It is also not unlikely that the Government would have to give fresh quotas to mills for the purchase of Indian cotton as and when the stocks with the mills are consumed and it is still six months before new crop cotton would be available to them. Imported cotton, even though a larger

quantity is brought and made available to the mills, cannot replace Indian cotton as the mills' production pattern cannot be changed without detriment to their earning capacity. The stocks in the country are not overflowing to such an extent as to cause any pessimism so far as the spot trade is concerned, though repeated efforts are likely to be made by speculators to push down prices. The future, though dim and uncertain for the next two months, is bound to be reassuring for the period between July and new crop arrivals.

There is not much demand for imported cotton also from the mills at present, in spite of offers at lower prices from Alexandria and the lower prices realised in the auctions at Khartoum. There is some interest in East African cotton as also in the U.S.A. styles, but with regard to the latter the unsettled question of aid to exports in some form or other keeps back buyers in this country from large-scale commitments at New York. There is revival of talk about a fresh release of Bengals for export. If this is forthcoming, it will provide a little relief for stockholders in these depressing days. But, here again, there is danger of Government delaying its decision and rates being pushed up in anticipation, making the task of shippers difficult.

I.C.C. May opened the week at Rs. 665 and moved up, on trade support, to touch a high of Rs. 668½ on 21st inst. But reports of slackening of activity in the spot market and of offtake in the piecegoods market depressed the contract which touched a low of Rs. 648½ on 24th inst., though on the following day, when the contract expired, it was somewhat higher at Rs. 650. Tenders issued so far against the May contract aggregate 13,400 bales which include Vijay (11,700 bales), Laxmi (800 bales), Surti (650 bales) and 216F (250 bales). I.C.C. August opened the week at Rs. 683 and fluctuated between Rs. 685½ and Rs. 668½ before it finished the week at Rs. 668¼. Thus, the spread between the May and August contracts, which was of the order of Rs. 18-Rs. 18½ in the beginning of the week, widened to Rs. 27 on the 25th inst., when the May contract went off the boards.

The following is the trend of prices in the forward market during the week under review.

	Opening	High	Low	Closing
I.C.C. May (Rs.) ...	665	668½	648½	650
I.C.C. August (Rs.)	683	685½	668¼	668¼

Quiet conditions prevailed in the spot market. The following are the latest available quotations from the market: Bengal Deshi Rs. 620; Berar Jarillas Rs. 810; Khandesh Rs. 830; Vijay Rs. 900; Oomra Deshi Rs. 930; Moglai Rs. 720.

At Karachi, while there was a sizable spurt in the prices of Sind and Punjab Deshi cotton, there was only a slight improvement in the rates for American seed cotton. This is generally attributed to heavy business on settlement and for technical reasons, as also to hopes entertained with regard to permission being granted to start hedge trading there. The following are the latest available quotations from the Karachi market: Sind *Deshi* Rs. 76; Punjab Jandhi Rs. 73; 4F Punjab R.G. Rs. 70½; S.G. Rs. 75½; L.S.S. Punjab R.G. Rs. 74; S.G. Rs. 78½; N.T.R.G. Rs. 74½; S.G. Rs. 79½; 289F Punjab R.G. Rs. 77; S.G. Rs. 81.

At Alexandria, there was some revival of activity following the Cotton Commission reducing its selling prices for the remaining stocks. Some Continental countries have responded to this move and some business resulted as a result of it. There is also a possibility of allowing future trading in the 1955-56 crop at a later date, though this will have no immediate effect on the present price levels.

At New York, due to unfavourable weather reports from some of the producing areas, prices have remained steady, though previous to this, during the earlier part of the week, there was some decline, the effect of which has not yet been fully wiped out. There is, however, lack of enthusiasm for the July position, which is gradually giving way under pressure.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	25-5-54	18-5-54	11-5-54
Spot	35.45	35.40	35.15
July	34.33	34.44	34.51
October	34.21	34.26	34.22
December	34.24	34.26	34.23
March	34.34	34.39	—

ART SILK YARN CLOSES FIRM

(*From Our Own Correspondent*)

BOMBAY, 26*th May*

The art silk yarn market opened easy on heavy arrivals of yarn and absence of satisfactory demand from consuming centres. The weakness in the grain and bullion markets was also responsible for the easiness. Subsequently, however, the market put on a firm trend on aggressive buying by a group of speculative operators. Yarn prices, as a result, advanced and revealed, on balance, sizable gains over the week.

Among futures, 150D May, which opened at Rs. 765 on the 20th inst., as against the previous closing of Rs. 768, declined to Rs. 760 on the same day. Later in the week, it advanced to as high as Rs. 810 before closing lower at Rs. 804. 150D June, which changed hands at Rs. 753 early in the week, as compared with the previous closing quotations at Rs. 758, fluctuated between Rs. 752 and Rs. 778 and finished at Rs. 770. Among spots, 150 Japan gained half an anna to Rs. 4-14, while 120 Japan lost As. 6 to Rs. 4-5. 150 Italy was higher by As. 2-6 at Rs. 4-1 and 120 Italy by only half an anna at Rs. 4.

The staple fibre section, however, presented a mixed trend. Thus, during the first three sessions, it ruled steady, while in the latter sessions, it staged a decline. The decline persisted almost upto today when again an upward trend was visible. The mixed performance was attributed to conflicting reports about offtake of staple fibre yarn and cloth from upcountry centres. Staple fibres 40x2 May, which was done at Rs. 624 on the 20th inst. as against Rs. 620 earlier, ruled steady at about Rs. 625 during the next two sessions. In the subsequent session, it declined to Rs. 612, the lowest touched in the week. At this low level, buying support accompanied by short covering lifted the rate to Rs. 627, although it finished the week at Rs. 625. June delivery rallied Rs. 5 to Rs. 629, the highest and the lowest touched being Rs. 631 and Rs. 612, respectively. In the ready section Century, New Great and Phœnix lost an anna and six pies each to Rs. 3-2-3, Rs. 3-4-6 and Rs. 3-1-3, respectively. Kohinoors were down by three-fourths of an anna, at Rs. 3-7-6. City, however, gained half an anna to Rs. 3-6-6. Among foreign yarns, Suico and Shinco declined by an anna each to Rs. 3-12.

Cotton yarns ruled generally easy. It was reported from almost all the consuming centres that the handlooms and powerlooms were reluctant to make purchases at the present level of prices, which they considered to be unduly high. Most of them have been buying ready goods and in small lots just sufficient to meet their immediate requirements. Cotton mills' hopes of making forward sales for longer deliveries have consequently failed to materialise. Among 80s, Finlays lost As. 12 to Rs. 63 and Elphinstones As. 8 to Rs. 60. Seksarias and Sitarams were unchanged at Rs. 56-4 and Rs. 61, respectively. Among 60s, Sri Ram and Raghuvamshis lost As. 8 each to Rs. 55-8 and Rs. 51-12, respectively. City, however, gained As. 4 to Rs. 49, while Seksarias were unchanged at Rs. 46-12. Among 40s, Seksarias put on As. 2 to Rs. 27-6 and Meenakshi As. 6 to Rs. 29-10. Maduras were quiet at Rs. 29-8. Among 30s, Giridhardas and Maduras were colourless at Rs. 23-2 and Rs. 25, respectively. Among 20s, Hind eased from Rs. 17-8 to Rs. 17-7, Seksarias from Rs. 16-13 to Rs. 16-12. Edwards were dull at Rs. 17-7. Among 10s, Moderns were up by As. 2 at Rs. 13-8. Podars and Elphinstones were unchanged at Rs. 13-4-6 and Rs. 12-12, respectively.

The table below gives the prices of art silk, staple fibre and cotton yarns quoted today, as compared with those seven days before:

	20-5-1954	19-5-1954
	Rs. a.	Rs. a.
Art silk yarn—		
150 May (per case of 200 lbs.)	804 0	788 0
150 June	770 0	758 0

30s Madura	25 0	25 0
40s Meenakshi	29 10	29 4
40s City	49 0	48 12
60s Finlay	63 0	63 12

OILSEEDS EASY

(*From Our Own Correspondent*)

BOMBAY, 26*th May*

The oilseeds market came under a wave of selling pressure during the week under review. This was in the main due to weakness in upcountry produce markets. The groundnut section ruled easy on the reiteration by the Commerce Minister at the Export Advisory Council meeting that the Government would not allow export of groundnut oil. The linseed section also disclosed a downward trend on discouraging export advices indeed by reports that the U.S. would deluge the European market with its huge stocks of linseed oil under its programme for the disposal of U.S. farm surplus products. The castor, *niger* and *kardi* seed sections proved no exception to the general easiness. This was due to the non-materialisation of the expected overseas demand for castor, *kardi* and *niger* seed oils, despite the reduction of export duty on castor oil and its complete abolition on *kardi* and linseed oils. As a result, there was a sharp decline in prices in all the sections.

Groundnuts came in for very little buying support as against heavy selling pressure. *Vanaspati* interests were inclined to cover their small purchases by forward sales. This accentuated the downward trend in groundnut forward delivery. Bold F.A.Q. lost As. 12 to Rs. 33-8. June-July eased further from Rs. 33-8 to Rs. 31-13. Khandesh quality and Coromandals declined from Rs. 35 each to Rs. 34-4. Groundnut oil ready was lower by As. 12 at Rs. 16-12. June and July deliveries disclosed a loss of Rs. 1-4 at Rs. 14-4 *each*.

In the linseed section, Bold ready changed hands at Rs. 25-14, as against Rs. 26-12. June-July delivery fell from Rs. 25-8 to Rs. 24-14. Linseed oil was lower by Re. 1 at Rs. 13-12. Linseed oil April-May was quoted in the U.K. and the *Continent* at £102 (sellers) per ton c.i.f.

In the castorseed section, the belief that export quota for castor oil, announced recently by the Government, amounting to about 7,000 tons, has fallen short of expectations, was strengthened by reports of large stocks of unsold castor oil with a number of dealers. This in its turn adversely affected the sentiment of the market and prices, as a result, suffered sizable recessions. Among futures, September opened the week at Rs. 117-8, as against Rs. 118-8. It fluctuated thereafter between Rs. 113-14 and Rs. 119-2, before closing lower at Rs. 114-10. The September clearing rate is Rs. 114-8, as against the previous rate of Rs. 126. The clearing rate for May is Rs. 110-8 as against Rs. 121. Madras quality disclosed a loss of As. 11 at Rs. 22-9. Castor oil B.S.S. eased from Rs. 12-12 to Rs. 12-10, and Commercials from Rs. 11-10 to Rs. 11-6. First B.S.S. was quoted at £116 c. & f. per ton, as against £136 c. & f. per ton ten days back and Commercials £108 c & f per ton as against £124 c & f per ton.

Among others, *kardi* Bold ready was done lower by As. 12 at Rs. 17-4. June-July lost Re. 1 to Rs. 27-8. *Niger* F.A.Q. eased from Rs. 28 to Rs. 29. Nigerseed oil (crude) is quoted at £135 c.i.f. in the U.K. and the Continent.

The following table shows the prices of oilseeds and oil on the 26th inst. as compared with those at the end of the previous two weeks:

	26-5-54	19-5-54	12-5-54
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—

SUGAR WEAK

(*From Our Own Correspondent*)

BOMBAY, 26*th May*

It looks as though the nominee distribution scheme announced by the Government of India a fortnight ago has been a great success in bringing down the price of sugar. It has introduced a certain element of competition between the sugar merchants, for the members of the two sugar merchants' association in the City have been trying to undercut the Government nominees by selling their stocks at a price which gives no room for the nominees to make even the modest profit of As. 8 per bag. It is possible that the competition is aimed at inconveniencing the Government nominees and putting them to a loss, for they dared to work for the Government in defiance of the wishes of their associations. But it is serving the purpose of the Government all right, in that it has reversed the bullish trend caused by the machinations of some resourceful sugar merchants. The retail traders in Bombay City at least are getting sugar regularly and at prices lower than they were a fortnight ago.

Another important factor that has led to a fall in sugar prices for the second week in succession is the heavy arrivals of both indigenous and foreign sugar. About 30,100 bags of sugar have arrived from the factories, while 8,800 tons of British refined sugar through the s.s. *Herpalycus* have been unloaded. The prospects of further large arrivals of foreign sugar in the near future also had an adverse effect on the trend of prices, especially in the forward section.

In the ready section, the price of indigenous sugar small grain has declined from Rs. 90 per bag a week ago, to Rs. 86, and medium grain from Rs. 92 to Rs. 90-91-8. Large grains, however, have been ruling steady at about Rs. 102 to Rs. 105 per bag owing to paucity of stocks. There has been a substantial fall in the price of imported sugar, with Cuban being current and quoted at Rs. 37-8 per 100 lbs. Mexican at Rs. 41 per 110½ lbs. and British refined at Rs. 85-12 per bag of 2 cwts.

The forward section remained dull but the trend was weak in sympathy with ready. *Jeth* delivery was neglected at Rs. 84 per bag.

It is expected that, within the next six weeks, about 65,000 tons of foreign sugar will be discharged in Bombay. The anticipated arrivals of imported sugar will consist of two shiploads of Formosan sugar, one shipload of Spanish sugar, three shiploads of British refined sugar, one shipload of Peruvian sugar and two shiploads of Polish and East German sugar.

PEPPER PRICES RECEDE

(*Messrs. Parekh & Co.*)

BOMBAY, 26*th May*

During the earlier part of the week, Malabar black pepper ruled firm, in view of the political situation in Indo-China and in sympathy with New York where dealers are reported to have accepted all offers from India for May shipment at $0.58 and for shipment during the first half of June at $0.56. The next day, however, New York buyers having withdrawn, the Indian market, at all primary centres, became weak with anxious sellers. In the later part of the week, even though there were short-coverings by the local bears, Alleppey failed to follow the rise, and the growers remained soft sellers at Rs. 1,100. The undertone of the market remained weak in view of the anxiety of growers who seemed to be more prone to liquidate their holdings, rather than hold over as they did in the previous years. From next month, Sarawak will become a more important factor for the world market, and if large purchases from India are not done by overseas, it is feared that there will be rate-war between Sarawak and India as the Indian growers, unfortunately, this year, lack backbone. The exporters from Malabar seemed to have diverted their energy to Bombay market and sold a good sized quantity for June and July shipments at $0.55 and $0.54, respectively, as they did during January, February and March last, since it was more profitable for them to sell in Bombay than to sell

in New York where buyers are asking about 2 to 3 cents lower. Sarawak is reported selling June shipment on the Continental markets but the quantities offered being in excess of their requirements, prices in London are sagging.

In the delivery section, the prices improved owing to bull support and bear covering, the highest and the lowest for June delivery being Rs. 950 and Rs. 900, respectively. At the time of writing, there are sellers for June shipment at $0.54 and July at $0.53. Following are today's nominal quotations:—

Ready delivery Rs. 140 per Bengali maund, June delivery Rs. 920-30, and July delivery Rs. 900-10 per candy of 51 cwts.

SACKINGS IMPROVE

(*From Our Own Correspondent*)

CALCUTTA, 25*th May*

The feature during the week under review was an impressive improvement in the prices of heavy goods, following keen speculative activity in the futures market. Business for export was confined to small quantities only, but stockists were not willing to discount such quotations. Ready B. twills opened at Rs. 109-12 last Tuesday and gradually rose to close at Rs. 112-8 towards the week-end. A further gain to Rs. 113 was recorded yesterday. The July-September delivery at Rs. 110 was better by Rs. 3, and October-December goods were offered at Rs. 108-4 which was the same as before. Earlier in the week, there were baseless rumours in the market that mills were to increase the number of working hours to 48 a week from the present 42½. The increase has indeed been favoured by the Jute Enquiry Commission, but those connected with the industry knew that these rumours were incorrect, as the proposed increase is not the first step to be taken by way of implementation of the Commission's recommendations which are being examined by the Governments concerned and on which official views have not yet been stated. Meanwhile, it is interesting to note that representative sections of the raw jute trade consisting of balers, dealers, brokers and sellers have joined together and impressed upon Government the early implementation of the Commission's recommendations. They have laid special emphasis on the recommendation which calls for establishing parity between raw jute prices and the prices of jute goods.

Hessians were quiet and the 40" 10 oz. was transacted at Rs. 44-1 for most part of the week. For a time the rate was better at Rs. 44-3. The transfer of hessian looms to the production of heavy goods has been so rapid that prices for hessian are expected to firm up. This, it is felt, would not affect heavy goods. Hessians 9 porters, ready, were priced at Rs. 40 f.o.b., and 11 porters at Rs. 48-3. Among other constructions of heavy goods, ready A. twills were quoted at Rs. 144 f.a.s., while D.W. flour bags advanced to Rs. 134-6 from Rs. 130. There was a further improvement in the quotation for the green-striped heavy cees to Rs. 127-3 from Rs. 123-4. Ready plain heavy cees were priced at Rs. 112-8, f.a.s.

In sympathy with jute goods, the raw jute market was more or less steady. Prices were better, and sellers were reserved although mills were not anxious to increase their stocks of raw material. Earlier in the week, the report that the jute crop in East Bengal for the 1954-55 season would be planned to yield as much as 6 million bales, as against the current season's estimate of 3.5 million bales, caused prices to fall further. But the decline was arrested by the better sentiment in jute goods subsequently. Business was done in new crop Assam bottoms at Rs. 26-8 a maund. Northern bottoms were shown interest at Rs. 27, and new crop Dubris changed hands at Rs. 26-8. In the *pucca* bales section, business was sought for Pakistani cuttings at Rs. 67. A moderate quantity changed hands at rates varying from Rs. 65 to Rs. 67.

Prices were almost unchanged in the Pakistani markets. Demand was far from fair, and it would appear that foreign buyers are biding for time, probably in anticipation of a further decline in the prices of raw jute. A decline is considered quite possible, as the official estimate of the new crop at 2.5 million bales is considered by the trade as very low. The trade expects the crop to be about 3.5 million bales. Some of the latest quotations in the Narayanganj market are: District white middle Rs. 21-8, jat tossa middle Rs. 26-12, northern tossa middle Rs. 22-4, northern white middle Rs. 19-4, district tossa middle Rs. 23-12, jat white middle Rs. 22-8, jat white bottom Rs. 19-8, northern tossa bottom Rs: 19-4, northern white bottom Rs. 16-4, jat white cross bottom Rs. 10-12, district white bottom Rs. 18-8, jat tossa bottom Rs. 23-12, and district tossa cross bottom Rs. 15-4.

CEREAL PRICES FALL

(*From Our Own Correspondent*)

HAPUR, 25*th May*

The foodgrain markets remained quiet to bearish during the week under review and prices are declining in all the markets and of all cereals. The downward trend has been stimulated by the excellent food supplies in the country, huge surpluses with the State Governments and the Centre and increased yield expectations for all major cereals including wheat, gram, barley, *bajra*, according to the latest crop estimates issued recently, and the start of imports of Burma rice under the new agreement with that country. All needy areas are being adequately fed from out of the reserves with the Centre. During the week ended 15th May, 1954, over 35,653 tons of foodgrains were despatched to the needy areas, the main recipients being Madras, Bombay and West Bengal.

Well-informed sources in New Delhi state that though the Centre will not reintroduce food controls, it is anxiously watching the downward tendency in wheat prices. The prevailing wheat price, between Rs. 11 and Rs. 12 per maund, is not reckoned uneconomic to the cultivators. As far as the Punjab is concerned, the total harvest has not yet arrived in the *mandies* and the same is the case with Uttar Pradesh. But this year's wheat crop being extraordinarily good in the Punjab, the price may come down steeply when the entire harvest comes to the market. There are speculations that the Government may have to step in to prevent any untoward fall in prices to render them uneconomic to the producer. It is considered likely that the Government will step into the market, as soon as the wheat price tends to fall below Rs. 10 per maund. Both the Centre and the State Governments might buy, if necessary large stocks of wheat in order to keep up the wheat prices in the neighbourhood of that level.

Under the recent agreement, Burma rice has started arriving in the country and is being distributed to the needy States. 11,950 tons of Burma rice was received during the week ending 12th May. The total imports of foodgrains from 1st January to 12th May 1954 are 51,460 tons including 9,250 tons of wheat and 34,110 tons of rice.

A regular incursion of locust swarms into India has begun. During the fortnight ended 15th May, 1954, the latest Plant Protection Directorate bulletin states, several swarms entered the Punjab from the west, moving into Gurdaspur, Amritsar, Kangra, Jullundur, Ferozepur and Ludhiana Districts. A large number of swarms is expected to follow and continue their movement eastwards. All the States in Northern India have been alerted. Numerous swarms are reported to have entered Pakistan from Iran and Afghanistan and large-scale breeding has started in Baluchistan. Egg-laying and emergence of hoppers has continued in Arabia and Iran on an extensive scale.

The ten-year control on rice has been lifted by the Assam Government with effect from 10th May. The rationing system has also been abolished in the State except in Shillong, the capital. Price control on rice will be lifted from 30th May in the whole of the Bombay State, including the 11 rationed cities. With this order, rationing in Bombay City will completely vanish.

Rabi grains are flowing to all the assembling centres in U.P. With the consumers already well provided, trade stocks have begun to increase. There was some disappointment on the Government that it is not proposed to form any more free wheat zone, as formerly it had been anticipated that U.P., Bihar, West Bengal and some other States might form a third free wheat zone. Coarse grains and pulses prices declined further and there was very indifferent enquiry for these cereals. Trade stockists are still very reluctant to build stocks, as they anticipate further fall in prices. There was some enquiry for superior quality wheat from east U.P. districts and for peas from Madras side and there were some despatches, but the receipts were appreciably higher. Pulses, ready and futures, remained very unsteady and there has been a sharp fall in prices.

The latest quotations in the Hapur market are: wheat *dara*: Rs. 12 to Rs. 12-8, farm Rs. 14-12 to Rs. 15, *gram*: Rs. 10-4 to Rs. 11, barley: Rs. 7-14, *bejhar*: Rs. 8, peas *dara*: Rs. 8-14, *arhar*: Rs. 9, *urd*: Rs. 13 to Rs. 14-4, *moong*: Rs. 13-12, *masoor*: Rs. 12. Futures peas *jeth*: Rs. 8-13, *bhadon*: Rs. 8-14, *arhar jeth*: Rs. 9, *bhadon*: Rs. 9-3, *urd magh*: Rs. 12-10, *guwar magh*: Rs. 6-11. These are the lowest for the week also.

GUR WEAK

(*From Our Own Correspondent*)

HAPUR, 25*th May*

The *gur* markets remained unsteady this week, and there was a steep fall in prices both in the ready and forward sections. The outlook in the ready crystal sugar section was rather gloomy on the receipt of heavy consignments of imported sugar at Bombay, Calcutta and Madras, and acceleration of sugar stock movements to scarcity pockets in the country. The fall in sugar prices in almost all important trade centres, unnerved *gur* stockists and forward market dealers and forced them to unload their holdings or reduce their commitments even at a loss. Enquiries from the deficit areas was poor although there was slight improvement in market arrivals, as producer stockists were induced to bring out their hoards. Despatches to the needy States were small, despite the fact that railway loading facilities were fully available for almost all the deficit States in the country, but despatchers were reluctant, as they anticipated further fall in prices. While Madhya Pradesh and Berar got their supplies from Ankapalli, Gujerat was a consistent buyer in North Indian markets. Recent loadings were on prior commitments, while fresh enquiry was non-existent. Reports from South Indian markets indicate a fully bearish trend with declining offtake.

Pansera *gur* at Hapur is today quoted at Rs. 17-4 against Rs. 19-4 quoted last week-end. In the futures section, the fall was equally steep with utter lack of speculative support. *Fagan* is presently quoted at Rs. 12-10.

The Union Ministry of Food and Agriculture has decided to launch a campaign on 1st June to increase the per-acre yield of sugarcane. Arrangements have been made for supplying fertilisers for a target area of 2.2 lakh acres, of which one lakh acres each will be in U.P. and Bihar, and 20,000 acres in the Punjab. In addition to the supply of ammonium sulphate, the Ministry is undertaking an educative programme to acquaint farmers with the technique of better sugarcane production.

The crystal sugar markets remained very unsteady. Tendered sugar was in good request, and with the Centre readily meeting all demands, the availability of sugar improved everywhere. Sugar stocks were moved more speedily. Besides, a heavy consignment of over one lakh bags of British refined sugar was unloaded in Bombay port this week, and it was expected that three more steamer-loads of sugar would reach Bombay by the end of this month. 1,500 tons of imported sugar reached Calcutta also. It is announced that the Government of India has completed purchase of about six lakh tons of sugar from abroad. Out of this quantity about 70,000 tons will be reaching Indian ports within this month, and the rest during the next five months. The question of making any further purchases from abroad will be considered in due course, in the light of the actual offtake during the coming months.

Average prices of sugar per maund were: Ambala Rs. 34, Delhi Rs. 33-10, Meerut Rs. 32, Hapur Rs. 32-8, Kanpur Rs. 32-4, Bhagalpur Rs. 34-8, Calcutta Rs. 33, Madras Rs. 33-3, and Bombay Rs. 35-8.

METALS STEADY

(*From Our Own Correspondent*)

CALCUTTA, 25*th May*

From the point of view of business, the week under review in the metal market was uninspiring; nevertheless, quotations were steady as, with the commencement of the busy season for manufacturers of non-ferrous metal products, bazar stockists of the base metals were confident of a moderate demand. It was for this reason that no downward movement in prices occurred, as would have been the case in a market devoid of moderate support from buyers.

The feature of the week was provided by the firmness in mercury which, although it did not change hands in mentionable quantities, spurted from Rs. 870 to Rs. 910 following the very firm reports received from Bombay and London. The price of electrolytic copper was firmly maintained throughout the week at Rs. 188. The virgin ingots, as well as wire bars, are hard to obtain, and it was on account of this that the lower trend in the London Metal Exchange was unnoticed in Calcutta. The I.C.C. brand fire-refined copper was steady. Moderate business was done in brass ingots as well as in brass and copper sheets for re-rolling. Virgin lead was maintained throughout the week at Rs. 68. Transactions could be put through only for forward deliveries, as the ready material was hardly available. Some imports are now expected to reach Calcutta soon. After opening at Rs. 56-12, electrolytic zinc advanced to Rs. 57, but in the absence of business moved down to Rs. 56-8. Tin was quiet at Rs. 472.

U. K. BUYING IN HIDES PATCHY

(*From Our Own Correspondent*)

MADRAS, 25*th May*

Arrivals of tanned cow hides and calf have been on a moderate scale and clearances small, due to sellers' price resistance. U.K. buying has been patchy. Good marks have realised heavy premium over ordinary market qualities. Demand for calf skins has been poor and for buff heavies steady. There has been good clearance of goat and sheep skins in the local market, while shipment business has been poor.

HEAVY ARRIVALS IN HIDES

(*From Our Own Correspondent*)

KANPUR, 22*nd May*

During the week under review the conditions of the local hides and skins market remained unaltered from those in the previous week. Fresh arrivals from outside the city was considerable. Local butcheries provided a smaller number of items in view of the extreme heat of the season when ordinarily non-vegetarian diets are avoided. Transactions in sheep and wet salted buff were brisk. The latest quotations are as follows:—

Wet salted cow 1st grade at Rs. 360 and 2nd grade at Rs. 260 to Rs. 160 *per score*; wet salted buff 1st grade 1 lb. 12 ozs. and 2nd grade 2 lbs. 2 ozs. per rupee; goat 1st grade Rs. 300 and 2nd grade Rs. 270 per 100 pieces; sheep 1st grade Rs. 300 and 2nd grade Rs. 225 per 100 pieces.

Some private power companies in the United States will be generating electricity for public use through atomic energy within the next five to ten years, a conference of the Atomic Industrial Forum was told on 24th inst. The forum is an organisation representing more than 100 private companies interested in developing commercial uses of atomic power. Its one-day conference was devoted to reports on the five-year reactor development programme of the U.S. Atomic Energy Commission and experiments by private companies on adapting the use of atomic furnaces to the production of electric power. A representative of the General Electric Company said it seemed certain electric companies in the United States would be operating a number of atomic power plants within the next 10 years. He forecast that electricity would be generated by atomic energy at costs competitive with present power production, possibly within five years. According to the General Electric representative, said two types of reactors seemed to offer the best possibilities for producing electric power. One of these is the boiling water reactor in which circulating water is boiled to produce steam and the other a reactor in which graphite is used as a moderator. The Director of Reactor Development for the A.E.C., said that the five different types of reactors, which the commission plans to develop, represented five different approaches to the problem of developing a practical atomic furnace. He said that, at the present stage of development, all reactors were very expensive, because they were being made on an experimental basis. He said that, eventually, the cost of producing reactors would be reduced through experience gained in developing experimental models.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=No recent quotation. x.d.=Ex-Dividend. c.d.=Com. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share".

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. ‡ Sales and amount written off. (k) Investments. † For ten months ended 31st December 1951.

(1) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Rs. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 1060 in the debentures section:—

H Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959 at par.

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952 or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955 on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time as par at any time on or after 30th June 1947 on six months' notice.

MARKET GOSSIP

(Concluded from page 1015)

that profit-sharing will solve all industrial problems, much less the problem of industrial relations. And it is also well to remember that profits must first be made before they can be shared. Paradoxically enough, the group of people who advocate profit-sharing is also the loudest of seldom realise that profits can only come of these people, all profit is suspect. They and that, in fact, they are the result of all those virtues which go to make trade or industry a commercial success. After all, enterprise must have its reward. And, the reward for enterprise, as Sir Ernest Lever, chief of a leading steel company in the U.K., is reported to have said, "ought to be greater than the reward of dependence." He deplored that management should be regarded as a "fair game for criticism, even when it is trying to justify its name and give humanity of human relations—this did not mean ready agreement with all the claims of workers or the spending of large sums of money upon welfare—Sir Ernest said that real management meant "demanding of themselves as well as demanding of others, a standard of fairness and demanding it also of those who work for them."

Notices

THE NEW GREAT EASTERN SPG. & WVG. CO., LTD.

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of The New Great Eastern Spinning and Weaving Company, Limited, will be held at the Registered Office of the Company at Royal Insurance Buildings, 12/14, Veer Nariman Road, Fort, Bombay, on Monday the 28th day of June, 1954, at 2-45 p.m., when the following Resolution will be proposed as a Special Resolution:

"RESOLVED that Clause III of the Memorandum of Association of the Company be altered by lettering the present sub-clause as sub-clause (*a*) and by inserting the following new sub-clause as sub-clause (*b*):

"'(b) To promote or join in the promotion of, or become a member of and to subscribe to the funds of any company, society or association the objects of which are such that the promotion or membership of such company, society or association appears to be likely directly or indirectly to benefit the Company and in particular but without prejudice to the foregoing generality to promote or join in the promotion of or become a member of or subscribe to the funds of any company, society or association which has for its objects or part of its objects the work of carrying out research into any of the business or parts of the business which the Company is authorised to carry on or research into any of the machinery or methods used in connection therewith; to promote or join in the promotion of or become a member of and to subscribe to the funds of any trade or commercial association, whether incorporated or not, consisting of members whose objects or interests are similar to those of the Company.'"

FINANCE FOR THE PRIVATE SECTOR

FEW committees have discharged the task entrusted to them so expeditiously and thoroughly as the Committee on Finance for the Private Sector, popularly known as the Shroff Committee. The appointment of the Committee was announced by the Reserve Bank of India early in October last and the Committee commenced its work at the end of that month. After undertaking a country-wide tour and taking evidence *from many important* associations and individuals, the Committee formed its conclusions and completed its report within a short period of *six months.* To be precise, the report was signed and submitted to the Reserve Bank on 23rd April, 1954. And, in a month's time the entire report (*of* 165 pages, closely printed in small type) has been printed and released to the public. All this is quick work. Indeed, this is a remarkable achievement, because the members of the Committee are all active business men, with plenty of work already on their hands, and the issues referred to their consideration were by no means simple. Their conclusions and findings give no indication of hasty work. On the contrary, they bear the stamp of careful consideration and deep study.

A refreshing feature of their recommendations is the absence of fanciful ideas; apparently, the Committee has been realistic enough not to be carried away by the impracticable suggestions advocated by some of those who tendered evidence before it. And for this very reason, there will be quite a few critics of its work. This is not to say that the Committee has been very conservative in its attitude. Far from being so, the Committee has displayed a progressive spirit and put forward proposals which conservative bankers will hesitate to endorse. In fine, the Committee has followed the principle of the golden mean in making suggestions that will enable the commercial banks to increase their utility to the society, which is determined to have a welfare State, and to operate in a manner which will leave little doubt about their activities being socially purposive.

The terms of reference to the Committee contained three distinct tasks. These were:

(i) to examine why investment in the private sector has not reached the level envisaged in the first Five-year Plan and, in this connection, to consider the factors, other than taxation, which influence investment in this sector;

(ii) to examine how increased finance could be made available to the private sector through sources other than those which are under the consideration of the Taxation Enquiry Commission; and

(iii) in particular, to examine the possibility of providing on a larger scale bank finance for development in the private sector.

The first impression that we get after a rapid study of the report is that the Committee has fulfilled these tasks well and that the Reserve Bank, which was responsible for its appointment, can have the satisfaction of having got done some good work for the economic advancement of the country.

The Committee's study of the impediments in the way of development in the sectors marked for private enterprise confirms the conviction of this journal that the greatest inhibiting factor is the lack of appropriate economic and political climate rather than non-availability of finance. The Committee has done well to emphasise that, so long as private enterprise is looked upon with suspicion and distrust by the Government—it will be more appropriate to say by the ruling party—*mere* multiplication or strengthening of agencies supplying finance will not add much to industrial development. After examining the causes for the slow progress in the private sector, the Committee finds that, in the present-day conditions in India, there are two forces tending to depress investment. One is the deprecatory attitude in society towards the profit-motive. The other is the contraction in savings available to the private sector. The Committee has been realistic enough to admit that, in India as elsewhere in the world, there has been a fundamental change in the conceptions of the functions of the modern State and social justice. It recognises that some of the difficulties and uncertainties facing private enterprise are, perhaps, inevitable in a period of transition to a planned economy and may disappear as organisational problems are gradually overcome and greater experience of planning is gained. Nevertheless, it feels that "the process of adjustment in attitudes and policies should and can be quickened," in order to enable private enterprise to regain its confidence and make its maximum contribution to the social good. At the same time, the Committee has hastened to add that, in recent years, the behaviour *of private enterprise* left much to be desired and that the organisations representing it must take vigorous measures to root out the many unhealthy and unethical practices that still prevail in the business sector and to raise the standards of business management and morality. This is doubtless a balanced assessment of the situation as it exists today.

The Committee has made several pertinent suggestions for improving the economic climate in a manner that will be conducive to private investment on an expanding scale. No reference has been made to the issue of taxation, as it is being considered by the Taxation Enquiry Commission. As these suggestions are summarised on page 1111 of this issue, it is unnecessary to state them here. Suffice it to add that we fully support the Committee's suggestions; in fact, they are in consonance with what we have ourselves urged in the past. Many may wonder whether, in the light of the Government's repeated statements on nationalisation, the Committee is right in demanding further clarification and assurances. But such a demand is not altogether unwarranted, because, in the first place, it refers only to large investments involving considerable risk and time lag in getting returns and, secondly, even the party-in-power still seems to be in two minds on this issue. It was only *the other day* that the Chairman of the Estimates Committee and Deputy Speaker of the Lok Sabha, Mr. A. Ananthasayanam Ayyangar, demanded the nationalisation of the Imperial Bank of India, even though there was no provocation for it.

Next to climate comes the availability of savings. It is common knowledge that, in India, there is a genuine shortage of savings. There are, therefore, serious limitations to what can be achieved through financial arrangements, that is, steps taken to mobilise and direct the available savings into desired channels. Even this bristles with difficulties, as, in recent years, there has been a diffusion of savings over a wide area occasioned by changes in the pattern of income distribution. These basic limitations have to be borne in mind while judging the work of the Committee.

There is, however, some room for increasing the volume of credit that can be made available to the private sector by a suitable adjustment of the financial policies and central banking practices. The Planning Commission has envisaged an expansion of Rs. 158 crores in the advances of commercial banks and other sources of short-term finance available to the private sector. If this is to materialise, there must be a very substantial expansion of at least Rs. 230 crores in the deposits of banks. But, during the past three years, there has scarcely been any increase in their deposits. In order, therefore, that the banking system may play its role in financing development, it is of paramount importance that its resources should be substantially increased. It is in this direction that the Committee has done valuable work. It has made a number of recommendations which, if implemented, will enable the commercial banks to render a little more assistance to business men. These recommendations fall under two groups, one seeking to raise the resources of banks and the other to increase the capacity of banks to create credit with the assistance of the central banking institution.

The Committee's study of the position has revealed certain impediments that stand in the way of banking expansion. These impediments, for the removal of which the Committee has made detailed suggestions, are: (i) the relative backwardness of the banking habit in the country, (ii) the inability of banks to expand branches owing to the steep rise in their establishment charges as a result of the Awards of Labour Tribunals, (iii) increasing competition from the public sector for available resources, (iv) certain directives of Government departments in regard to keeping of moneys of Government and quasi-Government institutions with banks, (v) insistence by Government on deposit of Government securities in respect of guarantees furnished by banks, (vi) inquisitorial enquiries regarding the customers' accounts with banks by the income-tax and sales tax departments of Governments, and (vii) advice tendered by the Reserve Bank to certain banks regarding banking practices.

Besides removing these handicaps, there are also some positive ways in which the banks can be enabled to expand their resources and make more money available to the private sector. These, according to the Committee, are: (i) liberalisation of the Bill Market Scheme of the Reserve Bank of India, (ii) liberalisation of

existing remittance facilities, (iii) granting subsidies to banks to open branches in rural areas, (iv) deposit insurance, (v) legislation to make drawing of fraudulent cheques a criminal offence, (vi) adequate security arrangements for banks in mofussil areas, (vii) mobile banks, and (viii) special measures to be taken by banking associations in India to popularise the banking habit, to avoid undue competition and to promote co-operation amongst banks in matters of common interest.

In a single article, it is not possible to express an opinion on all the suggestions made by the Committee for expanding banking facilities and spreading banking habit. There is, however, no doubt that the Committee's proposals are comprehensive and that, by and large, they are modest and practicable. They have to be implemented, if banks are to be more serviceable to the society. This, of course, means that the Reserve Bank will have to be more energetic than now and play a positive and dynamic role as a lender in the last resort. But that is inevitable in a planned Welfare State economy, in which the free play of economic forces is restrained through controls and profit-motive is subject to a discount.

On the question of providing long-term finance for industries, the Committee, it is gratifying to find, has chosen to be circumspect in its approach. It is plainly not in favour of mixed banking, in spite of powerful pleadings made by a section of the business community. It, however, points out that, in a limited way, banks in India have already been participating in the provision of long-term finance to industries through their investments in industrial securities and through lending on such securities. It favours an extension of this indirect form of providing long-term finance to the private sector. More specifically, the Committee feels that there is no harm in making available such finance by (a) adding to their investments in the shares and debentures of first class industrial concerns where they are satisfied about the transferability and marketability of the scrips, (b) making larger advances to approved parties against such shares and debentures, and (c) subscribing to a greater extent to the shares and bonds of the Industrial Finance Corporation of India and the State Financial Corporations. The Committee is confident that the liquidity position of banks will not be materially prejudiced, if banks indirectly assisted long-term financing of industries by subscribing to the securities of such special corporations.

While this is perfectly true, not much long-term finance can be made available to industries in this way. Again, there is considerable risk in encouraging banks to increase their commitments in industrial equities and debentures, as this may lead to misuse which may affect the confidence of the public in banks. It may be argued that the scope for such misuse cannot be appreciable, as the Reserve Bank has powers of inspection and control. But this is not, in our view, a sufficient safeguard. That apart, a slump on the Stock Exchange may cause a run on those banks which are known to have invested substantial sums in shares and debentures and this, in turn, may adversely affect the entire banking system. Great care must, therefore, be exercised in implementing this proposal.

Another specific suggestion made by the Committee is as follows:

"The Committee feels that the indirect participation by banks in long-term industrial finance would be considerably facilitated if the leading banks in India, in co-operation with insurance companies, could form a consortium or syndicate for underwriting or investing in new issues of shares and debentures of industrial companies wherever they are satisfied about the soundness and prospects of the projects. If banks in India would invest, say, an amount equal to 5 per cent. of their deposits in such shares and debentures, they could make available a further sum of over Rs. 30 crores for the long-term finance of industries in the private sector, without seriously jeopardising their liquid position. Such a consortium could appropriately function under the leadership of the largest joint stock bank in the country, namely, the Imperial Bank of India. Under the Imperial Bank of India Act as it stands at present, however, that Bank is prohibited from investing in the shares and debentures of joint stock companies, though it is authorised to accept fully paid-up shares as collateral security for advances, and is also empowered to make advances against the debentures of companies with limited liability. It is presumed that the present statutory restrictions are a relic of the times when the Imperial Bank functioned as a banker to the Government of India. We recommend that, in the present-day conditions, such restrictions are out of date and that Part I of Schedule I to the Imperial Bank of India Act may be suitably amended to enable the Bank to participate actively in providing long-term finance for industries through such investments."

On the face of it, the proposal sounds attractive and harmless. But the resources that are thus made available can come only at the expense of those for providing working capital for industries. Further, it is doubtful whether there will be any need for it, if the Development Corporation sponsored by the World Bank in co-operation with the Government of India and warmly welcomed by the Committee, comes into being.

FINANCIAL CONTROL—II

AMONG the financial issues raised by the governance of this country, none is perhaps more intractable than the exercise of control over the activities of State undertakings. These enterprises are not all limited companies. And yet, their relation to the public is not dissimilar to that of a company towards its shareholders. The situation is further complicated by the fact that some of them are wholly, and some only partly, owned by the Government. Their legal status is still obscure. The Comptroller and Auditor-General once described the Government-sponsored "private limited" companies as a "fraud" on the Indian Companies Act. He rightly pointed out that the joining together of officers, who have no financial interest in the undertaking they administer, cannot constitute a company. He held that the Government should have the backing of suitable Parliamentary enactment for setting up corporations and companies in which it owns any financial interest.

Again, the question of auditing the accounts of these undertakings remains to be satisfactorily settled. To deny the Comptroller and Auditor-General the right to audit their accounts is to whittle down his powers and, indirectly, to restrict Parliamentary supremacy over public expenditure that is implicit in the whole Constitution. If, on the other hand, he is given that right, he cannot, consistent with his distinguished and privileged position under the Constitution, hold himself responsible to the Board of Directors, however eminent that Board might be; he is responsible only to Parliament. If a mean is struck between the methods of company administration and those of Governmental administration, pure and simple, by appointing both an outside auditor and the Comptroller and Auditor-General to audit the accounts, the question of their relative importance is bound to arise sooner or later. If it leads to any difference of opinion between the two, it may well give rise to an accounting crisis.

The Government seems to be alive to the gravity as well as the complexity, of these problems. Speaking on the Company Law Amendment Bill, the Finance Minister, Mr. C. D. Deshmukh, revealed that the Government felt that a distinction could be made between State undertakings which were wholly owned by the Government and those that were only partly owned by it. The Government, it was stated in Parliament, was thinking in terms of amplifying the provisions which should govern State undertakings and the nature of control to be exercised by Parliament. It was also revealed that, when the Government took a decision on the question, a suitable amendment to the Act would be introduced in Parliament. The Government's decision will be awaited with interest, not only because some academic questions of legal and Constitutional importance are involved but also because the whole issue is of profound significance to the future of the ever-growing State-sponsored enterprises in the country.

The Estimates Committee has stressed that the State undertakings should be "given full measure of autonomy within the framework of the Statute and a careful watch should be kept to see that the undertaking is fulfilling its role efficiently and properly." The problem here is to generate in the men who run these enterprises that "commercial" sense which alone can make these undertakings a profitable proposition. Perhaps, a judicious conferment of freedom on the management for operating the enterprises and a certain willingness, on the part of Parliamentary bodies, like the Estimates and Public Accounts Committees, to exonerate mistakes, arising from errors of judgment rather than from moral turpitude will go a long way towards making the administrators more quick to take responsible decisions. At the same time, it seems necessary to point out that the mistakes committed in the administration of State undertakings, which have recently come to light, appear to be the result of inadequate, rather than of excessive, control. It is yet to be shown that the numerous instances of infructuous, extravagant and irregular expenditure would have been avoided had the men involved had greater freedom of operation.

The "commercial sense," so vital to the progress of State undertakings, cannot be so easily acquired by men who have spent their lives in measuring red-tape. With refreshing candour, Mr. T. T. Krishnamachari, in the course of the debate on the Company Law Bill, said: "I do not mind admitting that, as Minister for Commerce and Industry, I find I am handicapped, because it is difficult for me to get together a body of men who will appreciate that something has to be done quickly." Perhaps, this deficiency could be rectified, if the Government adopted the Estimates Committee's suggestion for the creation of an "Indian Commercial and Industrial Service," envisaged in the Government's Statement on Industrial Policy (1948). The inclusion of some fresh element, drawn from other walks of life, into the Government administration may, in course of time, prove a valuable addition.

Moved by an understandable anxiety to prevent the best men in the Government from seeking employment in the "private" sector, the Estimates Committee has suggested that "early steps should be taken to examine the question of prescribing the ceilings on salaries in private employment, consistent with the policies and principles adopted for the public sector." This is an absurd suggestion. If the flight of men from Government to private service is to be prevented, the remedy lies in upgrading the salaries of Government servants. If, on the other hand, the object is to lessen the inequality in incomes, it should be done by taxation, rather than by the prescription of omnibus ceilings. Again, the salaries of Government servants and those of private employees are not strictly comparable, since the former is entitled to certain privileges—such as, greater security of service, larger leave facilities and pension—which a private employer, by reason of the peculiar hazards to which the competitive, free and private economy is subject, cannot possibly ensure for his workers.

Finally, it is well to remember that no system of financial procedure, or of Governmental regulations or service conditions, however well conceived each might be, is a substitute for human material. It is the way in which the regulations are implemented that really determines the value of an administration. As Pope said:

"For forms of Government let fools contest
What is best administered is best."

The choice of personnel must be carefully made, in order that the men selected have a positive and constructive mind. They must conform as closely as possible to Mr. N. R. Pillai's excellent description of an ideal public servant. In the course of his address at the Convocation of the Travancore University, in December last, Mr. Pillai said:

"Far from being a neutralist, the public servant of today, and still more of tomorrow, should be one rich in human sympathy and with a fully-awakened social conscience. To his work, he must bring not only competence but faith and fervour and a mind, receptive as well as constructive, able to see, beyond the immediate difficulties, the opportunities that lie ahead. This does not mean that the public servant should degenerate into a 'yes-man'. But it does mean that he should on no account be a 'no-man', the man who can only see snags and pitfalls and whose instinctive reaction to external stimulus is one of obstruction. The yes-man tries to please others, the no-man pleases himself; the yes-man does not reveal his mind, the no-man has no mind to reveal. Both species are a danger to any organisation, but the no-type is a greater danger at a time of growth and development."

Such should be the men to whose care the administration of the country could be safely committed. It is true that it is difficult to find them. But the nation is not so poor in talent or in character as not to throw up the men the Government needs, provided sufficient incentives are given. In any case, far too much is at stake to excuse inertia or unwillingness, on the Government's part, to undertake bold new experiments in recruitment, training and administration.

SHROFF COMMITTEE AND BANK RATE

MR. BUTLER ON CONVERTIBILITY—OUTLOOK FOR WORLD SUGAR

THE eagerly awaited report of the Shroff Committee has been published. This report will no doubt be read with great interest by market circles, especially those who are interested in the capital market, including the section represented by indigenous bankers. The report is a comprehensive one, containing, as it does, as many as 66 recommendations. A fairly detailed summary of these appears on page 1111 of this issue, while an appreciation of the report is provided in the first leading article. As readers are aware, keen interest was evinced in the work of this Committee, as is borne out by the large number of detailed memoranda submitted to it. What has the Committee done? Will its suggestions result in more bank money being available to business men at cheaper rates of interest? It is not possible to give straight, simple answers to these posers. The Committee's report is easily the best on banking and the capital market published in the past two decades. It goes right to the heart of the current problems and may not, therefore, be of much interest to academical men. But it will be of live interest to practical business men, bankers, insurers and brokers connected with the capital market. As for the question whether more credit will be available at cheaper rates of interest, the answer is "yes", provided the Committee's recommendations are implemented. The qualification here is important.

MARKET GOSSIP

• • • •

After reading the report, a superficial critic may say that the Committee has recommended too many corporations and financial institutions. He may argue that a mere increase in the number of such institutions will not necessarily mean that more money will be forthcoming. This criticism will possibly receive considerable strength from the Committee's recommendation that a Special Development Corporation, with a capital of Rs. 5 crores and a loan of Rs. 10 crores from the Central and State Governments, be established for financing small-scale industries. The question that will naturally be asked is: "Where is the need for such a corporation when almost every State will be having its own Financial Corporation? Will this not lead to overlapping and duplication of effort?" The Committee has anticipated this criticism and given impressive reasons in support of its recommendation.

• • • •

The problem of linking indigenous bankers with the Reserve Bank is as old as the Reserve Bank itself. Yet no solution has been found for it. The Shroff Committee, however, has made some interesting proposals which, if implemented, would practically solve it. The Committee has looked at the issues from a practical angle and sought to establish the link with the Reserve Bank through the Scheduled banks. It has, of course, proposed certain changes in the method of operation of the indigenous bankers and the maintenance of books by them which they will do well to accept, if they are really interested in becoming an integrated part of our banking system. A detailed reference to this important aspect of Indian banking will be made in our next issue.

• • • •

When the Committee was sitting and framing its recommendations, there were rumours that it would recommend a reduction in the Bank rate. But as was anticipated by us at that time, the Committee has made no such recommendation. In fact, there is no reference whatever to this question in its report. It has not even conducted a *post-mortem* over the last change made in the Bank rate, that is, the increase in the rate (from 3 to 3½ per cent.) effected in November, 1951. The Committee has devoted a whole chapter to an examination of the factors that act as an impediment in the way of the private sector getting adequate bank accommodation, but it has not said a word on whether or not the increase in Bank rate has been one of them, although a large section of the business community had contended that it was. There is thus no inkling as to what the Committee felt on the issue of Bank rate. Its silence is, perhaps, due to the understandable desire to avoid speculation.

• • • •

In one place, however, the Committee makes the following comment, from which one may try to infer what might be its view on this issue:

"Finance, if it should adequately perform its function as a catalytic agent, has to be elastic enough to sustain genuine activities of production and trade on an upward trend. There is general agreement today that the supply of money and credit in India needs to be adjusted to meet the requirements of the public and private development programmes. Money supply with the public was brought down steeply in 1951-52, in order to counter the post-Korean inflation. Since then, production in several fields of economic activity has increased, and there has been an abatement of inflationary pressures from abroad. Also, the employment situation in the country is such as to cause considerable concern. These factors, as well as the need to step up development outlays in both the public and private sectors in order to achieve the planned targets, warrant adjustments on the monetary front. Measures such as the Bill Market Scheme have, to some extent, added to the flexibility of the monetary system, and the busy season expansion in money supply has tended to increase from year to year. However, there is a general feeling in the country that economic activity can be further stimulated by an increase in effective demand through activation of idle balances and deficit spending by Government."

• • • •

Continuing this discussion, it adds:

"As the central bank of the country, the Reserve Bank of India has the monopoly of note issue and can, therefore, directly affect the amount of currency in circulation. It has also statutory powers of control and regulation over the banking system; through the exercise of these powers and with the prestige it enjoys, it can affect both the size and the pattern of bank advances. In the exercise of these powers, the Reserve Bank has doubtless to bear in mind the overall implications of an expansion of liquid resources available to the community. But it has also to guard against rendering the monetary mechanism not flexible enough to meet the demands of an expanding economy. Until 1952, the emphasis of Reserve Bank policy was rightly on the former aspect of monetary policy. But the position now is different, inasmuch as the Indian economy is no longer in a stage of inflation. In this altered situation and in view of the fact that the Reserve Bank has enough powers and experience to control undue monetary expansion, if necessary, there is room for a more active policy on the part of the Reserve Bank."

• • • •

The above quotations show that the Committee is of the view that, as the economy is no longer in a state of inflation, the Reserve Bank can afford to follow a more active policy. It is also of the view that the present situation warrants adjustments on the monetary front in such a manner as to lead to an increase in the money supply. Does all this mean that the Committee is in favour of a cut in the Bank rate? One's guess is as good as another's. But it is necessary to add that, in another place, the Committee clearly states:

"We have referred at the outset to the question of the 'economic climate' necessary for a rapid growth of private investment. It is a truism that, while lack of finance might inhibit investment, an increase in the supply of finance will not by itself bring about an increase in investment. Cheap or plentiful credit cannot *per se* be an incentive. Private investment will come forth, only if there is an expectation of reasonable compensation for the risks it has to undertake. The investor's expectations of the returns he is likely to get on his investment are coloured not only by the purely economic factors of demand and costs but also by various political, social and psychological elements that make up the environment in which he has to function. These semi- or non-economic factors could well limit his willingness to invest and undertake risks, even when a proposition seems worthwhile on purely economic considerations. The Committee feels that, in the past few years, several changes have occurred in the socio-economic climate of this country which tend to discourage and discredit private enterprise. Unless these inhibiting factors are remedied, mere multiplication or strengthening of agencies supplying finance will not add much to industrial development."

• • • •

This quotation shows that what is more important than the provision of cheap finance is the creation of correct economic climate. If this be the criterion for determining whether or not the Bank rate should be reduced, then it confirms the view editorially expressed in our last issue.

• • • •

The U.K. Government gave the first concrete shape to its cheap money policy by making a surprise announcement, this week, of an issue for cash of £300 million of a new 2 per cent. Conversion Stock 1958-59, the issue price being £99¼ per £100 nominal. The holders of the £321 million of 3 per cent. National Defence Loan 1954-58 have been given the option of accepting payment at par in September, 1954, or of converting their stock into the new issue. If they choose the latter alternative, they would get £100 of new stock and a cash payment of 13s. for each £100 of Defence Loan tendered for exchange. The issue, it is stated, is designed to appeal largely to money market institutions. The terms of the issue of the new loan suggest, according to financial observers, that the Government regard 2½ per cent. as the appropriate yield on a 5-year stock. The immediate reaction of the Gilt-edged market was a sharp fall in the value of stocks, which have their first maturity date in the near future but a more remote second maturity date; these stocks had been quoting higher in the belief that they would be redeemed at the later date. Thus, the 3 per cent. War Loan 1955-59 declined by ½d. to £102. But some single-dated issues were marked up. Thus, 3 per cent. Exchequer Stock 1960 rose 11/16d. to £102½.

• • • •

Three years ago, anyone who talked of the possibility of early convertibility of the pound sterling would have been sent to bedlam. And yet, so rapid has been the recovery of the pound that the prospect of convertibility is now seriously discussed the world over. Although at no time in the post-war years was sterling nearer convertibility than now, it is apparently not so near as a few optimists would have it. Perhaps the ill-fated experiment in convertibility, tried by the U.K. in the early post-war years, has something to do with the caution with which even the spokesman of the Conservative Government in the U.K., who can normally be expected to speak enthusiastically about it, approaches the question. Thus, the U.K. Chancellor of the Exchequer, Mr. R. A. Butler, said last week, that three conditions would have to be fulfilled before the pound could be made a freely convertible currency. These are: sound finance within the sterling area, adequate reserves and the adoption by the major countries of policies conducive to trade expansion. He emphasised that the third of these conditions was by no means the least important. Presumably, he meant to correct, by this, the growing impression in the U.S. that Britain could achieve convertibility without any significant change in the American trade policies.

• • • •

So there it is. It is idle to presume that convertibility is round the corner. But then, there are hopeful signs. The sterling area's performance in the economic sphere is particularly encouraging. In this connection, Mr. Butler said that he regarded it as significant that, despite the fall in industrial activity in the U.S., trade and production outside the dollar area had gone on rising. Between July, 1953 and April, 1954, the U.S. industrial production had fallen 10 per cent. Between those dates, the sterling area gold and dollar reserves had risen by 19 per cent. Referring to his own country, Mr. Butler pointed out that, during the first few months of 1954, total industrial production had gone up by 7½ per cent. as compared with the same period last year. Car output was 42 per cent. higher, yarn spun 12 per cent. higher and steel production 4 per cent higher. Mr. Butler has certainly pulled his country out, so that even his harsh critics will not deny him Mr. Churchill's alliterative praise—"Mr. Butler banished bankruptcy." Mr. Butler, on his part, emphasised the need for vigilance. He warned that the country was "entering a period when it will be difficult to keep prices from rising," and urged that it was a matter for both sides of the industry to "see that increased money returns, either dividends or wages, are matched by increased output."

• • • • •

It will be recalled that a reference was made, in these columns (vide *Commerce* dated 1st May, 1954) to the move that was being made by the Atul Products Ltd., Bulsar, to manufacture new lines of dyes with the co-operation of the leading British chemicals manufacturers, the I.C.I. Ltd. It is now learnt that the Licensing Committee of the Central Government, which examines and sanctions, under the Industries (Regulation and Control) Act, applications for setting up new undertakings, has approved the application of Atul Products Ltd. for licence to manufacture dyestuffs in co-operation with the I.C.I. It is understood that the I.C.I. will subscribe nearly one-half of the capital needed for the new undertaking, besides making available to Atul Products Ltd. all technical guidance and help. This news has been well received by the Stock Exchange (at Ahmedabad) and the value of the Company's shares which was standing at Rs. 128½ a few weeks ago, has now spurted to Rs. 138½.

• • • •

Yet another notable example of fruitful Indo-British co-operation is likely to be furnished soon, if the reported intention of the Government of India to set up an aero-engine factory, at Bangalore, with the assistance of the well-known Rolls-Royce firm is carried out. It would appear that the Company's technical team, which visited India recently, has submitted its report to the Government. The team has recommended Bangalore for the location of the factory which will go into production two years after its establishment. The factory is intended to manufacture both piston and jet engines. It is further reported that, if agreement is reached between the Company and the Government of India, one of the directors of the Company will soon visit India.

• • • •

Last month, the International Sugar Council, which met in London, took, as readers are no doubt aware, two important decisions—to reduce the export quotas by a further 5 per cent., bringing the total reduction to 20 per cent., and to ask the exporting countries to limit their exports during the first eight months of the current calendar year to 75 per cent. of their initial quotas. These decisions were designed to keep the quantum of sugar flowing into the "free" market under check. The re-cent 5 per cent., cut in export quotas will bring the total export quota to 3.71 million tons. Although world requirements in 1954 have been placed higher—at about 3.86 million tons—one has to take into account exports from non-member countries.

• • • •

In this connection, E.D. and F. Man's latest review of the sugar market states that the estimate of world requirements is now a realistic one and that supplies are between 600,000 and 700,000 tons in excess of requirements. The two main features which are stated to have a depressing effect on the sugar position are the large stocks of sugar in the U.K. and the unsold stocks in the leading producing country, Cuba. It may be mentioned here that the stocks of sugar in the U.K. are reported to have reached a record of over 1.8 million tons. The review says that, with judicious handling and the creation of a strategic stock, it should be possible for the U.K. Government to whittle down its stocks to quite reasonable proportions before the end of next year. On the other hand, Cuba, it is stated, will probably find it difficult to sell 1 million tons before the end of this year, although the Cuban sugar is not weighing on the market at present.

• • • •

Whether Cuba or, for that matter, any other Agreement country, is able to dispose of its surplus sugar at favourable prices will, of course, depend on the trend of world output and requirements. As regards the former, a factor that may make a significant difference is the final outturn of the European beet crop in the 1954-55 season. Last year, Europe had a very high yield. It would appear that a high crop is normally followed by a

(Continued on page 1112)

CAUTIOUS TRADING IN EQUITIES

UNDERTONE STEADY

(From Our Own Correspondent)

BOMBAY, *3rd June*

TRADING on the Stock Exchange proceeded on a cautious note during the week under review. Barring some select counters in the miscellaneous section which received some special attention, equities moved in a narrow range and disclosed small variations on balance. Sentiment of the market was, however, a little better this week, as equities regained most of the losses suffered in the previous week. This was in marked evidence in textiles. As the market lacked fresh driving force, operators were generally reluctant to go long.

There were quite a few restraining factors which influence the cautious note. The international political situation was still in a fluid state. Nearer home in East Bengal, the political and economic situation was disquieting, with the Pakistan Central Government imposing Governor's rule on the State. The dispute between the rival labour unions at Burnpur in West Bengal, which necessitated the imposition of section 144, remained still unsolved. Advices from the cotton piecegoods market both at home and abroad were far from inspiring. It is reported that in the past two weeks exports of cloth have suffered a notable setback. Prices in the domestic market are said to have dropped a little, with the demand remaining slack. The commodity and bullion markets were unsettled and could not, therefore, lend support to equities. In spite of these restraining factors, values did not deteriorate, because of the occasional professional support at lower levels. The undertone was steady, though the turnover was restricted.

The Stock Exchange remained closed today on account of *Ramzan-Id.*

In the steel section, Tata Steels received fresh support early in the week on account of expectation about early dividend announcement. They rallied from Rs. 194 to Rs. 196-8, but reacted to Rs. 195-8 on Monday, due to weakness of Indian Irons, before closing finally at Rs. 194-8. Indian Irons hardened from Rs. 30-2½ to Rs. 30-8½ early in the week, but fell back to Rs. 30-1 on Monday. The finish was, however, better at Rs. 30-5.

The textile group presented a steady front with small gains on revival of small support. Rumours that the Government might abolish the export duty on coarse cloth and reports about the satisfactory stock position of mills helped the sentiment to remain intact. Bombay Dyeings, which had dropped from Rs. 436-4 to Rs. 415 in the previous three weeks, was able to stage a small recovery to Rs. 420-10 before finishing at Rs. 419-6. Kohinoors, which had been marked down in the previous three weeks by Rs. 16 to Rs. 355-9, revived to Rs. 369, but closed a shade lower at Rs. 367-4. Century's, however, gained over the week Rs. 2-8 to Rs. 325. Central Indias, on the other hand, lost Re. 1-8 to Rs. 171, as also Gokaks to Rs. 248-8. Finlays were just steady around Rs. 240 and Indu Ordinaries at Rs. 11-1. Khataus were better by Re. 1-4 at Rs. 120. Mysore Spinnings were impressive with a rise of Rs. 6-12 to Rs. 121-4. New Great's showed no change at Rs. 167. Shree Niwas were done at Rs. 198-12 *ex-div.* (dividend Rs. 14), as against Rs. 206-4 *cum-div.* at the close of the previous week. Simplex closed with a fractional loss at Rs. 154-8. The Directors of the Company have declared a final dividend of Rs. 6 per share for the year ended 31st March, 1954 on the increased capital of Rs. 42 lakhs, as against the corresponding distribution of Rs. 9 per share for the previous year on the then capital of Rs. 31.50 lakhs. With the interim payment of Rs. 5 per share, also on the increased capital, the total distribution comes to Rs. 11 per share, as against Rs. 15 per share for 1952-53 on the lower capital of Rs. 31.50 lakhs. Standards were marked up by Re. 1-4 to Rs. 313-12, while Svadeshis were down by a rupee at Rs. 273-8. Vishnus changed hands Rs. 2-8 lower at Rs. 140.

Bank shares maintained a steady tone and fractional gains were noted in several counters. Barodas changed hands As. 4 better at Rs. 108-8, as also Centrals at Rs. 54-12. Centrals (New), however, eased a little to Rs. 59-8. Imperial Fully Paids were unchanged at Rs. 1,785, while their Partly Paids were wanted Re. 1-4 higher, at Rs. 438-12.

Activity in the insurance section was very much restricted, but the undertone was steady. A rise of Rs. 15 to Rs. 670 in Empire of India and a drop of Rs. 2-2 to Rs. 34 in Industrial Prudentials were the main features in this section. New Indias were picked up at Rs. 45-4. Orientals were unchanged at Rs. 7,690, Jupiters at Rs. 7-8, Indian Mercantiles at Rs. 40-8 and Vulcans at Rs. 2-14. *British India Generals stood at Rs. 13-4.*

Minor variations were noted in the electricity group. Ahmedabad Electrics continued to be depressed, losing As. 10 to Rs. 110-13 over the week. But Suburbans added As. 10 before closing at Rs. 122-8. Surat Electrics were maintained at Rs. 130-10. Tata Hydros were a shade better at Rs. 140-8. Tata Powers changed hands at Rs. 1,400-4, as against Rs. 1,405. Andhra Valleys lost Rs. 2-8 to Rs. 1,320.

The miscellaneous section was more active on some selective support. In the sugar group, Belapurs rose early in the week from Rs. 269 to Rs. 271, but receded to close at Rs. 267-8. Phaltans stood on balance As. 8 better at Rs. 101. Walchandnagars were featureless at Rs. 175-10. In the cement group, a rise of Rs. 2-12 to Rs. 123-8 was noted in Digvijays. A.C.Cs. were steady at Rs. 157-12. Among engineering and mining shares, Alcocks suffered a setback from Rs. 322-8 to Rs. 302-8 on apprehensions about cut in dividend. Premier Constructions received good support and rose by Rs. 3-8 to Rs. 132-8. Shivrajpurs were quiet at Rs. 64. Indian Coppers were in good demand and rose by As. 3 to Rs. 3-3. B.B. Petrols were another notable feature with a jump of As. 5 to Rs. 4-2, on expectations of encouraging working results following the agreements reached between the Company and the Burma Government. In the shipping group, Scindias were steady at Rs. 17-10, as also India Steamships at Rs. 8-7½. Among miscellaneous industrials, Bombay Burmahs (old), after an initial rise from Rs. 396-14 to Rs. 400, drifted lower to Rs. 391-4 but revived at the close to Rs. 394-6. B.I.Cs were unchanged at Rs. 8-1. Killick Industries were done at Rs. 183-4 *ex-div.* (interim div. Rs. 4) as against Rs. 185 *cum-div.* at the close of last week.

* * * * *

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, *2nd June*

A cheerful note was struck during trading on the Calcutta Stock Exchange during the week under review, and it would appear that the market is beginning to mark the end of the dullness caused by the diversion of funds for the National Plan Loan. Although the Loan has not yet been closed and a further vigorous drive has been initiated by the State Governments and the Congress Committees, it is difficult to get anything more from the capital market which stands dried up already.

Most of the rises recorded this week were in tea, miscellaneous and engineering shares. Sellers in teas became scarce, and the favourite counters could be dispossessed only after attractive additions in prices. Speculative Indian Irons were firm and, despite profit-taking, the closing rate compared favourably with the opening. A firmer trend could have been in evidence but for the deteriorating labour situation in Burnpur and Kulti following inter-union rivalry. It is to be hoped that nothing serious would develop. Precautionary measures have been taken by the Government to prevent a disturbance to the peace. Good miscellaneous counters are keenly kept in view by long-term investors. In fact, these shares have come to attract business from other sections, especially from jutes and coals.

The forward list, which now contains only Indian Irons, will soon have three more scrips, viz., Orient Papers, National Jutes and Burrakur Coals. As soon as procedure for the clearing is fixed, dealings in these shares on a forward basis would commence. This would be by the end of this month.

Among engineering shares, Indian Galvanisings rose earlier from Rs. 18-12 to Rs. 19-3, but subsequently lost the gain. Indian Standard Wagons were steady at Rs. 71. Burn & Cos. were a strong feature and rose from Rs. 187 to Rs. 194.

Indo-Burma Petroleums were again a feature in the miscellaneous section and at Rs. 131-8 disclosed a gain of 11 points. British Burma Petrols advanced from Rs. 3-13 to Rs. 4-5. At Rs. 22-1, Martin Burns were better by Re. 1-9, while Rhotas Industries remained unchanged at Rs. 15-13. Alkali Chemicals were transacted at Rs. 16-12, as against Rs. 15-6 previously.

Orient Papers improved further from Rs. 18-12 to Rs. 20-10, following the report that this counter would soon be placed on the forward list. Business in Titaghurs was sought up to Rs. 42. India Paper Pulps spurted from Rs. 203 to Rs. 212. Shree Gopals were steady at Rs. 24.

Teas received distinct attention. Banarhats strengthened from Rs. 450 to Rs. 465, Choonabhutis from Rs. 322 to Rs. 332, New Dooars from Rs. 450 to Rs. 460, and Hantaparas from Rs. 243 to Rs. 267. Unsatisfied demand pushed Gungarams from a previous rate of Rs. 293 to Rs. 350.

Only mild interest was shown to jute shares. Nationals were taken at Rs. 26-7. Howrahs changed hands at Rs. 24-6, while Ganges were quiet at Rs. 68. At Rs. 165-8, Orients were lower by Rs. 5-8.

In selected trading among coals, Raneegunges encountered support and in the process improved from Rs. 12-6 to Rs. 13-10. Burrakurs were steady at Rs. 10. At Rs. 28-3, East Indians added As. 6, while Equitables declined from Rs. 34-1 to Rs. 33. Bengals were lower at Rs. 479.

* * * *

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, *1st June*

The Madras Stock Exchange continued to witness brisk trading conditions this week also. Almost all the scrips came in for support. Active buying enquiries were persistent even at higher levels, especially in planting shares. Prospects of increased demand for tea leaves from the U.K. and the U.S. were chiefly responsible for considerable hectic activity in tea scrips. The performance of rubbers was also colourful. The announcement of higher dividends by certain companies and prospects of similar announcements by others caused the uptrend in rubbers. Coffee and sugar scrips, however, lacked support, while the miscellaneous section came in for some selective enquiry. There was renewed interest in textiles. Small wonder, therefore, that business done in the market was encouraging and equities recorded, on balance, substantial gains spread over the entire list.

In the textile section Balasubramanias, Rs. 40 paid up, gained Rs. 4 to Rs. 46 and 'B' Rs. 70, paid-up, Re. 1 to Rs. 76. Janardhanas were higher by Rs. 2 at Rs. 78-8. Metturs gathered Rs. 17 to Rs. 297 *cum-div.* and Premiers Re. 1 to Rs. 106. Rajalakshmis rallied Rs. 5 to Rs. 118. R.C. Ambikai put on Rs. 8 to Rs. 153. Vasantas shot up from As. 4 to Rs. 146-12, while Bangalore Woollens were unchanged at Rs. 395. Travancore Rayons changed hands at Rs. 9-11 *cum-div.*, as against Rs. 9-8 *ex-div.*, on the declaration of a dividend of 5 per cent. for the year ended 31st December, 1953, as against *nil* As. 12 to Rs. 61-8 *cum-div.* A final dividend of Rs. 2-8 per share has been recommended for the year ended 31st March, 1954, thereby making a total of Rs. 4-8, the same as in previous year.

Teas were the brightest among plantings. Coonoor Teas improved by As. 4 to Rs. 24-4 and Hailleyburia by Re. 1 to Rs. 19-2. Highland Produces were higher by As. 8 at Rs. 14. Mlamallays and Nonsuch Teas gathered As. 4 each to Rs. 45 and Rs. 33, respectively. Peermades rallied As. 8 to Rs. 35-4. United Nilgiris were done higher at Rs. 218, as against Rs. 214. Waterfalls and Chandramalais put on an anna each to Rs. 3-5 and Rs. 3-15½, respectively. Emerald Valley Estates changed hands at Rs. 5-10 *cum-div.*, as against Rs. 5-8 *ex-div.* The Directors have declared a dividend of 25 per cent. for the year ended 31st December, 1953, as against 15 per cent. in the previous year.

Rubbers were also in good shape. Cochin Malabars advanced from Rs. 7-7 to Rs. 7-11 and Malankaras from Rs. 37-10 to Rs. 38. Nenmerays As. 5 to Rs. 12-10. Vaikundams improved from Rs. 16 to Rs. 16-12 and Teekoys from Rs. 7-12 to Rs. 8. Be Bes were higher by an anna and a half at Rs. 3, Anandams were enquired at Rs. 11-12 *cum-div.*, as against Rs. 11-4 *ex-div.* A dividend of 10 per cent. has been declared for the year ended 31st December, 1953, as against 15 per cent. for the previous year.

Among coffees, Coffee Lands gained As. 6 to Rs. 11 and Puthuthotams As. 3 at Rs. 3-10. Mysore Coffees were fractionally better at Re. 1-4. Consolidated Coffees, however, lost an anna to Rs. 17-11.

Among sugar scrips, India Sugars and Refineries, Rs. 10 paid-up, were quiet at Rs. 28-12 *cum-div.*, and Rs. 5 paid-up, at Rs. 18-8 *cum-div.* The Directors have maintained the dividend of 25 per cent. for the year ended 30th September, 1953. A call of Rs. 5 per share, with the balance of premium of Rs. 2-8 per share, has been made on the Rs. 5 paid-up shares, payable on or before 1st July, 1954. It is also proposed to capitalise a sum of Rs. 16 lakhs out of reserves for issuing one bonus share for every share held by shareholders as on 1st July, 1954. E.I.D. 'A' was up by As. 4 at Rs. 16-4. Other scrips were dull and their quotations were almost unchanged.

The miscellaneous section met with some selective enquiries. Bangalore Transport and Binnys put on As. 8 each to Rs. 12-10 and Rs. 124-8. Champion Reefs hardened by As. 8½ to Rs. 3-13 and Dalmia Cement, Rs. 10 paid-up, by As. 6 to Rs. 9-14.

Notice

LARSEN & TOUBRO LIMITED

NOTICE IS HEREBY GIVEN THAT THE Ninth Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, J. K. Building, Dougall Road, Ballard Estate, Bombay, on Saturday the 3rd July, 1954, at 2.00 p.m., to transact the following business:—

1. To receive the Directors' Report and the Audited Statement of Accounts for the year ended 31st March, 1954.
2. To sanction the declaration of a Dividend.
3. To elect Directors in place of Mr. M. V. Desai and Mr. S. K. Toubro, who retire by rotation, but being eligible, offer themselves for re-election.
4. To appoint Auditors for the current year and to fix their remuneration.
5. To transact any other business that may be transacted at an Ordinary General Meeting.

The Transfer Books of the Company will be closed from Monday, 14th June, to Saturday, 3rd July, 1954, both days inclusive.

By Order of the Board,
A. CORONEOS,
Constituted Attorney.

BOMBAY, *1st June, 1954.*

Note.—The Dividend when sanctioned will be made payable on or after 5th July, 1954, to those shareholders whose names stand on the Company's Register on 3rd July, 1954.

NEWS IN BRIEF

THE Government of India sanctioned, during April, a sum of Rs. 7,33,085 as subsidy and loan for the construction of 426 tenements under the Subsidised Industrial Housing Scheme.

Two railway delegations from India, one a three-member official team, and the other a seven-member non-official one representing railway workers, will visit the U.S.S.R. this month.

A plan to improve Kashmir's sheep and wool industry has been drawn up by Mr. George Upward, an Australian sheep expert attached to the F.A.O. The State Government has approved of the plan, which will be implemented in co-ordination with the F.A.O.

The proposed State-owned Industrial Development Corporation will come into being in about two months' time. Prominent industrialists will be associated with the administration of the Corporation and the Government hopes to finalise the personnel of the directorate within a fortnight.

A committee, with Mr. K. Raghuramiah, M.P., from Andhra as Chairman, is being deputed by the Ministry of Commerce and Industry to tour South-East Asian countries with a view to exploring the possibility of expanding the market for Indian tobacco.

The Government of Bombay has issued an order prohibiting the sale of sulphate of ammonia at a price exceeding Rs. 345 per ton wholesale and Rs. 4-6-6 per quarter of 28 lbs. or Rs. 13 per maund of 82.2/7 lbs. in retail from 1st June. The wholesale deal has been defined as sale in quantities exceeding 196 lbs.

The 21-member Housing Committee appointed by the U.P. Government to suggest ways of overcoming the housing shortage has decided to conduct a survey of housing conditions in the district headquarters of the State. The State Village and Town Planner, who has already conducted such surveys for the five principal towns, has been entrusted with the task which is to be completed within two months.

The Steering Committee of the Development Corporation sponsored by the World Bank will meet in Bombay next week to finalise its constitution to be placed before the Government. After the Government is satisfied that the Corporation thus formed conforms to the principles laid down, an approach will be made to the World Bank for a loan on the basis of the guarantee to be given by the Government in respect of the loan.

The Government of India has sanctioned Rs. 10 crores to develop inter-State roads, particularly in such areas where transport facilities do not exist. Disclosing this, Mr. O. V. Alagesan, Union Deputy Minister for Railways and Transport, said in Calcutta last week that this amount would be in addition to this year's budgetted figure of Rs. 27 crores for capital expenditure on national highways under the Five-year Plan.

For the convenience of the public, a special Estate Duty-cum-Income-tax Circle has been created for Bombay City, with effect from 1st June, 1954. This Circle will deal with all work connected with Estate Duty cases arising in Bombay City, including applications for Exemption Certificates. The Office of the Estate Duty Circle is located on the Fifth Floor (Room No. 6), Central Government Offices Building, Queen's Road, Bombay.

The Government of India has decided to regulate exports of crushed bones and bone grist during the quarter June-August, 1954 on a quota basis. Quotas will be issued to established crushers and shippers to the extent of 25 per cent. of their best year's exports during the calendar years 1950, 1951, 1952 and 1953. Quotas so issued will be valid for shipment upto 31st August, 1954.

American tourists and business travellers spend more than one billion dollars abroad every year, according to Trans World Airlines' statistician who have been campaigning to emphasise the importance of tourism. The average expenditure abroad by every American traveller is about $771, according to Norman C. Thompson, T.W.A.'s Chief in India. Coffee is the only commodity sold to America and imported in greater value than the one billion dollars worth of vacations bought by Americans on trips abroad, stated Mr. Thompson.

The Uttar Pradesh Government has suggested to the Government of India to declare the members of the State Legislatures and some district revenue officials as "authorised persons" for purposes of receiving and collecting small contributions to the National Plan Loan. Such a declaration would entitle the "authorised persons" to a commission of 1.25 per cent. on the collections they make and would give them an incentive for pushing up the drive for the mobilisation of small savings for the loan.

The Government of Bombay has extended upto 30th June, 1954, the period for submission by registered dealers of the statements in Form 10 in respect of the general tax and special tax paid by them on their purchases of the stocks held by them on 1st April, 1954. Under sub-rule (4) of rule 11 of the Bombay Sales Tax (Exemptions, Set-off and Compensation) Rules, 1954, these statements were required to be furnished by 31st May. The Government has extended the time limit by one month on requests from some trade associations to that effect.

With a view to meeting the demand for agricultural implements in the State, especially plough points, the Government of Mysore which owns and manages the biggest iron and steel works in South India, located at Bhadravati, has directed that steel flats required for plough shares, cart tyres, etc., be rolled by the works on a top priority basis. These implements will be supplied to co-operative societies. The Mysore Iron and Steel Works has programmed to roll such flats to the tune of 400 tons of different sizes required by agriculturists.

A pilot plant for the manufacture of fruit products and preserves, such as jams, jellies, candies, squashes and crushes was opened today at the Fruit Research Station at Kodur in Cuddapah district. The manufacturing plant, which costs Rs. 1.98 lakhs, will be worked by electricity supplied by a generator. This is the first commercial enterprise of the Andhra State. The normal production capacity of the plant will be on an average one lakh units of different products or in terms of money value, about Rs. 1.5 lakhs per annum.

The first consignment of locomotive boilers given by Canada to India under the Colombo Plan arrived at the Chittaranjan Locomotive Works in West Bengal early this week. The boilers will be fitted to locomotives manufactured at Chittaranjan. Canada is making a gift to India of 50 W.G. boilers and 120 W.P. locomotives under the Colombo Plan. The approximate cost of these is Rs. 8,44,00,000. An Indian railway officer is now in Canada in connection with the inspection of these boilers and locomotives.

A conference sponsored by the Government of India to consider proposals for setting up an All-India Co-operative Marketing Organisation is to be held at Srinagar about the middle of July. Ministers from all States dealing with the subject and representatives of agricultural interests are expected to participate in the conference. The object of the marketing organisation is to help agriculturists to market their produce on more advantageous terms within India and abroad. The organisation is also expected to obtain from abroad heavy agricultural machinery, chemical manure and other requirements of agriculturists on favourable terms.

In pursuance of the recommendation of the Engineers' Seminar held at Nangal early this year, the Ministry of Irrigation and Power, Government of India, has appointed an Engineers' Committee of Co-ordination, with Mr. Kanwar Sain, Chairman, Central Water and Power Commission, as Chairman. The Committee will take follow-up action on the recommendations of the seminars which will be held every three or four months at the site of one of the major river valley projects in India. It will also function as the steering committee for the next seminar. In addition to co-ordinating work relating to the organised development and execution of projects in the country, the Committee will advise the Board composed of the Central and State Ministers of Irrigation and Power on matters of high-level policy.

From Abroad

The Danish Government has decided to import 30,000 foreign cars and Kr. 350 million (£12.5 million) worth of textiles this year.

American corporations offered $1,800 million of new securities to investors in the first quarter of this year, as against $2,500 million and $2,000 million in the last and first quarters, respectively, of 1953.

As a result of further pressure on behalf of British shipbuilders seeking orders from Russia, the U.K. Government has assured that the official policy is to approve such exports of ships, subject to security requirements.

The prices of a number of iron and steel products have been raised in the U.K. with effect from 31st May last, consequent on the increase in coal and coke prices which came into force on 3rd May and the recent increase in wages.

Canada and Spain have signed the first trade agreement giving each other most-favoured-nation treatment with regard to tariffs and related matters. The agreement will come into force provisionally on 1st July next. Both the countries have undertaken not to impose discriminatory import or exchange restrictions, except for balance of payments reasons.

Import of foreign cotton cloth by the U.K. during the first quarter of 1954 amounted to 50 million yards, of which more than 28 million yards were from India. The total imports from all sources were double those during the corresponding period of 1953, reflecting the hampering effect of manpower shortages on Lancashire's production. A quantity of 603,000 yards was imported from Russia during the quarter.

Decontrol of copper in the U.K. was completed on Saturday last week, with the withdrawal of the Government broker from the London metal market, after operating for ten months. When controls were lifted in the private trading of copper last August, the Government instituted the role of official sales of copper to tide over the difficult transition to free dealings.

China may buy more than the agreed quantity of rubber from Ceylon during the current year. Under the pact with Ceylon, China takes 50,000 tons of sheet rubber annually. In the current year, Ceylon's surplus sheet rubber has also been offered to China for sale on the same terms as under the pact. China is expected to accept the offer. The quantity of surplus offered is not known.

A spokesman of the International Bank for Reconstruction and Development denied last week that a four million dollar loan for a paper mill project in East Pakistan had been refused. Negotiations for the loan had been going on for some time, he said. The Bank had not ceased consideration of the loan, the spokesman added. The loan is being sought by the Pakistan Development Corporation on behalf of the Karnaphuli Paper Mills.

The Government of Ceylon has decided to encourage the assembling of cars, radio sets and other mechanical equipment in Ceylon. As an inducement to the establishment of assembly plants in Ceylon, the Government is said to be considering a proposal to reduce or abolish duties on spare parts. If there is good response from private enterprise, the Government will, it is reported, make necessary changes in the tariff of import duties on parts in the next budget.

PERSONAL

MR. Khub Chand, Minister-in-charge of the Embassy of India at Baghdad, has been concurrently appointed Minister to Jordan.

Mr. Ganga Prasad Birla of Messrs. Birla Bros. Ltd., has left for London on a business tour.

Mr. J. R. D. Tata, Chairman, Air-India International, left for Rome last week-end to attend a meeting of the International Air Transport Association.

Mr. S. N. Bilgrami, Commerce and Industry Secretary to the Government of Hyderabad, has been appointed Chief Controller of Imports and Exports at New Delhi.

Mr. K. B. Lall, I.C.S., until recently Chief Controller of Imports and Exports, has been appointed Joint Secretary, Ministry of Commerce and Industry, Government of India.

Sardar Datar Singh, Additional Secretary to the Ministry of Food and Agriculture, Government of India, returned on Saturday from Rome, where he had been to attend the meeting of the Co-ordinating Committee of the F.A.O.

Mr. S. S. Vasist, Member for Transportation, Railway Board, will lead the official railway delegation to Moscow. The other members of the delegation are, Mr. D. Saudilya, Joint-Director (Finances) and Mr. B. Sahay, Officer on Special Duty, Railway Board.

Prof. C. N. Vakil, Director, School of Economics and Sociology, University of Bombay, has left for Paris to attend a special meeting of the Executive Committee of the International Economic Association, meeting from the 4th to 6th inst. He will return to Bombay on the 9th inst.

OBITUARY

Mr. Chhotabhai S. Patel

We regret to record the sad demise of Mr. Chhotabhai S. Patel, J.P., Chairman of the Bombay State Road Transport Corporation, in London on Friday, 28th May, 1954, after a heart attack. Mr. Patel, who was aged 65, had been to London four weeks ago on a business-*cum*-holiday tour. A member of the old Bombay Legislative Assembly for about seven years, representing the Indian Merchants' Chamber, Mr. Patel was also a member of the State Labour Advisory Board and the State Advisory Council of Industries and Chairman of the *Vanaspati* Manufacturers' Association of India. He assumed charge as Chairman of the Bombay State Road Transport Corporation in November, 1952.

"COMMERCE" 1929

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *8th June,*

India's Debt to England

The Bengal Chamber of Commerce has been well advised in circulating amongst its members the text of the speech delivered by Sir Stephen Demetriadi, K.B.E., Chairman of the Council of the London Chamber of Commerce, at the annual dinner of the Chamber in London on 30th April last. The speech contains some home truths which should be realised and recognised—and that sooner than later—by Indians as well as Europeans. In proposing the toast of His Majesty's Ministers, especially in the presence of Lord Peel, the Secretary of State for India, Sir Stephen appropriately referred to the relations of Britain with India. The decision which will have to be taken by the British Government after the Simon Commission has submitted its report will, he said, be the most momentous for India and for Britain since that day in 1858 when the entire administration was transferred from the East India Company to the British Crown. "The Governor and Company of Merchants of London trading into the East Indies," was a body founded by Queen Elizabeth on 31st December in the year 1600, and for over three hundred years the history and the development of the two countries have been inextricably interwoven. Sir Stephen reminded his hearers that the British found the country in a state of chronic internecine strife, both racial and religious, and there was any amount of corruption and oppression and insecurity both of life and of property. To the horrors of constant war were added, for the unfortunate peasant, periods of famine, bringing in its wake devastating epidemics of disease.

CANAL WATERS DISPUTE

THE prospects of a settlement of the seven-year-old Indo-Pakistan canal waters dispute now appear to be more bleak than ever. While India has accepted the World Bank's proposals, Pakistan's initial reaction appears to be wholly negative. If that is true, it is indeed unfortunate. Again, Pakistan is perhaps not so well advised in asking Sir Zafrullah Khan, Foreign Minister, to lead the Pakistan delegation at the forthcoming meeting of the working party of engineering experts, because Sir Zafrullah is only a politican, while the issue involved is not political but technical.

The details of the World Bank's proposals have not yet been made public. But, from Press reports, it is gathered that the World Bank has recognised India's claims for the exclusive utilisation of waters of the Sutlej, the Beas and the Ravi and of Pakistan's for the waters of the Indus, the Jhelum and the Chenab. Pakistan seems to be harping upon the fact that, while the Indus, Jhelum and Chenab should be exclusively Pakistan's rivers, the other three allotted to India should continue to be treated as common to both the countries. According to Mr. Nehru, India has accepted both the good and the bad in the World Bank's proposals, with a view to facilitating settlement of the problem once for all.

The dispute has come to a climax with the release of the waters of the Sutlej on Monday last into the 108-mile Bhakra main canal and the prospects of the opening up of the whole network of Bhakra-Nangal canals by the end of the first week of July. This, according to Pakistan, constitutes a violation of India's commitment to the World Bank, under which no unilateral action is to be taken by either party during the course of negotiations.

Pakistan's objection, however, seems to be wholly baseless. For the opening up of the canals neither violates the commitments entered into nor even international law. Even, according to the World Bank's proposals, India has the exclusive right to the ownership of the waters of the Sutlej, the Beas and the Ravi. It is also in keeping with the earlier agreement of 4th May, 1948, in which Pakistan recognised India's right to withdraw the waters from these rivers gradually to its underdeveloped areas. Again, according to international law, a sovereign nation has the right of ownership to the waters of all the rivers within it. It can direct these waters to profitable use in its area and, the neighbouring country, if it lies below the river, can claim no right to these waters either by tradition or past usage. Moreover, the amount of water to be used does not make much difference to Pakistan. It is pointed out that the proposed diversion of the waters from the Sutlej will not adversely affect the irrigational interests of Pakistan, as it has already built canals, certain connecting links, intermediaries, etc., so that it can get more water from other sources.

In the existing situation, it is difficult to forecast whether Pakistan will ultimately accept or reject the World Bank's proposals. Should Pakistan reject the proposals, the Working Party of engineering experts which is tackling this problem will cease to exist. If, on the other hand, Pakistan were to accept the proposals, it would become necessary for the two Governments to negotiate a detailed treaty.

The Government of India has always tried to settle the dispute with Pakistan in an amicable manner. It is the intransigent attitude of the Pakistan Government that is holding up the solution. A settlement of this dispute will not be difficult, if the present rulers of Pakistan realise that their country has 80 per cent. of the waters of the Indus basin which is not put to use for irrigation now and which is, therefore, running to waste. Even if a fraction of this water is put to use, Pakistan's needs could be more than met. It is clear, therefore, that the urgent problem is one of storing up the waters which are now running to waste in Pakistani territory, so that they can be fed down and distributed by engineering works and canals to lands where they can be profitably used. But the powers-that-be in Pakistan seem to be more keen on hurting India than on minding the welfare of their people. So long as this mentality persists, it is futile to appeal to their good sense.

TELEPHONE SERVICE

A plea for an extensive and better telephone service and the abolition of the present classification of trunk calls into "urgent" and "ordinary" and of "own-your-own-telephone" scheme has been put forth by the Federation of Indian Chambers of Commerce in a memorandum to the Union Ministry of Communications. Further, it has expressed concern at the charges for urgent calls which are twice those for ordinary. If it was not possible to abolish the distinction immediately, the Federation avers that, at least, the charges should be reduced as an interim measure. The memorandum says that, if necessary, a surcharge of 10 to 12 per cent. may be charged for urgent calls. It has further pleaded that this surcharge should not be made applicable to extended calls and that a part of the extended calls should be charged at a lower rate. The distinction between urgent and ordinary calls seems wholly unnecessary; few countries maintain it. After all, all trunk calls are urgent calls. Again, the "own-your-own-telephone" scheme is wrong in principle. A private citizen should not be allowed to own a part of a public utility. If the scheme is meant to increase revenue, it is again wrong, since it entails capital expenditure.

The need for an extensive and better telephone service has been felt for some time now. The number of telephones in India, as compared with other important Western countries, is very low, so that India does not figure prominently on the world's telephone map. The telephone density compares unfavourably even with some of the countries in South America, Middle East and Asia. It is stated that some of the principal cities, such as Sydney in Australia, have more telephones than the whole of India. Further Sao Paulo in Brazil, a modest town, has, we are told, a more advanced telephone system than a city like Bombay or Calcutta which is far more important from a commercial angle. The following table gives the density of telephones in India as compared with that in some important countries of the world:

(As on 1st January, 1952)

Country	Total Telephones	Telephones per 100 persons
U.S.A.	45,636,437	29.3
Sweden	1,788,874	25.2
Canada	3,140,000	20.1
U.K.	5,724,440	11.4
Argentina	852,327	4.8
Chile	137,700	2.3
Brazil	591,700	1.1
Egypt	125,308	0.6
Malaya	28,086	0.5
Iraq	24,165	0.4
Ceylon	18,362	0.2
Iran	30,000	0.2
India (as on 31-12-1953) ...	218,653	0.08

The main cause for India's backwardness in regard to telephone communication service, according to the Federation, is the failure of the authorities to adopt the commercial principle of ploughing back telephone revenue into long-term development of the service, in order to meet the growing needs of the business community, in particular, and the public, in general. Investment in tele-communications, it points out, secures a high rate of return. On a capital outlay of Rs. 25.6 crores, the telephone branch of the P. & T. Department earned Rs. 4.11 crores or a return of 16 per cent. (including interest on capital). These earnings have not only helped to make good the deficits in other branches of the departments, but have also provided a net contribution to general revenues. The Federation considers this to be "hardly fair" to the telephone users, actual and prospective. Incidentally, the Federation might as well have contrasted the Government's parsimonious attitude towards the electricity industry in regard to the return on capital invested with the high rate of return it earns on telephones and its indifference to consumer interest in the matter of providing telephone service, though both are public utilities.

MR. ALLEN ON AID TO INDIA

The recent divergence in the American and Indian foreign policies has led many to doubt whether the U.S. will continue its economic assistance to India. Apart from the few people in this country who, for certain extremist political reasons, would like to see that the aid is discontinued, there are many who would consider such break in the relationship between the two countries as a failure of the true democratic spirit. After all, it is the essence of democracy that differences should be not only tolerated but even appreciated. Over there, in the U.S., also, there is a section of opinion which is opposed to assistance to India on the ground that this country has chosen to differ from the American line in foreign policy. It would be tragic if the extremists in this country and their counterparts in the U.S. were to succeed in widening the breach between the two countries.

In this context, it is gratifying to note that Mr. George V. Allen, U.S. Ambassador to India, represents the nobler tradition in American political life, for he emphasised, in a recent broadcast from New York, that "in freedom, there is room for diversity." Mr. Allen said that though there were "sharp differences of opinion" between India and the U.S., he did not think these outweighed the advantages of American assistance to India. Supporting President Eisenhower's proposal for a grant of $104.5 million economic and technical aid to India, Mr. Allen said that democracy faced its most important trial in India. He was obviously paying a tribute to the way the Government in this country has been able to maintain domestic peace and initiate several measures of economic improvement, when he said: "We are not trying to put out a fire in India. But we are taking constructive fire preventive measures." He contrasted the Indian and Chinese political experiments. He said that, whereas on the Chinese mainland, communist totalitarianism was "gripping the Chinese people in an iron voice to achieve rapid material gain," in India, "360 million people under the leadership of a Government chosen by their votes are attempting to achieve similar material gain through democratic methods."

Clearly, it is better that the U.S. should help India adopt these "preventive" measures rather than it should frantically strive to save this country at a later date, if and when political conditions deteriorate for want of stable economic basis. The stakes are high. The success of democracy in India will determine the future of democratic institutions in the world. Mr. Allen rightly emphasised that India should continue to succeed in the "most enormous experiment in democracy the world has ever seen." It is to be hoped that his call will evoke a sympathetic response in that country and that it will succeed in making the sceptics view India's need for aid in a broader perspective.

TAX INVESTIGATION COMMISSION

A judgment of far-reaching significance to the work of the Income-tax Investigation Commission was delivered last week by the Supreme Court. The Court held that section 5(4) of the Taxation on Income (Investigation Commission) Act, 1947, was void, inasmuch as it offended against the provisions of Article 14 of the Constitution which does not permit discrimination by the State. The facts of the case are easily stated. A case had been referred to the Commission by the Government under section 5(1) of the Act, which empowers the Government, when it "has *prima facie* reasons for believing that a person has, to a substantial extent, evaded payment of taxation on income," to refer the case to the Commission. In the course of the Commission's investigation into the case, it became clear to the Commission that there was another case of tax evasion. The Commission asked the Government to refer this case too to it; in doing so, it was acting under the powers conferred on it, under section 5(4), which provides that if, in the course of investigation of a case referred to it under section 5(1), the Commission has "reason to believe that some person other than the person whose case is investigated has evaded payment of taxation on income it may make a report to the Central Government." The assessee, whose case fell within the scope of section 5(4), contended that the section was bad in law and contravened the Constitution. This contention has been upheld by the Supreme Court. The Court, however, refrained from expressing any opinion on section 5(1) of the Act, since it did not arise for decision in this case.

In his judgment, the Chief Justice affirmed that the validity of all laws, even those made before the coming into force of the Constitution, has to be "tested on the touchstone of the new Constitution." He subjected section 5(4) of the Taxation on Income (Investigation Commission) Act, 1947, to an elaborate examination in the light of the new Constitution, especially of Article 14 which affirms the right of all persons to equality before the law and to equal protection of the laws. He brought out the distinction between section 5(1) of the Act and section 5(4) thereof; the latter was held more general in scope in that no reference was made by the section to the fact that there should have been, as in section 5(1), a "substantial" evasion of tax. In other words, section 5(4) referred to all persons who, according to the Commission, had evaded taxes on income. Now, section 34 of the Indian Income-tax Act also prescribes a procedure to be followed by the Government in respect of tax evaders. Briefly, this section provides for cases where (1) an assessee has failed to disclose his correct income and, therefore, has escaped assessment or has been under-assessed, and (2) the Income-tax Officer has reason to believe that the assessee has escaped assessment or excessive relief has been granted. The Income-tax Department is empowered to reopen the cases falling under (1) within eight years and the cases falling under (2) within four years.

The Chief Justice asked, in effect, why any class of persons, who commit the same offence, should be treated differently—that is, leniently, if they were proceeded with under the Income-tax Act and, rigorously, if they were proceeded with under the Taxation on Income (Investigation Commission) Act. Again, in effect, he answered the question whether the section 5(4) of the latter Act implied any discrimination in the affirmative. He said that the section deprived a person of the rights of appeal, second appeal and revision to which he is entitled under the Income-tax Act. He added:

"A person who has evaded payment of income-tax and is proceeded with under section 34 and is held to have escaped income-tax has a right of appeal to the Appellate Assistant Commissioner of Income-tax and can challenge all the findings of fact given by the Income-tax Officer. If he does not get relief from the Appellate Assistant Commissioner, he is entitled to go before the Appellate Tribunal under section 33 and can challenge all the findings of fact given by the Income-tax Officer. On the other hand, a person dealt with under section 5(4) of the impugned Act has no such right."

Yet another ground on which the Chief Justice held that section 5(4) was bad in law was that, under this section, it is the Commission itself that reports to the Government against the persons who, in its opinion, have evaded taxes and it is also the Commission that decides their cases. Under this section, the Chief Justice said, "the Commission itself finds and gathers reason to believe that these persons have evaded income-tax and on its report Government is bound to refer their cases to the same Commission who has already arrived at the *prima facie* conclusion that they have evaded payment of income-tax. Thus, the "investigator and the judge in this situation are rolled into one." Finally, he held that section 5(4) offended the provisions of Article 14 of the Constitution and thus was void and unenforceable.

It is clear that a somewhat difficult situation has arisen for the Government as a result of the judgment. Since section 5(4) of the Act has been held void, the Commission can no longer report to the Government the cases of tax evasion, which comes to its notice, in the course of its work. Also, the Commission cannot deal with all the pending cases referred to it under this section. The Government itself may not be in a position to take action against those tax evaders, since section 34 of the Income-tax Act prescribes time limit for reopening cases of assessment. This means that the good work done by the Commission would avail the Government nothing. Again, the position of even section 5(1) of the Taxation of Income (Investigation Commission) Act is uncertain, although the Court has not expressed any opinion on the validity of this section. It may be difficult to uphold the validity of even this section. Reports from New Delhi emphasise that the Government is likely to examine the possiblity of amending the law, though it is not clear what amendments are contemplated. In business circles, it is felt that the Government will be well advised to settle the cases at ministerial level, though it is, again, not clear how this could be legally accomplished.

OFF THE RECORD

(By "ROVER")

THE business community in Bombay is used to occasional squabbles in the bullion market at Sheikh Memon Street. It is no new thing for it to learn one fine morning that some dispute regarding trading or settlement has been taken by a constituent to a court of law. There have also been times when trading in the market has remained suspended, as a result of some deadlock in settlement. Such occurrences are, however, very rare in the other speculative markets in the city. The forward market in cotton at Kalbadevi has a tradition of smooth working. Apart from the question of out-of-hours trading right in the trading hall, about which the authorities of the East India Cotton Association were alleged to be totally indifferent, the E.I.C.A. has built up a tradition of disciplined and ordered trading during the long regime of Mr. Purshotamdas Thakurdas. By his fair and firm, but tactful, handling, he has often saved a situation which might otherwise have developed awkwardly.

It is, therefore, with no small shock and surprise that business men in Western India have learnt about the recent developments in the Kalbadevi market, regarding the May contract, which expired on the 25th of last month. Though the E.I.C.A., or its committees have not been directly involved in the legal action, it has to be admitted that the reference to the court arose from a decision of the Association. The dispute is of a technical nature and it is not easy for those not intimately connected with forward trading in cotton and the by-laws of the E.I.C.A., to get a proper hang of it. It centres round the fixing of room rate, which forms the basis for calculating the "on" and "off" allowances for cotton of varieties other than the standard Jarilla of 25/32" staple, which are tenderable against contract.

It is said that, according to the prevailing practice, the basic rate for delivery in the matured contract was fixed by the Committee on the rate prevailing in the forward market on a given day. This rate was about Rs. 75 per candy lower than the rate for cotton of this quality in the spot market at the time. The "on" and "off" allowances were worked out on the comparison of this basis and the spot prices of various tenderable cottons on that day. It is claimed that under the by-laws of the Association, the prevailing spot rate for standard Jarilla should have been taken as the basic rate for fixing the price differentials. This action of the Committee, according to some, created an anomalous position under which Jarilla cotton of only 1/32" higher staple became entitled to a premium of Rs. 125 over the contract rate, while that of 1/32" lower staple stood at a discount of only Re. 1 below the contract rate!

It is alleged that this procedure gave an enormous advantage to those who were short in the May contract, as it forced the buyer to accept delivery of cotton at an artificially inflated rate. Even if one were to ignore the further allegations that the shorts, relying on this practice of fixing room rates and price differentials, deliberately pressed sales to lower the contract, so as to get higher "on" and lower "off" allowances and to scare away the buyers, one must admit that, whatever be the procedure laid down in the by-laws for fixing the basic rate, it is on the face of it unfair to accept the forward market rate for determining the basis and spot rates for working out the differences.

So long as the forward and spot rates keep near each other, as they usually do, at the time of the expiry of the contract, there is no injustice involved to either side in the practice of accepting as the basis for room rate the former, which is more definite than the latter. It is also true that had the futures rate been disproportionately higher than that in the ready market, instead of being considerably lower as in this case, the longs would have been the gainers because they would have paid only a nominal premia for higher staple cotton, while the discount on lower permissible staple would have been enormous. But it has to be remembered, in this connection, that the shorts would still have some remedy in such a contingency, inasmuch as they could have avoided giving delivery by paying the penalty fixed under by-law 64.

The Committee in following this long-established practice, however, cannot be blamed for doing so. On the one hand, it had no intention of favouring or disobliging either side. And, on the other, if it had departed from this practice, the other side would have questioned the decision and accused it of deliberately favouring the longs. All the same, a practice which is likely to favour either side and which cannot stand the test of logic, however time-honoured, has to be re-examined and revised if necessary. Now that the matter has been brought to a head and trading in August delivery to the extent of hundred of thousands of bales is in progress, it is imperative for the Association to consider the matter and clarify the position with regard to the method which will be adopted to fix the room rate and price differentials at the time when deliveries under the August contract would be due.

I can easily realise that it would be difficult for the Association to do so in view of the present dispute so long as it stands unresolved. But it would be in the interest of this august body and the enormous prestige and power it wields, to arrange for the settlement of the present disagreement on amicable lines. If there is litigation in the future between the E.I.C.A. and some of its constituents, on this or a similar issue, it would throw the whole working of the market out of gear and create innumerable complications. According to current reports, the Committee of the Association has very wisely left the matter in the hands of Mr. Purshotamdas Thakurdas.

I know that many of the readers of this column would wonder why I should have selected this somewhat technical subject for my comments this week. But I would like to remind them that cotton and textiles jointly form a solid foundation of the economy of Western India. It is, therefore, the duty of the business community as a whole, and of those who are not directly interested in any aspect of cloth and cotton, to keep track of what is happening in this important sphere. But my real aim in bringing up this matter is, once again, to point to the danger of letting the forward markets run away with themselves. Whether they like it or not, they have to be firmly anchored to their respective spot markets. They could only have a fixed cable length for meandering and any attempt at straying away from the circle and venturing on the high seas is bound to prove dangerous for the essentially frail craft. We have witnessed, during recent weeks, the bewildering spectacle not only of unnatural gaps between the spot and forward positions in various markets, but of the two markets marching in opposite directions at times.

Forward trading, offering hedge facilities to huge seasonal crops and a large number of equities, is an essential part of our present economic structure. However, it can be regarded as such only so long and so far as it serves this purpose. When it tends to get unreal, as a result of over-trading, cornering or organised bear raids, it endangers itself and the whole economy. Under our new concept of mixed economy, forward markets are already frowned upon severely by the authorities, while the more leftist elements want their extinction at an early date, not knowing the important help they render both to agriculture and industry. At a time like this, it would be nothing short of lunacy or suicide for the trade organisations responsible for regulating forward trading to relax their grip on wild and undisciplined elements operating in the markets.

I consider it equally necessary to draw the attention of the Forward Markets Commission to the unhealthy state of affairs in some of the markets. This is not a mere seasonal aspect. Apart from the *contretemps* in cotton, gold and silver have also been behaving in an unaccountable manner. Oilseeds too have been highly erratic. Some checks on the value of individual trading and on the daily range of fluctuations, which operate in forward markets abroad, are clearly indicated, to save these markets from themselves.

It is no defence to plead that the Commission has no powers to interfere in their working. If the Commission is convinced that all is not well with some of the markets, it must either ask for more powers or draw the attention of the Government to the anomalies which require setting right. The pose of the serene and detached Buddha in deep contemplation, though highly artistic and impressive in a statue, is hardly the right one for a body, which has to deal actively with everyday economic realities in all their ugly crudeness. I invite the Commission to state publicly what exactly it is doing to justify its existence.—*All Rights Reserved.*

WORKING OF TRADECONTROLS IN INDIA

ADVICE OF COMMERCIAL BODIES HELPFUL

(From A Special Correspondent)

NEW DELHI, 1st *June*

THE functioning of trade controls is being made smoother by the Government of India by the adoption of a device by which representative members of trade and commercial bodies have been asked periodically to send in their suggestions towards the improvement not only of the working of the trade controls, but also of expanding the export trade of the country. It is gratifying to note that the commercial community has taken advantage of this procedure and has begun to send in their constructive suggestions from time to time, which are being examined by the Government on their merits. One such suggestion, for instance, recently submitted to the export Advisory Council is that the export policy should be guided by two principal factors: it should be stable and motivated by a long-term outlook. Even though the internal supply position might not warrant free exports of some of the country's commodities to established markets, the Government should at least allow some token exports, so that the country could maintain continuity in the trade relationship. In respect of some commodities, the Government should facilitate the conclusion of long-term contracts with foreign buyers. Further, as the country has embarked on a policy of planned development, it should be able to assess to some extent the possible changes in the internal economy of the country within the next two or three years and should formulate plans for building up our export trade from now on in such commodities as might become surplus in the next year or two. During the last few years, for instance, a number of engineering and consumption goods manufacturing industries have come into existence. These industries have been gradually expanding their production and it is, therefore, possible that trade links could be established in respect of these industries from now on, through suitable publicity, setting up of export promotion councils, etc.

DELHI LETTER

Export Duty on Myrobalans

At a time when the merchant community has been making incessant demands on the Government regarding either the reduction or abolition, as the case may be, of export duties, it is somewhat surprising that it has come forward with a suggestion that the Government should impose an export duty on myrobalans. This export duty is intended to protect the indigenous myrobalan extract industry. It is alleged that the Indian industry has been suffering from a disadvantage on account of preferential shipping freight, since 1950, on exports of raw myrobalans, showing a difference of 60 shillings per ton for shipment to the U.K. The foreign manufacturers of myrobalan extracts have the advantage of disposing of their home-made extract in liquid form to their tanneries in tank wagons, whereas the Indian manufacturers have to convert the liquid extracts into solid or powder form and pack the same in triple bags to ensure safe transit, all these taking the cost of production to a higher level. Further, many foreign countries have imposed heavy import duties on the extract ranging from 8 per cent. to 25 per cent., keeping at the same time import of raw myrobalans free of duty. Thus the cost of Indian myrobalan extract has become higher than that of foreign-made extracts and the Indian industry is considerably handicapped by unfair competition from foreign manufacturers. It is computed that the landing cost of Indian myrobalan extract in the U.K. comes to about £54, while the cost of myrobalan extract produced by manufacturers in the U.K. and the Continental countries works out to about £51 per ton ex-factory. Thus foreign manufacturers are stated to be having an advantage of £3 per ton, if they import raw myrobalans. It is further argued that myrobalans have no suitable substitute either within or outside the country. Foreign importers have, therefore, to depend on India for the import of raw myrobalans. During the last three years, India has exported, on an average, about 30,000 tons per annum of raw myrobalans valued at Rs. 80 lakhs. Despite considerable disadvantages, the quantum of exports of myrobalan extract improved from about 3,400 tons in 1950-51 to about 6,000 tons in 1952-53. On account of the decline in prices, the value of exports in 1952-53, however, amounted to Rs. 25.12 lakhs only as against Rs. 33.62 lakhs in 1951-52 (5,000 tons) and Rs. 21.27 lakhs (3,400 tons) in 1950-51. In order to increase the competitive capacity of the Indian manufacturers of myrobalan extract, it is suggested that a nominal export duty of Rs. 50 per ton on raw myrobalans exported from this country would fetch about Rs. 150 lakhs to the Government exchequer. Besides giving protection to the indigenous industry, this levy will enable India to increase the exports of manufactured goods as against raw materials. The Central Board of Revenue can examine the whole problem from this angle and once it is conclusively proved that myrobalans have no competing raw materials in other countries, the case for the levy of an export duty becomes strong.

A number of suggestions have been made for promoting India's export trade in diverse directions. For instance, India is not in a position to compete on equal terms in Australia in regard to linoleum due to the low preferential duty levied on the U.K. products. It is suggested that the Government of India should take up the matter with the Australian Government, so that Indian exporters may be in a position to compete with the U.K. manufacturers on fair terms. With a view to propping up exports of linseed oil, a suggestion has been made to allow a small quantity of exports of linseed oilcake, linking it with oil. Exports of linseed oil in 1953 receded to 7,265 tons as against 33,000 tons in the preceding year, the decline being attributable to the lower prices quoted by Argentina and Uruguay and also due to the release of reserve stocks by the U.S.A. at reduced prices. It is, therefore, stated that some special steps should be taken to improve exports of linseed oil from the country.

Discrepancies in the Classification List

The trade has also drawn the attention of the Government to the discrepancies in the classification list regarding the export duty on cloth and kindred items. For instance, exports of rubberised cloth is now subject to the export duty of 10 per cent. *ad valorem*. It is argued that rubberised fabrics, whether single-textured or double-textured, have been excluded from cloth for the purpose of excise duty and that they have also been classified as rubber manufacture by the Export Trade Control Office for the purpose of export. Further, the purpose for which rubberised sheeting is used is completely different from that from which rubberised sheeting for raincoats, holdalls, ground sheeting and other rubberised waterproof garments are used. It is suggested that waterproof cotton canvas should also be excluded from the exportable list. This duty, along with a fairly high import duty in the importing countries, tends to make the price of Indian canvas almost prohibitive. As a result, such goods from other countries, particularly from Japan, are gradually pushing out the Indian materials from the markets of Burma, Hongkong, Siam, East Africa and the Middle East. The abolition of this duty is expected to improve the economic position of the waterproofing industry. Similarly, cotton stockinette should be excluded from the taxable list in regard to export duty, since it is a hosiery item. The abolition of this duty will enable India to build up a market for these products in Australia and New Zealand. According to the trade, there is no justification for classifying hosiery knitted fabrics under cloth (Indian Customs Tariff No. 6) as all technicians and experts in this line consider that this item cannot come under cloth, and as the Textile Commissioner has exempted hosiery and hosiery knitted fabrics in rolls from the purview of the textile control orders.

Some improvements have also been suggested in regard to the presentation of statistics. According to the trade, export statistics of the following items should be maintained separately: *kardi* oil, *niger* oil, tobacco seed oil and *kardi* seed. Separate figures for export of linseed oil raw and linseed oil boiled should be maintained to ascertain the trend of the export of refined products. The export statistics of rapeseed and mustard seed are recorded separately. As both these items are the same and there is no distinction in the export policy, as also in the crop reports, these items may be amalgamated, it is suggested.

M.P'S SALARY INCREASE

OPPOSITION WINS THE DAY

(From Our Own Correspondent)

LONDON, 29*th May*

THERE are times when the House of Commons, usually so sensitive to every cross-current of British public opinion that it often falls into the danger of doing nothing lest it offend anybody whose votes its members rely upon, suddenly turns its eyes upon itself and becomes entirely blind to the public which it represents. Such an occasion has been the recent discussions and debate about the salary increase recommended by the Parliamentary Commission. Indeed, though the House has voted decisively in favour of the increase, there is talk even now from some Conservative back-benchers that they should have a go at postponing the increase till old-age pensioners and Service pensioners have had their benefits brought into line with present-day costs of living. These members are apparently quite oblivious to the fact that what began as a reasonable proposition in the eyes of the public is, with excessive debate and excessive argument that the needs of others should come first, on the way to becoming a joke which could turn Parliament into a laughing stock.

LONDON LETTER

Those who feel genuinely that the needs of the pensioners should come first (though this is a matter on which the House could hardly coerce the Government) would be better advised to copy the example of the Labour member who announced after the debate that he would devote the whole of his increase to the needs of the old-age pensioners in his constituency. But most members—unless they be company directors or the like, or journalists or have independent incomes—will find that charity has to begin at home. After all, on the present rate of £1,000 per annum, less average expenses £750 per annum, an M.P. can reckon on the princely salary of £5 per week! His proposed £15 per week (less tax, which will lop off most of the increase for anyone enjoying an extra-Parliamentary income) will be none too much.

But the interesting part of this economic exercise in determining the equitable allowance (the Labour Party speaks of allowances and the Conservative Party of salaries) for a Parliamentary representative lies in the method of treatment. When the proposition first came before the House, it was referred back for further consideration and the House asked the Government for guidance. The guidance came in the Chancellor's plea not to vote for a salary increase but for a tax-free expense allowance. There is no doubt that, from the economic angle, the tax-free allowance would be the better proposition, better in the sense of being truer to the facts since the Parliamentary Commission had already established that £750 was the average expense "fully and solely incurred" in the performance of Parliamentary duties. If all members were allowed £500 per annum for their expenses, then the onus would be on them to show whether they were entitled to tax allowance on any part of their salary as well and the salary, remaining at £1,000, would be more in line with what professional people understand as a salary; which is no doubt why most of the Conservative ranks supported the Chancellor.

The opposite point of view, which won the day in Parliament, was the feeling of most Labour members—and of the small group of Conservatives who supported them and whose adherence (together with the abstention of a good many other Conservatives from voting at all) turned the scale—that expenses are a business racket for tax-dodging and that Members of Parliament should have no part with them. It would no doubt have been different if it had been proposed to provide members with services in kind, such as free secretarial assistance or even the free meals which one member suggested, but, as the Inland Revenue is prepared to admit various expenditure as tax-free, the Labour Party felt that it made no practical difference whether to call the increase an expense allowance or a salary increase (or even just an "allowance") but it would sound very different in the constituencies. There an honest-to-goodness salary increase would go down a deal better. All this shows how important it is to handle an issue of this kind tactfully in Parliament: if, when the Commission first reported, Parliament had decided on adding an expense allowance to members' pay, it would have attracted relatively little attention.—*All Rights Reserved.*

CONTROL OF MANAGING AGENTS

VALUE OF MANAGEMENT AUDIT

(By R. NANABHOY, F.C.W.A., F.C.C.S., Industrial Management, Cost and Quality Control Consultant)

IT is indeed a matter of gratification that the Finance Ministry is prepared to give further thought to representations for preventing abuses and *mala fides* that have brought discredit to the system of managing agents in the country and injured the interests of shareholders, in particular, and the national economy, in general. Critics must really be thankful to the Finance Minister for his assurance to give fullest consideration to their views. This assurance has encouraged the present writer to put forward a suggestion which, if implemented, should enable the Government to regularise the working of joint-stock companies in such a manner as to avail all classes of investors of equal benefit.

My suggestion in brief, is to make a mandatory provision in the Company Law for *management audit* in every company in addition to financial audit. The Government has already tried its level best to make the law perfect and comprehensive. But there are still some 'vexed' problems which cannot be totally solved by legislation. It, however, cannot afford to stop its efforts to solve the problem merely because it is difficult. It has to try hard and evolve a method for checking malpractices. My suggestion, if given due consideration, will, without unnecessarily interfering with the genuine commercial or industrial activities of a company, help close the loopholes through which the company's funds may be dissipated.

A managing agent is considered to be a person, firm or company entitled to the management of the whole affairs of a company by virtue of an agreement with the company and under the control and direction of the directors. Managing Agents in India have played a vital role in the economic development of the country. They have started and nursed the industry, and have borne risks. The system, as Dr. S. G. Panandikar says in his book, *Banking in India*, has proved to be "a substitute for a well-organised capital market and an industrial banking system of Western countries and has come into existence by the sheer force of economic circumstances."

As if to outbalance such favourable points, managing agents have become nearly the sole proprietors of companies and have tried to place their personal interests above those of shareholders. In several cases, inefficient descendants have been obliged to engage supervisory personnel at the cost of the company while retaining their own remuneration. Consequently, supervisory costs have become heavy. Thus, as the managing agency system has been marred by numerous abuses and malpractices, it is quite understandable that the Government should be anxious to assume powers for exercising a strict control over the activities of managing agency companies. The malpractices have given a fillip to the demand by a section of the public for putting an end to the system itself. The saner section, however, still considers that, under the present economic structure of the country, the managing agency system will continue to prove useful for some time to come, provided the defects therein are removed.

Difference Between the Two Systems of Audit

It is not the managing agency system that is defective, but it is the dishonest men who have made it so. We have now to see how a managing agency firm can be controlled by the shareholders, if they are given power of carrying out management audit as distinct from the financial audit. The most important difference between these two forms of audit is that, while the financial auditor will start somewhere in the middle of the process, the management auditor will start from the beginning. The financial auditor at times will rely on certificates given by the management, but the management auditor will testify the genuineness of the certificate by virtue of his specialised skill. The financial auditors are more or less bound by legal duties and tend to confine their activities only to matters of legal importance more than to those of moral importance. The management auditors will serve the moral obligation more, as they are supposed to guard the interest of the shareholders and workers. Let us take some instances of improper practices followed by some of the managing agents and see how they can be remedied.

The managing agents have their personal interests in some other concerns. They will manufacture the goods for that private concern of theirs in the company managed by them. There will be no trace of such transactions in the account books. In such a case, suppose the book figures are as under:

	Units
Opening stock	5,000
Purchases during the year	50,000
	55,000
Closing stock	10,000
Consumption	45,000

From the above illustration, it will be seen that the closing stock is 10,000 units. But supposing, for argument's sake, physical stock is only 7,000 units. In such a case, the financial auditor may invariably pass the physical stock as correct on the strength of the stocktaking report certified by the management. Actually, the closing stock should be 10,000 units. The management audit will not allow such a flaw to escape so easily. This auditor will go through every stage and will verify what the actual stock should be and will demand explanation from the managing agents, if the difference between the physical stock and the book figures is abnormally high. This will also reveal the malpractice of payment of false invoices or at times receiving short supplies and making payments for more quantities. Thus, in the above example, for instance, the purchases may be shown as 50,000 units, but actually only 45,000 units might have been received and payment made for 50,000 units; or after receiving 50,000 units, 5,000 units might be privately sold out as raw material. Such defects are not usually discovered under the routine financial audit, but management audit will surely discover them.

Relationship Between Consumption and Output

The management auditor will try to arrive at the nearest relationship between consumption and output in the industrial or business concern which is under his audit. Suppose the relationship is as under:

	Tons
Consumption	100
Finished products	75

Now the auditor will testify the figures supplied by the management on the touchstone of this ratio. The production figure must prove its relationship to the consumption figure and the management will be answerable for any variation from this estimate.

Relationship Between Hours Worked and Output

The management auditor will relate the number of hours worked to output. This will assist him in ascertaining whether the labour is fully employed or whether bogus labour is shown while actually the industry is underemployed. The financial auditor will only ensure the appropriateness of the wage bill, while the management auditor will calculate the total number of hours worked from the wage bill and compare the results with actual production shown on the basis of a fixed ratio arrived at from experience.

Managing agents may incur expenses at their sweet will and may utilise the funds for wrong purposes, as is alleged in the cases relating to the Sholapur Mill, Mr. Venkataraman (I.C.S.) and Messrs. R. Nanavaty & Co. (fertiliser scandal). It is a wonder how these expenses escaped the eyes of the auditors. Perhaps, the main reason is that the auditors considered legal validity of documents as a matter of important concern rather than the actual or potent use to which the amount is put to. The members of managing agency firms enjoy trips to foreign countries in the name of business tours, while, in effect, very little business is done on behalf of the company, bearing no relationship to the expenses of the trips. Not only do the managing agents themselves enjoy those so-called business tours but they send their brothers, sisters and even distant relatives to foreign countries at the cost of the managed company without any mentionable return. Similarly, under the disguise of secrecy of business, the managing agents hide their misdeeds and malpractices. This state of affairs should not be tolerated under the new Act. The expenses incurred by the managing agents should be related to their productive value. They should be made to explain how far these expenses have helped business uplift as compared with the costs incurred. This work can be done by management auditors by asking for the contracts entered into after going abroad, actual supply of goods to foreign countries or actual imports from foreign countries. They can also see whether the work could not have been done by correspondence.

Unproductive Units

From the detailed review of consumption and output as well as sale proceeds, the auditor will abe able to find out whether or not some units are unprofitable and will make suitable recommendations for dealing with such units. Similarly, he will point out which units are weak and need improvement. Thus the shareholders will come to know the week points of their concern and can take measutes in beneficial direction.

Records of Finished Goods

Records of finished goods are not maintained in such a way as to disclose the real position. As the financial auditor does not go deep into these facts, the malpractices continue to exist. Whereas the financial auditor will only check the invoices and outstanding balances, the management auditor will first verify the invoices with challans and stock record and will find out whether the finished goods sent out are actually billed or not. If this is not done, it will provide a loophole which unscrupulous agents will take advantage of to the detriment of shareholders and the Treasury.

If the system of management audit, with extensive powers, is put into practice, it will help reduce the malpractices to the minimum and thereby bring down the costs appreciably. The profits will proportionately rise, which in turn will bring more dividend to shareholders and yield more revenue to the Government. Another advantage of this system is that it will have an automatic check on the financial auditors and will compel them to be more careful, while confirming and certifying the accounts. Incidentally, if this system is introduced in Government undertakings, there will practically be no scope for corruption among their employees.

It is, however, important to decide as to who should have the power to appoint these auditors. It is needless to add that neither the managing agents nor those who are in charge of managing the companies which are not under managing agents should have the power of appointment of management auditors. The Central Government should have an areawise list of recognised management auditors which should include chartered accountants and cost accountants having practical experience of such work. It is from the list of such approved auditors that a company should select a management auditor with the consent of a 75 per cent. majority of shareholders. The removal of an auditor once chosen should be subject to the prior approval of the Government. This is necessary in order to ensure that he can work freely without fear of his being dismissed by the managing agents with the help of majority votes which they can invariably muster. It is, of course, necessary to add that provision must be made for giving suitable punishment to an auditor who does not discharge his duties properly.

BOMBAY STATE FINANCIAL CORPORATION

CHAIRMAN EXPLAINS POLICY

THE policy of the Bombay State Financial Corporation in regard to rendering financial assistance to needy industries in the State, as outlined briefly in the Directors' report (vide *Commerce* dated 29th May, 1954), has been further elucidated by Mr. Purushotamdas Kanji, its Chairman, in his speech at the first annual general meeting of the Corporation held on 31st May last. This elucidation gives a clear idea of the nature and extent of aid which the Corporation can extend to industry in the State. The speech clarifies also the conditions under which the assistance will be provided for industries. This clarification should help industrialists precisely to know what they can expect from the Corporation.

The Corporation is authorised to undertake various types of business under section 25 of the State Finance Corporation Act. The Corporation does not propose to venture into all these types at present. Its operations, in the first instance, will be confined to granting loans and advances to industrial concerns of medium- and small-scale industries. It would participate in subscribing also to debentures of industrial concerns. As business expands and experience is gained, the Board, according to Mr. Kanji, may consider undertaking other lines of business in due course. All this shows that the Corporation is proceeding on cautious lines.

In deciding its policy, the Board has taken care to avoid overlapping of activities with the all-India concern, the Industrial Financial Corporation of India. This is sought to be achieved by its decision to entertain loan applications from public limited companies of medium- and small-scale industries only upto a maximum of Rs. 5 lakhs. Accordingly, public companies in the State requiring loans and advances in excess of this maximum limit will have to approach the bigger body for their financial requirements. As the central institution, however, entertains applications only from public companies, other concerns such as private limited companies, registered partnerships, and proprietory concerns can only seek financial aid from the State Corporation. This demarcation of activities between the State and the Central Corporations is both necessary and practical. Besides preventing overlapping, it helps co-ordination of work between the two institutions.

The Board has fixed the minimum and maximum amount of loan which it can lend to concerns at a time at Rs. 10,000 and Rs. 5 lakhs respectively. The Board considers that the minimum loan fixed at Rs. 10,000 would enable small-scale concerns to take advantage of the assistance of the Corporation. Concerns requiring loans below this minimum will have to seek assistance from other sources. Although the maximum limit prescribed in the Act is Rs. 10 lakhs, the Board has done well in deciding that, in the initial stages, the limit should be Rs. 5 lakhs. This will help the Corporation to extend assistance to a wider sector of industry in the State.

Although the Corporation's activities are confined to medium- and small-scale industries only, such concerns as can offer adequate security can alone avail themselves of accommodation from the Corporation. For, under the provisions of the Act, the loans—both medium- and long-term—must be secured by mortgage of fixed assets of the concerned company. Consequently, industrial concerns which have no tangible or fixed assets to offer as security are not eligible for assistance from the Corporation. As the amount of loan sanctioned will be about 50 per cent. of the net value of fixed assets of a concern, the company concerned should have assets valued at not less than Rs. 20,000, if it seeks a loan of Rs. 10,000. This limitation may act rather harshly on small industrial units such as rice mills and oil mills operating in mofussil areas. It may be noted here that these concerns will have to offer securities to commercial banks for credit other than medium- and long-term, for carrying on their day-to-day operations.

During the four months ended 31st March, 1954, the Corporation received about 50 applications. The Executive Committee of the Board has already considered seven applications and investigations are in progress in respect of others. A striking feature of these applications is that loans are required either wholly or partly for working capital. But the Board has decided that loans should be primarily given for purposes of acquiring fixed assets, either for development of new units or for expansion, renovation or modernisation of existing units and that loans for working capital should be given only in exceptional cases. The Government of Bombay, too, is stated to have instructed the Corporation that loans for working capital should be given in exceptional cases for only limited amounts and for shorter periods. Although this direction does not rule out the possibility for giving loans for working capital altogether, the Corporation has, for the present, decided to reject all applications for loans purely for purposes of working capital.

The assistance to be provided by the Corporation will, to a certain extent, be limited by changes in economic conditions. This point has been very well explained by Mr. Kanji. As a result of the change-over from a sellers' to a buyers' market all the world over, industries, large and small, are faced with a set of tough problems such as keen competition within and from without, declining prices, lower turnover, etc. In the result most of them are working below their installed capacity. Commenting on this aspect of the question, Mr. Kanji observes: "It may be due to high cost of production, lack of marketing facilities, competition from imports, lack of finance, lack of technical personnel, want of co-ordination, poorer quality products, labour conditions and such other factors." He desires that the Central or State Government should appoint a Committee to enquire into the condition of these industries. He thinks that such an enquiry is necessary, because, unless the underlying causes are known, it would not be possible to apply effective remedies. In other words, the Corporation will be in a better position to deal with loan applications from such of the industries as are producing goods below their installed capacity, if it is posted with up-to-date information regarding the economic position of these industries.

U.N. ECONOMIC DEVELOPMENT FUND

Response to the proposal for establishing a Special U.N. Fund for Economic Development (S.U.N.F.E.D.), put forward by the members of the U.N., would appear to be not very encouraging. The replies received from 20 member-nations on this proposal fall under three categories. The first category, from the underdeveloped countries, expresses the view that the world situation—and, in particular, the situation in the underdeveloped countries—demands that the S.U.N.F.E.D. should be set up as soon as possible. Even, if provided with only modest resources, the Fund would be an important part of the U.N. machinery for ensuring speedy economic development. The countries under this category take the view that it is now time to draft the statute of the Fund on the basis of the recommendation of the special committee of nine which went into this question. They are prepared to contribute to the finances of the Fund to the extent their means permit.

The second category of replies is from the industrially advanced countries. This group seriously doubts the advisability and feasibility of setting up the Fund now or even in the near future. It recalls that the U.N. Assembly's resolution on the establishment of an international fund for financing development of underdeveloped countries was conditional on supervised disarmament which would make it possible for the advanced countries to make available to the Fund resources at present absorbed in defence expenditure. That condition has not been fulfilled. It further says that the economic and financial position of the developed countries does not permit them to contribute to the S.U.N.F.E.D. Some of the countries, however, seem to be willing to contribute, if the U.S. participates in the scheme.

The third group of replies is also from industrialised countries and opines that the Fund should be set up at once. It feels that it is neither necessary nor desirable to make the establishment of the Fund conditional on disarmament. The sum of $250 million required to start the Fund will be only an infinitesmal fraction of the world's total annual defence expenditure. It believes that the Fund will not duplicate or diminish the effectiveness of existing agencies.

The views of the three categories above are summarised in an interim report prepared by Mr. Raymond Scheyven of Belgium. He was appointed by the U.N. Assembly, last December, to examine the comments of Governments on the proposal to establish S.U.N.F.E.D., as suggested by nine international experts. These experts—Dr. D. R. Gadgil of the Gokhale Institute, Poona, was one of them—had proposed that the Governments of member-countries should be requested to contribute an amount equivalent to $250 million as initial capital for the Fund from which long-term, low interest loans could be given mainly for non-self-liquidating projects, in underdeveloped countries, such as road building and irrigation schemes. It was felt that the Fund would fill a gap in the existing U.N. machinery for promoting economic development and, at the same time, help fill another gap between the money needed by underdeveloped countries and the capital available for their development.

BANK EMPLOYEES URGE TRIPARTITE CONFERENCE TO AMEND AWARD

The Government of India's decision to issue an ordinance extending by three months the statutory limit of 30 days given to it for taking a decision on the Appellate Tribunal's award has been criticised by the All-India Bank Employee's Association, Calcutta. The Secretary of the Association told Press representatives last week that the Government was anxious to provide relief to bankers at the cost of the workers. It has set, he remarked, the public, depositors and the shareholders against the employees by saying that banks would be in jeopardy, if they were required to implement the award fully.

Analysing the provisions of the award, he said that while it gave some relief to 57 per cent. of the 60,000 bank employees, it adversely affected the remaining 43 per cent. Most of those who would be benefited were in rural areas or working in 'B' class banks. The bankers now wanted, he alleged, to exclude employees in rural areas from the purview of the award.

With a view to settling the dispute amicably, the Secretary has suggested the holding of a tripartite conference of the representatives of bank employers, employees and the Government. He opined that suitable amendments to the award could be made at the conference so that "it may be acceptable to all employees." It may be mentioned here that whenever tripartite conferences are held, the object is to see to it that the decisions reached at such conferences are acceptable to all the parties concerned and not only to one section.

"BANKRUPTCY BANISHED BY BUTLER"

History should have on record the high and richly deserving tributes paid by Sir Winston Churchill to Mr. R. A. Butler, the Chancellor of the British Exchequer, at a mass meeting at Albert Hall, London, last week. Coining an appropriately alliterative slogan, "Bankruptcy Banished by Butler," Sir Winston remarked: "We salute Mr. Butler, the Chancellor of the Exchequer, who has so faithfully and patiently followed the prudent, though often unpopular, courses which alone made this recovery possible."

These observations followed Sir Winston's review of the welcome change that had taken place in the status of the pound sterling since the Conservatives came to power. "Soon after we became responsible," he said, "the drain on our precious store of gold and dollars was stopped, and, for two years, we have been steadily rebuilding our reserves. Today they stand once more at over £1,000 million or £3,000 million." He claimed that the outside world, which was watching the country's efforts and seeing its results, had regained its confidence in the country. Sterling once again had become a currency which the world could trust. "From the shadow of bankruptcy," he continued, "we have advanced to solvency. At home during the past two years, the cost of living has been very much steadier, and we have also had the hope that we should not find it beyond our power to turn the slope downwards. Production has achieved new high records and the highest level of employment has been maintained."

Billowing Sails

once carried the world's communications and commerce. Even then Lloyds Bank was providing its clients with information and facilities for overseas trade.

Now, too, as then, Lloyds Bank continues to offer these services to those engaged in foreign business. With its own Branches at all major ports in England and Wales, and in India, Pakistan and Burma, and with affiliated Institutions and Foreign Agents and Correspondents in every large port and city throughout the world, Lloyds Bank is fully equipped to provide comprehensive service and finance for all classes of foreign trade.

LLOYDS BANK LIMITED — INCORPORATED IN ENGLAND — L&I/NO—1954

BANK OF RAJASTHAN SHOWS BETTER RESULTS

DEPOSITS AT A *RECORD* LEVEL

A SMALL but welcome improvement in profit is disclosed by the audited accounts of the Bank of Rajasthan Ltd. (General Manager: Mr. D. L. Gupta) for the year ended 31st December, 1953. The profit, before providing for taxation, which had dropped from Rs. 2.06 lakhs for 1951 to Rs. 0.85 lakh for the succeeding year, has risen to Rs. 1.05 lakhs. Though the setback in profit suffered in the previous year has thus not been fully recouped, even this small improvement is a noteworthy achievement in the face of the difficult business conditions and high cost of operations, which hit hard many a Scheduled bank in India. After providing a larger sum for taxation and making a small addition to the reserves, the dividend has been maintained at the modest rate of 3½ per cent., to which level it was reduced last year from 4½ per cent.

The following table gives the salient features of the Bank's profit and loss accounts and balance-sheets relating to the past four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1953	1952	1951	1950
Interest and discount earned ..	5.92	5.63	5.84	4.64
Commission and exchange earned	2.70	1.02	2.38	1.98
Interest paid	2.71	2.29	1.72	1.15
Expenses	4.08	4.43	4.41	3.65
Depreciation	0.22	0.11	0.21	0.16
Profit	1.05	0.85	2.06	1.82
Provision for taxation	0.50	0.27	0.25	0.40
To reserves	0.24	0.29	1.68	1.02
Dividend	0.32	0.28	0.28	0.23
	(3½%)	(3½%)	(4½%)	(4½%)
Carry forward	0.02	0.03	0.02	0.05

	As on 31st December			
	1953	1952	1951	1950
Capital	9.22	9.22	7.45	5.15
Reserves	5.01	4.82	4.50	2.53
Deposits	172.80	150.22	152.81	149.89
Advances and bills purchased and discounted	69.12	70.23	63.83	49.64
Investments	63.02	55.81	65.76	47.68
Cash	61.79	48.26	67.32	66.79
Balance-sheet total	209.50	190.23	197.24	183.89
Ratio to deposits of—	%	%	%	%
Advances	40.0	46.7	41.4	33.1
Investments	36.6	37.1	36.6	31.8
Cash	35.8	32.1	37.3	44.5

The gross income of the Bank for the year under review, amounting to Rs. 8.97 lakhs, is a record and represents an increase of Rs. 1.09 lakhs over the year. The increase in gross income is presumably due to a larger turnover of business. This may be due to the improvement in the agricultural situation in the State, which had been affected seriously by drought in the previous year. Of this rise in income, the two main sources, namely, interest and commission, account for Rs. 29,000 and Rs. 78,000, respectively. The rise in profit has not kept pace with the increase in gross income on account of the rise in operation costs. Expenses for the year under review are the highest on record for the Bank. Interest paid also has gone up sizably, but this is evidently due to the increase in deposits and the high rate of interest that prevailed throughout the year. After providing Rs. 50,000 for income-tax, as against Rs. 27,000 in the previous year, the Directors have set aside Rs. 24,000 to the reserve fund, which had received Rs. 17,062 in the previous year.

It will be observed from the foregoing table that deposits have gone up by Rs. 22.58 lakhs to a record level of Rs. 172.80 lakhs. A break-down analysis of deposits shows that fixed deposits have risen by Rs. 7.32 lakhs to Rs. 57.67 lakhs, savings bank deposits by Rs. 4.62 lakhs to Rs. 33.91 lakhs and current, contingency accounts, etc., by Rs. 10.64 lakhs to Rs. 81.21 lakhs. Advances and bills purchased and discounted show a small drop of Rs. 1.11 lakhs over the year. Investments, on the other hand, have been strengthened by Rs. 7.21 lakhs to Rs. 63.03 lakhs, almost the whole of which—Rs. 62.56 lakhs to be precise—are in Government securities. The market value of the investments in Government securities as at the close of the year is lower at Rs. 60.68 lakhs, the depreciation being more than covered by the investment reserve amounting to Rs. 2 lakhs. The major part of the investments consists of short- and medium-dated securities maturing within ten years, those maturing after ten years representing only 13.2 per cent. of the total investments. Cash balances are higher by Rs. 13.53 lakhs at Rs. 61.79 lakhs, at which the cash coverage to deposits is as high as 35.8 per cent. The total liquidity ratio is at an impressive level of 72.3 per cent. In fine, the Bank's balance-sheet is a clean one.

AMERICAN LETTER

ECONOMIC CONDITIONS BELIE TALKS ABOUT RECESSION

1954 WOULD BE A GOOD BUSINESS YEAR

(From Our Own Correspondent)

SAN FRANCISCO, *27th May*

I HAVE just completed a tour of the United States, particularly California. The strongest impression is that of continued and unimpeded growth of the West Coast, partly at the expense of other sections of the United States. It belies all recession talk. The second somewhat frightful observation is the fear of imminence of another war. There is general realisation that things have been going badly at the Geneva Conference. Also, there is a very acute feeling here on the West Coast that the South-Asian situation is highly critical and highly explosive. The hesitancy on the part of Great Britain and the United States to take any decisive measures is compared with the appeasement policy of Chamberlain towards Hitler at Munich. That this policy does not work, is quite obvious and that the Kremlin has had the initiative all these years is equally apparent to the man in the street in even the smallest farming communities.

While President Eisenhower is still much revered, he is accused of indecisiveness. Secretary Dulles' statements, stoutly defended by the President, make no sense to most people. The general question is "What next?" Commentators galore say in print, on radio and television, in effect "we are very close to war."

India's Position Misunderstood

India's position in this serious Asian situation is widely misunderstood, largely out of ignorance, in my opinion. For most people, the stand taken by Prime Minister Nehru is a complete mystery. It is not to me, because I had the privilege of attending a dinner which was given for him five years ago at the San Francisco Press Club. He explained his position then and it has been logical, on the basis of that, that India has taken the line of policy, it has pursued. There is great need that official quarters at New Delhi explain to the United States and the Western world the reasons for their actions. Prime Minister Nehru is accused here in many quarters to aspire for the leadership of all of South-East Asia. Also, that he does not want any United States interference, politically or economically, and that, in effect, he favours the Communist side.

Turning back to the political situation in the United States, there seems to be little doubt that, if national elections would be held today, instead of next November, the Democrats probably would win. However, party-lines are quite confused. Voters have become quite selective, just as the investors in the stock market. Those of independent thought, vote for people rather than for a party.

In the economic field, things have been much better than expected. Industrial production came up to seasonal expectations in April for the first time since last July. The Federal Reserve Board, which never abandons caution, estimates that the April output rate continued into the first part of May. Steel operations climbed to the highest point since last February, although a decline was forecast. A survey of aluminium sales showed the volume to be higher than a year ago. Also, business inventories have been trimmed at a $5,000 million pace.

Steel scrap prices advanced. Cotton textile prices firmed in response to the biggest buying wave since last August and there were many budding plans in evidence in the fields of electronics, atomic power industrial applications and port developments stemming from the St. Lawrence Seaway Project.

A large chain retail store, S. S. Kresge Company, announced plans for 31 new stores and Woolworth, the largest in the field, will open 34 new branches.

From all indications, home building this year may reach the second largest total in history. Aluminium Company of America announced that it expected to borrow $100 million to complete its five-year expansion programme. Johns-Manville said that it would spend this year about $18.5 million on improvements and Southern Pacific Company has a $60-million capital programme coming up.

Perhaps the best indicator of consumer health are the public utilities. The largest concern in the business, Consolidated Edison Company, of New York, held its annual meeting the other day. H. R. Searing, President of the Company, told stockholders, "we judge that wages are holding up well, because we see no slowing down in the payment of service bills. We keep a close watch on store vacancies and see no significant increase. We see no unusual unemployment. As a matter of fact, we have difficulty in hiring manual workers and certain classes of manual help."

This has been characteristic throughout this "recession." Here in California, for example, there has been a big ado about the influx of labour from Mexico, mostly illegally. Fact of the matter is, that most of the rice farmers in the desert, which is being reclaimed by irrigation, welcome these workers, legally or illegally, because they cannot find Americans willing to work in the fields.

So far as the overall picture is concerned, the two mainstays of the American economy in recent years are better than expected. They are construction which is supported by a $2,000-million Federal highway aid programme and industrial spending for plant and equipment. The logical conclusion, therefore, is the much heralded depression will not develop any further. Indeed, signs of upturn are appearing every day. Should a war break out, activity would, of course, be accelerated beyond present projections, but even without it, 1954 should be a very good business year.—*All Rights Reserved.*

MILLS URGED TO BUY NEW PLANT

U.K. PREPARED TO FACE COMPETITION

A CONTRAST between the attitude of the Government in this country towards the Indian textile industry and that of responsible persons in overseas countries towards the industry in their own countries is provided by a study of the proceedings of the recent International Cotton Congress at Buxton. The Government in this country, as well as the labour leaders and others in public life, are never tired of preaching the dangers of re-equipment, modernisation and rationalisation, and the virtues of the *status quo*. By contrast, Sir Harry Pilkington, President of the Federation of British Industries, told the International Cotton Congress that the industry should invest in new plant and equipment without delay. He believed that many people in industry were postponing re-equipment, because they were continuing to think in terms of 1939 values. It was an unrealistic attitude, because there could be no return to 1939 levels. He said: "Anybody who is putting off investment in the belief that prices will be cheaper later on is living in a fool's paradise." The moral of this advice could be slightly varied to suit Indian conditions. It would then be: "Anybody who believes that by postponing modernisation and rationalisation the Indian textile industry can maintain its competitive position is living in a fool's paradise."

Sir Harry appealed for wider opportunities for British industry to export its products to overseas markets. He said it wanted the opportunity to sell in the U.S., in West Africa, in the Argentine, and "even on the other side of the Iron Curtain." In the best British tradition of courage in the face of heavy odds, he said: "We in Britain are not afraid of competition; we have been brought up on it and we are prepared to compete with anybody provided we can have conditions of a fair fight. In that way, we can hold our place in the markets of the world on our merits." We would like to see similar courage in the ranks of Indian millowners. But before that can happen, it is necessary that both the Central and State Governments and the workers should play fair, the former by showing their willingness to reduce the numerous burdens it has imposed on the industry partly in the interests of revenue and partly in the interests of the handloom industry and the latter by increasing man-hour productivity.

Although the General Agreement on Tariff and Trade, Sir Harry said in effect, was not a perfect institution, it should not be abolished. He said that in the eyes of domestic manufacturers in importing countries the G.A.T.T. seemed to hamper their freedom and restrict their power of expansion by providing low-cost imports. But he thought that it would be wrong to give it up. Proceeding, he observed: "Doubtless none of us is satisfied with the details of G.A.T.T. But what matters is that G.A.T.T. in some form or other should continue—that the 34 countries who have formed themselves into this club should continue to work in harmony and co-operation." It may be mentioned, in this connection, that the committee of the Congress considered the question of temporary admission of Japan to the G.A.T.T. and confirmed its belief that the full admission of Japan to this organisation was unjustifiable. It is not, however, clear whether this means that the Congress is not opposed to temporary admission of Japan.

To revert to Sir Harry's address. He deplored that some people in the U.S. should oppose the adoption of the Randall Commission's report. He said:

"In the U.S., in my own industry, in the last few months I have seen propaganda to prevent the adoption of the Randall Commission's report—a report which we think is so gentle and so tender to the American interests that we are amazed that it should have aroused any opposition over there. We have seen plenty of propaganda to avoid its being passed into law by those who fear that the two or three per cent. of the total imports of the U.S. that we and our European opposite numbers can now supply would totally disrupt their markets. That same attitude will be voiced later in the year against the renewal of G.A.T.T."

On the question of the Commonwealth Preferential system, Sir Harry took a middle position in that he favoured neither its abolition nor its conversion into a more rigorous system.

"Some people in this country take the view that we should build a ring round the Empire with complete internal Empire free trade in the same way that the United States do. That is neither possible nor desirable. Even if we would have it, much of the Commonwealth would not."

On the other hand, he was quite certain that Britain would never abandon the general principle of Imperial Preference and would prefer to abandon G.A.T.T. first, as would most of the Commonwealth.

Among other subjects considered by the International Cotton Congress were the trash contained in raw cotton and the statistical activities of the International Federation. It was stated that the amount of dead cotton and immature fibre has increased in American and other cottons during recent years. International cotton statistics are in future to be published annually, instead of twice a year, but figures showing the number of looms in the world are also to be published annually, instead of at irregular intervals. There is to be further collaboration between the International Federation and the National Cotton Council of America covering the marketing of cotton, raw cotton research, technical matters and sales promotion.

The Federation of Master Cotton Spinners and Manufacturers' Association is to change its name from the beginning of September to the International Federation of Cotton and Allied Textile Industries. Responsibility will be put in the hands of a smaller and highly experienced international committee. The Egyptian Association of Cotton Spinners and Manufacturers, it is stated, has been admitted as a member of the Federation.

ENCOURAGEMENT TO KHADI

Contracts for a sum of Rs. 2½ lakhs have been placed with the all India Khadi and Village Industries Board, by the Director-General of Supplies and Disposal during the last five months. These contracts, it is stated, are in addition to those concluded by the end of December, 1953, for about Rs. 2 lakhs. This is in implementation of the Government of India's policy to encourage the use of *khadi* in various Government departments. In addition, enquiries against demands of an aggregate value of Rs. 15 lakhs are still pending with the Board and contracts for at least 50 per cent. of these may be concluded within the next three months. The Supply Department is considering the possibility of entering into annual rate contracts with the Board for standard types of articles, such as, dusters, towels, bed sheets and table covers, for which *khadi* has been found suitable.

The Board, it is pointed out, has had to overcome many difficulties. Organising production of new types of materials of uniform standard and quality required by the Government and not previously manufactured in *khadi* takes time. Government purchases of *khadi*, it is believed, will rise further as and when the Board is in a position to improve the quality and reorganise its production centres to handle demands for standard types of materials in keeping with the delivery requirements of the indentors. To this end, the Board is reported to be so arranging production that each centre specialises in a particular item of store and gains experience in meeting Government orders. To assist the Board to attain the rigid standards of inspection adopted by the Department and in order to increase production, the Department has laid down certain tolerances in width, warp and weft for the guidance of inspection authorities. This will enable the *khadi* production centres to maintain standards within these tolerances. Detailed specifications to govern supplies of different categories and qualities of *khadi* material are also being drawn up by the Supplies Department for adoption in consultation with the Board. The Department, it is stated, has found that there are several other varieties of cloth which could be replaced by *khadi*." It has circulated to all principal indentors samples of these varieties. A committee consisting of representatives of the principal indenting departments for cloth has been functioning under the chairmanship of the Director-General, Supplies and Disposals, since last year to ensure that effective action is taken in regard to greater utilisation of *khadi*.

WORLD WOOL CONSUMPTION

World consumption of wool in 1953, as estimated by the Commonwealth Economic Committee, is 2,600 million lbs. (clean basis). This level, according to the review of the world wool textile activity published by the Committee, was exceeded only in 1950, when the effects of the Korean war were particularly felt. World wool consumption was at its highest level during the first half of 1953, when the wool textile industry was completing its recovery from the recession of the previous year and rebuilding working stocks of tops, yarns and tissues. But, in the second half of the year, the rate of usage fell off to some extent, particularly in the U.S. Raw wool prices, however, remained generally firm. World output of wool tops is estimated to have risen by about 30 per cent. over 1952, while worsted yarn production increased by nearly 20 per cent. Woollen yarn production in 1953 was, however, only about 5 per cent. higher than in the previous year. Production of woven wool cloth showed practically no change over the year.

World wool supplies during 1954 are expected to amount to about 2,570 million lbs. (clean), excluding strategic reserves and normal carry-over in exporting countries, as against 2,640 million lbs. in 1953. As regards consumption in the current year, the review says:

"Consumption in 1954, would appear to have an approximate upper limit set to it by the amount of new available supplies—that is around 2,570 lbs. —and even these may not necessarily all be marketed. On the other hand, in view of the easier trend in consumption towards the end of 1953, consumption may well fall short of this upper limit. In this connection, much depends on developments in the U.S. and these are impossible to predict. Retail sales of wool textiles in the U.S. were unduly depressed during 1953 for various reasons, though they could well recover quite sharply in 1954."

RAW COTTON COMMISSION'S LOSSES

The Raw Cotton Commission of the U.K., which has been responsible for buying cotton from abroad and selling it to the British textile industry, suffered a loss of £22.4 million during the year ended 31st August, 1953. It may be recalled that when the Commission's accounts for the 13 months ended August, 1952 were published there was quite a sensation in the U.K., for they revealed a loss of £27.8 million. The Hopkins Committee, which investigated the problem of providing cover for the British textile industry, held that it was "intrinsically undesirable that public funds should be risked to provide cover for the cotton spinning industry." The latest report is the sixth of its kind to be published by the Commission which is scheduled to be closed down before the end of August this year.

The Commission's liabilities as on 31st August, 1953, it is stated, exceeded its assets by £11.1 million. The Commission's reserve fund built up in previous years to provide against losses stood at £9.9 million at the beginning of the year under review but now shows a deficit of £12.8 million. The year to which the latest report refers, it may be noted, covers a period when the mills were free to buy from the Commission or to make their own private arrangements for the import of cotton (to contract out of the Commission). For the current season, spinners using an estimated 56 per cent. of the industry's total cotton requirements have contracted out.

Commenting on this loss, the report states, that both the Commission and the free trade were long throughout the year, their stocks plus purchases exceeding sales. Hedges by contractors-out showed a deficit of £3.75 million and the Commission's own cover required a transfer of £17.06 million. The cover loss was larger than it would have been but for the Commission's obligations to contractors-out at the beginning of the season. Some 37,000 bales bought specially for mills which subsequently contracted out had to be carried for the whole season while the opening stock had been acquired to meet the needs of the whole trade. Over the season stock was gradually reduced from 1,148,070 bales to 633,390 bales, but the excess had to be carried while prices were falling. It is estimated that these factors accounted for £3.9 million of the cover loss.

HANDLOOM INDUSTRY

The Government of India has sanctioned further grants and loans to various States for the development of the handloom industry. The All India Handloom Board gets Rs. 2,30,000 for opening show-rooms for handloom fabrics in the regional offices of the Central Marketing Organisation at Madras, Nagpur, Bombay, Gwalior, Banaras and Calcutta. The expenditure on each show-room is expected to be about Rs. 38,440 of which Rs. 10,000 will be non-recurring and Rs. 28,440 recurring expenditure. The Rajasthan Government has been sanctioned a loan of Rs. 3,19,500 and a grant of Rs. 87,240. The loan is to be utilised to provide working capital for setting up 8 sales depots (Rs. 12,000), working capital for 5,000 weavers (Rs. 2,50,000), and share capital for 3,000 weavers (Rs. 37,500). The grant is to be utilised for converting 200 throw-shuttle looms into fly-shuttle ones (Rs. 10,000), opening 8 sales depots, (Rs. 26,240), awards of prizes (Rs. 500), organisational expenses (Rs. 7,100), inspection and stamping of handloom cloth (Rs. 15,000), rebate on sale of handloom cloth (Rs. 25,000) and for publicity and propaganda purposes (Rs. 2,500). A loan of Rs. 46,000 and a grant of Rs. 19,688 have been given to Vindhya Pradesh. The loan is to be utilised for providing share capital to weavers (Rs. 6,000), and working capital for 800 looms (Rs. 40,000). The grant is to be spent as rebate on sales of handloom cloth (Rs. 10,000), conversion of 420 throw-shuttle into fly-shuttle looms (Rs. 8,400) and organisational expenses (Rs. 1,288). Hyderabad has been given a grant of Rs. 21,500 towards expenses on organisation and supervision of the schemes for the development of the handloom industry.

A review of the conditions in the sphere of Indian cotton textile industry during 1953 forms part of the statement issued to the shareholders of Messrs. James Finlay and Co., Ltd., by the chairman of the Company, Mr. W. H. Marr. He points out that the production of cloth and yarn created a new record and exceeded the target to be reached by the industry by 1955-56 under the Five-year Plan. Exports were less than had been expected, but again reached a very substantial figure. Referring to the need for modernisation, he says: "The industry generally is faced with the necessity of modernisation to maintain efficiency and, even though this would cause some reduction in the total number of workers employed, it would help to reduce prices for export markets. Continued exports are essential for the Indian mills and they are likely to meet with some competition from new Pakistan mills in the course of a few years."

SLOW RATE OF ACTIVITY IN LIVERPOOL COTTON MARKET

MERCHANTS FAVOUR FLEXIBLE PRICE SCHEME FOR YARN

(From A Special Correspondent)

MANCHESTER, *25th May*

THE reopening of the Liverpool futures market may have been a milestone in the post-war history of the trade in Lancashire but it has not so far created any fresh set of circumstances having an important bearing on trade in yarn and cloth. Transactions in the reopened market have been relatively small and price movements have been narrow, if mainly downwards in direction.

MANCHESTER LETTER

This slow rate of activity was only to be expected and follows the example of other commodity markets which have restarted in recent years. In any case, the continued presence of the Raw Cotton Commission means that Liverpool has not yet felt the full weight of trading. Later in the year there should be an increased business, particularly when the new American crop begins to move.

Spinners' yarn quotations are still linked to the Commission's cover scheme but within the next few weeks the transfer to the futures market will have to be made. The operation of the dual system for this transitional period of three months or so has benefits of this kind. The Yarn Spinners' Association can arrange its affairs so as to choose the most opportune moment for taking this action.

The Association, in conjunction with the Master Spinners' Federation, has appointed a joint cotton committee to decide on a basis of cotton values to be used by all its members for operating cost price purposes. This development follows the realisation that the Raw Cotton Commission was to be wound-up and that the majority of spinners were obtaining their supplies privately.

A new spinning cost questionnaire has lately been completed by members of the Yarn Spinners' Association and the results of the investigation are being summarised. Many members are believed to feel that the marginal rates at present in operation are inadequate and do not now reflect current costs. The leaders of the Association will have to decide in the light of the information gained from the questionnaire and the present state of trade whether any adjustments should be made in the basis on which yarn quotations are calculated.

April Exports

Very little change occurred in shipments of Lancashire cotton goods last month, earnings being £10,434,578 against £10,565,260 in March. Cloth exports at 59,296,000 square yards showed a small decline but were almost identical with those of a year ago. Shipments of yarn were a little better but remained just below the 4,000,000-lb. mark.

For the first four months, cotton cloth exports aggregated 236,117,000 square yards, against 232,767,000 yards in 1953, the respective values being £29,932,522 and £29,348,844. Yarn shipments were 15,098,041 lbs. against 13,171,270 lbs., earning £6,379,258, compared with £5,466,575 a year ago.

Leading buyers have so far been:—*Cloth*—Australia 40,351,000 square yards; South Africa 31,806,000 square yards and Nigeria 22,019,000 square yards. *Yarn*—Australia 2,318,000 lbs.; Western Germany 1,420,718 lbs. and Irish Republic 1,187,136 lbs.

Imports have continued to increase, the quantity of foreign grey cloth reaching Britain being 57,516,000 square yards in the four months, against 27,975,000 yards last year. Other fabric arriving amounted to 11,868,000 yards, against 7,664,000 yards. Cotton yarn imports increased from 422,962 lbs. last year to 3,626,830 lbs. to the end of April.

Delivery Probe

As a measure to solve the problem of delays in delivery from the finishing section of the textile industry an independent investigator has been appointed to study and submit recommendations on how the problem can be overcome. This has been done with the agreement of the Confederation of Textile Dyers and Finishers and the Cotton and Rayon Merchants' Association, Mr. F. S. Winterbottom, Chairman of the Association, declared in his annual report.

These recommendations will be based on an examination of the actual practice adopted by converters and finishers in their relations with one another and for this purpose three firms, members of the Merchants' Association, have volunteered to give the necessary facilities to the investigator, said Mr. Winterbottom.

To overcome these delivery difficulties the merchant community endeavours to maintain ample supplies in the pipeline in order to safeguard our normal trade, said Mr. Winterbottom. Even so, it is essential that undertakings in regard to delivery given to converters by other firms engaged in production should be adhered to once they had been accepted.

Selling Abroad

Wider opportunities for British industry to sell its products in overseas markets were urged by Sir Harry Pilkington, President of the Federation of British Industries, at the concluding session of the International Cotton Congress at Buxton.

Sir Harry warned that firms which were putting off the buying of new plant to modernise factories in the belief that prices would be cheaper later were living "in a fool's paradise."

"We in Britain are not afraid of competition. We have been brought up on it and we are prepared to compete with anybody provided we can have conditions for a fair fight. In that way we can hold our place in the markets of the world on our merits," he said.

But what British industry needed, and certainly the textile industry, was access to other countries. It wanted the opportunity to sell in the United States, in West Africa, in the Argentine and on the other side of the Iron Curtain. Competition was not just a question of price alone but a combination of price, quality, service and design.

Sir Harry said there were "plenty of special interests" which would like to be without G.A.T.T. so that they could see tariffs raised in their own countries against destructive imports in their own particular line. "In the United States in my own industry in the last few months I have seen great propaganda to prevent the adoption of the Randall Commission's Report —a report which we think is so gentle, so tender to the American interests that we are amazed that it should have aroused any opposition over there."

Price Maintenance "Battle"

Disagreement among the different sections of the industry in Lancashire as to how each runs its own business is never allowed to lie dormant for many months. There is a long-standing argument between the merchants on the one side and the spinners and doublers on the other in connection with the working of the price agreements organised by the producers.

The war of words has broken out again as a result of statements issued by the yarn section of the Cotton and Rayon Merchants' Association and Mr. John Lindley, President of the Yarn Spinners' Association. For the merchants, "grave concern" is expressed at the effect of the price schemes on the competitive position of Lancashire in relation to producers in other countries. It is alleged that on many occasions business has been lost to Continental suppliers who, it is said, know the minimum price levels of British yarns and by making their own prices fractionally lower secure orders. This competition comes chiefly from Belgium and Italy.

The Council of the Merchants' Association is reported to be taking "active steps" in the matter and the position is certainly complicated by the approach of completely free buying of raw cotton. What the merchants and their supporters want is a greater degree of flexibility in the operation of the minimum price schemes. They contend that on certain occasions it would be preferable to make concessions to secure business in the face of foreign competition, provided the opportunity was offered to spinners as a whole, to avoid any one mill obtaining an advantage over another.

Spinners' Reply

The Yarn Spinners' Association, on the other hand, is equally convinced that the operation of its price scheme has been of such benefit to the industry in general that they should be continued without making any fundamental revisions of this kind. Mr. Lindley, in his annual remarks, referred to the critics of the Association who, he said, were "confounded by the loyalty and solidarity shown by its members in the year 1952," which was not only a year of trial but also, in his view, a year of achievement.

"Any crack in our defences at that time, any indication of weakness in our organisation, would have had a dire effect on our future," he declared. "Without this association we may well have been repeating even now the dismal history of the inter-war years."—*All Rights Reserved.*

EXPORT POLICY FOR COTTON

NEED FOR FURTHER QUOTA

THE export policy of the Government of India is, as is well known, determined by the need to conserve the available supply of cotton for the use of Indian mills. Exports are consequently permitted only in respect of those varieties of which there is a surplus in this country, after meeting the legitimate requirements of the Indian textile industry. This policy has been generally endorsed by the Indian cotton interests, though, from time to time, there have been protests against the delay in the announcement of quotas for export and also against the quantum permitted for export.

The interests concerned have welcomed the early announcement of quotas for export for the current season (1953-54). But there is a consensus of opinion that it is both possible and necessary to permit a larger quota than has been allotted so far. The Government announced, it may be recalled, on 28th September, 1953, an export quota of 175,000 bales of the 1953-54 crop short-staple cotton made up of the following varieties:

	Bales
Bengal Deshi	75,000
Mathias, Kalagin and Dholleras ...	50,000
C.P. I, C.P. II, Central India Deshi and Oomra Deshi 11/16" and below	50,000
Total ...	175,000

The Government also announced then that export licences would be issued for shipment upto 31st August, 1954, and that the total quota would be distributed among established exporters and newcomers in the ratio of four-fifths and one-fifth of the quota, respectively. It was also stated that this announcement was not final and the final export quota would be announced after the crop position became clearer. It is now felt that the supply position of cotton is comfortable enough to permit the Government to take a more liberal view of the export quota, especially for the Bengal Deshi cotton.

The supply of Bengal Deshi cotton is currently placed at about 349,600 bales, made up of the production of 277,000 bales and the carry-over of about 72,600 bales from the last season. As regards consumption of Bengal Deshi cotton, the mills used about 73,000 bales during the five-month period 1st September to 31st January, 1954, as against about 73,400 bales in the corresponding period in the year 1952-53. On the basis of the current rate of consumption, the mills are likely to use about 175,000 bales during the 12 months ended 31st August, 1954. This level of consumption, together with the quota of 75,000 bales for export, announced in September last, will make in all about 250,000 bales. If allowance were made for mills to hold a stock of even 60,000 bales—this would be 20,000 bales more than what they held on 31st August, 1953—it would still leave a surplus of about 40,000 bales. Indeed, this level of stocks should be comfortable enough for mills, considering that it would last them about 3¼ months beginning from September, 1954, and that the new crop Bengal Deshi would become available in October, this year. Since a clear surplus is thus indicated, the cotton interests argue that an additional quota for export could be permitted with profit to the country and without damage to the cotton requirements of the Indian mill industry.

The quota of 75,000 bales of Bengal Deshi, released in September last, is understood to have been sold out completely. It is pointed out that, in the local market itself, there is an unsold quantity of about 25,000 bales of very rough Bengals, while a similar unsold quantity is lying in upcountry centres. Mill demand for those varieties is virtually absent, with the result that they are weighing heavily on the market. It is stated that this quantity could be released for export without affecting the overall supply position of Indian cotton, in general, and that of Bengals, in particular.

It is intriguing, according to cotton men, that, while Dholleras and Oomras which can spin 10-12s counts are released for export, why Bengals, which spin only 6s counts, should not be more liberally treated for export purposes. Further, it would appear that Bengals command a better and readier export market than other short-staple varieties of Indian cotton. It is, therefore, urged that the question should be considered dispassionately and a decision reached on the basis of the available supply and mill requirements of Bengal Deshi cotton.

COTTON CONSUMPTION IN FRANCE

France is one of those countries which have now exceeded the pre-war level of cotton consumption. In an article contributed to the *Journal* of the International Cotton Advisory Committee, Mr. Edouard Senn, President, *Institute de Recherches du Cotton at des Textile Exotiques*, Paris, estimates the consumption of cotton in the 1953-54 season at 1.3 million bales (of 478 lbs. each). This is substantially larger than the level of 1.16 million bales touched in 1952-53 and 1.20 million bales, the average consumption in the pre-war period, 1934-38. The French textile industry consists, it may be mentioned here, of 7,714,775 spindles; the rate of activity (December, 1953 figure) was 86.37 per cent.

During the period 1st August, 1953 to 31st January, 1954, France imported 585,142 bales as against 561,619 bales in the same period in 1952-53. The following table gives the imports of cotton into France during the period 1st August, 1953 to 31st January, 1954, the same period in 1952-53 and the whole of the 1952-53 season:

Imports of Cotton into France

(In bales)

Country of origin	1-8-1953 to 31-1-1954	1-8-1952 to 31-1-1953	1-8-1952 to 31-7-1953
U.S.	132,073	153,077	513,884
Mexico	..	5,486	9,510
Brazil	44,336	5,839	5,940
Peru	14,837	29,389	40,292
Egypt	103,658	130,883	258,662
Sudan	19,067	22,129	35,716
Uganda	1,278	6,194	6,692
French Africa ..	103,643	103,246	158,242
Greece	10,166	231	2,453
Turkey	28,757	30,168	76,054
Syria	61,678	25,625	55,424
Pakistan	43,797	27,290	73,608
Others	21,862	19,062	36,911
Total ..	585,142	561,619	1,273,293

It will be seen from the table above that the U.S. was the largest supplier of cotton to France in 1952-53 as well as in the period 1st August, 1953 to 31st January, 1954. The breakdown of French imports from the U.S. during 1952-53 shows that strict middling accounted for 262,892 bales, good middling 66,876 bales, middling 129,140 bales, strict low middling 15,220 bales, low middling 15,220 bales and miscellaneous 24,444 bales. About 70 per cent. of the imports, it is stated, were either 1-1/32" or 1-1/16".

The prospects of cotton consumption in France are, of course, dependent on the prosperity of the French textile industry. As regards export trade, the exports of French cotton cloth to foreign countries aggregated 2,988 metric tons in 1953, as against 2,433 metric tons in 1952 and to overseas territories 47,940 metric tons as against 53,703 metric tons in 1952. France imported 3,147 tons of cloth in 1953 as against 8,293 tons in the previous year. The export trade is likely to be affected by the war in Indo-China. A high level of imports would be prejudicial to the interests of the domestic textile industry. The industry, it is stated, is opposed to liberalisation of import restrictions, because it considers that "some neighbouring countries can purchase their raw material freely in the most competitive markets, whereas French spinners receive parsimoniously exchange credits expendable in some countries only at a given time, which makes them unable to draw consistent plans as regards the purchasing of their raw materials." Also, French labour, according to the industry, is more expensive than the labour in neighbouring countries. The industry, according to Mr. Senn, considers that the problem created by the excess capacity of the European cotton industry "can only be solved by determined efforts to increase consumption at home and the world at large."

STANDARD INDIAN COTTONS

The results of the tests carried out by the Indian Central Cotton Committee's Technological Laboratory on the Standard Indian Cottons during the 1952-53 season are found in a report, published by the Committee, under the title, *Technological Reports on Standard Indian Cottons*. In his introduction to the report, Dr. C. Nanjundayya, Director of the Laboratory says that, before the establishment of the agricultural departments in the States, different types of cotton used to be grown by the cultivators regardless of the fact as to whether or not they were suited to the geographical and climatic conditions of a particular tract. The Agricultural Departments later commenced systematic work with a view to evolving new and improved varieties for each area. These improved varieties are maintained as standard cottons which are located at different cotton-growing tracts in the Indian Union. The new and improved varieties developed by the cotton breeders are tested at the Committee's Laboratory. Standard cottons are subjected to a large number of tests in each season along with those that are evolved from time to time, the former serving as standards of reference. The following is the present list of standard cottons:

Bombay: Jayawant; Jayadhar; Gadag I; Jarilla; Virnar. *Punjab:* Punjab American L.S.S.; Mollisoni. *Madhya Pradesh:* H 420. *Hyderabad:* Gaorani 6. K.2; Karungani K.5. *Andhra:* Nandyal 14. *Mysore:* Westerns I.

Standard cottons are subjected to a thorough examination for their fibre properties, spinning performance, and yarn characteristics. In the bulletin under review, the report on each cotton is divided into five sections: agricultural details, grader's report, fibre properties, spinning tests and remarks. At these tests, the varieties which showed "definitely better" results were: Laxmi, Vijay, Punjab-American L.S.S., Cambodia Co2 and Nandyal 14. The varieties which showed "definitely poorer" results were: Jayawant, Suyog, Jarilla and Mollisoni. The other varieties showed "approximately the same result" as in the previous season.

"H" CLASS LICENCE

The Government of India has introduced a new licence, "H" class licence in regard to hand-ginned cotton. Any person who purchases, or sells or carries on business in hand-ginned cotton, or holds hand-ginned cotton in hypothecation or against pledge, will, henceforth, have to obtain a "H" class licence from the State licensing authority concerned. Any person desirous of taking out "H" class licence will have to apply to the State licensing authority in Form "F" appended to the Cotton Control Order, 1950.

The scheme under which relief is granted to handloom weavers has been continued by the Government of Bombay for the financial year 1954-55 at a cost of Rs. 25 lakhs. Under the scheme, loans to the tune of Rs. 22 lakhs will be advanced to co-operative societies of handloom weavers for working capital for about 10,000 looms at the rate of Rs. 200 per loom and Rs. 11 (Rs. 10 for share contribution and Re. 1 entrance fee) for each new member. In addition, subsidy of Rs. 20 per loom for six months will be given to co-operative societies to offset the losses which they have to face while working the scheme, subject to certain conditions. It is estimated that the expenditure on account of the grant of subsidies to co-operative societies would come to Rs. 3 lakhs.

Indian mills are not interested in East African cotton at the present quotations at which it is offered in the Bombay market. At the last auction of East African cotton, held on 19th May, it would appear that 15,000 bales A. R. Mwanza were sold and that better prices were obtained for this cotton.

Private reports from Egypt indicate that the new cotton crop is making good progress. The cultivated area is about 16 per cent. more than that of last year.

RUBBER INDUSTRY HAS BRIGHT FUTURE

VAST SCOPE FOR EXPANSION

(By C. A. FAILING, Managing Director, The Goodyear Tyre and Rubber Co. of India Ltd., Calcutta)

(A note of optimism about the outlook for the rubber industry was sounded by Mr. Failing in the course of his interesting address on this subject to the Rotary International at Calcutta last week. He advised business men to take an optimistic view of the future and told them, in an impressive manner, that the Government of India was genuinely in favour of industrialisation on modern lines. He was convinced that India was well set for rapid economic progress. He reminded his listeners that an economy did not always grow at a steady unfaltering pace and that it was a good deal like the waves that break over the beach on the incoming tide. They should not make the mistake of the pessimists who simply could not see the tide for the waves.—ED.)

THE forecasting for any industry must necessarily involve a review, an analysis of the past performance, and developments affecting that industry. Now, let us go back to the year 1800, when Charles Goodyear was born. He was a dreamy type of man, considered by his friends as a queer character, because of his constant devotion to this useless, sticky, coagulated sap of the rubber tree. He was considered by his wife to be a poor husband and father, because his earnings were *nil*, and he contracted debts to experiment with this sticky, evil-smelling stuff in her kitchen.

However, for all this, Charles Goodyear discovered the process of vulcanisation of rubber. It was an accident but it laid the foundation of one of the world's basic industries. It was an accident in the sense that, hearing the approach of Mrs. Goodyear, Charles chucked a batch of his mixture into the firebox of the kitchen stove in order to escape the tongue lashing he might expect to receive if his wife were to catch him in another experiment.

Some time later, at the first opportunity, when Mrs. Goodyear was busy with her many household duties—she was her own bearer, cook, sweeper, *dhobi*, nanny and *durzi*, Charles Goodyear retrieved his mixture of rubber and sulphur from the stove and found that it was tough but not brittle, hard but pliable. He was elated with success.

It led him to the pursuit in various directions of the application of vulcanised rubber to commerce and industry. Unfortunately, it led him to a debtors' prison and he died a bankrupt. Well, so it goes with many great men in history, and, not to be outdone, the largest and greatest rubber company in the world today, which bears the name of the inventor of vulcanisation of rubber, also went broke as late as 1921, because it grew so fast it neglected to forecast the future and provide for adequate contingencies.

Progress During 100 Years

Now, it may interest you to go back one hundred years and look briefly at the progress of the rubber industry before we attempt to look into the future. In the year 1850, the total consumption of rubber in America was approximately 1,000 tons—and remember! that was 11 years after rubber became useful and had industrial application. When the automobile age began at the turn of the twentieth century, America was consuming less than 25,000 tons of rubber, which is approximately the consumption in India today. And, in the year 1914, at the beginning of World War I, that relatively small consumption had barely more than doubled. Today, the consumption of rubber, synthetic and natural, is going on at the rate of over 1,300,000 long tons annually in the U.S.A. alone, which, incidentally, is more than that consumed by the balance of the world. Here are some simple figures for those who have a flair for statistics:

Consumption of rubber per annum per person

Canada	11 pounds
England	8 ,,
Russia	1½ ,,
China	Few ounces
India	2 to 3 ounces
America	20 pounds

In 1953, 60 per cent. of the rubber consumption in America was synthetic and 40 per cent. natural. I leave to your imagination what the rubber situation would be in the world today if it were not for the production of synthetic rubber. The supply would be 500,000 tons less than the demand. Can you imagine what the price would be for a pound of rubber under conditions where the demand so far exceeds the supply? It might be $5.00 or $10.00 a lb. or more.

It is really fantastic when you pause to comprehend the effect that such a shortage of rubber would have on world trade. No industry operates without the aid of rubber products. The car in which you ride has over 200 different pieces of rubber assembled in the finished machine. Prices of products would be higher, resulting in sales resistance and employment would be less. The vicious economic cycle would be in full swing.

The Future

Now let us take a look at the future, say, the next 25 years, and the part that the rubber industry will play in coming generations. A broad basic viewpoint, as disclosed by statistics and by conditions such as the changing needs of the people, gives us certain facts.

Some industries are in a state of shrinkage, such as wool, soap, lumber, railroads, leather, traction and ice distribution. These industries are shrinking, because there are better and cheaper materials and services to meet the growing needs of the population. Synthetic fibres are replacing wool, cotton, lumber and leather. Detergents are an improvement for many purposes over soap. The radio and telephone are taking business from the telegraph lines. Highway transportation is replacing railroads and traction traffic. Electrical refrigeration is largely replacing the distribution of ice.

I can safely say to you now that, if the rubber industry were to depend upon its growth by devoting its efforts to products made from natural rubber only, it is not unlikely that it would lead the list of declining industries, but, as the situation now stands, the rubber industry is amongst the foremost of industries on the ascendancy. Why is that so? It is true because of a far-sighted programme of research to find new applications for rubber—to find new ways to improve living standards and create additional customers.

There would seem to be an inconsistency when I tell you that we have built a few laboratory test tyres which will outlast the average life of your automobile. The time is not too many years away when you will save your tyres for your new car when you discard the old one. This new tyre is constructed from a new type synthetic rubber developed by Goodyear, known as Chemigum SL. At the moment, its application to mass production has not been solved but just as sure as the tide it will reach the consumer sooner than we think. The rubber industry today has sent out its roots and firmly fastened them to many diversified lines of industry, particularly the chemical industry, the plastic industry and the aircraft industry, both lighter and heavier than air. The rubber industry is not depending upon rubber alone for the future. It is deeply concerned with atomic energy—Goodyear is now in the process of building for and will operate for the Government a two-billion dollar atomic energy plant in Southern Ohio. This project will be completed and in operation next year.

Yes—rubber is only a part of the rubber industry; to illustrate, if Goodyear's Industrial Rubber products were to be segregated into a separate unit, that unit would be the fifth largest rubber company in the world.

Greater Value for Money

The rubber industry is one of the very few industries where the customer today is receiving greater value for his money than he received pre-war. Look back to 1910 when the price to the consumer of a tyre for his Ford automobile was $31.20 or at the rate of $3.55 per lb. Today he will pay 93 cents only per lb. for that tyre and he can rightfully expect eight times the trouble-free mileage.

I think you will all agree with me that the rubber industry, during the great industrial age which we have experienced during the past 25 years, contributed as much, if not more, to the progress of that age than almost any other existing industry. You might dispute that the automobile industry has contributed the most, but surely the automobile industry would have come to a standstill long ago had it not been able to move on trouble-free rubber.

You might well say: "What has all this to do with the future of the rubber industry in India?" I say to you that India is not isolated from the rest of the world, that she shall progress with the rest of the world, and likely at a much faster pace, because there is so much that can be done.

Allow your imagination to reflect for a moment on the possibilities that exist in India today, with its population of over 360 million people, and which population is growing annually at the rate of 3 per cent. Suppose India were to consume 20 lbs. of rubber per person. The figure is fantastic and almost beyond the realm of our imagination. It would require twice as much rubber as is consumed in the world today. To even approach this figure of consumption by the population of India, it will require the raising of the standard of living of the multitudes beyond what you and I shall live to see. But a start must be made somewhere—and I say to you that the start has already been made.

Government Wants to Help

Just yesterday, I returned from Delhi where I had the good fortune to discuss some of these things with men very high in your Government. I am extremely encouraged and feel definitely that your Government has the welfare of the people at heart and has a keen interest in the advancement of industry. Now you may say—"What can the Government do?" It is quite obvious to me that Government is destined to play a great part in the future of all industry in India and in the future of all industry is, of course, included the rubber industry.

During the span of my business career in America, I recall the early thirties, when unemployment reached the dangerous level of well over 10 million. Our Government had, at that time, adopted a programme based upon a fallacy, a programme that Government could prime the pump of industry by circulating quantities of easy money. It spent money like paper and piled deficit upon deficit. It spent millions upon millions in public work projects, raking leaves and many other unproductive projects. This programme was carried on for six or seven years, but it did not bring back prosperity and it did not end unemployment. In 1939, when World War II began, there were still 9½ million jobless people, and this represented 17 per cent. of our total civilian labour force—one man out of every six was idle.

I would like to strike home to you today one thought, if you will but retain it. That the future of Indian industry depends upon you citizens of India; upon business men, labourers, farmers and everyone in India. The only thing that Government can do for you is to provide a fertile field in which to work. The only thing that will lead to a fixed progressive state of affairs is the individual efforts of all the people trying to do a little more for themselves, a little more for their families, a little more for each generation. The accumulative effect of all that work by all those people is the one thing that will give India the place in the world which it deserves.

Government Providing Fertile Field

We have in the rubber industry one of the finest examples of a Government service to its people. In 1942, America suddenly found her supply of crude rubber cut off by the Japanese from the Far East source. Her stockpile of crude rubber at that time would last only six months. Private industry could not hope to finance quickly and set into operation the facilities to provide a substitute for natural rubber. The Government stepped into the breach and, in one year's time, America was safe for her rubber supply and safe to prosecute the war in which she was involved.

Now that we are in a period of peace, the Government has decided to liquidate its interest in the production of synthetic rubber and sell out to private enterprise. Here is an example where the Government provided another fertile field for industry which the American people will now cultivate to their own advantage and to the benefit of all humanity.

My discussions in Delhi convinced me that your Government has in mind to provide fertile fields in which you can work, in which you will be able to improve the standard of living of your people. The Five-year Plans are designed along these lines—to provide electrical power, to provide water for irrigation, to build better roads for easier communication and the transport of supplies from places of plenty to places of need. Your Government, I think, appreciates that industry must be fostered and encouraged. It does not believe that what is bad for industry is good for Government.

I say to you people in India that you are indeed fortunate—there is so much that you can

INCREASING THE YIELD OF SUGARCANE

INTENSIVE CAMPAIGN LAUNCHED

THE Ministry of Food and Agriculture, Government of India, has embarked upon an intensive campaign for increasing the per-acre yield of sugarcane with effect from the 1st inst. According to a Press note issued by the Government, the Minister has, in consultation with sugarcane experts and sugarcane commissioners of the major cane-producing States of Uttar Pradesh, Bihar and the Punjab (I), decided to direct immediate attention towards improving the yield of the standing crop of sugarcane and to further intensify efforts in that direction during the next sowing season. It is also stated that arrangements have been made for supplying fertiliser for a target area of 2.2 lakh acres, of which 1,00,000 acres each will be in the State of Uttar Pradesh and Bihar and 20,000 acres in the Punjab. As much as 23,000 maunds of ammonium sulphate are also being distributed free to selected cane growers for demonstration in 10,000 acres of land in the three States scheduled for the purpose. Besides supplying ammonium sulphate, the Ministry is also undertaking an educational programme to acquaint the farmer with the technique of better sugarcane production. Arrangements are also being made to distribute, free of charge, in the three States, publicity material containing information on the application of fertiliser to sugarcane cultivation and improved cultural practices. This literature will also be made available to other States on demand. The Press note, however, warns that it is not the intention of the Ministry to confine this intensive drive to these areas alone. It recalls the convention of a special meeting of the Directors of Agriculture at Bangalore by the Minister for Agriculture to impress upon the Directors the desirability of their taking up suitable areas for such treatment all over India.

Although belated, the decision of the Government of India to launch an intensive campaign for increasing the per-acre yield of cane is welcome news. For, despite the long period of 18 years of protection granted by the Government, the efficiency of sugarcane cultivator has not improved appreciably. If anything, conditions have deteriorated thereby greatly belying the expectations of the consumer getting his requirements of sugar at reasonable prices and in sufficient quantities. It is, indeed, a sad commentary on, and hardly creditable to sugarcane growers that, although India has the largest acreage under sugarcane in the world, it has to import sugar worth Rs. 35 to Rs. 40 crores. This is particularly so, because this feature is expected to be not a casual one but prolonged for several years to come.

Yields Compared

What is this sad state of affairs due to? As is common knowledge, not only the yield of cane per acre in India continues to be low, but the sucrose content is also poor. The average yield per acre in India in 1952-53 was 12.00 tons, as against 14.10 tons in 1943-44 and 15.20 tons in 1933-34. The sucrose content was 9.98 per cent. in 1952-53, as against 10.02 per cent. in 1943-44 and 8.80 per cent. in 1933-34. Both the yield and the recovery per cent. of sugarcane are the lowest in the world. The yield per acre in Cuba is 17.12 tons, Mauritius 19.63 tons, Australia 21.34 tons, Puerto Rico 24.16 tons, Java 56.00 tons and Hawaii 62.05 tons. The recovery per cent. of sugarcane in Cuba is 12.25, Mauritius 12.08, Australia 14.33, Puerto Rico 12.23, Java 11.49 and Hawaii 10.46. It is true that, in some estates in the Deccan and South India, the yield is almost equal to the yield in Java and Hawaii, but they are exceptions accounting for only a fraction of the quantity of sugarcane produced in this country.

The irresistible conclusion that emerges from this study is that adequate attention has not been paid to improving the fortunes of the industry. The decision to carry out an intensive campaign in the U.P., Bihar and the Punjab is not only because they are the major producing centres, but also because the yield and recovery of sugar per cent. are low as compared with those in other parts of India. The yield per acre in 1952-53 was 10.00 tons in the U.P., 6.8 tons in Bihar and 11.1 tons in the Punjab (I). The recovery per cent. was 9.75, 10.03 and 10.21, respectively. The main reason for such a state of affairs is the ignorance of cultivators to use scientific methods of cultivation by utilising mixed fertilisers and the like. In Madhya Pradesh, it is also due to frequent occurrences of drought and lack of irrigation facilities.

If India is to be self-sufficient, efforts should be concentrated on measures for raising the yield and sucrose content of cane not only in the main producing areas in North India, but also in the Deccan and Peninsular India. In fact, ways and means must be found to expand sugarcane cultivation in South India. For, it is a well-established fact that the sub-tropical regions of the North are relatively less suitable for sugarcane growing as compared with the tropical tracts of the South. Consequently, better results can be had by devoting care and attention to sugarcane cultivation in the South than in the North.

Position In the Deccan

So far as the existing sugarcane farms in the Deccan are concerned, the major handicap in the way of increasing the yield of the crop is lack of water in sufficient quantities. The table given below gives the quantity of water supplied during the fair weather season in 1949-50, 1950-51 and 1951-52 to areas cultivated by the sugarcane factories in the Deccan. It will be evident from it that, barring the Girna Canal area, the total quantity of water supplied by the Government of Bombay to the sugarcane farmers during the three years under reference varied from 19.6 to 25.3 per cent. of the storage. Only in the Girna Canal area did the Government supply 55 per cent. of the storage. But this was an exception, because the water there was not in substantial demand for other purposes owing to the light nature of the soil. The quantity of water supplied to the farms cultivated by sugarcane factories falls woefully short of the Government's specific assurance to supply 35 per cent. of the total available water. If the sugar industry in the State is to expand, the Government of Bombay must take steps to liberalise the restrictions on the supply of water and tap fresh sources of irrigation. It must at any rate honour its commitments to the factories in this connection by supplying water to the extent to which it has already agreed.

Supply of water to Sugarcane Farms cultivated by Factories in the years 1949-50, 1950-51 and 1951-52

No.	Name of Cane	Cane Area (In acres)			Quantity consumed at the Distributory-head for cane (In million c. ft.)			Proportion to total capacity (In percentage)			Total storage capacity (In million c. ft.)

grower, in the wider interests of agrarian economy.

Dealing with the importance of sugarcane industry in the economic development of the Bihar State, he says that the industry pays Rs. 10 crores annually to the impoverished farmers of Bihar. The year 1953-54 was a bad one for the sugarcane industry because of floods in North Bihar and the disinclination on the part of cultivators to cultivate sugarcane on a larger area on account of low prices for the cane.

It is estimated that there are 400,000 sugarcane growers in the State and seasonal work is provided for as many as 30,000 workers. The State Government is helping the industry in every possible way. Recently, for instance, a sum of Rs. 14,00,000 was advanced by the Government to sugar factories. Besides this, it has also granted a loan of Rs. 4,00,000 to a factory for laying out a tramway line to facilitate quick movement of sugarcane from the fields to factories.

Raw sugar, molasses, jaggery and crude saccharine have been the important products of Gaya and Shahabad Districts in South Bihar for ages. These districts at one time exported lakhs of maunds of these commodities to East Bengal on the one side and Rajputana and Central India on the other. Bihar's sugar refineries, which have now become a thing of the past, were once known throughout the country for the excellent sugar they produced.

SHIFTING OF SUGAR FACTORY

It will be recalled that a reference was made in our last issue to the statement of Dr. Punjabrao Deshmukh in Parliament on the move to shift a sugar mill at Jagatjithagar near Himira in U.P.P.S.U. to Iqbalpur in the Sahanpur district in Uttar Pradesh. It is now learned that the factory referred to belongs to the Mahalaxmi Sugar Mills Co., Ltd., which has a daily cane-crushing capacity of 1,800 tons. Although the Centre has given its permission for shifting the factory on the ground that there was no reasonable certainty of the factory getting sugarcane in required quantity, there appears to be a lot of opposition to this move which is scheduled to materialise before the commencement of the forthcoming crushing season. An emergency meeting of the representatives of cane growers and the Agriculture and Co-operative Departments, was held at Jullundur under the Chairmanship of Mr. S. K. Chhibber, Deputy Commissioner, to consider the effects of the move. At this meeting the growers contended that there was no dearth of cane supply to warrant the shifting of any sugar mills, but it was the growing discontentment among them, due to delayed payments by mill managements, that enough cane had not been supplied during the crushing season. They alleged that the management of the Mahalaxmi Sugar Mills had secured permission from the Central Government to shift the mills by misrepresentation of facts.

Mr. Chhibber informed the meeting that the Government of Punjab (I), was alive to the grower's hardships and had decided to float a concern on a co-operative basis with a capital of Rs. 30 lakhs, of which Rs. 10 lakhs would be subscribed by the Government and the remainder by the public, preferably by the growers themselves. Before the Centre gives its permission to this move, it must satisfy itself as to the economic feasibility of the proposed sugar factory on co-operative lines, in order to avoid loss of capital in the coming years.

SUGARCANE INDUSTRY IN BIHAR

Dr. B. P. Pal, Director of the Indian Agricultural Research Institute, New Delhi, has disclosed, in a report published last week on the quality of research work done under the Central Sugarcane Research Station at Pusa, that the cultivation of the varieties of sugarcane evolved by the Institute and the measures discovered by it for controlling such pests as sugarcane borers, pyrilla, smut, wilt and rednot have saved the sugarcane industry in the Bihar State from ruin. He has recommended the study of biology of parasites for achieving even more satisfactory results and emphasised the need for sound cultivation on the part of the small-scale

POWER ALCOHOL

It will be remembered that, while commenting on the inaugural address of Mr. K. C. Reddy, Union Production Minister, and the presidential address of Mr G. S. Gupta at the eighth annual general meeting of the All-India Distillers' Association in our issue dated 10th April, we held that it was difficult to agree to the demand of the Association that the price of power alcohol should be increased. For such a step, we pointed out, would result in a further rise in the price of petrol-power alcohol mixture, thereby leading to an increase in the cost of transport run on this mixture. Advertting to this, the Association observes, after a long interval of 40 days, as follows:

"We would like to point out that, in case an increase in the price of the power alcohol is granted by the Union Government, this increase would not be passed on to the consumer in the shape of an increase in the marketing prices of power alcohol-petrol mixture, the reason being that, at the present moment, every State Government is making over As. 6 a gallon as net profit on every gallon of power alcohol consumed in the State. Besides, the handling charges paid to the oil companies are exorbitant and out of all proportion to the price of power alcohol paid to the manufacturer. Any increase in the price of power alcohol granted to the manufacturer, therefore, will be adjustable within these two limits and will not result in any increase in the price paid by the consumer."

CANE PRICES PAID IN MARCH

On the basis of returns received from the Central sugar factories, the average all-India price of cane paid per maund (including co-operative society's commission, transport charges, etc., but excluding cess) at the factory gate during March, 1954 was Re. 1-8-7, the maximum and minimum being Re. 1-13-4 and Re. 1-8-7, respectively. The average price actually received by the grower was Re. 1-7-2 per maund; the maximum and minimum prices were Re. 1-10-6 per maund and Re. 1-4-11 per maund, respectively.

METALLURGICAL COAL

REASSESSMENT OF RESERVES PROPOSED

A PROPOSAL to evolve a systematic and scientific procedure for reassessment of the reserves of coking coal in the country is reported to be engaging the attention of the Coal Board. The Board will, it is stated, also examine the methods of estimation of actual and potential reserves of various grades of coking coal in the country. The Board is also engaged in assessing the extent of coking coal which is lost in barriers. Reports from Calcutta disclose that, of the 197 collieries which were requested to submit the necessary information in this regard, about 62 have already done so.

That there is need for evolving a systematic and scientific procedure for reassessing the reserves of coking coal is common knowledge. The estimates of reserves made so far have been criticised on the ground that no scientific procedure had been adopted for this purpose. Even the estimates of the largest committee, know as the Krishnan Committee, were based on reports submitted by the collieries and not on an independent investigation, so that they too can hardly be regarded as reliable.

It may be recalled that Dr. C. S. Fox estimated, in 1932, the reserves of good coking coal, i.e., coal which when subjected to destructive distillation yields a hard coke suitable for smelting iron or smelting in blast furnaces, at about 1,500 million tons. In 1936, Sir Lewis Fermor estimated the reserves at 1,649 million tons. The next estimate was made in 1937, when the Coal Mining Committee placed them at 1,426 tons. Bringing these figures up to date to the end of 1944, Mr. Gee estimated the total reserves at 1,185 million tons. The Indian Coalfields Commitee assessed the reserves at about 750 million tons, after allowing for the inferior coal in certain parts of seams 12 to 18 of the Jharia coalfields. The Committee stated that not all the coal reserves in the Raniganj coalfields which Dr. Fox classified as coking coal were capable of being used by themselves for the manufacture of metallurgical coke; only Ramnagar seam and a portion of Laikdih seam contained coal fit for metallurgical coke. In this Committee's opinion, the major portion of Bokaro coal was not good coking coal and it was suitable only in admixture with good capital coal. The Krishnan Committee held that, with the adoption of stowing, washing and blending processes, India could recover about 2,000 million tons of metallurgical coal. But, if these processes were not adopted, he warned that the quantum of reserves would be halved. Thus, the estimates made so far place the reserves of coking coal suitable for metallurgical use at between 1,750 and 2,000 million tons.

Even if we were to assume that the dependable reserves are about 2,000 million tons, they would still be meagre, as compared to the vast size of India and the growing industrial use of coal. At the present rate of consumption of coking coal, ranging annually from 8 to 12 million for both metallurgical and non-metallurgical purposes, the available reserves will be used up in about 160 years. If we are to restrict the coking coal consumption to metallurgical purposes, which is estimated to be running at an annual rate of 3 million tons at present, they will last for 650 years. But with the establishment of the State-owned iron and steel factory and other basic industries for which metallurgical coal will be needed, it is needless to emphasise that the consumption requirements for essential metallurgical purposes are bound to expand. This explains the Government's anxiety to conserve coking coal towards which it has been taking steps by means of pegging the output, encouragement of voluntary stowing, aiding installation of washing plants and the like. But it would be better to base this policy on a proper reassessment of the reserves of coal fit for metallurgical purposes. It is gratifying to learn that the reassessment of the reserves, which will commence after a systematic and scientific procedure for this purpose is evolved and proper methods of estimation determined, will form part of the extensive survey of the country's mineral resources which the Ministry of National Resources and Scientific Research is planning to undertake.

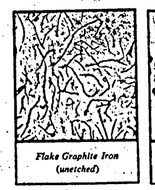
SPHEROIDAL GRAPHITE IRON
has all this and ductility too

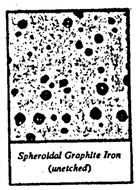
Although cast iron is such a useful material, its low strength and its brittleness have hitherto been serious limitations. Its field of usefulness has now been greatly extended by a process which induces the flake graphite, the weakening constituent, to assume the spheroidal form.

Properties which may be expected in commercial production fall within the following ranges:—

	Maximum Stress t.s.i.	Yield Point t.s.i.	Elongation %
As Cast (Pearlitic)	35 - 45	25 - 35	1 - 5
Annealed (Ferritic)	27 - 35	20 - 25	10 - 25



Flake Graphite Iron (unetched)



Spheroidal Graphite Iron (unetched)

Spheroidal Graphite cast iron is manufactured under licence and is the subject of patents and patent applications in the name of The Mond Nickel Company Ltd.

INDIAN RUBBER BOARD MEETS

PRODUCTION REQUIRES TO BE STEPPED UP

THE production of natural rubber in India has steadily gone up during the last six years. Thus, from 15,422 tons in 1948, it has gone up to 21,136 tons in 1953. Consumption, too, has advanced during this period from 19,719 tons to 22,373 tons. Thus, the output has risen by 5,714 tons, while the consumption has gone up by only 2,654 tons. In other words, the gap between production and consumption which stood at 4,297 tons in 1948 has narrowed down to 1,237 tons in 1953. The output of rubber in 1954 is expected to be 22,000 tons provided weather conditions are favourable. But consequent on the expansion programme that has been recently undertaken by rubber goods manufacturers, the consumption is anticipated to go up to 25,000 tons, that is, well above the output during the current year. In recent months the pace of consumption has been going up at a fairly rapid rate, so that stocks have considerably dwindled. As at the end of April last, stocks with estates and dealers were no more than 3,703 tons, which included 1,110 tons already sold to manufacturers and in transit, and with manufacturers 2,613 tons, as against a total of 9,047 tons at the end of April, 1953. It, therefore, looks as though some imports of rubber will have to be allowed not only this year but also for a few years more, till domestic production oversteps the demand.

Two notable points arise from the aforesaid statistical analysis. First, the indigenous production should be stepped up to catch up with the demand, if continued imports from foreign countries are to be averted and, secondly, the manufacturers should be assured of a steady supply of rubber till production keeps step with the demand. These two problems, therefore, figured prominently in the speech of Mr. A. V. Thomas, M.P., Chairman of the Indian Rubber Board, at the seventeenth annual meeting of the Board held in Bangalore last week. The increase in production of rubber is sought to be increased by rubber growers not by indiscriminate extension of areas of cultivation, but by intensive cultivation. The recent meeting of the International Rubber Study Group held in Colombo also emphasised the need for planting or replanting with high yielding strains, so as to improve production at a lower cost. Recalling this recommendation, Mr. Thomas pertinently observed: "If countries like Malaya, where production per unit area is comparatively high, should feel the urgent need for replacing old rubber with high yielding new strains, one could imagine how much more should it be applicable to India where average yields are lower and most of the estates are still under ordinary low yielding rubber." In this connection, he pointed out that the Indian Rubber Board had been urging the Government, for the last seven years, the need for replacing nearly 70,000 acres of old and worn out areas with new and high yielding material. "It is a necessity," he said, "of undoubted primary importance to producers in this country, without which raw rubber production cannot be stabilised as a growing and purposeful industry helping itself to be in a competitive position and finding all the rubber the country may require for its manufacturers."

Future of Consumption

The Government of India is not unaware of the need for increasing the output of rubber in India. Nor is it in favour of allowing large-scale imports of rubber which might adversely affect the producers in India. This awareness is evident from the observations of Mr. T. T. Krishnamachari in the House of the People recently when he spoke on the motion to refer the Rubber Bill to a Select Committee. He said:

"As I said, even as I visualise the present, the consumption will be about 25,000 tons. I am not sure if our production is going to be very much more than 22,000 tons. About this time last year, our overall stock position was about 9,300 tons. Some time back—the latest figures I have seen are really about a month old—we were just about the 6,000-ton limit. And today, the industrialists who want rubber tell me that the total available quantity, according to the peak figures with the estates and the dealers, is about 2,000 tons. But really they are not able to produce more than 50 lot tons anywhere, because it is spread over. Today, we are really getting very dangerously to the position of having low rubber stocks and, perhaps, we will have to import some. But I can assure the House that any importation will be very careful; we will not import such a quantity as will affect the interests of the rubber producers in the future. But that brings home to us the fact that it is imperative that we develop the acreage under rubber, the production of rubber, to make them more efficient so that we can look forward to a production which will keep pace and would be pari passu with our consumption needs. I do not think that I am being unduly optimistic when I feel that our consumption of rubber will considerably increase. With our having gone to the bottom of our consumption of tyres and purchase of motor vehicles, we have to rise in future and have more vehicles on the road. The transport problem is none too good.

"So it is quite possible that, within the next five or six or seven years, our consumption might rise in stages of two, three or four thousand tons per year, and we have really to look forward to a time when we need about 40,000 tons of rubber. The existing acreage might produce it to some extent, by adequate replanting and by making the trees yield a little more, but it might be necessary for us even to extend the acreage, even for purposes of meeting our own needs."

It is gratifying to find that the Government is fully aware of the need for raising the production of rubber. But mere awareness is not enough. What is required is action. It is here the Government has not done all that it can and should. Years ago, the Rubber Board submitted a concrete scheme for raising production. Nothing, however, was done about it. Even the Planning Commission, which has examined the question of transport, failed to consider the issue of finding the raw material for the manufacture of tyres that will be required by an expanding system of road transport. Even when its attention was drawn to this lapse by the interests concerned, nothing was done. It is to be hoped that at least now the Commerce and Industry Ministry will come forward with concrete proposals for raising the output of rubber.

Mr. Thomas referred to the need for a comprehensive rubber research scheme and experimental stations to educate rubber producers of the need to adopt scientific methods of production. The modest scheme, circulated by the Board to its members, he said, had the approval of the Indian Council of Agricultural Research. Mr. Thomas disclosed that the Union Government was anxious that the scheme should be implemented as early as possible.

Referring to the stock position, Mr. Thomas said that stocks were at present moving out fairly fast. The reasons for this were: (1) There was a small fall in production due to suspension of tapping on Sundays; (2) there was a better offtake and increased consumption by big manufacturers who had expanded their factories; and (3) the Government of India took timely action in stopping imports of any large quantities of foreign rubber during 1953.

Buffer Stocks

In order that the present healthy co-ordination between production and consumption might continue, Mr. Thomas felt that as a long-term measure, the Rubber Board would have to recommend to the Government some practical measure which would neutralise even the seasonal inconvenience that is caused to producers by accumulation and to manufacturers by shortage in supply. His own suggestion was that some purchase arrangement could be made for holding buffer stocks by the Governmental or convenient agencies under the auspices of the Rubber Board when the stocks were heavy in the market and releasing them to the manufacturers when there was an apparent shortage in the supply position in the market.

The Rubber Board reviewed the present rubber stock position in the country. In view of the present low level of stocks it has recommended to the Government that manufacturers should be allowed to import immediately raw rubber equivalent to the dry rubber content of their export of manufactured goods during the second half of 1953. The Board had already recommended the issue of import licences to manufacturers under the D.R.C. scheme for the first half of 1954. The imports against these recommendations amounting to approximately 1,650 tons will, it is expected, cover the immediate requirements of the manufacturers over and above their purchases of indigenous rubber. The Board has also recommended the allotment of an export quota of 100 tons to producers of sole crepe during the current year. The Board reiterated again the urgent need for the rehabilitation of old and worn-out rubber area in the country and the establishment of a rubber research station.

MARKETING OF JUTE AND JUTE GOODS

FINDINGS OF ENQUIRY COMMISSION

THE Jute Enquiry Commission's investigations into the current practices of marketing of raw jute and jute goods reveal that these practices leave much to be desired. They relate to (1) contract form for jute goods, (2) arbitration, and (3) Pucca Delivery Orders (P.D.O.). The evidence tendered before the Commission regarding the existing standard forms of contract for sale and purchase of goods shows that they were unsatisfactory in several respects. These contracts are the standard ones accepted by the I.J.M.A. In the case of forms for jute goods, there is a clause of a very wide nature which enables a seller of jute goods to give timely notice when, due to circumstances beyond his control, he finds it impossible to fulfil the contract and asks for extension. If the buyer is not agreeable to this, the contract can be cancelled by him, without having any further claims against sellers. In practice, it has been found that advantage has been taken of this clause to deny the buyer the normal contractual remedy for losses resulting from non-fulfilment of contract by the seller in cases which are not acts of God.

In the case of contracts for raw jute, the forms are stated to be one-sided and in favour of the buyers. Clause 10 of the form for Indian jute in *kutcha* bale packing allows the buyer, after arbitration award is given, to exercise one of three options, namely, (a) to accept the goods with the allowances awarded, (b) to cancel the contract and claim the difference between the contract and the market rates, and (c) to cancel the contract and accept a fresh tender. As the buyer initially gets three months' time to decide what remedy he should take, this clause is regarded to be unduly in his favour. The three months' time gives him plenty of time to watch the trend of the market and choose a course of action best suited to him. He can, for instance, take advantage of a falling market, but there is no similar provision to protect the interests of a seller.

In order to remedy these defects, the Commission has suggested that the proposed Jute Board should examine the appropriateness of the present forms in use in markets overseas and make suitable changes in the Indian contract forms, in order to see that the long-term interests of the parties concerned are not affected. The I.J.M.A. has also been advised to set right the defects in consultation with the interests concerned.

Arbitration Clauses

Complaints have also been received regarding the present system of arbitration connected with jute contracts. The main one is that buyers get two months' time to file a case before the Bengal Chamber of Commerce who, at present, appoint the panels of arbitrators. Over and above this time, the buyer of raw jute is allowed a further five days before he is called upon to exercise one of the three options mentioned earlier. This enables the buyer to accept the goods with the allowance when the market is in his favour or cancel the contract if it suits him. In the case of a dispute, the buyer of raw jute does not submit a proper statement of facts, laying down his case and the amount he actually claims as allowance for moisture and low quality, with the result that the seller does not specifically know the basis of the dispute. Again, on the panel serve brokers and dealers whose interests lie with the mills who are buyers of jute. The panels thus do not enjoy the fullest confidence of those on whose behalf they are established. The panel proceedings are usually held in mill premises and as such the atmosphere is not conducive to impartial arbitration. The Commission has recommended that steps should be taken to remedy these defects as soon as possible.

Then there are the Pucca Delivery Order forms which need considerable modification. The P.D.Os are normally issued on the basis that goods are ready for delivery, but, at the same time, it is open to the purchaser for any reason whatsoever to leave the goods in the custody of mills. As far as sales to dealers are concerned, the system of issuing P.D.Os enables the latter to negotiate their value on sale although the custody may still be retained by the mills. It is admitted that this system has a measure of flexibility which is advantageous both to the mills and the trade, as it permits the maximum turnover to take place. As P.D.O. is regarded

ELECTRIFICATION OF RURAL AREAS IN EUROPE

REPORTS OF U.N. EXPERTS

AS the electricity projects now being implemented and proposed to be implemented under the Five-year Plan materialise one after another, large blocks of electric power will become available which can be profitably used for agricultural operations and rural development. Experience has shown that, given necessary facilities, electric power for such operations will be popular. When electricity is extended to the villages, there is no doubt that farmers will use it more and more for agricultural operations and not merely for lifting water, and that artisans will utilise this power for employing their skill and establishing rural industries.

Electrification of agricultural operations is already a common phenomenon in Western countries. The Central European peasant, for example, hardly thinks of mentioning electric light as something novel or something to be wondered at, because he has already become accustomed to it in his daily life, whereas for the Turkish and the Indian peasant it is still an object of longing. Few can dispute that the peasants must be offered all the blessings of technical progress, that can make their lives worth living, for this experience will inevitably induce them to organise their work more efficiently to keep their produce from going to waste and to increase their production steadily. This is a field in which technology and electricity can still work miracles.

Viewed against this background, the reports on rural electrification, prepared by the Technical Assistance Administration, Economic Commission for Europe, Food and Agriculture Organisation, make profitable reading to those who are interested in this subject. Mr. C. A. Cameron-Brown, Expert on Agricultural Electrification of the British Electricity Authority, England, and Mr. F. Ringwald, Director, *Forces motrices de la Suisee Centrale*, have considered the technical and economic aspects of utilisation of electricity in rural areas, laying practically the whole emphasis on farm operations and more closely allied processes and operations.

Utility

The reports are mainly useful to an electrical engineer who has to tackle the problem of assessing the electrical potentialities of a projected rural electrification scheme, whether it be on a national scale under a new conception or on a limited local extension. Since practically no suggestion can be made without qualification on the agricultural practices involved, it is assumed that, given a general picture of the main problems involved, the engineer will consult the agricultural specialist to find just which aspect of electrical application can be followed.

The reports are handled throughout bearing in mind the two main requirements of the engineer-planner, namely, (1) the loads likely to be imposed and (2) the consumption likely to be involved. Where categorical power and demand cannot be given, a lead is shown, which, if followed through agricultural channels, will give the answer. Wherever considered practical, the expected consumption for individual application has been given in such a way that, again with agricultural consultation, the aggregate consumption under different farming conditions can be estimated. No attempt has, however, been made to assess global consumption on an area basis. Mr. Cameron-Brown says that there is no evidence that such assessments are significant or that they can be transferred from one agricultural area to another. "It is sounder," he declares, "to build up the total assessment from detailed assessments made in consultation with agricultural authorities."

While the various quantitative information is given throughout the text, an attempt is made to facilitate consultation by appending a list of expected consumption for different agricultural processes and operations. Often, however, the conditions can vary so much that a wide range of consumption has to be given and such assessments should be examined in detail before selecting a figure.

The potentialities of electrification of the rural areas for their economic development is clearly brought out by both the experts. As clearly pointed out by Mr. Ringwald, electric power is without doubt a saver of time and labour and protects the farmer from physical overstrain. The harassed labourer can husband his forces, leave the host of mechanical jobs to the more efficient machine and make his personal contribution more in the form of brainwork and initiative. The farmer is always an *entrepreneur* as well, and as such is expected to plan his work logically, unharassed by the trivial daily grind. Proper planning, according to him, is an essential condition for success and the appropriate combination of human and mechanical power is, after all, an essential part of progressive planning. Dealing with this aspect, Mr. Cameron-Brown observes as follows:

"It is common in farming, subject to such wide market variations, to safeguard income by diversifying the activities carried out. What the Americans call 'horizontal diversification' is widely carried out and means, in effect, the growing of a wide range of crops in the hope that, if one fails, either in fact or in market return, one or two of the others will come up well enough to compensate. With the coming of electricity and power readily available, many farmers will be able to consider what the Americans aptly call vertical diversification. This is the carrying of any one farm product through a processing stage to make its marketing value higher and so raise the farm income, e.g., the making of fruit into jam or bottling it, cold storage of eggs, poultry and butter, making straw into strawboard. Such diversification may best be applied, in these or other ways, where the holdings are small and the existing labour is not fully utilised or has time available now that electric power is available for facilitating the normal farm processes. Full consideration should be given to this aspect of economic return to a projected rural supply scheme."

As so many farm power operations are of comparatively short duration and as many of the machines installed are capable of much more work than they do, and again, as they mainly operate, to use the technical expression, at a poor load factor, Mr. Cameron-Brown has urged the need for exploring the possibilities for co-operative working. The expert points out that co-operative working would mean a lower capital investment per farm, lower costs of electricity distribution and generally cheaper working all round. The obstacle in the way of full co-operative working of field cultivation, namely, the urgency of utilising limited spells of favourable weather, does not generally apply to the processes operated electrically and undoubtedly much can be done in this direction. As aptly remarked by Mr. Cameron-Brown, co-operative working may be simply a "help-thy-neighbour" scheme, whereby one farmer owns one machine and another owns another type and each allows the other to come and use the equipment which he possesses. Alternatively and more fully, it can mean the central placing and common ownership of all the necessary equipment, with each farmer taking to this point the materials to be processed. Examining this latter aspect, Mr. Cameron-Brown observes as follows:

"Co-operative schemes have failed to make any appreciable headway in most countries so far electrified, because the type of economic and social development has resulted in a dispersed settlement of holdings, so that considerable haulage problems and loss of time are involved. Nevertheless, even in some of these countries, for many years farmers would haul grain to the local mill to be ground there. Where, however, the history of a country has resulted in more closely-knit settlements of village and farm buildings together, the way is open to the fullest development of co-operative schemes. It is, too, basically essential in the working of, say, a co-operative central machinery depot that it should be substantial enough to justify the services of a reasonably skilled attendant, if not full-time, at least for a substantial part of the working period. To leave machines to be attended to by the co-operative users would call for a degree of operative ability, not to mention conscientiousness, not likely to be found in any group of workers. In order, therefore, to help meet such a requirement, strong consideration should be given to the possibility of expanding what may have initially been envisaged as a pool of farm machines to become a full communal scheme providing at a reasonable *per capita* cost all those modern electrical services which would require a high level of individual income to provide in each house separately."

The first uses of power current in agriculture is naturally for actual production. Electric motors of almost every capacity from 1/20 h.p. to 50 h.p. and above are in fact to be found in use in agriculture. The use of electric motors for pumping water is one of the most direct contributions of electricity towards the betterment of rural work and living. At the same time, it is a sphere of application which, lacking proper and full consideration, can give results far below the real possibility. This arises largely from the basic simplicity of water-pumping and from the feeling that any form of power-pumping is better than hand-pumping or water-carrying. Mr. Cameron-Brown says that there are in existence far too many electrically-powered water-pumping sets which give something far short of full water service which electricity can provide. He then refers to uses of electricity in such operations as feed preparation transporting and conveying, ploughing and cultivating the land; cropdrying, preparation of milk, poultry production, pig rearing, food cooking, fruit handling, sugar production, horticulture, pest control, fencing farms and the like. As all this is applicable only to the highly developed countries of Europe and America where there is plenty of resources but not enough manpower and not to a capital starved and overpopulated country like India, it is unnecessary to go into details of his suggestions.

UTILISATION OF WIND POWER

The preliminary investigations carried out by the Wind Power Sub-committee of the Council of Scientific and Agricultural Research of which Dr. P. Nilakantan, Principal, Birla College, Pilani, is the convenor, have disclosed that windmills, which have been regarded in this country more as a curiority than as a practical scource of power, can, in fact, be profitably established in the arid waste lands of Rajasthan. The disappointments that followed the attempts made in the past to establish such mills in India have been due, according to him, to defects in location and installation. Dr. Nilakantan points out that, in Poona and Hardwar, for instance, windmills had been located in the midst of obstruction and, consequently, they could not function effectively even when the velocity of wind was high. Windmills are widely used even today in the U.S., in dry regions such as Arizona, and in Holland. They have been found quite practicable and their extensive use in India should, says Dr. Nilakantan, be an economic proposition.

In places where the wind velocity seldom exceeds six miles per hour during most of the year, the usual type of windmill cannot be effective or economic. But in arid regions, having no alternative sources of power supply, the windmill can be of great use even though it can function effectively only during a part of the year. It can, for instance, be a boon to the farmer around Jodhpur, particularly during the hot months when the velocity of wind is high. There is also considerable scope, according to Dr. Nilakantan, for windmill pumping plants in the drought-stricken areas of Saurashtra and in south Rajputana where also the wind velocity is comparatively high. In a place like Jodhpur, where the wind velocity exceeds eight miles per hour for about 3,500 hours in the year, a 12-foot diameter windmill, if properly installed, can give an output of 1 million gallons of water per annum from a 60-ft. deep well. A design for a composite type of windmill has been developed which uses common locally available material, thus reducing the cost of construction. A new feature in the design is the use of twin wheels. The whole system is mounted on a 60-ft. high tower. This model is expected to be useful for experiments in India. It is likely to give an output of 330 gallons per hour from a 200-ft. deep well in a 10-mile per hour wind and much more if the depth is reduced. It may be noted, in this connection, that a world symposium on the utilisation of wind power will be held in India next September.

The opening ceremony of the Bhakra main canal was performed by Mr. Bhimasen Sachar, Chief Minister of the Punjab, when he released Sutlej waters into the canal on 31st May. The Bhakra main line is a continuation of the 39-mile Nangal hydel channel, which takes off from the Nangal channel eight miles down-stream Bhakra. It will carry water to perched lands of Hissar and Rajasthan.

The Bhakra main line is the biggest lined canal so far constructed in India. Starting from Rupar and passing through the enclaves of P.E.P.S.U., the canal proceeds straight to the border of Hissar district, where it bifurcates into two branches—one lined (Bhakra branch) and the other unlined (Fatehabad branch). These two branches feed numerous distributaries.

NEW PRODUCTS AND PROCESSES

Radio Eyes Probe Space

ASTRONOMERS believe they will soon discover the secret of mysterious radio waves from outer space that reach the earth. These may come from the vast collections of stars known as galaxies. Radio signals are also flashed by meteors after hitting the outer layers of the earth's atmosphere. This was one of the developments in science reported at a recent meeting in Boston, Massachusetts, of the American Association for the Advancement of Science. Using radio waves in place of visible light waves, astronomers can now "see" several thousand light years farther than they can with optical telescopes. A light year is the distance light travels in one year—about six trillion miles. The radio waves pierce vast clouds of cosmic dust and hydrogen gas that obstruct the view of the ordinary telescope.

The most accurate radio telescope in the world is installed at the U.S. Naval Research Laboratory in Washington. It has a bowl-shaped antenna 50 feet across, that points to the sky. The world's largest radio telescope, with an antenna 250 feet across, is at Manchester, England.

Ultra-sensitive Device for Planes

The "most sensitive instrument ever devised for use in aircraft"—a new type of gyroscope—is being produced at Minneapolis, Minnesota, by the Minneapolis-Honeywell Regulator Company. It is designed for use in automatic flight control systems for supersonic aircraft. Operating on the principle of a child's spinning top, gyroscopes are the "brains" of automatic pilots and other robot devices necessary for modern air-planes that travel through space at speeds greater than sound. The new ultra-precision instrument is cylindrical in shape and weighs less than 3 pounds. It is capable of detecting motion 3,000 times slower than the movement of the hour on a watch. Engineers explain that the gyroscope's sensitive performance is due to the reduction of friction among its moving parts almost to zero. This was accomplished by floating the instrument's delicate, jewel-mounted "spin mechanism" in a special oily fluid. So sensitive is the mechanism that one speck of dust weighing one one-thousandth of a gram would have the same effect on it as the dropping of a handful of gravel into an automobile transmission. As proof of its ruggedness, engineers said they had used a demonstration model to drive nails through a board without affecting its performance. According to a company spokesman, if a man walked around in a small circle so slowly as to take him five years to complete his journey, the gyroscope could measure his rate of speed.

3-D X-Rays

The General Electric Company has developed a process of taking X-rays which produces a picture with three-dimensional effects. The new method can process a plate in two minutes and is expected to cut the cost per picture by 50 per cent. The photograph shows bones in rounded contour with soft tissue details appearing more clearly.

Water-purifying Unit

A compact water purifying unit which attaches to the water tap has been developed by A.R.F. Products, Incorporated, River Forest, Illinois. Bacteria is destroyed in a few seconds as the running water is exposed to a four-watt germicidal lamp which produces ultra-violet rays.

Supersensitive Photography

A self-amplifying camera that produces strong, sharp pictures in very dim light has been developed at the Massachusetts Institute of Technology. It operates on the principle of the Geiger counter: light energy from the object to be photographed is made to trigger a large electrical discharge which in turn develops the emulsion on the photographic plates. The camera consists of a pair of parallel plates, one transparent to the radiation being used and the other coated with a photographic emulsion. A high voltage difference is maintained between the plates. When a single photon of radiation enters the instrument through the transparent plate, it releases electrons from the plate from the gas inside. As in the Geiger counter, the high voltage field quickly expands the initial ionization into an avalanche of ions and electrons rushing towards the negative and positive plates. The discharge produces a large amount of energy, mainly in the ultra-violet, which develops the photographic emulsion. Physicists agree that what is remarkable about this device is that the inventor has found a way to keep the discharge from spreading. Each avalanche runs as a pencil beam from one electrode to another. It makes a small developed dot on the film. The picture, consisting of a huge number of dots, has high resolution.

Ethyl Acetate

The manufacture of ethyl acetate recently started by N. V. Electro, Zuur-en Waterstoffabriek, (the Netherlands), Distelweg, 90, Amsterdam, is now available for export. Ethyl acetate is a colourless, low boiling and highly volatile solvent for nitrocellulose, cellulose acetate varnish, resins, fats, oils, lacquers, diluents, varnishes, photographic films and many plastics. As a solvent it is often used in mixtures with alcohol. It is a base material for the manufacture of medicines, perfumes and many other organic substances. Owing to its good solvent properties, it is also used as an extractive agent, for instance for recovering organic substances from aqueous solutions.

INDIAN TRADE AND GENERAL INSURANCE COMPANY, LIMITED

NET PREMIUM INCOME EXCEEDS RS. 50-LAKH LEVEL

THAT the net premium income of the Indian Trade and General Insurance Company, Ltd., during the year ended December, 1953—that is at the end of the first decade of its establishment—should have exceeded the Rs. 50-lakh mark was "sure evidence" of the fact that the Company's business had been developed along the "right lines," states Mr. Karam Chand Thapar, Chairman of the Company, in a statement circulated to shareholders, along with the report and accounts for the year 1953. In his statement, Mr. Thapar affirms that in view of the restrictions on expenses, the Company should be satisfied with "such increase in our Indian business as is attracted by the services we are able to render, the security we offer and the enviable reputation we have acquired for prompt and fair settlement of claims."

The following are extracts from Mr. Thapar's statement:

"It is a happy coincidence that our net premium income in all departments should, at the end of this first decade, exceed the Rs. 50-lakh mark. I think you will agree that this is sure evidence that we have developed our business along the right lines.

"Market conditions are still far from satisfactory; this is borne out by the large number of companies that operated at an expense ratio well above that permitted under the Insurance Rules, in 1952, as published in the 1953 *Insurance Year Book*; it is obvious, therefore, that if we are to continue to operate within the specified limit of expenses we must be satisfied with such increase in our Indian business as is attracted by the services we are able to render, the security we offer and the enviable reputation we have acquired for prompt and fair settlement of claims.

Abridged Balance Sheet as at 31st December, 1953

Liabilities	Rs.	Assets	Rs.
Creditors ..	22,10,365	Cash and Bank.	5,98,124
Taxation ..	36,250	Debtors ..	32,05,395
Underwriting Funds ..	30,25,146	Investments (marketable).	41,27,974
Current Liabilities ..	52,71,761	*Current Assets.* .	79,31,493
Provisions ..	4,60,933	Furniture and Fixtures ..	1,77,260
Capital ..	24,00,000	Motor Cars and	
Profits and Loss	99,747	Stationery ..	1,23,688
	Rs. 82,32,441		Rs. 82,32,441

"Our total net premium income amounted to Rs. 51,58,146 as against Rs. 40,53,261 in 1952.

"To the net premium income of Rs. 51,58,146 must be added interest and dividends (less income-tax) amounting to Rs. 1,44,068 and miscellaneous receipts of Rs. 1,533; the total income of the Company thus amounted to Rs. 53,03,747; claime, paid and outstanding, take Rs. 25,01,250; commissions, expenses of management and foreign taxes Rs. 18,00,951; Company's contribution to provident and pension fund and bonus to staff aggregate Rs. 66,500, and depreciation, bad debts and other debits account for a further Rs. 1,61,563, leaving a balance of Rs. 7,73,483, to which must be added the balance carried forward from the previous year amounting to Rs. 10,886, making a total credit balance of Rs. 7,84,369. Out of this balance an amount of Rs. 6,71,706 (equal to 13 per cent. of our total premium) is placed to reserves for unexpired liabilities in all departments, and after reserving Rs. 13,000 for bad and doubtful debts, there is an available balance at the end of the year of Rs. 99,663.

"It is proposed to maintain the same dividend as last year of Re. 1-8 per share (tax-free) which will absorb Rs. 90,000, and to carry forward the balance to the next account.

"Management expenses, commissions, depreciation and foreign taxes work out at 37.7 per cent. of our net premium income, a further improvement on the figure of 37.9 per cent. in 1952, and I can say without fear of contradiction that at this level our expenses compare most favourably with those of almost any company of whatever size or age, Indian or foreign; the importance of this aspect of the management of our business cannot be sufficiently emphasised.

Fire

"Net premiums aggregated Rs. 25,97,027 as against Rs. 22,61,308 in the previous year. Claims, paid and outstanding, were higher at 46.4 per cent. due to the preponderance of foreign business but commissions and management expenses at 40.5 per cent. of the income showed a welcome reduction on the figure of 46 per cent. in 1952.

A sum of Rs. 2,47,346 is transferred to the profit and loss account.

Marine

"Net premiums were Rs. 16,57,459 as against Rs. 9,90,309. This increase is mainly due to a change in our method of reinsuring. Whilst commissions and expenses of management show an increase at 29.4 per cent. of the premium income due to the reduced commissions earned on reinsurances ceded under the new system of reinsurance, this is more than offset by the substantial reduction in the claims ratio at 53.6 per cent. as against 70.4 per cent. in 1952.

"The rapid increase in premium brings with it a heavy financing charge and we have transferred Rs. 2,09,544 to the profit and loss account. As a result of this, the reserve for unexpired liabilities is strengthened and now stands at Rs. 13,25,967, an increase of over Rs. 5 lakhs.

Miscellaneous

"Premiums at Rs. 9,03,662 show an increase of a little over one lakh on the previous year. Commission and expenses at 42.8 per cent. are 1.5 per cent. higher due to the initial cost of procuring business in certain overseas territories.

"Claims have improved to 45.3 per cent. of the premium as against 51.4 per cent. in 1952. An amount of Rs. 36,013 has been transferred to the profit and loss account.

Balance-Sheet

"The position is greatly strengthened as a result of the year's operations.

"Investments exceed Rs. 41 lakhs, underwriting and contingency reserves are over Rs. 35 lakhs and our total assets now stand at the substantial figure of Rs. 82,32,441.

"We can look to the future with every confidence and I must thank our General Manager, Mr. T. M. Sturgess, the senior executives and staff, both in India and abroad, as well as our many friends and agents who have all contributed to the success of our operations."

SCIENTIFIC SELECTION OF INSURANCE AGENTS

QUALITIES NEEDED FOR SUCCESSFUL SALESMANSHIP

ALTHOUGH it is only a few insurers, of whom the New India Assurance Company, Ltd., deserves prominent mention, that have attempted to follow a well conceived procedure for recruiting and training salesmen for insurance, all insurers now realise the importance of a proper selection of agents and of their training. The New India is now conducting a valuable experiment in training men in the difficult art of selling insurance. That the subject has received wide attention is evident from the fact that it formed part of the agenda of the recent Insurance Conference, at which the authors of the several instructive papers discussed the qualities that are needed to make a success of the profession of insurance salesmen.

The number of insurance agents who take up insurance salesmanship with great hopes only to leave the profession is certainly alarming. In the year 1951, the Government issued 1,26,691 licences, of which 64,200 were fresh licences and 62,491 were renewal licences. In the following year, 68,922 licences were issued of which only 2,959 were renewal licences. The turnover is, perhaps, nowhere larger than in this profession. Surely, it does nobody any good that there should be many large accretions to and frightfully large defections from the ranks of insurance salesmen. "The time has come," as Mr. Nand Kishore of the New India Assurance Company, Ltd., said in a paper read at the recent Insurance Conference, "when we must cry halt to this senseless waste of time, effort and manpower and conserve it for better achievement."

It is this large turnover in the profession that is responsible for the popular prejudice against it. When the public finds that many life insurance agents fail in their profession and take up positions elsewhere, there develops an "atmosphere of antagonism." Again, unless those already engaged on it are enjoying a comfortable level of income, the best men will not come forward to join this profession. The fact that many agents are not able to earn a comfortable level of income deters the really able men from taking up insurance as a career. Emphasising the importance of co-operative effort at tackling this problem of unpopularity of the insurance agents' profession, Mr. Nand Kishore says:

"The problem as it exists cannot be tackled so effectively by individual offices. It calls for a joint effort and co-operative research. Unless the leading insurance institutions willingly agree to supply the data necessary for co-operative research we shall not get anywhere near the solution."

The reason why many agents give up their work is the initial failures which discourage them. Mr. B. Sardana of the Lakshmi Insurance Company, Ltd., says:

"Our experience is that more than 75 per cent. of our new recruits give up this business without giving it a fair trial, merely because they do not realise the importance of very close touch with the organising officials of the company in the initial stages. This close touch would keep them charged with enthusiasm and would help them overcome the natural period of depression which all salesmen experience, particularly in the initial stages."

When a person offers himself to work as a life insurance salesman it is necessary, as Mr. J. A. Monsoor of the Bombay Mutual Life Assurance Society, Ltd., pointed out, in his paper, that he should be given a note "outlining the career which life insurance has to offer and the immense opportunities available to a really ambitious person. At the same time, he should be told that it does not promise a life of ease straightaway. Enterprise will have its reward. But hard work is necessary in the early stages. The unique advantages of life insurance salesmanship as a career for the right type of young man should be stressed. It is a business which, as Mr. Sardana said, requires no capital outlay. Again, the "sense of security that renewal income gives is unique in this profession." Above all, in the "hereditary renewals," which this profession assures to the agent, it has an advantage "unknown to any other calling."

There are three types of men who, as Mr. R. Jayaraman of the Bombay Life Assurance Company, Ltd., rightly says, should never be appointed as insurance salesmen. They are: (1) Dishonest men; (2) men with low mental capacity; (3) men who are "financially in trouble." "Run up the red play against these persons," he says. Again, caution is needed in appointing three other types of men: (1) A person who has few or no contacts, (2) a person who has no ambition, (3) a person with decided anti-social views.

In the U.S., selection of agents is done after an Aptitude and Personality test which is administered to the person applying for the job. It will be a long time before a similar test is standardised in this country, though an attempt has been made by the Indian Life Assurance Offices' Association to formulate an Aptitude Index suitable to Indian conditions. But it is possible to say, broadly speaking, what qualities will enable a man to carve out for himself a successful career as an insurance agent. These were listed by Mr. Nand Kishore who laid stress on age, stability, reliability, education, sociability, personality, self-discipline, manners, physical fitness, industriousness, determination, enthusiasm, sincerity, cheerfulness, and financial stability. Of these qualities, the first would need some explanation. Mr. Nand Kishore says: "It would appear that men between the ages of 23 and 30 have better chances of survival than people who are younger or older."

Finally, it is necessary to emphasise that, however able may be the man chosen, he is apt to fail, or to take an unduly long time in making a success of his job, if he is not properly trained. Training can make a good agent a better one, and an average agent into a successful man. Some guidance in the art of canvassing, if not a full-fledged course of training, will avert many failures.

INDIAN TRADE AND GENERAL INSURANCE CO., LTD.

A notable improvement in premium income in the principal departments, namely, fire, marine and miscellaneous, is shown by the report and accounts for the year ended 31st December, 1953, of the Indian Trade and General Insurance Company, Ltd. (General Manager: Mr. T. M. Sturgess, Calcutta). The net premium income from all departments has improved from Rs. 40.53 lakhs in 1952 to Rs. 51.58 lakhs in 1953. It is certainly gratifying to note that this comparatively young Company should have, within the very first decade of its establishment, shown so creditable a performance. Mr. K. C. Thapar, the Chairman of the Company, was fully justified in claiming (in the course of his statement to the shareholders) that the improvement is "sure evidence" of the fact that the Company's business has been developed along "right lines." Despite the increase in premium income, the balance carried to the appropriation account aggregated only Rs. 88,861, as against Rs. 99,809 in the previous year. This fall is primarily due to the fact that the marine department again worked at a loss. The Directors have recommended the maintenance of the dividend at the modest level of 3½ per cent.

The creditable record of progress which the Company has established for itself, will be clear from a study of the following table:

(In lakhs of rupees)

	Net premium income	Total assets
1944	2.81	26.69
1945	4.89	28.53
1946	8.18	33.87
1947	12.07	38.70
1948	15.55	45.47
1949	21.12	50.75
1950	24.66	56.66
1951	29.60	68.03
1952	40.53	77.92
1953	51.58	82.32

Turning to individual departments, one finds that the net premium income in the fire department advanced from Rs. 22.61 lakhs to Rs. 25.97 lakhs. The claims ratio was, however, higher at Rs. 46.4 per cent. as against 32 per cent. in 1952. This is attributed to the fact that a large part of the premium income is derived from foreign treaties on which the claims ratio is normally higher than on Indian business and also to the "series of heavy losses" on jute in Calcutta early in the year. The underwriting profit in the department, which continues to be the mainstay of the Company, aggregated Rs. 2.48 lakhs as against Rs. 0.64 lakh in the previous year.

Although the net premium income in the marine department improved by nearly Rs. 6½ lakhs to Rs. 16.57 lakhs during the year under review, the department could yield no profit. A sum of Rs. 2.10 lakhs had to be transferred from the profit and loss account, as against Rs. 0.51 lakh so transferred in the previous year. Last year, the Chairman referred to the "cut-throat competition" prevailing in the marine market. "If conditions did not worsen," the Chairman says this year, "there was certainly no improvement in this respect during 1953."

In the miscellaneous department, the net premium income was Rs. 1 lakh higher at Rs. 9.04 lakhs. The claims ratio was somewhat more favourable to the Company, it being 45.3 per cent. as against 51.4 per cent. in 1952. This is a result as much of the recent enhancement in comprehensive rates for private cars as of the "more stringent" underwriting policy pursued by the Company. The underwriting profit in the department was Rs. 0.36 lakh as against Rs. 0.46 lakh in 1952.

After taking into account the profits from the fire and miscellaneous departments, and the other sources of revenue, and providing for the loss in the marine department, and for Rs. 13,000 on account of bad and doubtful debts, there remains a balance of Rs. 88,861, which, together with the balance carried forward from the previous year, aggregates Rs. 99,747. The payment of the recommended dividend (Re. 1-8 per share) will absorb Rs. 90,000, leaving Rs. 9,747 to be carried forward to the current year's accounts. The strength of the financial position of the Company will be evident from the fact that it has, besides a capital of Rs. 26 lakhs, reserves aggregating Rs. 35.22 lakhs.

PRUDENTIAL ASSURANCE CO., LTD.

The leading British insurance office, the Prudential Assurance Company, Ltd., wrote a new life business of £120 million during 1953, which brought the total sums assured, including bonuses, to over £908 million. The premium income for the year was £41 million or nearly £2.75 million more than for the preceding year. At the recent annual general meeting of the Company, Mr. E. J. W. Borrajo, Deputy Chairman of the Company, stated that a record volume of new life business had been written by the Company's overseas branches; over 45,000 policies were issued in 1953, assuring sums of £51 million. After tracing the expansion of the Company's foreign business which commenced in 1924 with the establishment of an office in India, the Deputy Chairman said that the annual premium income from the Company's overseas life business now exceeded £10 million. He added:

"The extent of this development makes it most important that we should be satisfied that the overseas business is administered on sound lines.... When we started business in the various overseas territories, we determined our premium rates having regard to local conditions such as interest and mortality rates, expenses and taxation. During the early years of our development abroad, we declared the same rate of bonus in all territories as in the United Kingdom, because the trends of the overseas surpluses were not sufficiently stable to justify us in differentiating bonuses. But with the growth of the business, significant divergencies in surplus earnings have, as we anticipated, become apparent and the different rates of bonus declared in the various territories reflect these divergencies. The policy which we have followed enables us to keep our business in each territory on a self-supporting basis and to quote premiums and declare bonuses appropriate to local conditions."

Mr. Borrajo emphasised that the Company was at all times willing to play its part in providing finance for undertakings which were expanding on sound and progressive lines. Only, he deplored this character" available to absorb the funds at the Company's disposal, so that the Company had been compelled to increase its holdings of British Government securities. He said that the fact that the Company could not find suitable outlets for its funds might "well be an indication that too little is being done towards the re-equipment and modernisation of British industry."

If the Company is thus willing to finance sound enterprises, it is at the same time unwilling to hold an excessive proportion of any individual company's share capital. Mr. Borrajo said: "It is our policy to steer a middle course between our our readiness to invest in industry and to avoid holding a large proportion of the equity capital of individual companies." This reluctance to hold an excessive proportion of another company's share capital, it should be clear, stems from the understandable fear that it might be compelled to exercise an undesirable measure of control over the affairs of that company. Explaining the nature of the relationship between insurers and the capital market, he said:

"Our funds represent reserves which are required to meet the obligations under our insurance contracts. It must, therefore, be our aim, as has been previously stated on so many occasions, to invest our funds with a view to producing the best return for our policyholders. The very real competition which exists between the many offices seeking to achieve this aim is a vital factor in maintaining a healthy capital market, thereby enabling the intending borrower to raise money on fair and equitable terms. I do not claim perfection for the system on which the capital market is based but it has been built up and adapted over many years and works remarkably well. The introduction of State control of the investments would, by removing this competitive element, seriously interfere with the smooth working of the market to the disadvantage of those desiring to raise fresh capital. More serious still would be the effect upon the prospects of the policyholders. In my view, it is quite clear that State control of life assurance investments would result in subordinating the policyholders' interests to political considerations."

Those who advocate nationalisation of insurance in this country will do well to ponder Mr. Borrajo's analysis of the problem of investment. A single insurer which, in case of nationalisation of insurance, would be the State itself, would hardly provide funds to industrial borrowers on reasonable terms.

BRITISH INSULATED CALLENDER'S CABLES

GROWTH OF FOREIGN COMPETITION AFFECTS BUSINESS

SIR ALEXANDER ROGER'S STATEMENT

THE Ninth Annual General Meeting of British Insulated Callender's Cables Ltd., will be held on 10th June in Liverpool, England.

The following is an extract from the circulated statement of the Chairman, Sir Alexander Roger, K.C.I.E.:

"The Directors deeply regret to record the loss, through death last July, of Sir Johnstone Wright who, after a lifetime of service in the electricity supply industry, joined the Board of this Company in 1948. His friendship and wise counsel are greatly missed by us all.

"The resignation from the Board has just been received, on account of impaired health, of The Rt. Hon. Lord Ramsden to take effect from the forthcoming annual general meeting. No words of mine can adequately describe the outstanding services Lord Ramsden has rendered since 1942.

"We had much pleasure in appointing Sir Rex Hodges to our Board on 31st March last. He is a man of wide experience with an outstanding reputation in the Merseyside area, in which so many of our main factories are located.

"In my statement last year, I expressed the opinion that trading conditions in 1952 had been exceptionally favourable and the drop in 1953 trading profit of £1,178,002 to £8,344,074 was not unexpected by us.

Production

"1953 has not been an easy year for our production people. In certain of our activities the Group has enjoyed a good load factor with all its benefits, but in others the load has been erratic with all its consequent problems. This latter position has applied particularly where copper is mainly involved.

"In addition, we have had such abnormal experiences as the flooding of our Erith Works and an explosion last August in our copper refinery after 22 years of trouble-free operation. Fortunately, no loss of life occurred in either case.

"We have, however, made excellent progress on several large schemes of improvement which have left us with manufacturing units of which we can be justly proud.

"In some of our activities turnover was increased and in others well maintained, but in our copper wire mill products and in power cables substantial reductions were experienced. Admittedly, some falling away from previous levels was to be expected, but in the summer of last year there was an abnormal shortage of orders in copper products when it became known that the London Metal Exchange was reopening in August.

"The other main factor affecting business in 1953 was the growth of competition, particularly from European and Japanese manufacturers in overseas markets.

"In the all-important matter of exports one of the many strong points of the B.I.C.C. Group is in having operating subsidiaries in several overseas countries.

"In my statement last year, I dealt at length with our new investment in Canada and our new subsidiary in Australia. The former has had a satisfactory first period of operation and, as regards Australia, I have just returned from an extended tour of that country and of New Zealand. I was amazed at the developments in both these countries.

"We have since the close of the year received an order in face of international competition, valued over $3,000,000, from the British Columbia Electric Company for the supply and installation of some 77 miles of 138,000-volt gas pressure type cable.

"In Uganda, good progress has been made with the erection of 132,000-volt transmission lines to carry power from the Owen Falls Hydro Electric Station recently opened by H. M. the Queen. In Portugal a 130,000-volt transmission line from Lindoso to Oporto was commissioned last June.

"The contract for the supply and erection of the overhead equipment, together with underground feeder cables and pillars, for the first trolley-bus system in Ceylon was completed during the year.

Indian Interest

"Included in the B.I.C.C. Group is the Indian Cable Company Limited, in which your Company holds a substantial interest, with the great bulk of the balance owned by Indian nationals. Early in 1923, the Company commenced production of the first Indian-made copper conductors and rubber insulated cables. From small beginnings it has grown considerably and the factory at Tatanagar now stands in an area of 170 acres with well designed workers' housing and medical, recreational and educational facilities for its 1,300 employees. Far-seeing post-war plans for expansion are now coming to fruition. The new non-ferrous rod rolling mill went into production early in 1953, while nearby, a spacious building has been erected to house plant and equipment for the manufacture in India for the first time of paper insulated power cable. These developments represent a major contribution to India's Five-year Plan and a consolidation of our long and happy association with that great country.

"Standard parts for our Callender-Hamilton bridges and hangars have been shipped to New Zealand, Trinidad, British Guiana, Malaya and Sudan.

"On the marine side, we were particularly happy to be associated with the cabling of the royal yacht, and with many other new ships.

"Although there has been a welcome increase in the intake of orders since last autumn, there is no doubt that the days of having long order books are over, and that we are back to the pre-war position in many of our products with delivery and price becoming of increasing importance. This applies particularly to our overseas business where, for reasons I have already given, competition is becoming more and more intense.

"The relinquishment, however, of Government controls over most of our raw materials, and the growing freedom we, therefore, enjoy, are a help and challenge to us all in the Group to achieve greater productivity, even higher efficiency and lower costs. They must remain our foremost objectives.

"Conditions from the short-term aspect may not be easy—they rarely are! But I have confidence in the future of this Group with its widespread interests both in products and in territories; with its active research and technical activities; with its fine factories constantly being improved; and above all with its enthusiastic, competent and loyal team of men and women.

The Chairmanship

"In concluding this review of the 1953 results, I also virtually conclude my active service as a Director and as your Chairman, for it is my intention immediately after the forthcoming general meeting to resign both these offices.

"I get particular pleasure and comfort from the proposed appointment of Mr. W. H. McFadzean as my successor in the chair. He and I have worked together closely and happily for over 20 years, and since the amalgamation he has been my right-hand man.

"I commend him to you with complete confidence, and my final wish is that he will receive from all stockholders and all the B.I.C.C. team, the understanding and support and trust which I have enjoyed and have so deeply appreciated, and which will, always remain one of my most treasured memories."

Also issued with the accounts was a tribute from the Board of Directors to Sir Alexander Roger on the occasion of his retirement as Chairman and Director of the Company.

Local Branch: B.I.C.C. Ltd., P.O. Box No. 111, Esplanade House, Waudby Road, Fort, Bombay.

600 sq. inch sheet costs you less than 6 pice

Such a little thing — so important in making a sale! Trayons Transparent Paper, wrapped round your products, gives them a sales-appeal no customer can resist. The *extra-strong* transparent covering will keep your products clean and new always. And it costs so little; a 20"×30" sheet costs less than 6 pice! If you have any difficulty in obtaining your requirements write to us direct.

Trayons Transparent Paper is the strongest wrapping paper ever made! A strip only one inch wide can support 20 lbs. No cracking, no tearing.

It is more transparent than glass ... it transmits 95% of visible light, shows your products better.

PRICE:
Colourless — Rs. 4¼ per ream of 500 sheets
Amber — Rs. 5⅛ per ream of 500 sheets
plus Sales Tax where in force.
Packing charges — Rs. 1/4 extra

ANDHRA CEMENT COMPANY, LTD.

SIXTEENTH ANNUAL GENERAL MEETING

MR. V. RAMAKRISIINA PLEADS FOR GREATER INCENTIVES TO CEMENT INDUSTRY

AN expression of gratification at the high degree of priority given by the Government of India to the expansion and development of the cement industry was made by Mr. V. Ramakrishna, M.A., C.I.E., I.C.S. (Retd.), Chairman, Andhra Cement Co., Ltd., in the course of his address to the shareholders at their Sixteenth Annual General Meeting held in Madras on 22nd May, 1954. But he noted with disappointment the Government's attitude in not allowing a fair increase in the selling price of cement. Recalling the satisfactory progress made by the industry in recent years, Mr. Ramakrishna said that when the need for expansion of this industry was so great, it was but fair that the Government should give greater incentives. He also drew the attention of the shareholders to the vast potentialities for the development of the industry in the Andhra State.

The following is the full text of Mr. Ramakrishna's speech:

"GENTLEMEN,

"I have very great pleasure in extending to you a very hearty and warm welcome to the sixteenth annual general meeting of our Company, this evening.

"The Directors' report, the audited statement of accounts together with the profit and loss account for the year ended 31st December, 1953, have already been in your hands for some time, and I, therefore, with your kind permission, will take them as read.

A Notable Year

"1953 has been a year of notable improvement with regard to both agricultural and industrial production. On the food front, the production has substantially increased during the past two years leading to gradual decontrol of foodgrains all over the country. The industrial production in 1953 has been the highest since Independence. The general index of industrial production has gone up from 117.2 in 1951 to 135.1 in 1953. Though the targets fixed by the Planning Commission exceeded in certain cases, like cotton textiles and salt, some industries, like steel, suffered a small setback due to labour troubles. In the case of cement, the production was 3.78 million tons, as against installed capacity of 3.96 tons. Tea and paper have also recorded increased production.

"India completed three years out of the Five-year Plan programme, and spent about Rs. 1,000 crores. The Planning Commission recommended an increase in the total expenditure under the Five-year Plan by Rs. 175 crores to Rs. 2,244 crores. The Government will have, therefore, to spend about Rs. 1,250 crores during the next two years. This increase in expenditure in the public sector may create greater opportunities for employment, but unless this is accompanied by a corresponding increase in expenditure in the private sector, it will not be conducive to the creation of proper opportunities for full employment. I hope the Committee appointed by the Reserve Bank under the Chairmanship of Mr. A. D. Shroff, must have recommended appropriate measures of assistance to the private sector. The initiative taken by the Government to start two development corporations for providing financial assistance to the private sector is really to be welcomed. One will be started directly by the Government of India and the other will be by the Indian industrialists with the assistance of the Government of India and the World Bank. I hope that, with the increased expenditure in the public secfor, and with the availability of adequate financial facilities in the private sector, there will be greater activity in our country leading to greater economic prosperity.

Tariff Commission's Enquiry

"I referred in my speech last year to the enquiry undertaken by the Tariff Commission and the representations made by our Company. The Tariff Commission, among other things, recommended the fixation of a basic price of Rs. 72 per ton f.o.r. destination, as against the existing price of Rs. 71 per ton for all companies other than the five high-cost units and also an extra price ranging from Rs. 5 to Rs. 8 per ton for all the high-cost units. The Tariff Commission, while recommending the price of Rs. 72 per ton, made provision for a return of 10 per cent. on the gross block and 4½ per cent. return on the capital employed, and about Rs. 3.9 per ton for rehabilitation and expansion.

"Apart from the question whether the recommendation of a return of 10 per cent. on gross block is fair or not, in view of certain items of expenditure, such as managing agents' allowance and bonus, are not taken into account while computing the various elements of cost of production, the Government of India considered it adequate to allow a return of only 8 per cent. on gross block. This would mean a reduction of about Re. 1½ per ton in the price recommended by the Tariff Commission. The Government also felt that there was no justification for allowing Rs. 3.9 per ton in the cost, towards rehabilitation and expansion in the case of high-cost units. They decided, therefore, to treat Rs. 67 per ton f.o.r. destination as the standard ceiling price of cement. In order to assist the old units to carry out their rehabilitation and expansion programmes, the Government of India allowed these units to add a sum of Rs. 4 per ton to the standard cost, to make the total cost as Rs. 71 per ton as before. After deduction of taxes, the amount of Rs. 4 per ton allowed for rehabilitation and expansion, will yield a little over Rs. 2. As it is the intention of the Government that this sum of Rs. 2 per ton should be exclusively utilised for rehabilitation and expansion, they ordered that all the companies concerned should credit this amount in a separate account which should be operated with the consent of the Government. As the Government felt that there was no necessity for any rehabilitation in the case of high-cost units, but at the same time these units cannot economically work on returns on the same scale as other units, they allowed an increase in the price ranging from Rs. 5 to Rs. 12 over the standard ceiling price of Rs. 67 in the case of five high-cost units.

Fair Increase in Selling Price Needed

"While it is gratifying to note that the Government of India have given a high degree of priority to the expansion and development of the cement industry along with other basic-industries, it is somewhat disappointing to notice the discouraging attitude on the part of the Government in not allowing a fair increase in the selling price. This decision of the Government of India is likely to prove to be a great hardship to the industry in general, and particularly to our unit which is a small and single unit, and which is partly old and partly new, by treating it on the same basis as the A.C.C. Ltd.

"The cement industry has made a fairly satisfactory progress during the past few years, with the production increasing from about 1.55 million tons in 1948 to 3.78 million tons in 1953. The total demand for cement exclusive of the requirements of multi-purpose projects and roads, is expected to be around 3.8 million tons by 1955-56. The requirements of cement for multi-purpose projects and roads are estimated at about 7 lakh tons during the first Five-year Plan period. As against the anticipated demand of 4.5 million tons by 1955-56, the Planning Commission have fixed the target for increasing the rated capacity of this industry at 5.01 million tons in 1955-56.

"At a time when the need for expansion of this industry is so great, it would have been fair for the Government of India to offer enough incentives to the industry, especially taking into account the very satisfactory part played by this industry in fulfilling the expectations of all the interests concerned.

Potentialities in Andhra

"It may be mentioned that the potentialities for the development of the cement industry in the Andhra State are very great, not only on account of the existence of huge high quality deposits of limestone but also on account of a growing demand for cement as a result of the coming into existence of two big hydro-electric projects and construction of a very big river valley project on the Krishna River, in addition to a large number of minor irrigation schemes. With the development of various river valley and irrigation projects and with the growth of electricity and the construction of the State capital, the demand for cement in the Andhra State alone may be expected to be doubled in the next few years.

"Coming to our own affairs, I hope the shareholders will regard with satisfaction the results of the working of our Company during the year 1953. You will observe from the accounts placed before you that the profits of the Company amounted to Rs. 10,73,622, after providing a sum of Rs. 10 lakhs towards depreciation, as against the profit of Rs. 7,07,918 in the previous year after providing the same amount of Rs. 10 lakhs for depreciation. Production as well as despatches were, of course, higher during the year under review. Cement despatches amounted to 1,20,231 tons during 1953, as against 76,861 tons in 1952. This increase in production and despatches could not find a corresponding reflection in the trading results during the year under review, on account of a reduction in the price of packed cement and an increase in production costs. The packing charges are fixed by the Government and they have been reduced every quarter in 1953. Ourselves being a small unit, it is not possible for us to buy huge quantity of packing materials at advantageous rates. The prices of various raw materials as well as of packing materials continued to rule high. The labour costs also have been on the increase. The increase in profits in 1953 was, therefore, due to higher turnover and not to improved margin of profit.

"I would like to draw your attention to the provision made for taxes at Rs. 5.45 lakhs, as against Rs. 75,000 last year. Provision under this head will be on the increase hereafter.

Supplies of Wagons Inadequate

"Last year, I referred to the question of providing additional railway siding facilities at our factory to cope up with increased despatches. We have finalised the programmes regarding the provision of additional siding facilities at the factory and also to lay a special line for about six furlongs at the limestone quarries in Nadikude to ensure increased supplies of good quality limestone. In this connection, I wish to point out that we are not able to get adequate supplies of wagons for transporting our cement and this is proving to be a limiting factor over our sales, on many occasions, apart from the great inconvenience caused to our constituents.

"Your Directors have been always striving their level best to maintain cordial relationship with labour, and you may be glad to note that our relations with the labour have been on the whole, quite satisfactory, despite occasional manifestation of a few discordant notes now and then.

"The construction of the first set of 50 quarters allotted to us under the Industrial Subsidised Housing Scheme is almost completed, and arrangements are now being made for undertaking the remaining quarters contemplated under the Subsidised Scheme. It is proposed to build these quarters in two patterns suitable for the lower income and higher income groups respectively.

"In January, 1954, we have floated a subsidiary company under the name and style 'Andhra Cement Construction Co., Ltd.' for the purpose of undertaking various kinds of construction works and also to carry on any other business which will be conducive to the interests of this Company, and we hope this institution will prove to be of great assistance to us.

"With these few remarks I now commend the Directors' report and the audited statement of accounts for your adoption."

NEW RUSSIAN CERAMIC MATERIAL

A new Russian ceramic material developed in the Department of Glass and Ceramics Technology at the Moscow Chemical Technical Institute is said to have exceptionally good wearing qualities at high speeds. Average wear resistance for this material, TsM-332, which is one of several "micro-lite" materials, is said to be of the order of 350 minutes at 300 metres per minute, but it is said to have been used at speeds of the order of 3,500 metres per minute on some occasions. The material has a high density and a fine grain size. It is very brittle, but its hardness is said to be of the order of 92-93 Rockwell A scale, and its compression strength up to 500 kilograms per square millimetre.

AUDITORS' REPORT.

We beg to report that we have audited the Balance Sheet of the Bank of Rajasthan Ltd., Udaipur as at 31st December 1953 and the relative Profit and Loss Account of the Bank for the year ended on that date as above set forth with Books and Accounts of Udaipur and Jaipur offices and Returns of Branches and Pay Offices and report that—

(a) We have obtained all the information and explanations we have required and the same were satisfactory.
(b) In our opinion, the above Balance Sheet and Profit and Loss Account are drawn up in conformity with the law.
(c) Such Balance Sheet exhibits a true and correct view of the state of affairs according to the best of our information and explanations given to us and as shown by the books of the Bank. Also such Profit and Loss Account shows a true balance of Profit for the year.
(d) In our opinion, Books of accounts have been kept by the Bank as required by Section 130 of the Indian Companies Act.
(e) All the transactions which came to our notice were within the powers of the Bank.
(f) The Returns received from Branches and Pay Offices for the year ended 31st December, 1953 were duly audited by Messrs. Y. T. Korke & Co., Chartered Accountants.

B. D. GARGIEYA & CO.,
Chartered Accountants and Auditors, Beawar.

BEAWAR, 17th May, 1954.

HARISINGH, Chairman.
G. S. PUROHIT, } Directors.
D. L. MANSINGHKA }
D. L. GUPTA, Ex-Officio Director and General Manager.

NOTE—The other Directors have not signed the Balance Sheet and Profit and Loss Account being absent.

CONSEQUENCES OF DEFICIT FINANCE

PRIORITIES IN PLANNING REQUIRE TO BE RECONSIDERED

(By J. M. LOBO PRABHU, I.C.S.)

AS one of the first exponents of deficit finance to secure full employment and to implement the Five-year Plan, I am no doubt gratified that the budget of the year contains a deficit of Rs. 238 crores, and that the Finance Minister estimates the total of deficit finance in the next two years will be of the order of Rs. 600 crores. The change in policy is already reflected in the buoyant conditions of the share market. In so far as this created money will be available for development, the country has been spared more taxation, which has generally heartened industry. The new climate is likely to be felt over the whole field of production and consumption, as and when the new policy actually results in increasing money and opportunities.

To understand the impression, which Rs. 600 crores will make on the economy, it is necessary to relate it, first to currency in circulation, second to the national income, third to the previous actuals of development expenditure, fourth to the specific items of expenditure budgetted, and, fifth, to the bank and credit structure of the country. In the total note issue of about Rs. 1,200 crores, created money of the order of Rs. 600 crores may appear sizable. In this connection, it has to be remembered that the note issue in 1947-48 reached a total of Rs. 1,274 crores, when the national income was less than Rs. 8,600 crores, as against nearly Rs. 10,000 crores now, the general industrial index was 108.4 as against 133 now, the food production index was 99 in 1939-40, as against 102 in 1952 and much higher since. The figures of increased income and production could by themselves now support a greater volume of money in circulation, so that there is no reason to expect any disequilibrium from Rs. 600 crores of created money. Secondly, our money supply is deficient even comparatively with the national income per head in the countries mentioned. Thirdly, during the war, our economy had shown its capacity to absorb even a sixfold increase of currency, without adverse effects on production. It has to be noted that the country is subject, particularly in rural areas, to the traditional habit of keeping money hoarded which effectively reduces the volume and velocity of circulation. In these circumstances, Rs. 600 crores of created money should not make the total money supply excessive to the actual requirements and potentials of our economy.

Income and Money Supply

In a national income of Rs 10,000 crores, increasing yearly at the rate of nearly Rs. 500 crores, Rs. 600 crores of created money, injected over a period of two years, is rather short of the natural appetite. In fact, the increase in money should have matched the increase in income, in order to maintain the efficiency of purchasing power.

With reference to the previous provisions of capital expenditure, the current provision of Rs. 433 crores, based largely on loans and Treasury Bills, no doubt appears large. In terms of the national income, however, it is only 4.3 per cent. which is very small comparatively with similar expenditure in the U.S. or the U.K. No doubt our economy will be affected by this expenditure on account of its catalytic character. This will be more so if, on account of the steps now being taken, the provision will be fully spent, instead of standing over in a large part, as it did last year. This will be all to the good, as the direct employment, which cannot be of the order of less than 250,000 men, and the secondary employment, which may be four times as much according to Keynes "multiplier" theory, may produce a new economic climate.

The items of capital expenditure in the current budget seem to be more definitely aimed at increasing employment opportunities. The provision of Rs. 178 crores as advances to State Governments, of Rs. 24 crores for industries, and Rs. 25 crores for civil works, which have naturally wider employment opportunities, are much larger than in the past.

In relation to the credit and banking structure, the liberal money policy will generally have a catalytic effect. It has already been declared that Industrial Investment Corporations to handle about Rs. 50 crores are under consideration. Even otherwise, new expenditure of a large magnitude must increase the size of credit and banking operations. Advances from Scheduled banks, which fell from Rs. 526 crores in January, 1952 to Rs. 458 crores in February, 1954, have, since the budget, already shown an improvement to Rs. 567 crores in March. If there is some let up on the credit restrictions—this would be in keeping with the new policy of the Bank of England—bank credit will amplify the money supply arising from deficit financing.

It would appear that Rs. 600 crores of created money will not, because of its magnitude, be a strain on the economic structure. Its effect on the various propensities of the economy will be generally healthy. On the propensity for production, the dear money policy of the last two years has been restrictive, as may be seen from at least two consequences, first the tendency of stocks to accumulate, which has hit the marginal units, and, secondly, the decrease in investment which has broken the impetus of industrialisation, which started with the war. Planned production seems to be halted, because there has been no money for commensurate consumption. Should created money again flush the economy, not only will the impulse of production be restored but it may intensify in rapid progression. In a country with most deficient living standards, it is not difficult to stimulate the propensity to consume. The question really is how this propensity should be trained, so that it does not press on articles in short supply, but absorbs production, which is available and is beneficial.

Medium-scale Industries

The problem can be dealt both at the supply and the consumption ends. At the supply end, it seems necessary that there should be priorities in the expenditure both in the public and private sectors. It is possible to distinguish projects as long- or short-term, large- or medium-scale with visible or invisible returns, rural or urban, employing more capital or labour, with short or long chains of raw material supply and of trade lines. The emphasis in the Five-year Plan has been on long-term projects, the river valley and other irrigation and electricity schemes, and the great State factories, taking up the bulk of the finance available. While these projects are basic for other development, they are not immediately productive, with the result that the money spent on them is not balanced at once by increased supplies. This is true, to some extent, also of large- as against medium-scale projects. It would appear necessary to shift the emphasis now from long-term and large-scale projects to short-term and medium-scale ones. To some extent, this is a shift from the public to the private sector, making cheap money available to private investors. If along with capital, these investors are, by a long-term policy, assured protection from foreign competition in respect of production of standard quality, it can be expected that many medium-scale industries will quickly come into existence.

As between projects with visible returns like factories, electricity and irrigation, projects with invisible returns like education, health and social service, the latter may have to be toned down, till the unemployment problem is under control. As between rural and urban projects, the former may have preference, not only for reasons of the decentralisation involved, but because labour employed in rural areas is less liable to spend its full earnings. The choice between projects employing more capital, or labour is difficult to make. The capital-labour ratio of the country, which is the index of its economics, is very poor. For controlling inflation, imports of capital goods for which exchange is now available deserves to be preferred to employment of labour for which money has to be created. Generally, therefore, capital intensive projects are to be preferred, the exception being roads and housing, both of which are deficient and can absorb a large proportion of unskilled labour, throughout the country. As between projects employing short or long chains of raw material, the latter are to be preferred, because of the greater employment offered. This does not mean that agriculture and mining, in which the chain is short, nature playing a great part, should be stepped down. They are important for other reasons, but they do not, at present, require the same nursing as projects offering more widespread employment. It seems necessary, therefore, that priorities in planning require to be reconsidered. What was sound three years ago, when the food problem was overwhelming and conditions were inflationary, has to be viewed in a new context, that of using created finance to create full employment which will, at the same time, balance production and consumption better.

Apprehensions About Value of Money

The effect of deficit finance on the value of money has no doubt created apprehensions. There is a fear that inflationary pressures may be revived, because of the money available being in excess of the goods in supply. While the theory may be true generally, in underdeveloped countries, and particularly in a country like India in which the money supply is a pitiful eleven dollars per head, a good part of which is impounded in hoarding, we are a long way from a state of saturation. Even the opposite theory could be advanced that the volume and velocity of money in the economy, is low to the point of making it anæmic. If only people spent more, and on the right things, a greater proportion of the human and material resources of the country would be employed. In these circumstances, it is not necessary to encourage the propensity to save as a deflationary measure. Savment, but to the extent money can be created and used for productive purposes, it can do as well as personal savings, perhaps better, because the volume of demand will muster that much stronger to match increased production. This may sound unorthodox, but, to a great extent, the Indian economy suffers more from underspending than from over-spending. Deficit financing, if it can correct this tendency, without causing inflation, may do something which is not expected of it, but which may have significant consequences.

Much, therefore, can follow from deficit finance, provided it is fully utilised. In the last budget year, the deficit finance of Rs. 140 crores provided for remained largely on paper, because, on capital account, the shortfall in spending was of the order of Rs. 100 crores. If the current provision is to be spent, and the arrears of the Five-year Plan to be overtaken, a great deal of streamlining is necessary. In the first place, it is suggested that the interference of the Finance Department should be restricted, on the one hand, to overall sanctions and, on the other, to audit and accounting. The independence which the administration will acquire from this, will not only make for speed, but may promote economy from spot decisions of what is found necessary. Secondly, working to targets, under periodical review, which may be every quarter, enforces attention to day-to-day work, as has been found in the Madras State. Thirdly, considering that, even with the best will and effort, schemes always lag behind schedule, the plan should contain more schemes than are covered by the budget provision. A saving of 25 per cent. can be assumed and additional schemes started to that extent. As and when budget allocations are fully spent, such margins can be given up, but, for the present, the plans of work should take note of previous actuals of default, and to that extent should be surplus to the financial provision.

In anticipation of the deficit finance of the current budget, the economic climate has already begun to change. The large increase in public expenditure is expected to increase employment and revive purchasing power. The private sector seems to be reacting quickly. If, however, public expenditure is delayed, due to control and caution, characteristic of austerity finance, the country will not only miss the dawn of a better economic order but may have inflationary conditions, which only benefit speculators. Along with deficit finance, there must, therefore, be surplus performance. The economic mechanism which has now supply of power, can be engaged in the proper gear only by new spirit and action first in the public and then in the private sector.

BANK RATE IN WEST GERMANY CUT

West Germany has reduced its Bank rate from 3½ per cent. to 3 per cent. The reduction was given effect to on the 20th inst. This decision was taken in order to act in step with the Bank of England, which effected a cut in its discount rate from 3½ per cent. to 3 per cent. on the 13th ult.

Following the reduction in West Germany's Bank rate, the banks' lending rate there has come down from 4½ per cent. to 4 per cent. Similarly, the rate for Treasury Bills and for short-term loans of the Provincial Banks has been lowered from 3½ per cent. to 3 per cent.

COMMUNITY PROJECT PROGRAMME

CAUSES FOR SLOW AND UNEVEN PROGRESS

THE Report of the Programme Evaluation Organisation of the Planning Commission on the first year's working of the Community Projects is an immensely useful document. The Report is the outcome of an intensive study of this Organisation of 18 selected Community Project centres, of which five were Pilot Extension centres. Although the study is confined to a cross section of the projects which are scattered all over the country, its observations on operational problems confronting those in charge of this great national drive towards the economic rejuvenation of the countryside will help the project administrators to avoid pitfalls and to implement the programme on sound lines.

The Programme Evaluation Organisation (P.E.O.) was set up by the Planning Commission concurrently to evaluate the working of the Community Projects which constitute a pioneer experiment in the field of national welfare. The Organisation carries on the work of evaluation of the Community Projects under the direction of the Planning Commission. The main tasks of the P.E.O. have been specifically outlined in the agreement between the Government of India and the Ford Foundation under which the Foundation has agreed to make a very substantial contribution towards meeting the cost of the Organisation for three years. The main functions of the Organisation are:

(i) Current appraising of progress being made towards accomplishing programme objectives;

(ii) pointing up those extension methods which are proving effective and those which are not;

(iii) helping explain why some practices are adopted while others are rejected by the villagers; and

(iv) furnishing the insight into the impact of the community development programme upon rural economy and culture.

These tasks have to be performed in respect of the fourfold objectives of Community Projects, namely, (a) more employment; (b) more production; (c) co-operative efforts on the part of the people; and (d) spread of progressive outlook among the rural population.

The present Report, first in the series, seeks to reveal the strong and weak points in the operational organisation under the responsibility of the Community Projects Administration, also in the methods employed for the purpose of development. A striking feature of the Report is that it does not attempt at picking holes. On the contrary, it reveals a genuine attempt at understanding the problems through a detailed examination, so that it may find out how far the objects of the Community Programme—to which we shall refer presently—have been realised in the project areas and know the reasons for good progress in certain project areas and slackness in certain others. The study is undoubtedly a manifestation of a great desire on the part of the P.E.O. to see what constructive measures are necessary to make the Community Project Programme a great success. It is here that one finds the chief value of the Report.

Activities Under the Programme

The Report covers all aspects of activities under the Community Programme. Its main observations relate to the following: (1) the time-limit set for full implementation of the Community Projects, (2) the position of existing *panchayats*, the *ad hoc* popular organisations created in the various States and the role of co-operative societies in the implementation of the programme, (3) the need for fuller administrative co-ordination, (4) adequacy of trained personnel, (5) the role of project advisory committees, (6) achievements of physical targets, (7) creation of progressive outlook among people and (8) employment potential of the Community Projects.

Excepting the field of agriculture, the progress so far made in other spheres of community development such as building of schools, roads, hospitals, promotion of co-operative institutions, establishment of rural industries, sanitation, etc., has been uneven and in some respects disappointing. The causes for this slow progress make interesting reading.

The aim of Community Projects is to help people to earn more, in order to live better. This means the achievements of social, economic and community development at one and the same time. The Community Projects accordingly are planned on the pattern of many-sided development. Unfortunately, attempt at this planned development is a new thing for India. It is unfamiliar to the official as well as to the popular mind. Appropriate attitudes have to be induced in the officials and the masses alike. This itself is a tremendous educational task requiring time, energy and efforts.

Passivity of the popular mind in the initial stages is a great factor which hinders progress. Those connected with the projects seem to have a great headache in bringing about a gradual change in the attitude of the rural people from one of initial unconcern and scepticism to that of a rousing interest and ultimately to conversion to the very idea in order to instil faith in planned development on modern lines. It is encouraging to note in a number of centres this change was in full evidence.

The P.E.O. has found that targets to be achieved by the programmes in many cases had no proper basis, being no more than the officers' own conception of what they would be able to do. The figures represented only a goal to be reached. In determining the targets, the people, who are required to reach them, seemed in most cases to be unconcerned. Consequently, there was difficulty in assessing progress.

Reasons for Delay

It has also been found that, if the progress of development was slow, such was not due to lack of finances but to indefiniteness in initial budgetting by officials and other causes. These budgets were prepared hastily with vague ideas and time had to be spent on asking for details before sanctioning funds for them. There was also strict and rigid control over the spending powers of the staff. The normal rules of technical, financial and administrative sanctions caused delays and hindered progress. Again, co-ordination among officials of the various departments was not there to the full extent. There were also delays in indenting ordering, receiving and forwarding of equipment from the purchasing authorities to the project centres Contributions towards the development effort were from three parties, namely, the C.P.A., the State Governments and the people. The C.P.A. not only shares the financial costs but is also responsible for obtaining imported equipment or equipment chargeable to those sources. There are also contributions from State resources. At present, there are so many contributory schemes which are being framed and adopted by Central and State Governments that some Governments have lost track of their overall commitments, recurring and non-recurring. Consequently, the procedure involved in financing schemes arrests progress. The contribution by the people is mostly in kind rather than in coin. The Report says: "Where the non-official contribution is not in the form of big contributions, but is made up of a number of small contributions in cash, kind and service, a prior guarantee or deposit is out of the question. It is true that, in a few cases, works started on the strength of an assurance of popular participation were left unfinished. But this is inevitable in the initial stages, in any case more inevitable than the suspension of works on account of the failure of the Government to carry out its own part." All these causes are responsible for the low speed of constructive achievement.

Rural Organisations

Again, assistance from existing rural organisations such as *panchayats* and co-operatives for sustaining enthusiasm among the people in the development would appear to be not as much as was expected of them. Even the *ad hoc* popular organisations set up for the purpose have degenerated into official bodies. *Panchayats* do not exist in all areas, and where they exist, they generally suffer from group conflicts. Co-operatives can be of use but, unfortunately, there are limitations on their usefulness in the development projects. Their number is few, their membership is limited, and their rules make for selective rather than general membership. By their very nature, their functions are limited. The *ad hoc* advisory bodies, known by different names, are stated to be doing good work under the general guidance of competent officers. But the danger is that they may cease to function after the official agencies are withdrawn.

In this context, the Report emphasises the need for some suitable permanent institutions which will sustain popular enthusiasm and promote work under the programme after the special staff and assistance are withdrawn. This is a problem which requires the attention of the Planning Commission and the Governments both in the Centre and the States. Failure to organise independent popular institutions capable of undertaking the work under the projects may spell the doom of the scheme of Community Projects.

Again, the progress of development schemes is stated to have been adversely affected by the inadequacy of the trained extension worker at the village level. The Report says that the village level worker has proved himself to be a good extension agent. Unfortunately the number of such workers is stated to be very low. Most of them are from the urban areas, whose rural background has been poor. The training imparted to such candidates would be superficial. This underlines the need for selecting persons with a rural background.

The Report makes a critical evaluation of the progress made towards the achievement of the four main objectives of the Community Project Programme. The first one relates to the generation of a progressive outlook among the rural population. We are told that, as a result of the work so far done, such an outlook has been created among the villages. The danger is that it may very soon be difficult to check the speed of expansion, so that it may not outrun the resources of the Government.

Habits of Co-operative Action

The second objective concerns the formation of habits of co-operative action in the project areas. In view of the limitations of the existing institutions, namely, *panchayats*, co-operatives and *ad hoc* advisory committees, the attainment of this objective bristles with difficulties. Regarding the last mentioned agency, it is stated that even after the lapse of a year, advisory committees had not been set up in some States; few committees meet regularly and in certain cases the first meeting was the only one held in the year. Attendance of officers themselves was in some cases far from regular. Consequently, the Report says that the manner of association of non-official opinion with project and development work and the mutual relationship among departmental and administrative officers constitute two of the most important problems of development policy.

Another objective of the Community Project is increasing production. Although further intensified studies are needed for the actual measurement of physical targets achieved, the Report has no hesitation to say that "the objective of increasing production is being steadily attained." With the growing popularity of extension measures, increased supply of seeds, fertilisers, implements and water-supply, the trend towards increasing production may be expected to continue. It warns, however, that the trend may be affected by factors such as floods and droughts.

On the question of attaining the last objective, namely, increasing the volume of employment, the Report says that, to the extent to which tillage has been made possible by the grow-more-food schemes incorporated in the Project schemes, the volume in employment in agriculture has been increased. But the Projects have little to offer by way of direct addition to employment in the non-agricultural sector, except that they have created some jobs for those employed by the Community Project Administration.

NEW PUBLICATIONS

Agricultural Economics. By Dr. D. S. Chauhan. Published by Lakshmi Narain Agarwal, Educational Publishers, Hospital Road, Agra. Price: Rs. 12.

THE growth of population at a rate faster than the increase in food production in most South-East Asian countries has latterly tended to focus the attention of economists and agricultural scientists on problems of land and its cultivation. Studies in these problems have received further stimulus on account of the prominence given to land reform by the powers-that-be. As a consequence, agricultural economics has come to occupy an independent place of its own, breaking away from the conventional practice of being treated as an appendage to the studies in general economics. In India particularly, this subject is still being treated as part and parcel of Indian economics. A break from this traditional practice, however, is latterly visible by the publication, from time to time, of books exclusively devoted to the principles of agricultural economics. The book under review from the pen of Dr. Chauhan, Director, the B. R. School of Economics and Sociology, Agra, is one of these.

Post-graduate students desirous of specialising in agriculture, will find in Dr. Chauhan's book much that is of use to them in their attempts at studying agricultural problems on a scientific basis. For the book, as the author himself claims, is intended primarily to provide a clear and precise understanding of the principles of agricultural economies. To a certain extent, it will help students to face controversial issues relating to problems of land, and the bibliography suggested by the author will show the way for further studies on this subject.

One of the outstanding features of the book is the case made out by the author for proper land utilisation. The sections devoted particularly to soil erosion are stimulating and should go a long way towards practical solution of this most vexed problem. He has also skilfully dealt with the various classification of farms. In this context, however, one fails to get his guidance on the burning question of imposing a ceiling on landholdings, as no reference is made to this subject. So also the question of redistribution of land and the Bhudan movement which is gaining in importance on account of the indefatigable efforts of Acharya Vinoba Bhave. Nevertheless, this lapse has been made good by the author in other ways. Particularly, his strong plea for rural industrialisation on a decentralised basis merits consideration. Liberal use of maps and charts and profuse footnotes help clarification of the controversial issues dealt with by the author. In fine, the publication is doubtless a valuable addition to the literature on agricultural economics.

Criticism of Published Accounts. By R. S. Saksena, M. Com. Published by Motilal Banarsidass, Bankipore, Patna. Price: Rs. 2-8.

The publication under review is an attempt to fill the demand for a suitable guidance to students of advanced accountancy in the criticism of published accounts of companies. The author sets out the subject under two heads, namely, (1) criticism of the form and contents of published accounts, and (2) criticism of the substance of published accounts. The aim of the former is to see whether the statutory requirements are duly complied with. Under this head, the author gives the legal form of a company's balance-sheet and profit and loss account and discusses the information which each of the items of the accounts is required to provide. The criticism of the substance of published accounts of a company consists in analysing their contents in order that the existing and prospective shareholders and creditors of the company may form an opinion about the progress of the Company's business and its financial position. There is a separate chapter on the study of company's prospects. In this chapter, the author shows how the various factors such as the price and supply of raw materials, labour situation, the expansion programme of the company concerned, etc., should be watched in order to get an idea of a company's prospects. He also points out that the critic should carefully study the directors' report and chairman's speech, examine the results of the company in the past and that he must possess a thorough knowledge about the industry or business in general in which the company is engaged. Suitable illustrations have been given, wherever necessary, to elucidate the principles involved.

ANGLO-IRANIAN OIL COMPANY

SIR WILLIAM FRASER OUTLINES EFFORTS TO SOLVE IRANIAN DISPUTE

THE Forty-fifth Annual General Meeting of the Anglo-Iranian Oil Company, Ltd., will be held on 10th June in London, England.

In the course of the statement to stockholders, circulated with the report and accounts of the Company Sir William Fraser, C.B.E., LL.D., Chairman, says:

"Consolidated trading profit and other income for 1953 was £43,827,585 after provision of £20,056,243 for depreciation. The gross consolidated profit thus totalled £63,883,828, comparing with £61,260,584 for 1952 when depreciation and other write-offs totalling £14,198,946 were provided.

"Total capital expenditure during 1953 was just under £75,000,000, financed by the proceeds of the debenture issue in January, 1953, retained profits and reduction of net current assets. This capital expenditure included the following main items: Aden Refinery £26,500,000; Kent Refinery £14,600,000; Kwinana (W. Australia) Refinery £10,700,000; other U.K. Refineries £4,300,000; Tankers £8,500,000; oil exploration interests £4,500,000 and marketing interests £4,000,000—a total of £73,100,000.

"Capital expenditure in 1954 continues to be heavy, being of the order of £60,000,000.

"After providing £19,342,232 for taxation on profits, the amount available for reserves and dividends is £24,382,850 compared with £25,165,966 for 1952. Your Directors have placed £14,000,000 to general reserve and have recommended a final dividend on the ordinary stock of 25 per cent., and, in addition, a cash bonus of 2s. 6d. per £1 stock unit, both less income-tax. The total distribution for the year approximates 7 per cent. on the ordinary stock plus general reserve."

The Company's Interests In Iran

The statement then describes the latest events relating to the Company's interests in Iran including the resumption of diplomatic relations between Her Majesty's Government and the Iranian Government. "Following inter-Government negotiations and inter-Company discussion of the problem of restoring Iranian oil to the world market, it has been agreed that the best chance of reaching a solution lies in the formation of a consortium of Anglo-Iranian and seven other major oil companies concerned with the production and marketing of Middle East oil.

"The consortium of companies would be as follows: Anglo-Iranian Oil Company, with a 40 per cent. share; the five United States companies, Standard Oil (New Jersey), Socony-Vacuum Oil, Standard Oil of California, Gulf Oil and Texas with an interest aggregating 40 per cent; Royal Dutch-Shell with 14 per cent., and the Compagnie Francaise des Petroles with 6 per cent. The consortium would not be established until there is an agreement with the Iranian Government which is acceptable to all the companies participating.

"At the invitation of the Iranian Government a delegation of three negotiators left London for Tehran on 10th April.

"Parallel with the negotiations between the consortium delegation and the Iranian Government, negotiations with regard to the compensation to be paid to the Anglo-Iranian Oil Company by the Iranian Government are being conducted by Her Majesty's Ambassador, who arrived at Tehran in March. It had been agreed that this question, with which the other members of the consortium are not directly concerned, should be dealt with separately.

"The two sets of negotiations are in progress and developments between now and the annual general meeting will be reported then.

Production, Exploration and Refining

"Crude oil production in Kuwait, Iraq and Qatar was again substantially increased during 1953, when our offtake from those sources totalled some 32,200,000 tons compared with 25,600,000 tons in 1952. Our range of exploration activities (including Australia, Papua, Canada, East and West Africa, Trinidad, Sicily and the Persian Gulf) has been further extended.

"Our total refinery throughput during 1953, at 20,000,000 tons, was 2,000,000 tons greater than in 1952. With the new Aden Refinery coming into commission this summer, and Kwinana (W. Australia) Refinery early next year, as well as expected increases in capacity of some of our existing refineries, our total refining capacity by the end of next year should be some 30,000,000 tons. Parallel with this expansion in refining capacity, our refining operations and the quality of products are being continuously improved by the installation of new plant, in a constant effort to achieve the most efficient and competitive production.

"In Great Britain, our refinery throughput in 1953 was 9,327,000 tons against 6,788,000 tons in 1952."

The statement details the Company's refinery operations in Belgium, France, Germany, Italy, Israel, Kuwait, Australia and Aden.

"World demand for petroleum products (excluding the Iron Curtain countries) increased by about 5 per cent. in 1953, a similar rate to that experienced in the preceding year. In the Eastern Hemisphere the increase in consumption was about 8 per cent., only fractionally less than in the preceding year.

"1953 was our second full year without supplies from Iran. As reported last year, although the Anglo-Iranian Group's sales of over 32 million tons of crude oil and products in 1952 were 3 million tons below those for 1951, our position had been improving. This improvement continued, with the result that the Group's sales of crude oil and products in 1953 increased by 4½ million tons, or just over 14 per cent., as compared with 1952, and totalled just under 37 million tons. This increase occurred mainly in crude oil sales; sales of refined products increased by rather over one million tons and were supplied to a greater extent from our own resources.

"In India, Pakistan, and in our other outlets in East and South Africa, the Rhodesias, Egypt and the Sudan, etc., our trading position has been maintained or improved upon."

MAD 942

OIL PRESSURE LAMPS INDUSTRY

TARIFF BODY ENQUIRES INTO CLAIM FOR FURTHER PROTECTION

THE claim of the oil pressure lamps industry for the continuation of protection came up for enquiry before a Panel of the Tariff Commission on 31st May, 1954. The Panel was presided over by Mr. B. N. Adarkar and included Messrs. B. N. Das Gupta and L. Ramasubban. According to Mr. Adarkar, the industry has asked for, in addition to protection, a ban on imports of oil pressure lamps of the hurricane type. It has also asked for assistance by way of special railway freights, better booking facilities on railways and provision of shipping space for exports of oil pressure lamps to countries such as East Africa. A suggestion has also been made that all Indian products should be marked as "made in India" and that steps should be taken to prevent marketing of indigenous products in a manner calculated to mislead the consumer by indicating some sort of foreign origin of the product. The other demands of the industry include the extension of Government patronage and imposition of severe restrictions on the establishment of new units of the industry.

These demands have been made even after three years of protection the industry has enjoyed. From the speech of Mr. Adarkar delivered at the public enquiry held by the Panel last Monday, it is evident that the claim for protection by the industry was taken up by the old Tariff Board for investigation in April, 1949. In its report submitted in August, 1950, the Board recommended the conversion into protective duty of the then existing revenue duty of 30 per cent. on oil pressure lamps to remain in force till the end of 1953. The Government accepted this recommendation in principle but observed that the "Board should review the progress made by the industry during the first year of protection and, if no tangible progress in the improvement of the quality of its products was shown by the industry, they would have seriously to consider the withdrawal of all concessions or assistance granted to it." The Board enquired into the case of the industry after a year, that is at the end of 1951, and, being satisfied with its progress, recommended continuance of protection up to the end of 1953. This recommendation also was accepted and as it was not possible to review the position of the industry before the expiry of the term, the period was extended automatically to the end of 1954 by the Indian Tariff (Third Amendment) Act, 1953.

The oil pressure lamps industry owes its expansion largely to the conditions of internal shortage created by the last war. At the Tariff Board enquiry, the indigenous production was found to be confined mostly to the manufacture of hand or lantern type of oil pressure lamps with 100 to 400 candle-power (c.p.) and the scope of the enquiry was confined to all types of oil pressure lamps having 100 to 400 c.p. Since this classification has given rise to administrative difficulties, it is proposed that a distinction should be made only between the hurricane type and the hanging type of oil pressure lamps, irrespective of candle-power and that only the hanging type should be excluded from the scope of the enquiry. The Tariff Commission has now to examine this proposal.

Since the last enquiry the industry has made considerable progress. In 1950 there were only eight units. Although two of them went out of production subsequently, four more units have entered the field, three in Bombay and one in Bihar. Thus, the industry now consists of 10 units of which six are in Bombay, three in Calcutta and one in Bihar. The annual rated capacity, on single-shift basis, of eight out of the 10 existing units which have furnished information to the Commission, is 128,900 lamps which compares with 90,500 lamps at the last enquiry. Production has, however, been far below the rated capacity, in that it amounted to 39,932 lamps in 1950, 65,336 lamps in 1951, 37,231 lamps in 1952 and 31,325 in 1953. The drop in production is attributed to increased imports of foreign lamps. As against the output, the domestic annual demand is placed at 90,000 lamps by the Ministry of Commerce and Industry, 80,000 by the Oil Pressure Lamp Industries' Association, Calcutta, and 100,000 to 300,000 by the import trade.

As regards imports, trade figures include both the protected and non-protected variety of oil pressure categories, and no separate figures of imports of the protected categories, namely, lamps upto 400 c.p., are available. The trade accounts of both varieties show that in 1952-53, as many as 37,893 pressure lamps valued at Rs. 15.87 lakhs were imported and in 1953-54 during April to December, 91,253 lamps, valued at Rs. 36.34 lakhs, were imported. The Director-General of Commercial Intelligence and Statistics has, however, furnished only the value of imported oil pressure lamps upto 400 c.p. Thus, imports of oil pressure lamps during May-December, 1951, were valued at Rs. 7,21,689, in 1952 at Rs. 3,39,602 and Rs. 4,04,989 in January-November, 1953. Taking the average c.i.f. price of foreign lamps at about Rs. 30, the Commission estimates the imports of the protected variety at 24,056 lamps in 1951, 11,320 in 1952, and 13,496 in 1953. On this basis, it comes to the conclusion that lamps having more than 400 c.p. were imported in large numbers in 1953. As the total demand for this category of lamps is only 9,000 per annum, it looks as if there was no justification for these large imports. In fact these estimates go to substantiate the industry's complaint that certain importers imported lamps of 400 c.p. under the pretext that they were lamps of more than 400 c.p. as the latter variety are being allowed to be imported under the present policy.

There seems to be considerable improvement in regard to the quality of the indigenous lamps. For, we are told that most of the producers have installed automatic machinery and maintain that they are now able to produce the various components to the required degree of precision. But some consumers are reported to have stated that the pressure gauge needs improvement, while there is no standardisation as regards candle-power.

From the foregoing account emerge certain fundamental points. First, the industry has a large unutilised capacity, though it has enjoyed protection for about three years, the rate of protective duty being 31½ per cent. *ad valorem* including surcharge. On the basis of figures furnished to the Commission, although the demand is about three times the actual production in 1953, the industry has not been able to improve its sales in the domestic markets. It complains that this is due to excess of imports from abroad, and there is evidence that, to a certain extent, these complaints are well founded. Being a war-time industry, it is entitled to protection, provided it has taken measures to improve its efficiency and reduce costs. It is, however, not known to what extent it has made efforts in this direction and to enhance the quality and reputation of its products. If the present enquiry stands this test and proves that the cost of production of the indigenous lamps is higher than the c.i.f. landed cost of the imported products, its claim for the extension of tariff protection is certainly justified, but not protection through import controls.

U.K. SURVEYS EXPORT MARKET IN MIDDLE EAST

The report on trade possibilities in the Middle East countries submitted to the British Board of Trade by the British Trade Mission should be of considerable interest to trade and industry in India which too have commercial transactions in that region. The Mission headed by Sir Edward Benthall, Chairman of Bird & Co., Ltd., Calcutta, and a former Railway Member of the Government of India, provides a good deal of useful information regarding a region about which facts and figures are hard to gather. Such information as is available is often inadequate and sometimes contradictory. Official statistics, where available, are incomplete and leave much to be desired. The Mission's report has been prepared with care and caution after a personal spot-study of five States, namely, Iraq, Kuwait, the Lebanon, Syria and Saudi Arabia.

The mainstay of the Middle East area is the oil industry. The development of this industry in the post-war period was phenomenal. Between 1946 and 1953, oil output of the area, according to one source, rose from 35.6 million tons to 121.8 million tons. As a result of this rapid progress, the income of the Arab oil producing States also rose sharply. For instance, the State income of Iraq rose from £8 million in 1938 to £67 million in 1953. The State income of Kuwait rose between 1950-51 and 1952-53 from £13 million to £61 million and of Saudi Arabia from £49 million to £73 million. With this expanding revenue, each country has development plans of varying dimensions and objectives, providing immense scope for importing a variety of capital, semi-capital and consumer goods.

The Benthall Mission found evidence that British enterprise, which once dominated the region, has tended in the last few months to slip rather rapidly from its original position. There is a serious danger of the Continental countries, the U.S., and Japan usurping the part played by Britain in these markets. The main cause for this deterioration is stated to be the liberal credit facilities offered by competitors in respect of the goods needed by the area. Says the *Financial Times*: "British prices are being severely undercut, often to the extent of 20 per cent., and not infrequently more. British firms, with the laudable exception of the engineering industry, too often insist on escalator clauses in their contracts and refuse to quote firm prices. There is a reluctance to find out what the market really needs, and delivery dates are still longer and less frequently adhered to than those of our competitors." While these outmoded practices are deplored, the Mission lays strong emphasis on the need for tax concessions, by observing that "the whole structure of taxation in the U.K. provides a strong disincentive to the taking of risks in these markets by exporters of all kinds."

Among the Mission's recommendations calculated to develop the Middle East market for British goods with speed and efficiency, the following are the most important:

(1) The U.K. should go out of its way to select men of the highest technical and personal qualifications to advise these Governments when invited to do so;

(2) a Standing Committee should be set up in London to co-ordinate governmental and industrial action in the selection of experts to take service with these Governments;

(3) every assistance should be given by the U.K. to further the technical education of the nationals of these countries; and

(4) a conference of all parties interested in technical education should be called in London at an early date to consider how best the U.K. can assist.

Analysing the various items of export from the U.K. to the Middle East countries, the Mission points out that, in the market for oilfield equipment, the country still holds its own position. But exporters are advised to pay increasing attention to design, packing and service. The U.K. has, however, been losing ground in the public works contract business, owing to increasing competition. In motor vehicles, the U.S. holds the lion's share, though there is still large scope for the small car. The region is also in need of agricultural machinery and electrical equipment.

IMPROVING THE HIDES AND SKINS INDUSTRY IN U.P.

The suggestion that co-operative societies of village flayers and curers should be started for putting the hides and skins industry in Uttar Pradesh on a sound footing has been made by Mr. F. H. Hoek, an F. A. O. expert, in his report to the U.P. Government.

At present, Uttar Pradesh produces hides and leather of the value of Rs. 9.5 crores per annum. The expert is of the opinion that the value of the annual production could be raised to Rs. 11.80 crores by improving the quality of the products. He points out that the ban on cow slaughter enforced by local bodies has arrested progress in the output of slaughtered hides in which U.P. is short. At present, the State tanneries are importing slaughtered hides from Bihar and other States in large quantities. There is no likelihood of the production going up so long as the ban continues.

The production of fallen hides, that is, hides obtained from naturally dead animals, is estimated at 1.8 million per annum and it is in respect of fallen hides that the question of quality improvement arises. This is sought to be done by the erected methods of marketing of hides and by-products and transportation of carcasses. This work is to be entrusted to rural co-operative societies established for the purpose, as stated at the outset, in selected areas. The Co-operative Department is required to grant loans to these societies for the setting up of flaying sheds and central collection and marketing centres.

Other suggestions of the F.A.O. expert are the following:

(1) The collection of fallen animals in large towns should be placed under the control of municipal boards;

(2) all butchers working in slaughter houses should be in possession of a certificate of proficiency in slaughtering and flaying;

(3) proper measures should be taken against pests causing damage to hides and skins, and

(4) the plantation of babul trees for the production of tanning materials should be increased, especially in localities in rural areas running tanning industry.

BENGAL PAPER RETURNS TO DIVIDEND LIST AFTER A YEAR

PRODUCTION REACHES RECORD LEVEL

HEARTENING results are disclosed by the audited accounts of the Bengal Paper Mill Company, Ltd. (Managing Agents: Messrs. Balmer Lawrie & Co., Ltd., Calcutta), for the half-year ended 31st December, 1953. The gross profit for the half-year under review amounts to Rs. 13.64 lakhs, in refreshing contrast to the loss of Rs. 3.38 lakhs for the previous half-year and of Rs. 6.47 lakhs for the corresponding six months of 1952. It will be interesting to note that the profit for the half-year under review is the highest since the six months ended 30th June, 1949. Such an encouraging performance, after successive losses during the previous two half-years, has enabled the Directors to strengthen the reserves by Rs. 4 lakhs after a lapse of three half-years and resume the distribution of dividend on the ordinary shares at the rate of 12½ per cent. per annum. It will be remembered that the dividend for the previous two half-years had to be skipped over on account of the aforesaid losses after having maintained an enviable and unbroken record of dividend for nearly 27 years.

The satisfactory results achieved during the half-year under review were not unexpected. For the period was free from strike of workers which had been responsible for the adverse results in the previous two half-years. In fact, the strike was called off on 23rd March, 1953. Since the resumption of work, the Company's mill has been working efficiently. Furthermore, the management availed itself of the opportunity provided by the strike to concentrate on repairs to plant. This has contributed materially to the high level of production achieved after work was resumed. The output of paper during the half-year under review was a record and the Directors acknowledge that this was "made possible by the co-operation of all sections of the Company's employees and by the efficient machine running."

The following comparative table presents the financial results of the Company for the past four half-years, from which one can get an idea of how far the position has been retrieved since the strike:

(In lakhs of rupees)

	For the half-year ended			
	31-12-53	30-6-53	31-12-52	30-6-52
Sale proceeds	97.89	86.76	46.21	85.16

6 per cent. preference ..	0.60	0.60	0.60	0.60
Ordinary	2.81 (12½% p.a.)	..	..	2.81 (12½% p.a.)
Carry forward	1.40	0.24	—4.70	3.22

The record production during the half-year under review is reflected in the sharp rise in sale proceeds, which are more than double those in either of the previous two half-years, and in expenses. The provision for depreciation has been substantially raised, but no provision has been made, as in the previous two half-years, for taxation, notwithstanding a sizable improvement in earnings. Referring to this, the Directors observe:

"... it should, however, be noted that contrary to usual practice, no taxation provision or appropriation to tax contingency reserve has been made out of the profits.

"The special depreciation allowances on new plant and strike losses were large and relieved the Company of any immediate tax liability on the profits earned, but, as pointed out in a previous report, the special depreciation allowances do not represent any permanent relief. They are in the nature of relief in advance and have the effect of substantially increasing future tax liability, the extent of which it is not possible to determine at present.

"In a normal half-year this situation would have been coped with by an appropriation to the tax contingency reserve. The losses recently incurred have, however, obscured the position and your Directors have provided for the contingency in the transfer to general reserve. If necessary, the tax contingency reserve can be adjusted in a later period to cover the anticipated additional liability once the position has been fully investigated."

Out of the net profit of Rs. 8.79 lakhs, a sum of Rs. 4 lakhs has been transferred to the general reserve. The dividend on the ordinary shares has been restored to the rate paid prior to the strike period, namely, 12½ per cent. per annum. This rate, which is a record one since the capital of the Company was increased substantially in May, 1948, has been paid for three successive half-years upto 30th June, 1952, after having been raised from 10 per cent. per annum for the preceding five half-years.

Besides the loss of profit, the strike of workers in the Company's mill during the period from 9th October, 1952 to 23rd March, 1953, has cost the Company about Rs. 14 lakhs. The Directors say that this loss had to be paid out of the funds intended to finance the replacement of old machinery and developments. "There is, therefore, every necessity," they add, "to restore our finances as quickly as possible to their former strength by the careful husbanding of the Company's resources."

The Rs. 25 paid-up ordinary shares of the Company are being currently quoted at Rs. 60 *ex-div.*, at which rate and on the basis of the latest dividend, they provide a yield of 5.2 per cent. per annum free of tax.

INDO-BURMA PETROLEUM CO., LTD.

After over five years since the scheme for rehabilitation of the oil industry in Burma and the participation of the Government of Burma in the industry along with the three major companies in that country was put forward, a satisfactory agreement was reached in January, 1954, between the Government and the three oil companies. The three companies which have concluded this agreement are (1) the Indo-Burma Petroleum Company, Ltd., (2) the Burmah Oil Company, Ltd. and (3) the British Burmah Petroleum Company, Ltd. In the course a circular letter addressed to the shareholders, the Indo-Burma Petroleum Company, Ltd., gives the following details of the arrangements which the agreement with the Government of Burma gives effect to:

"A new company, the Burma Oil Company (1954) Ltd., has been formed in Burma with an authorised capital of K.30,00,00,000 divided into three million shares of K.100 each, of which K.20,00,00,000 will be issued as fully paid, to which new company will be transferred the undertakings in Burma of certain subsidiaries of the Burmah Oil Company, Ltd. and those undertakings or parts of undertakings of your Company and of the British Burmah Petroleum Company, Ltd., relating to production, transportation and refining of petroleum in Burma. In addition, these Companies will make a cash payment of Kyats 1 crore to the new company for working expenses. Your Company will receive approximately 300,000 fully paid shares in the new company for that part of our Company's undertakings in Burma which is included in this transaction.

"The Union Government of Burma has agreed to purchase for £5,000,000 from your Company, the Burmah Oil Company, Ltd., and the British Burmah Petroleum Company, Ltd., one-third of each of their holdings in the new company, 50 per cent. of the purchase price of which has been paid in cash in London and the balance will be paid by annual instalments equal to two-thirds of the total taxation on profits paid by the Burma Oil Company (1954) Ltd. during the year previous, but not necessarily exceeding £200,000 in any one year, but if it so wishes the Union Government of Burma may pay off the balance in full at any time. This means that the Union Government of Burma is acquiring initially a one-third interest in the new company, but it is also a condition of the agreement that after it has paid in full for this initial allotment of one-third of the shares, the Union Government may, as and when it desires, acquire further shares from the oil companies up to the total number issued to them at the same sterling price, i.e., £750 per 100 shares, payable in London.

"A further condition of the agreement is that, after provision only for depreciation at income-tax rates applicable at the time, the whole of the net profits, as certified by the auditors of the Company, shall be paid out as dividends to the shareholders and the Union Government of Burma has undertaken to provide facilities for the remittance of these dividends to the United Kingdom, India and Pakistan.

"An agreement will shortly be entered into confirming the appointment of your Company and the Burmah Oil Company (Burma Trading) Ltd. as agents for the sale of the indigenous oil products of the new company, for which they will be remunerated by means of an agency commission. It has been agreed also that, if the Union Government of Burma has acquired a majority shareholding in the new company or if the production and refining of indigenous oil has rendered Burma independent, or nearly independent, of imported supplies of motor spirit, kerosene and high speed diesel oil, the Union Government has the right to acquire an interest in the distribution and marketing organisations in Burma of the two selling agents corresponding to their then interest in the Burma Oil Company (1954) Ltd.

"Finally, the business of your distribution and marketing organisations in India and Pakistan will in no way be affected by the foregoing arrangements."

METTUR INDUSTRIES SHOW BETTER RESULTS

EXCELLENT FINANCIAL POSITION

THE removal of price and distribution controls over cloth, the installation of a power generating set to offset the adverse effects of a cut in Government power supply and the keen demand for cloth throughout South India were all cumulatively responsible for the satisfactory results achieved by the Mettur Industries Ltd. (Managing Agents: Messrs. W. A. Beardsell & Co., Ltd., Madras) during the year ended 31st March, 1954. The gross profit of the Company, which had dropped from Rs. 42.33 lakhs for 1951-52 to Rs. 29.69 lakhs for 1952-53, has gone up to Rs. 37.26 lakhs for the year under review. The net profit for the year amounts to Rs. 22.48 lakhs, an increase of Rs. 7.71 lakhs over that for the previous year. The distribution to the shareholders is proposed to be stepped up, from 12½ per cent. paid for the previous three years to 22½ per cent., by distributing a special bonus of 10 per cent.

The results would have been far more encouraging had it not been for the power cuts in April and May, 1953. The Directors report that the year's working was affected by power cuts in these two months. However, a diesel generating set was installed and started working by the end of May. This set is said to be capable of supplying about 50 per cent. of normal power requirements. The demand for the Company's cloth continued to be keen throughout South India. Following the removal of price and distribution controls, some minor adjustment in prices was made, but the Company's products were, and are still being, sold at fixed retail prices through their distribution organisation of wholesalers and retailers.

The following table shows the trend of the Company's earnings and appropriations thereof since 1950-51:

(In lakhs of rupees)

	For the year ended 31st March			
	1954	1953	1952	1951

Carry forward ..	0.60	0.77	0.50	0.23

N.A. Not available

Though the gross profit for the year under review is Rs. 5.07 lakhs less than that earned in 1951-52, the net profit is slightly higher, because of the lower provisions made for depreciation and taxation than those in 1952. The net profit has been supplemented by the receipt of a sum of Rs. 6.81 lakhs being the refund of E.P.T. after taxation thereon. Thus, the total sum available for appropriation is substantially higher than that two years ago. But the addition to the reserves is only half of that transferred out of the profit for 1952. This is because of the large allocation that has had to be made for payment of bonus and compensation for involuntary unemployment relating to previous years in addition to the bonus for the year under review. A sum of Rs. 6 lakhs has been placed to the fixed assets replacement reserve, which is Rs. 1 lakh more than that transferred to this reserve a year ago. The dividend equalisation reserve gets Rs. 50,000, as against *nil* in the previous year. The general reserve, which had received Rs. 2 lakhs, has not been provided with anything. A sum of Rs. 2.45 lakhs has been provided for paying bonus to workers for 1953-54, Rs. 2.16 lakhs for 1952-53, Rs. 2.43 lakhs being additional bonus for 1951-52 and 1952-53 and Rs. 2.53 lakhs being compensation for involuntary unemployment due to power cut in 1952-53. The receipt of E.P.T. refund is proposed to be utilised by the Directors to distribute a special bonus of 10 per cent. to the shareholders in addition to the dividend of 12½ per cent.

Half of the Company's present paid-up capital represents capitalisation of reserves in the past. Even after such a large transfer, the reserves and surplus stand well over the capital. The reserves include a general reserve of Rs. 38 lakhs, raw materials fluctuation reserve of Rs. 10 lakhs, fixed assets replacement reserve of Rs. 11 lakhs and dividend equalisation reserve of Rs. 10 lakhs. A notable feature of the balance-sheet is the strong liquid position of the assets, the cash balances alone more than adequately covering the current liabilities and provision for taxation. A year ago, these cash balances stood at Rs. 77.93 lakhs. The decline in cash balances has been offset by the increase in investments from a mere Rs. 82,285 to Rs. 72.07 lakhs.

The financial position of the Company is quite sound, as will be seen from the following synopsis of its latest balance-sheet:

Liabilities	Rs.	Assets	Rs.
Capital ..	60,00,000	Gross block ..	61,38,483
Reserves and surplus ..	69,50,153	Less—Depreciation ..	39,86,352
Provision for taxation ..	1,34,480	Net block ..	21,52,131
Liabilities ..	25,67,618	Stores, spares, etc. ..	14,54,771
		Stock-in-trade ..	14,95,076
		Debts, deposits and advances ..	4,22,925
		Investments ..	72,06,884
		Cash ..	29,19,464
Rs.	1,56,52,251	Rs.	1,56,52,251

The Rs. 100 paid-up shares of the Company are being currently quoted at Rs. 295 *cum-div.* On an *ex-div.* basis, the latest distribution gives a yield of 8.25 per cent. per annum, free of tax.

INDIA SUGARS AND REFINERIES LTD.

Lower production and additional payment to cane growers based on the S.I.S.M.A. formula have been responsible for the decline in earnings of the India Sugars and Refineries Ltd. (Managing Agents: The India Sugar Agencies Ltd., Madras) during the year ended 30th September, 1953. The gross profit of the Company amounts to Rs. 10.42 lakhs, as compared with Rs. 20.17 lakhs for the previous year and the record one of Rs. 28.91 lakhs for 1950-51, thus recording a shrinkage for the second year in succession. Nevertheless, the dividend to the shareholders is proposed to be kept unchanged at 25 per cent., to which level it was raised two years ago from 15 per cent. for 1949-50.

The Company's factory crushed during the year under review 89,660 tons of sugarcane and produced 9,425 tons of sugar, as against 132,634 tons and 12,502 tons, respectively, in the previous year. The Company had to pay, on the insistence of the Government of India, a sum of Rs. .9 lakhs to sugarcane growers over and above the contraced rates. This liability, the Directors say, was imposed on the Company long after the cane was purchased and paid for and was based on the S.I.S.M.A. formula. "Our factory" they add, "paid thus a bonus to cane growers which is higher than that paid by any other factory in the South during the year." The working of the Company's distillery is said to be not satisfactory.

Out of the gross profit of Rs. 10.42 lakhs, the Managing Agents' remuneration takes up Rs. 72,320, as against Rs. 1.96 lakhs in the previous year. The provision for depreciation has been stepped up from Rs. 1.37 lakhs to Rs. 4 lakhs, which includes Rs. 3.02 lakhs, representing additional depreciation in excess of the normal depreciation. The Directors have felt that additional depreciation should be charged off in the accounts so as to write down the plant and machinery. They believe, very rightly in our view, that "this conservative practice is in accord with prudent commercial policy and takes into account the need for rehabilitation and modernisation of our plant." The provision for taxation has been reduced from Rs. 7.50 lakhs to Rs. 3.75 lakhs. The net profit amounts to Rs. 1.95 lakhs, as compared with Rs. 9.34 lakhs. With the sizable sum of Rs. 3.71 lakhs brought in from the previous year, there is a sum of Rs. 5.66 lakhs available for appropriation. No addition to the general reserve has been made, while a year ago a sum of Rs. 5 lakhs had been added. The distribution of 7½ per cent. dividend on the preference shares requires Rs. 9,218 and of 25 per cent. on the ordinary shares Rs. 3.25 lakhs, leaving Rs. 2.32 lakhs to be carried forward.

The latest balance-sheet of the Company shows that the reserves and surplus aggregate Rs. 32.53 lakhs, as against a paid-up capital of Rs. 14.23 lakhs. The gross block of the value of Rs. 25.07 lakhs has been written down to Rs. 8.54 lakhs. The current assets aggregating Rs. 80.22 lakhs are more than double the current liabilities and provision for taxation and contingencies amounting to Rs. 40.01 lakhs.

The Government of India has accorded sanction to the Company's proposal to capitalise a sum of Rs. 16 lakhs being part of the amount standing to the credit of the general reserve (Rs. 30 lakhs) and issue 160,000 ordinary shareholders as capital to the existing ordinary shareholders as capital bonus in the proportion of one new share for each share held by them as on 1st July, 1954. The present paid-up ordinary capital amounts to Rs. 13 lakhs, made up of 1,00,000 shares of Rs. 10 each fully paid and 60,000 shares of Rs. 5 each (partly paid). Thus, the partly paid shareholders are also entitled to the bonus shares. After the issue of bonus shares, the ordinary paid-up capital of the Company will be Rs. 29 lakhs, made up of 260,000 shares of Rs. 10 each and 60,000 shares of Rs. 5 each (partly paid). The new shares will rank for dividend from 1st July, 1954.

The Directors have submitted proposals to the Government to put up an additional plant, so as to increase the crushing capacity by about 50 per cent. and to improve the economy and efficiency of the factory. They expect that this additional plant will be erected in the course of the next two years.

The Government of India has granted the Company a loan and a subsidy for the construction of 165 houses at a cost of about Rs. 4 lakhs to provide additional accommodation for the Company's labour. The first 44 quarters will be completed in a few weeks' time.

The Company's prospects for the current year is not unsatisfactory, as will be seen from the following extract from the Directors' report:

"Consequent on our factory coming within the Mysore State, we have had to pay an additional cane cess of about Rs. 5 lakhs per annum with effect from the current year. The working of the distillery has not been satisfactory, but it is tied up with the marketing conditions for rectified spirit, in which we expect improvement in the current year. In spite of adverse factors and the uncertain sugar market, we believe that, with the economies and improvement in efficiency that are constantly being attempted, it will be possible to present to you a not unsatisfactory report for the current year in due course."

Points From The Chair

Potentialities for Cement Industry in Andhra

"IT may be mentioned that the potentialities for the development of the cement industry in the Andhra State are very great, not only on account of the existence of huge high quality deposits of limestone but also on account of a growing demand for cement as a result of the coming into existence of two big hydro-electric projects and construction of a very big river valley project on the Krishna River, in addition to a large number of minor irrigation schemes. With the development of various river valley and irrigation projects and with the growth of electricity and the construction of the State capital, the demand for cement in the Andhra State alone may be expected to be doubled in the next few years."

V. RAMAKRISHNA,
Andhra Cement Co., Ltd.

Shipping Must Pay

"Your Board takes the view that the world will need shipping for as far ahead as any of us can see. Nothing has yet taken the place of sea transport as the most economical form of transport for general world trade. If this is true, it must be assumed that, over a period, shipping will be able to charge what is necessary to make it pay. There will be periods in the future, as in the past, when shipping does not pay, but unless it can recover its costs over a period, it will disappear. In our view, the world cannot afford to let it disappear. Thus, whilst we, in common with other shipping men, say that prospects are at present poor, we are not suggesting that this is a permanent state of affairs. In these troubled times no one can safely predict the level of demand for shipping even 12 months ahead, let alone for the 20 years we must have in view when building a new ship. But, if world shipping is to pay its way over a period, there is every reason to suppose that we, as part of it, can do the same, so long as we progress and do not fall behind."

SIR WILLIAM CRAWFORD CURRIE,
Peninsular and Oriental Steam Navigation Company

Warning Against Undue Rise in Tea Prices

"So far as one can judge, supply and demand appear to be more or less in balance at present and, while we expect larger crops from North India, where considerable areas have been replanted in recent years, there is every indication that consumption figures will also show an increase. With our large interests in producing companies we naturally look for remunerative selling prices, but we think the present level is rather high to be truly healthy. With the world-wide rise in all costs that has taken place since 1940, pre-war levels of tea prices cannot be expected, and I think it is true to say that generally tea prices have not risen more than those of other commodities, but it would be very dangerous to the prosperity of tea producing concerns, if the price of tea rose to a level which limited its consumption. It is a very popular beverage and, even at its present price, the cost of a cup of tea is far from being exorbitant."

W. H. MARR,
James Finlay & Co., Ltd.

Public Participation in Long-term Risks

"While from several points of view we welcome the association of national capital in such enterprises as ours, we would rather in some respects that the financial stake were held by the public than by the Government. Governments come and go, but the public remains, and oil ventures are long-term propositions. But it is one thing to prescribe that the public shall subscribe and quite another thing to attract them to do so. In the case of Pakistan Petroleum Ltd., after the list had been kept open for three months to allow time for the public to take up their prescribed 30 per cent., they had actually applied for less than 1 per cent. and the Government subsequently decided to take up the balance. In the case of the Sui Gas Transmission Co., which is not a speculative prospecting venture, but an undertaking expected to show a good and reasonably safe return, the public issue was oversubscribed five times in a few hours. The difference is interesting and instructive. The public have the money but are not prepared to take the kind of long-term risk which your Company and other British companies have taken for many years past, sometimes successfully and more often not. I feel sure the implications have not been lost upon the interested Governments."

SIR KENNETH B. HARPER,
Burmah Oil Co., Ltd.

COMPANY MEETINGS AND DIVIDENDS

BHARAT LINE LTD. Annual General Meeting, Bhavnagar, 7th June, 1954. Dividend: Rs. 5 per share. Transfer books remain closed from 20th May to 18th June, 1954, both days inclusive.

ARRAH-SASARAM LIGHT RAILWAY CO., LTD. Half-yearly General Meeting, Calcutta, 7th June, 1954. Dividend: Rs. 3 per share, less income-tax. Transfer books remain closed from 1st to 7th June, 1954, both days inclusive.

CHAPARMUKH-SILGHAT RAILWAY CO., LTD. Half-yearly General Meeting, Calcutta, 7th June, 1954. Dividend: Rs. 1-12 per share, less income-tax. Transfer books remain closed from 1st to 7th June, 1954, both days inclusive.

PHŒNIX MILLS SHOWS GOOD RESULTS

HANSQUA TEA PAYS RECORD DIVIDEND

Phœnix Mills, Ltd.

THE directors of the above Company (Agents: Messrs. Ramnarain Sons Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December, 1953.

The result of the year's working shows a profit of Rs. 12,37,095 (Rs. 21,027) subject to provision for depreciation and taxation. To this has to be added a sum of Rs. 27,380 (Rs. 2,40,353) brought forward from last year's account, making a total of Rs. 12,64,475 (Rs. 4,11,380), which, the directors recommend, may be dealt with as under:—

To payment of dividend at the rate of Rs. 8 (Rs. 8) per share free of income-tax for the year Rs. 3,84,000 (Rs. 3,84,000), to reserve for taxation Rs. 1,50,000 (*nil*), to depreciation on buildings Rs. 1,20,000 (*nil*), machinery Rs. 5,00,000 (*nil*), electric equipment Rs. 50,000 (*nil*), humidifier plant Rs. 10,000 (*nil*), furniture Rs. 15,000 (*nil*), electric light installation Rs. 2,000 (*nil* and on motor cars and lorry Rs. 3,000 (*nil* leaving to be carried forward to next year's account Rs. 30,475 (Rs. 27,380).

During the year under report, the following major additions have been made to machinery:—Thirty-eight ring frames Rs. 1,54,375 (*nil*) 12 pneuma-fils Rs. 9,750 (*nil*). 1 warp tying machine Rs. 28,788 (*nil*), 1 auto heald and reed brushing machine Rs. 12,026 (*nil*), 1 split cutting machine Rs. 7,336 (*nil*), 6 singer sewing machines Rs. 12,096 (*nil*) and 1 leesona roto coner Rs. 38,190 (*nil*).

The Mill buildings with machinery and stocks of cotton, yarn, cloth, etc., are insured against fire and riot risks to the extent of Rs. 2,85,02,450 (Rs. 3,01,04,000). The profits and fixed charges, including the risk of riot and civil commotion, have been insured for Rs. 40,00,000 (Rs. 50,00,000) covering indemnity for 24 months.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Coimbatore Pioneer Mills Ltd.

The directors of the above Company (Managing Agents and Secretaries: Messrs. T. R. Narayanaswamy Naidu & Co., Peelamedu; Coimbatore) submit the audited accounts of the Company for the year ended 31st December, 1953.

After deducting all working expenses and providing a sum of Rs. 3,75,282 (Rs. 1,69,106) towards depreciation including initial depreciation, there is a profit of Rs. 6,08,726 (Rs. 3,51,340) and with Rs. 1,33,497 (Rs. 1,28,656) brought forward from last year there is a sum of Rs. 7,42,223 (Rs. 4,79,996) available for distribution, which the directors recommend to be appropriated as under:—

To transfer to machinery renewal fund Rs. 2,96,276 (*nil*), to transfer to contingency reserve Rs. 1,20,000 (*nil*), to provision for bad and doubtful debts Rs. 16,047 (*nil*), to pay a dividend at the rate of 6¼ per cent. per annum, free of income-tax on the preference share capital of the Company for the year ended 31st December, 1953, Rs. 6,500 (Rs. 6,500), to pay a dividend at the rate of 15 (9) per cent. per annum, free of income-tax on the ordinary share capital of the Company for the year ended 31st December, 1953, Rs. 3,00,000 (Rs. 1,80,000) and to carry forward Rs. 3,400 (Rs. 1,33,496).

During the year under report the Mill had worked 301 days of which 41 days were of double shift and 227 days were of triple shift.

The Company has installed a generator to augment the power supply during the year under review to off set the cuts in electricity. The installed capacity of the Mills has been increased by an additional spindleage of 2,180 spindles, stepping up the total spindleage to 21,980 besides doubling cone and cheese. The entire stock of cotton and yarn, besides the Company's building and machinery have been insured as usual.

Accounts in brief are as under:—

Baghmari Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1953.

The season's working resulted in a profit, before providing for depreciation, of Rs. 3,34,568 (loss of Rs. 79,334) from which must be deducted loss on farming Rs. 1,556 (*nil*), adjustments Rs. 6,948 (Rs. 10,219), amount written off stores Rs. 26,358 (*nil*), depreciation for 1953 Rs. 1,14,299 Rs. 1,607 (*nil*) and loss brought forward from 1952 of Rs. 2,58,910 (Rs. 89,152) leaving a balance of debit of profit and loss account to be carried forward to 1954 of Rs. 75,110 (debit of Rs. 2,58,910).

The saleable crop weighed out at 9,008 maunds against an estimate of 9,000 maunds and was disposed of at an average price of As. 31.26 per lb.

The estimate for season 1954 provides for a saleable crop of 9,700 maunds at a total revenue expenditure of Rs. 9,52,320. The results may be considered to be satisfactory.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,50,000	Block ...	11,27,483
Reserves ...	7,21,416	Stock of tea	3,28,438
Liabilities ...	5,71,993	Stores ...	2,17,779
		Other assets	22,266
		Debts and advances ...	47,250
		Investments	1,107
		Cash ...	23,976
		Profit and loss account ...	75,110
Rs.	18,43,409	Rs.	18,43,409

Sungma Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1953.

The season's working resulted in a profit, before providing for depreciation, of Rs. 93,086 (loss of Rs. 3,04,072) from which must be deducted adjustments Rs. 1,052 (Rs. 25,009), amount written off stores Rs. 8,282 (*nil*), depreciation for 1953 Rs. 39,314 (Rs. 21,428) and loss brought forward from 1952 Rs. 3,23,732 (credit of Rs. 19,301) leaving a balance at debit of profit and loss account to be carried forward to 1954 of Rs. 2,79,294 (debit of Rs. 3,23,732).

The saleable crop from Sungma and Turzum Estates weighed out at 4,127 maunds against an estimate of 4,590 maunds and was disposed of at an average price of As. 37.33 per lb.

The estimate for season 1954 provides for a saleable crop of 4,700 maunds at a total revenue expenditure of Rs. 6,85,409.

The results may be considered to be satisfactory, although owing to unfavourable weather conditions, the gardens could not make the full estimated crop.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,23,000	Block ...	10,20,519
Reserves ...	5,74,585	Stock of tea	1,50,094
Liabilities ...	6,36,162	Stores ...	2,89,904
		Other assets	15,171
		Debts and advances ...	72,901
		Investments	2,817
		Cash ...	5,047
		Profit and loss account ...	2,79,294
Rs.	18,35,747	Rs.	18,35,747

Ethelbari Tea Co. (1932), Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submitted the audited accounts of the company for the year ended 31st December, 1953.

A crop of 5,743 maunds of tea was manufactured and disposed of, for sale in Calcutta for export 3,593 maunds, and for sale in Calcutta for internal consumption 2,150 maunds.

The teas realised an average price of Re. 1-12-9 per lb. as compared with Re. 1-6-3 a lb. obtained for the previous season's crop of 6,313 maunds. The Company's export quota for season 1953 was 3,381 maunds.

The shortfall of 657 maunds in the crop as compared with the Estimate can be attributed to the fact that the garden was closed down during January, 1953, pending the outcome of negotiations for finance through the Company's Bankers. As a result of this closure pruning was delayed, added to which rainfall during the season was short and badly distributed.

No extensions were put out during the year and the area under cultivation remains unchanged at 447 acres as registered with the Indian Tea Licensing Committee at 31st December, 1953.

The revenue account showed a profit of Rs. 2,70,934 (loss of Rs. 2,53,946) and after deducting from this staff commission and bonus Rs. 16,391 (nil), managing agents' commission on profits Rs. 5,464 (nil), and depreciation Rs. 24,993 (Rs. 28,300) there remained a sum of Rs. 2,24,086 (debit of Rs. 2,82,246). After adding forfeited dividends Rs. 375 (Rs. 630) there was a net profit for the year of Rs. 2,24,461 (loss of Rs. 2,81,616). After deducting from this the adjusted debit balance of Rs. 83,682 (debit of Rs. 54,303) brought forward from the previous year, there was a credit balance of Rs. 1,40,779 (debit of Rs. 85,919) on profit and loss account. The directors transferred

a sum of Rs. 1,00,000 (*nil*) to reserve account and Rs. 40,779 (debit of Rs. 85,919) carried forward.

The estimates for season 1954 are as follows:—

Garden	Crop	Expenditure		Total
		Garden	Calcutta	
	Maunds	Rs.	Rs.	Rs.
Ethelbari	6,500	6,14,347	1,29,740	7,44,087

The total number of hands employed on the garden at 31st December, 1953, was 626.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,50,000	Block ...	5,31,095
Reserves ...	1,02,500	Stock of tea	4,48,345
Provision for taxation ...	16,529	Stores ...	58,711
Liabilities ...	5,78,740	Debts, deposits and advances ...	26,535
Profit and loss account ...	40,779	Investments	1,100
		Cash ...	22,762
Rs.	10,88,548	Rs.	10,88,548

Alliance Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submitted the audited accounts of the company for the half-year ended 31st December, 1953.

The profit for the half-year, after making provision for doubtful debts Rs. 50,000 and providing for depreciation Rs. 1,61,000, (Rs. 2,39,000) amounted to Rs. 9,46,607 (Rs. 1,96,939). Deducting from this the debit balance brought forward from the previous half-year of Rs. 1,70,951 (debit of Rs. 13,63,074) there was a balance of Rs. 7,75,656 (debit of Rs. 11,66,135) from which the directors have transferred to general reserve account Rs. 3,00,000 (*nil*) leaving an available balance of Rs. 4,75,656 (debit of Rs. 4,75,656). The directors disposed of the above balance as follows:—

Paid dividend on 15,000 preference shares at Rs. 6 per share for the year ended 31st December, 1951 Rs. 90,000, dividend on 15,000 preference shares at Rs. 6 per share for the year ended 31st December, 1952 Rs. 90,000, dividend on 15,000 preference shares at Rs. 6 per share for the year ended 31st December, 1953 Rs. 90,000, dividend on 30,000 ordinary shares at 10 (*nil*) per cent. per annum for the half-year ended 31st December, 1953, or Rs. 3 (*nil*) per share Rs. 1,50,000 (*nil*) and carried forward Rs. 55,656 (debit of Rs. 11,66,135).

Jute stocks are shown at cost. Sold stocks of goods have been calculated at contract sale price and goods unsold on 31st December, 1953 have been valued at market price.

In accordance with the main and supplementary working time agreements of the Indian Jute Mills' Association, working hours were 42½ hours per week with 12½ per cent. of the total looms sealed. Due to a re-allocation of loom hours on a group basis, the mills worked 45 hours per week with 12½ per cent. of their total looms sealed. Unsettled labour conditions prevailed throughout the period. During the period trading conditions remained difficult with an upward trend in prices of both raw jute and manufactured goods towards the end of the year.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	45,00,000	Block ...	28,14,895

Thamarapally Rubber Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. A. V. George & Co., Ltd., Kottayam) submit the audited accounts of the Company for the year ended 31st December, 1953.

The total acreage under rubber, coconut, cashew, etc., amounts to 534.78. Both Maliyakal and Thamarapally Estates are in good condition.

The rubber secured during the year was 2,39,123 (2,28,967) pounds at 32.86 (45.74) cents per pound against an estimate of 2,15,000 (2,00,000) lbs. The crop estimated for 1954 is 2,25,000 lbs. at 60 cents per pound. The crop was sold at an average price of 124.70 (121.12) cents per pound.

The net profit after providing for taxes depreciation, etc., is Rs. 91,040 (Rs. 84,899). To this has to be added the balance from the last year Rs. 41,669 (Rs. 66,520) making a total of Rs. 1,32,709 (Rs. 1,51,419). The directors now recommend the following distribution:—

Dividend of 6¼ per cent. on preference shares Rs. 6,906 (Rs. 9,750), dividend of 30 (25) per cent. on ordinary shares Rs. 75,000 (Rs. 62,500) and transfer to dividend equalisation fund Rs. 37,500 (*nil*) leaving a balance of Rs. 13,303 (Rs. 41,669) to be carried forward.

Capital:—The preference share capital was reduced from Rs. 1,50,000 to Rs. 75,000 as per the resolution passed at the extraordinary General Meeting held on 12th September, 1952. Rs. 5 per share was refunded to the preference shareholders from 1st June, 1953.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,25,000	Block ...	5,00,364
Reserves ...	2,00,000	Stock-in-trade	60,115

Profit and loss account ...	1,32,709	Debts and advances ...	1,524
		Cash ...	2,09,495
Rs.	7,77,050	Rs.	7,77,050

Travancore Ogale Glass Mfg. Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Ogale Brothers Ltd., Trivandrum) submit the audited accounts of the Company for the year ended 31st December, 1953.

The total tonnage of glass melted was 1,026 tons and the value realised, about Rs. 6,00,000 (Rs. 5,70,000). After providing for all working expenses and depreciation of Rs. 41,052 (Rs. 41,182), the working resulted in a loss of Rs. 46,756 (loss of Rs. 61,644).

During the first six months when protracted negotiations were going on with labour, the production was unsatisfactory resulting in heavy losses which could not fully be covered by the year-end. Labour has to realise the changed business conditions and adopt a helpful attitude to the benefit of all concerned.

In keeping with the general market trend, the prices of glass articles had to be reduced from time to time and this process still continues. In the absence of corresponding relief in the costs, the only alternative remains to increase the production without corresponding increase in the costs. It is hoped to put the automatic bottle-making machines on full production in the latter part of 1954 which will put up the present production.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,98,380	Block ...	11,25,809
Reserves ...	1,50,000	Stock-in-trade	20,000
Provision for taxation ...	2,029	Stores and raw materials ...	1,59,229
Liabilities ...	3,96,750	Tools, etc. ...	28,467
		Debts, deposits and advances ...	70,331
		Cash ...	36,778
		Profit and loss account ...	1,06,545
Rs.	15,47,159	Rs.	15,47,159

Broach Electric Supply and Development Corporation Ltd.

The directors of the above Company (Managing Agents: The Rajputana Textiles (Agencies) Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December, 1953.

The generating station functioned satisfactorily throughout the year and a steady, continuous supply of energy was maintained. However, the need for additional plant capacity mentioned in the report for the preceding year was keenly felt, not only for the purpose of catering to the unsatisfied demand, but also to improve the power house economy by eliminating or reducing as far as possible the operation of the older sets. Accordingly, the directors after considering all aspects of the question, and particularly the delivery position, authorised the purchase of a 450 kw. s.i.m.—brush generating set early in June, 1953. The set was delivered and installed within a few months and that it was actually commissioned in and has been satisfactorily operating since December, 1953.

The distribution system was well maintained and received the necessary attention to ensure safety and increase efficiency. With the increasing demand changes must be effected in the system, and the installation of the requisite sub-stations and other apparatus for maintaining the desired standard of efficiency, is receiving urgent attention. The progress of the Corporation during the past five years is reflected in the following tabulation:—

Year	Number of consumers	Connected load k.w.	Units of energy sold	Revenue from energy sold Rs.
1953 ..	3,583	1,876	1,340,506	4,78,941
1952 ..	3,374	1,513	1,348,456	4,24,578
1951 ..	3,095	1,330	1,220,340	3,39,269
1950 ..	2,857	1,407	1,094,204	3,08,155
1949 ..	2,660	1,412	937,445	2,62,232

It will be noted that revenue from sales of energy shows a satisfactory increase. There was some dissatisfaction amongst motive power consumers, as a result of Government orders based on the recommendations of the Rating Committee, that all consumers both large and small should be subject to the same tariff rates. The directors felt that there was justification for this attitude of the large power consumers, and opportunity was taken during the year to introduce, after due intimation to the Government of Bombay, a sliding tariff rate which was offered to such consumers. Capital expenditure during the year amounted to Rs. 2,23,803.

The profit and loss account shows that the result of the year's operation, compared with the previous year, was as follows:—

	1953	1952
	Rs.	Rs.
Revenue from sales of energy	4,79,041	4,24,373
Revenue from other sources	27,846	20,682
Total gross revenue ..	5,01,587	4,45,055
All charges including depreciation and taxes	3,98,777	3,74,524
Net profit ..	1,02,810	70,531

It will be observed that the total gross revenue shows a satisfactory increase. However, this increase has been partly offset by the higher expenditure, while it is proposed to utilise a major portion of the balance to reduce the statutory liability in respect of arrears of depreciation, ascertained in accordance with the provisions of the Electricity (Supply) Act, 1948.

The Employees' Union at Broach formulated certain demands which were taken up by the conciliation officer, and the resulting conciliation proceedings proved successful inasmuch as the grades and scales of pay as also the dearness allowance—the principal objectives of the Union—offered by the Corporation proved acceptable in the light of the financial capacity and well-being of the Corporation. The relationship between the employees and the management is excellent.

After adding to the net profit Rs. 1,02,810 (Rs. 70,531) for the year, the amount brought forward from the preceding year's account and deducting therefrom the various statutory appropriations as also an amount of Rs. 7,400 for payment of bonus to employees, there remains a balance of Rs. 57,164 (Rs. 34,043) which the directors have recommended, should be utilised as follows:—

To dividend on shares at As. 12 (As. 5-9) per share (7½ (3.59) per cent.) free of income-tax Rs. 53,026 (Rs. 25,409) and balance to be carried forward Rs. 4,138 (Rs. 8,634).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,07,020	Block ...	14,21,795
Debentures	1,32,200	Stores and tools ...	79,893
Reserves ...	7,25,720	Other assets	56,890
Provision for taxation ...	69,647	Debts, deposits and advances ...	94,231
Liabilities ...	1,95,952	Investments	7,332
Profit and loss appropriation account	4,138	Cash ...	1,74,536
Rs.	18,34,677	Rs.	18,34,677

Rewa Coalfields, Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1953.

The Company's profit for the half-year after the inclusion of Rs. 26,964 (Rs. 35,347) brought forward is Rs. 3,56,232 (Rs. 4,86,908). After making provision for taxation Rs. 1,43,384 (Rs. 1,87,519) there remains a sum of Rs. 2,12,848 (Rs. 2,74,389). Out of this sum the directors have placed to development reserve Rs. 50,000 (Rs. 1,00,000) and recommend payment of a dividend at the rate of 20 (20) per cent. per annum, free of income-tax, absorbing Rs. 1,35,000 (Rs. 1,35,000) leaving to be carried forward Rs. 27,848 (Rs. 36,004).

Output and despatches of steam and other grades of coal for the last three half-years are as follows:—

Half-year ended	*Raisings*	*Despatches*
	Tons	Tons
31st December, 1953	1,59,034	1,57,021
30th June, 1953	1,45,493	1,42,358
31st December, 1952	1,67,990	1,65,004

The supply of wagons improved to some extent over the half-year, but production continued to be restricted on this account. In view of the cost of development work to maintain output in future, a further Rs. 50,000 has been placed to development reserve.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	13,50,000	Block ...	5,69,000
Reserves ...	7,88,385	Stock of coal	67,831
Provision for taxation ...	2,85,000	Stores ...	6,11,281
Liabilities ...	15,55,478	Debts, deposits and advances ...	14,68,444
Profit and loss account	27,848	Investments	2,05,381
		Cash ...	10,84,774
Rs.	40,06,711	Rs.	40,06,711

Bengal Bhatdee Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1953.

After providing Rs. 3,500 (Rs. 8,175) for depreciation, end Rs. 4,000 (Rs. 4,000) for taxation, there is a balance of Rs. 9,172 (Rs. 10,786) at the credit of profit and loss account from which the directors recommend payment of a dividend at As. 2 (As. 2) per share Rs. 5,617 (Rs. 5,617) leaving to be carried forward Rs. 3,555 (Rs. 5,169).

Raisings for the half-year were 39,915 (33,770) tons as compared with 44,189 (31,565) tons in the previous half-year and despatches 39,837 tons as against 42,208 tons.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,49,350	Block ...	3,14,056
Reserves	70,000	Stores ...	309
Provision for taxation ...	18,894	Debts and advances ...	132,207
Liabilities ...	1,42,633	Cash ...	2,36,961
Profit and loss account ...	3,556		
Rs.	6,84,433	Rs.	6,84,433

N.B.—Figures within brackets relate to the corresponding period of the previous year.

THE INDIA SUGARS AND REFINERIES LIMITED

MADRAS

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twentieth Ordinary General Meeting of the Company will be held at the Factory of the Company at Hospet on Monday the 28th June, 1954, at 4 p.m., to transact the following business:

1. To receive and adopt the Directors' Report and Audited Accounts for the year ended 30th September, 1953.

2. To declare dividends on Preference and Ordinary shares.

3. To elect two Directors in place of
   (i) Janab Rukn-ul-Mulk S. Abdul Wajid Sahib Bahadur.
   (ii) Lala Ram Gopal Gupta.

who retire and are eligible for re-election.

4. To appoint Auditors for the year 1953-54 and fix their remuneration.

5. To consider, and if thought fit, to pass the following resolutions as Special Resolutions with or without modifications:—

A. RESOLVED as a Special Resolution that the Articles of Association of the Company be and are hereby altered in the manner following, that is to say:—

(i) In place of the existing Article 12 the following be substituted:—

12. The nominal or authorised share capital shall be Rs. 60,00,000 (Rupees Sixty Lakhs) divided into 10,000 Preference shares of Rs. 100 each and 5,00,000 Ordinary shares of Rs. 10 each. The shares shall be under the control of the Directors who may allot or otherwise dispose of the same to such persons and on such terms and conditions and at such times as the Directors think fit.

(ii) After the existing Article 17 the following shall be inserted as Article 17A:

17A. Regulation 42 of Table A of the Act shall apply.

(iii) After the existing Article 136, the following shall be inserted as Article 136A:

136A. (a) Any General Meeting declaring a dividend may resolve that such dividend be paid wholly or in part by the distribution of specific assets and in particular of paid-up shares, debentures, or debenture-stock of the Company, or paid-up shares, debentures, or debenture-stock of any other company or in any one or more of such ways.

(b) Any General Meeting may resolve that any moneys, investments, or other assets forming part of the undivided profits of the Company standing to the credit of the Reserve Fund or in the hands of the Company and available for dividend (or representing premium received on the issue of shares) be capitalised and distributed amongst such of the shareholders as would be entitled to receive the same if distributed by way of dividend and in the same proportions on the footing that they become entitled thereto as Capital and that all or any part of such capitalised fund be applied on behalf of such shareholders in paying up in full either at par or at such premium as the resolution may provide, any unissued shares or debentures or debenture-stock of the Company which shall be distributed accordingly or in or towards payment of the uncalled liability on any issued shares or debentures or debenture-stock and that such distribution or payment shall be accepted by such shareholders in full satisfaction of their interest in the said capitalised sum.

(c) For the purpose of giving effect to any resolution under the two last preceding sub-articles the Directors may settle any difficulty which may arise in regard to the distribution as they think expedient, and in particular may issue fractional certificates and may fix the value for distribution of any specific assets, and may determine that cash payments shall be made to any members upon the footing of the value so fixed or that fractions of less value than half rupee may be disregarded in order to adjust the rights of all parties and may vest any such cash or specific assets in trustees upon such trusts for the persons entitled to the dividend or capitalised fund as may seem expedient to the Directors. Where requisite, a proper contract shall be filed in accordance with section 104 of the Companies Act and the Directors may appoint any person to sign such contract on behalf of the persons entitled to the dividend or capitalised fund, and such appointment shall be effective.

(iv) In place of the words "six months" appearing in Article 148, the words "nine months" shall be and are hereby substituted.

B. RESOLVED as a Special Resolution that

(i) It is desirable to capitalise a sum of Rs. 16,00,000 (Rupees Sixteen Lakhs) being part of the amount standing to the credit of the General Reserve and accordingly that the said sum be capitalised and distributed amongst the Ordinary Shareholders on the footing that they become entitled thereto as Capital in pursuance of Article 136A (b) read with Article 17A of the Articles of Association of the Company and that such capital sum be applied on behalf of the persons who are on the first day of July, 1954 holders of Ordinary shares in the Company, in payment in full for 160,000 Ordinary shares of the Company of Rs. 10 each and that such new Ordinary shares, credited as fully paid up be accordingly allotted to such persons respectively in the proportion of one of such shares for every one of the said Ordinary shares then held by such persons respectively and that the new shares so distributed shall be treated for all purposes as an increase of the nominal amount of the capital of the Company held by each such shareholder and not as income.

(ii) That such new shares shall rank for dividend from the 1st day of July, 1954 and shall in all other respects rank *pari passu* with the existing issued Ordinary shares in the capital of the Company.

(iii) That in satisfaction of the said capital distribution the Directors be and are hereby directed to allot and distribute 160,000 Ordinary shares, credited as fully paid, amongst the persons who are on the 1st day of July, 1954, holders of the issued Ordinary shares of the Company, or their nominees, in the proportion of one share for every one held by such shareholders respectively.

(iv) That the draft of the agreement providing for the allotment of the said 160,000 shares hereinabove referred to, submitted to this meeting and signed in the margin by the Chairman thereof by way of identification be and the same is hereby approved and that the Directors be authorised to affix the Seal of the Company to duplicate engrossments of such agreement as and when the same shall have been signed by Mr. K. Venkataraman of 322, Linghi Chetty Street, Madras, or failing him Mr. A. C. K. Krishnaswami of 90, Mowbrays Road, Madras, on behalf of the members holding Ordinary shares in the Company on the 1st day of July, 1954, and that the said Mr. K. Venkataraman and failing him Mr. A. C. K. Krishnaswami be and are hereby authorised on behalf of the holders of Ordinary shares in the Company's capital to enter into such agreement.

The Share Transfer Books of the Company will be closed from 21st June, 1954, to 1st July, 1954 (both days inclusive).

By Order of the Board,
for THE INDIA SUGAR AGENCIES LTD.,
Managing Agents.
C. HARIPRASAD,
General Manager.

MADRAS, *27th May*, 1954.

The dividend when declared will be made payable at the Imperial Bank of India, Bellary, on or after the 2nd July, 1954, and the Dividend Warrants will be posted to the Shareholders whose names stand in the register of members as on 21st June, 1954. Shareholders may kindly intimate to the Company any changes in address immediately.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

SHAW WALLACE AND COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Eighth Ordinary General Meeting of the Members will be held at the Registered Office of the Company, 4, Bankshall Street, Calcutta, on Tuesday the 29th June, 1954, at 3 p.m., for the following purposes:

(1) To receive and adopt the Directors' Report and Audited Accounts for the year ended 31st December, 1953.

(2) To confirm the Dividends already paid on the Preference Shares and to declare a Dividend on the Ordinary Shares.

(3) To elect Directors.

(4) To appoint Auditors and to fix their remuneration.

(5) As special business, to pass the following Special Resolution:—

"That the Articles of Association of the Company be altered in the manner following:—

(1) In Article 147, line 2, the words "for such period" shall be deleted and the following words substituted therefor:

'for a term not exceeding five years at a time.'

(2) Article 149 shall be deleted and the following new Article substituted therefor:

'The Directors may from time to time entrust to and confer upon a Managing Director for the time being such of the powers exercisable under these presents by the Directors as they may think fit save and except the power to:—

(a) Make calls on Shareholders in respect of moneys unpaid on shares in the Company.

(b) Borrow moneys except within limits previously fixed by the Directors at a Board Meeting.

(c) Invest the funds of the Company, and

(d) Make loans except within the limits previously fixed by the Directors at a Board Meeting.

The powers to be exercised by a Managing Director may be conferred upon him for such time, and to be exercised for such objects and purposes, and upon such terms and conditions, and with such restrictions as the Directors may think expedient, and they may confer such powers either collaterally with or to the exclusion of, and in substitution for all or any of the powers of the Directors in that behalf; and may from time to time revoke, withdraw, alter or vary all or any of such powers.'"

The Transfer Register of the Company's Ordinary Shares will be closed from 21st June to 29th June, 1954, both days inclusive.

By Order of the Board,
(Sd.) R. H. D. CAMPBELL,
Managing Director.

Notices

SHREE YUVRAJ SUGAR MILLS LTD.

NOTICE

To

THE DEBENTURE-HOLDERS, PREFERENCE AND ORDINARY SHAREHOLDERS OF

SHREE YUVRAJ SUGAR MILLS LTD.

NOTICE IS HEREBY GIVEN THAT PURsuant to the resolutions of the Debenture-holders, Creditors, Preference and Ordinary Shareholders passed in November last, approving and confirming the proposal for the sale of the Company's sugar plant at Ranbirsinghpura to the Panipat Sugar Mills Limited, for the consideration and the terms and conditions indicated in the scheme, the Company has entered into agreement for the sale of the Company's sugar plant with the Panipat Sugar Mills Limited, which has since been incorporated and has commenced business.

In terms of the aforesaid scheme:

(*a*) The Panipat Sugar Mills Limited will issue to the existing debenture-holders of the Company in lieu of and in full satisfaction and/or in replacement of the debentures of the Company, its own registered mortgage debentures of equivalent amount bearing interest at 6 per cent. per annum from 1st April, 1954, and repayable after 10 years. Interest upto 30th April, 1954, will be paid by the Company, and thereafter by the Panipat Sugar Mills Limited.

(*b*) The Panipat Sugar Mills Limited will issue to the existing Preference Shareholders of the Company in full satisfaction of the Preference Shareholdings including the arrears of dividend its Preference Shares on the basis of two fully paid-up Preference Shares of Rs. 25 each for every one fully paid-up Preference Share of Rs. 100 held by them.

(*c*) The Panipat Sugar Mills Limited will issue to the existing Ordinary Shareholders of the Company in full satisfaction of their Ordinary Shareholdings, its Ordinary Shares on the basis of one fully paid-up Ordinary Share of Rs. 10 for every Rs. 100 paid-up in respect to the individual Ordinary Shareholdings of the Company.

The Preference and Ordinary Shares of the Panipat Sugar Mills Limited will be allotted to the Preference and Ordinary Shareholders respectively of the Company who are registered in the books of the Company as Preference and Ordinary Shareholders on 15th June, 1954.

The Preference and Ordinary Shareholders of the Company are requested to apply on the prescribed form for allotment of Preference and Ordinary Shares of the said Panipat Sugar Mills Limited in lieu of their Preference and Ordinary Shareholdings of the Company on the above basis. Copies of the prescribed form of application can be obtained from the Panipat Sugar Mills Limited, 5, Royal Exchange Place, Calcutta or from the office of the Company at New Hospital Road, Jammu (Jammu and Kashmir State).

Applications on the prescribed form together with the Share Scrips for the Preference and Ordinary Shares of the Company held by them may be forwarded to the Company's office at New Hospital Road, Jammu, as early as possible but not later than 15th July, 1954.

The Debenture-holders of the Company are similarly requested to forward the debentures of the Company held by them to the Panipat Sugar Mills Limited, 5, Royal Exchange Place, Calcutta, for exchange with the debentures of equivalent amount in the said Panipat Sugar Mills Limited. The debentures should be accompanied by an application on the prescribed form which can be obtained from the said Panipat Sugar Mills Ltd. or from the Company on application. Applications for exchange of Debentures should reach the Panipat Sugar Mills Limited on or before 20th June, 1954.

CALCUTTA, *27th May*, 1954.

THE BURDWAN CUTWA RAILWAY COMPANY, LIMITED

THE FORTY-SEVENTH ORDINARY GENEral Meeting of the Shareholders will be held at the Registered Office of the Company, No. 3, Netaji Subhas Road, Calcutta, on Friday the 25th June, 1954, at 3-30 p.m., to transact the following business:—

1. To receive the Directors' Report and the Auditors' Report and to pass the Accounts for the year ended 31st March, 1953.
2. To declare a Dividend.
3. To elect a Director.
4. To elect Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from the 11th June to 25th June, 1954, both days inclusive.

By Order of the Board,
McLEOD & Co., LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, *1st June*, 1954.

Note.—Payment of the proposed dividend, if declared, will be made to those members whose names are registered in the books of the Company on 25th June, 1954, or to their mandatees.

Dividend warrants will be despatched as soon as possible after the General Meeting. Applications for warrants will not be necessary.

THE KATAKHAL LALABAZAR RAILWAY COMPANY, LIMITED

THE FORTY-THIRD ORDINARY GENERAL Meeting of the Shareholders will be held at the Registered Office of the Company, No. 3, Netaji Subhas Road, Calcutta, on Friday the 25th June, 1954, at 3-45 p.m., to transact the following business:—

1. To receive the Directors' Report and the Auditors' Report and to pass the Accounts for the year ended 31st March, 1953.
2. To declare a Dividend.
3. To elect a Director.
4. To elect Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 11th June to 25th June, 1954, both days inclusive.

By Order of the Board,
McLEOD & Co., LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, *1st June*, 1954.

Note.—Payment of the proposed dividend, if declared, will be made to those members whose names are registered in the books of the Company on 25th June, 1954, or to their mandatees.

Dividend warrants will be despatched as soon as possible after the General Meeting. Applications for warrants will not be necessary.

THE BANKURA DAMOODAR RIVER RAILWAY COMPANY, LIMITED

THE FORTY-SEVENTH ORDINARY GENEral Meeting of the Shareholders will be held at the Registered Office of the Company, No. 3, Netaji Subhas Road, Calcutta, on Friday the 25th June, 1954, at 3-40 p.m., to transact the following business:—

1. To receive the Directors' Report and the Auditors' Report and to pass the Accounts for the year ended 31st March, 1953.
2. To declare a Dividend.
3. To elect a Director.
4. To elect Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from the 11th June to 25th June, 1954, both days inclusive.

By Order of the Board,
McLEOD & Co., LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, *1st June*, 1954.

Note.—Payment of the proposed dividend, if declared, will be made to those members whose names are registered in the books of the Company on 25th June, 1954, or to their mandatees.

Dividend warrants will be despatched as soon as possible after the General Meeting. Applications for warrants will not be necessary.

Notices

1953-1954

THE SIMPLEX MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Forty-second Ordinary General Meeting of Shareholders of The Simplex Mills Company, Limited, will be held at the Registered Office of the Company, Forbes Building, Home Street, Fort, Bombay, on Friday the 2nd July, 1954, at 5-0 p.m. (S.T.), to transact the following business:—

(1) To adopt the Directors' Report and Audited Statements of Account for the year ended 31st March, 1954.

(2) To sanction the declaration of a Dividend.

(3) To elect Directors in place of those who retire from office under the Articles of Association of the Company but are eligible for re-election.

(4) To appoint Auditors for the coming year and fix their remuneration.

The Transfer Books of the Company will remain closed, as previously advertised, from the 14th day of June, 1954, to the 28th day of June, 1954, both days inclusive.

By Order of the Board,

FORBES FORBES CAMPBELL & CO., LTD.,
Agents.

BOMBAY, *28th May*, 1954.

Note.—The Dividend when sanctioned will be made payable free of Income-tax, at the Chartered Bank of India, Australia and China, Bombay, on and after 3rd July, to those Shareholders holding Fully Paid and Consolidated Shares of Rs. 50 each whose names stand on the Register on the 28th June, 1954, to whom Dividend Warrants will be posted, and in the case of holders of Fractional Shares, upon presentation to the Company of their Fractional Certificates.

THE AHMADPUR KATWA RAILWAY COMPANY, LIMITED

THE FORTY-SIXTH ORDINARY GENERAL Meeting of the Shareholders will be held at the Registered Office of the Company, No. 3, Netaji Subhas Road, Calcutta, on Friday the 25th June, 1954, at 3-35 p.m. to transact the following business:—

1. To receive the Directors' Report and the Auditors' Report and to pass the Accounts for the year ended 31st March, 1953.
2. To declare a Dividend.
3. To elect a Director.
4. To elect Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 11th June to 25th June, 1954, both days inclusive.

By Order of the Board,

McLEOD & CO., LTD.,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, *2nd June*, 1954.

Note.—Payment of the proposed dividend, if declared, will be made to those members whose names are registered in the books of the Company on 25th June, 1954, or to their mandatees.

Dividend warrants will be despatched as soon as possible after the General Meeting. Applications for warrants will not be necessary.

REQUIREMENTS OF ROLLING STOCK AGAINST 1955-56 PROGRAMME TO BE OBTAINED FROM ABROAD

THE RAILWAY BOARD, GOVERNMENT OF India, propose to obtain from established and reliable manufacturers the items of rolling stock and other railway equipment shown in the list below. Manufacturers in Europe, the United Kingdom and North America can obtain further details of designs, specifications, etc., from the Director General, India Store Department, 32/34, Edgware Road, London, W.2, and manufacturers in other countries and authorised agents in India of all foreign manufacturers can obtain these particulars from the Director of Railway Equipment, Railway Board, New Delhi, on or after 15th June, 1954.

LIST OF ROLLING STOCK AND RAILWAY EQUIPMENT

Locomotives

Broad-gauge:
15 Electric Prototype Locomotives (3,000 volt for Calcutta Electrification Scheme).

Metre-gauge:
12 'YM' Class Locomotives.
5 Diesel Shunting Locomotives.
20 Diesel General Purposes Locomotives.

Locomotive Boilers

Broad-gauge:
11 'XB' type.
6 'XA' type.

Locomotive Components

76 CWD/AWD Fire Boxes.
14 MAWD Fire Boxes.

Coaching Stock

Broad-gauge:
Electric Multiple Unit Stock (1,500 volt Bombay Suburban Traffic).
(*a*) 12—4 Car Units.
(*b*) 2—Spare Motor Coaches.
Electric Multiple Unit Stock (3,000 volt DC Calcutta Electrification).
(*a*) 16—3 Car Units.
(*b*) 2—Spare Motor Coaches.
Alternatively—
(*a*) 12—4 Coach Units.
(*b*) 2—Spare Motor Coaches.

Goods Stock Wagons

Broad-gauge:
3 Tower wagons without body for Western Railway.
3 Tower wagons without body for Eastern Railway (Calcutta Electrification).

Cranes

Broad-gauge:
1 75-ton Steam Breakdown Crane.
4 40-ton Steam Breakdown Cranes.
6 20-ton Steam Travelling Cranes.
3 5-ton Steam Travelling Cranes (special specification).

Metre-gauge:
3 35-ton Steam Breakdown Cranes.
8 20-ton Steam Travelling Bridge Cranes.

Wheelsets

Broad-gauge:					
WA 23	...	...	...	...	18,000
Metre-gauge:					
WA 42	...	...	...	...	1,000
WA 36	...	...	...	...	12,000
Narrow-gauge		...	...	...	400

JUTE

(*Concluded from page 1078*)

as a document of title to goods, banks are giving discounting facilities. But this flexibility of the system lays it open to certain abuses on occasions. These are:

(1) In cases where shipping instructions are sent against mills' P.D.Os. some mills do not bring down goods for a number of days. This prevents the P.D.O. holders from fulfilling their contractual obligations.

(2) The time limit for the delivery of goods against P.D.Os is neither provided in the contract terms nor mentioned in the P.D.O.

(3) The holder of P.D.Os, after making payment for the P.D.Os, is left at the mercy of the mill for the delivery of goods and he cannot take any action against the mills.

(4) Certain mills are found to be in the habit of issuing P.D.Os greatly in excess of their holdings of goods and are on presentation unable to deliver the goods.

Overissue of P.D.Os.

The Commission's investigation into the position of overissue of P.D.Os showed that there had been in many cases, no direct correlation between the quantum of production per month and sales, including their own P.D.Os in that month. Some mills were in the habit of repurchasing their own P.D.Os or P.D.Os of their group. A few others had purchased P.D.Os of other mills to cover their sales.

Thus under the present practice, P.D.Os are often issued in excess of actual production and stocks. They are also issued against anticipated production expected to be completed in due course before presentation of P.D.Os, as it happens that delivery is not usually called or made within a week or ten days of their issue. The Commission rightly comes to the conclusion that this was a contributory factor favouring the gross overissue of P.D.Os. in the speculation racket of 1952. With a view to setting right these defects, the Commission recommends that the standard form of contract, as well as the P.D.O. form, should refer to the period of delivery, and, in the case of P.D.O., there should also be an endorsement or declaration that the goods are ready and will be available for inspection or delivery within a specified period. This recommendation, if adopted, would have a salutary effect on unhealthy speculation.

The terms of reference to the Commission included the assessment of the extent of speculation in the jute goods market in December, 1952, when the *katka* market was suspended. On examination of the various witnesses closely connected with the speculative operations, the Commission seems to agree with the view of the I.J.M.A. that the operations represented "a struggle for mastery of the market between bears and bulls." It feels that the speculation was also due to overissue of P.D.Os and to the cheap credit facility provided on easy terms against P.D.Os. by a prominent Scheduled bank. Describing this incident, the Commission says:

"Another feature is that substantial bank finance at a low rate of interest to meet obligations in the futures market was provided. A prominent Scheduled bank advanced on P.D.Os substantial sums to three parties, including dealers and brokers. It was noticed that an account was opened by one party on the 27th November, 1952 and cheques for over Rs. 2½ crores were issued by him on 29th November, though the necessary securities were lodged with the bank only on the 2nd December. This cheap credit facility was specially authorised on easy terms (4½ per cent. interest) on the authority of the head office of the bank. We have examined the party, who was the Branch Manager at the time these transactions occurred, and append as a confidential enclosure, the details regarding his evidence. Although no loss was stated to be incurred by the bank and settlement was effected through the influence of important parties concerned, we are of the view that the way in which cheap credit is made available to speculative transactions of this type requires a very careful examination by the banking authorities in the country."

The Commission's conclusions after going into the whole episode, are noteworthy and bear reproduction:

"The factors which in our opinion facilitated this orgy of speculation were the inadequacy of regulations of the Calcutta Jute and Hessian Exchange to take action to prevent overtrading and cornering when they were apprehended or occurred. Absence of a proper code of ethics among directors and their lack of forbearance in taking part in the speculation themselves was a favouring circumstance. Mr. Bagaria agreed that directors could have kept a watch and instead of merely receiving the margin of deposit, could have called for a settlement directly when it was known that the transactions for November delivery had exceeded the capacity of the mills, a fact which the operators as well as the dealers were doubtless aware. The laxity in the system of issuing P.D.Os without full cover of goods enabled the mills or their managing agents also to speculate in the hope of netting as large a profit as possible. The case also discloses a serious risk to the financial system of the country, if banks should also undertake the risk of financing transactions in speculative markets without any other collateral support than the P.D.Os themselves and this in a situation when these documents were issued without due credit warranty."

As the Commission had been directed to study the position of futures market in raw jute and jute goods, it has dealt with this aspect of the question in some great detail. As a prelude to the subject, it gives a very interesting account of the history of futures markets in the commodity since 1925 upto the present day. Its remarks on the *katni* market—a market where business is conducted on vacant plots and at street corners under no definite rules and regulations—are worth noting. It characterises these transactions as "apparently pure gambling which the arms of the law are yet unable to root out." It is strongly of the opinion that every step should be taken by the Government to standpoint altogether *katni* and other irregular markets. It, however, makes no suggestions as to how this could be carried out.

After examining the various witnesses, it concludes that the establishment of a futures market for jute and jute goods will be helpful to the industry, and endorses generally the opinions of Prof. Todd of the Liverpool Cotton Exchange, who was invited by the Government of Bengal in 1940 to report on the conditions of futures trading in raw jute and jute goods. As already remarked in the course of a leading article in *Commerce* a few weeks ago, it has wisely refrained itself from attempting to provide a cut and dried scheme of futures trading. It has merely proposed that an Association on the model of the East India Cotton Association for regulating and controlling futures trading in jute and jute goods should be formed and left the question of details to the trade and the Forward Markets Commission.

GILT-EDGED FIRM

(From Our Own Correspondent)

BOMBAY, *2nd June*

The easing of stringency in the short-term money market, noted in the previous week, has proved to be a short-lived affair. For, as the week under review progressed, conditions became a little more tight than in the initial days. This was due more to supplies having dwindled than to any notable increase in demand. With the influx of funds slowing down, there was a scarcity of floating funds and activity in the inter-bank call money was small.

Inter-bank call money was done at the self-same rate of 2½ per cent. Though some banks were willing to pay 3 per cent., in the absence of availability of funds, business put through was next to nothing. Short-term deposits were wanted at 3 per cent. for one to two months, at 2½ per cent. for three to five months and at 2½ per cent. for six to twelve months.

A further contraction of Rs. 12.64 crores in notes in circulation is disclosed by the statement of affairs of the Reserve Bank of India for the week ended 28th May, 1954. This is the third week in succession in which a shrinkage is noted, the total fall in notes in circulation during the three weeks being of the order of Rs. 30.83 crores. Practically all the notes returning from circulation are being retained in the Banking Department, with the result that there is no decline in the total note issue during the three-week period; indeed, it actually shows a small rise of Rs. 32 lakhs. During the week under review alone, notes held in the Banking Department have gone up by Rs. 12.98 crores, that is, Rs. 34 lakhs more than the fall in notes in circulation. The significance of this variation is that the authorities do not expect the present downward trend in notes in circulation to continue for long and that they might have to place these notes back in circulation very soon. It is just possible that the next statement itself may show a big rise in note circulation. In the Banking Department, the deposits of the Central Government have risen by Rs. 3.49 crores and those of other Governments by Rs. 44 lakhs. Deposits of banks have gone down by Rs. 1.16 crores and those of others by Rs. 77 lakhs. Cash balances are up by Rs. 13.02 crores, while balances held abroad have dropped by Rs. 3.30 crores. Loans and advances to Governments are lower by Rs. 18 lakhs and other loans and advances by Rs. 8.20 crores. Advances to Scheduled banks against usance bills show a decline of Rs. 4.10 crores. The total amount of advances availed of by Scheduled banks against usance bills since 1st January, 1954, is Rs. 90.57 crores, as against Rs. 41.09 crores in the corresponding period of 1953.

The Scheduled banks' statement for the week ended 21st May, 1954, as compared with that for the previous week, discloses an increase of Rs. 4.69 crores in demand deposits and of Rs. 44 lakhs in time deposits. Inter-bank borrowings are lower by Rs. 19 lakhs. Borrowings from the Reserve Bank and the Imperial Bank have declined by Rs. 7.04 crores and Rs. 1.27 crores, respectively. Following the drop of Rs. 5.98 crores noted in the previous week, there has been a further fall of Rs. 2.45 crores in loans and advances during the week under review. Inland bills purchased and discounted are, however, higher by Rs. 90 lakhs. For the first time, a new item, namely, foreign bills purchased and discounted, has been included in the statement and these bills show a fall of Rs. 10 lakhs over the week to stand at Rs. 20.76 crores. A rise of Rs. 1.25 crores is noted in investments. Cash in India and balances with the Reserve Bank disclose an increase of Rs. 32 lakhs. Balances with other banks in current account have gone down by Rs. 61 lakhs, while money at call and short notice have risen by Rs. 53 lakhs.

The Gilt-edged market was cheerful during the week under review, with an all-round rise in values, on sustained enquiries. The bullish tendency was touched off by rumours that cut in the Bank rate was imminent. In fact, there were buyers in all counters, while sellers were scarce. 3 per cent. 1957 was reported done at Rs. 98-5, a rise of As. 5 over the week. 3 per cent. 1958 had buyers As. 4 higher at Rs. 98-2. 3 per cent. 1959-61 changed hands higher at Rs. 96-2½, as against Rs. 96-1 a week ago. 3 per cent. 1963-65 was bid at Rs. 92-13 *ex-voucher*, as against Rs. 92-12 *cum-voucher* last week. 3 per cent. 1964 rose by As. 2 to Rs. 92-14. 3 per cent. 1966-68 had deals at Rs. 90-4, an increase of As. 4 over the week. 3 per cent. 1970-75 was taken up from Rs. 86 to Rs. 86-4. 3 per cent. 1988 Conversion spurted by As. 6 to Rs. 82-2. 3½ per cent. 1961 National Plan Bond was done at Rs. 98-11 *ex-voucher*, as against Rs. 98-13 *cum-voucher*.

In the foreign exchange section, there was no change in the rupee-U.S. dollar exchange rate this week also. In New York, sterling moved within a narrow range, with a fractional rise in the forward position, while transferable sterling ruled weak. Spot sterling dropped from $2.81.13/16-2.81.15/16 to $2.81½-2.81¾, but recovered to close at $2.81.13/16-2.81.15/16. Forward sterling (three months) rose over the week by 1/16 cent, to an initial rise from $2.79.1/16-2.79.3/16 to $2.79¾-2.79¾, reacted to $2.78¾-2.79.

KEEN ATTENTION FOR QUALITY TEAS

(From Our Own Correspondent)

CALCUTTA, *1st June*

Export sale No. 2 was held yesterday when offerings aggregated 13,864 chests as follows: 13,781 chests of new season's tea and 83 chests of old season's. Despite a general fall in quality, prices recorded gains. Demand was moderate. Buyers paid keen attention for quality teas. Prices realised for stylish flavoury Darjeelings were above brokers' valuations. Whole leaf grades and the tippy teas were very steady. However, the commonest and plain liquoring Dooars were notably easy. Clean common B.P. was quoted at Rs. 2-10.

BULLION WEAKENS FURTHER

(From Our Own Correspondent)

BOMBAY, *2nd June*

The bullion market was in jitters during the week under review. It was under a spell of nervous liquidation by bulls and heavy sales by option dealers. Early in the week, there was a mild buoyancy on active demand and scarcity of stocks, but soon the operators took a bearish appraisal of the demand and began to liquidate their holdings. This was more in evidence in silver than in gold. The absence of any demand in the ready position, fresh arrivals and apprehensions that there would be a heavy influx of silver during the off-season, which, coupled with the present floating stocks, would be more than what could be consumed by the market in the next season, and rumours about the possibility of the Government of India imposing a tax on purchases of bullion were all responsible for the weakness of silver.

Gold also reacted more in sympathy with silver than on its own merits. No doubt, there were reports of large arrivals of gold in upcountry centres where the ruling prices were lower than in Bombay. Consequently, there was some selling on account of upcountry centres. The offtake was smaller than in the previous week, but it was just in keeping with the arrivals.

Silver for forward delivery (18th May settlement) opened the week on a bright note at Rs. 163-3, as against last week's closing of Rs. 162-11, and hardened to Rs. 163-12. But this buoyancy was short-lived, consequent on the revival of bull liquidation and bear selling. Despite occasional attempts at recovery, silver reacted to a low of Rs. 159-8 today. As the closing rate today was below Rs. 159-11, that is the level below which automatic margin was applicable, the bears were obliged to pay a margin of Rs. 500 per bar. The bears were in no mood to cover their sales, though the carry forward charges for the settlement were unofficially quoted at as high as Rs. 3-8 against them and they were obliged to pay margin in the current settlement.

The opening and closing rates of ready silver (.996 Mint) were Rs. 163-11 and Rs. 159-3, respectively. The premium commanded by the ready metal over the forward which stood at As. 8 early in the week narrowed down to just As. 2 at the close, reflecting the fall in demand in the ready position. The floating stocks of silver are placed at 1,100 bars. The daily average offtake was 10 to 15 bars. Gold for forward delivery (17th June settlement) began at Rs. 88-4 and fell by stages to Rs. 85-11 at the close.

Opening at Rs. 91, ready gold dropped to Rs. 87-1. The premium of ready over the forward narrowed down from Rs. 2-12 to Re. 1-6. The floating stocks of gold are estimated at 10,000 tolas. The daily average arrivals and offtake were even at 3,000 tolas.

In the London market, silver prices were unchanged at 72½d. per fine ounce for spot and at 72-3/8d. for forward. After an early decline from £12 8s. 10d. to £12 8s. 9½d., gold recovered to close higher at £12 8s. 10½d.

The following comparative table shows the trend of the market during the week under review:

	2-6-54	Highest	Lowest	26-5-54
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	87 1	91 4	86 13	91 0
Forward	85 11	88 8	85 7	88 6
Sovereign	60 0	60 12	59 0	60 10
SILVER				
Ready (.996 fine Mint)	159 8	164 4	158 10	163 8
Forward	159 1	163 12	158 8	162 11
London Ready	72¼d.	—	—	72¼d.
London Forward	72¼d.	—	—	72¼d.
London Gold	248s.10½d.	248s.10½d.	248s.9½d.	248s.10d.
New York Ready ..	85½c.	—	—	85½c.

METALS QUIET

(From Our Own Correspondent)

CALCUTTA, *1st June*

With little variation in prices, the metal market was quiet during the week under review. The uncertain international political situation does not enable consumers to go in for materials not more than they require to meet day-to-day requirements. However, the news from Washington that the American Government would soon commence buying domestic metals and minerals under the revised stockpiling programme is expected to boost sentiment in the coming weeks, provided New York advices are encouraging. The report that the United States had finalised all contracts for the purchase of 100,000 tons of Chilean copper for stockpile was also noted. Electrolytic copper was firm at Rs. 189, although the price realised for almost ready delivery was at one time as low as Rs. 170. This was due to the report of imports having reached Calcutta port. Good demand for copper sheets continued, and sellers being reserved, business done was confined to small quantities. Electrolytic zinc was maintained at Rs. 87-8. Mercury was firm and rose further to Rs. 945 per flask. Tin eased from Rs. 469 to Rs. 467, as there were no buyers and weak holders showed an anxiety to lessen commitments. Lead was unchanged at Rs. 68.

SPECULATION IN COTTON

(From Our Own Correspondent)

BOMBAY, *2nd June*

It is unusual for the cotton trade to have such sharp differences of opinion amongst the constituents of the E.I.C.A. as to drag matters to a court of law. The divorce between the two wings of the market, to which pointed attention was being drawn from time to time in *Commerce*, and which some parties in the trade were trying to defend as a normal domestic disagreement to be found in all marriages, has ultimately led to a state of affairs which certainly could not be to the liking of the leaders of this important association. As reported earlier, even the authorities had to ask for an explanation from it for the wide disparity between the prevailing rates in the forward and spot markets.

When the Association's Committee was engaged in considering the best explanation that could be offered for this anomaly, the issue was complicated further. A member operator who had suffered not directly out of this disparity but because of the usual practice of basing the room rates for cotton delivery against forward contracts on the ruling futures rates, and fixing the 'On' and 'Off' allowances by taking the difference between this rate and the spot rates for tenderable varieties, which have a distinct advantage to those who were short or who had hedged their cotton, took the matter to the High Court. Whatever be the outcome of this controversy, it has directed the flashlight on the need for maintaining some realistic relation between the spot and forward positions in trade involving any commodity or bullion. The real cause of wide gaps between these two positions lies in an unjustifiably excessive volume of speculation in the forward markets and neither of the reassuring phrases like "statistical position," or "technical considerations" can truly account for them. It is, therefore, necessary for all organisations to devise controls on trading which would put natural checks on heavy speculation. While the compulsory margin system provides the most effective check, various other methods have also been devised for keeping bull or bear enthusiasm within manageable volume.

It is feared that the Committee of the E.I.C.A., in spite of the brave front put up by it, will have some difficulty in adjusting matters to the satisfaction of all concerned in this dispute. This unexpected trouble, together with the uncertainty about the future form of the contract and any likely revision of the machinery to enforce it, is bound to create instability and erratic fluctuations in forward trading till the matter is finally settled. This was demonstrated during the last week when the prices were first pushed down to Rs. 664 per candy, then lifted suddenly over the week-end to Rs. 688 and again pushed down to Rs. 678 on the opening day of the current week.

Market men are also preoccupied with the future policy of the Government regarding cotton. Till this is announced, it is going to prove another unsettling factor both in the spot and the forward market. Already an unofficial 1955 February contract is being talked about at Rs. 38 below the current contract. It is not known whether some of the record transactions are actually taking place on this basis or not. But this creates a new complication about the market's working till something definite is known about the policy of the Government and the official commencement of the next contract.

This hand-to-mouth policy, creating a crisis or at least a grave uncertainty every year during the monsoon, is not calculated to stabilise and encourage either cotton production or the textile industry. It also creates unnecessary headaches for the cotton trade which has to carry several lakhs of bales worth hundreds of crores of rupees from year to year. It is time all the three sections, the growers, the trade and the industry, insisted upon the Government forming, if not a long-range policy, at least one having some duration. Mr. Kidwai, the Food and Agricultural Minister, recognised this need last year in the case of sugarcane when he announced that the minimum rate he proposed would remain in force for two years. But cotton, though far more important agricultural crop than sugarcane, is being anomalously dealt with by another Ministry which cannot be alive to the agricultural aspect of the question.

The spot trade during the week has been very dull. The mills have exhausted their quotas and they cannot buy any more Indian cotton, while they are reluctant to buy imported cotton to a larger extent. There are mills who have got unused quotas but they are in no hurry to use them or to relinquish them. The trade has, therefore, to carry a larger burden than normal and this in itself is enough to depress sentiment at Sewri. The volume of turnover has gone down considerably and the conditions are, therefore, listless in vivid contrast to those at Kalbadevi. The trade is awaiting fresh issue of quotas (about which some are very doubtful), and the abolition of the export duty on coarse cloth, which might give a fillip to mill buying. Even the limited interest which was there in imported cotton has been absent during recent weeks, because of an equally unsettling uncertainty regarding the subsidy policy of the U.S. Government for export of new crop cotton. Fortunately for the trade, the stringency in the money market is no longer there.

According to the latest reports there would be no fresh quota of Bengal *Deshi* for exports. This has caused disappointment not only to the shippers but also to both the sections of the market. If these reports be true, the stock of unwanted *Deshi* cotton will continue to press heavily on the total stocks carried by the trade. The effect of this can be gauged from the fact that the August contract dropped by about Rs. 5 in kerb trading on receipt of this news.

I.C.C. August opened the week at Rs. 661½, as against the previous close of Rs. 668½ and moved down to touch a low of Rs. 664 on the same day. Buying support was forthcoming in the following three days so that the contract was lifted to touch

a high of Rs. 688 on 31st May. Profit-taking induced a somewhat easier trend and the contract declined to Rs. 674½ today, before closing the day's session higher at Rs. 675½.

The following is the trend of prices over the week under review:

	Opening	High	Low	Closing
I.C.C. Aug. .. .. .. Rs.	666½	688	664	675½

The following are the latest available quotations from the spot market:

Bengal *Deshi* Rs. 610; Berar Jarillas Rs. 805; Khandesh Rs. 825; Vijay Rs. 890; Oomra *Deshi* Rs. 720; Moglai Rs. 710.

At Karachi, while the Sind and Punjab *Deshi* varieties secured further gains during the week, American seed cotton more or less maintained its previous level of prices. Fluctuations were narrow and the market is quietly awaiting developments. The political storm which overtook Pakistan during the last week-end does not seem to have affected the cotton trade. The latest available quotations from the Karachi market are:

Sind *Deshi* Rs. 77½; Punjab *Deshi* Rs. 75; 4F Punjab R.G. Rs. 69½; S.G. Rs. 74½; L.S.S. Punjab R.G. Rs. 73; S.G. Rs. 77; N.T.R.G. Rs. 73½; S.G. Rs. 77½; 289F Punjab R.G. Rs. 75½; and S.G. Rs. 79½.

Activity revived in the Alexandria market during the week. There were fair enquiries from the Continent as also from Japan and India for early deliveries of new crop Karnak.

There is little to report about the working of the New York market. Activity was confined more to domestic consumption demand which continues at a normal pace. There was also some slight improvement in enquiries from the Continent. Prices during the week under review have remained steady with narrow fluctuations. Straddle trading between New York and Liverpool has become now a regular feature in the New York market and prices are to a certain extent affected by these cross Atlantic manipulations.

The following are the latest available quotations from New York as compared with those a week and a fortnight before:

(In cents per lb.)

	1-6-54	25-5-54	18-5-54
Spot	34.45	35.45	35.40
July	34.38	34.33	34.44

December	34.19	34.24	34.26
March	34.30	34.34	34.39

ART SILK YARN ADVANCES

(From Our Own Correspondent)

BOMBAY, 2nd *June*

The announcement of the licensing policy, on 29th May, for the import of art silk yarn, for July-December, 1954, has been received with mixed feelings in the art silk yarn market. While the rayon manufacturers have welcomed it, traders have viewed it with concern and have characterised it as being very "restrictive" in nature. According to the announcement, established importers will get a quota of 25 per cent. of half of the best year's imports of artificial silk yarn and thread. The licences will be valid for six months only but will not apply for the import of double yarn and twisted yarn from quality yarn and yarn of deniers between 101 and 119 inclusive. Licence-holders will not be permitted to utilise more than 15 per cent. of the face value of their licences for import of 120 deniers art silk yarn in bright finish and not more than five per cent. of the face value of their licences for the import of 150 denier art silk yarn in bright finish. These restrictions will apply to all types of yarn including acetate but excluding bemberg and other non-viscose yarn of 120 and 150 deniers. Licences will not also be valid for import of staple fibre yarn but may be utilised for import of other synthetic yarns like nylon, grillion, ardil and casein.

It has further been decided that applications from actual users, both members and non-members of the various associations, for supplementary licences over and above the allotments made to them, in the ordinary course, will be considered on an *ad hoc* basis by the Joint Chief Controller of Imports, Bombay, in consultation with the Textile Commissioner. Applications for these additional licences should be made only after receipt of the licences/allotments for the licensing period July-December, 1954. These additional licences will not be valid for yarn of 120 and 150 deniers of bright finish and other prohibited varieties. Applications for import of synthetic fibres and other than staple fibre and rayon yarn, like nylon, grillion, merinova, ardil, casein, etc., for actual use, as also for stock and sale, will also be entertained and considered on an *ad hoc* basis in consultation with the Textile Commissioner.

Following the announcement of the import quota, which restricts the import of 150 deniers to 5 per cent. of the face value of licences, as before, and 120 deniers to 15 per cent., as against 25 per cent., during the last quota period, the art silk yarn market which was till then easy picked up strength considerably. Thus, 150D June, which was quoted at Rs. 730 on 28th May, as against Rs. 770 a couple of days before, improved steadily to Rs. 780 where it closed for the week. May delivery declined from Rs. 804 on 27th May to Rs. 795 on the 28th May. Thereafter, it improved to close, on 31st May, at Rs. 825. In the ready section, 120 Japan gained As. 2 to Rs. 4-7 and 150 Japan an anna to Rs. 4-15. 120 Italy gathered As. 2 to Rs. 4-2 and 150 Italy an anna to Rs. 4-2.

The National Rayon Corporation was reported to have sold in the open market its production upto the end of July and negotiations were going on in respect of August output. The sales have been generally on the basis of Rs. 3-10 for 150 deniers and Rs. 4 for 120 deniers with no discounts and the buyer accounting for sales tax.

The performance of staple fibre was generally easy, on accumulations of stocks and reports of discouraging offtake from important North Indian consuming centres. 40 x 2 June delivery opened the week at Rs. 619 as against Rs. 629. It declined to Rs. 614 on the subsequent day. Thereafter, it improved to Rs. 624 on 31st May. Subsequently, an easy trend was again witnessed. It receded to Rs. 613 on the 1st inst., before closing at Rs. 617 on the following day. May delivery was done at Rs. 620 on 31st May, as against Rs. 625 end of last week. In the ready section, City lost half an anna to Rs. 3-6. New Great and Phœnix, however, gained a quarter anna each to Rs. 3-4-9 and Rs. 3-1-6, respectively. Among foreign yarns, Shincos were lower by an anna at Rs. 3-11, while Suicos were unchanged at Rs. 3-12.

The easy trend in cotton yarns witnessed last week gathered further momentum this week. In the absence of buyers, the attempts of various mills to press forward sales was futile this week also. In view of the declining prices of raw cotton and unfavourable offtake from almost all consuming centres, particularly from handloom weavers, dealers hesitated to commit themselves to long contracts. Small wonder if, therefore, prices further declined and disclosed substantial losses over the week. Among 80s, Seksarias eased from Rs. 56-4 to Rs. 55-10, Finlays from Rs. 63 to Rs. 62 and Elphinstones from Rs. 60 to Rs. 59. Sri Rams were down by Rs. 2 at Rs. 59. Among 60s, Sri Rams fell from Rs. 55-8 to Rs. 52-12 and Raghuvamshis from Rs. 51-12 to Rs. 49. Citys were lower by Re. 1 at Rs. 48, Finlays by Re. 1-6 at Rs. 35-4, and Gold Mohurs by Re. 1-8 to Rs. 54-8. Seksarias, however, gained As. 12 to Rs. 47-8. Among 40s, Seksarias declined by As. 2 to Rs. 27-4, Among 40s, Seksarias declined by As. 2 to Rs. 29-4. Maduras were Meenakshis by As. 6 to Rs. 29-4. Maduras were unchanged at Rs. 29-8. Among 30s, Girdhras disclosed a loss of As. 2 at Rs. 23 and Maduras As. 4 at Rs. 24-12. Among 20s, Hinds and Edwards fell by As. 2 each to Rs. 17-5 and Rs. 16-4. Among 10s, Moderns were unchanged at Rs. 13-8 and Podars at Rs. 13-4-6. Elphinstones, however, gained an anna to Rs. 12-13.

The table below gives the prices of art silk, staple fibre and cotton yarns quoted today, as compared with those seven days before:

	2-6-1954	26-5-1954
	Rs. a.	Rs. a.
Art silk yarn—		
150 May (per case of 200 lbs.)	—	804 0
150 June	780 0	770 0
150 Japan (per lb.)	4 7	4 3
150 Japan (per lb.)	4 15	4 14
120 Japan (per lb.)	4 2	4 0
120 Italy (per lb.)	4 2	4 1
150 Italy (per lb.)		
Staple fibre yarn—	—	625 0
40 x 2 May (per case of 200 lbs.)	617 0	629 0
40 x 2 June	5 12	5 12

New Great (per lb.)		
Cotton yarn (per bundle of 10 lbs.)—	13 8	13 8
10s Moderns	16 12	16 12
20s Seksaria	24 12	25 0
30s Madura	29 4	29 10
40s Meenakshi	48 0	49 0
60s City	62 0	63 0
80s Finlay		

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, 2nd *June*

The oilseeds market ruled easy during the week under review. Continued fears that the U.S. may dump its large stocks of oilseeds and oils in the European markets and discouraging commodity market advices were responsible for the easiness. There was heavy selling pressure in groundnuts on increased arrivals of oil and lack of enquiries. Even at lower levels, enquiries from *vanaspati* interests were in want. The linseed, *kardi* and *niger* sections also put on a dull appearance partly in sympathy with groundnuts and partly in the absence of export enquiries for linseed oil and *niger* and *kardi* seeds and their oils. The costorseeds section proved no exception to the general downward trend. Consequently, prices declined sharply and disclosed major losses.

Operators in the groundnut section were reluctant to enter into commitments in a declining market. Although there were rumours that the Government may revise its export policy in regard to groundnut oil and H.P.S. groundnuts, they failed to enthuse the operators, as they expected further decline in values following the arrivals of summer crop in South Indian centres in the next week or two. As such, Bold F.A.Q. dropped from Rs. 33-8 to Rs. 31-10 and June-July delivery from Rs. 31-13 to Rs. 30-12. Khandesh quality eased from Rs. 34-4 to Rs. 32-4. Groundnut oil ex-mill was down by Re. 1 at Rs. 15-12. July delivery lost As. 8 to Rs. 15-12.

In the linseed section, Bold ready disclosed a loss of As. 14 at Rs. 25 and June-July (Forward) As. 12 at Rs. 24-2. Sutnas were lower by As. 14 at Rs. 23-8. Linseed oil declined from Rs. 13-12 to Rs. 13.

Among castorseeds, September delivery, which opened at Rs. 114-2 as against Rs. 114-10, fluctuated between Rs. 114-6 and Rs. 109-10, before closing at Rs. 110-12. May delivery, which changed hands at Rs. 109-12 on the 27th inst., as against Rs. 110-8 on the previous day, eased to Rs. 108-8, before finishing at Rs. 109-8 on the 29th inst. Madras ready eased from Rs. 22-9 to Rs. 21-8 and Kanpur from Rs. 21 to Rs. 20. It is stated that there is a large carry-over of the last year's crop. In addition, this year's crop is also hanging on the market heavily. Exports of castor oil upto the end of April during the current year are estimated at about 5,000 tons. Castor oil B.S.S. and Commercial lost As. 10 each to Rs. 12 and Rs. 10-12, respectively.

The Bombay Oilseeds Exchange has, in a telegram to the Chief Controller of Exports, Government of India, New Delhi, pleaded for free exports of castor oil or in the alternative substantial additional quotas. It has also requested that the quotas in the latter case should be valid upto the end of December, 1954. It has further pleaded for extending the period for the quotas expired at the end of April last, up to the end of July next. Regarding export of *kardi* and *niger* seeds, the Exchange has suggested not only the abolition of the export duty on them but also permission for further exports of these seeds.

Among others, both *kardi* Bold ready and June-July (forward) declined from Rs. 17-4 to Rs. 13-8. *Niger* ready Madras was down at Rs. 26-8 as against Rs. 27-4.

The following table shows the prices of oilseeds and oil on the 2nd inst. as compared with those at the end of the previous two weeks:

	2-6-54	26-5-54	19-5-54
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—			
Khandesh Quality Bold Ready (per cwt.)	32 4	34 4	35 0
June-July	30 12	31 13	33 8
Linseed—			
Bold Ready (per cwt.) ..	25 0	25 14	26 12
June-July	24 2	24 14	25 8
Castorseeds—			
September 1954	110 12	114 10	118 8
Madras (per cwt.)	21 8	22 9	23 4
Groundnut oil—			
Ex-mill Ready (per quarter) ..	15 12	16 12	17 8
Castor Oil—			
Commercial (per quarter) ..	10 12	11 6	11 10

SUGAR PRICES DECLINE FURTHER

(From Our Own Correspondent)

BOMBAY, 2nd *June*

The downward trend noticed last week in the Bombay sugar market gathered further momentum during the week under review. Under the impact of a series of highly bearish factors, the tone of the market in both the spot and forward sections became nervous. The factors responsible for the bearish trend were: (1) Rushing of indigenous sugar by special trains under the nominee distribution scheme; (2) arrival of s.s. *Herpelicus* with 8,800 tons of British refined sugar; (3) liberal allocation of Formosan sugar per s.s. *Maria* and full allocations of Spanish sugar per s.s. *North Anglia*, both of which have already arrived in this harbour, awaiting allocation of sheds in Alexandra docks; (4) further invitation of tenders for British refined sugar per s.s. *Margo* and s.s. *Atlantica*, Peruvian sugar per s.s. *Elba*, all the three ships due to anchor at this port next week; (5) slack upcountry demand, owing to satisfactory allocations of imported sugar to Madhya Pradesh, Gujerat and Bombay Deccan sides; (6) rumours of a probable reduction, by the Food Ministry, in the price of imported sugar to be issued from the ships expected to arrive here in the near future.

Another factor which accelerated the fall in prices is the arrival this week of 8,100 bags of indigenous sugar, being the balance of allocations made by the Central Food Ministry for the city. It is understood that only a couple of thousands of bags now remain to be despatched to the City in order to complete the full quota of indigenous sugar allotted to the market.

In the spot section prices for the small grain sugar receded by a rupee from Rs. 86 to Rs. 85 a bag. Medium grains which stood around Rs. 90—91-8 last week came down this week to Rs. 89—91-8 per bag. Large grain sugar was also sizably lower from Rs. 105—102 to Rs. 100—102. Stocks of Cuban and Mexican sugar are reported to have been exhausted, while British refined was freely offered at Rs. 84 per bag, disclosing thereby a clean loss of Re. 2-8 per bag.

The forward section ruled very weak on rumours of a probable reduction in the tender price of imported sugar, as stated above, to be announced by the Food Ministry shortly.

It looks as though the references in the "Market Gossip" columns last week, on New Delhi's slumber on the applications of the upcountry merchants, has had the desired effect on the powers-that-be. For, it is reliably learnt that New Delhi has issued circulars to the tenderers asking them whether they want the refund of their earnest money, or they wish to purchase imported sugar, in which case they are directed to submit their tenders to the respective Regional Directorates.

It must be admitted that New Delhi has made rapid strides in delivering sugar in sizable quantities and if the rumours of the expected reduction in the prices of imported sugar were to come true, a great blow would have been dealt with to hoarders and speculators in the sweet commodity.

PEPPER TOUCHES A NEW LOW

(Messrs. Parekh & Co.)

BOMBAY, 2nd *June*

Malabar black pepper during the week had a one-way traffic, with prices, at all primary centres, declining to a record new low level. Alleppey and Tellichery were anxious sellers at Rs. 900 and Rs. 850 respectively with poor response. In Bombay, June shipment for New York changed hands at as low as $0.47½. July and August shipments went abegging at $0.46 and $0.45 respectively. The market of Alleppey, after piercing the resistance level of Rs. 1,000, developed a crisis-like condition, as dealers who advanced loan to the growers against stock at higher prices became panicky. At Cochin, garbled pepper was traded at as low as Rs. 170 per cwt. with small buying interest. Such an abrupt fall in the Indian market at this time of the season was never dreamt of even by the worst pessimists among the trade. With the whole of the Sarawak and Lampong crop still to be marketed, one does not know the bottom pepper will touch this year. Statisticians in the trade seem to be revising their estimates of Malabar crop, and they are said to be whispering among themselves that this year's outturn of pepper, in Malabar District, must be much larger than the estimates given out earlier by various trade agencies; as otherwise such pressure of sales by the growers at any price cannot be possible, because, on the whole, India's export from November to May does not make bad reading. The buying policy of American dealers is such that they never buy in an unsettled market. If New York does not place very soon big orders with India, so as to instill confidence in the Indian growers, it is feared that the market may go still further down, because panic will spread among the dealers and growers with every further fall in the prices. If it is the policy of the Indian Government to keep the export duty on pepper under constant review, the time for scaling it down, or even abolishing it, is never more urgent than it is at present. But the Government machinery is very slow and usually they act too late. It is reported that the decision for the reduction in export duty on pepper was taken some 6 months back on the basis of the prices ruling then. But the Government dallied and the announcement was made only on the 12th May which did not prove helpful either to export or to the growers. If the Government this time also delays taking action, we fear it will lose precious dollars it is likely to earn from the export of pepper to U.S.A. and the growers will lose heavily on their investment on pepper cultivation, thus hitting hard the agricultural economy of Malabar, giving a handle to the Communists to exploit further the already exploited agriculturists of the area.

Following are today's nominal quotations:—Ready delivery Rs. 125 per Bengal maund, June delivery Rs. 820-30, July delivery Rs. 805-15 and August delivery Rs. 785-95 per candy of 5½ cwts.

TEA DUSTS REACT

(*Messrs. Forbes, Ewart and Figgis Ltd.*)

COCHIN, 29th *May*

The offerings in dust sale "J" which was held on Tuesday, 25th inst., amounted to approximately 3,03,000 lbs. There was less demand with prices very irregular and the market closed As. 2 to As. 3 easier, except for good grainy black types which remained fully firm.

London Market.—Offering unattractive. Market stronger to dearer.

Colombo Market.—Good demand. High-grown brokens declined about five to eight cents. Others firm to slightly dearer.

Calcutta Market—Export—No sale this week.

Dust.—No sale this week.

Special Licence.—The last business transacted in special licence was at 50 ples and there are now no sellers.

1954-55 *Export Quota.*—There has been a very strong demand for new season's quota and the price has appreciated to 57½ ples, which remains today's quotation.

Forthcoming Auctions.—Sale No. 11 will be held on Tuesday, 1st June and dust sale "K" will be held on Tuesday, 8th June, 1954.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd., wire as follows:

"*Sale* 11.—18,50,000 lbs. Good general demand, but prices tending lower, except for fannings and whole leaf."

B. TWILLS DECLINE

(From Our Own Correspondent)

CALCUTTA, 1st *June*

A gradual fall in the prices of heavy goods was the feature of trading in the week under review. Quotations for hessian were, however, unchanged and firm. But genuine support for B. twills could not be had at the higher level which was reached a week ago, following speculative manipulations. Consequently, prices declined. Even at the lower level, not much support was necessary before the market could attract genuine buyers. Such wide fluctuations in prices as have been witnessed recently have been caused by illegal trading in futures which remains banned.

The feeling among the genuine traders is strong for the complete elimination of this sort of manipulation which hits the trade and industry, but which enables the *katni* operator to make quick and easy money. Every rise is abrupt and accompanied by an equally abrupt shake-out. The pity is that the West Bengal Government, which banned futures trading, is not taking adequate steps to stop this sort of illegal trading. Under the conditions which exist today in the market, it is difficult to see how a regularised futures market on the lines of the East India Cotton Association of Bombay could function in Calcutta as recommended by the Jute Enquiry Commission. As a prelude, the illegal futures trading that is going on at present should be brought to an end without any further delay.

Last Wednesday, ready B. twills were done at Rs. 111-4 as against Rs. 113 previously. The lower level was due to heavy selling in *fatka*. Subsequently, there was an improvement to Rs. 111-12, but as genuine business could not take place even at this level the week-end took the rate down to Rs. 110-12. A spurt to Rs. 111-6 was recorded yesterday. The July-September position, after declining to Rs. 108-4 from Rs. 110, recovered to Rs. 109. Business was put through in October-December deliveries at Rs. 108. Hessian was throughout steady, and there was a fear that the recent transfer of hessian looms to sacking would lead to a shortage in hessian. The ready material was quoted for most part of the week at Rs. 44-4, and month-end considerations made the rate to improve to Rs. 44-7. There was some covering demand, and business was transacted for July-September shipment.

The low stock position of mills as regards manufactured goods would appear to be a sound cause for mills to consider the question of increasing working hours. While the industry's views on this matter have not yet been stated, it is understood that some of the mills find no reason why a reversion to a 48-hour week should not be made, if the export duties are done away with. Increasing working hours would bring a number of labour and marketing problems, the settling of which would take up both the time and energy of those dealing with the industry. If after finding a solution for these difficulties, stocks of finished goods accumulate and prices recede, mills would have to regret any earlier decision for increasing production. The marketing of a higher production can be ensured only if prices are brought down. And the only way of achieving this is by the Government sacrificing some revenue by the abolition of the export duties. Jute goods would be able to maintain their place as packaging materials only when they are offered at attractively low rates. Trade circles are inclined to agree with the view of the Deputy Chairman of the Indian Jute Mills Association, Mr. Walton, who is leading a delegation of his Association to the U.S.A., that exports of jute goods would increase by 10 per cent. if the duties were eliminated. In which case, there would be no demand from jute producers for the export of raw jute.

The raw jute market was quiet and featureless. Mills were reserved. The latest quotations are given below:

	Middles	Bottoms
	Rs. a.	Rs. a.
Pakistani district	31 0	27 0
„ northern	30 8	26 8
Indian: Daisee	31 0	28 0
Assam lower	29 8	26 8
Assam upper	28 8	25 8
Northern	29 0	26 0
Orissa	30 0	27 0
Murshidabad	—	24 8
Western	—	24 0
Jungli	—	23 8
Uttar Pradesh	—	23 8

Bimli f.a.q. was quoted at Rs. 22-8, and in the *pucca* bales section firsts marks ready were priced at Rs. 165 a bale.

There was a fractional rise in the prices of raw jute in the Narayanaganj market, although transactions were limited and foreign demand was insignificant. Northern tossa cross bottoms gained to Rs. 14-8 from Rs. 14, district white middles to Rs. 22 from Rs. 21-8, and jat white middles to Rs. 23 from Rs. 22-8. Jat white bottoms were better at Rs. 20, jat tossa middles at Rs. 27, and northern white bottoms Rs. 16-4. Other latest quotations are: district white bottom Rs. 19, district tossa bottom Rs. 23, northern white middle Rs. 19-8, jat tossa bottom Rs. 24, and northern tossa middle Rs. 22-4.

KIPS RULE FIRM

(From Our Own Correspondent)

MADRAS, 31*st May*

Quiet conditions prevailed in the U.K. kip market and shipment businesss was patchy. But prices locally ruled firm, due to shippers' buying to cover their earlier commitments. Arrivals were on the usual scale with good clearance, leaving small stocks with the *mandi* merchants, U.K. buying might revive when prices for lights decline to 52d., mediums to 42d. and heavies to 39d., but tanners are finding the raw market 5 per cent. over the above parity and are not willing to follow U.K. prices at present.

There was patchy demand for cow calf and buff calf. Buff heavies ruled 2d. over U.K. levels. There were stray enquiries from U.S.A. for buff lights and calf

In the tanned skins section, shipment business was restricted. Arrivals in the local market were taken up steadily by the exporters. Demand for lining sheep for run, parcels from U.K. was insistent, but sellers wanted orders for all selections combined, as otherwise they would be holding lower grades, for which there was little or no demand.

KANPUR HIDES AND SKINS STEADY

(From Our Own Correspondent)

KANPUR, 30*th May*

During the week under review, conditions in the local hides and skins market were rather unchanged from what they were in the previous week. There was a slight fall in fresh arrivals of goats and sheep, due to smaller consumption of meat during the present season which is hotter than usual. Brisk business was done in wet salted cow and buff. Behind the main transactions we had the local tanners. The latest quotations are as follows:—

Wet salted cow, 1st grade Rs. 360 and 2nd grade Rs. 260 per score; wet salted buff, 1st grade 1 lb. 12 ozs. and 2nd grade 2 lbs. per rupee; goat, 1st grade Rs. 300 and 2nd grade Rs. 280 per 100 pieces; sheep skins, 1st grade Rs. 300 and 2nd grade Rs. 250 per 100 pieces.

RUBBER INDUSTRY HAS BRIGHT FUTURE

(*Concluded from page* 1075)

do and you have the opportunity of showing great progress from day to day, from year to year, and can look forward to the time when future generations will enjoy the comforts of life found in other parts of the world.

During the course of industrial development in India, you will encounter always the pessimist. It would be wonderful if economy always grew at a steady unfaltering pace, but that has never happened in any nation anywhere. Economic progress is a good deal like the waves that break over the beach on the incoming tide Each one comes rolling in, spends itself and then recedes, but in doing so contributes to the volume and the force of the next wave, which always comes in a little farther. There are those who spend their time watching the waves and become so obsessed with the process that they fail to observe the onward movement of the tide itself. So, I think, it is with our pessimists today. They simply cannot see the tide for the waves.

Be An Optimist

From day to day, as I mingle with business men throughout Calcutta and other parts of India, I often ask—"How is business with you?" It strikes me that, in Calcutta, that question is answered by the great majority—"Business is not very good, money is tight, the people are not buying." Personally, I do not believe it. I do not believe that the money in India, and there is plenty of it, has been taken out and dumped in the Hooghly. I believe it is there to be spent if you have the goods to sell, and do a job of salesmanship. Yes, business is what you yourself make it.

To illustrate, I will tell you a litle story about a retired rubber worker. This elderly gentleman had worked in a rubber factory in America for 40 odd years and when he retired at the age of 65 he received a sizable pension, but he could not reconcile himself to be idle and so he bought what we in America think is an institutional part of the life of the American people. He bought a hot-dog and a hamburger stand at the side of a busy thoroughfare. He was deaf so he had no radio. His eyesight was poor so he did not read the newspapers, but he sold good hot-dogs and good sandwiches, and served good coffee and pure milk. He advertised by posting signs along the highway. He stood by the roadside and asked people to buy his sandwiches and his food. The people bought. He increased his food orders, he bought new cooking equipment, all of which made business for other workmen and other industries. He needed extra help to take care of his customers, so his son came home from college to help him.

Then things began to happen. His son said—"Dad, haven't you listened to the radio, there is a big recession on. The European situation is chaotic, the domestic situation is even worse." Whereupon, the father thought, well, my son has been to college, he reads the papers and listens to the radio, he should know. So, anticipating a recession, the father cut down on his food orders, let his advertising go to seed, and no longer bothered to stand by the highway to sell his wares. His sales fell overnight and the old gentleman said to his son—"You are right my boy, we are certainly in the middle of a great recession."

Yes, business is what you make it. Do not, under any consideration, be a pessimist about the future of industry in India—it can go only one way and that is up and up. Be an optimist—keep your eyes on the tide and absorb the waves as they come and go.

Sweden's 40-year-old liquor-book ration system will be abolished on 1st October, 1955. A Bill to this effect was passed by the Riksdag on 21st May, 1954. The abolition of the restrictions will be combined with "intensified anti-misuse measures" on the part of Governmental and municipal authorities and the country's temperance organisations. According to the decisions, the purchase rights will be unlimited for all persons over 21 years of age. Licensed restaurants will be entitled to serve liquor as from noon on week days and 1 p.m. on Sundays, although in conjunction with food. Beer of the export type (4.5 per cent. alcoholic content) will be available for sale and may also be served in restaurants. The excise policy shall aim at furthering a shift from hard liquor to beverages with a lower alcoholic content. Sales of alcoholic beverages are to be handled by special stores to be run by a State-controlled national company. A professor's chair in theoretic alcohol research is to be established at the Carolinian Hospital in Stockholm. Commenting on the reform, the Finance Minister, a teetotaller himself, recalled that Sweden was the only nation in the world to have tried rationing as a remedy against alcohol misuse. "We must admit that we have been unsuccessful," he said when recommending the new scheme.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. n.d.=Ex-Dividend. n.c.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. a Sales and amount written off. (k) Investments. ‡ For ten months ended 31st December 1951.

(1) Made up of an interim dividend of Rs. 1-12 per share on 1,28,000 shares and final dividend of Rs. 1-10 per share on 2,40,000 shares of which 1,28,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 1060 in the debentures section:—

B Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959

(d) Bearer bonds of Rs. 1,000 each with option of redemption in whole or in part at par on 30th June, 1952 on an any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8, or at par after 31st July, 1955 on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months' notice

RECOMMENDATIONS OF SHROFF COMMITTEE

SPECIAL CORPORATION FOR SMALL INDUSTRIES SUGGESTED

REVIEWING the developments in the private industrial sector during the first three years of the Five-year Plan, the Committee* on "Finance for the Private Sector," appointed by the Reserve Bank of India, in October, 1953, with Mr. A. D. Shroff as Chairman, observes that "while some progress has been registered in regard to investment in new capital, it has not been commensurate with the expectations; and, in order to reach the planned targets, annual investments in new capital will have to be raised to about double that in the period 1951-53. As regards investment in modernisation and replacement of equipment, very considerable leeway remains to be made up in the remaining years of the Plan. Finally, in respect of working capital, the problem has so far not proved acute for the large-scale industries. But medium and small-scale industries have suffered from lack of liquid funds; and, further, the planned increase in working funds to sustain a higher output has yet to materialise." The Committee adds that, if present trends in savings and supply of liquid resources continue, finance would undoubtedly be a major limiting factor to industrial development in the private sector.

The Committee's main terms of reference were to examine ways and means of increasing the finance available to the private sector through sources other than those under the consideration of the Taxation Enquiry Commission, and, in particular, through the organised banking sector. Accordingly, the Committee has made a series of recommendations to facilitate larger provision of finance to industries by commercial banks, insurance companies, industrial finance corporations, etc. The Committee has, *inter alia*, also examined various other factors inhibiting private industrial investment in India today and has placed considerable emphasis on the need for creating a proper economic climate for private investment.

Improvements in the Economic Climate

In order to facilitate increased private investment in industries, the Committee suggests that, in respect of large investments in scheduled industries which take time to fructify, it should be possible for, Government to give some assurance of immunity from nationalisation, at least for a reasonable period. The Committee also emphasises the need for co-ordinating the work of the various licensing authorities and simplifying the procedure with a view to avoiding unnecessary delay and the resulting loss to *entrepreneurs*.

The Committee considers that a major factor impeding private investment is the variety of additional obligations to compensate labour imposed by legislative measures adopted by Central and State Governments and by the Awards of Industrial Tribunals in recent years. The Committee feels that, while these measures may, from the welfare point of view, be good in themselves, their cumulative impact on industries is onerous; and, therefore, it urges that early steps should be taken to remove the confusions and uncertainties in regard to labour legislations and Awards and to ensure that the rise in the rewards of labour does not run ahead of the increase in the productivity of labour.

In regard to factors in the economy affecting the supply of investment funds, the Committee takes the view that recent changes in the pattern of income distribution have been such as to reduce the flow of savings into the organised capital market. At the same time, borrowings by Government and Government agencies have been substantial. This combination of circumstances has had the effect of limiting the scope for financing the programmes of expansion and rehabilitation of the private sector through new issues on the capital market.

The Committee draws pointed attention to the need for increased effort on the part of organised bodies like Chambers of Commerce and Manufacturers' Associations to root out the many unhealthy practices that still prevail in the business sector, and to raise the standards of business management and morality. The business community, says the Committee, "has to recognise that planning in a mixed economy necessarily involves some control and regulation of the private sector; and that, therefore, it is all the more necessary to exercise vigilence and discipline in such circumstances."

Financial Policy

Recent developments such as increased production in several fields of economic activity, abatement of inflationary pressures from abroad and deterioration in the employment situation, as well as the need to step up development outlays in both public and private sectors in order to achieve the planned targets, warrant, in the Committee's opinion, adjustments on the monetary front. It feels that, if the deficit of Rs. 250 crores envisaged in the Central Government budget for 1954-55 materialises, the activities of the public sector will add to aggregate purchasing power in the country and will stimulate further activity in the private sector. However, unless the savings generated by Government spending amongst the rural and wage-earning classes are drawn into money and capital markets to which all segments have equal access, deficit financing will not by itself solve the credit problems of some of them at least. The Committee emphasises that, in making arrangements for the provision of finance to the private sector, this point has to be borne in mind.

It then goes on to review the steps which the Reserve Bank has already taken to facilitate the flow of credit—such as the introduction of Bill Market Scheme, extension of credit facilities to co-operative banks, investment in the share capital of industrial finance corporations, promotion of sound banking practices in the country through a system of inspection of banks, etc.—and adds that, by further suitable adjustments in the Reserve Bank's lending and rediscount practices, larger investment by commercial banks and other financial institutions in private industry could be facilitated.

Commercial Banks

The Committee has examined carefully the scope for direct long-term lending by banks to industries and is of the opinion that it is not desirable to encourage a tendency on the part of banks to lean on the Reserve Bank for providing liquidity against the long-term advances which they make on their own judgment and initiative.

While the extent to which banks can give direct *loans to industries is limited*, the Committee recommends that, even with the present resources available to banks, they should endeavour to increase their investments in the shares and debentures of first class industrial concerns, make larger advances to approved parties against such securities and subscribe to a greater extent to the shares and bonds of special institutions like the Industrial Finance Corporation of India and the State Finance Corporations. To facilitate an enlargement of commercial bank investments in industrial securities, the Committee recommends the formation of a consortium or a syndicate by banks, in co-operation with insurance companies, under the leadership of the Imperial Bank of India, with the object of underwriting or investing in new issues of industrial shares and debentures. Also, in order to encourage the banks to invest in the shares and bonds of the Industrial Finance Corporation of India and State Finance Corporations, the Committee recommends that these securities should be treated by the Reserve Bank as on a par with Government securities for advances under section 17(4)(*a*) of the Reserve Bank of India Act, on such terms regarding margin, etc. as the Reserve Bank may deem appropriate.

Effect of Awards

The Committee has dealt in considerable detail with the effect of the

MARKET GOSSIP

(Concluded from page 1063)

low one. In that case, Europe should report a lower output this year. Weather and other conditions, too, have not been favourable. Europe's next crop, according to the aforesaid review, would be considerably less than that produced in 1953-54. A more definite picture, however, will be available by about September. As regards demand, there has been, it is stated, an expansion in consumption by about 2½ per cent. each year, during this century. This means that the world should normally be able to absorb one million tons more than in 1954-55. If smaller beet crops are harvested next season, the situation might improve further, in the sense that the year will see the beginning of a trend towards a better balance between world supply and demand.

• • • • •

An optimistic view of the scope for the development of the cement industry in India was taken by Mr. V. Ramakrishna, Chairman of the Andhra Cement Company, Ltd., at the recent annual meeting of the Company. The cement industry, he pointed out, had made satisfactory progress during the last few years, production having improved from 1.55 million tons in 1948 to 3.78 million tons in 1953. As against the anticipated demand of 4.5 million tons by 1955-56, the Planning Commission had fixed a target for increasing the rated capacity to 5.01 million tons. He emphasised that in Andhra State, the potentialities for the development of the industry were "very great" in view of the fact that it had not only large deposits of high quality limestone but there was growing demand for cement as a result of the construction of two big hydro-electric projects, the Krishna Project and several minor irrigation works.

• • • • •

Mr. Ramakrishna deplored that when the industry had done so well in the past and when there was scope for its further development, the Government should not provide enough incentives to the industry. Although he felt gratified at the high degree of priority the Government had given to the expansion of the cement industry, he said that it was "somewhat disappointing to notice the discouraging attitude on the part of the Government in not allowing a fair increase in the selling price." Reviewing the Government's decision on the Tariff Commission's recommendations, he pointed out how the Government whittled down, among other suggestions, the Commission's suggestion for a 10 per cent. return on gross block to 8 per cent. He said: "Apart from the question whether the recommendation of a return of 10 per cent. on gross block is fair or not, in view of the fact that certain items of expenditure such as managing agents' allowance and bonus are not taken into account while computing the various elements of cost of production, the Government of India have considered it adequate to allow a return of only 8 per cent. on gross block." This question, it may be noted here, has been repeatedly raised by the spokesmen of other industries which have similarly suffered through the Government's stringent attitude towards the return on gross block.

RECOMMENDATIONS OF SHROFF COMMITTEE

(Concluded from previous page)

houses, investment trusts, unit trusts, etc., should be set up. The Committee welcomes the move to establish, with support from the Government of India and the International Bank for Reconstruction and Development, a privately-owned and managed Industrial Development and Finance Corporation with a paid-up capital of Rs. 5 crores and an interest free deposit of Rs. 7½ crores by the Government of India for a period of 15 years. The State-owned and State-managed Industrial Development Corporation for promotion of new industrial units in the country, and urges the Government of India to expedite the formation of this State-sponsored Corporation.

Finally, the Committee emphasises the need for provision of technical and managerial assistance to industries. It believes that, on account of the paucity of technical experts in the country, it may not be practicable to have fully equipped technical wings attached to each Government and to each of the institutions like the Industrial Finance Corporation of India and the proposed Development Corporations. It, therefore, recommends that a central organisation for provision of technical and managerial advice and assistance should be set up. This organisation should not be a Government institution but one in which Government, special finance institutions and private industries are all jointly concerned.

Concluding the report, the Committee emphasises once again the need for a reorientation of attitudes on the part of all the sectors in the economy. "One major obstacle to achieving progress at a quicker pace," says the Committee, "may be attributed to lack of adjustment in attitudes towards the needs and requirements of the situation in the country. Whether it is a question of simplifying administrative procedures on the part of Government authorities or whether it is a question of business men reconciling themselves to the changed needs of new social concepts, or whether it is a question of bankers relaxing their accustomed conservatism to cope with the growing economic needs of the country or whether it is the central monetary authority that has to shape its policies to lend its assistance in directions hitherto unexplored to accelerate the onward march of the country's economic development, the Committee believes that unless all elements constituting the economy of the country are willing and prepared to develop a new outlook and shed preconceived ideas, real progress at a quickened pace cannot be attained."

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake

NEW LIGHT ON SMALL INDUSTRIES

FEW reports have gripped Indian imagination and are likely to remain the last word on the subject as the Report on Small Industries in India, submitted by the International Planning Team which, at the instance of the Central Government's Ministry of Commerce and Industry and the National Planning Commission, and through the courtesy of the Ford Foundation, toured the country for nearly three months studying the problems of small industries before it set down its impressions and thoughts on paper. Considering that the Team consisted of three Americans—Mr. Ramy Alexander, Mr. Raymond Miller and Mr. C. Leigh Stevens—and two Swedish experts—Mr. Sven Hagberg (Chairman) and Mr. Hans Grundstrom—each with a distinctive intellectual background and practical experience, and that the work of drafting the report was divided, each part being allotted to only one member of the Team, it is certainly remarkable that there is a surprisingly clear thread of unity throughout the report. Equally remarkable is the new mind that has been brought to bear upon this ancient subject which, having been discussed *ad nauseum* by the public on the platform and in the Press, repels people by the many cliches that have grown around it.

How did this admittedly hackneyed, though no doubt important, subject appeal to the Team? Perhaps, nothing is more characteristic of the Team's entire approach to the question than the emphasis which this international group of experts has laid on the magnitude of India's markets. The way to production is rightly sought through markets. Markets are not, as is the bane of the Congress Party's policy in relation to small industries, sought for the articles produced. The articles must be produced, the Team insists, to meet consumers' felt needs. The Team is impressed by the fact that India is fortunate in possessing one of the "largest potential domestic markets in the world." Since 80 per cent. of India's 360 millions live in the villages, the rural market deserves particular attention. Again, the 60 million urban residents, as the Team suggests, present a market of "staggering possibilities." It is true that the needs of the population are now only "latent" and not "felt"; the demand is potential, not effective. The Team is convinced that, when the "latent needs of these folks begin to change into felt needs, India will experience, perhaps, the greatest industrial revolution that the world has ever seen." All this must fire the imagination of even the dullest among our industrialists and public leaders. But it is well to realise that the change-over from the "latent" demand stage to the "felt" stage will need systematic effort on the part of administrators and sustained work on the part of the management and the workers. The Team's report is mainly concerned with the way in which the small industries can be fitted to meet India's vast and growing markets.

Village and small industries, according to the Team, can be divided into two groups: traditional village craftsmen (carpenters, blacksmiths, etc.), working mainly for the needs of the village where they live, and small industries, such as makers of light consumer goods, artcrafts and small tools, aiming at larger markets. The Team's verdict on small industries is that "they are today facing a crisis, their number of employed workers and their output of production gradually declining and in some cases slowly grinding to a halt." The "major single reason" for this state of affairs is stated to be the lack of systematic approach to the overall problem; better marketing, better financing, better raw materials, better finish, better equipment, better power facilities, better design are often thought of as separate remedies. A systematic approach, the Team again emphasises, must start with market research. What articles will sell, and at what price? Then comes designing. How should the article be designed, made and finished? The other problems are: raw materials, equipment and organisation, production, research and technical help, distribution and promotion, and finance.

The Team has recommended the establishment of four institutes of technology, located geographically so as to serve better the whole of India. The institutes will carry on investigations and applied research for promoting development of small industry and will disseminate the methods and results thus obtained to industrialists, their deputies and skilled workers. This recommendation has been accepted by the Government of India. The chief justification for these institutes lies in the fact that the larger national laboratories are at present unable, preoccupied as they are with fundamental research or with problems of large-scale industries, to devote any attention to the small industries. It must, however, be clear that, even so, the institutes will do well to pass on their more theoretical problems to the larger laboratories and also to receive guidance and help from them. But the main work of these institutes will lie in the sphere of small industries with which they should establish almost daily contact.

In order to increase the sale of small industries' products, the "most urgent needs" are good design and technical quality, reliable organisation of supply and co-ordinated promotion of sales in India and abroad. With this end in view, the Team has recommended the establishment of a National School of Design to serve as a centre for creative design and fashion, of a customers' service corporation to provide satisfactory channels of supply and a reliable procurement service for Indian and foreign buyers and of export development offices (one in North America and another in Europe), to promote and stimulate foreign trade in handicrafts and artcrafts. If the small industries are to make effective contribution to the economic development of the country, the Government should endeavour to implement these recommendations.

It is significant that the Team has repeatedly stressed the need for contact between producers and consumers through a well-developed marketing organisation or system that will serve as a liaison between the two. Apart from the need for establishing such contacts, the Team has also laid considerable emphasis on the necessity to strengthen trade associations, that is, voluntary association of members of a given industry or trade. The Team recommends that all existing State and national trade associations should be strengthened. The Central and State Governments, it is suggested, should take the initiative in organising and promoting meetings to discuss the problem of such industries. When they have been properly established, these associations, it is stressed, will help acquaint members of new methods and techniques, and also serve as information centres to their members. Considering that the same industry or trade is spread over diverse parts of the country, it is perhaps too much to expect a single trade or industrial association to serve each industry's needs. Nevertheless, a single trade association, in each region, and an all-India organisation knitting the regional associations can do much to improve efficiency in production and marketing of goods.

The Team has gone on record by emphasising that the most frequent complaint it heard in all its tour, was lack of finance. It was not only the frequent but the first complaint made by small industries and artisans. From a study of the problem, the Team reaches the conclusion that the major reason why capital for small industry is scarce is low productivity and over-population in many branches. It says that, even if it is admitted that the present depressed conditions are not conducive to the granting of credit, the commercial banks could make a more concerted effort at increasing credit to small industries. The policy of granting loans with security on land and buildings, which form part of the credit institutions' activities in other countries, has not made much headway in this country. The Team's specific recommendations include: (1) Commercial banks should delegate more authority to branches to make loans to small business; (2) co-operative banks should expand into the industrial field; (3) all States should have State finance corporations each one of them setting apart a portion of its funds exclusively for small industries; and (4) a system of loans against the security of real estate-mortgages should be considered and developed.

As regards the role of co-operatives, the Team rightly insists that, as a rule, co-operators should not associate themselves in an act of production as members; they may, of course, associate themselves for purposes of procuring raw materials and marketing of finished products. Wisely, the Team recommends the gradual withdrawal of the Government from co-operatives; it reiterates its "conviction" that co-operatives must be organised and developed by those who are to be served.

The Team has also recommended the establishment of a Small Industries Corporation by the Central Government. The scope of this Corporation is not to be confined to the mere grant of credit. It is meant to service small industry in the field of Government indents. The primary purpose of the Corporation will be

to provide the incentive to small industry to move forward by improving its techniques of production and management. It may be mentioned, in this connection, that the Central Government has, during the five years ended 1953-54, assisted cottage industries to the tune of over Rs. 600 lakhs. Perhaps, if this amount had been spent in a more systematic manner on the lines envisaged by the International Team, it would have yielded better returns than it has. The mere grant of loans, without technical guidance, will get the small industries nowhere.

Perhaps, the most notable part of the Team's report lies not so much in its specific recommendations—significant and important as they are—as in its practical approach to the problem, as well as in its general attitude towards the role of small industries. Indeed, it would be wrong, if not futile, to implement the Team's recommendations, unless the Government is at the same time prepared to appreciate the broad general principles on which its recommendations are based. With characteristic thoroughness, the Team has stated the principles of a dynamic economy: (1) "You cannot divide what you do not first produce"; (2) as production rises, new crafts and trades develop; for instance, to the extent a cultivator produces more food than he needs, one of his fellow cultivators may be released from the production of food to take up the tasks of building of houses, the making of clothes and the construction of roads. Since adoption of better methods comes invariably through the leadership of successful employers, success should be encouraged, not penalised. Again, the maintenance of a proper standard of quality is vital to industrial progress. Many Indian industries can lay the foundation for a promising long-term development, provided "efficient methods of production are adopted as soon and as widely as possible." Small industries have a "prominent" place in the Indian economy; only, it is "unsound" to use handpower just for the sake of using handpower. Labour-saving equipment is not an evil; it results in greatly expanded demands and markets, generates higher wages, expands employment and raises living standards.

Modernisation creates employment; it is "shortsighted" to stop this process for the "mere purpose of apparently preventing unemployment." In a certain mill, the Team found that, if the management had been allowed to rationalise work, it could operate "two shifts of needed production, utilising the number of employees now needed to operate one shift." The policy of stopping all attempts at rationalising the textile industry denies "employment for at least 25,000 people who, under present Indian conditions, are needed to operate over 250,000 additional acres required to grow the additional cotton needed from the extra shift"; it denies employment in ancillary occupations; it deprives the Sindri factory of about 5 per cent. of its market, for that much fertiliser should be used in the growing of the cotton. If modernisation results in some temporary unemployment, it is better to absorb the unemployed persons in a public works programme than to stop modernisation. In the final analysis, it is not *modernisation* but "*perpetuation of inefficient methods*" of production that causes unemployment; this has happened in Agra and Howrah. Indian industry, according to the Team, needs to be "set free" from the "illogical" restriction on the use of modern machinery, supported by legislation and regulation. Finally, the Team emphasises that the "challenge of rationalisation must be met and must become a part of a forward-looking industrial programme."

Such, in outline, is the economic philosophy which forms the basis of this illuminating report. Here is a call, a stirring call, made by an impartial body, for a change in Government's industrial policy. If this succeeds in curing the Government of its industrial myopia, the call will not have been made in vain.

SOME THOUGHTS ON BANKING TRENDS

WITH the publication of the Reserve Bank's latest annual report on *Trend and Progress of Banking in India*, a complete picture of commercial banking in the country during 1953 is now available. The report provides, besides a rapid review of the trends, all the relevant statistics, supported by a number of impressive and beautifully printed charts. These reveal no wide variations in the principal assets and liabilities over the year. The picture, therefore, may present a placid appearance. But that does not necessarily mean that banks had a comfortable and happier year. On the contrary, 1953 was, for most banks, a difficult year, in that they had to strive hard to retain and attract more deposits and look out for profitable investments consistent with safety in order to maintain their earnings, so that they could cover their ever-rising expenses. The fact that the profits of banks actually declined and that one of the big Scheduled banks had to cut its dividend is proof enough to show that the return of normal conditions in the monetary sphere and the readjustment of the banking system to the disinflationary monetary policy initiated in November, 1951 were not a painless affair to banks. It is, however, true to say that, so far as the Reserve Bank is concerned, the past year was a smooth one, for, as the watch-dog of the banking system, it had fewer worries than in the previous two years.

The Reserve Bank notes with gratification that movements in bank credit showed no abnormal features. In the past year, variations in this item were in accordance with the seasonal pattern. In the first five months of the year, which constitute part of the busy season, advances rose by Rs. 60 crores, while, in the subsequent seven months, which constitute the slack season, they declined by Rs. 70 crores, the net change over the year being a fall of Rs. 10 crores. This movement shows that the credit expansion earlier in the year was wholly for genuine seasonal trade purposes. In other words, the economy was not marked by any unhealthy speculative activity, such as the one witnessed in the summer of 1951 and early in 1952. The credit for this must be given not to banks or to the Reserve Bank's inspectors but to the general economic climate which was not quite favourable to speculators. The increase in domestic production of both agricultural and non-agricultural goods, the removal of many controls and the return of a strong buyers' market the world over, all these cumulatively caused a state of affairs which was not conducive to unhealthy speculation.

The seasonal demand for bank money was met mostly through borowings from the Reserve Bank. This had to be so, because there was no significant expansion in deposits. The total amount of advances taken by the system from the Reserve Bank aggregated Rs. 195.42 crores, as against Rs. 245.70 crores in 1952 and Rs. 113.90 crores during 1st January to 16th April, 1954. The major portion of these advances—Rs. 129.58 crores, to be precise—continued to be against Government securities, the balance (Rs. 65.84 crores) being against usance bills; the corresponding figures in the preceding year were Rs. 164.25 crores and Rs. 81.45 crores, respectively. Evidently, the bill market scheme was not as popular as was expected. But later figures, relating to the first three and a half months of 1954, reveal a distinct improvement in the use of this medium for obtaining central bank credit. This is due, to a large extent, to the extension of the facility to a larger number of banks and to the further relief given in stamp duty on these bills. Till the close of the last busy season (1952-53), this facility was available only to banks with deposits of Rs. 10 crores and over. But, in July 1953, it was extended to cover even banks with deposits of Rs. 5 crores. If the recommendations of the Shroff Committee were implemented, the usance bill system would doubtless receive further fillip which, in turn, would encourage the banks to increase their portfolio of commercial advances in preference to Government securities.

There has been, as already mentioned, no worthwhile increase in deposits. Over the year, total deposits (at Rs. 823.1 crores) show a small rise of Rs. 8.2 crores, an increase of less than one per cent. Taking the demand and the time liabilities separately, one finds that the former receded by Rs. 4.4 crores, while the latter went up by Rs. 12.6 crores, presumably because of the attractive rates of interest offered for time money. If the trend of these deposits is any indication of the progress of savings, it is clear that there has been no significant expansion in them. This will be evident further from the small increase of only Rs. 6 crores in personal time deposits. Another interesting feature disclosed by the variations in deposits is that, whereas the total deposits of Indian Scheduled banks increased by Rs. 17.1 crores, those of the Exchange banks fell by Rs. 8.9 crores. Further, in 1952, the time deposits of both Exchange banks and Indian Scheduled banks had gone up by Rs. 10 crores and Rs. 15 crores, respectively. But, in 1953, the Exchange banks' time deposits went up by no more than Rs. 40 lakhs, while those of Indian banks were higher by no less than Rs. 12.2 crores. These data show that the Indian banks' allegation that the Exchange banks had pinched their deposits by offering higher rate of interest is baseless.

It is pointless to argue that the Exchange banks were the first to start bidding for deposits by quoting higher rates and that the Indian banks had to follow suit. An increase in deposit rates was the inevitable result of the rise in Bank rate and the disinflationary monetary policy followed by the Government. It is, therefore, no use blaming anyone for that. In any case, in the competition for the available funds, the Indian banks seem to have scored over the foreign banks by a comfortable margin. Accordingly, if anyone has a legitimate cause for complaint, it is the Exchange banks and not the Indian banks. Indeed, the former can even go to the length of complaining that the present voluntary (*sic*) move to prevent any further competition for deposits by imposing a ceiling on interest rates is specially designed to retain the advantage which certain Indian banks have already gained by offering unduly high rates of interest for deposits. But to the credit of Exchange banks it must be said that they have made no such complaint. On the contrary, after some hesitation in the initial stages, they have agreed to support the contemplated gentlemen's agreement amongst the big banks on the rates of interest to be paid for deposits.

The move for placing a ceiling on rates of interest for certain classes of deposits through a voluntary understanding among the big banks stems from the need for reducing the cost of operations. The banks argue that, since their hands are tied by the awards of Labour Tribunals, they cannot bring down the establishment charges. The only course open to them, therefore, is to reduce the cost of deposits by mutual agreement among themselves. This may be a good argument, but it is necessary to warn the banks that their move will be misconstrued by the critics of private enterprise. They will be accused of trying to create a bankers' monopoly and their action will be approvingly quoted by their critics, including the Trade Union leaders, in favour of nationalisation of the banking system. They will, we are afraid, lose their right to demand a readjustment of the Tribunal's awards, for their action will be quoted against them by their employees. Since all the big banks are controlled by the big business men of India, the move will be regarded as one to do the depositors in the eye, so that big business may get the benefit of cheap bank credit. They will be setting a bad precedent to other sectors of private enterprise and be indirectly justifying the demands of those (Indian soap-makers, for instance) who want a monopoly for sellers. If the bankers believe in the virtue of private enterprise, they must be prepared to face the rigours of a competitive economy. The Reserve Bank is certainly ill-advised in extending its support to this move. If it is convinced that interest rates on short-term deposits have gone up to uneconomically high levels, then it should bring them down through the traditional means, namely, open market operations, instead of merely hoping that "leading banks will agree amongst themselves on the question of fixing ceilings on certain types of deposit rates." By expressing such a hope publicly, the Bank tacitly admits that deposit rates are unduly high. Accordingly, it should have the courage of conviction and act boldly, and not rely on such dubious methods as gentlemen's agreements which, as past experience shows, are honoured more in the breach than in observance. But the truth is that, whereas the rise in deposit rates has been in tune with the prevailing market conditions and the law of supply and demand, the banks' lending rates on the major portion of their advances have not moved up sufficiently; in fact, in many cases, they are the same as before. The remedy, therefore, lies in an upward readjustment of interest rates on advances. The Reserve Bank, which has thought it fit to comment on deposit rates, is silent on advances rates. The omission is very glaring indeed.

The production figures relating to rice, given in the two tables which formed part of the editorial article entitled "World Rice Position," in our issue dated 1st May, 1954, refer to paddy. For arriving at figures of rice production, some adjustments would, of course, be needed.

MUTUALISATION OF ORIENTAL LIFE NOW CERTAIN

WALCHANDNAGARS' LATEST ENTERPRISE—WORLD POSITION OF FATS AND OILS

THURSDAY, 3 P.M

THERE has been a slight improvement in the tone of the Share Market. Almost all counters have been displaying remarkable strength since the beginning of this week, notwithstanding the heavy fall in bullion, oilseeds and foodgrains markets and the further decline in cotton. Normally, the setback in these markets should have had an adverse effect on shares, too. But now it has had the opposite effect. The one scrip that has been conspicuous by staging a sharp and sudden rise is Tata Steel Ordinary. One explanation for this phenomenon is that some of those speculators, who had gone long in bullion and commodities, had remained short in a number of shares, including Tata Ordinary. And seeing their sorry plight in these markets, a few enterprising speculators have entered the Share Market to squeeze them out and make a handsome profit for themselves. Another explanation is that the last settlement revealed a strong technical position in favour of the bulls in Tata Ordinary. This has attracted fresh speculative buying in this scrip. Dame Rumour has it that the tenacious operator, who remained a bear in Tata Deferreds for a long time, has now re-entered the market as a fervent bull. A third explanation is that there is a shortage of floating stock in Tata Ordinary. This is probably due to the fact that many holders of this scrip, who would have otherwise liked to sell a part of their holdings, are not aware that, pending the preparation of new share certificates which will take some months, the T.I.S.Co. has made special arrangements with the Stock Exchange authorities for the acceptance on delivery dates of allotment letters or their receipts (where the splitting of a holding is involved) in lieu of shares. When this information reaches all the shareholders, there may be some substantial deliveries by investors. A fourth explanation is the belief that the Company may declare a somewhat higher dividend. Whatever the reason may be, the sudden rise in Tata Ordinaries has infused a new spirit among speculators who were extremely shy till a few days ago. Even textile shares have looked up, despite the uninspiring advices from the cloth market and the possibility of strong competition by Japan, to which we shall presently refer.

MARKET GOSSIP

• • • •

Japan, according to reports from Tokyo, is intensifying its export drive in a wide range of commodities, particularly textiles. This is attributed to Japan's desire to improve its balance of payments position which is none too comfortable, though, in recent months, the deficit has been held within reasonable bounds. With a view to meeting the competition from the smaller spinners, the "big ten" mills have slashed their prices. Yet another reason for the decline in prices is that the Japanese authorities have announced that cotton import licences would be issued in proportion to export shipments; this is an inducement to compel the mills to export at any cost. Shipments of cotton cloth, during the first four months of 1954, are estimated at 434 million yards, as compared with 250 million yards in the corresponding period of 1953. The silk industry, which is facing a recession in the domestic market also, feels that only export trade can avert the slump in the market for its goods. It would further appear that Japanese steel mills are also making a determined effort to find export outlets.

• • • •

For the second week in succession, the Gilt-edged market has staged an improvement. Values of almost all the medium-dateds and a few of the long-dateds have now reached levels that were prevailing before the announcement of the new loan. This shows that the pressure of subscriptions to the new loan has ceased to make itself felt on the existing loans. Indeed, there has been consistent buying in all the dated loans. A notable feature of this buying is that the low-interest bearing medium dateds, the 2½s and 2¼ths, are being strongly fancied, probably because of the heavy discount at which these loans are now standing. The 2½ per cent. 1961, for instance, is now being quoted at Rs. 91-2. Similarly, 2½ 1962 is standing at Rs. 92-2. Some investors seem to feel that a capital profit of Rs. 8 to Rs. 9 (which is not subject to tax), realisable in a period of 7 to 8 years, is attractive enough for a Gilt-edged security.

• • • •

The Finance Minister's statement in Madras (on Tuesday) on the progress of the new tap loan seems to have given rise to some speculation about the closing of the list. His reported remark that he would be satisfied if he were to get Rs. 100 crores for himself has led some to believe that the list would be closed shortly, perhaps by the end of this month, because already a little over Rs. 80 crores have been subscribed to the new loan. But this interpretation does not seem to be correct. It is possible that Mr. Deshmukh might have had in mind the figure of Rs. 100 crores for the Central Government alone. Since a good part of the subscriptions to the new loan has to be shared with the States also, we are sure he must be aiming at very much more than Rs. 100 crores. We think that he would need a minimum of Rs. 150 crores and that he would keep the list open at least till the end of the slack season. In any case, now that the Gilt-edged market has definitely recovered from the shock it received immediately after the new loan was announced, there is no reason why he should be in any particular hurry to close the list. This is evident from his other reported remarks on the National Plan Loan. "Questioned about the duration of the National Plan Loan," to quote the *Hindu* of Madras, "Mr. Deshmukh stated that he had given no thought to closing the subscription. The monsoon months were usually the slack season and so it was too early to decide anything about closing the loan." Significantly enough, the report published by this paper on Mr. Deshmukh's interview contains no reference whatever to the figure of Rs. 100 crores.

• • • •

Apropos the move to convert the Oriental Life Assurance Company into a mutual one, to which we referred some two months ago, we now learn that it has entered the final stage, having overcome all obstacles. At a meeting of the Board of Directors of the Company held on Wednesday, a formal resolution recommending that the Company be converted into a policyholders' company was adopted. It would appear that the Directors have overcome the Government's demand for representation on the Board of the Company by agreeing to give majority representation to policyholders right from the beginning instead of by stages, as was originally contemplated. Accordingly, in a board of 12 directors, seven will be the policyholders' representatives and 5 the shareholders' representatives. Thus, the policyholders will become the masters of the Company right from the inception. The representation for shareholders will be progressively reduced as and when the compensation bonds payable to them are redeemed. When all these bonds are paid off, the Board will consist of only policyholders' representatives. It is further understood that there is no change whatever in the originally agreed terms of compensation, according to which the shareholders will be paid Rs. 8,800 per share in the Company's bonds carrying interest at 4 per cent. per annum (taxable) and repayable over a period of ten years by annual drawings. This compensation will be paid out of future valuation surpluses and not out of the existing reserves, the whole of which will pass on to the policyholders intact. As regards the contention of some policyholders that compensation at the rate of Rs. 8,800 is unduly high, it is pointed out that this figure has been arrived at by an impartial referee and that as such the allegation that the Directors have been partial to the shareholders is unfounded.

• • • •

The general trend in the oilseeds market continues to be downward. The small gains, witnessed in the groundnut section yesterday and today, is at best only a technical correction. The decline in the market has been a continuous one, over the last four weeks. As compared with the prices ruling towards the end of last month, groundnut (Khandesh quality) has declined by Rs. 5 to Rs. 32-4, linseed (Bold ready) by Re. 1-12 to Rs. 24-4 and castorseed (September delivery) by Rs. 14 to Rs. 108-10. The decline in oilseeds reflects the general recession in edible commodity prices, notably the prices of wheat and rice. A few other factors are also responsible for this trend in the oilseeds market. There is the improved outlook for the new crop. Also, the offtake is stated to be poor. Thus, the Vanaspati interests, who have always been consistent supporters of this market, are themselves faced by a recession in the demand for their product, with the result that they are not so keen, as they formerly were, in supporting the market, except perhaps at lower levels. Finally, there has for some time now been some heavy speculation in certain upcountry centres, notably in Hyderabad. The cumulative effect of these factors is to pull the oilseeds market down to lower levels.

• • • •

An equally important factor that has contributed to the decline in the oilseeds market, is the bearish advices from Europe where the U.S. has been trying to sell its surplus oilseeds produce at attractive prices. World factors, too, are apparently assisting the bearish trend in the market. A larger output of oils and fats has been forecast for this year by Mr. J. C. A. Faure, a well-known authority on oilseeds and chief buyer of oils and fats for Unilever. Addressing the Congress of the International Association of Seed Crushers at Cannes recently, Mr. Faure placed the output this year at 25.25 millions tons, as against 24.25 million tons last year and the record output of 24.75 million tons in 1952; the pre-war output was about 21.6 million tons. Increased output, he said, was probable in a number of countries including European countries, India, Ceylon, Burma, Indonesia, Malaya and the Philippines. Some declines, however, were likely in the American Continent and in Australia. The higher level of production forecast for this year gives a *per capita* consumption of 22.1 lbs., as against 21.5 lbs. in 1953 and 22.2 lbs. in 1952; the pre-war level was 22.3 lbs. He placed the production of edible oils this year at 8.67 million tons, as against 7.94 million tons last year, palm oils at 3.21 million tons (3.10 million tons), industrial oils at 3.11 million tons (3.08 million tons) animal fats 9.50 million tons (9.44 million tons) and marine oils at 763,000 tons (715,000 tons). He forecast that the world export supply this year would aggregate 5.90 million tons, inclusive of U.S. export availability of 1.4 million tons, as against 5.46 million tons last year when the U.S. had a surplus of 1.12 million tons. World's export supply this year, at 5.90 million tons, has for the first time exceeded the pre-war exports of 5.83 million tons to which the U.S. contributed a mere 100,000 tons. The rapid rise of the U.S. as an exporter of oilseeds is, as is well known, a remarkable piece of agricultural transformation in the world. Mr. Faure pointed out that world import requirements would probably be only 5.34 million tons, so that there appeared to be an exportable surplus of some 550,000 tons. But there was a statistical difference of up to 200,000 tons between actual exports and imports, so that the surplus was likely to be 350,000 tons. "This does not mean, of course, that this quantity will necessarily force prices down," he continued, "as both producers and Governments are presumably still able to finance holding stocks if they desire to keep prices fairly stable."

• • • •

It is reliably understood that plans for the manufacture of certain essential items of machinery for the manufacture of sugar in vacuum pan sugar factories have been completed by Walchandnagar Industries Ltd. Amongst the items listed for such manufacture are instruments for accurate appraisal and control of vacuum pans, mechanical circulators for such pans, evaporators, Magma pumps, jet condensors, sulphur burners, high velocity juice heaters and car spotters. Most of these machines are based on the latest sugar boiling technique in operation in sugar factories and refineries in the U.S.A., Australia, Cuba, etc. The know-how and technical guidance with regard to the design, building and use of these machines, it is believed, will be provided by the well-known firm, the United States Pipe and Foundry Co. of New Jersey, who are leading manufacturers of sugar machinery in the U.S.A. It is learned on enquiry that a few sets of these machines have already been manufactured and put into operation in the two sister concerns of Walchandnagar Industries Ltd. and the Ravalgaon Sugar Farm Ltd., besides one other factory in Maharashtra. It is believed that the recent trip of Mr. Gulabchand Hirachand, Chairman of the Board of Directors of this Company, together with its Chief Engineer, to the U.S.A. is in connection with giving the finishing touches to this scheme for undertaking large-scale production. In view of the fact that machinery in most of the existing sugar factories is or will soon be due for replacement, there should be a good market for this enterprise, especially as several new sugar factories also are going to be established in the country in the near future.

• • • •

Being seasonal factories, sugar factories are in commission only for about a third of the year. The overheads, therefore, in their case are naturally heavy and the sugar industry has always been in search of subsidiary industries, especially those connected with the by-products of sugar to keep them engaged for a longer time. Walchandnagar and Ravalgaon between them have several such subsidiary industries such as confectionery, *vanaspati* manufacture, paper, strawboards, soap, dairy farming, extraction of canewax and distillation of industrial alcohol to their credit. It is for the first time, however, that a unit of the sugar industry has embarked on a plan of manufacturing capital goods required for the industry itself. It may be recalled that the cotton textile industry has already started such an experiment on a co-operative basis in Western India with some success and it is believed that a similar venture by the second largest industry in the country holds out good prospects for success. From the viewpoint of the Company if it is able to secure a good market for this machinery, there should be a good deal of saving on overheads and it would also enable it to provide work for a large number of hands who are engaged only for the season at present. Further, as the land, buildings, the already existing well-equipped workshop and the transport system will also be utilised for the manufacture of this machinery, the cost of manufacture would be considerably less than what it would be if the machines were to be manufactured by a new and independent concern. Though the effect of this additional activity on the part of Walchandnagar Industries Ltd. is not likely to be reflected in the next balance-sheet and profit and loss account, it cannot fail to have a steadying, long-term influence on the profits earned by the Company.

• • • •

An important part of the exacting duties of a secretary to a joint-stock company is to maintain the register of shareholders. This task, as all company officers now know, has been rendered more difficult after the coming into operation of the Estate Duty Act. Section 84(2) of the Act prescribes that "if any member of a company dies after the commencement of the Act and the company through any of its principal officers as defined in section 18 has knowledge of the death, it shall not be lawful for the company to register the transfer of any shares standing in the name of the deceased member, unless the Company is satisfied that the transferee has acquired such shares for valuable consideration or there is produced before it a certificate from the Controller that either the estate duty thereof has been paid or will be paid or none is due as the case may be." Any company which fails to comply with this section is liable to a penalty of Rs. 1,000 or a sum equal to double the amount of the estate duty payable, according as the Controller may direct, though the Controller is empowered to reduce the penalty in any particular case. Although the section is clear enough and covers most normal transfers, cases do arise where the section, as it stands, does not always provide a clear guidance. For instance, how will the section operate when the shares are jointly held in the names of two persons, and one of them dies, so that the share comes to be held automatically in the name of the survivor? Some experts are of the opinion that the section does not cover such cases, and that there is, therefore, no need to call for any certificate from the Controller of Estate Duty before the Company deletes the name of the deceased person and registers the shares in the name of the survivor. This view is based on the ground that the said section applies only to transfers by

SHARE MARKETS GAIN STRENGTH

TEXTILES LOOK UP

(From Our Own Correspondent)

BOMBAY, 10*th June*

AFTER experiencing four weeks of uncertain trend, equities on the Stock Exchange turned bullish during the week under review. Under a sustained spell of speculative buying and sizable short-covering in steel shares, activity enlivened and an all-round rise in prices was recorded. Even experienced brokers could not explain the sudden change in the complexion of the share market, when commodity and other markets were receding. It is even stated that but for the weakness of the other markets, shares would have flared up. It remains to be seen whether this upward trend is sustained in the coming weeks, as some are inclined to believe.

The favourable trend of production in the Tata Iron and Steel Works at Jamshedpur during May, prospects of substantial expansion in steel output, consequent on the commencement of working of a new blast furnace capable of increasing pig iron production by nearly 30,000 tons per month, encouraging advices from Calcutta, and the favourable technical position of the market in favour of bulls, were all factors which revived strong speculative buying in steel shares. Further, operators would appear to have taken an optimistic picture of the future, following the publication of the Shroff Committee recommendations and the reports that the privately owned Industrial Development Corporation would come into being in September next.

In the steel section, Tata Steels opened the week at Rs. 195-4 and edged forward to a high of Rs. 208-8, the highest level touched since the shares were listed ex-right on 29th March last. The closing was a shade lower at Rs. 207-8. Indian Irons advanced from Rs. 30-5 to Rs. 31-3½, before closing at Rs. 31-2.

Textile shares also showed moderate gains, on selective buying aided by the strength of steels. Further rise in this section was stalled by uninspiring advices from the cloth trade and fears that the expected removal of export duty on coarse cloth might not materialise. Bombay Dyeings appreciated from Rs. 419-6 to Rs. 425 on Monday. After a temporary reaction to Rs. 421-4, they gained ground to Rs. 427-8, but the closing was done at Rs. 423. Kohinoors came in for support and rose from Rs. 307-8 to Rs. 313. Century advanced from Rs. 325 to Rs. 332-4 on good enquiries. Central Indias picked up Rs. 3 to Rs. 174. Finlays staged a similar rise to Rs. 243. Gokaks came in for special attention and put on Rs. 8 to Rs. 256-8. Indore Malwas added Re. 1-14 to Rs. 109-6 and Khataus Re. 1-4 to Rs. 121-4. New Greats strengthened from Rs. 167 to Rs. 171. Simplex had a rise of Re. 1-12 to Rs. 156-4. The highlight of the section was provided by Standards which spurted by Rs. 21-4 to Rs. 335, on rumours that the Company would issue bonus shares in the ratio of one share for every four shares. Svadeshis stood Rs. 4-8 higher at Rs. 278, Swans Rs. 2-8 better at Rs. 318-12 and Tatas As. 12 at Rs. 48-8.

Bank shares were featureless, with restricted activity and minor variations in prices. Barodas added As. 8 to Rs. 109. Centrals were lower by As. 8 at Rs. 54-4 and their new shares by a similar extent at Rs. 59. Imperial Fully Paids dropped Rs. 12-8 to Rs. 1,772-8 and their Partly Paids Rs. 8-12 to Rs. 430. Bank of Indias were a fraction better at Rs. 147-4. United Commercials were marked down by Re. 1 to Rs. 44.

Insurance shares presented a firm front with smart gains in some of the counters. After remaining featureless almost throughout the week, Orientals jumped up today from Rs. 7,690 to Rs. 7,900. New Indias staged a rise of Rs. 2-4 to Rs. 47-8. Industrial and Prudentials spurted from Rs. 34 to Rs. 38 and Indian Mercantiles hardened by Re. 1-4 to Rs. 41,12. Empire of Indias were, however, well held at Rs. 670, B.I.Gs at Rs. 13-4 and Vulcans at Rs. 12-14.

Electric shares were steady, with the Tata Group attracting good attention. Tata Hydros improved by Re. 1-8 to Rs. 142. Tata Powers advanced smartly from Rs. 1,408-4 to Rs. 1,427-8 and Andhra Valleys from Rs. 1,320 to Rs. 1,335. Bombay Suburbans also added As. 10 to Rs. 193-2.

The miscellaneous section was firm and provided several bright spots. In the sugar group, Belapurs were steady with a rise of Re. 1-8 to Rs. 269. Phaltans recorded an increase of Rs. 5 to Rs. 106. Bhopals were unchanged at Rs. 12-8, while Walchandnagars jumped up from Rs. 175-10 to Rs. 180. The cement group was cheerful, A.C.C.s touching new high level after the shares were listed ex-right on 15th February, 1954. From Rs. 157-12, these shares came up to Rs. 161-8, but closed at Rs. 161. Digvijays scored an advance of Rs. 7-8 to Rs. 131 on scarcity of sellers. Among shipping shares, Scindias were earlier marked down from Rs. 17-10 to Rs. 17-7. After recovering to Rs. 17-14½ today, they closed at Rs. 17-11. India Steamships edged forward from Rs. 8-7½ to Rs. 8-11, Bharat Lines were quoted at Rs. 96. In the engineering group, Alcocks appreciated early in the week from Rs. 302-8 to Rs. 312-8, despite the cut in dividend from Rs. 17-8 to Rs. 10 per share. Towards the close, however, they receded to Rs. 307-8. Premier Constructions were featureless at Rs. 123-12. Tata Locomotives were a shade better at Rs. 115. In the mining group, Shivrajpurs were a notable exception to the general trend with a drop of Rs. 5 to Rs. 59, owing to poor demand for manganese and bleak export prospects. Indian Coppers were active and rose by As. 2½ to Rs. 3-6½. B.B. Petrols were quiet at Rs. 4.0½ on profit-taking after sustained rise for several weeks. Among miscellaneous industrials, Bombay Burmahs attracted substantial short-covering and rose from Rs. 394-6 to Rs. 407-8, but closed lower at Rs. 403-2. B.I.Cs put on As. 2 to Rs. 8-3. C.P. Railways had business As. 8 better at Rs. 106-8.

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, 9*th June*

Under the leadership of teas, the Calcutta Stock Exchange experienced active trading conditions during the week under review. The demand for tea shares is expected to continue for some time and this section would, therefore, attract a considerable portion of the funds available to the market. Other sections were steady, but the improvement in prices was insignificant compared to that in teas. Jutes came in for a little more attention and selected counters added gains. The latest political developments in East Bengal have so far been unnoticed in the market. The market remained closed on Thursday last on account of *Id*.

In the engineering section, Indian Irons opened at Rs. 30-6 and, after advancing to Rs. 30-11, shaded to Rs. 30-9. During last month, the Company produced 62,450 tons pig iron, 35,640 tons steel ingots, and 35,260 tons semis and finished steel. Burn & Cos. improved from Rs. 194 to Rs. 197-8, and Jessops at Rs. 29-6 added one point. In transactions, Indian Standard Wagons were raised from a previous rate of Rs. 71 to Rs. 82. Indian Galvanizings firmed up from Rs. 18-6 to Rs. 19-3.

Miscellaneous industrials were steady. Rallis were taken to Rs. 56 from Rs. 55-8, and Martin Burns to Rs. 23 from Rs. 22-1. Good support was given to India General Navigations which, as a result, gained from Rs. 83 to Rs. 86.

Among shares of paper mills, orients encountered support at Rs. 20-9. India Pulps were steady at Rs. 213 and Titaghurs received attention at Rs 4-14.

Transactions in the tea section were many and several features were noted. At Rs. 223, Patrakolas showed a gain of Rs. 31. Hantaparas moved from Rs. 267 to Rs. 277. Teliaparas were supported at Rs. 194, at which rate the improvement was by nine points. Ellenbaries reached as high a rate as Rs. 139, as against a previous rate of Rs. 81. Birparas advanced from Rs. 154 to Rs. 171. A rise of Re. 1-2 was noted in Ananda Assams at Rs. 25-2.

The better prices secured by jute goods were reflected in the jute section, although operators were cautious in view of the abrupt advances and falls in jute goods. Indias were a special feature in yesterday's trading and improved from Rs. 128 to Rs. 135. Champadanies steadied from Rs. 151 to Rs. 155 and Anglo-Indias were better at Rs. 201. Howrahs encountered support at Rs. 24-10 and Barnagores were higher at Rs. 145, as were Nellimarlas at Rs. 11-8.

• • • •

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, 8*th June*

The Madras Stock Exchange exhibited brisk trading conditions this week also. The general pattern of investment disclosed an underlying firmness. Continued satisfactory dividend declarations were one of the chief causes for this state of affairs. In fact, sellers were scarce in almost all the popular scrips. The planting section experienced a boomlet, especially in teas on persistent expectation of better demand following reports regarding paucity of stocks in the U.K. Rubbers also met with encouraging support. But coffees presented a desolated appearance having ruled virtually dull throughout the week. Sugars met with sustained demand. The textile and miscellaneous scrips too were no exception to the general trend. Consequently, the volume of business done was large and prices disclosed substantial gains over the week.

Textile scrips came in for selective enquiry. Dhanalakshmis gained Rs. 6 to Rs. 270 and Buckinghams Re. 1-12 to Rs. 148-8. Premiers put on Rs. 2 to Rs. 108 and Rangavilas Rs. 10-8 to Rs. 66. Vasantas were higher by Re. 1 at Rs. 185 and Kotharis As. 8 to Rs. 12-10. Jawhars were up by an anna at Rs. 5-5. The debentures of Rs. 5 lakhs will be redeemed on the 30th inst. Interest will not be allowed from 1st July, 1954. Lakshmis, Rs. 25 paid-up, "A", rallied Re. 1 to Rs. 65, while Rs. 50 paid-up lost Re. 1-8 to Rs. 128.

Teas among plantings received the best attention. Coonoor teas changed hands, with a gain of As. 12, at Rs. 25. Devons rose by Re. 1-4 to Rs. 15-4 *cum-div.* Deals were done in Twyfords, As. 6 higher, at Rs. 17-2 and in Udayagiris, As. 4 higher, at Rs. 12. United Nilgiris advanced from Rs. 218 to Rs. 220. Highland Producers had buyers at Rs. 14-4 *cum-div.*, as against Rs. 14 *ex-div.* The Directors have declared a final dividend of 7½ per cent., thereby making a total of 12½ per cent., for the year ended 31st December, 1953, as against 10 per cent. for the previous year.

Among rubbers, Cochin Malabars improved from Rs. 7-11 to Rs. 8 and Kallas from Rs. 4-8½ to Rs. 4-12. Malankaras advanced from Rs. 4-8½ to Rs. 38-12 and Mercaras from Rs. 3-15 to Rs. 4-3. Peninsulars disclosed a gain of As. 12 at Rs. 14-4 and Pullangodes an anna and a half to Rs. 3-3½. Travancore Rubbers were up by As. 6 at Rs. 15. Nenmeras were done at Rs. 11 *cum-div.*, as against Rs. 10-12 *ex-div.* The Directors have declared a dividend of 7½ per cent. for the year ended 31st December, 1953, as against 6¼ per cent. for the previous year.

Among coffees, Coffee Lands were unchanged at Rs. 11, while Consolidated Coffees lost an anna to Rs. 17-10. Puthuthotams, however, gained an anna to Rs. 3-11. Neelamalais (tea and coffee) were done at Rs. 5-6. *ex-div.*, as against Rs. 5-9 *cum-div.*

The miscellaneous scrips came in for selective enquiry. Aluminium Industries put on As. 8 to Rs. 15-4. General Papers disclosed a gain of As. 4 at Rs. 8-8. Indian Aluminium advanced from Rs. 115 to Rs. 125.

ATUL PRODUCTS LTD.

If Mr. Kasturbhai Lalbhai, Chairman of the Atul Products Ltd., was appreciative of the help rendered by the Government to the chemicals and dyestuffs industry, through the imposition of import restrictions, he was at the same time conscious of the fact that the industry owed a responsibility to consumers. "It would be upto us," he said, "to see that in spite of the encouragement we receive from the Government we do not fail to come up to the standards which may be legitimately expected of us." He gave the welcome assurance that his Company had not taken, and would not take, any "undue advantage" of the measures adopted by the Government in order to help the industry. On the larger question of the prospects for the industry, he said that the Indian market for dyes was large, India being one of the biggest importers at present. Indeed, he thought that the market would grow bigger still, as the living standards advanced and the demand for dyes from the textile, leather, paper and other industries moved up.

As regards the more specific question about the prospects for the Company, of which Mr. Kasturbhai is Chairman, he said that the Company had entered only a part of the market, that of direct and acid dyes. But the products turned out by the Company had uses in the cotton, wool, silk, jute, leather and paper industries. The Directors, he revealed, had decided to expand the range of the Company's products by the manufacture of naphtols, rapid fasts, rapidogens and developing salts. They were also considering the manufacture of vat dyes. He also gave some details about the Atul Products—I.C.I. deal, to which a reference has been made in these columns ere now. The agreement, he said, provides for the manufacture of jade green and its intermediates. The essential part of the scheme is that the Company, together with I.C.I. Ltd., will, as equal partners, float a new company. He added: "This will naturally lead to a better and greater utilisation of the site; but apart from that, this will also help your Company to enter into a new range of dyes and thus cover practically the whole field of dyes consumed in the country." The shareholders could not have asked for a more promising account of the Company's prospects.

FOR SALE

(Ex Calcutta Jute Mill)

One Parsons 2500 K. W. 550 Volt, 50 cycle, 3000 R.P.M. Turbo Alternator, complete with Condensing Plant and Auxiliaries. Closed Airs cooling Plant for Alternator, Spare Rotor for Alternator and spare Blading for Turbine. Working Pressure 180/200 lbs./sq. inch. Superheat 200 degrees F. This machine is in very good running condition. Reason for disposal—power now being taken from a Public Supply.

Box No. 942, c/o "Commerce"

Royal Insurance Buildings, Veer Nariman Road, Fort, Bombay.

Notice

HARINAGAR SUGAR MILLS, LIMITED

BOMBAY

NOTICE IS HEREBY GIVEN THAT THE Twenty-second Ordinary General Meeting of the Company will be held at the Registered Office, 207, Kalbadevi Road, Bombay, on Wednesday, 30th June, 1954, at 4 p.m.

The Share Transfer Books will remain closed from 23rd June 1954, to 7th July, 1954 (both inclusive).

By Order of the Board,
NARAYANLAL BANSILAL,
Managing Agents.

BOMBAY, 5th June, 1954.

NEWS IN BRIEF

THE Government of India has planned to install 20 kw. transmitters at Indore, Jaipur, Patiala, Madras, Hyderabad, Vijayawada, Trivandrum and Delhi.

Rice imported from Burma would be kept in reserve, as there was no deficit in the country this year, said Mr. M. V. Krishnappa, Union Deputy Minister for Food, in Mysore early this week.

Export of fresh fruits, except coconuts, to all permissible destinations, will continue to be licensed freely. Exports to Pakistan are already covered by O.G.L. Exports of coconuts will not be permitted.

The Kashmir Government has decided to speed up work on the Rs. 250 lakh multi-purpose project in the valley. The scheme is scheduled to be completed by March, 1957 and provides for flood control, drainage and irrigation.

The National Chemical Laboratory of India, Poona, has prepared a pale oil having quick drying properties by chemical treatment of tobacco seed oil. Besides its use as an edible oil and in soap making, tobacco seed oil is being used in paint and varnish industries.

The Government of India has decided, as an experimental measure, to license freely the export of soft wood, deodar, chir, kail and fir, to all permissible destinations up to the end of September, 1954. The maximum quantity which a single party will be allowed to export will not exceed 3,000 cubic tons.

The Madras Government has decided to abolish the zonal system, now in force in the State, in regard to distribution and transport of rice and paddy. The proposal, for which the State Government has asked the approval of the Central Government, will be put into effect from 1st July, 1954, if the concurrence of the Central Government is obtained.

The Government of India is drawing up plans for improving and stepping up of India's fruit production and this scheme will be included in the second Five-year Plan. The Government will take into consideration the problems facing the fruit growers and fruit preservation industry, such as provision of cheap transportation facilities and supply of sugar.

An Indo-U.S. supplementary agreement under the Technical Co-operation Programme has been signed for augmenting the present facilities for research on forest products. Additional equipment and supplies, at a cost of $85,000 on the part of the U.S. and Rs. 1.50 lakhs on the part of India, will be provided to the Forest Research Institute, Dehra Dun.

The policy regulating export of coal tar has been reviewed by the Government of India and it has been decided to release a quota of 5,000 tons for the export of coal tar upto the end of 1954. This quota will be administered by the Joint Chief Controller of Imports and Exports, Calcutta. Exports will be licensed on shipping bills which should be accompanied by firm contracts.

The U.P. Government has decided to build 500 industrial houses for the workers and labourers of factories and workshops at Allahabad. Work in this connection is expected to be taken up this year. The Government has also decided to build 30 houses for middle class people. The houses will be of four types, the cost of which would vary from Rs. 4,000 to Rs. 19,000. Preference would be given to Government servants to occupy the houses.

The Railway Board has sanctioned the electrification of the Howrah-Bandel-Burdwan line, (covering a distance of 66 miles) and the Sheoraphuli-Tarakeshwar branch line (covering about 22 miles) of the Calcutta suburban section. The scheme, estimated to cost Rs. 11.84 crores, will be the first stage of the plan for the electrification of the Calcutta suburban section. Work on the scheme, which will begin shortly, is expected to be completed in three years.

The Delhi State Government has constituted a nine-man committee to examine the prohibition policy in the State. The terms of reference to the Committee are: (1) to examine in detail in what stages and in what manner the "directive principles" contained in Article 47 of the Union Constitution in regard to prohibition should be carried out, and (2) to examine in what way the State Government should regulate its excise policy, keeping in view the cosmopolitan character of the State and the financial aspects of the problem.

A 30-day exhibition of American handicrafts and arts opened in New Delhi last week under the auspices of the All-India Fine Arts and Crafts Society. The exhibits will be displayed in Bombay later this year from 16th October to 9th November. Sponsored by the U.S. Information Service in India, the exhibits depict the growth of American craftsmanship during the centuries. They provide a visual picture of those influences which served to mould the present practice of handicrafts in the United States. The exhibition, open to the public free of charge, represents all types of basic crafts, from textiles to ceramics, and metal-smithing to woodworking. There are a few photographs, too.

The Government of Madhya Pradesh has ordered two important surveys in respect of forests which form about 48 per cent. of the total area of the State or over 130,000 sq. miles. One half of the forests in the State is owned by the State, the other half being under private ownership. One survey, which will last for over three years, will undertake the demarcation and resettlement of the vast forest area which came recently under State ownership. The other survey is for the purpose of arriving at reasonably accurate estimates of the available qualities of timber and other forest produce. The work will, in the first instance, last for five years and will be extended later on.

• • • •

From Abroad

The Canadian Wheat Board has cut the export price of wheat, both on International Wheat Agreement and other sales, by 10½ cents per bushel on the three top grades, bringing the export price to $1.72 per bushel. This follows the cut made by the U.S. last week by 10 cents per bushel.

The Government of Thailand has lifted all export bans on local commodities, with a view to increasing the country's foreign exchange income and promoting greater agricultural production. Export of rice will, however, continue to remain under Government control.

A team of economic and agricultural experts from the U.K., Australia and, possibly, Canada and New Zealand will undertake an investigation of the Ceylon Government's schemes for agricultural development, particularly self-sufficiency in rice. The Government proposes to bring all available land under paddy cultivation.

An American engineering consultant has prepared a plan to irrigate more than 1,000 square miles of four Middle East countries and provide hydro-electric power. Under the 470-million dollar scheme, all available water resources will be used to irrigate parts of Israel, Jordan, Syria and the Lebanon. It also provides for the generation of 1,400 million kilowatt hours annually.

The U.S. House of Representatives has passed and sent to the Senate a Bill to increase social security benefits and bring a further 9.7 million people into the existing security system. The Bill also aims at making 75 per cent. of the nation's old people eligible for benefits by 1960. About 47 per cent. of the population is now covered by the scheme.

India was among the countries represented at a conference on colour-fastness tests for textile goods held at Scarborough, Yorkshire, from the 4th to 6th inst. Other countries represented were Belgium, Canada, Czechoslovakia, Denmark, France, Germany, the Netherlands, Norway, Sweden, Switzerland, the U.S.A., and the U.K. The main subject on the agenda was a revised draft of about 20 tests for measuring the colour-fastness of textiles under such influences as daylight, washing, perspiration, rubbing, and spotting by acid or alkali.

The Government of Ceylon has reduced by half the cess payable by tea and rubber estates employing workers of Indian origin. This step has been taken as a result of the decline in the number of workers travelling to India from Ceylon. The cess is used for the comfort of workers in India. So far, tea and rubber estates employing labour of Indian origin had been paying a cess of 60 cents and 20 cents per acre, respectively. Now they will have to pay 30 cents and 10 cents, respectively, per acre of land.

Lancashire is playing a key part in rehabilitating the South Korean cotton spinning industry. Largely through the efforts of three experts in the assembly and operation of cotton spinning equipment, who have been seconded to the United Nations, a £1 million-aid project now promises to be one of the United Nations Korean Reconstruction Agency's first real achievements. The task of the Lancashire experts is to teach the Koreans how to put together and operate mill machinery imported with aid funds. Already more than £600,000 worth of machinery has been imported into South Korea.

The U.S.A. has spent more than $9,000 million on nuclear weapons, bringing its defence to a high state of preparedness against aggression, according to the Atomic Energy Commission. Members of the Commission gave the joint Senate-House of Representative Atomic Energy Committee last week a formal 108-page statement supporting an overall Atomic Energy Bill to meet President Eisenhower's recent suggestions. The statement endorsed provisions permitting wider private participation in developing electricity from nuclear power, but said that this can "best be accomplished by joint effort of both industry and Government as a working team."

World production of rice during the current year will be a record one, according to the U.S. Department of Agriculture. The third revision of estimates of rice crops on five continents has shown that production will reach 267,000 million lbs. for the year ending 31st July, 1954, as compared with the previous record of 254,000 million lbs. set last year. The largest increase in acreage and production is in Asia which accounts for 18 per cent. of this year's world crops, excluding that of China, North Korea and the Soviet Union. Growing conditions in India and Pakistan were the best in many years. These two countries, excluding China, are the world's largest producers of rice.

Five Indians and six Pakistanis are at present attending a course in the United Kingdom arranged by the Federation of British Industries (F.B.I.) under the F.B.I.'s scheme for enabling young graduate engineers from the less developed countries to visit Britain for practical training. Since the scheme began on a very modest scale in 1950, 44 scholars have visited the United Kingdom. Of these, nine have already completed their training and returned home. Eight more are expected to arrive shortly. The F.B.I. hopes that, within the next year or two, the number of scholarships awarded annually will be raised to about 120. Since most of the scholarships are for a two-year period, there will be at least 200 F.B.I. scholars in Britain at any one time.

PERSONAL

MR. K. R. Ramanujam, a retired General Manager of the Southern Railway, has been appointed Chief Engineer, Hindustan Shipyard, Visakhapatnam.

Mr. H. L. Jerath, Director-General of Posts and Telegraphs, Government of India, has returned after attending the meeting of Universal Postal Union.

Mr. E. Kunisch, Deputy Trade Commissioner for Federal Government of West Germany, sailed for West Germany on Wednesday this week on Home leave.

Mr. S. C. Roy, Managing Director, Aryasthan Insurance Co., Ltd., Calcutta, has been elected President of the Indian Insurance Institute for the current year.

Mr. R. G. Casey, Minister for External Affairs, Australia, paid a one-day visit to New Delhi on the 10th inst. on his way to Geneva and had talks with the Prime Minister.

Mr. N. S. Fridenger, Sales Manager of Madras Territory Office of Standard-Vacuum Oil Co., left for New York this week on retirement after thirty years of service in the Indian division.

Mr. J. V. Somayajulu has been elected President of the Andhra Chamber of Commerce for the current year. Messrs. V. Venugopal and V. Emberumanar Chetty have been elected Vice-Presidents.

Mr. Shanti Prasad Jain, a leading industrialist of Bihar, has been re-elected President of the Bihar Chamber of Commerce for the current year. Messrs. Rajandhari Singh and Mr. Ramgopal Agarwal, M.P., have been elected Vice-Presidents and Mr. Khemchandra Choudhury, Secretary.

Mr. C. R. Ranganathan, President of the Forest Research Institute and College, Dehra Dun, has been appointed Inspector-General of Forests, vice Mr. M. D. Chaturvedi who has retired. On retirement, Mr. Chaturvedi has been placed on special duty by the Ministry of Food and Agriculture in connection with the forthcoming World Forestry Congress to be held in December this year.

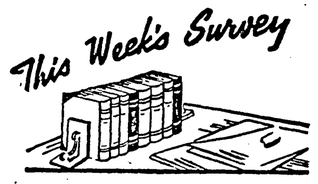
"COMMERCE" 1929

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 15*th June*

Bombay's Financial Crisis

The decision of the Bombay Stock Exchange to suspend business in shares on the forward list for four days pending the passing of the June settlement (June II) was undoubtedly a welcome one and should surely have a healthy effect on unduly depressed share prices. It is also a direct challenge to the recent "bear raid," and will tend to restore confidence and stability in the financial tension at present existing on the Exchange. But for the action of the Stock Exchange panic and forced sales might have ensued, with a still more sinister depression. In our issue of June 1, we urged the importance of the Bombay Stock Exchange taking some action to put an end to these "bear raids." Abnormal conditions and troubles demand abnormal remedies, and the present action is a wise one. There are, of course, critics of the action of the Stock Exchange Directors, and these people say that the move is intended to secure the difference for the "bears," and as soon as the settlement has passed a fresh difficulty will arise and the "bears" will again disorganise the market. On the contrary, we rather think this action will have a healthy effect and will be taken by the "bears" as a warning against reckless short sales and undue depression of prices. The Bombay Stock Exchange has passed through several crises in its history and an analysis of these shows that they are generally precipitated by "bear raids." On the other hand, the "bears" affirm that the panic, due to industrial upheaval and falling prices, is a natural one and they should not be blamed for it. The orgy of speculation, rather than the industrial trouble, is to be blamed for the present disorganisation, and there was certainly an attempt made to corner the shares of the Tata Hydro Company, Indian Dyeing and Bleaching, and Alcock, Ashdown and Company. At a meeting of the Directors of the Stock Exchange, it was pointed out that several banks had advanced over two crores of rupees on shares, and if the prices were allowed to drop the banks would either demand a margin or make forced sales, which would give a further chance to the "bears" to wreck the market. The Directors decided to send a deputation to Government to explain the gravity of the situation, with a view to impressing upon them the necessity of adopting effective measures for ending the strike and affording relief to the industry by way of protection.



AID TO INDIAN SHIPPING

A MIXED reception was given to the Government's shipping policy by Mr. C. R. Srinivasan, Chairman, Bharat Line Ltd., when he addressed the annual meeting of the Company this week. He was "grateful" to the Government for having modified the terms of loan to shipping companies, in order to enable the latter to make fuller use of the available finance. But he regretted that the Government had "not shown the same awareness in respect of operation facilities."

It may be recalled that these issues were raised by the shipowners at the last meeting of the Indian National Steamship Owners' Association, at which, Mr. K. C. Reddy, Minister for Production, Government of India, was' also present. The Chairman of the Association, Mr. N. Dandekar, reiterated the demand for exemption from tax, at least on profits ploughed back into the industry, and also the need for exempting coastal ships' bunkers and stores from the payment of customs duty and sales tax. While Mr. Reddy emphasised how liberal were the Government's terms for loans to shipowners, he was somewhat evasive in his reply to the demand for exempting bunkers and stores from customs duty and sales tax. He merely advised the Association to reinforce its case with additional arguments or to reconcile itself to the fact that it was not possible for the Government to assist the shipowners in that direction.

Surely, Mr. Reddy's Ministry cannot be unaware of the "arguments" on which the demand is based. The Minister's reply indicates, as Mr. Srinivasan suggested, that the Minister "was not properly briefed on the issue raised, though there is ample material available in the secretariat fully to bear out our case." Mr. Srinivasan referred to the helpful policy which even the "industrially advanced countries" were pursuing towards the shipping industry. He cited the U.K., where the Government had introduced an investment allowance of 20 per cent. on new plant and machinery to the shipping industry in addition to normal depreciation allowance. Again, Italy had "blazed a new trail" in operation relief, for, apart from granting shipbuilding subsidy, the Government had created free zones where shipowners could secure stores and supplies duty-free. This list, as is now well known, could be extended, for there is no country where shipping is not actively assisted by Government. Perhaps, Germany's case is unique in this respect. The German merchant fleet has increased during the last four years from a mere 290,000 tons to 2.1 million tons, thanks to systematic tax remission. Even if the Government is unable to concede the shipowners' demand for tax relief, in general, and for other forms of assistance, it will do well to consider the somewhat limited demand for relief in respect of taxes on bunkers and stores.

Another important issue to which Mr. Srinivasan referred was the persistence of avoidable delays in loading and discharging at ports and the adoption of "go-slow" tactics by the workers. He said that this evil threatened to disorganise normal trading operations at such important ports as Bombay and Calcutta and that it would, if unchecked in time, divert the trade elsewhere to the "serious detriment of the country's economy." He added that the time had clearly arrived when concerted efforts should be made to evolve a formula which would link emolument to output of labour. Here again, the German ports—Hamburg and Bremen harbours —furnish an excellent instance of what good and prompt port facilities may mean to a nation's trade. These ports have earned the well-merited title of "speedy ports," for repair and other facilities are available there, all the days in a week, irrespective of whether the day is a whole or half holiday. Indeed, on holidays there is a heavier fleet of steamers at these ports, because the world's shipowners know that the facilities they need will be more promptly given in these harbours than at any other port.

BIHAR'S ECONOMY

Few Indian States are so well endowed by nature as Bihar. It abounds in many minerals of national and international importance. Coal, iron ore. mica, manganese and limestone are only a few of the deposits Bihar can boast of. Its rivers are broad and, in fact, menacingly broad when in spate. Many parts of Bihar are fertile, or at least could be easily rendered fertile. And yet, Bihar has not gone beyond the mining stage in its industrialisation. The Bihari travels far from his home in search of factory employment. Why is Bihar industrially backward? This is a problem which must give its ministers furiously to think. Meanwhile, they will do well to ponder Mr. S. P. Jain's presidential address at the recent annual meeting of the Bihar Chamber of Commerce, held at Patna.

Mr. Jain's address was an excellent analysis of Bihar's economic problem. He attributed the State's backwardness to lack of irrigational facilities, absence of cheap power and inadequate transport. Above all, the Government's sales tax policy was itself a deterrent to the State's industrialisation. He urged the Government to "lose no time" in starting work on the Gandak and the Kosi River Projects. He criticised the Government's tube-well scheme. The "overheads" are so large that the irrigation charges are unconscionably heavy; the cultivator finds it cheaper to rely on his ordinary well than to buy water from tube-wells. This is true of electric power too. The rates are higher than in the neighbouring State, Bengal. No wonder, there is surplus of power at the Damodar Valley Project area. He urged that power supply should be arranged at low rates, in order to encourage the development of electro-chemical and other industries.

Bihar produces steel. But this fact avails the State nothing. The odd feature of steel price control is that this commodity is costlier in the State where its ore is mined and processed than in other States. The price is based on the old formula under which the price in the interior is calculated at the price in ports plus freight; this was adopted in order to face competition from imports. Although the justification for the basis has gone—no imports threaten India's steel industry—the formula itself remains. Mr. Jain urged the need for modifying the formula in order to let Bihar have the benefit of the steel it produces.

Laying of new railway lines, as Mr. Jain pointed out, will open up Bihar's vast interior. Bihar, he emphasised, should press its claims for new lines. In particular, he supported the case for railway links connecting Bokaro-Girdhi, Ray-Kumardih-Birmitrapur (linking Rourkela and Talcher), Barwadih-Chirmiri and Barwadih-Singarulia-Manikpur. These centres are the potential industrial heart of Bihar. The suggested lines cover areas rich in forest and mineral wealth. Given transport facilities, the whole region could be rapidly developed.

Mr. Jain subjected the Government's sales tax policy to a devastating analysis. Since his conclusions are capable of being applied to many other States as well, his analysis is well worth study. He discerned at least four chief evils in the system. In the first place, the policy of subjecting raw materials to sales tax retards industrialisation; he cited the instance of the oil industry which had been "killed" by this levy. Secondly, the system has banished several industries from Bihar. Factories producing consumer goods like buckets, tubs and household fittings have been transferred to Calcutta, so that Bihar is now compelled to import the very goods it was formerly manufacturing. Thirdly, ancillary industries are proving costly to establish. Small factories, which buy semi-finished goods and process them into a higher stage of manufacture, find the tax too burdensome. Finally, the system compels industrial concentration and interferes with the growth of specialisation and diversification in industrial production. Since every transaction is subject to sales tax, an industrial establishment is itself induced to carry out all the stages of manufacture. Hence, there is no diversification of production which could "develop small-scale industries involving small capital investment." Incidentally, it inhibits the growth of employment opportunities. Also, it runs counter to the Government's "sociological" objective of preventing "concentration of wealth in a few hands." This is an excellent analysis of the impact of sales tax on the country's economy. The evils to which Mr. Jain referred are likely to manifest themselves in other States. It is time that the Central and State Governments undertook a dispassionate study of the straits to which the country's economy is being driven by the bewilderingly complex systems of sales tax which have come to prevail in the country today. Meanwhile, we commend his analysis to the attention of the Taxation Enquiry Commission.

COMMUNITY PROJECTS

The Five-year Plan sets before the country the toughest problem of raising the standard of living of its 70 million agricultural families. At the end of the planned effort, the Plan visualises the existence of a very highly cultured rural society. This society is to consist of millions of educated, intelligent and healthy farm families living in tolerably good homesteads. The Plan further envisages these farmers practising scientific agriculture and organising themselves into co-operatives for the improvement of their common lot, with State assistance wherever possible. The work of bringing about this revolutionary change in the rural society was entrusted to National Extension services under schemes now familiarly known as Community Projects.

The implementation of the Community Programmes began two years ago—in May, 1952, to be precise. Since then, they have been extended to cover a large part of the country; nearly 49,000 villages with 39 million people or one-eighth of the total rural population of India, are now being tackled under this programme. The working of these programmes since their inception has been investigated by an official body of the Planning Commission, the Programme Evaluation Organisation (P.E.O.) which submitted its first report only a fortnight ago and to which a reference was made in our last issue. The Report, which is fairly critical in its approach to the problems facing the Community Projects, provides an indication of the progress that is being made in bringing about the change in the pattern of our rural society, as envisaged by the Planning Commission. The P.E.O's findings reveal that the projects have made the people in rural areas plan-conscious. Where they are enlightened and enthusiastic, marked progress has been achieved in several directions, such as increasing agricultural production, building roads, bridges and schools, repairing tanks, etc. The initial apathy and resistance to new techniques and new modes of working and living have also been overcome generally. This is a good sign which should augur well for this great experiment in rural uplift.

Unfortunately, the progress achieved is not at all uniform. It is very uneven. There are large blocs in the project areas in which people seem to be still passive to new ideas and changes, and those in charge of the projects have not been able to bring about a revolutionary change in the outlook of these people. The pace of progress has been impeded by underestimating the targets to be reached, shortage of trained personnel, lack of co-ordination in the administrative machinery, absence of suitable people's institutions in the villages, irregular and inadequate supplies and equipment. These are serious handicaps, indeed, and, if proper care and thought are not bestowed on their removal, the risks of failure will be really great. These operational problems are reported to have figured prominently in the four-day discussions at the Conference of Development Commissioners of the State Governments at Ootacamund, which ended last week. The various decisions reached at the Conference are expressed in very general terms. The Press release on its performance does not throw enough light to instil confidence among discerning readers that the Conference studied the problems right lines and that as a result of discussions, the Project Administrators would be able to deal with the handicaps, referred to above, effectively. A concrete instance is its decision regarding the setting up of people's institutions at the village level.

The need for people's institutions to be in charge of village projects arises because of three reasons. They are democratic in character and the fact that the people have a hand in planning a given project makes them feel that it is their own. Secondly, they can easily arouse the enthusiasm of the people and make them take an abiding interest in the uplift work. Thirdly, they can take the place of official agencies, when these are withdrawn, and continue to evince sustained interest in the development work. Consequently, the Community Projects sought to rely on the existing institutions such as *panchayats* and co-operatives for making villagers participate in the programme. Where these institutions did not exist, *ad hoc* committees were established for the purpose. Unfortunately all these institutions, as they now stand, suffer from too many limitations, as explained in a special article in our last issue. The P.E.O., therefore, emphasised the need for an intensive study of the issue of establishing the right type of village institutions to take the place of official agencies in course of time.

Now, it is not clear how this problem was examined at the Ooty Conference. If the village *panchayats* or *ad hoc* bodies are to function effectively, it is necessary to take measures for removing the limitations which have been hitherto responsible for reducing their utility to the Community Projects. It is, however, encouraging to note that the Conference has decided to institute a system of incentives and awards for outstanding work in the Community Projects. The system, if judiciously operated, can be expected to help make the people's institutions more useful than at present.

A feature of the progress of Community Projects which some may regard as rather disappointing is the lack of attention paid to the establishment of rural industries for providing subsidiary income to agricultural workers. Even the Ooty Conference does not seem to have discussed this question. The attitude of the P.E.O. towards this question also appears to be rather indifferent. It says: "Whatever may be the reasons for the uncertain prospects of rural crafts, the fact remains that, with their present organisation and resources, the Community Projects can hardly hope to tackle the problem of non-agricultural employment." This sounds disappointing, in that it falsifies hopes, held out two years ago when the Community Projects were started, that they would tackle the question of rural industries. Nevertheless, this failure need not be regarded as a great tragedy, for there is considerable force in the saying: "Do one thing at a time and do it well." It will be a matter for great satisfaction even if the present efforts succeed in raising agricultural practices and teaching villagers healthier ways of living.

It is, however, heartening to note that action has already been initiated by the Community Projects Administration along a number of lines to enhance the utility of the Projects. Quite a good number of training institutions have already been set up for training village level workers, social education organisers and other project personnel. This should help eliminate one of the serious handicaps from which the Projects are now suffering, namely, shortage of trained personnel. The C.P.A. has also drawn up a tentative scheme regarding the number of blocs which should be taken up under the second Five-year Plan. This scheme was examined by the Ooty Conference and is expected to be taken up for consideration by State Governments shortly. In preparing programmes for villages, it has been decided that emphasis should be laid on those activities in which the bulk of contribution comes from village people. Attention has also been given to the criticism that expenditure on the Projects has fallen far short of the funds allotted. The pace of expenditure has since been accelerated, as the sums spent in the last quarter of 1953-54 exceeded the combined figure spent in the previous five quarters.

INDUSTRIALISATION OF UNDERDEVELOPED COUNTRIES

Mr. David A. Morse, Director-General, International Labour Organisation, says that "industrialisation is a painful process." Simple economic incentives are simply not effective in a non-industrial community in drawing workers into industrial occupations. For workers with a village outlook and pattern will not willingly substitute the punctuality and discipline of factory production for the long stretches of work and idleness of rural occupations. Even in India, where industry has long been stabilised, Mr. Morse says, absenteeism rates run from 13 to 15 per cent. in textiles, iron and steel and cement, and upto 34 per cent. in coal and mica mining. About 5 to 10 per cent., it is stated, is the norm for industrial countries. In countries with less industrial traditions than India, industrial absenteeism may run to 50 and even 60 per cent. Proceeding, he says that workers in some countries will, in fact, judge the need to work by their need for food. According to the Director-General, a "Somali worker who, passing along the river bank on his way to work, discovers a fish on the line he left overnight, is likely to return home for the rest of the day."

What is this attitude due to? Few can deny that this is due to ancient social and re-

(*Continued on page 1163*)

OFF THE RECORD

(By "ROVER")

THE fact that only now, when they have had to face some strong criticism from the Press and severe dissatisfaction on the part of the public, with regard to their haphazard and ineffective sugar policy during the last two years, the Government of India has awakened to the urgent need for improving cane cultivation and stepping up its yield per acre, speaks volumes about the reprehensible complacency and cruel indifference to a problem which should have been tackled several years ago. If the State Governments, where sugarcane cultivation is an important economic activity, and the Central Food Ministry had stirred themselves even moderately as soon as sugar shortage was noticed and *qur* prices commenced an upward flight, there would have been an appreciable improvement in the output of cane, sugar and *qur* by this time. Millions of consumers of these widely used commodities would have been spared the great hardship and monetary losses they had to undergo during these years and the country would have saved several crores of rupees in foreign exchange, now being spent on imports of foreign sugar.

Must we always learn the hard way? Running my mind over a score of important events in the economic field, I cannot but rue the chronic attitude of lethargy and indecision of our ministers and functionaries in high places. The country had always been made to pay heavily in the matter of a series of belated decisions regarding abolition or reduction in export duties on jute, cotton, cotton piecegoods, oils and oilseeds. In every single instance, the right decision came either at the wrong moment or long after it was needed. This is a deplorable record for Governments, which aspire ultimately to expand their industrial undertakings in the future, not to say anything of the substantial sector already under their control. In the case of the famous Ass in the fable, it was only the poor brute which suffered pangs of hunger and easily avoidable starvation through its failure to make up its mind as to which stack of hay out of the two lying on either side it should feed itself from. The Government's inability to act promptly, even where a quick decision implies no risk, has, on the other hand, proved calamitous for many a trade and industry and for the economy of the country as a whole. One does not miss what one did not have, but this does not minimise the potential loss.

And so, true to the time-honoured tradition of his Government, Dr. Punjabrao Deshmukh, Union Minister for Agriculture, has now come out with a campaign for securing better yields of cane. During all these years, when the cane crop had been steadily going down, the State Governments of Uttar Pradesh and Bihar, to whom this must have been a matter of great concern, instead of directing their efforts to counteract this growing menace, were engaged in a political intrigue of securing the cane-growers' votes, by bullying the Central Government into fixing an increasingly higher price for poor quality cane, at the expense of the sugar and *qur* consumers in other States. Unfortunately, politics won the day over economic necessities and the Union authorities, who were well aware of the danger, succumbed to the pressure from Lucknow and Patna.

The Central Ministry of Food and Agriculture should have been firm and insisted upon both the State Governments undertaking timely remedies for improving cane cultivation. This was the only lasting and legitimate way of helping cultivators of sugarcane in these States, which produce the bulk of the cane grown in the country. They could not have failed to observe that the growers, because they obtained better prices for their cane, had gradually and shortsightedly let the cultivation deteriorate so much so that the yield in a number of places had gone to less than ten tons per acre. Higher prices, which work as an incentive with progressive cultivators, had tended, in the case of impoverished and demoralised small growers, to make them complacement about and indifferent to the dwindling crops. As the crops grew smaller in size, they asked for a higher price for cane and an obliging Government, with its eye to the elections, helped them to get it.

These very Governments had accumulated crores of rupees from the cane cess, which had been ostensibly imposed, and successively increased to improve sugarcane cultivation. The then Tariff Board had drawn pointed attention to this official misappropriation. With the help of these funds, the U.P. and Bihar Governments could have achieved a wonderful transformation in cane fields —if the money had been spent wisely for the purpose for which it was raised. Even a 20 per cent. increase in the yield of cane per acre would have given the country all the sugar and *qur* its people needed. But the Centre lacked the strength and firmness necessary to impose a wise decision on recalcitrant units, which contributed a large block of members to the Legislature from their areas.

The small section of the sugar industry located in the State of Bombay had demonstrated successfully that, contrary to popular belief, sugar was manufactured not in the factories but in the fields. The head of one of the oldest units in this field had publicly drawn attention to this important truth on more than one occasion. The sugar factories in Maharashtra had further demonstrated that high yields per acre were possible, in the case of sugarcane crop, only on the basis of estate farming. It was not solely due to a suitable climate that they were able to raise good crops from even comparatively poor soils. If it were so, the crops in the factories' plantations would not have been so much more prosperous than those raised in the same tracts by small cultivators, with limited means and more limited knowledge of the scientific and improved methods of cultivation. One factory in this area is known to have produced during this season 20,000 tons of sugar out of cane grown on a 4,000-acre plantation. This gives an average of five tons of sugar per acre against the one ton extracted painfully from one acre of poorly cultivated and indifferently tended soil of an ill-equipped but pampered cane-grower in U.P. or Bihar.

When the country needed more sugar badly, when the clamour for it had pushed prices up to as much as Rs. 175 per bag at one time, when we are reduced to such a state as to have to arrange for an import of half a million tons of sugar at a cost of 30 to 35 crores worth of precious foreign currency, which could advantageously be used for badly needed capital goods, one would have thought that the Maharashtra sugar mills would have been given every form of encouragement for their splendid effort in successfully demonstrating how easily the country's requirements of sugar could be met. But it has been their unfortunate experience that their success in growing good crops has been persistently frowned upon by the State authorities. Not only have they been muleted heavily for their successful farming methods, but they have been treated in a niggardly manner in the matter of water supply from the State irrigation sources, in order to favour small cultivators, who, even with such assistance, could obtain only inferior yields.

As if good, scientific cultivation was a crime deserving of condemnation, every one of the requests of the sugar mills in Bombay for the redress of some grievance or disability they suffer from is greeted with the stock reply that they were making good profits from their cane growing and so must bear even undeserved burdens. There was a time when it was a common complaint that justice was only for the rich. The sugar industry in Bombay has come to discover that justice is only for the poor and the well-to-do can not lay claim to it. Even now efforts are afoot which are designed to deprive them of some of their lands obtained under voluntarily-entered-into contracts or to raise the cost of cultivation for them, for the simple reason that they are able to raise more cane than others from the land cultivated by them.

All this apart, even today, when the Central Ministry of Agriculture has suddenly become aware of the urgent need for improving cane cultivation, neither the shrewd Mr. R. A. Kidwai nor the otherwise redoubtable Dr. Deshmukh have the courage to ask these State Governments to mend their ways. In utter despair of making any impression on these recklessly predatory Governments, the latter has decided to take certain measures, long overdue, of getting more cane from the miserable little plantations in U.P., Bihar and the Punjab. The cost of this campaign will naturally come out of the coffers of the Government of India, which, in other words, means that you and I will pay for this campaign, after having already paid about Rs. 2 per maund of sugar to one or other of the State Governments, by way of the increased cost of sugar to the extent of the cane cess. I cannot understand why Dr. Deshmukh should be so timid as not to compel all these State Governments to defray at least the cost of this campaign from their Cane Cess Fund. It is scandalous that public revenues of the Union should be spent for a purpose, for which the States have already secured and misused large amounts from the consumers of sugar.

I wonder if the levy of cane cess would and could come under examination by the Taxation Enquiry Commission. In its essence, this imposition is in the manner of a tax on an industrial product, because not all cane grown in the State, but only that part of it which is utilised for the manufacture of sugar, is subject to it. The States have no authority under the Constitution to levy such a duty on sugar. The fact that in most of the States which levy it, it is for all practical purposes regarded as general revenues and used mostly on objects wholly unconnected with agriculture, in general, or sugarcane cultivation, in particular, makes it doubly of the nature of a tax or excise duty. Only the Centre has the right to levy such a duty and it is doing so already.

In any case, if my small voice could reach this august body, I would implore it to subject this so-called cane cess to a critical examination, both from the point of view of constitutional propriety and public policy. Any attempt at getting round limitations deliberately placed by the Constitution on so important a subject like taxation by State Governments is not conducive to inculcating respect for either ordinary law or the Constitution. Tax evasion is certainly an anti-social activity deserving to be condemned severely. But those who indulge frequently in voicing such condemnation should themselves set an example of carrying out the provisions of the Constitution both in letter and in spirit, instead of trying to bend the Constitution to their will or to alter it to suit party and political convenience.—*All Rights Reserved.*

– An order worth more than a million dollars for hydro-electric equipment has been placed with Metropolitan-Vickers Electrical Company of Manchester by the Manitoba Hydro-Electric Board, Canada. Won in the face of international competition, the order is for two 33,000 kw. steam turbo-generator sets. The sets will be the largest in Manitoba. This is the third large Canadian order obtained by the British firm this year. An earlier order from the Alberta Hydro-Electric Board for steam turbo-generator sets was worth $1,500,000. The Company is also making the most powerful hydro-electric generator in the world for the Quebec Hydro-Electric Board—an order worth $3,000,000. The three Canadian orders add up to the impressive total of $5,500,000 this year.

IMPORT CONTROL POLICY FOR NEXT HALF-YEAR

ANNOUNCEMENT IMMINENT

(From A Special Correspondent)

NEW DELHI, 8th June

DELHI LETTER

WITHIN the next few days, the Government of India will be announcing its import control policy for the forthcoming half-year. As indicated by the Minister for Commerce and Industry at the time of his address to the Import Advisory Council in the third week of May, it is expected to formulate a liberalised form of import policy for more reasons than one. With the external payments position more than satisfactory and with the country's sterling balances standing at about Rs. 752 crores, India can withstand increased imports of consumer goods during the next trade year. In view of the highly satisfactory position on the food front, imports of foodgrains will be limited, largely confined to the intake of Burmese rice. In regard to raw cotton, although the Central Cotton Committee had laid a target of 45 lakh bales for 1954-55, the realisation of the above level of production will ultimately depend on the course of the monsoon in the important cotton-growing tracts of the country during the next three months. It is, however, expected that imports of cotton may not be heavy given an average monsoon. In these circumstances, the Government is now in a position to allocate increased sums for greater imports of consumer goods which would go a long way towards checking the possible inflationary trend as a result of deficit financing.

Suggestion by Trade Bodies

In framing the import policy, the Government is expected to be guided, to some extent, by the suggestions set forth by the leading members of the Import Advisory Council, commerce chambers and trade associations. In regard to some important basic raw materials like iron and steel, it is suggested that Government should follow a stable import policy. The import policy should not alternate between free licensing at one time and complete prohibition for the subsequent period, which has a tendency to create instability in the prices of these commodities. Complete ban on imports leads to scarcity and high prices while free licensing results in huge imports and underselling, sometimes even below the landed cost of goods. It is, therefore, stated that adequate quantities of controlled varieties of iron and steel, other raw materials and manufactured goods which are not produced in the country at all or not produced in sufficient quantities should be licensed in every licensing period so as to maintain a regular and steady flow of imports of these goods. The quantum of total imports to be licensed in the initial licensing period or periods may be tentatively fixed on the basis of the averages of actual imports for the past four or five years or other relatively dependable data. All classes of importers, namely, established importers, actual users and newcomers may be allowed to participate in the trade as now, but a ceiling may be imposed on the quantities to be imported by individual importers for resale. Keen competition between producing countries abroad and the economic conditions prevailing in India have rendered such restrictions obsolete.

There is some divergence of opinion on the use of import control as an aid to industrial development. According to one school, Government's import control policy has definitely proved beneficial to the growth of a number of indigenous industries during the last few years. But for a total ban and quantitative restrictions, such industries as oil engines, electric motors, textile coal-tar dyes, sewing machines, etc., could not have developed in the country during the last few years. It is argued that, if imports of competitive items are permitted even under a heavy duty, the foreign manufacturer commanding great resources would circumvent such a protection by undercutting the prices only of those items that are indigenously manufactured or would compel the Indian customer to buy his goods in preference to Indian goods by making the supplies of other items not indigenously manufactured dependent on orders being placed for the former. Complete ban on imports is, therefore, considered necessary for affording reasonable protection to deserving but vulnerable indigenous industries through import control. According to the other school of thought, import control should not be misused for granting protection to indigenous industries. Complete ban on imports will place the consumer at the mercy of industrialists. At the same time, it will not provide any incentive to him to improve the quality of his production. It is, therefore, urged that at least token imports are very necessary in these cases. The Government should also consider the feasibility of allowing reasonable imports, so that the interests of the consumer are not jeopardised. According to this school of thought, Government would do well to raise tariff duties to a high level in regard to these products and allow free imports.

With improvement in the manufacturing efficiency of the industry, it is possible to reduce the import duties gradually. This latter view of thought naturally finds favour with Government from the point of view of revenue considerations, as also from the consumer viewpoint. It is stated that, in a number of instances, the trade has been able to make disproportionate gains in imported goods by creating scarcity and artificial shortage and that the consumer has not been able to get reasonable prices as a result. In these instances, while Government has been losing revenue, it is the trade that has been the gainer all these years. In order to put an end to this state of affairs, the Government is likely to revise in an upward direction the import duties in a number of consumer goods.

Conflicting Interests

Conflicting interests have always been noticeable between established importers, actual users and newcomers. Established importers complain that the Government has been throwing more and more items open to actual users, thereby further restricting their trading activities. As against this, actual users point out that there are certain industries such as the chemical and metal industries which have to import the bulk of their raw materials from abroad. To deny the actual users licences is to consign them to the mercy of the importers. There is another school of thought, according to which actual users' licences should be used only in respect of basic raw materials of industries such as cotton, jute, rayon, yarn, staple fibre, etc. In respect of consumable stores the policy should be to encourage more normal channels. This should be done with a view to preventing growing unemployment among middle classes. With the progressive increase in the restriction of imported articles consequent on the growth of indigenous industries established importers have been losing their avocations. In order to prevent this state of affairs, it is argued that Government should insist on the indigenous producers to adopt and practice certain well defined marketing policies as a condition to the grant of protection under the tariff and import control regulations. It is suggested that new industries should make use of the medium of established importers to market their products. In all these instances, chambers of commerce and trade associations should sit together, evolve some procedure and establish some conventions to resolve the difficulties instead of each presenting his problems to Government from his own angle with all vehemence.

A number of suggestions has been given by the trade for the improvement of the policy relating to validity of licences. There is still a very large number of items for which the validity is for six months period. To enable an importer to negotiate reasonably with the foreign suppliers and to avoid his having to buy whatever is available within the short time, the minimum validity of any licence should be extended to 12-month period. For instance, certain goods are seasonal and, therefore, orders have to be placed at the appropriate time.

EXPLORING CONVERTIBILITY—I

MAIN FACTORS CONSIDERED

(From Our Own Correspondent)

LONDON, 4th June

LONDON LETTER

THE news of the week is the rise in this country's gold and dollar reserves of some £60 million in the month of May, bringing the reserves to a total of nearly $3,000 million or £1,066 million. The reserves now stand at rather more than three-quarters of their highest post-war level three years ago but, at this rate of increase, in six months the post-war maximum will be surpassed.

The principal reason for the increase is just that which recently prompted the Treasury and the Bank of England to lower the Bank Rate to 3 per cent., namely, the inflow of "hot" funds, not only to take advantage of the high money rates in the City but also to speculate on the possibility of an upward valuation. It is true that thus far the funds which came into this country early in May are still there, but they are an unreliable basis for the reserves of the sterling area: that is why the official attitude, different perhaps from that which prevailed when the Government was less concerned with the state of the reserves, before the war, is that these funds are not to be encouraged. Not only do they mean nothing in terms of the gold and dollar backing for sterling but they can encourage ideas about convertibility which may be against the interests of this country and of the sterling area.

The convertibility issue was bound to be raised again after the report four weeks ago of the O.E.E.C. (Organisation for European Economic Co-operation) which, however, academic and however routine, showed that Ministers were still considering the practicability of the move. It is, of course, well known that Germany and Belgium particularly, and one or two other West European countries, would like to see their currencies fully convertible and are individually fully capable of having their currencies convertible. They are only held back at the moment by loyalty to the O.E.E.C., and there is a school of thought in this country which considers that it is only that same loyalty which holds this country back from making sterling fully convertible. This school points out that, with the categories of sterling now in use, dollars can freely move into and out of sterling provided the correct exchange routine is followed, and that this country now exports dollar goods for sterling. The United Kingdom, indeed, at the moment maintains its exchange restriction only in the form of tight control over direct purchases of dollar manufactures for retention in this country and a readiness to claim only one half of its credit balances with the O.E.E.C. countries in gold. There is one other form of control, that is, that the capital sterling balances held by third countries in the United Kingdom remain inconvertible apart from special arrangements.

The question that the protagonists of convertibility are asked is whether, given convertibility, there would not be a heavy demand for dollars (a) merely to buy dollar manufactures; (b) by the owners of sterling balances to buy in America what they cannot buy here; and (c) by persons preferring to hold dollars instead of sterling. The trend of the market in the past three months shows that (c) is no longer an operative factor. Sterling is regarded for the time being as a strong currency which is undervalued in terms of dollars, and any speculator would at present prefer to hold sterling rather than dollars for a rise.

As for the old accounts, it is unlikely that there could be much pressure to convert these, except for commercial reasons of wishing to spend dollars rather than sterling. The most difficult point, therefore, is the desire, or the ability—or both—to purchase dollar goods in preference to sterling goods. To answer this problem satisfactorily, it is not enough to look at what is happening today. For today the answer might be that, given the present import restrictions or their equivalent in quotas, full convertibility and free exchange rates could only bring sterling appreciation and no outflow of gold or dollar reserves. It is the long-term implication of the problem of convertibility that must be restraining this Government, just as much as it would any Socialist Government, from taking the plunge from what is sometimes

(Continued in previous column)

called the first stage of convertibility—and which, for practical purpose, is not very different from the stage the United Kingdom has now reached—and the stage of full convertibility. This aspect will be examined in the succeeding letter.—*All Rights Reserved.*

PAKISTAN NOTES

WORLD BANK GIVES £5 MILLION LOAN FOR SUI GAS PROJECT

FAVOURABLE BALANCE OF PAYMENTS POSITION

THE International Bank for Reconstruction and Development, along with six private British banks, has granted a loan of £5 million (equivalent to $14 million) for the construction of a natural gas transmission line in West Pakistan. This project, which has been undertaken, as readers are aware, as a result of the recent discovery of natural gas at Sui (about 350 miles north of Karachi), seeks to make, for the first time, this fuel available to industry.

The six British exchange banks which have agreed to participate in the loan are: (1) the Chartered Bank of India, Australia and China, (2) the Eastern Bank Ltd., (3) Grindlays Bank Ltd., (4) Lloyds Bank Ltd., (5) the Mercantile Bank of India Ltd., and (6) the National Bank of India Ltd. These banks, which have their offices in Pakistan, have agreed to contribute £645,000 ($1,806,000) without the World Bank's guarantee. This amount represents the first seven maturities of the loan, falling due semi-annually from 1st August, 1956 to 1st August, 1959.

The loan is for a period of 20 years and will bear interest at the rate of 4½ per cent. per annum, including the statutory commission of 1 per cent. charged by the Bank. Amortisation of the loan will begin on 1st August, 1956. The loan is guaranteed by the Government of Pakistan and will be secured by a trust deed with Baring Brothers & Co., Ltd., of London, as trustees.

The loan has been granted to the newly-formed Sui Gas Transmission Company, Ltd., in which 75 per cent. of the shares will be held by private investors in Pakistan and in the U.K. and the balance by the Pakistan Industrial Development Corporation. A little more than one half of the shares will be in Pakistani ownership and the remainder will be held by the Burmah Oil Co., Ltd. and the Commonwealth Development Finance Co., Ltd., of the U.K. The total cost of the project will be about £9 million, out of which the World Bank loan will provide the equivalent of £5 million of the foreign exchange required. Sterling for the loan has been made available to the Bank by the U.K. out of its sterling subscription to the Bank's capital. The project is expected to be completed in May, 1955.

Important Source of Fuel

The development of natural gas will provide Pakistan with an important domestic source of fuel. Pakistan's supplies of coal and oil are insufficient to meet the country's needs. Of its annual coal requirements of about 1.2 million tons, 600,000 are now being imported and fuel oil imports aggregate more than 500,000 tons a year. The reserves of the Sui gas dome are estimated at over 2½ trillion cubic feet. This is enough to supply 110 million c.ft. of gas per day for over 50 years. The cost of gas compares favourably with the present price of liquid fuels. As the volume of gas increases, the price will progressively fall, so that at the full capacity of the line, gas would cost much less than fuel oil or coal. By providing relatively cheap and abundant supplies of the new fuel, the Sui Gas Project will, in course of time, save large amounts of foreign exchange. In the first year of operations, gas from the project will be equivalent in fuel value to some 500,000 tons of coal and as plant capacity is reached, it will be three times this quantity.

In a supplemental statement on the Sui Gas Loan, the World Bank presents the following survey of the general economic position of the country, which makes interesting reading:

"Pakistan has a total area of 365,000 square miles and a population of 75 million. The country is in two parts, a thousand miles apart: East Pakistan with an area of about 54,000 square miles and a population of over 40 million; and West Pakistan, an area of 310,000 square miles with a population of about 35 million.

"Pakistan normally produces enough foodgrains to feed its population; wheat and other grains are grown in West Pakistan, and rice in East Pakistan. It is the world's largest producer and exporter of raw jute, all of which is grown in East Pakistan. Cotton is produced mostly in West Pakistan. About 85 per cent. of Pakistan's exports consist of jute and cotton. Other agricultural products are: about 30 million lbs. of wool; about 50 million lbs. of tea; about 13 million pieces of hides and skins; and some oilseeds and sugar. Mineral production is relatively small. Some 400,000 to 600,000 tons of coal are produced yearly; over 150,000 tons of petroleum; and 15,000 to 20,000 tons of chrome ore and salt. Only chrome ore is exported.

"World prices for raw materials dropped sharply in 1951-53 and Pakistan's export earnings were correspondingly hard hit; a two-year drought darkened the economic and financial picture. The low point was passed in the spring of 1953. Since then world prices have stabilised and Pakistan's financial position has improved, though the country is still faced with the necessity of husbanding its resources most carefully.

"The timely grant by the United States of 700,000 tons of wheat in June, 1953, plus smaller wheat grants by Canada and Australia under the Colombo Plan, alleviated the food shortage and assured adequate supplies for 1953-54. Heavy summer and winter rains have since ended the drought and Pakistan may have a food surplus in 1954-55. Income and outgo of foreign exchange were brought into balance in early 1953, mainly through sharp curtailment of imports, and a small current account surplus was achieved for the whole year 1953. Prices of main export commodities have recovered appreciably from their lows of a year ago, and import controls have recently been eased somewhat.

"Self-sufficiency in foodgrains and cotton textiles, which are the principal necessities of the great bulk of the population, and increased domestic supplies of other goods now imported, will give a certain freedom of action in the choice of imports, such as Pakistan has not enjoyed in the recent past. Foreign exchange receipts should continue to rise as production expands.

"There were few industrial plants in Pakistan at the time of partition. There are now an impressive number of enterprises recently launched or under development, based principally on the processing of local raw materials. Since 1950, the production of cotton cloth has increased 124 per cent., and cotton yarn 295 per cent. Two woollen mills have started production. In the new jute manufacturing industry, 1,400 looms are now in operation. The vegetable oil and tanning and leather industries have also shown considerable progress. Coal production has increased from 437,000 tons in 1950 to 577,000 tons in 1953, and electric power output has risen in the same period from 234 million kw.h. to 406 million kw.h.

"The budget position also improved in the past year mainly through increased extraordinary revenues, including income from sale of U.S. and Colombo Plan wheat. Ordinary and defence expenditures were substantially reduced, while outlays for economic development were increased. As a net result, total Government expenditures declined slightly. While the financial position, both internal and external, will remain tight in the short run, it is expected that gains from development will become increasingly apparent in the next several years through increased domestic production, improved Government receipts and higher exports, especially of jute manufactures to the dollar area."

Favourable Balance of Payments

Pakistan has earned a surplus of Rs. 1.73 crores in its balance of payments during the quarter January-March, 1954. This is the fifth successive quarter in which Pakistan's balance of payments position shows a surplus. In the first quarter of 1953, Pakistan earned a surplus of Rs. 5.34 crores, followed by Rs. 1.47 crores in April-June, Rs. 0.92 crore in July-September and Rs. 4.33 crores in the last quarter. With the aforesaid surplus in the first quarter of 1954, the total surplus in the 15 months to March, 1954, amounts to Rs. 13.79 crores.

An analysis of the statement of receipts and payments shows that the foreign exchange earnings during the quarter under review amounted to Rs. 39.54 crores, of which Rs. 16.62 crores are accounted for by jute exports and Rs. 14.62 crores by cotton exports. Payments during the period aggregated Rs. 37.81 crores, of which Rs. 19.11 crores were spent on imports on private account and Rs. 13.29 crores on Government account. The latter include consumer goods, such as sugar and cotton textiles, imported on Government account. Invisible payments on travel, family maintenance and other services amounted to Rs. 5.41 crores.

A country-wise analysis of the balance of payments shows that during this quarter, Pakistan incurred a deficit of Rs. 11.88 crores with the U.K., while it had a surplus of Rs. 3.14 crores with the rest of the sterling area. There was a small deficit of Rs. 59 lakhs with the dollar area, while the surplus with the Continental O.E.E.C. countries amounted to Rs. 4.51 crores. The country had a surplus of Rs. 1.28 crores with Japan and of Rs. 5.27 crores with the rest of the non-sterling area.

The gold, dollar and sterling reserves of Pakistan as on 31st March, 1954, amounted to Rs. 71.96 crores, showing an improvement of Rs. 3.07 crores during the quarter January-March, 1954. Since the beginning of 1953, the reserves show a net improvement of Rs. 11.35 crores.

Revised Procedure for Export Payments

The Pakistan Government has laid down a revised procedure for the method of payment for exports from Pakistan to various countries. A *Gazette Extraordinary* issued, in this connection, on Monday this week, says that, in the case of American account countries, payment will be made in United States or Canadian dollars. Payment can also be made in rupees from the account of a bank in any country in the group or in sterling from the account of a person to any such country. For sterling area countries, payment can be made in rupees from the account of a bank of the area or in sterling or any sterling area currency. Indian and Pakistani rupees in the account of a resident of the area will be excluded from this payment. This provision will also not apply to the accounts of persons living in Pakistan and India. In the case of Indians, payment for exports from Pakistan can be made in Indian or Pakistani rupees from the account of a bank in the country of import. Payment can also be made in sterling from the account of a resident in the country of the transferable account group. It can also be made in rupees from the account of a bank in the country of import or any country in the transferable group.

The Adamjee Jute Mills, Ltd., which stopped working on 15th May last, resumed production on the 7th inst., according to a Press Note issued by the Government of East Bengal. Two hundred looms in the second mill went into production, working a single shift. The Press Note said: "Workers who reported for work were drawn from all sections and a peaceful atmosphere prevailed among them. The management is undertaking arrangements to rehabilitate the workers who suffered in the riots. Construction work on the third mill, which had been suspended since 15th May, is also expected to be resumed soon. It is expected that within a short time the five mills would start functioning in full swing."

The Prime Minister, Mr. Mohammed Ali, inaugurated on the 7th inst. the first non-stop Pakistan international air service between Karachi and Dacca. The Pakistan Government has decided to subsidise the service to the extent of Rs. 50 per passenger which will cost the Government Rs. 10 lakhs a year. The service will also be exempted from duty on aviation spirit. Mr. Mohammed Ali said a similar service between Karachi and Dacca via Lahore would be opened before the end of this month.

LINKING INDIGENOUS BANKERS WITH THE BANKING SYSTEM

VIEWS OF SHROFF COMMITTEE

IT will be recalled that, in our Market Gossip columns last week, we made a brief mention of the Shroff Committee's proposals for linking the indigenous bankers with the Reserve Bank of India. At the present moment, these proposals acquire great importance for several reasons. First, the indigenous bankers have been playing an important role in financing large sectors of the trade and industry in India. It is estimated that these bankers finance about 70 to 90 per cent. of the total internal trade of the country, while moneylenders have for centuries occupied a predominant position in the supply of finance to the agriculturists. Secondly, attempts have been made, for long, to bring them under the banking system but the problems involved being very peculiar, have so far defied solution. Thirdly, the economy today is in need of financing agencies in regions and sectors not served by the banking system and these indigenous bankers may be made to satisfy the need more effectively than now. For this they must be brought into the orbit of the organised banking system. But this is possible only if they agree to operate under some broad regulations for purposes of safety and security. The Shroff Committee's recommendations suggest the shape these controls should take.

Before referring to the Committee's proposals, it will be necessary to point out here the scope and functions of these bankers. The Committee, in this context, seeks to make a distinction between indigenous bankers and moneylenders. Quoting the Punjab Provincial Banking Enquiry Committee, it points out that the indigenous bankers finance trade and industry rather than consumption, while urban moneylenders finance consumption rather than trade. It has, however, taken care to add that the village moneylender makes advanes to agriculturists both for production and consumption. It accepts the definition of the Indian Central Banking Enquiry Committee for "indigenous banker", as any individual or private firm receiving deposits and dealing in *hundis* or lending money. Many of them engage in other forms of business such as trading and acting as commission agents. They are also commonly known as shroffs.

The manner in which these shroffs function is described as follows. The city shroffs supply funds and goods on credit to the town shroffs, and the latter, in turn, supply these to the village shroffs. The village shroffs, in turn, give unsecured loans to agriculturists and small traders and also supply goods on credit. In this way the institution of shroffs passes on credit from the cities to the towns and the villages and makes it available without security in the semi-urban and rural areas.

Bombay Shroffs' Association

Some interesting information has been furnished by the Bombay Shroffs' Association regarding the magnitude of the operations of the indigenous bankers. The turnover of the members of this Association alone is estimated at about Rs. 100 crores. About 80 per cent. of this is stated to be on account of sight *hundi* transactions and 20 per cent. for commercial purposes. The average payment made by a member-firm in respect of sight *hundi* transactions was Rs. 43 lakhs, while the average receipt was Rs. 50 lakhs, the annual turnover thus being Rs. 93 lakhs.

The *hundis* which arise out of trading and industrial activities are clean and payable on sight. The rate of interest charged by the shroffs on *hundis* varies from 4¼ to 6 per cent. plus a commission. While the main concern of the shroffs is the provision of short-term credit for trading purposes, the representatives of the Bombay Shroffs Association who met the Committee stated that small industries were obtaining considerable accommodation from them and that some of the constituents also functioned as buying agents for such industries. The resources of shroffs consist principally of their own capital and the call deposits accepted by them. Sometimes, they also receive fixed deposits. The representatives of the said Association further pointed out to the Committee that, if rediscount facilities at the Reserve Bank were made available to them, they could ask their constituents to draw 90 days' usance *hundis*, instead of sight *hundis*, which would help expand their business considerably. Since they lent mostly to traders, they did not come within the purview of the Bombay Moneylenders Act.

While members of the Bombay Shroffs Association are generally engaged in both banking and commission agency business, there are certain classes of indigenous bankers who confine themselves almost extensively to banking proper. The foremost among them are the Shikarpuri shroffs. According to the evidence tendered before the Shroff Committee, these shroffs have their headquarters in Bombay, and carry on business in over 400 places in India. They finance principally traders and small industrialists on *hundis* and claim that they have outstandings of about Rs. 20 crores at any time. They borrow from banks on these *hundis* against limits sanctioned to them. On an average, they charge about 9 per cent. to their constituents on *hundis* and pay 4½ to 5 per cent. to banks for rediscounting them. Some of them are subject to moneylending legislation in some States. Their *hundi* transactions, which come under "loans to traders," are, however, exempt from this law. But a licence is necessary for loans from one shroff to another. They plead that these should also be exempted from the purview of the Act.

Conditions for Linking

In view of the importance of these bankers, the Central Banking Enquiry Committee recommended that they should be brought into direct relations with the Reserve Bank in line with other joint-stock and co-operative banks, and thereby provided with rediscounting facilities. But, as the Reserve Bank could rediscount only bank-endorsed paper, only such indigenous bankers as were engaged in banking proper or were prepared to discontinue their non-banking business should, the Central Banking Enquiry Committee said, be eligible to be placed on the approved list of the Reserve Bank. It further stipulated that such indigenous bankers must agree to maintain proper books of accounts in the usual recognised manner and to have them audited annually by recognised auditors and that such books should be open for inspection and audit by the Reserve Bank of India.

Accordingly, the Reserve Bank of India pursued the question of linking the indigenous bankers with its own system. In 1937 it made an attempt by suggesting a scheme based on the Central Banking Enquiry Committee's suggestions. It failed because the bankers were unwilling to disassociate themselves with non-banking business. Again in 1941, the Reserve Bank agreed not to insist on immediate shedding of non-banking business by the shroffs, but suggested that the bankers should segregate it from their banking business, in the first instance, and then discard it within a specified time. This was also unsuccessful, but the Shroffs Association requested the Reserve Bank to keep the offer open. It is understood that the Association has taken up the question again with the Reserve Bank.

Reviewing the whole position carefully, the Shroff Committee has expressed itself fully in favour of the conditions laid down by the Central Banking Enquiry Committee for the linking of the indigenous bankers with the Reserve Bank. As, however, most of the bankers are reluctant to segregate their non-banking business, it may take time before any scheme could materialise. In the meantime, as an interim measure, however, it suggests that those shroffs who are doing their business by way of sight *hundis* should consider the possibility of introducing 90 days' *hundis* where practicable. In order to encourage these usance *hundis* on a large scale, the Government of India is advised to reduce the rates of stamp duty on such *hundis*.

Rediscounting "Hundis"

Another important recommendation of the Shroff Committee is that steps should be taken to encourage the rediscounting by the Reserve Bank of the usance bills of indigenous bankers such as Shikarpur shroffs through the Scheduled banks. Explaining this suggestion further, the Committee observes:

"Although the indigenous bankers finance principally the private trading rather than the industrial sector, they do provide, as already stated above, working capital for medium-scale and small-scale industries, and it will assist in making additional working capital available to these industries if the bills of these bankers, commonly known as Multani *hundis*, are made eligible by the Reserve Bank, as security for advances to Scheduled banks. In this connection, it has been suggested that, as the individual *hundis* endorsed by the shroffs are often for comparatively small amounts, the Reserve Bank of India should examine whether it could accept a bigger *hundi* supported by the small ones for purposes of rediscount. We commend this proposal for the consideration of the Reserve Bank and also suggest that if there are any legal difficulties in the way, they may take necessary steps to have the Act suitably amended. In this context, we may recall the arrangement which was in force for expansion of currency prior to the establishment of the Reserve Bank. We understand that, before 1935, the Imperial Bank of India deposited in Government portfolio all trade bills available to it and maintained a Government Portfolio Bill Register. The Imperial Bank further gave a certificate to the Controller of Currency that the bills held were 'in furtherance of trade.' The bills deposited included Multani bills which the Bank had discounted as well as other inland bills held for collection. The procedure was in existence at the time of the Presidency Banks and, it is learnt, was adopted by the Imperial Bank as early as 1922."

The Committee further suggests that the commercial banks should also consider the rediscounting of bills drawn by traders and small industries and endorsed by shroffs, provided the banks are satisfied with the standing of the parties concerned. The shroffs on their part should maintain, according to the Committee, proper books of accounts, preferably in the national language or English. The formation of an association representing shroffs all over India is also suggested by the Committee. Since shroffs are engaged mainly in lending to trade and industry, they should be exempted, says the Committee, from the purview of moneylending legislation.

Billowing Sails

once carried the world's communications and commerce. Even then Lloyds Bank was providing its clients with information and facilities for overseas trade.

Now, too, as then, Lloyds Bank continues to offer these services to those engaged in foreign business. With its own Branches at all major ports in England and Wales, and in India, Pakistan and Burma, and with affiliated Institutions and Foreign Agents and Correspondents in every large port and city throughout the world, Lloyds Bank is fully equipped to provide comprehensive service and finance for all classes of foreign trade.

Let LLOYDS BANK *look after* YOUR *interests*

LLOYDS BANK LIMITED — INCORPORATED IN ENGLAND

LB/G/40—1954

SHARP RISE IN DOLLAR RESERVES

The sterling area's gold and dollar reserves in May, 1954, staged a record rise of $165 million. This increase compares with $135 million in April, $102 million in March, $40 million in February and $25 million in January this year. The surplus registered in the month under review is the highest since March, 1951, when the reserves went up by as much as $193 million. The total reserves at the end of May, 1954, stood at $2,935 million.

A breakdown analysis of the May surplus of $165 million is revealing. Of this amount, receipts from the U.S. on account of defence aid amounted to $8 million and those from the E.P.U. $39 million. The balance of $120 million was the outcome of gold and dollar movements, as against $119 million in April and $86 million in March this year.

The official communique issued by the Treasury points out that a large part of the general credit of $120 million was due to the "boomlet" in sterling which developed during late April and the beginning of May. The amount thus received in the first few days of May alone is estimated roughly at between $80 and $90 million, the balance of $30 to $40 million being the genuine trading surplus. The abnormal inflow of money is believed to be due to rumours, then current in the foreign exchange markets, that the limits of the sterling exchange rate would be widened. These rumours were, however, officially denied early in May, and from then until the end of the month, the gains in reserves were small. But there have been no corresponding withdrawal of funds since the denial of the rumours.

THE CALAMITY THAT DID NOT HAPPEN

REASONS FOR THE FAILURE OF ECONOMIC PROPHETS

FOR more than a year, the countries of the free world have lived in dread of a business recession in the United States. Because of the importance of this country in world markets, and memories of what happened in 1929, 1937, and 1949, the peoples of other countries have taken it almost for granted that even a mild slump here would have calamitous effects upon their economies. The experience of 1949 was particularly frightening. At that time, a mere levelling off in the rise of the U.S. national product and drop of 10 per cent. in industrial production was enough to cause severe economic quakes abroad. With overall American imports then down by some 10 to 20 per cent., depending on the period measured, not only were foreign exporters supplying the American market hit but, worse still, the international balance of payments was thrown out of kilter, precipitating a currency crisis and new round of trade restrictions and currency devaluations.

Haunted by these precedents, foreigners have feared that a new recession here, even if only a minor dip, might again upset the apple-cart. They have conjured up the spectre of mounting unemployment and new currency troubles—all threatening their hard-won gains towards internal recovery, freer international trade and currency convertibility.

This fear of an American setback has been one of the factors delaying the lowering of trade barriers and restoration of currency convertibility. Other countries have been reluctant to take chances in the face of their apprehensions of a new "dollar crisis" stemming from an American slump.

U.S. Dip Not Paralleled Abroad

Today, the American business recession so widely feared abroad has become a reality. The rise in the U.S. national product has not only levelled off, but slipped a little, and the industrial production index is down about 10 per cent. from the peak. American imports during the first quarter of this year were off about 10 per cent. from the first quarter of last year—about the same decrease as was shown during the first quarter of 1949 as compared with the first quarter of 1948. Yet the dire predictions of the effects on the rest of the world have not been borne out.

That the American recession has had no counterpart in Western Europe is evident from the fact that industrial production in that region has shown no halt.

The indexes for Germany and the Netherlands, as well as the combined index for the 17 Western European countries included in the Organization for European Economic Co-operation (O.E.E.C.), hit new highs in the closing quarter of 1953, and the index for the United Kingdom bettered its fourth quarter 1953 record in the first quarter of 1954. Production in Belgium held close to previous peaks, while the French index reached a new high in April. Dips recorded in the first quarter of this year for some countries are partly seasonal, and still leave the figures higher than for the corresponding period a year ago.

Recovery in Germany and the Netherlands has been particularly impressive, the German industrial index forging ahead to a level three times as high as in 1948 when far-reaching monetary reforms were carried out, and the Dutch index doubling since 1947. Similarly, economic conditions are looking up in many non-European countries, including Australia, India and South Africa.

Nor are there any signs of a repetition of the international payments difficulties of 1949. The gold and dollar reserves of the Free World other than the United States continue to rise; in April the gain of $135 million for the sterling area's gold and dollar pool was the largest for any month in more than two years. Currency restrictions, instead of being tightened, are being progressively relaxed; hopes for continued advance in extending the area of free payments are the brightest since the end of the war. Actions by the Bank of England and by the German Central Bank in reducing their discount rates last month bear evidence of reviving confidence abroad, in striking contrast with apprehensions entertained a year ago.

In short, seldom have predictions of calamity gone more haywire. The question is, why have the prophets turned out to be so wrong?

First, expectations of the impact of a business decline on American imports were probably exaggerated. The decline in American imports in 1949 was heavily concentrated in the second quarter, when not only was the production index still receding but importers were withholding purchases in anticipation of currency devaluations which ultimately came in the early fall. In 1954, the production index is already showing signs of stabilising, and the incentive to postpone normal importing in anticipation of currency devaluations is lacking.

Second, European monetary conditions are much better than in 1949. Inflation has been checked, prices are more competitive in world markets, money is sounder, and currencies are fortified by larger reserves.

Third, production in Western Europe rests on a broader base. In 1949, Western European indexes did not parallel the downturn in this country, due to pressing demands abroad for reconstruction. During that period, and also after the outbreak of the Korean War, the comeback of the consumer goods industries was impeded by the need for directing production into more essential channels and by the measures taken to control inflation.

More recently, the build-up of industrial capacity and lessening of inflationary pressures have made it possible through elimination of rationing, reduction of taxes, and relaxation of credit restraints to give freer rein to consumption. While activities in the capital goods and metals industries have tended to level off as armament output has reached a peak and many postwar reconstruction projects have been completed, the consumer goods industries have staged a revival. This has helped to expand employment and carry overall production indexes as new highs.

Other Countries Less Dependent on U.S. Trade

Fourth, other countries have become less dependent upon U.S. imports and exports. They are trading more with one another. For example, in the six months from last October through March, British sales to the U.S. dipped 5 per cent. below the like period a year ago, but sales to the rest of the world more than offset this dip, leaving Britain with a rising surplus of trade earnings. Likewise, slipping sales to the U.S. of some sterling area commodities such as wool, rubber, and cocoa, have been made up by increased sales elsewhere. And what is happening in British trade is repeated in the trade of France and many other European countries. Since 1949, their trade among themselves and with other countries has grown substantially, both in exports and imports. Their exports to the U.S. have likewise increased, while their imports from the U.S. have decreased.

The cause is not hard to divine. It is due, on the import side, partly to efforts to cultivate non-dollar sources in order to conserve dollar exchange, and partly to increased productivity in non-dollar areas, including Europe itself. On the export side, it reflects both the increased output of European industry and more competitive pricing, as already mentioned. At the same time, the expanding European consumption works naturally for increased intra-European exchange of goods as well as more trade with other countries supplying the European market. The better customers of the European countries become of each other and of other non-dollar countries across the seas, the more they can expect to sell to the same countries, and *vice versa*.

Fifth, the so-called "terms of trade" have been in favour of European countries. By this is meant that prices of manufactured goods, which bulk large in European exports have been higher relatively than prices of foodstuffs and raw materials which bulk large in imports. This tends to widen the spread between prices and

TEXTILE INDUSTRY IN U.P.

ITS SPECIAL HANDICAPS

IN a country of India's size, it is necessary that each region should be allowed to develop its industrial potential in the light of the special advantages it may possess. India's textile industry has, in the past, suffered from controls which were often imposed in utter disregard of the peculiar difficulties of different regions. With the decontrol of the textile industry, it is reasonable to expect that each region should be free to put its labour, capital and raw material to the best advantage. It would be wrong to saddle the industry, which is situated in a region that is remote from raw cotton-growing tracts, to have the same wage structure as the industry in another region which has freer access to raw material. If this test is applied, it will be found that the progress of the textile industry in U.P. has been retarded by an excessively high wage structure which does not take into account the fact that other elements in production costs, such as costs of raw material and stores, are relatively high for this section of the Indian textile industry.

This aspect of U.P.'s textile industry has been effectively set forth in an illuminating booklet, entitled *Textile Industry in Uttar Pradesh*, in which the author, Mr. Sitaram Jaipuria of the Swadeshi Cotton Mills Company, Ltd., Kanpur, has discussed the special handicaps from which the U.P. textile industry suffers. Naturally enough, Mr. Jaipuria has not dealt with the new imposts, such as Employees' Provident Fund, State Insurance Scheme, excise duty and special cess on cloth, since the textile industry in U.P. shares these burdens with its counterparts in other regions of the country. He has rightly concentrated on the special handicaps from which the industry in his State suffers.

The U.P.'s textile industry is heavily concentrated in Kanpur which has 515,190 spindles and 10,344 looms and employs about 43,550 workers. Since U.P. is situated at a great distance from the cotton-growing regions, the mills have to haul their raw material over a longer distance than the mills in other regions. Because of U.P.'s geographical position, the mills are also compelled to carry stocks of raw cotton sufficient to cover several months' requirements. Chemicals and textile stores also cost the mills more, since they have to be carried over a longer distance. Also, the mills are compelled to maintain larger stocks of these goods. Again, the rates for power consumed have increased enormously since 1948, and, in certain ranges of power consumed, by as much as 211 per cent. On top of this increase has come a 25 per cent. surcharge imposed by the State Government.

It is against this background that the wage structure in the industry should be examined. Normally, one would expect the industry to pay, as compared with its confreres in other centres, lower wages to its workers in view of the fact that its other production costs are relatively higher. Actually, the minimum wage in Kanpur (Rs. 30 per month) is higher than in other centres, in Madras it is Rs. 26, in Calcutta Rs. 20-2-5, in C.P. Rs. 26, in Ahmedabad Rs. 28, and Sholapur Rs. 26. Besides the minimum wage, the Kanpur workers get a "personal wage" of about Rs. 4 per worker. This incidence, it is stated, is "peculiar to Kanpur alone."

If higher wages were reflected in higher man-hour output, the mere fact that higher wages are paid would certainly not swell the production costs. Apart from the fact that the Kanpur mill workers get a larger number of off-days per year than workers in other regions, they are, according to Mr. Jaipuria, less efficient than the workers in Bombay. He illustrates this by comparing the work-load in Bombay and Ahmedabad with that in Kanpur. He says:

"In Bombay and Ahmedabad, one operator often attends two sides of the spinning frame as against one in Kanpur, and similar is the case with regard to inter and roving frames. The draw-frame tender in Bombay has his wages fixed on the basis of 15 deliveries per worker, as against 10 in Kanpur. Most of the Bombay mills have installed high speed winding and warping, as against the slow speed work in Kanpur. Further, on the weaving side, the mills in Bombay work on a three- or four-loom system (upto a maximum of six), whereas in Kanpur the two-loom system prevails in most of the mills. The principle of more machines per head considerably reduces the final cost of wage and the ratio of wage cost to the actual cost of yarn or cloth is, therefore, much lower in Bombay and Ahmedabad than in Kanpur. In the case of spinning, it is an admitted fact that the mills in Kanpur are employing seven persons per 1,000 spindles as against four in Bombay. Even on the most modest and conservative estimates, it is considered that the U.P. mills employ at least three men for every two men employed in Bombay and Ahmedabad. The efficiency of labour in the Kanpur mills is much lower than either at Bombay or Ahmedabad. An important point to be borne in mind, in this connection, in the case of the Kanpur mills is the close proximity of the workers' homes and the consequent absenteeism in the mills after payment of gratuities, during the harvesting season or finally after holidays. This state of affairs forces mills to work with depleted complements on numerous occasions, thus affecting the total volume of production."

It should be obvious, from what is stated above, that, if any section of the Indian textile industry is in urgent need of rationalisation, it is the U.P. textile industry. Mr. Jaipuria rightly affirms that "there must be a substantial increase in the output *per capita*, if the consumer has to get the goods at lower prices." But all attempts at rationalisation have been opposed on the ground that it might involve retrenchment. It should, however, be clear that the Indian textile industry, much less the U.P. textile industry, cannot maintain its competitive position without rationalisation. In this connection, Mr. Jaipuria warns that Japan is likely to become a "serious rival" in coarse and medium counts; it has already "beaten all countries in plain cloth varieties of 30 counts. 40 counts and over."

Rationalisation Scheme

It is gratifying to note that the U.P. Home Minister, Mr. Sampurnanand, recognised, in the course of his recent address at the textile industry's tripartite conference, held at Naini Tal, the need for ensuring that the consumer gains in the long run through rationalisation. He commended the scheme of rationalisation worked out by the Assistant Labour Commissioner to the Conference and suggested the setting up of a committee to work out the details of the scheme. The details of the scheme are, however, not available. It is to be hoped that the authorities will bear in mind the special handicaps of the State's textile industry in finalising the details of any scheme of rationalisation for the industry.

REPLY TO LABOUR VIEWPOINT

A dismal feature about public life in a democratic country, like in India, where ignorance is widespread and literacy very poor, is that he who shouts the loudest is apt to get maximum hearing. But, if democracy is to work at all, it is necessary that the leaders should impose upon themselves certain restrictions. When they choose to fan people's passions in a most irresponsible manner, they are likely to inflict serious damage to the democratic machinery. It is a pity that the leaders of the Indian National Trade Union Congress should have permitted their love of labour to outrun reason and commnđn sense and made, at the recent meeting of the General Council of this body, statements which are palpably absurd. Mr. Surottam P. Hutheesingh, Chairman of the Ahmedabad Millowners' Association, has done a public service by issuing a Press statement in which he has corrected as well as contradicted the labour leaders' views.

Mr. Hutheesingh says that Mr. Kandubhai Desai's speech, made while moving the resolution urging the abolition of the managing agency system, has "pained" him considerably. He recognises that the system has its limitations. But it does not call for the "unwarranted crusade" which the labour leaders are conducting. He recalls the Company Law Committee's statement that the system has helped the economic life of the country in the past and that it should be allowed to continue. Referring to the specific allegation that the managing agents of the textile industry exploit the farmers by buying cotton at low prices and the consumers by selling cloth at high prices, Mr. Hutheesingh points out that the prices of cloth and cotton have been consistently controlled since 1943 and that the mills have often paid ceiling rates for cotton. As regards the allegation of tax evasion, made against the Ahmedabad millowners, he emphasises that the Tax Investigation Commission itself found that in a number of cases, no evasion of taxes had taken place.

It would appear that the I.N.T.U.C.'s President, Mr. Vasavada, made the statement that the installation of automatic machines would throw out as many as 9½ lakh workers (out of 8 lakh workers in the industry. Mr. Hutheesingh, who believes that there has been a "gross error" in these figures, has urged Mr. Vasavada to publish the details of the data, on which his statement is based, in order to enable the people to appreciate his conclusions. He also questions the correctness of the suggestion,

FURTHER LOSS OF £22 MILLION SHOWN BY RAW COTTON COMMISSION

IMPORTS OF FOREIGN CLOTH

(*From A Special Correspondent*)

MANCHESTER, 1st *June*

IT had been known for some time that the accounts presented by the Raw Cotton Commission for the year to the end of August last would show another very substantial deficit.

MANCHESTER LETTER

This much had been revealed in the debates on the freeing of cotton buying in the House of Commons. The trade, therefore, was prepared for the figures, which now show a further loss of some £22 million after the adverse balance of over £27 million in the previous 13 months.

The result is that the Commission's reserve fund, which at the end of August, 1952, stood at nearly £10 million, has now been exhausted and a net deficit of just over £11 million is shown in the balance-sheet.

Most of the report issued by the organisation deals with past events which are no longer news, but it provides a review of a year in which the trade began its return to private buying of the raw material, after so long being in the hands of centralised purchasing authorities. Events which occurred in the 12 months concerned did not exactly help the Commission and the loss of a fair proportion of its customers involved the organisation in some difficulties. In particular, supplies of cotton had been bought for firms which eventually contracted out and these were not easily sold to other customers.

From the viewpoint of the general public, the experiment in centralised buying now appears to have been an expensive one. Within the trade there are some who feel that being covered by the Commission was very pleasant while it lasted and who now are more than a little apprehensive of being without its "umbrella." The venturesome spirits are already taking advantage of their newly found freedom but only the future can tell whether people in the industry will look back on the era characterised by the Commission as an easy time or one in which the chains bound them too tightly.

Foreign Cloth Arrivals

Imports of foreign-made cotton cloth into Britain in the first quarter of 1954 were more than double the arrivals during the same period last year. Shipments aggregated 50 million square yards against less than 25 million yards in 1953, reflecting the difficulties which the Lancashire industry is undergoing through manpower shortages.

Board of Trade returns show that Indian mills outstripped all rivals—including Japan—as Britain's leading supplier, sending more than 26 million yards.

Only 11.5 million yards of the foreign cloth was specifically earmarked for re-export after undergoing finishing processes in this country. None of the Indian cloth was listed under this category but it is expected that at least a part of it will ultimately find its way overseas again.

Nearly 41 million yards of the total imports from all sources during the quarter were grey unbleached, the balance being finished material.

A feature of the quarter's imports was 603,000 square yards of Russian cloth, all of it in the grey and for re-export after finishing in this country. Shipments of greys from other countries, for re-export after finishing here, included (in square yards): Western Germany 3,100,000, France 2,400,000, Japan 2,200,000, Belgium 800,000, Holland 450,000, Irish Republic 340,000, and Hong Kong 77,000.

"No" to Japanese Cloth

A £1 million Lancashire textile company has announced its decision not to handle any Japanese cotton cloth, despite the fact that delays are occurring in the delivery of Lancashire cloth.

Mr. Walter Stott, Chairman of Stott and Smith Ltd., said in his annual review that the Company's merchanting trade could have been larger but for the delays in getting supplies of grey cloth and the extended delivery time required by finishers in Britain.

"These delays are unfortunate at a time when the country needs more exports. These conditions are prevalent throughout our trade, but we have decided as a policy not to buy Japanese grey cloth," he said.

Board of Trade figures show that 2,200,000 yards of Japanese grey cloth were imported into Britain in the first quarter of this year to supplement Lancashire's lagging output caused through labour shortage. The cloth was earmarked for re-export after undergoing finishing processes in this country.

"Thin End of the Wedge"

Fears that the Anglo-Japanese Trade Agreement may be "the thin end of the wedge" to make serious inroads into Lancashire's competitive position "by dubious means" were expressed by Col. B. W. Heaton, Chairman of Crosses and Heatons, Ltd., the £4 million Lancashire mill group.

"At best this means increased Japanese exports of textiles in competition with our own, especially to Colonial markets," he declared in his annual report. "It may be that any abuse or unfair trading methods will be rectified at the end of the year the agreement lasts by reinforcing the safeguards against such trading from which Lancashire has suffered severely in the past."

Commenting on the closing down of the Raw Cotton Commission and the resumption of private buying of raw cotton, Col. Heaton said the group would have to carry larger stocks than had been necessary during the past few years. The cover available after the winding-up of the Commission was, he added, very inadequate.

"We do not consider that a futures contract based on American cotton is a satisfactory hedge for long-stapled cottons. Until a suitable contract for these cottons is firmly established in Liverpool we shall be exposed to much greater risks." The Directors had therefore decided to reintroduce a stock and contingencies reserve of £200,000.

Union Viewpoint

The T.U.C. and the Labour Party policy-makers are now considering the cotton unions' new manifesto, "Plan for Cotton." Extra copies have been requested so that individual members of the executives of the two organisations can each have a copy, Mr. William Roberts, of Bolton, President of the United Textile Factory Workers' Association, has announced.

The 25,000-word document, drawn up at the request of the unions by Mr. Harold Wilson, M.P., has so far been kept secret. After the meeting this week Mr. Roberts said copies would not be sent out to union branches throughout Lancashire until the Association's Legislative Council had had a further opportunity of "vetting" the document after the views of the T.U.C. and the Labour Party are known. A delegate conference of branches would then be held when the contents of the document would be made known.

The document is the first comprehensive statement of policy to be compiled by the unions for ten years.

Against An Agreement

Growers of a raw material such as cotton must pay serious attention to the requirements of the users who have to process the fibre in the course of manufacturing it into finished articles. This is one of the reasons why the American Government is at present hesitating about its future policy regarding stocks of cotton. Spinners and manufacturers in the United States are strongly opposed on principle to any two-price system, which would enable foreign competitors to obtain their cotton supplies cheaper than they could buy.

Nor are the millowners in Britain and Western Europe any more anxious to see an international cotton agreement drawn up on the lines of the wheat agreement. The International Cotton Federation has already expressed its views on this subject and they were reaffirmed at the recent congress at Buxton.

Not only would the sponsors of such a scheme meet great practical and financial difficulties in trying to standardise all the different types of cotton fibres grown, but the main fear among users of the raw materials is that prices would be maintained at an uncompetitive level. This would affect the consumption of cotton in relation to other natural or synthetic fibres and would thus be to the disadvantage of growers.

As a pointer to the way the textile trade is moving, it is significant that the International Cotton Federation is to change its name later in the year to the International Federation of Cotton and Allied Textiles Industries. Man-made and synthetic fibres are playing an ever more important part in output from the mills and the old-established organisations are having to widen their facilities to bring the modern systems within their orbit.—*All Rights Reserved.*

FORWARD TRADING IN LIVERPOOL COTTON MARKET

WILL IT BENEFIT INDIA TO PARTICIPATE IN IT?

THE resumption of forward trading in cotton in Liverpool marks, as was mentioned in an earlier issue of this journal, yet another stage in the U.K.'s march towards freer economy. Its significance to the world cotton situation is also equally important. For it denotes that an important cotton consuming country, namely, the U.K., has chosen to throw away the crutches of State-trading in cotton in favour of relatively free system of purchase and marketing of cotton. Thus, it means the widening of the sphere of free market for this essentially international commodity. All this has raised the question whether India will do well to participate in the Liverpool futures market, and thereby provide for itself the larger hedging facilities which such participation would give this country.

Perhaps, it will be convenient to set down first the main features of the system of forward trading adopted by the Liverpool Cotton Association (L.C.A.). The basis of the contract is the American cotton, Middling 15/16", the trading unit being 100 bales weighing 48,000 lbs. net. The trading positions are: October-November; December-January; March-April; May-June and July-August. Trading in each position, it is noteworthy, will cease at the end of the first month. Off-coloured cotton may be tendered if not below Strict Low Middling ½" in value. Allowance will be added or deducted in respect of tenderable qualities other than Middling 15/16" according to official quotations to be published regularly. Allowance for cotton better than the contract quality will not be given in excess of those appropriate for cotton above Strict Middling or 1.1/16" staple. The tender provisions thus allow for the maximum amount of American cotton stocks in the U.K. being available for tender and for sufficient time to enable those who go "short" in the near position to import cotton from the U.S. or other foreign cotton for tender after actual trading has ceased. The maximum permitted range of fluctuation in any one day's trading will be 1d. per lb. above or below the previous close and 1d. per lb. between the highest and lowest quotations during the day.

The Liverpool contract is thus designed with three main features: (1) It is closely allied to the New York contract, being a pure American contract with similar quality basis and trading months corresponding to the active positions in New York. (2) The range of tenderable qualities is restricted broadly to those in normal demand for consumption. (3) It contains safeguards against a possible "squeeze" of the near position due to shortage of tenderable stock in the U.K.

Exchange Control

Since the importation of American cotton into the U.K., on which depends the successful operation of the system of forward trading adopted by the L.C.A., involves the expenditure of the scarce currency, the dollar, the authorities have devised a system of foreign exchange control that will keep the expenditure at a minimum level. The chief objective of the currency control is to ensure that dollars are spent for buying cotton for home consumption; it does not permit the exchange of dollar cotton for sterling. In a pamphlet, published by the L.C.A., the Association has summed up the main features of this scheme as follows:

"(a) Firms who expect normally and regularly to have dealings in foreign cotton markets or in the Liverpool market on behalf of foreign clients, will, if approved, be registered with the Bank of England as 'participants' in the scheme.

"(b) Such participants will be permitted to operate or arbitrage on foreign markets for account of themselves, of another participant or of a resident outside the sterling area, but not for any other resident of the U.K. If the client is a resident of another country in the sterling area, these facilities may be granted subject to evidence of approval by the exchange control of the country concerned.

"(c) Non-residents will be permitted, as far as the U.K. exchange control is concerned, to operate on the Liverpool market, but cotton taken up on an American futures contract will not normally be licensed for export from the U.K. All re-exports of cotton will be subject to specific export licence procedure.

"(d) Participants' bankers will be authorised to approve payments to non-residents arising out of futures transactions in the Liverpool market or in foreign futures markets. These payments must be made in the appropriate currency or to the appropriate type of non-resident sterling account.

"(e) Participants will have similar facilities for making payments in respect of various types of transactions concerned with the purchase and sale of physical cotton from and to foreign countries.

"(f) As a condition of these facilities being allowed to participants, they will be required to send a confidential monthly return to the Bank of England showing their trading position in respect of all futures and actual cotton transactions. All such transactions will also have to be passed through special 'Scheme bank accounts' by participants' bankers, who will send a copy of the account to the Bank of England each month. Both these returns will be treated as strictly confidential between the individual participant and the Bank of England.

"(g) Participants will be required to acknowledge the authority of a 'Market Executive' with whom the Bank of England will consult from time to time regarding the general position of the market. Only the aggregated returns of all participants will be used in such discussion, the individual returns remaining strictly confidential to the Bank."

The question whether it will benefit India to participate in the Liverpool futures contract has to be decided in the light of the shortcomings of the Indian contract and of the possible advantages of such participation. Those who advocate India's participation in the Liverpool contract rightly urge that it will help stabilise the economy of the Indian cotton trade. After all, the greater the contacts between world markets in a commodity the more stable will be the price of that commodity. In India, the cotton market suffers from the fact that it is a sheltered market. It is this factor which exposes cotton prices in this country to the tender mercies of aggressive speculators. Once the Indian market is linked, in some way, to a foreign market, the range of fluctuations could be held within limits. It would, in other words, impart a certain amount of stability to the Indian cotton economy.

Apart from the broad and general consideration stated above, there are certain specific advantages for the three important groups of persons interested in cotton, namely, the importers, exporters and consumers of cotton. India has been importing at the rate of 800,000 bales (of 400 lbs. each) per annum on an average. Importers of foreign cotton in India, that is, the merchants and mills, labour under a handicap, in that they have no adequate hedging facilities for purchases other than Indian cotton. The existing contract, based on Jarilla cotton, it is argued, has no practical or financial value for hedging purchases of foreign cotton. It is true that sellers in overseas countries have recently adopted the practice of making offers "on call" on New York. This practice, it is stated, does not ensure any great advantage to Indian importers. This is so for two reasons. In the first place, the sellers abroad, who make the offers "on call" on New York, are not in a position to carry out the necessary sales in New York. Secondly, the Indian importers' purchases of foreign cotton remain "on call" only for a short period. The buyer is compelled to call before the shipment date. This often deprives the buyer of any advantage. It would be a real help, it is argued, only if the buyer is enabled to keep the purchase "on call" until such time as he has sold his cloth or some equivalent.

But there would be a real advantage if the Indian buyer of foreign cotton were allowed to participate in the Liverpool contract. In that event, he could buy foreign cotton at a certain price and sell the Liverpool contract for a fairly distant delivery. He would then get a fairly reasonable hedging facility. If, for instance, the U.S. authorities were to grant an export subsidy for cotton, the Indian buyer, who avails himself of the facilities offered by the Liverpool market, would be fully covered, since the Liverpool price would automatically drop, whereas the New York price would remain unchanged. These arguments hold good for mills which desire to hedge their stocks of cloth held or produced for export but which have not hedged the cotton bought by them.

Cotton Exports

As regards exporters of cotton, it might be wondered whether they would derive any great advantage by their participation in Liverpool contract. This is because the cotton that is exported is a special quality, valued highly more for its scarcity than for its spinning value. The fluctuations in its price will have little relation to the changes in price of American cotton Middling 15/16". In the long run, however, some advantage may be derived from a link between the Bombay and the Liverpool cotton markets. But this can happen only if and when India is in a position to spare surplus staple cotton for export.

To sum up, in the pre-war years, India was a leading exporter of cotton and the Liverpool market provided an important corrective to the large speculative operations that characterised the futures market in Bombay. Today India is, of course, not an important exporter of cotton. But it is one of the three leading exporters of cloth, the quantity of cloth now being exported being almost equal to India's share of pre-war cotton exports from this sub-continent. The Indian mills must, therefore, have all the hedging facilities which their competitors in other parts of the world have.

Safeguards Against Misuse

It would, of course, be necessary for the Government to ensure that any scheme by which the Indian cotton and mill interests are allowed to make use of the hedging facilities in Liverpool does not provide a loophole for transfers of capital. This could be ensured if it is so arranged that every transaction, made from this end, is reported to the exchange control authorities here. These authorities could also arrange for an independent check of the transactions by calling for reports from the Liverpool cotton market; this could be arranged with the help of the authorities of the L.C.A. and the British exchange control.

There are thus some advantages in permitting the cotton and textile interests in India to make use of the hedging facilities provided by the Liverpool Cotton Association. There are also no insuperable obstacles in the grant of the necessary permission to Indian interests. Any possible misuse of the permission could also be guarded against. Even so, it will, perhaps, be prudent to wait a little longer before any decision on this question is taken. After all, the Liverpool cotton market has started functioning only recently and is providing only limited facilities. It would accordingly be better to wait till one gets a clearer picture of how it fares, before taking a firm decision. Meanwhile, nothing will be lost by cotton merchants and millowners discussing the question informally and examining the possible utility of the Liverpool futures to them.

WORLD SUPPLY OF COTTON

I. C. A. COMMITTEE'S ESTIMATES

THE available supply of cotton in the free world in the current (1953-54) season, is estimated by the International Cotton Advisory Committee at 45 million bales (of 478 lbs. each), as against 42.1 million bales in the previous season. This sizable increase in world supply is largely accounted for by the increase in cotton supplies in the U.S. where they are estimated at 21.9 million bales in the current season as compared with 18.0 million bales in the 1952-53 season.

The following table gives the Committee's estimate of the free world's cotton supply position in the 1952-53 and 1953-54 seasons:

(In million bales)

	1952-53	1953-54	Change
United States:			
Stocks	2.8	5.6	+2.8
Production	15.2	16.3	+1.1
Total supply	18.0	21.9	+3.9
Other net exporting countries:			
Stocks	4.4	4.8	+0.4
Production	13.6	13.2	−0.4
Total supply	18.0	18.0	..
Stocks in net importing countries	6.1	5.1	−1.0
Free world supply	42.1	45.0	+2.9

It will be seen from the table above that the supply position in the U.S. has increased this season by nearly four million bales, while in other net exporting countries the supply remains unchanged at 18 million bales. Stocks in net importing countries had declined at the beginning of the 1953-54 season by one million bales.

As regards production, the free world output during the current season is expected to rise to 29.5 million bales or 700,000 bales above the level reached in the 1952-53 season. If production in the Communist countries were included, world production, it is estimated, would aggregate 36.9 million bales this season or 1.2 million bales above the output in the previous season. The following table gives the statistics of world cotton production in the three seasons ended 1953-54:

World Cotton Output

(In million bales)

	1951-52	1952-53	1953-54
United States	15.2	15.2	16.3
Other countries (free world)	13.4	13.6	13.2
Total (free world)	28.6	28.8	29.5
Communist countries*	7.1	6.9	7.4
Grand total	35.7	35.7	36.9

*U.S.S.R., China, and E. Europe.

The free world's consumption of cotton in the current season is expected to be at least as high as in the 1950-51 boom season when it rose to 26.5 million bales. In the 1952-53 season, however, the free world's cotton consumption aggregated 25.9 million bales only. Thus, the increase in consumption this year is expected to be of the order of three-fourths of a million bales, or the same as the increase in the total production. From this, the Committee concludes that carry-over stocks at the end of the current season should increase by 2.5 million bales, as compared with 2.2 million bales last season.

In the U.S., cotton consumption over the first eight months of the present season declined by over half a million bales as compared with the consumption in the corresponding period of the previous season. Thus, it was 5.9 million bales in the eight months ended March, 1954, as against 6.4 million bales in the corresponding period of the 1952-53 season. Elsewhere, cotton consumption in many cases is running significantly higher than last season. In the aggregate, the consumption of cotton in the 1953-54 season should increase, according to the Committee, by 1.5 million bales.

A recent advice from a prominent organisation in the U.S. places the total land under cotton at 20.63 million acres, as against the official allotment of 21.38 million acres. If the per-acre yield were maintained at the average for the past five years, the total yield in the 1954-55 season would be 11.99 million bales. But, if the yield were to reach the record level touched last year, the total output could be 13.15 million bales.

P. & O. STEAM NAVIGATION COMPANY

SIR WILLIAM C. CURRIE ON PROBLEM OF REPLACEMENT OF SHIPS

THE 114th Annual Meeting of the Peninsular and Oriental Steam Navigation Company was held in London on 26th May, 1954. Addressing the meeting, Sir William Crawford Currie, G.B.E., Chairman of the Company, welcomed the investment allowance granted recently by the U.K. Government in place of the initial depreciation allowance which was in the nature of interest-free loan and had to be repaid.

The following are extracts from Sir William's speech:

"From the accounts it will be seen that there was a big contraction in earnings compared with 1952. This was not unexpected, as I forecast when we met here a year ago, and was experienced chiefly in the bulk cargo sections of our business in which cargo liners as well as tramp ships participate. Tramp rates of freight fluctuate more violently than liner rates, and it was the tramp ships which gained most from the 1952 boom and which suffered most in the subsequent recession.

"Fortunately part of the reduction of £5½ million in net earnings was offset by a reduction in the charge for income-tax. In addition, most of the excess profits levy for which we were liable in 1952 is recoverable on the results for 1953, so that the total charge for taxation in the profit and loss account is reduced by £4 million.

"As, I have no doubt, all stockholders know, the shipping industry for some years has been pressing for recognition by the Government that depreciation on historical cost will not provide for the replacement of fleets. In this inflationary age the depreciation has to be supplemented by accumulations of cash, mainly obtained out of taxed income. A system of initial allowances was introduced some few years ago to give some immediate relief. The system was welcomed, though, as the Chancellor said in his Budget speech last month, the tax relief was no more than an interest-free loan which had to be repaid. This loan to the Group as at 30th September last was over £13½ million, and will have to be repaid as increased taxation some years hence.

"I am glad to say that the inherent weakness of this system of temporary loans to industry now been recognised by the Government and that, in general, it is to be replaced by investment allowances on expenditure on new ships and plant. The effect of the new allowances will be that a sum equal to 20 per cent. of the expenditure on all new ships will be allowed as a charge against taxable profits; the resultant tax saving will not have to be refunded at a later date, as is the case with initial allowances. I have seen the investment allowance described as a subsidy. It is not. It is simply a reduction in taxation. Tax relief is not a subsidy.

Investment Allowance

"We are grateful to the Chancellor of the Exchequer for the new allowance; we hope that when the report of the Royal Commission on Taxation is published, it will contain proposals which will be of lasting benefit to the shipping industry and, therefore, to shipbuilding. It is as well, however, not to overestimate the effect of the present investment allowance. The immediate tax relief is precisely what it was with a 20 per cent. initial allowance. The tax saving will still be needed to supplement normal depreciation on historical cost in order to provide the cash required to replace our ships year by year, just as were the cash savings which resulted from initial allowances. For all practical purposes our position is unchanged, although if one goes back three years, when the initial allowance was 40 per cent., we are actually not so well off immediately. I see no reason, therefore, why the new policy adopted by the Chancellor should have any effect upon the level of dividends. In fact, in my view, it would be quite wrong if the relief given to meet inflation were used in that way. It is not until a decade hence, after the time has arrived for the gradual repayment of the interest-free loans received under the initial allowance system, that we shall be thankful that this investment allowance is not repayable. That time is too far ahead for me to forecast how the relief is then likely to operate.

"With the advent of large-scale air transport it was thought unwise to replace all the passenger ships that we had before the war and events have proved that decision to be correct. Whereas before the war the Group fleets consisted of passenger ships and cargo ships in roughly equal proportions, today only about one-third of the fleets consists of passenger tonnage.

"If these fleets are to remain progressively competitive, we must continue to do all in our power to ensure the replacement of obsolescent ships. There are no signs of a reduction in building costs for the type of tonnage which the Group requires. It may be asked why we continue in business on what would appear to be an uneconomic basis.

Sea Transport Still the Cheapest

"The answer is quite simple. Your Board takes the view that the world will need shipping for as far ahead as any of us can see. Nothing has yet taken the place of sea transport as the most economical form of transport for general world trade. If this is true, it must be assumed that over a period shipping will be able to charge what is necessary to make it pay. There will be periods in the future, as in the past, when shipping does not pay, but unless it can recover its costs over a period it will disappear. In our view, the world cannot afford to let it disappear. Thus, whilst we, in common with other shipping men, say that prospects are at present poor, we are not suggesting that this is a permanent state of affairs. In these troubled times no one can safely predict the level of demand for shipping even 12 months ahead, let alone for the 20 years we must have in view when building a new ship. But if world shipping is to pay its way over a period, there is every reason to suppose that we, as part of it, can do the same, so long as we progress and do not fall behind. Old trades will fade away and new trades will emerge. We do not blindly pursue the old trades or ignore the new. We do not replace like for like. We do not set up a target of tonnage which we try to maintain. We try always to carry more cargo in fewer ships. We are always modifying, switching, altering to conform to the changing demand. But we must continue to build and to build the right type and quality of ship. Every new ship must always be an act of faith, but we consider this faith fully justified despite present difficulties.

British India Steam Navigation Co., Ltd.

"This has been a difficult year for the Company, particularly in certain of its Eastern cargo trades where Japanese tonnage, under Government encouragement, has expanded rapidly and there has been fierce and uneconomic competition. In the passenger trades in the East new regulations issued by the Government of India will seriously impair the Company's ability to cater adequately for unberthed passengers.

India and Pakistan

"Trade to and from India and Pakistan has shown some recession since we last met, but we were fortunate in being able to make good some of the lack of cargo offering for India and Pakistan ports by a sustained demand to and from Red Sea ports.

"Despite more intensive competition for India and Pakistan markets, Britain seems to be holding her own in many fields of industry, although Continental and Japanese suppliers have made inroads into the trade in some of the bulk commodities.

"There is an increasing demand for oil cargoes to be shipped in bulk and with most of our ships fitted with bulk oil tanks we are in a good position to benefit from this development.

"We still have to contend with very serious delays at the East Pakistan ports of Chittagong and Chalna to obtain a worthwhile loading. Developments are taking place at these ports, however, which, it is hoped, will ease the position.

Passenger Traffic

"During the year further competition has come from Japanese, Italian and German Lines, while the airlines introduced tourists class fares on their services between Europe and India, Malaya and Hong Kong. The seasonal trend of traffic continues and the greater number of passenger vessels now available to the public tends to result in a contraction of both outward and homeward seasons.

"Cruises now play a substantial part in our passenger earnings and are well supported. This year we have planned 14 cruises, the largest number since the war, and bookings are going well, especially in the tourist class which attracts many holiday-makers by its moderate fares and the amenities it offers.

ROLE OF SUGARCANE IN INDIA'S AGRICULTURAL ECONOMY

METHODS TO BE ADOPTED FOR RAISING PER-ACRE YIELD

(By Dr. PUNJABRAO DESHMUKH, Minister for Agriculture, Government of India)

[In his second broadcast, made in recent weeks, on the subject of sugarcane cultivation, from the All-India Radio station, New Delhi, Dr. Punjabrao S. Deshmukh, Minister for Agriculture, Government of India, emphasised the need for stepping up the yields of sugarcane in the country. He deplored that the per-acre yield of sugarcane in India, which was one of the largest sugarcane-growing countries in the world, should be as low as 14 to 15 tons. Dr. Deshmukh, who was inaugurating the campaign for larger sugarcane yields, reviewed briefly, but succinctly, the main problems involved in increasing the per-acre output of this commodity. In view of the importance of this campaign to the future of India's sugar economy, the text of Dr. Deshmukh's broadcast, which follows, will be read with interest.—ED.]

WE are embarking today on a new campaign for increasing the production of sugarcane. Nowhere is sugarcane cultivation as old as in India, where, from time immemorial, cane has been cultivated and converted into products for indigenous consumption. India has now become one of the largest sugarcane-producing countries in the world with 4 to 4½ million acres under cultivation, yielding about a million to a million and a half tons of sugar every year and a substantial quantity of other products, such as *gur* and *khandsari*.

Sugarcane, thus, plays a very important role in the agricultural economy of the country, while the rural economy of the three major cane-growing States of Uttar Pradesh, Bihar and the Punjab is most intimately linked with cane cultivation. It is the chief source of livelihood for a large section of our agricultural population, besides the growers of sugarcane. The sugar industry is one of the principal industries of the country, providing employment to about 1.35 lakhs of workers.

Due to all these factors, cane cultivation has naturally received considerable attention at the hands of our scientists. Rich sugarcane varieties possessing high potentialities and fairly resistant to disease, pests, drought and frost are now available as a result of researches conducted at the Coimbatore Sugarcane Breeding Station as well as the State research stations.

Valuable Research

It may be asked why, in spite of all this valuable research conducted over a long period and an equal, if not more, eagerness on the part of our cultivators to increase their yields, our production of sugarcane per acre has remained so dismally low, being only about 14 to 15 tons per acre on the average. This very low per-acre yield of cane compares most unfavourably with the high yields of 62 tons and 56 tons per acre in Hawaii and Java respectively. Even in our own country, the yield of sugarcane in Peninsular India is three to four times as much as in Northern India.

It will be realised that there is similarity between these yields and the low yields in the case of paddy. There also, by better methods of cultivation, we have shown what can be achieved on lands where the yields we got were unthinkably large. In the case of paddy, we have already shown the way, and if we could do this, there is no reason why we should not be able to do the same in the case of other crops, especially sugarcane.

Actually, sugarcane is a much surer crop. The area is much more limited and the cultivation simpler since it requires no raising of seedlings, no transplanting and no, rather troublesome, process of puddling. In most places, it is possible to regulate the water-supply because most of this crop is irrigated. With so many distinguishing factors, I see no reason why we should tolerate these low yields and not make an all-out effort to see that we improve sugarcane cultivation in the country.

Low per-acre yields have become traditional in Indian agriculture and with it, naturally, has gone the tradition of want and poverty. Indian agriculture has to contend against a notoriously capricious nature; droughts, alternating with devastating floods, are a common occurrence in one part or the other of this vast sub-continent. But the most important of all the causes which account for our low crop yield is that Indian agriculture has to deal with impoverished soil.

Low Level of Productivity

We have not made sufficient effort to give back to mother earth what we take out of it in the form of plant foods. We have been raising crop after crop from our soil for centuries and it has not failed us altogether. But it is patent that we have not tried to replenish this soil with adequate nourishment and the natural consequence is that it has got stabilised to a much lower level of productivity.

It would be well to bear in mind that the land belongs to man and man belongs to the land not only in a philosophical sense. In agricultural development, particularly with a pattern of subsistence farming which is the characteristic feature of Indian agriculture, the two central objectives which must be kept clearly and consistently in view are: (i) the abolition of poverty of the cultivators, and (ii) the abolition of poverty of the soil. Increased acre yields would give us the best possible solution for both these kinds of poverty.

The answer to this problem of low crop yields lies in the judicious application of inorganic manures along with different kinds of organic manures available to the farmer. What is food to the body of a man and his animals, fertilisers and manures are to the soil. The other factors which help the per-acre yield of sugarcane, or for that matter any other crop, are better irrigation facilities, use of improved varieties, better implements, effective control of pests and diseases, a better system of cropping and rotation and the use of more fodder crop with a view to obtaining more farmyard manure.

The results we obtained last year from the country-wide campaign for the adoption of the Japanese method of paddy cultivation are well-known. These promising results have prompted and emboldened me to initiate action in increasing the production of sugarcane, particularly in the three important cane-producing States of U.P., Bihar and the Punjab. Recently, the sugarcane experts of these three States were invited to New Delhi and consulted as to what immediate steps should be taken to improve the acre yield. In consultation with them, it has been decided to provide a heavier dose of fertiliser as top-dressing to the standing crops and to lay out thousands of demonstrations on cultivators' fields, in addition to large-scale top-dressing of crops in big contiguous blocks with ammonium sulphate or similar nitrogenous fertilisers. Nitrogenous manures and fertilisers show the highest response in sugarcane cultivation and manurial trials conducted at our sugarcane research stations have established that anything up to 120 lbs. of nitrogen per acre can be profitably applied in the northern regions.

Better Cultural Practices

While the immediate need is to concentrate on the standing crop, the programme of increasing sugarcane production in Northern India or elsewhere through better cultural practices, including the use of improved implements, a proper treatment of the soil, provision of plant protection measures and scientific harvesting will be intensified in the next sowing season. As has been stated before, there are today no two opinions in regard to the efficacy of nitrogenous manures (supplemented, when necessary, by phosphates) in increasing per-acre yields of sugarcane.

Therefore, our immediate problem is one of applying more manure to the crop which has already been sown. My Ministry has already made arrangements for fertilisers for a minimum target area of 2.25 lakh acres, of which one lakh acres each will be in the States of U.P. and Bihar and 20,000 acres in the Punjab. This target relates to the intensive gate areas of sugar factories. In addition, it is expected that quite an appreciable area will be taken up for additional fertilisation in the general cane acreage of these States.

Besides this arrangement for the supply of fertilisers, information material on the use of ammonium sulphate in sugarcane and on other improved cultural practices is under preparation and will be distributed free amongst cane-growers in the States. Although, for obvious reasons, the campaign is mainly restricted to the intensive areas in the States of U.P., Bihar and the Punjab, it is my hope that the other important sugarcane-growing States will also fall in line and promote their own campaigns for pushing up cane yields per acre by the same means as will be adopted in the three northern States.

Crop Competition

Important as it is to increase sugarcane production, we are not losing sight of the need to stimulate cultivators to increase the yields of the more important of our food crops. Today, another matter of great significance is the "Crop Competition Fortnight", which we are celebrating all over the country. As sowings in the ensuing *kharif* season will begin shortly, it is essential that our immediate attention is concentrated on growing more foodgrains. Nothing contributes so much to the use of improved methods of farming and additional food production as the creation of a healthy spirit of competition among the farmers.

When crop competitions were first organised on an all-India basis in 1949-50, only seven States participated. In three years' time, the number of participating States has gone up to 22. The number of competitors increased from 18,870 in the first year to 1,72,000 in 1951-52. Similarly, the total acreage under competitions rose from 31,600 in 1949-50 to 1,22,000 in 1952-23. In the beginning, only paddy, wheat and potato were covered by this scheme, but it was extended to gram, *jowar* and *bajra* in 1951-52.

This spirit of competition and healthy rivalry amongst the cultivators has already yielded very encouraging results and prizes have been awarded to many of them. Those prizes are now proposed to be given for the highest yield in the village, *tehsil*, district and State and on all-India level. The value of prizes varies with the different levels, the all-India individual prize carrying a cash award of Rs. 5,000 and a certificate of "Krishi Pandit"!

Community Prizes

While the crop competition awards hitherto given were based on yields obtained only by individual competitors, it has now been decided to add to them the award of community prizes for collective enterprise. Under this new scheme, an award of Rs. 5,000 will be made to each State for the "best *tehsil*" which secures the highest number of entries for the crop competition among all the *tehsils* in the State. This is to encourage groups of farmers to come together to increase the acreage under crop competition in each State. It has also been decided to suitably recognise any outstanding work done by individuals in achieving greater success in this campaign.

The prizes awarded will be utilised for some constructive work in a suitable village in the "best *tehsil*" which secured the prize for the benefit of the entire agricultural community in that area. Those who join the competition will be consulted in regard to the manner of utilisation of the amount as far as possible. I am sure this will give an additional incentive to the cultivators to enlist themselves for competitions in still larger numbers during the coming crop competition fortnight.

Although we have prescribed the period of this celebration from 1st to 14th June the work of the organisers will not cease on the expiry of the fortnight. There is, thus, sufficient time to intensify our efforts among the cultivators to enlist themselves in as large numbers as possible.

I need hardly mention the advantage that accrue from these competitions. India has nearly 6,00,000 villages. If, on an average, 20 competitors are found in every village with a competition plot of one acre each for one crop, one crore acres of land will come directly under competition for every particular crop and will, therefore, receive special attention. This will ultimately give a very good dividend to the country in the shape of additional yields, apart from benefiting the cultivator-competitor. It will also stimulate the farmers' urge to use improved methods of cultivation and thus produce that enthusiastic response which we desire.

Co-operation From States

I wish to thank the State Governments for their co-operation in making these campaigns and competitions a striking success in the past. Encouraged by this response from the States and agriculturists, I call upon every worker of the State Departments of Agriculture, Irrigation and Development, from the Minister down to the village-level worker, to give of his best in making a great success of these campaigns and competitions.

SUGAR PRODUCTION AND STOCKS

The opening stock of sugar with factories in India on 1st May, 1954, was 5.21 lakh tons, as against 9.80 lakh tons on the corresponding date of the previous season, but arrivals of foreign sugar up to 15th May, 1954, totalled 2.54 lakh tons. The production of sugar in the country during the fortnight ended 15th May, was 2,000 tons, as against 26,000 tons during the corresponding period of the previous year. No foreign sugar arrived in the country during the fortnight ended 15th May. Out of the stock with the mills, 53,000 tons were despatched during the fortnight ended 15th May, as against 67,000 tons during the corresponding period of last year. The closing stock with the factories on 15th May was 4.70 lakh tons, as against 9.39 lakh tons on the same date last year. The total production of sugar for the season 1953-54, i.e., from 1st November, 1953, to 15th May, 1954, was 10.01 lakh tons, as against 12.84 lakh tons during the corresponding period of the previous season. The total quantity despatched from 1st November, 1953, to 15th May, 1954, was 7.26 lakh tons, as against 8.47 lakh tons during the same period of the last season.

SUGAR FACTORY ON CO-OPERATIVE BASIS

Reports from Kolhapur, Bombay State, indicate that Mr. V. P. Varde, Managing Director, Bombay State Co-operative Bank, held discussions recently there with prominent farmers from the Bhogavati River valley on the possibility of setting up of a sugar factory on co-operative basis in the valley, which is rich in sugarcane production. Mr. Varde called upon the farmers to consider the question seriously in the light of the sanction by the Government of Bombay for the construction of four sugar factories in the State on a co-operative basis. The State Government will, it is stated, invest Rs. 10 lakhs as share capital in each factory and the Bombay State Financial Corporation will advance loans to them.

NEW SUGAR FACTORY FOR P.E.P.S.U.

Speaking on the occasion of the opening ceremony of the automatic bottling plant of the Jagatjit Distillery and Allied Industries Ltd., Hamira, Mr. Brish Ban, Finance Minister, P.E.P.S.U., disclosed that Mr. Jaiswal, Managing Director of the Company, had agreed to install a new sugar factory, consequent on the shifting of the present one to U.P. The new factory is expected to go into production by October, 1955.

Indian Sugar, Annual Number, March 1954. Editor: J. S. Mehta. Published by the Indian Sugar Mills Association, 23-B, Netaji Subhas Road, Calcutta. Price: Rs. 3.

This publication is the second annual number since the Association took over the journal. Its standard of performance is, undoubtedly, of a high order and the Association and the Editor have every reason to be proud of it. It gives a very good insight into the position of the Indian sugar industry and its manifold knotty problems. The wide range of subjects it covers leaves very little to be desired. The articles relate to the problems of sugar industry such as cane cultivation, prices of cane, cost of production, the attitude of labour, the position of by-products, problems of research and technology, State policies in respect of the industry, and give one a comprehensive overall picture of this important industry. The chief merit of these articles lies in the fact that they are written by persons who are well known in the industry. To mention some of the contributors: Desh Raj Narang, Mr. Gulabchand, Mr. K. K. Birla and Mr. T. S. Venkatraman, all of whom have written thought-provoking articles.

The Editor deserves to be complimented on the care he has exercised in using charts, tables, etc., in order to make the publication quite interesting. The large number of advertisers who have sought the journal as a convenient forum for making known their wares to the public should speak for its popularity among them. Not a little of this popularity is due to its good printing and attractive get-up.

The question of a share out of the "excess profits" made by sugar factories in Uttar Pradesh for the cane growers will be considered by Mr. Rafi Ahmed Kidwai at a tripartite conference scheduled to be held at Naini Tal on 28th and 29th June, 1954. It is reported that a scheme based on the profit-sharing formula used with some success in the Punjab some time ago has been prepared and will form the basis of discussion.

SELLING PRICE OF SOFT COKE

MOVE TO BASE ON GRADES

THERE is a move on the part of the Government of India to rationalise the price structure of soft coke on the basis of grades. Reports from Calcutta indicate that the Government is considering the question of implementing the recommendations of the Working Party for the Coal Industry, 1951, in this regard, with the necessary modifications warranted by the passage of time, since the Party made its suggestions.

It will be recalled that the Working Party was of the considered opinion that standards for the quality of soft coke should be laid down and strictly followed, as in the case of coal. As soft coke is produced from coal, it wanted the prices of soft coke to be in conformity with the grades of coal from which coke is manufactured. It recommended that the price of grade I soft coke be maintained at Rs. 21-12 per ton and that the rates for grades II and III be fixed at Rs. 18-12 and Rs. 10 per ton, respectively.

The quality of soft coke depends on four factors. They are: (1) the quality of parent coal from which the soft coke is manufactured, (2) the care in picking out stones, shales and other deleterious matter, (3) the process of manufacture, and (4) the arrangements for a copious supply of water so essential for quenching heated soft coke.

Unfortunately, very few collieries have been taking pains to pick out shales and deleterious matter and, in many cases, proper arrangements for quenching are not made. A stage has been reached when no more delay in grading soft coke and fixing its price is advisable.

The Working Party for Coal has recommended three grades of soft coke as under:

Grade I.—Soft coke manufactured from grade II coal only. The coking index of parent coal should be at least 15 (Tatas). The colliery must have satisfactory arrangements for the manufacture of soft coke and for quenching the same.

Grade II.—Soft coke manufactured from grade IIIA and grade IIIB coal.

Grade III.—Soft coke manufactured from rejection.

Although belated, the move to rationalise the price structure of soft coke is welcome. For since 23rd November, 1949, the price of soft coke has been at a flat rate of Rs. 21-12, irrespective of quality. It is needless to add that the fixation of such a flat rate is nothing short of inverted economics. Small wonder, therefore, that complaints that soft coke despatched to consuming centres has been more frequently in half-burnt condition and contains also a large percentage of stone and shaly matter. The fixation of a flat rate, irrespective of quality, imposes a premium on inferior grades of coke. It is high time, therefore, that this method was dropped.

While a reduction in the selling prices of grades II and III is more than justified, the question is as to what should be the quantum of reduction. It is held that a flat rate has been imposed for a long time past, with a view to helping the grade III collieries which are mostly marginal units. Most of them are small mines and their output is meagre. Any drastic reduction in the price, it is feared, would force their closure, leading to some aggravation of the unemployment problem. Consequently, the price reduction, it is felt, should be such as not to disturb their economic position violently.

The success of the efforts for popularising the use of soft coke for domestic purposes, with a view to conserving India's depleting forest resources, and cowdung, which is now used as fuel but which must be diverted for use as natural manure, is dependent on a rational price structure. Soft coke is always a cheaper and more convenient form of fuel. Already, the demand for it has outstripped supply. Fortunately, there is enough low volatile semi-coking high-ash content coal in the country suitable for the manufacture of soft coke.

LIGNITE MINING IN NEIVELI

The pilot lignite quarrying scheme at Neiveli, which was inaugurated on 5th March, 1953, to dig a pit of 600 sq. ft. at ground level upto a depth of about 180 feet to expose a lignite surface of 100 sq. ft. at the bottom, with a view to determining the feasibility of economic exploitation of lignite deposits in South Arcot, is progressing well. According to a Press note issued by the Government of Madras, excavations had been made upto a maximum of 90 feet and a total quantity of 13,055,718 c. ft. of earth had been removed till the end of April 1954, out of the total estimated quantity of 26,000,000 c. ft. An expenditure of Rs. 25 lakhs has been incurred so far, out of the estimated cost of Rs. 65.89 lakhs for the pilot project as a whole. It is disclosed that the Government of India had, on the assumption that the pilot quarrying will be completed early, already made arrangements with a London firm to prepare a project report for commercial exploitation of lignite.

Addressing a meeting convened under the auspices of the Institute of Engineers, Tiruchi Centre, on 30th May at Tiruchirapalli, Mr. H. K. Ghose, Special Officer, Lignite Investigation, Neiveli, disclosed that, according to the present schedule of work, the pilot quarrying work would be able to expose lignite within a year. Initial quarrying operations had revealed that the sides stood well on excavation and had dispelled the apprehension of water seeping through. The excavations had now gone down to an average depth of 70 feet and the maximum depth reached in one pit was 90 feet, where the soil was found to be ferrogenous clayey sandstone. He revealed that, if any trouble were to be experienced from ground water or artesian water, the situation would be controlled by the contrivances provided to meet any such trouble. He added that arrangements had also been made for drawing out water by "electric osmosis." For tackling artesian water, a ring submersion pump with a capacity of 200 to 300 gallons per minute had been installed in boreholes upto a depth of 350 to 370 feet. Other necessary precautions to prevent the bursting of pit floor would also be taken with the aid of high-capacity centrifugal pumps.

SINDRI'S COKE OVEN PLANT

The Sindri fertiliser factory marched another step forward on the road to implement its programme for manufacturing by-products on the 25th ultimo when its Managing Director, Mr. A. B. Chatterji, performed the lighting ceremony of the new ovens of its Rs. 2.35-crore coke oven plant.

The plant consists of a battery of 60 ovens to produce about 600 tons of coke a day. After nine or ten weeks of heating, the battery will be pressed into service. The installation of the plant, which will make Sindri self-sufficient in its coke requirements for gas generation, was carried out by a German firm.

A special feature of the plant is the provision made for operating the ovens either by what is known as the "filling" or the "stamping" process. The stamping process marks a new development in the field of coke oven construction in India and allows the use of poor quality coal which cannot otherwise be coked by the conventional filling process. It, therefore, helps reduction in the drain on India's valuable resources of metallurgical coal needed for the country's expanding steel industry.

COAL TAR INDUSTRY

The Indian Standards Institution has circulated for comments a number of draft standards for materials produced by coal tar industry. These draft standards, which have been prepared by I.S.I.'s Heavy Chemicals (Organic) Sectional Committee, cover the requirements and the methods of test for: (1) benzole, industrial, grade I (used as a chemical and as solvent); (2) toluole, industrial, solvent grade (used as solvent in the manufacture of explosives and fine chemicals); (3) toluole, pure, nitration grade (used for nitration in the manufacture of explosives and fine chemicals); (4) phenol (carbolic acid) (used as a chemical in the manufacture of fine chemicals, pharmaceuticals, dyes and synthetic resins, and as an antiseptic); (5) naphthalene (used as a moth repellent, skin preservative and as a chemical for the production of organic intermediates in the manufacture of dyes, drugs, etc.); and (6) refined cresylic acid (used in the manufacture of chemicals, synthetic resins, antiseptics and disinfectants).

PROBLEMS OF JUTE TRADE

ARGENTINA BECOMES POTENTIAL BUYER

THE review of the jute industry's affairs in 1953 made by Mr. Nandalal Kanoria, President, Gunny Trades Association, Calcutta, in his speech at the annual meeting of the Association on the 1st inst., makes refreshing reading. The year saw the solution to some of the problems of the industry left over unsolved in the previous year. Thus, the stocks of jute goods, which remained high throughout 1952, reached saturation point in May, 1953, when it stood at 138,800 tons, the highest for some years. This led to the reduction in the export duties on sacking specialities and hessians by three stages. The demand for hessian cloth improved and the stocks came down to 91,500 tons at the end of April, 1954. Another feature of the year was the appearance of Argentina as a potential buyer of hessians. In the seven months ended December, 1953, exports of hessians to that country amounted to 92,000 tons, as compared with 93,000 tons to the U.S. Explaining this unexpected development, Mr. Kanoria observed:

"This record buying by Argentina helped to relieve the pressure of stocks to a great extent and it was to meet this demand and on account of there being a slackness in the demand for sacking goods, that a percentage of looms were converted from the manufacture of sacking goods to hessians. This entirely changed the picture of the export trade, inasmuch as we exported 36 crore yards more of hessian in 1953 than in 1952, while we exported 15 crore less bags in 1953 than in 1952. The ratio of production between hessian and sacking also changed. The hessian percentage rose from 32.7 in 1952 to 44.7 in 1953, while the sacking percentage declined from 63.8 to 51.9. This reversal in the ratio of the two constructions contributed to the overall decrease in the total tonnage of production."

Argentina's purchases of Indian goods were welcome, for they helped to relieve the pressure of stocks on mills; yet the mills continued to suffer; for, their total sales did not come up to expectations. Consequently, there was a great need to explore the possibilities of expanding the markets. The I.J.M.A. accordingly sent a delegation to Australia and New Zealand. This has since been followed by another delegation to the U.S recently. The Association's publicity and propaganda was intensified. As the delegations did not include representatives of trade, Mr. Kanoria suggested their inclusion, because these representatives would bring to bear on the problem their long experience of foreign markets and personal contacts with importers.

Mr. Kanoria then referred to one of the recommendations of the Jute Enquiry Commission, namely, increasing the working hours of the mills from the present 42½ hours to 48 hours a week. This is the most controversial issue which needs discussion at length exclusively. Reserving it, therefore, for a subsequent occasion, we refer here only to Mr. Kanoria's views. Supporting the case of increasing the working hours, he observed:

"The Commission has recommended an increase in the working hours of the mills. This recommendation, when implemented, will bring in a revolutionary change in the working policy of the industry. In the past, the industry always planned or adjusted its working on the basis of profitable manufacturing conditions based on its immediate demand for its production. It is not difficult to assesss the harm done by this policy. The most obvious result has been the establishment and expansion of the jute industry in foreign countries at our cost. You will be surprised to learn that the present yearly production of the Indian jute mills is less than the average yearly production during the years 1920-30, and so are its exports, in spite of 12 per cent. increase in loomage since 1930. This shrinkage in the production of this most useful packaging material seems strange against the background of tremendous rise in the industrial and agricultural production all over the world. I strongly feel in favour of a gradual increase in the working hours by the industry. The policy of increasing the working hours, when acted upon, will go a long way to help the Indian industry to regain its supremacy in world markets."

Mr. Kanoria favoured the establishment of a well regulated futures market for jute goods as recommended by the Jute Enquiry Commission. The regulation should, he said, contain certain measures calculated to stop over-trading, cornering and delivering of fake *pucca* delivery orders. He wanted that the rules and by-laws should be so framed that the defects experienced in the operations in the past might not be repeated. He was glad that the I.J.M.A. which once opposed futures trading in any shape or form had now favoured it.

The President of the Gunny Trades Association commended the Commission's recommendations regarding the abolition of sales tax and similar taxes on raw jute, reduction in freight rates charged by railways and steamships and the imposition of wage-ceilings and dividend limitation. He was, however of the opinion that the appointment of a Jute Commissioner and the establishment of Jute Board and a Development Council would be of little value to the industry, as, these bodies, by their interference with the industry, would create fresh problems rather than solve them. This opinion of Mr. Kanoria is more or less in consonance with the stand taken by this journal when it commented on the Commission's report about a month ago.

The Jute Enquiry Commission has, it will be recalled, expressed dissatisfaction at the complacent attitude of the industry towards the standard of specifications in contract forms for sale and purchase of jute goods. So far as hessian goods are concerned, the classification of Bemis Brothers is accepted. But there is no such classification for sackings or any other variety of goods. This matter had been engaging the attention of the Gunny Trades Association even while the Commission was conducting its enquiry. Explaining what the Association has done in this direction, Mr. Kanoria stated:

"In the absence of classification, such discriminatory terms as 'European mill-make,' 'Indian mill-make, 'Any bar Indian mill-make,' etc., were current in the trade. The use of such terms in the contract was objected to by the Government of India and it was pointed out by them that the same should be eliminated from the trade as soon as possible. A meeting was held between the Presidents of the Indian Jute Mills Association, the Calcutta Jute Fabrics Shippers Association and your Association and in the course of discussions at this meeting, a proposal was made on behalf of your Association to undertake the preparation of an approved list of jute mills for general transactions of sacking goods. The I.J.M.A. could not associate itself with this scheme as it could not make discrimination among its members. However, it is a matter of great satisfaction that with the co-operation of the members of this Association, your Committee has been able to draw up an approved list of 58 jute mills out of the 74 mills in and around Calcutta, which is subject to revision every year. This list has been made effective in the market from the beginning of this year and has worked satisfactorily for the last five months. The Government of Burma has given recognition to this list and we have received many encouraging letters from foreign consumers complimenting us on our scheme as well as assuring us of their co-operation. Copies of the list have now been supplied to important foreign buyers for their guidance in the purchases of selected sacking goods. Although at present this classification has been made on the basis of opinions collected from the members of the Association and some important shippers and consumers, the Association is contemplating the introduction of other tests for this purpose and arranging for scientific equipment for the same as soon as possible."

Availing himself of the opportunity provided by the meeting, Mr. Kanoria complained against the tendency of increasing participation of jute mills in direct exports of jute goods. He attributed this tendency to the permission given by the Government to shippers to charge a commission of 5 per cent. over the controlled prices during the period when the industry was under the control system instituted by the Government. The total effect of this direct participation has, we are told, been the widespread unemployment among dealers, brokers and their dependents. Mr. Kanoria, therefore, appealed to the industry to abandon this practice by taking recourse to the established channels of trade for promoting exports of their goods.

TEA PRICES REMAIN FIRM

SHORTAGE OF SUPPLIES IN LONDON

IN recent weeks, tea shares on the Calcutta Stock Exchange have been very active. The turnover has considerably broadened and values of a large number of scrips have registered impressive gains. The declaration of encouraging dividends by a number of tea companies and the expectation that the earnings of many well established companies for the current year would constitute a record, with the prices of teas remaining firm in the last two sales of the new season's crop, have been responsible for the keen buying in this section. In export sale No. 2, held last week, there was a fair demand for all descriptions, though buyers were discriminating and only quality teas were keenly sought after. Clean common B.P. fetched Rs. 2-10 per lb. Though this is a fraction less than that quoted in the previous sale, it compares well with that of Re. 1-11-6 in the corresponding sale of 1953.

The phenomenal rise in tea prices, as indicated above, naturally induces one to contemplate whether the upward trend would be maintained; if so, for how long, and whether the present rise is in the interests of tea estates themselves. The available indications are that the current year will be a boom year for the tea industry. The trend of prices during the year, however, will depend on the crop position of North-East India which holds the key to the complex position of world supplies and demand. The progress of current tea crop in North-East India are, therefore, watched with keen interest by everyone, more so by Mincing Lane, particularly because of the tight supply position there at present.

So far, in the current season, the North Indian tea crop has been slow in coming, as compared with that in the corresponding period of last year. It is estimated that the outturn of North Indian tea upto the end of April, 1954, was 15.8 million lbs., as compared with 21.7 million lbs. in the corresponding period of 1953. This shortfall was due to unfavourable climatic conditions. Dooars and Terai districts particularly, and to a lesser extent Darjeelings, were extremely short of rain. But latest advices indicate that rain has been good and there is no reason why tea gardens will not be able to make good the deficit, though it will not before August.

Moreover, the crop position at this part of the season is usually deceptive and it is risky to take a definite view now on crop prospects. It is only during the period from middle of June to the middle of October that the bulk of the crop is picked. It is not until then that a good appreciation of the crop position for the current year will be possible. The recent rains, however, have given rise to hopes that, this year there will be a larger crop than last year.

Exports of North Indian tea during the period from 1st April to 15th May, 1954, amounted to 5.88 million lbs., as against 21.86 million lbs. in the corresponding period of 1953. Shipments from Cochin from 1st January to 13th May, 1954, aggregated 19.21 million lbs., as against 19.41 million lbs. Exports of Pakistan teas during the month of April this year amounted to 730,202 lbs., as compared with 2.09 million lbs. in April, 1953. Exports to U.K. alone from these three tea areas during the aforesaid periods were as follows:

(In million lbs.)

	1954	1953
North Indian	3.64	13.71
South Indian	9.46	8.46
Pakistan	0.19	0.46

It will thus be seen that supplies to London are very much lower than a year ago. This shortfall in supplies, in the face of increasing consumption, has created an acute scarcity of stocks in the U.K. Stocks in that country at the end of May amounted to no more than 94.6 million lbs. which, at the present rate of consumption—including re-exports—of about 10 million lbs. per week, amounts to less than 10 weeks' requirements. This stock is said to be even below the lowest level to which stocks normally fell in the pre-war days. But it will not be before August that an appreciable quantity will flow to London.

Merchants and blenders are, therefore, worried over the supplies for the next two months, although there will be some supplies from Ceylon and other producing countries in the meantime. Until then, prices will remain firm. The trend, thereafter, will depend on not only the North Indian tea crop but other producing countries. The present high prices of tea are encouraging

(Continued in previous column)

some of the producing countries, which are not members of the International Tea Agreement, to launch upon schemes for expanding production. East Africa and Rhodesia, for instance, where suitable free-hold land is said to be available at about Rs. 80 per acre, are planning large extensions. These plantings may not affect the tea market in the next few years, but the problem of overproduction may arise thereafter. At the same time, consumption is rising not only in the U.K. but on the Continent and in the U.S. Notwithstanding the rise in prices in recent months, tea is still competitive with other beverages. So the present level of tea prices is not likely to affect the rising trend of consumption.

The tea industry will, however, do well to take care that the price of tea does not become too high to invite consumer resistance. The industry should also keep in mind the three major disasters which had befallen it during this century. It is essential for producers to ensure that enough tea is produced to keep the price of this commodity at a level which will maintain its popularity with the public.

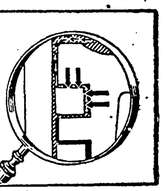
How oil makes an inferno useful!

Look inside a big Diesel engine – and you find an inferno of terrific heat.

Scorching temperatures and the actual flames generated inside the Diesel create the severest tests for oil. Not only is it important to prevent metal-to-metal contact between piston rings and cylinder wall, but the oil must also *seal in* the gases to save power.

The makers of Gargoyle lubricants were the first to lubricate Diesel engines correctly. Now, there are specially made oils for every type and size of Diesel. Gargoyle oils work on the principle which has proved to be the most vital factor in Industry: the *right* oil, in the *right* place, in the *right* way. 88 years of experience has shown them how!



Temperatures can go as high as 3,500 degrees Fahrenheit inside a Diesel engine. No wonder experience was needed to develop Gargoyle lubricants for Diesel engines!

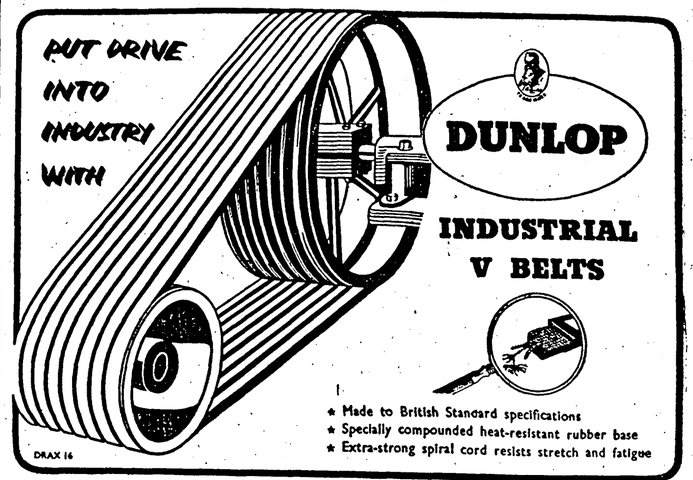
Let this experience benefit you. Standard-Vacuum Industrial Lubricants give you correct lubrication with four special advantages:

- Reduced power consumption;
- More continuous production;
- Decreased maintenance;
- Lower lubrication costs.

Gargoyle Lubricants

STANDARD-VACUUM OIL COMPANY
(The Liability of the Members of the Company is Limited)

V.8522



DEVELOPMENT OF MINERALS IN INDIA

AMBITIOUS PROGRAMME OF PROSPECTING IN OFFING

THE details of what transpired at the second meeting of the Indian Mineral Advisory Board, held at Ranchi on the 3rd inst., are not available. From a review of the brief reports appearing in the daily Press, it would appear that the Board discussed, *inter alia*, (1) the possibility of developing non-ferrous mineral deposits like copper, zinc and lead, (2) the case for the establishment of beneficiation plants for upgrading mineral ores in certain selected areas, (3) the establishment of a ferrous-manganese industry, and (4) the draft Mineral Conservation and Development Rules, 1954.

Presiding over the Conference, Mr. K. D. Malaviya, Deputy Minister for Natural Resources and Scientific Research, disclosed that his Ministry was working out, in close collaboration with other Ministries, an ambitious programme for prospecting. He further stated that the Planning Commission had been kept informed, members of the *Lok Sabha* had been consulted and the representatives of the State Governments were called upon to submit suggestions for a comprehensive programme for survey of mineral resources. The drilling section of the Indian Bureau of Mines was being rapidly expanded and provided with large drills. A programme of rapid survey would be drawn up in a few weeks.

Dealing with the work so far carried out, Mr. Malaviya stated that, in 1953-54, the Geological Survey of India had systematically surveyed nearly 10,000 sq. miles. The mapping of the manganese belt of Madhya Pradesh had now been practically completed. Detailed mapping of the copper belt of Singhbhum and the copper ore deposits in Daribo in Alwar had commenced. Geophysical prospecting was being progressively taken up by the Geological Survey of India.

Location of Deposits

Adverting to the location of mineral deposits, especially to the examination of foundation for large structures and the subsoil, Mr. Malaviya said that the Indian Bureau of Mines had already done an appreciable amount of work. Detailed prospecting, conservation and developmental programmes were being handled by the Bureau. It had also completed inspection of the manganese mines of practically the entire country, the chromite mines in Bihar, Orissa, Mysore and Madras, the asbestos mines in Andhra, Mysore and Bihar, the copper mines in Bihar and Himachal Pradesh and the bauxite mines in Bombay. The gold mines in Mysore had also been visited, with a view to assessing the possibility of working low-grade ores. Of special significance was the research done by the Bureau into methods of beneficiation of low-grade manganese ores from Madhya Pradesh, Bombay and Orissa. Work on this was still proceeding, but it was gratifying that mine-owners had already started setting up heavy-media separation plants. One such plant had been set up in Madhya Pradesh at a cost of Rs. 23 lakhs.

Referring to the depression in prices of manganese ore and mica, Mr. Malaviya said that India was particularly interested in maintaining a high level of export trade in manganese ore and mica, because of the very large number of workers and capital involved in their mining. The fall in demand for mica splittings and manganese ore was causing concern and it was necessary, therefore, to explore ways and means of finding greater use of these minerals in the country itself.

Proceeding further, he disclosed that steps were being taken to implement the recommendations of the first meeting of the Board held last year. These recommendations were: (1) Central co-ordination of mineral development to ensure maximum production, (2) conservation and utilisation of minerals, (3) a flexible export policy, and (4) the revision of rates of royalty and dead rent. A committee to examine the rates of royalty and the dead rent had been set up. Some of the sub-committees set up to deal with groups of minerals had already submitted their reports, while the recommendations of sub-committees to deal with manganese, mica and china-clay were awaited.

The need for developing non-ferrous metal deposits requires no emphasis, for India is deficient in some important non-ferrous metals like copper, lead, zinc, aluminium and tin. There are several abandoned copper mines, in the U.P., Bihar, Andhra, Madhya Pradesh and Mysore. Most of these were actively worked in the past, as is evident from the extensive workings and the voluminous slag heaps. With the present improved metallurgical practices, it is now possible to work copper ores containing as low as 0.2 per cent. copper, as compared with the previous requirement of 2.5 per cent.

Regarding lead and zinc, only the Zawar mines in Rajasthan are being worked. Even though the mines were developed by the Geological Survey of India during the last war as an emergency source, the present production by concessionaires—about 200 tons of run-of-mine-ore per day—is not economic. To step up this production to 1,000 tons per day, it is necessary to prove at least 8 to 10 million tons of ore in deposits. Detailed investigations are, therefore, an essential pre-requisite for the development of these mines.

Beneficiation

The establishment of beneficiation plants for upgrading mineral ores, in certain selected areas is long overdue. Because of the stoppage of stock-piling programme by the U.S. and the removal of export restrictions by the U.S.S.R., Indian low-grade manganese is today facing a falling market. Upgrading this ore is the only solution and the efforts of the Indian Bureau of Mines have resulted in the establishment of a Rs. 26-lakh beneficiation unit in Madhya Pradesh. A second plant will shortly be erected in this area. The Bureau of Mines and the National Metallurgical Laboratory are now engaged in evolving cheaper processes for medium-sized industrial units. The Bhandara district in Madhya Pradesh, Keonjhar in Orissa, Visakhapatnam in Andhra and North Kanara region in Bombay are suitable for the erection of manganese beneficiation plants.

India produces 16,000 tons of chromite per year. The major part of the production is exported, practically all of it being high grade ore. Since India's resources of high-grade ore are limited, there is scope for setting up beneficiation plants for improving the low-grade chromite in Bihar and Madras.

The present production of ilmenite in India is of the order of 250,000 tons. The whole of this comes entirely from Travancore-Cochin. There are important deposits of ilmenite along the Madras, Orissa and Bombay coasts also. Suitable place for beneficiation of plants are the coastal areas of Ratnagiri-Malgund in Bombay and of Andhra and Orissa.

There is great need for establishing a ferro-manganese industry, for the earnings from ferro-manganese are much greater than those from the raw ore. The facilities for producing ferro-manganese are now more easily available than at any time before. The raw materials required for the manufacture of ferro-manganese are manganese ore, coke and limestone, all of which are available in considerable quantities in India. Further, the supply of cheap electrical power, essential for electric furnace production of ferro-manganese, will be available from the various hydro-electric and thermal power projects which are fast coming up. Besides the high-grade manganese ores in different areas, India has vast deposits of low-grade manganese ores, especially in Orissa and Bombay which are fortunately very low in phosphorus, an essential requirement for high-standard ferro-manganese. India today imports about 300 tons of ferro-manganese at a cost of Rs. 1,200 per ton. The estimated cost of production of standard ferro-manganese in electric furnaces in India is said to be approximately Rs. 600 per ton.

Conservation

The Mines and Minerals (Regulation and Development) Act, 1948, empowers the Central Government to make rules for the conservation and development of minerals. The Mineral Conservation and Development Rules, 1954, have been drafted under the powers of the Act. An earlier draft of these rules was circulated to State Governments and representatives of mining industry and the present rules have been evolved as a result of various amendments, changes and alterations suggested by them.

Briefly, these rules will enable the Director, Indian Bureau of Mines, to collect necessary information regarding any mine, to issue instructions to mine-owners for rectification of any defect in the mining and quarrying operations and to direct improvement in the mining methods. The Bureau of Mines will also be authorised by the rules to collect samples from mines and new bore holes. The Central Government will be authorised by the rules to review or revise any restriction order issued by the Director, Indian Bureau of Mines, and to prohibit mining operations in any area. Besides, it has to specify the agency by which minerals can be worked in this area. A draft "Manual of Instructions" has been prepared to afford guidance to the mining industry in modern methods of mining technique. This, it is hoped, will avoid too frequent recourse to the issue of instructions.

INDIA'S FIRST SUPER CONSTELLATION ARRIVES

Air-India International's "Empress Nurjehan," renamed "Rani of Jhansi," VT-DGL, landed at Santa Cruz airport at 11.20 hours (I.S.T.) on Sunday the 6th inst. The "Rani of Jhansi" is the largest of the aeroplanes that have ever landed at Santa Cruz airport. It has a graceful dolphin shape and looked magnificent in its white, red and silver coat. In spite of its 183,000 lbs. all-up weight, it is both graceful and beautiful. It is over 113 ft. long and has a wingspread of 123 ft. The "Rani of Jhansi" left Bombay on a proving flight to Cairo on the 8th inst. and returned on the 10th. It will fly the London service via Cairo, Geneva and Paris on a weekly frequency commencing from the 19th inst. It will carry a total of 70 luxury and tourist class passengers. Air-India International's Super Constellation frequency of service will be increased to two flights a week when the second aircraft arrives at Santa Cruz in July.

KUTCH CAPITAL TO BE CONNECTED WITH M.G. LINE TO DELHI

The Railway Board has approved a scheme to convert the 30-mile narrow-gauge line from Bhuj, capital of Kutch, to Adipur into metre-gauge and to connect it with the Gandhidham-Deesa line which joins the main line to Delhi. The work on this scheme, which is estimated to cost nearly Rs. 47 lakhs, will begin during this financial year.

Railway transport facilities in Kutch State are far from satisfactory. Bhuj is at present served by a narrow-gauge line which links it with Adipur, six miles from the metre-gauge railhead at Gandhidham, the growing colony of displaced persons. This involves transhipment of goods and passengers and road transport is necessary between Gandhidham and Adipur. When Kutch became a centrally administered State, it was realised that the working and maintenance of the isolated small narrow-gauge line was costly.

To overcome these difficulties and to provide direct railway facilities from Bhuj to the rest of India, it has been proposed to extend the metre-gauge line from Gandhidham to Adipur and to convert the 30-mile Bhuj-Adipur narrow-gauge line into metre-gauge. This will make the through movement of goods and traffic to Bhuj possible and will also help the State authorities in moving food-grains, fodder and other essential goods from their central depots at Bhuj during scarcity times. When the work is carried out the usual passenger amenities will also be provided for the convenience of the public.

WORLD OIL POSITION

INCREASING ACTIVITY IN 1953

THE year 1953 was characterised by increasing activity in the world's mineral oil industry. According to the Royal Dutch Petroleum Company, world crude oil and natural gasolene production reached a level of over 5,000 million barrels, as compared with about 4,740 million barrels in 1952. There was also a substantial increase in refining capacity. Of the world's output, the U.S. accounted for more than 50 per cent.; to be precise, its output was 2,601.9 million barrels.

The following table gives the world oil output in 1953, as compared with that in 1952:

World Production of Crude Oil and Natural Gasoline

(Millions of barrels)*

Country	1953	1952
North America—		
United States	2,601.9	2,513.4
Canada	82.0	62.3
Mexico	73.1	78.4
	2,757.0	2,654.1

Grand total	5,020.8	4,739.5

* According to the specific gravity of the crude oil, one metric ton varies from 6.5 to 7.5 barrels.

There was also a rise in the consumption of oil, the extent of improvement being approximately the same as during 1952. The pace of rise, however, varied as between the products. The demand for gasolene, kerosene and gas/diesel oil, for instance, increased more than that for fuel oil. But, as crude oil production and refinery capacity was in excess of immediate needs, there was a general tendency for available supplies to exceed demand. Even in the case of aviation gasolene, supplies of which had been difficult after the shut down of the Abadan refinery, sufficient quantities were available towards the end of the year.

A feature of the year under review was that, as expansion in the supply of oil products surpassed the growth in demand, there was greater competition. The Soviet sphere re-emerged as a supplier of oil products to Western countries, but the volume of oil involved was relatively small.

There was a general willingness on the part of Governments to provide importers with the dollar or sterling exchange to pay for oil supplies. With the continuance of foreign aid by the U.S., albeit on a smaller scale than in the preceding year, the problem of finding the dollars necessary to pay for their vital supplies, including oil, was no more serious than it had been in the past. There was, however, a general shortage of sterling in some countries.

The basic U.S. prices of crude oil and oil products in the Gulf increased in summer in time with the rise in the general level of prices in the U.S. since the end of extensive price controls in that country. The prices, however, weakened towards the end of the year. Nevertheless, as compared with other main commodities entering international trade, they varied relatively little during 1953.

The addition to the world's tanker fleets of new vessels was of the order of 3¾ million tons d.w.t. This was greater than in any previous year and it is expected that this rate of building will be maintained during the next two years. Consequently, conditions in the tanker fleet market were depressed in 1953. Freight rates in the middle of 1953 reached their lowest levels since 1949. It is true that some seasonal hardening occurred towards the end of 1953 and in the early part of 1954. But, since then, these rates have again softened and the prospects for the remainder of the year are not, in the opinion of the Royal Dutch Petroleum Company, encouraging. Over the year, some 750,000 tons were scrapped, but the large amount of new tonnage at present on order, most of which is for delivery within the next three years, suggests that the surplus position can only be relieved by a still more drastic scrapping of the less efficient vessels. It may be noted that the recurring peaks of high tanker freights in the post-war period resulted in an artificial increase in the life of tankers, the average age of obsolescence reaching the quite abnormal one of 30 years. But, with the present surplus of tankers and current low rates, combined with growing competition from superior modern vessels, the owners, we are told, will have to revise their views on the economic life of the less efficient vessels.

SABARMATI STATION YARD TO BE REMODELLED

It has been decided to remodel the Sabarmati Station yard near Ahmedabad and to double the Ahmedabad-Kalol section of the Ahmedabad-Delhi metre-gauge line. Work on the two projects will be taken in hand during the current financial year. It is estimated that the two projects will cost Rs. 2,46,00,000. When they are completed, movement of goods traffic in the area will be facilitated and it will be possible to run a few more suburban trains to meet the requirements of Ahmedabad and its growing suburbs.

The Sabarmati yard, about four miles from Ahmedabad, is of great importance for the transhipment of goods from the broad-gauge to the metre-gauge. The present yard has reached its capacity for handling goods traffic. As a result of this, public demand for speedier transhipment of goods and for increased handling of goods traffic cannot be met. It has, therefore, been decided to increase the capacity of the yard and provide more facilities for transhipment of goods at an estimated cost of Rs. 1½ crores.

Passenger traffic on the Ahmedabad-Kalol section, a distance of about 17 miles, is very heavy and there is hardly any scope for additional traffic on the section. Due to the rapid growth of suburbs around Ahmedabad in the past decade or so and the existence of a number of metre-gauge branch lines between Ahmedabad and Mehsana, the need to double this section of the metre-gauge line has been long felt. Owing to the heavy passenger traffic on the Ahmedabad-Kalol section, goods trains have very often to be detained on the way to allow passenger traffic to move. It has, therefore, been decided to double, in the first instance, the intensively worked Ahmedabad-Kaloi section at an estimated cost of Rs. 96 lakhs. This will incidentally be the first section to be doubled on the Delhi-Ahmedabad line. It is expected that the movement of both passenger and goods traffic in the area will improve and the railway operational facilities at Sabarmati will increase when these projects are completed.

EXPANSION OF RAILWAY WORKSHOPS IN ASSAM

Facilities for the training of trade apprentices in the railway workshops at Dibrugarh in Assam are being expanded by the railway administration. The number of apprentices in the workshop is being increased. It has also been decided that one-third of the total number of apprentice mechanics and apprentice train examiners required by the North-Eastern Railway should be selected by the Calcutta Railway Service Commission, so that applicants from Assam may have increased opportunities for railway service.

The railway administration proposes to develop the Dibrugarh workshops as far as possible. Arrangements have also been made to replace a few machines which had been removed from these workshops to the workshop at Gorakhpur. The replacement had been undertaken in the interest of rationalisation and the development of the North-Eastern Railway as a whole and not in order to reduce the importance of the Dibrugarh workshops. A new power house has already been built at Dibrugarh.

The Bongiagaon workshops are proposed to be converted into a central saw mill and transportation workshop by providing suitable machinery and plant. A proposal for redistribution of work between the Gauhati, Lumding and Pandu workshops to increase overall efficiency is under consideration. Retrenchment of staff is not likely in the process of this redistribution.

The railway administration has offered to transfer the machines in the railway repair workshop of the old T. B. Railway at Tezpur to the Assam Government for the use of the Jorhat Technical Training School. A decision on this will be taken after the State authorities have communicated their willingness to take over the equipment.

NEW PRODUCTS AND PROCESSES

Cheap Solar Cooker

A SIMPLE, inexpensive solar cooker has been developed in the United States by Dr. Maria Telkes, a solar energy expert and research associate at New York University, who has already built a sun-heated house. The sun stove is made of a closely insulated box, a glass window, a set of four simple mirrors and a special heat-absorbing chemical. It is expected to cost less than $5 to make, and develop a temperature of at least 350°F. within half an hour.

Drug to Control Bleeding

A new drug, Arfonad, developed by the Hoffman-La Roche Pharmaceutical Company, is said to permit surgeons to almost completely control bleeding in difficult operations of the head, neck, and chest. The drug drastically reduces blood pressure, enabling doctors to operate and avoid potentially dangerous blood transfusions while eliminating post-operative shock. Doctors from two English hospitals report they have used Arfonad successfully in 300 cases of "bloodless" surgery.

New Clinical Thermometer

A new clinical thermometer described as more accurate and faster than the present mercury type has been developed by the U.S. Army. Called "Swiftem," the new development represents "the first change in clinical thermometers since the mercury column type was introduced in 1867." It is reported that the new device uses metals the ability of which to conduct an electric current varies according to temperature—the higher the temperature, the lower their electrical resistance.

Spectroscope to Measure Elements

An apparatus that measures distances smaller than one-trillionth of an inch was demonstrated recently at the Harvard Medical School in Boston, Massachusetts. The device is the newest model of the spectroscope which identifies elements by their spectra or characteristic light rays. The spectroscope is expected to reveal the part played by minute quantities of some 30 elements, mostly metals, in the economy of life. Harvard scientists believe the spectroscope will provide clues to the causes of heart disease, cancer, high blood pressure, and the aging process of man.

Bowlgour—A Rice Substitute

Bowlgour, a rice substitute made of wheat, is now widely in use in the Middle East countries. The product is made by boiling wheat, drying it in the sun, removing part of the bran by rubbing and then cracking the wheat into a coarse or fine meal. The coarse types are cooked in much the same way as rice, and the finer processed meal is cooked with meat or eaten as porridge.

Bowlgour is made by some small millers in California and New England, as a speciality product for use by people of the Middle East living in the U.S.

The U.S. Department of Commerce has now under contemplation an experimental programme for manufacturing and selling Bowlgour in the Far East. The programme involves the setting up of a pilot plant to manufacture the product for sale through commercial channels. The object of the programme is to provide a new market for the large surplus stocks of wheat in the U.S. Tested on a small scale in the Women's College at Madras, Bowlgour is stated to have yielded favourable results.

Largest Ever U.S.-Manufactured Helicopter

A new helicopter was demonstrated recently that experts believe might well revolutionise air transportation. The new machine, the largest ever put into regular production, can carry up to 35 passengers (or 26 men and 3 jeeps) between points more than 200 miles apart. Developed for the U.S. Marine Corps, there will also be commercial models of the helicopter, which has been designated XHR2S. The XHR2S is the first helicopter to be equipped with retractible landing gear and rotors that fold automatically so that the craft can be easily stowed in hangars or aircraft carriers. The rotors have de-icing devices for flights in cold weather and the craft carries an automatic pilot for instrument flight.

Powered by two piston engines similar to those used in the famous F47 Thunderbolt fighters in World War II, the XHR2S's top speed is over 150 miles per hour. Commercial models of the machine will use gas-turbine engines. The remarkable feature of the new craft is that virtually all of its fuselage is potential passenger space. The engines are placed outside, their enclosures jutting out from the ends of short fixed wings at the top of the fuselage. The power of both engines is transmitted to one five-blade rotor and a four-blade rotor at the tail of the ship. The landing gear retracts into the shelter that encloses the engines when the helicopter is in flight.

INVESTMENT OF INSURERS' FUNDS

SHROFF COMMITTEE FAVOURS RELAXATION OF RESTRICTIONS

THE restrictions on insurers' freedom to invest their funds were imposed by the Government, as is well known, after a good deal of discussion and consultation with the interests concerned. Even so, it is necessary that these restrictions, however well-intentioned they may be, should be kept under constant scrutiny, in order to see that they do not whittle down opportunities for safe and profitable investment. From this point of view, it is gratifying to note that the Committee on Finance for the Private Sector (Chairman: Mr. A. D. Shroff) gave its thought to this subject while drafting its report which was released last week.

The chief object of the restrictions on insurers' investments, imposed under sections 27 and 27A of the Insurance Act, is to ensure that the policyholders' money is safely invested. Under section 27 of the Act, the funds of life assurance companies, as defined in that section, are required to be invested in Government securities to the tune of 25 per cent. and in Government or other approved securities to the tune of a further 25 per cent. The balance (that is, 50 per cent. of the funds) is to be invested in approved investments, specified under section 27A. These restrictions have been criticised on the ground that they do not permit the insurers to use their funds to aid the industrial sector. This point was effectively brought out by the Indian Life Assurance Offices' Association in its memorandum to the Shroff Committee. The Association said:

"By their very nature of business, insurance companies have to invest in loans on policies, land and house properity and maintain uninvested assets in agents' balances, outstanding premiums, outstanding interest, cash, stamps, etc., the total of which would come to a little over 20 per cent. Thus, between the restrictions of investment in Government and approved securities and in these types of investment, only a very little margin is left for insurance companies to invest freely in industrial shares and debentures. To enable life insurance companies to invest larger amounts in industrial shares and debentures, we submit that the provisions of section 27 of the Insurance Act should be amended so as to require life insurance companies to invest their funds as follows: 20 per cent. in Government securities and 20 per cent. in Government or other approved securities and the balance of 60 per cent. in other investments as per section 27A."

The Shroff Committee, on its part, points out that, even within the permissible limits of the Insurance Act, there is still fairly large scope for investment of life funds in industrial shares and debentures. The Committee notes that insurance companies "have come to play an increasingly useful role in the provision of industrial finance through their investment in the shares and debentures of well established companies." It is, however, convinced that, as compared with insurance companies in the more industrialised Western countries, their counterpart in India invest a comparatively small proportion of their assets in shares and debentures. Referring to the insurers' role as a source of industrial finance, the Committee says:

"In India, though life insurance business is relatively underdeveloped, insurance companies have been playing an increasingly important role in recent years in mobilising savings and making them available for investment in industries. According to the figures furnished to the Committee by a leading firm of stockbrokers, of the issues made through them of debentures and preference shares in the Calcutta market during the last three and a half years, insurance companies and banks have taken up 79.5 per cent. while investment companies and provident fund and similar institutions have subscribed 12.0 per cent. and individual investors only 8.5 per cent."

The Committee has next examined the nature of the existing restrictions on insurers' investments. It says:

"We are aware that many of these restrictions were imposed on the recommendations of the Sir Cowasji Jehangir Committee, but feel some of these have proved very onerous in practice and that they could be relaxed without prejudice to the safety of the insurers or that of the policyholders. To enable insurance companies to play a larger part in meeting the growing financial needs of the private sector, we recommend that section 27 may be amended so as to require the companies to invest their funds as under: 25 per cent. in Government securities, 20 per cent. in Government or other approved securities and the balance 55 per cent. in other investments specified in section 27A.

"We are further of the opinion that the restrictions contained in sub-sections (3) and (4) of section 27A, which require that not more than 2½ per cent. of the liabilities should be invested in any one company, restrict the investment activities of insurance companies. We feel that, without prejudice to the underlying object of these sub-sections, which is to prevent interlocking and acquisition of control over other companies, the limit of 2½ per cent. referred to in both the sub-sections 27A (3) and (4), and of 2 per cent. prescribed in the former sub-section can be raised to 5 per cent."

If these suggestions were implemented, it would mean a slight improvement on the present position. It would increase the scope for insurers' investments in approved investments from 50 to 55 per cent. of their funds, and for investment in any particular company's capital structure from 2 per cent. to 5 per cent. of that structure. Perhaps, the Committee is unwilling to recommend further relaxation of restrictions, in view of the fact that there have been several cases of improper use of funds by insurers. It is only natural that the restrictions should be relaxed gradually. The Committee's modest recommendations in this direction deserve to be implemented by the Government by amending the Act suitably.

Another important issue is the presence of several anomalies in the Insurance Act in regard to insurers' investments. The Committee says: "It has been represented to us by insurance interests that there are a number of anomalies in the Insurance Act which inhibit investment by insurance companies in the shares and debentures of industrial concerns." It would appear, for instance, that the shares of societies, registered under the Co-operative Societies Act and guaranteed as to payment of interest and capital by State Governments do not come under the definition of approved securities. The other anomalies have been listed in a memorandum submitted by certain insurance interests to the Committee. This memorandum says:

"(i) Shares of a society, registered under the Co-operative Societies Act, guaranteed by the State Governments as to payment of interest and repayment of share capital should be classified as approved security by suitable amendment to the definition of approved security [Section 2 (3)].

"(ii) As the Act stands at present, an insurer cannot apply for debentures of companies which do not come within the purview of section 27A (i) (f), (g) and (h), even after obtaining requisite consent of the Directors under section 27 (A) (2) of the Act. This, we understand, is due to the fact that an investment in non-approved debentures is considered a loan to the company which is prohibited under section 29 (3). Suitable amendment to section 29 (3) be made so as to permit insurers to apply for a debenture issue which is not an approved investment.

"(iii) Debentures (a superior security) are at times non-approved although preference shares and/or ordinary shares (an inferior security compared to debentures) are an approved investment. Suitable amendment be made in section 27A (i), (f) (g) and (h) to remove this anomaly.

"(iv) According to section 27A (i) (g), the book-value or market value, whichever is less, of the fixed assets offered as a security to debenture-holders should be at least three times the value of debentures. Conventionally, by 'book-value' is meant the cost of assets less depreciation. In the case of well managed companies, the block is always well depreciated and the provision in clause (g) of section 27 (A) (i) will operate against such companies. Suitable amendment be suggested to reduce the coverage, say, to two times in such cases.

"(v) Usually, a new debenture issue is made to finance the cost of fixed assets. As the Act stands at present, proposed addition to fixed capital expenditure cannot be taken into account for ascertaining coverage stipulated by section 27A (i) (g). We suggest that, by a suitable amendment intended addition to fixed assets may be taken into account for ascertaining coverage (subject to adequate safeguards regarding utilisation of money borrowed for the purpose of additions to fixed assets).

"(vi) Under section 27A (i) (1) of the Act investment in ordinary shares is an approved investment provided a dividend of 4 per cent. has been paid for the years stipulated in the Act. The Act is, however, silent on the point whether dividend should be taxable or tax-free. We suggest that a suitable amendment may be made so as to fix minimum dividend at 4 per cent. taxable or 3 per cent. tax-free.

"(vii) Investment in Government guaranteed railway shares (which are trustee securities) should, by suitable amendment, be classified as approved investments."

It will be seen from what is stated above that the nature of some of these anomalies is to defeat the very object of the Act, namely, to provide for the safety of insurers' investments. It is, therefore, to be hoped that the whole issue will, as the Committee suggests, be examined by the Government in consultation with insurance interests "with a view to removing the anomalies in the provisions of the Insurance Act."

MERGER OF COOPERATIVE INSURERS

DECISION DEFERRED TILL AUGUST

THERE is a growing impression in this country that, although the number of insurance companies is certainly not large for a country of India's size, the number is large enough for the available business. Competition for securing business, life as well as general, is keen and is becoming keener every day. In this process, small and uneconomic insurers are bound to be weeded out. While this is the position of all insurers in general, the co-operative insurers, in particular, are faced with yet another difficulty. They face the prospect of more co-operative insurance bodies being set up by State Governments. In this connection, it is gratifying to note that they wish to forestall any further competition by organising themselves in the most efficient manner possible. Proposals for attaining the maximum degree of co-ordination in the activities of the various co-operative insurance societies in India were considered at a meeting of the various societies held recently at Ootacamund, at which the Registrars of Co-operative Societies, Bombay and Madras, were also present by invitation.

At the Ootacamund meeting, two main proposals were discussed. The first proposal is to merge all the existing co-operative insurance societies into two large societies—one to transact life and the other to transact general insurance business. One of these will be located at Bombay and the other at Madras. The second proposal is to retain the individuality of each insurer but to create a federal organisation which will frame the general policy and will be in charge of the more important functions, leaving the details to the individual companies. If the first proposal is accepted, then it is understood that the State Governments will be prevailed upon to agree that they will allow no other co-operative insurance company to be started. In order to see that local initiative is not stifled, a local board will be set up in each State to supervise insurance work. The idea behind both the proposals is to ensure that co-operative insurers are enabled to give the widest possible coverage.

No final decision has yet been taken on either of the two proposals. The whole issue has been referred to a committee, the members of which are:

Mr. J. C. Desai, Chairman of the All-India Co-operative Fire and General Insurance Society of Bombay; Mr. A. L. Chandavarkar, Chairman of the Bombay Co-operative Insurance Society; Mr. L. N. Gupta of Hyderabad; Mr. Madhava Rao Anwari, representing the Hyderabad Co-operative Fire and General Insurance Society, and Mr. T. M. Chinniah Pillai, Chairman of the Co-operative Fire and General Insurance Society, Madras, and Mr. G. H. Thakur, General Manager of the Bombay Co-operative Insurance Society.

It would appear that the Committee will prepare a draft scheme for co-operative action by all co-operative insurers, and that the issue will be considered at another meeting of the interests concerned, scheduled to be held at Hyderabad in the middle of August. The merger move on the part of co-operative insurers, in whose ranks there are many small-sized societies, is a commendable one. And, if it succeeds, it will no doubt strengthen their position both intrinsically and in relation to other insurers. The outcome of the next meeting will, therefore, be watched with interest.

JAYABHARAT INSURANCE CO., LTD.

An all-round improvement in premium income has been recorded by the Jayabharat Insurance Company, Ltd. (General Manager: Mr. Rasiklal C. Parikh, Bombay), during the year ended 31st December, 1953. The Company is a composite office transacting fire, marine and miscellaneous business, besides life business. The premium income in the general department moved up from Rs. 46.32 lakhs in 1952 to Rs. 49.48 lakhs in the year under review. New life business improved from Rs. 77.25 lakhs to Rs. 85.43 lakhs, bringing the total assurances in force, at the end of 1953, to Rs. 3.13 crores. Life premium income advanced from Rs. 13.55 lakhs to Rs. 14.91 lakhs. Despite the improvement in the Company's business operations, the profit, carried to the appropriate account, was somewhat lower at Rs. 4.39 lakhs, as against Rs. 5.63 lakhs in the previous year. The Directors have recommended a dividend of Rs. 3 per share (Rs. 50 paid-up), the same as was paid last year.

In the fire department, the net premium income amounted to Rs. 33.22 lakhs, as against Rs. 32.33 lakhs in the previous year. Both claims at Rs. 12.67 lakhs, and expenses, including commission, depreciation and foreign taxes, at Rs. 17.21 lakhs, were higher than in 1952, when they were Rs. 11.68 lakhs and Rs. 13.71 lakhs respectively. The underwriting profit in the department, therefore, declined by Rs. 5.20 lakhs to Rs. 3 lakhs. It may be mentioned here that the Company has been

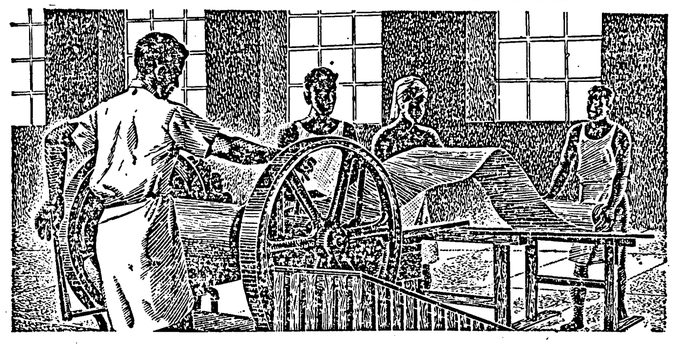
How banking serves the PLYWOOD INDUSTRY



TIMBER suitable for plywood and tea chests is plentiful on the south-western coast, and the plywood industry in India is expanding every year. Production capacity has doubled since 1948, rating over 150 million square feet per annum now. Out of India's 53 plywood factories, more than half are in Malabar, Cochin, Travancore and Bangalore.

Banking has greatly helped in the rapid growth of the plywood industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the plywood industry.

We at Palai are proud that so many leading plywood manufacturers of South India employ the *complete* banking service we offer.

Current Accounts—Demand Drafts—Telegraphic Transfers—Investments—Letters of Credit—Bill Collection—Deposits—Loans & Overdrafts—Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.
(Incorporated in Travancore-Cochin with Limited Liability)

Head Office: PALAI, TRAVANCORE.
Branches at: Madras, Cochin, Quilon, Trivandrum, Alleppey, Mangalore, Bangalore, etc. *Also at:* Delhi & New Delhi.

BANKING IN THE UNITED STATES

AN OUTLINE OF THE SYSTEM

(By CRAWFORD WILLIAMS)

LIKE many other nations, America has a vast banking system suited to the needs of every earning pocket which serves even the smallest communities in the country.

The importance of modern banking as the economic balance wheel in everyday life is well known. John Smith, for example, may not have a bank account, but indirectly he is very much affected by banks, whether he realises it or not. If he has a job, his keeping it may depend upon the ability of his employer to borrow money to keep his business going; to advance in his job, he may have to depend upon the ability of his employer to finance his business through a bank. And if he has no job, getting one may depend upon the ability of business to expand by an issue of stocks or bonds; and business depends on bankers to market these to the public and to invest in them.

American banking differs from financial systems of most other countries, in that all the 14,644 banks in the United States are privately owned and operated. However, they are supervised by Federal or State banking departments, and banking laws are comprehensive enough to protect the interests of the depositors.

U.S. banks are chartered either by the Government of one of the 48 States in which they are situated or by the Federal Government. There are 9,575 banks with State charters, while 4,876 are chartered by the Federal Government and are called national banks.

In addition, 5,887 branches are operated by these parent banks. Together these 20,531 banking offices make financial services available to the smallest communities in the country. In the management and operation of these banks, a working force of more than 75,000 officers and 300,000 staff members is employed.

The institution of State and federally chartered banks is known as the dual system of banking and, while supervisory regulations of the systems are similar and insure a uniformity of banking service over the entire country, the division of authority provides checks and balances that prevent abuses and inequities that might arise if authority were vested in one source.

Banks are regarded as public utility-service businesses and, as such, are subject to regulation, inspection and general supervision by the appropriate Government (State or Federal), as are the railroads, other systems of public transportation and communications in the United States.

Banks Render Variety of Financial Services

As independent and privately owned institutions, however, American banks, as do those in India, compete with one another for business. Results of this free competition are reflected in the variety of financial services they make available to the public. American banks provide a wide variety of essential services in every community in which they operate, relating these services directly to the needs of the community.

The banks' funds, constantly being used by the Government and by the people of the United States, are largely accumulated from the savings of individual citizens and business enterprises. Savings, demand and other deposits in U.S. banks totalled $193,336 million in June 1953. The banks had total assets of $212,431 million, including $16,424 million in capital account.

In addition to the ordinary banking services, many American banks have incorporated in them, or affiliated with them, trust institutions that offer professional counsel to executors of estates who are inexperienced in financial matters. Usually, the trust department is also equipped to take over management of an estate, in the interest of the beneficiaries, when asked to do so. These departments act most often on behalf of widows, orphans and educational institutions.

Through note departments, banks provide still another service—that of collecting agent for an individual or firm who has sold property and is receiving payment on a monthly or quarterly basis. They accept payments or deposit the money to the customer's account for a small fee, usually 25 cents for each $100 collected.

There are many other special banking services, the character of each depending on the needs of the community. Some of the larger banks employ experts on real property, construction and home financing to help their customers plan homes. Banks in rural communities have special departments to advise farmers on problems of financing, management and soil conservation.

Without the co-operation of banks, the United States would have had a more difficult time in financing World War II and the tremendous costs of relief and rehabilitation during the post-war period. It is estimated that banks represented the U.S. Government in issuing more than 60 per cent. of all the War Bonds and the Savings Bonds sold. Banks also represented the Government in providing a service of ration coupon banking, which made it possible to administer the rationing programme more easily when it was in operation.

Deposits Loaned for Many Purposes

Funds placed with the banks by depositors are loaned for many purposes. Through loans from banks, individuals are assisted in purchasing homes, farms and businesses. Banks also extend credit for personal loans, for the purchase of automobiles, furniture and other types of durable consumer goods. Commercial and industrial enterprises may obtain credit to facilitate their operations or permit expansion. Through the investment of deposits in Government bonds, the banks assist the Government in financing many of its functions.

In 1945, banks had more than $100,000 million of their depositors' money invested safely in Government securities, and only $30,000 million out on loan to their customers. Now, it is the other way round. In October 1953, banks had $78,000 million on loan and only $73,000 million in Government securities. In other words, bankers are "back in the business of banking again", as one of them put it.

The privately owned banks of the United States are deeply rooted in national tradition. Government regulatory measures, which strengthen the banking system as a whole, insure depositors against loss, and ensure uniform banking services throughout the country, evolved by gradual stages as the economy of the country became more complex and its communities and States more interdependent. But even the Federal Reserve Banks, empowered by Federal statute to wield great influence over the nation's economy, are privately owned banks operating under Government supervision.

The American banking system could be said to have begun during the Revolutionary War, when a Bank of North America was organised in Philadelphia in 1780 to finance the purchase of supplies and pay soldiers. State banks were organised in Massachusetts and New York about the same time. Banking was on an uncoordinated basis until the Civil War (1861-65) emphasised the need for an integrated banking system and caused the adoption by Congress of the National Banking Act of 1865. There has been a constant development of the system since.

The Federal Reserve System

As industry and commerce became worldwide, there was need for something like a central bank in the United States. This need was met in 1913 by the establishment of the Federal Reserve System which provides for an elastic currency, a means of rediscounting commercial paper and for the supervision of national banks, and serves as a place for the deposit of bank reserves.

The Federal Reserve System divides the United States into 12 districts, each of which has a Federal Reserve Bank with two branches. It is administered by a Board of Governors, composed of seven members appointed by the U.S. President for a term of 14 years. Assisting the Board is a Federal Advisory Council composed of 12 members. Each of the individual Federal Reserve Banks is governed by nine directors. Six of them, including three who are bankers and three who are not, are chosen by the member-banks in the Federal Reserve District, and three are appointed by the Board of Governors of the Federal Reserve System. Membership in the Federal Reserve System includes all federally chartered banks in the U.S. (4,876), which are required by law to be members, and many State banks and trust companies that have voluntarily applied for and been admitted to membership.

Capital stock of the 12 Federal Reserve Banks is owned by the member-banks. Each is required to subscribe to the capital stock of its respective Federal Reserve Bank an amount equal to six per cent. of the member-bank's paid-up capital and surplus. This stock may neither be transferred nor pledged for loans.

The Federal Reserve System is designed to stabilise the supply of bank credit and money in the United States. It holds the legal reserves of member-banks. It is the fiscal agent of the U.S. Government. It rediscounts loan paper of its member-banks and issues currency. It operates the principal system for the collection of cheques drawn on other banks. It transfers funds from one bank to another. It is the principal physical source of coin and currency, which it sells to, or receives on deposit from, member or non-member banks.

Through its power to specify the amount of required reserve to be maintained by member-banks and to set the rate at which loan paper will be rediscounted, the Federal Reserve System wields considerable influence over the nation's economy. Its responsibilities as an economic balance wheel were clarified and its duties enlarged in the banking legislation that grew out of the depression in the early 1930's. The amount of required reserve to be maintained by member-banks and the rediscount rate (both fixed by the Federal Reserve System) are two of the determinants of the availability of credit. Raising either or both tightens credit and makes it harder for borrowers to obtain loans. Conversely, lowering either tends to ease credit and stimulate lending.

Federal Deposit Insurance

The stockholders who own American banks have invested in their banks more than $16,424 million. Their investments form a cushion to protect the funds of bank depositors against occasional loss from unsound investments by the banks, or any misuse of public trust. The Federal Deposit Insurance Corporation, another U.S. Government agency, is the ultimate guarantee that no depositor shall suffer loss on deposits up to $10,000. At present, there are nearly 110 million depositors whose accounts are protected by Federal deposit insurance.

Organised in 1933 under the Federal Deposit Insurance Act, the Corporation's income consists of assessments on insured banks at the annual rate of 1/12th of one per cent. of their average deposits less authorised deductions, and income from investments. As of 31st December, 1952, the Corporation's surplus amounted to approximately $1,363 million.

The Corporation is authorised to borrow from the Treasury such funds as are from time to time required for insurance purposes, not exceeding in the aggregate $3,000 million outstanding at any time. The Corporation has never exercised this borrowing authority.

Of the 14,088 operating commercial banks and trust companies in the United States and possessions on 31st December, 1952, deposits in 13,439 banks were insured by the Corporation. Of these banks, 6,795, by virtue of membership in the Federal Reserve System, were automatically insured, and 6,644 were banks not members of the Federal Reserve System which had made applications and had been admitted to insurance. In addition, of the 529 mutual savings banks, 206 were insured by the Corporation.

If any bank goes into liquidation, the Corporation immediately assumes the insured de-

DHOLE & CO'S

EIGHTH ANNUAL MEETING OF BHARAT LINE LIMITED

MR. C. R. SRINIVASAN'S SPEECH

PLEA FOR URGENT OPERATION RELIEF TO INDIAN SHIPPING

AN earnest plea for treating the shipping interests' request to the Government of India for operation facilities, such as lightening the burden of duties in respect of stores and supplies, as a matter of urgency and importance, in view of the none-too-rosy prospects for the industry, was made by Mr. C. R. Srinivasan, Chairman of the Bharat Line Ltd., in the course of his address to the shareholders at their Eighth Annual General Meeting held in Bhavnagar on 7th June, 1954. In this connection, he referred to the investment allowance granted recently to the shipping industry in the U.K. and the action taken in Italy of declaring shipyards and fleets as free zones for the purpose of securing stores and supplies duty-free. Another urgent problem to which Mr. Srinivasan drew the attention of the Government of India for its prompt action was the increasing frequency with which "go-slow" tactics are being adopted by dock labour.

The following is the full text of Mr. Srinivasan's speech:

"GENTLEMEN,

"It gives me great pleasure to welcome you to the eighth ordinary general meeting of the Company, the Directors' report and the audited balance-sheet and profit and loss statement have been in your hands for some time now. I trust I have your permission to take them as read.

Company's Fleet

"As your Directors have informed you in their report, the Company suffered a grievous loss, not in terms of money, but in terms of service, after the close of the report year, when our s.s. *Bharatbala* grounded on a reef in the Gulf of Cambay on her way from Bombay to Bhavnagar and had to be abandoned. It was one of the earlier units of our fleet, and had been regularly employed in our coastal trade. Fortunately, there was no loss of life. Your Directors are taking steps to secure a suitable ship to replace the *Bharatbala*.

"As regards the ship which has been under construction for our Company at the Hindustan Shipyard at Visakhapatnam, and which has been named *Bharatratna* when I had the privilege of launching it last year, its delivery has unfortunately been delayed by some months due to delay in the arrival of machinery at the yard. The ship is now expected to be delivered about the middle of July, 1954.

"As mentioned in your Directors' report, the Company has now entered the Persian Gulf-India-Burma trade on fortnightly liner service basis, with the goodwill and co-operation of Government. We propose to set apart four ships for this service and these ships are to be acquired during the current year with the assistance of loans from the Government's ships purchase loans project. Your Directors are taking the necessary steps in this direction.

"Your Directors continue to keep in view their policy to replace old tonnage with fresh tonnage as and when opportunities offer. In my speech last year, I had mentioned that two of the Company's ships were due for replacement on account of age; one of them, namely, the old *Bharatratna*, has since been disposed of and the s.s. *Bharatveer* acquired in its place. The question of disposing of the other old ship on advantageous terms continues to engage the attention of your Directors.

Fleet Insurance

"You will notice from the Directors' report that insurance of our fleet for the current year has been placed entirely through Indian insurance companies. For a proper understanding of the step we have taken, a little explanation will not be out of place. Right up to 1952, our business was placed through London where the hull insurance market has developed over a long period of years and a large body of underwriters, possessed of ample resources, share the risk and stand the strain incidental to the business. We have maintained good relations with them and, thanks to our Managing Agents, we have had full advantage of cut rates warranted by our record. It is but natural that informed opinion in the country should seek to build up an Indian hull insurance market and that Indian-owned bottoms should give it priority in the placing of business; at the same time, few would deny that such a consummation, devoutly to be wished for, cannot be achieved overnight and a time-lag to enable Indian insurance interests progressively to take up these new responsibilities must be allowed, if results are to endure. It is this realistic appreciation of the issues involved that led your Directors to reserve 10 per cent. of the underwriting to Indian companies for the year under report; the other 90 per cent. was taken up by British interests in the same way as before. It may interest you to know that even of the 10 per cent. offered only 8 per cent. was taken up by Indian companies directly, the balance being covered by reinsurance. Still it was a good beginning, with goodwill assured among the displaced interests, and we had intended to carry our constructive efforts a substantial step further by reserving 25 per cent. for Indian companies in the current year. The Reserve Bank of India, however, stepped in and under exchange regulations prescribed that the business should be placed only with Indian interests. If it was intended to save exchange, the course suggested is wide of the mark because Indian insurance interests are not sufficiently established to digest the volume of business available and must cover the risk by reinsurance facilities open to them in London or elsewhere. In the result, there is really no saving in exchange, if the risk is covered indirectly by foreign interests; only instead of using the art of suasion, an element of compulsion is introduced in a sector which may react, possibly unfavourably, on the rate structure. Government presumably is waiting on events to intervene if necessary. However, so far as we are concerned, we are in entire sympathy with the underlying idea, while striking this note of caution, and we shall extend our fullest co-operation to build up the Indian hull insurance market. For the current year, we have placed our fleet insurance with Indian interests. We learn that they have reserved only 22 per cent. of the business for themselves, covering the balance by reinsurance in the London market through our regular brokers. This bears out in striking measure our original appreciation of the limits of development possible in the situation for the year.

Results of Working

"As your Directors have pointed out in their report, although the gross earnings from freight and charter hire of ships rose from Rs. 2,12,79,907-7-6 in 1952 to Rs. 2,22,27,900-15-4 in 1953, the gross profit fell from Rs. 49,59,304-8-11 in 1952 to Rs. 39,61,844-15-3 in 1953. While the increase in the earnings was due to the increase in our tonnage and its regular employment in our trades, the fall in profit may broadly be attributed to falling freight rates, and rising operating costs. Avoidable delays still persist at loading and discharging ports and the wage curve is still on the rise. The Managing Agents are taking all possible steps to ensure economy without sacrifice of efficiency, and your Directors have this matter under constant review. Freight rates in the ultimate analysis are determined by what the trade can bear. Likewise, operation costs must be determined by what the Company can bear. It would be wise to recognise that the sellers' market has faded out and in the conditions that are supervening, both shippers and shipping companies would do well to get together to rationalise the rate structure with due regard to public interest.

Planning for Progress

"I have referred earlier to our entry in a new field of activity, namely, the Persian Gulf-India-Burma trade. Here a regular fortnightly liner service is required, and our Company will proceed to establish this service with four ships to start with. There are powerful vested interests in this trade, established over many decades, and with large resources at their command. Naturally, these interests will not take kindly to new entrants and we must be prepared for a phase of uneconomic competition before good sense prevails and the spirit of accommodation triumphs. Your Directors are conscious of the risks they are facing, but they dare not shirk a responsibility, clearly indicated, if the Company is to develop in the service of the motherland by progressively widening its range and reach. If we have faith in our future, such sacrifices as may fall to our lot at the start should not deter us from reaching out to the success that awaits our courage and confidence. The fact that the Government of India stands behind us justifies our faith. That Indian shippers will likewise stand solid behind us when we seek to serve what is immediately to their interest and ultimately to our country's advantage surely, is not too much to hope for and that hope reinforces our faith. I look to your whole-hearted support in this promising venture.

"Our immediate problem of finance for acquiring additional tonnage has been met with cordial alacrity by the Government. You may remember, I referred, in my speech last year, to the need for relaxation of some of the terms imposed on Government loans for shipbuilding and ship purchase. I am glad to inform you that our appeal has registered and the new loan will be made available to us on more satisfactory terms in respect of interest and repayment; and I take this opportunity to convey to the Government our appreciation and grateful thanks.

Plea for Government Help

"The Government, while responding to our appeal for financial facilities on easier terms, has not shown the same awareness in respect of operation facilities. Shipping interests have repeatedly represented to the Government the need for lightening the burden of duties in respect of stores and supplies. Advantage was taken of the presence of the Union Minister for Production in February last at the annual meeting of the Indian National Steamship Owners' Association to pinpoint our case for relief, but to no purpose. His reply only indicated that he was not briefed properly on the issue raised, though there was ample material available in the secretariat fully to bear out our case. May I take this opportunity to request him to give thought to this matter and extend at least the same measure of help that other countries, industrially advanced countries, have not hesitated to offer. It may interest him to know that Great Britain has just introduced an investment allowance of 20 per cent. on new plant and machinery to the shipping industry in addition to normal depreciation allowance and Italy has blazed a new trail in operation relief, apart from shipbuilding subsidy, by declaring shipyards and fleets as free zones to secure stores and supplies duty-free. I am not so much concerned with the *form*, as with the *fact* of help to build up a new industry of national importance in times of war and peace. If only the will is there—surely the will is there with so much planning ahead at Government level—it is not difficult to give it dynamic expression. This is a matter of urgency and importance as the prospects before the shipping industry at the moment are by no means rosy and I would beg of the Government of India to give this matter their immediate attention.

"I have referred above to rising operatings costs and persistence of avoidable delays at loading and discharging ports. In this connection I would particularly draw attention to the 'go-slow' tactics being employed by labour nowadays with increasing frequency. I am aware that responsible authorities in the Labour Ministry of the Government of India have condemned this practice as undesirable and indefensible even from labour's point of view: but, beyond expressing their disapproval of it, the Government does not appear to have evolved any effective measures to uproot this growing evil which, if unchecked in time, threatens to disorganise normal trading operations at important ports, such as Bombay and Calcutta, and even to divert their trade elsewhere to the serious detriment of the country's economy.

"Patch-work measures evolved in haste to meet exigencies as they occurred have failed to produce lasting results. The time has clearly arrived when concerted efforts should be made jointly by the Ministries of the Government of India concerned with this problem to evolve a working formula relating emoluments to output of work, the formula being made applicable to all categories of labour at a port, with adequate enforcing powers vested in the authority entrusted with the operation of the formula.

"This highly disturbing feature of the working conditions at our ports calls for prompt and adequate action on the part of our National Government on the lines indicated above and I earnestly hope that this very serious matter will

FOSTERING MALAYA'S TIN AND RUBBER INDUSTRIES

TAX BURDEN MAY BE EASED

(*By BARRY MORTIMER*)

THE modern world runs on rubber wheels, and the engines that drive those wheels run, more often than not, on bearings containing tin. The two materials are in that sense complementary, although the largest single use of tin is in the manufacture of tinplate—the thin tin-coated steel that encases the world's canned foods and other goods. One-third of the free world's requirements of each of these strategic materials is supplied by Malaya.

The industrial world's dependence on Malayan tin and rubber is more than matched by Malaya's dependence on those two commodities for the prosperity of its entire economy. Rubber normally provides over half the Federation's total earnings from exports, and tin about one-sixth. The duties on those exports and the taxes on the profits of the rubber and tin companies are the major sources of Government revenue.

The wages paid by the companies, and the incomes of the small producers, are two of the chief means of maintaining local purchasing power and the standard of living. To carry this dependence on rubber and tin a stage farther, local purchasing power determines the volume of imports, which determines the revenue the Government obtains from the duties on imports. When tin and rubber prices are booming, Malaya booms too. The boom collapsed three years ago, but the costly war against communism still goes on.

Dropped Steadily

In 1953, the price of rubber dropped steadily from 27d. a pound to 16d. a pound and it has made only a slight and hesitant recovery since. A fall of one penny a pound reduces Government revenue from all sources by roughly £750,000, and reduces private incomes in Malaya by over £4 million.

The duties on rubber and tin exports in 1954 will probably finance only about one-tenth of Government expenditure, as compared with about one-fifth in 1952. The price of tin dropped by nearly £400 last year to £580, and has only recently recovered to about £750 a ton. The fall in both commodities was caused by the surplus of rubber and the potential surplus of tin that arose with the tapering off of the strategic purchases for the American stockpile.

The Governments of the Federation and of the United Kingdom are trying to counter the serious effect on the Malayan economy of the fall in prices—which increases the financial burden of the war against the Communists—in three main ways: by attempts to stabilise prices of tin and rubber; by lessening the country's dependence on those commodities; and by increasing Britain's financial assistance to Malaya.

Britain played a leading part in promoting the International Tin Agreement which, if signed by sufficient producing and consuming countries, will attempt to stabilise the price within an economic range and bring about an orderly adjustment of world production to consumption. The United Kingdom Government will lend Malaya the £5.8 million needed to finance Malaya's contribution to the agreement's buffer stock of tin.

Efforts to obtain a similar agreement on rubber, in which the technical difficulties are much greater, have so far failed but there are heartening signs that the natural rubber industry may be working out its own salvation. To both commodities, the attitude of the United States Administration has been increasingly helpful.

Though the United States has not signed the tin agreement, it has stated publicly that it recognises its importance to other countries of the free world, and hence has no objection to its coming into force. On rubber, the Administration has taken several steps to allow natural rubber to compete on more even terms with United States synthetic rubber.

Diversifying Malaya's economy will take many years to achieve any worthwhile results, but a start has been made. To encourage the expansion of export crops other than rubber, such as vegetable oils and oilseeds, and cocoa, the Government gives tax reliefs to estates and makes direct grants to smallholders who replant with those crops. Domestic production of tin also qualifies for these incentives. To reduce dependence on imports of rice, the staple food of the peoples of the region, domestic production is being expanded by direct Government expenditure of some £2 million over the next few years. And private capital has built two large factories, one to produce margarine, edible oil, glycerine, and soap, the other cement.

Long-term Development

At the Government's invitation, a mission of the World Bank for Reconstruction and Development has just been in Malaya to review its economic potentialities and to advise on long-term development. But little progress can be made in bringing outlying areas under cultivation and in prospecting for minerals until the country is cleared of terrorists.

The rubber and tin industries have, for many years, financed research and development through their own bureaux in Malaya, Britain, and elsewhere. In rubber, for instance, particular attention is being paid to the expansion of existing uses, such as liquid (latex) rubber for foam-rubber products, and the development of new uses, such as road-surfacing and the soling of shoes with cyclised rubber, which has the appearance of leather, but lasts longer. Methods of improving the packing and grading of rubber, so that it can compete more favourably with the precise quality control of synthetic, have also been introduced.

The greatest single means of building up the prosperity of the rubber industry, and thereby to a great extent of Malaya itself, lies in speeding up the replanting of the plantations. New trees, when they mature in about eight years' time, can produce three times as much rubber as the old. At the present price of rubber and rates of taxation, only the leading estates can afford to replant on anything like the scale needed. As producers have little control over the price, they argue, not without justification, that the Government must reduce the burden of taxation.

They hope that, following the official enquiry into the competitive position of the industry this year, the Government will ease this burden. The difficulties of so doing are admittedly great, but some relief is undoubtedly necessary, even if the United Kingdom Government would have to offset the loss of revenue by increasing its already large contribution towards the cost of Malayan defence.—*Exclusive to "Commerce."*

TAX REFORM IN WEST GERMANY

REDUCTIONS EFFECTED IN DIRECT TAXES

THE currency reform of 1948 put the monetary system of Western Germany on a sound and normal basis again. The next step necessary to give the German economy a start on the road to normalcy would have been the reduction in the rates of taxation to a reasonable level. In order to make leeway for some capital formation and to stimulate investment activities, a make-shift system of tax concession in respect of investments made has been applied from 1948 onwards. If the Federal Government has now decided to reduce tax rates quite generally, it has, apparently, based its decision on the assumption that a temporary loss in tax revenue will be compensated for, in the future, by the favourable effect of reduced taxes on business. Simultaneously, the preferential rates of taxation are to be abolished as far as possible, which will simplify the levying of taxes.

Contrary to well considered suggestions, the tax bills announced by the Federal Government, in March last, do not provide for fundamental changes of the present system of taxation, since, according to a recent utterance of the Minister for Financial Affairs, Mr. Schäffer, "this system, on the whole, has proved its worth and effectiveness." The large number of taxes levied now is not to be reduced, but even to be increased by one more tax.

The principal features of the new tax reform bills will be outlined in the following paragraphs. The core of the bills is the lowering of the rates of the income and corporation taxes.

Cuts Income and Corporation Taxes

The income tax is to be reduced by 15 to 20 per cent. for almost all income brackets. In the future, especially the families with numerous children will have to pay considerably less by way of taxes, while single persons without dependents are even to pay more in some cases. No income is, on the whole, to be taxed more than 55 per cent. In the future, the present top limit being close to 70 per cent. It must, however, be considered that nearly all incomes are subject to a number of additional direct taxes, such as the Berlin Emergency Levy, to assist the "Island of Berlin," the property tax, the church tax, and the Equalisation of Burdens Levy; in addition, independent business people have to pay an industrial tax (Gewerbesteuer). The sum total of these taxes paid by an individual on his income will, in the highest brackets, still run up to 80 per cent., as appears from data given by the Ministry of Financial Affairs.

The corporation tax, which takes a proportional part of all profits of corporations, irrespective of the relative amount of such profits, at present 60 per cent. of undistributed profits and 30 per cent. of distributed profits, is to be reduced to 45 per cent. of the undistributed profits, while the 30 per cent. rate on profits distributed will be continued. Competent business leaders and economists are, however, opposed to this method of taxation, introduced only last year, with its differential rates depending on the application of the profits. They would, instead, prefer a uniform rate of 33 per cent., or up to 40 per cent., at the most. With differential rates, the corporations, still in need of increasing their reserves, would be at a disadvantage in comparison with those which were able to accumulate reserves during the last few years and can now distribute high profits.

It is sure that the double taxation of dividends, which results from the corporation tax levied on the corporation and the tax on the shareholder's income, will be alleviated to some extent by the reduction of the rate of the corporation tax. This will enhance the readiness of people to invest in new issues of capital stock and thus make easier the increase of risk capital which many companies need so urgently.

Simultaneously with the reduction of the income and corporation taxes, nearly all tax privileges are to be abolished. By this measure, taxation will be simplified and made more uniform. It is true, though, that those companies, which in the past could profit most from these privileges, will have to pay more taxes in the future.

The importance of other tax relief measures is much inferior to that of the reduction of income and corporation tax rates. In the case of the inheritance tax, some reductions of rates and an increase of the tax-exempt amounts are provided. The exemption for children of the deceased are to be raise from DM20,000 to DM30,000.

As mentioned above, the losses of tax receipts will be covered by the quickening of economic activity and the continued increase of the national income. Nevertheless, the authors of the bills believe that it is necessary to open up some new sources of taxation, e.g., by raising the 1 per cent. rate of the wholesale turn-over tax to 1.5 per cent.

The bills also contain a clause according to which the Federal Government is empowered to collect a supplementary levy in addition to the income and corporation taxes, if such levy is deemed indispensible in order to avoid deficits in the federal budget. The Federal Parliament must legislate on this levy every year, it is to be 2.5 per cent. of the income and corporation taxes for the current year. This additional levy is not meant for the purpose of covering the anticipated loss of receipts; it is rather intended to make the fiscal policies of the Federal Government more independent of the states which, year after year, have been opposing the proportional share of the

(*Continued in previous column*)

(*Concluded from next column*)

income and corporation taxes demanded by the Federal Government.

According to the calculations of the Federal Ministry of Financial Affairs, the sum total of tax relief accorded to the German taxpayer, in the fiscal year of 1955, is estimated to amount to DM2.3 billion. The Federal and State budgets are not expected seriously to be impaired by this reduction, if the national income grows by about 5 per cent. In spite of the reduction of rates, the federal and state tax revenue of approximately DM30 billion in 1953 will increase to DM32.3 billion in 1954, and to DM33.5 billion in 1955. Even in 1955, the aggregate taxes to be paid to the federal and state treasuries and to the communities will still amount to one-third of the national income.

In addition to the bills on tax-reform, the Government has also submitted a bill on the equalisation of finances. The equalisation bill is intended to establish a final delimination of federal and state taxation. By tradition, the receipts from customs and internal revenue (taxes on consumption and turnover) have gone to the Federal Government, while the direct taxes were received by the States. The financial requirements of the Federal Government have gradually grown to such an extent that they can be met only by allotting to the Federal Government also a share of the income and corporation tax revenue. This share had to be determined by Federal legislation from year to year, which each time resulted in endless bickering between the Federal Government and the states. At present, the share of these taxes given to the Federal Government is 38 per cent. According to the new bill, it would be permanently fixed at 40 per cent. The Bundesrat, which is the second chamber consisting of the representatives of the governments of the individual states, is not willing to concede to the Federal Government a share of more than 35 per cent., at the most. The Bundesrat is also opposed to the readjustment of the so-called horizontal equalisation of finances as proposed in the bill. This horizontal equalisation provides that the financially strong industrial states, such as North Rhine-Westphalia and Baden-Wuerttemberg, give a *pro rata* share of their revenue to the poor states which are predominantly agricultural, e.g., to Schleswig-Holstein and Bavaria.

These issues, and some others, have to be finally settled by the Federal Parliament. However, it is unlikely that the bills will be subjected to fundamental changes.—*By the courtesy of Rhein-Main Bank.*

THE ATUL PRODUCTS LIMITED

MR. KASTURBHAI LALBHAI OUTLINES SCHEMES FOR EXPANSION

AT present, India offers a large market for dyes. This is likely to grow further, with the expansion of industries which consume considerable quantities of dyes. In view of these vast possibilities, the Atul Products Ltd. proposes to expand the range of products in this line. Announcing this at the annual general meeting of the Company held on the 5th inst., Mr. Kasturbhai Lalbhai, Chairman of the Company, revealed that the Company had entered into an agreement with Imperial Chemical Industries Ltd. for the manufacture of Jade Green and its intermediates, thus paving the way for covering ultimately the whole field of dyes consumed in this country. In this connection, Mr. Kasturbhai welcomed the restrictions imposed recently on imports of dyes. At the same time, he called on the dyestuff manufacturers in this country to see that they did not fail to come up to the standards expected of them and to fulfil the obligations devolved on them as one of the links in the chain of the chemical development in India.

The following is the full text of Mr. Kasturbhai's speech:

"GENTLEMEN,

"The report and the statement of accounts for the year 1953 submitted by the Directors have been in your hands for some time. So, if you will please agree, we may take them as read.

"The report has already drawn your attention to the difficulties which the Company had to face in the year 1953. Out of these, the present unrealistic structure of the import duties is the most important, because, normally one would expect that the duties on raw materials would be lower than the duties on the finished products except when the raw material producing industry is to be protected. For various reasons the contrary is the case with our tariff structure, and not only we but the entire chemical industry suffers from it. The attention of the Government has been drawn to this problem by the Indian Chemical Manufacturers' Association as well as individual parties. I am, therefore, confident that very soon there will be an improvement in this situation. In fact, the Tariff Commission has already made its enquiry into the problem, so far as it relates to the dyestuff industry, and I trust its recommendations will ensure a steady and remunerative development of the industry. It will shortly take up a similar enquiry into the raw materials used by the pharmaceutical industry also. I am sure that as a result of these enquiries, the present tariff structure will be modified in a realistic manner, so that, in future, no new industry will be called upon to work with the initial handicap that some of the present units of the chemical industry have had to face.

Restrictions on Import of Dyes

"As you are aware, the Government of India has recently imposed some restrictions on the import of dyes that are being manufactured in the country. This is a step in the right direction and I take this opportunity to thank the Government of India on behalf of all those who are trying to establish a dyestuff industry in India. The fact is that in almost all countries the dyestuff industry has had to rely on considerable assistance from the State, either by way of extremely heavy protective duties or total prohibition of imports and development loans. Many of our foreign competitors have themselves developed in this way. This is due to the reason that the products manufactured by the dyestuff industry are numerous and interrelated, the investments required large and the technique highly complicated. So, a breathing period is necessary before the industry can come into its own. I am happy to find that the Government of India is fully aware of the difficulties which face the establishment of a full-fledged dye industry in the country, and I have no doubt that they will take appropriate steps in suitable cases to assist it. However, I would also say that it would be up to us to see that, in spite of the encouragement that we received from the Government, we do not fail to come up to the standards which may be legitimately expected of us, and also fulfil any obligations that may devolve on us as one of the links in the chain of the chemical development of the country. In this connection, I would particularly mention our responsibility towards the consumers and take this opportunity to assure them that the Company has not, and would not, take any undue advantage of measures taken by the Government to assist us.

Large Market for Dyes

"We have a large market for dyes—India being one of the biggest importers at present. I also think that this market is likely to grow bigger still, because, as our standard of living goes up, the textile, leather, paper and other industries which make use of dyes are also bound to grow up. Therefore, apart from the force of competition, which any new entrant has to face, I believe we have a fairly favourable field for our production. So far as our Company is concerned, we have entered only one part of this market, that of direct and acid dyes. The majority of the products for colouring cotton, wool, silk, jute, leather and paper belong to this class, and our production also forms a substantial part of the present requirements of the country. But, as mentioned in the Directors' report submitted to you, your Directors have decided to expand this range by going into the manufacture of naphthols, rapid fasts, Rapidogens and developing salts which form again an important group of dyes. Your Directors are also considering as to what we should do about the manufacture of vat dyes—the most important class of dyes. If your Company is to have a legitimate share of this market, it should have increased resources and I am sure the shareholders will agree with me that your Directors should avail themselves of every opportunity for the expansion of the business of the Company.

"The manufacture of dyes requires the use of a large number of raw materials, most of which are not made in this country. Your Directors have also under consideration schemes for the manufacture of the more important of these raw materials. Inasmuch as some of our plants will be smaller than what are considered usual in other countries, our costs of manufacture may be higher than the prices at which they could be imported. However, as I mentioned earlier, we have to satisfy other standards and other obligations also. However, your Directors are convinced that, for a proper economic development of the country, we should undertake their manufacture, even though they may appear costly at present.

"You will be glad to know that what we have done so far is well approved. Many foreign visitors to our plant have praised the way in which we have entered into this difficult field of manufacture by careful planning and installations of the best of equipment. I feel a large part of the credit for this goes to the American Cyanamid Company who are our associates in this venture. In this connection, I may say that we should not be shy of securing foreign experience or technique wherever we can get it. We have profited considerably by the guidance that we have received, and I see a greater need of similar guidance in the plans that we have in hand. This does not mean that we should never hope to manage things ourselves. But that will require a period of training for our chemists and technicians. Your Directors are aware of their responsibility in this direction and are doing everything to see that we have a properly trained staff.

Agreement with I.C.I.

"In the annual report which was circulated to you, your Directors have referred to the various schemes of expansion which the Company has in hand. In that connection, your Directors beg to inform you that they have recently concluded an agreement with Imperial Chemical Industries Ltd., for the manufacture of Jade Green and its intermediates. The essential part of the scheme is that your Company

NEW PUBLICATIONS

The Law of Income-Tax in India (Seventh Edition). By V. S. Sundaram. Published by Madras Law Journal, Madras. Price: Rs. 37-8.

THE periodical editions of Mr. Sundaram's book on Income-tax is an eagerly awaited volume amongst the many publications on Income-tax law to which a busy lawyer and an Income-tax Practitioner would always like to turn and consult on a ticklish point, an obscure interpretation or a difficult problem with which Income-tax law abounds.

Amongst the well known books on Income-tax, *The Law of Income-tax in India* by Mr. Sundaram enjoys a unique position. In fact, the first authoritative book on Income-tax was written by Mr. Sundaram when he was the Secretary of the Central Board of Revenue. The book bears the impress of the author's vast learning and deep insight of law. By reason of the extended notes on the frequent amendments in law, this book has become so bulky as to become unwieldy, but between its covers are found notes and comments on sections not found elsewhere which are both illuminating and instructive.

The peculiar feature of this book is the author's copious quotation from various cases in the body of the book which help the readers a great deal in proper understanding of the subject and the principles involved.

The Income-tax Law is always in a state of flux. Even before an edition gets under way, it becomes obsolete by new amendments and new features being introduced in Income-tax Law. Though it is very difficult to keep pace with the ever-growing amendments and new enactments, the author has done his best to throw light on the new aspects of Income-tax Law.

We have no doubt that the book would be a useful edition to the reference library of any lawyer, Income-tax Practitioner, secretaries and accountants of companies.—*R. K. D.*

Handbook on Estate Duty. By P. S. Bagadthey. Published by the Author, Alkapuri, Baroda. Price: Rs. 15.

Mr. Bagadthey's book, *Handbook on Estate Duty*, is a valuable addition to the growing literature on Estate Duty. The book is the result of the study which the author had to make when he was called upon to deliver a series of lectures on this subject. The author shows legal erudition as well as awareness of the requirements of a lay reader. The general scheme of the book is to give the text of the Act, which is followed by a detailed examination of the different parts of the Act. The rules framed under the Act are given as an appendix. Two distinguishing features of the book are the detailed treatment of each section, giving the analogous provisions in the British Estate Duty Act, on which the Indian Act is modelled, and the large number of illustrations given in order to show how the duty is calculated. We commend this book to the attention of all those who are interested in a study of the subject.

India, 1954. Published by the Publications Division, Ministry of Information and Broadcasting, Government of India, New Delhi. Price: Rs. 7-8.

The sub-title "A Reference Annual" given to the book *India* 1954, sums up, adequately enough, the contents of its volume. The book deals with India's population, land statistics, Constitution and the judicial and public service systems. Separate chapters are also devoted, among other subjects, to defence, public finance (budgets), Five-year Plan, agriculture, commerce, industry and transport. Each State gets a chapter where the progress made by it in diverse fields, such as education and industry, is succinctly described. The book also gives the names of the members of Parliament and State Legislatures. A notable feature of the book is that it gives a chronicle of important events of the year 1953 and also the laws passed by Parliament during the year. The book will prove invaluable as a work of reference.

A Handbook of Cost Accounts. By R. S. Saksena. Published by Motilal Banarsidass, Bankipore, Patna 4. Price: Rs. 2-8.

Modern industry is not only complicated but competitive. If a manufacturer has to compete successfully with his confreres, he should know the cost relating to each process and unit of production. Only then will he be able to quote a competitive price for his articles. The aim of the publication under review is not to provide a comprehensive study of the cost accounting system, but as the title itself indicates, to provide a concise account of the subject for the students. The author, who is Professor of Commerce, St. Xavier's College, Ranchi, has felt the need for catering to the needs of students preparing for different examinations in commerce. The subject matter has been explained in brief and selected examples have been given to illustrate fundamental principles.

ATUL PRODUCTS LIMITED

(*Concluded from page* 1141)

and I.C.I. Ltd. will float a new company, as equal partners, and will set up plants on the site already developed by your Company. This will, naturally, lead to a better and greater utilisation of the site; but, apart from that, this will also help your Company to enter into a new range of dyes, and thus cover practically the whole field of dyes consumed in the country.

"Your Directors have referred elsewhere to the large investments necessary in the dyes industry, as also to the need of technical assistance and experience. Your Directors examined the above in relation to these and other factors and came to the conclusion that these arrangements will prove beneficial to the Company.

"I gave you some ideas of the problems that we have to face, because the industry that we have taken in hand is new, and we should develop a proper perspective in looking at it. With our market, with the zeal and intelligence of our young scientists and with the goodwill of our Government, there is no reason why we should not succeed in building it up just as other countries have done."

INDIA'S BALANCE OF PAYMENTS IN 1953

POSITION WITH DOLLAR AREA SHOWS SURPLUS

AN overall surplus in the current account earned at a reduced level of trade, a significant improvement in the dollar position and a further deterioration in the terms of trade are the most outstanding features of India's balance of payments position in 1953, according to an analysis of preliminary figures made by the Department of Research of the Reserve Bank of India and published in the issue of the *Reserve Bank of India Bulletin*. The surplus on current account, amounting to Rs. 56.9 crores, is a marked rise over that of 1952 at Rs. 1.7 crores. This improvement was due to the shrinkage in the value of imports being far in excess of that in exports. Thus, whereas imports declined by no less than Rs. 176.2 crores, that is, from Rs. 742.6 crores in 1952 to Rs. 566.4 crores in 1953, exports fell by only Rs. 108.3 crores, from Rs. 649.1 crores to Rs. 530.8 crores. The net result was a narrowing down of the deficit on trade account from Rs. 93.5 crores to Rs. 35.5 crores. This deficit was converted into a surplus of Rs. 56.9 crores by net receipts amounting to Rs. 92.4 crores under the account of invisibles. The terms of trade continued to deteriorate, but the extent of fall was only 3 per cent. as against 24 per cent. in 1952. Some idea of the deterioration in terms of trade can be had from the fact that there was a steep fall of over 16 per cent. in export prices in general, the volume exported, in fact, showing a slight rise of about 2 per cent. In contrast, the prices of imports fell by only 13 per cent., while the quantum of such dropped by as much as 27 per cent. Incidentally, it may be mentioned here that the magnitude of fall in India's trade was as much as 21 per cent. as against only 2 per cent. in the world trade as a whole.

The table below reveals at a glance India's overall balance of payments of position in 1953, as compared with that in the preceding year.

India's Overall Balance of Payments Position in 1952

	1953*	1952
Imports—		
(a) Private	425.9	506.2
(b) Government	140.4	236.5
Total imports	566.4	742.6
Exports—		
(c) Private	525.8	640.1
(d) Government	5.0	9.0
Total exports	530.8	649.1
Trade Balance—		
(e) Private	+ 99.9	+133.9
(f) Government	—135.4	—227.5
Trade Balance (e) and (f)	— 35.5	— 93.5
Invisibles—		
(g) Private	+ 50.9	+ 62.5
(h) Government	+ 41.5	+ 32.7
Invisibles (net) (g) and (h)	+ 92.4	+ 95.2
Current account (net)	+ 56.9	+ 1.7
Errors and omissions (net)	+ 2.3	— 42.1
Capital account	+ 59.2	— 40.4
Index of net terms of trade (1948-49=100)	91	94

* Preliminary figures.

It will be seen from the table above that there was a reduction in the value of imports on both private and Government accounts. Thus, private imports (*a*) declined over the year by Rs. 80.3 crores to Rs. 425.9 crores. The reasons for this fall are worth noting. Nearly half of it was accounted for by raw cotton, the balance being shared by a variety of commodities such as chemicals, drugs and medicines, machinery and vehicles. The point to be noted, in this connection, is that the fall occurred, despite the operation of a liberalised import policy relating to caustic soda, lithophone, machinery, industrial raw materials like art silk yarn and cotton yarn above 80 counts, spices, fruits, etc., free licensing for cotton of 1.1/16" staple and above from soft currency countries and the extension of the validity of import licences issued for U.S. cotton till the end of the year. The emergence of a favourable domestic supply situation in cotton kept down the demand for imports. Purchases of raw jute from Pakistan also shrank considerably, because production of jute goods was at a low level. The drop in imports of chemicals, etc., reflects either the fall in the activity of consuming industries or the use of accumulated stocks.

The decline in Government offtake during the year was even larger than that on private account. Thus, payment for imports on Government account dropped by Rs. 96.1 crores to Rs. 140.4 crores (*vide* (*b*) in the table above). This exceeded the drop in private imports by Rs. 15.8 crores. The reduced offtake was occasioned by substantial improvement in the domestic production of foodgrains. In 1952-53, the output of foodgrains increased by nearly 5 million tons over the previous year's level. The fall in Government's purchases was, to a certain extent, offset by imports of sugar to bring down the rise in sugar prices. Purchases of certain types of stores also showed some increase.

Exports

The value of exports of Indian merchandise dropped by as much as Rs. 118.3 crores to Rs. 530.8 crores during the year. The decline was due to fall in export prices, in conformity with the general drop in prices all the world over. Thus earnings from jute manufactures fell sharply by Rs. 69.9 crores to Rs. 107.8 crores. Receipts from cotton textile exports were also lower by Rs. 7 crores to Rs. 75.7 crores. Tea, however, was a notable exception, in that its earnings rose by Rs. 15.2 crores to a record level of Rs. 96.6 crores.

In order to counteract the declining trend in exports, the Government pursued further its policy of active export promotion initiated in 1952. Thus quota restrictions were liberalised; licensing procedures were simplified; and export duties were adjusted to external demand. Export duties on hessian, linseed and linseed oil were reduced, while the duties on some cotton goods and on jute specialities were totally abolished. Rebate was granted in respect of duties on imported raw materials used in Indian manufactures exported abroad. An export promotion organisation was also set up.

The net result of the trade in 1953 was a deficit of Rs. 35.5 crores, as against a deficit of Rs. 93.5 crores in 1952. The improvement in the overall payments position was due, in the main, to reduced imports on Government account which amounted to only Rs. 135.4 crores, as compared with Rs. 277.5 crores in 1952. The trade balance on private account, on the contrary, revealed a surplus of Rs. 99 crores.

Invisibles

On the invisibles account, receipts at Rs. 92.4 crores, were slightly lower than those in the previous year at Rs. 95.2 crores. The items under these receipts showed some notable changes. Receipts on account of official donations (chiefly under Indo-American Technical Co-operation Agreement), for instance, rose by Rs. 5.9 crores to Rs. 17.8 crores. This was, however, more than offset by the fall in net receipts from other transactions like private donations, miscellaneous services, and in unclassified receipts owing to tightening on restrictions on remittances in countries such as Burma and Ceylon.

An analysis of the invisibles account is given below:

(In crores of rupees)

	Receipts	Payments	Net
Foreign travel	0.9	10.4	—9.5
Transportation (1)	30.7	13.5	+17.2
Insurance (1)	5.7	3.9	+ 1.8
Investment income	18.3	30.0	—11.7
Government account	28.2	16.5	+11.7
Miscellaneous	25.6	8.9	+16.6
Donations—			
Official	17.8	..	+17.8
Private	19.2	5.0	+14.2
Unclassified	41.3	7.0	+34.3
Net	187.7	95.2	+92.4

(1) The data given for the two items in this table give only a partial idea of the transactions on the two accounts. The two items are more or less complete on the receipts side, but in regard to payments only a portion of the expenditure is entered here. Payments for imports shown under item I are mostly on c.i.f. basis and, therefore, incorporate all but a small portion of the expenditure incurred by the country on "transportation" and "insurance."

The items "miscellaneous" and "unclassified" together account for a substantial part of the invisible receipts. Considering that it is the net invisible receipts that accounted for the surplus on current payments account, more details of these two items are necessary to enable one to get a better appreciation of the factors that contributed to the favourable balance of payments.

Terms of Trade

Over the year, as a whole, there was a further deterioration, in terms of trade, as the index of net terms of trade moved down from 94 in 1952 to 91 in the year under review. Much of this decline had occurred in the first quarter of the year; the last quarter, in fact, witnessed an improvement in the net terms of trade.

The table below shows this country's payments position regionwise in 1953, as compared with that in the previous year.

Balance of Payments Regionwise

Surplus (+) or deficit (—)

	1953	1952
Sterling area excluding Pakistan	+42.1	+84.5
Pakistan	—02.2	+39.3
Dollar area	+30.5	—111.2
O.E.E.C. countries	—55.7	—21.0
Rest of sterling area	+42.3	+10.0
Total surplus or deficit	+56.9	+ 1.7

As will be seen from the table above, the surplus with the sterling area (excluding Pakistan) drops by almost 50 per cent., that is, from Rs. 84.5 crores to Rs. 42.1 crores. The fall is attributed to an adverse swing in the trade balance and a fall in the net receipts on invisible account. An analysis of different items reveals that imports rose by Rs. 25.5 crores to Rs. 295.7 crores, while exports declined by Rs. 12.1 crores. The payments position with Pakistan reveals that the surplus of Rs. 39.3 crores witnessed in 1952 was converted into a deficit of Rs. 2.2 crores in the year under review. Exports dropped by Rs. 50.1 crores to Rs. 7.4 crores. This was because Pakistan deliberately preferred to trade with countries other than India.

As stated at the outset, India's payments position showed a marked improvement with the dollar area. Imports declined from Rs. 279.6 crores in 1952 to Rs. 108.2 crores in 1953. There was a decline in exports too, from Rs. 154.7 crores to Rs. 119.8 crores. The net result was that the deficit of Rs. 124.9 crores noticed in 1952 yielded place to a surplus of Rs. 11.6 crores. On the invisible side, official donations showed on advance from Rs. 7.6 crores to Rs. 17.6 crores, but others declined from Rs. 6.1 crores to Rs. 1.5 crores. Consequently, the net position on the current account showed a surplus of Rs. 30.5 crores, as compared with a net deficit of Rs. 111.2 crores in 1952. The improvement was due, in the main, to reduced purchases of raw materials (such as cotton), food and stores. The fall in exports was mostly due to lower U.S. offtake of jute goods from India.

O.E.E.C. Countries

India's position with the O.E.E.C. countries was, however, one of deficit. On current account, the deficit which amounted to Rs. 21 crores in 1952, widened further to Rs. 55.7 crores. Imports rose from Rs. 86.7 crores to Rs. 97.8 crores but exports dropped from Rs. 65.6 crores to Rs. 44.5 crores, occasioned by a decline in despatches of jute manufactures and vegetable oil.

There was a fourfold rise in the surplus with the rest of the sterling area. Payments due for imports declined from Rs. 78.8 crores to Rs. 50.6 crores. This was due chiefly to cessation of imports of food from China and Thailand. The value of exports was slightly lower at Rs. 84.9 crores, as against Rs. 85.4 crores in the previous year.

The main feature that emerges from the above study of the balance of payments position is that, notwithstanding the large savings made in imports of food and raw cotton, India's total imports continued to exceed its total exports and that, if this is not adversely reflected in the foreign exchange reserves, it is due to certain large miscellaneous receipts. As these are not likely to continue for ever, it is essential for India to redouble its efforts at increasing its exports, if it is to remain solvent and pay for the large imports that will be necessary in order to fulfil its development programmes.

SUBSIDIES TO EXPORTERS NOT TO BE GIVEN

Neither the British Government nor the Federal German Government is to provide "open or concealed subsidies" to exporters. International trade should follow natural lines and develop freely. This policy was made clear during the mission to West Germany recently of the U.K. Chancellor of the Exchequer, Mr. R. A. Butler, according to a joint statement issued on 4th inst. It says that Mr. Butler told the Germans that it was not the intention of the British to restore a system of Government control which would be contrary to the avowed policy of restoring the freedom of markets, both internally and internationally.

BRITISH CHEMICALS INDUSTRY

EXTENSIVE RANGE AND HIGH OUTPUT

(By E. A. RUNNING)

IN this modern age, a highly developed chemical industry is of great national importance, for there is no activity which is not to some degree dependent on the use of chemicals. Chemicals are as vital to a country's welfare as either steel or coal, and chemical production must constantly expand to keep pace with the growing requirements of other industries.

It is estimated, for instance, that Britain's chemical industry produces 10,000 products for the use of other industries. Britain's rapid recovery from World War II and her present economic strength is shown nowhere as clearly as in the record of her chemical industry.

In 1935, the value of all chemicals, dyestuffs and drugs produced by United Kingdom firms was £65,642,000. By 1946, the figure had risen to £212,217,000. The value of the industry's output in 1952 has been estimated at £520,000,000 or 60 per cent. above the 1948 figure. Last year, production went up a further 14.1 per cent. The 1953 output of one Company (Imperial Chemical Industries Ltd.) was in fact approximately 80 per cent. more than in 1946.

Exports of chemicals, drugs and dyestuffs, valued at £22,280,000 in the last pre-war year shared a total of £66,086,000 in 1946. In 1951—a year of exceptional activity—exports of chemicals, drugs, dyes and colours, raw casein and plastic materials earned £159,020,000. Last year, the figure fell to £146,105,474, but, in recent months, there has been a steady improvement.

New Synthetic Compounds

The expansion in these exports has been due largely to increasing trade in the new synthetic organic compounds—dyes, drugs, essences and plastics. Exports of penicillin which have more than doubled since 1951 earned £4,455,000 last year. In 1953, other antibiotics brought in £3,253,000, sulphonamides £2,546,000 and synthetic detergents £2,597,000. In 1953, exports of plastic materials were 43 times as great as they were in 1938.

The capital employed in Britain's chemical industry rose from £230,600,000 in 1948 to £406,800,000 in 1952. Furthermore, while the total cost of all expansion plans in view at the end of 1948 was just over £190,000,000, the comparable figure at the end of 1952 was about £230,000,000. Several costly expansion schemes have since been announced. Imperial Chemical Industries Ltd. spent some £30 million on new captal construction in 1953, as compared with less than £2 million in 1945. Since that year, it has spent £146,500,000 on new plant and equipment, while the completion of projects already under construction will take another £60 million. In 1949, its works at Billingham in Yorkshire was the second largest in the world and, since then, it has grown considerably. At Wilton—nine miles away and connected by underground pipelines as well as by rail and road transport—the firm has been developing another site. Within a year or two, Wilton will be even larger than Billingham and will have cost £53,000,000.

Oil Refining

Since the war, no less than £190,000,000 has been spent on raising Britain's oil refinery capacity from 2,500,000 tons of crude oil per year (in 1947) to 19,002,695 tons (in 1953). Keeping pace with this, there has been a rapid growth of the petroleum chemical industry. Many products derived from petroleum and previously imported have been replaced by home manufacture from imported oil. Several chemicals, such as acetone, acetic anhydride and isopropylalcohol, imported in substantial quantity as recently as 1950, are now being exported. The industry is adding several hundred products to its selling range each year and many of these are coming from the new petroleum chemical plants.

Among the petroleum-based chemicals for which a great demand is expected are synthetic rubbers and "Terylene," a synthetic fibre. In March, three companies announced that they would build plants which, within two years, would be producing a total of 18,000 tons per year of styrene-butadiene rubber-like resins. Some of these will be similar in composition and properties to those now being produced in the United States of America, but others will be entirely new. Imperial Chemical Industries is already selling 1,000,000 pounds per year of "Terylene"—a United Kingdom development which is considered to be the best of all synthetic fibres. By the end of 1954, capacity will have been increased to 11,000,000 pounds per year. It is planned to raise this figure to 44,000,000 pounds.

Research

Much of the strength of Britain's chemical industry is due to the great emphasis which has always been placed upon research. Besides the new products and new uses which are continually being discovered, new processes are constantly being introduced to increase and improve production. In 1952, the industry spent £11,200,000 on research and development—an increase of nearly 32 per cent. over 1948. Capital expenditure of £6,200,000 is in hand to increase laboratory and experimental facilities and it is expected that, when this work is completed, annual expenditure will rise to a total of £12,700,000.

Britain's fame in the field of chemistry was founded by such illustrious men as Joseph Priestley, John Dalton, Humphry Davy, Michael Faraday, Edward Frankland and William Hyde Wollaston. In more recent years, such workers as Ludwig Mond, William Perkin, William Ramsay and Alexander Fleming have helped maintain her position. And, although the development of new chemical industries overseas may some day cause a decline in United Kingdom exports of some of the basic heavy chemicals, the industry is confident that it will be able to maintain its position with its high-quality fine chemicals, pharmaceuticals, dyestuffs, plastics and synthetic fibres.

INDIA ADOPTS G.A.T.T. DECISIONS

There is a section of public opinion in the country which doubts the advisability of India's participation in the General Agreement on Tariffs and Trade, on the ground that the G.A.T.T. has not yielded any spectacular results. It is true that no such results have been achieved by India's participation, but there have been certainly certain advantages which, though small in themselves, have gone to help promote world trade. We have had ere now several occasions to refer to them and the latest relates to the acceptance by member-countries of the standard practices for (*a*) documentary requirements for the importation of goods, and (*b*) consular formalities. These two standards were adopted by the contracting parties to the G.A.T.T., at their seventh session held at Geneva in October-November, 1952. The documents have been published in the *Gazette of India Extraordinary*, dated 4th June, 1954. They were adopted after considering the resolutions, passed by the International Chamber of Commerce in 1951, which drew attention to the difficulties on account of the expense and clerical work imposed on traders and emphasised the need for abolishing consular formalities.

The principles embodied in the first document have been recognised in the General Agreement on Tariffs and Trade. In India, the Customs authorities in case of doubt may, in support of the declaration of value quantity or description of goods to be cleared, require the production of any invoice, broker's note, policy of insurance or other document. In a few cases where imports are assessable at a preferential rate of duty, certain other documents, such as certificates of origin, etc., are also required to be presented at the time of importation. The practice followed in India is in accord with the recommendations in this document.

Regarding the second document, it is to be noted that, although a system requiring foreign suppliers to support their offers of goods with consular invoices, visas, etc., issued by the consular representatives of importing countries is followed by some Governments, such a system is not in vogue in India. The recommendations embodied in this document do not, therefore, affect India but their acceptance by other Governments will be of benefit to Indian exporters.

The adoption of the principles and procedure underlying these documents by various countries will, therefore, make a substantial countribution towards removal of barriers to export and import trade and also assist expansion of world trade and employment.

(*Concluded from next column*)

to have its own agencies abroad. But, to a certain extent, the State can come to its help but such help can only follow the organisation of the various sectors of the industry, namely, cultivation of lac, processing the commodity and marketing the finished products on a scientific basis. The reorganisation of the industry is worth it, for, even as an unorganised industry, it is earning about Rs. 8 crores of foreign exchange every year; indeed, in 1951-52 the exports rose to Rs. 14.5 crores owing to high prices. The average exports could certainly be doubled, provided the methods of production are modernised and the quality of the product is ensured.

REHABILITATION OF LAC INDUSTRY

QUALITY AND PRICES MUST BE STABILISED

THANKS to the lack of publicity to the proceedings of the Shellac Conference held at Ranchi on the 1st inst., one is not in a position to know what decisions were taken to improve the economic condition of the Indian lac industry. This industry was one of those worst hit in 1952, and the crisis it faced then led to the appointment of a committee which made a number of recommendations. Although prices of shellac have recovered since then, its general position appears to have undergone no notable change at all. It is true that, in recent weeks, there has been a sharp rise in shellac prices—T.N. quality is currently quoted at Rs. 128 per maund, as against Rs. 98 at the end of February last and a low of Rs. 63 in March, 1953—but this is due to heavy speculative buying induced by expectations of a short-fall of about 40 per cent. in the *baisaki* crop, caused by adverse weather conditions. It is purely a temporary development which will surely disappear once the production improves again. The basic defects in the industry are still there to be removed. This is reflected fully in the speeches, delivered at the Conference, of both Dr. Punjabrao Deshmukh, Union Minister of Agriculture, and Dr. Sri Krishna Sinha, Chief Minister of Bihar. Both of them stressed the fact that, as the country was dependent upon foreign markets for the disposal of as much as 90 per cent. of the total output of shellac, attempts should be made to reduce their dependence by stimulating domestic consumption.

Dr. Sinha was particularly concerned over the position of the industry in his own State. Bihar, it may be mentioned, accounts for about 59 per cent. of the total production of lac in this country. The fortunes of a large section of its population engaged with lac cultivation, manufacture and trade are bound up with this industry. According to Dr. Sinha, the industry is facing even today a slump as a result of which thousands of labourers have been thrown out of employment.

The main troubles with this industry are two. One is wide fluctuations in prices of shellac and the other lack of proper quality control. Both these factors were referred to by the Chief Minister. He said that the wide fluctuations in prices affected not only the growers, but even the manufacturers; in other words, it affected the industry adversely at every stage. He wanted the Conference to suggest practical measures to prevent wide fluctuations in lac prices. Likewise, he criticised the tendency among a section of the trade which indulged in adulteration of lac at most stages with a view to securing higher profits. He did well in giving a warning that "the manufacturers and traders engaged in this industry should realise their responsibility in this matter to check their profiteering propensity and to take extra care and precaution to win the confidence of their buyers by maintaining the high quality of their products." With a view to reducing the country's dependence on foreign markets, he suggested that the Planning Commission should include, in its Second Five-year Plan, proposals for the establishment of industries utilising lac as one of their raw materials.

Dr. Deshmukh also emphasised the necessity of increasing the consumption of shellac both at home and abroad, by means of extensive propaganda. As regards expanding internal consumption, he thought that big consuming industries such as railways and shipyards could encourage the lac industry by using (*a*) shellac-based paints and (*b*) shellac-based oil-cloth and emery cloth. Another use which could be adopted at the village level was the coating of earthenware pots. He opined that the low standard of living in the country was a great limiting factor to the use of shellac. Consequently, for a large number of years, this commodity had to remain, he said, essentially an exportable commodity in the interest of India's balance of trade. In view of this necessity, we do not see why an attempt should not be made in foreign markets to expand sales of shellac. The instance of jute and tea industries which have their own publicity organisations abroad provide us an indication as to how exports of lac too could be promoted. Unfortunately, the lac industry is not so organised as the other two and, therefore, may not be able

SOCIAL UNREST OBSTACLE TO PEACE

I.L.O. CHIEF SURVEYS SOME MAIN LABOUR PROBLEMS

THE thirty-seventh annual conference of the International Labour Organisation began its 22-day session on the 2nd inst. The main subject of discussion at the conference is the annual report of Mr. David A. Morse, Director-General of I.L.O. The text of the report has not yet been made available in this country. But it would appear from Press reports that it surveys the world economic outlook, with particular reference to the standard of living of the millions of workers. A significant feature of the report is Mr. Morse's warning against the consequences of the failure of the promises of better living conditions to workers, especially in the underdeveloped areas of the world. Fulfilment of these promises is essential for strengthening the cause of peace. Mr. Morse points out the extent to which social disorder and civil unrest that will follow the disappointment in the realisation of better living conditions could undermine and weaken the attempts by nations meeting in international assembly to construct a workable and lasting peace. To quote his words:

"The issues of peace and social progress are inextricably interwoven at the present time. Social discontent and impatience for social progress in our world today is a ready occasion for political agitation and is often quick to become a cause of civil unrest. The nations meeting in international assembly to construct a workable and lasting peace cannot risk having their strength and determination in this cause undermined by social disorder at home. The reality, and not only the promise, of better living conditions, especially in the vast underdeveloped areas of the world, is an essential element in strengthening the cause of peace, just as the establishment of peace is necessary to the continuing long-term improvement of social conditions throughout the world. At few periods in its history has the I.L.O.'s work been more directly relevant to the great international political issues of the day. The I.L.O. has traditionally had a practical approach to social problems. It brings together the most powerful social forces in each country, workers and employers as well as Governments, to work out agreed solutions to concrete actual problems. I ask Governments in particular to reflect upon the importance of strengthening this practical undogmatic approach at a time when social problems are a prey to internal political dissensions and to international cleavage."

Few acquainted with the economic and political conditions in South and South-East Asia can dispute these remarks of Mr. Morse. After all, the prime necessity of man is the satisfaction of hunger and the provision of clothing which are not available to millions in these regions. Culture never breeds in a hungry stomach. It is, therefore, no accident that most of the original centres of civilisation grew up either at seaports or on the banks of navigable rivers. Political order, which is necessary to assure security to enable the peasant, the trader and the craftsman to specialise and organise their affairs is, as such, dependent on maintenance of a certain minimum standard of living. And in this modern world where distances have shrunk, thanks to marvels of science in the sphere of communications and inter-dependency of nations has increased on account of political ideologies and rapid industrialisation, no nation can remain prosperous for all times while others are in penury, even as a palatial house cannot exist in security amidst thatchments.

Conflict

It is true that, over much of the world, modern forms of economic and social organisation and industrial technology are regarded as man's best hope of overcoming poverty and improving material conditions of life. Yet almost everywhere, the process of industrialisation, as pointed out by the report, touches off a conflict between new and old social forms, attitudes and human values. The sufferers in this conflict are the peoples whose security in the old society is undermined before they find new security in the new industrial community. To quote the memorable words of Mr. Morse again:

"Great social strains and conflicts emerge among people uprooted from the traditional way of life and forced by circumstances to adjust to a new and alien routine. Where there is physical poverty, disease and hunger, these tensions may be aggravated. The interaction of bad physical conditions of life with the psychological tensions of social change makes a highly explosive compound threatening to burst into political disorder and thwart the possibility of peaceful progress."

Surveying the trend of industrial development throughout the world at the present time, the report declares that, in Asia, "overpopulation" is the compulsive force behind a great structural change. An industrial revolution has become a demographic necessity, and the awareness that poverty may be alleviated through modern economic organisation has aroused hopes in Asia which the world cannot afford to see frustrated. Throughout the less developed areas, there is a latent conflict between the aims of those who have realised that the hopes of the future lie with industrial development and the attitudes and habits of the rural masses. This is occurring at a time when world opinion is calling for the removal of the compulsions which have operated in the past to create the labour supply on which industrialisation has been founded. But measures taken in response to this trend of opinion have not been solving the social problems of industrialisation. What is being done is rather to reject unacceptable solutions. There remains "a great problem of labour supply to be overcome by those who are committed to the course of industrialisation."

That the population in India, Pakistan and the Middle East are frightfully dense is common knowledge. The position in these countries is almost similar to that which existed in the U.K. by about 1790. Although the population is enormous in Burma, Siam, Malaya and Indonesia, there are in these countries huge areas of uncultivated land which, if developed properly, would provide succour to them. A more or less similar position exists in the case of Latin America also.

Suspect Minority

A common feature observable in these countries is that, with the widening economic gap between the industrialised Western world and these countries, the masses of the latter are losing hopes of ever attaining a Western standard of living. The Western world has become, as remarked by Colin Clark, a "suspect minority." It is up to the West, therefore, to help these countries in improving their living standards and see that all the good things of life are available to all inhabitants of the world and not increasingly concentrated, as they are being done at present, for the benefit of a small Western minority.

Be that as it may, Mr. Morse suggests that the trade union "may be one of the most powerful instruments for creating a new industrial society and for helping the new recruit from the rural community to adjust to the conditions of industrial life." Of great importance is the union's role in "giving the worker a social status where he may previously have been an unregarded item at the bottom of the social scale." The problem of how to promote the growth of trade unions on sound and stable lines has been posed for Governments in many parts of the world. It is not enough to say that the workers must be left alone to organise themselves; yet there are grave dangers in unionism fostered by the State. The problem is a complex one which calls for serious consideration in the light of the experience in recent years of the countries undergoing economic development. If progress can be made in improving labour-management relations, more favourable attitudes by workers and employers will overcome some of the human obstacles to economic growth. But the report warns that it is useless to create attitudes favourable to economic expansion if investment capital is not ready to finance expansion. "Labour mobility without new job openings does not make sense." Achieving the first without the second will only court disillusionment and a recrudescence of restrictive attitudes and practices in perhaps even more rigid forms. The social and economic problems of economic development must be solved together; they cannot be divorced from one another without either frustrating economic development or disregarding its social purpose.

Social Value of Work

The I.L.O. Annual Report has urged management and trade unions to adopt such attitudes as will make the worker feel the social value of work, that he is participating in a common effort towards a purpose broader than his own personal wants or profitability of his factory. Elucidating this theme, Mr. Morse says:

"To arouse this sense of purpose requires a new attitude by management as well as by labour. New techniques and institutions may help foster it, but it is the underlying attitude and not the methods or forms that count. The greatest challenge which must be faced through democratic labour-management relations is to spread this new attitude towards work throughout industry."

It is beginning to be recognised, Mr. Morse explains, that man must have "job satisfaction" as well as decent living and working conditions and economic security. This means that industrial work must be given the social content that it now generally lacks. Man has to be enabled to make a contribution to society. Unless he feels that he is doing so, he develops emotional conflicts giving rise to discontent. To resolve these conflicts, he has to believe that his work has social purpose.

The development of a healthy trade union on sound economic foundations will help the worker realise the social purpose of his work. Unfortunately, the trade unions in the underdeveloped countries are not developed and, where they are developed, they have become pawns in the hands of politicians who have been using the power vested in them for their selfish political ends. This has been possible because of the illiteracy of the workers.

Housing

Mr. Morse has called upon the conference to pay special attention to the question of housing. Like all great social problems, housing affects workers virtually in every country. It does not respect ideological or geographical barriers. Housing the workers in Eastern countries is as important as that in Western countries. It is one of the problems which is closest to the individual human person. According to Mr. Morse, 180 million families are without adequate housing; they include some who have no shelter at all. Reporting on the need for workers' housing, Mr. Morse observes as follows:

"The world has now accepted that starvation and raggedness are not tolerable as part of the age to workers' health, happiness, efficiency and citizenship that is done by the appalling state of workers' housing in most parts of the world. Our prime task here is to awaken people's conscience to the urgency of the need to make the worker's home a reasonable expression of and basis for his human dignity."

Housing shortage, which affects more than one-third of the earth's population, including 30 million families in the industrially advanced countries, cannot be solved unless costs are reduced, financing methods improved and employment stabilised so as to permit the introduction of more stabilised methods. Much can be done by private enterprise, says Mr. Morse, especially for those who are anxious and able to rent or to buy. But Government assistance or subsidies of one kind or another will still be necessary before the needier part of the ill-housed get out of rural and urban slumps. Mr. Morse approvingly quotes the stand taken by President Eisenhower in favour of long-term mortgages to encourage private construction and home purchases by modest measures. He also quotes figures to show that, if the annual cost of interest, taxes and upkeep on a small home is 5 per cent. of the purchase price and if the purchase price exceeds five times the worker's annual earnings, he will have to pay at least 25 per cent. of his income in "rent"—proportionately more if the price of the house and fixed charges are higher. In this connection, Mr. Morse has made the following remarks:

"It is impossible to make any definite proposals as to what percentage of his income a worker should devote to his housing. . . . However, in few countries would it be considered desirable that workers should spend more than one-fifth of their income on housing, excluding heat and utilities, and in most countries a lower proportion is aimed at. This would require a capital cost for housing of at most two to four times the worker's annual income, and usually less . . . . If workers are to be able to pay for their own housing, even assuming substantial improvements in the financing of housing, there will need to be a substantial reduction in capital costs of construction and/or a substantial rise in workers' income."

Mr. Morse made the following suggestions concerning better organisation of the housing industry:

(1) Each country must make a reappraisal of its housing programme with a view to ensuring that it is currently doing its utmost to meet workers' urgent needs.

(2) Increased imports required by an expanding housing programme could be minimised by using designs and materials permitting a maximum use of domestic materials.

(3) Special training techniques might be developed to enable unskilled workers to supplement the building labour force.

(4) The bulk of housing effort in the underdeveloped countries must be concentrated on developing

with the types of labour and materials which are available and which can be spared from economic development projects, a type of housing which, while it may fall substantially short of ultimately desirable standards, will at least represent a significant improvement.

(5) The most important single contribution that in many cases can be made towards cost reduction is the adoption of a housing programme that will create confidence among employers and workers that the level of activity will be maintained on a high and stable basis.

(6) Experience has shown that significant economies can be achieved in house-building by large-scale enterprises.

(7) The high degree of labour turnover characteristic of the industry today with its small firms and small contracts makes it difficult for workers and employers to develop the spirit of collaboration in a common task which is essential to a raising of productivity.

(8) The architect and the contractor should agree on the design that will most simplify and cheapen production.

(9) The contractor should work out in advance with his suppliers and with foremen the best programming of supplies, where they are to be sited, and how the work is to be arranged.

(10) Briefing on the site of supervisors and workers by designers and contractors, especially as to any unusual features of the design of materials, can make a significant contribution to greater productivity.

(11) Extensive research is needed in the industry. The possibilities of improvements resulting from prefabrication, mechanisation on the site and work study are enormous.

(12) Important research still remains to be done into the possibilities of reducing seasonal fluctuations in the work and earnings in the housing industry.

(13) If the industry is to produce the larger output that will be necessary to make an effective attack on the world's housing needs, it needs to recruit more workers, it needs particularly to recruit young workers in order to offset the current tendency towards an ageing of the labour force, and it needs to extend and improve its training facilities.

Amortisation

The importance of the period of amortisation and the rate of interest is brought out by the fact that a period of 20 years' amortisation and a rate of interest of 5 per cent. require an annual charge equivalent to 8 per cent. of the capital cost, while a 50-year period and a 3 per cent. rate of interest require an annual charge of only 4 per cent. of capital cost. The risk element in housing finance is also important. Here, much has been done, but much still remains to be done in extending the proportion of the capital cost which can be borrowed and in mobilising savings and directing them towards workers' housing and in guaranteeing and providing insurance facilities against risk of default by borrowers. Public authorities able to take a broad and long-term view of the continuing need for housing are, says Mr. Morse, in a better position than are individual or even corporate leaders to minimise the charges that must be made to cover these risks. Mortgage banks, savings banks, co-operative building societies and insurance companies have shown themselves to be well able to co-operate with Governmental agencies to make loans available to workers at minimum cost.

Discussing Government subsidies and rent controls, Mr. Morse, suggests that some substandard housing could be restored rather than having to be demolished. He says: "In some cases the private landlord may be willing to make the expenditures provided he can recoup them from higher rents, particularly if he were able to obtain the necessary finance easily and on good terms. In such cases, it appears that Governments might relax rent control to permit controlled rent increases, subject to appropriate safeguards, and should consider the desirability of arranging capital advances for landlords." Proceeding, he observes that, if higher rents made it impossible for the houses to be let, Governments would have to decide whether to subsidise rents or take over the houses at appropriate valuations in order to keep them filled. "Public subsidies," to quote him, "were paid on privately-traded consumption goods in many countries during and after the war. There does not appear to be any intrinsic reason why privately-owned houses should not be publicly subsidised, although there would no doubt be administrative difficulties involved."

MINERVA MILL RAISES DISTRIBUTION TO SHAREHOLDERS BY 2 PER CENT.

PROFIT HIGHEST IN FOUR YEARS

IN conformity with the general trend of cotton textile mill profits for the year ended 31st December, 1953, the results of the Minerva Mills Ltd. (Managing Agents: Messrs. N. Sirur & Co., Ltd., Bombay) for that year show a sizable improvement. The gross profit is impressive at Rs. 6.39 lakhs, as compared with only Rs. 0.85 lakh for the previous year. It may be noted, in this connection, that the Company's profit had dwindled successively from Rs. 27.28 lakhs for the year 1948 to Rs. 0.85 lakh in 1952. It is, therefore, gratifying to find that the Company was able to retrieve the position to some extent during the year under review and earn a profit which is the highest for the past four years.

Following the improvement in earnings, as indicated above, the distribution to shareholders has been raised from 5 per cent. to 7 per cent. by stepping up the dividend by 1 per cent. to 6 per cent. and by distributing a bonus of 1 per cent. It will be remembered that the dividend was cut last year from 6 per cent. paid for 1950 and 1951; for 1949, a dividend of 6 per cent. together with a bonus of 2 per cent. was paid. Thus, the distribution for the year under review is 1 per cent. lower than that for 1949.

The causes that led to the improvement in the earnings of the Company, in common with its confreres, are too well known to bear repetition. Briefly stated, however, they are the abolition of the control on price and distribution of cloth in July last, the cheapness of raw cotton and the rise in output of cloth. An analysis of the figures in the latest profit and loss account of the Company clearly bears out these features. Thus, sale proceeds of cloth alone show a rise from Rs. 87.81 lakhs to Rs. 106.53 lakhs; closing stocks of cloth and yarn have declined from Rs. 36.17 lakhs to Rs. 24.78 lakhs and the value of cotton consumed from Rs. 88.98 lakhs to Rs. 74.78 lakhs.

The following table brings out clearly the progress of the Company during the past three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950
Sale proceeds	145.24	131.47	133.26	101.97
Stocks of cloth and yarn	24.74	36.17	27.73	16.35
Value of cotton, stores and fuel consumed	85.65	99.96	108.07	65.62
Wages and other expenses	42.56	39.56	34.91	31.67
Gross profit	6.39	0.85	2.43	3.34
Managing Agents' commission	0.66	0.09	..	0.33
Depreciation	3.54	1.08	0.60	0.79
Taxation	0.26	0.18	0.10	0.10
Net profit (+) or loss (—)	+1.93	—0.50	+1.73	+2.12
Transfer from reserves and provisions written back	..	2.02	..	0.50
To reserves	0.07	1.48	1.78	1.78
Dividend	(D. 6% + B. 1%)	(D. 5%)	(D. 6%)	(D. 6%)
Carry forward	0.12	0.26	0.23	0.27

It will be observed that the saving on cotton, stores and fuel consumed has been offset to some extent by the rise of Rs. 3 lakhs in wages and other expenses. It will be interesting to note from the foregoing table that, in the course of the past three years alone, the wages and other expenses have gone up by nearly Rs. 11 lakhs, while the gross profit has risen by Rs. 3 lakhs only. The provision for depreciation has been raised from Rs. 1.08 lakhs to Rs. 3.54 lakhs and that for taxation from Rs. 18,500 to Rs. 26,000. The net profit for the year under review amounts to Rs. 1.93 lakhs, as against a loss of Rs. 50,403 in the previous year. No addition has been made to the reserve fund to replace even partly the sum (Rs. 2 lakhs) drawn last year to wipe off the loss and pay a dividend of 5 per cent. This is the fourth year in succession in which the reserve fund has not been provided with anything, although a sum of Rs. 50,000 was allocated to the investment reserve in 1950.

There has been no change in the capital of the Company which remains at Rs. 29.81 lakhs, to which level it was raised in 1948 from Rs. 24.87 lakhs by the capitalisation of Rs. 4.93 lakhs from out of the reserve fund. The reserve and surplus aggregate Rs. 25.02 lakhs. The gross block of the value of Rs. 76.14 lakhs, including new additions to the extent of Rs. 3.35 lakhs during the year under review, has been written down to Rs. 31.31 lakhs. Current liabilities and provision for taxation amount to Rs. 66.04 lakhs, having been reduced from Rs. 79.43 lakhs as at the close of 1952. Of these liabilities, secured loans from banks show a fall from Rs. 45.13 lakhs to Rs. 25.38 lakhs, while unsecured loans disclose an increase from Rs. 16.85 lakhs to Rs. 19.26 lakhs. A substantial part of the unsecured loans—Rs. 14.91 lakhs to be precise—is in the form of fixed deposits. The current assets aggregate Rs. 89.55 lakhs as against Rs. 92.66 lakhs a year ago, and exceed the current liabilities and provision for taxation by Rs. 23.51 lakhs. Of the current assets, stock-in-trade amounts to Rs. 41.81 lakhs, as against Rs. 64.60 lakhs, stores; spares and tools Rs. 16.00 lakhs (Rs. 15.08 lakhs), debts, deposits and advances Rs. 13.78 lakhs (Rs. 8.16 lakhs), investments Rs. 17.08 lakhs (Rs. 14.32 lakhs), and cash balances Rs. 0.88 lakh (Rs. 0.50 lakh).

The Rs. 100 paid up shares of the Company are being currently quoted at Rs. 110 *cum-div.* On an *ex-div.* basis, the latest distribution provides a yield of 6.8 per cent. per annum free of tax.

COMPANY LAW ADMINISTRATION

The Government of India, which has formally taken over the administration of Company Law, will open three regional offices; one for the Western region with headquarters at Bombay and one each for the Eastern and Southern regions, in the next two or three months, probably before the end of September. This was disclosed by Mr. D. L. Mazumdar, Secretary, Department of Economic Affairs, Finance Ministry, Government of India, in Madras last week. Mr. Mazumdar toured the Southern areas last week in connection with finalising the arrangements for the same.

The administration of Company Law had always been a Central subject, but the function had so far been delegated to State Governments and the latter were carrying on the function as agents of the Central Government, said Mr. Mazumdar. The Government of India, however, wanted to resume the function, with the object of standardising the administration and laying down a uniform policy throughout the country. The Central Government had not set up its own machinery, but was using the machinery set up by the State Governments. The time had now come, Mr. Mazumdar added, when it should have the machinery under its own control. There would, however, be no dislocation in doing so, he assured.

An autonomous organisation had been set up by the Central Government under the Department of Economic Affairs, in the Ministry of Finance for this purpose. The head of the Department would be the Commissioner for Corporate Investment and Administration. He would be in charge of the Stock Exchange also. There would be three or four directors who would be working through the regional offices. The whole work was expected to be completed before the end of September this year.

CENTURY MILL'S PROPOSAL TO PRODUCE ART SILK YARN APPROVED

At the extraordinary general meeting of the shareholders of the Century Spinning and Manufacturing Company, Ltd., held on 7th June, 1954, the Directors' proposal to expand the business of the Company by putting up a plant for the manufacture of art silk yarn (reference to which was made in these columns in our issue dated 29th May, 1954) was approved by an overwhelming majority.

Mr. R. D. Birla, Chairman of the Company, who presided over the meeting, gave some interesting details of the scheme in his speech before putting the resolution to vote as well as in his reply to questions from the shareholders, many of whom evinced keen interest in the prospects for the new venture. According to him, it is proposed to put up a plant for the manufacture of art silk yarn by continuous viscose process at Kalyan. The site in Kalyan has been chosen because of ready availability of water and other facilities. The disposal of waste water has also been taken into consideration in selecting Kalyan as the site of the plant. The capital cost of the plant will be Rs. 3.5 crores. It has not yet been finally decided as to how the necessary resources will be raised. It may be raised by (1) making arrangement for deferred payment with suppliers of machinery, (2) having cash credit facilities from banks, and (3) seeking accommodation from Government or semi-Government bodies. It is, however, not the intention of the management to raise new capital. A categorical assurance to this effect was given by Mr. Birla.

There is no question of competition with the existing factory in Kalyan, as the present requirements of the country are much more than the existing productive capacity of the factories already manufacturing art silk yarn, as well as the productive capacity of the Century Mill's proposed plant. The present productive capacity of the two factories, one at Kalyan and another in Travancore, is 10 tons and 5 tons per day, or roughly 12.5 million lbs. per year. Both factories are manufacturing art silk yarn by continuous viscose process. The capacity of Sirsilks Ltd., in Hyderabad, which is yet to commence production on a commercial scale, is 5 tons per day, but its process is different, namely, acetate process. The maximum production capacity of the three factories will thus be 17.5 million lbs. per annum, even after making room for the expansion of these factories. The production of the Century Mills, when the present project is completed, will be 5 tons per day or 4 million lbs. per annum. Thus, the total domestic production of rayon yarn will be of the order of 21.5 million lbs. only. As against this, the requirements are estimated at 75 million lbs. per annum. Even now, imports are running at the rate of 40 million lbs., notwithstanding the close check that is being exercised over them by the Government. It will thus be seen that there is vast scope for the profitable manufacture of art silk yarn in the country.

The proposed plant is expected to go into production in less than two years, provided everything goes well, according to schedule. The management proposes to apply to the Government for licence soon, now that the resolution has been approved by the shareholders.

One or two shareholders objected to the Directors' proposal to utilise the resources of the Company in this scheme involving heavy capital cost with the attendant risks. They requested the management to start a new concern for taking up this project. But the Chairman rejected the request and said that it was not the intention of the management to have a new concern. The decision to this effect had been taken, he said, after prolonged consideration. Some of the shareholders expressed concern over the dividend of the Company being affected by the new venture. The Chairman assured them that the dividend of the Company would be maintained at the current level for at least three years.

SRI KRISHNARAJENDRA MILL RAISES DIVIDEND

An increase of one per cent. to 9 per cent. in the distribution to the shareholders has been proposed by the Directors of the Sri Krishnarajendra Mills Ltd. (Managing Director and Chairman: Mr. H. N. Pallegar, I.A.S., Mysore), for the year ended 31st March, 1954. It was only last year that the distribution was raised from a dividend of 4½ per cent. and bonus of 1½ per cent. to a dividend of 6 per cent. and a bonus of 2 per cent. This year, the Directors have proposed not only to consolidate the dividend and bonus parts of the distribution but also to enhance the total by one per cent. Though the distribution is being raised for the second year in succession, the latest one falls short of that (16 per cent.) paid for the year ended 30th June, 1943. (The Company, it may be noted here, changed its financial year-end from 30th June to 31st March in 1951.)

This welcome increase in the distribution to shareholders follows an improvement in the earnings of the Company for the year under review. The gross profit has gone up from Rs. 6.75 lakhs for 1952-53 to Rs. 9.20 lakhs, a rise of over 36 per cent. The provision for depreciation has been more than doubled from Rs. 2.10 lakhs to Rs. 4.52 lakhs, consequent on the sizable addition to the gross block made during the year. The provision for taxation has been stepped up only slightly from Rs. 1 lakh to Rs. 1.12 lakhs, notwithstanding the notable rise in profit. This is evidently because of the initial depreciation allowances permitted under the Income-tax Act on the additions to the plant and machinery. The Directors have transferred a sum of Rs. 22,368 to the general reserve, as against Rs. 23,989 in the previous year and Rs. 20,000 to the dividend equalisation fund, as compared with Rs. 50,000 a year ago. The increased dividend requires only Rs. 36,000 more than that taken up last year and this has been well earned, as will be seen from the following table, which presents the salient features of the results for the year under review against the background of those for the previous years:

(In lakhs of rupees)

	Year ended 31st March			Nine months ended 31-3-1951
	1954	1953	1952	
Sale proceeds	88.95	85.39	78.31	60.21
Stocks	23.11	22.85	26.21	17.50
Expenses*	80.63	80.45	72.34	54.87
Profit	9.20	6.75	6.66	5.75
Provision for—				
Depreciation	4.52	2.10	1.80	1.42
Taxation	1.12	1.00	2.00	1.70
To reserves	0.42	0.74	0.61	0.50
Dividend	3.20 (D. 9%)	2.94 (D. 6% + B. 2½%)	2.20 (D. 44% + B. 1½%)	2.20 (D. 6% + B. 2%)
Carry forward	0.28	0.23	0.27	0.25

* Approximate.

Commenting on the year's results, the Directors observe that "they will be considered satisfactory, particularly in the light of manufacturing costs continuing to be high and the emergence of competitive buyers' market."

The latest balance-sheet of the Company shows that the reserves and surplus amount to Rs. 14.75 lakhs, representing about 40 per cent. of the paid-up capital of Rs. 36.70 lakhs. Provision for taxation amounts to Rs. 9.90 lakhs and current liabilities aggregate Rs. 22.99 lakhs. The gross block of the value of Rs. 73.40 lakhs (which includes Rs. 18.01 lakhs representing additions during the year) has been well written down to Rs. 26.14 lakhs. Current assets amount to Rs. 58.20 lakhs and exceed the current liabilities and provision for taxation by a margin of Rs. 25.31 lakhs.

During the year under review, a new spinning unit of 5,544 spindles was erected and the same is working satisfactorily.

Points From The Chair

"Go-slow" Tactics of Dock Labour

"I HAVE referred above to rising operating costs and persistence of avoidable delays at loading and discharging ports. In this connection, I would particularly draw attention to the 'go-slow' tactics being employed by labour nowadays with increasing frequency. I am aware that responsible authorities in the Labour Ministry of the Government of India have condemned this practice as undesirable and indefensible even from labour's point of view; but, beyond expressing their disapproval of it, the Government do not appear to have evolved any effective measure to uproot this growing evil which, if unchecked in time, threatens to disorganise normal trading operations at important ports, such as Bombay and Calcutta, and even to divert their trade elsewhere to the serious detriment of the country's economy. Patchwork measures evolved in haste to meet exigencies as they occurred have failed to produce lasting results. The time has clearly arrived when concerted efforts should be made jointly by the Ministries of the Government of India concerned with this problem to evolve a working formula relating emoluments to output of work, the formula being made applicable to all categories of labour at a port, with adequate enforcing powers vested in the authority entrusted with the operation of the formula."

C. R. SRINIVASAN,
Bharat Line Ltd.

Change in Economic Conditions of West Africa

"Not everyone realises that economic conditions in tropical West Africa have developed more rapidly and changed more fundamentally in the last 25 years than in all the centuries which have gone before. One indication of that change is the fact that the total annual value of exports, after allowing for changes in the value of money is now 3½ times what it was 25 years ago. Imports, on the same basis, show a similar rise. This represents a rate of growth with which few parallels can be found elsewhere. But rapidity of growth does not imply that a high level of prosperity has yet been reached by our standards. The popular conception of vast African territories with untold wealth is a delusion. Despite considerable mineral deposits, most of the area is predominantly agricultural. The soils are not rich. In Nigeria, the only territory for which national income figures exist, the *per capita* income three years ago was estimated at £20 a year, compared with £250 for the United Kingdom. Over the whole area of tropical West Africa, the real *per capita* income is low by any measure."

SIR GEOFFREY HEYWORTH,
Unilever Ltd.

Research in Rubber

"Attempts have been made to compare expenditure on research by the natural rubber producer with what is alleged to be spent by the rubber manufacturers of America. No informed person would seek to deny the high technical efficiency of the latter or their enlightened and progressive outlook, but the comparisons that have been made have little validity and less of the exactitude which should rightly appertain to a scientific subject. Recently, however, there has been one authoritative statement made regarding American expenditure on research. It was to the effect that, as from 1st July of the current year, some 4 million American dollars were being set aside for research on and development of synthetic rubber. On the basis of last year's output of synthetic rubber, this would be the equivalent of .67 of a Malayan cent per lb. Far from being in excess of the rate of expenditure incurred by a company such as this, in its incidence, it is actually less, despite the fact that the synthetic rubber industry, in contrast to the excessively taxed natural rubber industry, enjoys the privileged position of having at its disposal profits which are not made subject to any tax whatsoever."

SIR JOHN HAY,
United Sua Betong Rubber Estates Ltd.

Sugar Production in Jamaica

"I regret to tell you, however, that sugar production in Jamaica will have to be restricted in future. The new International Sugar Agreement, which came into force on 1st January, 1954, limits the export production of Commonwealth countries to the quotas established under the Commonwealth Sugar Agreement of 21st December, 1951. The overall B.W.I. export quota amounts to 900,000 tons of which Jamaica's agreed share is 270,000 tons, but, according to present estimates, total export production in Jamaica for the current year will exceed this latter figure by some 50,000 tons, making an approximate total of 320,000 tons for export, to which must be added local consumption sugar, bringing the estimated grand total production to over 365,000 tons. There is a possibility this year that there will be shortfalls in other territories which will provide additional quota for Jamaica. But shortfalls in other territories cannot be expected in future years, and in order to effect the necessary restriction of sugar production in Jamaica, deliveries of cane by both estates and farmers will have to be limited. This will require legislation and the matter is now receiving the attention of the Government of Jamaica. In the meantime, I must express our concern at the continued expansion of cane cultivation by certain farmers who have ignored the repeated warnings given to them. Unless control is put into effect promptly, a most serious situation will arise."

G. VERNON TATE,
West Indies Sugar Co., Ltd.

COMPANY MEETINGS AND DIVIDENDS

UNITED PROVINCES ELECTRIC SUPPLY CO., LTD. Half-yearly General Meeting, Calcutta, 18th June, 1954. Dividend: Rs. 5 per share. Transfer books remain closed from 12th to 18th June, 1954, both days inclusive.

PUTINBAREE TEA ASSOCIATION LTD. Annual General Meeting, Calcutta, 18th June, 1954. Dividend: Re. 1 per share. Transfer books remain closed from 9th to 18th June, 1954, both days inclusive.

NEW CINNATOLLIAH TEA CO., LTD. Annual General Meeting, Calcutta, 18th June, 1954. Dividend: Rs. 5 per share. Transfer books remain closed from 9th to 18th June, 1954, both days inclusive.

BURRAKUR COAL CO., LTD. Half-yearly General Meeting, Calcutta, 22nd June, 1954. Dividend: As. 4 per share. Transfer books remain closed from 8th to 22nd June, 1954, both days inclusive.

INDIAN WOOD PRODUCTS CUTS DIVIDEND SLIGHTLY

KHARDAH JUTE'S RESULTS DISAPPOINTING

Indian Wood Products Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Gillanders Arbuthnot & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th September, 1953.

Although the profit was lower this year the results can be considered satisfactory. The excess profits tax refund received this year was considerably smaller than in 1952, as also the amount of interest received on pre-paid income-tax. The percentage of Katha obtained from the Khair wood continued to fall slightly during the year, due to the poor quality of timber that we have been allotted, but turnover remained about the same owing to an increase in selling prices.

The value of the stocks of Khair wood continues to increase due to the high rate of royalty charged by the U.P. Government.

The results of the year's working, after providing for taxation, shows a net profit of Rs. 6,92,961 (Rs. 9,21,788) to which is added the credit balance brought forward from the previous year of Rs. 1,70,440 (Rs. 73,653) making a total of Rs. 8,63,401. (Rs. 9,95,441). From this amount is deducted the interim-dividend of 10 (15) per cent. paid on the 18th December, 1953, on 2,00,000 (1,50,000) ordinary shares of Rs. 10 each, without any deduction in respect of income-tax payable by the Company, absorbing Rs. 2,00,000 (Rs. 2,25,000), leaving an available balance of Rs. 6,63,401 (Rs. 7,70,441). The directors have decided to transfer Rs. 2,00,000 (Rs. 3,00,000) to general reserve and recommend that the balance of Rs. 4,63,401 (Rs. 4,70,441) should be disposed of as follows:—

By payment of a final dividend of 15 (15) per cent. on 2,00,000 (2,00,000) ordinary shares of Rs. 10 each, without any deduction in respect of income-tax payable by the Company, Rs. 3,00,000 (Rs. 3,00,000) and leaving to be carried forward in profit and loss account a sum of Rs. 1,63,401 (Rs. 1,70,441).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Block ...	4,77,979
Reserves ...	14,15,487	Stocks	31,21,659
Provision for taxation ...	3,80,943	Stores, tools, etc. ...	2,48,313
Liabilities ...	5,02,011	Debts, deposits and advances ...	4,14,495
Profit and loss account ...	8,63,401	Investments	4,49,126

Rs.	51,61,842	Rs.	51,61,842

Khardah Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Anderson Wright Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th September, 1953.

The revenue account after deduction of all working charges and commissions showed a profit of Rs. 8,59,979 (Rs. 20,06,119). After adding the amount carried forward from the last half-year of Rs. 3,07,185 (Rs. 7,39,848) there was a total amount of Rs. 11,67,164 (Rs. 27,45,967). After providing for taxation Rs. 3,25,000 (Rs. 8,25,000), and depreciation Rs. 1,50,000 (Rs. 1,50,000) there remained an available balance of Rs. 6,92,164 (Rs. 17,70,967), which the directors dealt with as follows:—

By payment of the dividend for the half-year on the preference shares at the rate of 6 per cent. per annum without any deduction in respect of income-tax paid by the Company Rs. 27,000 (Rs. 27,000) and payment of a dividend for the half-year on the ordinary shares of Rs. 7-8 (Rs. 15) per share without any deduction in respect of income-tax paid by the Company Rs. 4,05,000 (Rs. 8,10,000) leaving a balance of Rs. 2,60,164 (Rs. 4,00,592) which the directors carried forward.

During the period covered by this report, the working hours at the Mill were maintained at 42½ hours per week, but with 12½ per cent. of the total complement of looms sealed in compliance with the main and supplementary working time agreements of the Indian Jute Mills Association.

During the greater part of the period under review, prices of both raw jute and manufactured goods developed weakness but advanced considerably during the month of May due principally to unfavourable weather conditions in the jute growing districts. The margin of manufacturing profit, however, has continued to be on the low side and, but for difficult trading conditions, the working results of the half-year might have been more satisfactory.

The reduction in the export duty on hessians in September last as also large purchases of hessians by the Argentine had the effect of stimulating its price structure but heavy goods prices did not show a similar improvement and were generally uneconomical.

The sum of Rs. 27,235 (Rs. 32,299) was paid to workers as gratuity on retirement during the period, the Employers' contribution to Mill Employees' provident fund amounted to Rs. 1,52,278 (Rs. 65,228) and the Employers' contribution towards the Employees' State Insurance Fund amounted to Rs. 21,657.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	63,00,000	Block ...	51,85,346

		Cash ...	1,29,175
Rs.	1,39,42,455	Rs.	1,39,42,455

Albion Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Sahu Jain Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th November, 1953.

The half-year's working after writing off depreciation showed a profit of Rs. 5,80,976 (Rs. 1,51,493) to which was added the net balance brought forward after appropriation from the last accounts of Rs. 4,42,186 (Rs. 16,522), making a total of Rs. 10,23,162 (Rs. 1,68,016). From this has been appropriated for provision for taxation Rs. 1,70,000 (*nil*) and transfer to general reserve Rs. 5,96,609 (*nil*) leaving a balance of Rs. 2,56,553 (Rs. 1,68,016). The directors made payment of dividends (without deduction of income-tax paid by the Company) for the half-year ended 30th November, 1953, to the shareholders as on 21st May, 1954, on 9,000 preference shares at Rs. 3-3 (Rs. 3-3) each Rs. 31,500 (Rs. 31,500) and on 12,000 ordinary shares at Rs. 12 (Rs. 10) each Rs. 1,44,000 (Rs. 1,20,000) leaving a balance to be carried forward of Rs. 81,053 (Rs. 16,516).

In accordance with the working time agreement of the Indian Jute Mills Association, the Mills worked 42½ hours per week with 12½ per cent. of the total complement of looms sealed throughout the half-year.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	24,50,000	Block ...	24,88,267
Reserves ...	52,13,033	Stocks ...	34,54,168

Liabilities ...	11,66,109	Debts, deposits and advances ...	10,31,920
Profit and loss account ...	2,85,017	Investments	91,987
		Cash ...	18,60,708
Rs.	97,26,822	Rs.	97,26,822

United Provinces Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September, 1953.

Although trading results and progress have been satisfactorily maintained during the period under review, the cost of labour and materials continues to rise thereby offsetting progress to a considerable extent.

The following schedule indicates the progress made during the past three years:—

Half-year ended	*Units sold*	*Revenue* Rs.
31st March, 1951 ...	23,129,769	27,79,281
30th September, 1951	26,484,531	31,10,349
31st March, 1952 ...	25,430,966	31,52,162
30th September, 1952	28,183,332	34,33,172
31st March, 1953 ...	28,300,558	34,62,595
30th September, 1953	31,257,135	37,86,990

After complying with the provisions of the Electricity (Supply) Act, 1948, and making adequate provisions for liabilities and setting aside Rs. 50,000 (Rs. 60,000) to development and extensions account, there remains a balance of Rs. 3,59,568 (Rs. 3,56,045) including Rs. 78,548 (Rs. 72,471) brought forward from the previous half-year, available for distribution, and this the directors recommend be disposed of in payment of a dividend at the rate of 10 (10) per cent. per annum free of income-tax Rs. 2,80,000 (Rs. 2,80,000) and in carrying forward to next half-year Rs. 79,568 (Rs. 76,045).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	56,01,183	Block ...	1,29,27,793
Debentures ...	30,00,000	Stores ...	17,39,109
Reserves ...	36,71,372	Tools and instruments	1,46,024
Liabilities ...	54,06,922	Work-in-progress ...	1,624
Profit and loss account ...	3,59,568	Goods-in-transit ...	2,702
		Other assets	1,01,238
		Debts, deposits and advances ...	21,40,192
		Investments	5,14,116
		Cash ...	4,66,249
Rs.	1,80,39,047	Rs.	1,80,39,047

Palani Andavar Mills Ltd.

The directors of the above Company (Managing Agents and Secretaries: Baghyalakshmi & Co., Udamalpet) submitted the audited accounts of the Company for the year ended 31st December, 1953.

After meeting all expenses and providing a sum of Rs. 5,05,571 (Rs. 1,15,000) towards depreciation, which includes initial depreciation also, the year's trading has resulted in a net profit of Rs. 2,66,565 (Rs. 59,710). Adding to this the carry forward balance of last year's profit amounting to Rs. 3,380 (Rs. 19,670) the total available for distribution was Rs. 2,69,945 (Rs. 1,67,380), out of which a sum of Rs. 11,469 has been adjusted towards dividend equalisation fund and a sum of Rs. 3,926 spent for charity and donations has been written off leaving a balance of Rs. 2,54,551 (Rs. 1,67,380) which the directors disposed of as follows:—

By payment a dividend of 7 (7) per cent. on preference shares Rs. 14,000 (Rs. 14,000), payment a dividend of 24 (15) per cent. on ordinary shares Rs. 2,40,000 (Rs. 1,50,000) and carried forward to next year Rs. 551 (Rs. 3,380).

Although control measures on yarn were lifted in the middle of the year, the yarn market was sluggish and the prices of yarn were fluctuating and unsteady. There was a drastic cut in the supply of electricity during the beginning months of the year and the Company was forced to instal a generator to augment the power supply. The Company has been obliged to provide for depreciation on a very large-scale on account of the capital expansion programme undertaken by it and in respect of which the Government is allowing special concession for depreciation. The prices of cotton were, however, more or less steady during the year. The Company was able to work for 304 days during the year as against 246 days in the previous year. This was made possible by the use of the generator, which however resulted in increased cost to the company in respect of its power requirements. The directors consider that the profits earned in the circumstances are satisfactory.

The directors are glad to report the installation and the use of an additional 6,400 spindles with the necessary auxiliary machinery and high draft-ing system during the year. This additional spindleage is expected to increase the production capacity of the mills substantially.

As there was no need for the reserve for fluctuations in price of cotton and staple fibre, it has been distributed amongst other reserves, the total of which now stands at Rs. 9,00,000. A dividend equalisation fund of Rs. 1,00,000 has been created in the place of Rs. 88,000 in last year's account which was utilised for paying dividends.

The assessments to income-tax upto and inclusive of the year 1951 have been completed and the balance in provision for taxes account is expected to cover the tax liability in respect of both 1952 and 1953. Therefore, no additional provision has been made on this account out of this year's profits.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,00,000	Block ...	13,40,793
Reserves ...	7,50,000	Stocks ...	47,53,991
Provision for taxation ...	1,50,000	Stores and spare parts ...	11,98,912
Liabilities ...	11,40,292	Debts, deposits and advances ...	25,84,056
Profit and loss account ...	2,54,551	Investments	50,781
		Cash ...	1,23,371
Rs.	34,94,843	Rs.	34,94,843

N.B.—Figures within brackets relate to the corresponding period of the previous year.

GILT-EDGED ACTIVE

(From Our Own Correspondent)

BOMBAY, *9th June*

There was no perceptible change in the state of the short-term money market during the week under review. There was no doubt some influx of funds from mofussil centres, but it was easily absorbed by the market. Exchange banks were reported to be active borrowers, with the result that the available funds were found inadequate to ease the situation. However, banks were not prepared to pay more than 2½ per cent. for inter-bank call money. They were willing to seek accommodation from the Reserve Bank rather than pay anything above 2½ per cent. House money continued to fetch 3 per cent. Short-term deposits for one to three months were still usable at 3 per cent. and for 4 to 12 months at 2½ to 2¾ per cent.

After three weeks of successive contraction to the extent of Rs. 30.83 crores, notes in circulation have gone up, as was anticipated in these columns last week, by Rs. 8.62 crores during the week ended 4th June, 1954. As against this, there has been a fall of Rs. 9.39 crores in the notes held in the Banking Department of the Reserve Bank. The consequential decline of Rs. 77 lakhs in total notes issued is covered by a similar fall in rupee coin. There has been a further increase in the Central Government's deposits by Rs. 2.81 crores, bringing the total increase in the past four weeks to Rs. 19.13 crores. Deposits of other Governments have declined by Rs. 1.01 crores and those of banks by Rs. 3.69 crores. Balances held abroad have gone down by Rs. 65 lakhs. A rise of Rs. 60 lakhs is noted in loans and advances to Governments. Other loans and advances have, however, dropped by Rs. 2.45 crores. There has been a fresh borrowing of Rs. 7.45 crores by scheduled banks against usance bills, while the outstanding borrowings as at the close of the week show a reduction of Rs. 5.27 crores. Investments have gone up by Rs. 9.78 crores.

An increase of Rs. 1.54 crores in demand deposits and of Rs. 49 lakhs in time deposits is disclosed by the Scheduled banks' statement for the week ended 28th May, 1954. Inter-bank borrowings have also risen by Rs. 54 lakhs. Borrowings from the Reserve Bank have gone down by Rs. 8.36 crores and those from the Imperial Bank by Rs. 15 lakhs. For the third week in succession, loans and advances have contracted, the exact decline during the week under review being Rs. 4.49 crores. Inland bills purchased and discounted have also dropped by Rs. 2.66 crores, while foreign bills have risen by Rs. 16 lakhs. Investments show a decline of Rs. 23 lakhs. Cash in India and balances with the Reserve Bank disclose a shrinkage of Rs. 2.12 crores and balances with other banks in current account Rs. 6 lakhs, while money at call and short notice reveals a rise of Rs. 1.13 crores.

The Gilt-edged market continued to be cheerful during the week under review also. There was a preponderance of buyers and this factor, coupled with scarcity of stocks, pushed up prices further. The volume of business also showed an enlargement. A good deal of business was put through in 3 per cent. 1957 which advanced by As. 4 to Rs. 98-6. 3 per cent. 1958 had buyers at Rs. 98-3, a rise of As. 3 over the week. 3 per cent. 1959-61 were wanted up to Rs. 96-4, as against Rs. 96-2 last week. 3 per cent. 1963-65 had business As. 2 higher at Rs. 92-14 and 3 per cent. 1964 were in request As. 2 better at Rs. 92-15. 3 per cent. 1966-68 gained an anna to Rs. 90-5. There were buyers in 3 per cent. 1970-75 at Rs. 86-6, As. 2 higher than in the previous week. 3 per cent. 1986 Conversion Loan, however, met with profit-taking and shed As. 3 to Rs. 81-15. 3½ per cent. N.P. Loan attracted good attention and changed hands a fraction better at Rs. 98-13. 2½ per cent. 1954 rose by an anna to Rs. 99-9. 2½ per cent. 1955 had buyers at Rs. 98-10. 2½ per cent. 1961 hardened by an anna to Rs. 91-2. 2½ per cent. 1960 changed hands As. 2 higher at Rs. 94-3, as also 2½ per cent. 1962 at Rs. 92-2.

In the foreign exchange section, there was no change in the rupee-U.S. dollar exchange rate. In New York, however, sterling was a shade weaker, spot sterling moving down from $2.81.13/16 to $2.81.15/16 to $2.81-2.81¼. Three months' sterling closed at $2.81.11/16-2.81¾, as against $2.81.11/16-2.81.13/16 and transferable sterling at $2.78¼-2.78½, as compared with $2.78¼-2.79 a week ago.

METALS RULE STEADY

(From Our Own Correspondent)

CALCUTTA, *8th June*

Following better advices from foreign markets, steady conditions were in evidence in the local metal market during the week under review. Demand was moderate and stockists were full of confidence. With the increase in the tempo of industrial development in the country, metal industries are getting busier and busier day by day. Indigenous metal industries are now able to cater to a wider requirement of products, hitherto met by imports.

In trading this week, electrolytic zinc gained from Rs. 58-4 to Rs. 59-4, and the news that the U.S. domestic price had been further raised to 11 cents from 10½ cents a lb. was cheerfully noted. There was also a report that there was a proposal by the Tariff Commission in the United States to raise the import duty by 50 per cent. in respect of zinc and lead. In the local market, the quotation for zinc at one time touched Rs. 60, a moderate quantity being involved in transactions. Price ideas about zinc, lead and tin are high, in view of the imminent purchases for stockpiling in America.

Mercury continued to be very steady, and at Rs. 1,005 registered a further gain. The main producing countries of quicksilver, namely, Mexico, Spain and Italy, are heavily booked with orders from the United States, and this has contributed for strong markets. Lead advanced from Rs. 69 to Rs. 70. Tin was better at Rs. 472. In contrast with other sections, however, copper was quiet at Rs. 167.

SHARP FALL IN BULLION

(From Our Own Correspondent)

BOMBAY, *9th June*

A sharp decline in prices in the course of the last three days, bringing them to new low levels not witnessed during the last four months, was the main feature of trading on the Bullion Exchange during the week under review. In the earlier part of the week, the trend was somewhat irregular under alternate spells of profit-taking at higher levels and replacement buying and covering by short-sellers at the lower levels.

The main factor responsible for the recession in the latter part of the week was the withdrawal of support by the leading bull operator in silver. Then, there were heavy sales on account of up-country centres like Calcutta, Delhi, Kanpur, etc., where silver prices were reported to be lower than in Bombay. Lack of demand in the ready position and increasing arrivals also contributed to the weakness. Sentiment in gold was also affected, but it was due chiefly to the debacle in silver. Though gold (forward) touched today a level which was nearly Rs. 2-8 below the highest level of the week touched on Saturday, there was a good recovery at the close on heavy short-covering by the leading operator who was long in silver but short in this metal. In the result, gold closed the week with a loss of only As. 10 on balance, while silver stood Rs. 3-4 lower.

Silver for forward delivery (18th June settlement) opened the week promisingly at Rs. 159-13 and hardened to Rs. 160-2. As the closing rate on Thursday last (at Rs. 159-11) was above Rs. 159-10, at which margin against bears was enforceable, the automatic margin clause which became applicable on the previous day was withdrawn. But, on the very next day, the bears had to pay margin, as the rate fell below Rs. 159-10. Further, the bears had to pay margin throughout the week, as the price continued to rule below this rate. After a drop to Rs. 158-2 on Friday, forward silver staged a recovery to Rs. 159-11 on Saturday. Thereafter, there was a landslide, forward silver touching a low of Rs. 155-5, the lowest since 16th January last. The closing was a shade better at Rs. 155-13.

The carry forward charges which were unofficially quoted at Rs. 3 against sellers at the close of the previous week widened to Rs. 4-8 on Monday. Business in the next settlement commenced yesterday with the carry forward charges officially quoting at Rs. 4-6 against sellers. Today, however, the *bulli* charges narrowed down to Rs. 3-4 to Rs. 3-6.

Ready silver (.996 Mint) commanded a premium of As. 2 over the forward rate for the current settlement, the opening and closing rates for the week being Rs. 159-15 and Rs. 155-15, respectively. The floating stocks of silver are placed at 1,200 bars. The daily average offtake was 15 bars.

Gold for forward delivery (17th June settlement) began the week at Rs. 85-13 and, after dropping to Rs. 85-3 on Friday, gained strength to Rs. 86-12 on Saturday. The subsequent debacle brought the rate to Rs. 84-6 today. As the margin against sellers would be applicable at Rs. 84-10, there was swift bear covering which pushed up the rate to Rs. 85-1 at the close. Business in the next settlement officially began yesterday at Rs. 84-3, that is at a discount of Re. 1-6 from the current settlement rate, and closed at Rs. 83-12.

Ready gold opened at Rs. 87-2 and closed at Rs. 85-13. The premium over forward, which stood at Re. 1-6 at the close of the previous week, narrowed down to As. 12 today. The floating stocks of gold are estimated at 10,000 tolas. The daily average arrivals and offtake were even at 3,000 tolas.

In London, there was a slight marking up in silver prices from 72¼d. to 72½d. for ready and from 72¾d. to 72¼d. for forward. Gold, however, stood a fraction lower at £12 8s. 10d., as against £12 8s. 10½d.

The following comparative table shows the trend of the market during the week under review:

	9-6-54	Highest	Lowest	2-6-54
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	85 13	88 1	85 2	87 1
Forward	85 1	86 12	84 6	85 11
Sovereign	58 12	60 0	58 12	59 0
SILVER				
Ready (.996 fine Mint) ..	155 15	160 4	155 7	159 8
Forward	155 13	160 2	155 5	159 1
London Ready	72½d.	—	—	72¼d.
London Forward	72¾d.	—	—	72½d.
London Gold	245s.10d.	—	—	245s.10½d
New York Ready	85½c.	—	—	85½c.

LINSEED WEAK

(Messrs. A. Bradley & Co.)

CALCUTTA, *7th June*

The weaker tendency which began to take shape earlier has continued and prices have recorded a sharp downward trend with market conditions exhibiting an underlying weakness, in sympathy with the main producing centres. There have been keener offerings from sellers, especially for forward delivery, but millers have adopted a cautious attitude; lack of buying support has offset the scarcity of arrivals from upcountry. Further settlements against commitments have been reported, but actual trading has been very poor. In the oil market, conditions remain rather dull with consumers very inactive; there are keen sellers for forward delivery. The latest quotations are as follows:—Ready Rs. 17-12 and July/August Rs. 18 per maund.

SPOT COTTON QUIET

(From Our Own Correspondent)

BOMBAY, *9th June*

As expected, since last week, the climate in the forward cotton market has been very unsettled, even more so than the weather during the week in Bombay. The operators are bewildered by the turn of events and do not know which way to turn for guidance in the daily operations. In the first place, the uncertainty with regard to the final settlement of the issue raised in connection with the fixing of the basic rate and the 'on' and 'off' allowances for deliveries in the expired May contract, hangs heavily on the market. Whatever decision is given by the Court is bound to affect the August delivery and trading under this uncertainty in the last contract of the season, without another to fall back on, is like groping in the dark. The working of the market has, therefore, become naturally erratic. The earlier part of the week under review witnessed a sudden rise in prices. This was followed during the week-end by a more sudden and more severe onslaught on the price structure.

The history of the previous week was reversed. Last week, the contract gained 9 points over the week. During the week, under review, it lost nearly 8 points. This has also encouraged a large volume of option business, which, in its turn, works to accentuate the prevailing trend and to widen the scope of fluctuations. Altogether the atmosphere in the forward market has become stormy, spelling danger both for forward trading in general and for the operators. The issue has also roused certain group tensions amongst operators, which brings into operation non-economic factors and precludes smooth working of this contract. There are no signs of Government agreeing to allow forward trading in the new crop at this stage, which might remove some pressure on the August contract.

Conditions in the spot market are quiet. After a slight revival of mill interest, trading has again relapsed into the previous rut. It is now confined largely to interchange of goods amongst traders. The stagnant position has spread over the section dealing with imported cotton also. There is little evidence of improvement in the business trend which might induce mills to come forward for fresh purchases. Both the textile industry and the cotton trade have, therefore, been reduced to living in hopes of Government removing the export duty on coarse cloth. So far, there is no slump in cloth prices, but slack demand has pushed the position to the verge of a slump in textiles, which would naturally flow over into the spot cotton market.

If, in the meantime, monsoon penetrates into the cotton producing areas and weather reports are encouraging for the new crop, an additional bearish factor will be added to an already gloomy situation. The spot trade and the mills are, therefore, likely to be led to hedge all the cottons in their possession. There are indications that even imported cotton is being hedged in the Jarilla contract and a sudden wave of hedging emerging from Sewri might overwhelm the contract in the forward market in Bombay. A situation has now developed in the cotton trade, when all concerned, including the Government, the growers, the traders and the consumers have to combine and think of ways and means to restore both confidence and normal conditions, in the trade.

Opening the week at Rs. 677, as against the previous close of Rs. 675½, the I.C.C. August moved up, on speculative support, to touch a high of Rs. 683 on 5th instant. Selling pressure at this level forced the contract to touch a low of Rs. 660½ on 8th inst. The contract regained part of the loss today, finishing the day's session at Rs. 669½. The following is the trend of prices over the week under review:

	Opening	*High*	*Low*	*Closing*
I.C.C. Aug. (Rs.) ...	677	683	660½	669½

The latest available quotations from the Sewri market are: Bengal *Deshi* Rs. 590; Berar Jarilla Rs. 795; Khandesh Rs. 815; Vijay Rs. 880; Oomra *Deshi* Rs. 720; Moglai Rs. 700.

The week at Karachi was devoid of any development. Prices remained steady with a slight rise in the case of American seed varieties. Nothing more has been heard about the opening of forward trading in the new crop for which the authorities had been approached.

The latest available quotations from the Karachi market are: Sind *Deshi* Rs. 78, Punjab *Deshi* Rs. 75; 4F Punjab R.G. Rs. 70¾; S.G. Rs. 74¼; L.S.S. Punjab R.G. Rs. 74; S.G. Rs. 78½; N.T. R.G. Rs. 74¼; S.G. Rs. 78½; 289F Punjab R.G. Rs. 76¾; S.G. Rs. 80¼.

It was an equally uneventful week at Alexandria, possibly because of the *Id* celebrations. As in the previous week, there was some enquiry for Ashmouni both from the local mills and the shippers. The Egyptian Cotton Commission has announced that the old crop will be sold on the present basis to the end of August. This has affected demand for new crop to a certain extent. All new crop positions, therefore, worked easy during the week. The Egyptian Cotton Commission has also informed the Exporters' Association that there would be no reduction in the selling differentials for present stocks with the Commission. While the premia for entitlement currency have remained unchanged during the week, there is every possibility of their appreciating in the near future, in view of increased imports of various consumer goods likely to take place during the coming week. Exports during the season till the 26th of May amounted to 816,707 bales, against 700,995 bales shipped during the period in the 1952-53 season.

At Liverpool, the new market is gradually feeling its way and business in large parts is confined to the transfer of hedges from the Raw Cotton Commission cover scheme to the new market.

Against these hedges there was straddle buying from New York, with the result that their pressure did not affect the price trend which continues to be steady.

At New York too, it has been a placid week. The range of fluctuations has been very short and the demand for contract was generally met by selling on the part of those carrying on a straddle trade between New York and Liverpool. Exports till the week ending 20th May exceeded those for the same period last year by half a million bales.

The following are the latest available quotations from New York as compared with those a week and a fortnight before:

(In cents per lb.)

	8-6-54	1-6-54	25-5-54
Spot	35.30	34.45	35.45
July	34.26	34.38	34.33
October	34.17	34.16	34.21
December	34.17	34.19	34.24
March	34.32	34.30	34.34

STAPLE FIBRE YARN DECLINES FURTHER

(From Our Own Correspondent)

BOMBAY, *9th June*

A feature of trading in the art silk yarn market was the persistence of the downward trend witnessed in staple fibre yarn 40×2 last week. Under the impact of continued hammering by bears, the futures section was almost nervous. As a result, there was a sharp fall in the value of June delivery. There was lack of demand in spots and prices, as a result, moved within very narrow limits.

Among futures, June delivery, which opened quiet at Rs. 617, fluctuated between Rs. 606 and Rs. 624, before closing at Rs. 609. Although officially trading in July was open since the 1st inst., it was resumed only today when it was quoted at Rs. 610. In the ready section, City and New Great lost three-quarters of an anna each to Rs. 3-5-3 and Rs. 3-4, respectively. Phoenix was down by half-an-anna at Rs. 3-1 and Hinds by a quarter anna at Rs. 3-1-9. Among foreign yarns, Suico and Shinco lost an anna each to Rs. 3-11 and Rs. 3-10, respectively.

The performance even in the art silk yarn section was not encouraging. The fact that a prominent bull took delivery of 350 cases in May fixed delivery, and fears that he may squeeze further in June fixed delivery, had no effect on the market. This was due to discouraging reports of offtake of yarn in important consuming centres. 150D June which opened quiet at Rs. 780 shot up to Rs. 790 on the 7th inst. Thereafter, it registered a downward trend and eased to Rs. 606, the lowest touched in the week, today, before closing at Rs. 770. The Board of the Yarn Exchange is expected to take a decision at its meeting on the 12th inst. whether trading in July fixed delivery should be allowed.

Among spots, 120 Japan was unchanged at Rs. 4-7, while 150 Japan lost an anna to Rs. 4-14. 120 Italy was quiet at Rs. 4-2 but 150 Italy lost As. 2 to Rs. 4.

There was no notable change in the cotton yarn section. With uncertainty continuing in raw cotton prices and restricted offtake in handloom cloth, the undertone was not reassuring. Dealers, as a result, were more inclined to take interest in goods for ready and near deliveries for which premiums had been paid, as compared with goods for distant deliveries. Quotations, therefore, were a shade easy. Among 80s, Elphinstone lost As. 4 to Rs. 58-12, while Seksarias were unchanged at Rs. 55-10, Finlays at Rs. 62 and Sri Rams at Rs. 59. Deals reported done in 60s, showed that Sri Rams eased from Rs. 52-12 to Rs. 52 and Seksarias from Rs. 47-8 to Rs. 45-12. Raghuvamshis, however, gained As. 8 to Rs. 49-8. Transactions in 40s revealed that Seksarias declined by As. 4 to Rs. 27 and Meenakshis by As. 2 to Rs. 29-2. Maduras were colourless at Rs. 29-8. Among 30s, Girdhardas were lower by As. 2 at Rs. 23-2 and Maduras by As. 4 at Rs. 24-8. Among 20s. Seksarias were down by As. 2 at Rs. 16-10, while Hinds gained an anna to Rs. 17-6. Edwards were unchanged at Rs. 16-14. Among 10s, Moderns, Podars and Elphinstones were unchanged at Rs. 13-8, Rs. 13-4-6 and Rs. 12-13, respectively.

The table below gives the prices of art silk, staple fibre and cotton yarns quoted today, as compared with those seven days before:

	9-6-1954	2-6-1954
	Rs. a.	Rs. a.
Art silk yarn—		
150 June (per case of 200 lbs.)	770 0	780 0
120 Japan (per lb.)	4 7	4 7
150 Japan (per lb.)	4 14	4 15
120 Italy (per lb.)	4 2	4 2
150 Italy (per lb.)	4 0	4 2
Staple fibre yarn—		
40 s 2 June (per case of 200 lbs.) ..	609 0	617 0
Suico (per lb.)	3 11	3 12
New Great (per lb.)	3 4	3 4 3/9
Cotton yarn (per bundle of 10 lbs.)—		
10s Modern	13 8	13 8
20s Seksaria	16 10	16 12
30s Madura	24 8	24 12
40s Meenakshi	29 2	29 4
60s City	47 4	48 0
80s Finlay	62 0	62 0

OILSEEDS BEARISH

(From Our Own Correspondent)

BOMBAY, *9th June*

The oilseeds market continued to present a bearish trend during the outgoing week. Adverse factors, such as unfavourable upcountry advices, poor offtake of oil as well as seeds, reported accumulation of stocks with *vanaspati* manufacturers, sharp fall in copra oil prices, weakness of pepper, bullion and cotton markets, reported arrivals of summer groundnut crop in South Indian centres, cumulatively contributed to depress the sentiment of the market. Quotations of oilseeds, despite feeble support at lower levels, registered sizable declines, on persistent selling pressure. For a while, under conflicting rumours about the possibility of the Government allowing token exports of groundnut oil, the groundnut section ruled rather erratically, but finished lower ultimately. The trend in the linseed section, which lacked strength of its own, was influenced by the behaviour in groundnuts. After exhibiting steady trend during the early part of the week, the castorseeds section turned easier subsequently, solely on speculative selling. The *niger* and *kardi* sections proved no exception to the general trend.

In view of the anxiety of stockists in upcountry centres to dispose of their stocks and almost a slump in the prices of groundnuts in Hyderabad State, operators hesitated to enter into fresh commitments. Bold F.A.Q., which opened at Rs. 31 as against Rs. 31-10, improved to Rs. 31-8 on the 4th inst. Thereafter, it gradually declined to Rs. 28-14, on the 7th inst. Subsequently, there was again an upward trend, on support at lower levels by shorts and *vanaspati* interests. As a result, Bold ready shot up to Rs. 30-4 today, where it closed. June-July lost Re. 1 to Rs. 29-12. Khandesh quality ready declined from Rs. 32-4 to Rs. 31-8. Groundnut oil railway receipt disclosed a loss of As. 8 at Rs. 15 and July delivery As. 15 at Rs. 14-13.

Export demand for linseed oil continued to be negligible this week too. Even local demand was lacking. This, coupled with the underlying easiness in the groundnut section, pushed down prices of the linseed. Bold ready was easier by Re. 1-4 at Rs. 23-12 and June-July by As. 10 at Rs. 23-8. Sutnas were down at Rs. 22-4, as against Rs. 23-8. Linseed oil disclosed a loss of As. 8 at Rs. 12-8.

In the castorseed section, September delivery which was enquired for at Rs. 110-4, as against Rs. 111-4, fluctuated between Rs. 111-14 and Rs. 105-2, before closing at Rs. 107-4. Madras quality changed hands at about Rs. 21, as against Rs. 21-8. Castoroil B.S.S. eased from Rs. 12 to Rs. 11-8, I Pressure from Rs. 11-8 to Rs. 10-14 and Commercial from Rs. 10-12 to Rs. 10-8. Continental quotations at £100 per ton for commercial oil and £108 per ton for B.S.S. are encouraging, but owing to limited quotas Indian traders cannot take advantage of the situation.

Among others, *kardi* Bold ready lost Rs. 2 to Rs. 15-4. August-September delivery eased from Rs. 15-14 to Rs. 15-8. *Niger* Madras ready was down by As. 8 at Rs. 26.

The following table shows the prices of oilseeds and oil on the 9th inst. as compared with those at the end of the previous two weeks:

	9-5-54	2-5-54	26-4-54
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—			
Khandesh Quality Bold Ready (per cwt.)	31 8	32 4	34 4

Commercial (per quarter) ..	10 8	10 12	11 6

PEPPER DROPS FURTHER

(Messrs. Parekh & Co.)

BOMBAY, *9th June*

Malabar black pepper during the week continued its downward journey, with Alleppey, Tellicherry and Bombay establishing new low levels. During the earlier part, growers at Alleppey were anxious sellers at Rs. 800. Their counterparts at Tellicherry sold as low as at Rs. 750. At Bombay, June shipment for New York was done at $043, July at $0.42 and August at $0.41. Last Saturday, however, the market tried to look up, following the purchases by the bulls and short-covering by bears at Bombay. Bulls tried to rig up the market with a view to stirring up activities in New York. But, New York refused to follow the rise in India. Consequently, the market in the later part once again relapsed with rather double the force as spot price in the New York market gave way and came down from $0.55 to $0.48, possibly under pressure of sales of afloat consignments from India per the s.s. *Banka*.

Though consigners from India invited bids almost daily from their brokers at New York, who, instead of giving counter-bids, began to give only indications and when asked to sell they cabled back with still further lower price idea without transacting business. Such a runaway attitude of New York buyers made Indian sellers all the more nervous, who, in order to cut their losses on consignments, are reported to have sold in Bombay, as hedge, July shipment at $0.40 and August at $0.39. There are sellers at this price, but few buyers. Crisis-like conditions are still persisting at all the growing centres where growers as well as dealers are anxious sellers at the best market price, but with almost no buyers. Garbled pepper at Cochin was done at as low as Rs. 145.

In short, the pepper market at the moment has become a bottomless pit and one does not know what will be the lowest in the year, 1954 if India, Sarawak and Indonesia were to compete among themselves to sell their pepper in U.S. market which will naturally try to take the best advantage of the situation.

In the delivery section, prices established new low levels with sellers for July and August deliveries at Rs. 715 and Rs. 695 respectively.

Following are today's nominal quotations:—Ready delivery Rs. 115 per Bengal maund and June Rs. 770-80; July Rs. 720-30, and August Rs. 700-710 per candy of 5½ cwts.

TEAS A LITTLE EASIER

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, *5th June*

The offerings in sale No. 11, which was held on Tuesday, 1st June, amounted to approximately 18,45,000 lbs. There was a good general demand, but prices were generally a little easier, except for fannings and whole leaf grades. Pekoes, however, met a very poor market and were the weakest feature of the sale. Low and low medium teas were half anna easier and good mediums and highgrowns were half to one anna easier with O.P.'s and well made F.P.'s irregularly As. 1 to As. 1½ dearer. Black well made types met a strong market and were irregularly dearer. The following are the quotations:—

	1954 Rs. a. p.	1953 Rs. a. p.
Low-grown Travancore B.O.P.	2 7 6	1 10 6
Medium Travancore B.O.P.	2 8 0	1 11 0
Anamallais B.O.P.	2 10 0	1 14 6
Best liquoring Nilgiri B.O.P.	2 14 0	2 5 6
Well made black leaf O.P. ...	2 12 6	1 15 6

London Market.—Old season's unchanged. New season's Kumargram P.F. 5/1-3/4.

Colombo Market.—Export.—Active demand. Highgrowns brokens lower, following quality. Other kinds dearer, particularly fannings.

Calcutta Market—Export.—Good demand, fading towards close. Any invoices with character sold well at firm to stronger rates. Plain thin liquoring types weakest feature. Darjeelings with flavour sold well. Whole leaf strong. Clean common broken pekoe As. 42.

Dust.—3,400 packages. Fair demand. Market irregularly As. 1½ to As. 2 easier. Flavoury Darjeelings strongest feature.

Special licence expired on 31st May, 1954, and the last business transacted was at 38 pies.

1954-55 *Export Quota.*—Current season's quota appreciated early in the week to 57 pies, but this has since declined to 52 pies which remains today's quotation.

Forthcoming Auctions.—Dust sale 'K' will be held on Tuesday, 8th June, and sale No. 12 will be held on Tuesday, 15th June, 1954.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd. wire:—

"*Dust Sale K.*—3,75,000 lbs. Less demand. Prices irregularly As. 2 lower."

SACKINGS FARE WELL

(From Our Own Correspondent)

CALCUTTA, *8th June*

Steady conditions prevailed in all sections of the jute market during the week under review, and the best additions to prices were seen in the heavy goods section. A shortage for certain constructions of heavy goods was keenly felt. Ready goods in green cees and A. twills were particularly difficult to obtain, and stockists could be attracted to part with their small holdings only for substantial premiums. It is believed that shipments of heavy goods in the month of May were in excess of production. Judging from the rate of demand and declining stocks with mills, an increase in the working hours of mills is called for. This view has been supported by the President of the Gunny Trades Association, Mr. N. Kanoria, who has stated that the policy of increasing working hours, when acted upon, will go a long way to help the Indian industry to regain its supremacy in world markets. Successful competition in foreign markets, he adds, would depend upon bringing down production costs by modernisation and rationalisation of the industry.

There was considerable activity this week in B. twills in the *fatka* market, as a result of which the price gained to Rs. 113-4 by the week-end from Rs. 111-4 which was the week's opening quotation. In the transactions yesterday, the rate was further raised to Rs. 115-8. Support to higher prices was also given as a result of covering demand. A. twills were in keen demand, and the ready goods were at one time as high as Rs. 158-8. Green-striped heavy cees changed hands at Rs. 128-4 and D.W. flour bags at Rs. 136.

Although not much business took place in hessian, this section was steady in sympathy with heavy goods. Up to the week-end, ready 40" 10 oz. was quoted at Rs. 44-5, but the feature of the week was provided in the spurt to Rs. 44-12 with the f.o.b. rate at Rs. 48-13. The 8 oz. hessian was priced at Rs. 37-10 f.a.s. and Rs. 40-14 f.o.b.

Good business was put through in raw jute with mills. However, with sellers anxious for more and more business, the better conditions noted in the goods market were not fully reflected in raw jute. For this reason, prices were unchanged for most part of the week, but the latest quotations, given below and wherever changed, show an improvement of As. 8 compared to the rates of a week ago given in brackets. *Bimli* f.a.q. at Rs. 23-8 had the distinction of a gain by one point. In the pucca bales section, first marks ready at Rs. 170 added Rs. 5, with Dundee dalsee being priced at Rs. 165.

SUGAR QUIETLY STEADY

(From Our Own Correspondent)

BOMBAY, *9th June*

The Bombay sugar market presented a quietly steady tone during the week under review. The panicky conditions among spot traders noted last week on account of heavy accumulated stocks of indigenous sugar subsided this week. The main factor which gave them breathing time this week was the fact that the s.s. *North Anglia* and the s.s. *Maria*, which arrived in the harbour on the 1st inst., had to wait in the upstream up to the 6th inst. for want of a shed in the port. This interval helped the spot traders to dispose of their stocks.

The quality of Formosan sugar per s.s. *Maria* has turned out to be very good and especially favoured by the trade in view of the fact that a very large percentage of the consignment is of bold cane sugar comparable with our I.S.S. cane C.29 and that there are not several qualities and several sizes of grains in this shipload, as was the case in the shipment of Java and Czech sugar. The quality of the Spanish sugar is, however, rather poor and appears to be the most inferior imported into this country so far.

The Government has this week permitted the trade to link up sales of bold grain and small grain of imported sugar at the average margin of one rupee profit. This permission was accorded because traders complained of losses as very often they were given sugar of small grain for which there was little demand in urban areas. In view of this directive, British refined sugar which was being sold at a loss at Rs. 84 per bag will now be sold at Rs. 88-4 per bag, the Spanish at Rs. 51-4 and the Formosan (the most superior quality of sugar available) at Rs. 87 per bag of 220 lbs. These quotations compare favourably with fair prices estimated, on a free market basis, at Rs. 84-8 per bag for British refined sugar, Rs. 49 per bag for Spanish sugar and Rs. 93 per bag of 220 lbs. for Formosan sugar. The landed costs thus being higher than the free market estimates of British refined and Spanish sugar save the traders from losses on these sugars. The permission given by Government thus accommodates the traders who stand committed to sell imported sugar also on a gross margin of Re. 1 per maund, as in the case of indigenous sugar.

In the spot section, small grains improved by As. 8 to Rs. 85-8 over the week. Medium grains, which ranged last week between Rs. 89 and Rs. 91-8, were a shade lower at between Rs. 87-8 and Rs. 91-8. Large grains, however, were slightly better at Rs. 100 to Rs. 103 as against Rs. 100 to Rs. 102 last week, owing to paucity of stocks. The quotations for British refined stood at Rs. 88-4 as against Rs. 84 a week ago.

The forward section continued to be neglected and Jeth delivery hovered between Rs. 83 and Rs. 83-8 per bag and was weak today at Rs. 82-14, as a result of persistent rumours that the reported reduction in the prices of imported sugar may come into force very soon so that British refined sugar per s.s. *Margo*, due to arrive shortly, may be available at a reduced price. Trading in *Shravan* delivery opened today at Rs. 83.

Arrivals during the week under review amounted to 11,600 bags. Of the two ships carrying British refined sugar, one, namely, the s.s. *Atlantic Coast*, has already arrived and the other, the s.s. *Margo*, is scheduled to dock in this harbour before the week is out. The former carries 10,222 tons of British refined and the latter, 9,557 tons of Spanish refined sugar. The s.s. *Maria* brings in 9,029 tons of Formosan sugar.

KIP PRICES LOWEST IN SEVEN MONTHS

(From Our Own Correspondent)

MADRAS, *7th June*

Trading in the kip section has been dull, due to *Ramzan* holidays here and the proximity of Whitsun holidays in the U.K. Dressers have shown great price resistance, and are offering 1d. less at 52d. for lights, 42d. for mediums and 39d. for heavies. Prices locally have not touched these levels since October last and sellers think twice before accepting these prices for later cover. Business in cow calf, buff calf and buff hides has been patchy.

There has been good clearance of tanned skins in the local market and prices have held steady. Shipments of goat skins to U.K. have been greater in volume than sheep, and this is a new feature in the tanning trade. Prices of goat skins which have held firm for superior tannages may not hold in consequence.

Shipments in bales during May were: To U.K.: 4,414 tanned cow, 453 tanned cow calf, 73 tanned buff hides, 329 tanned buff calf, 963 tanned goat and 769 tanned sheep. To Continent: 298 tanned goat, 51 tanned sheep and 75 drysalted goat. To U.S.A.: 166 tanned cow hides, 140 tanned buff hides, 20 tanned buff calf, 166 tanned goat, 300 drysalted goat and 8 tanned snake skins. To Japan: 188 tanned sheep skins.

KANPUR HIDES STEADY

(From Our Own Correspondent)

KANPUR, *6th June*

During the week under review, the local hides and skins market ruled steady despite the *Id* festival during the week and business could not attain normal proportions. The new arrival was considerable in regard to wet salted cow, whereas the supplies of buff were a bit lean. The local tanners were the main buyers. The latest quotations are as follows:

Wet salted cow, 1st grade Rs. 360, 2nd grade Rs. 240 and 3rd grade Rs. 160 per score; wet salted buff, 1st grade 1 lb. 12 ozs. and 2nd grade 1 lb. 14 ozs. per rupee; goat, 1st grade Rs. 300 and 2nd grade Rs. 260 per 100 pieces; sheep skins, 1st grade Rs. 300 and 2nd grade Rs. 250 per 100 pieces.

INSURANCE

(Concluded from page 1134)

appointed branch manager and resident representative in India of the General Fire Assurance Company of Paris and of the Cornhill Insurance Company, Ltd., of London.

In the marine section, the net premium income advanced from Rs. 7.23 lakhs to Rs. 8.08 lakhs. Claims as well as expenses were higher at Rs. 6.16 lakhs and Rs. 2.22 lakhs, respectively. Marine business continues to present serious difficulties to all general insurers, both in this country and abroad, owing to keen competition for business and high cost of claims. The Jayabharat's experience was not different from that of other insurers in this field. The department again suffered a loss this year, though it is gratifying to note that at Rs. 1.12 lakhs it was slightly smaller than in the previous year. The net premium income in the miscellaneous department improved by Rs. 1.42 lakhs to Rs. 8.18 lakhs. Claims rose from Rs. 4.58 lakhs to Rs. 5.29 lakhs and expenses from Rs. 2.32 lakhs to Rs. 2.86 lakhs. The working of the department showed a loss of Rs. 0.67 lakh.

The underwriting profit from the fire department (Rs. 3.0 lakhs) together with income from interest and dividend (Rs. 3.94 lakhs) and from other sources, amounted to Rs. 6.95 lakhs. After debiting the loss in the marine and miscellaneous departments and providing for reserves for bad debts (Rs. 50,000) and other expenses, there was a balance of Rs. 4.39 lakhs, which, together with Rs. 31,051 brought forward from the previous year, made in all Rs. 4.70 lakhs. The Directors propose to transfer Rs. 1.50 lakhs for taxation reserve and Rs. 1 lakh for general reserve. The payment of dividend at Rs. 3 per share will absorb Rs. 1.5 lakhs, leaving Rs. 70,117 to be carried forward to current year's account.

The financial position of the company continues to be good. Besides a capital of Rs. 25 lakhs, the Company's funds aggregate Rs. 87.05 lakhs, inclusive of life assurance fund (Rs. 42.60 lakhs), fire fund (Rs. 16.61 lakhs), marine fund (Rs. 8.08 lakhs) and miscellaneous fund (Rs. 4.09 lakhs).

BANKING IN THE UNITED STATES

(Concluded from page 1136)

posit liability of the closed bank and makes available the funds needed to discharge such liability. Since the inception of the Corporation in 1933, depositors in the 245 insured banks that have been placed in receivership have been paid in each case as soon as their claims have been presented and proved.

Depositors in 175 hazardous insured banks have been given full protection and uninterrupted bank service when, with financial aid from the Corporation in the form of loans or purchases of assets, these banks have been merged with solvent insured banks.

Commercial and Investment Banking Separated

Commercial and investment banking have been separated by national law in the United States. Commercial bankers can no longer underwrite securities or act as agents of business enterprises by making indirect loans through brokers. They are also prevented from investing in "unsafe" securities. Investment banking is regulated under a special Government agency, the Securities and Exchange Commission (S.E.C.). With certain exceptions, all new issues of stocks and bonds must be registered with the S.E.C. If the registration contains all the necessary facts and is unchallenged by the S.E.C., the issue can be offered for sale to the public. A "prospectus" of the new issue must be prepared and the investment banker must be able to prove that purchasers of the security have received a copy of it. This prospectus must contain all the important information that is needed by an investor to make up his mind regarding the purchase (full disclosure). The statements in it must conform to those made to the S.E.C.

The American Bankers' Association, organised to promote the general welfare and usefulness of banks and to secure more uniform legislation, was founded in 1875. The Investment Bankers' Association was organised in 1912.

The responsibility of bankers was summed up by a former President of the American Bankers' Association, Mr. Joseph M. Dodge, as follows:

"Banking is a business in which managements must know the working rules of its relationship with the economy, recognise the problems which are peculiar to it, and work toward objectives which accept a broader national responsibility. And it is a business in which what you do in your bank is not only important to you, but, as it becomes a part of what all banks do, it is important to the stability of the economy, and to the future life of banking in its present form. . . . We must be sure to pursue sound policies in our own business and do everything we can to lead others to do the same. And, finally, we must be willing to give continuous consideration to the economic net product of what we do."—*Exclusive to "Commerce."*

AGRICULTURAL PRODUCE SURPLUSES

THE seventh annual Conference of the International Federation of Agricultural Producers, which concluded its nine-day session recently at Nairobi (East Africa), discussed, among others, the problem of mounting surpluses of agricultural produce in certain countries and the need for co-ordination of farm and trade policies, with a view to promoting a healthy and expanding world economy. The notable feature of the Conference was the adoption of the Policy Committee report calling for the introduction of national programmes to effect production changes, as it was thought that the best way to solve the problem of world agricultural surpluses was to change the amount of different products grown and not to reduce the output as a whole. The Committee recommended that Governments with unwieldy surpluses should switch over from the production of crops and livestock to that of goods more needed in their home markets. The Conference decided that reduced production of such crops as cotton, grain and potatoes and increased output of such goods as animal protein food was more urgent.

Of the member-delegates of Nations who attended the Conference, about 27 were, however, of the considered view that the long-term solution lay in increasing the purchasing power of the underdeveloped countries and lowering trade barriers. The report of the Conference averred that, in the long-run, the solution must be found in the "progressive reduction of barriers to world trade, including full convertibility of national currencies." It called for encouragement of schemes for disposing of surpluses in underdeveloped countries linked with programmes for their general economic development to increase their purchasing power. It was further felt that such organisations as the U.N. Food and Agricultural Organisation should be given larger funds to provide technical assistance to underdeveloped countries and that efforts should be made to increase supplies of capital for such countries. One reason why the Asian market prospects were not encouraging, it was stated, was a reduction in the purchases by India, which was concentrating on expansion of its agricultural commodities. This statement will not stand scrutiny; India has had to take steps for increasing its production, because, apart from other considerations, its neighbours wanted excessive prices for their products, with some of them following unrealistic exchange rate policies.

It seems clear that the policy adopted in some countries of supporting agricultural prices at a level higher than what they would be if the law of supply and demand were allowed free play, without exercising some direct control over production, is doomed to failure. If prices of individual commodities are too high, they stimulate excessive production and discourage consumption at that level of prices. Some kind of production control thus becomes necessary, unless the surplus produce can be dumped abroad at levels which are far below the domestic prices. If exports are subsidised, it means that the domestic consumer has to pay a part of the consumption price of the foreign consumer of the national product. A glaring anomaly of the present world economic situation is that nations with surplus produce exist side by side with nations suffering from chronic undernourishment. The surplus products can find their markets only if the purchasing power of the undeveloped and underdeveloped countries is increased. This means that capital investment in the latter countries should be stimulated. After all, poverty in any part of the world constitutes a danger to any other part of the world. It is, therefore, in the enlightened self-interest of the more fortunate nations to aid the economic development of the less fortunate as far as their resources permit.

The Government of Turkey and representatives of an American Investment Corporation have signed an agreement for the setting up of a 10 million dollar joint Turco-American company in Turkey for the manufacture of agricultural implements. The programme seeks to make Turkey self-sufficient in agricultural machinery within five years. This is claimed to be the first foreign investment attracted by the very liberal terms extended to foreign capital under Turkey's recent foreign investments law.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share.'

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. a Sales and amount written off. (k) Investments. ‡ For ten months ended 31st December 1951.

(1) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Rs. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 1164 in the debentures section:—

§ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium

(b) Bearer bonds of Rs 1,000 each repayable a par.

(c) Bearer bonds o Rs. 1,000 each repayable on 31st July, 1939

(d) Bearer bonds of Rs. 1,000 each with option of redemption a whole or in part at par on 30th June, 1953 o on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955, on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium afte 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months notice

MARKET GOSSIP

(Concluded from page 1115)

deeds and not to transmission or mutation which automatically takes place by the operation of law. In the case under reference, there is no transfer deed; the deceased does not execute any deed; the survivor becomes the owner of the interest left behind by the deceased by law. There is, accordingly, neither a transferor nor a transferee. But section 84 talks only of registration of a transfer.

• • • • •

Indeed, the said section, according to legal experts, will not also apply to cases where, on the death of a shareholder, another person becomes entitled to the share of the Company under a decree or order of the court. Again, if a legal representative produces a court's order giving him the right to ownership of the deceased member's shares, then also, there would be no need for the company to obtain a certificate, under section 84 of the Estate Duty Act, before effecting the transfer of shares.

• • • • •

It would appear that, in relation to at least one of these cases, there has been a conflict of opinion between the Estate Duty authorities and the legal experts. Thus, the authorities have, it is stated, held that a certificate relating to estate duty payment, contemplated under section 84, would be necessary even when shares, held jointly by two persons, come into the sole possession of one of them on the death of the other. They have held, it is stated, that it will not be lawful for the company to delete the name of any deceased person unless the company is satisfied that the survivor has acquired the shares for adequate consideration or produces a certificate from the Estate Duty authorities. This ruling, however, does not sound convincing in the light of the clear wording of section 84 which refers only to shares and not to transmission. If, therefore, a company deletes the name of the deceased person, it can still contend in a court of law that it has not done anything contrary to section 84(2) of the Act; and, perhaps, its contention may be upheld by the court. But many companies are not prepared to take the risk and have not deleted the names of deceased shareholders in respect of shares held under joint names. They prefer to await authoritative ruling on this question. In view of the great importance of this subject to the marketing of shares and to their negotiability, it will perhaps be helpful to all interests concerned if a correct interpretation is obtained at the highest possible level and is incorporated in the rules, so that company managements will at least know how to deal with cases where one of the joint-owners of their shares dies, leaving the other to the ownership of the shares.

SURVEY

(Concluded from page 1119)

ligious customs which still die hard even in the modern blood. As pointed out by Mr. Morse, "such attitudes are indigenous both to the worker's psychology and his religious and social customs." Again, he says that religious ceremonies involving a return of the worker to his village are a major factor for the reluctance of the potential worker to respond to monetary incentives. It should be clear that, unless there is a change in the mental attitude of the worker towards industrial employment, no scheme of industrialisation, however technically and financially perfect it may be, will enable a backward country to make headway in the industrial field. Also ranking high as deterrents are the mechanics of urban life, such as bad transportation, irregular food, bad home and frequent sickness.

From this, one cannot jump to the conclusion that the mere removal of these deterrents, important though it is, will not automatically induce workers to stay on their jobs and to refrain from running back to their rural homes often. For, as Mr. Morse rightly points out, the higher the emoluments and amenities to workers, the greater the percentage of absenteeism and, consequently, lower productivity. In other words, the hopes of better standard of living will continue to remain a mirage. Surely, here is a difficult problem for backward countries.

Strict enforcement of factory discipline, as Mr. Morse says, will not produce the necessary change in the attitude of the workers in backward countries towards industrial employment. The causes of lower turnover are not to be found solely in the work place. Personnel relations must, therefore, be so managed as to create a sense of security, to replace the worker's roots in his village. Construction of workers' housing, education in personal hygiene and avoidance of accidents and improvements in workers' nutrition are among the steps necessary. Also efforts should be made to give the worker a "sense of belonging to the undertaking." Mr. Morse goes so far as to say that the hope for future social progress under democratic conditions lies in the growth of healthy labour-management co-operation. The fully-habituated industrial worker with nothing more than wages as a purpose is just as likely to be a problem worker as the transferee from a rural pattern.

BANKING

(Concluded from page 1123)

costs to the benefit of European exporters, and to swing the balance of payments in favour of European countries, thus strengthening their exchange position.

At the same time, the relative steadiness of world prices of primary products in the face of our business recession has spared the raw material producing countries much of the pain of additional deflation. By and large, these countries took their price licking in 1951 and 1952 with the collapse of the post-Korean price bulge. By 1953 some of these economies were already stabilizing; others have enjoyed considerable recovery.

Influence of American Spending

Finally, a sixth and highly important factor softening the impact of the American recession upon the Free World has been the continued heavy outpouring of American funds for travel and other private services, economic aid, and support of our military efforts and those of our allies abroad.

Much has been said about the cutting back of economic aid—and the total has indeed been substantially reduced from the peak—but the amount still bulks large and is accompanied by increased spending in the military categories. Despite the declining trend of American commercial imports in the latter part of 1953, aggregate dollar creating transactions last year reached a grand total of around $19.6 billion, only a shade less than in 1952. And figures for the first quarter of 1954 indicate spending at an annual rate not much below that of 1953.

Dollar Creating Transactions
(In billions of dollars)

	1948 Official	1949 Official	1952 Official	1953 Official	First quarter 1953 Official	First quarter 1954 Anticipated

* Includes U.S. offshore military procurement.
† Includes also expenditures abroad of U.S. personnel.
‡ Excludes U.S. military aid grants.

A Test Well Stood

The foregoing review will, we believe, shed light on why the course of economic events in 1953-54 has proved to be so much at variance with 1948-49 and with prognostications based on that experience.

European countries have increased their production and consumption markedly in the past five years, and their economies are in better balance. Their dependence on us for manufactured goods has decreased, and they have been able to obtain increasing supplies of raw materials at moderate prices from non-dollar sources. Inflation has been checked

FLOW OF FOREIGN CAPITAL TO UNDERDEVELOPED AREAS

AT no time in the world's history was there more urgent need for capital than now. Large parts of the world's area are underdeveloped and the people inhabiting these regions are becoming conscious of the need for economic development. Such development of these regions involves the large-scale use of capital. Perhaps, it is not as widely realised as it should be that this process, especially in the earlier stages, means the use of heavy doses of capital on projects which yield no visible, large or immediate returns. Thus roads, railways, transport, public health and education are all both desirable and necessary in these regions. These are all capital-consuming projects, yielding little direct return. It is at a time like this when capital is needed urgently and in a large measure that capital is "suspect." This is particularly so in the regions which require large-scale development. And politicians here are doing everything they can to discourge the growth of domestic savings and the flow of foreign capital. This paradox of the urgent need for capital and the suspicion with which it is treated lies at the root of the *malaise* that afflicts world economy, in general, and the underdeveloped economies, in particular. It would require an entire change in the attitude of many underdeveloped countries towards capital to cure this *malaise*. It would also call for a change in the attitude towards foreign capital, for the scarcest of all commodities in these countries is domestic capital.

In this context, it will no doubt be depressing, however understandable it may be, to be told that most of the foreign direct investment in manufacturing industries has, in recent years, been made not in underdeveloped but in economically advanced countries. This is the main conclusion reached by a study of international flow of private capital over the period 1946-52, recently made by the U.N. Department of Economic Affairs. The exceptions were the Latin American countries, which received considerable amounts of U.S. capital for investment in industries. The petroleum industry, it is stated, accounts for a large proportion of foreign direct investments in recent years. In other extractive industries, such investments has expanded, particularly in the dependent territories of West European countries. Other main features of the international flow of private capital as indicated in the U.N. study are:

(1) The floating in international capital markets of foreign Government bonds, once so important in international financing, is now limited to special cases of loans between countries maintaining close commercial or political relations with each other. (2) Similar floating of shares and debentures of business enterprises and trade in outstanding securities have also declined to minor importance, except when the transactions are related to so-called direct investments, involving managerial control through enterprises in the investing country. Such investments, accordingly, account for the great bulk of private long-term capital moving between countries. (3) The growth of direct investments does not result principally from the transfer of fresh funds from the capital-exporting countries, but from the reinvestment of a large proportion of the profits earned. (4) Underdeveloped countries in Latin America derive most of their inflow of foreign capital from the United States and dependent territories from their respective metropolitan countries in Western Europe. (This does not apply to investments in the petroleum industry.) Relatively little capital is flowing to the independent countries in South-East Asia. (5) There is no flow of private capital to countries with centrally planned economies in Eastern Europe and Asia. (6) New private foreign investment in public utilities have been more than offset by the liquidation of such investments, particularly in railway properties. The outstanding amount of such investment has, accordingly, tended to decline.

Surely, it is not a too comforting thought that the independent South-East Asian countries were unable to attract foreign capital. After all, they need it as badly as other parts of the underdeveloped world. In the last century, the U.K. was the main source from which capital flowed into these territories. The U.K. is no longer able to play this historic role. Soon after the war, the U.S. did, no doubt, assume the role of the principal supplier of capital. But its assumption of this role synchronised with the period of rehabilitation of the war-damaged economies of advanced industrial countries. Consequently, so far as the underdeveloped countries are concerned, American aid was strictly limited. Nevertheless, it would be wrong not to acknowledge the fact that the U.S. has played its role with a generosity unprecedented in the world's economic history—between 1946 and 1953, the value of American Government economic aid to foreign countries aggregated 41.7 billion dollars (about Rs. 20,000 crores), of which 33 billion dollars were for economic aid—or to ignore the consideration that the rehabilitation of industrially advanced countries has been a great indirect help to underdeveloped regions.

If the U.S. Government-sponsored economic assistance has flowed less plentifully towards underdeveloped countries than to industrially advanced regions, the outflow of U.S. private capital has also followed a similar course. At the end of 1952, the private capital invested by the U.S., which was the largest exporter of foreign capital, aggregated $21 billion. During 1946-52, the recorded gross outflow of private investment was $9.2 billion. Countrywise, U.S. direct investments at the end of 1950 (in million dollars) stood as follows: U.K. 847; Continental Europe 873; Canada 3,579; New Zealand 25; South Africa 140; Argentine 356; Brazil 644; Chile 2,540; Cuba 642; Mexico 415; Venezuela 993; other Latin American Republics 79; India 38; Pakistan 3; the Philippines 149; Indonesia 58; Egypt 39; Israel 15; Liberia 82; U.K. dependencies 297; other European dependencies in Africa 43; and other countries 659.

The underdeveloped countries thus stood at the far end of the list of the nations which have received U.S. private capital. Most of these countries have ambitious economic programmes which cannot be implemented because domestic capital is scarce. Even India, which has a comparatively well-organised capital market, had to acknowledge its serious capital deficiency. The authors of the Rs. 2,069-crore Five-year Plan estimated that the country would be able to raise no more than Rs. 1,704 crores from internal sources, even after taking into account deficit financing to the tune of Rs. 290 crores. The Rs. 365-crore gap between the country's needs and available resources, the authors of the Plan pointed out, could be met "only from external sources, or, in the absence of it, by additional measures of internal taxation and borrowing or by further deficit financing." The expenditure under the Plan has, in the meanwhile, been increased by Rs. 150-175 crores. Considering that the Plan has been rightly criticised on the ground that the rate of economic improvement it contemplates is too slow to evoke public enthusiasm and that, in the event of a recession, it may become difficult to attain even the level of internal resources, contemplated under the Plan, it seems necessary for this country to examine afresh, in a true spirit of economic introspection, its attitude towards foreign capital.

Before this introspection is undertaken, it is, perhaps, just as well that one should consider the point of view of the U.S., which still remains the only country that can supply the large capital needs of the underdeveloped countries. The generous spirit in which the U.S. conceives its role as the source of economic aid, has been stated often enough by President Eisenhower. Recently, we drew the readers' attention to similar sentiments that have been expressed by the U.S. Ambassador to India, Mr. George V. Allen. The U.S. foreign economic policy was again restated by Mr. W. T. Turner, U.S. Consul-General, Bom-

bay, in his recent address—the full text appears elsewhere in this issue—at the Rotary Club. Mr. Turner affirmed that the policy was based on "our conviction that the U.S. cannot remain an isolated island of prosperity in the midst of a world in need of assistance."

This is a generous sentiment. Even so, it is well to recognise that there are large sections of American public which regard American grants and gifts to foreign countries as an intolerable burden on the American taxpayer. Despite this opposition, the U.S. Administration continues to give, or to recommend aid, to underdeveloped countries. For instance, for the year beginning from 1st July, 1954, the Administration has recommended economic and technical aid to India to the tune of $104 million (Rs. 50 crores). By and large, such aid will, in course of time, diminish or disappear. Indeed, it might disappear not only because of the opposition to it in the U.S. but also due to the lurking suspicion in the minds of the hypersensitive recipients that the aid may inevitably tie them up with the aid-giving countries, thereby limiting their freedom of thought and action.

If the direct Government-to-Government economic aid—whether in the form of gifts or loans at such attractive terms as to amount to aid—is thus to be ruled out, the only two significant forms in which foreign capital may flow into underdeveloped countries are loans raised by the Governments of these countries in the lending countries and voluntary investment of foreign private capital. Now, the chief drawback in obtaining foreign capital through loans is that it is a very rigid and costly method. It will compel the borrowing country to set apart large sums, every year, in order to pay the interest on the loans and also to find large sums of foreign exchange when the repayment of the loans falls due. Moreover, as mere provision of finance will not meet the needs of the borrowing countries which are deficient in technical know-how, heavy expenditure will have to be incurred in obtaining such know-how.

Considering all these drawbacks, it is better to encourage the flow of private capital. Here no "strings" are involved. The problem of finding foreign exchange for periodical remittances will not be serious and private capital when it comes will bring its own know-how. This apart, as Mr. Turner pointed out, "American capital must hereafter be obtained mainly from private sources, not from Government grants or aids." Again, he emphasised that American capital "is always eager and ready to flow into any situation where it can earn a competitive yield, where it can be secure from undue controls and interference, and where it can be reasonably assured of the right to remit a fair amount of earnings." This sums up, in fact, the conditions under which foreign capital may reasonably be expected to flow to underdeveloped countries.

Now, none of these conditions is too difficult to comply with. It should be possible for India, which needs foreign capital, to facilitate the flow of such capital by making it worthwhile for the capital to come in. This will imply, in the first place, the creation of a proper climate in which foreign capital can feel a certain sense of security. Incidentally, the creation of such a climate will prove helpful to domestic capital as well. Secondly, there should, of course, be no discrimination against foreign capital *vis-a-vis* indigenous capital. Once it comes in, it must be treated on par with any other domestic enterprise. Although this condition is clearly conceded in the Government's Statement of Industrial Policy, as well as in some of the statements of the Prime Minister and Finance Minister on foreign capital, serious doubts continue to assail the minds of foreign investors, because the actions and statements of certain people who hold responsible positions in the country's political and business spheres run counter to these official statements. Thirdly, it will assist the flow of foreign capital if there is sufficient understanding and agreement between the capital-exporting and the capital-importing countries. It is to be regretted, in this connection, that India has not yet been able to conclude a commercial treaty with the U.S. It is to be hoped that the Government of India will soon be able to conclude such a treaty which has been delayed for a long time now. Fourthly, it will be necessary to come to certain mutual fiscal agreements by which foreign firms can be free from double taxation. This necessary arrangement, too, has been long overdue and the failure to conclude it does not redound to the credit of those in power in this country. And above all, the Governments of the countries which invite foreign capital from the free countries of the world, must have a continuing faith in the system of free and private enterprise.

WORLD ECONOMIC TRENDS

IN 1953, world production and consumption reached record levels, and international trade touched a high point, so that the disequilibrium in international transactions eased considerably. In presenting these conclusions, the *World Economic Report* 1952-53, published, this week, by the U.N. Department of Economic Affairs, warns that these favourable trends may be "of only temporary significance." Apart from this qualification, there is the more important point that this bright overall picture may conceal many dark spots. This is because no single unqualified statement can adequately describe the conditions in a world which contains countries with divergent economic systems and with different living and economic standards.

The *Report*, therefore, has a separate section for describing economic conditions in the three broad groups of countries, namely, economically developed private enterprise economies, centrally planned economies and economically underdeveloped private enterprise economies. Total industrial as well as agricultural production in the first group of countries—Australia, Belgium, Canada, Denmark, France, West Germany, Italy the Netherlands, Norway, Sweden, the U.K. and the U.S. —rose sharply in 1953. There was a tendency for employment to rise and, in many countries, unemployment declined. National product of almost all countries in this group, therefore, rose, in many cases more than in 1952; Belgium and France were, however, the exceptions to this general trend. Generally speaking, investment in fixed capital rose nearly everywhere. But the rise was not great, and much of it was largely due to increases in house construction; the level of investment in industrial plant and equipment was either a little less or remained at about the same level as in the previous year. A welcome trend from the point of view of these industrial countries was the improvement in their terms of trade, thanks to the decline in the prices of food and raw materials.

Analysing the trends in these countries over the period 1945-53, the *Report* notes that output rose during the years 1945-50, which it appropriately calls the reconstruction period, and some progress was made in restoring world trade and in reducing inflationary pressures. In 1949, however, there was a short-lived recession. Sterling and several other currencies were devalued in September, 1949. The outbreak of the Korean war gave a new impetus to the economies of these countries. The *Report* deals with the period 1950-53 in its three phases: (1) the first phase (from mid-1950 to mid-1951) during which heavy inventory accumulation combined with rising Government expenditure produced sharp increase in output; (2) the second phase (mid-1951 to mid-1952) in which there was a reversal of the inventory boom and output rose much more slowly, and (3) the third phase (1952-53) in which Government expenditure began to flatten out but increases in fixed capital investment and consumption quickened once more the pace of economic activity.

Reviewing the trends in connection with centrally planned economies—to this group belongs the U.S.S.R. and its satellite countries—the *Report* discloses that "considerable disproportions" between the output of investment goods and that of consumer goods developed in the course of very rapid industrialisation of these countries. Even in the U.S.S.R., where these disproportions were relatively limited, agricultural output lagged behind industrial production. In order to eliminate these disproportions, the Governments of these countries decided, in 1953, to slow down the rate of expansion, to reallocate resources in favour of consumer goods industries and agriculture. Incentives for agricultural producers were substantially increased by measures which raised the prices paid to peasants and gave greater security of tenure to private producers.

In the underdeveloped countries, the *Report* notes, the balance of payment position improved from mid-1950 to mid-1951 owing to sharp increase in export prices. This stimulated the output of exportable raw materials and private and public investment was expanded. Although this boom subsided in the following months (mid-1951 to mid-1952), fixed capital investment was generally maintained or increased as a result of the high export profits of the preceding period. In 1952-53, the overall economic activity of underdeveloped countries generally slackened. If the balance of payments position nevertheless improved, it was because the countries tightened their import restrictions.

In the primary producing countries—this group includes countries of Asia (except Japan and the mainland of China), Africa, Latin America and Oceania, Canada, Finland, Spain and Yugoslavia—export earnings in the first half of 1953 were 36 per cent. above the level in the same period of 1950. The volume of exports in the first half of 1953 was about 12 per cent. above the level of the same period of 1950. Imports, which began to expand in 1950, declined in 1953. In the first half of 1953, the value of the imports was 37 per cent. above the level in 1950 and the quantum of imports 15 per cent. above that level. Raw material prices were, as a whole, subject to more violent swings since 1950 than food prices which have generally exhibited an upward trend in the period 1950-53. In more recent months, however, there has been, as is well known, a decline in the prices of food articles too.

The major developments in world trade during the period 1950-53 include the increase in the volume of world exports and improvement in the degree of balance in the regional pattern of world exports. Extreme fluctuations, however, characterised international trade during the years 1950 to 1952. From mid-1950 to mid-1951, exports from primary producing countries increased sharply in response to higher demand in industrial countries. But they slackened in the middle of 1951, though there was a significant recovery in the second half of 1952. Exports from industrial countries rose in the second half of 1950 and the increase continued through 1951 and into the beginning of 1952. There was again a decline in the exports of these countries after the first quarter of 1952. In 1953, however, the exports of these countries recovered significantly. But the U.S. proved an exception.

Considering that the main preoccupation of the free world in post-war years has been the attainment of a balance in trade and payment between its dollar and non-dollar countries, it is gratifying to note that there was a greater degree of balance in 1953 than in 1950. The *Report* attributes this development to a rise in the U.S. import demand and to increased output in the non-dollar areas of exportable commodities. Some temporary factors, such as the increase in the U.S. military expenditure abroad, also played their part in easing the balance of payments position. In 1953, the export balance of the U.S. on current transactions in goods and services, excluding military aid exports, touched a record low level of any post-war year at $400 million. The rest of the world, on the other hand, added some $2.3 billion to gold and dollar reserves as a result of transactions with the U.S., including the receipt of $2.0 billion in economic aid.

Perhaps, the most significant part of the *Report* is the one where it discusses current trends in the light of the recent decline in the economic activity in certain private economy countries. It affirms that output, in the future, will depend more fundamentally upon the course of Government expenditure, consumption, foreign investment and especially, on private domestic fixed capital investment. The general problem for these countries is whether and how soon investment and consumption will "make good the slack entailed by the reduction in military expenditure." Since declines in military expenditure, it says, are not likely to be fully offset by increases in other forms of public expenditure, much will depend on whether private domestic investment in fixed capital expands. From this point of view, it is certainly disturbing that there has been a "rather widespread fall" in industrial investment in several countries and a decline in such investment has been anticipated for 1954 in the U.S. The *Report* also attaches great importance to capital transfers to underdeveloped countries well beyond what is presently contemplated. In a nutshell, the main world economic problem is one of adjustment to a non-military economy and improvement of living standards in underdeveloped areas so as to maintain a continuous increase in production and consumption of goods. This calls for nothing short of the highest possible level of international, as well as national, economic statesmanship. There is, however, no sign of realisation of the urgency of this need by all the members of the United Nations, as witness the lack of encouragement to the proposal for setting up a special U.N. Fund for economic development suggested by a special committee in 1951. This Committee advocated the voluntary transfer of about $7 billion a year, representing 2 per cent. of the annual national income of the developed countries of the world, to the underdeveloped countries. Although this amount is well within the capacity of developed countries, the proposal has failed to evoke any response from them, and it looks as though it has been practically shelved.

BULLISH FERVOUR IN EQUITIES STRONG

TRANSFORMATION IN WHEAT SITUATION—FURTHER MOVE TOWARDS CONVERTIBILITY

THURSDAY, 5 P.M.

ALTHOUGH the commodity and bullion markets have continued to display a bearish trend, the bullish fervour on the Stock Exchange that revived last week persists; if anything, it is a little stronger than a week ago. Both Tata Ordinaries and Indian Irons are being favoured by big operators in expectation of some fresh development. None is in a position to say what it is, but they all aver that something is in the offing. Time alone can tell whether this is a bluff or otherwise. Despite vigorous denials by a section of the Press, market circles feel that the Indian Iron and Steel Co., Ltd., has some scheme of capital reconstruction, the effect of which will be beneficial to its existing shareholders. There are also reports that the Government is likely to modify the iron and steel control in a manner that will bring some additional benefit to the companies. Another anticipation is a reduction in the Bank rate; this has been responsible for the sustained firmness of the Gilt-edged market, too.

MARKET GOSSIP

• • • •

The rise in equities this week has been on a broad front. The turnover also has been quite substantial. Textile shares met with selective buying on reports that the present dullness of the cloth market is only a passing phase and that very soon demand will revive. In spite of production running at the rate of 5,000 million yards per annum, stocks of cloth with the mills are not large. Indeed, almost all the good mills are believed to have only three or four weeks' production in stock. In the course of his informal talk with journalists on Wednesday, the Commerce and Industry Minister, Mr. T. T. Krishnamachari, stated that consumption of cloth in the country had gone up substantially and that it would be necessary to step up production further, if exports were to be allowed at the rate of 1,000 million yards per annum.

• • • •

It is refreshing to find that most of the leading Indian industrialists are now optimistic about the economic outlook. In spite of the disquieting statements made by some of the leading Congressmen from time to time on the place of private enterprise, big industries, rationalisation, labour relations, etc., they are satisfied that the Government of India will encourage large-scale industries and that it will not place any obstacle in the way of industrialisation by private enterprise. The removal of a number of controls has eliminated uncertainties. The proof of this growing confidence among industrialists is provided by the firm, initial steps taken in recent months for the starting of a few big industries, involving investment of large capital. Some more big projects to be started under the auspices of private enterprise are also under active consideration. A leading house of Indian industrialists is so strongly convinced of the good intentions of the Government that it is seriously considering the question of establishing one more steel unit in the country, involving an investment of several crores of rupees.

• • • •

The break in wheat prices last week in the U.S. and Canada was an important event of the year in the world of foodgrains. Though sudden and surprising, it was neither unwarranted in the light of the statistical position of the commodity nor completely unexpected in that everyone knew that the ruling prices of wheat were highly artificial and could not last much longer. The drop, however, has not been so appreciable as to cause much satisfaction among the importing countries; it is less than 6 per cent. Such a small fall does not deserve to be described as a rate war in wheat. It may easily lead to one, but, significantly enough, there has been no further price cutting after last week's reduction.

• • • •

The initiative in reducing the price of wheat was taken by the U.S. The cut was not made directly in the selling price; it was effected through an increase in the shipping subsidy for wheat by 10 cents a bushel (60 lbs.). This action was immediately followed by a cut of 10¼ cents a bushel in the Canadian Wheat Board's export price for three top grades. The revised rate, namely, $1.72½ a bushel, applied to sales under the International Wheat Agreement as well as to other sales. The expression "rate war" has come to be used, perhaps because the U.S. lowered its wheat price, despite Canada's representations. But the U.S. action is understandable. Its exports have suffered to a much greater extent than those of Canada. Further, it had to do something to reduce the present sure of mounting stocks which have already exceeded its storage capacity. In fact, a reduction was long overdue. It is just possible that the U.S. might have all along held it off, in order to enable those in the other parts of the world, who had large supplies of American wheat, to move them into consumption without suffering any serious loss. It is true that some merchants might still be holding some stocks, but the loss thereon would not be very heavy, as the cut has been modest, being no more than As. 10 per maund.

• • • •

The lowering of American and Canadian wheat prices has not yet evoked a corresponding cut in the selling prices of Australian and Argentine prices. Australia has been saying that it would wait and watch and that, while ultimately it will have to sell at market prices, it will not reduce its price for the present, unless Argentina takes the initiative. Be that as it may, the U.S. and Canadian action has upset the confidence of importers all over the world and, with supplies remaining at record high levels, they are not likely to buy more than their immediate requirements, that is, they will buy only on a hand-to-mouth basis. This attitude itself may, sooner or later, force a further reduction in prices. This raises the question: to what extent will the price of wheat be allowed to fall? This is a difficult question to answer, for much will depend on the U.S. Government, which set the present reductions in motion. There is no doubt that the question of finance in carrying large stocks cannot be a big problem for the U.S. Its chief worry must be storage space. If this inference is correct, once the pressure on storage space is relieved by exports, it may not reduce the export price any further. Much, therefore, depends on the offtake of American wheat in the coming weeks. If the offtake does not pick up, the U.S. will have to lower its price further. But will Canada and other exporting countries always leave the initiative in the hands of the U.S.? Will they not try to steal a march over that country by cutting their prices in advance, without waiting for the U.S. to do so? These possibilities cannot be ruled out. Nothing, however, is likely to happen until the conclusion of the meeting of the International Wheat Council currently taking place in London and scheduled to conclude on Wednesday next week. This meeting gives an opportunity to members to air their views and to reach some mutual understanding amongst them as to the future course of action. The outcome of this meeting will, therefore, be watched with great interest.

• • • •

The comments on the U.S. action in Canada and Australia are adverse. They reflect the indignation of wheat interests in these two countries. In fact, both of them seem to feel that the U.S. has let them down by suddenly imparting a highly bearish tone to the wheat markets and causing confusion among the traders. They say that they are unable to reconcile the U.S. action with its oft-repeated assurance that it would not disrupt world prices by dumping its surplus commodities and with its Anti-dumping Act against imported goods. These reactions are understandable, because, whereas the U.S. is financially strong enough to subsidise its exports or to give away its surplus wheat, the other wheat-exporting countries are not that much rich to do so. The most surprising are, however, the reactions of some of the importing countries, especially the members of the International Wheat Agreement. Generally speaking, they should be happy over what has happened; but, really, they are not. This is explicable. So long as the price of wheat is above the minimum level of $1.55 fixed under the I.W.A., the importing member countries are under no obligation to take up the quantity agreed to by them. Now that the price is being compulsorily pushed down by the Wheat Boards in the exporting countries, those countries which have not exhausted their quotas are afraid that a stage may soon be reached when they will have to honour their commitments under the Agreement. The present selling price is only 17 cents above the floor price of $1.55 per bushel.

• • • •

The main reason for the fall in wheat prices is the marked increase in world supplies, following two successive record crops in the U.S. and Canada and the prospect of almost another good crop in the current year. Production in other parts of the world also has been good. Thus, the world's biggest importing area, Western Europe, has harvested the best crop since the end of the war. Indeed, three of the largest producers, France, Italy and the U.K., set new records. With the building up of stocks that took place in 1952-53, European requirements have been considerably reduced. India, with excellent wheat and rice harvests in the past year, has been practically out of the import market this year. So is Pakistan, which last season needed large emergency imports. In fact, of the three Asian countries that last season imported large quantities of wheat, only Japan, because of a poor rice harvest and also because of the increasing consumption of wheat, has been a substantial importer this year. Many smaller importers, too, including Egypt and several Middle East countries, have had better wheat harvests than in the preceding year.

• • • •

While thus the importing countries are in need of less wheat, all the exporting countries have more wheat to offer. The following table shows the position of the four major exporting countries:

Wheat Production and Stocks
(Million bushels)

	1952-53		1953-54	
	Production	Carry-over	Production	Carry-over*
United States ...	1,291	559	1,169	850
Canada ...	688	370	614	550
Argentine ...	278	104	230	100
Australia ...	195	52	199	110
Total ...	2,452	1,085	2,212	1,610

* Estimate.

It will be noted that, though production in the current crop year (ending 31st July) in the U.S. and Canada is less than the bumper harvests in 1952-53, the surplus is larger, owing to the large stocks brought in from the previous year. The total surplus of these four countries alone at the end of July, 1954, will be higher by 525 million bushels. In the case of Canada, the carry-over will be larger than in any other year except 1943, when it reached a phenomenal figure of 595 million bushels. In the case of the U.S., the expected carry-over is a record in its history. Among the other exporting countries, Turkey, France and Uruguay have had record harvests. The French North African wheat crop, too, has been a good one. Russia and the Danubian countries also are believed to have had an excellent crop, with surpluses for export this year. Even Sweden has joined the ranks of the exporters on a small-scale.

• • • •

In short, rising supply in the face of falling demand has brought about a striking change in the atmosphere of the world wheat market. This is further evident from the fact that the importing signatories to the I.W.A. have neglected to make their guaranteed purchases. The total of these for the current year (1953-54) is 421 million bushels—this itself is very much less than the 581 million bushels per annum agreed to in the previous two seasons and fully taken up. Of this 421 million bushels, only 190 million had been taken up in the first 9 months of the year, leaving 230 million, about 55 per cent., to be taken up in the final three months. Some importing countries had not bought a single bushel; India, which has the second biggest import quota, had taken up just one per cent. of its quota of 37.3 million bushels (equivalent of one million tons).

• • • •

Such is the state of the world wheat position. Since the importing countries are not taking delivery of their full quota, it is quite on the cards that the exporting countries would reduce their prices to the minimum of $1.55 per bushel, in order to force them to do so. If they do, India is in duty bound to take up its quota of one million tons. It cannot say "no," because in previous seasons when the free market price was well above the maximum fixed under the I.W.A., the exporting countries honoured their obligations to the full. What applies to India, applies equally to other countries. They all signed and ratified the I.W.A. with their eyes wide open, even ignoring the far-sighted lead given by Britain which boldly decided to keep out of the arrangement, as it felt that the U.S. and other exporting countries were not justified in demanding an increase in both the minimum and maximum prices. It will be recalled that these levels were raised to $1.55 and $2.05, from $1.20 and $1.80 per bushel in the previous I.W.A. Even assuming that the importing countries honour their commitments under the I.W.A., the problem of surplus wheat will not be fully solved. There will still be large surpluses. How are they to be disposed of? And what sort of future awaits the wheat growers? These aspects will be examined in our next issue.

• • • •

In recent weeks, the price of wheat and other foodgrains have declined in India, too. In fact, in the past 15 days, the price of Indian wheat has fallen to a much greater extent than the Canadian and the U.S. wheat. Thus, whereas the latter two have dropped only 10 annas per maund, Indian wheat has lost as much as Re. 1-12 per maund. Incidentally, it will be interesting to note, in this connection, that the ruling price of Rs. 12-4 per maund of Indian wheat, is almost equal to the U.S. export price. The drop in the price of Indian wheat is much heavier as compared with the rate of Rs. 17-4 per maund prevailing at the beginning of the year. While this fall is welcome from the point of view of the consumer who has suffered for a long period from high prices, care must be taken to see that it is not carried too far, lest it should affect the purchasing power of the agriculturists who provide the biggest market for most of the goods produced in the country. Knowledgeable circles feel that, having regard to the pre-war level of prices of wheat and the rise in cost of operations, if the price of wheat were to go below Rs. 9 per maund, the farmers would be severely hit.

• • • •

As already stated, prices of other foodgrains, too, have fallen. An idea of the extent to which they have done so will be evident from the following comparative table:

(Per maund)

	A year ago	Jan., 1954	Feb., 1954	March, 1954	May 1954	Latest [14-6-54]
	Rs. a.	Rs. a.	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Wheat	17 4	17 4	16 4	16 0	14 8	12 0
Gram	15 10	14 8	13 8	11 8	10 10	9 8
Jowar	12 8	10 6	9 12	8 14	8 4	10 0
Rice (Basmati) ..	25 0	30 0	29 0	28 0	33 8	34 0
,, (Coarse) ..	23 0	19 8	19 0	19 8	19 0	18 4
Bajhar	12 4	11 6	10 0	9 0	8 14	7 12
Dal (Arhar) ..	14 11	12 0	10 4	9 8	10 2	8 1

It will be noted that, except in the case of rice, the fall in prices has been fairly substantial. Even in the case of rice, it is only the fine rice that is still commanding a high price, whereas the coarse rice has staged a perceptible fall. The decline in prices noted above is chiefly the result of an increase in domestic production. Whether this trend will continue and if so, to what extent, will depend upon the size of the next crop which in turn will depend upon the monsoon. As the latter is an unpredictable factor and as the stocks in the country

SHARE MARKETS REMAIN BUOYANT

BOMBAY DYEINGS IMPROVE

(From Our Own Correspondent)

BOMBAY, 17*th June*

BUOYANT conditions prevailed on the Stock Exchange for the second week in succession. The advance in equity prices noted last week gathered considerable momentum during the week under review. Though the heavy profit-taking which intervened in the last two days pared down values rather markedly, the market once again recovered and displayed strength at the close. The undertone at the close was firm.

The main inspiration to the market for this buoyancy was the fervent hope of a cut in Bank rate which would mean cheap credit for industries. Besides, operators would appear to have also taken the view that the implementation of the Shroff Committee's recommendations and the setting up of two Industrial Development Corporations for financing industries would open a new vista of industrial prosperity to the country. Reports that the Controller of Capital Issues had sanctioned the issue of bonus shares by two textile mills of Bombay and prospects of more bonus issues being sanctioned also gave a stimulus to trading. Hopes were entertained that subscriptions to the National Plan Loan would be closed by the end of this month.

Steel shares once again led the market. Keen speculative support to Indian irons, particularly from Calcutta, was in evidence, owing to reports that there would be a reconstruction of the Company's capital structure. Consequently, Indian Irons made a sharp jump from Rs. 31-2 to Rs. 32-7 on Tuesday this week. After reacting to Rs. 31-9 yesterday, they closed today at Rs. 32-1. Tata Ordinaries made an advance from Rs. 207-8 to Rs. 211-4, but slipped back at Rs. 206-12. The closing was, however, better at Rs. 208-8.

Textile shares were steady but, barring a few selected counters, the rise in prices was very moderate. This was due to the disappointment caused by reports that the Government of India was unwilling to remove the export duty on coarse cloth. Bombay Dyeings provided the highlight of the section, spurting from Rs. 425 to Rs. 443-12 yesterday. After a sharp retreat to Rs. 433-12 today, they finished better at Rs. 438-12. Kohinoors came up from Rs. 313 to Rs. 317, but wound up at Rs. 313. Centurys were in favour and rose from Rs. 332-4 to Rs. 340. A part of this gain was, however, shed when the shares closed at Rs. 336-8. Central Indias added Rs. 2-8 to Rs. 176-8 and Finlays Rs. 2 to Rs. 245. Gokaks finished Rs. 3-8 better at Rs. 260. It is reported that this Company's application for capitalisation of reserves has been approved by the Government. Sassoon Spinnings came to prominence with a rise of Rs. 2-8 to Rs. 32-8. Sholapoors were marked up by Rs. 185 at Rs. 2,410. Shree Niwas scored a gain of Rs. 2-8 to Rs. 201-4. But Simplex were unimpressive at Rs. 155-12. Standards met with realising and lost Rs. 2-8 to Rs. 332-8. Svadeshis added a rupee to Rs. 279. The Controller of Capital Issues is reported to have sanctioned the Company's proposal to issue bonus shares. Swans changed hands Rs. 2-8 higher at Rs. 321-4, and Tata Mills Re. 1 at Rs. 49-8. New Citys were a notable exception to the general trend, with a drop of Rs. 9-11 to Rs. 156-4. New Greats were marked down by a rupee to Rs. 170. Podars lost Re. 1-4 to Rs. 138-12.

Not much activity was noted in bank shares, but the undertone remained steady. Centrals were up by a rupee to Rs. 55-4 and their new shares by As. 4 to Rs. 59-4. Imperials disclosed no change over the week, Fully Paids remaining at Rs. 1,772-8 and Partly Paids at Rs. 430. Barodas put on Re. 1 to Rs. 110, Bank of Indias shed a fraction to Rs. 146-12. United Commercials rallied by Re. 1-4 to Rs. 45-4.

A rise of Rs. 4 to Rs. 42 in Industrial and Prudentials was the main feature of trading in the insurance section. This scrip has gone up by Rs. 8 in the course of the last two weeks. This is attributed to rumours of mutualisation of the Company. Vulcans advanced during the week under review by Re. 1-8 to Rs. 144-8. After a rise of Rs. 100 to Rs. 8,000, Orientals closed at Rs. 7,900. New Indias were quiet at Rs. 47-4. British India Generals put on As. 8 to Rs. 13-12.

Enquiries for electricity shares were selective. The volume of business was restricted. Tata Hydros were in demand and rose by Rs. 3 to Rs. 143. Tata Powers gained Rs. 8-12 to Rs. 1,436-4 and there new shares Rs. 2-8 to Rs. 1,115. Andhra Valleys were unchanged at Rs. 1,335. Ahmedabad Electrics were on offer and lost As. 10 to Rs. 108-7. Their new shares lost As. 4 to Rs. 106-12. Amalgamated Electrics were marked down by a fraction to Rs. 10-12.

Selective interest was noted in the miscellaneous group, but the undertone was steady. In the sugar section. Belapurs scored a gain of Re. 1-8 to Rs. 270-8. Phaltons were unchanged at Rs. 106. Walchandnagars made a spirited rally from Rs. 180 to Rs. 191-9 on reports that the Company proposes to start manufacturing of certain items of sugar-making machinery. Cement shares were unimpressive, with A.C.C. moving narrowly between Rs. 163 and Rs. 159-12 and Digvijays remaining quiet at Rs. 130-8. In the engineering and mining section, Alcocks could not make any headway, in the face of offerings. They dropped Rs. 2-8 to Rs. 205. Premier Constructions evoked fresh interest and appreciated by Rs. 4-8 to Rs. 137-4. Tata Locomotives had buyers at Rs. 115. Larsen and Toubros came into prominence with a rise of Re. 1-5 to Rs. 12-8. Indian Coppers lagged behind, losing As. 2¼ to Rs. 3-3¾, as also B.B. Petrols dropping As. 2 to Rs. 3-14¾. Shivrajpurs attracted considerable attention and gained Rs. 4 to Rs. 63.

Among other sections in the group, shipping shares presented a better tone on prospects of an increase in freight rates. Scindias picked up from Rs. 17-11 to Rs. 18-7, but closed at Rs. 18-2½. India Steamships hardened by As. 4¼ to Rs. 815¼. Bharat Lines were quoted at Rs. 95. Automobile shares were in demand. Hindustan Motors moved up from Rs. 8-9¼ to Rs. 9-1, though the closing was a trade lower at Rs. 8-15¼. Premier Automobiles were done at Rs. 75, as against Rs. 74.

Bombay Burmahs (Old), among miscellaneous industrials, were erratic within a narrow range, but stood on balance Re. 1-4 higher at Rs. 404-6. B.I.Cs. were steady at Rs. 8-1. Killick Industries were marked down from Rs. 183 to Rs. 179. National Rayons were concerned in strong bullish activity and rallied from Rs. 169-4 to Rs. 182-8, on reports that the Company would issue fresh capital for its expansion programme, the second stage of which is stated to have been finalised. It is also stated that the new shares would be issued to the existing shareholders (both ordinary and preference) in the ratio of 1:4. Tata Chemicals were better at Rs. 15-11½, as also Tata Oils at Rs. 41. Wimcos reacted from Rs. 200 to Rs. 195.

• • • •

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, 16*th June*

The week under review on the Calcutta Stock Exchange was noted for activity leading to a striking increase in the daily list of transactions. Prices also registered strident advances. The reasons leading to such a trend included higher advices from Bombay, and the possibility of further acceleration of industrial expansion under the Second Five-year Plan.

Although teas were firm, there were signs to indicate that the wave of buying received a setback. There was profit-taking earlier in the week, and since then business continued limited. This week's experience has again demonstrated the fact that teas advance when other sections of the market are dull and lose ground when others display general firmness. The export auctions on Monday, when prices lost by 3 annas, gave operators the feeling that activity in tea shares has been overdone in recent weeks. Variation in prices at the sales has not caused surprise as the future of the tea industry continues encouraging.

After recording a mixed trend, the jute section provided selective features, as, although the jute goods market was featureless, operators were left with the feeling that there was demand for all the goods produced by mills. The month-end stocks in both hessians and sackings represent just over a month's production. Argentina is again in need of hessian, and has already invited tenders for 5,000 tons. This factor is bound to bring steadiness to hessians, and may even prevent mills from further transfers of looms from hessians to sackings. Besides, demand for hessians from the United States is expected to gather momentum from August, as is usually the case. All these point that the outlook for jute shares is bright, and in the coming weeks this section is likely to take the leadership of the market.

Engineering shares were firm. Speculative Indian Irons, encouraged by inspiring advices from Bombay, added impressive gains. Miscellaneous industrials, paper mills and textiles also shared the better sentiment of the market in view of the bright industrial prospects.

Sectionwise, amongst engineering shares Indian Irons opened last Wednesday at Rs. 30-12, and moderate buying support saw the rate gradually rise to Rs. 31-11 by the week-end. The advance soon caught the attention of speculators, whose activity pushed the rate to Rs. 32-7 on Monday. Yesterday a reaction to Rs. 32 was recorded on profit-taking, which continued today to take the rate further down to Rs. 31-11. At Rs. 30, Jessop & Cos. put on As. 12 and keen interest in Burn & Cos. saw the quotation advance to Rs. 202 from Rs. 192-8. In active trading, Indian Galvanizings were better at Rs. 20-4 as against Rs. 19-3 earlier.

Expectations of a reduction in the export duty on coarse cloth and moderate activity in the export market were factors which enlivened activity in the textile section, where Kesorams at Rs. 25-14 scored two points. Elgin Mills were fractionally better at Rs. 16, and Bowreahs were paid Rs. 310 in transactions of small lots compared to Rs. 300 previously. Dunbars were paid Rs. 201.

Coals came in for a little more attention. There was an increase in the number of transactions, but changes in prices were not as impressive as in other sections. Equitables hardened to Rs. 34-2 from Rs. 33-8 and in transactions South Karanpuras were pushed to Rs. 10-8 from Rs. 9-6. On moderate buying support, New Manbhooms gained to Rs. 11-6 from Rs. 9. New Beerbhooms jumped to Rs. 18-8 from Rs. 17-10, Pench Valley being higher at Rs. 26-2 as against Rs. 25-9 previously. After realising Rs. 14, Raneegunges moved back to Rs. 12-4, while Burrakurs were easy at Rs. 10-3. Central Indias were unchanged at Rs. 7-1 as were Western Bengals at Rs. 6. Khatras Jherriahs were crossed at Rs. 44 *ex-div.* Dhemo Mains being fractionally higher at Rs. 8-15.

Shares of paper mills were put through at advancing rates, and the best feature was provided by India Pulps which, on impressive support, gained to as high a rate as Rs. 245 as against Rs. 212-8 a week ago. Orient Papers at first eased to Rs. 19-9 from Rs. 20-3 but subsequently more than made good the loss at Rs. 20-5. Sree Gopals were a favourite and in business gained to Rs. 27-10 from Rs. 24-1, although on Tuesday there was a reaction to Rs. 27-4. Titaghurs were steady at Rs. 41-14 and subsequently improved to Rs. 42-4. At Rs. 63, Bengals put on three points.

Although the volume of transactions fell by a marked degree in teas, interest in selective counters continued and features were provided. Thus Carrons were taken to Rs. 235 from a previous rate of Rs. 222, while Nagalsurees gave way to Rs. 232 from Rs. 247. A number of transactions was reported in Hattikhiras which rose from Rs. 18-10 to Rs. 21-10. Tukvars were another strong feature for the advance to Rs. 12-4 from Rs. 9-14.

Among shippings, India General Navigations provided the best feature and rose to Rs. 100 from Rs. 85. India Steamships also engaged the keen attention of operators and scored to Rs. 9-4 from Rs. 8-9. Ports were attended at Rs. 13-6 which was As. 14 higher on balance. On the other hand, Calcutta Landings eased to Rs. 20-6 from Rs. 23.

In the miscellaneous section, Rallis received pointed attention and at Rs. 69 put on 13 points, and Shaw Wallaces advanced to Rs. 14-12 from Rs. 13. At Rs. 18, Rohtas Industries scored an advance of Rs. 2. F. & C. Oslers being better at Rs. 17-14. Jardine Hendersons attracted attention at the higher rate of Rs. 123.

Selective interest was shown to jute shares. Barnagores hardened to Rs. 151 from Rs. 147. At Rs. 304, Kankinarrahs jumping to Rs. 136 from Rs. 130-8. Speculative Howrahs opened at Rs. 24-11 and after improving to Rs. 25-5 reacted to Rs. 24-14. Lansdownes were fractionally better at Rs. 139-8.

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, 15*th June*

The brisk activity noted on the Madras Stock Exchange during the past few weeks yielded place to cheerless conditions this week. Barring selective support for some favourite scrips, interest was lacking all round. The textile section came in for comparatively little support, on lack of domestic and overseas demand for cloth. Even plantings, which held the field for a long time now, were lacking support, for tea and coffee scrips met with only stray enquiries. Rubbers, however, proved an exception in that they evinced some interest. Among other sections, miscellaneous and banking scrips too were colourless. Business done was, therefore, small, and price movements confined to narrow levels. There was, on balance, a sprinkling of moderate gains and losses.

In the textile section Balasubramanias, Rs. 40 paid-up, gained As. 4 to Rs. 46-12 and 'B' shares, Rs. 70 paid-up, Re. 1-8 to Rs. 77-8. Coimbatore Cottons improved from Rs. 222 to Rs. 223-8 and R.C. Ambikais from Rs. 153 to Rs. 157. Rajalakshmis rallied Re. 1 to Rs. 116. Metturs, however, lost to Rs. 58. Lakshmis, Rs. 50 paid-up, eased from Rs. 128 to Rs. 126 and, Rs. 25 paid-up, 'A' from Rs. 65 to Rs. 64.

Among plantings, the performance of tea scrips was not encouraging, as stated already. Blue Mountains lost an anna to Rs. 3 and Highland Produces As. 6 to Rs. 3-14. Nonsuch Teas eased from Rs. 33 to Rs. 32-10. Emerand Valleys, however, put on As. 3 to Rs. 6-1 *cum-div.* and Halley-burias As. 2 to Rs. 19-10. Nilgiri Teas advanced Rs. 14-2 to Rs. 14-4 and United Nilgiris from Rs. 220 to Rs. 221.

Among rubbers, Be Bes and Cochin Malabars rallied As. 2 each to Rs. 3-3 and Rs. 8-2, respectively. But Kallas changed hands higher at Rs. 4-14, as against Rs. 4-12. Malankaras disclosed a gain of Re. 1-4 at Rs. 40 and Nenmenys As. 4 at Rs. 11-4 *cum-div.* Rajagiris were better by an anna at Rs. 13-4 and Vaikundams by As. 2 at Rs. 11-4. Shevroys were fractionally better at Re. 1-12½. Pullangodes were done at Rs. 3-14 ex-div., as against Rs. 3-5½ *cum-div.* Udayagiris changed hands at Rs. 12-2 *cum-div.*, as against Rs. 12 *ex-div.* The Directors have declared a dividend of 10 per cent. on the ordinary shares for the year ended 31st December, 1953, as against *nil* in the previous year.

Coffees were colourless. Consolidated Coffees were unchanged at Rs. 17-10, while Puthuthotams lost an anna to Rs. 3-10. Mysore Coffees, however, gathered As 4 to Re. 1-8 and Coffee Lands As. 10 to Rs. 11-10.

There were some sporadic enquiries in miscellaneous scrips. Aluminium Industries advanced by As. 6 to Rs. 15-10 and Andhra Cements 'B' by As. 2 to Rs. 11-2. Bangalore Transport improved by As. 4 to Rs. 12-14 and India Cement by As. 3 to Rs. 18-7. Mettur Chemicals advanced from Rs. 5-2 to Rs. 5-6 and Mysore Chemicals and Manufacturings from Rs. 12-11 to Rs. 13. Dalmia Cements were up by Re. 1-1 at Rs. 11. Rallis put on As. 8 to Rs. 37-8. But Mysore Gold lost As. 3 to Rs. 3-11¼. Champion Reefs also eased by a similar amount to Rs. 3-10. Parrys were done at Rs. 5-3 *cum-div.*, as against Rs. 5-1 *ex-div.* The Directors have maintained the dividend of 15 per cent. free of income-tax, on the ordinary shares for the year ended 31st December, 1953, the same as in the previous year.

NEWS IN BRIEF

THE President of India has given his assent to the Bihar Land Reforms (Amendment) Act, 1953.

The Bhakra-Nangal hydel channel will be inaugurated by the Prime Minister on 8th July, 1954.

The Andhra Government is studying, in all its aspects, the proposal to nationalise transport services in the State.

The Government of India has decided to allow importers and sole selling agents, as a special case, to import spare parts of certain textile machinery upto 5 per cent. of the imports of the complete machinery.

The scheme to establish an oilseed research station at Anantapur has been finalised by the Director of Agriculture, Andhra State. A site extending over 30 acres for locating the research station has been selected.

Deposits of monazite have been found on the beaches of Bhimlipatnam, Vishakhapatnam District, Andhra State. The Geological Survey of India will shortly carry out extensive tests in that area to find out the extent of deposits.

It is reported that the Government of India is considering the question of setting up two more fertiliser factories on the lines of the Sindri Fertiliser Factory. One of the factories is likely to be set up in Rajasthan and the other in South India.

The Central Government has decided to extend the free licensing of export of cotton tents, including bivouac tents, for shipment up to 30th September, 1954, within the fixed ceiling. This decision does not, however, apply to tents dyed olive green or made of mineral khaki cloth.

According to the revised estimates of the Indian Lac Cess Committee, the *Baisakhi* lac crop in India for the year 1954 is expected to be 547,000 maunds, as against the preliminary estimates of 645,000 maunds and the previous year's final estimates of 426,000 maunds.

The Andhra Government has decided to give up the scheme of compulsory levy on producers and dealers of foodgrains, in view of the changed food situation in the State. It has, however, been decided to continue the procurement on a voluntary basis in the five surplus districts of the State.

An agreement has been signed between India and the U.S., under which the U.S. Bureau of Reclamation will render technical services to the Central Water and Power Commission of the Government of India. A sum not exceeding $100,000 has been provided from the technical assistance fund for this purpose.

The Government of Madhya Bharat has decided to levy sales tax, with effect from 1st July, 1954, on sales effected by non-resident dealers in India outside the State to consumers, users, unregistered or unlicensed dealers in the State, if the goods are delivered in the State for purposes of consumption.

The Government of India has decided, after consultations with the Planning Commission, to provide assistance to State Governments in furtherance of the National Water Supply and Sanitation programmes. A sum of Rs. 12 crores has been set apart for allocation to the State Governments, during the years 1954-55 and 1955-56.

With a view to increasing sugar production, the Union Government has decided to encourage the establishment of two or three more factories in South India. Disclosing this, Mr. M. V. Krishnappa, Union Deputy Food Minister, said, in Mysore last week, that Mr. Kidwai would meet the Mysore Ministers in this connection. He assured that the country would not be allowed to suffer due to shortage of sugar and that the deficit would be met by imports.

Special priority will be given to rural electrification and water-supply schemes to irrigate scarcity areas through river pumping in Madras State under the second Five-year Plan. Fifty per cent. of the funds allotted for local development under this Plan will be earmarked for rural water-supply schemes. A plan is being formulated by the Minister for Public Works by which private electrical undertakings, which are not likely to be nationalised for some time, will be helped to participate in rural electrification schemes. The Government of India will give loan assistance to undertakings which have definite programmes.

A programme for the manufacture of a four-wheel drive vehicle of the jeep class in the country has been approved by the Government of India. The programme was submitted by Messrs. Mahindra and Mahindra Ltd., in collaboration with Willys Overland Corporation. The firm has, according to a Press Note issued by the Ministry of Commerce and Industry last week, undertaken to manufacture 69 per cent. by value of the components of the jeep within three years. In accordance with the general policy of the Government on the subject, the import of other four-wheel drive vehicles of the same class will not, as a rule, be permitted.

An Indo-U.S. agreement has been signed for providing adequate storage facilities for building up a foodgrains reserve. The total estimated cost of the project agreed to is $1,539,000 and Rs. 15 lakhs. The dollar part of the expenditure will be utilised for procurement of equipment and supplies and their transportation into India, while the rupee part of the expenditure will meet the costs of inland handling, transportation, land requisition, and installation of the equipment and supplies and for other local costs of the project. The project aims at providing for two silo-cum-elevators, each with a capacity of 10,000 tons. Prefabricated metal storage facilities with a capacity of 50,000 tons will also be provided.

Representatives of producers, manufacturers, brokers and exporters of lac met in Calcutta last week to consider a scheme for enforcing quality control on exports of lac and lac products on the basis of Agmark grades. The meeting considered the desirability or otherwise of adopting the scheme immediately on a compulsory basis. The possibility of introducing Agmark on an optional basis for the first two years was also discussed. The exporters seemed to apprehend that, without agreement on the part of overseas buyers to accept Agmark grades, the introduction of the scheme on a compulsory basis might affect the industry adversely. Mr. K. R. Damle, Additional Secretary, Union Ministry of Food and Agriculture, who presided over the meeting, however, assured the industry that its views would be given due consideration before a decision was taken by the Government of India.

The Government of India has decided to reduce the present selling price of Rs. 30 to Rs. 29-8 per maund f.o.r. destination station, in respect of both indigenous and imported sugar with effect from 16th June, 1954. The tenders received for the supply of sugar after 15th June, 1954, will be allotted sugar at the reduced rate. In case of imported sugar, the reduced price will apply to consignments arriving at the ports concerned after June, 1954. As hitherto, the selling prices, in case of British refined, Cuban refined, Formosan and Czech sugars, will be As. 8 per maund higher than for other qualities. In case of indigenous sugar, the price differentials will remain unchanged. The Government of India has also decided to reduce the rate of earnest money from Rs. 5 to Rs. 2-8 per maund for tenders made for supply of sugar after 15th June, 1954.

From Abroad

The Brussels Steel Convention has raised the price for steel exported to countries outside the European Coal and Steel Community by $1 to $2 per ton f.o.b. Antwerp.

Orders for about 200 jet and turbo-prop powered airliners have been placed with the U.K. manufacturers by British and foreign airlines; over 100 of these are for export. The value of the export orders is estimated at £32½ million, without spares.

The Argentine Central Bank proposes to implement several measures aimed at improving exchange transactions. The most important of these measures will be a reduction from 20 per cent. to 5 per cent. of the surcharge on the unused portions of exchange licences.

The Ways and Means Committee of the U.S. House of Representatives has approved a Bill extending by one year the President's authority to make trade agreements with other nations. The President had originally asked for a three-year extension, but later on agreed to one year, in view of the opposition from the Republicans.

The U.S. Secretary of Agriculture announced last week that the U.S. would not subsidise the export of American cotton in the new cotton year which would begin on 1st August. The U.S. had not, he said, placed an export subsidy on American cotton in the current crop year and would not do so in the next crop year.

Taxpayers in the U.K. contributed last year £14,907,330 towards the development and welfare of colonial territories, of which £1,250,000 was for research, states the 1953-54 report on British Colonies. In the eight years ended 31st March, 1954, the sum actually issued for approved schemes under the Colonial Development and Welfare Acts aggregated £84,899,649. In that period, a sum of £7,848,396 was spent on research.

Sudan's first Budget, since the grant of self-government by Britain to that country in February, 1953, presented to Parliament last week, anticipated a surplus of £500,000, with expenditure amounting to £32 million. The main feature of the tax proposal is that only those who earn at least £10,000 a year will have to pay income-tax. The taxes on income proposed are £10,000 to £20,000—30 per cent., £20,000 to £30,000—35 per cent., and over £30,000—40 per cent.

The demand for cars in Britain appears to be insatiable. Despite double-shift working and overtime, manufacturers are not able to keep up with the demand. Many makers now have waiting lists of customers nearly as long as in 1947, when the industry had not got back into its peace-time stride and a far higher proportion of output was on orders from the Government, for export only. In March this year alone, 39,639 new cars were registered, as against 17,346 in the corresponding month of last year. It is expected that the first six months of 1954 will see nearly as many new registrations as the whole of 1952.

A new company, "FINAREP," has been formed in Paris by a group of big French banks and the principal oil refining companies for stimulating the search for oil in Metropolitan France and the French Union. The initial capital of the Company is Frs. 100 million, but the promoters propose to raise it later to Frs. 2,000 million and eventually perhaps to Frs. 20,000 million, partly by issues to the public. "FINAREP" proposes to take interest in several companies exploring the soil of France.

PERSONAL

MR. J. R. D. Tata, Chairman, Air-India International Corporation, has returned from Rome after attending a meeting of the International Air Transport Association.

Mr. H. M. Patel, Secretary, Union Ministry of Agriculture, left for London last week-end to attend the International Wheat Conference now being held in London.

Dr. Clarence H. Kent, Professor of Mechanical Engineering at the City College of New York, has been appointed Technical Adviser to the Indian Institute of Science at Bangalore.

Mr. Ghanshyam Dass Moda has been elected President of the Delhi Stock Exchange Association, Ltd., for the current year. Mr. Bishan Swarup Poplai has been elected Vice-President and Mr. Bhagwan Dass Honorary General Secretary.

Mr. H. Siddaveerappa, Minister for Industries, Mysore State, has been re-elected Chairman of the Indian Coffee Board for its extended period of office ending 31st December, 1954. Mr. S. N. Ramanna has been re-elected Vice-Chairman.

Mr. R. D. Birla and Mr. G. D. Birla left for Europe on Monday this week on a holiday-cum-business tour. While Mr. R. D. Birla will confine his visit only to Europe, Mr. G. D. Birla will visit the U.S. also and return to India after a period of about four months via Japan.

Mr. H. C. MacColl, Manager of the Chartered Bank of India, Australia and China, Bombay, and Chairman of the Exchange Banks Association, left for the U.K. on Friday this week on retirement, after serving the Bank with great distinction for a period of nearly thirty-eight years, the major portion of which was spent in India. He is succeeded by Mr. G. Dodds, who was the Manager of the Bank's Kanpur branch hitherto.

"COMMERCE" 1929

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

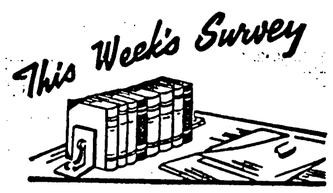
CALCUTTA, 22*nd June*

Banking Enquiry

The personnel of the Central Banking Enquiry Committee, published in our banking section this week, was announced a day too late for inclusion in last week's *Commerce*. However, we succeeded in giving the reader an intelligent anticipation of what was coming. The Committee, as constituted, comprises twenty-one gentlemen representing all classes of banking interests. It includes two representatives of Indian and European commercial interests, two Indian economists, a nominee of the Imperial Bank, two representatives of co-operative banks and one of the Exchange banks, a joint-stock banker and two indigenous bankers. There is also representation of the general interests of the public, particularly of agriculture from the side of those who require credit facilities; but no provision has been made for the representation of the legislature as such on the Central Committee. The Finance Member has, however, agreed to keep the leaders of political parties apprised, by means of informal conversations, of the progress of the enquiry. Thus, commercial opinion and political susceptibilities have both received due consideration in the composition of the Committee. To us, however, the Committee seems to be much too big for all practical purposes. The scheme of enquiry is cumbersome. As outlined in the Government of India's letter to provincial administrations, the plan of campaign is as elaborate as complicated. To start with, there were initial discussions with representatives of the legislature and of trade and industrial associations which resulted in a consensus of opinion indicating the broad lines on which the enquiry should proceed and its main objects. The first stage of the enquiry will be devoted to collection of evidence and an analysis of the main directions in which the provision of increased facilities will be most fruitful. This will be entrusted to provincial committees, the personnel of which has not yet been announced. The provincial committee will initiate, in a few selected areas, an intensive survey of local conditions. The Central Committee will also appoint sub-committees which will visit important industrial centres and gain firsthand knowledge of the needs and requirements of the large industries and trades that are not the monopoly of any one province. When these various committees have completed their labours, the Government of India propose to seek the aid of a small body of outside experts who will examine the evidence and suggestions accumulated during the first stage of the enquiry and advise the Central Committee in the preparation of the report. The scheme is certainly as elaborate and comprehensive as one could wish it to be, but how long it will take to lead to practical results, it is difficult at present to foretell.

The Government grants to such companies, under the 1953 Budget Law, subsidies which are equal to the capital provided by private interests.

A survey conducted by the Ministry of Health officials in the U.K. reveals that an average Englishman spends 36 hours a week just lounging about in a chair and a further 60 hours in bed. Work takes up 47 hours. The average time spent on strenuous sports even by young men, who had plenty of spare energy because they were on light work, was only about half an hour a week. Even games involving little muscular effort—billiards, for example—took up only an hour a week.



SEWING MACHINE INDUSTRY

THE Tariff Commission has commenced its enquiry into the claim for the continuance of protection and assistance to the sewing machine industry. The industry has asked for the extension of the period of protection for a minimum of at least three years. Some units have also asked for a complete ban on imports of sewing machines, on the ground that the entire domestic demand for the machines can be met by the industry. Alternatively, they have suggested the imposition of protective duty of 75 per cent. on imports of complete sewing machines and 100 per cent. on imports of parts of sewing machines. Besides, they have asked for continuance of full facilities for importing such raw materials as are not available in India. A suggestion has also been made for the grant of financial assistance to the units, whether producing complete sewing machines or parts of machines, which are unable to make further progress, owing to financial difficulties.

That the industry has made very satisfactory progress during the seven long years of protection is evident from the review of the performance of the industry made by Mr. M. D. Bhat, Chairman, Tariff Commission, while opening the public enquiry into the industry's claim for the continuance of protection on the 14th inst. at Bombay. There are at present two regular producers, namely, Jay Engineering Works Ltd., Calcutta, and K. C. Mullick and Sons Ltd., Calcutta, but recently a third unit by Lakshmi Narain & Co. of Jodhpur has been allowed to set up, in collaboration with a Japanese firm, a factory at Andheri, Bombay; this unit will devote its attention largely to the manufacture of industrial sewing machines. Two other units, namely, Lotus Industries, Calcutta, and Vijay Sewing Machine Company, Navsari, are also reported to have taken up the manufacture of sewing machines.

The capacity of the industry which was estimated at 8,000 sewing machines in 1946-47 has increased to 66,700 machines at present. Actual production also has made significant advance, in that it improved from 7,000 in 1946-47 to 64,139 machines in 1953. The percentage (in terms of value) of indigenously obtained raw materials used in the manufacture of sewing machines has increased; in the case of the Jay Engineering Works Ltd., it has risen from 57 in 1947 to 75 at present. The manufacture of industrial sewing machines has developed appreciably in recent years. The principal producer, namely, Jay Engineering Works Ltd., has set up an up-to-date research department. Besides the five units manufacturing complete sewing machines, there are also some units engaged in the assembly of sewing machines and in the manufacture of sewing machine parts.

The demand for sewing machines, on the basis of figures of indigenous production of sewing machines plus imports minus exports, (taking export figures as furnished by the Jay Engineering Works) works out to 68,759 in 1951, 61,370 in 1952 and 64,109 in 1953. The demand is expected to go up, according to the Development Wing of the Ministry of Commerce and Industry, to 124,000 sewing machines by 1956, comprising 80,000 domestic machines and 44,000 industrial machines. Other estimates of present demand vary from 70,000 to 155,000 machines and of demand in the near future from 120,000 to 200,000 machines. The estimates of demand for sewing machines include certain types of light industrial sewing machines, viz., machines similar to Singer 15 K.S.V. 80 and 15 K.S.V. 81, which can also be used as domestic machines.

The Commission has first to determine the basis of estimates and arrive at an agreed estimate of demand, both current and future. As there is not much gap between present production and installed capacity, the next question to be enquired into is whether any of the five units manufacturing sewing machines completely has any programme for the expansion of production. In this connection, the position in regard to the availability of raw materials for the industry from indigenous sources will have to be reviewed. Then, the Commission will have to determine whether protection and/or assistance is needed and, if so, the precise quantum of the protection needed. This involves a comparison of the fair ex-works price of the indigenous sewing machine with the c.i.f. price and landed cost of the imported sewing machine. The Commission should also enquire into the question of selling prices, as also the selling arrangements made by the indigenous manufacturers in respect of their products.

Another question to be decided is whether the distinction made, for the purpose of import control, between domestic and industrial sewing machines is working satisfactorily. It will be recalled that the Government accepted the recommendation made by the Tariff Board in 1949 that sewing machines with a landed cost of Rs. 300 or less should be treated as domestic machines, while machines with a landed cost of above Rs. 300 inclusive of the cost of cover should be regarded as industrial machines. Yet another question to be considered by the Commission relates to the quality of the indigenous sewing machines about which there are divergent opinions. It is stated that indigenous sewing machines get worn out easily and, therefore, require frequent replacement. Besides, it is alleged that there is no uniform standard of quality and that the interchangeability of intricate parts is not guaranteed. On behalf of the manufacturers, it is stated that there is still some consumers' prejudice towards the Indian sewing machines.

Despite these complaints, some of them probably exaggerated, it is true that the sewing machine industry has, during the last seven years, made striking progress, both quantitatively and qualitatively. It is also true that much still remains to be done to improve the quality of its products so as to bring it up to the highest international standards and to reduce the cost of its production. A sewing machine, as Mr. Bhat rightly observed, is an appliance of daily use; there is vast scope for developing the internal market by popularising its use in remote places in the countryside and by making it available at a cheap price. Expansion of production and reduction of prices will also enable the industry to build up large export markets. It would appear that there are indications that the tempo of world competition may increase. But the industry, as he observed, need not fear such competition, if it can develop "its own strength by eliminating all deficiencies and weaknesses which impair its competitive position."

MR. B. M. BIRLA ON UNEMPLOYMENT

The chief economic problem facing the country, according to Mr. B. M. Birla, the well-known industrialist and President of the Federation of Indian Chambers of Commerce and Industry, is one of increasing investment in industries so as to expand production and employment opportunities rapidly. Mr. Birla, who addressed a Press Conference in Bombay on Tuesday this week, reiterated the point made at an earlier Press Conference in New Delhi that India could itself undertake the manufacture of at least Rs. 300 crores out of the Rs. 400 crores worth of goods which it annually imported from abroad. If the wages of a worker were reckoned at Rs. 2,000 per annum, the production of goods worth Rs. 300 crores would provide employment for at least 15 lakhs people. He admitted that the problem was not easy, inasmuch as the production of Rs. 300 crores worth of goods would involve a capital expenditure of Rs. 1,500-2,000 crores. And investment in India is only of the order of five to seven per cent. of *per capita* income, as against 10 to 20 per cent. in other advanced countries.

The fundamental problem is, therefore, to stimulate savings and investment. Mr. Birla felt that the pace of increase in the standard of living envisaged under the Five-year Plan was too slow and that the standard should be doubled at least in ten years. In this connection, he pointed out that the war-time increase in prices, which inhibited savings, was now yielding place to a comparatively steady and even a declining trend in prices. This should be welcomed since it would make savings possible by certain sectors. But, at the same time, he warned that the decline in agricultural prices, in particular, should be halted at some reasonable level, if the purchasing power of the agriculturists, who form the largest section of India's consumers, were to be maintained intact. Besides the general problem of stimulating savings, there were other problems, such as high taxes, unsatisfactory labour situation and transport bottlenecks. High tax levels prevented corporate and individual investment. As regards labour, he affirmed that wages should be high, but there should be freedom for the manufacturer to use the "devil," the machine. He cited the instance of the American car, which was both cheap and efficient, despite the fact that it had been turned out by the world's costliest labour force. He deplored that transport bottlenecks should remain even though nine years have elapsed since the termination of the war. During this period, other countries, which had suffered worse damage than India, had already brought their transport system to a high pitch of efficiency. Without going into the details of the problem, he felt that something was obviously wrong somewhere in the sphere of transport.

The need for freedom from vexatious controls was also emphasised by Mr. Birla. He gave several convincing instances to substantiate his contention that a free economy was more conducive to a vigorous growth than a controlled economy. He pointed out how the removal of controls on cotton textiles and foodgrains had led to higher production, improvement in quality and fall in prices. When there was competition between business men, the urge to satisfy the consumer in all respects would be strong among them, and it was this urge that made an economy to move forward. If there were controls, the business man would produce only what the Government wanted him to make and would have little incentive to please the consumer. This tendency would, in course of time, lead to a stagnant economy.

As there were nearly six crores people engaged in business and as about four crores people were dependent upon them, Mr. Birla thought that business men formed a very important section of the community. Collectively, they constituted the largest sector next to agriculture. They were both employers and self-employed people. On their prosperity depended the prosperity of the country. The Government employed only about 30 lakhs men. It was, therefore, obvious that the problem of unemployment could be solved more speedily only by expanding the sphere of non-Governmental employment. In this connection, he rightly warned that nationalisation would create no fresh wealth nor any new employment opportunities. But, at the same time, Mr. Birla took care to add that the demand for State ownership could be stalled only if private enterprise was vigorous and alive to its responsibility of creating employment opportunities. Indian capital, which controlled only a little over 50 per cent. of India's industries, had been pulling its weight. Even so, he thought that Bombay's industrialists, despite a few notable exceptions, had not yet given the lead which might be expected of them. He hoped that they would give such a lead. If there was not enough capital in India, he felt that there was nothing wrong in borrowing foreign capital in the same way as the U.S. had done in the early years of its industrial history.

This analysis makes stimulating reading, not only because the logic of the analysis is beyond reproach but there is urgent need for India's industrialists to place their point of view steadily before the public gaze in order to refute the much-unfounded criticism of India's industrial leaders. Public resentment at the low living standards and at the growing rate of unemployment is only natural. But the average citizen should be helped to realise that the solution lies as much in his, and in the Government's hands as in the hands of industrialists.

LABOUR RELATIONS IN TRAVANCORE PLANTATIONS

Plantation problems of South India, in general, and of Travancore, in particular, were discussed at some length by Mr. W. S. S. Mackay, Chairman of the Kanan Devan Planters' Association, in his address before the sixty-ninth annual general meeting of the Association held recently at Munnar. Referring to labour problems, Mr. Mackay said that the apparently weak approach of the various Government organisations and officers, who dealt directly or indirectly with labour, was a matter which caused annoyance and worry and was at times very difficult to understand. In fact, he said, so much was this the case that the uninitiated in labour matters might, after a time, be excused if they reeled from the conciliation table, murmuring the words of the great Greek philosopher Aristotle: "Liberty kindleth love: love refuseth no labour: and labour obtaineth whatever it seeketh." To the observer, labour appeared to have had things very much its own way in recent times. In Travancore last year, a major interest had become involved in a strike upon the bonus issue and, while this was compromised pending examination by a Tribunal Court, there was a severe setback in labour relations. The bonus issue was one which had been the major cause of disputes throughout India, and would continue to be a festering sore until suitable legislation was effected. In this connection, Mr. Mackay referred to a statement made by the Minister for Commerce and Industry to the effect that the "sooner the frills in the present wage structures were cut out the better, and an inclusive wage arrived at which will satisfy the present needs of the plantation worker." If this was done, much of the unrest to which planters had become accustomed may disappear and in return more efficient production and improved quality in their products would result.

In recent times, the disturbance-creating policies of labour leaders had been reduced, but managements and union officials also had been at times exasperated by the ill-conceived behaviour of youths within the movement which had at times been quite irresponsible and uncontrollable. Speaking generally, however, planters in Travancore had been fortunate, in that there existed some clear thinking and reasonable labour leadership. This fact had made them try all the more earnestly to understand the difficulties of labour leaders and to co-operate with them. It was, therefore, a matter for great disappointment that party politics were again creeping into union affairs, that there had been a split in the trade union ranks, and that disruption, non-co-operation, and the deliberate sabotage of peaceful dealings were being repeated. "We do not profess to understand people who would use the trade union movement to sabotage productive efficiency and embarrass the powers of Government and the employers for their own ends," said Mr. Mackay. "There is something criminally irresponsible about this attitude which can no longer be attributed to the birth-pangs of a new ideology or lack of education. We can only hope that the influence of the more enlightened elements to whom I have referred will have a breaking effect and that, in the year which lies before us, our differences may again be settled amicably."

Mr. Mackay went on to say that they were prepared to admit that, in passing from the old patriarchal system, new ways towards help and encouragement have to be found, in order to keep labour contented and working well. It was easy enough to give advice and say that patience and forbearing was never more important than it was today but the implementation of such advice was a very different matter. They had to bear in mind that this democratic experiment which was taken up and largely perfected by the British had become a Commonwealth ideology and that they must make it work in the face of all obstacles and in accordance with the rules laid down.

I.L.O. AND COMMUNIST COUNTRIES

The International Labour Organisation voted, on the 10th inst., that employer delegates from the seven Communist countries, namely, the Soviet Union, the Ukraine, Byelo-Russia, Poland, Bulgaria, Hungary and Czechoslovakia be given seats on its committees as deputy members without voting rights. This decision is, however, subject to the approval of the three-man Credential Committee, which has before it the objections of the non-Communist employer delegates against the admission of Communist employer delegates. Earlier a Soviet amendment that Communist employer delegates should be given the status of full committee membership was voted down.

The status of Communist employer delegates has threatened the future of the I.L.O. In fact, for the first time since the I.L.O. was established in 1919, a "great crisis" has developed; it is faced, as Sir Richard Snedden, the British employer delegate, said, with "disruption, disintegration or at least slow paralysis." Mr. William McGrath, the Chief U.S. employer delegate, has threatened to recommend to his Government to refuse to send another employer delegation to the I.L.O., unless steps were taken to stop the Communists from interfering with the Organisation's present structure. According to him, "Russia is trying to re-enter the I.L.O. to disrupt it and use it as a springboard for Communist propaganda." In this connection, it is interesting to note what the Russian delegate had to say about the industrial conditions in his country. Mr. Nikolao Krestov, Russian employer delegate, said that the Soviet heavy industrial production was now three times higher than in 1940. Mechanical industry's production was four times higher and wages had risen by 119 per cent. Mr. Krestov, who is the head of the Moscow Dynamo Electrical Works, disclosed that the head of a Soviet undertaking was personally and directly responsible to the State. He made an annual collective agreement with the trade unions covering wages, training, safety, health, housing and living, conditions. He added: "We are also deeply concerned with the cultural levels of our employees."

The opposition of the employers' delegates from the democratic countries to the presence of the Communists employer delegates in the I.L.O. is understandable. For, as aptly pointed out by Sir Richard Snedden, employer and worker delegates from the Soviet bloc countries are indistinguishable from Government delegates and both take orders from their Governments. He said: "It is true that there has been much talk of co-operation but co-operation can never be a synonym for sabotage." Thus, the very tripartite structure of the I.L.O. has received "a staggering blow." It may be that the Credential Committee may approve of the deputy membership of the Communist delegates without voting rights thus meeting the objections of non-Communist delegates to some extent. But it may not stop at that. Once the Communist delegates are granted the status of deputy membership, it is bound to be followed by a clamour for full membership, thereby setting in motion an unnecessary and dangerous controversy. This will retard the progress of the I.L.O., unless the delegates from the Soviet bloc countries learn to realise that the approach of the democratic countries to labour questions is fundamentally different from that of the totalitarian countries. But it is really too much to hope that the Soviet delegates will recognise, much less appreciate, this difference. If the I.L.O. is to be saved, it must continue to be as it has been all along, that is, without the Communist countries.

OFF THE RECORD

(By "ROVER")

MR. B. M. Birla has a vigorous mind, activated further by imagination and ambition. At the same time, being conditioned by wide business experience, it has its roots deep down in realism. There could be no better combination than that of a spirited and powerful steed handled by a skilful and venturesome rider, who is not averse to take calculated risks. Mr. Birla's address to the Press Conference last Tuesday at the Indian Merchants' Chamber in Bombay gives proof of this rare combination of qualities. We have many amongst the community who are timid and some who are rash and indiscreet. But those of the common run are neither. It is reassuring to know that, at a time like this, when the business community is not unnaturally beset by doubts and hesitancy and the country's economic future is on the anvil, leadership for the time being resides in one who, in his make-up, resembles tempered steel, combining strength, sharpness and elasticity.

We are all obsessed by the mounting volume of unemployment. Many in authority are even overwhelmed by it, so much so that, in their desperation, they are even prepared to reverse the order of evolution and to go back a few centuries, solely in order to provide work for millions of idle hands. There is possibly some reason for the present mood of distrust of science and technology, but giving way to despair and recourse to rank reaction will not take us out of the trough into which we have been pushed, not by scientific research but by a set of wrong policies. If Big Business has been in too much of a hurry to build individual fortunes instead of well-established industries, the politicians, too, have been reprehensibly hasty in securing welfare by coercive legislation.

Let the advocates of primitive methods of production build up a true picture of the quality and contents of the kind of life, which millions would be forced to live, if they had their way. We do not have to fall back on historical research for this grim picture. There are large parts of Central Africa and some regions in Asia to give us an idea of the shabby and miserable standard of life a whole nation would have to accept under such conditions. But it is these very people who are the loudest in their demand for raising and improving the standard of life of the common man. The contradiction involved in the call, on the one hand, of back to nature and down with the machine, and, on the other, for an all-round higher standard of life, which translated into material things means more and better food, more and better clothes, better houses, better and more schools, clinics and hospitals, more books, more roads and more leisure, is so obvious and patent that I get exasperated when I hear it coming from the same set of people.

As Mr. Birla said, there can be no short cut for finding more employment and raising the general standard of life. We have to build up more industries to enlarge the scope for employment. In fact, he is even more impatient than the Prime Minister and the Planning Commission and wants the pace of improvement in the standard of living doubled during the next ten years. His lively imagination and the still more lively spirit of adventure which resides in him have encouraged him to dream of an additional investment of Rs. 1,500 crores to Rs. 2,000 crores in the private sector within a few short years. He wants this obviously not for enhancing managing agents' commissions, but for providing employment initially to about a million and a half of the unemployed.

There is nothing small or stinted about Mr. Birla's ideas or his figures. He is obviously one of those artists used to draw in bold, sweeping lines, on a large canvas and not of those who labour hard on dainty miniatures. His mind runs ahead with ideas of what employment and regularly incoming wages for these fifteen lakhs of persons would mean to industrial production. These workers, with money in their pockets, and their dependents would set up an additional demand for more goods, thus opening up an unending vista of new industries creating employment for additional millions.

What Mr. Birla seems to want is that the present vicious circle of unemployment, reducing demand for goods and throwing more men out of work, should be broken by a bold effort to increase production. This was the line along which the minds of the late President Roosevelt and Henry Ford worked. At the same time, his keen wits have seized on the fact that our country annually imports about four hundred crores worth of goods. It is not as if we have to create a market for additional production in the country. Mr. Birla has also worked out that nearly three hundred crores worth of imported goods could be produced within the country. He said that both the Government and the Planning Commission were now seized of this problem and he appeared to be confident that they realised the importance of this line of reasoning, which means that we might see it reflected in some measure in the second Five-year Plan.

But Mr. Birla, with the ingrained realism of a practical man of affairs, realises that the Government by itself cannot tackle this problem. It is for the people and the industrialists to take up their share of the responsibility for providing increased scope for employment. He does not minimise the difficulty of securing two thousand crores for investment, at a time when many of the sources of saving have dried up. This is so because of the series of misfortunes which have overtaken the large middle class, which was till now profitably engaged in a comparatively small way in one line of business or another. Mr. Birla, however, pointed out that Bombay owned the largest capital market in the country and that, during recent months, it had shown some hopeful signs of revival, after a long period of stalemate. He was not wrong in judging the present signs as propitious, in view of several attempts in Western India to branch out along new lines. He, therefore, appealed to business men and industrialists in Western India, in general, and Bombay, in particular, to regain their lead by venturing forth to expand industrial production to replace some of the exports from abroad.

While it would be easier to produce consumer goods, Mr. Birla was not unmindful of the fact that rapid industrialisation would not be possible without paying due heed to the need for starting and developing capital goods industries. I have little doubt that Bombay, the country's financial and industrial hub, as Mr. Birla called it, would give a good response to this fervent appeal from the President of the Federation of Indian Chambers of Commerce and Industry.

U.S. Speaking With Two Voices

Not being gifted with subtlety of any sort and not having even a nodding acquaintance with diplomacy, I was somewhat bewildered last week by two distinct voices claiming to speak officially at the same time for the U.S.A. What drove this confusion deeper into my mind was the curious coincidence, which made the American Ambassador, Mr. George V. Allen address the Rotary Club at Calcutta, just when Mr. W. T. Turner, the Consul-General for the U.S.A. in Bombay, was talking to the Rotarians in this city, more or less on the same subject. Mr. Allen, newly returned from his mission home, to secure as generous an economic aid for this country as possible, was trying to emphasise the fact that America should continue to help India with financial aid in her own national interest, and gave it as his opinion that it would be a tragedy if, after volunteering to give military assistance to Pakistan, the U.S. should hesitate to give economic aid to India or even if she so much as reduced the extent of this aid to India and other countries.

In stark and unrelieved contrast to this, Mr. Turner, himself a Rotarian, did not mince matters in his efforts to convince the authorities in this country, through the business community in Bombay to whom he was speaking, that "American capital must hereafter be obtained mainly from private sources, not from Governmental grants and aid." At the same time, he was also at great pains to make it clear that American capital was not likely to flow into this country, as the U.S.A. had no basic commercial treaty with India, which could offer assurance or guarantee of rights to the investors. He went further and reminded his audience that "trade and not aid" was the basic policy in Washington and that President Eisenhower had, in his recent message to the U.S. Congress, underscored the fact that as soon as possible financial aid to underdeveloped countries should be replaced by private investments.

Many in India have reconciled themselves to the fact that American disapproval of this country's foreign policy might at any time put an end to whatever aid it is getting for economic reconstruction, though it would not be true to say that people in this country are indifferent to it. It is, however, somewhat surprising that there should be such a glaring difference not only in contents, but in the tone and emphasis of two representatives of the U.S. Government in India, in utterances dealing with matters of high policy. Or does this reflect the basic differences in the attitude of one section of the American people with another equally important section to this country?—*All Rights Reserved.*

CONTRIBUTION BY SMALL IRRIGATION PROJECTS IMPRESSIVE

SMALL INDUSTRIES—FOOD PRODUCTION

(From A Special Correspondent)

NEW DELHI, 15th *June*

IT is now being realised slowly but steadily by Government that small- and medium-scale irrigation projects are productive of greater results in the near future than big paper schemes or the large-scale multipurpose projects costing crores of rupees. Small schemes generate the enthusiasm of the local people; it can be framed to cover a wider field, making the people conscious that Government has been trying its best to improve their economic conditions through many beneficial schemes. Small- and medium-scale irrigation projects in the Punjab, for instance, have already begun to yield more than what was anticipated of them originally when the schemes were drawn up. While both the Bhakra-Nangal and Harike projects are estimated to cost as much as Rs. 165 crores, small irrigation schemes are expected to cost only about Rs. 3.26 crores during the first Five-year Plan. Many of the latter projects have been undertaken in pursuance of the grow-more-food campaign and they number about 24. While Bhakra-Nangal is expected to bring in an area of 3.6 million acres under its irrigation system ultimately, the small irrigation projects are estimated to have already brought in a few lakh acres under irrigation during the last few years. It is expected that, at the end of the first Plan period, the total area under irrigation under this head will exceed one million acres.

DELHI LETTER

Prominent among these schemes which have begun to show substantial results are: the Shah Nahar Canal, the Jagadhri tube-well scheme, new Kasur distributary scheme, Radaur and Munak schemes, the repairing and remodelling of Kuhls (mountain torrents) for purposes of irrigation, the Dera Baba Nanak schemes, the extension of the upper Bari Doab Canal, Ferozepore District channels, drainage works schemes, etc. Drainage works are considered very essential in these areas in order to reduce waterlogging, particularly in areas where rice and cotton are being grown. The construction of storm-water and seepage drains in Ludhiana and Ferozepore Districts are scheduled to be completed far in advance of the Bhakra Dam. For the forthcoming *kharif* season, more land will be brought under irrigation, not only as a result of the extension of the abovementioned small irrigation schemes, but also on account of the recent inauguration of the Bhakra main line at Rupar, 24 miles from the State Capital. The area under cotton during the forthcoming season is also expected to increase, in view of the provision of the improved facilities of irrigation. Some new strains of cotton are reported to have been evolved, which are considered superior to 216F from the point of view of the staple length, ginning percentage and outturn per acre.

The Planning Commission has already taken note of this aspect of development and has begun to look favourably on small irrigation schemes which could become productive within a couple of years. During the second Five-year Plan, Government will advise the State Governments that, in their planning of community projects and national extension service schemes, they should give considerable priority to the execution of small- and medium-sized irrigation schemes. Apart from increasing the food production in the country, the implementation of these schemes will have a considerable disinflationary effect.

What is true of the small irrigation schemes is also true of the development of small industries. The Ministry of Commerce and Industry has now begun to feel a certain amount of urgency, especially after the submission of the report by the International Ford Foundation Team on this problem. It has already decided to establish forthwith four technological institutes for conducting research and providing assistance and training in small industries. These institutes will act as service agencies to impart simply and quickly to the small industrialist, for his immediate use, modern advance in science and technology, in business management, finance and marketing. They will initiate and carry on investigation and surveys of existing methods as well as conduct experimental and applied research for promoting development of small industries. The Government is already on the lookout for the personnel to man these institutions. It is likely that a few international experts will be approached for taking up the responsibility of planning and initially working these institutes. It may be mentioned, in this connection, that the Education Ministry of the Central Government is now planning to open 500 multipurpose schools in the country at a cost of Rs. 250 crores. Each district will have one such school. These schools, by imparting education as well as vocational training, will, it is expected, help solve the unemployment problem.

The Government of India has also been very favourably impressed by the other recommendations of the International Ford Foundation Team. It will be gradually implementing them, particularly the establishment of a national school of design, a customers service organisation, export development offices (one in North America and another in Europe), a small industries corporation, a plant for production and training, small plants for demonstration and an autonomous marketing service corporation. In this connection, it may be noted that the All-India Handicrafts Board has already planned to implement a scheme for the orderly marketing of its products in foreign countries. It has suggested an expert organisation for the handling of the handicraft business. In order to improve the quality and production methods of its products, the Board has planned to send a team of experts to Japan and other countries. It is anxious to push up sales of the products of cottage industries in North American markets, particularly in the U.S.A. and Canada. For this purpose, it is desirous of rectifying many of the serious defects which have become the main deterrents to larger exports, such as lack of standardisation, the inability to adhere to delivery schedule, as also to adapt themselves in the matter of new designs, etc. Now that the Commerce and Industry Ministry will be implementing the report of the Ford Foundation Team, it will have to review the whole position from this angle and try to integrate the entire development of cottage and small-scale industries on the various lines suggested by the Team. Even the expansion of the handloom industry may be made a part of the whole scheme. In a country like India with a huge population and insufficient work, a rational and speedy development of cottage and small industries will be productive of considerable results, besides enhancing the national income of the people to an appreciable extent. In view of the above, Government will be making a determined effort in stabilising this industry.

According to the annual world economic report of the United Nations, national production in India during 1953 rose by about 5 per cent. as compared with the preceding year. This increase was possible because of more than 10 per cent. increase in India's grain crop last year. Total agricultural production, however, rose less than the increase in grain output. The report further points out that "large increase in industrial production in 1952 was accompanied by only very small increase in national production, while in 1953 the reverse relationship obtained. These movements reflect predominance of agriculture in Indian economy and its consequent sensitivity in fluctuations in crop output."

Preliminary estimates of food production for 1953-54 show an impressive rise of about 7.7 million tons to 55.3 million tons. What is noteworthy in this increase is the sharp rise in the production of rice, the outturn of which has moved up from 23.42 million tons in 1952-53 to about 27.1 million tons in 1953-54. In 1951-52, rice production stood at 20.74 million tons. Production of wheat has also been going up steadily from 6.04 million tons in 1951-52 to 6.76 million tons in 1952-53 and to 7.3 million tons in 1953-54. The output of other cereals such as barley, *jowar*, *bajra*, *ragi* and other millets is estimated at 20.9 million tons in 1953-54, as against 17.40 million tons in 1952-53 and 15.66 million tons in 1951-52. Total cereals production in 1951-52 and 1952-53 amounted to 42.44 and 47.58 million tons, respectively. If the output of agricultural production, particularly in foodgrains, is maintained at the latest level during the forthcoming year, the stock position of foodgrains will show a substantial improvement at the end of next year, acting as a deterrent to any upward movement in prices of commodities that may be caused by the present deficit financing by Government.

U.S. PRIVATE CAPITAL

PROMOTION OF INVESTMENT ABROAD

THE U.S. Government, in recent years has pursued many measures designed to encourage U.S. citizens and business concerns to invest abroad. As it became increasingly evident that it was mutually desirable that U.S. foreign economic aid should be reduced, the Government has exerted more effort to stimulate U.S. private investment overseas. One of the ways in which the Government has pursued this objective has been to give wide circulation to information on foreign investment opportunities. The Department of Commerce, through its *Foreign Commerce Weekly* and its field offices, has disseminated such information to chambers of commerce, trade associations, and individual concerns. The Foreign Operations Administration has also arranged for the exchange of information between foreign and American business concerns on investment and trade opportunities.

Recently the Department of Commerce published an analysis of factors affecting investment in some 26 countries. It is now publishing studies on investment conditions and outlook in selected countries. Such studies have been published to date on India, Venezuela and Colombia.

The United States is actively pursuing a programme of negotiating treaties which have as one of their objectives the assurance of conditions favourable to the investment of private foreign capital. At present, there are in effect 32 comprehensive treaties dealing with general economic relations between the United States and other individual countries. The State Department has stated that it is prepared to discuss at any time the conclusion of such a treaty with the representatives of other countries desiring to facilitate foreign investment.

The U.S. Government, since 1948, has had in operation a programme under which it is prepared to offer guarantees to private investors against certain of the non-business risks affecting investment abroad. Limited at first to European countries, the programme has since been expanded and is now available to any country which concludes the necessary bilateral agreement with the United States. Under this programme guarantees may be issued against the risk of inability to convert local currency earnings into dollars and the risk of loss from expropriation or nationalisation. Outside of Europe the only countries which have availed themselves of this programme are Israel, Nationalist China, the Philippines, Haiti, and Japan.

According to the Department of State, discussions of the guarantee programme have, however, taken place with a number of other countries and additional bilateral agreements are expected. Officials say that the United States is prepared to discuss the application of the programme with any country which sincerely desires to encourage the entry and operation of American private enterprises. These officials point out that President Eisenhower recently recommended to Congress that this guarantee programme be further expanded to cover risks of war, revolution and insurrection.

The President also has recommended a number of important changes in the U.S. tax laws relating to the taxation of income from foreign sources. These proposed changes, which are designed to increase the flow of U.S. private capital abroad, are now being considered by Congress.

Department of State officials say that the United States is prepared to take further steps, bilaterally, to increase private investment overseas through the alleviation of double taxation.

As of today, the United States is a party with foreign countries to 15 treaties relating to income-taxes, 10 treaties relating to estate taxes and death duties, and one treaty relating to the taxation of gifts. Income and estate tax treaties with three other countries are now in the closing stages of negotiation.

PAKISTAN NOTES

COTTON TALKS WITH U.K.

NEW TRADE PACT WITH JAPAN LIKELY

PROBLEMS relating to the promotion of cotton exports from Pakistan to the U.K. are now being discussed at Manchester by the Pakistan cotton delegation with U.K. cotton interests. The visit of this delegation has been sponsored by the Lancashire-Pakistan Cotton Committee which, it will be recalled, was formed in the U.K. some time last year to further the trade relations between the two countries. The delegation is led by Mr. M. Karamatullah, Secretary, Ministry of Commerce, Government of Pakistan.

Welcoming the Pakistan delegation, Sir Raymond Streat, Chairman of the U.K. Cotton Board, expressed the hope that the negotiations would result in enlarged trade between Lancashire and Pakistan. Lancashire, Sir Raymond said, needed every type of cotton and Pakistan could grow large quantities which should be as good as any other. Proceeding, he observed: "Pakistan is a great consuming market for cotton textiles and is building up an industry of her own. However, Britain thinks she will still need to import some supplies, because her total needs were so great and because some qualities are not within the technical range of her own mills."

In the course of his address, Sir Raymond made it clear that Lancashire did not favour barter deals as a favourable solution of the long-term difficulties of international trade. To quote his words: "We think barter deals are rigid and inflexible and involve all sorts of controls and restraints inimical to the growth of healthy trade. We are aware that the circumstances of 1953 impelled Pakistan to engage in barter negotiations and that a barter agreement embracing cotton goods is in force between Pakistan and Japan."

Trade Pact with Japan

A Press report from Karachi avers that negotiations for a new Pakistan-Japan trade agreement will again be held shortly between the representatives of the two countries. The trade between Pakistan and Japan is at present governed by the agreement which expired at the end of March but was extended till the end of this month. In the course of the talks now proposed, it is expected that the issue relating to the exchange of Pakistani rice for Japanese textiles will be reconsidered. The recent negotiations on this issue, it may be noted here, broke off, since Japan considered the price of Pakistani rice as high. Another aspect that will be reconsidered relates to Pakistan's complaint that Japan has failed to purchase the quantity of cotton stipulated in the agreement.

Export Drive

Pakistan has decided to encourage exports by allowing 30 per cent. of foreign exchange earned to be utilised for the import of selected items. The export items against which this facility will be granted include primary commodities as well as certain articles manufactured in Pakistan. This will also help Pakistan to increase its slender foreign exchange reserves. The items for import are second-hand clothing, cement, household, electrical fittings, mustard oil and seeds, coconut oil and copra, photographic films, plates and paper, onions, spices, art silk fabrics, cotton piecegoods, fents, karakuli cloth, bidi leaves, cycles, cycle parts and accessories, scooters and motor rickshaws, sanitary fittings, construction materials, hardware, coir fibre and yarn, washing soap flakes, optical lenses and frames, jeeps and trucks. Suggestions from business men for the addition of other items to this list will be considered.

The scheme is introduced for the period ending 31st March, 1955.

* * * *

The economic position of Pakistan is now worse than before. This is the impression which an Indian University student gathered during his recent visit to Lahore. Writing about the impressions of his tour in the *Hindustan Times*, the student observes: "Though there are numerous Buicks and Cadillacs to be noticed on the Mall, the poorer sections are in a bad plight. Incomes are lower and prices higher than perhaps in Delhi. Fruit, paper and cloth especially are very costly. The price of a banana is As. 4 and of an exercise book of 64 pages Re. 1. The inflationary condition becomes apparent from the fact that, whereas the official rate of exchange is 100 Pakistani rupees=144 Indian rupees, the unofficial rate is 100 Pakistani rupees =85 Indian rupees."

BRIGHT FUTURE FOR INDIAN INSURANCE

MR. LAXMIDAS GOCULDAS'S ADDRESS

A BRIGHT future for the Indian insurance business which would be called upon to play a significant role in the economic development of the country was visualised by Mr. Laxmidas P. Goculdas, presiding over the Twenty-sixth Annual General Meeting of the Indian Insurance Companies' Association, Bombay, on Wednesday. He maintained that it had been always the primary concern of Indian insurers to offer their services at an economic cost and that the 35 per cent. decline in the average fire rates since the entry of Indian companies was a proof of their earnestness. The industry had reached its present stage of progress through its own efforts without any support from the Government and he hoped that this important arm of the national economy would receive direct encouragement in future.

"The overall picture of the working of Indian general insurance is," said Mr. Goculdas, "that the premium income is shrinking. The era of war and post-war expansion of premiums has definitely ended and the market has got to get accustomed to a lower level of income. By itself, it is not a bad feature, because it would represent more stabilised trading. From the point of claims experience the year 1953 has been good, but since the beginning of the current year there have been far too many fire losses. These losses are a form of national wastage, considerable part of which can be avoided. The need for spreading the fire brigade facilities is, therefore, urgent.

"With the progressive implementation of the various schemes under the Five-year Plan, our companies will be called upon to play a significant role in the country's economy. I take this opportunity to commend the suggestion made to the Government from several quarters to modify the Insurance Act in order that insurance companies may be able to invest, having due regard to considerations of security and their obligations to policyholders, their controlled funds in new undertakings of national importance. The recommendations of the Shroff Committee should also prove very helpful in this connection.

Need for More Reserves

"It is, however, necessary that the companies should have adequate reserves so that they can perform their obligations satisfactorily in the coming years. The problems of underwriting capacity and reserve building are so interlinked that the strength of reserves is of paramount importance for the companies' progress not only in the home market but also in the foreign market. It is, therefore, very essential that Indian companies should be enabled to attain a stronger financial position by affording them reasonable facilities to build up ample reserves. The only reserves now permitted by the tax authorities as an expenditure are 'reserves for unexpired risks.' These do not take into account the peculiar conditions attending the general insurance business in this country. The liabilities are highly concentrated and do not provide any large spread of risks territorially and by class. In the circumstances, it is very desirable that Indian insurance companies should be allowed to build up by stages 'additional reserves,' free of taxation, by permitting at least a 5 per cent. additional increase in the reserves. I earnestly hope that our request would be sympathetically considered by the Taxation Enquiry Commission and companies would be allowed at an early date to create 'reserves for unexpired risks' and 'additional reserves' to the total extent of 100 per cent. of their premium income of the year in respect of fire and miscellaneous insurance, 150 per cent. in respect of marine cargo business and 200 per cent. in respect of marine and aviation hull business.

Cost of Service

"Recently the Tariff Committee has been directed by the Controller of Insurance to consider the feasibility of downward revision of rates in general insurance business. The tariff rates in this country are not at all high. The rates for the bulk of the cargo marine insurance are dictated by international factors and the complaint all over the world is that cargo rates have reached an uneconomic level. The rates for motor insurance which constitute by far the largest source of premium income to most insurers in India had to be slightly enhanced last year and even so they stand at a much lower level than elsewhere in the world. Our fire rating system closely follows the pattern and the level of the tariffs in the general foreign field. Recent claims experience in this country reveals how the process of reduction has been carried a bit too far. The large latent potentiality of the business is of little assistance to insurers so long as the business is not received by the offices.

"It has always been the primary concern of Indian insurers to offer their services at an economic cost. Since the entry of Indian companies in the field the fire rates have, on an average, gone down by over 35 per cent. This process will continue, but a reduction of rates cannot be made to order. The basis of rates in general business is entirely different from that in life assurance. It is, therefore, improper to look upon the two as alike. There has hardly been any case of profiteering by insurers throughout the past 15 years. Insurance rates have gone down when the price of almost every other commodity or service has increased substantially and the administrative expenses, that had gone up during the inflationary period, still continue to rise against the background of a stationary or a lower premium income. I earnestly hope that the Tariff Committee will stick to its duty of maintaining just and fair rates and not yield to pressure from sources not conversant with the mechanics of our rating system.

"The proposal requiring companies to make payments, on behalf of their foreign treaty reinsurers, of income-tax on profits earned by them by treating the local companies as statutory agents of their reinsurers constitutes a departure from established reinsurance practice. If carried through, it would put the clock of progress back in general insurance. We have explained to the Government the difficulty inherent in devising a fool-proof formula, but have indicated to them certain tests which would be helpful in determining the *bona fide* character of a reinsurance arrangement. Reinsurance is an indispensable adjunct to direct operations and any move that affects reinsurance will recoil on the progress of general insurance. I earnestly hope that the Central Board of Revenue will issue appropriate instructions to the income-tax officers without further delay.

State to Compete

"That brings me to the growing tendency on the part of the Central and certain State Governments to encroach upon the sphere efficiently served by private enterprise. The proposal of the Central Government provides for the extension of insurance facilities through the postal insurance fund beyond the present restricted scope. The proposal of the Mysore State Government seeks to enlarge the scope of its general insurance scheme, now confined to motor insurance, to include new lines of business. Insurance interests in the country look upon these incursions with disfavour. The achievements of Indian insurance are quite remarkable considering its young age and difficulties. Schemes such as are in vogue deprive the indigeneous market of a slice of business which is quite important for its reciprocity value. The proposals would bring Government into direct active competition with private insurance companies, a course which should be avoided.

Setback to "Swadeshi"

"The cause of *swadeshi* seems to have suffered a setback during recent years. Some of the quasi-Government undertakings and public bodies still continue to place their banking and insurance business with non-Indian companies. Government should, therefore, make necessary provision to ensure that this business under the control of semi-Government bodies is placed with Indian undertakings. Financially and numerically Indian companies have now reached a stage when they can absorb all available business in the country by offering a standard of service comparable to any from other sources and there is no reason why preference should be shown to any non-Indian company.

"The basic weakness of Indian insurance is excessive cost arising from unhealthy competition amongst insurance companies *inter se*. If we fail to put our house in order, we will be inviting further restrictions amounting, perhaps, to vexatious and detailed interference in the day-to-day working of our companies. One cannot deprecate too strongly the scramble for business arising from a greed for premium income. I, however, trust that our companies would take a long-range view and conduct their affairs on sound and healthy lines, so that Indian insurance can attain a position of eminence and play its destined role at home as well as abroad."

SUPERVISION OF BANKING IN 1953

BANKS URGED TO EXTEND MORE SUPPORT TO TREASURY BILLS

THE supervision and control of banking in India by the Reserve Bank of India during the past three or four years has undoubtedly gone a long way towards remedying the defects in the working of our banking system and in strengthening the banking structure as a whole. The activities of the Reserve Bank in 1953 also were directed towards this end. More banks were inspected and the year saw the first round of inspection of all Scheduled banks coming to an end. The Reserve Bank's conclusion is that the banking system has sought to discharge its responsibilities under the Five-year Plan "in a fair measure." Its remarks in this context bear reproduction. It observes:

"The role of the banking system, in the context of its responsibilities in the Five-year Plan, has to be related not merely to measures designed to increasing its resources but to a more effective use of them. There is reason to believe that working capital requirements of organised industry are being met at present in a fair measure."

The Reserve Bank, however, does not seem to be quite satisfied with the investment policy of banks in so far as it relates to Treasury Bills. Investments of Scheduled banks in Government obligations mostly consist of short-dated and medium-dated loans. Although this is considered to be satisfactory, the component of Treasury Bills, in the Bank's view, is still negligible. "Next to cash and balances with banks, Treasury Bills rank as a highly liquid asset which also yields an adequate return and can be converted into cash almost instantaneously. For this they occupy an important place in the investment portfolio of commercial banks in the West. The liberal discount facilities given by the Reserve Bank and their current yield entitle them to more liberal support from the leading banks." The Bank is constrained to make these remarks, because, out of a total investment of Rs. 337.75 crores invested in Government securities by Scheduled banks in 1953, only Rs. 9.58 crores or 2.8 per cent. were invested in Treasury Bills. In the preceding year, out of total investment in Government securities of Rs. 327.02 crores, Treasury Bills accounted for only Rs. 17.39 crores or 5.3 per cent. of the total. The reasons for this lack of popularity of Treasury Bills with banks are not far to seek. The demand for funds during this busy season was so great that the banks had to offer as much as 3 per cent. if not a little more, for short-term deposits. Even inter-bank call money fetched 3 per cent. When this was the state of affairs, which bank could afford to invest in Treasury Bills yielding 2.5 per cent. on an average? These bills are really popular with banks and whenever the banks have found that their funds are not usable remuneratively elsewhere, they have always preferred to invest such funds in Treasury Bills. Since their costs of operation are high, banks are always on the alert to increase their earnings by using their money in the most remunerative channels. In this search for high yield investment, the low-yielding Treasury Bills get a low priority.

Banking Legislation

An event of some importance to the credit structure of the country in 1953 was the enactment of the Reserve Bank of India (Amendment and Miscellaneous Provisions) Act, 1953. This Act is designed to enlarge the scope of financial accommodation by the Reserve Bank for productive purposes and to enable it to reintroduce high denomination notes. The provisions empower the Bank to extend loans and advances facilities to co-operative institutions for agricultural purposes. The Bank can give short-term credit to the Industrial Finance Corporation of India also. One of the provisions exempts Scheduled banks from including their borrowings from the Imperial Bank of India in computing their demand and time liabilities for purposes of section 42 of the Reserve Bank of India Act.

Another piece of legislation enacted during the year was the Banking Companies (Amendment) Act, 1953. The main object of this Act was to provide for quick disposal of liquidation proceedings, on the basis of recommendations of the Banks' Liquidation Proceedings Committee. An important feature of the amending Act is the extension of jurisdiction of the High Court to which the liquidator of a banking company has to follow his debtors.

Inspection of banks is one of the chief functions of the Reserve Bank of India. During 1953, the Bank inspected 154 banks, of which 14 were Scheduled banks. Since March 1950, when inspections were commenced, 514 inspections have been carried out for various purposes, granting licences being the chief one. The system of inspections has been useful in providing the Reserve Bank with the opportunity of looking much closer into the affairs of banks concerned. At the end of 1953, as many as 20 banks were submitting monthly progress reports and 289 banks quarterly reports to the Reserve Bank. These have helped rectification of defects in the working of banks.

Another development was the opening of an office of the Department of Banking Operations in Trivandrum. The office is intended to conduct inspections and keep close contact with the banks in Travancore-Cochin.

No new applications were received for licences to carry on banking business. Three banks, however, applied for licences to commence banking business. From applications pending considerations, licences were issued to seven Scheduled banks, one Non-scheduled bank and one foreign bank. The total number of licences issued, since the commencement of the Act, stands at 34. Four Non-scheduled banks were refused licences for carrying on banking business.

Amalgamation

Action was taken in connection with amalgamation of smaller banks into bigger banks. During 1953, one proposal for amalgamation appeared to be *prima facie* desirable and the banks concerned were advised to draw up an agreed scheme of amalgamation. Another proposal was not considered desirable, and the banks were asked to consider the feasibility of arriving at an agreement whereby the liabilities and certain agreed assets of one of them could be transferred to the other.

Five banks went into liquidation, one of them being a Scheduled bank, the business of which was taken over by another. Of these five two were in Bombay, two in Madras and one in Trivandrum. Fourteen banks were ordered to be wound-up by the Court. Again, five non-Scheduled banks suspended payment and applied to the Court for the grant of a moratorium.

Of the 28 companies, the cases of which were pending for classification into banking and non-banking companies, three were classified as banking companies, 15 were either classified as banking companies or went into liquidation or struck off from the Register of Companies. Since the commencement of the Banking Companies Act, 189 companies have either been declared non-banking companies or have gone into liquidation or struck off the Register of Companies.

Action was also taken in a number of cases in which banks were found to have contravened several sections of the Banking Companies Act.

With a view to providing adequate funds to the private sector, a committee was appointed by the Reserve Bank of India under the chairmanship of Mr. A. D. Shroff. This Committee studied the problem with special regard to the scope of assistance which banks might render to industries in the private sector. The Committee has since submitted its report which is under the consideration of the Bank.

During the year negotiations were in progress for the setting up of an Industrial Development and Finance Corporation with the assistance of the I.B.R.D. It is expected that this institution, by supplementing the Industrial Finance Corporation of India and the various State Financial Corporations, will fill up an important gap in the availability of capital.

The All-India Rural Credit Survey, initiated in 1951 under the ægis of an expert committee, has completed its Report on the Survey. This report is to be published shortly. It is expected to throw considerable light on the position of supply and demand for credit in the rural areas. Steps are being taken to implement the recommendations of the Rural Banking Enquiry Committee also. While co-operative banks continue to receive assistance from the Reserve Bank in many ways, attempts are being made to establish apex banks in States where they do not exist.

Billowing Sails

once carried the world's communications and commerce. Even then Lloyds Bank was providing its clients with information and facilities for overseas trade.
Now, too, as then, Lloyds Bank continues to offer these services to those engaged in foreign business. With its own Branches at all major ports in England and Wales, and in India, Pakistan and Burma, and with affiliated Institutions and Foreign Agents and Correspondents in every large port and city throughout the world, Lloyds Bank is fully equipped to provide comprehensive service and finance for all classes of foreign trade.

Let LLOYDS BANK *look after* YOUR *interests*

LLOYDS BANK LIMITED — INCORPORATED IN ENGLAND

LB/G/40—1954

SAURASHTRA FINANCE CORPORATION

It will be recalled that the Saurashtra Finance Corporation (Managing Director: Mr. L. D. Dave, Rajkot) was inaugurated at Rajkot by Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, on 9th November, 1953, though it started functioning as from 29th September, 1953. Its capital is Rs. 2 crores divided into two lakhs fully paid-up shares of Rs. 100 each. Of this, one lakh shares, valued at Rs. 1 crore, have been issued for the present.

The Directors' report of the Corporation for the period from 29th September, 1953 to 31st March, 1954, discloses that the Corporation received 20 applications for loans. Some of these were considered by the Board. Four loans for sums below Rs. 20,000 each were forwarded to the Small-scale Industries Board for being dealt with by it. Of the remaining 16 applications for accommodation amounting to Rs. 32.10 lakhs, three each were from electrical undertakings, oil mills and chemical industries; there was one application from a mining company and one from a textile mill. Five applications were from miscellaneous concerns.

The Chairman of the Corporation, Mr. Pranlal Devkaran Nanjee, pointed out, in his address at the annual meeting held on 29th ultimo, that, since the period under review was one of preparation and organisation, the number of applications scrutinised was only six. As the applications were for long-term loans involving 10 years or more, detailed scrutiny would take more time. He, however, assured that endeavours would be made by the Board for disposing of the applications as expeditiously as possible. He revealed that the Directors had decided to hold some of their meetings at various important centres in the State with a view to having a close-range view of the industries in Saurashtra, giving incentive to industrialists to apply for loans, and attracting public attention towards the activity of the Board. He trusted that full advantage would be taken of the Corporation's services by industrialists, so that employment opportunities may be thrown open to the people of the State.

I.B.R.D. LOAN TO FRENCH WEST AFRICA

The International Bank for Reconstruction and Development granted a loan of $7.5 million to French West Africa on the 10th inst. The loan is intended to assist a programme of modernisation of railways in that country of great distances. French West Africa is about three-fifths the size of the U.S. and eight times that of France. About three-quarters of the population of 18 million live more than 200 miles from the Atlantic coast. Economic development of the region has been hampered by inadequate railways in the country.

The Bank's loan will provide funds for the purchase of 35 diesel mainline locomotives and 34 diesel switching engines for the two largest and most heavily used lines in that country. The loan is for a term of 12 years and carries interest at 4½ per cent. The French West African Railway Administration is the borrower and the loan is guaranteed by the Republic of France.

A feature of the loan is that Messrs. J. P. Morgan & Co., New York, have agreed to participate in the loan without the Bank's guarantee to the extent of $609,000 covering the first two maturities of the loan, falling due on 1st December, 1956, and 1st June, 1957.

SEMANTICS AS AN ECONOMIC WEAPON

BEWARE OF BEGUILEMENT OF WORDS

[These are days of glamour words and catchwords not merely in India but throughout the free world. Words such as "democracy," "welfare State," "fair prices," "living wage" and "security" are frequently used. The article on this page, published through the courtesy of The Guaranty Survey, *the monthly of the Guaranty Trust Company of New York, shows to what extent the urge for clear thinking is liable to wane by the frequent use of such words and what a distorted picture of a particular state of affairs can be presented by a mere play of words. It emphasises the need for looking beneath words to understand realities and for vigilance against the beguilement of words. In the present circumstances, the article is quite relevant to this country. It deserves to be read and pondered, especially by our politicians and economists.—Ed.]*

THE decline in business since mid-1953 has been variously dubbed. One is dazed by the subtle distinctions implied in such terms as "rolling adjustment," "disinflation," "un-boom," "readjustment," "dip," "deflation," "boom and bust," "recession" and "depression."

The name in each case seems to depend mainly upon what the commentator is trying to prove. Government officials, naturally uneasy under the burden of the "full-employment commitment," tend to use terms suggesting mildness of setback. At the other extreme, those who would like to hurry Congress and the Administration into drastic action show a preference for "depression," a word which, since the disastrous experience of the 1930's, has assumed such fearful implications that it is usually avoided in dispassionate discussions of current economic conditions.

The fact is that none of the terms used in characterising the recent course of business has precise meaning. No one can draw a line where a category of contraction signified by one word ends and another begins. The important differences between the terms do not lie so much in their expressed meanings as in the emotional responses which their connotations evoke in reader or listener. If these responses are subconscious, as they usually are (and are often intended to be), the reader or listener is allowing himself to be imposed upon. Those who wish to be informed rather than exploited by what they read or hear must be constantly on their guard against the hidden implications in words, especially at a time like the present, when specious ideologies are bidding for popular favour.

Students of language have always been troubled by the unbridgeable gap between words and the things they stand for. Words mean different things to different persons. According to the Book of Job, the Lord inveighed against him "that darkeneth counsel by words without knowledge." Bacon lamented the tendency of words to "shoot back upon the understanding of the wisest, and mightily entangle and pervert the judgment." Cynics have been led to define language as the art of concealing thought.

The difficulty of precise communication of ideas is made worse by the gradual transitions that occur in the meanings, and even more in the connotations, of words during the passage of time. Some words, like "democracy" or "liberalism," take on such strong favourable colorations that they are used by both libertarians and communists to describe their respective systems. Others, like "depression" and "dole," fall into such disrepute that it is impossible to use them without creating an unfavourable emotional atmosphere. Whether favourable or unfavourable, these evocative properties of words, as semanticists call them, can so overshadow the original cognitive values as to make the words almost useless for purposes of straightforward exposition.

Intentional Implications

Men discovered long ago that the power of words to arouse feeling could be a strong instrument of persuasion as well as a barrier to the transmission of knowledge or thought. "It is worldly wisdom," said Pope Gregory I more than 13 centuries ago, "to conceal the mind with cunning devices, to hide one's meaning with words, to represent falsehood as truth, and to prove truth to be falsehood." In the hands of a skilled practitioner, language can become the art of preventing thought by substituting emotion for it. The established reaction patterns created by certain words tend to stultify thought while seeming to stimulate it.

Discussion of the present business situation in terms calculated to arouse fear or promote confidence is a case in point. Those who demand that the Government take steps to prevent a "full-blown depression" do not advocate inflationary deficit financing—not in those words. They recommend public works and tax relief, which mean inflationary deficit financing but sound much better. "Inflation" and "deficit" are fear words. They suggest unsound fiscal practices, rising costs of living, and currency depreciation. "Public works" and "tax relief," on the other hand, conjure up mental images of more money in everybody's pocket, along with fine new roads, schools, hospitals and playgrounds.

Similarly, those who believe the Government should pursue a long-term policy of injecting new money into the economy, in order to exert a continual stimulating effect on demand are not found speaking of chronic inflation. That would imply a step-by-step descent into monetary debasement. Instead, they talk about a gradual rise in prices and wages, connoting large incomes and good times.

About a decade ago, Sir William Beveridge, the British economist, wrote a book on *Full Employment in a Free Society*, an alluring double objective. An actual reading of the book reveals that the author's programme would probably involve price control as an inevitable consequence; that private, as well as governmental, investment would have to be regulated by political authority; that control over the location of industrial plants would be a central requirement; and that it would be necessary to maintain "organised mobility" of labour (not, of course, "compulsory allocation" of labour). Such civil liberties as the right to choose new public officials and alter public policies, freedom in the choice of occupations and in the management of personal incomes, and the right of labour to bargain collectively and to strike could not be exercised "irresponsibly." Sir William declared also that the liberties essential to a "free society" do not include the liberty of a private citizen to own means of production and to employ others in operating them at a wage.

The author's ability to apply the phrase "free society" to such a regime would seem to indicate that the magic of words can work its spell upon the user as well as upon his readers.

Glamour Words

The perennial controversy over the relation between the individual and the State has produced innumerable semantic traps for the unwary. One of these is the indiscriminate and often misleading use of such faith-inspiring words as "liberalism" and "democracy." Historically, liberalism stood genuinely for the importance of the individual and his right to pursue his own aims, with a minimum of interference by the State. During the past generation, the label has been appropriated by the advocates of stronger Governmental authority, the very school of thought that historical liberalism was formed to combat. It is strange that the historical liberals have not protested more vigorously against this perversion of meaning. "Democracy," on the other hand, is claimed by both groups, with the unfortunate result that it is impossible to tell what the word means without first knowing who is using it and what his actual beliefs are.

Another word to conjure with is "welfare." Authoritarians call their system the "welfare State," as if those who oppose it were against welfare, or at any rate indifferent to it. Actually, of course, welfare is not the issue at all. Every good citizen favours welfare, as he understands it. The real question is not the desirability of welfare but the power of the State to tell its citizens what welfare is and how it shall be sought.

Politically determined "welfare" has its subdivisions. Among these are "fair" prices, a "living" wage, "adequate" housing, and "security." What right-minded person could oppose such obviously desirable objectives? Only when one looks beneath the words at the actual things they stand for does one realise that these are merely glamorous catchwords for highly debatable public policies and programmes.

One finds, for example, that buyers and sellers are likely to have very different ideas regarding what constitutes a "fair" price, and that political action is likely to settle the question on the basis of which side has the most votes. Since a wage is a price, the issue of the "living" wage also tends to develop into a scramble for political favour. "Adequate" housing turns out to be some official's or board's idea of what it would be desirable for people to have in the way of living quarters, without too much regard for costs, on the one hand, or competing needs and desires, on the other. "Security" is found to mean an attempt at escape from the vicissitudes of life in an individualistic society, usually taking the form of compulsory savings or compulsory redistribution of income, with ultimate effects that may be far from desirable.

Some Other Catchwords

Words like "progressive" and "reform" fall into a similar category. Such words imply a change for the better, and they are especially effective in an age like the present, when there is a too-general tendency to assume that change necessarily is for the better. A little reflection is enough to show that words of this kind, when applied to a concrete proposal, merely beg the question.

A particularly subtle form of economic quackery is the use of such terms as "rationalism, "planning," and the "scientific" approach to economic and social questions. Words like these imply profound understanding on the part of the speaker and impugn the intelligence of anyone who ventures to question his views. They suggest that society can assure its salvation only by placing its fate in the hands of the experts.

In human affairs, who can arrogate to himself the title of "expert"? No small part of the economic and political ills that afflict the world today can be traced to centralised "planning" of production and distribution in the name of "rationalisation." Planning at the level of the individual enterprise is, of course, universal in the business world, but planning at higher levels has proved a tragically inadequate substitute for the automatic regulatory action of prices in free markets. The "scientific" approach is only another name for bungling interference in human relations by those who have deluded themselves or others into believing that they are equipped to play a superhuman role.

"Capitalism" and "Free Enterprise"

"Capitalism," once an acceptable descriptive term, has become, for many, a vituperative epithet. It suggests the capitalist of the old cartoons, the fat plutocrat with the plug hat, the big cigar and the full money-bags, ruthlessly trampling upon the widow and the orphan. Among those who have any knowledge of economic matters, this absurd myth has long since vanished into the limbo of exploded superstitions. Yet the mental image has become so odious that the friends of capitalism usually avoid the term, preferring such inoffensive expressions as "free enterprise." But who ever heard of a Communist talking about "free enterprise"?

As the art of semantics rises to new heights, the importance of looking beneath words to realities grows more urgent. Language may be used to express, conceal or prevent thought, but it cannot safely be allowed to become a substitute for thought. Truly, the price of liberty is eternal vigilance—vigilance against the beguilements of words.

AUSTRIAN BANK RATE CUT

The National Bank of Austria reduced its Bank rate from 4 per cent. to 3½ per cent. with effect from the 3rd inst. This is the fourth reduction since January, 1953. The table below shows the previous rates and the dates on which they became effective.

Year	*Date*	*Rate* Per cent.
1935	10th July (occupation)	3.5
1945	3rd August	3.5
1951	6th December	5.0
1952	3rd July	6.0
1953	22nd January	5.5
	26th March	5.0
	24th September	4.0
1954	3rd June	3.5

Legislation is being instituted in the U.S. for increasing the lending authority of the U.S. Export-Import Bank by 500 million dollars. The increase would bring the Bank's lending total to 5,000 million dollars, the limit it could have outstanding at any one time. The object of the legislation is to improve international trade.

Ceylon has announced a reduction in its Bank rate from 3 per cent. to 2½ per cent. with effect from the 12th inst. It was only on 23rd July, 1953, that the Bank rate had been raised from 2½ per cent. to 3 per cent.

STABILISING CONDITIONS IN HANDLOOM INDUSTRY

STRESS LAID ON LONG-TERM SOLUTIONS

THE well-worn but pertinent point, namely, that the stability of the handloom sector of the Indian cotton textile industry rests not on palliatives but on long-term solutions, was stressed once again by Mr. T. T. Krishnamachari, Minister for Commerce and Industry, Government of India, in the course of his address at the third meeting of the All-India Handloom Board held in Bombay on Wednesday this week. Mr. Krishnamachari also indicated what these long-term solutions were. Emphasising, in particular, the need for a proper marketing organisation, he said that the Board should take necessary steps to see that goods produced on handlooms were marketed as early as possible. In fact, this is the most crucial problem. It is gratifying to be told that the Board has singled out the problem of marketing and organisation for immediate attention. Alluding to this, Mr. T. Swaminathan, Textile Commissioner and Chairman of the Board, revealed that the bulk of the grants and loans made by the Board related to organisation and marketing. He observed:

"Grants for opening sales depots and for rebates on the sale of handloom cloth figure largely in the assistance given to States. Similarly, share capital advances to weavers for joining co-operatives and working capital advances to co-operatives were also important and substantial items in the lists of loans made available to States.

"An important development has been that States are opening sales depots in rural and semi-urban areas now, in contrast to larger concentration on the urban areas in the past. This is as it should be, seeing that, except for luxury and semi-luxury fabrics, an approach has to be made to the ordinary consumer of cloth all over the country, if a large enough market is to be developed for the handloom industry. It is gratifying that exports of handloom cloth during 1953 were of the order of 65 million yards. With the deputation of our marketing officers to Baghdad, Colombo, Rangoon and Singapore, it may reasonably be hoped that there will be a considerable increase in our exports of handloom cloth."

While the Board has thus been preoccupied with the immediate problem of marketing and organisation, it does not seem to have forgotten the basic remedy for the difficulties of the handloom industry, namely, improvement in efficiency of production, designs, etc. According to Mr. Swaminathan, a number of improvements to the basic tools of the industry is being gradually introduced. The States are also going in for dye-houses and finishing plants for improving the quality and finish and increasing the range of varieties of the products produced by the handloom industry. Steps are also being taken to organise research as regards modifications in equipment with a view to improving the finish and designs of handloom textiles.

Co-operatives for Handlooms

Both Mr. Swaminathan and Mr. Krishnamachari felt that the co-operative movement was the best method of achieving stability in the handloom industry. Mr. Swaminathan said:

"In the co-operative organisation lies the answer to many of the difficulties of the handloom weaver and it is only right and proper that States should give urgent attention to the education of the weaver towards organising himself. Working through the co-operative organisation, the handloom weaver will ultimately get the largest benefit out of any assistance that may be made available to the industry. The co-operative organisation is also one method whereby the States and Central Governments will be able to assure themselves that measures of assistance reach the actual weaver. When the Board started functioning, it was reported to it by State Governments that roughly 727,000 weavers were within the co-operative fold. The State Governments have reported that, during 1953-54, 35,200 weavers were freshly brought into the fold. It has to be remembered that the bringing in of the weavers into co-operatives in any large way during 1953 has been done only in the latter half of the year. In view of this, the progress achieved is not unsatisfactory. State Governments hope to bring in about 200,000 weavers into the co-operative fold during 1954-55. Needless to say that this target, if achieved, will lay the foundations well and truly for the prosperity of the handloom weaver and his industry in future."

Expressing a more or less similar view, Mr. Krishnamachari said that we would be on the right lines in canalising expenditure for the development of the handloom industry through the medium of co-operative societies. In this connection, he alluded to the fact that, as many as 762,000 looms (out of the estimated 2·1 million looms in existence) were in the co-operative field; in some States such as Bihar, Madras, Andhra, Uttar Pradesh and Bombay, nearly half the number of looms was within the co-operative field.

Another important aspect which was stressed by both Mr. Swaminathan and Mr. Krishnamachari related to statistics in regard to the industry. Making a special appeal to the States for collecting correct data on the number of looms, etc., Mr. Swaminathan said:

"The Fact Finding Committee, appointed by the Government of India in 1941, estimated that there were a total of 2,193,262 looms in the country in 1940. According to reports we have had from State Governments, there were 2,893,271 looms in 1952. The Textile Enquiry Committee, appointed by the Government of India in December, 1952, conducted a scientific sample survey, as a result of which it has been concluded that there are about 2,100,000 looms in the country. It is essential for many purposes that we should have a correct appreciation of the size of the industry. Only then, for instance, will it be possible to visualise the volume of employment and unemployment in the country in this industry. Only then, for instance, again, will it be possible to estimate the repercussions of the introduction of improvements to the equipment of this industry. Only then, again, will it be possible to estimate and provide for the financial assistance necessary for marketing the product of the industry. It would not be right at this stage to anticipate the findings of the Textile Inquiry Committee. But, it is by no means unlikely that, in order to be able to obtain and maintain reliable figures of the magnitude of various problems of this industry, a system of registration of handlooms will be contemplated. I may recall that the Board has already offered some financial assistance to States with regard to the collection of statistics pertaining to the handloom industry. I would appeal to State Governments to take up in earnest and urgently the work of collection and compilation of statistics."

The Commerce and Industry Ministry called upon the Board to devise a system whereby some periodical checks over the number of handlooms in operation could be had. He was not in favour of allowing unlimited expansion in the handloom sector. In other words, he wanted registration and licensing of looms, providing, of course, for a certain amount of flexibility by which some allowance could be made for a certain percentage of new entrants every year.

Mr. Krishnamachari referred to the supply of yarn to the handlooms. Alluding to the suggestion, made in some circles, that the weaving operations in the mills should be curtailed if the handlooms are to be assured of adequate supplies of yarn, he categorically stated that it was not a practical proposition. The real remedy lay, according to him, in raising the supplies of free yarn by having more mills.

Reservation of Markets

Mr. Krishnamachari also opposed the plea for reserving markets for handlooms. To quote his own words: "I do not believe in reservation. As a permanent remedy, it will not help. I look at the problems of the handloom industry from the practical point of view. In some cases, reservation has resulted in more evil than good." He, however, justified the imposition of cess on mill-made cloth for the sake of developing the handloom sector on the ground that adjustment of burdens in the different sectors of the industry was a necessity.

Mr. Krishnamachari was optimistic that the handloom industry was now well set on the road to progress. This optimism was on the present high level of output accompanied by a marked rise in consumption. The total production of handloom cloth during 1954 is expected to be of the order of 1,500 million yards, as against about 1,200 million yards in the previous year. Whether such an upward trend in output will be maintained in the coming months will depend on the extent of financial assistance rendered by the All-India Handloom Board. Incidentally, it may be noted that the Government of India is expected to make available a sum of Rs. 5 crores to the handloom industry during 1954-55. With the balance left over from 1953-54, the total assistance available to the industry during the current financial year will be of the order of Rs. 6 to Rs. 7 crores. Certainly, this is no small sum. If the assistance is used well and prudently, it can, as Mr. Swaminathan rightly pointed out, "do a great deal to put the handloom industry on a satisfactory footing of lasting and long-term prosperity."

According to the U.S. Foreign Agricultural Service, world sheep numbers in 1953 reached a new figure of 841 million head. This represents an increase of 13 million head over the previous year. The important sheep producing areas, which showed increases in 1953, were Australia, Argentina, India, the Union of South Africa and New Zealand, with some gains being registered also in Uruguay and the United Kingdom.

EXPORTS OF INDIAN COTTON TEXTILES

DOWNWARD TREND AGAIN VISIBLE

A FULL month has elapsed since the assurance that the Central Government would take all possible steps to maintain and possibly improve India's competitive position in world cotton textile markets was given by Mr. H. V. R. Iyengar, Secretary to the Commerce and Industry Ministry, at the meeting of the Export Advisory Council. Both the textile industry and the trade have been eagerly awaiting the official announcement. This is only natural, considering the setback which exports of piecegoods have once again experienced in the past few weeks. The quantity of cloth shipped during the second fortnight of May, 1954, for instance, was distinctly lower at 34·2 million yards, as against 40·5 million yards in the previous fortnight. The exports for the whole month thus come to 74·7 million yards. These no doubt compare favourably with the exports of 69·4 million yards in April, 1954. But the exports in May were less than what they were in any of the first three months of the year.

The following table gives the cloth exports during the first five months of the year as compared with those in the corresponding months of the year 1953:

(In million yards)

	1953	1954
January	43·4	81·0
February	38·6	82·8
March	53·9	78·9
April	63·6	69·4
May	64·5	74·7
Total	264·0	386·8

It will be seen from the foregoing figures that exports of cloth during the five months ended May, 1954, amounted to 386·8 million yards. On this basis, the total exports for the whole calendar year may be estimated at 928 million yards, which fall short of the Buxton target of 1,000 million yards. Even this estimate is considered by some as an exaggerated one. In their opinion, exports of cloth in the coming months will not average more than 50 to 60 million yards per month. If this view were to prove correct, it would mean that India would once again lose a part of its overseas market. Already, Japan is offering stiff competition to India in some of the countries which have, in recent years, been a good market for India's cotton piecegoods. This is indicated by the shipments of considerable quantities of cloth from Japan to countries such as Indonesia, Pakistan and Siam. During the first two months of the current calendar year alone, Japan exported to Indonesia as much as 69 million yards of cloth, while India exported hardly 17 million yards during the four months ended April, 1954. Similarly, shipments to Pakistan and Siam during the same period were large, being 24·99 million yards and 24·51 million yards, respectively, while India was not able to export to these countries during the four-month period more than 7·48 million yards and 2·20 million yards. The following table indicates shipments of cloth from India, Japan and the U.K:

(In million yards)

DEARTH OF NEW BUSINESS FOR LANCASHIRE MILLS

CLOTH OUTPUT MOVES UP DESPITE LABOUR SHORTAGE

(By A Special Correspondent)

MANCHESTER, *8th June*

THE Whitsuntide holiday is regarded as an extra vacation for most of those who work in the textile industry in Manchester. Many of the mill towns continue producing yarn and cloth with only a limited break but the distributing centre usually works only a short week.

MANCHESTER LETTER

Trade in cotton and rayon goods in Lancashire over the past few weeks has slackened and although most producers still have reasonably long order books there has been a dearth of new business. Part of the resistance shown by buyers has been attributed to doubts over the future trend of raw cotton prices but there has also been considerable objection to the long time taken for the completion of contracts. Prospective customers have been disinclined to accept delivery terms, extending not only to the end of the year but in some cases into 1955.

In conclusion there has been a sharp decline in the amount of fresh operations under consideration. The mills, however, are still busy turning out as much yarn and cloth as they can, subject to the restrictions of labour shortages. Export sales have been particularly quiet and not more than very scattered transactions have been mentioned.

Home trade business now amounts to between 75 and 80 per cent. of production in Lancashire and in this branch too conditions have been relatively quiet for some little time past. Most of the big wholesalers have stocked up and although pressure is still being exerted on the mills to expedite deliveries, there has not been the same keenness to follow on existing contracts.

Pakistan Delegation

Considerable interest has been taken in Lancashire in the news that a cotton delegation from Pakistan is arriving in Britain later in the month to start negotiations with their opposite numbers in this country. The visit had been anticipated some time ago and an agenda has been drawn up by the Lancashire members of the committee responsible for fostering better trade relations with Pakistan.

Meetings between the delegation and British textile trade leaders are expected to have a two-way purpose. On the one hand, Lancashire wants to sell more cotton goods to Pakistan, while it is felt that a wider use of Pakistan cotton in this country's mills would be of benefit to both nations.

Labour Losses

Since the Cotton Working Party, as far back as 1946, made an estimate of the likely labour force available for cotton spinning and weaving mills in Lancashire, it has not been the practice to guess the future manpower for fear that the forecast would prove equally incorrect. It was then stated that the mills could look forward to a maximum of about 250,000. By the end of 1951 the available operatives had reached more than 320,000, but the recession which followed reduced the workers by some 60,000.

The long struggle back has enabled about 30,000 workpeople to be regained for spinning and weaving, but the current total at around 290,000 seems to have stabilised itself for the time being at least. It is being generally accepted in the industry that this is very near the probable maximum unless some unexpected events take place.

Despite the number of workers being substantially below those employed in the mills at the peak of the post-war boom, the quantity of yarn and cloth being produced still continues to rise. Cotton and rayon fabric woven in the first quarter of this year, for example, was slightly higher even than in 1951, but this has, to some extent, been explained by the fact that the number of working days this year was in excess of those three years ago. All the same, the tendency is for better output for operative to be achieved, bearing in mind the reduced labour force.

There is no doubt that many firms producing cotton and rayon goods are now far better equipped than they were even a few years ago. In addition, respacing has been adopted particularly in the weaving section and although this has reduced the amount of machinery actually in place in the mills, productivity has been improved by this action. Redeployment schemes are being widely adopted although they are still not as frequently used as certain interests would like.

In view of the continued labour shortage, most managements have now made up their minds that it is only along these lines that better output can be achieved. The influx of school-leavers is reasonably satisfactory, representing rather more than 15 per cent. of the available number in the area, but the textile industries are always hampered by an ageing labour force and the fact that so many women are employed which involves a greater degree of wastage than in other trades.

Price Schemes

Price-fixing schemes in the British cotton textile industry—spotlighted by the recent Monopolies Commission criticisms of such agreements in the calico printing industry—have been defended by two leading cotton trade unions, the Operative Weavers' Amalgamation and the Operative Spinners' Amalgamation.

In a statement to branches, the Weavers' Amalgamation explains that it has thought it necessary to define its attitude as a result of the Calico Printing Industry Report and the probable repercussions on the cotton industry "in the event of that industry being referred for the consideration of the Monopolies Commission."

"We would prefer that a form of fixing minimum prices should remain, but that the Government should assume responsibility for examining and reviewing any minimum prices suggested, on the basis of a reasonable profit by efficient firms, having regard to the capital and other needs of the industry," the statement declared.

There was room for some form of price-fixing mechanism within the textile industry provided such prices were subject to some outside authority, such as the Board of Trade, and that provision was made for a more rapid change in prices when a situation arose which appeared to demand it.

Commenting that the minimum price arrangements in the cotton spinning industry were similar in principle to those operating in the calico printing industry, the Weavers' Amalgamation statement went on: "It should not be accepted that all forms of minimum price arrangements are evil. Such arrangements can hold protective value for operatives as well as employers."

Severe price competition in times of slump might cause firms to abandon quality standards and cut prices below cost. "Past experience has shown that when such circumstances faced the cotton industry in the inter-war years internecine and suicidal competition seriously weakened the industry and caused great suffering, particularly amongst the operatives."

The main criticism of the yarn spinning price agreement was that minimum rates were fixed too high and that the rigid price structure could not meet sudden market changes. "Reductions in Lancashire's yarn prices have generally lagged behind world reductions in yarn prices. In order to capture new markets and retain old, a greater degree of flexibility in pricing is needed in day-to-day trading," the statement added.

Spinners' View

In a report to the 20,000 members of the Operative Spinners' Amalgamation, Mr. Charles Schofield, the General Secretary, also stressed the difficulties and hardships which resulted from indiscriminate price slashing during trade slumps in the past. The periods of depression were prolonged because of the price cutting and many firms were forced to sell yarn at any price they could get, many quotations being well below the cost of production.

"This chaotic selling proceeded until there was nothing more to sell and these firms, drained of all their resources, went out of existence," declared Mr. Schofield.

The experience of the spinning section of the cotton industry was not such as could be repeated. Subject to regular scrutiny by disinterested persons on behalf of, for example, the Board of Trade, the union felt that the price agreement in the spinning industry should not be interfered with.—*All Rights Reserved.*

WORLD EXPORTS OF COTTON DURING FIRST HALF OF CURRENT SEASON

SOME SIGNIFICANT CHANGES

WORLD trade in cotton in the current season must be studied in the light of the larger supply of this commodity that is available for consumers. Thus, the free world supply in the current (1953-54) season is placed at 45.1 million bales of 478 lbs. each, as against 42.1 million bales in the previous season. This increase is due principally to the improvement in supply in the U.S. placed at 21.9 million bales, as against 18.0 million bales in the 1952-53 season. Although the figures relating to exports of cotton from all the exporting countries in the world are not available, the figures relating to the countries which account for 80 to 90 per cent. of the world trade have now been made available by the International Cotton Advisory Committee, Washington.

Cotton Exports

From a study of cotton exports of these countries in the first half of the current season, it is seen that the total exports were 200,000 bales higher than during the corresponding period in 1952-53. The following table gives the exports of cotton in 1951-52, 1952-53, and exports from the chief exporting countries in the first half of 1952-53 and of 1953-54:

(In 000 bales)

Exporting country	1951-52	1952-53	August-January	
			1952-53	1953-54
U.S.	5,519	3,048	1,738	1,525
Brazil	350	153	30	630
Mexico	975	988	615	670
Pakistan	906	1,270	525	466
Turkey	260	433	205	203
Egypt	915	1,725	852	644
Sudan	309	268	77	229
Peru	347	371	178	198
India	124	290	160	51
Others	1,318	1,995	..	..
Total	11,110	10,556	4,405*	4,606*

* Total of nine months.

Commenting on the table above, the Committee observes that there are "significant" changes in the distribution of exports by the country of origin. Exports from the U.S. over this period were lower by more than 200,000 bales, as compared with 1952-53, whereas total exports from other countries were roughly half a million bales higher. The Committee has also referred to the "important" variations which have taken place in the exports of the non-dollar group of countries. Since cotton prices in Brazil were made competitive with other growths, foreign demand has been greatly stimulated and till the end of January, 1954, the country had exported 630,000 bales, as compared with almost a negligible volume of exports in the corresponding period in 1952-53. Exports from Sudan have also been in very much greater volume. In Mexico, Turkey, and Peru, cotton exports have been generally at last season's level.

Availability of Cotton

Egypt, India and Pakistan show a significant decline which is in part a reflection of a lower export availability this season. But, if exports in August 1952, and August, 1953—the former month was an exceptional month of heavy exports—were excluded, the rate of exports in this season would, however, show a 10 per cent. increase in volume than in the last season. Referring to Pakistan, the Committee observes that export availabilities in that country have been reduced as a result of decreased production and a marked increase in domestic consumption. A feature of the world trade in cotton, according to the Committee, is the re-entry of the U.S.S.R. as a cotton exporter. Exports from Russia are, however, small, being believed to be of the order of 150,000 bales during the first half of 1953-54.

The export situation in the second half of the current season, it is stated, is likely to differ somewhat from the first half. This may be due to changes in price relationship. Thus, it is pointed out that active demand for and limited availability of cotton in some non-dollar markets have altered the price relationship between dollar and non-dollar cotton in favour of the former. And, since January, 1954, there have been indications, according to the Committee, that the U.S. may claim a larger share of the world trade than earlier in the season. Official sources predict that U.S. exports of cotton in the current season may be well above the 3 million bales exported in the 1952-53 season.

Since export of cotton from the U.S. will materially influence the world trends in cotton, it is necessary to examine the grounds on which the optimistic estimates of U.S. export trade are based. The Committee cites many factors in support of the view that exports of cotton from the U.S. this season are likely to be larger than in the last season. It regards as the "foremost" among these factors the large volume of cotton that will move under the funds allotted to the Foreign Operations Administration (F.O.A.). Total authorisations for cotton purchases already are close to $200 million which, at current prices, could finance over one million bales of cotton. It is believed that substantial funds are still available in recipient countries for future cotton purchases out of this season's crop. Also, allocations for cotton purchases against payment in local currencies have been made under the Mutual Security Act. Germany ($3 million), Finland ($2 million), Spain ($4 million), Yugoslavia ($3.2 million) and France ($12 million) are the countries which have received allocations for the import of cotton.

Dollar Import Restrictions

Another development, which is cited as conducive to larger exports of cotton by the U.S., is the liberalisation of restrictions on dollar imports in a number of countries. Thus, Germany has liberalised its dollar import restrictions and there is a possibility that Japan will increase its purchases of dollar cotton. Also, trade missions have been sent by the U.S. to Asia, Africa and Europe in order to expand export trade in agricultural commodities, including cotton. Referring to the role of the Commodity Credit Corporation in the marketing of U.S. cotton, the Committee says:

"Sales of Commodity Credit Corporation inventory cotton which were suspended in November, 1952, were resumed on 12th April. This decision applied only to some 235,000 bales which consisted mainly of 1951 crop pooled cotton. By 'pooled' is meant that the Government has taken full control of this cotton but producers still have rights to any profit that might be made from its sale. Sales can be made at prices not less than the higher of the market price or 105 per cent. of the current support price plus 'reasonable carrying charges,' these charges being set in a schedule and ranging from 60 points per pound for cotton sold in the month of October to 195 points for cotton sold in the month of July.

"The bulk of the C.C.C's cotton is, of course, still owned by farmers, but held as collateral for loans. On 1st August, 1954, the C.C.C. will purchase all unredeemed cotton from the 1952-53 crop, at present about 1.7 million bales, at market price or the loan price plus carrying charges, whichever is higher. If past sales policy is followed, this cotton will be sold on the same basis as the 1951-52 cotton but no decision has been made as yet.

"In the meantime, loan operations on the 1953-54 crop closed on 30th April with loans made on approximately 7.0 million bales of cotton but with redemptions through 23rd April totalling 867,920 bales. If the precedent of last year is followed, this cotton will be allowed to remain in the ownership of farmers through 1954-55 and thus will be available for sale only at the original loan rate of 32.70 cents (Middling 15/16 inch) per pound plus carrying charges at about 20 points per month for the period in the loan plus a payment to farmers for selling their equity."

As regards exports of cotton from non-dollar countries, over the remainder of the current season, the position, it is stated, will be affected in many cases by reduced availabilities. In Mexico, for example, very little cotton now remains unsold. Brazil too does not possess large stocks for export. Sales to domestic and foreign consumers out of Government and bank-owned stocks are reported to be 1.5 million bales. It is estimated that excluding the 1954 crop only some 300,000 bales of cotton are now available for export. Exports from Pakistan will, as already stated, decline somewhat from the total of 1.27 million bales shipped in 1952-53. So far, Turkey's exports have been at approximately last season's level. Heavy exports from Egypt this season are the result of increased trade with Western Europe and Japan. Uganda, Sudan and Peru are experiencing little difficulty in finding markets for their cotton. From this analysis, it should be clear that the total export trade in cotton for the whole of the current season will be materially influenced by the trend in U.S. exports of cotton.

U.S. AND LIVERPOOL COTTON EXCHANGE

The reopening of the Liverpool Cotton Exchange, which took place last month, was greeted in the U.S. as a triumph for free enterprise. The President of the New York Cotton Exchange, Mr. Bernard J. Conlin, whose address at Liverpool, on this occasion, is now available in this country, stressed that it was "most appropriate and factual" to refer to the Liverpool Association as "our sister Exchange." He stated that the history of this relationship dated back to the earliest beginnings of cotton trading. Over the years, the system of cotton marketing, he pointed out, has been improved and refined. He added: "All of us have been able through the facilities of the futures market to employ capital freely on a sound basis; and similarly to move cotton from the producer, to the merchant, to the manufacturer, so that all could proceed with foresight, skill and knowledge in this most vital business process of our economic life." Referring to the difficulties involved in the resumption of forward trading and to the factors prominent in the raw cotton picture today, Mr. Conlin said:

"Now, of course, there will be difficulties as you resume futures trading. We in New York are well aware of the difficulties attendant upon resumption of trading after suspension. 'We have had it,' our latest experience being in 1951. At that time our Government issued an overnight and unexpected price regulation order. What followed, suffice it to say, was that we were obliged to suspend all trading for a period of some six weeks. Meanwhile, the wheels of the cotton industry came very close to grinding to a standstill. Six weeks, of course, does not compare with your suspension of trading for 13 years. But I can assure you that we know of your situation because we have experienced it. To my mind many difficulties are foreseeable; but some unexpected ones are created when free trading in free markets by free people comes to a halt and is then resumed.

"It would seem appropriate at this time to refer to a number of factors prominent in the raw cotton picture throughout the world today. Some of these did not exist at the time trading in cotton futures was suspended in Liverpool in the early days of World War II. On the other hand, some that did exist have in many ways become accentuated since then. Number 1. Cotton production outside of the U.S. has sharply increased and cotton is now grown in about eighty subdivisions in the world. Number 2. A factor of great importance, now existing, is the large increase of synthetic and other man-made fibres. And thirdly, the continuation of the price support programme in the United States and its impact on all phases of the cotton industry. In this matter of price support, you are undoubtedly aware that it is the aim of the present administration in Washington to restore to private endeavour many functions heretofore assumed by the Government; and to eliminate rigid or unduly high governmental price supports. You will note that I say, 'it is the aim.' Here's hoping."

A similar note of enthusiastic welcome to the Liverpool futures market was struck by Mr. Herman S. Kohlmeyer, President, New Orleans Cotton Exchange, who, in an article contributed to the well-known U.S. cotton newspaper, *The Cotton Trade Journal*, said:

"For the first time in 13 years, quotations from the historically great futures market at Liverpool are being displayed on the main board of the New Orleans Cotton Exchange. The huge ledger on which these quotations are posted for permanent, public record once again lists—side by side with the markets of New Orleans, New York and Chicago—that of our sister Exchange in Great Britain. Seeing these figures, in spaces blank since the outbreak of World War II, encourages the belief that world markets are indeed reopening, and that private enterprise can again flourish. Moreover, this inspiring sight is coupled with satisfaction of a more material nature—for in just the few days since the reopening of the Liverpool Exchange, direct benefit has been felt on our Exchange, in arbitrage orders between New Orleans and Liverpool.

"They at Liverpool, have many problems in front of them as we, in New Orleans, have many in front of us. Free enterprise, the free flow and exchange of commodities between different countries, is again advancing—it is not yet a *fait accompli*. Each of us must solve our own problems—and each solution or lack of solution will have an effect on the other."

EXPORTS OF U.S. COTTON

Exports of U.S. cotton, during the period beginning from 1st August, 1953, upto 3rd June, 1954, aggregated 3,289,095 bales as compared with 2,733,865 bales during the same period a year ago. An optimistic view about the export possibilities for cotton is taken by many cotton men in the U.S. Thus, Mr. Read P. Dunn, the Director of Foreign Trade of the National Cotton Council, who attended the recent meeting of the International Federation of Cotton Spinners' and Manufacturers' Associations, at Buxton, is reported to have said that the "high level of textile activity and the reduced availability of foreign cotton indicate that the total demand for the U.S. cotton in Europe next year will be considerably higher than this year."

The U.S. Secretary of Agriculture, Mr. Ezra Benson, announced, in an official statement, made on 11th June, that the U.S. had not placed an export subsidy on American cotton this crop year and that it would not do so in the next crop year.

FIXATION OF SUGARCANE PRICES

CANE GROWERS IN SOUTH INDIA URGE ADOPTION OF DEFINITE POLICY

AS briefly reported in these columns last week, a two-day tripartite conference of U.P. sugarcane growers, U.P. sugar industry and the Government will commence at Naini Tal on the 26th inst., to consider the question of a share of the excess profits made by sugar factories in Uttar Pradesh for the cane growers. The conference is expected to be presided over by the Union Food and Agriculture Minister, Mr. Rafi Ahmed Kidwai. The deliberations of the conference and the final decisions taken thereat are bound to be watched with considerable interest by all those directly connected with the sugar industry throughout the country, not to speak of the consumer. For whatever decisions that are taken at this conference will undoubtedly form the basis for the Government of India's policy of fixing sugarcane prices. It would be appropriate, therefore, to refer, in this connection, to some of the points raised by the South Indian Sugarcane Growers' Association, in the course of a memorandum personally submitted to Mr. Kidwai at Ootacamund on Monday last week.

The Association urged the Minister to adopt a definite policy with regard to the fixation of prices for sugarcane supplied to the mills and reiterated the following two suggestions:

(1) A minimum price should be fixed for cane payable by the factory against delivery for a period of at least three years in advance of the planting season, based on the average cost of production of cane plus a reasonable margin of profit.

(2) The Government should evolve a method by which a sugar factory will pay a reasonable portion of the additional profit realised by it by the sale of sugar during the season for cane, thus enabling the cane growers to get not less than two-thirds of the sugar price.

The implementation of the aforesaid suggestions, the Association argued, would "instil a sense of security in the minds of the sugarcane grower and induce him to increase the production." The anxiety on the part of the Association to better the lot of the cane growers is clearly exaggerated. Even the very basis on which the two suggestions have been made is defective. Take, for instance, the plea for fixing a minimum price for cane for a period of at least three years. Such a policy will, by guaranteeing a certain price to the cane growers, leave the factories at the mercy of the growers. For the factories will have to pay a stipulated price for whatever quality cane is supplied to them. Surely, this will take away all incentives on the part of the cane growers to cultivate quality cane at an economic price, since they are assured of a definite price for a number of years. Moreover, how can the price of cane, the raw material, be fixed for three or more years, leaving the price of sugar, the finished product, to be determined by the law of supply and demand? Do the cane growers want the Government to protect the sugar producers also against losses by assuring a reasonable price? If the answer is in the negative, then the growers cannot certainly ask for a controlled (minimum) price for their product. After all, it must be remembered that, if the sugar industry is prosperous, demand for sugarcane will be at a high level, which means that the growers will get a fair return.

Similarly, there is no justification whatever in the cane-growers' demand for a share in the sugar industry's profit. As this question has been discussed ere now by this journal, it is not proposed to refer to it again. There is, however, one aspect of the suggestion which needs reference, namely, the plea for securing to the cane growers two-thirds of the selling price of sugar. In support of this plea, the Association observes:

"The S.I.S.M.A. (South Indian Sugar Mills Association), of which Messrs. Parry & Co., Ltd., is a member, had paid for 1952-53 an additional sum over and above the minimum price fixed by Government based on an agreement between the growers' representatives and the S.I.S.M.A. representatives. Although the growers' representatives and Parry's representatives could not reach an agreement on any formula, the latter proposed to make an additional payment for the current season also, based on the S.I.S.M.A. formula, as in the previous season. The S.I.S.M.A. is also keen that its formula should be made applicable throughout India and the Association learns that this is under the consideration of Government. The salient feature of the S.I.S.M.A formula is the payment for cane on the average recovery and the average selling price of sugar during the season on a sliding scale. This involves considerable difficulties for the cane grower who has no means of finding out, or testing the correctness of the average recovery or the average selling price. He is not taken into confidence by the factory with reference to these factors.

"Though this Association does not believe in the accusation that the factories are adopting methods by which the share of the grower is considerably reduced, it desires to state that there is vast scope for manipulation by the factories. The sliding scale of percentage is not acceptable to the growers, as it would leave very little or nil for them at certain levels of sugar price, though, at certain other levels, it would be advantageous. Therefore, the Association insists on two-thirds of the average selling price at all levels. If the S.I.S.M.A. formula is to be made acceptable, the Government should devise methods by which it can prevent any fraud being committed in calculating the average recovery and the average selling price during the season and secure two-thirds at the selling price. If it cannot be secured at all levels, the Association requests that the percentage fixed for different levels may be raised.

"The manufacturing cost allowed to the industry is too high and does not take into account the value of the by-products manufactured. The Government should, therefore, take into consideration the cost of production as fixed by the Tariff Board at Rs. 161 or so per ton in fixing the prices of cane and sugar. If this is done, the grower will get a reasonable return for his cane."

If the above suggestion of the South Indian Sugarcane Growers' Association were to be accepted, it would mean accepting the cane-growers as the major partner of the sugar industry, a partner who would be entitled to a profit whether the industry makes a profit or not and who would on no account share the loss. This fantastic demand shows to what extent the favouritism extended to cane-growers has emboldened them to ask for more favours. There is no reason why sugarcane producers alone should receive such favoured treatment when producers of other crops and the major part of consumers are not assured of even a minimum living wage.

(Concluded from next column)

and not for large-scale industries. Is the Bombay Government, therefore, justified in foisting the Co-operative Movement on the sugar industry? Secondly, by taking a part of the share capital in the proposed co-operative societies, the State Government is entering a field of activity which is not meant for State activity under either the Five-year Plan or the Government of India's statement of industrial policy. Thirdly, much has been made of the solitary co-operative sugar factory in the State. The claim that it has been a great success is open to question and must be carefully checked up by an impartial enquiry. Before accepting the Bombay Government's suggestion, the Centre must conduct, through an impartial body of research workers, a critical study of the working of this factory and compare its efficiency, its contribution to the well-being of the society at least in the area in which the factory is situated, and the taxes paid by it to the State with a factory run on joint-stock lines. One of the reasons for the high cost of sugar in India is the uneconomic and unscientific production of sugarcane in small peasant holdings. Care must be taken to ensure that to this defect is not added another by encouraging manufacture of sugar on units of uneconomic size on the ground of supporting the Co-operative Movement.

The anxiety of the Bombay Government not to disturb the status of the peasants growing sugarcane in the areas mentioned by it is quite understandable. But their status can be preserved by forming co-operatives of sugarcane producers and leaving the establishment of sugar factories to joint-stock companies. The sugarcane grown in a factory area should be earmarked for that factory and be supplied to it through the co-operatives. This will facilitate marketing of cane. Through mutual co-operation between the factory and the cane-growers' co-operative societies, the farmers can be enabled to grow better varieties of cane and to increase the yield per acre. In order to ensure that cane-growers get a share in the profits of the factory, a part of the latter's share capital may be earmarked for them. If necessary, they may even be given certain facilities for becoming shareholders in the company owning the factory without much strain on their finances. This arrangement will serve the country's interests far more effectively than establishing co-operative societies, inasmuch as it will lead to more efficient production of sugar and economic utilisation of land.

CO-OPERATION IN SUGAR MAKING

WILL IT BE A SUCCESS?

THE Government of Bombay has decided to promote 12 sugar factories on a co-operative basis by giving special support by way of contribution to the share capital. This decision is a sequel to the rapid survey of the sugarcane producing areas in the State recently undertaken by it, with a view to enabling "a systematic utilisation of the sugarcane areas in the State and facilitating submission of applications by the interested parties for licences for establishing new sugar factories and their examination by the Government." The result of the survey, says the Government, has shown that it should be possible to set up economic-sized units for the manufacture of sugar in 12 areas. The co-operative societies or bodies or sponsors who are willing to form co-operative societies for the establishment of sugar factories have been asked to apply for permission and assistance before 15th July, 1954.

In this connection, two conditions have been laid down. First, the members of the co-operative societies will have to raise a minimum share capital of Rs. 10 lakhs for the purpose. Secondly, they must be in a position to secure the sugarcane grown in the area where the factory will be set up.

The Bombay Government's decision to participate directly in the promotion of sugar factories on a co-operative basis by offering to participate in capital runs counter to the very principles of the Co-operative Movement. As a rule, co-operators should not associate themselves in an act of production as members. Emphasising this aspect forcibly in its report on small industries in India—editorial comment on the report was made in our last week's issue—the International Planning Team has stated that co-operatives must be organised and developed by those who are to be served. In fact, the Team has recommended the withdrawal of the State from co-operatives. In spite of this well-known elementary principle of co-operation, it is regrettable that the Bombay Government should have come out with a proposal to have a direct financial stake in the setting up of co-operative sugar mills.

If the Government is really anxious to augment output of sugar, it can do so in so many other ways. As readers are aware, the Government itself has been greatly responsible for the series of impediments that are standing in the way of larger sugar production by private enterprise. In fact, it has all along been treating the sugar industry as its milch cow. How else can one explain the Government's policies with regard to supply of water to sugar factories, rents on lands leased to factories for growing cane, disposal of molasses, etc., and its anxiety to net in as much revenue as possible by way of cane cess, electricity and water charges, and other taxes?

The Bombay Government's decision is tantamount to giving statutory protection for the Co-operative Movement against private enterprise. Such a policy would have been welcomed if private enterprise had not at all been in a position to deliver the goods to the community. The sugar industry in the Bombay State is certainly in a position to maintain a high level of sugar output, provided the Government removes the restrictions placed on it and reduces the heavy tax imposts. The mere fact that the Government has found it necessary to give special support to co-operative sugar factories by offering to contribute a part of the share capital is itself an indication that the Co-operative Movement will not be in a position to raise sufficient capital for investment in sugar factories.

To sum up, it is very doubtful whether the establishment of sugar factories on a co-operative basis even with the backing of the State Government will be a success. Making of white sugar is a large-scale industrial process and not a cottage industry business. It requires considerable managerial efficiency and organising ability which will not be readily available to the Co-operative Movement. The cost of sugar-making will, therefore, be very high and the consumer will have to pay dearly. One would like to know, in this connection, as to what is the Bombay Government's conception of an economic unit. Until this vital information is available, it is not possible to say whether the Bombay Government's estimate of the scope being available for 12 factories is correct.

The application of the co-operative principle was meant only for cottage and small industries

(Continued in previous column)

WAGES OF COLLIERY LABOUR

I.N.T.U.C. MEMORANDUM ANALYSED

THE basic approach of the workers of coal mines to the issues relating to their wages has been explained by the Indian National Mine Workers' Federation (I.N.T.U.C.) in a memorandum to the All-India Industrial Tribunal (Colliery Disputes), which is now enquiring into this question. According to the Federation, the real wages have, since 1947, declined by 75 per cent., even if they are computed on the basis of the C.B. Award, which is itself alleged to be grossly defective. It has demanded the inclusion of dearness allowance and other concessions, bonus, etc., in the basic wages. While determining wages payable to workers, the Federation contends, "the question of cost should not come in the way of satisfying the minimum human requirements of a worker." Proceeding, it observes: "No civilised society has any right to live on, or to take advantage of, sweated labour. It is all the more so when it is a key industry like the coal industry and when its products are the cheapest in the world."

The Federation disputes the contention that "rising wages will lead to rising prices, especially when rising wages barely satisfy the minimum needs of workers. The wages of an industrial worker, it adds, should be such as would enable him to have not merely the means for bare subsistence of life, but also preserve his efficiency as a worker. It has also objected to the present system of making railway fare, leave with wages and quarterly bonus dependent on attendance. This system, it is stated, is unjust, inasmuch as it is in the nature of a "fine instead of an incentive for better attendance."

On the basis of these considerations and taking the standard of a worker's family as consisting of three consumption units, the Federation has calculated the minimum basic wage of an unskilled worker of the lowest category at Re. 1 per day and dearness allowance at 225 per cent. of basic wages. Besides, the worker should be given a minimum attendance bonus at the rate of As. 4 per day plus one-quarter seer of free rice, a quarterly bonus at the rate of one-third of his earnings inclusive of dearness allowance. Also, the cheap grain concessions and other privileges enjoyed by the worker now, the Federation says, should be continued.

Classification of Workers

The Federation has classified workers into two categories, namely, (1) manual workers and (2) staff. The manual workers are further sub-divided into two classes, namely, (1) time-rated workers inclusive of unskilled, semi-skilled, skilled and highly skilled workers and (2) piece-rated workers inclusive of miners, wagon-loaders, trolleymen and the like. The Federation has asked for a scale of wages ranging from 4 to 10 years in the case of manual workers and 10 to 20 years in the case of clerical staff. The demand for basic wages and grades is as follows:

For Time-rated Workers:

B(1) Unskilled 'A' Re. 1-0-0/0-1-0/1-4-0 (4 years)
(Daily) 'B' Re. 1-2-0/0-1-0/1-8-0 (4 years)
(2) Semi-skilled 'C' Re. 1-4-0/0-1-6/2-0-0 (8 years)
(Daily) 'D' Re. 1-8-0/0-2-0/2-8-0 (8 years)
'E' Rs. 2-0-0/0-2-0/3-0-0 (8 years)
(3) Skilled 'F' Rs. 75-5-125 (10 years)
(Monthly) 'G' Rs. 125-5-175 (10 years)
(4) Highly Skilled 'H' Rs. 150-10-250 (10 years)

N.B.—For work underground, the above basic rate should be increased by 12½ per cent.

For Piece-rated Workers:

(a) 100 per cent. increase in the present basic rate of miners, trammers, wagon-loaders and others;
(b) a minimum basic earning of Rs. 1-8 per day for cutting by pick and loading one 36 c.ft. tub and for trolleymen; and
(c) the minimum rate of Re. 1 per ton for loading a ton of coal into wagon.

For Clerical Staff:

A. Rs. 225-15-375
B. Rs. 110-10-210-15-285
C. Rs. 55-5-105-8-145-10-195

Similar scales have been demanded for other members of the staff.

This is not all; there are also other demands. They include, among others, (1) standardisation of wages, (2) supply of uniforms and footwear at 25 per cent. cost price or cash equivalent thereof, (3) 10 paid festival holidays, and (4) free quarters and, in its absence, payment of 10 per cent. of total emoluments with a minimum of Rs. 10 per month. It has further demanded equal pay for male and female workers for work of equal value done.

This, in brief, is the summary of the demands of the I.N.T.U.C. A dispassionate study of the demands discloses certain glaring defects. The most important of them is the demand for the determination of a minimum level of wages without reference to its bearing on the cost of the product. It is true that labour should be assured of a reasonable fair wage and that such a wage should take into consideration the social, and not merely the economic, aspect of human life. But these high principles are less applicable to predominantly backward countries than to industrially advanced countries, where the burden of millions of unemployed threatening national economic equilibrium is not in existence. The problem before the wage-fixing authorities in countries which are in the process of industrial and agricultural development is to improve the conditions of paid employment effectively, without prescribing excessively liberal conditions as to wage payments and wage levels that cannot be sustained because of the pressure of labour supply, the high cost of production and the like.

Burden

It may be true that each one of the demands of the Federation inflicts only a small burden, but the cumulative effect is crushing to a degree. The coal industry is not in a very prosperous condition. India has lost 40 per cent. of its export markets in coal owing to severe competition from China, Australia and South Africa. This has led to a glut of stocks which is far larger than can be absorbed by the present pace of industrialisation. The collieries are, in fact, paying rebate to dispose of their stocks. The coal industry is not in as affluent a condition as it was a few years ago, when there was a sellers' market for coal. The number of marginal collieries has been increasing. In these circumstances, to make heavy demands on their funds is "to kill the goose that lays the golden eggs."

The demand that bonus should not be linked to attendance is preposterous, as it will only help increase absenteeism from the mines. In fact, bonus should be linked not only to attendance but also to productivity. It is high time, therefore, that trade unions in the country revised their demands and took into consideration the effect of their demands on the healthy development of the industry, in particular, and the nation as a whole. It is needless to reiterate here that trade union leaders should not seek to win the support of the workers by holding promises that cannot be realised and, even if realised, cannot be sustained. Labour leaders will do well to put forward demands which could be met by the industry without serious detriment to its economic position and also improve the workers' efficiency. After all, it is not politics, but economics that should determine the character and quantum of demands.

SYNTHETIC PETROL

The Central Government's Advisory Committee on synthetic petrol, which concluded its two-day session at Srinagar (Kashmir) on the 3rd inst. under the chairmanship of Mr. K. D. Malavia, Deputy Minister for Natural Resources and Scientific Research, recommended to the Government the setting up of a synthetic oil plant in the country, as soon as possible. The Committee considered various processes involved in the production of synthetic petrol, the size, as well as the design of the plant, its location and the experts needed to work it.

Addressing a Press Conference immediately after the meeting, Mr. Malavia disclosed that the Committee had not yet considered the question of financial outlay for such a plant; it was, however, of the opinion that it should be reduced to the barest minimum. In any case, the plant would cost, according to the Deputy Minister, between Rs. 40 and Rs. 50 crores. As regards location, Mr. Malavia stated that the Committee had considered the claims of six places in Madras, West Bengal, Madhya Pradesh and Assam, but no final decision had yet been taken.

A pilot plant will, it is stated, be set up somewhere near Dhanbad. This plant will be of considerable help in starting the industry. The synthetic petrol scheme, when implemented, will reduce India's dependence on imported petrol. The country's needs today are over 3,000,000 tons of petrol, but it is producing only about 300,000 tons. It is true that prospecting is in progress in West Bengal, but it is too early to forecast the results.

Besides reducing India's dependence on imported petrol, the establishment of a synthetic petrol industry has two other distinct advantages. The industry will open up new and wide prospects of employment for a large number of Indian technicians and engineers. Secondly, it will facilitate development of petro-chemical industry. Fortunately, India has vast reserves of low-grade coal suitable for extracting petrol. The Committee will meet again on 12th July at New Delhi to consider the question of setting up of the synthetic petrol plant in India in all its details.

TRANSFERABLE COAL WASHERY

A new coal-preparation plant, first of its kind, has recently been put to work by Simon-Carves, Limited, at Gidlow, Wigan. The outstanding feature of the plant, which was jointly designed by Simon-Carves and the National Coal Board, is that it can if necessary be dismantled and re-erected on another site, so that its working life does not depend on continuing coal supplies in the area which it serves at present. To facilitate transfer from one site to another, the use of reinforced concrete is kept to a minimum. Steel construction is used throughout for buildings and structures, which are clad with "Cellactite" sheets on the sides and are roofed with asbestos; the slurry tank and flocculation tank are built up of riveted and bolted steel plates which can be readily dismantled.

The capital cost of this plant was substantially less than that of a plant of equal capacity and orthodox construction.

The plant treats 200 tons per hour of run-of-mine coal from a number of Lancashire pits. It incorporates a Baum wash box of modern design, classifying screens, and flocculation and filter plant for fines treatment. Cleaned coal is loaded out to rail or road vehicles in grades of 6 in. to 4 in., 4 in. to 2 in., 2 in. to 1 in., and 1 in to 0 in. Shale is conveyed to a bunker for loading out to road lorries or dumpers.

The State-owned coal mines in the U.K. produced less coal, but made more money last year, than they did in 1952. This is disclosed in the 1953 report of the National Coal Board which controls the mines. The mines produced 212,500,000 tons of coal, which was 1,800,000 tons less than in 1952. The Board reported a financial surplus of £353,647, as compared with a loss of £8,200,000 during 1952. The Board still has a deficit of £13,600,000 accumulated since the coal mines were transferred to public control by the Labour Government in 1947.

The U.K. Government has turned down a suggestion that a committee should be set up to investigate the price structure of coal in the U.K. with a view to readjusting the scale of prices in order to bring money value into closer relation to the efficiency value of the coal. It is of the opinion that such an investigating committee was unnecessary at the present time. For the National Coal Board's present pricing policy is said to be designed to secure a close relationship between price and quality, although there are other important factors in determining a price.

RAISING OUTPUT OF COFFEE

CHAIRMAN OF THE COFFEE BOARD URGES COMPREHENSIVE POLICY

SEVERAL important resolutions relating to export allocation of coffee, promotion of coffee drinking in the country and institution of a research scheme in the sphere of coffee technology were adopted at the thirty-fourth meeting of the Indian Coffee Board, held in Bangalore on the 11th inst., under the chairmanship of Mr. H. Siddaveerappa, Minister for Industries, Mysore, and Chairman of the Board.

The Indian Coffee Board has, in the last thirteen years of its history, contributed much to resuscitating the coffee industry. Following the outbreak of World War II, the industry was almost in a state of collapse with the loss of the vast export market. Thanks to the stimulus of attractive prices and other incentives given by the Board, the industry is now restored to a position of comparative stability and confidence. The acreage under coffee has risen from 183.003 in 1939-40 to 240,038 in 1952-53. Production has also risen considerably from an average of 16,104 tons for the six years preceding 1939-40 to 22,443 tons for the six years preceding 1953-54. In the current season (1953-54) the output has exceeded the original estimates of the Board (27,500 tons); for it is now estimated at 29,000 tons, the highest so far recorded in India.

After recalling the valuable work done by the Board in encouraging coffee output in India, Mr. Siddaveerappa hoped that the present accent on production would give the necessary spurt for still higher production, for which there was considerable scope in this country. He was of the view, that, if the *Malnad* areas of South India, with their immense potentialities, were developed to their full extent, coffee production could perhaps double itself in a short time, thus contributing to the material prosperity of the country. It would also help solve the problem of unemployment in the country. He expressed the hope that the Plantation Enquiry Commission, which was due to start work soon, would, with the effective co-operation of the leaders of the industry, succeed in devising a comprehensive scheme for the development of the industry to its full stature. Indian coffee, he said, was a product of high quality which, besides having established a name for itself in world markets for several decades, had an expanding home market.

Although coffee production has increased, the internal price of coffee too has risen. Thus, it rose from Rs. 203 per cwt. for Plantation 'A' in 1948 to Rs. 251-11 in 1952. In fact, the average Pool auction price for this variety touched a record high of Rs. 325-15 per cwt. in September, 1952. Referring to this aspect, Mr. Siddaveerappa pointed out that coffee prices in the country had, since the time the high levels were touched, been brought down to reasonable levels, thanks to the "unrelenting" pressure, kept by the Board, on speculation. Thus, as against the average Pool auction price of Rs. 316-11 for Plantation 'A' in September, 1952, the price in December 1953 was Rs. 199-1. In the first quarter of 1954, it stood at Rs. 202-14. Coffee powder prices, which, in the latter half of 1952, had ranged between Rs. 3 and Rs. 3-12 per lb., have been now brought down to between Rs. 2-4 and Rs. 2-12 per lb. Among the measures adopted by the Board to keep down prices, Mr. Siddaveerappa mentioned the following: (1) holding of local auctions at important coffee consuming centres for the special benefit of small retail dealers and (2) the increased allotment of coffee to co-operative societies and the propaganda department for being directly retailed to the public at fixed fair prices.

These measures to bring down coffee prices during the past over a year, commendable as they are, have not brought any increase in consumption. On the other hand, there has been a significant fall in consumption from 18,383 tons in 1951 to 17,682 tons in 1952 and to 15,184 tons in 1953. Mr. Siddaveerappa hoped that with the more reasonable prices now prevailing in the Indian market, the consumption would not only reach its old level but would tend to go up still further. If the quantity of coffee released for internal consumption during the last five months, which Mr. Siddaveerappa said was over 9,000 tons, is any indication, the consumption in the current year would see a substantial increase, exceeding 20,000 tons. The Coffee Board Chairman added that the firm policy enunciated by the Union Government in the matter of exports, namely, that only the surplus coffee over and above full home requirements would be allowed to be exported, had the whole-hearted support of the Board, and that the policy was bound to keep internal prices within "reasonable limits." He seems to feel that the present prices are reasonable so far as the consumers are concerned. For, he said:

"I would like to take this opportunity to stress that coffee patrons in India have reason to be thankful to the Indian coffee industry, if they consider what the public in other important coffee consuming countries have to pay for their favourite beverage. In the U.S.A., the wholesale price of coffee comparable to our Plantation 'A' is around Rs. 500 per cwt. and the powder retail price close to Rs. 6 per pound."

From the foregoing account of the trend of production and consumption, it will be evident that even allowing for the estimated increase in home consumption, there will be still a safe gap between consumption and production, so that there is no fear of any large increase in coffee price.

The Coffee Board's revised estimate of production in the current (1953-54) season ending 30th June, 1954, is 29,000 tons, made up of 22,250 tons of arabica and 6,750 tons of robusta. Out of this crop 5,000 tons have already been sold for shipment. The pool stock as on 1st June was 20.175 tons and, allowing for an internal release of 1,750 tons per month for the next seven months, the Board has recommended an export allotment of 3,000 tons. It would appear that that quantity can be safely exported from the 1953-54 crop without affecting internal prices. The Board will, it is stated, consider the question of further exports in August next. It has placed the estimate for the coming (1954-55) season at 22,000 tons, made up of 12.500 tons arabica and 9.500 tons robusta.

The Board has decided to distribute, in respect of the 1952-53 crop delivered to the Pool, the balance of nearly Rs. 22 lakhs remaining after payment of Rs. 2-4 per point to the growers on the basis of the value of coffee delivered by them with reference to the existing price differential scale. This may increase the point value to a little over Rs. 2-5. In respect of the 1953-54 crop, the Board has declared a third payment to be made in June, bringing the total value of payments to Re. 1-5 per point, and a further payment of As. 4 per point to be made in July.

With a view to popularising coffee in North India, the Board has decided to appoint agencies to sell coffee powder in important North Indian towns. It has also been decided to arrange for preparing and serving coffee at the Coimbatore railway junction on a demonstration basis for a period of one month, so as to induce railway refreshment establishments to adopt the Board's standard method of brewing coffee. This is with a view to improving the quality of coffee served in railway stations; for, as Mr. Siddaveerappa pointed out, "a good cup of coffee is by far the best propaganda for coffee."

(*Concluded from next column*)

compared with that in the preceding two months, as also in the same month in 1953:

Total	..	157	202	308	2,616
Grand total	..	71,333	74,989	75,586	72,544

Including the output of May, the total for the eleven months of the current season, namely, July-May, 1953-54, amounts to 790,677 tons, as compared with 821,251 tons in the same period of the previous season, namely, 1952-53. The total consumption of raw jute, based on this output, may be put at 4,585,923 bales, as compared with 4,763,255 bales in the corresponding period of 1952-53.

STOCKS WITH JUTE MILLS

POSITION IN MAY BETTER

THE downward trend in stocks of jute goods with the I.J.M.A. mills, which started early in the season 1953-54, persisted till the end of May, the latest month for which figures have been released by the I.J.M.A. Thus, the stocks, which stood at as high as 136,807 tons in July, 1953, gradually declined and touched a low of 86,478 tons in May this year or a fall of 37 per cent. Compared with stocks at the end of April, they show a fall of 4,900 tons. In May, 1953, that is, a year previously, the total stocks were at 138,800 tons. On the basis of average monthly production of 72,000 tons for the 11 months of the season, the stocks with the mills at the end of May constitute about five weeks' production, and the position, from the point of view of the mills, is statistically strong and comfortable.

An analysis of stocks according to the three different types of goods, namely, sackings, hessians and others, discloses that there has been a gradual reduction in sackings in each of the four months ended May, 1954. Thus, they amounted to 71,864 tons in February, 61,407 tons in March, 57,538 tons in April and 50,029 tons in May, 1954, the lowest touched since August, 1952. The decline during the month under review is rather sharp in that the stocks have been reduced by as much as 7,500 tons. This continued decline is all the more significant, because the output of sackings had maintained an upward trend from January to April, although it was slightly lower in May, as will be shown presently. In other words, mills were able to dispose of a larger quantity of sackings than what they manufactured during the period. This was possible largely because of the steady flow of orders from Australia and a few other countries.

Stocks of hessians, on the contrary, showed a marked rise in the period, January to May, 1954. Thus, they amounted to 21,356 tons in January, 21,994 tons in February, 29,588 tons in March, 32,292 tons in April and 34,846 tons in May, 1954. This rise in hessians, despite a fall in their monthly output since March, 1954, reflects the sluggishness in the offtake of hessians, especially by the U.S.

Accumulation of other types of goods with the mills is, however, better, in that the stocks at 1,603 tons in the month under review, are about 300 tons less than those at the end of March, 1954, although they are more or less the same as in the previous month, namely, April, 1954.

The table below gives the stock position of the various types of jute goods in each of the three months ended May, 1954, as also in May last year:

(In tons)

		As on 31st May, 1954	As on 30th April, 1954	As on 31st Mar., 1954	As on 31st May, 1953
Hessian	.. ..	24,454	31,995	29,298	46,792
Sacking	.. ..	49,730	57,250	60,697	86,864
Others	.. ..	1,602	1,618	1,905	1,924
	Total ..	85,786	90,890	91,900	1,35,580
Hessian	.. ..	322	297	290	947
Sacking	.. ..	390	236	710	2,262
Others	.. ..	1	8	15	..
	Total ..	692	536	1,015	3,209
	Grand Total ..	86,478	91,426	92,915	1,38,789

The output of jute manufactures in May, 1954, was 71,333 tons or about 3,600 tons less than in the preceding month. The fall reflects the lower output in all the three categories of goods. The output of hessians at 28,985 tons was lower by about 3,000 tons and represented the continuation of the downward trend which started in March, 1954. In regard to the output of sackings, the upward trend, which commenced in January onwards, received a check in the month under review. The production of sackings in January this year was 33,349 tons. After moving up slightly to 33,995 tons in the following month, the output rose sharply to 38,114 tons in March, 1954. The improvement persisted in April also when production amounted to 40,456 tons; a recession took place in May, when production declined to 39,462 tons.

On the basis of an output of 71,330 tons of jute manufactures, consumption of raw jute during May may be placed at 413,714 bales, as compared with 434,936 bales in the previous month.

The table below gives the output of the different categories of goods in May, 1954, as

Rangoon

The green and lush 'land of the pagodas' is still very much a land of tradition. Rangoon's dove-shaped 'sampans' have plied on the Irrawaddy for centuries. The people adhere to their age-old religion, culture and costumes — even play the ancient game of 'Chin Lon' with the utmost skill.

Motorists of Rangoon also follow a tradition — that of filling up with Triple-Action Mobiloil at the sign of the Flying Red Horse.

Like motorists throughout the world, they know that Triple-Action Mobiloil Saves on Wear • Saves on Repairs • Saves on Gasoline ... and that

Mobilgas with S-54
is the best gasoline from any pump

Mobiloil

MADRAS-3 AND UMRETH (BOMBAY)

NON-FERROUS METALS INDUSTRY IN INDIA

WIDE GAP BETWEEN OUTPUT AND INSTALLED CAPACITY

A NUMBER of problems facing the non-ferrous metals industry was subjected to a review by Mr. J. N. Bhan in the course of his presidential address to the annual general meeting of the Indian Non-ferrous Metals Manufacturers' Association, held in Calcutta last week. The chief problem is the surplus capacity in certain sectors of the industry. The production of non-ferrous metal in 1953, notwithstanding some gains made over that in 1952, in some cases, had been much below the installed capacity. The production of virgin lead was a little higher at 141.2 tons in 1953, as against 94.3 tons in 1952, and that of virgin aluminium at 313.2 tons, as against 297.2 tons. The output of virgin copper and antimony was, however, substantially lower; the former amounted to 410.0 tons, as against 506.6 tons, and the latter to 10.9 tons, as against 15.1 tons. A comparison with installed capacity discloses a big gap, except in the case of aluminium. It may be noted here that the installed capacity of lead is 500.0 tons, aluminium 333.3 tons, copper 600.0 tons and antimony 58.3 tons. So far as semi-manufactures are concerned, the output of bare copper conductors improved not only in terms of the previous year, but even over that of 1951. Brass and copper pipes and tubes also disclosed increased production but the total turnover was negligible. Among the semi-manufactures, which were able to improve over their performances in 1952, were brass and copper sheets, circles and strips, aluminium sheets, circles and strips, and lead sheets. In the case of aluminium conductors, there was not only a substantial improvement in output, but also an increase in installed capacity. The producers of aluminium are increasing their installed capacity and devoting their energies in building up a diversified and wider market for their products.

Causes for Lower Output

Thus, although the trend of output in certain cases was upward, it still lagged far below the installed capacity. What is this gap due to? According to Mr. J. N. Bhan, the important factors responsible for lower production are reduced demand, competition from ordnance factories, inadequate supplies of raw ore in the case of antimony and labour troubles. Apart from a prolonged strike that affected the production of copper substantially, go-slow tactics and indiscipline had been on the increase. The trade union leaders were unresponsive, despite the reasonable and sympathetic attitude of employers towards the wishes and aspirations of labour.

A drawback of the non-ferrous metals industry is its dependence on foreign countries for supplies of raw material. Consequently, its production is dependent on metal supplies from the world markets. Fortunately, a fair measure of stability has come to prevail in the metal markets of the world. While it would be rash to prophesy on the future course of metal prices, depending as they are on the political conditions of the world, as pointed out by Mr. Bhan, it is reasonable to expect, in the measurable future, the continuance of the present stability. Meanwhile, Mr. Bhan urged that efforts should be made to prospect and exploit occurrences of copper, lead, antimony and other minerals. It is gratifying to note that, shortly, the Government of India will carry out a comprehensive exploration of the mineral reserves in India.

Export Policy

Mr. Bhan expressed his thanks to the Ministry of Commerce and Industry for its policy in regard to import and export policies, which have been helpful. He said that, as the virgin metals were already on the O.G.L., it should be possible to import adequately the quantity of metals required. He disapproved of the recent removal of export of scrap from the O.G.L. and placing it on the licensing list. He characterised the import policy relating to semi-manufactures as "well conceived," as it had assured import of only such items for which indigenous manufacturing capacity was either non-existent or insufficient. He also expressed his approval of the export policy which provides for export of semi-manufactured products in excess of indigenous demand and of materials which cannot be reclaimed or recovered indigenously. Proceeding, he observed: "Apart from the advantage that this policy has of increasing production at home and encouraging the manufacturers to seek out new markets in adjacent countries, this is in line with the larger objective of building up a healthy metal market in India, for which the prime condition is the free inflow and outflow of metals to the best possible extent."

Speaking on the question of tariff protection, Mr. Bhan advocated higher import duties, with a view to sustaining indigenous production and employment; he also favoured a judicious application of import control itself as a means of protecting domestic industries, for he felt that for an underdeveloped country like India, where industries were mostly dependent on the home market, such would be a perfectly legitimate form of giving protection. He substantiated his plea by pointing out how, even in the U.S. which is a highly industrialised country and which is itself a supplier of metals to world markets, the Tariff Commission had recently recommended higher import duties to protect the domestic production of several non-ferrous metal industries.

Ordnance Factories

While the import and export policies have been of considerable assistance to the industry, some difficulties have arisen from the activities of the ordnance factories which have, in certain cases, entered into competition with the units of private industry. Regretting this state of affairs, the President suggested that ordnance factories, if they should at all produce for the civil market, should merely concentrate on items not manufactured by the private sector.

One more aspect which was referred to by Mr. Bhan was the Government's purchase policy. While undoubtedly the Government's officers are endeavouring today to obtain Governmental requirements as far as possible from local manufacturers, there are still occasions when the purchase branch of the Government procures its requirements from foreign countries because of lower quotations. The President suggested (1) that indigenous manufacturers should be called upon to explain their difficulties about quoting lower prices, before orders were cross-mandated abroad, and (2) that purchases should be made only from factories that were well equipped for the manufacture and testing of metals.

INTERNATIONAL TIN AGREEMENT

The future of the International Tin Agreement depends upon France's decision to ratify it. For, if the Agreement drawn up in December last at Geneva is to become effective, nine consuming countries holding together at least 333 votes and producer countries holding together at least 900 votes, out of the thousand votes allocated to each, should ratify the Agreement by the end of this month. Reports from London indicate that all producer countries, except Indonesia and Thailand, have already signed the Agreement or have indicated their intention to do so. The signature of Indonesia, which accounts for 21.5 per cent. of world output and which has 213 votes, is vital to the success of the scheme; its acceptance of the pact is, however, not seriously in doubt.

The problem is on the consumer side of the Agreement. Among the consumer countries, those which have already ratified the Agreement are India, the U.K., Belgium, and Netherlands. Canada has indicated that it would sign it. It is reported that Australia's signature will be appended shortly. This leaves three important European consumers, namely, France, Germany and Italy and a number of other smaller consumers yet to sign. The ratification of the Agreement by France, which controls 55 votes, is doubtful, as French consumers are not happy about the ceiling price of £880 per ton of tin written into the Agreement; they want this to be reduced to £800 per ton. There is also hesitation to sign the Agreement on the part of Germany and Italy. But Germany has stated that it would ratify the Agreement if the majority did. Italy, on the other hand, is reported to be in favour of signing the Agreement, provided France and Germany did so.

CONFERENCE ON ATOMIC ENERGY

World-wide developments in the peaceful uses of atomic energy will be reviewed at a conference of nuclear engineers to be held at the University of Michigan end of this month. The conference will be held under the auspices of the American Institute of Chemical Engineers, which recently formed a Division of Nuclear Engineering to work on peaceful atomic uses. Simultaneously, the University will hold a conference of editors and scientists with a view to discussing the social, industrial and political implications of nuclear energy. The subjects to be discussed include the role of government and industry in nuclear power development, the utilisation of isotopes and radiation and the social effects of nuclear energy.

INDIAN AIRLINES

PROGRESS DURING SECOND HALF OF 1953

THE progress report of civil airlines in India during July-December, 1953, discloses that there was a slight fall in the number of passengers and the amount of freight carried both on scheduled and non-scheduled services, as compared with those in the previous half-year. The amount of mails carried, however, disclosed a slight increase. The scheduled services operated by the Indian Airlines Corporation and Air-India International during July-December, 1953, covered an unduplicated mileage of 27,046. About 9.6 million miles were flown on these services and 190,315 passengers, 40.7 million lbs. of freight and 4.5 million lbs. of mail were carried. These compare with 9.6 million miles flown and 213,677 passengers, 44 million lbs. of freight and 4.4 million lbs. of mail carried during the previous half-year. The overall load factor achieved on the scheduled services was lower at 65.2 per cent. in the second half of 1953, as compared with 66.5 per cent. during the first half of the year.

Besides Air-India International and the Indian Airlines Corporation, five Indian air transport companies operated non-scheduled services during the period under review. Nearly 2.1 million miles were flown on these services and 41,842 passengers and 41.8 million lbs. of freight were carried during July-December, 1953. As against this, 2.2 million miles were flown, 53,057 passengers and 46.8 million lbs. of freight were carried during the first half of the year. Thus, on scheduled as well as non-scheduled services, 11.7 million miles were flown and 232,157 passengers, 82.5 million lbs. of freight and 4 million lbs. of mail were carried during the period under review. The corresponding figures for the previous half-year were 11.8 million miles, 266,734 passengers, 90.8 million lbs. of freight and 4.4 million lbs. of mail.

Night Air Services

The night air services continued to operate satisfactorily during the period under review, so far as freight and mails carried were concerned, but there was a sizable decline in the number of passengers carried. Thus, 11,610 passengers travelled by this service and 603,379 lbs. of freight and 1,642,310 lbs. of mails were carried by them, thereby giving a daily average of 63 passengers, 3,279 mails of freight and 8,926 lbs. of mail. These compare with 13,343 passengers, 524,156 lbs. of freight and 1,564,396 lbs. of mails, which give a daily average of 74 passengers 2,896 lbs. of freight and 8,643 lbs. of mail.

A notable development of the period under review was the commencement of a direct air service between Delhi and Kabul on the Delhi-Amritsar-Lahore-Kabul-Kandahar (with non-traffic landing at Lahore) route from 7th November, 1953. The Bombay-Delhi non-stop night service was converted into an evening service from 17th December.

Air-India International, which operates long-distance international air routes, placed orders last year for five additional Super Constellation aeroplanes of the latest type. One of these arrived on the 6th inst. and has commenced the London service via Cairo, Geneva and Paris from today. Air-India International proposes to introduce a new service to Singapore shortly. This will be followed by another to Japan.

Integration

The Indian Airlines Corporation has set about the task of integrating the activities of the eight air companies, which it has replaced. This Corporation has already reorganised its operations on the basis of a strong centralised administration and a rationalised network of air services and engineering bases.

The total number of aerodromes at the end of December, 1953, was 78. The aerodromes at Cooch-Behar and Balurghat were taken over by the Civil Aviation Department from the Government of West Bengal on 10th July, 1953.

As many as 642 aircraft held current certificates of registration at the end of last year. Of them, 192 aircraft held current certificates of airworthiness.

Among other notable features of the year 1953 were the establishment of an aeronautical tele-communications station at Pathankot and the completion of the installation of aeronautical radio navigation and communication facilities at North Lakhimpur, Kamalpur, Kohwai, Belonia and Kailashahar.

NEW PRODUCTS AND PROCESSES

Electronic Apparatus For Cytological Research

A UNIQUE electronic machine in the aid of cancer, claimed to be the first of its kind in the world, has been designed by two Swedish scientists, Professor Holger Hydén and Sven Bourghardt, of the Medical College of Gothenburg. By means of the new apparatus, the structure of the cells and the changes taking place within the cell can be studied with greater precision than hitherto. Thin shavings of cellular growth consisting of upto 200 cells are split up into 12,000 "control points," the machine measuring and tabulating every point. The entire process takes but four minutes.

Aluminium School Building

A new type of permanent aluminium building which should prove of great interest to all Asian countries is to be featured at the British Trade Fair to be held in Baghdad from autumn 25th October to 8th November. The exhibit is a fully-equipped school building developed by a British firm as a result of an extensive survey carried out in tropical and sub-tropical areas. In designing the building—known as Mark 3—particular attention has been given to transport problems, and the structure can be packed in the simplest and most economical way to minimise sea-freight costs. The school building is the latest development of a form of construction that has been successfully tested in varying climates, both in the United Kingdom and overseas.

New British Tractor

A new British tractor by name "Platypus Bogmaster" is expected to be of great value in large-scale paddy cultivation, as well as for swamp-land reclamation. Originally designed to reclaim bog-land in Ireland for sugar-beet growing, it has the low ground pressure of only 1.25 lb. per square inch for its total weight of just over 3½ tons. The tractor has a Perkins P-4 engine. It has three forward gears and one reverse, each with two ratios. The track plates are 32 inches wide.

Iodinated Groundnut Cake

Studies on the iodination of waste proteins, undertaken at the Biochemistry Department, University of Madras, under a scheme of research financed by the Council of Scientific and Industrial Research, have resulted in the production of iodinated groundnut protein with thyroglobulin-like activity. Feeding trials on dairy cows have been undertaken with a view to studying quantitatively the increase in milk yield. Iodination of proteins under proper conditions leads to the formation of artificial thyroglobulins which, like natural thyroglobulin isolated from the thyroid glands of animals, have the property of stimulating metabolic activities. Iodinated casein, for instance, stimulates milk yield when fed to animals and iodocasein is marketed in Western countries and made available for the feeding of dairy animals. Iodinated groundnut cake can be produced at a cost of about Rs. 9 per lb. Further work is on hand with a view to reducing the cost of production and increase the thyroxine content of the iodinated product.

Use of Insect-killers in Fertiliser

The use of insecticides in combination with fertilisers is expected to expand remarkably among farmers of the United States. Tests conducted by scientists of the U.S. Government and of State agricultural stations during the last two years have achieved such successful results that a number of manufacturers are now ready to produce insecticide-fertiliser combinations on a large scale. Last year the mixtures were found effective in controlling northern corn rootworms, wireworms, seed corn beetles, grubs and other soil insects that damage corn (maize). The combined fertiliser and insecticide was applied at the time the corn was planted. The corn thus treated was healthier and more productive than untreated corn. In the North Central State of Ohio, extensive tests also showed that clover root borers can be controlled by applying a mixture of insecticide and fertiliser at the time red clover is seeded. Hay from the treated fields was considerably better than average, with second cuttings earlier and larger. The clover was expected to hold over to a second cutting year, whereas reseeding had been necessary before. The insecticide can be sprayed on the crop fields, as well as applied with the fertiliser. However, farm leaders expect the mix to be more popular because it makes both applications possible in one process.

Rollerless Churn Kneader

A new type of churn kneader with a vat of approximately elliptic cross section, the prototype of which was first thoroughly tried out by dairy farmers in the neighbourhood, is being produced by Messrs. U.P. & Th. Woudstra, Fabriek van Zuivelwerktuigen, Oppenhuizerweg, Sneek (Holland). This machine, a patent application for which has been filed in various countries, is now also available for export. A special feature of the machine is that, by means of a hydraulic variator, the machine can be set to any desired number of revolutions without being stopped to adapt the speed to the churning process. The absence of rollers, the small number of cogwheels, the carefully balanced vat and the liberal use of ball bearings make it possible for the machine to be driven by a motor of 10 h.p. only, at a capacity of 6,000 litres (1,320 gallons) of milk (about 2,700 litres—600 gallons) of butter. The moisture content being under control, the machine can turn out a product with a highly uniform degree of moisture. Churning and kneading thus take very little time. The vat supplied with the churn is of wood, but can be made of stainless steel to order.

INLAND WATER TRANSPORT IN INDIA

PLEA FOR RAPID DEVELOPMENT

[By A. SITARAMAN, M.A., A.M.Inst.T. (Lond.)]

ALL sound planning in transport must rest upon some sort of projection of the past as well as foresight of likely needs and developments of the future. The avowed objectives of our national transport policy are to secure the maximum co-ordination of all the available forms of transport and employ them to the best advantage of the country, each in its own sphere of effective service. The economic and social life of a nation changes and the changes today are more marked than in any previous period of history. We are in the fourth year of the Five-year Plan period. The implementation of the development schemes in the various sectors has thrown a vastly growing demand for transport and resonant complaints backed by voluble public opinion are not infrequently being made in the Press and on the platform about transport bottlenecks hampering the scheduled movements of basic raw materials of industries to the manufacturing sites.

The railways continue to occupy a predominant position in our transport system, carrying a much larger volume of traffic than that carried by other means of transport. Considerable progress has no doubt been achieved in carrying out the rehabilitation and development programmes of the railways under the Plan. Next in importance to the railways in the country's transport system is the mechanical road transport. During the past five decades, mechanical road transport has, indeed, made a spectacular progress in this country, but the progress cannot be considered to have been very orderly. The control and regulation of motor transport in the initial stages has been narrowly conceived, not on the basis of a well-thought-out plan but only to bolster up the railways in which a vast capital expenditure has been sunk by the Government. The individualistic tendencies pursued by the two forms of transport, rail and road, in their own interests characterised the developments till the period before the outbreak of World War II.

In the schemes of economic development to be implemented under the national Five-year Plan, there is, however, a growing realisation of the effective role which each form of transport can play to serve the national interest and economy. Targets have been prescribed in the Plan, making substantial addition to the road mileage, covering national highways, State roads and lower grade roads in the rural development schemes so as to facilitate the rapid expansion of motor transport services. Road passenger transport undertakings have been formed with State Governments and railways participating in the capital investment and the State Transport Services are left to be managed by statutory corporations. There is still vast scope for the development of mechanical transport services in the private sector and a policy designed to encourage actively the operation of mechanical transport in the private sector, will ease the unsatisfied demand for transport to a great extent.

It is only our inland water transport system that has not kept pace to any extent and been allowed to languish. In fact, it has remained, so far, the so-called Cindrella of the transport services. Transport by water was undoubtedly the earliest attempt at movement for the obvious reason that it could be undertaken with less energy and much smaller appliances and equipment than any other **means of conveyance. This** is borne out by the fact that the ancient civilisations flourished on the banks of rivers and inland seas. All the ancient towns of importance, so far as recorded history shows, were situated on the water's edge. Carriage by inland waterways is essentially cheap, because of the comparatively small amount of effort involved and the fact that bulk conveyance is always used and the materials and appliances used are not dear. On the other hand, as a means of carriage, it is slow and few improvements of any significance have been adopted for the last hundred years or so. Motive power is reduced in many cases, as crafts are able to take advantage of the tidal flow to an extent not possible with other means of carriage. The traditional material for the construction of inland waterway boats is wood and this has the advantage of being exceptionally durable. Modern construction, however, tends definitely towards the use of steel, as a better shaped vessel results and one having an increased capacity. A further advantage of steel-belt craft is that there is much less liability to fire. The construction and upkeep costs of permanent way and signalling are also not present to any great extent. The permanent way is free of all cost to anybody and it is a gift of nature needing very little outlay.

Natural advantages for the development of water transport in India are very great, but the commercial potentialities have not been exploited to the full to enable it to render useful service in a united transport effort. Most of the important rivers, wherever they exist, are perennial, and flow through the plains, a factor which eliminates the provision of costly equipment and initial costs for adaptation to navigation. In the Deccan and South India, the rivers are not easily navigable, owing to the ruggedness of the peninsula, but over small stretches of the river mileage, navigation exists on the Godavari and Krishna rivers. A few canals in India were solely built for navigation. The important ones are the Eastern and Circular canals in Bengal, the Orissa Coast canal and the Buckingham canal running parallel to the east coast from the Krishna delta through Madras.

At the present time, India has an approximate length of 5,144 miles of navigable waterways distributed over the various States. U.P. covers 745 miles, Bihar 715 miles, West Bengal 777 miles, Assam 920 miles, Orissa 287 miles and Madras the remaining 1,700 miles. Out of this, 1,762 miles are navigated by steamers. Navigation is possible all the year round over a length of 1,522 miles. The most important inland waterways are concentrated in the north-east, particularly in the States of Assam, Bihar and West Bengal. The Ganges and Brahmaputra rivers are the central arteries in the north-east waterway system and provide an important means of transport to those States and East Pakistan through which they pass in reaching their main outlet to the sea. Over the major inland water-routes, several steamship companies, as well as individual boat-owners, provide year-round shipping facilities.

Before the advent of the railway era, inland water transport was highly developed and the principal rivers and canals in the plains of North and North-East India were the important highways of commerce and large tonnage of merchandise, involving significantly long hauls, was carried in the crafts. With the construction of the railways in 1855, the inland navigation began to decline, as the British Government at the time was pursuing a bold policy of railway development, giving every assistance in the expansion of this means of transport. The inland water-transport system having then been in the initial stages of mechanisation, could not hold its own against the competition of railways in regard to security, safety and speed, notwithstanding its comparative cheapness. This was the first blow arresting its development in parallel with the railways. The next setback came in when big irrigation schemes were undertaken and large-scale withdrawal of water was effected from the meagre supplies in the rivers to feed the newly dug out canals for land irrigation. Inland navigation has been a provincial subject, and the waterways seem to have been regarded as a mere "stand-by" by the Government of the time, rather than as an important line of communication, as no effort in terms of man-power and money was made to keep then in efficient condition. This attitude of indifference contributed to a further deterioration of the inland waterways. Thus it is that the water-transport system suffered from the menacing neglect of several years, without a fair chance being given to rise to its full stature and prove its potential value.

With the planned economic development of the country set in motion, there is a greater recognition of the part which the inland waterways can play usefully in the transport system of the country and the objective is to restore it to its rightful place in the service of trade and industry. Powers have been taken in the present constitution by the Central Government to control navigation on inter-State rivers and national waterways. The Five-year Plan provides for a number of multipurpose river-valley projects, including schemes for inland navigation. A rational approach is being made for the utilisation of the water resources of the rivers, treating them from the source to the mouth on a multi-purpose basis, including hydel power, irrigation and navigation. The Central Water and Power Commission has been set up, to assist in the co-ordinated development of the water resources

(Continued on page 1201)

CARRYING MESSAGE OF INSURANCE TO VILLAGES

MR. H. K. SEN'S PLEA AT PATNA INSURANCE INSTITUTE

ALTHOUGH Indian insurance has made rapid headway in recent years, the fact remains that insurance, by and large, continues to be an urban habit, the beneficiaries being largely residents in towns and cities. A great deal of change—and a welcome change, at that—is certainly taking place in the economic standards of the rural sector of the country. But no attempt has so far been made to spread the gospel of insurance among the rural folk. It is, therefore, gratifying to note that, when Mr. H. K. Sen, President of the Indian Insurance Institute, Patna, addressed the recent annual meeting of the Institute, he laid special emphasis on the need for carrying the "message" of insurance to the remotest villages and farmyards through the medium of newspapers, handbills and leaflets.

Apart from the fact that insurance is a service that can be more economically given only when it is spread over as wide an area as possible and more and more persons are allowed to benefit from it, there is a powerful economic reason why insurance should now endeavour to establish itself in the villages. The urban middle class, which has been the mainstay of insurers till now, is, as Mr. Sen pointed out, "too hard hit today to afford any proper measures of insurance." The income of the traders, the artisans and the small industrial producers in the villages, on the other hand, is slowly moving up. But these classes have always been less insurance-minded than the urban residents. Mr. Sen rightly suggested that there was need for an "intensive propaganda" and "collective advertising," in order to make these rural classes more insurance-conscious than they are. Although this task is by no means easy, it is at the same time true that the rural areas are bound to become a steady source of insurance business once their interest in the subject has been aroused properly.

Villagers are Alert

Perhaps, insurers are exaggerating the difficulties of carrying the message of insurance to the rural areas and also the innate conservatism of the villagers. In this connection, it is interesting to note what the International Planning Team (Chairman: Mr. Sven Hagberg) which, at the instance of the Government of India and through the courtesy of the Ford Foundation, toured this country investigating the problems of India's rural industries, was, struck by the willingness of the rural communities to benefit from advanced industrial methods. The Team quotes an instance to show what a wide field there is in villages for insurance work. It says:

"The Team met with a life insurance salesman who had found that the rural market exceeded the urban in his areas for prospects with cash willing to buy insurance. He had worked out a route on roads where he could go by a bicycle and was soliciting villagers to purchase life insurance. The results had been so gratifying that he had given up his city clientele and was concentrating on the villager. Enough evidence of this nature was found from other salesmen, merchants and bankers to convince the Team that the villagers have increasing amounts of cash and will spend it for worthwhile purchases, including life insurance and other methods of investments for savings."

It should, therefore, be clear that the rural areas need not remain a closed market for insurers for all time to come. If facilities are provided, and if the message of insurance reaches the areas, insurers are bound to see, in course of time, an increasingly prosperous source of business in this sector of Indian economy. It is, of course, necessary to see that the business gained is "solid" business, in the sense that it will not lapse. This problem, is, however, common to both rural and urban sectors. Mr. Sen did well to emphasise the magnitude of this problem. The total business in force of Indian insurers in the beginning of 1943 was Rs. 251 crores. New business effected during the 10 years ended 1952 was Rs. 1,191 crores. The total business in force on 31st December, 1952, was, however, Rs. 790 crores. The outgo by claims, death and maturity, during this 10-year period, was Rs. 83 crores. These figures show that a colossal sum of Rs. 564 crores went out of the insurers' books through lapses, surrenders and paid-ups. He estimated that a sum of at least Rs. 10 crores must have been lost by lapsed policyholders during this period. Since insurers spend considerable sums in procuration of new business, lapsed policies mean no return to them. A lapsed policy does not also help the agent, who loses the renewal commission. It is, of course, a total loss to the policyholder.

Administrative Problem

Both in rural or urban areas, it is necessary for insurers to ensure that a policy, once taken out, is allowed to remain on the company's books. Although the problem is, as stated already, common to both urban and rural residents, it presents, perhaps, certain additional difficulties in rural areas. This is because an insured person in a village has less opportunities to consult an insurance agent about life assurance matters than an insured person in a town. This problem can be effectively tackled only when there is a country-wide network of efficient and honest insurance agents. Mr. Sen stressed the need for attracting "young and energetic men" to take up insurance as a career and also the need, on the part of insurers, to recognise and reward talent. As regards work in rural areas, the men chosen should have a rural bias and ought to possess a rural background. Perhaps, the system of training, too, will have to be different for the men who have to work in the villages.

Again, the system of insurance administration, too, will have to be suitably altered, if rural communities have to take a larger interest in insurance. The suggestions which Mr. Sen made in connection with preventing lapses, have a certain relevance here. He suggested that insurance administration should be decentralised, giving "adequate powers to the branches and regional offices." He aded: "It may also be necessary to increase the number of men trained in the technical side of the business in these branches and regional offices to which agents and field workers could look forward for proper guidance." If this suggestion were implemented, it would improve insurance salesmanship in towns and villages and would, at the same time, help check the evil of lapses.

STATE INSURANCE

The Employees' State Insurance Scheme will be introduced in Nagpur from 26th June and the Madhya Pradesh Government has adopted a service system of medical benefit for the purpose. Under the service system, as opposed to the panel system, the staff will be full-time medical officers. Five State Insurance dispensaries are being opened in Nagpur and they have been so located that no worker will be required to walk more than one mile from his home to get treatment. Each Insurance medical officer, it is stated, will have on his panel 3,000 insured workers. Those workers who required hospitalisation will get admission in the Medical College Hospital and the Mayo Hospital on a priority basis. Transport to hospitals will also be free of cost.

Total	Rs.	79,78,22,199

B. N. PURI,
General Manager.

RESULTS OF NEW INDIA SATISFACTORY

INCREASE IN PREMIUM INCOME

THE New India Assurance Company, Ltd. (General Manager: Mr. B. K. Shah, Bombay) has earned the well-merited title of being a most progressive general and life office in the country; it has also a growing reputation for prompt and efficient service in the many foreign countries where it operates. The latest report and accounts of the Company, which refer to 1953, show that the Company is maintaining a very satisfactory rate of progress. The total premium income in the general department increased from Rs. 385.95 lakhs in 1952 to Rs. 389.63 lakhs in 1953, while, in the life department, the new business for the year under review failed to hit the Rs. 20-crore mark only by a few lakhs, the actual new business being Rs. 19.91 crores, as against Rs. 18.04 crores in 1952. All the general departments again worked on a profitable basis; the marine section, which played the truant in 1951, yielded a modest profit in 1952 and 1953. Despite the increase in overall premium income and the fact that expenses have been held within reasonable bounds, the profit from the general accounts, together with shareholders' share of life profit, was somewhat lower at Rs. 43.58 lakhs; this reflects partly the increased cost of claims. The dividend has, however, been maintained at 13½ per cent.

Turning to individual accounts, it is seen that, while the premium incomes in the fire and miscellaneous accounts have moved up, there was a decline in the premium income of the marine department. The overall increase in premium income, to which a reference has been made already, is due to the fact that the Company could write a larger volume of business overseas. Thus, while the premium income from the Company's Indian business declined from Rs. 91.82 lakhs to Rs. 86.57 lakhs in 1953, its foreign business improved, between the two years, from Rs 294.13 lakhs to Rs. 303.06 lakhs. The salient features of the Company's general accounts, the fire, miscellaneous and marine accounts, are summarised below:

(Rs. in lakhs)

	1953	1952	1951
Fire Department			
Net premiums	283.32	229.28	228.83
Net claims	100.50	88.80	78.00
Commission and expenses	105.19	106.79	85.26
Reserve	98.00	96.00	94.00
	(42%)	(41.9%)	(42.1%)
Additional reserve	61.00	55.00	56.00
Profit	26.93	33.39	34.85
Miscellaneous			
Net premiums	72.84	65.52	57.71
Net claims	37.04	34.17	25.79
Commission and expenses	19.71	19.28	16.64
Reserve	29.00	27.00	24.00
	(40.1%)	(41.2%)	(41.6%)
Additional reserve	26.00	24.00	22.00
Profit	12.68	8.17	4.92
Marine			
Net premiums	83.97	91.15	82.70
Net claims	74.21	64.35	63.82
Commission and expenses	18.79	22.42	14.07
Reserve	84.00	91.00	83.00
	(100%)	(99.8%)	(100.4%)
Additional reserve	41.00	41.00	41.00
Profit (+) or loss (—)	1.88	0.31	—2.76

It will be seen from the table above that, despite the increase in business in the fire and miscellaneous sections, as reflected in the net premium incomes, there has been no significant variation in the item "commission and expenses." If the profit has nevertheless declined in the fire department from Rs. 33.39 lakhs to Rs. 26.93 lakhs, it is due to the fact that the cost of claims has increased. It was 43.1 per cent. in the year under review, as against 38.5 per cent. in 1952 and 34.9 per cent. in 1951. In the miscellaneous section, the cost of claims declined slightly from 52.2 per cent. to 51.2 per cent. This fact, coupled with the substantial increase of Rs. 7 lakhs in premium income, is responsible for the sizable improvement of Rs 4.51 lakhs to Rs. 12.68 lakhs that has taken place in this department's profit. The net premium income in the marine department declined from Rs. 91.15 lakhs to Rs. 83.97 lakhs. At the same time, there has been a steep increase in the cost of claims which has moved up from Rs. 64.35 lakhs (70.6 per cent.) to Rs. 74.21 lakhs (88.4 per cent.). This, however, is the general experience of all marine insurers, who find that, while competition remains keen, the cost of claims continues to rise.

New India's life business is increasing from year to year. The Company has produced a series of descriptive leaflets, setting forth the policy conditions and premium rates which are both attractive and keenly competitive. During the year under review, the Company's new life business aggregated Rs. 19.91 crores, as against Rs. 18.04 crores in 1952. The total business in force, as at the end of 1953, was Rs. 95.17 crores, as compared with Rs. 83.85 crores at the end of the previous year. A notable feature of the working of this department is the decline in expense ratio which was 28.1 per cent., as against 29.3 per cent. in 1952. The Company's life insurance fund has improved by over Rs. 3 crores to Rs. 20.46 crores.

The profit and loss account has been credited with the profit from the fire, miscellaneous and marine accounts which, together with the shareholders' life profit account, makes in all Rs. 43.58 lakhs. After providing for other income and outgo, a balance of Rs. 43.59 lakhs has been carried to the profit and loss appropriation account, which, together with the balance brought forward from the previous year (Rs. 0.94 lakh), forms a disposable total of Rs. 44.53 lakhs. Out of this sum, the Directors have transferred Rs. 19.36 lakhs towards reserve for taxation and strengthened the general reserve and the dividend equalisation reserve by Rs. 9 lakhs and Rs. 1 lakh, respectively. The payment of the recommend dividend of Rs. 2 per share will absorb Rs. 14.24 lakhs, leaving Rs. 92,900 to be carried forward to the current year's accounts.

The Company's financial position continues to be strong as ever. As the table above shows, the Company has built up reserves far in excess of the customary 40 per cent. basis in the fire and miscellaneous sections and the 100 per cent. basis in the marine section. Besides a capital of Rs. 1.07 crores, the Company has reserves which aggregate Rs. 25.42 crores, inclusive of fire fund (Rs. 1.59 crores), miscellaneous fund (Rs. 0.55 crore), marine fund (Rs. 1.25 crores) and life fund (Rs. 20.46 crores).

HEALTH SCHEME FOR GOVERNMENT SERVANTS

The Contributory Health Scheme for Government servants in New Delhi, sponsored by the Central Government, is expected to come into effect on 1st July, 1954. The scheme, which is proposed to be implemented through 16 dispensaries in different parts of Delhi, will utilise the services of 44 medical officers. It is estimated that 2½ lakhs men, women and children will be covered by the scheme. Addressing an informal meeting of doctors and health personnel under this pilot scheme of the Health Ministry, held recently in New Delhi, the Deputy Minister for Health, Mrs. M. Chandrasekhar, said that salaried personnel had been employed under the scheme and they had been debarred from private practice so that they might give "undivided attention" to their work.

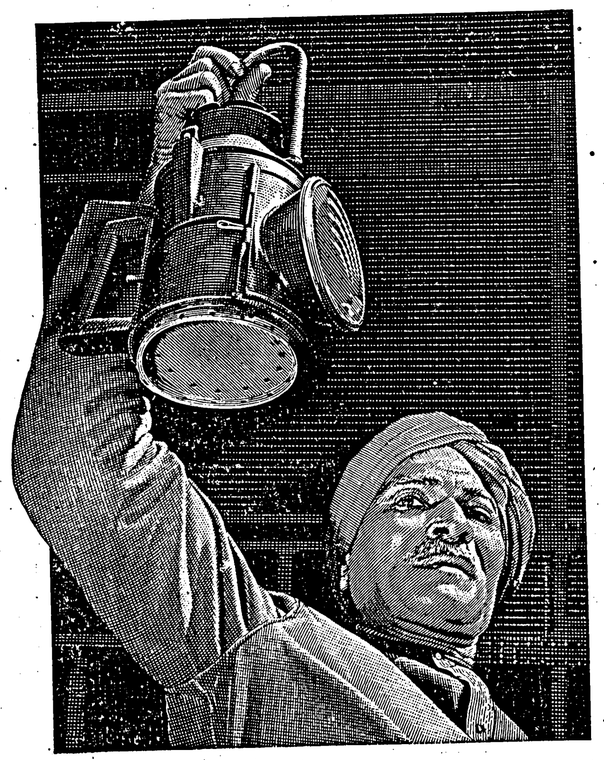
TRAINING CLASSES

As a first step towards the implementation of the Employees' State Insurance Scheme in Coimbatore, a series of training classes for employers, officers and other clerical staff was inaugurated recently in Coimbatore by Mr. V. R. Natesan, Regional Director, Employees' State Insurance Corporation, Madras. The first batch of about 35 officers has now received its training. Three other batches of 40 each will receive similar training. The object of the training classes is to apprise the employers, officers and clerical staff who would be connected with the working of the scheme with all their obligations as employers under the Employees' State Insurance Act.

A series of refresher courses for medical officers employed under the Contributory Health Service Scheme of the Government of India is being arranged by the Directorate General of Health Services. The first course in the series is being held this month. The refresher courses are meant to keep the medical officers abreast of recent advances in the diagnosis and treatment of diseases. Senior members of the medical profession are taking part in the training programme.

It is also proposed to hold clinical conferences periodically where difficult and interesting cases presented by the doctors will be discussed. The doctors in the scheme will also have free access to books and periodicals in the Directorate General of Health Services Library.

There goes the Frontier Mail !



There goes the signal. And slowly many hundreds of tons of freight and food, people and post, move off into the Indian country-side. To keep her lines of communication open, India is spending about two annas of every Five-Year-Plan rupee on the railway system—the largest in Asia. And that amount is for rehabilitation of existing tracks and rolling stock only—more money will be found for the expansion of the railway system which will be necessary to meet the demands of the increased industrial activity.

The railways of India haul more tons of oil more miles than all other forms of transportation put together, and make it possible for the oil industry to transport their products across the vast distances of the country. We, in turn, supply Indian Railways with a great many petroleum products essential for their operation, such as lubricants, cutting, furnace, diesel and quenching oils, kerosine and also petrol for their motor transport.

BURMAH-SHELL ... IN INDIA'S LIFE AND PART OF IT

ANNUAL MEETING OF ROHTAS INDUSTRIES LIMITED

MR. SHANTI PRASAD JAIN REVIEWS COMPANY'S PROGRESS

DEVELOPMENT PROGRAMMES EXPLAINED

THE Twenty-first Annual General Meeting of Rohtas Industries Ltd. was held at Dalmianagar, Bihar, on 2nd June, 1954. Addressing the shareholders of the Company, Mr. Shanti Prasad Jain, Chairman, reviewed the progress made by the Company during the past year and drew attention to the development plans proposed in the various fields of the Company's activity. In this connection, he referred to a number of problems that confront industries in general and the Company in particular, in the spheres of paper, cement and sugar. Mr. Shanti Prasad also gave an indication that the prospects for the Company during the current year were better.

The following is the full text of Mr. Jain's address:

"GENTLEMEN,

"I have pleasure in welcoming you to the twenty-first ordinary general meeting. The audited accounts of your Company for the year ended 31st October, 1953 together with the Directors' report are already in your hands. With your permission, I shall take them as read.

Working Results

"I consider that the working results of the year are such as to give us all a sense of satisfaction that the Company is having steady improvement, in spite of the fact that the total sales proceeds during the year have registered a fall. This has been due to scaling down of cement price in stages beginning from December, 1952 by Rs. 14-7 per ton in the item of packing charges. Cement output was lost to some extent on account of the overhaul of the plant. There has also been reduction in paper prices in the middle of February, 1953. With the improved output of the cement that is already evident from current production and the operation of the German-Yankee machine which has gone into production, the working results of the present year are bound to be better.

Paper

"Since our last meeting, your Directors have taken steps for placing order for two additional paper machines. The capacity of an economic unit before the war was reckoned at 5,000 to 6,000 tons of pulp. Today, it should be of the order of 25,000 tons of pulp. The management of your Company is keen to remove the disadvantages that attend small-scale production and they have, therefore, been planning for enlarging the capacity and to achieve larger production. The plans may be considered ambitious and even attended with some risk. But, in its efforts to improve efficiency, your Company is assured of the support of the Government of Bihar which has promised to consider sympathetically its application for long-term lease of forest areas which supply raw material for the paper factory. Modernisation of your factory, as contemplated, will make it compare favourably with the standard paper factories abroad. But the price factor of the raw material is there. Besides, the quality of paper produced with bamboo pulp is appreciably different from that produced from wood-pulp. Your Company will conduct laboratory experiments and concentrate on improving the quality of the paper produced from bamboo and bagasse pulp and will aim at progressively reaching a quality equal to production from chemical wood-pulp. Barring the inherent defect in bamboo pulp, achievement of better efficiency and economy will be possible with increase in capacity. It will also be possible to keep production well ahead of demand in this country which I expect would increase in the order of 15 per cent. per annum. Your Company will produce special and finest varieties of paper like bank, bond, ledger, poster, kraft, match, manilla, etc., which are largely imported at present. The expansion of your paper unit and the extensions already effected and in contemplation by certain other mills will raise the total production of the various items of paper in this country to 240,000 tons.

"While dealing with expansion and improvement of quality, I would like to refer to the factor of price which is now fixed on the basis of a certain formula evolved by the Tariff Board. This formula takes into consideration the different varieties of papers manufactured, but no emphasis is given to the quality of each variety. During the war, the industry had to produce maximum tonnage and very little attention was paid to quality. It is essential now that premium and discount should be allowed to manufacturers producing different qualities in the same variety. The Government of India should urge the Indian Standards Institution to lay down specifications for different qualities in respect of all varieties, so that manufacturers may get price according to quality. The manufacturers who pay attention to quality and produce goods of better quality will be compensated. This provision will result in general improvement in the quality of the products. It will be in line with the policy of the Industry Ministry which is anxious to improve the quality of national products in every possible respect.

"In the context of expansion, I would like to make one point. It is with regard to the need for the Indian industry to begin to think on the lines of specialisation in selected products. It is very desirable, as it will increase efficiency and reduce the cost of production and thereby enable the factories to face competition better. Specialisation in qualities has not been so far possible in this country due to the small tonnage of total production. Now that the industry has expanded and there is still growing need for many new varieties of paper and board, development should take place on specialised lines. This will be of benefit both to the producer and the consumer.

Cement

"Cement is a commodity for which there is growing demand in the country. The Planning Commission has visualised extension of cement production to about 5 million tons by 1955-56 from the rated capacity of 3.88 million tons per annum. The Industry Ministry, Government of India, wants even a larger target, if the railway Ministry could manage requisite transport. The needed expansion of the industry has to take place in areas like the Amritsar-Calcutta belt which experienced greatest shortage in respect of cement and where, in view of the large population and high consumption, demand is expected to steadily increase. Ideal sites in this area with ample supplies of limestone and nearness to coal are limited. Obviously, therefore, expansion in the area has to take place largely at the site of the existing units.

"Your Company has been anxious to extend its capacity and with the construction of the Mokameh Bridge it will be best situated for supplies to markets in North Bihar and North Bengal. It, however, gets no encouragement to go ahead with expansion schemes. The Tariff Commission has made a distinction, which is not understandable, between new plants by existing manufacturers and new manufacturers. On account of this, your Company's second plant put up after the war did not get the advantage of the higher price allowed to new units. Your Company's cement factory is not situated at the limestone head which results in higher transport cost of limestone and lower freight on cement. The present delivered price of cement includes freight on cement equivalent to Rs. 15 per ton and cement companies are allowed to charge higher freight if their average works out higher. Under this basis of freight allowed for cement, it is not possible for your Company to set off the freight on limestone that it has to pay. A factory which is situated in the same region as yours and drawing limestone from the same area escapes the freight on limestone, because it is at quarries site and is able also to charge extra price when sending cement to longer distances. The just claims of your Company in this respect, if granted, would have helped extension of its present capacity.

Asbestos Cement Products

"Encouraging progress has been made in regard to your asbestos cement plant. This factory has been placed by the Government of India in the approved list for I.S.D. supplies. In order to have supplies of asbestos fibre at more favourable terms, your Company is endeavouring to enter into arrangements with asbestos mines abroad. This will increase the competitive capacity of your product.

Sugar

"Your factory has registered a higher production during the year because of larger supply of sugarcane. But the 1953-54 season has proved very disappointing. The total production of sugar in the country is only 10 lakh tons. It is perhaps the worst season in recent years. Want of adequate supply of sugarcane to help full season crush and of suitable variety that gives better recovery continues to be the thorny problem of the industry. We are aware that the Government of India are giving this matter their attention by assisting development of sugarcane from the point of view of better yield per acre and also permitting establishment of factories in South India where sugarcane cultivation is better and supply is more.

"The problem of greatest importance is that the supply and quality of sugarcane should be improved. It was perhaps in 1943 that, in Bihar, due to a particular variety of sugarcane the recovery was increased by 1 per cent. There has been no progress since. In fact, a variety of sugarcane which contains 20 per cent. fibre and is heavy, creating difficulty in milling, is grown in South and North Bihar. The industry is not helped by cultivation of such unsuitable varieties of sugarcane. The Sugarcane Research Institute has to devote greater attention to the question of ensuring that sugarcane cultivation is improved and the variety of cane available is such as to give substantially better recovery.

"While the Bihar Government is anxious to assist the sugar industry, paradoxically, however, additional difficulties are sought to be imposed. To assist better sugarcane cultivation the Government of Bihar is sinking tube-wells. But the result is contrary to expectations. Because of disproportionate increase in the irrigation charges on sugarcane cultivation, the agriculturists took to cultivation of paddy. We had urged that the Government of Bihar should adjust irrigation charges, so as to actively assist sugarcane cultivation with the expanded scheme of tube-wells. It is to be hoped that the lower price of cereals will make sugarcane cultivation attractive to the agriculturists. Then, there is the vexed question of imposition of sales tax on sugarcane. Representations have been made on this point also to the Bihar Government. It will be appropriate for the Government of India to bring its influence to bear upon the State Government in these matters.

Greatest Handicap

"The greatest handicap to your factory is non-availability of sugarcane. We cannot shift the factory to a better location, because the move will not get the approval of the Bihar Government. It is not possible either for us to run counter to the wishes of the State Government. If the handicap regarding sugarcane is removed, the main difficulty to your sugar factory will have been solved and the factory will be able to contribute in increasing measure to augment supply of sugar in the country. The capacity of your factory is high and there is also good market for your sugar which is classified as one of the best qualities in the market. In order to ensure larger supplies of sugarcane, your Company has arranged for the construction of additional railway sidings for transport of sugarcane. Here, I should acknowledge the help accorded to us by the Government of Bihar in sanctioning a development loan towards construction of the siding. We are negotiating for another siding of 12 to 14 miles in length to enable transport of additional cane.

"Unless sugar production in the country is helped to be augmented and the country made self-sufficient during the next few years, the unfortunate position of our country having to import sugar from abroad will remain. This is a matter of great concern to the industry, especially when, for several years, the country was managing without imports and the indigenous industry was able to meet the internal demand at a price, at which, under the conditions pertaining to the industry in the country, sugar would not have been available anywhere.

Stores and Machinery

"Your Company has had to import at present substantial percentage of spare parts for the cement factory and other units. Gradually, your Company has been following a policy of making such purchases increasingly from within the country. It may be that in the initial stages this policy will cost the Company more, but it is advantageous from the long-term interests of the country and, consequently, beneficial to your Company also. With this end in view, your Company has taken steps to strengthen its engineering department and one of the engineers has been deputed to visit Europe for the purpose of studying the manufacture of spare parts especially for the cement industry. In regard to the paper industry extensions, it has been arranged that a percentage of the machinery, such as beaters and refiners, will be manufactured in the country and in the Company's own workshops. It may also be possible to meet the requirements of other paper factories in regard to these items in course of time.

Housing

"Side by side the efforts directed towards improving the quality of the various products and expanding capacity, your Company has also been paying attention for the improvement of facilities to and in the living conditions of the supervisory staff and labour. Your Company will be spending about Rs. 50 lakhs on the construction of quarters for labour and staff. In this effort, support from the Central Government as well as the State Government is available to your Company. With the completion of these quarters, every labourer working in Dalmianagar can live in suitable houses near the workplace itself, if he chooses, by paying economic rent. It is the keen desire of the management to provide greater facilities to make living still better. This will also be necessary with the growing number of employees on account of the increasing activities of the Company.

Company Law

"While talking of development activities in the country, one question which comes to our mind prominently is the recent tendency to impose restrictions on the freedom and initiative of private enterprise. The amendments to the Indian Companies Act, in the shape of a new Bill, are before the Select Committee of Parliament. I need not refer to the various sections of the Bill which have been the subject of criticism from different quarters. It is not for me to anticipate what the ultimate shape of the legislation will be. But it is very relevant to point out that the most important consideration both for the people and the country is that every able-bodied person should be enabled to engage himself in employment of profit to himself and to the nation. The real question is whether the existing system has provided employment opportunities and whether its contribution has so far been towards steady development of the country and, under conditions of freedom and proper support, whether it could continue to render such benefit to the economy. One can always find defects in any system of organisation functioning in the country and human intelligence sets no limit to arguments. Criticisms by persons on ideological grounds should not be made to prevail in such matters. The measure of the value should be the service that a system renders to the country. I hope, therefore, wise counsels will prevail in the ultimate decision in regard to the various clauses of the new Bill that are in their present form detrimental to the nation.

"I hope you will all share with me the expectation that your Company, as is evident from the results so far, will maintain the progress made in its working and that the various schemes for expansion and improvement in the quality of the products will further brighten the future prospects.

"I would like to take this opportunity to thank the officers, staff and labour for the improvement that has been achieved and to express the hope that, in their future efforts also, they will be guided solely by considerations affecting the Company's prospects and their own welfare."

TRANSISTOR

The transistor, a tiny instrument that is rapidly taking the place of vacuum tubes in radio and television sets, electronic "brains," hearing aids and other devices, is usually made with a small crystal of germanium as its essential part. Germanium is a rare metal and costs about $500 a pound. It is also non-resistant to high temperatures, a disadvantage in electronic equipment for which transistors are being increasingly used. Scientists have, therefore, been searching for a cheaper, more adaptable material than germanium. Recently, they have found that a transistor made with silicon, one of the earth's most plentiful materials, may replace germanium types. Although silicon withstands high temperatures much better than germanium and costs less, it is harder to prepare. But difficulties in silicon preparation have now been overcome by the Raytheon Laboratories at Waltham, Massachusetts. Silicon transistors have been developed there which have met stringent tests and stood up well at temperatures far above 350 degrees Fahrenheit.

FOREIGN ECONOMIC POLICY OF U.S.*

NEED FOR LIBERAL TRADE POLICIES RECOGNISED

(By W. T. TURNER, U.S. Consul General, Bombay)

LET me say at once that there is no such thing as a hard-and-fast economic policy in the United States in the sense of fixed rules. Nor for that matter is there such a thing as fixed economic policy in any other country, except perhaps behind the Iron Curtain where all policy is fixed by a dictatorship. Policy in our country and in all democratic countries is the course of action followed in pursuance of certain principles, and in the light of current conditions, at home and abroad, by the individuals and groups administering the Government. In our country, all of these factors, such as principles, conditions, individuals, and groups, are subject to change from year to year. Therefore, we see policy, both political and economic, change quite often. So all that anyone can do in discussing the economic policy of the United States is to observe the lead set by the Administration, and to estimate the degree of approval which such lead will get from the Congress and the people. This I will endeavour to do.

It happens that the present time is rather a good one to discuss the foreign economic policy and programme of the United States Government. The Republican Administration, after a little more than a year in office, has had time to consider its policies and to formulate its programmes. Last summer, the President appointed a commission on foreign economic policy, generally known as the Randall Commission, "to examine, study, and report on the subjects of international trade and its enlargement consistent with a sound domestic economy, our foreign economic policy, and the trade aspects of our national security and total foreign economic policy." This commission was instructed to recommend a course of action for the American Government, following the expiration of the Reciprocal Trade Agreement Act. This important Act, which, of course, was the work of the previous Democratic Administration, expired on 12th June, 1954. The Randall Commission made its report in January. This report was received with intense interest, both in the United States and abroad, and may well be a blue-print for a new phase of our economic relations with other nations.

Historic Message

Then, on 30th March, a few weeks after the publication of the Randall Report, President Eisenhower submitted to the Congress his long-awaited message outlining specific proposals for an overall U.S. foreign economic programme, including trade and investment policy. This message is historic as marking the first time that the Administration of the United States Government has asked the Congress to take definite legislative action upon a programme covering and seeking to co-ordinate all phases of our foreign economic policy. This message is so important as a guide to U.S. economic policy that I propose to outline its principal features and the philosophy that it reflects.

The President's recommendations were, as was generally expected, closely in line with those of the Randall Commission. The President described these proposals as designed to produce in a manner that is consistent with our national security, the highest possible level of international trade. I think I might quote from the President's speech at this point:

"World-wide depression and wars, inflation and resultant economic dislocations, have left a sorry heritage: a patchwork of temporary expedients and a host of restrictions, rigidities, interferences and barriers which seriously inhibit the expansion of international trade. Thus are impeded the very forces which make for increased production, employment and incomes.

"The tasks of repairing the physical damage caused by the catastrophe of war have been substantially achieved. The creation of an adequate system of defence for the free world is well advanced. Most of the countries which suffered the ravages of war have made remarkable headway towards financial stability and increased production. Their own efforts have been greatly aided by our assistance. And yet, despite this recovery, we and other free nations are still severely limited by the persistence of uneconomic, man-made barriers to mutual trade and the flow of funds among us.

"Together we and our friends abroad must work at the task of lowering the unjustifiable barriers—not all at once but gradually and with full regard for our own interests. In this effort, the United States must make the initiative and, in doing so, make clear to the rest of the world that we expect them to follow our lead."

*Extract from an address to the Rotary Club of Bombay.

Conceived as a whole, the President's Foreign Economic Programme consists of four major parts. These are:

(1) curtailment of economic aid on a grant basis to foreign countries; (2) encouragement of private investment in other countries; (3) encouragement of currency convertibility as an indispensable condition for a freer and healthier international trade; and (4) the expansion of trade generally.

In justification of his programme for expansion of trade, the President declared that, if we wish to sell abroad, we must buy abroad, and that to this end we must make changes in our tariff laws. He recommended that the Trade Agreements Act, due to expire this week, should be extended for three years. Under the authority of this Act, our Government has negotiated a series of Reciprocal Trade Agreements, providing for tariff reductions, with many other countries. The President recommended that this Act be amended to permit him to do the following:

(1) Reduce the tariffs by 5 per cent. on commodities subject to Trade Agreement negotiations; (2) reduce by 50 per cent. tariffs on products which are not being imported or which are being imported only in negligible volume; and (3) reduce to 50 per cent. *ad valorem* over a three-year period any rates in excess of that amount.

Not A High Tariff Country

I think that these tariff recommendations are of major interest in a great many foreign countries. I am frequently asked why United States tariffs are so high and why they are not lowered to permit more foreign goods to be sold in the U.S. My reply is that my Government is endeavouring, as in this instance, to bring about a gradual and general lowering of tariffs which constitute obstacles to trade. At the same time, I want to emphasise that the United States is not, even now a high tariff country. There is a vast number of commodities which are admitted free of duty to the United States, and even on articles which are competitive with American products, our tariffs are not excessive as compared with those in many other countries. The United States has gone a considerable way in reducing tariffs since the Reciprocal Trade Agreements Programme was inaugurated in 1934. At that time, our tariffs amounted to 50 per cent. of dutiable imports; today they average about 12 per cent. About 55 per cent. of imports now are duty-free. In this connection, the Randall report states that "the United States is no longer among the higher tariff countries of the world." I think that this is remarkable when one considers the high cost of labour in the United States. Last summer, when I was in New York, I learned that an ordinary bricklayer earns $3.25 in an hour for an eight-hour day, or approximately 125 rupees a day. You may judge for yourself that only a high degree of industrial rationalisation and great labour efficiency make it possible for us to lower tariffs in a situation like this.

In connection with tariffs, the President asked the Congress for authority to overrule the Tariff Commission, when its findings, as is often the case, are based purely on technical grounds and not on the broader requirements of our national trade policies. He justified this request on the grounds that the welfare of the nation often required decisions on broader grounds than the Tariff Commission is empowered to consider.

What is Unfair Competition?

The President also approved the Randall Commission's recommendations that the United States should not allow reduction in tariffs where there is unfair competition from products made in foreign countries. In defining "unfair competition," he declared that mere differences in wage levels should not necessarily govern, but tariff reduction should be withheld on products made by workers receiving wages which are substandard in the exporting country. At the same time, he approved the Commission's recommendations concerning the raising of labour standards through consultative procedures in international conferences such as those sponsored by the International Labour Organisation.

With respect to the importation of raw materials, the President declared that tariff policy should afford reasonably easy access to the United States market. He said that domestic sources of supply for materials required for military purposes should be assured by direct means or subsidies, rather than by tariffs or quotas.

Before leaving the subject of the tariff, I should mention that the Randall Report recommended to the President that the U.S. should continue its traditional policy of non-discrimination in trade relations with other free countries. This policy is reflected in our unconditional most-favoured-nation tariff policy which has been in effect for 30 years. It is very unlikely that any change will be made in this policy in the foreseeable future, as to do so would defeat our efforts to eliminate preferential arrangements that discriminate against the U.S.

G.A.T.T.

I have been telling you about the President's recommendations regarding tariffs. I should add that the President informed the Congress that he intended to act promptly upon the recommendations of the Randall Commission that the United States renegotiate the organisational provisions of the General Agreement on Tariffs and Trade, commonly known as G.A.T.T. As you probably know, since 1948, virtually all the major trade nations of the world, including the United States, have become party to G.A.T.T. The amendments to this agreement proposed by the President are too complicated for me to discuss at this time, but, in general, are designed to provide a simpler and stronger instrument which would contribute more effectively to the development of a workable system of world trade.

Another important recommendation of the President concerns the simplification of American customs procedures. There have been many complaints that the complexities of our customs procedures constitute a significant barrier in themselves to international trade, and that they create irritations which are detrimental to our total foreign relations. This has been generally recognised in recent years, and the President has stated that he will direct the Tariff Commission to draft legislation providing for the simplification of commodity definitions and rate structures, as well as for the administration of customs procedures. In order to provide an improved basis for customs evaluation, the President urged the Congress to adopt the proposals which have already been made by the Treasury Department and submitted to the Congress.

Foreign Aid

Turning now to the matter of U.S. economic aid and technical assistance to foreign countries, for the benefit of those who like statistics I might mention that, during the eight fiscal years from 1946 through 1953, the value of this aid totalled 41.7 billion dollars, or about 20,000 crores of rupees, of which 33 billion dollars was for economic aid. These enormous grants, unprecedented in history, have been made by the United States Government to assist in rebuilding a world order, in which the value of free democratic society can be preserved and thereby contribute to the prosperity and security of our own country. We call this a policy of "enlightened self-interest," because we believe that, in assisting others, we are also helping to develop our own trade and to support our own economy. This is a policy based on our conviction that the United States cannot remain an isolated island of prosperity in the midst of a world in need of assistance. I want to emphasise to you that these great sums of money have not come out of any magic bag of gold, but out of the pockets of the American taxpayer. They have been a heavy burden on each one of us. I might tell you that, as a taxpayer, I have to return more than 20 per cent. of my salary to the Treasury in the form of direct income-tax.

There has been much demand that this burden be lightened. Our Government has come to realise that economic aid to foreign countries cannot be continued indefinitely. The President pointed out in his message to Congress that, as soon as possible, aid should be replaced by loans and private investments. One might say that "Trade, not aid" is a slogan of the present Administration in Washington. I say this, although, as you are aware, the Administration has recommended economic and technical aid to India for the year beginning 1st July, 1954, in an amount of 104 million dollars, or approximately 50 crores of rupees. You have probably all read the considerations which the American Ambassador, Mr. Allen, expressed in Congressional Committees by way of justifying these funds.

The President declared in his message to Congress that the Export-Import Bank will make necessary loans for development projects which are economically sound and which are in the interest of the United States. He recommended that the United States should continue to participate in technical co-operation programmes abroad, but that these programmes should concentrate on providing experts and technical know-how, rather than large funds or shipment of goods.

The President states that, in order to facilitate international currency convertibility, the United States favours more active use of the International Monetary Fund and possibly standby credits of the Federal Reserve Banks. He disapproved of proposals made in certain quarters for setting up a huge Government exchange stabilisation fund. He commented that the return to convertibility by foreign countries will be facilitated if our trade policies lead them to expect expansion of our foreign trade and investment.

He pointed out that an increased flow of United States investment in foreign countries will contribute to the needed expansion of international trade, and, by strengthening the economies of foreign countries, will contribute to our own economic welfare activity and employment. But he emphasised that those countries desiring development capital must hereafter look to private investment and to the World Bank, not to United States Government funds. He urged adoption by the Congress of a tax measure which is designed to stimulate private United States investment in foreign countries by lowering the taxation on the business income from foreign branches of American firms and by other measures which would afford tax relief to investors in foreign countries. This will be of major importance to American firms abroad which are now sometimes subject to double taxation.

In this connection, the President said that, in order to encourage the flow of private investment abroad, the United States Government would endeavour, through its diplomatic and consular representatives abroad, to gain the support and understanding by foreign nations of conditions for the attraction of private foreign investment. As you are probably aware, there are many countries, where, in principle, there is much encouragement given to foreign private investment, but where in practice there are many obstacles placed in the way of such investment. It is these deterrents that the President proposes to remove through diplomatic means, if possible.

Rely on Private Capital

I would like here to comment that, since I have been in Bombay, I have heard much talk about the need for development capital in India, and suggestions that American capital could fill this need. In discussing this matter with Indian friends, I have told them that American capital must hereafter be obtained mainly from private sources, not from Governmental grants or aids. I have tried to impress on them that private American capital is always eager and ready to flow into any situation where it can earn a competitive yield, where it can be secure from undue controls and interference, and where it can be reasonably assured of the right to remit a fair amount of earnings, I have told them that it is for the country which wishes to attract American capital to bring about these favourable copditions. There is no desire on the part of responsible American manufacturers to exploit or to extort improper profits from overseas investments. But American business is certainly not going to invest large sums abroad for purely sentimental or charitable reasons.

I might also mention at this point that American capital is not likely to flow into any area where there is no assurance or guarantee of rights based on treaty. As you are probably aware, there is no basic commercial treaty in existence between India and the United States, although the United States Government has been proposing for several years, without success, the negotiation of a basic treaty of friendship, commerce and navigation, with India.

Trivandrum Permanent Bank Ltd.
(THE PERMANENT FUND OF 1899)
Head Office: **TRIVANDRUM (T. C. STATE)**
Fourteen Branches at Important Centres in Travancore-Cochin State.
AGENCIES AT IMPORTANT CITIES IN INDIA
PAID-UP CAPITAL .. .. Rs. 5.00 lakhs
RESERVE ACCOUNTS .. .. Rs. 1.81 lakhs
WORKING FUNDS .. .. Rs. 100.00 lakhs
AN INSTITUTION OF 54 YEARS' STANDING
Accepts Fixed Deposits at 4% for one year and 4½% two years and Savings Bank Accounts at 2½%. Recurring Deposits in multiples of Rs. 1 per month for 85 and 46 months are accepted and repaid on maturity at Rs. 100 and Rs. 50 per unit—to suit the needs of the lower middle class.
Originally started as a Fund—invests its funds chiefly on gold and landed property—serves the needs of the rich and the poor alike.
Details can be had on inquiry.
N. WIRAKUMAR, B.A., B.Com., Secretary.

Another recommendation of the President which will be of general interest abroad, I am sure, concerns the "Buy American" legislation. At present, certain of our laws require that, in specified procurement by the United States Government, preference must be given to domestic firms over foreign bidders. The President has now recommended that, except where conditions of national security and other factors require otherwise, bidders of foreign nations that treat American bidders on an equal basis with their own nationals, shall be exempted from the provisions of the "Buy American" laws.

The President also made several recommendations designed to encourage the flow of raw materials in international trade. In general, these measures are designed to establish greater stability of world prices of raw materials by moderating or relaxing impediments to international trade, by increased diversification of foreign economies, by avoiding procurement policies which disturb world prices, by consultation with other nations, and by tempering the fluctuations in our own economy.

Tourism Encouraged

Another recommendation by the President should be of increasing interest to Indians: that is in connection with encouragement of international travel by Americans. Last year, over one billion dollars, or about five hundred crores of rupees, were spent abroad by American tourists. The President proposes to encourage this travel by increasing the duty-free allowance for tourists from $500 to $1,000. Furthermore, he recommends that certain steps be taken to simplify governmental procedures relating to customs, visas, exchange, and other regulations in foreign countries that sometimes harass the traveller. As international travel is almost pure profit for the host countries, this is an increasingly important and profitable source of dollars for those countries which encourage tourism.

I have now given you a highly condensed summary of the foreign economic policies of the present Administration of the United States Government, as defined by the President and his advisers. You have probably gained, from what I have said, some idea of the scope and complexity of these policies. The trouble is that, while there is general agreement among Americans as to principles and objectives, there are widespread and deep-seated differences of opinion on how to reach them. Some of the proposals made by the President, which I have outlined to you, are certain to arouse a great deal of controversy in American business and Congressional circles. This is particularly true of the recommendations for reducing trade barriers. Tariffs have traditionally been a source of bitter controversy among the large and important business groups who regard tariff protection as vitally necessary to equalising differences in wage costs here and abroad. These groups oppose any lowering of tariffs as posing a grave threat to the domestic economy. They contend that without adequate tariff protections, many industries would be unable to compete with foreign goods produced by low-paid workers abroad, thus throwing the American workers out of jobs and spreading depression. Other of the recommendations, such as those relating to customs simplification and to international travel, will be readily approved.

Significant Developments

It is most significant that the President's recommendations should come at a time when competition everywhere is increasing as the period of post-war shortage passes and as fears of economic difficulties have become intensified.

It is also highly significant that these recommendations come from the leader of the Republican Party which is traditionally committed to high and restrictive tariff policies. Personally, I think it is most encouraging that the United States Government and people have generally adopted the view that we cannot maintain our individual prosperity apart from the rest of the world and that unless we are willing to adopt liberal trade policies, other countries will be unable to pay for the goods they need from us for their progress and development.

With all the criticism pro and con of the Randall report and of the President's programme, it is generally acknowledged that these recommendations will do much to place our foreign relations on a sound and practical footing and prove to the world that the U.S. will continue in her role of economic leadership. If these recommendations are generally approved by the Congress, we may consider that the results would constitute a great and enlightened step forward towards an even more liberal economic policy for the United States Government.

Balance of Payments

Now, before concluding my remarks, I think it might be of interest to many of you for me to review briefly what has actually been occurring in the balance of payments between the United States and the world at large in recent months. It may come as a surprise to many that, at least for the time being, the period of huge export balances, which characterised United States foreign trade in the first years after the war, has come to a close. In 1953, American imports aggregating almost eleven billion dollars, were only 1.3 billion dollars short of exports, not counting military aid, for the same period. This near-balance in our trade has been brought about, not by decreasing exports, but by increasing our imports which have more than doubled since 1946. Exports, on the other hand, are only slightly above the 1946 level.

These figures are for merchandise trade alone, and do not include the huge "invisible" items in the balance of payments, such as domestic expenses, shipping, insurance, dividends, etc., plus the huge sums spent by our military forces abroad. Actually, it appears that our 1953 overall trade and service accounts with the rest of the world were about in equilibrium. If anything, there was a small deficit for the United States. So, temporarily at least, the much talked of "dollar gap" has been closed. The result has been that the so-called dollar shortage has given way to a substantial dollar surplus in many foreign countries. It is estimated now that foreign countries have built up their gold and dollar reserves at a rate in excess of two billion dollars a year.

The Randall report comments that this is an impressive record, but warns against concluding prematurely that the dollar problem has been solved. It calls attention to the present limitations imposed by many countries on dollar imports and argues that, in a free market and with convertible currency, the potential demand for dollar goods might substantially exceed the present restricted demand. It points particularly to the fact that the building up of foreign gold and dollar reserves has been made possible to a considerable extent by United States Government economic aid. Nor does the Commission entertain much hope that expansion of private investment can fill this gap, since many of the deterrents can be overcome only gradually.

Thus, we come back to the main premise of the Randall report and of the President's proposals, which is that the preservation of equilibrium in the balance of payments and maintenance of United States export sales at a high level will require a further growth of United States imports. But establishment of a dependable international balance is not something the United States can accomplish alone. The problem must, as the Randall report states, be attacked on many fronts and not too much dependence should be placed on any one line of attack. The final solution, the report declares, will depend even more upon the efforts of other countries than our own. It would involve their continuing internal efforts to achieve sound and strong economies and their external efforts to correct their international unbalance. This leads to the general conviction in the United States that the greatest contribution our country can make towards the economy of the world is the maintenance of a high degree of prosperity in the United States by assuring a full measure of production and consumption in our own country.

RATIONALISATION IN INDUSTRY

UNEMPLOYMENT FEAR UNJUST, SAYS WORLD TEAM

THE report on Small Industries in India prepared and submitted to the Government of India by the International Planning Team, to which a reference was made last week in the course of a leading article, has some thought-provoking practical suggestions for the achievement of rapid rural industrialisation. While making these suggestions, the Team has put forward certain brilliant arguments to dispel the unjustified fear that rationalisation brings with it unemployment. Besides, the Team draws pointed attention to the fact that "illogical" restrictions upon industry, large and small, would result in preventing progress.

In order to drive home the significance of increased production to industrial process, the International Team enunciates the basic principle that "you cannot divide what you do not produce." It says that this principle is well understood in the field of food production. For the cultivator knows that, if he did not produce enough food, he, his family and the country would be poorly fed. But this very principle is generally overlooked by industrial workers in so far as their production is concerned, as witness the opposition of labour to modernisation of industry calculated to secure increased production. Consequently, the following remarks of the Team are noteworthy:

"More production means more goods, more wealth to divide. More wealth means higher wages and lower cost per product. It means more and more employment as more goods are sold. This industrial process is evolutionary. It does not take place overnight. As through the use of efficient production tools and methods, more needed goods are produced at lower prices, workers released from present tasks take up other tasks in the same or other fields in which effective demands are being created by the very process of rationalisation itself. This evolutionary process can start from the simplest beginnings."

Thus begins the industrial process and as it develops, observes the Team, the pattern remains constant, regardless of its rate. The Team points out that it has to re-emphasise this economic principle, because, wherever it visited, it was confronted with "the unjustified fear of unemployment because of rationalisation." Enlarging the point further, it says that "with India's needs and desires, such as for better housing, irrigation, roads, etc., there should be no unemployment. If India's desires are to be met, the necessary shifts of effort to meet those needs would not in any sense be because of unemployment but because of overall advance."

Rationalisation

There are also a few more interesting passages in the report on rationalisation which deserve to be extracted. Here are some of them:

".... the basic causes of present deficiencies in small industry are methods of management and production which fall far short of meeting modern demands for efficiency; plus reluctance or failure to adopt improved rationalised methods.

"The challenge for rationalisation must be met as part of a forward-looking industrial programme that will encourage and accelerate evolutionary growth. Without rationalisation the natural talents of Indian workers and craftsmen are being wasted in a hopeless race against modern technology. Unless and until these workers are helped to produce more goods and more wealth, neither wages nor living standards can be raised.

"To prevent rationalisation, to stop the processes of modernisation, is not only illogical; it will force stagnation and retrogression of Indian small industry.

"In large part resistance to modernisation derives from fears, which are widespread, of technological unemployment. These fears are ill-founded and unjustified. Perpetuation of inefficient outdated methods has more drastically reduced employment than any modernisation could have done—and without opening prospects for the future.

"Modernisation, on the other hand, creates employment. Improvements mean more and better products at lower and lower cost price and result in greatly expanded demands and markets and thus expanded job opportunities. Reluctance or failure to appreciate this concept is not only responsible for many of the difficulties observed but are real obstacles in the way of any organic effort toward improvement.

"Without modernisation Indian industries which cling to obsolete equipment are condemned to mediocrity and eventual elimination. Only by adopting efficient methods of production, as soon and as widely as possible, can small and village industry take advantage of the good opportunity it now has to lay a basis for a promising long-term development."

Referring to the employment aspect of modernisation, the Team points out that it is shortsighted to stop the processes of modernisation and development, for the mere purpose of apparently preventing unemployment when, in every field of India, it needs goods and services such as roads, etc. It would be worse, especially when in fact, modernisation creates employment. Explaining this point further, it remarks:

"Higher wages under its modernisation lift the worker above a mere subsistence to a respected consumer of goods of every description. It preserves and enhances India's position in the world as a producer for the world's needs. To prevent it, forces stagnation and retrogression. All this is in the false fear that modernisation can take place overnight. In fact, it is a relatively slow evolutionary process which takes years and which India should accelerate."

Machine Alone not Enough

The Team then proceeds to point out that in order to achieve rapid industrialisation, introduction of machinisation alone is not enough. It should be free from all unnecessary restrictions such as the ones to which Indian industry is subject. Says the Team: "Indian industry needs to be set free from those restrictions supported by legislation and regulation which are illogical. These retard and even prevent employment-earning opportunities." It quotes the system of bonus as an instance of illogical practice. It observes that, as the bonus system operates, it prevents the determination of liabilities until a long period of time has passed. No man, family, institution or Government can soundly finance itself under such a system. Nor can it plan, the Team adds, for the future or the present.

Explaining thus the importance of rationalisation and freedom from illogical restrictions for industries, the Team suggests the line of action to be pursued for accelerating the process of industrialisation in rural areas in three directions, namely, (a) setting up a Small Industries Corporation, (b) establishing a plant for production and training, and (c) installing small plants for demonstration.

The Small Industries Corporation should, it is suggested, be formed by the Central Government. It should have regional and State branches. Its work is to consist of servicing small industry in the field of Government indents in all its purchases from industry. It will also provide the necessary incentive and help small industry to improve its techniques of production and management by working on secured orders and to assure the industry its due place and share in India's expanding economy. It should have contracting and inspecting services and contain a separate financial body with power to direct loans to small industry for improving their equipment. It should have an engineering division which would help small industries to produce efficiently. The Corporation should sub-contract only to those firms which show the managerial ability to operate efficiently and are willing and eager to pay high wages consistent with higher production.

Training

The Team has suggested the establishment of a plant for production and training, with a view to meeting the demand for workers trained in mass production methods. The Team suggests that the plant should manufacture relatively large central diesel electric generating plants for community use in villages and small towns. It will help provide villages with sources of power well before the commendable multi-purpose river valley development can be brought to bear in sufficient amounts. Availability of power, it says, is the first essential to industrial growth.

The Government should establish, in addition to the two mentioned above, small plants for demonstration.

The Team lays emphasis on the interdependency of business, big and small, and of Government with them. Some industries must by their nature be big; they should refrain from entering into competition with their customers, small industries. For small industry is, the Team points out, the most essential element in the proper fabrication of the basic material to meet the myriad forms they take in satisfying the needs of the people. Small industry also complements big industry by aiding it through the medium of sub-contracting and service. The Government, therefore, must provide, it stresses, the atmosphere in which both can work, aiding directly only initially and requiring that the responsibilities of all elements of the community be discharged and none favoured over the others.

CRISIS IN MANGANESE INDUSTRY

SPEEDY REMEDIAL MEASURES URGED

THE manganese industry in Madhya Pradesh is, it is reported, facing a serious crisis at present. As many as 63 mines out of about 200 in the State have already been closed and a few are on the brink of closure and are expected to go out of production if no action is taken to help the industry out of its present plight. So far about 25,000 workers employed in the mines have been rendered idle and it is feared the number is likely to go up considerably, if more mines are compelled to stop their operations.

The present slump in the Indian manganese industry is attributed to serious competition in the overseas countries from Russia and Brazil. In the result, there has been a marked fall in the price of manganese. It is reported that the price of high grade ore from Madhya Pradesh has fallen from Rs. 145 per ton, six months ago, to as low as Rs. 80 per ton at present. The demand for low and medium grade ores has been practically nil, and the producers of these ores have been hard hit by the slump.

Evidently, the present slump is an aftermath of the boom in this industry, during the past two or three years. The accounts relating to the sea-borne trade of India reveal a marked increase in export of manganese during the past three years. The value of exports to some of the leading countries in each of the three years ended 1952-53 and in the first ten months of 1953-54 is shown in the table below:

(In lakhs of rupees)

	1950-51	1951-52	1952-53	10 months Apr.-Jan., 1953-54
U.K.	107.9 (107,912)	156.4 (114,654)	224.6 (136,884)	189.71 (107,672)
Sweden	1.7 (1,530)	20.9 (14,100)	24.8 (12,675)	11.53 (5,539)
Norway	4.29 (3,979)	12.65 (8,384)	24.92 (15,879)	7.56 (4,893)
W. Germany	47.89 (47,170)	168.86 (145,246)	195.44 (146,918)	95.06 (65,867)
France	6.29 (6,350)	59.12 (44,046)	96.12 (45,740)	84.70 (45,113)
Italy	10.36 (8,826)	71.61 (48,150)	42.85 (23,010)	27.99 (14,499)
Japan	75.72 (69,919)	177.06 (129,533)	68.56 (34,000)	15.81 (90,196)
Canada	9.84 (9,300)	15.86 (13,470)	8.67 (5,000)	16.96 (9,000)
U.S.	521.9 (533,102)	854.6 (577,169)	1,361.07 (990,907)	1,449.82 (906,240)
Other countries ..	15.43 (18,283)	40.24 (30,185)	59.42 (42,095)	8.75 (66,600)
Total ..	801.25 (820,780)	1,569.84 (1,124,956)	2,077.30 (1,364,931)	2,064.08 (1,318,314)

(Figures in brackets related to quantity in tons.)

It will be seen from the table above that the value of exports of manganese had steadily increased from Rs. 8.01 crores in 1950-51 to Rs. 15.69 crores in 1951-52 and to Rs. 20.77 crores in 1952-53. It is also encouraging to note that in the first 10 months of 1953-54, exports, valued at Rs. 20.64 crores, were almost the same as those in the full year of 1952-53. The upward trend in the value of exports, however, refers to a past period. It will be misleading, therefore, to infer from these figures that the industry is in a prosperous position now. It does not reflect the disquieting situation in which the industry finds itself today.

Incidentally, the volume of exports in 1953 would have been higher still but for the transport bottlenecks experienced in the second-half of that year. The country's capacity to export manganese ore was found to be limited by the capacity of Calcutta and Madras ports to handle shipments, as well as by the supply of wagons. Lack of dumping space at the ports was, and still is, a limiting factor. Consequently, a quota system was introduced and in the last quarter of 1953 export quotas were allotted to established shippers upto 25 per cent. of their best year's exports. For the same period, mine-owners were allotted quotas upto 20 per cent. of their best year's production. For the quarter January-March, 1954, export quotas were granted on the same basis as in the previous quarter. Subsequently, the position was again reviewed. It was found that substantial portion of the quotas previously allotted was still to be utilised. Consequently, the period of validity of the quotas for purposes of allotment of wagons was also extended further.

As a result of these bottlenecks, huge manganese ore dumps containing superior as well as inferior grades have sprung up in mining areas. According to one source, about 3.75 million tons of marketable ore—let alone ores of other lower grades—are available in dumps in Madhya Pradesh. The reserves of ore in dumps in the Srikakulam district of Andhra are estimated at about 1.2 million tons. Total dumps in Bihar and Orissa where manganese mining has been started comparatively recently amount to two lakh tons.

PROFIT OF SIMPLEX MILLS NEARLY MAINTAINED

FINANCIAL POSITION SOUND

THE financial results of the Simplex Mills Company, Ltd. (Agents: Messrs. Forbes Forbes Campbell & Co., Ltd., Bombay), for the year ended 31st March, 1954, disclose that, despite the better trading conditions that prevailed during the year, the Company has not been able to improve its earnings over those for the previous year. The gross profit of the Company for the year under review amounts to Rs. 22.40 lakhs, as against Rs. 22.57 lakhs for 1952-53. The shrinkage, albeit negligible, is in distinct contrast to the experience of many other mills and has brought down the Company's profit for the year under review to the lowest level for the last four years. Thus, from Rs. 34.08 lakhs for the year 1950-51, the profit has dropped to Rs. 22.40 lakhs for 1953-54, a decline of over 34 per cent. in the last three years.

The dividend to shareholders has also been slightly pruned in consonance with the small shrinkage in profit. A final dividend of Rs. 6 per share of Rs. 50 has been proposed by the Directors, as against the corresponding distribution of Rs. 9 per share. This, together with the interim dividend of Rs. 5 per share (as against Rs. 6 per share for 1952-53), makes the total dividend for the year under review Rs. 11 per share, as compared with Rs. 15 per share for the previous year. It must, however, be noted that the total dividend of 22 per cent. for the year under review is on the increased capital of Rs. 42 lakhs, raised by the capitalisation of Rs. 10.50 lakhs in September, 1953. On the old capital of Rs. 31.50 lakhs, the distribution for the year under review works out to 29.3 per cent., which is only a fraction lower than that of 30 per cent. paid for 1952-53.

The following table presents the salient features of the Company's financial results for the year under review against the background of those for the previous three years:

(In thousands of rupees)

	For the year ended 31st March			
	1954	1953	1952	1951
Sale proceeds (net)	2,42,83	2,12,81	2,00,04	1,76,76
Cotton and staple fibre consumed	1,16,82	97,80	1,04,57	79,81
Art silk and other yarn and waste purchased	1,96	3,31	5,75	7
Other expenses (including stores and fuel consumed)	1,02,06	89,40	74,63	62,23
Gross profit	22,40	22,57	25,53	34,08
Agents' commission	2,94	3,58	3,21	4,55
Provision for—				
Depreciation	5,00	5,00	5,00	5,00
Taxation	5,00	6,00	7,50	11,00
Net profit	9,45	7,98	9,82	13,53
E.P.T. refund (net)	..	7,35	..	..
To reserves	5	6,00	1,47	6,00
,, staff gratuity fund	30	3	12	65
Dividend	9,24† (22%)	9,45 (30%)	8,40* (30%)	7,14 (34%)
Carry forward	22	86	50	67

* The dividend consists of an interim distribution of Rs. 5 per share of Rs. 50 on a paid-up capital of Rs. 21 lakhs and a final dividend of Rs. 10 per share on the capital of Rs. 31.50 lakhs increased in January, 1952.

† On the capital of Rs. 42 lakhs increased in September, 1953.

The foregoing table fully explains the causes for the slight shrinkage in profit. Though the sale proceeds have gone up by Rs. 30.22 lakhs, the value of cotton and staple fibre consumed has risen by Rs. 19 lakhs and expenses, including stores and fuel consumed, by Rs. 12.68 lakhs, thus more than offsetting the rise in sale proceeds. Stores, fuel and coal consumed show an increase of Rs. 3.05 lakhs, salaries and wages Rs. 5.77 lakhs, repairs and renewals Rs. 1.17 lakhs and provident fund contribution Rs. 1.61 lakhs. It will be interesting to note from the foregoing table that these expenses have risen by nearly Rs. 40 lakhs in the course of the last three years, which is mainly responsible for the reduction in the profit-margin of the Company. Thus, whereas the Company made a profit of Rs. 34.08 lakhs in 1951 on a gross turnover of Rs. 192.44 lakhs, representing 17.7 per cent., it has earned a profit of only Rs. 22.40 lakhs in the year under review on a larger turnover of Rs. 237.02 lakhs which works out to only 9.45 per cent.

In the accounts for the year under review, no provision has been made for additional wages, in respect of the period of closure of the mill from November, 1951 to July, 1952, due to electricity shortage, amounting to Rs. 2.01 lakhs, additional dearness allowance from May, 1953, to March, 1954, amounting to Rs. 2.86 lakhs, and overtime wages to watch and ward staff from April, 1949, to July, 1952, amounting to Rs. 33,285 as the awards made in these references by the Industrial Court are under appeal.

After providing for Agents' commission, depreciation and taxation, the net profit amounts to Rs. 9.45 lakhs, an increase of Rs. 1.47 lakhs over the year. The net profit of the previous year was supplemented by the receipt of Rs. 7.35 lakhs, being the net E.P.T. refund. This additional income was utilised to add Rs. 6 lakhs to the dividend equalisation fund. No sum has been added to this reserve this year, but a small sum of Rs. 5,256 has now been transferred to the reserve fund.

The Company's balance-sheet as on 31st March, 1954, reflects a satisfactory financial position. As against a paid-up capital of Rs. 42 lakhs, reserves and surplus aggregate Rs. 39.02 lakhs, even after the capitalisation of a sum of Rs. 28 lakhs in the post-war period. Provision for taxation amounts to Rs. 5.31 lakhs and current liabilities aggregate Rs. 21.49 lakhs. As against a gross block of the value of Rs. 80.15 lakhs, a depreciation fund of Rs. 68.69 lakhs has been built up. Current assets amount to Rs. 96.36 lakhs, exceeding current liabilities and provision for taxation by a wide margin of Rs. 69.56 lakhs. Of these current assets, cash balances alone amount to Rs. 21 lakhs.

During the year under review, four automatic dye jiggers, a cloth shearing and cropping machine, a drying range complete with stenter were installed and are now in operation.

The Rs. 50 paid-up shares are being currently quoted at Rs. 156-8 *cum-div.* (final div. Rs. 6). On an *ex-div.* basis, the dividend for the past year provides a yield of 7.3 per cent. per annum free of tax.

ADVERSE RESULTS OF U.P. SUGAR

The results disclosed by the audited accounts of the United Provinces Sugar Company, Ltd., (Managing Agents: Messrs. James Finlay & Co., Ltd., Calcutta), for the year ended 30th September, 1953, are disappointing. The gross profit, which had dropped from Rs. 10.51 lakhs for 1950-51 to Rs. 7.50 lakhs in the succeeding year, has further dwindled to a low of Rs. 1.64 lakhs for the year under review. After providing for the Managing Agents' remuneration, depreciation and taxation, the accounts show a net loss of Rs. 1.05 lakhs, in contrast to the profit of Rs. 2.65 lakhs for the previous year and of Rs. 4.02 lakhs for 1950-51. The dividend to shareholders, which had been pruned last year from 20 per cent. to 15 per cent., has been drastically cut further to 5 per cent. for the year under review.

The setback in results, as indicated above, has been due to factors beyond the control of the management. The poor quality of cane due to adverse weather conditions, the reduction in the price of cane from the Company's estates, the heavy excise duty and higher provincial cesses were some of the causes for the disappointing results. The number of crushing days was higher at 110, as against 104. The quantity of cane crushed amounted to 25,24,444 maunds, as against 23,32,984 maunds in the previous year and the output of sugar shows a rise from 2,36,129 maunds to 2,44,069 maunds. The recovery of sugar has, however, declined from 10.12 per cent. to 9.67 per cent. It will be interesting to note here that the number of crushing days, the quantity of cane crushed and the output of sugar during the year under review are the highest in the past nine years of the Company's history.

The following comparative table brings out clearly the salient features of the Company's accounts for the last four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1953	1952	1951	1950
Sale proceeds of sugar and molasses	48.62	53.70	66.01	41.56
Stocks of sugar and molasses	19.14	19.80	13.42	19.73
Cane and country crops	5.05	7.40	8.14	7.07
Cost and transport of cane	40.64	46.75	49.87	42.89
Excise duty	9.19	4.46	6.66	6.76
Cultivation expenses	6.56	6.87	7.00	7.48
Manufacturing expenses	6.06	6.54	5.61	5.00
Other expenses	9.24	8.94	9.41	7.93
Gross profit (+) or loss (—)	+1.64	+7.60	+10.51	+0.49
Managing Agents' remuneration	1.14	1.71	1.34	1.03
Depreciation	0.75	0.54	1.13	0.61
Taxation	0.80	3.14	4.00	0.35
Net profit (+) or loss (—)	—1.05	+2.65	+4.02	—1.41
E.P.T. refund (net)	0.33	..	..	..
Transfer from reserves	1.53	..	..	1.70
To reserves	0.33	..	0.70	..
Dividend	0.80	2.40	3.20	0.48
	(5%)	(15%)	(20%)	(3%)
Carry forward	0.02	0.37	0.12	..

A notable feature disclosed by the table is the sharp rise in excise duty paid during the year under review from Rs. 4.46 lakhs to Rs. 9.19 lakhs, representing an increase of 106 per cent. over the year, although the quantity of sugar produced shows only a fractional increase. A statement of the Company's results for the last 18 years attached to the Directors' report reveals that the excise duty paid during the year under review is a record one. Even in the year 1936-37, when the Company's output of sugar was the highest at 3,38,755 maunds, the excise duty paid by it was no more than Rs. 4.69 lakhs. In 1942-43, the output amounted to a near record level of 3,37,517 maunds and the excise duty paid was Rs. 7.98 lakhs. The statement also shows that the provincial cesses paid during the year under review amounted to Rs. 4.73 lakhs, also a record.

The gross profit of Rs. 1.64 lakhs earned by the Company during the year under review is mainly due to the profit of Rs. 3.19 lakhs (as against Rs. 6.82 lakhs in the previous year) earned by the sugar manufacturing section. The estates section has actually suffered a loss of Rs. 1.63 lakhs (as against a small profit of Rs. 0.68 lakh). The loss on estates account is due to damage done to cane and grain crops by a disastrous hailstorm and the reduction in price of cane from Re. 1-12 to Re. 1-5 per maund. The provision for depreciation has been made at the usual rates. No provision for State taxation has, according to the Directors, been necessary and the provision for Central tax fully covers liabilities on the profits for the year under review. The E.P.T. refund (net) amounting to Rs. 33,035, received during the year, has been transferred to the rehabilitation reserve, "in conformity with the accepted practice in such cases." During the year, a sum of Rs. 1.29 lakhs, out of the total E.P.T. deposits of Rs. 1.65 lakhs, was repaid by the income-tax authorities, thereby freeing to a large extent the E.P.T. deposit reserve of Rs. 1.15 lakhs created in 1944. The Directors have, therefore, transferred Rs. 85,000 out of this reserve to the profit and loss appropriation account. This, together with the sum of Rs. 67,875 drawn from the general reserve, has been utilised to wipe off the year's loss.

The latest balance-sheet shows that the reserves and surplus aggregate Rs. 8.04 lakhs, as against a paid-up capital of Rs. 16 lakhs. Half of this capital, it may be noted, was raised in 1933, by the capitalisation of reserves. The gross block of the value of Rs. 31.13 lakhs has been written down to a book value of Rs. 6.13 lakhs. Current liabilities and provision for taxation, amounting to Rs. 22.10 lakhs, are covered by current assets aggregating Rs. 40.02 lakhs by a very wide margin.

The prospects for the current year are none-too-bright, as will be seen from the following extracts culled from the Directors' report:

"Profits from the sugar factory and estates will be affected to a certain extent by the heavy flooding experienced during the monsoon and a cane price agitation by growers which caused a stoppage of work for nearly two days, followed by intermittent cane supplies which adversely affected recovery. The season closed on 24th March with a crush of 18,96,330 maunds cane and recovery of 10.05 per cent. The price of cane fixed by Government was Re. 1-7 per maund."

CUT IN CEMENT PRICE AFFECTS DIGVIJAY CEMENT

The audited accounts of the Shree Digvijay Cement Company, Ltd. (Managing Agents: Shree Laxmi Agents Ltd., Seeka, Saurashtra), show that the earnings of the Company have been well maintained, notwithstanding a reduction in selling prices of cement. Thus, the gross profit for the year under review amounts to Rs. 25.32 lakhs, as against Rs. 25.24 lakhs for the previous year. The net profit, after providing for Managing Agents' remuneration and depreciation, however, shows a decline from Rs. 13.11 lakhs to Rs. 8.82 lakhs, due to larger provision for depreciation. After transferring a sum of Rs. 3 lakhs, as against Rs. 7 lakhs, to the reserve fund, the Directors propose to maintain the dividend on the ordinary shares at 6 per cent., to which level it had been enhanced last year from the maiden dividend of 5 per cent. paid for 1951.

The salient features of the Company's working results for the year under review are presented against the background of those for the previous three years in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950
Sale proceeds (net)	106.76	99.09	82.17	82.14
Stocks	16.14	4.10	3.84	1.23
Operating and other expenses	90.83	78.94	62.89	62.71
Gross profit	25.32	25.22	22.72	21.15
Managing Agents' remuneration	1.50	2.11	1.50	0.85
Depreciation	15.00	10.00	10.00	10.00
Net profit	8.82	13.11	11.22	4.29
To reserve fund	3.00	7.00	3.00	..
Dividends—				
5% preference	2.00	2.00	2.00	3.75*
Ordinary	3.60	3.60	3.00	..
	(6%)	(6%)	(5%)	
Carry forward	1.63	1.41	0.60	1.46

* For the years 1949 and 1950.

The increases in sale proceeds of cement, in spite of the cut in selling price of cement, closing stocks and expenses indicate that the Company's production must have exceeded the previous year's record output. In April, 1952, the Government withdrew the special price granted to new units, and effected a drastic reduction in the price of cement in December, 1952. Thus, the reduced price was in force throughout the year covered by the report under review, although the Tariff Commission submitted its recommendations in July, 1953, for an increase in price. It was only in February, 1954, that the increase in selling price of cement—this, however, falls short of what the Tariff Commission recommended—was sanctioned by the Government of India. Had it not been for the lower price for cement which prevailed during the year 1953, the Company's results would have been more impressive.

No provision for taxation has been made, because of the huge arrears of depreciation that remain to be provided.

The balance-sheet of the Company as on 31st December, 1953, shows that the reserves and sur-

(Continued on next page)

Points From The Chair

Standards in Paper Production Should Be Fixed

"WHILE dealing with expansion and improvement of quality, I would like to refer to the factor of price which is now fixed on the basis of a certain formula evolved by the Tariff Board. This formula takes into consideration the different varieties of papers manufactured, but no emphasis is given to the quality of each variety. During the war, the industry had to produce maximum tonnage and very little attention was paid to quality. It is essential now that premium and discount should be allowed to manufacturers producing different qualities in the same variety. The Government of India should urge the Indian Standards Institution to lay down specifications for different qualities in respect of all varieties, so that manufacturers may get price according to quality. The manufacturers who pay attention to quality and produce goods of better quality will be compensated. This provision will result in general improvement in the quality of the products. It will be in line with the policy of the Industry Ministry which is anxious to improve the quality of national products in every possible respect."

SHANTI PRASAD JAIN,
Rohtas Industries Ltd.

Prospects for Tea

"I think, I can be rather more optimistic in regard to the prospects for the future than I was a year ago. In the first place, the current level of prices is much higher and, while some decline may well take place in the autumn, there is more scope for adjustment and there should be no danger of a fall to unremunerative levels. For the various reasons I have indicated, costs will be higher, but the real strength of the market seems likely to come from the statistical position. While there should be no scarcity of tea for the actual consumer, the quantities likely to be available in the distribution pipe-line may well be no more than what might be termed a bare minimum. At the time of writing, the stocks in London are 113.8 million lbs. and that figure is more likely to fall than rise before the weight of the North India crop comes forward in the late autumn. Crops from countries and districts where harvesting continues during the whole year, e.g., Ceylon, South India and Africa, are up on the previous year, but not to any appreciable extent."

W. H. MARR,
Consolidated Tea and Lands Co., Ltd.

British Tax Code for Mining Companies

"... there is urgent need for the deadly impartiality of the British tax code to be relaxed and for similar incentive legislation to be applied to British oil and mining companies operating overseas, as is enjoyed by their foreign competitors who operate under more flexible tax codes. This is increasingly recognised by other Governments in the British Commonwealth who now give incentives in the form of tax reliefs to mining concerns operating in their territories. However, these reliefs are disallowed in the United Kingdom, with the result that no benefits accrue to the companies, the only gainer being the United Kingdom Treasury. For that reason, Dominion and Colonial Governments exercise discrimination against British companies and there are instances where reliefs given by Governments in the British Commonwealth are withheld from British companies, although they are extended to their United States and Canadian competitors. In the circumstances, it is hardly surprising that not a single overseas mining company directed from this country has been registered since 1939."

MALCOLM MACLACHLAN,
British-Borneo Petroleum Syndicate Ltd.

Comets in International Civil Aviation

"We have a large stake in civil aviation both as it exists today and in future projects. We share with everybody the sense of disappointment that the success of the Comet I should have been jeopardised by recent events. We can only look forward to the successful outcome of the present investigation and to seeing both present and future Comets given the opportunity to establish themselves on international routes. The useful experience which we are accumulating on the operation of propeller turbine engines in airline operation points the way for still further development of this type of engine and we are already well advanced in being able to offer improved specifications which we believe will be of world-wide interest to aircraft designers."

THE RT. HON. LORD HIVES,
Rolls-Royce Ltd.

(Concluded from previous page)

plus aggregate Rs. 14.63 lakhs, as against a paid-up capital of Rs. 99.71 lakhs. The gross block of the value of Rs. 51.09 lakhs during the year, has been written up of Rs. 51.09 lakhs during the year; and has been provided with a depreciation fund of Rs. 51.49 lakhs. Besides this gross block, extension works in progress and residential buildings under construction account for Rs. 11.82 lakhs. Current assets aggregate Rs. 65.90 lakhs, as against current liabilities amounting to Rs. 79.74 lakhs.

The Directors expect the Company to show better results in the current year, thanks to the increase in selling price which came into effect in February, 1954. The cement mill of the extension project, it is stated, commenced production in September, 1953, and the work of construction on the ropeway scheme has been taken in hand.

The Rs. 100 paid-up ordinary shares of the Company are being currently quoted around Rs. 132 *cum-div.* On an *ex-div.* basis, the latest dividend gives a yield of 4.76 per cent. per annum.

COMPANY MEETINGS AND DIVIDENDS

HIGHLAND PRODUCE CO., LTD. Annual General Meeting, Alleppey, 24th June, 1954. Dividend: Re. 1-4 per share. Transfer books will remain closed from 17th to 24th June, 1954, both days inclusive.

SHAW WALLACE COMPANY REPORTS SATISFACTORY RESULTS

BURRAKUR COAL RESTORES CUT IN DIVIDEND

Shaw Wallace & Co., Ltd.

THE directors of the above Company (Managing Director: Mr. R. H. D. Campbell, Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1953.

Included with these are the accounts of the firm of Shaw Wallace & Co. and of the firm's associates, Atlas Fertilisers Ltd. and Shawlace Nominees Ltd. of Calcutta, Indo-Agri Ltd. and Madras Hide & Skin Exporters Ltd. of Madras, Shaw Wallace Ceylon Ltd. of Colombo, Shaw Wallace Pakistan Ltd. of Karachi, and Shaw Pearson & Smith Ltd. of London.

The Company's profits, after the inclusion of Rs. 3,56,616 (Rs. 3,47,991) brought forward, is Rs. 25,59,639 (Rs. 25,80,900) and after making provision for taxation Rs. 7,59,885 (Rs. 6,92,409) there remains a balance of Rs. 17,99,754 (Rs. 18,88,491). Out of which the directors have placed to general reserve account Rs. 2,00,000 (Rs. 3,00,000), placed to investment reserve account Rs. 1,50,000 (Rs. 1,50,000) declared as interim dividends, payable for the year 1953 on the cumulative preference shares *Rs. 3,31,875* (Rs. 3,31,875) and recommend the payment of a dividend on the ordinary shares of 10 per cent. free of income-tax Rs. 7,50,000 (Rs. 7,50,000), leaving to be carried forward Rs. 3,67,879 (Rs. 3,56,616).

Trading conditions for the first part of the year were extremely difficult, but improved considerably during the last three months. In view of the *general economic conditions* prevailing, the directors consider that the results for the year, which compare very closely with those of 1952, must be regarded as satisfactory. Since the close of the year to date profits continue at a satisfactory level.

On 1st January, 1954 Messrs. Shaw Wallace Ceylon Ltd. acquired the whole of the ordinary capital of Messrs. Lee Hedges & Co., Ltd., Colombo, and changed its name to Messrs. Shaw Wallace & Hedges Ltd. The purchase price was satisfied by increasing the issued capital of the Company by 62,500 shares of Rs. 10 each which were issued to the shareholders of Messrs. Lee Hedges & Co., Ltd. As a result of this transaction the business of the Company's Ceylon associate has been put on a much broader footing, and the directors are confident that this move will prove beneficial to the Group's results in the future.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,50,00,000	Block ...	9,71,831
Reserves ...	38,50,000	Investments	2,10,16,294
Provision for taxation ...	14,50,000	Stocks ...	7,88,866
Liabilities ...	89,86,809	Stores ...	75,435
Profit and loss account ...	3,67,879	Debts, deposits and advances ...	58,27,252
		Cash ...	9,75,010
Rs.	2,96,54,688	Rs.	2,96,54,688

Burrakur Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1953.

4,71,163 tons were raised and 4,99,753 tons were despatched. In comparison with 5,09,461 tons raised and 4,83,282 tons despatched during the previous half-year.

The Loyabad Ropeway worked well throughout the period and 4,43,802 tons of sand were transported. The figure for the previous six months was 3,13,616 tons. Although the carrying capacity of the Ropeway itself is adequate for the Group's sand requirements, the gathering arrangements have had to be augmented owing to the greater distances from which sand had to be collected due to the poor replacement of sand since the monsoon.

29,360 tons of metallurgical coke were produced by the Loyabad Coke Plant during the half-year. The figure for the previous half-year was 30,975 tons. Despatches for the two periods were 32,428 tons and 30,831 tons respectively.

It will be recalled that a decision was taken two years ago to carry out a substantial repair programme to the Battery. It has been found now that the rate of deterioration *of the ovens is more* rapid than the repair schedule. As this state of affairs is adversely affecting the production of coke and the relevant income, the directors have decided to increase the rate at which ovens are being repaired. *This will necessarily reduce outputs* for a period, but will also result in an earlier return to normal working conditions.

Stowing and Costs.—The directors referred at length to this subject in their last report. Although there are indications that Government is aware of the difficulties under which stowing collieries are labouring, alleviation is not yet forthcoming. Meanwhile, the Company continues to follow the best known method of coal conservation, but it must be appreciated that this is very costly.

Transport.—The number of wagons available daily for coal loading in the Bengal-Bihar fields was 3,119. This is 16 wagons more than for the previous period. In order to assist forward planning, the coal industry has informed the Planning Commission that in its opinion transport to the extent of an additional 2 million tons per year for the next ten years will be required, if the industrial expansion programme is to be fulfilled.

Market.—There is little fresh to note since the directors' last report. Illegal rebates continue.

Labour.—While the directors give their full support to reasonable improvement in the conditions under which labour works in so far as these improvements fall within the capacity of management to pay, they suggest that the criterion is the capacity to pay, and this is governed first and last by labour's willingness to do a fair day's work for the many benefits which are now available in return for services rendered.

As this repoprt is written, the industry is under the orders of a Tribunal set up by Government in response to demands formulated by labour (or their leaders) which, if acceded to *in toto*, will increase the pit-head price of coal to Indian industry by about 50 per cent.

Accounts.—In recommending an increase in the dividend distribution to 5 per cent. per annum from 2½ per cent. per annum paid for the previous half-year, the directors draw attention to the fact that some items of income are unlikely to recur and others, such as *dividends from investments* fall mainly into this period's accounts. They feel justified, however, in their course of action in the circumstances obtaining and in the interests of shareholders.

The Profit and loss account, after providing Rs. 3,92,488 (Rs. 2,95,574) for depreciation, Rs. 3,77,366 (Rs. 3,74,751) for taxation, transferring Rs. 55,000 (Rs. 1,50,000) to tax contingency reserve, Rs. 50,000 (Rs. 50,000) to debenture redemption reserve, Rs. 50,000 (Rs. 50,000) to ropeway rope replacement reserve nil (Rs. 50,000) for reserve for bad and doubtful debts and including the sum of Rs. 83,532 (Rs. 1,54,703) brought forward from last half-year, shows an available balance of Rs. 4,28,860 (Rs. 4,32,782) which the directors propose to dispose of as follows:—

In paying a dividend on the 1st preference shares of 7 per cent. per annum without any deduction for income-tax paid by the Company Rs. 80,493 (Rs. 80,493), in paying a dividend on the 2nd preference shares of 6 per cent. per annum after deduction of income-tax paid by the Company Rs. 9,956 (Rs. 9,956), in paying a dividend on the ordinary shares at the rate of 5 (5) per cent. per annum without any deduction for income-tax paid by the Company Rs. 2,27,312 (Rs. 2,27,312) and in carrying forward Rs. 1,11,099 (Rs. 1,15,021).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,18,42,280	Block ...	2,38,22,014
Reserves ...	1,72,13,285	Capital exp. in progress	5,38,115

Katras Jherriah Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st January, 1954.

After providing Rs. 81,000 (Rs. 75,000) for depreciation and Rs. 1,62,000 (Rs. 1,60,000) for taxation and cesses and *after transferring Rs. 60,000 (nil)* to general reserve nil (Rs. 25,000) to development reserve, there is a balance of Rs. 1,91,080 (Rs. 1,89,822) at the credit of profit and loss account, out of which the directors recommend the payment of a dividend at Rs. 2 (Rs. 2) per share absorbing Rs. 1,00,000 (Rs. 1,00,000), leaving to be carried forward Rs. 91,080 (Rs. 89,822).

Raisings during the half-year were 1,22,229 tons, as compared with 1,15,663 tons during the previous half-year and despatches including purchased coal were 1,77,584 tons, as compared with 1,39,861 tons.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	10,10,715
Reserves ...	12,60,000	Stocks ...	3,11,298
Provision for taxation ...	2,12,224	Stores ...	3,77,952
Liabilities ...	13,65,425	Debts, deposits and advances ...	14,57,113
Profit and loss account ...	91,080	Investments	2,08,302
		Cash ...	63,349
Rs.	34,28,729	Rs.	34,28,729

Searsole Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Gillanders Arbuthnot & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st January, 1954.

The result of the year's working, after providing for taxation, is a net profit of Rs. 40,278 (Rs. 53,298) to which has to be added the undisbursed balance brought forward from the last account Rs. 20,499 (Rs. 18,451), making a total of Rs. 60,777 (Rs. 71,749). The directors recommend that this sum be disposed of as follows:—

Dividend at the rate of 25 (25) per cent. per annum without any deduction in respect of income-tax payable by the Company for the year ended 31st January, 1954, Rs. 31,250 (Rs. 31,250), transfer to development reserve Rs. 10,000 (Rs. 20,000) and to be carried forward Rs. 19,527 (Rs. 20,499).

Raisings and despatches of all classes of coal for the last three years are as follows:—

Year ended	*Raisings* Tons	*Despatches* Tons
31st January, 1954 ...	45,135	43,561
31st January, 1953 ...	50,033	43,058
31st January, 1952 ...	45,476	41,968

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,25,000	Block ...	1,68,798
Reserves ...	1,75,000	Stock of coal	77,287
Provision for taxation ...	43,209	Stores and spare parts	64,769
Liabilities ...	1,90,891	Other assets	4,802
Profit and loss account ...	60,777	Debts, deposits and advances ...	2,35,489
		Investments	300
		Cash ...	23,432
Rs.	5,94,877	Rs.	5,94,877

New Cinnatolliah Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1953.

The accounts disclosed a profit of Rs. 2,00,667 (loss of Rs. 2,09,936). On transfer of this sum to profit and loss account and after sundry adjustments, there was a balance at credit of that account amounting to Rs. 1,61,164 (debit of Rs. 44,129), of which the directors have transferred Rs. 75,000 (Rs. 30,000) to revenue reserve and Rs. 40,000 (Rs. 1,26,579) to buildings and machinery reserve. The directors have paid a dividend of 5 (*nil*) per cent. leaving Rs. 21,164 (debit of Rs. 44,129) to be carried forward.

Crop weighed out at 4,707 maunds as compared with 5,206 maunds in 1952. The average selling price was Rs. 2-3-3 per lb. compared with Re. 1-9-10 per lb. in the previous year. Planted area remained at 935 acres.

Estimates for 1954 provide for a crop of 5,300 maunds at an outlay of Rs. 6,80,980, including inland freight and sale charges.

Accounts in brief were as under—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	4,00,000
Reserves ...	1,15,030	Stores and supplies ...	72,791
Provision for taxation ...	5,383	Tea sales receivable ...	4,84,553
Liabilities ...	3,96,283	Other assets	19,836
Profit and loss account ...	21,164	Advances and deposits ...	17,665
		Cash ...	42,085
Rs.	10,37,830	Rs.	10,37,830

Naskarpara Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Howrah Trading Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st October, 1953.

The accounts show a profit of Rs. 2,16,256 (gross profit of Rs. 2,55,865) after providing Rs. 2,33,355 for interest, commission, allowance and other expenses which when adjusted with a sum of Rs. 1,47,786 (Rs. 17,184) being the debit balance of the last year leaves a net profit of Rs. 68,470 (Rs. 80,104) which is dealt with as under:—

In paying a dividend on 2,00,000 ordinary shares (free of income-tax) at As. 5 (As. 6) per share Rs. 62,500 (Rs. 75,000) and in carrying forward Rs. 5,970 (Rs. 5,104).

During the period under review, the Mills have worked in accordance with the supplemental working time agreement of the Indian Jute Mills Association.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Block ...	11,99,238
Debentures ...	5,00,000	Stocks ...	24,54,570
Reserves ...	15,05,000	Stores and spare gears	8,20,957
Provision for taxation ...	4,56,492	Other assets	9,811
Liabilities ...	21,74,451	Debts, deposits and advances ...	18,83,345
Profit and loss account ...	68,470	Investments	48,030
		Cash ...	2,88,462
Rs.	67,04,413	Rs.	67,04,413

Fort William Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bangur Brothers Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st March, 1954.

The net result after providing for depreciation reveals a profit of Rs. 6,79,023 (Rs. 2,77,092) and adding to it the previous balance of Rs. 2,912 (debit of Rs. 7,75,693), there remains a net credit of (Rs. 6,81,934) (net debit of Rs. 4,98,601). The directors propose to make appropriation out of this sum, as detailed hereunder:—

Transfer to general reserve account Rs. 5,00,000 (*nil*), dividend on 10,000 7 per cent. cumulative preference shares for the half-year ended 31st March, 1954, at Rs. 3-8 (*nil*) per share Rs. 35,000 half-year ended 31st March, 1954 at Rs. 10 (*nil*) per share Rs. 1,40,000 (*nil*) and in carrying forward Rs. 6,934 (net debit of Rs. 4,98,601).

In accordance with the working time agreement of the I.J.M.A., the Mills worked 42½ hours per week with 12½ per cent. of the total looms sealed throughout the period under report.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	24,00,000	Block ...	30,17,765
Reserves ...	6,00,000	Stock-in-trade	31,70,158

Profit and loss account ...	6,934	Stores-in-transit ...	2,39,492
		Debts and advances ...	16,16,383
		Investments	97,034
		Cash ...	39,890
Rs.	88,47,765	Rs.	88,47,765

Okayti Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1953.

The accounts disclose a profit on the season's working of Rs. 45,994 (loss of Rs. 1,10,750). On transfer of this sum to profit and loss account and after sundry adjustments, there is a balance at credit of that account amounting to Rs. 23,948 (debit of Rs. 31,979), of which the directors have transferred Rs. 5,000 (Rs. 17,000) to revenue reserve, Rs. 5,000 (Rs. 36,800) to buildings and machinery reserve and Rs. 2,500 (Rs. 25,000) to hail reserve. The directors recommend that dividends of 7 per cent. on the preference shares for seasons 1951 and 1952 be declared at the annual meeting, leaving Rs. 4,448 (debit of Rs. 31,979) to be carried forward.

Crop weighed out at 2,045 maunds as compared with 2,250 maunds estimated and 2,135 maunds in 1952. The average selling price was Rs. 2-8-2 per lb., as against Rs. 2-0-1 per lb. in the previous year. Planted area is as previously reported, viz., 505 acres.

Estimates for 1954 provide for a crop of 2,250 maunds at an outlay of Rs. 3,83,210, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,50,000	Block ...	1,50,000

Nagaisuree Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1953.

The accounts disclose a profit of Rs. 9,04,843 (loss of Rs. 1,29,122). On transfer of this sum to profit and loss account and after sundry adjustments there is a balance at credit of that account amounting to Rs. 6,99,278 (credit of Rs. 325), of which the directors have transferred Rs. 1,79,000 (Rs. 1,04,000) to revenue reserve and Rs. 2,00,000 (*nil*) to buildings and machinery reserve. The directors recommend that a dividend of 25 (*nil*) per cent. be declared at the annual meeting, leaving Rs. 60,278 (credit of Rs. 325) to be carried forward.

Crop was 13,169 maunds as compared with 11,836 maunds in 1952. The average selling price was Rs. 2-1-10 per lb., as against Re. 1-5-8 per lb. in the previous year. Planted area remained at 1124.90 acres.

Estimates for 1954 provide for a crop of 12,000 maunds at an outlay of Rs. 13,36,640, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,00,000	Block ...	9,60,000
Reserves ...	7,91,738	Stores and supplies ...	61,063

		Cash ...	4,91,800
Rs.	26,76,001	Rs.	26,76,001

Bokakhat Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1953.

A crop of 4,031 maunds was manufactured and has been disposed of by sale in Calcutta for export 3,562 maunds, and by sale in Calcutta for internal consumption 469 maunds. The average price per pound realised was Rs. 2-0-4 as compared with Re. 1-9-4 a lb. obtained for the previous season's crop of 3,336 maunds. The Company's export quota for season 1953 was 3,313 maunds.

The area under cultivation as registered with the Indian Tea Licensing Committee at 31st December, 1953, was 484.64 acres. This figure was ascertained after a survey of the garden area.

The revenue account showed a profit of Rs. 1,47,298 (loss of Rs. 1,78,432) and after deducting staff commission and bonus Rs. 8,814 (*nil*), managing agents' commission on profits Rs. 2,938 (*nil*), provision for sales tax Rs. 2,700 (*nil*) and depreciation Rs. 33,119 (Rs. 36,602), there was left a sum of Rs. 99,727 (debit of Rs. 2,15,034). After adding forfeited dividends Rs. 600 (Rs. 2,050) and post-war refund of excess profits tax (net) Rs. 222 (*nil*), there was a net profit for the year of Rs. 1,00,549 (loss of Rs. 2,11,540). After deducting from this the adjusted debit balance of Rs. 36,833 (Rs. 1,89,687) brought forward from the previous year, there was a credit balance of Rs. 63,716 (debit of Rs. 36,227) on profit and loss account, which was carried forward.

Due to improved results in 1953 the work on the rehabilitation programme, referred to in the Report for 1952 is being resumed in 1954, and it is expected that the Company will continue to work at a profit during the current season.

Labour.—The total number of hands employed on the garden at 31st December, 1953, was 535.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	8,53,851
Reserves ...	3,500	Stock of tea	2,16,549
Provision for taxation ...	2,700	Stores ...	67,966
Liabilities ...	5,14,764	Debts, deposits and advances ...	21,505
Profit and loss account ...	63,716	Investments	1,000
		Cash ...	23,809
Rs.	11,84,680	Rs.	11,84,680

Methoni Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1953.

A crop of 10,037 maunds was manufactured and disposed of for sale in Calcutta for export—9,242 maunds and for sale in Calcutta for internal consumption—795 maunds.

The teas realised an average price of Rs. 2-0-9 per lb. as compared with Re. 1-7-10 per lb. obtained for the previous season's crop of 10,588 maunds. The Company's export quota for season 1953 was 4,626 maunds.

A further 3.43 acres were put out during the year and the area under cultivation at 31st December, 1953, was 611.96 acres.

The revenue account showed a profit of Rs. 4,95,432 (Rs. 35,973) and after deducting from this staff commission and bonus Rs. 35,816 (Rs. 2,386), managing agents' commission on profits Rs. 9,880 (Rs. 736), reserve for taxation Rs. 1,17,000 (*nil*) and depreciation Rs. 51,264 (Rs. 76,850) there was a sum of Rs. 2,51,472 (Rs. 55,632). After adding profit on sale of car and machinery Rs. 6,600 (*nil*) there was a net profit for the year of Rs. 2,58,072 (loss of Rs. 31,801). After adding to this the adjusted credit balance of Rs. 6,379 (Rs. 39,579) brought forward from the previous year, and Rs. 984 being refund of income-tax paid at source, there was a credit balance of Rs. 2,65,435 (credit of Rs. 7,778) on profit and loss account. The directors disposed of this amount by paying a dividend of 15 (*nil*) per cent. for the season 1953 without any deduction for income-tax paid by the Company Rs. 1,20,000 (*nil*), placing to reserve account Rs. 1,00,000 (*nil*) and by carrying forward Rs. 45,435 (credit of Rs. 7,778).

The total number of hands employed on the garden at 31st December, 1953 was 1,001 (1,010).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Block ...	15,01,738
Reserves ...	9,07,500	Stock of tea	4,76,415
Provision for taxation ...	1,17,786	Stores ...	1,61,404
Liabilities ...	3,38,685	Debts, deposits and advances ...	55,645
Profit and loss account ...	45,435	Investments	1,000
		Cash ...	13,184
Rs.	22,09,386	Rs.	22,09,386

Lakurka Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. H. V. Low & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 30th April, 1953.

After meeting all expenses and providing Rs. 35,311 (Rs. 30,000) for depreciation and Rs. 20,000 (*nil*) for taxation reserve, there was a balance of Rs. 61,683 (Rs. 1,06,949) at the credit of profit and loss account which includes a credit balance of Rs. 13,549 (Rs. 11,945) brought forward from the last account and from this amount the directors paid a dividend of As. 8 (As. 12) (annas eight only) per share free of income-tax absorbing Rs. 45,000 (Rs. 67,500) and transferred a sum of Rs. 15,000 (Rs. 25,000) to general reserve fund, leaving a balance of Rs. 1,683 (Rs. 13,549) to be carried forward to the next account.

During the year 79,863 tons of coal were raised and 64,369 tons despatched as compared with 92,949 tons raised and 92,352 tons despatched during the previous year.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,00,000	Block ...	5,54,913
Reserves ...	11,49,450	Stock of coal	2,13,630
Provision for taxation ...	55,892	Stores, etc. ...	73,568
Liabilities ...	2,19,676	Debts, deposits and advances ...	7,84,317
Profit and loss account ...	61,683	Investments	1,24,571
		Cash ...	35,702
Rs.	23,86,701	Rs.	23,86,701

Anandam Rubber Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. A. V. George & Co., Ltd., Kottayam) submit the audited accounts of the Company for the year ended 31st December, 1953.

As mentioned in the last report, the Devaroly Estate transaction was closed by the end of May, 1953. The Pookulam Tea Estate in Peermade District, Travancore-Cochin State, was purchased by the Company on 2nd December, 1953 for Rs. 5,25,000. This price was paid out of the sale proceeds of the Devaroly Estate.

The rubber crop harvested during the year was 1,17,923 lbs. at 67.78 cents per pound. The rubber crop estimated for 1954 is 1,07,000 lbs. at 56.63 cents per pound. The average price realised was 124.16 cents per pound.

The tea crop secured during December, 1953 was 8,400 lbs. The tea crop estimated for 1954 is 2,00,000 lbs. at 106 cents per pound.

The net profit after providing for taxes, depreciation, etc., is Rs. 45,618 (Rs. 83,223) to which has to be added the balance from the last year Rs. 27,520 (Rs. 16,793) making a total of Rs. 73,137 (Rs. 1,00,020). The directors recommend the following distribution:—

Payment of 7 per cent. dividend on preference shares Rs. 17,500 (Rs. 17,500) and 10 (15) per cent. dividend on ordinary shares Rs. 25,000 (Rs. 37,500) leaving a balance of Rs. 30,637 (Rs. 27,520) to be carried forward. The provision of Rs. 25,000 for taxes, includes the anticipated liability to agricultural income-tax in Madras State on the profits of Kannambra Estate.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	9,21,412
Debentures	1,05,000	Stock-in-trade	54,579
Reserves ...	3,59,789	Stores and spare parts	7,061
Provision for taxation ...	22,581	Other assets	2,809
Liabilities ...	2,69,648	Debts, deposits and advances ...	1,06,352
Profit and loss account ...	73,137	Cash ...	2,37,942
Rs.	13,30,155	Rs.	13,30,155

Jubbulpore Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th September, 1953.

The schedule of units sold and revenue set out herein indicates that satisfactory progress has been maintained.

Half-year ended	*Units sold*	*Revenue* Rs.
31st March, 1951 ...	7,934,113	11,45,828
30th September, 1951	8,649,661	10,24,778
31st March, 1952 ...	8,537,639	11,70,070
30th September, 1952	9,636,474	10,74,752
31st March, 1953	9,677,159	11,91,490
30th September, 1953	10,663,476	11,90,024

After complying with the provisions of the Electricity (Supply) Act, 1948, and making adequate provisions for liabilities and setting aside Rs. 25,000 (Rs. 30,000) to development and extensions account, there remained a balance of Rs. 1,14,006 (Rs. 1,22,308) including Rs. 23,887 (Rs. 30,826) brought forward from the previous half-year, available for distribution, and this amount the directors disposed of in payment of a dividend at the rate of 8 (8) per cent. per annum free of income-tax absorbing Rs. 89,982 (Rs. 89,982) and in carrying forward to next half-year Rs. 24,024 (Rs. 32,326).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	22,49,700	Block ...	37,74,191
Reserves ...	15,93,092	Stores ...	5,28,666
Provision for taxation ...	1,01,608	Tools, etc. ...	85,630
Liabilities ...	14,38,288	Plant under construction ...	3,824
Profit and loss account ...	1,14,006	Other assets	823
		Debts, deposits and advances ...	6,49,219
		Investments	1,05,683
		Cash ...	3,50,661
Rs.	54,98,694	Rs.	54,98,694

New India Investment Corporation Ltd.

The directors of the above Company (Secretaries: Messrs. Hamdutt Ramkissendass, Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1953.

The revenue profit of the year amounted to Rs. 1,39,429 (Rs. 1,84,433) which after adding Rs. 29,934 (Rs. 7,832) brought down from last account and a sum of Rs. 28,175 (*nil*) on account of forfeited dividends and repaying Rs. 17-8 (*nil*) on account of forfeited dividends, made a total of Rs. 1,97,520 (Rs. 1,92,110) which the directors allocated as follows:—

To general reserve Rs. 80,000 (*nil*), to reserve for taxation Rs. 25,000 (*nil*) to payment of a dividend at Rs. 2 (Rs. 2) per share Rs. 62,176 (Rs. 62,176) and carried forward Rs. 30,344 (Rs. 29,934).

The investments of the Company showed an appreciation as compared with the last report. In spite of the directors' best endeavours, the taxation difficulties of the Company still remain unresolved.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	23,32,100	Block ...	1,553
Reserves ...	5,42,392	Advances ...	21,774
Provision for taxation ...	27,530	Investments	29,00,922
Liabilities ...	90,312	Cash ...	98,429
Profit and loss appropriation account ...	30,344		
Rs.	30,22,678	Rs.	30,22,678

N.B.—Figures within brackets relate to the corresponding period of the previous year.

NEW PUBLICATIONS

Economic and Social Status of Women Workers in India. Labour Bureau, Ministry of Labour, Government of India.

THE *Economic and Social Status of Women Workers in India*, published by the Labour Bureau, is the first of its kind solely devoted to the problems of women workers in industry. The publication, which is the result of enquiry conducted by the Labour Bureau, deals mainly with the cotton, jute and textile industry, coal mining and plantations. The report has been divided into the following six chapters: (1) Legislative measures for the protection and welfare of women workers, (2) employment, (3) wages and earnings, (4) working conditions, (5) social conditions, and (6) health and welfare. It is stated that as much information as could be gathered from published reports has been comprised into each chapter. A large number of life histories of women workers in various industries were collected for the present enquiry. Some salient points from these have been incorporated, especially in the chapter on social conditions. A few selected life studies have been appended to the report. These studies disclose that a large number of women workers have migrated to the industrial areas with their parents or husbands. Also, they throw a flood of light on the social and economic conditions of the families and the attitude of the workers towards their jobs.

According to the report, while the number of women workers in factories rose from 2.4 lakhs in 1927 to 2.8 lakhs in 1949, the percentage of women to the total number of workers dropped from 16.95 to 11.33 during the same period. In the mining industry, however, the percentage of women to the total labour force employed increased from 17.9 to 20.5 during the decade ending 1950. About half of the labour force employed on plantations were women. Married women formed about 50 to 80 per cent. of women workers in various industries, whereas widows constituted about 20 to 50 per cent. Women formed only about 6.6 per cent. of the total trade union membership in 1949-50.

Details are given regarding the comparative wage rates of men and women in various sectors of industry. There is also a comprehensive study of the effects of the working woman on the family, society, literacy, participation in trade unions, marital status, social customs, etc. Needless to point out, in this connection, that the effect of women's employment has been the creation of a new class of women who confronts the community with certain problems like the care of children, the delinquent child, domestic disharmony and family discord.

The Indian Land Problem and Legislation. By G. D. Patel. Publishers: N. M. Tripathi Ltd., Princess Street, Bombay 2. Price: Rs. 15.

Dr. G. D. Patel has attempted a scientific survey and analysis of land reforms in India. At the outset, he has dealt with the Bombay land reform laws enacted from 1950 to 1953 and, in the later chapters, with all-India land reforms relating to consolidation of land holdings, tenancy, *jagir* and *zamindari* abolition. He has also dealt with the *bhoodan yagna*. In this task, the author has drawn upon various sources such as Government archives, *District Gazetteers*, reports from various land reforms committees appointed by different States, the land reform laws of various States, Press reports, magazines and private publications. The information on the special land and *inam* tenures of the merged areas, it is stated, is the result of his on-the-spot enquiries as an Alienation Enquiry Officer. He has assessed the socio-economic effects of the laws concerned.

It is gratifying to note that the author has treated land problems in a correct historical perspective. Dr. Patel has spared no pains to make the book as authentic and up-to-date as possible. He has offered many sound criticisms and helpful suggestions about land reforms policy at the end of each chapter. Dr. Patel has rightly stressed the need for making an assessment of land reforms, with a view to ascertaining whether the objectives of social justice and increase in agricultural output have been achieved by the land reform legislations in the various States.

Dr. Patel has been careful to treat the whole problem in a scientific and from a non-partisan point of view. He has tried to keep all possible requirements of State Governments, administrators, lawyers, politicians and students of economics in preparing this book. The book will, as Mr. Morarji Desai, Chief Minister, Bombay, says, in his preface to it, "prove to be of immense help to those who are interested in understanding the magnitude of our land problem and the efforts which are being made to solve them."

Nickel Bulletin, April, 1954. Publishers: The Mond Nickel Co., Ltd., London. Bombay Office, 1, Forbes Street, Fort.

Two leading articles in the *Nickel Bulletin* for April deal with the impact strength of spheroidal-graphite cast iron, and with the properties and uses of Ni-Resist corrosion and heat-resisting cast irons, respectively. Literature on the chemical analysis of nickel-containing materials and of nickel-plating solutions is an important item in the abstract section of this issue; the items referred to in this connection include a textbook on select methods of metallurgical analysis, a brochure on methods for emission spectrochemical analysis, and recommended procedures for determination of nickel and of boric acid in plating baths. Further items of interest in the electrodeposition section are a study of the properties of nickel-plated aluminium alloys and methods of porosity-testing of electrodeposits. Attention is directed to two reviews of the composition and properties of permanent-magnet materials, with particular reference to the widened applications made posible by the nickel-containing types of alloy.

The literature on high-temperature materials includes a study of factors affecting weld hot cracking in heat-resisting alloys, and of conditions for welding Inconel X, and a survey of the current stage of development of metal-ceramic materials (cermets). In the corrosion-resisting section, reference is made to a method for evaluation of resistance to corrosion by acids at elevated temperature, results of long-term exposure of nickel-alloy cast irons in soils, technique used in production of stainless-steel aft frames for aircraft gas turbines, the descaling of stainless steels, and the manufacture of stainless-steel powder by water disintegration.

Planting and Commerce: Annual Number. Editor: V. I. Chacko, Post Box No. 60, Ernakulam. Price: Rs. 2.

The year 1953 was an eventful one for the planting industry not only on account of the quick changes in prices and prospects of planting crops but also on account of the controversial legislative measures enacted or introduced during the year. It was also during that year that much public attention was focussed on plantation affairs and the role that the industry plays in the nation's economy. This was in no small measure due to the small range of journals devoted to presenting full facts and figures about the industry and making well-informed and candid discussion on its affairs. *Planting and Commerce*, a weekly published from Travancore-Cochin State, the main centre of the planting industry, made its appearance last year at the most opportune time when the industry needed such public attention. The task has been ably done by this journal during its brief existence of a little over a year.

The first annual number of this weekly, recently published, contains a number of interesting articles on tea, coffee, rubber and other main plantation crops. The article on the "State of the Plantation Industry" sums up the developments in the various sections of the industry during 1953. Another article discusses the prospects for the Indian coffee industry, in which the author points out that "it is rarely that an opportunity, such as India now enjoys, comes the way of a country which could fully take advantage of it." The author adds, "India alone among the world's coffee growers has an abundance of intelligent and relatively cheap labour, suitable land, a supporting home market, a keenly interested Government, a very high quality of coffee, a very low price and a stable law and order position." With these formidable advantages, he adds, it should not be difficult for the Indian coffee industry to launch an all-out programme of re-plantation and expansion which can raise coffee to the position of one of the first four major items of exports. The number contains another article on the future of India's rubber. Supplemented by statistics relating to production, consumption, prices, exports and imports, the annual number is an authentic and useful reference work on plantation topics.

***Cost of Living Index Numbers in India*—A Monograph. Issued by Labour Bureau, Ministry of Labour, Government of India. Manager of Publications, Civil Lines, Delhi. Price: Rs. 5-12.**

The publication deals with theoretical principles and internationally accepted standards in the construction and maintenance of cost of living index numbers and gives a comprehensive description of the existing indices in India and the methods followed in their computation. The reader will find a critical appreciation of the various problems dealt with in the construction of the indices, together with an enunciation of the correct principles and practices to be followed. The statistical appendices to the *Monograph* give the data necessary for judging the use and reliability of cost of living index numbers. These include scope, method and important results of family budget enquiries on which the indices are based, the full weighting diagram of each index along with the details of articles included in it and their base-prices, coverage of the indices and information about the scope, method and agency of price collection.

The subject of cost of living index numbers has assumed considerable importance, in view of the fact that the dearness allowance component of wages and salaries of a large number of employees are governed by such indices. In recent times, there has also been a significant development in the field of construction and maintenance of cost of living index numbers and more than 50 series of such indices compiled by the Central and State Governments are now available in this country. The *Monograph* constitutes a complete reference book containing details of all existing indices.

Studies in Agricultural Economics, Vol. I. Publishers: Economic and Statistical Adviser, Directorate of Economics and Statistics, Ministry of Food and Agriculture.

The Economic and Statistical Adviser, Mr. S. R. Sen, has done well in bringing together in this brochure the articles on agricultural problems which have appeared from time to time during the last two years in that excellent publication, the *Agricultural Situation in India*, the monthly journal published by the Directorate of Economics, Ministry of Food and Agriculture. The only exception is a paper on rural credit and rural institutions presented at the International Conference on Agricultural and Co-operative Credit held at Berkely, U.S., in August-October, 1952. This paper has been included in the brochure, because it throws much light on an important aspect of agricultural economy.

The articles have been grouped under four headings, namely, (1) food problem, (2) commodities and commodity control, (3) agricultural statistics, and (4) rural credit and rural institutions. The time of publication of the articles in the journal is indicated in the footnote of each article. Care has been taken wherever possible to bring facts and figures up-to-date. Mr. Sen has warned, at the outset, that the views expressed in the articles should not be taken as those of the Government of India. The brochure is invaluable for students interested in agricultural economics and will be read with interest by those who have missed them in the journal.

Agricultural Legislation in India, Vol. IV—Land Reforms. Publishers: Economic and Statistical Adviser, Directorate of Economics and Statistics, Ministry of Food and Agriculture.

Few subjects have aroused keener interest in recent years than agrarian reform. The collection of Acts bearing on this subject, passed in recent years in the different States, and their presentation in a manner which would make comparative analysis possible, is an important task that must precede a detailed study of the subject. The present volume fulfils this need partly.

The Acts so far passed have been too numerous and extensive to be included in one volume. Consequently, the present volume deals with only land reform measures pertaining to the abolition of intermediaries. Another volume relating to the regulation of tenancy conditions will, it is stated, follow shortly. An important feature of the volume is the brief survey of the history of land legislation in India.

The Indian Agricultural Atlas. Economic and Statistical Adviser, Ministry of Food and Agriculture. Price: Rs. 12.

The *Atlas* under review is a completely revised and enlarged version of the *Crop Atlas of India* which used to be published in the past by the Department of Commercial Intelligence and Statistics. All important agro-economic data are represented pictorially. The topics treated pictorially include India's physical features, rainfall, temperature, soils, cultivated area, agricultural crops (area under each crop as well as yield) such as rice, wheat, tobacco, oilseeds and sugarcane. The *Atlas* will prove useful not only to students but also to the general reader.

GILT-EDGED BUOYANT

(From Our Own Correspondent)

BOMBAY, 16th June

There was no perceptible sign of any easing of the stringency in the short-term money market during the week under review. Some of the big Indian banks were reported to have experienced a good influx of funds from the mofussil, but these funds were mainly utilised to reduce their own borrowings, so that there was no material improvement in their liquidity position. On the other hand, there was some drawings on banks for payment of quarterly advance payment of income-tax. Besides, Exchange banks were once again keen borrowers, but floating funds being scarce, their demand remained largely unsatisfied, with the result that they had to go to the Reserve Bank for accommodation. Consequently, money rates remained unchanged at the previous week's levels.

Inter-bank call money continued to be bid at 2½ per cent. by Exchange banks and big Indian banks. The corresponding rate among the smaller Indian banks was 3 per cent. Short-term deposits were in demand at 3 per cent. for 1 to 3 months and at 2¾ to 2½ per cent. for 4 to 12 months.

A contraction of Rs. 2.94 crores in notes in circulation is disclosed by the statement of affairs of the Reserve Bank of India for the week ended 11th June, 1954, in contrast to the rise of Rs. 8.62 crores in the previous week. Notes held in the Banking Department which had declined by Rs. 9.39 crores in the previous week, have risen by Rs. 2.32 crores. For the fifth week in succession, Central Government deposits show an increase, the rise during the week under review being Rs. 2.74 crores. Deposits of other Governments have declined by Rs. 4.13 crores, while those of banks have gone up by Rs. 3.39 crores. Cash balances have improved by Rs. 2.81 crores and balances held abroad by Rs. 12 lakhs. Loans and advances to Governments are lower by Rs. 29 lakhs and other loans and advances by Rs. 1.75 crores. Total amount of advances availed of by Scheduled banks against usance bills since 1st January, 1954, is Rs. 105.74 crores, an increase of Rs. 7.72 crores over the week. The net outstanding borrowings against usance bills as at the close of the week under review amount to Rs. 21.23 crores, a rise of Rs. 5.33 crores.

The consolidated statement of position of Scheduled banks for the week ended 4th June, 1954, shows a drop of Rs 3.71 crores in demand deposits. Time deposits are almost unchanged. Inter-bank borrowings are lower by Rs. 7 lakhs. Borrowings from the Reserve Bank are lower by Rs. 2.48 crores, while those from the Imperial Bank are higher by Rs. 27 lakhs. After three weeks of successive decline, loans and advances have gone up by Rs. 2.07 crores. Inland bills purchased and discounted show a decline of Rs. 2.69 crores, while foreign bills reveal a rise of Rs. 43 lakhs. Cash in India and balances with the Reserve Bank are higher by Rs. 1.16 crores, while balances with other banks in current account and money at call and short notice have gone down by Rs. 89 lakhs and Rs. 72 lakhs, respectively. Investments are up by Rs. 2.26 crores.

The Gilt-edged market displayed fresh vigour during the week under review and, under a spell of broadened activity, values leapt up all round. Sustained hopes of a reduction in Bank rate provided the main stimulus. 3 per cent. 1957 was in demand and gained As. 2 to Rs. 98-8 and 3 per cent. 1958 by a similar extent to Rs. 98-5. 3 per cent. 1959-61 advanced by as much as As. 4 to Rs. 96-8. 3 per cent. 1963-65 put on As. 2 to Rs. 93-3. per cent. 1964 was quoted today at Rs. 93 *ex-voucher*, as against Rs. 92-15 *cum-voucher* a week ago. 3 per cent. 1966-68 gained As. 3 to Rs. 90-8 and 3 per cent. 1970-75 rallied from Rs. 86-6 to Rs. 86-12. 3 per cent. 1986 Conversion Loan, which had lagged behind last week, was in good shape, rising by As. 5 to Rs. 82-4. 3½ per cent. N.P. Bonds rose by As. 4 to Rs. 99-1. 2½ per cent. 1954 put on As. 2 to Rs. 99-11 and 2½ per cent. 1955 As. 3 to Rs. 98-12. 2½ per cent. 1961 was unchanged at Rs. 91-2. 2½ per cent. 1960 and 2½ per cent. 1962 hardened by As. 2 to Rs. 94-5 and Rs. 92-4, respectively. 2½ per cent. 1976 was stagnant at Rs. 82-2.

In the foreign exchange section, the rupee was unchanged in terms of U.S. dollars. In New York, spot sterling was a little strong in terms of the dollar, at $2.81.13/16-2.81.15/16, as against $2.81.13/16-2.81.1. 3 months' sterling was done at $2.81.11/16-2.81.13/16, as against $2.81.11/16-2.81.1. Transferable sterling, however, continued to be weak, dropping from $2.78½-2.78¾ to $2.73¼-2.73½, the decline in the past two weeks being 1¼ cent.

KIPS STEADY

(From Our Own Correspondent)

MADRAS, 14th June

Arrivals of tanned hides and skins were poor during the week under review, due to *Ramzan* holidays. Trading in the kip section disclosed a steady undertone with selective enquiries from the U.K. for all grades in 5-5½ lbs. and 8-8½ lbs. fifths in 10-12 lbs. and inferiors in all weights, at a penny below Madras levels. As tanners are in a well sold position, it has been difficult to place shipment business at the U.K. prices. Tanners expect the U.K. buying to resume at current Madras prices, which are the lowest since October last. There were patchy enquiries for cow calf and buff calf in well-known standards, while buff heavies continued out of reach of U.K. buyers, due to buying on U.S. account. There were stray sales of buff lights to the U.S.

In the tanned skins market, there was no change to report. Shipment business continued difficult, due to buyers preference to purchase their requirements in the public sales which come off on the 28th inst. In view of the heavy spot stocks in the U.K. and large shipments during April-May, it is expected that current prices will not hold.

DEBACLE IN SILVER

(From Our Own Correspondent)

BOMBAY, 16th June

Hectic activity in silver with a sharp rise in values in the earlier part of the week, followed by a debacle during the last three days, was the main feature of trading on the Bullion Exchange during the week under review. The landslide in silver from Monday onwards was so rapid, disclosing a loss of nearly Rs. 10, that the earlier gain was more than wiped out, resulting in a big net loss of Rs. 5-8 over the week.

Gold was relatively more steady during the major part of the week, but towards the close a bearish note was struck with the leading bull operator in silver, who was heavily short in gold, hammering the market, presumably with the object of cutting his loss in silver, with the result that gold also stood on balance with a loss of Re. 1-7 per tola. The slackness in demand for ready gold also contributed to the weakness in the yellow metal.

Following the heavy drop in silver in the previous two weeks, which persisted for a short while on the opening of the week under review, due to rumours that the leading bull operator in silver had come to a settlement with the prominent bear operator in regard to his purchases, there was a smart recovery on heavy nervous covering by some of the shorts and some replacement buying, with the result that the *budli* charges against sellers, which had dropped from Rs. 3-6 at the close of the previous week to Re. 1-8 on Thursday morning, widened to as much as Rs. 5-8 on Monday morning. This led to the belief that the leading bull operator might squeeze the bears at the time of settlement by demanding delivery. This belief gained ground by reports that he had made financial arrangements for taking delivery of the bars. These expectations, however, were belied. It would appear that subsequent events had frustrated the reported intentions of the "bull." For the heavy carry forward charges attracted a large quantity of silver from upcountry centres, with the result that the floating stocks in Bombay expanded considerably. Evidently finding that, with these large stocks, he would not be able to dictate terms at the time of delivery, as would be the case if stocks had not enlarged, the prominent bull was reported to have come to a settlement with the chief "bear" and carried forward the bulk of his purchases to the next settlement. He also liquidated a good part of his holdings in the last two or three days. This development gave a free hand to the prominent bear to seize the opportunity and hammer the market down. Consequently, the *budli* charges, after narrowing down from Rs. 5-8 against sellers on Monday morning to *nil* on Tuesday evening, turned in favour of sellers and stood today at As. 10.

Silver for forward delivery (18th June settlement) opened the week at Rs. 156-5 and soon slumped to Rs. 154-12. After coming up to Rs. 159-8 on Monday morning, it tumbled down, under the pressure of long liquidation and short selling, to a low of Rs. 149-13 today, before winding up at Rs. 150-5. Business in the next settlement (17th July) began at Rs. 153-2. After a reaction to Rs. 152-14, the second settlement recovered to Rs. 154-3 on Monday. In the subsequent trading, it slumped to a low of Rs. 150-7 today. The closing was done at Rs. 150-15.

The opening and closing rates for ready silver (.996 Mint) were Rs. 156-7 and Rs. 150-5, respectively, the highest and lowest levels being Rs. 159-10 and Rs. 149-13. The floating stocks are estimated at 1,500 bars. The daily average offtake was less than 10 bars.

Opening at Rs. 85-4, gold for forward delivery (17th June settlement) drifted lower to Rs. 83-15 on Saturday. As the closing rate on Friday at Rs. 84-6 was well below the rate at which (Rs. 84-13) automatic margin was applicable, the bears had to pay a margin of Rs. 7 per tola. The closing rates on subsequent days of the week under review having remained below this level, the bears continued to pay the margin throughout the week. On Monday this week, there was recovery to Rs. 84-12, but this was short-lived, in the face of heavy selling by both bulls and bears. Consequently, forward gold came down to a low of Rs. 83-7 today, before closing at Rs. 83-10. Trading in the next settlement (18th July) began at Rs. 84-1 and closed for the week at Rs. 82-4. The *budli* charges against sellers widened from As. 15 to Re. 1-11, but narrowed down to Re. 1-6 at the close.

Ready gold opened at Rs. 85-12 and closed at Rs. 83-12. The premium over the forward (current settlement) rate which stood at As. 12 at the close of the previous week narrowed down to As. 2 today, reflecting the poor demand for the ready metal. The floating stocks of gold are reported to be 15,000 tolas. The daily average arrivals and offtake were even at 3,000 tolas.

In London, silver displayed slight strength rising from 72½d. to 73d. for spot and from 72½d. to 72½d. for forward. After an initial firmness, moving up from £12 8s. 10d. to £12 9s., gold reacted to £12 8s. 11½d. at the close.

The following comparative table shows the trend of the market during the week under review:

	16-6-54	Highest	Lowest	9-6-54
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint)	83 12	85 13	83 9	85 13
Forward	83 10	85 5	83 7	85 1

New York Ready	85¼c.	—	—	85¼c.

NARROW FLUCTUATIONS IN COTTON

(From Our Own Correspondent)

BOMBAY, 16th June

While awaiting the Court's decision with regard to the method of fixing price differentials at the time of tendering cotton on the maturity of a contract, the forward cotton market is experiencing a stalemate, with wild fluctuations of the previous weeks giving way to small turnover within a narrow range of about Rs. 5 in prices. Everybody fears, however, that this comparative listlessness at Kalbadevi will not last long. In fact, there are anticipations of some fireworks during the latter part of the week or early next week. This is all the more likely as next Monday happens to be the day for the settlement of option business for June. In the meantime, the general feeling amongst operators is that of pressing sales at every bulge. It is also feared that the spot interests would come out to hedge cotton with every appreciation in price.

The spot market is also ruling dull, in spite of a slight improvement with regard to enquiries by mills. With the reduction in premia rates, it was natural that some of the mills, with unutilised quotas for Indian cotton, should try to cover their requirements in view of the uncertainty with regard to the pattern of premia rates after the Court's decision. In spite of this, the anxiety on the part of holders of stocks to lighten their burdens has led to a further reduction in premium for some varieties generally favoured by the mills. While the statistical position for Indian cotton continues still to be not only satisfactory but sound, a kind of neverousness has invaded the Sewri market because of slackness of the cloth trade. Reports of good rains in Gujerat and Saurashtra have also affected the sentiment, while some traders are even prepared to revise their original estimates of the size of the crop during the current season. The situation, therefore, turns on the pivotal issue of mill consumption of Indian cotton during the current and coming months.

With regard to imports and exports also there is a sense of hesitancy. With the last flicker of hope regarding the export of superfluous Bengal *Deshi* cotton gone, prices have given way in this section in spite of some mill buying of this variety. In view of the uncertainty with regard to the subsidy for exports for cotton during the next cotton year having been removed interest in imported cotton might show some improvement in the coming weeks. But there is little enthusiasm for taking advantage of Government's concession allowing traders to import cotton from dollar areas on their own account. Even Egyptian and East African cottons, which are generally favoured by the Indian mills, are neglected and there is a good deal of bargain hunting for cheap lots amongst imported cottons at Sewri. The only hope of the market is in Government coming to the aid of the textile industry by allowing a reduction in the export duty on coarse cloth. In the meantime, the market finds some sustenance from the fact that other commodity markets seem to have turned the corner.

In the early part of the week under review, an easier trend prevailed in the forward cotton market. This was due to absence of outside support and to scattered selling pressure. Also, a prominent bull operator is reported to have decided to unload his commitments. Thus, I.C.C. August which opened the week at Rs. 672½, touched a low of Rs. 666 on the same day (11th inst.). But some support was forthcoming at this level. Also, reports of unsatisfactory rain in certain cotton areas lent further impetus to this recovery. The contract improved to Rs. 674½ on 15th inst., though, at the close of the week, it was somewhat lower at Rs. 671. The following is the trend of prices in the forward market over the week under review:

	Opening	*High*	*Low*	*Closing*
I.C.C. Aug. ...	Rs. 672½	674½	666	671

The following are the latest available quotations from the Sewri market: Bengal *Deshi* Rs. 560, Berar Jarilla Rs. 770; Khandesh Rs. 780; Vijay Rs. 850; Oomra *Deshi* Rs. 710; Mogiai Rs. 675.

At Karachi also, the stalemate continues without any change either way. Prices have remained steady with little fluctuation during the course of the week. There was some revival of interest in Pakistan cotton as reported in earlier weeks from the Continent. But this brought about a small rise in prices which killed this interest before it could materialise into actual transactions. Now that the U.S. export policy is known, some significant trend is likely to emerge in the near future.

The latest available quotations from the Karachi market are: Sind *Deshi* Rs. 77; Punjab *Deshi* Rs. 74½ to Rs. 76½; 4F Punjab R.G. Rs. 70 to Rs. 70½; S.G Rs. 74½ to Rs. 77; L.S.S. Punjab R.G. Rs. 79½; S.G. Rs. 78½; N.T. R.G. Rs. 74½; S.G. Rs. 79½; 289F Punjab R.G. Rs. 76½; S.G. Rs. 81½.

At Alexandria too, it is the same story. The market is dull even though prices have maintained a steady level during the week. A few scattered enquiries come now and then from India and the Continent. But there is no large-scale buying in new crop. The Cotton Commission sold some bales from its stocks of Karnak, while local demand continues to absorb Ashmouni and lower grades of Karnak.

Both Liverpool and New York had little to report during the early part of the week. Trading at the former centre was on cautious lines, as it should be in the case of a newly opened market. There might, however, be some more activity after the conclusion of the meeting of the International Cotton Advisory Committee, which is in session at present in Brazil. At New York, even though the new crop was expected to be lower, both because of the lower acreage and discouraging weather, the price movement till yesterday was bearish in character. The July contract had dropped nearly 10 points during the week under review, but after the official announcement that there would be no cot-

ton export subsidy next year, there was a spurt in prices as it was believed that more orders would flow in from abroad, now that the uncertainty had been removed.

The following are the latest available quotations from New York as compared with those a week and a fortnight before:

(In cents per lb.)

	15-6-54	8-6-54	1-6-54
Spot	35.25	35.30	34.45
July	34.16	34.26	34.38
October ...	34.12	34.17	34.16
December ...	34.11	34.17	34.19
March	34.25	34.32	34.30

ART SILK YARN RECOVERS

(From Our Own Correspondent)

BOMBAY, 16th *June*

The forward section of the art silk yarn market which exhibited distinctly easy conditions last week staged a marked recovery during the week under review. Revival of demand in the spot section, scarcity of stocks and the acceptance of the delivery of 490 cases in May contract by one of the prominent speculators hardened the sentiment of operators in the market. The buying support that ensued as a consequence pulled up the prices of art silk yarn from their low levels. Not only were the last week's losses completely made good, but rates today finished higher than those a fortnight before. Thus 150D June contract during the week rallied 15 points to Rs. 785, as against Rs. 780 two weeks ago.

In contrast to the trend in the forward section, the spot section suffered a further fall in prices. 120 Japan moved down by As. 4 to Rs. 4-3. 150 Japan and 120 Italy receded by As. 2 each to Rs. 4-12 and Rs. 4, respectively. 150 Italy, however, was well supported at Rs. 4, as against Rs. 3-15 early in the week.

It is reported that the National Rayon Corporation has sold in the open market its entire production till the end of November.

The staple fibre yarn section was fully steady till the close yesterday but reacted today. The steadiness was due to heavy purchases by some of the prominent stockists. But today, some selling was in evidence, as the stockists tried to book profits. Values, as a result, drifted lower. The closing rates, however, were still higher than those at the end of last week. Staple fibre yarn (40×2) for June delivery improved from Rs. 609 to Rs. 619 before closing at Rs. 612. July delivery, after advancing by Rs. 10 to Rs. 620, finished lower at Rs. 615. In the spot section, Phoenix yarns fell by an anna and a half to Rs. 3-1½. Kohinoors and Hurjis shed an anna each to Rs. 3-5 and Rs. 3-0½ respectively. Citys, on the other hand, gained nine pies to Rs. 3-6. New Greats were fully steady at Rs. 3-4, Hinds at Rs. 3-1½ and Sri Rams at Rs. 3-2½. Rs. 3-4, Hinds at Rs. 3-1½ and Sri Rams at Rs. 3-2½. Prices of foreign yarn were well maintained, Sulcos being quoted at Rs. 3-11 and Shincos at Rs. 3-10.

The cotton yarn section continued to rule easy this week too, thanks to slackness in demand. The reports of yarn sales at lower prices by certain up-country mills were also responsible for the easiness. Consequently, cotton yarn values tended to recede. Among 80s, Elphinstones dropped As. 12 to Rs. 58. Sri Rams declined by As. 8 to Rs. 58-8 and Seksarias by As. 2 to Rs. 53-8. Among 60s, Raghuvamshis fell by Re. 1-4 to Rs. 48-4. Citys were lower by As. 4 at Rs. 47. Among 40s, Maduras were transacted at Rs. 29-4, as against Rs. 29-8. Among 30s, Girdhandas yarns lost As. 6 to Rs. 22-12 and Maduras As. 4 to Rs. 24-4. Among 20s, Hind lost an anna to Rs. 17-8. Yarn of 10 counts, however, was fully steady. Moderns being quoted at Rs. 13-8, Podars at Rs. 13-4½ and Elphinstones at Rs. 12-13.

The table below gives the prices of art silk, staple fibre and cotton yarns quoted today, as compared with those seven days before:

	16-6-1954	9-6-1954
	Rs. a.	Rs. a.
Art silk yarn—		
150 June (per case of 200 lbs.)	785 0	770 0
120 Japan (per lb.)	4 3	4 7
150 Japan (per lb.)	4 12	4 14
120 Italy (per lb.)	4 0	4 0

80s Elphinstone	58 0	58 12

OILSEEDS FARE BETTER

(From Our Own Correspondent)

BOMBAY, 16th *June*

The oilseeds market presented an upward trend during the week under review almost till today, when, on selling pressure, easiness came to prevail. The improvement was noticed, despite several adverse factors, such as favourable rains in important oilseeds-growing centres of the South benefitting the standing crop, especially groundnuts, expectations of bumper Pollachi groundnut crop and weakness of cotton and bullion markets. These were discounted because of the technical position of the market. Emergence of buying support at the low levels reached in the previous week, sharp rise in the price of Sarson seeds, and expectations of export quotas for groundnut and castor oil all induced some hectic covering by shorts. Consequently, a portion of the values lost in the previous week was recovered, but the recovery received a halt today on the resumption of speculative selling. Prices, therefore, staged a mild setback. Nevertheless, all the sections finished the week with moderate gains on balance.

In the groundnut section, Bold F.A.Q., which opened the week at Rs. 30-10, as against Rs. 30-4, shot up to Rs. 32-8 in the 14th inst. Thereafter, it declined on profit-taking and closed the week at Rs. 31-12. Khandesh quality, after improving from Rs. 31-8 on the 9th inst., to Rs. 33-8 on the 15th inst., eased to Rs. 32-12 today. June-July gained Re. 1-6 to Rs. 31-2 and August-September As. 8 to Rs. 29-14. Groundnut oil put on As. 12 to Rs. 16-8 per bag. *Ashad* delivery lost As. 4 to close at Rs. 82-12.

The Central Government withdrew the permission given last week to the trade to link up sales of bold grain and small grain of imported sugar at the average margin of one rupee profit. Foreign sugar is now being sold at free market prices. Spanish sugar dropped Rs. 3-4 to Rs. 48 per bag of 132 lbs. British refined sugar shed a like amount to Rs. 85 per bag of 2 cwts Formosan sugar, however, was well supported at Rs. 93 per bag of 220 lbs., as against Rs. 87 a week before, because in quality it is said to be much better than the other imported varieties.

As already stated, arrivals of sugar into the Bombay market were lower, being no more than 5,600 bags, as against 11,600 bags a week before.

The sugar traders met the Union Food and Agriculture Minister, Mr. Rafi Ahmed Kidwai, yesterday and discussed the problems relating to the sale of imported sugar. Drawing attention to the greatly inferior quality and damaged condition of Spanish sugar, the traders urged the Minister not to allot to the trade the inferior quality sugar. This plea is reported to have been accepted by the Minister. This means that sales will henceforth be made on ship-wise basis as before and not on a general basis as at present. It is suggested by a section of the trade that, henceforth, the Ministry must exercise great caution in buying sugar from Spain or other countries which are not regular exporters of sugar and that, in any case, if and when such shipments arrive, they should be directed to those ports where they can be easily disposed of and not bring them to ports like Bombay where buyers are highly discriminating.

The restrictions on the profit margin of the sugar traders have now been lifted by the Government of India. This decision is a sequel to the representations made by traders to the effect that, as they have incurred heavy losses recently, they must be given an opportunity to take advantage of the rise in the prices of superior grades sugar such as Formosan which arrived per s.s. *Maria*. Accordingly, the traders who have been alloted sugar are free to sell at free market rates.

The Union Food Ministry, it is understood, has decided to make available liberal supplies of Formosan sugar to the grain dealers' federations and other co-operative societies, as the quality of this sugar has turned out to be very good. The two chief considerations which have weighed with the Government in deciding so are the need to check the enormous rise of Rs. 10 per bag in the margin of profit on sale of Formosan sugar and the anxiety to ensure supplies to consumers at a reasonable price.

Four shiploads of sugar are expected to arrive in the Bombay harbour during the next six weeks. These consist of British refined, Formosan, East German and Polish, and Peruvian sugar. The s.s. *Atlantic Coast* has left Bombay with 5,000 tons of British refined sugar for being discharged at Bhavnagar. The s.s. *Margo* has already commenced discharging 9,700 tons of sugar in Bombay harbour.

INDIAN SUGAR STEADY

(From Our Own Correspondent)

BOMBAY, 16th *June*

Despite the reduction in the price of sugar by As. 8 to Rs. 29-8 per maund (f.o.r. destination, both for foreign and Indian sugar), with effect from today, announced by the Government, indigenous sugar in the spot section of the Bombay sugar market remained fully steady. If anything, it actually registered some improvement. This was due to good buying support induced by tight stock position and reduced arrivals. Small grain sugar was transacted at Rs. 87 per bag, as against Rs. 85-8 a week before. Medium grain hardened from Rs. 89-9½ to 89-94. Large grain was better by Rs. 2 at Rs. 100-105.

The forward section, however, experienced a fall in prices. *Jeth* delivery, which was quoted at Rs. 82-14 last week, was squared up at Rs. 82-4 per bag. *Ashad* delivery lost As. 4 to close at Rs. 82-12.

DEMAND FOR TEA DUSTS RESTRICTED

(Messrs. Forbes, Ewart & Figgis Ltd.)

Cochin, 12th *June*

The offerings in dust sale "K" which was held on Tuesday, 8th June, amounted to approximately 3,75,000 lbs. There was a restricted demand with very irregular prices and the market closed fully As. 2 easier. Good grainy black types met less competition and were half to one anna easier.

London Market.—No sale this week.

Colombo Market.—Good liquoring fannings firm. Others quieter. Demand declined three to five cents.

Calcutta Market.—No sale this week.

1954-55 *Export Quota.*— There has been a further decline in current season's quota with sellers now quoted at 50 pies, at which price business has still to be effected.

Forthcoming Auctions.—Sale No. 12 will be held on Tuesday, 15th June, and dust sale "L" will be held on Tuesday, 22nd June, 1954.

As we go to Press, Messrs. Forbes, Ewart and Figgis Ltd., wire as follows:

"*Sale* 12.—14,50,000 lbs. Good general demand, but prices have declined half to one anna, except for clean black teas which are steady. Whole leaf and thin liquoring broken pekoes difficult to sell."

PEPPER RECOVERS

(Messrs. Parekh & Co.)

BOMBAY, 16th *June*

After last week's severe shake-out, Malabar black pepper showed, during the week, an improving tendency on short-covering occasioned by unfavourable news of Indo-China Conference at Geneva. Scarcity of contracts in June delivery in Bombay and fear of impending bull squeeze fanned the fire. July shipment was done at as high as $0.50 and August was booked at $0.48. Garbled pepper in Cochin also staged a rapid recovery and is now quoted at Rs. 195 per cwt. buyers, as compared with Rs. 145 during the last week. Sarawak black at Singapore also improved to dollars (Singapore) 150, under pressure of short-covering. When prices were declining almost every day during the last three weeks, heavy short sales were reported to have been done in all important world markets.

Now, with the steadiness in the producing markets like Sarawak and India, there is a scramble for buying by short sellers, reflecting the present improvement in the prices. The growers at the moment are holding back and are demanding higher prices at every small sale.

Alleppey is quoting at Rs. 1,050 and Cochin Rs. 1,150, as against Rs. 715 and Rs. 800, respectively, during the last week. There are unconfirmed rumours that some of the short sellers at Cochin are refusing to make delivery against their former lower priced sales. If that is the case, Indian shippers will have to buy in the open market from the growers who might refuse to sell except at their own price.

The future of the market, however, depends upon the Indo-China situation, the attitude of the growers both at Sarawak and in India, and the policy of U.S. buyers who are reported to have not fully covered their requirements for the coming good-demand-months beginning from 4th July.

Following are today's nominal quotations:— Ready delivery Rs. 130 per Bengali maund, June delivery Rs. 900-950, July delivery Rs. 865-875 and August delivery Rs. 845-855 per candy of 5½ cwts.

JUTE GOODS DECLINE

(From Our Own Correspondent)

CALCUTTA, 15th *June*.

Prices of jute goods moved in a downward direction during the week under review. Support from foreign buyers was poor; and there was a lull after last week's heavy demand for local covering. Small acceptances for hessians from the United States and the United Kingdom were received. The week's decline in prices followed profit-taking, natural after the heavy operations in the *fatka* market a week ago. The figures relating to stocks of finished goods with mills as at the end of the last month have been published, and these show a further welcome decline in heavy goods to 50,000 tons from 57,500 tons as at the end of April. Production of sacking in May was 39,400 tons, which indicates that demand during the month was considerably above the rate of production. And this factor gives strength to the recommendation of the Jute Enquiry Commission to resume full working hours in mills.

However, certain quarters have pointed out that it would be unwise to add more to the present working period of 42½ hours a week, and the reason advanced for this view is that there is no certainty that the current rate of demand would continue, so that, if demand is not equal to production after resumption of full working hours, it will be difficult for mills to face the labour and marketing problems that would be created by a glut in supplies. Market circles, however, feel that these fears, although based on past experience, are not justified in view of the changed circumstances which have maintained demand at the higher level for some time and which have caused a considerable decline in mills' stocks of finished goods. It is necessary that the volume of production should be determined by current demand and not by a feared glut. If a glut eventually results, a solution should be found out then. More production and increased exports will lead to cheaper goods, and if the benefit of such cheapness is extended to consumers, demand will further expand and users of packaging materials will certainly prefer jute goods to substitutes. The recent speculative increases in the prices of several constructions of heavy sacking were due to declining stocks and production failing to meet demand. The abrupt changes in prices have caused considerable harm to the genuine trade, and, on many occasions have kept the foreign buyer away from the market when he actually needed replenishment. Only more production will keep away the demon of shortages, both artificial and created, and stabilise prices. Before the Government of India, however, favours the suggested increase in output, market circles strongly feel that the export duties should be done away with.

The decline in prices commenced last Wednesday, when ready B. twills fell to Rs. 114-2 from Rs. 115-14, and the October-December delivery to Rs. 109-10 from Rs. 110-6 on profit-taking. Genuine buyers withdrew from the market at this stage, and this factor gave added prominence to the downward trend. By Friday the ready B. twills had fallen to Rs. 112-10. At this level, some business took place, and the resulting change in sentiment enabled the rate to close steady at Rs. 113-7 over the week-end. In trading to-day, the rate was Rs. 139 as were A. twills at Rs. 114-8. The trend in hessian was not dissimilar to that of B. twills, as the ready 40" 10 oz. opening at Rs. 44-3 lost ground to Rs. 43-15 and picked up to Rs. 44-2 by Saturday. The quotation recovered today to Rs. 44-10 f.a.s., and to Rs. 46-11 f.o.b. The eight oz. was offered at Rs. 37-12 f.a.s.

Easy conditions prevailed in the raw jute market. Latest quotations are:

FOODGRAIN PRICES RECOVER AFTER INITIAL SETBACK

(From Our Own Correspondent)

HAPUR, 11th *June*

There has been a slight recovery, after persistent fall, in the foodgrain prices during the week under review and well-informed sources in New Delhi state that the Centre is anxiously watching the downward trend in wheat prices. But the prevailing wheat price between Rs. 11 and Rs. 12 is not reckoned uneconomic to the cultivator. Advices from foreign countries go to show that, in order to capture foreign wheat markets, the exporting countries are reducing prices. To follow in line with America, which reduced the price of wheat, Canada has also reduced the price of exporting wheat by 10 per cent. and Australia is also considering a similar move.

The food position in U.P. continues to be very satisfactory and green manure crops which also yield some food are widely sown. The wheat price for *dara* quality, which touched a low of Rs. 10-10 per maund, has recovered to Rs. 11-8. The daily average arrivals amount to 1,500 to 2,000 maunds and the wheat stock here is estimated at 95 *khatties* of 800 maunds each. The arrivals in the other assembling centres are also encouraging and stocks have gone up considerably. Hoarders of grains in surplus areas are reported to be unnerved and anxious to liquidate their possessions. The prices of coarse foodgrains which has been completely decontrolled, except for some export restriction from Madhya Bharat, Saurashtra and some eastern districts, have also slightly recovered. Gram is quoted at Rs. 9-8, after having gone down to Rs. 9-0-9 per maund. In sympathy with the fall in prices of pulses, peas and arhar also reacted. The price of peas for *dara* green quality being quoted at Rs. 8-5, after having touched a low of Rs. 7-12. Arhar price is quoted at Rs. 8-2-6. Bhadon forward for peas and arhar are quoted at Rs. 8-7-6 and Rs. 8-5-6, respectively. Urd forward was featureless and is quoted at Rs. 11-8-6 for Magh delivery. Guwar forward is also lifeless and fluctuations have been within a narrow range and is presently quoted at Rs. 6-11-3.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, 11th *June*

Crystal sugar has been ruling quiet. After the recent sharp fall, prices have shown a tendency to stabilise and mill delivery prices are ranging within a narrow range of Rs. 30 to Rs. 32. The U.P. Government has lodged a protest with the Centre against the Central Government action in taking over the distribution of sugar quota, which had so far been in the hands of the State Government. The U.P. Sugar Dealers' Association has, on the other hand, congratulated the Centre for this bold step which has been responsible for reducing the sugar price from Rs. 38 to Rs. 32 within a fortnight. There has been a fall in sugar production in the State this year and the mills were able to crush 155 million maunds of sugarcane, as compared with 195 million maunds last year. This was due to many factors, among which are (1) good price fetched by *gur* throughout the season, (2) the reluctance of the grower to give cane to the factory but crushing it himself, and (3) the delayed starting of sugar mills—out of a total of 66 mills in the State, one did not start at all.

The prevailing rates for wholesale mill delivery in this part of the State are: Jaswant Rs. 30; Simbhauli Rs. 30-2; Mawana Rs. 30; Sehora Rs. 30; Amroha Rs. 30; Bijnore Rs. 29-4; Mansoorpur Rs. 31 and Rampur Rs. 31-8. Retail Rs. 32-8 and *khandsari* Rs. 24 to Rs. 32.

Gur prices have remained almost stationary during the week and arrivals have decreased, averaging 200 maunds daily. There is a good outside demand where the buyers want to stock *gur* before the rains set in. The stock here is now estimated at 14,000 maunds and the prevailing rate is Rs. 16-12. The rates in other centres are: Meerut *gur* pansera Rs. 16-8 and khurpapar Rs. 18-4; Delhi Rs. 17-8; Amritsar Rs. 20 and shakker Rs. 22; Ludhiana Rs. 16 to Rs. 17-8; Mogha khurpapar Rs. 18 to Rs. 19-8 Ghaziabad Rs. 16-4 to Rs. 17-8 and Khurja pansera Rs. 15-8.

METALS STEADY

(From Our Own Correspondent)

CALCUTTA, 14th *June*

Following firm advices from foreign markets, which reflected the prolonging nature of the Geneva Conference, steady conditions prevailed in the metal market during the week under review. Prices were, however, affected by a fractional degree. But stockists were confident of getting orders for moderate quantities. Note was taken of the hope expressed by Mr. J. N. Bhan, in his address last week to the annual meeting of the Indian Non-ferrous Metals Manufacturers' Association, that, with more discipline and reasonableness on the part of labour and increased industrialisation now in progress, the factories that had been experiencing slump conditions might again be restored to a reasonable level of progress. The import and export policies are benefiting the metals industry also, and the trade is sympathetic with Mr. Bhan's urge on Government to direct ordnance factories to produce only items that are not manufactured by the private sector. For unhealthy competition between the private and public sectors is not conducive to planned development. However, Mr. Bhan's advocacy of higher import duties on non-ferrous metals products will not so readily be supported by the trade, as imports should always be provided for to prevent indigenous manufacturers from falling into a sense of complacency.

During the week, some imports of copper were received in Calcutta, and more are expected to arrive soon. Even now the supply position is relieved considerably, and business took place at Rs. 167 per cwt. for ready delivery. Mercury continued to be quoted firm at Rs. 1,005. The Government has taken advantage of the present higher prices and has invited tenders for the disposal of 500 tons of mercury. This did not affect market sentiment in view of the tightness in world supply. Good business was transacted in tin, but the price, after moving higher to Rs. 477, receded to Rs. 474. This was due to the anxiety of sellers to secure more business. Lead changed hands at Rs. 70 for the ready material. Consumers accepted moderate quantities. Electrolytic zinc opened at Rs. 59-4, and after moving to Rs. 59-8 closed lower at Rs. 59.

LINSEED EASY

(Messrs. A. Bradley & Co.)

CALCUTTA, 14th *June*

Linseed prices have shown little change during the week, although a generally easier undertone has prevailed. Sellers have been more in evidence, especially for forward delivery, but there has been a total absence of interest from crushers. Ready business has been reported on a small scale by traders. In the oil section, activity has been very scarce with millers anxious to dispose of ready stocks.

Latest quotations are: Ready Rs. 17-8 and July-August Rs. 17-12 per maund.

DEMAND FOR HIDES STRONG

(From Our Own Correspondent)

KANPUR, 16th *June*

During the week under review the conditions of the local hides and skins market remained more or less similar to those in the previous week. The new arrival from the mofussil areas was considerable, but the same from local sources was slightly less than the average expectation. The demand for all the categories of the goods was strong. The main purchases were the local tanners and the Madras dealers. The latest quotations are as follows:—

Wet salted cow, 1st grade Rs. 340, 2nd grade Rs. 230 and 3rd grade Rs. 170 per score; wet salted buff, 1st grade 1 lb. 14 ozs. and 2nd grade 2 lbs. 2 ozs. per rupee; sheep skins 1st grade Rs. 275 and 2nd grade Rs. 250 per 100 pieces; goat skins 1st grade Rs. 325 and 2nd grade Rs. 275 per 100 pieces.

TEAS REACT

(From Our Own Correspondent)

CALCUTTA, 15th *June*

Offerings during yesterday's export sale aggregated 21,900 chests. Although there was fair demand, prices fell by As. 2 to As. 3 generally. Commonest brokens and fannings were the weakest features of the sale, being fully lower by As. 3. However, buyers paid keen attention to stylish whole leaf grades and flavoury teas from Darjeeling. Clean common BP was quoted at Rs. 2-8, other kinds were unquoted.

INLAND WATER TRANSPORT IN INDIA

(Concluded from page 1185)

of the country. For tackling some of the important problems relating to the development of navigation on the Ganges and Brahmaputra and to co-ordinate the work of the State Governments concerned in the matter, an agency under the name of the Ganga Brahmaputra Water Transport Board has been constituted in 1952. Long stretches of rivers in India, on account of inadequate maintenance, have become shallow, rendering them unsuitable for navigation. In accordance with the recommendations of the inland water transport experts of the E.C.A.F.E. region, who studied the problem, pilot projects have been undertaken to examine the feasibility of negotiating shallow stretches by specially designed crafts.

A modest start has thus been made in the development of inland water transport, but the pace of progress will need to be accelerated in the short term to fill in the gaps in our overall transport system. Needless to say, the economy of the country in peace-time and the dire necessities of a state of war, demand the rehabilitation and increased use of waterways and extended and improved navigation. The future development should be in the direction of concentrating all effort in the provision of services, for the carriage of those traffics for which the waterway system is best suited. These would normally include, bulk conveyance between port and inland destination, and between points of origin and consumption, processing and storage. Like other human activities, transport is nowadays becoming an increasingly specialised job and the part that our inland waterways will be able to play in the commercial transport of the country in future years will depend on how best it could be fitted into the whole system according to its particular aptitude and capacity in serving the needs of the community and conferring the maximum social advantages.—*All Rights Reserved.*

COMMERCE AND INDUSTRY

(Concluded from page 1192).

Another point to be noted is that, along with manganese ore, other minerals such as iron ore, bauxite, coal and others are also mined. In the interior such as Madhya Pradesh, remoteness from the ports is a great handicap in the proper development of these minerals. The present situation demands prompt adoption of suitable measures to give relief to the mines seriously affected not only by the changed conditions in the international markets but also by transport bottlenecks. As manganese ore is an important item of exports, a number of suggestions has been made to improve the industry's economic position. These include:

(1) Reduction, if not total abolition, of the existing export duty of Rs. 15 per cent. *ad valorem* on exports of manganese ore;

(2) reduction of railway freight to make the export of high-grade varieties of the various ores extracted in the interior regions of the country;

(3) installation of beneficiation plants in the mining areas for the purpose of upgrading the existing ores;

(4) establishment of proper co-ordination between the Ministries of (a) Commerce and Industry, (b) Natural Resources, and (c) Railways for formulating a firm development and export policy for manganese ores; and

(5) establishment of ferro-manganese plant for the manufacture and export of ferro-manganese.

The Central Mining Advisory Board has, no doubt, taken up the question of exploitation of mineral resources of India and we are told that it has appointed a sub-committee of the representatives of State Governments and the manganese industry to examine the question of starting a ferro-manganese plant in India. The move is welcome but the situation today needs speedy action to alleviate the hardships caused to the industry as early as possible. It should include not only long-term projects but also measures which can provide immediate relief to the industry.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nemile quotation. Ex.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. a Sales and amount written off. (b) Investments. ‡ For ten months ended 31st December 1951.

(1) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Rs. 1-16 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 1212 in the debentures section:—

§§ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable a par.

(d) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959

(d) Bearer bonds of Rs. 1,000 each with option of redemption a whole or a part at par on 30th June, 1952 o on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955 on six months' notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months notice

MARKET GOSSIP

(Concluded from page 1167)

are not large enough to cushion the adverse effects of a poor monsoon, it is quite a hazardous job to take a view of the Indian foodgrains markets. It can, however, be stated that, in view of the comfortable world supply position of wheat and the considerable improvement that has taken place in the world rice situation, it should be possible for the Government of India to prevent any spectacular rise in prices of foodgrains by permitting liberal imports.

* * * *

The U.K. is certainly moving fast. "Convertibility" of the pound, till now only a favourite topic among financial writers, *seems* to be within a measurable distance of time. British officials are discussing the subject this week in Paris where the officials of the O.E.E.C. countries are holding preparatory meetings for the London Conference on convertibility problems, scheduled to take place in July. The Paris meeting is the outcome of the suggestion made to the O.E.E.C. Council by Mr. R. A. Butler, the U.K. Chancellor of the Exchequer, at the beginning of last month. The Council then agreed to set up a "Ministerial Working Party" to consider the practical problem of currency convertibility. The Paris meeting will discuss these problems and thereby prepare the ground for high level discussions in July, when seven other Ministers representing France, Germany, Italy, Switzerland, Greece, the Benelux group and the Scandinavian group of countries, will go to London for further discussions on what is, perhaps, the last as well as the most complicated step towards complete freedom from controls, namely, the convertibility of the pound. It is, however, necessary to emphasise here that neither the Paris meeting nor the forthcoming London Conference can produce a solution to the problem straightaway. The issues are far too complicated for such a snap decision.

* * * *

Indeed, this aspect has been continuously borne in mind by the British authorities. Although the pound is looking up in the foreign exchange markets of the world and the Government has demolished, one after another, many of the war-time controls and restrictions, the authorities have always spoken very cautiously about the convertibility issue. This is natural, in view of the national and international implications of the convertibility of the pound. It would, therefore, be unwise to expect any quick decisions on this issue either from the Paris or from the London Conference. It would appear that the official view in Britain is that convertibility is certainly not desirable, if it is to be achieved at the expense of a contraction or even a halt in the expansion of world trade. The official view also regards some positive action, on the part of the U.S., to close the dollar gap *as necessary* before convertibility of the pound could be risked. In this connection, it is pointed out that the gap is now only temporarily closed by means of the U.S.'s large-scale dollar expenditure on military establishments abroad. Presumably, the Paris and London Conferences will enable the European countries to speak with a single voice on these questions. This would be helpful in winning American support as well as the support of the I.M.F.—the I.M.F. will meet in September—to the European point of view.

* * * *

Although no definite indication is yet available about the subjects that are now being discussed at Paris, it is believed that they include the possibility of extending the existing system of trade liberalisation so as to include the dollar and other monetary areas outside the O.E.E.C. and the desirability of abolishing import restrictions existing between the O.E.E.C. countries and also those on imports from the dollar area. These measures, it is stated, are necessary before convertibility of the pound could be realised. Again, the Paris meeting, it is stated, is likely to discuss the international credit facilities which would be necessary for a return to convertibility.

* * * *

Many in this country will want to know whether the convertibility of the pound will automatically mean the convertibility of the rupee. It is not. Indeed, for the sterling area, as a whole, convertibility of the pound will rarely mean no relief—no immediate relief, at any rate—from exchange restrictions. This is because the convertibility of the pound, if and when a favourable decision is reached, is likely to apply in the first instance, only to "non-resident sterling"—that is, to sterling in the possession of persons resident outside the sterling area. The residents of the transferable account area—countries in Western Europe, the Americas, Iron Curtain countries, Japan and others—who acquire sterling will have the facility to convert their sterling holdings into dollars. They will, therefore, welcome immediately any convertibility decision. The sterling area countries will, however, continue to depend for their dollars on the common dollar pool at London.

* * * *

So much for what convertibility may mean in actual exchange practice. Its effects on world trade would, however, be very significant. It would enable world trade to flow more freely than now. At the same time, it might conceivably mean some danger to the sterling area's trade. Some non-sterling countries are now spending their sterling earnings in the sterling area itself, since that is the only way of spending their sterling. Once sterling becomes convertible for them, they will buy from the sterling area only if the goods they need are sold to them at competitive prices. If they find that the same goods could be more cheaply obtained in the dollar area, they will convert their sterling into dollars and buy their goods from that area. Again, the sterling area's gold and dollar reserves have, in recent months, been augmented by the flow of funds from abroad, especially from the dollar countries. If sterling becomes weak for some reason or other and if it is at the same time convertible, the foreign owners of these funds in London would be quick to convert them into dollars. This might impose a severe strain on sterling. All this suggests that the convertibility of the pound sterling is an issue that is not so easy to settle. Since the authorities concerned are well aware of these implications, it is only reasonable to assume that they will not allow themselves to be hustled into action.

* * * *

The Reserve Bank of India's scheme for establishing a Staff Training College has, we learn, reached the stage of completion. The College will be located in the building formerly owned by Whiteaways in the Hornby Road, Bombay. The Bank has appointed Mr. F. H. Hayne of the Training Department of the Midland Bank as its Principal. He will be assisted by Mr. T. H. Harvey also from the same Department. The former has been in the service of the Midland Bank since 1927, while the latter joined the Bank in 1947. The services of these two experts have been secured under the Colombo Plan. It is learned that they are at present examining the scheme of syllabus prepared by the Indian Banks' Association, Bombay. The syllabus will avoid overlapping with that prescribed for the Institute of Bankers' examination.

* * * *

The Staff Training College is expected to start functioning in three months' time. The College is likely to provide for three courses of 14 weeks' duration every year, the number of trainees in each course being about 40. The course of training is to be primarily practical in nature, and arrangements will be made for lectures on subjects of interest to bankers by outside experts drawn from academic and business circles. The College will impart training to the supervisory staff of banks. The administrative expenses of the College will be borne by the Reserve Bank of India.

* * * *

Designed to provide instruction in modern technique in banking, the Staff Training College, when it begins functioning, will fulfil a long-felt need. It will remedy the present paucity of adequately trained staff and enlarge the scope for extending banking facilities in the country. It represents one more step towards improving the efficiency of the banking system and the quality of the supervisory staff working in banks. In arranging for its establishment, the Reserve Bank has served—and truly well—the cause of sound banking in India.

TEXTILES

(Concluded from page 1176)

drawal of the 10 per cent. export duty on coarse cloth, abolition of the licensing procedure for exports, and the removal of the difficulties experienced by exporters in the matter of refund of excise duty on cloth exported out of India.

COMMONWEALTH WOOL GROWERS' CONFERENCE

AMENDING THE CONSTITUTION—A DANGEROUS PASTIME

IT is hardly five years since the country "solemnly" resolved to become a "Sovereign Democratic Republic" and adopted a constitution to this end. The Constitution was rightly hailed all over the democratic world as a splendid piece of achievement and triumph for the cherished principles of freedom, though there were some critics who felt that it was unduly elaborate and somewhat rigid. That this latter criticism was not unjustified was evident from the subsequent amendments. Not all these amendments were, of course, designed to make the Constitution flexible or to reduce the power of the State. Indeed, some of them actually enhanced the powers of the State. But, so long as such amendments do not raise fundamental issues, they may be accepted as an inevitable concession to the need for clarification of an insufficiently well-expressed idea or for some verbal improvement. Even so, it is wrong to alter the Constitution too often. In any case, it is a dangerous pastime. For one thing, it is bound to create the impression that it is easy to amend the Constitution. It might well create precedents which succeeding Governments might use for changing the Constitution out of shape. Secondly, it is wrong to amend the Constitution, without giving it sufficient time to show the beneficent results which its authors hoped from it. It is like trying to pull up the roots of a plant and trim its branches before it has had time to take root in the soil.

The latest in the series of attempts at amending the Constitution comes from the Sub-committee of the Congress Working Committee. Being the party in power, it will no doubt be able to command the necessary votes to carry through the amendments. Indeed, it is this factor which ought to make the interests concerned sit up and take notice of the precise import of the suggested changes in constitutional provisions. The suggested changes include, among others, an amendment to Article 226 of the Constitution, which lays down the powers of the High Court, and two amendments to Article 31 which affirms the right of owners to claim compensation for their property taken over by the State. Now both these changes have far-reaching economic and political implications, so that it would be wrong to allow these changes to be carried through. If they are given effect to, they will seriously undermine the fundamental rights of citizens and reduce the democratic content of the Constitution.

It has been clear for some time now that the ruling party has been thinking in terms of amending the Constitution. The provocation is probably provided by the series of reverses inflicted on the Executive by the Supreme Court. The cases arising out of the Sholapur Mills Act, sales tax law, admission to English-teaching schools and Income-tax Investigation Commission's powers are only a few of the instances where the Supreme Court has found it necessary to examine the country's laws in the light of the rights guaranteed by the Constitution. The right course in these circumstances, would be for the Executive to reform the laws in order to make them conform to the Constitution. But, what is now sought to be done is to reform the Constitution, so as to make it conform to the Executive's wishes. This process, if allowed to continue, will corrupt the Constitution.

The Federation of Indian Chambers of Commerce and Industry has, therefore, done well to draw the attention of the public to the implications of the suggested changes. It has rightly chosen to address a memorandum on the subject to the All-India Congress Committee itself. The fact that the Federation has consistently supported the Congress should entitle this body to get a fair hearing. Again, the promptness with which the Federation has moved in this matter is commendable. It has voiced its objection before the proposals, now in a formative stage, become a *fait accompli* and take the shape of official Bills.

The Federation rightly argues that the proposed amendments will "materially alter the basic democratic structure of our Constitution," that they will interfere with the "rule of law" guaranteed by the Constitution and adversely affect the vital purpose of democratic institutions, namely, "to keep alive and promote individual creativeness, vigour and vitality." It takes up for special comment the suggested amendments to Article 226 and to Article 31 to indicate how the "basic structure of our Constitution would be materially altered." It says:

"Article 226 lays down that the High Court shall have the power throughout its jurisdiction to issue to any person or authority, including in appropriate cases any Government, directions, orders or writs, including writs in the nature of *habeas corpus, mandamus,* prohibition, *quo warranto* and *certiorari,* or any of them. The exercise of this power by the High Court is for the enforcement of any of the rights conferred by Part III—Fundamental Rights—and for any other purpose. It has now been suggested that the last words 'and for any other purpose,' should be deleted. In other words, the amendment will curtail the jurisdiction of the High Courts, that is, of the judicial authority, except in cases covered by the fundamental rights guaranteed under Part III. The purpose behind including the words, 'for any other purpose,' is to enable an individual who feels aggrieved at an action of the executive, actual or contemplated, to have recourse to the due process of law. The Committee cannot understand why this essential safeguard against executive action contrary to the spirit of the Constitution but not covered specifically by the contents of Part III of the Constitution should be denied to the citizen. Further, with the growing amplitude of the powers of Government to supervise, direct, regulate and control the economic life and, therefore, the work a day life of the people, the necessity for judicial safeguards and guarantees becomes stronger."

It is a sad commentary on the Congress, the chief architect of the Constitution, that, so soon after enacting the Constitution, it has found it necessary to alter it in a somewhat radical manner. If the Constitution were altered in the manner now contemplated, it would certainly be said of its authors that they, in a fit of generosity, gave the country a constitution conceived in the best democratic traditions and soon found that the country had been given too much of this good thing, called freedom. It is true that freedom should be contained in order to be possessed. But this should apply as much to the Executive as to the people. If the courts were prevented from safeguarding the rights of the citizens, a stage would soon be reached where the citizens would lose their powers of initiative and self-direction and thus become a burden on the State itself. Surely, this is not the way to enlist popular enthusiasm for the task of economic reconstruction.

The Federation next subjects the proposed amendment to Article 31 to a careful scrutiny. Now, this Article states that no person shall be deprived of his property save by authority of law. The Article explains this right further as follows:

"No property, movable or immovable, including any interest in, or in any company owning, any commercial or industrial undertaking, shall be taken possession of or acquired for public purposes under any law authorising the taking of such possession or such acquisition unless the law provides for compensation for the property taken possession of or acquired and either fixes the amount of compensation or specifies the principles on which, and the manner in which, the compensation is to be determined and given."

Now, this Article is sought to be amended in two ways. In the first place, it is proposed to enlarge the scope of the Article by providing for "temporarily taking over possession of control of any property for the purpose of its preservation or better management or supervision or for the purposes of employment, production or prices." Secondly, it is proposed to amend the Article to the effect that the amount of compensation or the principles on which and the manner in which the compensation is determined and given shall not be challenged before any court of law. It should be clear that both these modifications will, as the Federation points out, tend to "restrict substantially" the right of the individual to hold property. Apart from this major consideration, the Federation has raised a number of valid objections. Since law, constitutional law, in particular, should be precise, the Federation asks as to what is meant by "temporary" acquisition of property—"3 months, 6 months, 5 years or 10 years." Again, can the period be extended? In other words, will it not be open to the Executive to set at naught an aggrieved party's claim for compensation by calling the acquisition a temporary one? The Federation further asks as to what is sought to be conveyed by the omnibus phrase—"purposes of employment, production or prices." It pertinently asks: "Who is to determine them?" Who is responsible for losses or damage to property caused during the period of "temporary acquisition"? Nor is the Federation convinced that there is need for special enactment of the kind contemplated by this amendment inasmuch as item 33 in the Seventh Schedule (List I) of

the Constitution empowers the Central Government to acquire or requisition property for the purposes of the Union. Finally, it rightly insists that, if the proposed amendments were carried out, it would defeat the Government's policy in respect of foreign capital, which everyone, except the most narrow-minded, short-sighted and selfish Indian capitalist, concedes is required for achieving speedy economic development of the country. Any change in the Constitution which curtails the right to hold property and reduces the sense of security, it warns, "cannot but affect adversely the willingness of the foreign investor to invest here."

The Federation's argument that it is not the Constitution but the absence of a correct economic policy that stands in the way of rapid economic progress is unquestionably correct. It says:

"Apparently, the Constitution Sub-committee permitted themselves to suggest amendments in the belief that it will help the pace of social and economic progress of the country. In the considered view of the Federation Committee, however, it is not correct to contend that the provisions of the Constitution are the main or major obstacle to our economic development. They are firmly convinced that the pace of development can be stepped up materially within the framework of the existing Constitution by pursuing policies which encourage individual initiative and enterprise and which create an incentive to work, to earn, to save and to invest. In fact, the framework of the Constitution, as it is, is more suited for creating an environment in which progress becomes possible and any attempt to modify or alter its structure, especially when we are having plans of development, to suit the desires of the executive cannot but have a deleterious effect on the rate of progress. The Federation Committee would urge the Congress Working Committee and Government to devote their energies to the formulation and implementation of policies which will accelerate economic development and to desist from amending the Constitution in any way that may, directly or indirectly, immediately or remotely, affect the fundamental rights of the citizens."

No impartial student of current economic affairs in the country will fail to endorse the sentiment expressed above. Although the impatient reformers might feel that more powers to the State will bring quicker progress to the country, the fact remains that it is ultimately the people that must help themselves. The Government which helps the people to help themselves, will have rendered the greatest service to the citizens. The proposed amendments are prompted by the mistaken belief that the State can do everything.

There are undoubtedly loopholes in some of the existing laws which enable unscrupulous citizens to thrive at the expense of the society. One way to check their nefarious activities is to plug the loopholes through a suitable reform of the existing laws within the four corners of the Constitution, as is now sought to be done in the case of the Company law. Another, a more important, in our view, is for the State itself to follow correct economic policies which will not provide unsolicited opportunites for these elements to exploit the public and which will provide room for the inexorable economic laws to operate and take their toll. The State should not forget its obligation to the people to maintain the value of money. It is only when it forgets this obligation and resorts to inflation, controls, etc., that the morale of the community starts going down. Nothing corrupts a nation so much as inflation.

THE PROBLEM BEFORE JUTE INDUSTRY

IN recent months, the position of jute mills has shown a distinct improvement. The stocks with the mills have declined to reasonable proportions, due more to better offtake than to any appreciable fall in production. Indeed, the production has been running at a slightly higher level since the beginning of this year. As will be seen from the latest statistical picture presented in our last issue, *vide* page 1182, total stocks, as at the end of May, 1954, aggregate only 86,478 tons, as against 138,789 tons a year before. Besides, there are indications that the demand for jute goods will be quite encouraging in the coming months. The trend of prices of jute goods and raw jute is also quite steady. This improvement has strengthened the hands of those who have been urging for some time past the need for increasing the working hours now restricted, by mutual agreement among the mills, to 42½ hours per week, with 12½ per cent. of looms remaining sealed. They argue that, unless this restriction is relaxed, the prices of both raw jute and jute goods will go up, thereby preventing the recovery that has been taking place in the offtake of Indian jute goods from gathering momentum. There is reason to believe that the question is being studied by the Indian Jute Mills Association (I.J.M.A.) and there is no doubt that the Association will soon take a correct decision.

More important than a revision of the existing working hours is the question of the future of the Working Time Agreement. This issue has come to the fore because of two reasons, first, certain remarks of the Jute Enquiry Commission have cast serious doubts about its value and, secondly, the Agreement itself expires at the end of this year. Sooner or later, the Association will have to decide whether restrictions on working hours are at all necessary and if so in what directions should the present Agreement be modified. As readers are aware, the Jute Enquiry Commission is of the view that the present Agreement has outlived its utility and that the earlier it is scrapped the better it will be for the industry. After considering the pros and cons of the Agreement, the Commission has come to the conclusion that the Agreement acts as a sort of protection to the less efficient units of the industry and, as these units stand in the way of the industry moving forward with a view to bringing down the cost of production and raising its competitive capacity in the world markets, they cannot continue to enjoy such protection. It accordingly feels that, in the long-term interest of the industry, the Agreement should be modified, if not abandoned. The Association had presented a well-argued statement to the Commission, emphasising the importance of continuing the Agreement. The fact that, despite this statement, the Commission has come to the aforesaid conclusion suggests that the Association's case has failed to carry conviction to it.

In its note to the Commission, the Association has traced the history and the purpose of the Agreement. It is interesting to find that the Agreement to restrict working hours is not of recent origin and that it dates back as far as 1885. The primary object of such restrictions is to prevent cut-throat competition among the mills. That such competition is possible even today is the fear of the I.J.M.A., a fear based not only on past experience but also on the fact that the productive capacity of the Indian jute manufacturing industry greatly exceeds the present world demand. In the event of such competition, there will be a collapse of the market, raw jute growers will be seriously affected and workers employed in the mills will be thrown out of employment. In short, the chaos in the industry will be of such a serious nature that the hardship to which everyone connected with the industry would be put does not bear contemplation. The Working Time Agreement, voluntarily entered into among the members of the Association, is designed to prevent the emergence of such a situation. It spreads the limitation on production equitably over the industry as a whole and also maintains the potential productive capacity necessary to meet sudden increases in demand.

The Association further points out that the Agreement has been enjoying the support of all its members and claims that it is the "fundamental basis of this vital and well-organised industry." Through this Agreement the production of jute goods is maintained at a level which world markets can absorb. At present, the working hours are restricted to 42½ per week, with 12½ per cent. of the looms sealed, the only exception to this arrangement being the smaller mills with a registered complement of not more than 220 looms; these small mills are permitted to work 72 hours a week, with none of their looms sealed. There is nothing rigid about this arrangement, inasmuch as the number of working hours can be raised or lowered with the consent of the majority of its signatories. The Association warns that the alternative to the Agreement is cut-throat competition and gross over-production with all its attendant evils.

Impressive as these arguments are, they are not flawless. In the good old days, when India had the virtual monopoly of both raw jute and jute manufactures, an agreement of the sort currently in force yielded satisfactory results. But now India does not enjoy this monopoly. The major portion of raw jute is being produced by Pakistan; in fact, the latter has the capacity to produce almost the entire world requirements of raw jute. On the manufacturing side, India has only 56 per cent. of world loomage, leaving as much as 44 per cent. to be held by other countries. The share of India in the jute goods consumed in many parts of the world has appreciably gone down, as compared with that five or six years ago. Pakistan, with the advantage of superior raw jute which it produces, is fast emerging as an important supplier of jute goods in the world markets. In such a state of affairs, any restriction on the production of Indian jute mills constitutes a sort of protection not only to the uneconomic units in India but also to the numerous jute mills in the other parts of the world, most of which are uneconomic in the sense that they are, for some reason or other, unable to stand the competition from the efficient Indian mills without protection.

The experience in the past five years—a period in which the present Working Time Agreement has been in force—fully bears out this contention. The main reason for cutting the working hours was shortage of raw jute, but, although this shortage ceased more than two years ago, the cut was not restored, for, in the meantime, the substitutes for jute and other producers of jute goods had filled the gap. So long as the present state of affairs in the industry continues, a good part of this loss is irretrievable, though some gain has been made in the past eight or nine months. It is, of course, true that this loss was not due entirely to the voluntarily imposed restriction on production. The high export duties levied by the Government were also responsible to a considerable extent. Nevertheless there is no gainsaying the fact that the Working Time Agreement, too, was a contributory factor for the loss of markets.

The point we wish to make here is that any handicap placed on the Indian jute industry which reduces its competitive capacity is a handicap in favour of the jute mills in Pakistan, Dundee and other countries. It is argued that the Working Time Agreement is not a handicap, inasmuch as it imparts stability to the industry. There is some truth in this contention, but it can easily be exaggerated. Further, the Agreement is a definite handicap to the more efficient units in the industry. These units have to carry the burden of keeping the inefficient units alive. They cannot use their financial resources, talent for better management and their better equipment to the maximum extent possible by working longer hours, or by working an additional shift, for bringing down their cost and enhancing their competitive ability in the overseas markets. While it is hard to measure, in precise terms, the price which these mills are now paying for avoiding internal competition, it stands to reason that, if the uneconomic units are weeded out and the economic units are encouraged to step up their production, everyone, excepting the owners of the uneconomic units, stands to gain.

It is, of course, assumed here that the freedom from restrictions on working hours will induce the economic units to modernise their machinery at least to the minimum extent necessary and to step up their production through additional shift working. Now, it may be argued that these units will not be inclined to do so at a time when the profit-margins will be adversely affected by the keen competition that will follow the abolition of the Working Time Agreement. It was probably this consideration that made the I.J.M.A. to assert before the Jute Enquiry Commission that, if the Working Time Agreement were to be scrapped before half of the old mills was modernised, it would spell disaster to the industry. This contention sounds reasonable, but the I.J.M.A. has so far given no satisfactory answer to the argument that the restriction on working hours acts as a deterrent to modernisation of the mills, for it does not enable the mills to cover the heavy cost of new machinery by working longer hours.

One can thus go on arguing in a circle. It only shows that the jute industry is now in a vicious circle, thanks to the blunders committed in the past. It does not do any good to anybody to try to apportion blame for these blunders. If it is agreed that the Indian jute industry consists also of uneconomic units and that their elimination will strengthen the other units and enable India to get a larger share of the world trade in jute goods, then ways and means must be found to achieve this object. The vicious circle must be broken not just anywhere in the circle but right at the spot from where it can be completely got rid of as early as possible. The Government can certainly help the industry in this direction by completely abolishing the export duty on all jute goods, on condition that the mills will first restore the working hours to 48 per week and remove the sealing on the looms and that, thereafter, they will devise measures for strengthening the competitive capacity of the mills. It is, of course, needless to add that any such action will require the wholehearted co-operation of labour.

BUOYANCY IN SHARES PERSISTS

U.K. MAY BUY INDIAN COAL—CITY SUGAR BODIES TO MERGE—ECONOMIC TRENDS IN MIDDLE EAST

THURSDAY, 5 P.M.

THIS has been a good week for all the markets, in general, and an exceptionably bright one for the share market, in particular. The downward trend in the commodity markets seems to have been arrested, at least for the moment, the closing rates today showing a modest gain in cotton and oilseeds. A smart rise in gold and a steady trend in silver have been the features of the bullion market, in which there was a serious debacle last week. In shares, values have staged an all-round improvement, the popular speculative counters scoring several points, as will be seen from the Week's Stock Exchange Trend published elsewhere in this issue. The most striking feature of this market is the buoyancy of textile shares. There has been a spectacular rise in Bombay Dyeings, accompanied by a moderate advance in the other scrips such as Kohinoors and Centurys. Market circles are not in a position to offer any convincing explanation for the present bullish trend. It seems to be all a question of sentiment rather than anything else. Now that the values have already gone up substantially, investors and speculators are probably inclined to take more risk. But a leading firm of brokers maintains that the major portion of activity is of a highly speculative nature.

MARKET GOSSIP

* * * * *

The outlook for all the major Indian industries has definitely improved. The first six months of the current year have proved to be a profitable one to them and there are no particular reasons why the next half-year also should not be equally good. The cotton mill industry, as was pointed out by us last week, is doing well. Its stocks are normal, despite production running at record high levels. There is a likelihood of the Government lifting all the remaining controls on the industry, excepting those that are meant for protecting the handloom industry. Even in regard to the latter, Mr. T. T. Krishnamachari has clearly stated that reservation of markets for handlooms has not done any tangible good for them and that he is not in favour of continuing such spoonfeeding. It is just possible that, in course of time, this restriction also may be removed. The price of cotton has eased a bit and, given a good monsoon, the mills can expect to get their needs of raw material at somewhat lower prices than now.

* * * * *

Conditions in the jute industry, too, are much better than expected, so much so that the mills are likely to work longer hours without any adverse effect on their profit margins. The tea industry is distinctly well off and so also coffee, though somewhat less than tea. No complaints are now heard either from cement or steel. The position of various other miscellaneous industries also is satisfactory, albeit in varying degree. Further, the attitude of the Central Government towards industries, in general, is helpful, thanks to the realistic views taken by the Finance, Food, and Commerce and Industry Ministers. All the three of them are maintaining a keen watch over the country's economic progress and have given several indications in recent weeks that they will assist the private sector to overcome genuine difficulties. If all this is taken into consideration, it will be seen that the present mood of the market is not unjustified.

* * * * *

The knowledgeable sections of the daily Press aver that there is no truth in the reports that the Indian Iron and Steel Company is either contemplating a capital reorganisation scheme or will pay a higher dividend. Though several days have passed since these denials appeared, there has been no change in the expectations of the market, which is still proceeding on the assumption that something is in the offing. It was also reported some days ago that the Chairman of the I.I.S.Co. has impressed upon the authorities of the Exchange the need for checking the heavy speculation that has been going on in this scrip. This report, too, has been ignored by the market. If nothing is in the offing to justify the vague impressions of the market, then the Company will do well to take the investors into confidence and say so. It may be added here that there is nothing wrong in doing so; many companies in Britain do contradict wild rumours on the Stock Exchange for the benefit of their shareholders.

* * * * *

The bluff of the big speculator in cotton, who bought heavily and who has been bullying the E.I.C.A. by taking advantage of what seems to be a defect in the drafting of a bye-law, was out this week, when he failed to meet his commitments, believed to be of the order of Rs. 25 to Rs. 26 lakhs. It is now as evident as daylight that this operator was not a genuine speculator and that he belongs to the ranks of gamblers. It is a pity that members of futures markets in Bombay continue to have such clients on their books. They never seem to learn anything. It is to be hoped that the Board of the E.I.C.A. at least will take serious notice of this incident and teach the members concerned a lesson. It should not accept compromises and partial settlements. It must insist upon full payment, declare those who are not in a position to pay as defaulters and deprive them of the membership of the Association. It is only such firm and merciless action by those in charge of futures markets which will improve the standard of forward trading and bring honour to, and respect for, futures markets. Incidentally, this is a convenient way of reducing the overbloated membership of the E.C.I.A. Besides taking stern action against the defaulting members, the E.I.C.A. authorities should introduce, without any further delay, some sort of check on excessive speculation. Why should they not initiate such a reform and take the credit for it, instead of allowing the Forward Markets Commission to snatch it, as it might well do if given some more time?

* * * * *

The bullion market has started looking up once again. After going down to a low of Rs. 81-15 earlier in the week, forward gold has come up again to Rs. 84-5. Similarly, silver has recovered from a low level of Rs. 148-8 to Rs. 150-14. Arrivals of gold have slowed down. Owing to the tightening of the cordon round the French pockets in the country and the onset of the monsoon, which is not conducive to smuggling gold into Bombay through the sea, the flow of contra band gold has become negligible. This, coupled with short-covering by bears, has imparted fresh strength to the yellow metal. The shrinkage of floating stocks and the heavy short-position are reflected in the widening of the premium on ready gold to as much as Re. 1-8 to Re. 1-12 per tola. In silver, the chief bear operator, who was threatening early in the week to take the market down to Rs. 125 per 100 tolas, has chosen not to increase his commitments any further. On the contrary, one finds some bears covering their open positions. Nevertheless, after last week's debacle, the bulls seem to have lost their courage. It remains to be seen whether the chief bull operator, who had carried forward quite a few thousand bars from the last to the current settlement, would make a fresh attempt to recover a part of his losses by staging a squeeze towards the close of this settlement. Many doubt it, because the next two months constitute a slack period for bullion. If notwithstanding all this, there has been an improvement in the value of silver, it is due to a natural reaction to the precipitous fall that had taken place in the past week.

* * * * *

While the bullion markets in India are thus recovering from a sharp break in the previous two weeks as a sequel to excessive, unhealthy speculation, the gold market in London is quiet and dull in marked contrast to the activity which developed immediately on the reopening of the market and for some time subsequently. The turnover has shrunk, the demand from the Far East having dried up considerably. Further, the Continental centres, which used to exercise considerable influence on the London market, owing to their purchases for investment of a long-term nature, presumably in the hope of an eventual gain, are also in a subdued mood. On the supply side, arrivals from the Soviet Union have ceased. The Union of South Africa, however, continues to meet the requirements of the open market. Australia, which has been very reluctant to sell gold in the London market, is reported to be willing to do so now, according to the *Financial Times*. It will be recalled, in this connection, that one or two members of the sterling area—particularly Australia—showed a disinclination at first to sell gold for resident sterling in London. Prior to the opening of the London market, these countries had been disposing of their surplus metal for dollars in the free international markets and, when London did reopen, they indicated that they would like to be able to enjoy the right conferred on certain other sellers to take payment in dollars or in the new fully convertible type of sterling created when the market started again. It is, however, now stated that the Bank of England has succeeded in disposing of the objection to selling gold for resident sterling, thereby enabling Australia to send all available metal for sale in London. But, as Australia can sell more profitably elsewhere, it may not send all its available gold production for sale in the London market.

* * * * *

There seems to be some good news for the Indian coal industry which is now trying hard to expand its export markets. Britain is once again developing a shortage of coal and the authorities are worried over the coming winter's fuel prospects. On Monday this week, the Minister for Fuel told the British Parliament that, as compared with last year, while the production was up by only one million tons, the consumption was higher by three million tons. It was the intention of the British Government, the Minister said, to fill this gap through imports. Although the Minister refused to divulge the quantities or the sources of imports, as he wanted to give the Coal Board the best commercial opportunities of getting coal as cheaply as possible, London advices say that India is being mentioned as one of the sources. India can certainly supply the major portion of Britain's needs and it is to be hoped that both the coal industry and the Government of India will do their best to get this business. It would appear that the shortage of coal in Britain is not a temporary feature and that it may last for a considerable number of years. In the "bad old days" before the war coal imports by Britain were unknown and the U.K. was Europe's supplier. In 1923, it shipped abroad nearly 100 million tons and, though the amounts declined thereafter, they never fell below 46 million tons. Last year 16.5 million tons were scraped together for the foreign market and for bunkers, while, since 1947, close on 4 million tons have been imported to meet one crisis or another. Commenting on this state of affairs, the *Financial Times* observes significantly enough:

"When the present cycle of imports was announced last July there was a tendency to minimise them. It was emphasised that nothing other than large coal would be bought and that the importation would enable the U.K. to fulfil her own export contracts. Now it begins to look as if imports of large coal may be a permanent feature. Last year the loss to the National Coal Board was just over £1 million or about £2 a ton. This year because of mounting consumption and poor output the Board will not be able to offset a corresponding loss by increasing exports. The bulk of the imported coal goes to the domestic market and a small quantity to the railways, so that if consumers want to keep down their fuel costs they must be economical. That does not only mean burning less coal. It means installing apparatus that will burn the less scarce and cheaper grades with equal efficiency. That is all the consumer can do. The rest depends on the miners, and it is to be hoped they realise the gravity of the situation. So far this year their performance is not impressive. In January the Board made a bargain with them. It raised their wages on condition that they increased the year's output by 5 million tons. Such an increase, the Board said, would meet the £9.5 million cost of the pay claim. The miners have not increased their output, with the result that the country faces another anxious winter. The possibility is not only of inadequate coal supplies but of paying more for what is available."

It will be seen from the above quotation that Britain is unlikely to be in a position to produce enough coal to meet the full requirements of its domestic and export markets for several years to come and that it will, therefore, have to import on a much larger scale than now. It is true that Britain is doing everything that lies in its power to replace coal through development of oil refining and atomic power. But this will take a fairly long time.

* * * * *

Too many trade bodies and markets in one commodity and that too in one centre are not an uncommon feature in this country. But this feature is steadily disappearing, a symptom of the growing unity among the people. Thus in recent years, there has been an amalgamation of markets in cotton, bullion, oilseeds and yarn. It is now learned that there is a move to merge the two sugar trade bodies in the City into one. The two bodies are the Bombay Sugar Mer-

(*Continued on page 1263*)

EQUITY VALUES HARDEN FURTHER

TEXTILES WELL FAVOURED

(From Our Own Correspondent)

BOMBAY, 24th *June*

THE Stock Exchange continued to present cheerful conditions during the week under review. Equity values hardened over a very wide front on keen speculative enquiry and investment support. Though no rational explanation is offered for the buoyancy of the market, leading brokers attribute it to a change for the better which had taken place, for a couple of weeks now, in the psychology of operators. Even a stray enquiry gave a twist to the upward spiral, as such is usual in a rising market. Advices from other Stock Exchanges in the country also gave impetus to trading. In Calcutta, for instance, jute shares were buoyant on reports of the increase in the working time of jute mills. In Madras, miscellaneous industrials provided a firm feature and some of the scrips which had been dormant for a very long time, came into the limelight. Locally, the bullion market showed, during the last three days, signs of returning to normalcy from the recent debacle. The Finance Minister's indication about the prospects of an increase in money supply would appear to have also been responsible for some inspired activity. The continued decline in foodgrain prices was recokned as a favourable factor for industries, in that it would go to bring down their expenses on that account.

Steel shares were somewhat irregular, though the undertone was bullish. Tata Ordinaries opened the week under review on a very bright note with a jump from Rs. 208-8 to Rs. 213-8. Despite end-of-account considerations, they finished on Friday last better at Rs. 211. The new account opened cautiously at Rs. 209 and the shares moved narrowly till yesterday between Rs. 209-4 and Rs. 207, but today they rallied to close at Rs. 212-8. Indian Irons hardened from Rs. 32-1 to Rs. 32-11½ on the opening day, but drifted back to Rs. 32-1 on Monday. There was again a sharp rise to Rs. 32-10½ on Tuesday, but this was not sustained yesterday when profit-taking pruned them to Rs. 32-5. Today, however, reports of a capital reconstruction of the Company, despite the denial from some quarters, revived to lift the shares to Rs. 32-14.

A feature of this week's trading on the Exchange was the firmness of textiles, in anticipation of removal of controls on production. Under the lead of Bombay Dyeings and Centurys which were concerned in some hectic activity, the section recorded handsome gains. Bombay Dyeings were well sought after in the belief that the Company would issue bonus shares immediately after the Taxation Enquiry Commission's recommendations are published. Further, fond hopes of abolition of the export duty on coarse cloth, resulting in a fresh fillip to the Company's export trade, encouraged activity in this scrip, lifting the price from Rs. 438-12 to Rs. 468-12. It will be noted that the share has gone up by Rs. 53-12, in the course of the last four weeks, the rise during the week under review alone being Rs. 30. The prospects of considerable improvement in the working result, consequent on the inclusion of the rayon manufacturing project, imparted strength to Centurys, which gained Rs. 8-12 to Rs. 345-4. Kohinoors advanced by Rs. 7-8 to Rs. 320-8. It will be interesting to note that Kohinoors which were ahead of Centurys by Rs. 16 early this year are now lagging behind the latter by about Rs. 25. Central Indias appreciated by Rs. 4-8 to Rs. 181, Finlays by Rs. 5 to Rs. 250, Gokaks by Rs. 8 to Rs. 268, Indore Malwas by Rs. 7-8 to Rs. 116-14 and Khataus by Rs. 5 to Rs. 126-4. Mysore Spinnings hardened by Rs. 3-12 to Rs. 125. New Citys, which had lost Rs. 9-11 in the previous week, revived during the week under review and gained Rs. 3-12 to Rs. 160. New Greats put on Re. 1 to Rs. 171. Podars added Rs. 6-4 to Rs. 145, Simplex Rs. 3-4 to Rs. 159 and Standards Rs. 5 to Rs. 337-8. Svadeshis flared up by Rs. 12 to Rs. 291 on persistent buying. Swans picked up Rs. 8-12 to Rs. 330 and Tatas Rs. 5 to Rs. 54-8.

Interest in bank shares was selective and price variations were fractional. Centrals gained no more than As. 8 to Rs. 55-12 and their new shares As. 12 to Rs. 60. Barodas shed a rupee to Rs. 109. Imperial Fully Paids and Partly Paids dropped Rs. 2-8 to Rs. 1,770 and Rs. 427-8, respectively. Indias were lower by As. 12 at Rs. 146 and United Commercials As. 4 at Rs. 45.

Insurance shares attracted enquiries, but thanks to paucity of offerings, business was restricted. Empire of Indias were in demand and moved up by Rs. 26-4 to Rs. 696-4. Indian Mercantiles added As. 4 to Rs. 42. Industrial Prudentials improved by Re. 1-4 to Rs. 43-4. New Indias were taken up by Re. 1 to Rs. 48-4. Orientals were lower by Rs. 200 at Rs. 7,700. British India Generals had business at Rs. 13-12 and Vulcans at Rs. 14-4.

Electricity shares were steady, with revival of enquiries, particularly in Tata Hydro group. Ahmedabad Electrics were in demand, their old shares rose by As. 10 to Rs. 108-7 and their new shares by As. 4 to Rs. 107. Bombay Suburbans were well held at Rs. 123-2 and Poona Electrics at Rs. 131-4. Surat Electrics dropped As. 10 to Rs. 128-2. Andhra Valleys appreciated by Rs. 25 to Rs. 1,360. Tata Powers improved by Rs. 13-12 to Rs. 1,450 and their new shares by Rs. 3-12 to Rs. 1,118-12. Tata Hydros rose by Rs. 2 to Rs. 147-8.

The miscellaneous section followed the improved pattern of the market and several bright spots were noted. Sugar shares were very strong, Belapurs recording a rise of Rs. 10-8 to Rs. 281, Phaltans Rs. 5-4 to Rs. 111-4 and Walchandnagars Rs. 4-11 to Rs. 196-4. A hardening tendency was noted in cement shares, A.C.C. being done Re. 1 better at Rs. 162 and Digvijays Rs. 3 higher at Rs. 133-8. In the shipping group, Scindias were a feature with a rise of As. 8½ to Rs. 18-11. India Steamships moved up from Rs. 8-15½ to Rs. 9-2. Bharat Lines, however, found sellers at Rs. 93. Automobile shares were dormant, but the undertone was steady. Hindustan Motors were quoted at Rs. 8-15 and Premier Automobiles at Rs. 77, both a fraction lower. In the engineering and mining group, Alcocks had a rise of Rs. 5-10 to Rs. 310-10. Premier Constructions were again in the forefront with an advance of Rs. 7-12 to Rs. 145. Tata Locomotives were in favour at Rs. 121-8, as against Rs. 115 last week, on reports that the shares would be placed on the forward list and that the Company would expand its field of operation to the manufacture of tanks. Larsen and Toubros passed hands unchanged at Rs. 12-8. B.B. Petrols were done As. 3 better at Rs. 4-1½ and Indian Coppers an anna higher at Rs. 3-4½. Shivrajpurs were quiet at Rs. 62-8. In the miscellaneous industrial group, Bombay Burmahs were in keen demand on prospects of better working results following the rise in tea prices; the old shares rallied Rs. 16-14 to Rs. 421-4 and the new shares Rs. 3-2 to Rs. 140-10. B.I.Cs were unchanged at Rs. 8-4 C. P. Railways had buyers Re. 1-8 better at Rs. 108. National Rayons continued to be well favoured and rose by Rs. 7-8 to Rs. 190. Demand for Tata Chemicals once again revived and they spurted by Re. 1-0½ to Rs. 16-12. Tata Oils rose sharply by Rs. 4 to Rs. 45. Wimcos recouped last week's loss and closed at Rs. 200.

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, 23rd *June*

Although the volume of business was not as large as last week, the Calcutta Stock Exchange ruled steadly during the week under review. Periodical profit-taking at bulges checked the rising trend in prices. Support to the market was largely professional in character, and outside buyers were either hesitant to lend their support substantially or yet unable to replace the funds invested in the National Plan Loan. There were rumours that the Plan Loan would be closed shortly on the belief that the Finance Minister's target of Rs. 100 crores might have been realised already. However, there were others who felt that since the loan was meant to meet the needs of both the Centre and the States and that the Centre alone needed Rs. 100 crores, the Finance Minister would utilise fully the opportunity of the present slack season of monetary demand and keep the loan open for some more time. This view is supported by the renewed vigorous drive for subscription to the loan in the States.

Engineering shares were again in the limelight, and rumours of an imminent reduction in the Bank rate resulted in renewed interest in Indian Irons. Support for this counter was mainly speculative, but genuine investors were inclined to the view that paying such a high price as the current quotation was not worth while. It is true that the loss in production as a result of the strike and the lockout in the Burnpur Works has been more than made up by subsequent increased output and that the Company will also benefit from the increased retention prices as from 1st January, 1953. Consequently, increased profits may result, but whether a higher dividend would be distributed or not remains to be seen as the Company requires funds for further expansion and repayment of loans. The return at the rate of dividend of 10 per cent. comes to just over 3 per cent., and all these factors are keeping long-term investors away from the market's leading counter.

Teas claimed good attention from operators, and the possibility of Indian exports of tea to Germany was noted with encouragement.

Sectionwise, there was moderate activity in the engineering section. Indian Irons opened at Rs. 31-14 last Thursday, and fresh buying support raised the rate to Rs. 32-11 by Friday. A decline to Rs. 32-6 was recorded over the calendar week-end, and on reopening on Monday the rate hovered around Rs. 32-3. On Tuesday, an upward movement to Rs. 32-11 was recorded, but today the rate declined to Rs. 32-5. A strong feature was provided by Burn & Cos. which were lifted to Rs. 220 from Rs. 204. Indian Standard Wagons advanced to Rs. 95 from Rs. 91.

Teas were steady, and despite profit-taking the trend tended to register movement in the upward direction. At Rs. 280, Hantaparas gained Rs. 464. Patrekolas gained to Rs. 463 from Birparas to Rs 170 from Rs. 151, and Seajulis to Rs. 33-12 from Rs. 28-4 added Re. 1-10 and Nagaisurrees hardened to Rs. 240 from Rs. 232.

Attention paid to jute shares was evidence of a cautious note, and for this reason, changes were confined to selected counters. Today, however, trading was more cheerful than on previous days. At Rs. 161 Budge Budges added Rs. 8, and Deltas advanced to Rs. 259 from Rs. 254. Speculative Howrahs opened at Rs. 24-8 and after realising Rs. 25-1 sagged to Rs. 24-14 over the week-end. Since Monday, trading took a cheerful turn and the rate recovered to Rs. 25-14.

Moderate turnover at advancing rates was the feature in the miscellaneous section. Martin Burns received good attention and improved to Rs. 23-14 from Rs. 23. At Rs. 18-2 Rohtas Industries put on As. 6, and Calcutta Trams were transacted at Rs. 18-10 as against Rs. 12-14 previously. After the rise last week, Jardine Hendersons receded to Rs. 122, and Shaw Wallaces to Rs. 13-4. F. & C. Oslers came to business at Rs. 17-12.

Among cement shares Assam Bengals were in the forefront and rose to Rs. 6 from Rs. 5-3, Sone Valley being better at Rs. 7-9. Shares of paper mills were subjected to profit-taking and India Pulps lost ground to Rs. 231 from Rs. 245. From Rs. 27-4, Shree Gopals moved down to Rs. 26-7, and at Rs. 41-10 Titaghurs were lower by As. 6.

In the textile section, Kesorams were shown keen attention and at Rs. 27-3 gained Re. 1-10. Cawnpores were steady at Rs. 9-8 earlier but today receded to Rs. 9-4.

Although quiet, the coal section was not devoid of features. At Rs. 9 Bharat Collieries added Re. 1-1, and East Indians were wanted at Rs. 28-3 as against Rs. 28 previously. New Manbhooms were steady at Rs. 11-13 and Raneegunges at Rs. 12-10. New Beerbhooms realised Rs. 19-7 and Burrakurs Rs. 10-12.

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, 22nd *June*

The Madras Stock Exchange witnessed brisk trading conditions this week under the leadership of planting shares. There was increasing investment support for favourites among tea, rubber, and miscellaneous scrips. Operators interested in tea shares appeared to have taken for granted that better days had come to prevail for the tea industry. Coffee scrips also came in to share a fair measure of their attention. Sporadic outside enquiries for certain select miscellaneous shares, such as F.A.C.Ts and Mettur Chemicals, helped to improve the trend of prices in this section. But textile and banking scrips ruled generally easy on selling pressure. The volume of business done on the Exchange during the week was, therefore, relatively large and the undertone remained steady.

In the textile section, with the exception of a few selective scrips which came in for frequent support the rest ruled generally dull. Thus, Travancore Rayons put on Rs. 2-8 to Rs. 12-8 *cum-div.* and Venkteswas Rs. 2 to Rs. 89. Cannanores changed hands higher at Rs. 104-8, as against Rs. 103-8. Metturs, however, lost Rs. 4-8 to Rs. 289 and Bangalore Woollens Rs. 2-8 to Rs. 390. Lakshmis, Rs. 50 paid-up, were done at Rs. 125 *cum-div.*, as against As. 8 each to Rs. 115-8 and Rs. 148, respectively. Jamardanas were done at Rs. 68 *ex-div.*, as against Rs. 72-8 *cum-div.*

Teas as usual provided the highlight in plantings. Blue Mountains put on As. 2 to Rs. 3-2 and Coorg Teas As. 4½ to Rs. 7-4. Devasholas gathered As. 12 to Rs. 20-4, and Hailebyburias Re. 1-2 to Rs. 20-12. Nilgiri Teas were done higher at Rs. 15, as against Rs. 14-4, and Peermades at Rs. 37, as against Rs. 35-8.

Among rubbers, Be Bes improved by an anna to Rs. 3-3. Malankaras rallied Rs. 2 to Rs. 42 and Nilamburs As. 3½ to Rs. 9-5½. Shevroys were up by an anna and a half at Re. 1-14. Travancore Rubbers advanced from Rs. 15 to Rs. 15-14 and Vaikundams from Rs. 16-14 to Rs. 17-2. Cochin Malabars, however, lost an anna to Rs. 8-1, while Peninsulars were unchanged at Rs. 14-4.

Coffees too were active. Coffee Lands shot up by As. 12 to Rs. 12-6 and Consolidated Coffees by As. 6 to Rs. 18. Kadur Coffees gained As. 2 to Rs. 1-10 and Mysore Coffees an anna to Re. 1-9. Puthuthottams were fractionally better at Rs. 3-10½.

The miscellaneous section came in for considerable support. Aluminium Industries gathered As. 2 to Rs. 15-12. Andhra Cement 'A' improved by Rs. 2 to Rs. 113 and 'B' by As. 2 to Rs. 11-4. Dalmia Cements, Rs. 2-8 paid-up, advanced by As. 3 to Rs. 2-4 and India Cements by As. 13 to Rs. 16-7. F.A.C.Ts were up by As. 14½ at Rs. 4-15 and Indian Steel Rolling Mills by As. 4 at Rs. 12-12 *cum-div.*

NEWS IN BRIEF

THE Committee appointed by the Government of India to suggest ways for integrating the nationalised airlines is reported to have submitted its report.

The Andhra Government is drawing up a 20-year plan, involving 600 schemes and costing Rs. 400 crores, for the development of the State to be submitted to the Planning Commission.

Nearly 6,700 wagons, about 800 coaches and 73 locomotives were manufactured in India during 1953. In the same year, about 1,330 wagons, nearly 220 coaches and 112 locomotives were imported.

The Government of India has fixed the selling price of imported Burma rice at Rs. 21-8 per Bengal maund (Rs. 82.2/7 lbs.) net weight, inclusive of the cost of gunny bags, ex-Government depots, to licensed foodgrain dealers in Bombay State.

The foundations of the Ganga Bridge at Mokameh near Patna, preliminary work on which has already begun, will be deeper than perhaps those of any other bridge in the world. It will have 600-feet spans—the largest for any railway bridge in India.

The Union Ministry of Natural Resources and Scientific Research has set up an eight-member committee to examine and advise private sectors to promote and establish ferro-manganese industry. The Committee is expected to submit its report by September.

The Reserve Bank of India is reported to have undertaken a survey of the assets and liabilities of all State Governments in India, covering a period of five years from 1948. The enquiry will, among other things, throw light on the capacity of States to float loans for financing development plans.

A Conference of Ministers of Agriculture of different States will be held on 11th July, 1954, at Srinagar. The meeting will consider a scheme for providing an all-India co-operative organisation for marketing of agricultural produce and a proposal to form an all-India Formers' Council.

The Standing Committee of the U.P. State Irrigation Department has approved of a Rs. 62.5-crore development programme under the second Five-year Plan. The programme comprises 24 big and small projects and, when completed, is expected to increase irrigated area by 30 per cent. over the target of the first Five-year Plan.

The all-India final estimate of cotton for 1953-54 puts the current year's production at 17,027,000 acres and 3,935,000 bales (of 392 lbs.), as against the partially revised estimate of 15,693,000 acres and 3,131,000 bales, respectively for 1952-53. The production of cottonseed during 1953-54 is estimated at 1,377,000 tons, as against 1,090,000 tons in 1952-53.

The Government of India has appointed six Central campaign officers to intensify the Japanese method of rice cultivation in the country. These officers will be required to render the maximum possible assistance to the State Governments in the matter of publicity and demonstrations and to ensure that the targets laid down by the Government of India are achieved.

The Standing Committee of the Irrigation Department, Uttar Pradesh Government, has not approved of the proposal to impose a betterment levy for financing development schemes in the second Five-year Plan. It is stated that the Government had decided upon the present enhancement of irrigation rates in place of a betterment levy. Even the enforcement of irrigation rates is being opposed by agriculturists.

The Government of India has assigned Mr. K. L. Khanna, Director, Sugarcane Research and Development, Bihar, to make a detailed study and a critical review of the research and development work done in India with a view to the formulation of recommendations for future pattern of work and preparation of memoirs on specialised branches of sugarcane research. Mr. Khanna is expected to submit his report to the Government of India by February, 1955.

The Government of Bombay and the Employees' State Insurance Corporation have decided to introduce the Employees' State Insurance Scheme in Bombay on 2nd October, 1954. The Scheme will cover 425,000 industrial workers in Greater Bombay, of whom 240,000 will be textile workers. About 300 to 400 panel doctors will be required to look after the health of 425,000 workers. Each doctor will be allotted about 1,500 workers or a maximum of 2,000. It is proposed to build a 200-bed hospital for insured workers at a cost of Rs. 50 lakhs.

The Planning Commission, it is learned, proposes to appoint a Special Officer to make a first-hand study of the working of Prohibition in various States to enable it to have a clear appraisal of the results of the reform. It is believed that the Commission will formulate its recommendations on Prohibition on the basis of the special study. The Special Officer, it is gathered, will make a survey of the progress and working of Prohibition in the States, where it is now in force, and the effects of the reform, and gather material and statistics in consultation with the respective States.

The Committee appointed by the Union Government to investigate the working of inland and water transport services on the Calcutta-Assam and Calcutta-Bihar routes has issued a 23-point questionnaire. The questionnaire seeks information on, among others, (1) whether freight rates charged by the joint steamer companies are excessive and, if so, what should be the reasonable charges, (2) whether there is any discrimination between various shippers in the acceptance of cargo and in booking of certain types of cargo and (3) whether goods services operated by the companies are not regular. The Committee has also invited suggestions regarding conditions of booking, storing and transhipment.

Electricity generated by public utility power stations in India in February this year fell by 38 million kw.h., as compared to January, due to the shorter month. The total quantity of power generated during the month was 542.7 million kw.h., of which 451.4 million kw.h. were sold to ultimate consumers. The data include figures for 642 undertakings, including two new diesel generating stations at Chakia in Bihar and Guledgudd in Bombay. The corresponding figures of output and sale for February 1953, are 493.4 million kw.h. and 417.4 million kw.h. and for February, 1939, 187.7 million kw.h. and 159.5 million kw.h., respectively.

The evaluation team of the Foreign Operations Administration of the United States Government, which has come to India in order to study the progress of the various projects under the Indo-American Technical Assistance Programme, visited the tubewell areas of the Punjab State last week. The team showed great interest in the progress of the tubewell programme in the Punjab and the tremendous effect that this programme is going to have on the living standards of the cultivators and the agricultural production of the country. They felt that the tubewell programme was one of the most important projects undertaken by the Government of India and that there was great scope for its expansion in the future.

• • • •

From Abroad

The U.K. Government has made representations to the Government of India against the high level of Indian tariff on British textiles.

The French Government is reported to have approved the signing of the international tin agreement drafted at Geneva last December by the United Nations Tin Conference.

A group of Canadian officials arrived in London early this week to seek further relaxations in British import restrictions, with a view to increasing the lagging Canadian exports.

The Persian Government has signed a three-year contract with a British firm for the purchase of 1,000 British tractors and other agricultural equipment worth £1,600,000. Deliveries are due to start in a few weeks.

The Ministry of Materials, U.K., has announced a cut of £5 per ton in the selling prices of all grades of raw jute. This follows the further fall in Pakistan prices. The new price schedule has come into effect from the 21st inst.

The Massachusetts Institute of Technology has announced plans for construction of a $1,000,000 privately financed, non-secret nuclear reactor, or atomic furnace, for research in peace-time applications of nuclear power.

A power station for Turkey will be built jointly by a group of German firms. It will cost 40 million marks. The 64,000 kw. power station will probably start operating at the beginning of 1956 and supply the north-western part of Anatolia with electric current.

A German shipping service to Australia will be started again next autumn. Five ships of the H.A.P.A.G. and the Norddeutsche Lloyd, approximately 7,000 gross register tons each, will sail to Australia, while sailings to New Zealand will not take place for the time being.

The British Government has turned down a request for removing the import duty on linseed and linseed oil. The duty was imposed as a result of the 1932 Ottawa Agreement, under which Britain undertook to maintain a margin of preference of 10 per cent. *ad valorem* on linseed and 15 per cent. on linseed oil imported from India and other Commonwealth countries.

The U.S. Secretary of Agriculture has ordered a reduction of 12.7 per cent. in the wheat output of 1955 and imposed the stiffest farm controls in U.S. history to curb mounting surpluses. Simultaneously, the House Agriculture Committee has approved a new two-price plan for wheat, which will push up domestic prices, but will bring about a saving of millions of dollars in export subsidies.

The output of cars in Britain is expected to reach in May an annual rate of 1 million units, the target aimed at by the industry in its post-war expansion programme. Many of the principal manufacturers are stated to be experiencing an increasing overseas demand. Foreign orders for one of the popular small cars alone are reported to be equivalent to five months' export production.

The Spanish Ministry of Commerce has decided to liberalise, with immediate effect, the import policy affecting a certain number of articles, for which import licences will be granted rapidly and without ceiling of quantity. Amongst them are shellac, rubber and latex, rubber waste, raw materials for the plastic industry, cow guts, spices, tea and seeds (except potato seed). The granting of import licences would have no other limitations, but those derived from the business and professional standing of the applicants or those arising from the trade agreements entered with other nations, as well as the need for protection of the indigenous industry.

PERSONAL

MR. G. L. Mehta, Indian Ambassador to the U.S., will be arriving in India shortly for a month's stay.

Mrs. Vijayalakshmi Pandit, President of the U.N. General Assembly, left for Geneva on Saturday last on a goodwill mission to the Continent.

Lord Tedder, G.C.B., Director, Standard Motors Products of India Ltd., has accepted the invitation of the Board to be Chairman of the Company.

Toshio Yamanaka, Chief of the Third Section, European and American Affairs Bureau, has been appointed First Secretary at the Japanese Embassy in New Delhi.

Mr. M. A. Sreenivasan, Chairman of the Kolar Gold Mining Companies Ltd., has returned to Bangalore after a six-week tour of the U.K. and Europe.

Mr. Pranlal Devkaran Nanjee has been elected representative of the Indian Merchants' Chamber on the Senate of the Bombay University for a term of five years.

Mr. A Natarajan, Honorary Secretary, Calcutta Branch of the Institution of the Rubber Industry, who left for London on Saturday last, attended the third Rubber Technology Conference held there from the 22nd to 26th inst.

Mr. M. D. Chaturvedi, till recently Inspector-General of Forests, Ministry of Food and Agriculture, has been appointed Secretary-General, Fourth World Forestry Congress, which is scheduled to meet at Dehra Dun from 11th to 22nd December, 1954.

Messrs. S. S. Vasist, P. Sahai and D. Sandilya, Member, Officer on Special Duty and Joint Director, respectively, of the Railway Board, who have been invited by the Soviet Government to visit important railway installations, factories and workshops, left for Rome *en route* to Russia.

Sardar Swaran Singh, Union Minister for Works, Housing and Supply, will lead the Indian delegation to the 18th session of the U.N. Economic and Social Council to be held at Geneva from 29th July, 1954. Messrs. Dharma Vira, Indian Ambassador to Czechoslovakia, S. S. Bajpai, Commercial Counsellor, Indian Ambassy at Rome, S. Sen, Consul-General for India at Geneva; and V. C. Vijaya Raghavan, Deputy Chief Controller of Imports and Exports, will be the alternate delegates. Mr. S. W. Zaman, Vice-Consul of India at Geneva, will be the Secretary and Adviser to the delegation.

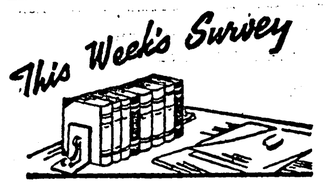
"COMMERCE" 1929

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 29th *June*

The New Loan

At the time of writing, cash subscriptions to the New Loan have approximated Rs. 13 crores; and conversions Rs. 21 crores. The Government of India have set out to secure Rs. 27 crores by cash and as much as possible by conversion. Had either section of the loan been strikingly successful, the financial position of the Government of India would be free from all complications of the past two years. And were both the loans successful, the Government would have been out of the wood altogether. Unfortunately, luck has not been in their way. It is idle to expect a heavy rush of applications in the closing days. In the first place, the extra inducement of double brokerage on the first three days is *non est*, and, in the second, the progress of the loan, day by day, has not been sensational enough to capture the imagination and compel the attention of investors to such an extent as to make them bustle in, lest they be left out in the end. Looking at the terms and conditions of this year's new loan issues, and especially those of the 5 per cent. 1929-47 Loan, one might say that the Government certainly deserved a far more favourable response than has so far been accorded to their proposals. Between Sir George Schuster and Sir Osborne A. Smith they have evolved a type of loan which, while carrying an attractive interest yield, has also been invested with adequate and comprehensive guarantees. That a loan with so alluring a yield and so entrenched as to the stability of future prices should have proved only a partial success, is a profound commentary on the seriousness and gravity of the present financial position of the country. That, in spite of an appreciable increase in the borrowing rate, the Indian Treasury has failed to secure its requirements is a feature fraught with ominous portents for the future of India's finances. India could not borrow in London at anything like favourable terms; and, at home, also, conditions have proved no less unpropitious. But the commitments already entered into must be fulfilled; works, which are in various stages of development, must be completed; and whatever be the policy in regard to new commitments on capital account, funds for the works already on hand must, somehow or other, be found.



TECHNICAL ASSISTANCE

FEW can deny that the U.N. Expanded Programme of Technical Assistance has, since its inception nearly four years back, "caught the imagination of the world by the concept of interchange of skills across frontiers and oceans" and by holding forth better prospects of living for the millions of the underdeveloped world. This is so, despite some loss of momentum last year. This is evident from a perusal of the sixth report of the U.N. Technical Assistance Board released to the Press this week. The report sums up the recent developments, that is, the events in 1953 and in the early months of 1954 and explains the intricate pattern of international aid to underdeveloped countries. It reveals an increasing awareness of the need for expanding the scope of this "miraculous ingredient of international co-operation, whereby nations, by pooling together a portion of their resources and their 'know-how,' are able to help each other without hope of reward or profit or gain." Such an expansion is necessary, because there is a yawning gap between the living standards of the people in the various geographic regions of the world. This gap between the most- and the less-developed countries is one of the most significantly alarming aspects of contemporary society. In fact, much of the political and social tensions of the present-day world has roots in it.

What has, indeed, happened in the past four years since the Programme began is that the less developed nations have re-examined their economic and social problems, have sought counsel in solving them and have invited many thousands of experts from many lands to work with and for them. The technical skill and experience of many countries have been drawn upon to speed up progress at points at which they have lagged; the energies and initiative, the hopes and capacity for self-help of many peoples have in some measure been quickened anew. It is true that, despite increased support and a growing volume of requests for aid, the Programme suffered some loss of momentum in 1953. The volume of technical assistance provided actually fell slightly, as compared with that rendered in the previous year. The total obligations recorded during 1953 amounted to $22.81 million, as compared with $22.96 million in 1952. But this was due to planned curtailment of activity in the interests of prudent financial administration. At the end of the year, the Programme emerged thinner, yet better equipped with improved procedures to handle a considerable expansion of work in future years.

It is common knowledge that the planned curtailment of activity led to certain unavoidable disappointments, as it resulted in abandoning and postponing some of the important activities, but the Programme has gained in many ways. The loss of momentum has been compensated by qualitative refinement of the Programme which came as a result of co-operative efforts on the part of Governments and agencies. Administrative arrangements have also been improved and steps have been taken to reduce overhead expenses.

Although the total cost of technical assistance services, which were provided in 1953, was somewhat lower than in the previous year, the geographical scope of the programme remained extremely wide. Actually, the number of countries and territories receiving experts increased from 62 to 65, though fellowships were awarded to nationals of only 82 countries and territories, as compared with 92 in 1952. The total number of countries that received assistance in some form or other fell from 97 to 86.

The following table shows the number of experts sent out and the fellowships awarded in 1953 under the Expanded Programme, as compared with those in 1952:

—	1952		1953	
	Number	Countries or territories served	Number	Countries or territories served
Experts provided ..	1,026	62	1,757	65
Fellowships awarded ..	2,127	92	1,195	82

The relative cost of the three main forms of assistance—experts, fellows, and equipment—in 1952 and 1953 is as follows:

(Thousands of dollars)

—	1952		1953	
	Amount	Per cent.	Amount	Per cent.
Experts ..	11,136	59	13,585	76
Fellowships ..	5,021	27	2,532	14
Equipment ..	2,644	14	1,701	10
Total ..	18,801	100	17,818	100

A glaring anomaly of the Expanded Programme is that it is not related directly to any source of capital supply. This means that many new opportunities, opened up by the Programme, must depend for their full exploitation on the availability of finance from Governments, private groups or international lending agencies which should be linked, when necessary, with the work of the Programme by the Government co-ordinating authorities concerned. This applies essentially to new developmental ventures, but such activities form only a part and not a major part of any technical assistance programme. The Expanded Programme has a vast field to exploit in improving the use of existing services and facilities and in helping to make the best use of the capital available from other sources.

The financial and operational difficulties in 1953, though painful, has afforded valuable lessons for the future. The Expanded Programme is entirely based on voluntary contributions, and its administrative procedures must be so devised as to take this into account with the least disturbance to Programme possibilities. The Technical Assistance Board hopes that the plans made for financial (including currency) management in 1954 will go some way in providing a solution to this problem.

To sum up, despite some shortcomings, the Expanded Programme has so far worked fairly satisfactorily. Yet much remains to be done to improve the operation of the programme, to appraise the value of particular projects and of country programmes as a whole and to make more effective use of the limited resources. The expressed needs of less developed countries for international technical assistance far outrun the existing resources of the Programme but not its possibilities. These needs cannot be fulfilled unless more resources are placed at the disposal of the Board.

PERSIAN OIL

With the resumption of negotiations between the three-man delegation, representing the consortium of the Anglo-Iranian Oil Company, the Royal Shell (Dutch), *Companie Francaise Des Petroles* and five principal American oil companies, and the Government of Persia, the attempts to settle the Persian oil dispute seem to have entered the final stage. The realistic attitude displayed by the statesmen who are at the helm of affairs in Persia towards this question has held forth prospects of a satisfactory settlement. There has been a general feeling that Dr. Mussadiq and his collaborators, having no idea whatever of production and marketing of oil, had confused the whole issue by whipping up mass hysteria and dragged the country to the precipice of economic chaos. It is clearly realised, in responsible circles at least that, without the oil revenue, Persia will have to go hat in hand and rely on political alms.

How true these feelings are is evident by the fact that, since nationalisation of the oil industry in March 1951, there has been a cessation of oil exports (which amounted to more than 30 million tons in 1950) and a halt in crude oil production (which accounted for 32.3 million tons in 1950) and, naturally, petroleum refining (which was 24.7 million tons in 1950). The activities of the Anglo-Iranian Oil Company, which contributed an estimated 10 per cent. of national income of Iran in 1950, ceased completely. Direct payments by the Company to the Government (which amounted to about $44.9 million in 1950) and substantial local expenditure by the Company in the form of foreign exchange for the payment of wages and the purchase of local materials (which was of the order of $70 million in 1949-50 and $56 million in 1950-51), as well as imports of substantial capital and consumer goods by the Company (which accounted for $59 million in 1949-50 and $29 million in 1950-51) were discontinued. As a result, Government revenues, work on development projects under the seven-year plan and imports, all sustained severe losses and the whole country suffered. It is obvious that persistence of this state of affairs will be catastrophic to the economic health of Persia and may ultimately open the flood-gates of Communism initially into Persia and subsequently into the whole of the Middle East.

Viewed thus, the need for reviving Persia's oil industry is as much political as it is economic. But the problems involved are very delicate. The oil companies cannot be expected to make arrangements for the production and flow of oil into world markets which would prejudice either the national sentiments of Persians or their own position elsewhere. It is necessary to reconcile Persian national aspirations with a reasonable control over profits which the companies will require before they venture their capital for reviving the production and marketing of oil. It is estimated that about $60 million will be needed to put the Abadan oil refinery back into working condition. The determination of the quantum of compensation to the Anglo-Iranian Oil Company is one of the most baffling issues, as it is now recognised on both sides that Persia's nationalisation law cannot be undone without peril to the economy of Persia, in particular, and the world, in general.

That the major democracies of the world have no vendetta against Persia's nationalisation law and that they are prepared to accommodate national sentiments and economic aspirations is evident from the composition of the consortium and the other arrangements said to have been entered into between them, with a view to facilitating the smooth flow of Persian oil to world markets. It is reported that the Anglo-Iranian Company is to be allotted only a 40 per cent. holding in the shares of the new company, presumably because the Zahedi Government will find it difficult to negotiate with a group in which the British held a major interest. Nationalisation of oil is generally welcome, because it is supposed to restore to the country the wealth it is alleged to have been unjustly deprived of. But this should not be done in such a way as to make it extremely difficult and costly to work this national asset on which the whole economy of Persia rests. The Persian Government will do well to realise that, so long as its country is lacking in financial resources and "know-how" for exploiting its vast oil resources, it is to its advantage to take the help of other advanced countries which have these and which believe in democracy.

DUNLOP RUBBER

The activities of the Dunlop Rubber Company Ltd., an extensive survey of which was made by Lord Baillieu, the Chairman, in his statement to the Company's shareholders at their annual general meeting held in London last week, offer a unique example of how an enterprising industry can find a market for its products in the various countries of the world even in the face of keen competition. The secret of this success lies in the intensive research and development work which it is continually undertaking in relation to the application of new methods of manufacture and the development of new products. Particular attention is being paid by the Company to review its production methods and equipment so as to ensure that use is made of the most modern practice and technique.

One of the new developments introduced by the Company during the past year was the Dunlop tubeless tyre which is stated to have been favourably received. Another recent development is the coach speed tyre which has been designed to meet the exacting conditions imposed by high-speed long-distance coach travel which is so much in fashion today, especially on the Continent. Plants have been installed for a new method of manufacturing the rims of cycle tyres to improve efficiency and to give a better finished product. The application of the aviation products has been extended to new fields also. The experience gained by the Company in the design of aircraft wheel brakes has enabled it to design a road vehicle brake and fit it experimentally to cars, commercial and military vehicles.

Notwithstanding strong competition from a number of countries, a very wide range of articles has been developed and produced by the general rubber goods division of the Company. These goods have been incorporated in the end-products of other industries which are exported. An example of this kind of product is interior rubber matting for cars. Considerable progress has been made in the development and production of fire-resistant conveyor belting for coal mines. The special belting construction known as "Extron" has the great advantage of being thinner and more flexible, yet equivalent in strength to the more rigid types. For the first time, early in 1954, a range of products including bins, industrial trays and containers, under the name of "Fortiflex," has been placed on the market.

Rubber lining is another field in which the Company has achieved outstanding success. Two instances which deserve special mention are: (1) the successful lining with rubber of a chemical plant on a scale not previously attempted in the U.K. and (2) complete lining of a reservoir (of an area equal to two football fields) which had developed serious leakages.

It is gratifying to note from Lord Baillieu's statement that the Company's business has increased in the very competitive field of the kind of consumer goods which it produces. In rubber footwear, however, the severe competition at home and from such low-cost producers as Japan seems to be seriously affecting any expansion in the field of recognised footwear products. Accordingly, the Company has directed the development to the more specialised field of industrial boots, informal footwear and sports shoes. It has found that there is a large potential market for this type of product and considerable scope for imagination and enterprise. Lord Baillieu disclosed that the Company was fully alive to the rapidly increasing applications of rubber in its natural and synthetic forms to the footwear industry as a whole. This example of finding alternative uses for the raw material and marketing new products when keen competition is felt, instead of fighting for a closed market, is highly commendable and typical of progressive industrial growth.

DEVELOPMENT LEVY IN U.P.

Reports from Naini Tal disclose that the Government of India has threatened to cut off all further aid to Uttar Pradesh for implementing the irrigation projects, if the State Government failed to reconsider its decision to refrain from imposing development levy. It will be recalled that, following the recommendation of the Planning Commission, the Government of Uttar Pradesh had agreed to introduce this levy just like other States. Subsequently, it dropped the levy in preference to an increase in irrigation rates on the ground that the levy was being opposed by farmers. Accordingly, it increased, in two instalments, the irrigation rates by about 225 per cent. of the basic rate in 1948. The Government of U.P., it is stated, argues that, with the increase in irrigation rates, there is no room left for development levy. The Centre, however, is reported to hold the view that, despite the two increases, the irrigation rates in U.P. are still lower than in Bombay which has already legislated for the imposition of betterment levy. Other States which have legislated in this regard are the Punjab(I), Mysore, P.E.P.S.U. and Hyderabad.

Development levy, better known as betterment levy, represents the Government's share in the increase in the value of land occasioned by the provision of irrigation facilities. This is levied only once when irrigation facilities are provided for the first time and the value of land increases appreciably on this account. It may be recovered either in a lump sum or in instalments spread over a number of years or in the form of a part of the land. The justice of the levy is accepted in almost all Western countries on the principle that "the person benefited from public expenditure should contribute to that expenditure to the extent of increased value of the property, and this not only if the improvement effected by public authority was carried out for the purpose of conferring a benefit on such property but also if the resulting benefit was purely accidental, the expenditure having been taken for a different purpose." The application of the principle of betterment levy in the U.K. was first limited to particular improvements carried out at public expense, but was later extended to cases where the value or property increased by the operation of provisions contained in any scheme (of town planning) whether that involved public expenditure or not. It is now generally understood to include enhancement in value of property arising from general community of influences, such as growth of urban population. The Uthwatt Committee, U.K., has defined the term "betterment" so as to mean any increase in the value of land (including buildings thereon) arising from central or Local Government action whether positive (for example, by the execution of public works) or negative (for example, by the imposition of restrictions on other lands).

In India, the betterment levy is confined only to betterment arising from particular works of improvement. This, it will be conceded, is a modest aim. The U.P. Government will, therefore, do well to revise its decision and keep step with the other States by introducing the betterment levy. No civilised State sacrifices sound economic principles and succumbs to political pressure.

OFF THE RECORD

(By "ROVER")

I do know how the authorities would react, if I were to walk into a store, pick up a few things which I needed, tell the proprietor or the manager-in-charge what, in my opinion, would be the fair basis for calculating the price for my so-called purchases, inform him that he would be paid this price, arbitrarily and unilaterally fixed by me, at some indefinite date when I found it convenient to do so and walk away with my loot, with not so much as a "good morning" to the man behind the counter. Before long I would find myself either in a police lock-up, or maybe, if I were more lucky, behind the high walls of a mental hospital. It would be of little avail, even if I were able to establish beyond any reasonable doubt that I had not helped myself to these things for any selfish purpose and that I had meant to use them for the benefit of some starving, shivering and sick inmates of an orphanage. I would be rightly condemned as a free-booter, if I were not so fortunate as to be certified as a lunatic by a competent medical authority.

Far be it from me, as a loyal, law-abiding and humble citizen to think of our popular Governments in terms which I have applied to my own hypothetical case. But I must say that, if I were not to strain unduly my intellectual integrity and the little gift of logical thinking with which I have been endowed by a kind Providence, I must confess that, much as I have tried to escape the unwelcome conviction by repeated feats of mental gymnastics, I fail to see, on a purely mental plane, any radical difference between my imaginary misdeed and the way in which the Government of India has dealt with the unfortunate air transport companies and the still more unfortunate shareholders of these nationalised concerns.

Had it been a case of nationalisation of all private industrial and commercial concerns, these poor devils would at least have the solace that all those who were, like themselves, misguided enough, to invest their savings in public companies were meted out the same rough sort of social justice, and that, relatively to their neighbours, they were in the same position of affluence or penury. I have called it a rough type of social justice, because even such a step would have left out a large number of people, who, instead of putting their money in shares and stock, stuck to the good, old, orthodox method of buying bullion or jewellery for their womenfolk or went in for other alternative forms of investments. But to have been singled out in this manner for a highhanded act of partial expropriation, must have been extremely galling to these bold and adventurous souls.

They must have been bold, imaginative and adventurous, because, unlike many plebeians like us, who are content to invest our money in well-established concerns having to do with steels or cement, jutes or cotton textiles, banking or insurance, they deliberately chose to support, in spite of all their inherent risks, new industries necessary for a well ordered economy for the country, I cannot imagine a more illogical Government than ours, which, while unhesitatingly and unremorsefully indulging in such treatment of investors, cries out for more and still more investment in the private sector. Similarly, I cannot also think of more trustful and patriotic citizens than those of our country, who, with this act of indiscriminate and invidious expropriation still green in their memory, continue, with zeal and alacrity, to pour out their hard-earned savings to establish new concerns. This makes me doubt sometimes the wisdom of the old adage that a people get the Government they deserve or that of the new one, that a Government gets the citizens it deserves.

I am moved to refer to this sorry state of affairs, because of the reminder I received the other day of the dire plight of the shareholders of these air transport companies, who, after nearly a year of unremorseful deprivation of their property, are no nearer getting even a part of their legitimate dues. To begin with, they were allowed only about one-fifth of the world price for Dakotas, Vikings and Skymasters and about half of that for Constellations. For some reason, which the Government did not care to publish, the well-established principle of paying the market value for assets compulsorily acquired, invariably adopted by Government in their deals with regard to the acquisition of private property or disposal of their own, was not only laid aside, but even the reduced amount was decided to be paid not in cash but in 3½ per cent., negotiable bonds, redeemable at par after five years.

And as it has actually turned out, it looks as if it will be a long time before the shareholders receive these bonds or the interest on it. There is precious little delay in fixing the salaries and other emoluments of office of the Ministers. In fact, in several States, one of the earliest acts of the newly sworn-in Ministries was to decide what salaries and allowances they were to draw. I have little doubt that, if the Act authorising nationalisation of airlines had contained a clause that the Ministers and officials responsible for computing and settling the amount of compensation were to draw their salaries only after they had finished this job and paid the companies, the shareholders would have received their bonds months ago.

The proceedings of the meeting of the shareholders of the air companies held in Bombay last week, under the auspices of the Bombay Shareholders' Association, to record their protest against this prolonged and uncalled for delay in the payment of compensation and the resolutions passed at this meeting make pathetic reading. They go to expose, as few things can, not only the utter inefficiency of the Central Secretariat, but its callous indifference to the fate of small investors. Mr. K. R. P. Shroff, Vice-President of the Association, is reputed to be a forceful speaker and a master of invectives when his susceptible heart is moved by any show of injustice or undeserved harshness. He was, however, singularly restrained in his denunciation of the authorities for this indefensible delay, in making even a part payment against these assets, for the valuation of which clear principles were laid down in the Air Corporations Act, 1953. Perhaps, this public protest from people who are virtually in the position of creditors of the Government of India would expedite the final settlement of this unfortunate issue.

The significance of this sorry episode, however, lies not so much in itself, as in the basis of the future relations of the Governments as manufacturing and trading bodies *vis-a-vis* private enterprise and the public. Having accepted mixed economy as the ruling pattern for the future, at least for some years, it has become necessary to define this relationship more precisely. We must recognise that the position of the Central and the State Governments as manufacturers and traders, along with the private sector also operating in this sphere, is not the same, at least in theory, as authorities exercising control over the affairs of the country in the old orthodox sense. I hold that this distinction has not been well appreciated both by the Governments and the public. But it is necessary in the interest of smooth economic working that the two spheres of Government activities should be properly demarcated. The very fact that for some of its enterprises Governments have borrowed the form of public companies or that they have created statutory corporations is a tacit admission of the necessity for the distinction to which I have drawn attention above.

Once this distinction is accepted, it must also be conceded that, to the extent that the Governments are trading or manufacturing bodies, they must accept both the legal limitations and the prevailing practices in the world of business, implied in such a position. Any use of the general authority and powers possessed by Governments in such dealings would not only lead to an anomalous position, but, in the long run, it would go to shatter all the wholesome traditions regarding dealings between business units and the code of honour which goes with it. What I mean is that, apart from compulsory acquisition of property under legal process, the Governments, to the extent that they are buyers or sellers, should behave and deal with others in a manner in which buyers and dealers are usually expected to behave in a well-ordered economic society.

Despite occasional instances of violations, we must accept the fact that there is something like business ethics. Business men, as producers, buyers and sellers, are expected to observe the tenets of this code of morality sanctioned by tradition and in some cases by the law itself. A buyer is expected to pay the price agreed upon for any goods purchased by him on the due date. Failure to honour his commitments in this respect would involve a serious reflection on the credit of the firm concerned, even if it were one of the biggest or the wealthiest. It is not open, in ordinary business transactions, for the purchaser to extend unilaterally, without any negotiations or without obtaining the consent of the creditor, the period at which payment should ordinarily be made. In the present instance of the acquisition of the airlines, because the purchaser is a Government possessed of vast authority, it does not make the failure on its part to make payment when due, less reprehensible than it would have been, had the purchaser been a private corporation or an individual.

What I want to drive at is the fact that possession of authority cannot make an act moral, which is not so otherwise according to the prevailing standards, though it might make it legal by the passing of an Act or the issuing of an ordinance. To put it very crudely, giving of short weight to a customer would be just as disgraceful for an official agency as for a private dealer. Just as the authority wielded by the Government would not shield it from moral opprobrium for such an unethical practice, it must also be recognised that authority should not sway moral judgment in more subtle, but no less immoral, acts such as evasion of liability for payment when due or of asking dealers or producers to supply Government requirements at a lower than the fair price, leaving it to them to make up the loss incurred in such official deals, by charging higher prices to ordinary customers from the public as is being done by some authorities. If an act is morally wrong in essence, mere possession of authority by the party perpetrating it or that it is performed for some real or imaginary public purpose, cannot render it moral.

What I am condemning here as indefensible under the prevailing code of commercial morality is not the act of acquisition itself, but the delay in payment after taking possession of the property involved. The act of acquisition is a matter for political science to decide. Even the mode of payment may be considered as a matter, subject to rights of Governments under the Constitution; but no fair-minded man can concede that the act of payment itself, once having been agreed to, can be judged in any other way except under principles of business ethics.—*All Rights Reserved.*

DOWNWARD TREND IN PRICES OF COMMODITIES

POSITION FAVOURABLE FOR DEFICIT FINANCING

(From A Special Correspondent)

NEW DELHI, 22*nd June*

MR. Chintaman Deshmukh, India's Finance Minister, who has been away from the Capital during the last six weeks, will be returning to it within the next few days. During this period, he has visited almost all the Southern States, namely, Travancore-Cochin, Madras, Andhra, Mysore and his home State of Bombay.

DELHI LETTER

During this tour, he must have gathered valuable data regarding the progress of the Plan and his contacts with the various cross sections of society must have helped him to assess the economic needs of the people of these States. As the main architect, mentor and implementator of the Five-year Plan, it is a good sign that the Finance Minister should get firsthand information not only on the progress of the Plan in these States but also as to what should be done during the second Five-year Plan in order to remove some misunderstanding held by many in the South that the first Plan did not take full account of the needs of these States. This sort of feeling was responsible, to some extent, for the defeat of the ruling party in the State of Travancore-Cochin in recent elections a few months ago. The Planning authorities in New Delhi must, therefore, view the whole problem not only from the productivity point of view of the plans but also from the need for dispersing the benefits of economic development over as wide an area as possible, especially to areas where the unemployment problem continues to remain acute.

Despite a few undesirable features, Mr. Deshmukh has reason to feel highly gratified at the way the Indian economy has been progressing during the last few months. The main anxiety of Mr. Deshmukh during the last two or three years has been to prevent any sharp upward trend in prices. In other words, his main motives have not only been the safeguarding of the balance of payments position but also to bring about a certain amount of stability in the general economy without which it is extremely difficult to implement successfully the plans for expansion. Mr. Deshmukh has been able to achieve this purpose far beyond his expectations.

Generally speaking, in the past, the second and third quarters of the year used to witness a moderate rise in the prices of commodities. The completion of the crop movement and the adverse effects of the monsoon on the regular internal transport in the country were responsible for this state of affairs. A year ago, commodity prices began to move gradually, and at times rather sharply, commencing from January and continuing right upto the middle of September. In early January, 1953, the index number of wholesale prices stood at 372 (August, 1939=100), from which level it showed a persistent rise, touching the peak level (since April, 1951) of 410.4 in August last. This rise in prices was in distinct contrast to the general world trend at that time, largely attributable to the temporary increases in the prices of foodgrains, pulses and other food articles such as tea, sugar, *gur*, oilseeds and oils. At the same time, there was also a moderate rise in the prices of some export commodities such as jute manufactures, raw hides and skins, shellac, etc. During the second quarter of 1953, the country was experiencing considerable adverse balance of trade, too, the figure being as high as Rs. 44.11 crores. In the third quarter of that year, the adverse balance declined to Rs. 17.87 crores, but the position was still adverse. At that time, the Government of India took belated measures to prevent the upward trend in prices. For instance, in order to arrest the flight in the prices of oilseeds and oils, it put a ban on the export of groundnut and oil. It announced a reduction in the import duty on copra, which was later followed by the free licensing of imports of palm kernel and palm oil. To prevent an increase in the prices of sugar, it tried to release more quantities from its stocks, besides announcing that it would import more sugar from foreign countries in case of necessity. Import prices of wheat were brought down slightly in some of the rationed areas. All these had some salutary effect and from the middle of September, prices began to come down moderately following brighter prospects of the *kharif* crop due to a very good monsoon all over the country.

During the current year, the movement of prices has been highly satisfactory, being in refreshing contrast to the trend described above. While presenting the Budget for 1954-55 in February last, the Finance Minister was rather anxious that his plan for deficit financing should not generate any fresh inflation in the country. This apprehension of his has now been more than belied. Commodity prices have now begun to slacken appreciably, especially at a time when they generally used to present a firm tendency. The wholesale prices index in January this year stood at 398.5 and by March, it came down to 394.0. In April, there was a temporary spurt, the index improving to 402.6. In May, the index number again receded to 396.1 which is slightly below the pre-Korean war level of 397.1. During the first week of June, it was marked down to a further low level of 385.2.

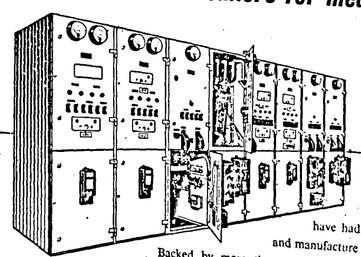
The falling trend in prices is the result of a number of favourable factors, the prominent among them being the gratifying improvement in the output of foodgrains, particularly rice, during this year. This apart, the Government's cautious export policy has contributed not a little to stabilise the price trend during these months. The Government, for instance, has refrained from allowing additional export quotas in respect of short-staple cotton, despite pressure from cotton export trade interests and the upward revision of the cotton crop for the 1953-54 season which is now estimated at about 43.7 lakh bales. Similarly, in respect of oilseeds, the Government has so far firmly refused to allow quotas for groundnut oil. As a result of this, prices of groundnut have now been ruling lower than in January last when the crop was moving to the market. Again, in the case of coffee, it has been pursuing a conservative policy in allowing exports, notwithstanding the fact that the outturn of the coffee crop in the 1953-54 season is estimated at very near about 30,000 tons—the highest in the history of the industry—and that the total stock position of this commodity is more than satisfactory. Prices of pepper and other export commodities from the West Coast have been sluggish, in view of the reduced international demand for these products.

It may be noted that the intensity of the decline in prices of certain commodities has not been fully reflected in the index number during recent months. For instance, in the case of rice, the pre-Korean war index had been standing at 501 which in mid-August last year went up to 546. At the end of April this year, it receded to 486. It may be mentioned that these indices had not apparently taken into the free market prices in these days. Recently, the Food Minister of West Bengal gave the trend of rice prices in his State, which may be considered to present the real state of affairs in this respect. The average price of rice in West Bengal for the week ended 9th June, 1954, stood, according to him, at Rs. 16-5 per maund, the corresponding rates in the previous two years being Rs. 23 and Rs. 30-9, respectively. In Madras also, the price of rice has been ruling at about the Government controlled rates, while, this time last year, it was nearly double that of controlled price. It is because of this satisfactory position that the Government of India has been contemplating exports of about two lakh tons of fine rice to overseas countries.

In the food group, while the cereals index has declined from 467 to 385 in the first week of June, the recession in pulses has been greater from 506 to 305, being a fall of about 40 per cent. over last year. The decline in the industrial raw material group is computed at about 6 per cent., from 483.3 to 452.7, while, in the semi-manufactures group, the fall is negligible, from 364.4 to 356.9. Curiously enough, the manufactures group index has improved from 371.1 to 378.4. The miscellaneous group index, however, has receded to 645.5 from 658 a year ago.

A general conclusion that one could venture to draw from the present movement of commodity prices is that there is not likely to be a resumption of any upward movement in the coming months. But much will depend upon the progress of the monsoon during the next three months. Even a normal monsoon might maintain the *status quo* due to the comfortable stock position that has been built during the current year, while a favourable monsoon might aggravate the tendency of a receding price trend. It can be safely stated that the policy of deficit financing now being pursued by Government may not create inflationary conditions. On the other hand, a moderate dose of deficit financing and pump priming methods have become necessary in order to arrest the downward trend in the main commodities and to inject more purchasing power in the rural sector of the country. In these circumstances, Mr. Chintaman Deshmukh can confidently go ahead with his policy of deficit financing to the full extent provided for in his Budget, without fear of any precipitous rise in prices and cost of living.

Air circuit breakers for medium voltages and 3.3 kV systems



'ENGLISH ELECTRIC' pioneers of heavy duty air circuit breakers, have had unrivalled experience in the design and manufacture of this highly specialised equipment. Backed by more than 40 years' experience of switchgear manufacture, 'ENGLISH ELECTRIC' have developed type OB indoor air circuit breakers for use on medium voltage and 3.3 kV systems, in power stations and for industrial consumers.

The type OB.3 air circuit breaker illustrated has a rating of 1,600 amps., 660 volts and 25 MVA when tested to BS.116, and can be supplied in either single or double tier cubicles with hand or electrical operation. 'ENGLISH ELECTRIC' type OB air circuit breakers are designed for safe and consistent operation, for reliability under all conditions of service, with the minimum maintenance cost.

IMPROVEMENT IN BUSINESS NOT UPTO EXPECTATIONS

EASY MONEY POLICY LIKELY TO REMAIN

(From Our Own Correspondent)

NEW YORK, 16*th June*

THE spring upturn in business has taken place, but not to the extent that was expected. There is no informed guess here when a real upturn in business volume will start, except there could hardly be any complaint about an employment level of more than 61 million. Outdoor activities account for most of the increased activity, such as farming, but there is also greater demand for automobiles and air-conditioning units as the warmer weather of the Northern continent makes itself felt.

Politically, the scene has been dominated more or less by the McCarthy-Army hearings which received international billing. Quite candidly, President Eisenhower is being blamed for finding no way of stopping this Congressional probing which, really, served no other purpose but to get Senator McCarthy in the news every day. Most competent observers agree that nothing has been uncovered or discovered which was not known before and the procedure as a whole has hurt rather than enhanced United States prestige. Nevertheless, Senator McCarthy remains the most controversial character in American Government. He challenged the authority of the President of the United States and he has probably made more enemies than friends. Yet, he is still a powerful figure in American politics who has to be reckoned with. His strength lies among the masses of relatively uninformed people in the "hinterland."

Another political event of magnitude will be the forthcoming visit of Sir Winston Churchill, Prime Minister of the United Kingdom. The best that is hoped for at this point is another statement of principles, like the Atlantic Charter of 1941. Hopes for a *rapprochement* between the East and the West are fading, particularly since the dismal failure of the Geneva Conference on the Far East.

A real upturn in business is not expected here until late in the fall. Automobiles are anticipated to be produced at the rate of five million rather than six million last year. The building of autos remains one of the cornerstones of the U.S. economy. Building and construction is satisfactory—better, in fact, than expected and supported by a Federal aid-to-highways programme of about $2,000 million.

There is a general inclination here among the powers of the Federal Reserve system for easy money. Treasury Bill rates are down to ⅛ to ¼ per cent. and much financing is done on this basis. The monetary and fiscal managers admit that monetary policy can accomplish more during periods of inflation than when the curve is downward. Nevertheless, the policy of easy money remains and it is likely to remain in the United States, unless there is a general reversal to an out and out inflationary policy. Such a development could come about only in the case of war. Air-raid drills are being held all over the country and they make the populace familiar with the routine of a bombing emergency. The trading floor of the New York Stock Exchange was emptied the other day in four minutes of some 2,000 individuals, both brokers and their assistants. The other exchanges, dealing in securities and commodities, had an equally good record. That such air-raid drills are being held, is an indication of the seriousness in which the rift in East-West relations is being held in official quarters. Yet, no provisions are being made for Government insurance, such as prevailed in England and Germany during the last war. The existence of a near-emergency is admitted, but not quite acknowledged.

In the meantime, monetary and economic policy in the U.S. follow rather than anticipate national policy. The progress of the Communists in Asia is being viewed with great alarm here. However, the domestic potential of all the markets has been so strong over such a long period of time that the alarm is likely to remain superficial until the first bombs drop on to the great population centres. If nothing untoward happens, a continuation of easy money and of a compromise in foreign policy can be looked for. There is an ample supply of accumulated funds from all quarters to take care of the normal requirements of the U.S. economy.

Savings are still rolling in at an impressive rate, not quite as heavily as last year, but about at the same rate. The same applies to retail sales. For the year as a whole so far, the volume has been just about equal that of 1953.

Commodity prices are a problem. Hog prices, high now, are expected to crack. Cattle prices also seem far from stable. Huge new crops of grain are growing and they will create storage problems. Much grain will have to be dumped on the ground without shelter from above.

Investment spending through the third quarter of the year is now scheduled at an annual rate of $27,100 million compared with $27,200 million estimated earlier. Last year's investment in plant and equipment came to $28,400 million. Manufacturing firms plan to invest about 7 per cent. less than last year. Automobile companies are up and steel and metal firms are down because rearmament spending is off. Declines are also indicated in machinery, textiles, chemical and rubber companies. Mining concerns are investing about the same amount as last year. Public utilities also plan to match the 1953 figures, but railroads are cutting investments.

The mainstay in the economy are two factors—business spending for plant and equipment as well as building and construction. There is no prospect, either, that previous estimates will be revised downward owing to the steady upward trend in population. Another inflationary factor is the increase in technology which makes it necessary to replace industrial equipment at a hefetofore unheard of rate. This is true in virtually every sector of the U.S. economy.

Small recessions in the stock markets, in the commodity markets and otherwise, thus, may be regarded as just "technical" in nature within the general scheme of an upturn which can be stopped only by the deadly destruction of "Atomic War I" which, indeed, may produce greater activity for replacement and reconstruction than had been known before.—*All Rights Reserved.*

BUSINESS CONCERNS IN U.S.

The number of business concerns in the United States has increased by about one million since 1945, the U.S. Department of Commerce reports. This means an increase of nearly one-third in the total of non-farm business establishments. During the same period, private employment rose by more than five million. The Department noted that both the number of firms and the number of job-holders increased in all size groups, except the very largest —those employing 10,000 persons or more. There are about 240 firms in this category. About 55 per cent. of the overall increase in employment, was in firms with less than 20 employees. This group accounts for about 95 per cent. of all American business concerns and about one-fourth of all paid employment.

EMPLOYMENT INCREASES BY HALF MILLION

Employment in the United States between mid-April and mid-May rose 521,000 while unemployment decreased by 160,000, according to the Departments of Commerce and Labour. Employment totalled 60,600,000 in April and 61,100,000 in May. The higher employment and lower unemployment figures for May reflected the greater activity in farming and other outdoor work normally expeted in late spring.

U.S. FOREIGN TRADE REGISTERS GAINS IN APRIL

The foreign trade of the United States registered impressive gains during April, according to a preliminary report of the U.S. Department of Commerce. U.S. exports in April are estimated at $1,404 million, about 25 per cent. above the March total and about 7 per cent. above the 1953 monthly average. Included in the April export total are about $10 million of March exports for which information was received too late for inclusion in the March statistics because of cargo diversions resulting from the New York shipping strike, which ended in early April. The estimated import total for April is $948 million, about 11 per cent. above the March total and about 5 per cent. above the 1953 monthly average.

to union between North and South, but the true barrier is economic. An Ireland re-united within the United Kingdom would be economically possible, but the United Kingdom would today resist as gracefully as possible re-union with a country which could only be a liability.

The second instalment of this article will try to answer the question: "What makes the Irish economy tick?"—*All Rights Reserved.*

NOTES ON IRELAND—I

WHERE TIME WAS MADE FOR SLAVES

(From Our Own Correspondent)

IRELAND, 17*th June*

LONDON LETTER

THE Londoner's first impression of Ireland, if he enters the country at one of the south-eastern ports, is very much the same as if he had fetched up in Brittany—it is pure Gaelic: the same simple white houses, generous and disorderly village streets, shops that sell a jumble of everything, an air that nothing has to be done efficiently and in a hurry and yet that life and getting a living are one and the same thing. Cities such as Dublin and Cork are much more sophisticated, of course, but in the little country towns—and apart from the few cities the towns are only large villages—one can do one's shopping after supper in the evening, for the shopkeepers know no rush hours, only an even tempo of business from mid-morning till dark falls.

And as one progresses through the country, noting the ruins of many cottages, the thistles and bracken choking fields that could carry far more stock on them than one can see grazing, the great tracks of boggy land and the limestone mountains whose lower slopes carry but an inch or two of soil, the beggars in the city streets, and the tattered peasants on the farms, one asks oneself again and again: "What makes the country tick?"

There appears to be simply no basis for a sound economy. There is hardly any coal in the country, though inexhaustible supplies of peat which is a degree less valuable as fuel than brown coal, few railways, the great river system of the Shannon flows uselessly away to the Atlantic, the fine bays and estuaries of the south-west, though they make wonderful holiday scenery, have nothing of the economic value they would have if they faced the Irish Sea and the British and continental markets for Ireland's agricultural produce. It is a country with all nature's handicaps and a wild, almost sub-tropical, climate in the south-west, and plentiful rain, as her only blessings.

The country immediately invites a comparison with Switzerland, whose only advantage is her central European position and which has yet become one of the busiest and most prosperous European communities. What is the reason for the difference? Much of it is to be found in the history of Ireland which remained feudal in its economic structure till comparatively recently. It was a country whose inhabitants lived either in castles or in hovels. After the great potato famine of a century ago, the population of Ireland—at that time about a third that of England —halved: two millions of the Irish gradually emigrated to the United States and nearly as many to Canada. The most vigorous element left the country and left behind a population of old folks and of children. And today a high proportion of the children as they grow up look to England or abroad for their livelihood—there is nothing in Ireland which calls to them.

Then, of course, there is Partition. The Irish Government regards the country as divided into 26 counties (Eire) and six counties (Northern Ireland). It only refers to the six counties as such—never to them as part of the United Kingdom. Ulster—the six counties—has one quarter of the total population of Ireland; it has Belfast, the second city of the country, and in Belfast it has the only heavy industry and shipbuilding in Ireland. It is quite true that the separation of Ulster from the rest of Ireland separates the industrial from the agricultural, but today the Ulster folk do not want to be linked with Eire. Ulster has its own Government within the United Kingdom for all local matters and it receives a substantial grant out of the British Exchequer to supplement the proceeds of local taxation. In addition, Ulster has all the benefits of the British Welfare State and its farmers receive the same guaranteed prices as do British farmers. No wonder "Ulster is British" as the slogan goes.

Far too much is made of the religious issue. Northern Ireland is mainly Protestant, but there are many Protestants—relics of the Cromwell plantations —in the South and many villages, as well as the cities, have their Protestant churches. The Eire Government claim, and rightly as far as one can judge, that Protestants in their country suffer no disability; the Ulster Government claims, with perhaps less conviction, that Catholics in the North are as free as Protestants. Religion may be exploited as the basic barrier

(Continued in previous column)

CREDIT NEEDS OF SMALL-SCALE INDUSTRIES

VIEWS OF SHROFF COMMITTEE AND WORLD TEAM

THE importance of small industries to the Indian economy has been adequately emphasised and acknowledged though remedial action is not readily forthcoming. Unfortunately, even reliable statistical data on the state of affairs of the existing small industries are not available Thus, information regarding men employed, materials used, money spent, and gross value of goods produced by these industries is meagre. A rough idea may, however, be had by certain broad estimates made by the National Income Committee. According to these estimates, in 1950-51, the value of net output of small enterprises was of the order of Rs. 910 crores, while that of factory establishments was around Rs. 550 crores. The numbers of workers employed in these categories in that year were 11.5 million and 3 million. The small enterprises include also cottage industries but exclude the small units under the Factories Act which are taken as factory establishments. If the value of these small units is also added, the contribution of small industries to output and employment will be considerable.

Despite this dominant role played by the small industries, very little has been done for putting them on sound lines through provision of credit. It is, however, encouraging that, of late, increasing attention is being bestowed on the need for rehabilitating small-scale industry in India. The question has been investigated by the Shroff Committee and the International Planning Team. It has also been studied by those connected with the All-India Rural Credit Survey, conducted under the auspices of the Reserve Bank of India, the report on which remains to be published yet. Read together, the reports of the first two Committees, containing as they do, well considered suggestions, should provide very valuable material for organising provision of credit to small-scale industries in India.

The reports of the Shroff Committee and the World Team give us a comprehensive picture of the financial problems facing small industries in India. The Shroff Committee, however, has confined itself to the consideration of financial problems relating to units with assets ranging between Rs. 10,000 and Rs. 5 lakhs, which are not integrated with the rural economy. It excludes from its purview village or cottage industries which are ancillary to the agricultural sector. The World Team, for its part, has, however, devoted one whole chapter to small-scale industries including cottage industries. The recommendations of both in regard to these sectors indicate a broad line of action to be taken by the Government to help the entire sector of cottage and small-scale industries. But some of their recommendations overlap and, if given effect to without examining them carefully, there would result the establishment of too many corporations and institutions than necessary. It is, therefore, imperative that these recommendations should be examined by a special committee for evolving a simple structure of financing small industries and for seeing whether the job could not be done through the State Finance Corporations.

Position of Small-scale Industries

The Shroff Committee's views on small-scale industries of the category referred to in the para above may be dealt with first. Most of these industries were started during the war, attracted by the scarcity conditions of a sellers' market. Now, with the return of a buyers' market, they are experiencing serious difficulties. They are undercapitalised. Inadequacy of security has deprived them of the assistance of commercial banks. Their products lack standardisation, while their managerial ability remains unsatisfactory. They buy their raw materials in the retail market and sell their products on a wholesale basis. Consequently, their earnings allow meagre or no profit margins. Where Governments buy their products, payments on these purchases are inordinately delayed, thereby resulting in needless hardship. Their case, therefore, needs urgent consideration.

Many agencies are trying to provide credit facilities to small-scale industries. One of them is the State. Under the State Aid to Industries Act, the State Governments can offer long-term and medium credit. But such aid has so far been insignificant. In 1953-54, for instance, West Bengal provided in its budget Rs. 3 lakhs, Madras Rs. 12 lakhs and Mysore Rs. 7 lakhs. Although these allocations are small, the actual amount lent to industries is stated to be even less. Besides, delay in sanctioning loans is stated to have been discouraging the borrowers to obtain finance from this source. The Shroff Committee suggests that the State Government should not only increase the amount available but also simplify the procedure of lending by modifying the State Aid to Industries Act.

Then there are the State Finance Corporations. These institutions are just new to the field and the cautious manner in which the few that have started operations and are proceeding with the applications for finance indicates that, for some time to come, their assistance will not be appreciable. The Shroff Committee feels that indiscriminate establishment of too many State Corporations would result in locking up the available funds by them rather than providing the industries with funds. The Committee, therefore, recommends that steps should be taken to amend the State Financial Corporations Act, 1951, so that the Act may permit joint working of a financial corporation by two or more adjoining States. The Reserve Bank has been advised carefully to scrutinise the scope for such institutions in States. The Committee further recommends that, in order to augment the long-term finance available to small industries, a Special Development Corporation should be constituted immediately. This Corporation, through a separate and specialised department, should take a lead in organising the small industries and rendering assistance in the matter of co-operative or joint purchase of raw materials, standardisation of products, organised marketing, distribution and publicity. Its functions are more or less similar to those of the four technical institutions recommended by the World Team referred to in an earlier issue of this journal.

Industrial Co-operatives

Industrial co-operatives are another type of agencies providing credit for small-scale industries. These societies cater for such industries as weaving, oil pressing, tanning and leather work, coir and rope making, smithy and carpentry, metalware, pottery and salt. These co-operatives are stated to have been doing some good work. The Committee feels that they deserve every support from the authorities. The Reserve Bank can also assist the societies through Co-operative banks. There is, however, the need for small producers to come together and effect improvements in the organisation of production and marketing so that, they may be entitled to a larger measure of credit facilities than at present.

So much for small-scale industries. Now we may consider the case of small and cottage industries as pointed out by the International Team of Experts. Wherever the Team visited, it seems to have noticed certain general drawbacks. These cottage industries, including the bigger ones among them, rely, we are told, on dealers both for buying raw material and for marketing the finished products. Pressed by the necessity to (1) sell every day's or week's production at once, (2) buy raw material in small quantities at retail prices, or (3) work to orders of dealers, that is, with no material of their own, their day-to-day earnings are very limited and do not allow them to procure the implements or machines needed to produce more and better products. In many centres, production is divided not only between a great number of producers in the same line but also in several operations each with its own specialised one. This makes it difficult to follow economical procedures throughout. Each industry is crowded, because anyone can start a business of his own. He does not need many tools or much equipment as his competitors themselves do not have any. They are all bound in the same depressed condition and seem unable themselves to find a way to better standards. Consequently, the commercial banks are reluctant to do business with them

Causes for Lack of Bank Credit

Explaining at some length why the small and cottage industries do not get credit from these banks, the Team gives three clear reasons. These are: (1) The weak structure of the industry in which production is split up into many units each lacking in capital of its own, (2) the present policy, regulations and practices of the banks, and (3) the relation between the limited resources of the banks and the actual demand for money in the market.

The Team, therefore, finds that real finance does not exist at all in the sphere of small industries and there is a severe lack of capital as well as credit. Their difficulties are so great that a very strong effort is needed if beneficial results are to be achieved. In this effort, the general principle must be, says the Team, to give credit chiefly to gain certain results such as securing modern equipment and better utilisation of manpower.

The Team feels that immediate attention should be paid to the elimination of too many uneconomic units. Concentration of business in fewer hands would enable introduction of new methods of production which would facilitate attraction of more credit. And credit should be given to those who desire to improve their production in the best manner possible. For a solu*neurs*, there should be close co-operation among all agencies, namely, Central and State Governments, State Finance Corporations, insurance companies, commercial and Co-operative banks and the industrialists concerned.

The Team recommends that commercial banks should delegate more authority to branches in the mofussil to make loans to small business and work generally towards decentralising their loan business. They should also establish local Boards of Directors to examine applications for loans. Co-operative banks should also be encouraged to expand their activities in the field of small industries. The State Government should see to it that in order to encourage venture capital, the general atmosphere for conducting business is favourable. The Team further feels that adequate amount of funds, now allocated to small industries under the Five-year Plan, should be set aside to provide loans for venture capital. The State Finance Corporations started in States must earmark certain funds exclusively for the use of small industries for ordinary loans. The Team further recommends that a competent field organisation be set up immediately to process loan applications from small industry within the framework of the State Directorate of Industries. This organisation should act as an agent of the State Finance Corporations. The Government should also consider the introduction of a sound system of instalment credit, primarily to spur purchases for modernising machinery and equipments or for buying new machinery, tools and other equipment by those who want to establish small industries for the first time.

TWO BANKS REFUSED LICENCES

The Reserve Bank of India has refused licences to the Assam Banking Corporation Ltd., Dibrugarh, and the Coimbatore Kamalalaya Bank Ltd., Coimbatore, for carrying on banking business. Consequently, these banks cannot accept deposits from the public.

Billowing Sails

once carried the world's communications and commerce. Even then Lloyds Bank was providing its clients with information and facilities for overseas trade.

Now, too, as then, Lloyds Bank continues to offer these services to those engaged in foreign business. With its own Branches at all major ports in England and Wales, and in India, Pakistan and Burma, and with affiliated Institutions and Foreign Agents and Correspondents in every large port and city throughout the world, Lloyds Bank is fully equipped to provide comprehensive service and finance for all classes of foreign trade.

LLOYDS BANK LIMITED 1677 INCORPORATED IN ENGLAND

LB/G/40—1954

EXPLORING CONVERTIBILITY—II

POSTPONEMENT LIKELY TILL INHERENT STRENGTH IS BUILT UP

(From Our London Correspondent)

THE basic causes for the recent increases in the gold and dollar reserves are not strong exports and a diminished demand for imports—they are largely speculative as was seen in a previous despatch on convertibility.

There is no inherently established strong export position for the United Kingdom, and if sterling were made fully convertible and the balance of payments running gently in this country's favour were to move just as gently the other way, there would inevitably be a drain on the gold and dollar reserves which, at present, are at a level little more than a quarter of this country's annual imports.

Suppose, then, that sterling had been made convertible and that trade recessions throughout the world diminished Britain's export markets to just that extent that created an unfavourable balance which, coupled with a withdrawal of "hot" funds, began dragging the reserves down to the minimum level of £600 million or so, the purchasing power of the £ at home could be allowed to rise, prices to fall, and employment to decline, in the traditional but now half-forgotten manner, in an effort to make British exports competitive and to reduce this country's import bill. But Lord Brand, in a letter to the London *Times* last week, pointed out that the Socialist Party which is a very practicable alternative Government in the country today would not tolerate such a policy. They would believe in the need to maintain domestic demand and domestic employment, and this could only be achieved by the imposition of import controls, inconvertibility for sterling, or letting sterling depreciate without interference. The latter course, while academically attractive to some theorists, is not practical for a currency which has wider responsibilities than its own domestic sphere. The Chancellor of the Exchequer today is acutely aware that sterling in the post-war world has recovered its position as the premier international currency and must be chary of adopting a course which, even if not by acts of policy of his own Government might by acts of policy of a successor Government, bring fluctuations into the exchange quotations which could destroy the pre-eminence of the currency.

A Government committed to domestic full employment in preference to convertibility would have to impose currency control immediately full employment was threatened. The issue is as simple as that. It is this pre-occupation with long-term domestic policy which inevitably restrains a British Government from accepting a temporary strength as the signal to make sterling fully convertible. Why not, it has been urged, even put the boot on the other foot and let sterling go its own way and put the onus on other countries of letting their currencies be freely convertible into sterling by accepting sterling at the ruling rates of exchange at all times?

There is another important argument in the Chancellor's eyes against full convertibility. This country feels that it has some commitment towards those Western European countries whose currencies are too weak to contemplate convertibility. It is only a few weeks ago that Western Germany was insistent that Britain's balances with the O.E.E.C. should be settled with a higher proportion of gold. But the Western German Government accepts the economic policy of deflation in case of economic need. A British Chancellor cannot accept that policy. France, in particular, but the U.N.I.S.C.A.N. countries as well, would not put convertibility at all costs as their prime currency consideration, and if convertibility is to be bought at the price of rigid import controls it becomes valueless. Instead of increasing the liberty of trade, it restricts it in exchange for the liberty of capital movements, and an O.E.E.C. without the big creditor countries would be a rather sorry affair.

Does this mean that convertibility for sterling must be indefinitely postponed until all Western European currencies can be convertible? The answer is "No," but it is likely to be postponed until such time as the inherent strength of sterling has been built up to a point at which the fears of recessions, unbalanced trade balances, and deflation, have gone into the background of political, if not of economic, thought.—*All Rights Reserved.*

(Concluded)

NEW CO-OPERATIVE LAW FOR U.P. PROPOSED

The U.P. Government has done well in having decided to bring forward a Bill to replace the Central Co-operative Act, 1912. The Central Act, which was amended only in three minor ways, has been found to be outmoded, as since then the Co-operative Movement has undergone important changes. Besides, at the time of enactment of the Act, experience of actual working of co-operative societies was not much. In fact, the Co-operative Planning Committee appointed by the Government of India a few years ago, had stated that the States where the 1912 Act was in force should enact their own legislation. Accordingly, the Government of U.P. has decided to replace the Central Act by a new legislation of its own.

One of the major changes proposed in the Bill stipulates that the principle of unlimited liability should not be insisted upon in the case of credit societies for agriculturists. The share limit for an individual in a society with limited liability is proposed to be raised from Rs. 1,000 to Rs. 2,000 and the Registrar is to be empowered to allow a higher maximum to any particular class of individuals.

Another provision in the Bill makes compulsory the publication of balance-sheets of societies within three months of the co-operative year. Finance banks and societies are also empowered to inspect societies affiliated with them. It is also proposed to provide for more powers to liquidators. They will be empowered to effect compromise between societies' creditors and debtors and to carry on business of societies as far as may be beneficial for winding them up.

Provisions of the State Insolvency Act, it is proposed, should not be applicable to co-operative dues. Attachment of property can be ordered under the Bill by the Registrar, before the liquidator passes a contribution order against any member or before judgment. Arbitration proceedings can be taken against agents, employees and officials. State dues can be recovered as arrears of land revenue.

I.B.R.D. RAISES LOAN IN CANADA

The International Bank for Reconstruction and Development issued, last week, 3¾ per cent. Canadian dollar bonds worth $25 million through a group of investment dealers and chartered banks. Dated as on 1st June, 1954, the bonds are repayable on 1st June, 1969. These 15-year bonds, which were offered at 99½, constitute the second loan to be raised by the Bank in the Canadian market. The first issue was in 1952 when the Bank offered $15 million 4 per cent. 10-year bonds.

With the latest issue of the Bank in Canada, the Bank's total outstanding funded debt amounts to the equivalent of U.S. $776,678,354 divided into 17 issues. Eight issues amounting to U.S. $665 million are denominated in U.S. dollars; the remaining nine issues equivalent to U.S.$111,678,354, are denominated in Canadian dollars, pound sterling and Swiss francs.

As on 31st May, 1954, the Bank had entered into 102 loan commitments, amounting to the equivalent of U.S. $892,948,464. These commitments have as their objective largely the financing of the foreign exchange costs of reconstruction and development in 30 member-countries of the Bank and three overseas territories of member-countries. Borrowers include Governments, Government agencies, and private business and industry.

WORLD BANK LOAN TO CEYLON

A notable feature of the I.B.R.D.'s first loan to Ceylon is the multiple currencies in which it is given. Those currencies are German marks, Italian lire, French francs and the pound sterling. The aggregate loan is equivalent to U.S. $19,110,000. It is granted for a term of 25 years and bears interest at 4½ per cent. including the 1 per cent. commission.

The loan is intended to assist the development of electric power in south-west Ceylon. It will also finance the foreign exchange costs of constructing the second dam in the Aberdeen Laksapana Hydro-electric Scheme for supplying power in this most productive and populous area. It would encourage the output of foodgrains and consumer goods which are at present imported from abroad.

RATIONALISATION OF WORK-LOAD IN KANPUR COTTON MILLS

LONG OVERDUE REFORM TO BE INTRODUCED

MUCH has been made of the agreement between the workers and managements of cotton mills in Kanpur on the question of work-load. This is doubtless due to the use of the word "rationalisation," a heavily overworked expression these days. The rationalisation that has been agreed to here by the workers does not relate, as is ordinarily understood nowadays, to the introduction of modern machinery, capable of giving higher productivity per worker than the old machinery now in operation in most of the mills. It refers only to the number of looms which a worker should mind. It is true that the new agreement secures for employers in Kanpur a state of working conditions which was long overdue and which has been prevailing in other cotton mill centres such as Ahmedabad and Bombay. But, in agreeing to it, labour has not made any great concession. Indeed, it has agreed only when it found that the alternative was closure of mills and complete loss of wages. Even in doing so, it has had its pound of flesh and it is doubtful whether the mills' position will be bettered to any appreciable extent. Time alone will show the extent of advantage they gain from this arrangement.

In accordance with the terms of the agreement reached at the Tripartite Conference held at Naini Tal the other day, rationalisation in the Kanpur mills will be effected through improvement in the output per worker. One worker, for example, will be required to mind four looms as in Bombay, instead of two as at present. This may appear as a concession to employers, but it must be noted that the increased work-load is to be accompanied by higher wages; those putting in work beyond a stipulated minimum standard will be getting still higher wages. It may be argued that higher work-load must bear higher wages. That is perfectly true. But the efficiency of cotton mill workers in Uttar Pradesh is lower than that in other parts of India. Consequently, it remains to be seen whether there is any net advantage to the mills and, if so, to what extent. Nevertheless, the agreement is welcome, for something is always better than nothing. The aforesaid scheme is only tentative, in that the basic principles of the scheme and the means of actual implementation are yet to be worked out. A special committee, appointed at the Naini Tal Conference, is now busy on this job.

Need for Rationalisation

The need for rationalising the cotton mills of Kanpur cannot be stressed too strongly. This is so for two reasons. First, Kanpur is the major textile producing centre in the State of Uttar Pradesh. It accounts for 5 per cent. of India's total output of mill-made cloth and employs as many as 46,000 workers. Secondly, the mills in Kanpur have, for several years, been subject to a series of stresses and strains, a detailed reference to which was made in these columns only two weeks ago. Some of its handicaps are a heavy wage bill, high cost of raw material, thanks to the mills being situated far away from cotton-growing areas, high cost of chemicals and stores, and increased power rates.

During the war years, it will be recalled, the cotton mills of Kanpur were making good profits and had, therefore, engaged a larger number of workers than they ought to have. At the end of the war, the mills were, therefore, faced with the problem of surplus labour, on the one hand, and heavy cost structure, on the other. For several years, the mills had been agitating for the retrenchment of the surplus staff, but they were not allowed to do so.

In announcing the present agreement, Dr. Sampurnanand, U.P.'s Labour Minister, was very apologetic. He had to tell his critics that, unless the agreement was accepted, he would be helpless, as the mills had power to retrench workers under the recently amended Industrial Disputes Act of the Centre. This explanation is not absolutely correct, for the State Governments can, if they so desire, stop such retrenchment.

Fears of Unemployment

Be that as it may, a criticism levelled against the present agreement by labour leaders is that it will result in large unemployment. Dr. Sampurnanand says that there will be no such thing. On the other hand, he contends that, if something was not done to raise the competitive position of Kanpur mills, the risk of unemployment was far greater. Elucidating his point, he observes:

"We welcome the solicitude of political parties and others for the well-being of workers in Kanpur, but facts must be faced squarely. One of these facts, established by unimpeachable statistics, is that there has been a drop of several thousands in the number of workers employed in Kanpur mills, bringing untold misery not only to the men thrown out of employment but also to their dependents. The best efforts of labour leaders and the Labour Department have not been able to keep them in employment.

"The recent amendments to the Central Industrial Disputes Act now make it comparatively easier for an employer to retrench persons whom he considers surplus by paying a certain sum of money as compensation. Many employers would consider this a small price to pay in return for a permanent saving in their establishment. The problem is to save these thousands of workers threatened with impending retrenchment.

"No amount of agitation in the Press or platform can help them. Government's decision to see that such a scheme of rationalisation is devised as will keep all these men, whose numbers are estimated to be between 5,000 and 9,000, in employment, must be reviewed against this background. We believe that it is possible to avert crisis and to keep in employment all engaged in industry at present, including substitutes and temporaries."

The U.P. Labour Minister gave a broad indication of the gain that will accrue to workers. Apart from the fact that the threatened unemployment has been averted, not an insignificant gain in itself, the average wages (including dearness allowance) of a textile worker can go up to Rs. 115 per month, as against Rs. 85 at present, while the extra efficient can earn up to Rs. 130 per month. Increased output per worker will also bring about higher cloth production and, possibly, investment of fresh capital in the industry. Many of the mills which are working only two shifts now can work three shifts. Thus, the chances of sustained employment will be brighter.

COMPETITION IN S. AFRICAN TEXTILE MARKET

The countries of Eastern Europe are offering stiff competition to British textile firms in South Africa, an important market for Lancashire goods. This was revealed by Mr. Charles E. Dymond, the U.K. Trade Commissioner at Johannesburg, in the course of his address at a recent meeting of the Manchester Chamber of Commerce. According to Mr. Dymond, Hungarian linen is being sold in South African markets at 2s. per yard (delivered to Durban) and Polish linen at 1s. 7d. to 1s. 8d. per yard. Good quality interlinings made in Czechoslovakia are priced at 2s. 4d., the closest price to which in Britain is 5s. 11d. (from the factory). The other countries offering competition are Holland with sheetings, Belgium with furnishing fabrics and Germany with printed materials.

It is not the East European countries alone that are offering competition in the South African textile markets. The U.S. also is doing likewise, especially in fancy weaves, drills and twills. Competition from Japan, however, is not effective, owing to special import restrictions.

SALES OF HANDLOOM CLOTH

With a view to improving the offtake of handloom cotton cloth in the State, the Government of Bombay has decided to allow a rebate upto 18 pies in the rupee on the purchases of cloth worth Rs. 5 or more at a time. No such rebate will, however, be allowed in respect of purchases exceeding Rs. 100 made by a consumer in a day. The rebate will be allowed only if the purchase is made at certain specified institutions. These are the District Government sales depots, Government cotton weaving schools, Government wool weaving schools, Government dyeing and printing schools, village industries production centres run by the Co-operative Department, handloom weavers' co-operative societies, the State Industrial Co-operative Association and its branches, and the district industrial co-operative associations and their branches. The rebate will also be allowed on the sales effected through consumers' co-operative societies, multi-purpose co-operative societies, urban co-operative banks and their branches, district central co-operative banks and their branches, district industrial co-operative banks and their branches and purchase and sales unions and their branches, provided these institutions have purchased the cloth from weavers or weavers' co-operative societies.

AID TO HANDLOOMS

Inaugurating the third meeting of the All-India Handloom Board held in Bombay last week, Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, commended the development of the handloom industry through the medium of co-operative societies. The efficacy of this solution depends, to a large extent, on the availability of adequate financial assistance and on the efficiency and honesty of those in charge of the co-operative institutions. While it is not known how the latter prerequisite will be ensured, it is gratifying to hear from the Minister that the Reserve Bank of India is willing to help the Government-approved schemes for the development of co-operative societies of handloom weavers. Mr. Krishnamachari appealed to the Board to prepare schemes and submit them to the Government for approval. He remarked: "The problem of credit to co-operative societies is not an insoluble one."

The Government of India has decided to continue the temporary suspension of clauses 25 and 26 of the Cotton Textiles (Control) Order, 1948, for another six months, till 31st December, 1954. The effect of this decision is that the mills and dealers may continue to buy or sell or have in their possession time-barred cloth or yarn in packed or loose condition till 31st December, 1954. Dealers can dispose of time-barred cloth or yarn in loose condition without getting it T.C.B. stamped by the State Textile Controllers. Dealers can also dispose of any T.C.B. stamped cloth or yarn till 31st December, 1954, even though the time limit for disposal of such cloth or yarn has expired.

Research conducted by the U.S. Department of Agriculture has resulted in a chemical treatment called acetylation. The treatment improves cotton fibre without harming any of its natural qualities. Tests show that cotton fabrics, after treatment, are less subject to rot and have more resistance to the heat of laundry presses and irons.

PAKISTAN COTTON DELEGATION MEETS U.K. TEXTILE LEADERS

SPINNING AND WEAVING OPERATIVES CLAIM HIGHER WAGES

(From A Special Correspondent)

MANCHESTER, 15*th June*

MANCHESTER LETTER

PLEDGES to boost the two-way flow of trade in textiles and raw cotton between Pakistan and Britain were given at the inaugural session in Manchester of the Anglo-Pakistan cotton conference.

Sir Raymond Streat, Chairman of the Cotton Board, welcoming the ten-man delegation of Pakistan cotton leaders, said the British cotton industry had taken the "novel and unprecedented" step of inviting the delegation to Lancashire because it believed it was high time something was done to improve the prospects of trade between the two countries.

The aim of the conference is to discuss ways of increasing Lancashire's purchases of Pakistan raw cotton and Pakistan's imports of Lancashire-made textiles. Since 1949 Japan has been the biggest supplier of cotton piecegoods to Pakistan.

"The British cotton industry with its long experience and its leadership in technology and science is well qualified to meet a big share of the requirements of the Pakistan market," said Sir Raymond Streat. He added: "Basically the situation is favourable but in practice it has not been satisfactory."

Mr. Mohammad Karamatullah, leader of the Pakistan delegation and Secretary to the Pakistan Government in the Ministry of Commerce, told the conference that active steps were being taken by Pakistan to improve the quality of its raw cotton. A scheme was now under examination which would encourage capital investment in ginning factories to improve and ensure standards of quality.

Pledging the determination of the Pakistan cotton leaders to overcome problems at present limiting the two-way textile trade between the two countries, Mr. Karamatullah said: "We will chart a course leading to the maximisation of trade between our countries. I am sure that in the progress and prosperity of the British cotton industry there will be a substantial component of Pakistan raw cotton."

Higher Pay Claim

An application for a wage increase of 10 per cent. for 300,000 cotton spinning and weaving operatives was lodged with mill employers this week by leaders of the Lancashire cotton unions. A decision to go ahead with an industry-wide pay claim, following the lead taken by the Weavers' Amalgamation, was reached at a joint meeting of the main cotton unions.

Mr. Harry Earnshaw, President of the Northern Counties' Textile Trades Federation, said the grounds for the new claim included the increased cost of living and higher profits in the industry. The new application comes just 12 months after the last claim put forward by the operatives. They were subsequently awarded an advance of 1*s.* in the £ with effect from last August. Average weekly earnings in the industry now stand at £6 16*s* 4*d* in the weaving section and £6 11*s* 6*d* in spinning.

Price Schemes

The repercussions arising from the report of the Monopolies Commission on the British calico printing trade are still very evident. In some directions there has been an attempt to keep quiet about the subject in the hope that by avoiding undue prominence other similar schemes may continue unhindered, but developments have occurred which have again thrown the spotlight on the textile industry's price arrangements.

Although the Commission called for the discontinuance of the minimum price scheme in calico printing, it carefully left a loophole by suggesting that there was no harm in publishing a list of prices "not enforceable by sanctions," provided the list was freely available to all. Taking note of this fact, the Rayon Staple Spinners and Doublers' Association has now issued to all its spinner-members a list of prices "below which the Spinning Committee would recommend members not to accept business."

This development was a trade matter and did not receive much general publicity, but when two of the largest unions in the industry see fit to issue statements supporting the employers in their price plans, such an event makes news. Mr. Charles Schofield, Secretary of the Operative Spinners' Amalgamation, has expressed his Executive Council's view that the scheme organised by the Yarn Spinners' Association should not be interfered with. All the union asks is that there should be regular scrutinies of prices by disinterested persons.

On the same day that the spinners raised the question, the Operative Weavers' Amalgamation also voiced its opinion on the minimum price system. Although not as directly interested as the spinners, the weavers took a similar viewpoint, contending that there was room for some form of price-fixing mechanism within the textile industries and also urging supervision by an outside authority, such as the Board of Trade. The suggestion of dropping the price-fixing arrangements and allowing "unrestricted and suicidal competition" to reappear was strongly opposed.

One point made in the statement prepared by the Weavers' Amalgamation has been stressed in other directions. The point is that the Yarn Spinners' Agreement should be more flexible. Several other organisations which do not altogether disapprove of the scheme contend that the present rigid price structure cannot meet sudden market changes. "Is it possible within the scheme of the Yarn Spinners' Association," asks the Weavers' Amalgamation, "to provide for quicker and more flexible methods of price change and to find a method of fixing minimum prices other than what appears to be on the basis of enabling inefficient firms to make a profit?"

There is still no parallel to the spinning price schemes on the cotton manufacturing side of the industry, and commenting on this fact, the Weavers' Amalgamation points out that in times of stress minimum yarn prices would not help their particular department. A further effect could easily be that because of minimum yarn prices during bad trade the spinning unions might be able to obtain better wage agreements for their members than the weaving unions could secure for theirs.

In rayon weaving, however, a system has been evolved for minimum price fixing based on accurate costing, and the Rayon Weaving Association, in its Annual Report, is highly critical of the views expressed on calico printing by the Monopolies Commission. Calling it "a most disturbing" document, the Association condemns the general terms in which the report refers to price regulation schemes and accuses the Commission of becoming doctrinaire in its approach.

The pursuit of efficiency in these days, the rayon weavers assert, involves the expenditure of money as well as brains and hard work. An industry particularly susceptible to the operations of the weak seller and liable to be depressed by selling without proper regard for true costs, will never have the means to become more efficient, no matter how strong its desire for greater efficiency may be. Accordingly, some means must be found to stabilise its position, and price regulation has so far proved the remedy for Lancashire.

Industrial Progress

The challenge which British industry must meet in 1954 is that of streamlining prices and speeding delivery of goods to export markets, declared the Lancashire and Merseyside Industrial Development Association in its Annual Report. British quality was generally of a high standard, but foreign competitors were often able to quote lower prices and earlier delivery dates. "Our prosperity depends upon the degree of success achieved," says the document.

The outstanding and most welcome industrial feature during the year had been the continued recovery made by the Lancashire textile industry. Nearly 1,000 new factory buildings and extensions have been completed in North-West England since the war, covering an area of 21 million square feet and estimated to give employment to 40,000 men and 22,000 women. The total represented over 15 per cent. of all the industrial buildings completed in Great Britain during the period.

In spite of the progress made, however, there were still difficult problems awaiting solution. Almost half the regional total of unemployment continued to be centred on Merseyside, even though some 50 firms had either moved into the area or opened branch factories there since the war.

In the cotton towns, unemployment, according to the report, had once more given place to a labour shortage, but the excessive dependence on the textile industry remained.

THREAT OF MAN-MADE FIBRES TO COTTON

PATTERN OF WORLD CONSUMPTION

THE recent session of the International Congress of Man-made Fibres held at Paris served to emphasise the growing importance of artificial fibres. The aim of the Congress is to examine on an international plane the various economic and technological problems relating to artificial and synthetic fibres, to establish and strengthen contacts between the various sectors of the industry and the textile trades, and to promote the use of man-made fibres, both quantitatively and qualitatively. The question that is frequently asked, in this connection, is whether these artificial fibres constitute a threat to the natural textile fibres, of which the most important is cotton. It must, however, be emphasised here that the sponsors of the Congress do not aim at eliminating natural fibres. Nevertheless, the interest aroused by the Congress is evident from the fact that it was attended by some 3,200 delegates from 31 countries.

Since the beginning of the present century, many and varied have been the attempts at producing artificial textile fibres. The four main groups of textile fibres, in which there has been continuous research, are the polyamide, headed by Nylon, the polyester, to which the Terylene of Imperial Chemical Industries belongs, the vinylitic, with Vinyon among other products, the acrylic, of which Orlon is the best known. A newcomer to the ranks of the artificial fibres is the French Rilsan, which is produced from castor oil. Among these artificial fibres, rayon is, of course, the most important. It was first produced on a commercial scale during the early years of the present century. In recent years, it has made rapid progress, both quantitative and qualitative. Rayon is produced in two main forms—continuous filament and staple fibre. The former is produced as a continuous thread of any required length and can be woven without serious difficulty by the silk and cotton industries. Rayon staple fibre is rayon cut up into short pieces, so that it can be spun into yarn on the ordinary spinning machinery used in the cotton, woollen and worsted industries.

World rayon and synthetic fibres production increased from a mere 13,000 tons in 1913 to 200,000 tons in 1929 and to one million tons in 1939. Since then, the output has nearly doubled; the world production of these fibres in 1953 is estimated at 1.9 million tons. In 1928-29, these fibres accounted for only 3 per cent. of the world output of essential textile fibres, namely, cotton, wool, silk, and man-made fibres. But this proportion expanded to 13 per cent. in 1940 and to 19 per cent. in 1952. Europe still ranks prominently among the world producers of artificial fibres, with 50 per cent. of the world's output to its credit. The U.S. produces 30 per cent. of the world output and Japan 10 per cent.

Consumption of Fibres

In post-war years, there have been significant shifts in the consumption of natural and artificial fibres. The table below gives the *per capita* world consumption of textile fibres:

World consumption of textile fibres
(Per capita)
(In kilos)

	1938	1951
Cotton	2.9 (78.4%)	3 (73.2%)
Artificial fibres	0.4 (10.8%)	0.7 (19.0%)
Wool	0.4 (10.8%)	0.4 (9.8%)
	3.7 (100.0%)	4.1 (100.0%)

It will be seen from the table above that, whereas there has been a decline in the proportion of cotton fabrics to the total textile fabrics consumed per person, from 78.4 per cent. in 1938 to 73.2 per cent. in 1951, the proportion of fabrics made of artificial fibres to total textile fabrics has increased from 10.8 per cent. to 17 per cent. Thus, there is no getting away from the fact that artificial fibres are making headway, while cotton is on the defensive in the battle of textile fibres. In the U.S., about 60 per cent. of the summer suits, it is stated, is made of staple fibre. Also, there are some non-apparel uses for which rayon, it is claimed, is better suited than cotton. Thus, when synthetic rubber came into widespread use in vehicle tyres during the war, it was found that rayon was more suitable for tyre cord than cotton. Since the war ended, rayon tyre cord has continued to gain ground at the expense of cotton until it now holds the greater part of this particular market. About 60 per cent. of the world output of tyres, it is estimated, is at present produced with rayon.

It is, of course, difficult to disentangle the genuine improvement in rayon consumption from the effect of the high price levels which have prevailed for cotton. In other words, it is difficult to say what part of the increase in rayon's consumption is due to any inherent superiority it may possess as a textile fibre. There are, however, two factors which will always be cited in favour of rayon. In the first place, its prices, in recent years, have been held well below those of cotton. Indeed, Lancashire firms, for instance, found in 1952 and 1953 that the only way in which they could meet consumer resistance to high textile prices was to introduce a fairly substantial proportion of rayon into their yarns and fabrics. Secondly, the quality of rayon is always more uniform than that of cotton.

Rayon's virtues, whatever they are, arise principally from the fact that it is a factory-made product. Its quality can be controlled relatively easily, unlike that of cotton, which depends upon the weather and other factors. Secondly, the price of rayon itself can be regulated more easily than that of cotton. Again, this is because the production of rayon can be controlled to meet the demand in the market. The output of cotton is not so sensitive to changes in demand, since it is produced in the fields and its output is subject to weather and other conditions. Nevertheless, cotton, as a textile fibre, cannot be entirely replaced by rayon. But its ability to compete with rayon will be strictly determined by its price. It is necessary that its prices should be attractively low. Otherwise, the spinners will be continuously tempted to try other fibres.

IMPORT OF COTTON

The Central Government has announced its import policy in respect of cotton for the second half of the current year. Licences for the import into India of dollar and non-dollar cotton of staple length not less than 1.1/16" for the period July-December, 1954 will be issued by the Joint Chief Controller of Imports, Bombay. These licences will be issued as hitherto—against prior sales to mills or on importers' account on production of evidence of purchase from overseas suppliers. No applications will be entertained after 15th December, 1954, for licences for the July-December, 1954, licensing period. Licences for the import of cotton from the dollar area will be valid for shipment upto 30th June, 1955, and those for non-dollar cotton up to 12 months from the date of issue. Importers will not be permitted, without prior approval of the Textile Commissioner, to sell the cotton to parties other than mills. Particulars of all sales by importers, it is stated, should be notified to the Textile Commissioner, Government of India. The arrival of all imports and the price at which the purchase has been made should also be notified to the Textile Commissioner and the Joint Chief Controller.

1953-54 COTTON CROP ESTIMATE

The official all-India final estimate of cotton for 1953-54 places the land under cotton at 17,027,000 acres and output at 3,935,000 bales (of 392 lbs.), as against the revised estimate of 15,693,000 acres and 3,131,000 bales in the 1952-53 season. The current year's estimate thus shows an increase of 8.5 per cent. in area and 25.7 per cent. in production over the corresponding estimate for the previous year. The increase in acreage and in production, it is stated, has been shared by almost all the cotton-growing States. Favourable weather conditions have assisted the increase in output of cotton. As between the different varieties of cotton, the increase in production has occurred mainly in Americans.

The production of cottonseed is estimated at 1,377,000 tons during 1953-54, as against 1,090,000 tons during 1952-53, thereby showing an increase of 281,000 tons.

The Madhya Pradesh cotton crop in the year 1953-54 is estimated at 635,800 bales which represents 66.4 per cent. of the normal yield. The average yield per acre (in terms of lint) comes to 68.2 lbs. The area under cotton in the State is estimated at 3,655,000 acres, which is higher than the finally revised area of last year by 3.2 per cent. The area under long-staple cotton is 870,000 acres, under medium-staple 1,236,000 acres and under short-staple 1,549,000 acres. Owing to the introduction of improved trade varieties of H420 and 197-3 cotton, the area under long-staple cotton had been appreciably increased.

Prospects for the new cotton crop in Peru are reported to be favourable. This information is based on a report which stated that the present rate of harvesting of Tanguis indicated a record bumper crop of this variety. According to the Statistical Bulletin of the International Cotton Advisory Committee, the production of Tanguis is estimated at around 390,000 bales and of Pima at 40,000 bales, as compared with 340,000 bales and 55,000 bales, respectively, in the previous season.

Japanese staple fibre production during May this year is reported to have aggregated 38,180,840 lbs., which is a new post-war record and compares with 28,820,699 lbs. in May, 1953. Increased production was attributed to cut-throat competition amongst manufacturers who were expanding their output in order to reduce their costs.

NEW PUBLICATIONS

Municipal Finance in Certain Leading Indian States. By Dr. K. M. Bhouraskar. Published by Chunilal D. Barfivala, Director, Local Self-Government Institute, 11, Elphinstone Circle, Fort, Bombay.

FOR three reasons, this publication loses much of its importance. First, it is a little out of date, in that it is devoted to the study of the trend of municipal finance in some of the States during a period which covers only up to 1946-47. It does not, therefore, take into account the changes and developments that followed the financial integration of States. Secondly, the publication deals with five States, namely, Hyderabad, Mysore, Baroda, Indore and Kolhapur, of which the last-mentioned three States are now no longer in independent existence, with the result that, on the basis of the municipal finances in these States, no general conclusions of all-India significance can be drawn. Thirdly, since the subject of local finance has been discussed threadbare by the Local Finance Enquiry Committee in its voluminous report submitted not long ago, some of the conclusions that the author, Dr. K. M. Bhouraskar, has drawn are more or less a repetition of what is contained in the report. Nevertheless, the publication under review must be welcomed as a useful addition to the scanty literature on Local Bodies.

The author begins his thesis with a brief discussion of the problems of local finance in general. He thus examines the types of local authorities in existence, distribution of responsibility and resources, and methods of allocation. The author deals next with municipal expenditure. Unlike most authors who have studied this aspect only summarily, Dr. Bhouraskar has done well to measure the benefits conferred by expenditure incurred by Local Bodies. Indeed, as Prof. C. N. Vakil has aptly stated in his foreword to the publication, "this marks an entirely new angle for viewing the problems of local finance for which Dr. Bhouraskar must be congratulated." In Part III is discussed the sources from which the different municipal functions are financed.

On the basis of his study of the expenditure and income of the municipalities, Dr. Bhouraskar has come to the conclusion that, "whereas modern trends have contributed to increase largely the expenditure of municipalities, they have not made for a simultaneous increase in the revenue powers that could be conveniently assigned to them." This gap, he points out, must be filled by grants-in-aid. Referring to the implementation of productive works and meeting large capital outlay and accidental expenditure, he suggests loans. A specific suggestion which he has put forward in this connection is that the States must follow a liberal loan policy towards the municipalities which would enable them to embark on productive schemes.

The author concludes his thesis with several suggestions for reorienting municipal finance. He draws particular attention to the narrower range of functions the State municipalities are fulfilling than the former Provincial municipalities, but does not advocate devolution of additional services on the municipalities, except water-works, town planning and fire brigade. In his view, the first duty of local authorities is to improve the tone of the existing services which leave much to be desired. He also emphasises the need for augmenting the existing sources of municipal income by raising the efficiency of collection, replacing terminal taxes by octrois, raising rates of house and vehicle taxes, and retention of the power to tax entertainments by the municipalities which already enjoy them and the transfer of such power by the State to those which do not have them.

Bombay Cotton Annual, 1952-53. Published by the East India Cotton Association, Ltd., Bombay. Price: Rs. 4.

Among the services which the East India Cotton Association Ltd., Bombay, renders to its members and the general public is the publication of the *Bombay Cotton Annual*. The latest in this series refers to the year 1952-53. Like the previous volumes in the series, the 1952-53 *Annual* is an authoritative compendium of all matters relating to cotton and cotton textiles. It carries statistical tables of crops, exports, imports, prices, stocks, and consumption of cotton. It also carries tabular statement of production and exports of yarn and cloth. Government notifications relating to cotton are also reproduced in this publication. The publication is thus a handy book of reference to all those who are interested in cotton and cotton textiles.

Call to the Nation

THREE years ago, in March 1951, the people of India started to build themselves a better life. Our first Five-Year Plan aimed at growing more food, producing more goods, improving social services and creating more employment.

Progress so far has been impressive. We have already spent nearly a thousand crores of rupees in this mighty adventure of building a New India. We no longer depend on outside help for food. We have built huge dams like Tilaiya, set up thermal power stations like Bokaro, established factories like Sindri and constructed cities like Chandigarh. We make our own railway locomotives and assemble our own motor cars and aircraft. Through Community Projects and Rural Extension Service, we have laid the foundations of rural prosperity.

ALL-OUT EFFORT NEEDED. In spite of this progress, an all-out effort is needed during the remaining two years to achieve the target we set for ourselves. To pay for this effort India still needs about thirteen hundred crores of rupees.

The National Plan Loan is a Call to the Nation to rise to the occasion. The Five-Year Plan is the People's Plan. It is the people's duty to contribute their share to the success of this venture. IT IS YOUR DUTY AND MINE.

INVEST IN INDIA'S FUTURE

INDISPENSABLE TO THE BUSINESS WORLD

We offer below a few important Publications which will be found very useful and helpful in solving the various problems that face the business world.

THE LAW OF INCOME TAX IN INDIA (VII Edition) By V. S. SUNDARAM

"The work continues to maintain its *usual standard of excellence* and will be found very useful not only by those in constant touch with the subject but also by laymen."—*The Hindu*, Madras.

1954 Edition Price Rs. 37-8. Postage extra.

LAW OF SALES TAX IN INDIA By R. MATHURBUTHAM AND R. SRINIVASAN

"The scope of the book is comprehensive ..... and makes it useful equally to every person in India who has anything to do with this branch of the law—Shopkeepers, Traders, Merchants, Lawyers, etc."—*Calcutta Weekly Notes*.

1954 Edition Price Rs. 14-0. Postage extra.

ESTATES DUTY ACT By P. R. NARAYANA IYER

With a Foreword by HON'BLE JUSTICE P. GOVINDA MENON

"The enunciation of the principles and the discussion of the decided cases under the several sections should help the department, the Legal Profession and the Courts to get a clear idea of the Law....."

HON'BLE JUSTICE P. RAJAGOPALAN, Madras High Court.

1954 Edition Price Rs. 15-0. Postage extra.

FACTORIES AND LABOUR MANUAL By R. MATHURBUTHAM AND R. SRINIVASAN, *Advocates*.

"The book will be of considerable help to Lawyers, Industrialists, Labour Organisations & Legislators alike."—*Commerce*, Bombay.

1952 Edition Price Rs. 18-0. Postage extra.

READY JULY 1954.

THE INDIAN COMPANIES ACT By K. VENKOBA RAO

The Third Edition of this very useful and popular book will be released in July, 1954. It has been completely revised and a number of useful appendices added.

Price Rs. 25-0. Postage extra.

LABOUR PROBLEMS IN THE UTTAR PRADESH SUGAR INDUSTRY

BONUS ISSUE TO BE SETTLED BY A SPECIAL COMMITTEE

AVAILABLE reports about the deliberations of the Uttar Pradesh Tripartite Labour Conference (Sugar), held at Naini Tal recently, and the decisions taken thereat indicate that both the workers and the managements of the sugar industry have realised the importance of maintaining cordial relations between them as a prerequisite for the achievement of a high level of sugar output. The Conference was marked by agreement between the two parties on several outstanding problems of labour employed in the sugar industry. This is certainly reassuring, considering the stress that has lately been laid on mutual negotiations as an effective means of settling industrial disputes, in contrast to compulsory adjudication or arbitration.

An important issue on which there was consensus of opinion at the Naini Tal Conference related to payment of bonus to sugar labour for the season 1953-54. The Conference asked the U.P. Government to set up a committee to determine the quantum of bonus, to exempt such factories as have incurred losses from the onus of paying bonus and to examine the question of introducing the slab system in place of the present step-up system for the award of bonus.

A Welcome Move

The desire to settle the bonus issue by mutual agreement, instead of through an industrial court, must be widely welcomed. As readers are aware, the issue of bonus had, until recently, been a major cause of dispute in the U.P. sugar industry. During the last two years, however, the issue has been settled by mutual negotiations. Last year, for instance, the Tripartite Labour Conference met some time in October and authorised the State's Labour Minister to appoint a committee which would, by mutual discussion, determine the rate of bonus to be given to workers in the sugar industry for the 1952-53 season. A committee was accordingly set up with the Labour Commissioner as the Chairman. In its report submitted to the Government, the committee recommended an increase of 25 per cent. on the previous season's slabs, the actual rates of bonus being determined according to the level of sugar output in each factory as follows:

Production (In 000 maunds)	*Rate of bonus* (As. per maund)
Up to 100	*Nil*
100 to 200	2½
200 to 350	5
350 to 500	7½
Over 500	10

The U.P. Government accepted the above recommendation and issued an order on 23rd December, 1953, directing the factories to pay bonus accordingly. There were, however, 16 sugar factories which had applied for relief on special grounds. The cases of these factories were referred to a sub-committee consisting of the Labour Commissioner (Chairman) and one representative each of employers and employees. On the basis of the recommendations of this sub-committee the Government directed 10 factories to pay bonus at the rate given in the previous order and exempted six other factories from payment of any bonus.

Standing Orders

To revert to the recent Tripartite Labour Conference (Sugar) at Naini Tal. The Conference suggested the formation of a special committee to examine the question of payment of retaining allowances by the sugar factories to their labour. It also authorised the Government to appoint a sub-committee to work out the details of changes relating to standing orders in vogue in the sugar factories which govern the employment of workers. In the course of the discussions, the representatives of the sugar industry laid particular stress on the exclusion of clerical and watch and ward staff of the mills from the category of workmen. They also wanted freedom for factories to engage workers by stages in proportion to the volume of work and to dispense with their services towards the end of the season. The labour representatives put forward a plea for a provision in the standing orders for compulsory employment of workers from year to year and exclusion from the purview of misconduct of those cases of illegal strike which did not involve acts of violence. Among the other issues raised were the top-heavy expenditure of factories and certain items of wasteful expenditure by management. Another suggestion made related to payment of bonus to workers in the shape of shares of the companies. The implementation of this suggestion, it was pointed out, would not only enable the workers to become co-partners in the mills but also make available to the factories funds for expanding the scale of their operations.

SUGARCANE PRICES

Sugar factories in India paid higher prices for their requirements of sugarcane during the month of April, 1954, as compared with the corresponding month of 1953. Thus, the all-India average price of sugarcane (including co-operative societies' commission, transport charges, etc., but excluding cane cess) paid by the factories during the month under review was Re. 1-9-5 per maund, as against Re. 1-5-11 a year before. The portion of the total price actually received by the grower was Re. 1-8-3, which is As. 3-8 higher than the price received a year before.

The following table gives the average prices of cane (per maund) paid by the factories and those actually received by the grower during April, 1954, as compared with the corresponding month in the previous season:

—	Delivered at factory		Actually received by grower	
	April, 1953	April, 1954	April, 1953	April, 1954
	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
All-India	1 5 11	1 9 5	1 4 7	1 8 3
U.P.	1 5 11	1 11 0	1 4 6	1 8 10
Bihar	1 6 0	..	1 4 3	..
Bombay	1 7 0	1 8 4	1 6 10	1 10 6
Madras	1 6 0	1 7 0	1 5 0	1 7 0
Andhra	..	1 8 0	..	1 8 0

It will be seen from the above figures that the average price paid by factories for cane was the highest in the State of Uttar Pradesh, being Re. 1-11. This represents a rise of As. 5-1 as compared with April, 1953. Some factories paid as much as Re. 1-13-7 per maund, as against the maximum of Re. 1-10 in Andhra, Re. 1-8-4 in Bombay and Re. 1-7 in Madras. In U.P., the sugarcane growers also received the highest price, the sum actually received by a few amounting to Re. 1-11 per maund. The maximum prices received by the cane-growers in the other aforesaid States were Re. 1-9-8, Re. 1-10-6 and Re. 1-7, respectively. In the case of Bihar, it may be noted, the sugar factories had closed down their crushing operations by April, 1954, on account of acute shortage of cane supplies, thanks to a marked setback to the sugarcane crop.

POWER ALCOHOL IN U.P.

The Central Government has asked the Government of Uttar Pradesh to reduce the percentage of power alcohol in the admixture of power alcohol and petrol from 20 to 15. This alteration is said to have been necessitated by the marked fall in the production of molasses, the raw material for the manufacture of power alcohol during the current (1953-54) sugar season, following the appreciable decline in the output of sugar. The aggregate output of molasses in U.P. during the 1953-54 season is estimated at not more than 4.6 million maunds, as against as much as 7.0 million maunds in the previous season. On this basis, the aggregate output of power alcohol in the State may be estimated at 2.23 million bulk gallons, as compared with 4.85 million bulk gallons in 1952-53. Incidentally, it may be noted that the U.P. supplies power alcohol to the Punjab, P.E.P.S.U., Delhi and Vindhya Pradesh.

The fall in the output of power alcohol is not peculiar to U.P. alone. It is in evidence in other States also which have suffered a decline in molasses supplies consequent on poorer crushing operations in sugar factories. Although the quantity of power alcohol produced in the whole of India during the four months ended February, 1954, was larger than in the corresponding months of 1952-53, being 3,245,300 bulk gallons as against 2,592,300 bulk gallons the aggregate output for the whole of 1953-54 is expected to be much lower than that in the previous season.

ANDHRA WANTS MORE SUGAR MILLS

The State of Andhra will have two or three new sugar mills, if the reported request of the Andhra Government for the establishment of the same is granted by the Centre. The plea for expanding the size of the sugar industry in this State is based on two important considerations. First, Andhra produces sugarcane in abundance, a good portion of which is being used in gur manufacture for want of well-equipped sugar mills. Secondly, expansion in the size of the sugar industry will, by improving supplies, enable the State to reduce dependence on other States. Incidentally, it will help reduce the overall import of sugar by the Government of India.

As regards the machinery and equipment required for setting up the new factories, business men in Andhra are prepared to invest the necessary capital to start a sugar factory in the State "almost immediately," according to a recent statement by Mr. P. Thimma Reddi, Minister for Agriculture, Government of Andhra. The Andhra Government's scheme for the expansion of the sugar industry also envisages the transfer of plant from some of the factories which are almost idle throughout the season, thanks to lack of sugarcane supplies.

RAISING SUGAR OUTPUT IN U.P.

Under instructions from the Government of Uttar Pradesh, the mills in that State are said to be busy working out details of measures by which their productive capacity can be expanded with a view to meeting the growing demand for sugar. A large number of factories is reported to have asked for permission to extend their plants and equipment. On its part, the Government, it is said, is searching for devices whereby the cane production in the State can be increased to cope with the additional demand. Efforts are being made by the Government to persuade the sugar factory owners to assist in cane development work. The Chief Minister, Mr. G. B. Pant, has already held consultations with the sugar manufacturers. The matter has also been discussed at the meetings of departmental officers. Further meetings are proposed. It is expected that there will be certain changes in the set-up of the Cane Development Department.

One of the specific proposals now being considered relates to the creation, eventually, of sugarcane development zones around each factory, in which cane cultivation will be carried out according to a carefully worked out plan. Among other steps are provision of special irrigation facilities, ensuring adequate and regular supply of manure, and financial assistance to cultivators.

SUGAR PRODUCTION AND STOCKS

The total production and despatches of sugar during the current sugar season (upto the end of May, 1954) amounted to 1,001,000 tons and 790,000 tons, as against 1,292,000 tons and 921,000 tons, respectively, in the corresponding period of the previous season. Arrivals of foreign sugar from 1st November, 1953, upto 15th May, 1954, aggregated 250,000 tons.

The production of sugar in the country and arrivals of foreign sugar during the fortnight ended 31st May, 1954, was 400 tons and 55,000 tons, respectively. Out of the stocks with the mills, 64,000 tons were despatched during the fortnight, as against 74,000 tons in the same period last year. The closing stocks with the factories as on 31st May, 1954, were 406,000 tons, as compared with 873,000 tons a year before.

TRANSPORT OF COAL

NEED FOR EXPORT PROMOTION COUNCIL

PRESS reports from Ranchi disclose that, at the recent meeting of the Mineral Advisory Board held there, to which a reference was made in the last issue of this journal, certain problems relating to provision of additional facilities for transport of coal and ways and means of recapturing lost overseas markets were discussed. The representative of the Indian Colliery Owners' Association held that, unless the railways provided an additional 300 to 500 wagons daily, the coal industry's distress would be further aggravated, thereby forcing the marginal collieries to close down. Although the representative of the railways appreciated the colliery owners' point of view, he expressed the railways' inability to provide more wagons in the present circumstances. He, however, gave the assurance that the Railways Board would examine the matter and would try to render as much relief as possible. Representing the Indian Mining Federation, Mr. B. N. Banerjee suggested the reintroduction of the old system of rebate on railway freight for export of coal, with a view to stimulating exports. A representative of the Ministry of Production disclosed that the Ministry had a proposal to constitute a small committee to examine the causes for the precipitous drop in coal exports and to recommend the steps necessary for increasing the volume of exports.

It is now common knowledge that the two main problems threatening the economic working of the industry is transport bottleneck and dwindling exports. The daily loading of coal in Bengal and Bihar coalfields in 1953 was 3,112 wagons, as against 3,163 in 1952. The availability of wagons is far short of the growing pace of demand under the impact of the implementation of the various programmes of industrial and agricultural development. Not only the number of wagons but also the railway siding facilities are not enough. The inadequate line facilities are still a great bottleneck. This is not all. There is also the allegation of the stepmotherly treatment meted out to private-owned collieries, as against State-owned collieries, in the matter of allotment of wagons. Now that both the ownership and management of railway collieries are vested in the Production Ministry, it is feared that this invidious treatment will be all the more pronounced.

The proposal to constitute a committee to enquire into the fall in exports and suggest remedies is a step in the right direction, but, if it is to be of any use, it must be constituted immediately and asked to submit its report as early as possible, preferably within a couple of months. For, if the drastic fall in exports (from 3.30 million tons in 1952 to a mere 1.99 million tons in 1953) is not checked, it would seriously affect the economy of the Indian coal industry. In fact, the need for at least maintaining, if not stepping up, exports and earning as much foreign exchange as possible is now all the more greater, as the successful implementation of the Five-year Plan requires a tremendous amount of foreign exchange to balance the import of capital and other essential goods needed. From this point of view, it is felt that, instead of the proposed committee, an export promotion council for the coal industry should be formed. This will be in line with Mr. T. T. Krishnamachari's proposal to set up an export council for each industry.

Meanwhile, there is the necessity to encourage, as far as possible, washing and blending of coal by private collieries. As it is aptly put, conservation of coal does not really mean restriction of output but the most efficient utilisation of coal. In this connection, the case for implementing the report of the Committee on Coal Washing cannot be too strongly emphasised. Besides, storage facilities at ports, especially at Calcutta, should be expanded so that, during the slack transport season, coal might be moved and stored for export as and when the demand arises.

COAL MINES LABOUR WELFARE FUND

The Coal Mines Welfare Fund Advisory Committee, which met recently at Shillong, decided that, in future, 90 per cent. of the welfare fund should be allocated for general welfare and 10 per cent. for special welfare schemes. At present, the Fund authorities are spending only 85 per cent. under different heads. The changes to be made in the percentages of expenditure under different heads will be settled at its next meeting, the date of which is yet to be decided. The Committee set up a sub-committee to locate sites in colliery regions for 10 regular primary schools in houses to be provided by the Coal Mines Welfare Fund. It resolved upon initiating a residential industrial training centre for mine-workers' children on an experimental basis in Bhuli. In the meantime, it is stated that the Coal Mines Welfare Commissioner has submitted a scheme for spending the accumulated sum of Rs. 3 crores on housing account and Rs. 2 crores on general welfare account for the consideration of the Board.

EMPLOYMENT IN COLLIERIES DURING APRIL

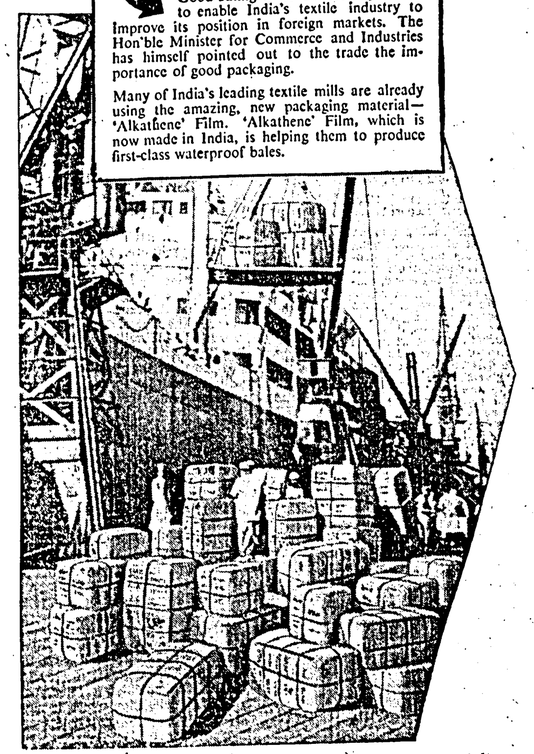
According to the Chief Inspector of Mines in India, more persons were employed daily in lesser number of collieries during April, 1954, than in the previous month. The output per man-shift also increased. On an average, 330,039 workers were employed daily in 845 collieries in April, as compared with 326,581 workers employed daily in 848 collieries in March. The output per man-shift for miners and loaders was estimated at about 1.09 tons, representing an increase by 0.01 ton over the previous month's figure. The percentage of absenteeism dropped from 13.96 in March to 13.16 during the period under review. The output of coal during April was 3,037,138 tons, as compared with 3,073,257 tons in March. During the period, 295,416 tons of hard, soft and other kinds of coke were produced as compared with 333,188 tons in March.

One of the richest lignite deposits of Europe, the Timelkam brown coal mine in Upper Austria has been developed and equipped with the most modern machinery with the help of E.R.P. credits. Among other quite up-to-date features, the pits of the mine are ventilated by suction ventilators, which are installed at the most important points of the underground galleries. Hauling and hoisting is partly made by means of specially developed equipment. The mined coal is brought by a conveyor belt to the crushing plant.

GOOD BALING helps India's textile exports

Good baling is of utmost importance to enable India's textile industry to improve its position in foreign markets. The Hon'ble Minister for Commerce and Industries has himself pointed out to the trade the importance of good packaging.

Many of India's leading textile mills are already using the amazing, new packaging material—'Alkathene' Film. 'Alkathene' Film, which is now made in India, is helping them to produce first-class waterproof bales.

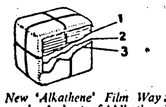


If you have not already done so, give 'Alkathene' Film a trial. 'Alkathene' Film combines superior physical properties with eye appeal. It will ensure that your textile bales reach their destination exactly in the same excellent condition in which they left your mills.

- 'Alkathene' Film is transparent, tough and resilient. It successfully withstands baling pressures, and the strain encountered in transit due to rough handling.
- 'Alkathene' Film is impermeable to moisture and will protect your bales in transit even during monsoon conditions.
- 'Alkathene' Film has been approved by the Textile Commissioner.

And finally, 'Alkathene' Film, though it costs no more than any waterproof packing material, effects substantial savings. It cuts packaging costs, simplifies baling operations, reduces operational time and saves on freight charges. This is how 'Alkathene' Film does it:

The Old Way was to give the bale 2 wrappings of hessian interlayered with a double-sheet of tar-laminated paper, plus 1 extra sheet of kraft paper to protect the textiles from staining.



The New 'Alkathene' Film Way: Now, only 1 sheet of 'Alkathene' Film and two hessian wrappings are enough to provide *complete protection* against exposure and rough handling in transit. There is absolutely *no* danger of staining.

the revolutionary new protective packaging material

'ALKATHENE' Film

MADE IN INDIA

TOUGH • WATERPROOF • INEXPENSIVE

Surely you will want to know more about 'Alkathene' Film! Write, phone or call for free detailed literature and samples. Our Technical Service Department will be glad to help you put 'Alkathene' Film to best use.

RISE IN WORLD CONSUMPTION OF RUBBER ENVISAGED

DUNLOPS TO PRODUCE SYNTHETIC RUBBER

THERE has been a steady advance in the price of natural rubber in London during the last three months. From a low of 15¼d.—the lowest for the last four years—spot rubber at Mincing Lane has crept up to 19½d. per lb., the highest quotation to be seen since July, 1953. The main factor that has contributed to this sustained improvement is the statistical position of the commodity. According to the Rubber Study Group's estimates, while the world consumption of natural rubber in 1954 may reach 1,680,000 tons, the production will be no more than 1,705,000 tons, thereby leaving a surplus of only 25,000 tons. Although the rubber trade does not seem to agree with this view, it is generally accepted that there will not be any large surplus left this year. Consequently, there has been an enlargement in buying by consumers from the "hand-to-mouth" level. Secondly, the normal seasonal decline in supplies has been accelerated by the severe "wintering" in Malaya. Thirdly, the grave political situation in Indo-China has induced buyers to replenish their stocks.

These factors have not, however, brought any spectacular rise in the price of natural rubber. This is because of the realisation that natural rubber will have to compete with the synthetic and that any further rise will be disadvantageous to it, as it will stimulate the consumption of synthetic rubber. This does not mean that there is no scope for an increase in consumption of both synthetic and natural rubber. All that is sought to be made out by this school of thought is that, if the price of natural rubber is not competitive, the expansion in the demand for rubber will be met by the synthetic.

The world demand for rubber is expected to expand in the coming years, what with the vast industrial uses to which it is being put day by day. A striking confirmation of this view is provided by the statement of the Rt. Hon. Lord Baillieu, Chairman of the Dunlop Rubber Company Ltd., to the shareholders of the Company at their annual general meeting held in London last week. Recalling his reference made at the previous year's meeting to the need for continued expansion in the world production of both natural and synthetic rubber to meet the prospective requirements of the industry, Lord Baillieu referred to the Company's own efforts to increase the output of natural rubber in its estates in Malaya and also to produce synthetic rubber. As one of the world's largest producers of natural rubber, it is continuing intensive research on natural rubber at its research centre on the Dunlop estates in Malaya.

The improvement in the emergency situation throughout Malaya has greatly facilitated the management of the Company's properties and the achievement of a high level of efficiency. The output per acre has increased and a larger quantity of concentrated latex has been made available by the parent company to its group. Even so, the organisation's requirements in latex have outrun the output of its estates and it has, therefore, been necessary to supplement the crop from the Company's own estates by purchases from other producers. In view of this, the Company has resumed full-scale replanting operations which had been curtailed in 1952. It is expected that the earliest post-war replantings will be brought into tapping within the next twelve months. The replanting programme is an extensive one, lasting over a few years. This is important, because the main concern of producers of natural rubber is to bring down the cost of production. Dunlop's plan is expected to bring out both increased production and lower costs.

It may seem curious, at first thought, that, as one of the largest producers of natural rubber, Dunlops should launch on a programme of production of synthetic rubber. But the Company seems to be fully convinced that there is vast scope for the utilisation of the synthetic product also in its manufacturing activities. Explaining the reasons for the launching of this programme, Lord Baillieu observes in his statement:

"Extensive research is being conducted on synthetic rubber in both Europe and North America. The indications are that, both for commercial and strategic reasons, it is important for this country to have full access to adequate supplies and it is, therefore, obvious that our Company must be in the forefront of these new developments. The ability to take part in the production and the 'know-how' involved in the extensive industrial use of these new rubbers is of great importance to this country both economically and strategically.

"During the last few years, our research centre at Fort Dunlop has built up a considerable technical knowledge and has operated on a pilot scale, a plant for production of synthetic rubbers over a wide range of applications. You will have seen the recent announcement in the Press that, as an essential step towards establishing the industry in this country, we have decided to erect a new plant at Fort Dunlop. Work on the site has already begun.

"The raw materials will now become available for the first time in Great Britain from the chemical and oil refinery industries. The new rubber plant at Fort Dunlop has not been designed to manufacture established general purpose rubbers on a large commercial basis, but to produce, as they become available from our research centre, a wide range of new rubbers in sufficient quantities for development in the Company's products."

More than anything else, the future of natural rubber in Malaya is dependent mainly upon the maintenance of stability and progress of South-East Asia. A clear picture of the outlook can be got only after the outcome of the issue in Indo-China and the results of the Geneva Conference. From the point of view of the Company's own future, therefore, the decision to produce synthetic rubber is a step in the right direction.

TEA COUNCIL OF THE U.S.

The first Annual Report of the Tea Council of the United States, since its formation in April, 1953, discloses that much valuable work has been done by this body in exploiting the vast potential market for tea offered by America and increasing the consumption of this beverage in that country. It indicates also that there is still great scope for developing tea consumption in that country.

The Tea Council of the U.S. is the outcome of the meeting in January, 1953, of the representatives of India, Ceylon and Indonesia with the delegates of the Tea Association of the U.S. Within 48 hours of this meeting an agreement was signed among them to set up the Tea Council as a non-profit corporation for the promotion of sales of tea in the U.S. regardless of brand or of country of origin. The first meeting of the Council was held on 1st April, 1953. The birth of the Tea Council happily terminated the momentary uncertainty about the future of tea promotion in the U.S.

The most striking success of the Council's campaign is indicated by the fact that consumption of tea by Americans reached an all-time high of 103.3 million lbs. during 1953. This includes consumption both in the home and outside in public eating places. Imports of tea into the U.S. climbed to 105 million lbs., representing an increase of 11 per cent. over those in the previous year, which were themselves 12 per cent. above the preceding year's imports. The rise in home consumption is indicated by the increase in sales of tea in grocery stores by 7 per cent. in 1953. This has come on the heels of a 6 per cent. rise in 1952, after these sales had remained virtually static in the preceding three years.

Commenting on this growth in tea consumption in the U.S., the Tea Council's Annual Report says:

"This healthy growth in the world's number two foreign market for tea presents a challenging paradox. In the face of steadily increasing consumption, it is still true that America, the richest and the greatest potential market in the world, consumes less than one-fifteenth as much tea *per capita* as the United Kingdom. We consume less than one-fourth as much per person, as our neighbour to the north, Canada. On a *per capita* basis, there are eight other countries, not including those where tea is grown, which drink more of the world's most popular beverage than we do. It was not always so and there are unmistakable signs today that tea in the U.S.A. stands on the threshold of a renaissance, the extent of which may well exceed our hopes and expectations of a few years ago. If the Tea Council's campaign has proved anything, it has proved that Americans like tea and can be influenced to drink it; and that the tea industry, working together in full partnership with the producing countries, can expand the market beyond anything that would have been believed a few years ago."

The one conclusion that is drawn by the Council from the results of its campaign is that "tea, as a beverage, has far greater intrinsic merits . . . far greater sales appeal than the industry, until recently, has been able to project to the American people."

The three producing countries, India, Ceylon and Indonesia, contributed $850,000 for the calendar year 1953 for financing the campaign. The U.S. trade had agreed to contribute $520,000, but it actually contributed $567,000 or $47,000 more than had been agreed upon. This was due to increased sales of tea on which the packers contributed 1 cent. per lb. and the importers 1/10 cent. per lb. For the current year, Ceylon and India have agreed to increase their contribution by $25,000 and Indonesia by $5,000. On the basis of the past year's figure, the U.S. trade's contribution for 1954 is set at $567,000.

OUTLOOK FOR JUTE INDUSTRY

TIME FOR INCREASING WORKING HOURS PROPITIOUS

NEWS has come that Australia has decided to decontrol jute goods. It is reported that private trade will be permitted to make purchases of woolpacks from 1st July and cornsacks from August next. The State control over sale and distribution of woolpacks will be withdrawn in January, 1955, and that on cornsacks in the following month. This piece of news should be heartening to the jute industry as the administration of jute controls in Australia has had a deleterious effect on consumption of Indian jute manufactures in that country all these years. During war-time, as also in the Korean boom period, the Jute Control authorities had purchased jute goods for purposes of stockpiling and at very high prices. The existence of large stocks of these high-priced goods had become an embarrassment to the Australian Government. Consequently, it decided to fix its selling price on the basis of an average of the high rates previously paid for these stocks and of the lower levels at which subsequent purchases were made. It sought, by means of the average price system, to dispose of the high-priced stocks without incurring any loss. Last year, when the Indian Jute Delegation visited the place, it was expected that the process of covering the loss would take about a year or so. Now that the Government of Australia has decided to withdraw controls, it is reasonable to assume that the Government must have by now disposed of its high-priced stocks. As the average price at which jute goods were distributed to the consumer was higher than the rates at which Calcutta was able to sell, the controls not only prevented the Australian consumer from taking advantage of the declining prices in Calcutta, but forced him to take recourse to cheaper substitutes or adopt the bulk system of handling. The withdrawal of controls should provide opportunities for the Indian jute mills to recover at least a good part of the Australian market which they had lost. To this extent, the outlook for the Indian jute industry has improved.

Closely following the news from Australia comes the report regarding Argentina's invitation of tenders for a further 5,000 tons of hessians and 500 tons of sackings. Although this quantity is small as compared with the purchase of 30,000 tons in April, it confirms that continued interest of Argentina in the Indian market. Last year, Argentina purchased from this country about 100,000 tons. It is too early to predict what quantity it would lift this year, but it is believed that the offtake may, more or less, be the same as in 1953. The present order for hessians consists of 50 per cent. of 40"×9½ oz. and 40 per cent. of 40"×10 oz. The demand for sackings is understood to be confined to twills. The shipments of this order will be completed in the next three months. If this order is followed by further offtake, the position of hessian stocks is bound to improve considerably.

Hopes are also entertained that the U.S., which has been purchasing rather sparingly from the Indian market, may resume its normal purchases as a result of the I.J.M.A. Delegation's visit to that country, which has just concluded. Further, the fact that the country holds a large surplus of wheat in the face of reduced stocks of burlap (amounting to 183 million yards in April as compared with 209 million yards a year previously) has encouraged the view that America should come to the market sooner or later, for meeting its requirements.

These expectations, which have followed the recent good enquiry for sackings from the Middle East countries, West Africa and Burma, have given further prominence to the question of increasing the working hours of jute mills from 42½ to 48 a week. There is a growing feeling—apart from that given rise to by the recommendations of the Jute Enquiry Commission to extend the hours of work—that, with the expected American and Argentina demand, with lower stocks with mills, and with the prospect of Australia entering the market in the near future, the mills would not be able to cope with the increasing demand, unless they took steps to raise the output of jute goods. And one report goes so far as to say that the mills are contemplating to raise the working week by 2½ hours to 45. A final decision is expected to be taken in this regard immediately after the return of the I.J.M.A. delegation which is now in the U.K. on its way back to India. If there is

THE INDIAN ELECTRICITY ACT

SOME SUGGESTIONS FOR REVISING PROVISIONS RELATING TO RATES

(By K. V. KARANTHA, M.A., M.I.E. Chief Electrical Inspector to Government of Madras)*

WE have now two Acts governing electricity supply, the Indian Electricity Act, 1910, which is proposed to be revised, and the Electricity (Supply) Act, 1949, which it is proposed to amend in some ways. Some mix up seems to have occurred in the scope and functions of these Acts which it is advisable to clear up during the present revisions. The Indian Electricity Act was enacted at a time when it was not considered likely that the State Governments would themselves take up large-scale electricity supply to the public. So, this Act was essentially meant to control the other types of suppliers of energy, the licensees. The other Act was enacted primarily for enabling large-scale electricity generation and supply by Governmental agencies in the form of State Electricity Boards. The main purpose of this Act is to prescribe the organisation necessary for such work, to specify its functions and responsibilities and to provide for powers to raise the necessary finance and to permit the control of licensees' power houses and transmission lines, where required for grid purposes, etc.

We, however, find one major departure in the objective of the Electricity (Supply) Act, where it also attempts to regulate the electricity supply rates of licensees. The provisions under reference are sections 57 and 58 and the Sixth and Seventh Schedules to the Act. It may be argued that, in addition to providing for generation and bulk supply of electricity to licensees by the State Boards, it is also very pertinent to provide for this grid electricity being resold by licensees without undue profits and, therefore, the provisions relating to limits of profits to be earned by licensees, the appointment of rating committee to revise the rates of licensees, etc., are all very relevant to the Electricity (Supply) Act.

The control of licensees' electricity supply rates is, however, a matter of public importance, having a much broader application than resale of electricity purchased by licensees from State Electricity Boards. The need for the control of licensees' electricity rates is there irrespective of whether a licensee generates his own electricity or buys it in bulk from another licensee or buys it from an Electricity Board. That means that such control provisions should go into that Act which essentially concerns itself with all licensees and the main objective of which is to control the working of licensees. That being the function of the Indian Electricity Act, it should be the one to contain the provisions that should control licensees' accounts and profits and to provide for appointing rating committees, etc.

The Best Proof

The best proof of the mix up that has occurred in the Electricity (Supply) Act in this regard is the fact that the financial returns of licensees required for checking the profits being made by them under the Sixth Schedule to that Act are required to be submitted under the Indian Electricity Rules, framed under the Indian Electricity Act. It is not also as if, in the old Indian Electricity Act itself, this essential aspect of its function had been overlooked. In it also, there is provision for the control of profits which was meant to be done by the fixation of maximum rates in licences with provision for revision of these rates by advisory boards to be appointed by the State Governments under its section 35. But the process of control of rates and profits had not been clearly understood when framing the Indian Electricity Act and, hence, these provisions were not found to be sufficiently satisfactory. But the remedy could well have been the revision of the Indian Electricity Act in this regard rather than a mix up, as has occurred now in the Electricity (Supply) Act.

Since, therefore, the general terms of control of licensees' rates is more pertinent to the Indian Electricity Act than to the Electricity (Supply) Act, the sections in the Electricity (Supply) Act pertaining to these controls may now be shifted to the new draft and also got deleted from the Electricity (Supply) Act. The occasion should also be availed of, to remove the various defects in the existing provisions of the Electricity (Supply) Act, which have come to light as a result of the practical working so far of its section 57 and the Sixth Schedule. The defects needing rectification are many and somewhat controversial. The most important ones are dealt with here.

It has been held that the specifying of maximum rates in licences (Schedule clause XI of the Indian Electricity Act) would now be inoperative, in view of the provisions in clause I of the Sixth Schedule to the Electricity (Supply) Act. But it seems to be wrong to have no maximum rates in new licences. It would be very pertinent to have such maximum rates in the drafts of new licences advertised for the purpose of calling objections, since the public and the local authorities who have to give their support or voice their objections attach a lot of importance to the rates they are likely to be charged when the licence is issued. They would like to have an idea of how these rates compare with the rates existing elsewhere, or where there are rival applicants, whose rates are likely to be more beneficial to them.

Then again, it is not as if there are going to be no maximum rates at all in future. After a licensee has worked for some time and a stage has come when his rates are to be scrutinised by a rating committee appointed under the Electricity (Supply) Act, there will be certain maximum rates fixed by this rating committee, which will have to prevail thereafter until they are again modified by another rating committee. What is, therefore, good enough for a later stage of the licensee's working cannot be bad for the earlier period also. Therefore, when a licensee starts supply, it should again be made statutorily possible for certain maximum rates to prevail, until these rates are revised by a rating committee, whereafter the revised rates should hold the field, till again revised by a later rating committee, etc.

It is but fair that a licensee's right to earn a fair return on his investment should be subject to his operating in an efficient manner and showing due economy of operation. But clause I of the Sixth Schedule to the Electricity (Supply) Act which now gives the licensee the power to push up his rates, whenever he so chooses to do, does not specifically stipulate anything about his having to be efficient and economical, as a condition to his increasing the rates. There have been some glaring examples of rates being pushed up, along with a disproportionate increase in expenses.

Efficiency and economy of operation of licensees are expected to be enforced by suitable amendments to section 46 of the Electricity Supply Act, the enforcing authority being the State Electricity Board. But that arrangement, again, would not seem to be suitable. The State Electricity Board is itself a licensee. It can hardly afford to get involved in details and controversies and lengthy correspondence with licensees about various points of efficiency, particularly on the administrative side. Then again, where a State Board does not find a licensee complying with its instructions to economise or improve efficiency, the remedy provided in the Electricity (Supply) Act is for taking the matter to a court of law. The court would, however, not be the most suitable agency for a speedy and thorough investigation of the licensees' economy and efficiency of operation, the work being such as is best dealt with by persons well experienced in this field.

The present provisions in the Electricity (Supply) Act have resulted in licensees modifying their rates as they consider best, acting as their own judges in regard to the economy of their own operations. The present provisions also make it possible for them to keep back investigations by a rating committee by merely not exceeding the permitted net income even when the gross income goes up substantially, by merely increasing their expenditure. Such powers to be their own judges seem to be altogether a wrong approach to the solution of public utility control. The only proper remedy seems to be to have provisions whereby impartial and competent rating committees are empowered to scrutinise all proposals for increase in rates or to hold enquiries and to compel reduction in rates whenever their enquiries show it to be necessary.

The work is best done by a permanent rating committee for each State, available at all times for doing this work and competent for this work by continuous application to the same. Provision should, of course, be made for appeals to the State Governments where a licensee is dissatisfied with the decision of a rating committee. Such rating committees are found to be a most essential part of the rate regulatory system in the land of outstanding private enterprise, namely, the United States. If the powerful licensees there have accepted as quite fair such an arrangement, our licensees may also consider it as both good and fair for our work here. The system is found to work in an efficient and business like manner in the United States and has been in existence for a long time and is, therefore, a well-tried and dependable arrangement, unlike our attempt at financial control in the Sixth Schedule by a noval procedure of leaving it to licensees, a procedure which is now found to be very unsuitable.

Limits to Revision of Rates

There is no restriction on licensees now from revising their rates, even more often than once a year, and some licensees have actually done so. Except under exceptional circumstances, there should, however, be no difficulty for any licensee to prepare proper revenue forecasts for a whole year and decide once for all in the year what alterations in rates are necessary to enable him to earn a reasonable return and no more. This should be done sufficiently early in the year so that steep changes in rates are avoided. Revising the rates more than once a year, due to incorrect estimates, results in needlessly upsetting the budgets of the consumers and should not be tolerated.

Where licensees are now not earning a reasonable return and so have to increase their rates, there is also now scope for increasing some rates only and not others. Where some licensees have actually revised their rates in this manner, it has given room to a lot of discontent amongst the class of consumers whose rates alone were increased. If the standard tariffs structure is properly drawn up, there would be no need to alter some rates only, while if it is an improperly drawn up one, such a structure would not be justifiable. So provision may be made for all revisions in rates being in the form of a uniform percentage of increase or decrease on a standard tariff structure approved for each licensee.

Calculation of Fair Return

Some glaring defects which are now operating against the interest of consumers have come to light in the working out of the "reasonable returns" of licensees. The Sixth Schedule of the Electricity (Supply) Act prescribes what is called a standard rate of return for working out the "reasonable return" the licensees are permitted to earn. Obviously, such a "standard rate" could only have application to moneys which the licensee has himself put in for his working. If he has put in some loan money also, either he should be permitted to earn the "standard rate of return" on this loan amount also and the licensee compelled to meet the interest charges out of such return, or he must meet the interest charges as an item of permissible expenditure, and not claim any additional return on the loan amount for himself. It obviously has to be one way or the other, but not both ways. What, however, is now happening is the reverse. The interest charges are being met under permissible revenue expenses and the licensee, in addition, appropriates a "standard rate of return" on the loan amount also for himself.

The unfairness is even more glaring when he takes such loans from the consumers themselves by way of security deposits, the consumers being then compelled to give him sufficiently high electricity charges to cover the interest on such security deposits and also charges to enable the licensee to get a "standard rate of return" for himself on their own moneys. So, it is no wonder that, in some cases, licensees have pushed up consumers' deposits greatly to improve on the rate of return for themselves in this indirect manner.

Then again, when a licensee overcharges his consumers and thus makes excessive net profits, the Sixth Schedule permits him to keep nearly 50 per cent. of such excess in a tariff and dividends control reserve. This reserve is meant to be drawn upon by the licensee when his profits are low, but otherwise it does not belong to him. In practice, more often, it becomes practicable to plough it back into his business and earn a "standard rate of return" for his own appropriation, as if the fund had come out of his moneys and not from the consumers themselves by their being overcharged.

*The views expressed herein are the personal views of the author and they have no official significance.

There is going on an agitation by licensees for a suitable increase in the standard rate of return from 5 per cent. specified in the Sixth Schedule to 6 per cent. The 5 per cent. rate now contained in the Act was prescribed at a time when money conditions were certainly easier and the present stringent money conditions were not visualised. It would, therefore, be but fair to increase this standard rate appropriately. That could be done, but the rest of the process of calculation of the reasonable return should be free from the very serious defects pointed out above. The new draft should take care of this.

Collections from Consumers

While the present times necessitate licensees being allowed a higher standard rate of reasonable return than the 5 per cent. limit now contained in the Supply Act, licensees should be prevented from putting consumers to any avoidable loss by way of collections in excess. This can be made feasible only by making it statutorily compulsory for licensees to always close their annual accounts with no more net profit than the permissible fair return, such non-surplus position being achieved by refunds of all excess collections in the form of rebates to consumers *given before closing the annual accounts*. If such rebates are not given then, but are proposed to be given later, as now provided in the Electricity Supply Act, the excess collections appear as a taxable profit in the annual accounts and a very substantial portion of it goes off by way of income-tax. So, though it was really no profit, but only collection of undue charges from consumers, the consumers then get back only a fraction of the excess charged, by way of refund. As for any efficiency bonus to licensees when they do exceptionally good work, a system should be worked out which will tax the consumers no more than just what has to be paid to the licensees for this, unlike at present where it costs them very much more.

Suppression of Certain Rates

The power now given to licensees in Clause I of the Sixth Schedule to the Electricity (Supply) Act to vary the rates to enable earning a reasonable return on their investments has been held by some licensees to include power to radically alter the structure of a rate. In one case, a licensee has gone a step further and suppressed one type of rate altogether as a result of which many consumers stopped taking supply. The existing schedule clause X(2) of the Indian Electricity Act also seems to permit the latter step, provided a month's prior notice is given.

Unlike in the past, where many licensees generated their own power, what most licensees will be doing in future will be to sell the same grid electricity to all. Very widely varying tariff structures differing in different licensees' areas do not seem to be desirable for the future set-up either in the interest of the grid authorities or of the consumers. Many small licensees have not the competence to frame their own tariff structures suitably. The time seems to have, therefore, come when, as far as possible, certain standard tariff structures, used in the State Board areas or the Government Electricity Supply areas are followed as models in the areas of the distributing licensees also. To what extent this should be made compulsory and how enforceable are matters to which the new draft of the Indian Electricity Act may well devote some attention.

Miscellaneous Charges

The Sixth Schedule to the Electricity (Supply) Act provides for a licensee modifying his rates, as he likes, to enable him to earn the reasonable return on his capital investments. The section is silent on the powers of the licensee to modify his scale of miscellaneous charges, such as hire of meters, reconnection charges, fuse renewal charges, etc. Some licensees have revised such rates also along with the electricity charges without reference to the State Governments considering it as being within their powers to do so. But in Madras, it is being held that these charges cannot be altered without the concurrence of the Government. The income from these miscellaneous charges is not much and the charges represent the costs of certain services to be rendered by the licensees, which normally do not vary frequently. Frequent revisions in these charges are not, therefore, desirable. It would be, therefore, advisable to place the matter beyond doubt in the revised draft that licensees should not vary their miscellaneous charges without the concurrence of the State Government.

In the matter of rates for electric supply for street lighting purposes, the old arrangement was to have the same fixed for years together, but clause I of the Sixth Schedule to the Supply Act gives the licensees now power to revise such rates frequently. Frequent increases in rates would greatly upset the very inelastic budget provisions of local authorities and are better not encouraged in the new draft.

There is one other modification which seems very desirable and yet would appear to be somewhat outside the scope of the Indian Electricity Act. This refers to the work of maintenance of street lights by licensees. Where it is a large urban street lighting system that is involved, the local authority can generally arrange to have its own street lighting staff to maintain the lights and to attend to their repairs. So, where a licensee is unwilling to take up such work or his rates for maintenance (apart from rates for supply of energy) are considered high, an alternative course is available and is not difficult to adopt.

But as grid supplies spread to rural areas, we come upon small and very often very small *panchayat* areas where electric street lighting is eagerly welcomed and greatly appreciated. The *panchayat* boards, however, sometimes require only a few dozen electric street lights and cannot bear the cost of the whole-time competent staff to maintain these lights. There can be no two opinions that for such lights, the best arrangement is to have the licensee do both the supply of energy and also their maintenance. As such it also becomes necessary to ensure that the licensees conditions and charges for the maintenance of the lights are fair and equitable, which are best provided for by not making him the sole judge of it.

It will, therefore, have to be made statutorily compulsory now for a licensee to maintain all street lights, if the local authority so desires it, and the street light maintenance rates and the terms of maintenance to be offered by him should only be those approved by the State Government or the Standing Rating Committee of the State or some such competent and impartial organisation. Though the work of maintenance of street lights would be normally beyond the legitimately enforceable work of electric supply licensees, there seems to be no other proper solution.

Not very long ago, a storm struck an area served by a prominent electrical utility—one of our customers. The company suffered serious damage. Transformers were blown off their mounts. Posts sadly gave way. One redeeming feature—the silver lining of an otherwise dark and dismal picture—was, indeed, the company's "silver linings," or aluminium conductors.

To quote the words of the engineer of the company:

"All Aluminium and ACSR conductors (which have extensively been used) stood up very well. There were very few cases of snappings, although heavy trees fell on the lines and pinned them down."

In storm or calm, AL-IND Cables can take it!

EXPLORATION OF INDIA'S MINERAL RESOURCES

CENTRE PROPOSES A CO-ORDINATED NATIONAL PROGRAMME

THE Conference of the Central and North Indian State Governments on problems relating to the exploration of the mineral reserves, which concluded its two-day session at Srinagar on the 18th inst., recommended that top priority should be given to the completion of survey and detailed prospecting of the reserves of non-ferrous metals. It suggested that certain areas in the States of Rajasthan, Bihar and Himachal Pradesh should be taken up for detailed prospecting of copper ore. Similarly, some of the more promising areas in Bihar and Himachal Pradesh were recommended for exploration of deposits of lead, zinc and silver. The Conference was of the considered opinion that more attention should be given to exploration of deposits of gold that had been traced in the States of West Bengal, Bihar, Orissa and of pyrites in Bihar. As regards supplies of tin, for which India is at present completely dependent on imports, the Conference felt that an intensive survey of all known occurrences, particularly in Bihar, should be undertaken. In view of the importance of sillimanite, the reserves of which are found in Assam and Vindhya Pradesh, the Conference recommended a quantitative assessment of the deposits. It further suggested detailed prospecting of magnesite deposits in certain areas of Uttar Pradesh. Specifically, the Conference discussed the work to be undertaken by the Geological Survey of India and the Indian Bureau of Mines during the current year, namely, 1954-55 and subsequent years.

Inaugurating the Conference, Mr. K. D. Malaviya, Union Deputy Minister for Natural Resources and Scientific Research, disclosed that the Government of India proposed to launch a vigorous drive for the development of mineral resources in the country. He said that the Prime Minister attached great importance to the development of the mineral resources and the Government of India was of the view that it was urgently necessary to draw up a comprehensive programme of exploitation of mineral resources giving priority to the more important minerals. The task had, he averred, to be undertaken very urgently and the list of priorities drawn up on a national basis. Various programmes had been made from time to time by the States, but it was, he felt, necessary to consider all these within the framework of a co-ordinated plan for India as a whole.

Bangalore Conference

A similar conference of Southern States was held in Bangalore on the 24th inst. The details about the proceedings are not yet available. But, from Press reports, it would appear that the Mysore Government had suggested the continuation of the investigation taken up by the Geological Survey of India during the field season 1953-54, but not yet completed. A memorandum on the subject of gold occurrences in the States of Mysore and Bombay and the desirability of detailed investigations was submitted for discussion at the Conference by Messrs. John Taylor and Sons, Ltd.

The Government of Madras suggested the investigation of granite quarries in the Ramanathapuram Division. It suggested also a quantitative survey of gypsum in Tiruchirapalli District and the investigation of deposits of iron ore and mica in Kasargod and Puttur taluks in South Canara District. It further suggested the investigation of ground-water resources, particularly in the Salem Division, Kaveripatnam, Ootacamund, Yercaud and areas in and round the Koilpatti taluk.

The Government of Andhra suggested the investigation of bauxite deposits in the hilly tracts of Visakhapatnam District, beryl deposits at Kurupam area of Parvatipuram taluk of Srikakulam District, china-clay in Nellore District, graphite in and around Marripalem and Peddakonda areas, gypsum deposits in Nellore District, iron-ore deposits in Krishna and Guntur Districts, limestone deposits in Borra caves in Visakhapatnam District, mica deposits in Bhimlipatam area and deposits of red ochre in Araku valley in Visakhapatnam District. Investigation of mica deposits in Coorg were also suggested by the Coorg Government.

The Travancore-Cochin Government suggested the investigation of the clay deposits of the State. The suggestions made by the Government of Bombay were the examination of asbestos deposits in Bagalkot taluk of Bijapur District and the investigation of manganese deposits in Dohad taluk of Panchmahals District. It also suggested to the Conference the continuance of the geological investigations in regard to the Koyna Project and carrying on of the work of geological survey of the dam sites of several reservoir projects.

The Indian Union Minerals Association suggested an intensive survey including large-scale geological mapping of the river valleys where power projects are in operation so as to explore fully the possibilities of manufacturing ferro-manganese, fire-bricks, etc. The Coal Consumers Association of India suggested further survey and development of coal in Hyderabad and development of Godavari coal deposits. They also suggested that future survey of mineral resources should be undertaken not only for the reserves available, but also a quality-wise survey should be undertaken in close collaboration with the Fuel Research Institute, Dhanbad. It urged that there should be close liaison between the Geological Survey of India, the Coal Board, the Indian Bureau of Mines and the Fuel Research Institute of India.

That there is an imperative need for drawing up a co-ordinated national plan for prospecting and investigating the mineral resources in India is common knowledge. For the knowledge of the mineral wealth in the country is too limited, although the development of mineral resources is the very basis of industrial and agricultural development. But, as it will be impossible to undertake at once all the programmes submitted by the various State Governments, it will be necessary to chalk out an order of priority in the light of the requirements of the various development plans now being worked out under the overall national plan.

The implementation of the programmes agreed upon will entail recourse to modern techniques, such as photogeology combining air survey and ground mapping, churn drilling, diamond drilling, geomagnetic surveys and geochemical investigations. This raises the problem of technical manpower and equipment. To a considerable extent, industry may be depended upon for carrying out detailed prospecting as an immediate preliminary to commercial exploitation. It will be recalled that Mr. Malaviya appealed to the industry to undertake exploration work and gave the assurance that the Government would be willing to assist to the extent it could. He also suggested that industry should explore the possibilities of manufacturing drills and other equipments needed for such large-scale prospecting in order to expedite the implementation of the programmes.

U.S. AID TO STORE INDIA'S FOODGRAINS

An agreement signed on the 14th inst. between the U.S. and the Government of India provides for U.S. aid for the provision of adequate and better storage facilities for India's foodgrains reserves. The U.S. will contribute $1,539,000 (Rs. 73,10,250) and India will provide Rs. 15,00,000. The dollar part of the expenditure will be used for procurement of equipment needed and its transportation to India, while the rupee part of the expenditure will meet the costs of inland handling, transportation, land acquisition, installation of equipment and supplies and other local costs. The Government will assist India in exploring the advatages of new types of godowns and aims at providing for two silo-*cum*-elevators, each with a capacity of 10,000 tons. One of the silos will be erected at or near a major port, the other at a suitable centre in the interior.

Experiments will also be conducted with prefabricated metal storage facilities, which can be erected at short notice and which have the advantage of mobility should it become necessary at any time to move such stores from one part of the country to another. Such prefabricated metal storage facilities will have a capacity of 50,000 tons. The metal storage facilities will be at places where transit storage accommodation is required urgently.

The Foreign Operations Administration of the U.S. Government will furnish the services of a grain storage expert and such other technical assistance as may be required by India. Provision will also be made for training outside India two officers of the storage section of the Ministry of Food and Agriculture and other Indian specialists in the latest methods of handling and storing grains, preservation and other techniques. The U.S. will make available $13,000 (Rs. 47,500) in addition to $1,539,000 already earmarked for this project, to defray costs outside India of the two Indian officers.

Another agreement signed on the same day provides for assistance by the U.S. Bureau and Reclamation required by the Central Water and Power Commission of the Government of India in connection with its work. For this purpose, the U.S. Government has agreed to make available $100,000 (Rs. 4,75,000) from the technical assistance fund.

RAILWAY WAGONS AND COACHES

The capacity of the railways to carry both goods and passengers is expected to improve further as a result of orders placed by the Railway Board for a large number of wagons and coaches. Over 11,000 wagons and 480 coaches have been ordered under the Railways' Rolling Stock Procurement Programme for the current financial year. Most of the stock will be delivered during the present financial year and the remainder will be supplied in the first few months of the next.

The wagons ordered include about 8,500 broad-gauge, about 2,750 metre-gauge and 50 narrow-gauge wagons. Of the total number of wagons ordered all but about 500 will be supplied by Indian manufacturers. The approximate cost is about Rs. 12 crores. The wagon orders from abroad have been placed in Belgium and France at a total cost of £274,800. In 1953-54, orders were placed for about 10,500 wagons comprising about 6,250 broad-gauge wagons, 4,265 metre-gauge wagons and 46 narrow-gauge wagons. Of the total number of wagons ordered in that year, 6,860 were ordered from Indian firms and the rest from foreign firms.

Of the 480 coaches ordered under the present year's programme, 180 are complete fully furnished broad-gauge coaches and 250 metre-gauge steel coach body shells. These will be supplied by Indian firms and will cost approximately about Rs. 2.30 crores. The remaining 50 coaches, which will be electric multiple unit stock for the suburban railways, have been ordered from Italy and will cost about £975,000. In 1953-54, orders for 250 broad-gauge coaches were placed with Indian firms and for 50 coaches with manufacturers abroad. In addition, 50 narrow-gauge coaches were also ordered from foreign manufacturers. Orders have also been placed for 300 metre-gauge bogie underframes under the 1954-55 programme. This will be supplied by an Indian firm. An equal number of metre-gauge bogie underframes were ordered internally in the last financial year.

U.S. TECHNICAL ASSISTANCE TO INDIAN INDUSTRY

The Government of India signed, on the 16th inst., an agreement with the Government of the United States, whereby the latter will provide technical assistance to Indian industries mainly in the private sector for increasing their productivity and improving their management. The assistance would be of the value of $805,000 and will be mainly in the form of provision of productivity teams and individual experts in these fields and the required supporting equipment, supplies and technical literature. The following assistance is visualised under the project :

(a) Four productivity teams and a production engineer will be furnished to assist in the improvement of production technology, quality of production, standards of working conditions and related technical aspects in the metal working industry in India.

(b) A productivity and management team of five engineers will be furnished for assistance to the newsprint industry and specially to the National Newsprint and Paper Mills Ltd., Madhya Pradesh (Nepa Mills). Industrial specialists on certain specific industrial and research problems will be provided.

(c) Technical assistance and books on business management and other related technical literature will also be provided.

PUNJAB ROAD TRANSPORT

With the assent of the Punjab(I) Motor Unions' executive to a joint corporation scheme for nationalised road transport services, the longstanding dispute between the Government of Punjab and transport operators has come to an end. Under the scheme, 40 per cent. of the shares of the corporation will be allotted to the Punjab Government and 20 per cent. to the railways, leaving the remaining 40 per cent. open to public subscription, preference being given to subscriptions from the old transport operators. A general meeting of the Union at Jullundur has been convened for 30th June, 1954, to ratify the decision of the executive. The corporation is expected to implement the scheme without delay.

At a meeting held on the 19th inst. at Bombay, the Indian Airlines Corporation (I.A.C.) decided to replace the Vikings now engaged on the I.A.C. daily morning Bombay-Calcutta service, by the four-engined Skymasters. The Skymaster, apart from having four engines, will have a seating capacity of 53 passengers, as against 27 in a Viking. Dakotas, however, will continue to operate the night mail service between Bombay and Calcutta via Nagpur. The Corporation also considered the question of the purchase of small aircraft for feeder routes. It further decided to install a teleprinter service linking Delhi, Bombay, Madras, Calcutta, Nagpur, Hyderabad and Bangalore, with a view to increasing the efficiency of the Corporation.

NEW PRODUCTS AND PROCESSES

Chemical Polishing of Aluminium

A SIMPLE process for chemical polishing of aluminium has been developed at the National Metallurgical Laboratory, Jamshedpur. This process, it is stated, yields excellent results compared with other methods. According to it, the surface of the metal is well washed with benzene or any other suitable solvent to completely make it grease-free. It is then dipped for four minutes in a mixture containing ortho-phosphoric acid, nitric acid and acetic acid in suitable proportions and kept between 118° and 122° C. The metal is then removed and washed with water.

Radar to Scan Clouds For Water

The University of Chicago and the University of Arizona have established a jointly-operated research programme in which radar will be used to observe clouds as a possible source of water in the arid south-western region of the United States. The aim of the programme will be to find out how much the future development of dry regions throughout the world can be helped by efforts to cause extra rainfall. A special radar set to scan the clouds will be installed on one of the mountain peaks above the valley floor around Tucson, Arizona.

Paint Cools Building Interiors

A "cool" paint that can lower interior temperatures by as much as 45 degrees in hot weather has been developed by a United States company, Coating Laboratories, Inc., of Tulsa, Oklahoma. Extensive tests have shown that the paint will lower the temperature inside a galvanised steel building to within one degree of the coolest outside "shade" temperature—the temperature taken in a place shaded from the sun. The paint's "coolness" is due to the reflective qualities of its special pigment combination. In addition to reflecting heat and light, it also reflects infra-red heat waves.

Safety Switch for Headlights

Mr. Albert Sammer, an engineer from Tyrol (Austria), has designed a switch for all vehicles equipped with headlights and dimmed lights. The new device automatically switches on the second glow filament in case the other filament burns out or otherwise ceases to function during night driving. Since it is practically highly improbable, that both glow filaments of a lamp become defective, at the same time, the new invention is a significant contribution to safety against accidents caused by the sudden going out of headlights. The safety switch operates not only in case of breakage of the glow filament, but also in all cases where the wiring leading to the headlights becomes defective. A big advantage of the new invention is the fact that it can be installed not only on vehicles with two headlights, but also in those with one headlight only, such as motor cycles, where the sudden extinction of the light is especially dangerous. The moment the safety switch begins to operate, a small glow lamp which can also be used for the lighting up of the dashboard ceases to burn and indicates to the driver that the emergency switch is now functioning.

Water-repellent Agent for Windows

Raindrops have an objectionable way of clinging to window panes, and then, when trickling down, of leaving erratic traces which greatly obstruct the view. N.V. Stoop's Handel Mij, Buitenhof 5, The Hague (the Netherlands), a chemical concern, has now prepared a compound with which to prevent this fogging as a result of rain, snow or frost. A patent application has been filed. On panes treated with this preparation, the drops run straight down without leaving a trace. The treatment takes little time and can easily be applied by anyone. The pane is first thoroughly cleaned so that, in particular, it is absolutely free from grease. The preparation is then carefully spread over the entire surface and after about 30 minutes, vigorously rubbed out with a clean cloth till the pane is perfectly clear.

The preparation is extremely useful for treating windows of automobiles, on ships' bridges, in the cockpits of aircraft and in drivers' cabins on trains, etc. It is already being successfully used for windows in traffic control towers on airfields and for optical instruments which are used out of doors.

Worthington Refrigeration System

At American Brake Shoe Company's new bearing laboratory in its research centre at Mahwah, (N.J.), a Worthington refrigeration system provides and maintains correct temperatures for studying the performance of journal bearings in railroad use, and various lubricating methods to eliminate the so-called hot box problem. A Worthington refrigeration compressor, driven by a 40 h.p. motor is used for obtaining large temperature drops in the test room and for holding it at very low temperatures. A smaller Worthington compressor, driven by a 5 h.p. motor, is used for minor adjustments in temperature, and for holding at values slightly below outside room temperature. Any temperature setting made is automatically maintained in the test room through controls on the refrigeration system and the heating system. The controls, in turn, depend on information supplied by thermocouples located throughout the test room.

All of the equipment in the test room and the machinery room is controlled at the operators panel in a separate control room where the operator looks directly into the test room through a thermopane window. A system of weights can exert simulated loads up to 20,000 pounds per journal. A hydraulic loading arrangement permits applying as much as 40,000 pounds to the journal bearing.

JAYABHARAT INSURANCE COMPANY, LTD.

MR. C. B. PARIKH'S WARNING AGAINST SACRIFICE OF QUALITY IN BUSINESS

PRESIDING over the Eleventh Annual General Meeting of the Jayabharat Insurance Company, Ltd., held in Bombay on Friday, 18th June, 1954, Mr. Chimanlal B. Parikh, Chairman of the Company, sounded a note of warning to the effect that, if the insurers, in their pursuit of new business, sacrificed quality for the sake of quantity, it would lead to "heavy lapsation." He emphasised that this involved a "national waste of energy and funds."

The following are extracts from Mr. Parikh's speech:

"GENTLEMEN,

"The insurance industry has been and is still passing through very difficult times. With the end of inflation, prices have not come down proportionately. There is a widening of the gulf between prices and income. In spite of the high hopes held by Government, the Five-year Plan projects have not still sufficiently coped with the increasing unemployment. The baffling problem of unemployment after the cessation of war activities has considerably affected the progress of Indian insurance.

"The heavy lapsation of recent years is partly due to the sharp reduction in income of many individuals.

"To attract buyers of insurance policy in the prevailing economic conditions of the country, companies have resorted to reduction of life premium rates. To a certain extent this is also due to the improvement of 'experience' of companies and it is but proper that the benefits of this improvement are passed on to policyholders. We have also followed suit.

"But I feel that economy in expenses will have to be effected to such an extent as to warrant this reduction in premium rates. It will be suicidal to them if some companies sacrifice their sound and secure structure for the sake of questionable advantage.

"We have to be on our guard and in the pursuit of new business we have to see that we do not sacrifice quality for quantity as otherwise it would lead to heavy lapsation which is a national waste of energy and funds and is not in the interest of either the insurer or the insured or the agent. If, however, the business is conducted on strictly sound and scientific basis the reduction of premium rates, I believe, would result in increased new business and total premium income and help to eliminate lapses to certain extent.

"The need of adequate and safe investment of new moneys and the constant supervision of existing investment portfolios demand unremitting attention. The overriding aim must always be security of principal but this is not to be regarded as synonymous with a narrow outlook or with an unduly restricted range of investment.

"The relief, therefore, as recommended by the Shroff Committee, although not as much as desired, would mean some improvement on the present position. The scope for investments in 'approved investments' would increase from 50 per cent. to 55 per cent. of the funds and for investment in any particular company's capital structure from 2 per cent. to 5 per cent.

"The Committee's suggestion that Government should examine, in consultation with insurance interests, the issue as regards these investments with a view to removing the anomalies in the provisions of the Insurance Act are to be welcomed. Let us hope that the Government would implement the modest recommendations of the Committee.

"During the year, the net premium income from the general business was Rs. 49,47,917 as against Rs. 46,31,721 in the previous year. The net premium income from the life business was Rs. 14,91,439 as against Rs. 13,55,340 in the previous year.

Fire Insurance

"The gross premium income from the fire insurance for the year was Rs. 55,88,883 as against Rs. 56,87,394 in the previous year. The net claims paid and outstanding were 38.1 per cent. of the net premium income as against 36.1 per cent. in the previous year.

Marine Business

"The net premium income was Rs. 8,08,100 as against Rs. 7,23,347 in the previous year. The net claims paid and outstanding were 76.3 per cent. of the net premium as against 60 per cent. in the previous year.

Miscellaneous Business

"The gross premium income for the year of the miscellaneous department was Rs. 9,79,904 as against Rs. 8,15,737 in the previous year. The net premium income was Rs. 8,18,043 as against Rs. 6,75,624 in the previous year. The claims paid and outstanding were 64.7 per cent. of the net premium income as against 67.8 per cent. in the previous year.

Life Business

"The life business proposed during the year was Rs. 1,06,51,000 and the business completed was Rs. 85,43,000 as against Rs. 93,76,500 and Rs. 77,25,500 respectively of the previous year.

"The total assurance in force at the close of the year amounted to Rs. 3,13,23,957.

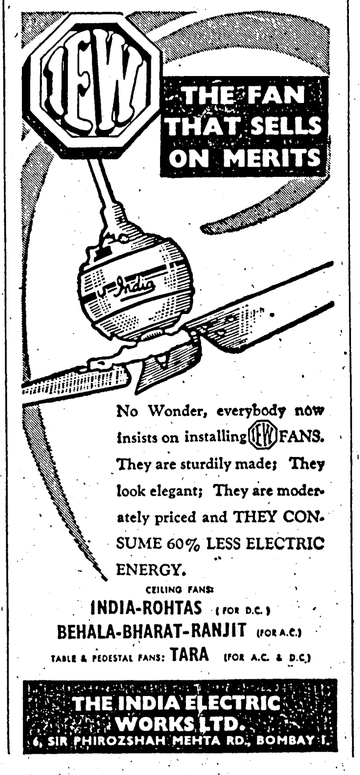
"The life assurance fund at the end of the year stands at Rs. 42,60,134.

Profit and Loss Appropriation

"The balance carried forward to the profit and loss appropriation account amounts to Rs. 4,39,066. This, together with the balance brought forward from the previous year, amounts to Rs. 4,70,117.

"Your Directors recommend that the payment of dividend for the year be maintained at Rs. 3 per share free of tax amounting to Rs. 1,50,000.

"An amount of Rs. 1,50,000 be appropriated as taxation reserve. An amount of Rs. 1,00,000 be appropriated as general reserve and the balance be carried forward to the next account. The total funds at the end of the year under report stand at Rs. 1,16,75,360 and the total assets amount to over Rs. 1,57,70,000."



GENERAL INSURERS' PROBLEMS REVIEWED

TAX RELIEF URGED TO BUILD UP STRONG RESERVES

AN exhaustive and interesting survey of the problems of general insurers was made by Mr. Laxmidas P. Goculdas, Chairman of the Indian Insurance Companies' Association, when he addressed its annual meeting last week. Mr. Goculdas also made a number of constructive suggestions for improving the conditions in the insurance market. He emphasised that insurance could and should play a very important role in promoting economic progress by "providing industrial capital for national development."

Mr. Goculdas prefaced his speech by a review of the conditions in the general insurance market. He pointed out that premium income was shrinking, while claims experience was not very encouraging. From the point of view of claims experience, the year 1953 had been a good one but the current year had witnessed several fire losses. He added: "I must emphasise that these losses are a form of national wastage, considerable part of which could be avoided by a little more care. The insurers may compensate the sufferers, but, unfortunately, it is the insuring public who bears the incidence of the losses."

National Waste

Although insurance may provide cover against fire losses and help the insured person to recover the value of the property involved in fire accident, there is no getting away from the fact that a property destroyed by fire is irrevocably lost to the country. The general community pays for this loss. There is also an indirect loss to the nation in the sense that it might not be possible to replace, quickly enough, the property destroyed by fire. These considerations should prompt the Central and State Governments to help remove congestion in industrial areas, so as to lessen the chances of fire losses and also to make fire-fighting facilities more widely available, at least in all industrial areas. In India, these facilities are not available in several small towns, let alone rural areas. Since a fire, uncontrolled in its early stages, grows into a conflagration and leads to serious loss, it is necessary, as Mr. Goculdas pointed out, that the Government should aim at providing a nation-wide fire brigade service.

In the absence of such nation-wide fire brigade service, it is left to insurers to provide the necessary cover against losses which occur from time to time. If the Government cannot render an indirect service to insurers by adopting measures that will bring about a favourable change in their claims experience, it could at least see that insurers are enabled to build up sufficient reserves to meet their claims. "The problems of underwriting capacity and reserve building," Mr. Goculdas said, "are so interlinked that the strength and reserves is of paramount importance for the companies' progress not only in the home market but also in the foreign market." But Indian companies suffer from a double disadvantage in this respect. They do not, as already stated, enjoy any form of indirect help from the Government in the shape of services that will help lessen their losses. Nor are they in a position to build up reserves. The existing level of taxation is too high to permit the building up of large reserves.

Need for Reserves

The insurers have, at the same time, to meet the competition of foreign companies. Now, many of these foreign companies, it is argued by Indian insurers, started their operations several decades before the Indian companies. They had, therefore, the benefit not only of an earlier start but also of the comparatively low rates of tax which prevailed in earlier years. They were thus able to build up strong reserves. It is largely this historical difference, according to them, that lies at the root of the difficulty which Indian insurers have to face when they have to meet competition from foreign insurers. The Government should enable Indian insurers, as Mr. Goculdas rightly urged, to attain a "stronger financial position by affording them reasonable facilities to build up ample reserves which will enhance their competitive strength in the home market and would also help their development in the international field."

A longstanding grievance of general insurers is that they are not allowed, without attracting tax, to set aside for reserves a larger proportion of their income than what is stipulated under the Act. The limits set by the Act are 50 per cent. of premium income for fire and miscellaneous insurance and 100 per cent. for marine insurance. It is interesting to recall what Mr. R. Varadachari, who has had extensive experience in the administration of income-tax and who, as the Administrator of the Jupiter General Insurance Company, Ltd., knows the difficulties of insurers, had to say on this subject. In his report, Mr. Varadachari said:

"It is rather unfortunate that the Income-tax Department insists upon allowing only a reserve of 100 per cent. under marine and 50 per cent. under fire and miscellaneous. But I am quite convinced, from my experience of income-tax administration for a long time and of insurance for the last few years, that this rule-of-thumb method is not appropriate to all companies and that it is acting detrimentally to the interests of Indian insurance in not encouraging the creation of adequate reserves to meet any emergencies. Though the figures are the same as those usually adopted by the English income-tax authorities, the practice is not the same in the two countries. Apart from this, it should be remembered that the English insurance companies are giants, with a long history of over 100 years, and have huge funds at their disposal which could stand any catastrophic losses. It is, therefore, inappropriate to judge the comparatively new insurance companies of India by the same standard and apply a rule-of-thumb method. In Continental countries, it is the Government departments which insist upon strong reserves being maintained by the companies."

So much for the views of a person who has had the rare benefit of the knowledge of both insurance and income-tax. To revert to Mr. Goculdas's speech. He emphasised that, inasmuch as the general insurers' business is concentrated in congested areas, they are not able to spread the risks either territorially or by class. He, therefore, reiterated the demand, already made by the Association in its memorandum to the Taxation Enquiry Committee, namely, that insurers should be allowed to create reserves for unexpired risks and additional reserves to the total extent of 100 per cent. of their premium income in respect of fire and miscellaneous insurance, 150 per cent. in respect of marine cargo business and 200 per cent. in respect of marine and aviation hull business.

Treaty Reinsurers

Another tax problem agitating the minds of insurers is the demand by the Income-tax Department requiring general insurance companies to pay tax on behalf of their foreign treaty reinsurers on profits earned by the latter. Referring to this question, Mr. Goculdas said: "The proposal constitutes a departure from established reinsurance practice and is viewed with apprehension by Indian companies." If this proposal were carried through, it would, as Mr. Goculdas warned, "put the clock of progress back in general insurance." Indeed, it might even invite retaliation by foreign countries where Indian insurers operate. The Government will, therefore, do well to accede to Mr. Goculdas's request that "in all cases, where the reinsurance transactions are *bona fide* and undertaken for the sole purpose of obtaining protection by means of reinsurance, the present position of treating the reinsurance as not liable to tax should be continued."

It is certainly unfortunate that, while the Central and State Governments have not yet adopted any positive measure designed to benefit life or general insurers, they seek to place impediments in the way of private enterprise through attempts at competing for the available business. Mr. Goculdas referred, in this connection, to the extension of insurance facilities by the Postal Insurance Fund beyond the restricted sphere of Central Government employees and the Mysore Government's proposal to enlarge the scope of its general insurance scheme, now confined only to motor insurance, so as to include marine insurance, burglary insurance, air accident insurance, etc. These proposals, as Mr. Goculdas warned, would, if implemented, "fragmatise" the available business. This would expose both the Government insurance departments and private insurers to grave danger.

Finally, Mr. Goculdas referred to the state of the insurance market in the country, to the keen competition that prevails there, to the increase in costs of claims and to the evil of rebating. He deplored that cases of illegal rebates and deflection of business from one company to another by questionable means still continue. He sounded a note of warning that, if the insurers failed to put their house in order, they would be "inviting further restriction, amounting, perhaps, to vexatious and detailed interference in the day-to-day working of our companies." Instead of indulging in uneconomic competition, insurers will perhaps be well advised to explore new lines of business. It should be possible for insurers to expand the volume of general business by publicising the value of insurance against burglary, loss of life or limb through accident, and other forms of insurance which have still to become popular in this country.

UNITED INDIA LIFE ASSURANCE CO., LTD.

With the new business for the year ended 31st December, 1953, at Rs. 3.79 crores, the total business of the United India Life Assurance Company, Ltd. (Manager: Mr. N. V. Nayudu, Madras) has now climbed up to a total of Rs. 26.97 crores, thereby registering an increase of Rs. 2.04 crores, as compared with the business at the end of the previous year. The renewal premium income of the Company has increased by Rs. 4.93 lakhs to Rs. 1.01 crores. The Company's life assurance fund now stands at Rs. 7.49 crores. A noteworthy feature of the Company's business trend is the increase in the average sum assured per policy which was Rs. 2,858, as against Rs. 2,757 in the previous year.

These results, creditable as they already are, are likely to be excelled in the current year. There are at least two factors which point to the bright future that lies ahead of the Company. In the first place, the management has, as Mr. N. Rama Rau, Chairman of the Company, emphasised at the recent annual meeting of the Company, effected a "substantial reduction" in premium rates. This should make the United India's policies more attractive to prospects. It is significant that the United India's management does not regret this reduction in premium rates was made possible by the steady improvement in the Company's mortality experience, increase in the yield on its investments and the fact that expenses of management have been held within reasonable limits. He added: "I sincerely hope that the reduction in rate now adopted by a large number of companies will be followed by progressive reduction in cost in due course and that life insurance will become a really attractive feature in the planning of the common man's life."

Secondly, the management is steadily expanding its overseas business. In this connection, Mr. Rama Rau revealed that the management had set up local advisory boards in Malaya and Ceylon. This step should go a long way towards enlisting local co-operation in the promotion of the Company's business. Finally, the Company has earned a well-deserved reputation for keeping the interests of the policyholders above every other interest. The foresight of the Company's management will be evident from the fact that the authorities of the Company created, over a quarter of a century ago, a trust deed placing restrictions on investments on the lines that later found legislative expression in the Insurance Act, 1950. In the light of the recent Act, the deed has no doubt fallen into disuse. Even so, it will serve to emphasise the fact that the Company's sponsors conceived their role towards policyholders as that of trustees.

TRAINING COURSE FOR EMPLOYERS' STAFF

The Regional Office of the Employees' State Insurance Corporation has organised a training course for officers and staff of the employers in Greater Bombay, where the Employees' State Insurance Scheme is to be implemented shortly. The Employees' State Insurance Scheme provides for cash and medical benefits under three contingencies, sickness, maternity and employment injury. When the scheme is implemented in Greater Bombay, about 450,000 workers employed in about 1,600 industrial establishments will receive benefits provided under the scheme.

The training course is intended to acquaint the officers and staff of employers with the detailed working of the Employees' State Insurance Scheme, particularly in so far as the obligations and functions of the employers are concerned. Training will be given in batches of about 50 persons each by a team of instructors who have been specially trained for the purpose by an I.L.O. expert and some of whom also have the experience of practical working of the scheme in Delhi and Kanpur. The course will last about two months so as to enable all employers in Greater Bombay to avail of the opportunity.

The Committee of the Indian Insurance Companies Association, Bombay, for the year 1954, consists of: Messrs. M. G. Mody (New Great) Chairman; K. C. Desai (Vulcan), Vice-Chairman; H. M. Chawalla (Concord), M. S. Datur (British India), T. K. Desai (New India), L. P. Goculdas (Jayabharat), N. C. Jerajani (Indian Globe), K. G. Merchant (All India General), Mohanial Velji (New Asiatic), P. H. Shukla (United India) and G. H. Thakore (All India Co-operative).

The speech of Mr. H. K. Sen, which we reviewed last week in these columns, was made at the annual meeting of the Indian Insurance Institute, held at Calcutta, and not at Patna, as stated therein.

BOMBAY CO-OPERATIVE INSURANCE SOCIETY

MR. A. L. CHANDAVARKAR ON NEW PREMIUM RATES

PRESIDING over the Twenty-fourth Ordinary Annual General Meeting of the Bombay Co-operative Insurance Society Ltd., held at Bombay, on Saturday, 19th June, 1954, Mr. A. L. Chandavarkar, Chairman of the Society, doubted the advisability of the recent reduction in premium rates by insurers. He held that it would have been more appropriate if the trade had had time to study the question in all its details.

In the course of his speech, Mr. Chandavarkar referred to the increase of over Rs. 5 lakhs in the Society's new business and expressed his satisfaction at the increase in the net interest yield.

Turning to other matters, Mr. Chandavarkar referred to the substantial reduction in the rates of premia effected by the Society from 1st April, 1954, so as to continue to offer life insurance at rates comparable with the rates charged by some of the big insurers. He said, however, that it was difficult to assess the effects of this grave step on the trade. He doubted the advisability of this step in view of the present unsettled economic conditions, and felt it would have been best if the trade had had time to study the question and to decide the best manner in which policyholders could be benefited without any untoward effect on the trade. He assured the members that inasmuch as the Society's position was sound in every respect, it faced the future with confidence.

Referring to the decision of the Executive Committee of the Life Insurance Council, prohibiting co-operative insurers from offering policies to members of co-operative societies at reduced rates of premia, he appealed to the State and Central Governments to redress the wrong which had been inadvertently done to the members of co-operative societies.

He suggested that employees of large establishments could avail themselves of the advantage of cheap insurance under staff insurance scheme of the Society whereunder the premia are reduced to a minimum and appealed to co-operative credit societies formed by employees of these establishments to take interest in these matters and to have the Society's scheme approved by the employers, thus taking advantage of the insurance facilities offered by a co-operative insurer for the benefit of their members and other employees.

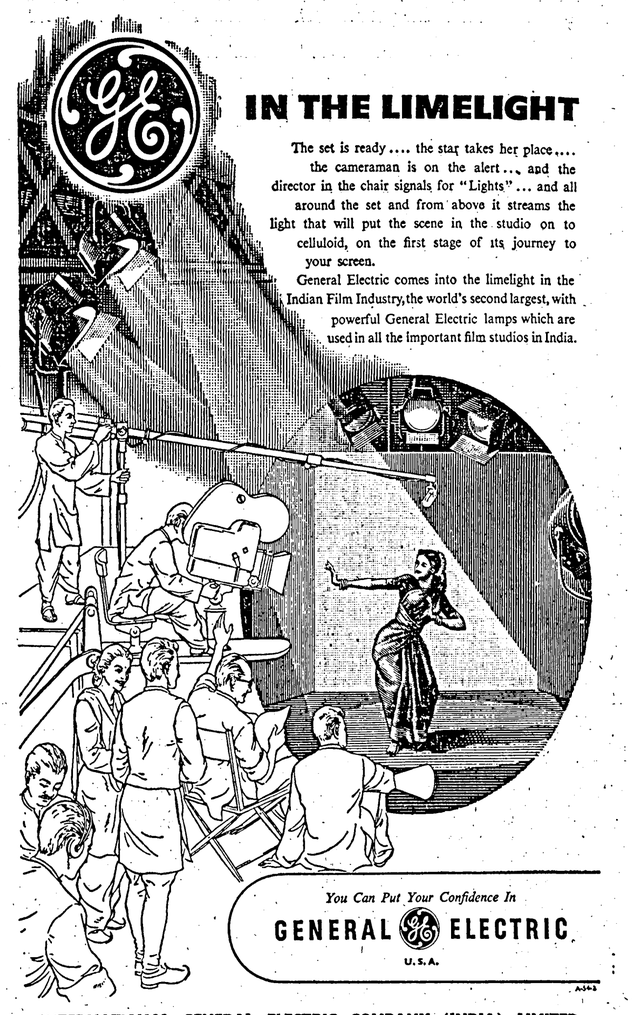
Alluding to the compulsory provident fund scheme constituted by the Government of India for employees in certain industries, he said that this scheme presents an opportunity to life offices to impress upon the workers the benefit of life insurance. He expressed the hope that, with the help of employers, the Society's efforts in this field would lead to results mutually beneficial to all.

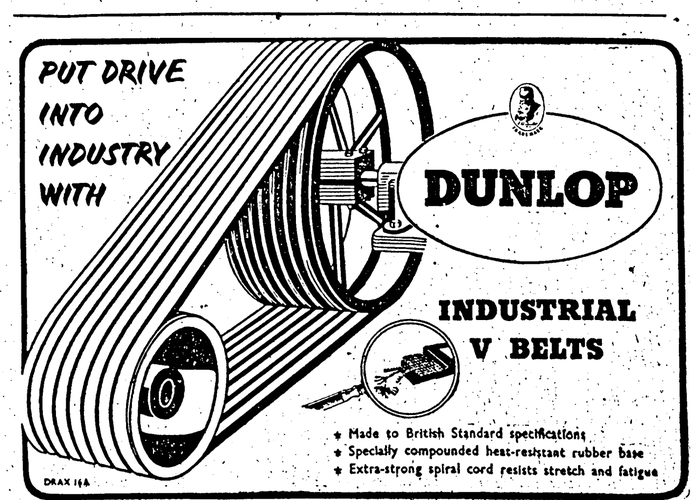
He then touched upon the question of keen competition from the insurers outside the co-operative movement and suggested that a well developed co-operative organisation alone can make sustained approach to the large masses of people who have not yet heard of the services which life insurance can render and make available insurance service at a reasonable cost and on liberal terms and conditions. In this connection, he welcomed the move for the formation of a single co-operative insurance organisation for transacting life insurance business throughout India and even outside, in place of a number of co-operative insurance societies registered in various States. He informed the members that informal exchange of views on this subject was now taking place.

Finally, he referred to the problem of lapsation of policies, and revealed that the Society had liberalised the conditions for revival of lapsed policies and that it would pay members to investigate these conditions.

The meeting adopted the revenue account and balance-sheet of the Society for the year 1953.

At the recent annual meeting of the Co-operative Insurance Society Ltd., held at Manchester, Mr. S. Leonard Kassel, Chairman of the Committee of Management, emphasised the need for simultaneous efforts at improving the yield on investments and at keeping the expenses under control. He added: "Our aim is to be fair both to the policyholders and the staff, but we never forget that, as a co-operative organisation, our main duty is to watch the interests of the consumers—our policyholders."





THE UNITED INDIA LIFE ASSURANCE COMPANY LIMITED

MR. N. RAMA RAU ON FUTURE OF LIFE INSURANCE

PRESIDING over the Forty-eighth Annual General Meeting of the United India Life Assurance Company, Ltd., held at Madras on Friday, 4th June, 1954, Mr. N. Rama Rau, Chairman of the Company, expressed his firm belief that life assurance had a "bright future" in this country. He explained that this belief was based on the twin considerations of the great expansion that was likely to take place in industry and agriculture and the gradual dissolution of the Hindu joint-family system.

The following are extracts from Mr. Rama Rau's speech:

"GENTLEMEN,

"It is natural that our thoughts on this occasion should be full of the great tragedy in which our late Chairman, Shri M. Ct. M. Chidambaram Chettyar, lost his life in a plane crash in Singapore on 13th March this year. This sad event has cast a gloom around us. We are all filled with a deep sense of the loss that his sudden death has caused to his family, to this Company and to the various institutions with which he was associated, and to his numerous friends. He was comparatively young when in 1931, he was elected as Chairman of this Company—a position which he continued to hold till his death. As a colleague of his, on the Board of Management of this Company during all these years, I can say without hesitation that but for his far-sighted vision, forceful personality and his wise direction, this Company could not have risen to its present stature. I note with satisfaction the desire expressed by you that this meeting may place on record our sorrow for the death of Shri Chidambaram Chettyar and our appreciation of the services rendered by him to the Company.

"To mark our respect for the memory of our late Chairman, Shri Chidambaram Chettyar, may I now request you all to stand and observe silence for two minutes.

"I now have pleasure in presenting to you the report of the Board of Directors and the accounts of the Company for the year ended 31st December, 1953. The report and the accounts have now been in your hands for some time and I take it that it is your desire that they may be taken as read and I would request you presently to receive and adopt the same.

New Business

"Our new business for the year amounted to 13,266 policies assuring a sum of Rs. 3,79,25,695. The annual premium income arising out of the above new business was Rs. 21,47,758.

"The average sum assured per policy in respect of the above new business was Rs. 2,858 as against Rs. 2,757 in the previous year.

"The business in force as at 31st December, 1953, was 1,16,923 policies assuring a sum of Rs. 26,96,57,855 registering an increase of 3,583 policies and Rs. 2,04,68,897 sum assured during the year.

"The renewal premium income of the Company for the year was Rs. 1,01,43,600 registering an increase of Rs. 4,93,491 over the previous year.

"The income from interest, dividends and rent less income-tax thereon amounted to Rs. 28,73,169 as against Rs. 23,57,992 in the previous year. The yield on the mean life assurance fund during the year was 4.32 per cent. (gross) and 3.82 per cent. (net) as against 4.27 per cent. (gross) and 3.25 per cent. (net) in the previous year.

"A special reserve of Rs. 40,857 has been created towards mortgage loans. The total investments of the Company stand in the books at Rs. 24,08,168, more than their realisable or market values, against which our investment reserve fund of Rs. 26,50,000 is more than adequate.

Life Fund

"The life assurance fund has increased during the year by Rs. 63,17,545 as against the corresponding increase of Rs. 43,90,819 during the previous year and now stands at Rs. 7,48,98,593.

"The net benefits paid by the Company to its policyholders during the year amounted to a sum of Rs. 48,12,741, of which claims by maturity amounted to Rs. 29,88,766, claims by death Rs. 10,11,490 and annuities and surrenders to Rs. 8,12,485. The total amount of benefits paid to the policyholders by way of claims from the inception of the Company is Rs. 3,43,07,415.

Life Insurance in India

"Although it is gratifying to note that life insurance business has made rapid strides during the last 30 years, it is not flattering to be told that the number of policies in force at the end of 1952 was less than 1 per cent. of the total population and that the *per capita* insurance coverage is less than Rs. 25. I firmly believe that there is a bright future for life insurance in India. There are two important factors which I expect will contribute to a rapid growth of life business in future: one is the tremendous and determined effort now being made for expansion of industry and agriculture. This effort is bound to yield good results by raising living standards and adding to the economic wealth of the country. The other factor arises out of the changes that are taking place in our social life and in the gradual dissolution of the Hindu joint-family system. In the economic sphere, emphasis is being gradually laid on the independence and self-sufficiency of the individual rather than of the family as a whole. With the isolation of the individual from the family, there will necessarily arise a greater dependence on the security afforded by life insurance.

"It will be of interest to you to note that we have recently effected a substantial reduction in our premium rates. This reduction was made possible by the steady improvement in our mortality and a higher yield on our investments and the good results arising out of a constant effort to keep within limits our expenses of management. I sincerely hope that the reduction in rates now adopted by a large number of companies will be followed by progressive reduction in cost in due course and that life insurance will become a really attractive feature in the planning of the common man's life.

"With the object of safeguarding the interests of the policyholders, the Insurance Act of 1950 enacted several provisions for the regulation and control of investments of life assurance funds in the hands of companies. Although these provisions met with some hostile criticism on account of the insistence that a large proportion of such funds should be kept invested in Government and approved securities, yet, it must be admitted that the need for regulation of investments became urgent and that the law did not come into force a day too soon. In this context, it will give us satisfaction to think that the authorities of 'United India' had realised a quarter of a century ago the wisdom of placing a restriction on investments very much on lines of the scheme since adopted by the Insurance Act. The 'Trust Deed' which came into existence in 1928 has served the Company very well. It seems to me, however, that having regard to the existing comprehensive provisions of the Insurance Act on this subject, the value of and need for the Trust Deed may not be apparent hereafter.

"Before leaving the subject of investments, I should like to refer to our investments on buildings. The buildings which the Company owns in Madras, Bombay, Calcutta, Delhi and other places form very valuable assets of the Company. Their total market value is far higher today than when these investments were made. We have not, however, taken credit for the increase in value in our accounts, so that the large difference between the market and book value forms a sort of hidden reserve to strengthen the Company's position and enhance the security of the policyholders.

Foreign Business

"With regard to the development of foreign business, we have latterly set up Local Boards in Malaya and Ceylon. It is hoped that in due course, these Boards will serve to make the Company more popular and be helpful for the development of the Company's business and the improvement of its administration in the countries concerned. On your behalf, I should like to thank the Local Advisory Boards for the keen interest they have evinced in the affairs of the Company and the readiness with which they have given their valuable advice from time to time.

"It is also my desire to take this opportunity to express my appreciation of the services of our staff both at the Head Office and in the Branches of our medical examiners and of all the field workers and agents."

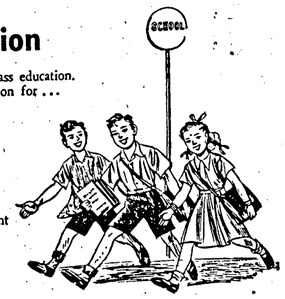
For every citizen—
education



A major target of India's Five Year Plan is mass education. To achieve this aim, the Plan has made provision for ...

* Primary Schools for	187,90,000	pupils
* Junior Basic Schools for	52,80,000	pupils
* Secondary Schools for	57,80,000	pupils
* Industrial Schools for	21,000	pupils
* Technical and Vocational Schools for	43,600	pupils

India's new schools will need cement. More cement means better living for all, and ACC continues to make more and more quality cement to help achieve National Targets

For free technical assistance on any problem of concrete construction, please write to The Concrete Association of India, 1, Queen's Road, Bombay.

PRODUCTION ENGINEERING AND PERSONNEL

IMPORTANCE OF MORALE NEEDS GREATER ATTENTION

(By S. A. TRIVEDI, B.Sc., B.Sc. Tech., M.S. (Wisc.)

THE three M's of industry are money, material and men. For the procurement of the first M, namely, money, the shares department, the accounts department and the management of an industrial establishment take the requisite steps. The planning, purchase and stores departments take care of the second M. This leaves the third M—men—which is of equal, if not of greater, importance as the first two M's, which has not merited with that measure of consideration it deserves.

In the modern world, there is a belief that the value of man as such is less than that of an animal. If money is invested on animals, it is necessary to see that these animals do not wear out as a result of continuous work and consequently become inefficient; hence considerable care of animals is taken. However, except in a well run organisation, the staff is not considered as an asset but as a commodity, which can be purchased with money. This is a wrong policy to adopt. To any industry, men are an asset and their continued efficiency is a desideratum in the pursuit of day-to-day activities. Should this aspect of human values be always in the forefront of managerial considerations, there will be no falling away in production and the result will be most tangible and heartening to the eventual good of the employers and the employees alike.

For this purpose it is very necessary there should be a department in all industries, which shall be delegated with the duty of looking after the men and seeing that good relationship is fostered between the management and their employees.

At present, we find constant complaints and bickerings between the employer and the employees. The former allege that the men do not co-operate and the latter urge that their masters are unsympathetic towards them. This has resulted in avoidable strikes and lockouts. It would thus appear that both the parties do not attach much importance to the ethical and psychological aspects of the problem and hence the squabbles day in and day out. It is at such a juncture the personnel department would come in very handy in creating a healthy atmosphere and smoothening out the differences most tactfully. Its efforts will establish harmonious relationship between the two factions, guaranteeing a proper appreciation of each other's viewpoints.

In this connection, Mr. Thomas G. Spates, Vice-President of the General Foods Corporation, widely known in the field of "Personnel," rightly says:

"Sound personnel administration means so organising and treating people at work that they will utilise their maximum individual capabilities, thereby attaining maximum personnel and group satisfaction and rendering their maximum service to the enterprise of which they are a part."

Now broadly and definitely the conception of this function of personnel administration is explained by him thus:

"Personnel administration is a code of ways of organising and treating individuals at work, so that they will get the greatest possible realisation of their intrinsic abilities, thus attaining maximum efficiency for themselves and their group and thereby giving to enterprise of which they are a part its determining competitive advantage and its optimum results."

In many well organised companies in the United States of America, the policies of the department are considered so important for better relationship between supervisory and working force that some of them state their labour policies and instruct their supervisory staff to follow the same both in letter and spirit. Some of these policies are:

(1) To pay all employees adequately for service rendered;

(2) to maintain reasonable hours of work and safe working conditions;

(3) to provide continuous employment consistent with business conditions;

(4) to place employees in that kind of work which is best suited to their abilities;

(5) to help each individual to progress in companies' service;

(6) to aid employees in times of need;

(7) to encourage thrift;

(8) to co-operate in social, athletics and other recreation activities; and

(9) to accord to each employee the right to discuss freely with the executive any matter concerning his welfare or the company's interest.

In India, the Union Government has taken a lead and established certain laws to help labour, and all industries have been asked to have on their staff a trained labour officer. Although suitable legislation, in the form of the Factories Act, Workmen's Compensation Act and Payment of Wages Act, has clearly indicated the manner of treatment of labour and the benefits which accrue to them, these do not cover the entire field and certain unwritten and conventional rules have to be drawn up and followed. This means that the personnel department has to evolve these methods of approach and apply the same. Thus the functions of the personnel department would fall into the following categories, besides looking after the proper administration of the above labour laws:

(1) Employment, recruitment, selection, hiring and placement and occupational adjustment;

(2) training;

(3) employees' service and benefit plans, education, residential accommodation;

(4) medical and health services;

(5) personal safety, fire precautions and sanitation; and

(6) joint representation union problems.

It must be emphasised that, with a view to ensuring satisfactory performance of the foregoing functions, the personnel department should be manned by a person of authority who could co-ordinate the activities of these branches.

Employment and Occupational Adjustment

This will embrace the study of labour resources interviewing applicants, making physical and mental tests, selection of suitable employees, introducing them to their respective jobs, placement, transfer and advancement, lay-offs, attendance and maintenance of records. Most of these are done by our industry, except physical and metal tests which are necessary to get an idea of general intelligence, personality and emotional stability of the employees.

Training

This is a very important part of work to be attended to by the personnel and production departments, in that the employee is taught to understand the nature of the work expected of him and to do it well, thus ensuring to him possible avenues of future advancement. It is too much to except schools and institutions to turn out workers to an acceptable stage of efficiency and hence the need for a trainee course for employees. The Government of India has laid particular emphasis on this aspect of the question and sponsored trainee courses for industrial workers for this purpose. The help of international organisations such as the F.A.O., Colombo Plan, Ford Foundation, T.C.M., etc., can be sought to afford efficient and specialised training. The bigger companies can institute training programmes within their own premises, whilst smaller companies can take advantage of the numerous facilities available in the country.

Employee Service and Benefit Plans

These consist of organising mutual benefit associations such as co-operative societies, credit unions saving plans, provident fund, housing societies, canteens, recreation clubs, publication of house organ. It would be as well if the employees are given perfect freedom to direct these activities on their own. This extra curricular occupation would create much enthusiasm, thus leaving no scope and time for resorting to mischief, strikes, and other unsocial acts. The personnel department has to take considerable pains to initiate them specially in a remotely situated industrial organisation.

Medical and Health Services

This is an important aspect of the problem. In a distant locale this service should provide a dispensary and indoor hospital fully equipped and adequately staffed, as also a maternity ward. In view of the fact that workers are an asset, selection of personnel should be based upon a proper medical examination before employment, and given medical aid in time of need.

Safety, Fire Precautions and Sanitation

This will include safety precautions against mechanical, chemical and electrical hazard. Persons entrusted with this branch of the service should ensure that all danger points are well guarded and warning against hazard placed at prominent locations. They should also train selected men in various first aid measures in case of accidents and emergencies arising out of these hazards.

Similarly, a fire-fighting gang should be trained and mock fire alarm trials arranged periodically. A liberal provision of fire extinguishers and other appliances should be made. A check up of water hydrants and their sound working, as also facilities for isolating the scene of fire, should be readily available like fire doors, on and off switches, electric fire-fighting appliances, etc.

Now comes the sanitation of the factory as a whole. Rest rooms, wash-places and urinals, etc., and their general cleanliness should be looked after carefully as laid down in the Indian Factories Act.

Joint Representation

In a well-organised industrial organisation, there are no chances for misunderstanding arising between the worker and the management. However, it is always better to encourage the formation of the workers' union, as this will avoid any outside influences which tend to mislead the worker. The personnel department will find it a great help to discuss them and settle all problems facing labour with their selected representatives and get the same accepted by the management. This type of human relationship provides means for collective dealing between the employer and the employees regarding wages, hours of work, working conditions and other subjects of human interest and facilities for exchange of information and understanding between supervisory and working classes. It facilitates creation of a just and harmonious relationship between workers and supervisors, consideration of grievances and complaints from employees, and growth of morale, contentment and loyalty. Besides, it ensures suitable facilities for constructive co-operation in furtherance of efficiency and economy of operation, thus promoting success of the enterprise.

Morale

Above all these, scientific organisation is the unwritten, unseen and unvisualised aspect of factory administration, called morale. It comprehends endowment, character, qualities, personalities, and social relation of individuals who form the organisation personnel. If this informal organisation is good the whole will function with less friction and fewer conflicts than if it is otherwise. Whilst on the subject, Swami Vivekanand has quite aptly said:

"What the nation wants is pluck and scientific genius. What we want is a great spirit, tremendous energy and boundless enthusiasm. It's the man of action, the lion heart, whom the Goddess of Wealth resorts to."

This morale, which means 'discipline and confidence' is a state of faith. In the army or industry, it is essentially faith in the organisation, in its leadership, in its objectives and achievement of these objectives. The morale is personal in origin and operates from top downwards. The chief of the organisation is the real morale officer who, as a leader, must pave the way for permeation of this quality throughout the whole personnel. Morale results, according to an eminent authority in the field of public relations, from making proper demands upon people—demands which enable them to win the psychological rewards of achievement. It connotes energy, eagerness, team work and success, while lack of it is mated by confusion, apathy, muddling and failure. The real morale leader will get people in the right frame of mind to do their best. Morale is that quality of physical, mental and spiritual fitness that demands release in action against the required objectives.

In a good organisation, this morale should be evidenced throughout the successive ranks to the supervisory and foreman level. The latter in turn may engender the same spirit in workers by prompt handling of complaints dealing fairly with all workers, careful interpretation of management decisions, which may caure unrest, and in other ways removing most of the causes of lost morale. If the foreman or supervisor neglects this aspect, the good work done by management will be defeated, since workers are influenced in their morale by other workers whose attitude towards the company is not

SOME PROBLEMS OF EXPORT TRADE

EXPANSION OF U.K. MARKET STRESSED

THE problems relating to promotion of exports discussed by Mr. H. N. Vibhakar, First Secretary (Commercial) designate to the Indian High Commissioner in the U.K., with the representatives of the Hindustan Chamber of Commerce and the Southern India Chamber of Commerce at Madras on the 16th inst., are of utmost importance to the economic progress of the country. For a solution to these problems will help expand India's exports and thereby enable the country not only to earn foreign exchange but to extend employment opportunities for its people.

The memoranda presented to Mr. Vibhakar by both the Chambers drew his attention to the lines on which export drive should be accelerated. Today India's export trade in animal and vegetable oils, cotton, tobacco and its manufactures, metal scrap and ores, mica and shellac is declining. In the exports of bristles too India is facing keen competition from Russia, China and the Netherlands. In the exports of carpets, Persian competition is having a telling effect on Indian trade. The market for lemongrass is becoming negligible. So Mr. D. C. Kothari, President of the Hindustan Chamber, pressed the need for recapturing these markets. Similarly, Mr. Govindan, of the Southern India Chamber, made a few points. According to him, as the U.K. is not able to import groundnut from West Africa, that country's requirements of groundnut oil must be met by India. In respect of leather, the enforcement of the "leather contents" clause by U.K. importers is partly responsible for the the shrinkage of Indian shipments and this will have to be enquired into. The offtake of Indian tobacco has fallen considerably and so also that of mica. The possibility of exporting some special varieties of handloom goods to the U.K. has also to be considered. Mr. Govindan stated that there was a feeling that sufficient publicity was not given to Indian goods in foreign markets. He, therefore, suggested that in such countries as England, the Government must maintain a museum for the display of Indian products. The Indian banks should be encouraged, he said, to open branches in the U.K. and trade enquiries should be sent to Indian Chambers of Commerce direct.

The need for maintaining a high level of trade with the U.K. was stressed by Mr. Kothari also. He observed that the U.K. was still India's foremost customer. The first quarter of 1954 had shown, according to him, a trade surplus with the U.K. of about $16.4 million. Tea exports had almost doubled as compared with the corresponding quarter of the previous year. Not only did he want this high level of exports to be maintained but he saw great scope in the U.K. for developing a market for bedspreads, table cloths, medium handkerchiefs, furnishing fabrics, and prints of handloom make. Up to 1953, India was not in a position to supply iron ore to the U.K. Now that the supply position of iron ore was easy, the possibility of marketing it in that country had to be investigated. He took care to add that for the expansion of Indian exports as also for avoiding inflationary conditions, liberalisation of import controls was necessary. Incidentally, Mr. Kothari desired to know how the Trade Representative could help Indian business men in the matter of arbitration of disputes.

The various aspects of export promotion, as also of maintenance of a high level of exports to Britain, mentioned above, place a heavy responsibility on the Trade Commissioners not only in the U.K. but elsewhere. In fact, their role has now completely changed, for since independence the foreign trade of India has undergone several changes. The country now exports more of manufactured goods and less of raw materials and imports more of raw materials and machinery for its industry, and less of consumer goods. It was almost the reverse of this in pre-independence days. The variety of goods entering the export trade is large, demanding a high degree of skill in salesmanship. The Trade Commissioners are now required to study the problems of these export items as also their nature of the markets overseas and act as a liaison between the Indian producers and the overseas importers. But the assistance that Trade Commissioners can give is of a limited nature and even this will be of little use, if producers here fail to observe certain important principles of commerce. Mr. Vibhakar, therefore, did well in reminding Indian exporters of these principles. The points stressed by him are worth noting.

The prestige of a nation depended, Mr. Vibhakar remarked, on the quality, efficiency, speed and the way in which manufacturers supplied goods according to specifications. Whenever there were complaints, they had to be answered to the satisfaction of importers. It took years of collective effort to create a good reputation and this had to be carefully maintained. He narrated how Japan promoted external trade. Goods were according to specifications and there was speedy shipment of goods. The yardage of textiles, for instance, was quite good. If 40 yards had to be sent, the yardage sent actually was 41 and not 39. He added that the essence of success in trade lay in the prestige they built up for their goods. The trade must look into the question of having special export prices and export policies for pushing up and for retaining markets for India in foreign countries. Referring to the request for the display of Indian goods abroad by Trade Representatives, Mr. Vibhakar asked them to send him adequate quantities of sample goods for display purposes at centres in the U.K. As for the suggestion for liberalising import trade, he said that the Government of India was progressively reducing restrictions on imports and that this policy would no doubt be continued in future also.

The prominence given to the question of arbitration of disputes between Indian and overseas merchants in the discussions above merits a reference here to the move made by the Federation of Indian Chambers of Commerce and Industry. The Federation is taking steps to constitute an Arbitration Board with separate panels for various industries for settling disputes regarding quality, period of delivery, etc., between Indian and foreign merchants. The decisions of the Board would be accepted not only by the party in India but also by the party at the other end. At present disputes connected with specifications and standards regarding Indian exports of tea, coffee, hides and skins, etc., are settled by bodies in importing countries. Because their decisions are final, Indian business men are sometimes known to have suffered considerable hardship. The setting up of the Arbitration Board in India would be advantageous to these business men. The Federation is expected to submit a scheme in this connection to the Government of India in order to seek its co-operation and assistance.

EARNINGS OF SINDRI FACTORY

Despite reductions in the price of ammonium sulphate produced at Sindri, the accounts of the fertiliser factory for the year ended 31st March, 1954, are understood to make satisfactory reading. The annual general meeting of the Company will be held in July next.

The price of ammonium sulphate was reduced from Rs. 350 to Rs. 285 per ton (f.o.r. Sindri) with effect from January, 1953. A further cut of Rs. 10 per ton was made on 1st March this year. The earnings of the Company, however, have been well maintained, thanks to a higher level of production. Output, however, is still below the rated capacity of 960 tons per day, the actual production being 750 tons or less. Plant troubles have been carefully investigated by expert engineers and it is believed that they will be successfully handled in the course of the current year.

One outstanding feature of the annual accounts will be the financing of the coke oven plant without additional borrowings from the Government of India. The sum of Rs. 2.35 crores required for this purpose has been provided by the Company from its depreciation reserves. The plant is expected to be inaugurated by the President, Dr. Rajendra Prasad, in September this year. It is intended to make the fertiliser factory independent of outside supplies of coke and lead to lower costs of production in due course.

The Company made a gross profit of Rs. 2.71 crores in the previous accounting period. Out of this amount the Directors appropriated a little less than Rs. 2.09 crores for depreciation and repairs, while utilising Rs. 35.16 lakhs for paying interest at 4½ per cent. on borrowings from the Government of India and Rs. 26.36 lakhs for writing off development expenditure. The financial picture presented for the latest accounting year is not likely to be less comfortable.

U.S. TECHNICAL AID TO INDIAN INDUSTRY

The Government of India signed on the 16th inst. an agreement with the Government of the United States of America whereby the latter would provide technical assistance to Indian industries, mainly in the private sector, for increasing their productivity and improving their management. The assistance would be of the value of 805,000 dollars and will be mainly in the form of provision of productivity teams and individual experts in these fields and the required supporting equipment, supplies and technical literature.

The following assistance is visualised under the project:

(a) Four productivity teams and a production engineer will be furnished to assist in the improvement of production technology, quality of production, standards of working conditions and related technical aspects in the metal working industry in India.

(b) A productivity and management team of five engineers will be furnished for assistance to the newsprint industry and specially to the National Newsprint and Paper Mills Ltd., Madhya Pradesh (Nepa Mills). Industrial specialists on certain specific industrial and research problems will be provided.

(c) Technical assistance and books on business management and other related technical literature will also be provided.

The agreement was signed by the designated representatives of the two Governments: Mr. L. Wade Lathram, Acting Director of the U.S. Co-operation Mission to India signed on behalf of the U.S. Government and Mr. C. V. Narasimhan, Joint Secretary, Ministry of Finance, signed on behalf of the Government of India.

INDO-U.K. TRADE IN JANUARY-APRIL, 1954

A rise of about 24 per cent. in the total value of trade between the U.K. and India during the four-month period January-April, 1954, is disclosed by H. M. S. Trade and Navigation Accounts of the U.K., just published. Thus, the total of exports and imports which amounted to £71.855 million in the first four months of 1953 rose to £89.320 million in the corresponding period this year. Of this, the value of shipments to India amounted to £39.015 million, while the U.K.'s imports from India aggregated £50.305 million. In the same period last year, the U.K.'s exports to India were only £37.382 million, while imports amounted to only £34.47 million. These figures reveal a marked rise of 47 per cent. in the U.K.'s offtake of Indian merchandise, while its despatches of goods to India during the period rose only by about 22 per cent. In the result, the small favourable trade balance of £2.9 million which the U.K. had with India during the corresponding period last year has turned into an adverse trade balance of £21.3 million.

Imports of Indian tea, which rose from £14.5 million to £24.9 million, headed the list and accounted for the bulk of the increase in imports. The offtake of miscellaneous Indian textiles also rose rather sharply from £3.1 million to £7.2 million or an increase of 133 per cent. U.K.'s purchases of Indian leather and manufactures were also higher by nearly £1 million at £5 million. The British offtake of metalliferous ores and metal scrap was, however, lower at £1.5 million, as against £1.8 million.

Among British exports to India, the value of machinery, other than electric, staged a decline from £10.1 million to £9.8 million during the four-month period under review. Similarly, shipments of electric machinery and appliances too receded from £6.7 million to £5.3 million. But exports of chemicals and road vehicles and aircraft increased in value from £3.6 million to £4.9 million and £2.4 million to £3.6 million, respectively.

RATIONALISATION AND INDUSTRIAL HOUSING

MR. N. H. TATA PLACES EMPLOYERS' VIEWS BEFORE I.L.O.

THE views of Mr. David Morse, Director-General of the I.L.O., on some outstanding labour problems, expressed in his Annual Report presented to the thirty-seventh session of this body, now in session at Geneva—referred to in this journal a fortnight ago—have been analysed dispassionately by the employers' representative from India, Mr. Naval H. Tata, in his speech delivered at the session on the 14th inst. He did well in endorsing the view that the member-States of the I.L.O. "must give to the industrial work the social content which it has generally lacked upto now." He regretted that political tensions attracting the attention of the world had deprived the basic social problems of their share of due recognition; "if only political atmosphere improves, and the feeling of mutual suspicion yields place to mutual understanding and amity, a large volume of resources used in the unproductive activity of defence could be utilised," he said, "towards accelerating the progress of economic development in the vast underdeveloped regions of the world." He told the advanced countries of the West that, in the long run, any aid extended to the underdeveloped countries would stand in their own stead, and commended Mr. Morse for laying stress on this point in his Report.

Mr. Naval Tata's study of those portions of the I.L.O. Director-General's Report that relate to rationalisation appears to have left in him no doubt that the uproar by workers' representatives which the move for rationalisation has caused in India is out of all proportion to the short-term impact it is likely to have on employment. His arguments, in this context, directed to eliminate the misgivings about the effects of rationalisation, are quite convincing. In view of the repeated protests against launching schemes of rationalisation in this country by labour, Mr. Naval Tata's remarks merit reproduction here:

"In an era in which no machine manufacturer can survive unless his design and specifications offer an element of labour-saving feature, it would be unreasonable to expect re-equipment of machinery without reduction in units of labour needed to man modern machines. This very feature was the essence of 'industrial revolution,' and, if the critics who decry rationalisation today were correct in their belief, then the evolution from the manual to machine operation would have caused colossal unemployment with the advent of 'industrial revolution'. Instead, it opened up new vistas of employment opportunities which alone permit us to talk in terms of 'full employment,' thanks to the dynamics of 'industrial revolution.'

"Judged by the experience of industrially advanced countries, it is, therefore, safe to assume that, with the cost of production going down by means of rationalisation of labour and management, consumption is bound to go up, giving scope for increased production and more employment through further industrialisation of the country. In the interim period, however, there may be some displacement of labour, and a solution for the temporary hardship so caused may be found by mutual negotiations between the employer and the workers concerned. But to condemn outright the introduction of modern technique on the ground of an initial temporary unemployment is to put back the clock of industrial progress and fetter the industrial future of a country by denying the future generation of labour forces the employment opportunities possible under the normal growth and expansion of industries.

"It is, indeed, intriguing that, whilst considerable opposition is raised against modernisation and rationalisation in the industrial sector, on the agricultural front, we are going ahead with mechanising our agricultural operations by means of tractors, harvestor machinery and many other labour-saving implements which must replace manual labour to a large extent. What is good for the agricultural front should be good for the industrial sector as well, and it is extremely difficult to reconcile the clamour in my country against rationalisation and modernisation of industry with acceptance of the principle of modernisation in the agricultural sector. If the question of unemployment is the guiding factor, then the arguments should apply equally to both the sectors."

In the quotation above there is one point which is generally overlooked and to which Mr. Tata has done well in drawing pointed attention. This relates to the question of temporary hardships that may be caused to a few workers by their displacement resulting from rationalisation. Mr. Tata feels that this by itself should not be an adequate ground for the outright condemnation of rationalisation. For he is quite sure that the hardships could be avoided by "mutual negotiations between the employer and the worker concerned." We see no reason for the failure of such negotiations as the Government has already passed legislation providing for payment of compensation to workers temporarily retrenched or laid off. Of course, there was no need for this law, as even otherwise through negotiations a solution could have always been found for any dispute. Nevertheless, as the Government, by its interference, has strengthened the hands of the employees, the workers should cease their opposition to rationalisation. In this context, we must mention here that Mr. Tata's protest against undue Governmental interference in industrial relations through process of issuing ukases is thoroughly justified.

The Director-General's Report makes a valuable suggestion to solve the problem of housing for workers. While emphasising the need for giving it top priority, the Report points out that the problem of housing cannot be solved, "unless costs are reduced, financing methods improved and employment stabilised." This is possible, it says, by the co-operation of several agencies, namely, State and Central Governments, local bodies, industrial establishments and workers themselves. Mr. Tata considers that, in making this suggestion, the Director-General has sought to provide a practical solution to the problem of industrial housing. To quote Mr. Tata:

"The Director-General's Report has amply untied the complicated knots of the problem of housing and one could clearly glean that this complex problem involves a co-ordinated effort of Government, local authorities, employer and worker, if all the difficulties of finance, sites, building materials and the item of labour cost were to be solved. Today, the most difficult problem in highly concentrated industrial areas is the want of suitable sites at reasonable price for housing and, unless a co-ordinated effort is made to tackle this problem, it would be unfair to expect the employer independently to shoulder the responsibility for providing housing for workers at a rent within their means."

It is noteworthy that Mr. Tata has, in fact, expressed gratitude to Mr. Morse for laying stress in his Report that, in addition to employers, Governmental and semi-Governmental agencies also should lend their hands of assistance in building industrial workers' houses.

In the course of discussions on the Report, the employees' delegate from India is reported to have condemned the managing agency system as "feudal in character" and described it as a source of unconscionable profit. Mr. Tata's references to this issue, in his speech, protesting against the attitude of the workers' delegate, are quite pertinent. The controversy regarding the continuation of the managing agency system in India is purely a domestic issue and should find no place at all in discussions at an international organisation. What was even more regrettable was the one-sided version given by the employees' delegate. It is gratifying to find that Mr. Tata did not fail to present a balanced picture of the managing agency system and gave instances of the valuable service rendered by this system for the industrial progress of the country. He mentioned, for instance, how, on certain occasions, some of the managing agency firms had pledged their family properties and fortunes to save some of the basic industries in India and for "nursing and nurturing them through sheer moral obligations, regardless of profit or loss." Proceeding, he told the I.L.O. session that the Government of India was in favour of retaining the managing agency system and that the few defects found in the system would be set right by the proposed reform of the company law.

World exports of unmanufactured tobacco during 1953, amounted to 1,291 million lbs., about 10 per cent. above 1952 and the third highest on record in the post-war period. The post-war record was set in 1951 when world exports reached, according to the U.S. Department of Commerce, 1,304 million lbs. The United States continued as the world's leading tobacco exporter in 1953. Its exports aggregated 516,357,000 lbs., 30 per cent. above 1952, and comprised about 40 per cent. of the world total. Other countries whose tobacco exports rose include Greece, Italy, the Netherlands, Turkey, Indonesia, Algeria, Nyasaland, the Union of South Africa and Colombia. Principal countries whose exports declined in 1953 as compared to 1952 include Canada, Cuba, Yugoslavia, Syria, India, Brazil, Madagascar and Southern Rhodesia.

WAGES OF PLANTATION LABOUR IN MADRAS

SPECIAL TRIBUNAL'S INTERIM AWARD REVIEWED

THE interim award of the Special Industrial Tribunal for Plantations, Coimbatore, in respect of the industrial dispute between the workers and the managements of the estates in the Nilgiris, Malabar, Coimbatore, Salem and Madurai, given on 15th May, 1954, has been published in the *Gazette of Madras*, dated 9th June, 1952. The award provides for an increase in the basic minimum wages. According to the award, the basic minimum wages for grade I workers should be Re. 1-7 per day, for grade II workers Re. 1-1 and for a child As. 11. These rates compare with the existing general rates of Re. 1-5, Re. 1 and As. 10-6 per day, respectively, as fixed by the Government of Madras in March, 1952; the rate for male workers in about 40 estates in the Anamalais is Re. 1-5-9. The revised rates are to be given retrospective effect from 9th January, 1952. The Tribunal has held that, "though the cost of living index appeared to be going down, there is no need to reduce these wages in proportion to the decrease in the cost of living index.". The final report is likely to be ready in about nine months or, at the most, a year. In the opinion of the Tribunal, the higher rates recommended now are not expected seriously to disturb the economy of the industry in the meantime.

It will be recalled that, on 25th September, 1950, the Government of Madras constituted a tripartite committee to make an enquiry into the labour conditions of plantations and advise the Government in regard to the fixation of minimum wages for labour and other employees. While the enquiry was being conducted, disputes arose between employers and employees in various estates and so the Government appointed Mr. T. S. Viswanatha Ayyar as Industrial Tribunal to adjudicate the disputes. More or less simultaneously with the order, the Government of Madras fixed minimum wages for labour in March, 1952, on the report of the Tripartite Committee which submitted its report in October, 1951. The South Indian Estate Labour Relations Organisation, thinking that the Government had fixed minimum wages, felt that a further reference to the Industrial Tribunal would not be valid. Consequently, it took the matter to the High Court and got an injunction forbidding further proceedings in the main enquiry, pending the disposal of the writ. The writ petition was, however, dismissed in October, 1953. In the meantime, the aggrieved staff and labour requested the Government to constitute a special tribunal to go into the disputes and also wanted an interim award on the question of "interim increase of wages," pending the final award of all wages. The Government appointed Mr. K. Chakravarti as the Special Tribunal in January, 1954.

Contention of Workers

Mr. G. Ramanujam, who represented labour as well as the staff unions, contended, first, that there was no denial on the part of the managements of their capacity to pay a higher wage and that it should be inferred that they had the capacity to pay the same; secondly, that the present-day worker or a member of the staff was not being paid sufficiently to keep him and his family at the "living wage" level, that the industry was a very well-organised one and had been earning huge profits, as could be seen from the high dividends declared year after year; thirdly, that inasmuch as it was agreed on all hands that a "living wage" should be reached progressively, a start should be made in that direction even from now; fourthly, that the wages earned by the staff or the workers did not provide for ordinary amenities, but kept them always in want and that an interim increase should, therefore, be ordered forthwith. He argued further that, though, for purposes of calculation, a normal family might be taken as comprising three consumption units, the number of wage earners in a family ought to be fixed at only one and not more, as observed by the Fair Wages Committee, so that the wife and children might have opportunities of improving the condition of the family and not be compelled to be wage earners to keep their heads above water. He also contended that the fact that the Madras Minimum Wages Committee fixed certain rates only meant that no worker in the industry should be paid less than those rates and that it did not prevent or prohibit a higher wage being given, if found reasonable. He criticised the reduction of wage rates as fixed by the Madras Minimum Wages Committee; the Committee fixed minimum wage for men at Re. 1-7-9, for women at Re. 1-1-9 and for children at As. 12; the Madras Government reduced it to Re. 1-5, Re. 1-1 and As. 10-6, respectively, as indicated above.

The managements contended that the Government had already fixed the minimum wages at a subsistence-plus-level acting on the recommendations of the Committee, that wages at this level would provide not only the necessities of life but also some comforts, that the managements themselves were providing for other amenities such as housing, medical facilities, education of children, etc., and that an interim increase could not be ordered before all the facts were fully considered.

Minimum Wages

It contended that the Minimum Wages Committee made a mistake in the calculation of the calorific deficiency of the food basket, while arriving at the wages recommended by them, and when this was pointed out by the representative of the managements, the Government agreed with the representation, and that was why they fixed the wages at the present levels. It was not as if the managements influenced or prevailed upon the Government and got lower rates fixed than those recommended by the Committee. It was not true to say that any pressure was brought to bear on the Government by the managements to fix the lower rates. As a matter of fact, though the minimum wage fixed by the Government for men under the Act is Re. 1-5 per day, some tea estates in the Anamalais were paying Re. 1-5-9 per day for men. The lower limit having been fixed, the question of raising it further would depend on the capacity of the industry to pay and its economic position in India as a whole. This is a matter that had to be considered in greater detail and no increase in the wages could be ordered as an interim measure based on superficial considerations. The fact that in Travancore-Cochin the wages were fixed higher was no justification for a rise in this State. Different considerations prevailed there in fixing the wages higher for that State. If this point alone were to be taken as a sufficient ground for fixing wages in adjoining States, lower rates had been fixed in Mysore and Coorg and the Madras wages should, therefore, be reduced to that level. Diet costs and minimum requirements for a family had not been properly calculated and, if properly calculated, it would cost only Rs. 66-15 for a family and the wage that was actually being given was Rs. 77-3 per family. The contention that there should be only one wage earner in a family, viz., the man, was not at all a sound one and did not take into account the realities and the actual facts existing in the estates. The wages prevailing in other industries were much lower than what were given in the plantation estates. Apart from the wages, the employees were having several other extra amenities and, if these were valued in terms of money, it would be seen that they were in receipt of quite a large amount. In any event, there was no justification whatever for ordering an interim increase of wages. The employers further argued that, since the minimum wages were fixed, there had been no substantial change or alteration in the conditions of the industry which justified a rise in wages.

Uniformity in Wage Rates

In its report, the Madras Minimum Wages Committee had stated that there was one point on which there was identity of opinion and that was that, whatever the minimum rate, it should be uniform for all crops and areas. At the time the Committee submitted the report, the tea estates in Anamalai District (about 40 in number) were paying a daily wage of Re. 1-5-9 to every male worker. But, as the Committee fixed a minimum wage of Re. 1-7-9, it did not refer to this aspect separately. The Government fixed the wage for a male worker at Re. 1-5 per day, while the Anamalai estates continued to pay Re. 1-5-9 per day. This naturally gave rise to some dissatisfaction among labour.

THE HIGHEST RECORD OF INCREASE

Again, the minimum wages recommended by the Committee were split up into two portions, namely, "a basic wage arrived at with the cost of living index fixed at 160 and a dearness allowance for 178 points" and the Committee recommended that the dearness allowance should be so regulated as to provide for a rise or fall of every 10 points, the compensation payable thereon being worked out at 7½ pies for every 10 points. The Government, when it fixed minimum wages in March 1952, apparently overlooked this recommendation and did not provide for variations in the cost of living index. The workers were, therefore, paid only at a fixed rate all through, though there have been variations in the cost of living index between March 1952 and now.

The Madras Government did not make any provision for increase or decrease in dearness allowance according to the cost of living index, as recommended by the Minimum Wages Committee. But, as cost of living had gone up since then, the Tribunal pointed out that the workers had been denied an extra 7 or 7½ pies from February, 1953, to June, 1953, and a further 7 or 7½ pies from June, 1953, to the date of the interim award.

Consequent on the fixing of higher rates of wages in the Travancore-Cochin State, the Central Tariff Board agreed to give a higher price for Group A rubber from October, 1952, to compensate the increase in wages. The minimum wages in Madras are lower than the wages in Travancore, but it is not unlikely that the rubber-growers in Madras are getting the benefit of the higher price of rubber, without passing it on to the workers. Apart from these considerations, there is the fact that, while the Minimum Wages Committee recommended higher rates, the Government actually fixed the minimum rates slightly lower and also the fact that while workers are getting more in the neighbouring Travancore-Cochin State, they are paid much less in the Madras State. The workers, who are to a large extent illiterate, would not be in a position to appreciate why higher rates were fixed in Travancore-Cochin or why the Madras Government had to fix slightly lower rates than those recommended by the Minimum Wages Committee. They would only be nurturing a grievance that, for some unknown reasons, they have not been dealt with fairly.

In view of these considerations, the Tribunal considered that some interim relief had to be given to assure the workers that their interests were being looked into and to see that there was no disruption in the smooth working of the industry. The interim relief is without prejudice to a revision by way of an increase or decrease as justifiable by the final report.

Wages of Staff

As regards the wages of staff, the Tribunal considered that there was no need for granting them any interim relief. For, when entering service, a clerk gets Rs. 94 per month, a free house, sometimes electrified, and free firewood. On completing his probation, which is generally for a year, he gets Rs. 101. It was argued that out of this amount, Rs. 35 represented servant's allowance and, therefore, this amount could not be taken as part of the salary. Deducting this, a juniormost clerk receives Rs. 59 in the case of a probationer and Rs. 66 in the case of a permanent clerk. In view of the high cost of living at high altitudes, it was alleged that this was very low and that all salaries should, therefore, be increased by at least Rs. 10 per month. It was also argued that dearness allowance was fixed in 1948 with reference to a base of 228 points and that, though there had been an increase in the cost of living index, there had been no proportional adjustment in dearness allowance. The Tribunal found little force in these contentions. At the outset, it found that whatever be the name under which allowance of Rs. 35 was given, it was really cash allowance and the clerk could spend it as he liked. The basic salaries and dearness allowances went on increasing as years passed. This, according to the Tribunal, compared favourably with what clerks in other services or departments got and, consequently, there was no need for any interim relief. The Tribunal held that, if there were cases where only a check-roll servant, and not a cash allowance, was given, such should be given up in favour of cash allowance.

IMPROVING KENYA WORKERS' EFFICIENCY

Adequate family housing for a majority of workers in Kenya's towns by 1st January, 1965, is one of the goals set by Part IV of the report of the Carpenter Committee on African Wages, just tabled in the Colony's Legislative Council. The first three parts (already published) deal with minimum wages and a family minimum scale. Parts IV and V, making recommendations on labour stabilisation and improvement of African efficiency and output, were laid before the Legislative Council on 9th June. Part VI summarises the conclusions. The first day of 1965 is also the target date set by earlier sections of the report for providing African family minimum wages.

The African housing problem in Kenya can be solved only by a co-ordinated programme, says Part IV. It recommends an immediate survey with the objective of sufficient urban family housing by the beginning of 1965, and urges some measure of subsidies for family housing during the transition period from a "bachelor" to a "family" minimum wage. The Committee calls on urban authorities to concentrate on "neighbourhood units"—self-contained housing schemes with schools, shops, health centres, and other amenities—with adequate provision for tenant purchase and builder-owner schemes. For rural areas, income-tax relief is recommended on the expenses of farmers building permanent homes for African labour, and the possibilities examined of building African village settlements in European settled areas.

On labour stabilisation, the report declares, workers should be given old-age security through some form of State provident or contributory pension scheme for all Africans employed outside native land units. But the Committee makes no definite recommendations on the matter, stating it needs detailed examination by the recently appointed Social Security Committee. It calls for prompt attention to the housing of retired workers.

Dealing with African education, the report recommends priority for schooling in towns and settled areas to the children of workers living there, with English teaching at the earliest possible age. Social and recreational amenities are other inducements to labour stabilisation that, the report thinks, can best be provided in urban areas through neighbourhood units and in rural areas by building social centres in heavily populated districts.

Satisfied that there is considerable potential for higher efficiency and productivity among African workers, the report says that the development of this potential needs not only labour stabilisation but also more efficient management. To encourage labour stabilisation and improved methods of management, the report proposes a gradual increase in basic wage levels, and Government consideration of special training for African supervisory staff.

Under-nourishment is pinpointed as a major cause of the present low standards among African workers, which are due to lessened physical capacity. Two measures suggested for overcoming it are facilities for cheap midday meals and prescribed ration scales where employers provide food as part of wages. Gradual, concerted action by employers to increase and standardise working hours and cease part-time employment is seen by the report as an essential condition for increased rural productivity.

Examining incentives to better work, the Committee declares that a main condition is the existence of a stable, contented labour force earning wages adequate for health, decency and efficiency. At the present it considers payment by time the most suitable system for Kenya, and stresses that increments should be given only for increased efficiency, and where bonus payments are made workers should be able to relate these to their own efforts. Among other incentives, the report mentions better housing for more skilled workers, supply of cooked meals, and competitions in farm crafts. It recommends combining the maximum monthly wage rates laid down by the employment Ordinance with proportionate increases in weekly and daily rates.

The report calls on the Government to review the collection of statistics, in view of the urgent need for up-to-date information on such matters as African urban population and housing and conditions of rural labour, and to consider further sociological studies both in and outside the African reserves.

THE INDIAN LABOUR YEAR BOOK

The sixth issue of the *Indian Labour Year Book* (1951-52), published by the Labour Bureau of the Ministry of Labour, Government of India, contains valuable information relating to labour problems. Among the important features of the publication are a digest of the various labour laws in the country together with the administration of those laws and details about trade unions and industrial disputes. Special chapters are devoted to agricultural labour, housing and welfare of labour, Indian labour overseas and India's relations with the I.L.O.

There is a treatise on industrial employment, wages and industrial relations which has been dealt with exhaustive statistical tables. The appendices containing summaries of important awards, recommendations of labour tribunals, list of labour Acts and a select bibliography of labour literature are other features of the publication under review.

PAKISTAN NOTES

PAKISTAN'S ECONOMIC TROUBLES

OBSERVATIONS OF MR. COLIN CLARK

THE developments in East Bengal culminating in the suspension of the Fazlul Huq Ministry have evoked world-wide interest. The causes for these developments are being studied by disinterested observers and some of their findings make interesting reading. A typical instance of this is provided by an article in the *Financial Times*, London, contributed by the well-known economist, Mr. Colin Clark. Mr. Clark's observations are based on an extensive survey of the economic conditions in Pakistan conducted by him in 1952 under the Colombo Plan, through the courtesy of the Australian Department of External Affairs.

From the analysis of Mr. Colin Clark, it would appear that the chief grievance of an East Pakistani is that his Province supplies a large part of Pakistan's exports—the whole of jute and tea—while West Pakistan produces only cotton. The bulk of the export proceeds is utilised for financing imports into West Pakistan. The economists in East Pakistan estimate a "Provincial balance of payments" showing that East Pakistan has to earn a considerable surplus of exports over imports to pay taxation, commercial charges, etc., to West Pakistan. This complaint would not have arisen if East Pakistan had been economically better off, or even as well off as West Pakistan. Stressing this aspect, Mr. Clark has made a few notable observations which bear reproduction. He says:

"West Pakistan has a great deal more than its share of the industrial and commercial employment. The best angle of measure of how things stand is the proportion of the labour force which has to make its living from agriculture. In East Pakistan, this proportion stands at 78 per cent.—one of the highest in the world. In West Pakistan, the figure is only 54 per cent. which shows a substantial degree of economic advancement, by oriental standards.

"To make matters worse, substantial numbers of adults capable of work have never been entered statistically as members of the labour force in East Pakistan at all—these are the 'disguised unemployed.' It is true that East Pakistan, with its high temperature and high rainfall, has the finest agricultural climate in the world capable of growing two crops a year, and it has one of the world's most fertile alluvial soils. But this productive land is immensely overcrowded."

Mr. Clark also draws pointed attention to the high rate of population growth in East Pakistan *vis-a-vis* West Pakistan. Incidentally, he urges the Central Government of Pakistan to do everything that it can to divert new industrial development to the East rather than to the West. But West Pakistan continues to get what many regard as more than its share of new industries.

In the opinion of Mr. Clark, all the aforesaid economic difficulties are superimposed on other sources of disagreement. To quote him again: "They must not be regarded as the basic cause of the trouble; or even necessarily as its pre dominant element. A great deal of the trouble is linguistic. East Pakistan practically throughout speaks the Bengali language, which thus has a bigger following than all the other languages of Pakistan put together."

The foregoing account is, in our view, a fair summing of the factors responsible for the cleavage between the two wings of Pakistan. In fact, the economic disparity between East and West Pakistan is getting worse as every day passes. In view of this, Mr. Colin Clark has done well to emphasise that "it is very much to the interests of world peace, as well as of the people of Pakistan, that the breach should be healed as soon as possible."

Development of Roads

Road development in Pakistan will receive considerable impetus during the current (1954-55) financial year, thanks to the appreciable rise in the quantum of financial assistance by the Government of Pakistan to the Provinces and States. The aggregate allocations which the Central Ministry of Communications has made out of the Central Road Fund during the year amount to as much as Rs. 88.16 lakhs, which represent an increase of Rs. 49.91 lakhs as compared with the previous year. These bring the total allocations from the fund up-to-date to Rs. 2.80 crores.

In addition to the aforesaid allocations, the Ministry has sanctioned, out of the 15 per cent Central Government reserve (drawn from the Fund), Rs. 45 lakhs for specified road projects in the different Provinces during 1954-55. A sum of Rs. 2.69 lakhs has also been spent on the Road Research Laboratory, Lahore, which is engaged on research in road building.

With a view to making available more funds for the construction of roads, the rate of subvention has been doubled from As. 2-6 to As. 5 out of the customs and excise duty on every gallon of motor spirit, excluding aviation spirit, with effect from the year under review. The Central Road Fund, it may be recalled, was created in 1949 out of the revenue derived by way of excise and customs duty on petrol at the rate of As. 2-6 per gallon. The Fund is administered by the Central Government. Of the total resources at the disposal of the Fund, 85 per cent. is distributed among the Provinces and States in proportion to their areas, population, petrol consumption and expenditure on road maintenance. The balance is spent on research and administration.

Cotton Talks With U.K.

After holding discussions with the representatives of the Lancashire cotton trade, the Pakistan cotton delegation returned to London on the 19th inst. An official report on the talks issued by the U.K. Cotton Board reveals that the Pakistan delegation has indicated that the price control over cotton goods in Pakistan will be withdrawn as soon as adequate stocks are built up and it becomes possible to allow imports of cotton yarn and piecegoods from the U.K. at the normal level. Alluding to Lancashire's complaint that British exports of yarn and piecegoods have been steadily dwindling because of restrictions and internal price control, the Pakistan delegation is reported to have said that these restrictions were necessitated by balance of payments considerations. Referring to the complaints regarding mixing and adulteration in Pakistan cotton, the delegation stated: "A great deal is being done by the Government of Pakistan to reduce adulteration." It was, however, pointed out that Pakistan cotton was sold on type samples and the buyers should take care to mention the variety they wanted when buying the type. A delegation of Lancashire cotton experts is expected to visit Pakistan later this year to have further talks with the Pakistan cotton delegation. The Karachi Cotton Association has already extended an invitation to the Lancashire-Pakistan Cotton Committee at Manchester.

Assistance to East Bengal

With the recent turn of events on the political front in East Bengal, it is natural that the Government of Pakistan should be anxious to solve some of the most pressing economic problems of East Bengal. Officials of the Central Ministries of Finance, Food, Commerce and Industry were deputed to discuss the problems with the departmental heads of the East Bengal Government. A three-day conference of all these official spokesmen was held at Dacca last week. The conference took several decisions of far-reaching importance to East Bengal. One such decision relates to the grant of a Central loan of Rs. 5 crores to the Provincial Government for the building up of a food reserve of 100,000 tons rice and 10,000 tons wheat. The conference also recommended a loan of Rs. 2 crores to the co-operative societies in East Bengal for the purchase of jute, with a view to stabilising prices during the next season. Further, it suggested immediate liberalisation of imports of cloth, drugs and other essential goods as a means to bring down the prices "within the reach of the common man."

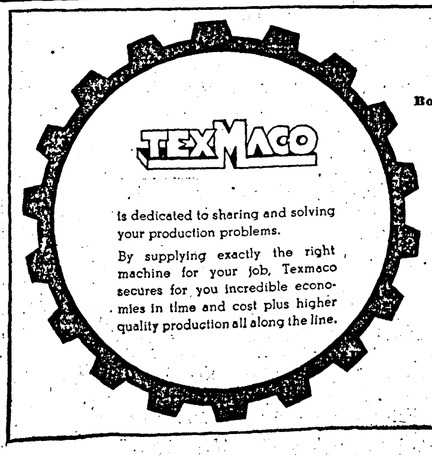
Trade With Afghanistan

The possibilities of establishing a market for Pakistan textiles in Afghanistan are being explored by a Pakistan textile trade delegation which is now in Afghanistan. This delegation is to be followed by a full-fledged trade delegation in the near future sponsored by the Commerce Ministry. Disclosing this, Mr. Abdul Quaiyum Khan, Minister for Industries, Government of Pakistan, stated the other day that Pakistan had recently supplied 11,000 tons of cement to Afghanistan. He revealed, in this connection, that his Government was also considering the export of sugar to this country.

Incidentally, the Minister alluded to the Government's proposal to send a survey team to Saudi Arabia which will prepare a budget of the resources of the country. He also alluded to the proposal to set up a power development corporation in Pakistan on the lines of the national electric authorities in the advanced countries of the West. He further revealed that the Government proposed to set up purchase organisations in France and West Germany similar to those existing at present in the U.K. and the U.S.

* * *

The implementation of the expansion scheme of the Amin Jute Mill in East Bengal is reported to be progressing quite satisfactorily. According to a recent report from Chittagong, the machinery for the sacking and hessian unit of the Mill has already arrived and is being installed. It is expected that, by the middle of August next, the capacity of the Mill will increase to 400 looms (working on double shift), as against only 150 looms working at present. The target capacity of the Mill is 500 looms.



TEXMACO

Boiler & Heavy Engineering Division ● Ring Spinning and Drawing Frames

can meet your requirements in Smoke Tube, Marine, Water Tube and Locomotive Boilers, Flues, Mechanical Stokers, Economisers, Chemical and Pressure Vessels, Coal Handling Plant, Chimneys, Ductings, Cranes, Wagons and Rolling Stock, Penstock Pipes, Sluice and Spillway Gates for Hydraulic Dam Projects, etc.

are the products of extensive research and designed for improved yarn production in point of quality and quantity under varying mill conditions.

In addition to complete units a wide variety of spare parts and conversion material can be manufactured to required specifications.

WESTERN INDIA LIFE INSURANCE CO., LTD.

DR. M. N. AGASHE ON NEW PREMIUM RATES

PRESIDING over the Annual General Meeting of the Western India Life Insurance Company, Ltd., held at Satara, on Sunday, 20th June, 1954, Dr. M. N. Agashe, Chairman of the Company, referred to the state of Indian economy and said that, although the "marked" improvement in food position was a relieving feature of the economic trends, there was no corresponding improvement in employment. He averred that, with increased unemployment and reduced purchasing power, business conditions had been "trying and difficult." He added:

"If you look at the business progress made by us against this background, you will have every reason to be satisfied with our results, inasmuch as we have maintained our usual tradition of showing gradual increase in business from year to year. This will be evident from the fact that we could raise the new business figure of Rs. 2 crores and 69 lakhs for 1952 to over Rs. 2 crores and 76 lakhs for the year under review, and it is a matter of great satisfaction that we have achieved all this at a moderate cost."

Dr. Agashe next referred to the change in premium rates effected by the leading insurers in the country. Explaining the position of the Western India in relation to this movement towards lower premium rates, he said:

"You all know that insurance companies had to increase their premium rates in the year 1945 due to the changed conditions of the post-war period. Most of them had to revise them again in 1947. We, however, did not follow in their footsteps then, as we did not feel that it was justifiable to do so and, therefore, decided to watch and wait. I am proud to say that we had no occasion to regret for not falling in line with other sister companies. Even with lower rates of premium, we were able to show as good working results as those shown by other companies of repute who had increased their premiums. We hope those policyholders who have taken new policies with us during this period will appreciate this. A review of the preceding five years shows that we have had a very favourable mortality experience and have obtained an increased interest yield while the expenses remained almost stationary. This gave rise to some constructive thinking on the part of some insurers. Some of the companies that had taken a lead to enhance their premium rates in 1947 began to consider the question whether they could reduce their rates and take them to the level of their rates prevailing in 1945 and they came to a decision. The New India Assurance Company first took the lead and announced the decision to reduce their rates. The Oriental followed suit almost immediately and they also reduced their rates. This created a stir in the insurance world. Some life offices found it inconvenient to reduce the premium rates and made a representation to the Government through the Indian Life Assurance Offices' Association and Life Insurance Council and made strenuous efforts to prevail upon the Government to issue a directive prohibiting such a reduction in insurance premiums. We waited to know the reaction of the Association and Council and on getting the decisions of their meetings, we reconsidered the whole issue in the light of the new conditions and of our own experience and decided to reduce our rates also from 1st April, 1954. I hope you all will appreciate this move. I am sure that this facility, coupled with some other schemes, such as the Employees' Provident Fund Act, Estate Duty Act, etc., will greatly help the business development in years to come. . . . We make concentrated efforts to preserve the business that is secured and try our utmost to give our policyholders and claimants every possible service. This has helped us to keep our lapse ratio at a low figure."

Proceeding, Dr. Agashe referred to the improvement in the Company's life assurance fund and related matters and said:

"On going through the figures of the Annual Report, it will be seen that, as a result of the year's working, a sum of over Rs. 72 lakhs has been added to our life assurance fund which now stands at more than Rs. 6 crores and 33 lakhs. This shows the prosperous position of our Company. It may be noted that not only our funds but also our net interest yield have shown a steady increase during the last six years.

"Similarly, our expense ratio, viz., 24.01 per cent. for 1953, is within margin and quite satisfactory, inasmuch as the average expense ratio of all companies together for the year 1952 is 27.1 per cent. These features only confirm that we maintain the great traditions of the past.

"There is one more point of interest to you in general and to our policyholders in particular, viz., during 1953, payments of over Rs. 27 lakhs were made by us by way of death and maturity claims. It is a gratifying feature that our experience in respect of death claims is satisfactory during the year under review which speaks eloquently of the great care exercised by the Directors in the selection of business.

"I would like to make mention of the fact that the official valuation of our Company as at the end of 1953 is already in progress and, as preliminary work in that respect is done on the newly installed Hollerith machinery, I expect the results would be ready rather earlier this time. It would be rather premature to say anything about the results just at present, but it is expected that, as in the past, results of the valuation would be favourable."

SHAW WALLACE AND COMPANY LIMITED

DIVIDEND ON PREFERENCE SHARES

THE DIRECTORS HAVE DECLARED AN Interim Dividend of 3 per cent., less Income-tax, on the Company's Preference Shares in respect of the year 1954, payable to Members whose names appear on the Preference Share Register on the 15th July, 1954. Warrants will be posted on or after that date in accordance with instructions recorded in the Company's books.

The Transfer Register of the Preference Shares will be closed from the 8th to 15th July, 1954, both days inclusive.

By Order of the Board,
(Sd.) R. H. D. CAMPBELL,
Managing Director.

4 BANKSHALL STREET,
CALCUTTA, 16*th June*, 1954.

THE BRITANNIA BISCUIT COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Sixty-third Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, 15, Taratola Road, Alipore, Calcutta, on Tuesday the 20th July, 1954, at 11 a.m., for the following purposes :—

To receive the Directors' Report and to pass the audited accounts for the year ending 31st March, 1954, declare the final dividends recommended by the Directors, elect Directors in place of retiring Directors, appoint Auditors and fix their remuneration, and to transact any other business as may properly be brought before the Meeting.

The Transfer Register will be closed from the 16th July to 22nd July, 1954, both days inclusive.

By Order of the Board,
A. P. CHANDA,
Director and Secretary.

15, TARATOLA ROAD, ALIPORE,
CALCUTTA, 18*th June*, 1954.

As Dividend Warrants are sent only to registered shareholders or their mandatees, shares held on Blank Transfers should be submitted with complete deeds for registration of transfers before the Register of members is closed. No applications for Warrants will be necessary.

JUTE

(*Concluded from page* 1230)

truth in this report, it looks as though the Industry is very cautious in its approach to the question of increasing production.

From a consideration of various aspects of the case, it would appear that the present moment is quite propitious for extending the working hours from the present 42½ to 48 a week. The increase in hours of work requires additional supplies of raw jute. In view of the encouraging supply position of raw jute, the mills may not find any difficulty in securing the raw material. The Pakistani crop in 1954-55 is placed by trade circles at about 6 million bales. India is expected to grow about 4 million bales. Considering the world demand for raw jute to be 9 million bales, the mills are unlikely to experience any difficulty in obtaining raw jute. Prices too may be expected to remain at reasonable levels in relation to the prices of jute goods, thereby earning them a fair margin of profit. The enlarged output would enable the mills to reduce their costs and compete favourably with overseas manufactures in world markets. Further, the industry is now exposed to the criticism that, by its working time agreement, it is shielding inefficient mills at the expense of those who have gone in for modernisation. By extending the hours of work at present, as a preliminary to a drastic modification of the agreement, it can avoid such criticism. The outlook for the industry being very favourable even the marginally placed units can hope to fare well under the new conditions.

JESSOP AND COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Twenty-second Ordinary General Meeting of the Shareholders will be held on Friday, 23rd July, 1954, at 12 noon, at the Registered Office, 63, Netaji Subhas Road, Calcutta—1, to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Balance-sheet and Profit and Loss Account for the year ended 31st October, 1953.
2. To declare a Dividend.
3. To elect a Director.
4. To appoint Auditors for the current year and to fix their remuneration.
5. To transact any other business of an Ordinary Meeting.

The Ordinary Share Transfer Books of the Company will be closed from the 5th July to 23rd July, 1954, both days inclusive.

Dividends are paid only to Registered Shareholders or their Mandatees.

By Order of the Board,
A. H. MITCHELL,
Acting Secretary.

63, NETAJI SUBHAS ROAD,
CALCUTTA, 19*th June*, 1954.

THE METAL BOX COMPANY OF INDIA LIMITED

NOTICE IS HEREBY GIVEN THAT THE Twenty-first Annual Ordinary General Meeting of the Company will be held at 59C, Chowringhee Road, Calcutta, on Thursday the 15th day of July, 1954, at 4 p.m., for the following purposes:—

1. To receive the Report of the Directors, the Statement of Accounts for the year ended 31st March, 1954, and the Report of the Auditors thereon.
2. To declare a Dividend.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.
5. To transact any other ordinary business of the Company.

The Ordinary Share Register of the Company will be closed from 1st to 15th July, 1954, both days inclusive.

By Order of the Board,
F. P. GILBERT,
Secretary.

59C, CHOWRINGHEE ROAD,
CALCUTTA, 17*th June*, 1954.

CALCUTTA GAS COMPANY (PROPRIETARY) LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Sixth Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, No. 8, Dalhousie Square East, Calcutta, on Monday the 12th July, 1954, at 4-30 p.m., for the purpose of receiving and passing the Directors' Report, Audited Accounts for the year ended 30th September, 1953, and declaring the Dividend recommended by the Directors and for transacting any other business that may be brought forward.

The Share Transfer Register of the Company will be closed from the 1st July, 1954, to 12th July, 1954, both days inclusive.

By Order of the Board,

CALCUTTA-1, 17*th June*, 1954.

LARSEN AND TOUBRO'S RECORD TURNOVER

PROFIT, HOWEVER, SHRINKS

THE most outstanding feature of the working of Messrs. Larsen and Toubro Ltd. [Managing Agents: L. & T. (Management) Ltd., Bombay], during the year ended 31st March, 1954, is the record turnover of business. The Company's direct sales show an improvement from Rs. 162.80 lakhs to Rs. 192.16 lakhs. Indirect sales, namely, indent sales and sales effected as selling agents for managed companies, have, however, gone down from Rs. 89 lakhs to Rs. 60 lakhs, but the total sales, at Rs. 252.16 lakhs, show a small increase over the record sales in the previous year, thus establishing a fresh record in the history of the Company.

The trading profit has, however, contracted from the highest level of Rs. 43.59 lakhs for 1952-53 to Rs. 39.39 lakhs for the year under review, a drop of Rs. 4.20 lakhs. This decline in profit is in distinct contrast to the increase of Rs. 7.47 lakhs noted in the previous year. It is, nevertheless, comforting to note that the profit for the year under review is well above that for any of the years preceding 1952-53, so that it is the second best on record.

The net profit (after providing for depreciation and taxation) is, on the other hand, higher at Rs. 6.84 lakhs, as compared with Rs. 6.05 lakhs for the previous year; it is thus a fresh record. The dividend on the ordinary shares has been maintained at 10 per cent. for the fifth year in succession and for the third consecutive year after the Company was converted into a public one early in 1951. The dividend has been maintained after enhancing the allocation to the general reserve from Rs. 1 lakh to Rs. 2.25 lakhs.

The following comparative table presents the salient features of the working results for the past four years, from which an idea of the Company's progress in recent years can be gained:

(In lakhs of rupees)

	For the year ended 31st March			
	1954	1953	1952	1951
Sale proceeds	192.16	162.80	139.85	137.55
Trading expenses ..	152.77	119.21	103.73	104.51

5 per cent. preference	0.85	0.85	0.84	0.34
Ordinary	3.20	3.20	2.99	1.91
	(10%)	(10%)	(10%)	(10%)
Carry forward	0.16	0.13	0.36	0.34

The Company was able to improve its sales through "intensive sales work combined with numerous machinery demonstrations." A notable feature of the Company's business during the year was the receipt of big "repeat" orders from the Madhya Pradesh Government and the Mysore Government for large fleets of "caterpillar" tractors and allied equipment required for the execution of a number of irrigation projects under the Five-year Plan. The Directors report that "an increasing proportion of the Company's business comes as repeat orders, not only from Governments but also from private customers in the industrial and agricultural fields, as well as from important engineering contractors." The Directors add that, consequent on the easier supply position in regard to practically all the types of tractors and implements and their spare parts, machinery and industrial plant, which the Company handles, the market became highly competitive, with the result that the selling prices had to be adjusted downwards to meet the situation. This, coupled with the higher cost of sales, has affected the trading profit.

The balance-sheet of the Company as on 31st March, 1954, shows an increase of Rs. 5 lakhs in its paid-up capital to Rs. 50 lakhs. Early in 1954, the Directors issued 50,000 ordinary shares of Rs. 10 each and the issue was fully subscribed and paid-up. The reserves and surplus aggregate Rs. 3.41 lakhs. The gross block at Rs. 22.28 lakhs has been written down to a book value of Rs. 11.43 lakhs. Current liabilities and provision for taxation aggregating Rs. 146.50 lakhs are more than adequately covered by current assets amounting to Rs. 190.03 lakhs.

The Directors view the Company's future with confidence. They observe:

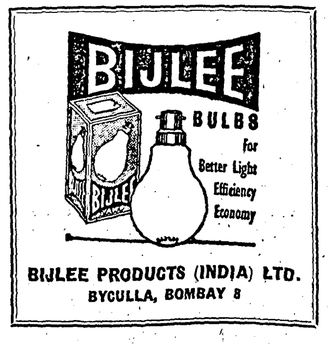
"With the easy supply position, it is expected that competition will remain keen and will even intensify further. It is, however, also expected that the demand for tractors and implements, industrial plant and other equipment which the Company handles will increase both from Government and the private sector. The Directors are satisfied that the Company is well equipped to utilise these opportunities and is prepared to meet the competition. The Directors consequently continue to view the future with confidence."

The Company's ordinary shares are being currently quoted at Rs. 12-8 *cum-div*. On an *ex-div*. basis, the shares give a yield of 8.7 per cent. per annum, free of tax.

ROHTAS INDUSTRIES

In this country, it is often the Government that impresses upon the industrialists the need for maintaining standards of quality in manufacture. It is, therefore, pleasant to turn to Mr. S. P. Jain's speech at the annual meeting of the Rohtas Industries Ltd., the well-known company engaged in the manufacture of a wide range of industrial products, including paper, cement and sugar. Mr. Jain, the Chairman of the Company, urged the Government to ask the Indian Standards Institute to lay down specifications for different qualities of paper. He complained that the price schedule, evolved by the Tariff Commission, did not take into consideration the quality of paper manufactured by the mills. The manufacturers, he rightly insisted, should get a price according to the quality of their goods. In this connection, he pointed out that it would be better for each unit to specialise in certain lines of paper manufacture. Since the industry had expanded and there was still a growing need for many new varieties of paper and board, Mr. Jain thought that future development should take place on "specialised lines," so as to benefit both the producer and the consumer. He revealed that the management was contemplating modernising the paper mill so as not only to increase production but to enlarge the range of the varieties of paper manufactured by the factory.

Yet another line of manufacture, in which the Company is engaged, is sugar. Mr. Jain warned that, unless the sugar output was increased, the country's "unfortunate" dependence on imports would remain. So far as the Company is concerned, it would appear that its sugar is classified as "one of the best qualities in the market." Nevertheless, the factory's "greatest handicap" is the non-availability of sugarcane. Such factories are often advised to shift their location to a more advantageous site. Mr. Jain said: "We cannot shift the factory to a better location, because the move will not get the approval of the Bihar Government." If the Government is thus anxious to prevent the flight of sugar factories from its territory, it is only reasonable to expect that it will provide the necessary facilities for the industry. Obviously, the Government has not been particularly helpful. Mr. Jain mentioned two impediments in the way of the industry's progress. In the first place, the Government's irrigation charges for the use of water from the State-owned tube-wells were so heavy that the cultivator prefers to use the water for the cultivation of cereals rather than sugarcane. Secondly, there was the "vexed" question of sales tax on sugarcane. Mr. Jain complained that Bihar produced a variety of sugarcane with 20 per cent. fibre, which caused considerable difficulty for the factories. Those who know the economics of the sugar industry know it only too well that sugar is produced primarily in the fields; so vital is the importance of the quality of sugarcane to the quality and quantum of the final product, sugar. It is to be hoped that the State Government will devote its attention to quantitative and qualitative improvement of sugarcane cultivation.



FURTHER SETBACK IN RESULTS OF BIRLA JUTE

The financial results of the Birla Jute Manufacturing Co., Ltd. (Managing Agents: Messrs. Birla Brothers Ltd., Calcutta), for the year ended 31st March, 1954, disclose a decline of Rs. 15.59 lakhs in gross profit, that is, from Rs. 51.91 lakhs for 1952-53 to Rs. 36.32 lakhs. This is the second year in succession in which the Company's profit has suffered a setback sizably, the drop in the previous year having been Rs. 21.68 lakhs. Thus the profit has more than halved itself (from Rs. 73.59 lakhs) in the course of two years. The net profit amounts to Rs. 14.51 lakhs, as against Rs. 15.09 lakhs for 1952-53 and Rs. 29.26 lakhs for 1951-52. The dividend on the ordinary shares has been cut from 30 per cent., which had been in paid for the previous three years to 10 per cent.; but the latest dividend is on a capital which was trebled during the year by the capitalisation of a part of the reserves and the issue of ordinary bonus shares in the ratio of two shares for every ordinary share held, so that it represents 30 per cent. on the old capital. In other words, the shareholders have not suffered any loss in the return on their holdings.

The disappointing financial results are due to the difficult trading conditions during the early part of the year, consequent on the poor demand for goods from overseas buyers. It was because of these difficult conditions that the Government of India reduced the export duty on hessians from Rs. 275 to Rs. 120 per ton on 14th September, 1953.

The salient features of the Company's results for the past four years are presented in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1954	1953	1952	1951
Sale proceeds	288.56	325.76	600.84	374.48
Other income	8.70	8.49	8.53	8.11
Stocks	7.81	3.57	7.51	28.42
Jute consumed	161.45	172.79	305.56	211.07
Manufacturing and other expenses	92.42	101.81	119.20	108.40

To reserves	8.84	8.00	20.00	20.00
Dividends—				
7½ per cent. preference ..	1.31	1.31	1.31	..
Ordinary	9.13	9.13	9.13	3.39
	(10%)*	(10%)	(30%)	(30%)
Carry forward	1.27	1.04	1.39	2.66

* On the increased capital of Rs. 91.20 lakhs, raised by the capitalisation of Rs. 60.84 lakhs in January, 1954.

Despite the drastic fall in earnings, the provision for depreciation has not been reduced by any notable extent. The provision for taxation has, however, been cut, in consonance with the decline in profit. A sum of Rs. 3 lakhs has been added to the dividend equalisation fund, which was created last year with an allocation of Rs. 5 lakhs. The general reserve, which had not received any addition last year, has now been strengthened by the addition of Rs. 84,000.

The capital of the Company shows an increase from Rs. 55.10 lakhs to Rs. 115.94 lakhs, consequent on the capitalisation of Rs. 60.84 lakhs from the reserves in January, 1954. Even after the aforesaid capitalisation, the reserves and surplus stand at the impressive level of Rs. 209.88 lakhs. The gross block, of the value of Rs. 302.71 lakhs, has been written down to Rs. 173.58 lakhs. Besides this gross block, the capital expenditure on the calcium carbide plant amounts to Rs. 15.82 lakhs. The current assets aggregate Rs. 194.42 lakhs and exceed current liabilities and provision amounting to Rs. 58 lakhs (of which provision for taxation alone accounts for Rs. 33.25 lakhs) by a huge margin of Rs. 136.42 lakhs.

The calcium carbide project of the Company is reported to have made considerable progress during the year and the factory is expected to commence production from the middle of this year.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 15-13 *ex-div*. At this rate and on the basis of the latest dividend, the shares give a yield of 6.3 per cent. per annum, free of tax.

PARRY & CO. MAINTAINS DIVIDEND

The Directors of Parry & Co., Ltd. (Secretaries: The Coromandel Investment Trust Ltd., Madras) propose to maintain the dividend on the ordinary shares of the Company for the year ended 31st December, 1953, at 15 per cent., that is, at the same level as for 1952. It will be recalled that the Company had paid a bumper dividend of 80 per cent. for 1950. But this was reduced to 32½ per cent. in the subsequent year on a capital which had been doubled in November, 1951. In the following year, that is for 1952, the dividend was drastically cut to 15 per cent., following a sharp fall in the Company's earnings. The financial results for the year under review disclose that the earnings have been nearly maintained at the previous year's level.

(Continued on page 1253)

RESULTS OF VICTORIA MILLS SATISFACTORY

FINANCIAL POSITION SOUND

THE financial results of the Victoria Mills Ltd., Bombay (Secretaries, Treasurers and Agents: Messrs. Mangaldas Mehta & Co., Ltd., Bombay), for the year ended 31st December, 1953, are gratifying. Notwithstanding the high cost of African cotton, a large quantity of which the Company has to consume, and the sharp rise in other expenses, particularly salaries and wages, the Company has been able to report a slightly better profit for the year under review. Thus, the gross profit for the year (before providing for Agents' commission) amounts to Rs. 18.24 lakhs, as compared with Rs. 17.76 lakhs for 1952. It will be remembered that the Company's profit had declined last year from Rs. 26.17 lakhs earned in 1951.

The distribution to ordinary shareholders has been maintained at 15 per cent. for the third year in succession, after it was raised from 12½ per cent. paid for the years 1949 and 1950. It will be recalled that, in 1949, the dividend was reduced from 22½ per cent. to 12½ per cent., consequent on the capitalisation of a sum of Rs. 8 lakhs from the reserves and the issue of one share for one already held. The dividend of 22½ per cent. paid for 1948 was by no means the highest, for the Company had paid as high a dividend as 42 per cent. in 1942. But, since then, the capital has been considerably increased.

To revert to the Company's working during the year under review. The salient features of the working results for the year are presented in the following comparative table against the background of those for the previous three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950
Sale proceeds (net)	205.78	195.20	200.02	137.81
Other income	2.19	3.94	2.80	1.98

Provision for—				
Depreciation	4.50	4.00	8.50	2.00
Taxation	1.00	1.00	10.00	3.75
Net profit	6.51	6.17	6.62	4.84
To reserves	1.00	..	5.50	2.80
,, charity account ..	0.10	0.10	0.10	0.05
Dividends—				
6 per cent. preference ..	0.32	0.32	0.32	0.32
Ordinary	2.40	2.40	2.40	2.00
	(15%)	(15%)	(15%)	(12½%)
Carry forward	2.91	2.22	1.87	0.67

It will be noted that the net sale proceeds of cloth, yarn and waste for the year under review have gone up by Rs. 10.58 lakhs, mainly due to the rise in sale proceeds of cloth by Rs. 10.16 lakhs. Sale proceeds of cloth would have been higher but for the fall in cloth prices during the latter half of the year. Value of cotton consumed shows a decline of Rs. 5.15 lakhs, but this saving has been more than offset by the rise of Rs. 13.50 lakhs in expenses. Of this increase in expenses, salaries and wages alone account for as much as Rs. 10.48 lakhs. Stores and dyed yarn consumed show a rise of Rs. 3.75 lakhs.

After providing for Agents' commission and depreciation, the allocation for taxation has been cut from Rs. 7 lakhs to Rs. 1 lakh, evidently because income-tax has been paid up to the year 1952 and there is already a large sum standing to the credit of taxation reserve. A sum of Rs. 1 lakh has been transferred to the reserve fund, for which no allocation was made last year. After paying the preference and ordinary dividend, the surplus that has been carried forward is substantially higher at Rs. 2.91 lakhs, as compared with a mere Rs. 22,000 brought in.

The latest balance-sheet of the Company discloses a sound financial position. The reserves and surplus aggregate Rs. 32.50 lakhs, as against a paid-up capital of Rs. 24 lakhs. These reserves have been built up after the capitalisation of as much as Rs. 18 lakhs during the years 1943 to 1949. Of the sum thus capitalised, Rs. 10 lakhs were distributed as bonus to ordinary shareholders in the form of ordinary shares and Rs. 8 lakhs in the form of preference shares. The entire preference capital of Rs. 8 lakhs has thus been raised by the capitalisation of part of the reserves. As against a gross block of Rs. 46.32 lakhs, a depreciation fund of Rs. 31.76 lakhs has been built up. The current assets aggregate Rs. 83.33 lakhs and exceed current liabilities and provision for taxation amounting to Rs. 43.40 lakhs, by a huge margin of Rs. 41.93 lakhs. Of the current assets, cash balances alone account for Rs. 36.95 lakhs.

The following synopsis of the Company's latest balance-sheet shows its financial position at a glance:

Liabilities	Rs.	Assets	Rs.
Capital ..	24,00,000	Gross block	46,32,497
Reserves and surplus ..	32,49,375	*Less*—Depreciation ..	31,76,356

Liabilities ..	30,85,161	Stocks ..	18,98,568
		Stores ..	6,62,563
		Debts, deposits and advances ..	21,85,520
		Investments	90,993
		Cash ..	36,95,222
	Rs. 99,39,007		Rs. 99,89,007

Points From The Chair

Can Life Insurance Be Made Attractive?

"ALTHOUGH there has been an increase in our business from year to year it has not increased by leaps and bounds. Nor have we even kept that ideal before us. But it will be seen from the *Insurance Year Books* of recent years that new business figures have not registered a consistent increase during the last few years. In fact, total new business in 1952 was less than that in 1951 by about Rs. 2 crores. Depression in business, unemployment, unsteady conditions in the market and high cost of living have made the common man's life extremely unsteady and, howsoever he may wish to do so, he is not able to save systematically and substantially. Naturally, these conditions mar the growth of insurance business. The question now before the insurance companies is whether they can create favourable conditions for further development of business and make life insurance more attractive to men of moderate means and if so, how? No immediate reply could be given to this, but an attempt is being made by suitably reducing premium rates so as to make insurance as cheap as possible. It is yet to be seen whether it will lead to the desired result and how far it will be beneficial in the long run."

DR. M. N. AGASHE,
Western India Life Insurance Co., Ltd.

Good Prospects for Life Insurance

"Although it is gratifying to note that life insurance business has made rapid strides during the last 30 years, it is not flattering to be told that the number of policies in force at the end of 1952 was less than 1 per cent. of the total population and that the *per capita* insurance coverage is less than Rs. 25. I firmly believe that there is a bright future for life insurance in India. There are two important factors which I expect will contribute to a rapid growth of life business in future: one is the tremendous and determined effort now being made for expansion of industry and agriculture. This effort is bound to yield good results by raising living standards and adding to the economic wealth of the country. The other factor arises out of the changes that are taking place in our social life and in the gradual dissolution of the Hindu joint family system. In the economic sphere, emphasis is being gradually laid on the independence and self-sufficiency of the individual rather than of the family as a whole. With the isolation of the individual from the family, there will necessarily arise a greater dependence on the security afforded by life insurance."

N. RAMA RAU,
United India Life Assurance Co., Ltd.

Shroff Committee Recommendations

"I would like to make a passing reference to the recommendations of the Shroff Committee as regards the restrictions imposed by the Government under sections 27 and 27A of the Insurance Act on life insurers' freedom to invest their funds. These are undoubtedly to ensure that the policyholders' money is safely invested. The need of adequate and safe investment of new moneys and the constant supervision of existing investment portfolios demand unremitting attention. The overriding aim must always be security of principal, but this is not to be regarded as synonymous with a narrow outlook or with an unduly restricted range of investment. The relief, therefore, as recommended by the Shroff Committee, although not as much as desired, would mean some improvement on the present position. The scope for investments in 'approved investments' would increase from 50 per cent. to 55 per cent. of the funds and for investment in any particular company's capital structure from 2 per cent. to 5 per cent. The Committee's suggestion that Government should examine, in consultation with insurance interests, the issue as regards these investments with a view to removing the anomalies in the provision of the Insurance Act are to be welcomed. Let us hope that the Government would implement the modest recommendations of the Committee."

CHIMANLAL B. PARIKH,
Jayabharat Insurance Co., Ltd.

Tax Burden as an Inflationary Force

"We must, I believe, accept as a fact that the high level of taxation operates as a constant inflationary influence affecting selling prices and profits. With high taxation there will be a constant upward pressure on profits in order to provide reasonably for reserves and dividends. It follows, therefore, that a reduction in taxation, as it lessens this pressure, will tend to reduce costs and increase the competitive power of British industry, upon which this island people depends for its very existence. I am sure the Chancellor and his advisers are well aware of these simple truths. I realise he is faced with a perplexing dilemma in reconciling the claims of industry for an easing of its burden with the essential provisions required for defence and the needs of the Welfare State. Risks, however, must be taken, if we are to preserve both our solvency and safety. I nourish the hope that he will continue in his next Budget the fruitful process of relief which in his 1952 Budget gave such an impetus to our progress."

RT. HON. LORD BALLIEU,
Dunlop Rubber Co., Ltd.

COMPANY MEETINGS AND DIVIDENDS

DEVON TEA AND PRODUCE CO., LTD. Annual General Meeting, Madras, 28th June, 1954. Dividend: Re. 1-14 per share (including a bonus of As. 10 per share.) Transfer books remain closed from 22nd to 28th June, 1954, both days inclusive.

BALANOOR TEA AND RUBBER CO., LTD. Annual General Meeting, Madras, 28th June, 1954. Dividend: Re. 1-14 per share (including bonus of As. 10 per share). Transfer books remain closed from 22nd to 28th June, 1954, both days inclusive.

BORMAH JAN TEA CO., LTD. Annual General Meeting, Calcutta, 29th June, 1954. Dividend: As. 12 per share. Transfer books remain closed from 16th to 29th June, 1954, both days inclusive.

TELOLIAN TEA CO., LTD. Annual General Meeting, Calcutta, 29th June, 1954. Dividend: Re. 1-8 per share. Transfer books remain closed from 16th to 29th June, 1954, both days inclusive.

SHANKAR SUGAR MILLS LTD. Annual General Meeting, Calcutta, 29th June, 1954. Transfer books remain closed from 14th to 29th June, 1954, both days inclusive.

EMERALD VALLEY ESTATES LTD. Annual General Meeting, Coimbatore, 30th June, 1954. Dividend: As. 10 per share. Transfer books remain closed from 24th to 30th June, 1954, both days inclusive.

TRAVANCORE RAYONS LTD. Annual General Meeting, Rayonpuram, Travancore-Cochin State, 2nd July, 1954. Dividend: As. 8 per share.

PARRY & CO., LTD. Annual General Meeting, Madras, 2nd July, 1954. Dividend: As. 4-4/5 per share. Transfer books will remain closed from 1st to 15th July, 1954, both days inclusive.

KALIGHAT FALTA RAILWAY CO., LTD. Annual General Meeting, Calcutta, 7th July, 1954. Transfer books remain closed from 24th June to 7th July, 1954, both days inclusive.

ELLENBARRIE TEA CO., LTD. Annual General Meeting, Calcutta, 7th July, 1954. Dividend: Nil. Transfer books will remain closed from 28th June to 7th July, 1954, both days inclusive.

TEESTA VALLEY TEA CO., LTD. Annual General Meeting, Calcutta, 8th July, 1954. Dividend: Re. 1-8 per share. Transfer books remain closed from 25th June to 8th July, 1954, both days inclusive.

MARGARET'S HOPE TEA CO., LTD. Annual General Meeting, Calcutta, 8th July, 1954. Transfer books remain closed from 25th June to 8th July, 1954, both days inclusive.

AN ADVERSE YEAR FOR ASSAM SAW MILLS AND TIMBER

HIGHLAND PRODUCE REPORTS BETTER RESULTS

Assam Saw Mills & Timber Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th September, 1953.

The profit and loss account, including the credit balance of Rs. 69,978 (Rs. 60,887) brought forward from the previous year, Rs. 25,356 (Rs. 19,44,859), being insurance claims received for cyclone damage and Rs. 1,75,000 (nil) written back from income-tax and super-tax provision and after allowing for sundry charges and a sum of Rs. 1,55,049 (Rs. 47,254) for depreciation, shows a debit balance of Rs. 97,203 (credit of Rs. 1,86,645, out of which the directors paid dividend of As. 4 per share, absorbing Rs. 1,16,667 and carried forward Rs. 69,978), and this the directors recommend should be carried forward.

The directors regret that although the reconstructed factory at Namsoi went into production towards the end of October, 1952, this period coincided with a very severe slump in the tea industry, and the resulting curtailment of purchasing by that industry reduced the demand for tea chests very seriously.

The Company's business suffered as a result and in addition the road and river communications have become somewhat precarious between April and September due to the change of channel of the Lohit River, which during these months frequently floods Saikwaghat which is the railhead for despatches.

The directors are in close touch with the State Government and the North East Frontier Agency authorities in regard to the improvement of communications, and with the latter authorities in connection with the Company's forest leases which have still not been signed.

Due to these and other difficulties it has been found impossible to continue work at Jonai, and the Saw Mills there have been put meantime on a "care and maintenance" basis.

The directors are glad to be able to advise that the 1953-54 period shows a considerable improvement in the trading position, although purchases of chests by the Tea Industry still remain considerably below the normal of recent years, resulting in severe price-cutting competition. Provided, however, the directors are able to obtain the assistance which they consider is their due in improving communications, they hope still to be able to expand production and show profitable results.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	13,99,998	Block ...	18,91,600

	Rs. 48,65,961		Rs. 48,65,961

Highland Produce Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. A. V. Thomas & Co., Ltd., Alleppey) submitted the audited accounts of the Company for the year ended 31st December, 1953.

The total acreage of the estates of the Company is 2,047 and the crop of tea harvested during the year amounted to 9,11,800 pounds as against 7,37,966 pounds in the previous year. The tea crop harvested, will no doubt be considered very satisfactory. A crop of 6,385 lbs. of cardamom was harvested from the cardamom areas on Carady Goody Estate.

The f.o.b. cost for the year was Re. 1-1-6 against the estimated cost of Re. 1-2-7 per lb., and the all-in cost was Re. 1-9-9 per lb. as against last year's all-in cost of Re. 1-9. The net average price realised was Re. 1-12-3 as against Re. 1-11-10 for the previous year.

The net profit for the year amounted to Rs. 3,19,494 (Rs. 2,12,348) after providing for depreciation on buildings and machinery and a reserve for taxation of Rs. 1,90,000 (Rs. 40,000) for taxation. This profit together with the balance of Rs. 80,797 (66,448) brought forward from the previous year makes a total of Rs. 4,00,291 (Rs. 2,78,797). Out of this the entire dividend of 6 (6) per cent. on preference shares and an interim dividend of 5 (5) per cent. on the ordinary shares on account of 1953 amounting in all to Rs. 1,08,000 (Rs. 1,08,000) have already been paid, leaving a balance of Rs. 2,92,291 (Rs. 1,70,797) available for distribution which the directors recommend be disposed of as under:—

By payment of 7½ (5) per cent. final dividend on ordinary shares [making 12½ (10) per cent. for the year] Rs. 1,35,000 (Rs. 90,000), transfer to general reserve Rs. 1,00,000 (*nil*) and in carrying forward Rs. 57,291 (Rs. 80,797).

With reference to the application for the consent of the Central Government for the renewal of the managing agency with Messrs. A. V. Thomas & Co., Ltd., on the terms already notified by notice dated 26th May, 1953, calling the extraordinary general meeting, the Government have been pleased to accord consent

The managing agents have also been directed in that consent letter not to take any buying or selling commission from the Company which they have agreed to.

In accordance with the consent, it is believed that the arrangements in contemplation would be completed and before the next report is published the amounts of the Company now lying in credit with Thomcos Bank Ltd., would have been transferred to a scheduled bank.

A tea crop of 8,50,000 pounds and 6,000 pounds of cardamom are estimated for the year 1954.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	21,00,000	Block ...	17,98,144
Reserves ...	6,86,355	Stock-in-trade ...	1,89,746

Profit and loss account ...	2,92,291	Debts, deposits and advances ...	1,41,471
		Investments ...	2,46,450
		Cash ...	10,77,053
	Rs. 35,74,362		Rs. 35,74,362

Davon Tea & Produce Co., Ltd.

The directors of the above Company (Managing Agents: Young India Agencies Ltd., Madras) submit the audited accounts of the Company for the year ended 31st March, 1954.

The Company's working for the period under review shows a profit of Rs. 1,48,194 (Rs. 72,195) to which is added the balance brought forward from last year of Rs. 26,935 (Rs. 41,959) making a total of Rs. 1,75,129 (Rs. 1,14,154). After deducting dividend on preference shares at 7½ (7½) per cent. paid already Rs. 15,000 (Rs. 15,000) and 10 (10) per cent. of the net profit to managing agents Rs. 14,819 (Rs. 7,219) there is a balance of Rs. 1,45,310 (Rs. 91,935). The directors recommend appropriating this balance as under:—

To pay dividend of 2½ (12½) per cent. plus bonus of 6¼ (nil) per cent. on ordinary capital as it stood on the 31st March, 1954 Rs. 37,500 (Rs. 25,000), to transfer to dividend equalisation reserve Rs. 35,000 (Rs. 15,000), to transfer to reserve fund Rs. 50,000 (Rs. 25,000) and to carry forward the balance of Rs. 22,810 (Rs. 26,935).

The total acreage of the estates amount to 1,888. Tea crop during the year was 2,22,243 lbs. as against previous year's crop 2,08,848 lbs. All-in cost of tea was 128.2 cts. per lb. and the average sale price realised 175.0 cts. Estimate for the next year is 2,25,000 lbs. Coffee crop was 929 cwts. against previous year's crop of 316 cwts. Estimate for the next year is 700 cwts.

The Company's estates are well maintained. During the year of report it was decided to issue 10,000 ordinary shares of Rs. 10 each as bonus shares to holders of ordinary shares and they have since been allotted.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,00,000	Block ...	5,25,674
Reserves ...	3,70,000	Stock-on-hand ...	1,61,592
Provision for taxation ...	38,017	Stores-on-hand ...	75,760
Liabilities ...	87,692	Other assets ...	32,335
Profit and loss account ...	1,75,129	Debts, deposits and advances ...	10,594
		Investments ...	10,719
		Cash ...	1,94,164
	Rs. 10,70,838		Rs. 10,70,838

Dornah Jan Tea Co. (1936), Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1953.

The season's working resulted in a profit, before providing for depreciation of Rs. 3,95,282 (loss of Rs. 7,908) from which must be deducted provision for taxation Rs. 1,21,695 (*nil*), adjustments Rs. 5,418 (Rs. 3,578), amount written off stores Rs. 4,146 (nil), loss on farming Rs. 520 (Rs. 3,270), depreciation for the year 1953 Rs. 520 (Rs. 40,785) and loss brought forward from 1952 Rs. 32,144 (profit of Rs. 22,297), leaving a balance at credit of profit and loss account of Rs. 1,80,710 (debit of Rs. 32,144) which it is proposed should be dealt with as follows:—

Transfer to general reserve Rs. 46,500 (*nil*), transfer to buildings and machinery reserve Rs. 60,000 (nil), in payment of a dividend at the rate of 6 per cent. for the year ended 31st December, 1952, on 1,000 cumulative preference shares of Rs. 100 each, absorbing Rs. 6,000, in payment of a dividend at the rate of 6 per cent. for the year ended 31st December, 1953, on 1,000 cumulative preference shares of Rs. 100 each, absorbing Rs. 6,000, in payment of a dividend at the rate of 7½ (*nil*) per cent. for the year ended 31st December, 1953, on 75,000 ordinary shares of Rs. 10 each, absorbing Rs. 56,250 (*nil*), and carry forward Rs. 5,960 (debit of Rs. 32,144).

The saleable crop weighed out at 7,305 (7,101) maunds against an estimate of 7,400 (8,000) maunds and was disposed of at an average price of As. 32.16 (As. 22.28) per lb.

The estimate for season 1954 provides for a saleable crop of 7,400 maunds at a total revenue expenditure of Rs. 7,11,830. The results of the year may be considered to be satisfactory.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,50,000	Block ...	5,83,452
Debentures ...	50,000	Stock of tea ...	2,96,580
Reserves ...	4,50,000	Stores ...	1,58,554
Provision for taxation ...	1,23,500	Other assets ...	2,118
Liabilities ...	2,27,766	Debts, deposits and advances ...	36,560
Profit and loss account ...	5,960	Cash ...	6,29,952
	Rs. 17,07,226		Rs. 17,07,226

Nenmeny Rubber and Produce Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. A. V. George & Co., Ltd., Kottayam) submit the audited accounts of the Company for the year ended 31st December, 1953.

The acreage under rubber is 1,366.33, that under tea is 11, and coconut 25.50. As much as 36.95 acres of immature rubber in Eldorado Estate was brought under tapping in 1953. Both Nenmeny and Eldorado Estates are reported to be in good condition.

The rubber crop harvested during the year was 5,36,211 (4,65,972) lbs. at 75.45 (81.34) cents per pound against an estimate of 5,15,000 lbs. at 86.63 cents per pound. The crop estimated for 1954 is 5,60,000 lbs. at 89.95 cents per pound. The average price realised was 125.25 cents per pound. The demand for crepe sole was very poor and so the manufacture of crepe sole was stopped during the latter part of the year.

The net profit after providing for taxes, depreciation, etc., is Rs. 1,07,227 (Rs. 95,126), to which has to be added the balance from last year of Rs. 31,378 (Rs. 28,190), making a total of Rs. 1,38,605 (Rs. 1,23,316). The directors now recommend the following distribution:—

Payment of 7 per cent. dividend on preference shares Rs. 21,000 (Rs. 21,000), 7½ (6¼) per cent. dividend on ordinary shares Rs. 25,125 (Rs. 20,938) and debenture redemption reserve Rs. 50,000 (Rs. 50,000) leaving a balance of Rs. 42,480 (Rs. 31,378).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,35,000	Block ...	12,65,955
Debentures ...	4,00,000	Stock-in-trade ...	1,85,610
Reserves ...	1,36,000	Stores and spare parts ...	16,441
Provision for taxation ...	62,405	Other assets ...	1,552
Liabilities ...	1,12,323	Debts, deposits and advances ...	31,693

Navsari Cotton and Silk Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. F. H. Mehta & Sons Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st December, 1953.

The profit for the year, after making a provision of Rs. 2,50,000 (Rs. 3,00,000) for depreciation amounted to Rs. 5,67,820 (Rs. 6,32,711). After adding the balance brought forward from the previous year of Rs. 2,66,495 (Rs. 3,28,784) there was a total sum of Rs. 8,34,315 (Rs. 9,61,495). The directors disposed of this sum as under:—

To reserve for taxes Rs. 3,40,000 (Rs. 2,50,000), to payment of dividend on cumulative 5 per cent. preference shares (free of income-tax) Rs. 25,000 (Rs. 25,000) and to payment of dividend at Rs. 12-8 (Rs. 40 per share, on the old capital of Rs. 10,50,000) per ordinary share (free of Income-tax) Rs. 4,25,250 (Rs. 4,20,000), leaving a balance of Rs. 44,065 (Rs. 2,66,495) to be carried forward.

At an Extraordinary General Meeting of the shareholders of the Company held on 11th December, 1953, it was resolved to increase the share capital from Rs. 20,00,000 to Rs. 30,50,000 by the creation of 1,050 ordinary shares of Rs. 100 each.

It was further resolved to capitalise a sum of Rs. 21,00,000 out of the amount then standing to the credit of the reserve fund and to issue and allot 21,000 ordinary shares of Rs. 100 each fully paid to those shareholders whose names stood on the register of the Company on 4th December, 1953, in the proportion of two of such ordinary shares for every one ordinary share then held by each of such shareholders.

All price and distribution controls on cotton fabrics were removed during the year except control on production. Towards the end of October, 1953, the export duty of 10 per cent. on medium cloth was removed.

The handloom industry was given further protection by the Government when on 26th October, 1953, the Dhoties (Additional Excise Duty) Act, 1953 was passed imposing a penal excise duty on sales of dhoties in excess of the permission quota in any quarter.

The industry witnessed a serious depression in the last quarter when sales had to be made at a loss as cloth prices remained at a low level.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	36,50,000	Block ...	39,63,794
Reserves ...	72,62,385	Stock-in-trade ...	38,36,484
Provision for taxation ...	10,64,793	Debts, deposits and advances ...	25,07,876
Liabilities ...	9,95,503	Investments ...	13,58,558
Profit and loss account ...	8,34,315	Cash ...	21,40,287
	Rs. 1,38,06,996		Rs. 1,38,06,999

N.B.—Figures within brackets relate to the corresponding period of the previous year.

MONEY RATES UNCHANGED

(From Our Own Correspondent)

BOMBAY, 23rd June

Conditions in the short-term money market during the week under review were more or less unchanged from those noted in the previous week. Big Indian banks were not keen borrowers, as the return of funds to them from trade and agriculturists was substantial which, in the absence of any demand, was utilised to pay off their own borrowings. In fact, one of the leading Indian banks with its head office in Delhi became a lender, consequent on a substantial influx of funds from Madhya Pradesh and Uttar Pradesh. Some of the Exchange banks were, however, still able to absorb all available funds, so that there was no surplus of floating funds in the market. Conditions would have been more easy but for the fact that the Delhi bank had diverted its surplus funds to Calcutta.

Inter-bank call money was by and large unchanged at 2½ per cent, among the Exchange banks and leading Indian banks, though some deals were reported done at 2½ per cent. also. The corresponding rate among the smaller Indian banks was 3 per cent. House money continued to be quoted at 3 per cent. Short-term deposits were bid at 3 per cent. for 1 to 3 months and at 2½ to 2¾ per cent. for longer periods.

A further contraction of Rs. 18.27 crores in notes in circulation is disclosed by the statement of affairs of the Reserve Bank of India for the week ended 18th June, 1954; this compares with a decline of Rs. 2.94 crores registered in the previous week. Notes held in the Banking Department also have fallen, but by only Rs. 71 lakhs, so that the decline in total notes issued is of the order of Rs. 18.98 crores. This is covered by a contraction of Rs. 20 crores in foreign securities and an increase of Rs. 1.02 crores in rupee coin. The rising trend in Central Government deposits is being maintained, the increase during the week under review being of the order of Rs. 8.73 crores, bringing the total rise in the last six weeks to Rs. 30.61 crores. There has been a decline of Rs. 3.39 crores in the desposits of other Governments, while deposits of banks have improved by Rs. 4.06 crores. Deposits of others are lower by Rs. 4.30 crores. Cash balances have gone down by Rs. 67 lakhs, while balances held abroad have risen by Rs. 16.07 crores. Loans and advances to other loans and advances Rs. 6.40 crores. Total amount of advances availed of so far by Scheduled banks against usance bills is Rs. 109.24 crores, an increase of Rs. 3.50 crores over the week, while the outstanding borrowings on this account have been reduced during the week by Rs. 2.95 crores.

The consolidated statement of position of the Scheduled Banks for the week ended 11th June, 1953, fully reflects the trend in the money market described at the outset. Thus, while there has been a substantial fall of Rs. 11.37 crores in bank credit—loans and advances showing a drop of Rs. 7.35 crores and bills purchased and discounted Rs. 3.92 crores—banks' deposits have not increased correspondingly. Demand deposits, for instance, show an increase of only Rs. 2.62 crores and time deposits Rs. 1.31 crores. Inter-bank borrowings also show an increase of Rs. 1.23 crores. Borrowings from the Reserve Bank, however, have been reduced by Rs. 2.03 crores and those from the Imperial Bank by Rs. 2.35 crores. Investments have gone up by Rs. 99 lakhs. Cash on hand and balances with the Reserve Bank together account for an increase of only Rs. 40 lakhs. Balances with other banks in current account have advanced by Rs. 94 lakhs and money at call and short notice by Rs. 3.30 crores.

The Gilt-edged market continued to display cheerful sentiment, with demand for some of the issues persisting. There was a further smart rise in values in some of them, consequent on a broadening of activity in the face of paucity of stocks. A rise of an anna was recorded in 3 per cent. 1957 and 3 per cent. 1958 to Rs. 98-9 and Rs. 98-6, respectively. 3 per cent. 1959-61 improved Rs. 98-6, respectively. 3 per cent. 1963-65 and by an anna to Rs. 96-9. 3 per cent. 1963-65 and 3 per cent. 1964 each put on As. 3 to Rs. 93-3. 3 per cent. 1966-68 and 3 per cent. 1970-75 advanced by an anna to Rs. 90-9 and Rs. 86-13, respectively. 3 per cent. 1986 Conversion Loan covered fresh ground with a rise of As. 3 to Rs. 82-7. 3½ per cent, 1961 National Plan Bond was stagnant at Rs. 99-1. In the group of low-interest bearing loans, 2½ per cent. 1954 was marked up by an anna to Rs. 99-12 and 2½ per cent. 1955 by as much as As. 4 to Rs. 99. 2½ per cent. 1961 hardened from Rs. 91-2 to Rs. 91-8 and 2½ per cent. 1960 from Rs. 94-5 to Rs. 94-8. 2½ per cent. 1962 rose by As. 2 to Rs. 92-6.

In the foreign exchange section, there was again no change in the rupee-U.S. dollar exchange rate. In New York, spot sterling, after an initial drop from $2.81.13/16-2.81.15/16 to $2.81½-2.81¾, recovered to close at $2.81.13/16-2.81.15/16. Three months sterling showed no change on balance at $2.81.11/16-2.81.13/16, although it had earlier declined to $2.81.9/16-2.81.11/16. Transferable sterling moved down from $2.78¼-2.78¾ to $2.78.3/16-2.78.5/16.

LINSEED FIRM

(Messrs. A. Bradley & Co.)

CALCUTTA, 21st June

A generally firm undertone has prevailed in the linseed market during the week. Although prices have been well maintained, trading has been very limited. Millers have been purchasing small ready lots for their immediate requirements and have shown no interest for forward delivery; sellers are reserved. Trading in the oil market has been negligible with keen sellers for ready goods.

Latest quotations are: Ready Rs. 17-10 and July-August Rs. 17-14 per maund.

GOLD FIRM

(From Our Own Correspondent)

BOMBAY, 23rd June

A smart rise in the price of gold was the main feature of trading on the Bullion Exchange during the week under review. This was due to the offtake exceeding the arrivals and substantial covering by a prominent operator from Calcutta who was short in gold. Although the demand was still on a small-scale, the fact that the inflow of smuggled gold had been conspicuous by its absence was mainly responsible for this recovery. Consequently, the premium of the ready position over the forward widened from Re. 1-4 to Re. 1-8. Further, gold was less affected by the debacle of the previous week, so that the recovery in gold was more prominent than in that in silver. The general trend, however, was irregular and uncertain.

Silver also displayed signs of return to normalcy, but the recovery was slow and inconspicuous. The downward trend noted last week gathered further momentum during the earlier part of the week, the forward position touching on Monday Rs. 148-8, the lowest level since 26th October, 1953. But from yesterday onwards, the white metal gained strength, albeit moderately, due to slackness in arrivals from upcountry centres.

Gold for forward delivery (18th July settlement) hardened from Rs. 82-3 to Rs. 83-7 on Friday, inspired by reports of better offtake and confiscation of some smuggled gold. However, at higher levels, there was liquidation by bulls and pressure from bears which dragged the price down to Rs. 81-15 on Monday. The lower level attracted fresh support and bear covering. Forward gold, therefore, staged a smart rally to Rs. 83-15 today before closing at Rs. 83-10, a gain of Re. 1-7 over the week.

Ready gold opened at Rs. 83-5 and hardened to Rs. 84-11 on Friday. After a setback to Rs. 83-5 on Monday, the ready metal closed higher at Rs. 85-2. The floating stocks of gold are estimated at 15,000 tolas. The daily average arrivals were less than 4,000 tolas, while the offtake was about 5,000 tolas on an average.

Forward silver (17th July settlement) was steady for a while early in the week, moving up from Rs. 150-14 to Rs. 151-10, but soon suffered a serious setback on revival of bull liquidation and bear selling. As a result, the white metal touched a low of Rs. 148-8 on Monday. Covering by short sellers and scattered support lifted the forward price to Rs. 150-1 at the close.

Ready silver (.996 Mint) opened at Rs. 150-1, that is at a discount of As. 8 below the forward, and closed at Rs. 150-1, the discount having been wiped out. The floating stocks of silver are estimated at 1,700 bars. The daily average offtake was less than 10 bars.

In London, silver gained strength during the week, the spot price moving up from 73d. to 73¼d. and the forward rate from 72¾d. to 73¼d. Gold, on the other hand, ruled weak, the rate declining from £12 8s. 11¼d. to £12 8s. 9¼d.

The following comparative table shows the trend of the market during the week under review:

	23-6-54	Highest	Lowest	16-6-54
Gold	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.63 fine Mint)	85 2	85 7	83 8	83 13
Forward	83 10	83 15	81 15	83 10
Cawnpore	83 0	83 0	81 8	83 0
Silver				
Ready (.723 fine Mint)	150 1	151 8	148 4	150 5
Forward	150 1	151 10	148 8	150 5
London Ready	73¼d.	73¼d.	72¾d.	73¼d.
London Forward	73¼d.	73¼d.	72¾d.	73¼d.
London Gold	248s 9¼d.	248s 11d.	248s 9¼d.	248s 11¼d.
New York Ready	85¼c.	—	—	85¼c.

METALS RECOVER AFTER EARLY DECLINE

(From Our Own Correspondent)

CALCUTTA, 22nd June

Earlier in the week under review, the metal market exhibited a note of easiness, but as the week progressed the market regained steadiness and closing levels compared well with the opening rates. The cause for weakness earlier was the announcement from New York to the effect that the American Government was against purchasing domestic lead and zinc at prevailing market prices for stockpile. Subsequently, this announcement was withdrawn, and a report from Washington indicated imminent purchases by the Government at current market prices. Following this, other foreign markets regained an encouraging tone, which duly reflected itself in Calcutta also. The fact that the Geneva Conference could not find a solution to the Korean issue boosted sentiment further, although the cautious trading by purchasers prevented prices from moving up.

Electrolytic zinc opened at Rs. 59-8, and for the reason already stated gave way to Rs. 58-8, only to firm up again to Rs. 59. The lower level made stockists nervous; but offers did not find acceptance. Lead closed at Rs. 71, i.e., Re. 1 higher on balance. This was due to the difficulty in locating ready supplies. Buyers were active, and were interested for forward positions even up to the end of August. During mid-week, the price had sagged to Rs. 69-8. Mercury was quoted firm at Rs. 990. With little business passing, tin closed quiet at Rs. 472. Electrolytic copper was throughout the week priced at Rs. 167. Wire bars continued to be in tight supply.

LANDSLIDE IN COTTON

(From Our Own Correspondent)

BOMBAY, 23rd June

There are signs of the forward market in cotton trying to stabilise itself at the present lower levels. Considering that, only about six weeks ago, August contract ruled above Rs. 700, the purge that it has undergone can be considered as severe even for the cotton trade where heavy fluctuations are not unusual. The *pundits* are right in assessing that, after a fall of 70 points within seven weeks, the technical balance is bound to be restored to a certain extent in the coming weeks. Other reasons for lending support to this expert opinion are also there. The leading bull operators are believed to have been liquidated. No large-scale selling need, therefore, be expected from these sources, unless the prices go up sufficiently high to make it attractive for the bears to hammer the market.

A greater part of the cotton in stock has been hedged, which means that no pressure is likely to be forthcoming from the Sewri and upcountry spot markets. Call fixing by the mills has also started on a moderate scale and the shorts are inclined to cover their sales to book their paper profits. In addition to this, the Stock Exchange and the cloth markets are optimistic about the removal of, or reduction in, the export duty on coarse cloth, which, if it comes about, would mean a scramble for Indian cotton by the mills. The only deterrents to a sizable rise in the forward price of cotton are that the mills have little unused quotas for purchase of Indian cotton and the present signs of a good monsoon. A part of this is discounted by the rising trend in the production of cotton textiles which would mean a higher consumption of Indian cotton next year. A higher crop in 1953-54, therefore, would not weigh heavily on the market and there should be enough time for the present stocks to be disposed of before the new crop comes into the market. The ways of forward markets and of speculators, however, are not subject to any rational calculations and there are still prophets of gloom in the cotton trade who predict that the August contract would see the Rs. 600 limit some time before it expires.

The spot market also continues to be under the shadow of the new crop. The sentiment having been demoralised, weak stockists are in a hurry to dispose of their cotton at whatever prices they can obtain. It is, however, hoped that the steady trend witnessed just at present at Kalbadevi and the revival of modest enquiry by the mills may induce holders to take a more reasonable view of the coming months. The turnover even on good days still continues to be low. But upcountry mills also have shown interest in acquiring cotton of their choice at the present low rates and, if other commodity markets show some steadiness, conditions are likely to improve at Sewri. Mills' enquiries are still confined to Kala, Vagad and Vijay and have not spread over the entire range of the present stocks. The premia are still low, in spite of the heavy fall in the basic rate. If cover can be provided by opening forward trading in the new crop, much of the fear which disturbs the spot merchants would disappear and the trade would gain in steadiness to that extent.

There are fresh hopes in the market regarding an additional small quota of Bengals for export. Fresh representations are believed to have been made, pointing out the stock position which would permit, to a small extent, additional exports of this variety. With reports of good rain from all cotton-growing areas, the Government may be induced to take a more favourable view of this request. Interest in imported cotton is still lacking, even though the trade has welcomed the absence of any monetary ceilings with regard to import licences which will be issued by the Joint Chief Controller of Imports for the July-December period to both mills and importers against evidence of purchase from overseas suppliers. Till the pattern of production of cloth and the proportions of various qualities—superfine, fine, medium and coarse—can be more accurately assessed for the coming year, there will not be much enthusiasm for importing cotton by traders on their own account, in view of the uncertainties regarding future prices in the world markets, even after the removal of the possibility of subsidy for exports in the U.S.A. The average of monthly consumption of foreign cotton during September, 1953 to March, 1954, has been 57,000 bales which is nearly 20 per cent. less than the monthly average for the previous year. This factor is bound to be taken note of by the trade while entering into any commitments abroad.

Persistent bear hammering and heavy bull liquidation brought about a landslide in the price of forward cotton. I.C.C. August which stood at Rs. 671 last week slumped yesterday to Rs. 632, the lowest touched during the current calendar year. Lower levels evoked some support and a slight recovery was in evidence towards the close. The contract finished at Rs. 640½. There was no trading in the forward section today.

The following is the trend of prices in the forward market during the week under review:

	Closing 16-6-54	High	Low	Closing 22-6-54
I.C.C. Aug. ...	Rs. 671	671	632	640½

The latest available quotations from the Sewri market are: Bengal *Deshi* Rs. 560; Berar Jarillas Rs. 750; Khandesh Rs. 760; Vijay Rs. 830; Oomra *Deshi* Rs. 690; Moglai Rs. 650.

In Pakistan, there were no fresh developments during the week under review, except that the prices for the staple varieties were a little steadier after the announcement regarding no likelihood of subsidy by the U.S. Secretary for Agriculture. The new crop quotations, however, are substantially lower. It is confidently expected that, now that the main hurdle has been crossed with regard to the U.S. policy, enquiries from the Continent and Japan would increase in the coming months and it should not be difficult for Karachi to dispose of its pre-

sent stocks to about 275,000 bales, before the new crop comes in.

Latest available quotations from the Karachi cotton market are: Sind *Deshi* Rs. 75-8; Punjab *Deshi* Rs. 73-8 to Rs. 74-8; 4F Punjab R.G. Rs. 68-8; S.G. Rs. 73; LS.S. Punjab R.G. Rs. 72-8; S.G. Rs. 76-8; N.T.R.G. Rs. 73-8; S.G. Rs. 77-8; 289F Punjab R.G. Rs. 75-8; S.G. Rs. 79-8.

At Alexandria, conditions have been quiet, with only token demand from abroad and only a modest offtake for domestic purposes. This has led to a fall in the spot premia for both current and new crops. The sales of new crop cotton by the Egyptian Cotton Commission so far amount only to 2,500 bales. For the present, only France and Chile are believed to be interested in Egyptian cotton.

While the Liverpool market is still maintaining a cautious attitude, with discounts on forward deliveries showing narrowing tendencies, the New York market has been displaying marked weakness during the current week. This is believed partly to be a result of liquidation in nearby July and political uncertainties. The closing rate yesterday showed a decline of 31 points over 34.16 cents of the previous week. As a result of favourable crop news from several centres, there was also some selling in October and December positions.

The following are the latest available quotations from New York as compared with those a week and a fortnight before:

(In cents per lb.)

	22-6-54	15-6-54	8-6-54
Spot	35.00	35.25	35.30
July	33.85	34.16	34.26
October	33.80	34.12	34.17
December	33.85	34.11	34.17
March	34.01	34.25	34.32

ART SILK YARN RECEDES

(From Our Own Correspondent)

BOMBAY, 23rd *June*

Despite the acute scarcity of tenderable variety, the forward section of the art silk yarn market presented an easy tone during the week under review. The easiness was the result of speculative selling induced by reports of lower offtake of yarn in consuming centres. The Central Government's decision to allow imports of twisted yarn during the next half-year was another unhelpful factor. Prices of art silk yarn, therefore, staged a sizable retreat this week. Thus, 150D June contract dropped 15 points to Rs. 770. July contract finished lower at Rs. 762 today, as against Rs. 778 at which business commenced on Monday.

The spot section did not, however, share the easiness of the forward section. Values were generally well maintained. 120 Japan was fully steady at Rs. 4-4, 150 Japan at Rs. 4-12 and 120 Italy at Rs. 4. 150 Italy, on the other hand, failed to evoke support and receded by an anna to Rs. 3-15.

The reaction that set in in the staple fibre yarn section towards the close of last week gathered further momentum this week. It was brought about by heavy unloading by mills in Bombay, South India and other centres. Buyers, however, were scarce, thanks to very poor offtake in consuming centres. To quote one report: "Consumers in Surat have been buying only sparingly and are not likely to enter the markets unless the markets become more settled. Punjab, Uttar Pradesh and other markets report reduced consumption in 40×2s, 20s, and other count yarns, due to limited seasonal demands." Selling pressure that ensued as a consequent resulted in a fall in prices. Staple fibre yarn (40×2) for June delivery declined by Rs. 4 to Rs. 604. July delivery shed Rs. 7 to Rs. 608. In the spot section, Citys fell by an anna and a half to Rs. 3-4-6. Kohinoors were transacted lower at Rs. 3-3-9, as against Rs. 3-5. Centurys lost an anna to Rs. 3-0-9. Among foreign yarns, Suicos receded by an anna and a half to Rs. 3-9-6. Shincos eased from Rs. 3-10 to Rs. 3-9.

Activity in the cotton yarn section was somewhat restricted. Prices of coarse and medium count yarns were easy, while those of superior counts were a shade better. Among 10s, Elphinstones lost an anna to Rs. 12-12. Among 20s, Edwards were lower by a like amount at Rs. 16-13. Among 30s, Maduras declined by As. 4 to Rs. 24. Among 40s, Seksarias fell by As. 4 to Rs. 26-12. Yarns of 60 and 80 counts, however, registered improvement. Among the former, Citys advanced by Re. 1-4 to Rs. 48-4 and Sri Rams by As. 12 to Rs. 53-4. Among 80s, Finlays and Sri Rams gained As. 4 each to Rs. 62-8 and Rs. 58-12, respectively.

The table below gives the prices of art silk, staple fibre and cotton yarns quoted today, as compared with those seven days before:

	23-6-1954	16-6-1954
	Rs. a.	Rs. a.
Art silk yarn—		
150 June (per case of 200 lbs.)	770 0	785 0
150 July	762 0	—
120 Japan (per lb.)	4 4	4 3
150 Japan (per lb.)	4 12	4 12
120 Italy (per lb.)	4 0	4 0
150 Italy (per lb.)	3 15	4 0
Staple fibre yarn—		
40×2 June (per case of 200 lbs.) ..	604 0	612 0
40×2 July	608 0	615 0
8s/60 (per lb.)	3 9½	3 11
City (per lb.)	3 4½	3 6
Cotton yarn (per bundle of 10 lbs.)—		
10s Modern	13 8	13 8
20s Hind	17 5	17 5
30s Madura	24 0	24 4
40s Seksaria	26 12	27 0
50s City	48 4	47 0
80s Sri Ram	58 12	58 0

OILSEEDS ERRATIC

(From Our Own Correspondent)

BOMBAY, 23rd *June*

The oilseeds market behaved rather erratically during the week under review. This was presumably due to conflicting reports about rains in the various oil producing centres and about prospects for imminent announcement of export quotas in groundnut, castor and salad oils. In fact, some of the operators expected free licensing of castor oil in view of the prevalence of large stocks in the country. As a result, the prices fluctuated rather frequently and sometimes widely, while the genuine operators remained hesitant to commit themselves. Quotations, on balance, showed a sprinkling of gains and losses over the week.

The highlight of the market was provided by the castorseeds section, which turned out to be highly speculative. Bulls expected a quota of 17,000 tons, if not free licensing, while the bear operators put the quota at no more than 9,000 tons at the most. A few, however, were of the opinion that castor oil export quotas will not be announced until 20th July. Small wonder if, as a result of these, the market there witnessed alternate bouts of buying and selling.

Castor futures, September delivery which opened the week steady at Rs. 109, fluctuated between Rs. 112-8 and Rs. 107-10, before closing at Rs. 111-6. Madras quality gained As. 8 to Rs. 22-4, and Kanpur Bold As. 4 to Rs. 20-8. Castor oil B.S.S., however, lost As. 4 to Rs. 11-12. I Pressures changed hands at Rs. 11-4 as against Rs. 11-8. Commercials, however, put on an anna to Rs. 10-15. Despite encouraging export advices at £109 per ton for B.S.S. and £102 for Commercials from the Continent and 12.75 cents for Commercial and 13.25 cents for B.S.S. from the U.S., oils generally declined. This was because the available quotas for export prior to the end of July is almost exhausted. Traders are reluctant to commit themselves in expectation of export quotas owing to fears of witnessing once again the tragic experience of the groundnut oil early in the year, when those who had entered long in export markets suffered heavy losses on the refusal by the Commerce Minister to grant export quotas.

It is too difficult to forecast anything about the Government's policy regarding export of groundnut oil. In all probability it may not be announced until the next crop position becomes clear. Crop reports from Pollachi (Madras) indicate that prospects for the groundnut crop, following the recent rains, are bright. The Andhra summer crop is estimated at 75,000 tons. Lack of rains is reported from Hyderabad. Saurashtra is yet to get rains.

Marketwise Bold F.A.Q. in groundnuts gained As. 4 to Rs. 32, while August-September delivery lost As. 6 to Rs. 29-8. Khandesh quality eased from Rs. 32-12 to Rs. 32-4. Groundnut oil was lower by As. 12 at Rs. 15-12. July and August deliveries were lower at Rs. 15-8 and Rs. 15-4, as against Rs. 15-12 and Rs. 15-10, respectively.

The linseed section, as usual lacked strength of its own. The trend was more or less determined by the developments in North Indian sarson and rapeseed markets. Bold ready which opened at Rs. 24-8 as against Rs. 24-10 shot up to Rs. 25 on the 19th inst. Subsequently, after some resistance, the rate declined and closed at Rs. 24-8. August-September deliveries were down by As. 4 to Rs. 23-8. Linseed oil, however, put on As. 2 to Rs. 13-2. There was a virtual absence of export enquiries for linseed oil.

Among others, *kardi* Bold ready was quiet at Rs. 16, while August-September lost As. 6 to Rs. 16. *Niger* ready F.A.Q. was down As. 8 at Rs. 25-8.

The following table shows the prices of oilseeds and oil on the 23rd inst. as compared with those at the end of the previous two weeks:

	23-6-54	16-6-54	9-6-54

FOREIGN SUGAR EASY

(From Our Own Correspondent)

BOMBAY, 23rd *June*

Following large arrivals of imported sugar, foreign sugar in the spot section of the Bombay sugar market exhibited easy conditions during the week under review and prices drifted lower. Formosan sugar dropped Rs. 2 to Rs. 91 per bag of 220 lbs. This was in distinct contrast to the marked rise of Rs. 6 registered in the previous week. British refined sugar and Spanish sugar receded by As. 8 each to Rs. 84-8 per bag of 2 cwts. and Rs. 47-8 per bag of 132 lbs., respectively.

The forward section also exhibited easy conditions. *Ashad* delivery declined from Rs. 82-12 to Rs. 82—82-4 per bag.

Indigenous sugar in the spot section, however, continued to rule steady, thanks to tight stock position, encouraging demand and negligible arrivals. Owing to the downward trend in prices in this city caused by the large arrivals of foreign sugar, the flow of indigenous sugar into the market has received a check. Medium grain sugar was fully steady at Rs. 89 per maund and large grain at Rs. 100 to Rs. 105. There was no trading in small grain sugar, as there were no stocks of this variety. It is reported that about 4,000 tons of Formosan sugar will be despatched from Bombay docks to Delhi and adjoining centres. As a result of this step, the price of sugar in U.P. has declined sizably.

It is rumoured that the s.s. *Alba*, carrying 9,000 tons of Peruvian cane sugar, is being diverted. The s.s. *Blair Clova* is due to arrive in this harbour tomorrow. This ship is carrying 5,000 tons of East German and 3,000 tons of Polish beet sugar. The tender price for East German sugar is reported to have been fixed at Rs. 29-8 per maund (f.o.r. destination), while that for Polish sugar will be decided before the day is out.

As already stated, arrivals of sugar into the Bombay market were lower, being no more than 1,200 bags, as against 5,600 bags a week before and 11,600 bags two weeks before.

The demand for sugar from Madhya Pradesh centres such as Akola, Amravati, Nagpur and Kandwa, and also from East Khandesh, Hyderabad State, Bombay Deccan and Gujarat sides is encouraging.

PEPPER RECEDES AGAIN

(Messrs. Parekh & Co.)

BOMBAY, 23rd *June*

Malabar black pepper during the week presented a paradox. The advance reported in our last issue proved shortlived. On the evening of last Wednesday, July shipments for New York were traded at as low as $0.44 per lb. and August York, as against the prices of $0.50 and $0.48 respectively, quoted in the morning the same day. Garbled pepper at Cochin appeared to be under the full control of speculators and prices moved up and down rather violently, though growers were not so anxious to press sales of ungarbled pepper at these low prices, as the arrivals from the interior were small due to heavy rains in the producing areas. In almost all cases, "garbled" pepper at Cochin was sold below parity. Distressed sellings of loaned pepper having been finished, the longs in the garbled are trying to push up the market with a view to squeezing the exporters whenever they come to buy their immediate requirements. In view of the present tight attitude of growers in almost all the producing centres, some shippers are reported to have repurchased from New York, June shipment, from $0.44 to $0.49 and July at $0.46 and August at $0.43.

In spite of sizable repurchases on India's account, New York market, strangely enough, failed to show any sign of animation, as there was poor demand from grinders who are reported to have held larger stocks than estimated earlier. Consequently, the dealers at New York are refusing to buy from overseas in anticipation of still lower prices. They seem to be waiting for stability in the prices in India, before making a start for their fresh purchases.

Sarawak during the week remained fairly steady, as exporters there were able to sell June and July shipments to New York dealers who seem to have made these purchases as replacement against their sales of Malabar black to India. At the time of writing, there are sellers for July and c. & f. New York, respectively.

Following are today's nominal quotations:— Ready delivery Rs. 110-130 per Bengal maund (as against Rs. 130 last week) and July Rs. 800 (Rs. 865-875), August Rs. 770 (Rs. 845-855) and September Rs. 750 per candy of 5½ cwts.

DISCRIMINATORY BUYING IN TEA

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 19th *June*

The offerings in sale No. 12, which was held on Tuesday, 15th June, amounted to approximately 14,47,000 lbs. There was a good general demand with buyers showing discrimination particularly in respect of clean black well-made types as against brown mixed stalky grades, with similar liquors, from the same districts. Black well-made types are quoted as firm to slightly dearer, but prices for other teas generally were half to one anna easier. Thin liquoring broken pekoes and whole leaf grades met a poor market and were difficult to sell. Low and low mediums declined by half to one anna and good mediums were irregularly half an anna easier. With quality now lower high-growns declined by a further half to one anna. The following are the quotations:—

	1954			1953		
	Rs.	a.	p.	Rs.	a.	p.
Low-grown Travancore B.O.P.	2	7	0	1	9	6
Medium Travancore B.O.P.	2	7	6	1	10	6
Anamallais B.O.P.	2	9	6	1	13	0
Best liquoring Nilgiri B.O.P.	2	13	9	2	2	6
Well made black leaf O.P.	2	11	6	2	1	0

London Market.—New season's Dooars firm to dearer. Poor stalky old seasons easier.

Colombo Market.—Good demand. Low-growns and stalky sorts easier. Others firm. Improved quality dearer.

Calcutta Market—Export.—22,000 packages. Less demand at rates As. 2 to As. 3½ below last. Whole leaf strongest feature. Tippy teas neglected. Flavoury Darjeelings strong. Others difficult of sale.

Dust.—6,300 packages. Fair demand. Market half to one anna, Darjeelings without character As. 2 to As. 3 easier. Exportable types steady. C.T.C. strongest feature.

1954-55 *Export Quota.*—Current season's export quota declined early this week to 48 pies, but due to renewed interest business has been effected at 51 pies, which remains today's quotation.

Forthcoming Auctions.—Dust sale "L" will be held on Tuesday, 22nd June, and sale No. 13 will be held on Tuesday, 29th June, 1954.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd. wire:

"*Dust Sale L.*—3,50,000 lbs. Fair general demand. Market irregular. Best liquoring considerably easier. Others barely steady."

HESSIANS STEADY

(From Our Own Correspondent)

CALCUTTA, 22nd *June*

Jute markets were steady during the week under review, although business done with overseas countries was not considerable. Nevertheless, enquiries for both hessians and heavy goods were satisfactory. Mills were very reserved, and this accounted for the poor volume of business compared to moderate demand. Moreover, mills had only little to offer for ready and near delivery positions. They paid little attention to enquiries for forward positions owing to expectation of higher prices. Quotations for forward delivery for hessians were often fractionally higher than those for the ready goods, and this factor gave sellers confidence in the future.

Argentina was in the market for hessian and bought 13,500 tons. It had earlier called for tenders for 5,000 tons of hessian and 500 tons of sacking. It was the support from Argentina, which kept prices firm and encouraged mills to sell as little as possible for forward delivery. Last year, Argentina bought 100,000 tons, and this enabled mills to reduce stocks considerably. Normally, the country's annual requirements are not as large as this quantity, and it is believed that it holds a moderate stock against this year's requirement. All the same, the market expects that before the end of the year the Argentina would have taken about 90,000 tons which would be utilised mostly in packing the large crop of grains. Up to now this year, Argentina has taken about 43,500 tons against tenders for 15,000 tons in April and those above referred to. Current purchases have also exceeded the quantities for which tenders were originally invited.

American purchases have so far been for small quantities only, and last year when Argentina entered the market, buyers withdrew in order that prices would be kept at reasonable levels. It was only after the Argentina purchases were completed that the United States began to show interest in offers. But last year's purchases for Argentina were done mostly after September, when the duty on hessians was reduced. By that time America had bought a moderate quantity, and it could thus afford to wait till Argentina had covered its requirements. Market circles believe that this year the United States cannot afford to repeat this performance, as it is usually in August that American buyers get active. The U.S. for this year a huge quantity of surplus wheat to be bagged, stored and sold.

Earlier in the week, acceptances were received from America for a moderate quantity of hessians, and this coupled with the support from buyers on behalf of Argentina made the quotation for hessians rule steady at Rs. 44-8. The July-September delivery was higher at Rs. 44-9. Further business followed, and the rate for ready delivery gained Rs. 44-12 and subsequently to Rs. 45-5. An easy tone set in during the week-end, and the quotation closed at Rs. 45, at which rate business was put through yesterday also. The 8 oz. hessian was priced at Rs. 38 f.a.s. and at Rs. 41-4 f.o.b.

Sacking goods also received good support, and the price for B twills was at one time as high as Rs. 114-8. Subsequently, the rate sagged to Rs. 113-15. There was a spurt to Rs. 114-4 yesterday. The news that Australia has decided to terminate controls over purchases and distribution of jute goods was noted with satisfaction.

In contrast with the conditions in jute goods, the raw jute market was idle. Mills were reserved, and stockists of the old crop showed a keen desire for business. Bimli f.a.q. was lower at Rs. 21. Mills paid Rs. 24 for new crop northern bottoms, while the rate for new crop Assam bottoms was Rs. 24. Latest quotations for the old crop, as given below, record declines of As. 8 to As. 2-8 as compared to those of a week ago:

	Middles Rs.	a.	*Bottoms* Rs.	a.
Pakistani:				
Northern	27	8	23	8
District	28	0	24	0
Indian:				
Northern	26	8	23	8
Assam Upper	26	0	23	0
Assam Lower	26	8	23	8
Daisee	28	0	25	0
Orissa	27	8	24	8
Murshidabad	—		22	8
Western	—		22	0
Jungli	—		21	8
Uttar Pradesh	—		21	8

Although the Narayanganj market opened on an easy tone, it gathered steadiness as the week progressed and closed. For, increased enquiries from foreign countries were received. At Rs. 23, jat white middles improved by As. 4, and jat Tossa jat white middles gained to Rs. 27 from Rs. 26-12. Other quotations also recorded gains of about As. 4 each. The news of the week from East Bengal was the Government's cancelling of the order suspending the realisation of the jute licence fee passed by the Fazlul Haq Ministry.

FAIR DEMAND FOR TEA DUSTS

(From Our Own Correspondent)

CALCUTTA, 22nd *June*

During sales of tea dusts for domestic consumption last week, 6,162 chests were offered. They consisted of fairly useful selections, and, although demand was fair, prices recorded an irregular pattern. Thus, while good C.T.C. Assams received the keen attention of buyers and the smaller kinds realised prices which were often As. 2 to As. 3 above brokers' valuations, many other sorts were easy by half an anna to one anna. The clean black exportable types were in good demand. Of the Darjeelings on offer, the better ones were steady, but the less attractive lots eased by As. 2 to As. 3. The quotations were: medium Dooars dusts Rs. 2-0-6 to Rs. 2-1, medium Assam grainy Rs. 2-1-6 to Rs. 2-2, and best Assam C.T.C. Rs. 2-7 to Rs. 2-8. Leaf offered aggregated 1,381 chests, prices of which declined by As. 2 to As. 3.

KIPS STEADY TO FIRM

(From Our Own Correspondent)

MADRAS, 21st *June*

Arrivals of kips have been on a moderate scale and offtake good. Prices have ruled steady to firm. Despite U.K. dresser's resistance to buy at prices quoted at origin, it has been reported that U.K. factories have been purchasing kips at a moderate pace. Demand for tanned cow calf and buff calf has been negligible and for buff lights and heavies good due to buying on the U.S. account.

The London tanned hides auction held last week was a flop. Several parcels were unsold, due to poor prices offered which were considerably lower than Madras levels.

In the next London tanned skins public auctions 4,80,000 goat skins and 1,020,000 sheep skins will be available for sale.

Shipment business in tanned skins has been small. Demand for goat skins from the Continent for prime class has been poor. There have been some enquiries for sheep skins from Japan. Prices in the local market have ruled weak.

Raw markets have been easier by Rs. 10 per hundred skins in several centres.

KANPUR HIDES EASY

(From Our Own Correspondent)

KANPUR, 20th *June*

Easy conditions prevailed in the hides and skins market during the week under review. The fresh supplies were easily disposed of. There was certain dearth of fresh goat and sheep skins straight from the butchers. Due to extreme heat of an enervating nature, the level of meat consumption has gone very low. The Madras dealers were the most important parties behind the transactions over lighter variety of cow and goat sheep categories. The local tanners were the main purchasers of the important items of the wet salted cow and wet salted buff. The latest quotations of the week are as follows:—

Wet salted cow 1st grade Rs. 340, 2nd grade Rs. 220 and 3rd grade Rs. 180 per score; wet salted buff 1st grade 1 lb. 13 ozs. and 2nd grade 2 lbs. 3 ozs. per rupee; goat skins 1st grade Rs. 350 and 2nd grade Rs. 280 per 100 pieces; sheep skins 1st grade Rs. 275 and 2nd grade Rs. 230 per 100 pieces.

SMALL-SCALE INDUSTRIES

The question of establishment and promotion of small-scale industries in India assumes importance in the context of growing unemployment in the country. The increasing attention that this question is receiving at the hands of the authorities indicates that they are quite alive to the dangers of the unemployment menace. This is evident from the decisions on the recommendations of the world Team on Small-scale Industries reached at the conference of officials of the Central and State Governments held in Bombay on the 16th inst.

The meeting was convened to consider the report of the International Team of Experts appointed by the Ford Foundation to go into the question of promoting small-scale industries in this country. The meeting considered the question of establishing the four regional institutes—one of the chief recommendations of the Team—their location and jurisdiction, staff requirements of these institutes and the immediate work to be undertaken by them. It was decided that advisory bodies should be set up for each institute on which the State concerned would be represented. It was also decided that the institutes should undertake immediately market surveys in selected fields. They should also take up an immediate programme with reference to specific needs of specific industries in each area. The State and the Central Governments were requested to liberalise rules for granting loans to small-scale industries and place at the disposal of the industries larger funds.

The Commerce and Industry Ministry of the Union Government, Mr. T. T. Krishnamachari, who addressed the meeting, revealed the action so far taken by the Government on the report of the Team. According to him, the Government has decided to set up the four regional institutes on lines recommended by the Team. These institutes will help the artisan and the small producer to become more efficient. The Government has also decided to place a senior officer in charge of development of small-scale industries and to undertake the establishment of the various institutions and corporations recommended by the Team. This officer will be assisted by a small-scale industries advisory board of which he will be the Chairman. In addition the Centre will consider appointing special officers drawn from the State Department of Industries who will act as liaison between the Centre and the States in the matter of implementing the schemes. The Central Government is determined to go ahead with an active programme for the development of these industries. All good schemes are assured of financial aid by the Centre. Every effort will be made, it is stated, to secure the full co-operation of State Governments in the development work.

The International Wheat Council, which concluded its five-day session on the 21st inst., issued a warning that the present excess of wheat supply must be adjusted to world demand. Further deterioration in world wheat trade, it said, would seriously affect the economies of both wheat-producing and wheat-importing countries. It urged those countries (Britain is one of them) which had abstained from joining the International Wheat Agreement to join the Agreement in order to help stabilise the world wheat trade.

COMPANY AFFAIRS

(Concluded from page 1248)

so that no further cut in the distribution to shareholders has been found necessary.

The profit on manufacturing, trading, agency commission, etc. for the year under review amounts to Rs. 55.63 lakhs, as against Rs. 57.78 lakhs for the previous year. Although this fall of Rs. 2.15 lakhs compares well with that of Rs. 26.76 lakhs noted in the profit for 1952, yet it has brought the Company's profit to the lowest level in the past five years. The relatively better performance in 1953 was not due to any improvement in the trading conditions, but on account of considerable economies effected in 1952, as also in the year under review. Referring to the working of the Company during the year, the Directors observe:

"In spite of difficult trading conditions which persisted throughout 1953, the Company's gross earnings from manufacturing, trading, agency commission, etc., have been reasonably well maintained. All items of expenditure have been kept under constant scrutiny, so that, in 1953, it has again been possible to effect a reduction in overheads without detriment to efficiency."

The following comparative table brings out clearly the Company's progress in the last three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1953	1952	1951	1950
Profit on manufacturing, trading, etc.	55.63	57.78	84.54	88.64
Other income	5.96	8.08	4.00	3.94
Expenses	40.42	47.33	40.36	36.33
Secretaries' remuneration ..	0.80	—	4.15	6.49
Depreciation	3.15	3.18	3.14	1.84
Taxation	6.94	7.33	15.50	20.30
Net profit	10.29	12.03	21.71	24.85
General reserve	3.00	5.00	7.00	11.78
Dividends—				
5 per cent. preference ..	1.50	1.50	1.50	1.50
Ordinary	5.00 (15%)	6.00 (15%)	13.00 (32½%)	16.00 (40%)
Carry forward	1.31	1.53	1.94	1.73

The Secretaries' remuneration for 1953 is only for seven months of the year, that is, from 1st June, 1953, to 31st December, 1953, at 7½ per cent. per annum on the profit, as the old Secretaries, Messrs. Parry's Holdings Ltd., vacated their office from 1st June. In consideration of being allowed to do so, they waived their remuneration for the period from 1st January, 1952 to 31st May, 1953.

The balance-sheet as on 31st December, 1953, shows that the Company's reserves and surplus stand at Rs. 28.31 lakhs, as against a paid-up capital of Rs. 70 lakhs. The outstanding liability on the 4½ per cent. debenture capital amounts to Rs. 3.40 lakhs. The current liabilities and provision for taxation aggregate Rs. 243.68 lakhs. The value of the gross block, at Rs. 44.15 lakhs, has been written down to Rs. 24.44 lakhs. Trade investments at a below cost amount to Rs. 20.16 lakhs, the market value of the same as on 31st December, 1953, being Rs. 33.03 lakhs. The other current assets (excluding Rs. 61,795 representing construction suspense) amount to as much as Rs. 300.18 lakhs, of which stocks and stores account for Rs. 157.28 lakhs, having declined from Rs. 240.10 lakhs as at the close of 1952. The reduction in stocks and stores has meant a substantial reduction in bank borrowings from Rs. 109.49 lakhs to Rs. 75.48 lakhs and other liabilities.

The Rs. 2 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 5 *cum-div.* On an *ex-div.* basis, the shares provide a yield of 6.4 per cent. per annum, free of tax.

COMPENSATION TO AIR COMPANIES

More than a year has elapsed since the Air Corporations Act was enacted on 28th May, 1953, but the air companies in India taken over under the Act have not received any compensation from the Government of India. Consequently, the shareholders of these companies also have not been able to receive, even in part, payment from the companies concerned. It is stated that a sum of Rs. 4.5 crores has thus been locked up on account of the delay. A meeting of the shareholders of these companies held in Bombay on Thursday last week, under the auspices of the Bombay Shareholders' Association, therefore, voiced their protest against the "prolonged and uncalled for" delay on the part of the Government in making payment of the compensation to the companies.

A resolution adopted at the meeting drew the attention of the Government that section 25 of the Air Corporations Act had laid down principles for determining compensation and had prescribed fixed amounts to be paid as compensation in respect of aircraft engines, frames and screws. In view of this provision, the resolution stated, there was no reason whatsoever why, even if there should be delay in ascertaining the compensation to be paid in respect of stores, immediate payment should not be made to the companies of compensation in respect of air frames, aircraft engines, air screws and accessories, in accordance with the schedule of the Act. Such payment, the resolution urged, should be made forthwith, to enable the companies to make an interim payment to the shareholders.

A ten-man action committee, under the chairmanship of Mr. K. R. P. Shroff, President of the Bombay Stock Exchange, was appointed for representing to the Government the views of the shareholders in connection with the compensation to be paid to them and all other matters in which their interests are involved, as well as for the purpose of protecting the interests of the shareholders *vis-a-vis* the respective air companies.

The meeting expressed its disappointment over the compensation paid to the Managing Agents of Airways India Ltd., notwithstanding the fact that under section 20(4) of the Act, the managing agents of such companies are not entitled to compensation for the termination of the managing agency. The shareholders hoped that suitable action would be taken to secure refund of this payment from the company concerned.

STOCK & SHARE QUOTATIONS

Abbreviations:—D = Deferred shares. P.O. = Preferred Ordinary shares. Y = Accounts published yearly. H = Accounts published half-yearly. P = Company has Preference shares. T = Company has Debentures. N = No quotation. x.d. = Ex-Dividend. c.d. = Cum. Dividend. i = Interim Dividend. f = Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

* Including bonus. ‡ Sales and amount written off. (k) Investments. † For ten months ended 31st December 1951.

(1) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Rs. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

* The following explanatory notes relate to the abbreviations and marks shown on page 1212 in the debentures section:—

H Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent.

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July, 1959

(d) Bearer bonds of Rs. 1,000 each with option of redemption a whole or a part at par on 30th June, 1952 on any subsequent interest date at one month's notice.

(e) Redeemable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955 on six months' notice in each case

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at ½ per cent. premium, on 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months notice

MARKET GOSSIP

(Concluded from page 1215)

chants' Association and the *Shakkar Vyapari Mandal*. The latter is of recent origin and its formation was due to differences of opinion and conflicts among the members of the former. It is alleged that the old body, the B.S.M.A., has an undemocratic constitution and arbitrary voting rights, designed to keep a clique in power. When the Government of India decided to distribute imported sugar in Bombay through recognised trade bodies, this Association unsuccessfully tried to claim that it was the sole representative of the sugar trade in the City and dubbed the *Mandal* as representing a set of newcomers, speculators and commission agents. Later events completely falsified these claims, in that the Government gave a prominent place to the members of the *Mandal* in regard to the distribution of sugar. Be that as it may, it is good to hear that the sugar traders are now ready to end their feuds and unite themselves. The B.S.M.A. is believed to have expressed its readiness to amend its constitution and make it democratic by abolishing the discriminatory voting rights. The credit for this welcome development goes to the Government of India's Regional Director in Bombay, who recently impressed upon the authorities of the two trade bodies the desirability of sinking their differences and acting in harmony in their own interest, as well as of the trade in general.

* * * *

Since India has many and continuing trade links with the Middle East countries, the U.N.'s study, entitled *Recent Economic Developments in the Middle East* (1952-53), published early this week, will evoke considerable interest in this country. The economic picture which emerges from the study does not, however, reveal any significant change in the characteristic features of the economy of this region. Despite a marked expansion of the oil industry in recent years, the region's economy continues to be mainly agricultural. A great degree of diversity in the material resources of these countries renders economic progress uneven. Where resources are available, mediæval economic policies pursued by the Governments and political unrest have arrested progress. Industrial development has been very slow, thanks to lack of capital, technical skill and managerial ability. Dependence on agricultural exports, such as cotton, fruit, tobacco, etc., has rendered the economics of these countries vulnerable to changes in world markets in these commodities. And since terms of trade have gone against these countries, trade deficits have become almost chronic. This general backwardness underlines the necessity for mobilising the resources of the region on a planned basis.

* * * *

Although the overall picture of Middle East economy is thus gloomy, the marked progress achieved by several countries in one or more of the main fields of activity, as revealed by the U.N. study, makes very encouraging reading. The greatest expansion in production was registered in petroleum. Thus, the proved reserves of crude petroleum, estimated at 8,300 million metric tons, in 1953, showed a rise of 28 per cent. over those of 1951. This brings the share of the region in the world's total proved reserves to 53 per cent. as against 50 per cent. in 1951. This is attributed to petroleum discoveries in Saudi Arabia, Kuwait, Iraq, Trucial Coast, and the neutral zone between Kuwait and Saudi Arabia. Similarly, there was an increase in the output of crude oil, despite the sizable decline in Iranian production. It amounted to 121.7 million metric tons in 1953, as against 105.7 million in 1952, thereby raising the region's share from 17 per cent. to 18.4 per cent. of the world total production. In spite of this improvement in crude production, the importance of the Middle East as a supplier of refined oil products has declined in recent years, for in 1952, the region processed a little less than 4 per cent. of the world's refined products as against 9 per cent. in 1950. Exports of crude petroleum rose from 62.3 million metric tons in 1951 to 79.6 million in 1952. The major petroleum producing countries were also able to earn higher revenues from the oil royalties which amounted to $500 million in 1953, as compared with $440 million in 1952 and only $260 million in 1951.

* * * *

It is noteworthy that agricultural output in 1952-53 was 7 per cent. larger than in 1951-52. The 1953-54 crop is expected to be as large as that of the preceding year. Again, production of cereals in 1952 was about 25 per cent. above the 1948-50 level, thanks mainly to Turkey's wheat crop. Cotton production in 1952 stood at 16 per cent. above the 1951 level. But in 1953, it showed a decline on account of fall in prices and accumulation of stocks in the previous year. There are, however, two disquieting features in this sector which merit the attention of the authorities in the region. One is that in spite of better cereal crops in most of the countries, the region, as a whole, is still a net importer of cereals. The other is that the improvement in the agricultural sector was mainly due to favourable weather and extension of the cultivated area rather than to an improvement in the methods of cultivation.

* * * *

In the sphere of industry, progress was not only uneven but slow. Turkey was, however, an exception. The return of the buyers' market involved many industries in difficulties. They were deprived of the twofold stimulus which they enjoyed after the outbreak of hostilities in Korea, namely, enlarged domestic purchasing power, arising out of high prices for local export crops and absence of foreign competition. Nevertheless, some of the Governments pursued their programmes of development. These related generally to mining, metallurgical, construction and electric power industries. Scarcity of capital was, however, a limiting factor. Local capital was shy. Revenues from oil royalties, which could have been utilised by the leading oil producing countries for economic development, were used generally for expanding imports. Some countries—Jordan, Iran, Turkey, for instance—received economic assistance from the U.K. or the U.S. but such assistance was utilised by many of these countries in supplementing deficiencies or in providing relief to refugees. Consequently, development work was handicapped. Afghanistan, Egypt, the Lebanon, the Sudan, Syria and Yemen, which account for one-half of the population of the region, received little or no outside assistance and, therefore, they had to rely on their own resources which were too meagre to accommodate their development programmes. There was, however, a proposal to set up an Arab Bank for Economic Development with a capital of £E200 million, but no decision was taken at the two conferences of representatives of the countries concerned held in May and August, 1953. Unless some institution, on these lines, for financing industries is set up by the Arab countries, the chances for an early development of their economies seem to be remote.

* * * *

Developments in the foreign trade sector indicated a struggle on the part of these countries for achieving equilibrium in their balance of trade. There was a decline of a little less than 10 per cent. in exports but there was an increase of a similar magnitude in imports. Individual performance differed from country to country. For instance, the total foreign trade increased by almost 30 per cent. in Turkey and to a lesser extent in Israel and Jordan, while it declined by 18 per cent. in Egypt. As there were trade deficits in 1952, most countries imposed restrictions on imports, and thus sought to narrow down their trade deficits in 1953. An analysis of the regional distribution of trade revealed a decline in the shares of the U.S. and the U.K. in their trade with these countries, while the shares of West Germany and Russia registered a marked improvement. The inter-regional trade was also on the decline.

PRODUCTION ENGINEERING AND PERSONNEL

(Concluded from page 1240)

cordial, due probably to some minor but nevertheless actual grievance. It is better to remember that morale cannot be forced but must be induced. According to one authority, the worker's chief demands from his job are: (1) security of full employment and reasonably high wages, (2) chance
