coin. In the Banking Department, deposits of the Central Government have risen for the second week in succession, the latest increase being of the order of Rs. 8.47 crores. Deposits of other Governments are lower by Rs. 63 lakhs, while those of banks are up by Rs. 96 lakhs. Deposits of others are also higher by Rs. 1.20 crores. On the assets side, cash balances show a rise of Rs. 13.60 crores and balances held abroad a drop of Rs. 2.08 crores. Loans and advances to Governments and other advances have declined by Rs. 66 lakhs and Rs. 6.89 crores, respectively, the drop in the latter reflecting mainly the repayment of loans taken by Scheduled banks against usance bills. The weekly outstanding of such borrowings shows a decline of Rs. 4.50 crores, while the total amount taken so far during the current year shows an increase of Rs. 3.90 crores. Investments have recorded a rise of Rs. 6.08 crores.

The consolidated statement of position of Scheduled banks for the week ended 14th May, 1954, as compared with that for the previous week, reveals a rise of Rs. 7.52 crores in demand deposits and a decline of Rs. 65 lakhs in time deposits. Inter-bank borrowings show a rise of Rs. 99 lakhs. Borrowings from the Reserve Bank show a drop of Rs. 1.43 crores and those from the Imperial Bank Rs. 5.78 crores. A decline of Rs. 5.98 crores is noted in advances and of Rs. 91 lakhs in bills purchased and discounted. Investments have gone down by Rs. 23 lakhs. Cash balances disclose an increase of Rs. 3.68 crores, balances with other banks in current account Rs. 93 lakhs and money at call and short notice Rs. 2.02 crores.

The Gilt-edged market was featureless with the volume of business done remaining small. There was a tendency to book profits at higher levels, but the undertone remained steady. 3 per cent. 1957 was quoted at the self-same rate of Rs. 98, but there appeared sellers at this rate towards the close. 3 per cent. 1958 had business an anna better at Rs. 97-14. 3 per cent. 1959-61 had small buyers at Rs. 96-1. 3 per cent. 1963-65 put on an anna to Rs. 92-12, at which there were buyers. 3 per cent. 1964 was wanted As. 2 better at Rs. 92-13. 3 per cent. 1966-68 was the demand at Rs. 90. 3 per cent. 1970-75 shaded off from Rs. 86-1 to Rs. 86. 3 per cent. 1986 Conversion Loan was taken up from Rs. 81-12 to Rs. 82, but dropped to Rs. 81-14 on profit-taking. 3½ per cent. 1961 National Plan Bond was in request at Rs. 98-13.

In the foreign exchange section, there was no change in the rupee-U.S. dollar exchange rate. In the New York market, sterling gained fresh strength during the week, but towards the close shaded off a little. Transferable sterling, however, firmed up smartly. Thus, spot sterling picked up from $2.81-13/16-2.81-15/16 to $2.81¾-2.82 per £, but closed at $2.81-13/16-2.81-15/16. Likewise, forward sterling for three months, after hardening from $2.81-11/16-2.81-13/16 to $2.81⅞-2.81⅞, reacted to $2.81⅛-2.81⅜. Transferable sterling rose from $2.78¾-2.78⅞ to $2.79-1/16-2.79-3/16.

GENERAL DEMAND FOR TEA GOOD

(Messrs. Forbes, Ewart & Figgis Ltd.)

COCHIN, 22nd *May*

The offerings in sale No. 10, which was held on Tuesday, 18th May, amounted to approximately 15,24,000 lbs. There was good general demand, particularly for low and low medium teas which sold at or just below valuation. Medium and highgrowns were well supported, in spite of the further falling away in quality, although prices were a little irregular. Medium and good mediums were quoted at half to one anna easier. Whole leaf teas received very little support and were once again the weakest feature of the sale, being As. 1 to As. 1-6 easier.

The followng were the quotations:—

	1954 Rs. a. p.	1953 Rs. a. p.
Lowgrown Travancore B.O.P.	2 8 0	1 11 0
Medium Travancore B.O.P.	2 8 9	1 12 0
Anamallais B.O.P.	2 11 0	1 15 6
Best liquoring Nilgiri B.O.P.	3 0 0	2 8 3
Well made black leaf O.P.	2 11 3	1 15 0

London Market.—Dearer market. Commons half penny better sorts full penny 4/8.

Colombo Market.—Good demand. Discounting increased duty, lowgrowns slightly dearer. Thin stalky highgrowns and u.v.a.'s down five cents.

Calcutta Market—Export.—Strong general demand. Whole leaf and Dooars brokens with character keenly sought after. First flush Darjeelings well supported, often well above valuation, easing towards close. Clean common B.P. Rs. 2-10-6.

Dust.—No sale this week.

Special licence.—Small business has been effected here at 47 piles.

1954-55 *Export Quota.*—There has been a strong demand for current season's quota causing an appreciation in the price to 52 pies, which remains today's quotation.

Forthcoming Auctions.—Dust Sale 'J' will be held on Tuesday, 25th May, and Sale No. 11 will be held on Tuesday, 1st June, 1954.

As we go to Press, Messrs. Forbes, Ewart & Figgis Ltd. wire:

"*Dust Sale J.*—300,000 lbs. Market very irregular and easier As. 2 to As. 3."

BULLION WEAKENS AFTER EARLY RISE

(From Our Own Correspondent)

BOMBAY, 26th *May*

After last week's heavy drop in prices, the bullion market made a strident advance early in the week under review, but this recovery proved to be a short-lived affair. Both the metals once again came under bear hammering, with the result that the earlier gain was entirely wiped off. On balance, both silver and gold disclosed no change over the week.

The earlier sharp rise in bullion prices, particularly in silver, was due to nervous covering by short sellers who feared that the bulls might demand delivery at the next settlement. Attempts by a prominent operator to break the morale of the market by persistent selling proved futile, as leading bull operators and option dealers carried out heavy purchases. The satisfactory offtake and scarcity of stocks also favoured the buyers. The wide premium of Rs. 3-4 which ready gold commanded over forward was successfully exploited by the bulls. However, reports of diminishing offtake, increased arrivals of silver in upcountry centres, the offer of the Government of India to give facilities for subscribing to the National Plan Loan in the form of gold and jewellery and lack of follow-up support were all factors which had an unsettling effect on the bulls and induced them to book their profit. The disinclination of bears to cover their sales in the current settlement is evident from the heavy carry forward charges they are prepared to pay. The *badli* rate, which was Rs. 2-8 against sellers on Saturday, widened to Rs. 3-4 today at the close.

Silver for forward delivery (18th June settlement) opened the week at Rs. 162-10 and flared up to a high of Rs. 166 on Friday. On the subsequent days, it reacted strongly and touched a low of Rs. 161-11 on Tuesday, but steadied up to close at Rs. 162-11 today.

Ready silver (.996 Mint) began at Rs. 163-4 and, after hardening to Rs. 166-10 dropped to Rs. 162-8. The closing was, however, better at Rs. 163-3. The premium of ready over the forward, which was As. 12 at the close of the previous week, narrowed down to As. 8 this week. The floating stocks of silver are placed at 800 to 900 bars. The daily average offtake was about 20 bars.

Opening at Rs. 88-4, gold for forward delivery (18th May settlement) jumped up to Rs. 89-15 on Friday. It, however, dropped to Rs. 87-14 yesterday, before recovering to Rs. 88-6 at the close today.

Ready gold opened at Rs. 91-14 and closed at Rs. 91. The highest and the lowest levels touched were Rs. 93-1 and Rs. 90-14 respectively. The floating stocks of gold are estimated at 10,000 tolas. The daily average arrivals were 5,000 tolas while the offtake was 4,000 tolas on an average.

In the London market, silver prices remained unchanged almost throughout the week at 72¼d. per fine ounce for spot and at 72¼d. for forward. Yesterday, however, there was a quarter-penny rise to 72¼d. and 72⅜d., respectively. Gold weakened from £12 8s. 11d. to £12 8s. 9d., but hardened yesterday to £12 8s. 10d., disclosing a loss of 1d. over the week.

The following comparative table shows the trend of the market during the week under review:

	26-5-54	Highest	Lowest	19-5-54
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	91 0	93 1	90 14	91 1
Forward	88 6	89 15	87 14	88 7
Sovereign	60 10	60 14	60 10	60 8
SILVER				
Ready (.996 fine Mint)	163 3	166 10	162 3	163 8
Forward	162 11	166 0	161 11	162 13
London Ready	72¼d.	72¼d.	72¼d.	72¼d.
London Forward	72⅜d.	72⅜d.	72⅜d.	72⅜d.
London Gold	248s.10d.	248s.10½d.	248s.9d.	248s.11d.
New York Ready	85⅛c.	—	—	85⅛c.

LINSEED WEAK

(Messrs. A. Bradley & Co.)

CALCUTTA, 24th *May*

Very weak conditions prevailed during the week, although prices had shown little change. Towards the close, however, the general tendency appeared to be somewhat better. Trading was dull and crushers were reserved, but there were keen buyers in the bazar to cover previous sales. The oil market displayed a slightly better undertone, owing to some forward enquiries and ready settlements. The latest quotations are as follows:—Ready Rs. 18-12, June-July Rs. 19-2 per maund.

COTTON QUIET

(From Our Own Correspondent)

BOMBAY, 26th *May*

Market men's thoughts are now turning to the new crop. Once again, considerations regarding the cotton policy of the Government for the future have come to the fore. The demand for price decontrol of cotton is again being heard and the pressure on this score will increase as time goes on. The moral basis for such control, on which the Government could rely, has been removed, inasmuch as there is now no control on the price of cloth. Control on the price of cotton was primarily designed as a necessary condition for maintaining control on the prices of cloth. But it had a secondary function of preventing diversion of land from foodgrains to cotton also. Now that foodgrains are plentiful and control on foodgrains also is practically removed, it has become difficult for the authorities to justify its continued hold on the price of cotton.

They have, however, a new justification for maintaining certain floors and ceilings for the price of cotton. The offtake of cloth, both for the purposes of export and for internal consumption, depends on the price of textiles and it is necessary in the interests of the country's economy to maintain both the level of production in the textile industry and the export of cloth abroad, for the sake of preventing deterioration in the situation regarding employment. Exports could be maintained only if cloth is priced competitively and once the ceiling on the price of cotton is removed, it is not unlikely that speculators might push up the rates to world parity, which would gravely affect our balance of trade and internal consumption of textiles. There will also be some danger of diversion of land from foodgrains to cotton and in no sense could it be said that we are self-sufficient with regard to foodgrains. All these are serious considerations and the Government will have to weigh them very finely in the balance, to arrive at a fair decision on this question. There is also the usual uncertainty about the monsoon and the authorities would be reluctant to be pushed into a premature announcement on a question of such grave import.

The question with regard to giving permission for forward trading in the new crop is also bound to come up soon. But unless the Government decide one way or the other about the continuance or otherwise of floors and ceilings, such permission is out of the question. The market will, therefore, have to wait for a considerably long time, till a clearer picture with regard to the monsoon has emerged, before an alternative to the present August delivery is provided. This question has also been further complicated by the behaviour of the forward market at Kalbadevi. Cotton circles are apt to resent any suggestion from commentators that there is a wide disparity in the position of the two parallel markets. This fact, together with the totally unrealistic trend in the forward market, however, can no longer be either concealed or explained away. This fact has also now been noticed by the Textile Commissioner and grave doubts have arisen in the minds of the authorities, the producers and textile men whether the hedge market is discharging its most obvious function.

Whatever might be said about the controversy regarding the nature of the hedge contract or the way in which 'On' and 'Off' allowance and room rates are being fixed, one has to face the fact that the E.I.C.A. authorities are not in a position or are reluctant to enforce the degree of control necessary in all highly speculative markets. It has no longer remained a secret that the contract is being worked by groups of wild but wealthy men in the trade or sometimes outside it, to twist and manipulate it. This is serious enough to jeopardise the interests of the growers and the actual holders of stocks. But for such unhealthy pressures, the spot trade would not have been forced to liquidate some of its holdings by cutting prices, actually when the statistical position is favourable for the maintenance of the price level.

Besides, coming as it does just prior to the time of sowing, these bear raids which have been witnessed during the last few days, when the August contract has retreated from Rs. 705, two or three weeks ago, to Rs. 668 today, the growers are likely to be discouraged and to put their land under alternate crops. The E.I.C.A. authorities themselves are now engaged in considering this question. But the vested interests being powerful, it is feared that the Association will not be able to come to any reasonable decision involving stringent kerbs on frenzied speculation.

The continued deterioration in the forward market as a result of large-scale selling has, to a certain extent, demoralised the spot trade during the week under review. With the futures sliding down fast, the mills are in no mood to buy Indian cotton except for the barest immediate requirements. The turnover has, therefore, gone down considerably at Sewri. The statistical position, however, continues to be good and as the mill's consumption of Indian cotton has not been reduced, they will have to buy Indian cotton sooner or later. Financial stringency also is believed to have played a part in the present lethargy in the market and talks of increasing the rates of interest on advances by the banks have also led to a certain amount of unloading of actual stocks. The busy season, however, will soon be ended and in view of this and the hope of Government intervening in the Bank Appellate Tribunal's award, will hold the hands of the banks from raising rates on advances. Confidence is, however, a plant of delicate growth and the bears in the forward market have shaken the roots of this plant.
