MERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake

RAY, 5 FEBRUARY, 1955 PRICE Rs. 1/8

OMINATE THE LD?

pretation of socialism is not in conso- the popular conception, others may in a different manner and raise false e minds of the people. As a result, f events may compel them to yield round in favour of doctrinaire

theory that, in order to bring about e distribution of wealth and to prevent ation of economic power, the public nust establish new industries and occupy nant place in the industrial field is as out e as the Marxist notion of democracy, y, increasing poverty amidst increasing h. A modern State has various means ugh which it can prevent the evils referred without itself starting and owning industries. can prevent excessive concentration of ealth through taxation, provided it has an efficient machinery to collect taxes. It can prevent concentration of economic power by providing adequate incentives and proper opportunities for new *entrepreneurs* to come into the field. It can minimise chances of corruption and profiteering by following appropriate monetary, trade and fiscal policies. It can protect the interests of the working class by legislating for fair wages, working hours and amenities. It is by these means that the Western democratic countries have brought about economic progress without undermining the freedom of man. There is no reason to believe that this system will not yield satisfactory results if followed by this country. India has already been trying it with gratifying success and will find the results as satisfactory as in Western Europe or North America if the system is given a fair trial for some years.

Experience of Western democracies which tried what India wants to do now has not been quite satisfactory. State ownership of industries actually arrested progress, for the simple reason that red-tapism is an inescapable evil of Government administration for which there is no remedy. This evil will persist in some form or other even in a dictatorship or monolithic State as Russia. It is a pity that the powers-that-be in this country are unwilling to profit by the experience of other countries. Their argument that India is different from other countries is not convincing. Human beings are the same all over the world. Indeed, if, even in countries such as the U.K., France and Australia which are not lacking in administrative talent, the public sector in the field of commerce and industry was not an unqualified success, the chances of its success in India, where the Administration is weak and inexperienced in the art of industrial management, are remote. It can be safely predicted that, if India were to depend upon the public sector to play a prominent role in industrialisation, the progress would be painfully slow and the cost would be heavy. The economic history of the world clearly shows that economic progress is best achieved within the framework of a free society where private enterprise enjoys a large measure of freedom and not under a totalitarian system. This is confirmed even by this country's limited experience of its State-owned industrial factories such as the machine tool factories at Bangalore and Ambernath, the shipyard at Vizagapatam, the locomotive works at Chittaranjan, and even the fertiliser factory at Sindri. Some of these are doubtless producing goods and a great show of it is being made by the Government. If, however, a fair picture of their working is to be had, one must take into account their financial results. If this test were applied, one would find that the public is paying a heavy price.

The protagonists of the public sector argue that, as the private sector has its own limitations, it will not be able to undertake large industrial projects as speedily as the country needs and that, therefore, it is necessary for the Government to establish industries. Now what is it that the Government has which the private sector has not? Financial resources, of course. Even here it is not that the Government has them in plenty. What makes it easier for the Government to raise resources is its power to command credit and create money. Excepting this one superiority over the private sector, it has no other qualification for running industries. But money alone is not sufficient to plan and establish large industries. It requires able administrators who are well versed in the art of business and who can take quick decisions to perform these complicated tasks. No Government can fulfil this requirement, much less that of an underdeveloped country. The officials of the Government of India are usually overworked with a multitude of functions. They have no intimate knowledge of trade or industry. They are answerable only to the ministers and, as the latter keep on changing in a democracy, they are, for all practical purposes, accountable to no one. Even the officials themselves are frequently changed, with the result that it is difficult to pin down irregularities to any one official. To give an instance, in the case of the Sindri Fertiliser, in which nearly Rs. 30 crores are invested, the key post of managing director has been held by no less than three officials in a short period of three years. It is difficult to understand how such changes will be conducive to efficiency. Indeed, it is inconceivable that, in an industry of this magnitude under the private sector, such frequent changes will take place.

In the case of industrial undertakings in the private sector, the officials are responsible to the board of directors through the managing director and the directors are responsible to shareholders. If they fail to show good results, the shareholders raise a hue and cry and draw the

argument that
world which have
in every sense of that
g to socialism. Another
was pointed out by us last week, political; the Congress probably wants to adopt a slogan that appeals to the public. With the general elections not far away, this is perfectly understandable. But its aftermath may be injurious to the country.

Although socialism is a term flexible enough to permit several interpretations, it has come to be associated with a definite ideology and, when a Government adopts it, the public expects it to act in consonance with that ideology. In principle, socialism means that individual freedom should be completely subordinated to the interests of the community. One of the basic features of socialistic society is to substitute co-operative for competitive production, a feature totally opposed to a private enterprise society in which competition is given a high place as an element for raising the efficiency of the society. Once the goal of the Government is expressed to be socialism or socialistic pattern of society—the difference between the two is no more than that between tweedledum and tweedledee—it automatically places private enterprise at a disadvantage. For it will encourage the critics of private enterprise to bring down the private sector in the estimation of the people. It will make it difficult for the Government to help and encourage the private sector, even when it wants to, as the Government of India professes now. Psychology and sentiment are important factors in a democracy and it will be suicidal in the long run for a political party to mislead the people or speak in two voices. Although it is not the intention of the present Government to make any drastic changes in the Constitution in regard to the people's property rights, already there are suggestions by some that the Constitution must be suitably amended in order to establish a socialistic pattern of society. Mr. Nehru and his colleagues in the Centre, as well as in some of the States, are doubtless reasonable people. There is no need to question their sincerity. Their definition of socialism and socialistic pattern of society is such as to evoke the acceptance of their goal by the private sector. But the danger is that, as

Government to show satisfactory results, the cost of such failure being quietly borne by the taxpayer. That things will go on in a leisurely fashion in the public sector will be evident from the fact that precious little has been done in regard to the establishment of the steel factory at Rourkela, though well over a year has passed since the agreement was signed with the German firm of Krupp and Demag. This is in striking contrast to the speed with which the Tata-Mercedes-Benz project for the manufacture of heavy trucks is being implemented. There is also the instance of the Industrial Credit and Investment Corporation, a project of private enterprise, and the National Industrial Development Corporation, sponsored by the Government. Whereas the former has made quick progress and will start functioning in a few days, nothing is known of the latter, except that it has been registered. Then, there are several projects which the Government has been keen on establishing, as, for instance, the one for the manufacture of heavy power machinery, but which show no prospect of seeing the light of day in the near future. As regards the British and the Russian offers for the establishment of steel plants, the British offer was the result of successful negotiations conducted by the private sector within a short period of a few weeks; it is doubtful whether any official of the Government of India would have achieved such success. If the Russian offer has now fructified into a preliminary agreement, it is more because of the accommodating attitude displayed by Russia than due to any great skill or enterprise displayed by the Government; for political reasons, the Soviet Government was very keen on clinching the deal. It remains to be seen how long the Government will take to complete these projects and bring the plants into production.

The Government is trying to meet the lack of right type of personnel to plan, negotiate, implement and manage industrial undertakings by obtaining the co-operation of business men more or less in an honorary capacity. If the public sector expands on such a large-scale as is now envisaged, this arrangement will hardly be able to cope with the situation. That apart, this is not a satisfactory way of filling the gap. For one thing, so long as there is no stake of their own, it is unnatural to expect the non-officials to give of their best to the Government-owned industries, as they would do if the industries belonged to them; they will also be chary of advising the Government to go ahead in those cases where some risk is involved, lest they should be blamed later, if anything were to go wrong. For another, such advisory roles for non-official business men mean more opportunities for the Government to confer privileges. This in turn will lead to such undesirable practices as favouritism and anti-social elements in the private sector trying to appease the Government by offering their services in order to hide their questionable activities. These tendencies will not be conducive to the growth of democracy on healthy lines.

In the last two or three years, in particular, the private sector has displayed admirable initiative in expanding the existing industries, as well as in establishing new ones. If it has not been able to do more, it is because of the Government's unhelpful economic policy and of its frequent attack on private enterprise. In fine, the Government has not cared to provide the right climate for private enterprise all these years. Taxation has been continued at a high level. Prices and profits have been controlled, without paying adequate attention to the needs of industries for building up reserves. Regulations over production, expansion and establishment of new industries have not always been administered in a diligent manner and without causing a feeling of exasperation among industrialists. Labour legislation has been carried too far, in that the employer has been deprived of his powers to ensure efficiency and to punish promptly misdemeanours. There have no doubt been instances where the Government has rendered handsome assistance to industries in the private sector. But these are exceptions and not the rule.

Generally speaking, the attitude of the Government and that of the party-in-power towards the private sector has been one of distrust; they have been tolerating it, as though it is a necessary evil. In these circumstances, it is not fair for the protagonists of the public sector to say that the State has to step in because the private sector is not capable of rising to the occasion. Given the freedom, incentive, measure of financial assistance and ce of no nationalisation, the private capable of industrialising the far more rapidly and at a relatively smaller cost to the public. After all, the private sector has already proved that it can establish almost all the heavy industries the country needs such as coal, iron and steel, petroleum, shipbuilding, automobiles, machine tools, chemicals and electric power.

In the light of what has been stated above it will be seen that it is unnecessary for public sector to hold a dominating position the industrial and commercial sector, that private sector is in a position to rise to occasion and that this development need necessarily stand in the way of the establishment of a Welfare State, without glaring inequalities in the distribution of wealth is, the Government has assumed the responsibilities in regard to agriculture, port and power, besides the customary a modern democratic State. These more than what a young democracy can If the Government is wise, it will be with discharging these responsibilities ly, instead of taking on its shoulders dens which can be conveniently left private sector to carry.

EMPLOYMENT AND RIVER PR

IT is not altogether in keeping with the of urgency for economic improvement the Central Government wants to incu the officials and the public that the auth deliberately adopt a go-slow policy in exe the large irrigation projects committed to charge. A recent instance, which has co public notice through Press reports, is the progress of the Gandhi Sagar Dam. It would appear that the construction of the Dam, tended to serve the arid deserts of Rajasthan is proceeding at the proverbial snail's pace. A the present rate of progress, it is computed that it will take nine years to complete the project, whereas projects of much bigger size have been either completed or proposed to be completed in a shorter period.

This leisurely bullock-cart pace, it is stated, is not altogether accidental. It is not due to any peculiar physical obstacles which stand in the way of progress. It is attributed partly to the Government's desire to see that the project remains uncompleted for as long a period as possible, so that it may serve as a source of employment for a conveniently long period of time and partly to the supposed superiority of the masonry (which is employed in the project) over concrete construction. Perhaps, it is best to leave the technical aspect of the question for discussion by the pundits in constructional engineering. But the much larger question is: What consideration should be taken into account in embarking upon a river project? This question raises at least three fundamental issues—the question of the expeditious completion of a project, the cost of the project, and of its employment potential.

Strictly speaking, all the three problems are "financial" rather than physical. After all, financial considerations cannot be altogether ignored in a money economy, except perhaps when a State is dealing with defence policies. The break-up of the problem into the three elements is made here only for purposes of clarity. To take the question of expeditious completion first. It should be clear that speed is the very essence of these constructional activities. The country cannot afford to wait for long till the authorities choose to complete the project taking "their own" time to do the job. What must strike even a casual observer as extremely odd about the deliberate delay is that it is so incongruous with the Government's own exhortations for speed. Indeed, it is anomalous, to say the least, that Government spokesmen should regard sober audit objections as a spanner in the wheel of progress and insist, in a mood of enthusiasm for rapid progress, that even financial considerations may be sacrificed at the altar of speed and, at the same time, pursue a conscious go-slow policy in carrying out certain projects.

It is not contended here that all considerations—such, for instance, as cost and technical efficiency—should be sacrificed for the sake of speed in construction. What is suggested is that, if the use of modern methods of construction can cut out unnecessary waste of time, the Government should not hesitate to employ them. The only consideration here is that one should weigh the advantage of the economy in time through the use of modern methods of constructional engineering against the possible

th
cas
tend
and po
render. The
the cost of the
cularly undesirable
projects serve. For t
developed areas. If any
should be provided, in ord
preneurs to migrate to these regions.

The slow execution of the projects is sometimes defended on the ground that it thereby provides employment for a larger number of people. The sooner this fallacy is exposed the better it will be for all concerned. The implementation of a river valley project, as such, should not be looked upon as a source of employment. It will no doubt provide employment opportunities. But such opportunities will at best be only temporary. It would, therefore, be wrong to over-emphasise this aspect. What a project should do, and what it certainly could do, is to provide the means for better utilisation of the land and for industrialisation, so that a prosperous agricultural-cum-industrial community may grow up. It is the quantum of employment in the secondary and tertiary stages that really matters in the long run.

The size of this employment potential and the speed with which it can be raised will be indirectly determined by the cost of the water and power services in the region, and the speed with which the projects are completed. Incidentally, it is also wrong to argue that, by making the projects labour intensive, some new and beneficial purchasing power is created. "A worker who gets restricted wages and cannot, therefore, have much of a surplus," as Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, points out in an article to the Congress Number of the *Indian Express*, "would hardly become a consumer of articles other than food articles and the argument that the worker engaged in labour intensive industries is a potential consumer of consumption goods has an extremely limited validity." Although these remarks were made in a different context, namely, large-scale *vs.* small-scale industries, they are quite valid to the case under discussion. The workers employed in the execution of a project can form neither a prosperous nor a permanent class of consumers. It would, therefore, be more expedient to concentrate on the early completion of the projects—and at minimum cost.

PRECIPITOUS FALL IN COTTON MARKET

I.C.I.C.—SHELL REFINERY—NEW RAYON VENTURE

THURSDAY, 5 P.M.

OVER the week, equity values have receded to some extent not only in Bombay but also in Calcutta. After a continuous rise over a long period, tea shares have begun to slide down. This is not surprising, because the boom in tea has reached the zenith and the 1955-56 season may well see a definite break in tea prices. Wise investors do not wait till this event comes to pass; they generally sell in a rising market. In any case, the present is not the time for making fresh investments in tea, even if the yields seem attractive. The yield on tea shares is usually 2 per cent. higher than that on other equities, for tea is after all an agricultural crop and agriculture is a gamble in the monsoon. As all agricultural crops do, tea prices fluctuate over a wide range. But the cost of production has become rigid owing to high labour costs. There is also a risk of tea being taxed further by the Government. Significantly enough, the latest speculation on the Taxation Enquiry Commission's recommendations is that an increase in indirect taxes has been advocated on the ground that there is no further scope for raising direct taxes.

MARKET GOSSIP

• • • •

In the Bombay share market, all the leading counters have staged a retreat, the fall being heavier in textiles than in steels. Many reasons are mentioned for this week's decline in share values, but the most important, in our opinion, is pre-budget uncertainty. The bulls, who were rather optimistic about the budget proposals a week ago, are now a little perturbed. They fear that Mr. Deshmukh may try to implement the measures necessary for establishing the socialistic pattern of society and for distributing economic power in the forthcoming budget itself. The other factors which have upset the market are: (a) The resignation of Mr. T. T. Krishnamachari from the Central Cabinet; the city is unanimous that the country will lose the services of an able Minister. It regards this as a sign of victory to that school of thought which, in the name of employment, wants to perpetuate low productivity and uneconomic means of production. In other words, Mr. Krishnamachari's walk out does not augur well for industries in the private sector. (b) The signing of the agreement with the Russian Government for establishing a steel plant in India; this event, too, is regarded as an adverse factor to the market, inasmuch as the Russian influence may strengthen the hands of communists in the country. Further, it is feared that Russia may purposely underquote the prices of its plant and machinery, in order to place the private sector in this country at a disadvantage. And (c) the sharp fall in prices of cotton and a substantial decline in those of oilseeds; apart from the fact a slump in commodity markets has its sympathetic effect on shares, operators feel that, if the present low prices persist, the purchasing power in the hands of farmers will decline which in turn will affect the consumption of industrial manufactures and construction of houses.

• • • •

A notable development of the week has been the publication of the prospectus of the Industrial Credit and Investment Corporation of India Ltd., inviting subscriptions from the public to the tune of Rs. 1.50 crores. The shares are in units of Rs. 100 each, the issue price being at par. The subscription list, which opened today, will close on Monday the 14th inst. The issue to the public constitutes only 30 per cent. of the total, the remaining 70 per cent. having already been booked by institutional investors in India, the U.K. and the U.S., as per particulars published on pages 220 and 221 of this issue. As the objects and functions are clearly set out in the prospectus, it is unnecessary to restate them here. Suffice it to highlight here some of the investment merits of this new issue:

(1) The scope for an industrial investment corporation in India is very good. There are many industries which need long-term and medium-term loans for expansion and modernisation. A number of new projects are waiting to be promoted. Within a few weeks after its coming into existence, the Company will, we understand, underwrite the capital issue of a new rayon and staple fibre company, to which we shall presently refer.

(2) The Company's Board of Directors is as strong as the private sector in India can produce. Accordingly, the Company is in good hands.

(3) The Company is assured of the services and guidance of foreign experts.

(4) A long-term interest-free loan of Rs. 7.5 crores is being made available to the Company by the Government of India. The bulk of its resources is thus free of charge.

(5) Although a creditor to the Company, the Government of India has agreed to stand on the same footing as the shareholders, in the event of the Company going into liquidation, in respect of any balance of the loan that may remain unpaid.

(6) The resources required by the Company are strengthened by the loan of $10 million agreed to by the World Bank; this loan is to be drawn by the Company at its convenience.

(7) The Company seems to be assured of a steady flow of income. Even if its opening resources of Rs. 12.3 crores are invested in Government securities, the interest thereon will be sufficient to pay a minimum dividend of 4 to 4.5 per cent. in the very first year of working. It is not surprising, therefore, that the Government has unhesitatingly declared these shares as approved investment for insurance companies.

• • • •

Several investors, it would appear, have already taken note of these merits of the aforesaid shares and we will not be surprised if the issue to the public is oversubscribed. As it is the desire of the Company's Board that the shares should be held as widely as possible, small investors may be given full allotment.

• • • •

It is reliably understood that the Burmah-Shell Refinery will shortly issue cumulative preference shares for Rs. 2 crores. Arrangements are being made with a prominent investment trust to get the issue underwritten. The dividend on these shares is likely to be fixed at 6 per cent. and the issue price at par.

• • • •

In about twenty-seven months from now, a new unit will commence production of rayon yarn and staple fibre. This project is the one which has been sponsored by the Silk and Art Silk Mills Association (S.A.S.M.A.), Bombay, in combination with an Italian firm and about which references have already been made in the Press. It is now learned that the capital issue permit and the necessary licence for the project have already been secured and, in about a couple of weeks' time, the Company will be registered. The location of the plant is yet to be decided. Recently, a team of technical experts from Italy surveyed some of the areas in the Bombay State. The team has selected five sites, two in Bombay and three round about Surat. The final report of the team is expected within a month. The aggregate capital outlay of the project is estimated at about Rs. 6 crores, of which the Italian firm will provide Rs. 1 crore in the form of equity capital. The member firms of the S.A.S.M.A. will subscribe Rs. 2 crores. This amount is proposed to be raised by means of a levy of 10 per cent. on the import licences for rayon yarn. The balance of Rs. 3 crores is expected to be raised from the public. It is reported that the newly-formed Industrial Credit and Investment Corporation has already been approached to underwrite this issue to the public. In all probability, this will be the first underwriting business to be done by this Corporation.

• • • •

The total installed capacity of the proposed unit is more than 8 million lbs. of rayon yarn and an equal quantity of staple fibre per annum. Considering the wide gap that exists between the present rate of output of rayon yarn and the actual demand, the combined efforts of the Bombay rayon weaving mills to establish a yarn-producing unit on a co-operative basis are, indeed, commendable. The annual domestic requirements of rayon yarn in 1955-56 are estimated by the Planning Commission at 55 million lbs.—the S.A.S.M.A. places the estimate of the weaving industry (excluding the handlooms) alone at 60 million lbs. on a two-shift basis—while the actual rate of output is not more than 10 million lbs. The gap in supplies is thus of the order of 45 million lbs. Practically the entire quantity is now being imported from abroad. During the financial year 1953-54, India imported 38.40 million lbs. of rayon yarn, valued at Rs. 12.04 crores. With the commencement of full-scale production by the new unit, as also with the successful implementation of (a) the plan for doubling the existing capacity of the National Rayon Corporation (Bombay) within three to four years, and (b) of the project by the Century Spinning and Weaving Mills, the dependence on foreign imports of rayon yarn will be greatly reduced and much precious foreign exchange saved.

• • • •

For sometime now, it has been practically a one-way traffic for cotton prices. I.C.C. February opened the current calendar year at Rs. 617½ and I.C.C. May at Rs. 608½. Since then, cotton prices have steadily declined, the fall during the week being precipitous. A week ago, I.C.C. February was standing at Rs. 607; today it touched a low of Rs. 563, before finishing at Rs. 569-8, a loss of Rs. 37-8 per candy over the week. Similarly, I.C.C. May slipped from Rs. 599 to Rs. 562-8 and finally closed at Rs. 570-8. Even the fact that there were no tenders against the February contract for the second time in succession has failed to impart any strength to the market. In the last week of January, the traders entertained hopes of a smart recovery following the Central Government's announcement of fresh quotas to mills, which would enable spinners to buy domestic cotton to the extent of their Indian cotton consumption last season or up to 115 per cent. of the official allocations made to them in 1952-53. But this expectation did not materialise. In the spot section, too, prices have shown a declining trend. Thus, since the commencement of the year, Jarilla has declined from Rs. 687 per candy to Rs. 633, Jayadhar from Rs. 822 to Rs. 758 and Laxmi from Rs. 862 to Rs. 803.

• • • •

The persistent downward trend in cotton prices has caused, naturally enough, some anxiety among the traders. Since the futures prices are only about Rs. 70 above the floor level (Rs. 495), it is feared that, if the present trend were to continue, it would not be long before the prices reach the floor. The Government would then be compelled to honour its commitment, namely, to buy all cotton offered at that level. It is asked as to why the Government should wait till the unhappy moment arrives and not act in time to prevent a further fall in prices. In this connection, three issues dominate cotton men's minds, the revision of the hedge contract, the scope for further exports of cotton and provision of facilities for an additional consumption of cotton by mills.

• • • •

The present hedge contract, it is pointed out by a section of the trade, is needlessly bearish. Since it was conceived in war years and at a time when the problem was to prevent prices piercing the ceilings, the contract has come to possess certain bearish features. These features are thus an anachronistic survival of the war years. In the altered condition of ample supply of cotton, the sooner these features are modified the better it will be for all concerned. There are, however, some who point out that the present debacle in cotton prices is the result of natural forces of demand and supply, and the blame cannot be altogether laid on the nature of the hedge contract. The present fall in prices is attributed to the large size of the current season's crop (44½ to 45 lakh bales), a larger carry-over (about 17½ lakh bales). On the one hand, the demand is restricted partly by the control on export and partly through the system of allocation of quotas to mills which reduces the competition among mills. Nonetheless, it is generally admitted that the hedge contract is defective, in the sense that it registers prices which have no relation to the prices in the spot market. It is this defect which makes the contract both unattractive and unsafe as a hedge. But any tendency to look upon the revision of the hedge contract alone as a panacea for King Cotton's ills, it is held, is nothing short of a belief in market quackery.

• • • •

Although no modification of the hedge contract will, by itself, influence the course of prices, it is generally thought that some modification is necessary in order to make the contract fulfil effectively its purpose as a hedge against fluctuations in prices. The East India Cotton Association has invited the suggestions of the members of the Association for the modification of the contract. Tracing the history of the hedge contract, the Association points out how there were three different types of contract in the pre-war years. These were: (1) Fully Good Broach in which the basic variety was Broach Deshi and the other staple varieties were tenderable upto to ⅞" staple; (2) Fine Oomra in which the Oomra and C.P. Deshi were principally tenderable; and (3) Fully Good Bengals. During World War II, outlets for exports were gradually reduced and, on account of the food problem, the area under cotton not only underwent curtailment but steps were in fact taken to discourage short-staple cottons known as Deshi and to encourage the production of medium and long-staple cottons. To suit the altered needs of the country, the short-staple contracts had to be abandoned and in their place a single hedge contract was evolved, namely, the Indian Cotton Contract, in 1942, with Fine M.G. Jarilla ⅞" staple as basis without tolerance. Other varieties were tenderable at: (a) a discount of 18¾ per cent. of the premia for staple upto ⅞" only; (b) a discount of 18¾ per cent. of the premia fixed in case of 'premium' varieties; at an increased discount of 18¾ premia in case of 'discount' varieties; and (c) Full 'ON' or 'OFF' allowance for class.

• • • •

Originally the volume of cotton tenderable against the I.C.C. was about 29 lakh bales, which included what is now Pakistan growths, out of a total crop of about Rs. 50 lakh bales. After Partition in 1947, the volume of tenderable cotton was reduced to 12 lakh bales out of a crop of 22 lakh bales. With the continued effort of the Government to reach self-sufficiency, the production was progressively increased during the last three years and the volume of the tenderable crop against the hedge contract has now exceeded 31 lakh bales, as against an estimated crop of 42½ lakh bales. In the Korean inflation period, all the commodity markets throughout the world sky-rocketed and the result was that, in May 1950, the contract had to be closed out. It was only after the general slump in 1952 that futures trading was reopened for the season 1952-53 and at the time of reopening, the contract was broadened and varietal and staple premia weightages were abolished. It may be added that, in 1948-49, the basis of the contract was altered to Fine Jarilla 25/32" with a tolerance of 1/32" staple which tolerance was not available previously.

• • • •

The Association, however, emphasises that the suggestions for reform of the hedge contract should be made bearing in mind the fact that the control on prices of cotton still remains and the demand for cotton is limited by the export quota and restriction on mill buying by means of a quota system. As a result of the quota system, there is an arbitrarily predetermined limitation of demand. The rigidity of this was brought home last season when in May, June and July some mills desperately needed Indian cotton, quota allocations for which was denied to them in spite of a fall by about Rs. 100 in cotton prices. Simultaneously some other mills did not utilise their quotas fully. A failure to utilise the quotas fully brings no repercussions on the mills so that in effect the quota means a reservation from the crop for each individual mill throughout the year to be utilised, if and when they choose to do so, and to the extent that they may desire.

• • • •

In responsible trade quarters, it is felt that the reform of the hedge contract should begin with changing the basis of the contract. The whole trouble about the contract, it is stated, arises from the multiplicity of the varieties tenderable against the contract. They thus suggest that there should be two hedge contracts, namely, a long-staple contract and medium-staple contract. The number of tender-

DULL CONDITIONS IN SHARE MARKET

SELLING PRESSURE AT CLOSE

(From Our Own Correspondent)

BOMBAY, *3rd February*

LISTLESS conditions prevailed on the Stock Exchange during the week under review. After having kept up the cheerful sentiment for over a week, operators preferred to be cautious in extending their support further. The undertone was, therefore, quietly steady and fluctuations were confined to a narrow range. Today, however, there was a wave of selling pressure which pruned down the previous week's gains partially in some cases, and completely in others.

The sudden outburst of selling today was described as technical correction. A section of the market would appear to be apprehensive of the signing of the Indo-Russian pact on the setting up of a steel plant. Further, the reported submission of resignation by Mr. T. T. Krishnamachari, rumours that the Taxation Enquiry Commission's report would be published before this week-end, weakness of cotton, bullion and commodity markets and option settlement considerations cumulatively dampened the enthusiasm of operators.

In the steel section, Tata Ordinaries hardened early in the week from Rs. 238-12 to Rs. 239-4, but lost some ground to Rs. 235-8 on Monday this week. Revival of speculative buying at lower levels restored Tata Ordinaries to Rs. 238-8 yesterday. The recurrence of selling pushed the shares back at the close today to Rs. 234-12, disclosing thus a loss of Rs. 4 over the week. After a recession from Rs. 33-13½ to Rs. 33-4 on Tuesday, Indian Irons attracted some support which lifted them to Rs. 33-9½. But this gain could not be consolidated in the face of selling pressure today which brought the shares down to Rs. 33-6½ at the close.

Barring a bout of speculative support to leading counters yesterday, textiles were generally easy, with prices tending downwards. The selling pressure which ensued today aggravated the downward trend, resulting in widespread losses over the week. Bombay Dyeings, for instance, gave way from Rs. 485 to Rs. 473-12, before strong speculative support lifted them yesterday to Rs. 483-12. Today, however, the shares dropped to Rs. 476-4 at the close. Kohinoors were marked down from Rs. 330-4 to Rs. 325, though they had touched, during the week, Rs. 331-8. Central Indias lost Rs. 3 to Rs. 125-8, Gokaks Rs. 3 to Rs. 223-8 and Indu Ordinaries As. 1½ to Rs. 11. Khataus dropped Rs. 2-8 to Rs. 152-8, New Creats Rs. 6-8 to Rs. 167 and Shree Niwas Rs. 5-10 to Rs. 231-4. Simplex declined by Rs. 3 to Rs. 148, Standards by Rs. 5 to Rs. 353-12, Svadeshis by Rs. 4 to Rs. 207-8 and Tata Mills by Re. 1-8 to Rs. 62-8.

The banking section was featureless, and enquiries were selective. Barodas lost a fraction to Rs. 102. Centrals put on a fraction to Rs. 52-3, while their new shares were unchanged at Rs. 53-4. Imperial Fully Paids advanced by Rs. 7-8 to Rs. 1,632-8, while the Partly Paids receded by Rs. 5 to Rs. 400. Bank of Indias dropped Re. 1-12 to Rs. 148-4 and United Commercials Re. 1 to Rs. 46-8. Punjab Nationals were marked up by As. 4 to Rs. 37-4.

Business in insurance shares was restricted. New Indias suffered further recession from Rs. 56-8 to Rs. 54-8. After last week's sharp rise, Orientals shed a fraction of the gain and closed Rs. 15 lower at Rs. 7,485. There was hardly any variation in other counters.

The electricity section was featureless, but the undertone was steady with enquiries in selective counters. Ahmedabad Electrics were well held at Rs. 114-1 on persistent enquiries. Due to paucity of sellers, not much business was reported. Bombay Suburbans changed hands As. 10 higher at Rs. 133-2 and their new shares As. 8 better at Rs. 100-8. Surat Electrics gained As. 10 to Rs. 129-6. Tata Hydros were unchanged at Rs. 148, while Tata Powers put on Rs. 5 to Rs. 1,498-12. Andhra Valleys shed Re. 1-4 to Rs. 1,406-4.

The miscellaneous section followed the general pattern of the market, disclosing losses over a wide front. Sugar shares were easy, Belapurs receding from Rs. 317 to Rs. 313-8, Phaltans dropping Rs. 2 to Rs. 113-8 and Walchandnagars Rs. 5 to Rs. 225. Cement shares were quiet. A.C.C. drifted lower from Rs. 184 *cum-div.* to Rs. 174 *ex-div.* (dividend Rs. 8-8). Digvijays were a fraction lower at Rs. 170-4. Shipping shares fared no better, despite the news of a possible general upward revision of freight rates. Scindias were placed As. 5 lower at Rs. 15-13. Great Eastern Shippings were As. 6 down at Rs. 17 and Bharat Lines lost As. 8 to Rs. 84. In the engineering group, Alcocks changed hands Rs. 5 lower at Rs. 300. Premier Constructions moved down by Rs. 3-12 to Rs. 155. Among mining shares, B.B. Petrols were depressed a little at Rs. 3-14½. Indian Coppers attracted good enquiries on reports of a sharp rise in copper prices and satisfactory production at the Company's mines. The shares, as a result, appreciated by As. 1½ to Rs. 3-8½. Shivrajpurs showed no change at Rs. 75-8. Among miscellaneous industrials, Bombay Burmahs met heavy realising and dropped from Rs. 474-6 to Rs. 463-2. B.I.Cs were quiet at Rs. 8-14. Killicks shed Re. 1-4 to Rs. 178-12. National Rayons were on offer and suffered a fall from Rs. 207-12 to Rs. 201-8. Tata Chemicals were fairly steady at Rs. 16-15½ on reports of the Government's decision to give protection to bleaching powder and caustic soda and improvements in prices of soda ash. Tata Oils drifted lower by As. 12 to Rs. 40-12. Wimcos had business Re. 1-4 lower at Rs. 212-8.

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, *2nd February*

With tea shares continuing in the lead, steady conditions were again witnessed on the Calcutta Stock Exchange during the week under review. Anticipations of a favourable budget, likelihood of a settlement in the Indo-Pakistani disputes which can improve trade prospects for Indian consumer goods in Pakistan, and the general belief that the conflict in Formosa would not lead to World War III, were factors which aided sentiment, although investors preferred to be cautious. Much attention is given to reports regarding Formosa, as if fighting breaks out among the big powers, India's industrial progress will be severely hampered. Since Monday, a slightly easier trend was in evidence. A cause for the pause was the reported submission of resignation by Mr. T. T. Krishnamachari, Union Commerce and Industry Minister, over disagreement on matters of policy. His exit would cause regret in both business and industry circles. The lack of business in jute goods for export resulted in a featureless jute section. Engineerings were in good form, as were miscellaneous industrials.

One of the strong features in the tea section was provided by Naga Hills, which, following the declaration of a satisfactory interim dividend, spurted to Rs. 52-2 from Rs. 39-8 previously. At Rs. 325, Hoolungoorees added Rs. 22, and Methonis with an attractive interim dividend of 10 per cent., realised Rs. 28, marking a gain of Rs. 2. Jutlibaris advanced from Rs. 23-12 to Rs. 24-10, Betjans from Rs. 51-8 to Rs. 52, Gungarams from Rs. 455 to Rs. 465, and Birparas from Rs. 295 to Rs. 304; subsequently, some of these counters lost their gains in part. Further support was given to Roopacherras, which, as a result, improved from Rs. 27-12 to Rs. 30. Nagaisurrees hardened to Rs. 392 from Rs. 383, and good attention was shown to Sungmas at Rs. 13. Hantaparas, at Rs. 405-8, were stronger by ten points. Banarhats moved up to Rs. 616 from Rs. 603. Other particularly interesting advances were Carrons at Rs. 322, Killicotts at Rs. 44-12, Central Cachars at Rs. 157 and Teliaparas at Rs. 212. In profit-taking, Bormahjans receded to Rs. 21-14 from Rs. 23.

In the engineering section, Indian Irons opened at Rs. 33-8 and soon touched Rs. 33-13 but profit-taking intervened and reduced the gain to Rs. 33-9 by Monday and to Rs. 33-5 by Tuesday. Today these shares recovered to Rs. 33-7. An impressive feature was provided by a jump to Rs. 126 from Rs. 94 in Indian Standard Wagons. Burn & Cos. were marked higher at Rs. 255, while Indian Galvanizings, at Rs. 20-15, registered a fractional improvement. On the other hand, Texmacos were shaded to Rs. 15-11 from Rs. 16-8, but regained today to finish at Rs. 16. Braithwaites after giving way to Rs. 24-6 from Rs. 24-9 recovered to Rs. 24-8.

In the jute section, a number of transactions reported losses. Speculative Howrahs were thrown back to Rs. 29-7 from Rs. 30-4 as were Nationals to Rs. 32-8 from Rs. 33-5. In the latter counter there was a subsequent recovery to Rs. 32-14. Reliances were lower at Rs. 14-8 as against Rs. 15 earlier. Barnagores realised Rs. 177, marking a loss of Rs. 2-8, while Nuddeas were supported at Rs. 51-8 as against Rs. 54 earlier. Indias were reduced to Rs 227 from Rs. 232, and Budge Budges to Rs. 188 from Rs. 195. However, Anglo-Indias, at Rs. 226, forged ahead by two points. Champdanies met with business at Rs. 168.

In common with the general trend, miscellaneous industrials after remaining firm up to the week-end began to record lower levels since Monday. Martin Burns were at one time better at Rs. 23-10 but subsequently were pulled down to Rs. 22-15. Imperial Tobaccos fluctuated between Rs. 11-8 and Rs. 11-12, closing at Rs. 11-12. Niccos were quiet at Rs. 22, Indian Cables returning Rs. 24-1 from Rs. 24-3. Indian Coppers were the forefront, maintaining a fractionally higher of Rs. 3-9, Sone Valley Cements being around at Rs. 7-12.

Carews in the sugar section rose to Rs. 19 from Rs. 10-4 on dividend rumours but reacted to Rs. 10-9. Belsunds were steady at Rs. 10-9 and Balrampores were traded at Rs. 9-8.

Among paper mills, India Paper Pulps were raised to Rs. 248 from Rs. 240 previously, while Titaghurs fluctuated between Rs. 41-10 and Rs. 42-6, and closed today at the lower rate. Orients were unchanged at Rs. 26-5. Profit-taking continued in Indo-Burmas in the oil section, and the rate was further lower at Rs. 124-8.

In the coal section, a slightly steadier trend was in evidence in view of the lower levels. New Beerbhoums were bought at Rs. 20-4 earlier but today lost the gain of As. 4. Pench Valleys at Rs. 24-7 added three annas. Bengals were shown attention at Rs. 505 but the improvement of one rupee was lost today. East Indias were hammered down to Rs. 28-3 from Rs. 28-12, Talchers being sought at Rs. 3-6.

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, *2nd February*

The moderate enquiry witnessed last week on the Madras Stock Exchange gathered some further strength this week. Led by teas, most of the planting shares headed forward on sustained support from Bombay and North Indian operators. The recent imposts on tea and the levy of agricultural income-tax from the forthcoming financial year had very little effect on the trend of the market. Textile scrips too were slightly in favour on good enquiries from the various consuming centres in India. They would have been better if overseas enquiries for cloth had been encouraging. The miscellaneous scrips, however, turned out to be a solitary exception in that they ruled virtually listless. But the undertone in others was generally strong.

The textile section was very active. Thus, Ashers improved from Rs. 100 to Rs. 105 and Bangalore Woollens from Rs. 407 to Rs. 408. Radhakrishnas Rs. 100 paid-up put on Rs. 2-8 to Rs. 220 and 'B' Rs. 2 to Rs. 110. Rangavilas gathered Rs. 4 to Rs. 64 and Venkatesas Rs. 3 to Rs. 115. Saradas were done higher at Rs. 78 as against Rs. 75. Dhanalakshmis, however, lost Rs. 4-8 to Rs. 303, Lakshmis, Rs. 50 paid-up, Rs. 2 to Rs. 144 *cum-div.* and Lakshmis 'A', Rs. 25 paid-up, As. 12 to Rs. 72 Rajalakshmis eased from Rs. 139 to Rs. 138.

Among plantings, teas presented a firm tone. Coorg teas gathered As. 3 to Rs. 9-15 and Haileyburias As. 4 to Rs. 28-12. Highlands were better by As. 8 at Rs. 17-4 and Nilgiri teas by As. 4 at Rs. 16-8. Non such teas improved from Rs. 35-12 to Rs. 36-8 and Parksides from Rs. 22-4 to Rs. 24-2. Peermades gained Re. 1-8 to Rs. 47 and Talyars As. 9 to Rs. 17. United Nilgiri teas changed hands at Rs. 298 *cum-div.*, as against Rs. 290 *ex-div.*

Rubbers revealed selective buying. Be Bes hardened by As. 2 to Rs. 3-14 and Cochin Malabars by an anna to Rs. 7-5½. Mercaras were higher by As. 5 at Rs. 5-13 and Vaikundams by Re. 1-4 at Rs. 23-8. Vellimalais gathered As. 4 to Rs. 6. Nenmenys, however, lost As. 2 to Rs. 11-10 and Rajagiris an anna to Rs. 14-6. Kallas were lower at Rs. 5-6 as against Rs. 3-7.

In the coffee section, Coffee Lands advanced from Rs. 16-4 to Rs. 16-11 and Cochin Malabars from Rs. 7-4½ to Rs. 7-5½. Puthuttotams gained an anna to Rs. 4-9. But Kadur Coffees were quiet at Rs. 1-10½ and Mysore Coffees at Rs. 1-11½.

Miscellaneous scrips, however, lacked enquiry. Mysore Gold lost As. 8 to Rs 3-6 and Mysore Papers As. 4 to Rs. 17-12. Rallis declined from Rs. 50 to Rs. 48. Mysore Glass and Enamels were lower by an anna at Rs. 3-13 and Aluminium Industries by As. 2 at Rs. 17-14 *cum-div.* Bruntons, however, put on As. 4 to Rs. 5-12 and Travancore Cements As. 3 to Rs. 7-9. Mettur Chemicals were slightly better at Rs. 8-13 *cum-div.* Textools shot up from Rs. 95 to Rs. 100.

CZECH EXHIBITION OPENS IN BOMBAY

Intending Indian importers of Czechoslovak manufactures, especially plant and machinery, will have an opportunity of making up their minds after the firsthand, on-the-spot study of the goods at the Czech Industrial Exhibition which opened on the 4th inst. The exhibition is housed in a semi-cylindrical building, completely made of wood, specially imported from Czechoslovakia. The building was constructed by Czech technicians under the personal guidance of Mr. Jan Buda, Director of the Czechoslovak Chamber of Commerce. In it will be on show, as stated last week, £200,000 worth of goods ranging from mighty aeroplanes and heavy machinery to exquisite and fragile glassware and ceramic works. Many of the heavy machinery on show in the 3,000-square yard pavilion will be seen in action.

An outstanding feature of the exhibition is the novel shuttleless jet loom. This loom has a performance of 400 revolutions a minute which is almost twice the speed of the best shuttle looms today. As a major producer of textiles in the world, India should be interested in this new type of loom.

NEWS IN BRIEF

INDIA'S total tea crop in 1954-55 is estimated at 639 million pounds.

The annual production of wool in the country is estimated at between 50 and 55 million pounds.

The Government of India sanctioned loans aggregating about Rs. 16.96 crores and grants amounting to Rs. 2.30 crores to the various States for taking up different types of minor irrigation schemes in 1953-54.

About 1,29,000 acres of land were reclaimed and 4,00,000 acres brought under irrigation within two years of the implementation of the Community Projects and National Extension Service schemes, i.e., up to October, 1954.

The Central Government has decided to make export allocations to established exporters at Bombay Port of manganese dioxide/peroxide for quantities equal to 85 per cent. of their best year's exports during the calendar years 1952 and 1953. The quotas will be valid for shipment till 31st December, 1955.

Exports of iron and steel drums and barrels will be licensed freely for export, as an experimental measure till the end of April, 1955. Export licences will be granted subject to the condition that no extra steel, in addition to what they are entitled to under the normal distribution scheme, is claimed by manufacturers to replace the quantity consumed for export.

Applications for the export of the following semi-manufactures and manufactures of non-ferrous metals will be considered by the Government of India on an *ad hoc* basis till the end of June, 1955: (1) sheets and circles of copper, brass and aluminium; (2) strips, plates, bars, rods, pipes and tubes of copper and brass; (3) copper wire; and (4) copper manufactures.

A shipment of 3,600 tons of rails, first to be imported from Japan since the war, out of nearly 40,000 tons ordered by the Union Government from Japanese manufacturers, has been received in Bombay. The entire consignment is earmarked for the Western Railway. 6,000 tons of Japanese steel consigned to the Government of India have also been received in Bombay.

The Madhya Pradesh Government's proposals for advance implementation of certain electrification schemes, which are at present included in the second Five-year Plan, were examined last week by Mr. S. V. Ramamurthi, Adviser, Planning Commission. This advance implementation is said to be necessary, in view of the rapidly increasing demand for power in the State. All the electricity schemes included in the first Five-year Plan have been completed.

The Government of India has decided to allow further export of a limited quantity of pulses. Internal dealers in pulses, who had a minimum turnover of Rs. 50,000 in any of the three years 1951, 1952 or 1953, will be permitted to export, subject to a maximum allotment of 50 tons to any one shipper from Bombay, Calcutta and Madras and 25 tons from Jamnagar, Cochin, Tuticorin and Visakhapatnam.

The all-India first estimate of small millets for the year 1954-55 puts the current year's area at 10,124,000 acres, as against the corresponding estimate of 9,796,000 acres for the previous year, thereby showing an increase of 328,000 acres or 3.3 per cent. This is the first time that the all-India first estimate of small millets is being issued. The estimate does not cover the entire area sown to these crops. It relates to *kharif* small millets only and does not include area sown to *rabi* small millets, information for which will be included in the second estimate.

The Government of Mysore has approached the Centre for the imposition of a total ban on private trading in silk yarn imported from Japan. This was disclosed by Mysore's Industries Minister at a Press conference in Bangalore recently. The entire Japanese imports, the Minister opined, should be held as a Central reserve and released gradually, as demand develops, at competitive rates. The above suggestion is based on the ground that Mysore produces nearly 60 per cent. of silk fabrics made in India, and it cannot afford speculation and price cutting which may be caused by the import of 2 million lbs. of Japanese silk yarn for which permit has been given.

The Government of India has decided to set up a committee, with Mr. G. B. Kotak as Chairman, to advise it on the more intensive utilisation of indigenous capacity for railway equipment, particularly for the manufacture of special types of wagons, narrow-gauge locomotives and other stock in-and fittings used on railways, which are still imported. The terms of reference of this Committee will include problems relating to self-sufficiency in the production of railway equipment to the maximum extent possible. It will specifically locate idle capacity in India for the manufacture of railway equipment and rolling stock which are at present imported; and suggest ways and means of expanding the existing plants and/or of setting up new industries in India for producing items of railway equipment which cannot at present be manufactured with the existing resources.

• • • •

From Abroad

The European Coal-Steel Community has once again raised the prices of certain steel products, some of them above those in the German domestic market.

Corporate cash dividends in the U.S. paid during 1954 were 8 per cent. higher than in 1953, the aggregate payments being $9,198 million, as against $8,501 million. It is believed that payments in 1955 will be still larger.

Industrial investments of about £15 million have been financed in Belgium under the State-aid scheme brought into operation in August, 1953. Under the scheme, advances to industrialists are provided at reduced rates of interest or under Government guarantee.

The Ceylon Government has expressed a desire to negotiate with China a revised price for the rubber exported in barter for rice under its five-year barter deal with China. The market price of rubber in Singapore is now over 3d. above the barter price of 27d. per lb.

Orders for 266 ships representing 634,000 gross tons were booked by British shipbuilders during 1954. Of these, more than half were placed in the last quarter. The total order books of U.K. shipyards at the end of the year stood at 773 ships, or 4.3 million tons, valued at £500 million, as compared with 5.5 million tons a year before and the peak of over 7 million tons in mid-1952.

An agreement on the necessity of carrying through a still more restrictive credit policy was reached between the Riksbank and Sweden's commercial banks on 18th January. The general principles now in force concerning the liquidity of the banks will be prolonged until further notice. A system of voluntary credit restrictions has formed part of the country's economic policy since 1952.

Investments in Norway in 1953 amounted to 35.4 per cent. of the national production, according to an economic analysis issued by the Research Department of the Norwegian Central Bureau of Statistics. The corresponding figure for 1952 was 28 per cent., as compared with Great Britain 12, Belgium 15, Denmark 17, Netherlands 17, the U.S. 18, Sweden 21 and Western Germany 25.

Caltex Limited is likely to take up oil exploration in Pakistan. Negotiations between the Pakistan Government and Caltex Limited, now going on for some time, are reported to be nearing a successful end. The terms to be offered are expected to be similar to those offered to Standard-Vacuum Oil Co., the first American concern to join the search for oil in Pakistan. The S.V.O.C. has started operations to explore 10,000 sq. miles each in both wings of the country.

A new Colonial Development and Welfare Bill introduced in the House of Commons on 26th January and read a first time provides an extra £80 million from the U.K. for colonial projects during the next five years. The funds, in fact, available during that period will, it is pointed out, amount, under this heading, to nearly £120 million; for, in addition to the £80 million of new money now announced, nearly £40 million provided and fully allocated under the existing Acts will be carried over into the new period.

A report has been drawn up in Britain which proposes that scales of pay for a section of women employees be increased by seven equal annual instalments, so that, on the payment of the seventh instalment, the scales for women become identical with those for men. Subject to the final acceptance of the proposals by the staff side, the British Government proposes to put them into operation as from 1st January, 1955. The process will then be completed on 1st January, 1961. The proposals apply to the non-industrial civil service only. For the industrial civil service, the Government considers it essential to follow the fair-wage principle and to continue to pay women employees in accordance with the general practice in the trade concerned.

Industrial investments in Sweden during 1954 are estimated at Kr. 2,488 million (£172 million), or about 10 per cent. more than in the preceding year, according to an investigation by the Swedish Board of Trade into 4,000 enterprises representing 80 per cent. of the country's total industrial labour force. Estimates for 1955 foreshadow aggregate investments of Kr. 2,740 million. Most of the increase in investments in 1954 related to machinery. Investments in buildings went up by 12 per cent. and in power-plant construction by 7 per cent., while investments in housing for workers and employees were lower than in 1953. The scheme for 1955 indicate a rise for practically all kinds of investments, including a 50 per cent. increase for industrial buildings, while the purchase of new machinery is likely to remain more or less unchanged at Kr. 1,135 million.

The President of the Board of Trade, U.K., said in the House of Commons last week that he had no evidence that the export duty on Indian and Ceylon tea had had any significant effect on the price at auctions in London and Calcutta. He added that he had not discussed the export duty with the Governments of India and Ceylon. This was a revenue matter for the Indian Government. There was a limit to the extent to which Britain could protest about a revenue action of this kind, he observed. The Economic Secretary to the Treasury added that he saw no reason for an enquiry into the profits of tea companies. There did not appear to have been any significant increase in profits from the blending, packing and distribution of tea in Britain. The price of tea reflected the current strength of international demand and supply. Producers were, therefore, unable to control prices.

PERSONAL

MR. John Sherman Cooper, former Republican Senator of Kentucky, has been nominated U.S. Ambassador to India and Nepal.

Mr. F. C. Badhwar, former Chairman of the Railway Board, has been invited by the Ceylon Government to advise it on the ways and means of improving the transport facilities in the Island.

Mr. Hammad Tewfik Hammad, Finance Minister of Sudan, arrived in Bombay on Tuesday this week on a goodwill mission. He will also seek to re-establish trade contacts between the two countries.

Mr. Frederick C. E. Goss, technical assistant and signal engineer of the Westinghouse Brake and Signal Company, London, has been appointed principal lecturer at the U.N. Railway Training Centre in Lahore.

Mr. N. Sundaresan, recently retired Deputy Governor of the Reserve Bank of India, will shortly join the Colombo Plan Administration and advise the Ceylon Government on matters relating to its finances and public debts.

Mr. Lalchand Hirachand, Chairman, and Mr. V. M. Meswani, General Manager, of the Premier Automobiles Ltd., Bombay, left for the U.K. and the U.S. early this week for further discussions with their associates in connection with the Company's manufacturing programme.

Mr. Harekrushna Mahtab, former Chief Minister of Orissa and Union Minister for Commerce and Industry, has been appointed Governor of Bombay. Mr. Mahtab is expected to assume charge in the first week of March next.

Mr. S. J. Wright, Consulting Engineer to the Royal Agricultural Society, arrived from the U.K. last week to advise the Union Government in connection with the tractor testing station proposed to be set up near New Delhi. The services of Mr. Wright have been made available under the Technical Co-operation Scheme of the Colombo Plan.

Mr. G. D. Somani of the Shree Niwas Cotton Mills Ltd. and Mr. J. C. Burns of the Finlay group of mills have been elected Chairman and Vice-Chairman, respectively, of the Millowners' Association, Bombay, for 1955-56. The other members of the Committee are: Messrs. Vithal N. Chandavarkar, T. V. Baddeley, Dharamsey Mulraj Khatau, Krishnaraj M. D. Thackersey, Neville N. Wadia, Ramnath A. Podar, Radhakrishna Ramnarain Ruia, Motilal Tapuriah, S. P. Jain, E. D. Sheppard, Pratap Bhogilal, Arvind N. Mafatlal, Naval H. Tata, Babulal Bubna, F. H. Kemple, R. L. Coghlan, E. F. Morrey, and R. S. Khaitan.

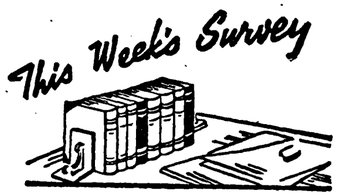
"COMMERCE" 1930

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *1st February*

Tea Trade Troubles

We await with considerable interest—with a certain amount of anxiety also—the receipt of Brooke Bond's annual report on the tea trade. The London correspondents of the *Statesman* and the *Englishman* have cubbed brief exerpts from this pronouncement; but beyond the statement that Mincing Lane is profoundly disturbed by the large crops grown and the big stocks held, we are left unenlightened as regards today's actual position. The information we ourselves have received from London is, in point of fact, far more disconcerting than what Messrs. Brooke Bond state in their review. The total stocks of tea in London alone are about 35,000,000 lbs. greater than at this time last year. As an addition to the burden thus created the amount of tea afloat for London is also in excess of the quantity for the corresponding period of last year. For some considerable time past many estates have been selling their crops at prices materially below production cost, and it is believed by Mincing Lane experts that, of the total quantity of tea put forward, about 80 per cent. has been sold at a loss. These factors are sufficient to justify the tentative restriction scheme (formally entitled "limitation of output") which has been officially recommended. The tea industry is no stranger to the idea of regulating output by concerted arrangements between producers, and its experience has, on the whole, been successful—as a temporary expedient, at any rate. The reason is not far to seek. Until the war the policy of the bulk of Indian producers was framed on the most conservative lines, the disastrous reversal of which, dictated originally by war-time necessities, is the key to most of the industry's post-war vicissitudes.



NEW U.S. AMBASSADOR TO INDIA

THE U.S. has been singularly well represented by its ambassadors in India. The choice has always fallen on the right man. In one sense, the choice is really not so easy to make. For, more than the ambassador of any other country in India, the U.S. Ambassador must learn to interpret his country to India and India to the U.S. This is a particularly delicate task. The small differences in the international outlook of the two countries are easily magnified, whereas the abiding common elements in the outlook of the two countries are apt to be ignored. The U.S. Ambassadors in India have displayed a commendable capacity to see the Indo-U.S. relations in the correct perspective. This tradition will no doubt be enriched by the new U.S. Ambassador, Mr. John Sherman Cooper.

Mr. Cooper enjoys a wide reputation as a man of liberal outlook. He was one of the few Republicans openly to challenge Senator McCarthy. He has had a long career of public service dating back to 1928 when he was first elected, at the age of 26, to the legislature of Kentucky. He has held several judicial appointments and has been a member of a law firm. He served in the Army (1942-46) and assisted in reorganising the German judicial system, after the cessation of hostilities. He has also had wide experience in the field of international affairs. He was the U.S. delegate to the U.N. General Assembly in 1949, and alternate delegate in the following two years. In the Senate, to which he was elected in 1946 and after a defeat in 1948 was re-elected in 1952, he was a member of the Special Committee considering recommendations for revision of the U.N. Charter. A firm believer in the U.N., Mr. Cooper has frequently expressed the view that the world's economy would not be restored until the U.S. exercised its full leadership and was "prepared to make some sacrifices in terms of money."

SECOND FIVE-YEAR PLAN

Now that the first Five-year Plan is drawing to a close, there has been considerable speculation about the size and the nature of the next plan. This is as it should be, considering that, if it has to be free from the shortcomings which vitiated the present plan, much thought and care should go into the preparation of the next. The lesson of the first Plan, as is now becoming increasingly clear, is that it is not enough merely to earmark money for a project. What is equally necessary is that the project should have been carefully thought out and the men to carry it out found for the job.

Wisely, the Central Government has lost no time in consulting the several interests concerned about the shape that the next Plan is to take. Among the groups that are being consulted, the academic economists are one. A Panel of Economists has been constituted with the Finance Minister as Chairman, to discuss questions relating to the formulation of the second Plan. Addressing the Panel, which held its meeting in New Delhi last week, Mr. Deshmukh admitted that it could not be said that the first Plan had provided for optimum utilisation of the available physical resources of the country. The main question, he said, was to what extent a physical approach to the Plan would produce better results in terms not only of national income but also of employment.

Apparently, there has been some confusion between the so-called "financial" emphasis in the first Plan and the so-called "physical" emphasis that is sought to be laid—or that some interests want to be laid—in the next Plan. The over-enthusiastic planner is likely to ignore financial considerations, while a too conservative planner is likely to be so unimaginative as not to undertake any planning at all. But "physical" considerations in any sound plan cannot be isolated from financial considerations. From this point of view, the Panel of Economists did well to emphasise that the physical and financial approaches to planning were complementary and not mutually exclusive, and that, in a money economy, the financial aspects of planning should receive careful consideration along with the physical possibilities and the resources available. This was one of the conclusions which emerged from a review of the econometric studies prepared by the Indian Institute of Statistics. Another important conclusion that emerged from the discussion was that the objectives of the second Plan must be to increase in incomes, together with a substantial expansion in employment, and that these twin objectives should be related to the pattern of income distribution that is felt to be socially desirable.

Following these discussions, the Planning Commission has appointed a Standing Committee of the Panel of Economists to map out the studies which the economists will undertake urgently in the field of economic policy and institutional changes. Besides the Finance Minister, who will be the Chairman, the Committee will consist of Mr. J. J. Anjaria, Prof. C. N. Vakil, Dr. V. K. R. V. Rao, Dr. B. K. Madan, Dr. Balakrishna, Mr. D. G. Karve, Dr. S. K. Muranjan, and Mr. A. K. Das Gupta. This Committee, it is stated, will suggest a programme of studies to be commenced immediately. It will set up for this purpose working groups of economists to work in co-operation with the economic staff of the Planning Commission and in the Ministry of Finance. A continuous liaison between the Standing Committee and the Indian Statistical Institute will also be established. The joint contribution of this committee and the Institute —these two bodies consist of well-known economists in the country—to the task of formulating the Plan will be watched with interest.

AFTER-SALES SERVICE OF TRACTORS

After nearly two years of labour, the Committee on servicing of tractors (Chairman: Mr. M. R. Bhide, Joint Secretary in the Union Ministry of Food and Agriculture) has submitted its report. The most important feature of the Report is the prescription of standards to regulate the after-sales service of tractors in India. For, without such standards, the progress of mechanisation of agriculture is bound to be retarded. As the Committee itself has significantly pointed out, a high percentage of tractors has been rendered idle, after giving satisfactory service for a short time, for want of proper maintenance and service facilities. The result is a growing number of dissatisfied customers and the consequent slowing down of the progress of mechanisation of agriculture.

Accordingly, the Committee has recommended that every importer of diesel and other type of tractor will have to make arrangements for maintaining an adequate stock of spare parts with the dealer, distributor, or sub-distributor in the district, *taluq* or *mofussil* headquarters for being made available to customers at reasonable prices within a reasonable period from the time of receipt of an order. The Committee has stressed that the importer should maintain properly equipped service stations for repairs at convenient centres. The dealer or the importer should give a guarantee concerning the service arrangements when effecting sale of machinery. Similarly, a guarantee to replace defective parts noticed within the first six months should be given. The sellers should also undertake to give three free servicings in the first six months. The Committee has suggested that the proposal for tractor testing station should be finalised and the station opened as soon as possible. It emphasises that such an organisation is essential for exercising proper control over the various types and makes of tractors.

It is true the Committee admits that, as in the case of pricing of spare parts, the servicing charges depend on so many variable factors. Nevertheless, it has felt that it should be possible to prepare an estimate of charges for standard items of work required in the repairing and servicing of tractors, while special items can be covered by separate charges. The standard charges should cover only labour and supervision, the cost of spares used being charged for separately. As most of the repairs are to be carried out in or near the area of operation, the importers of tractors and spare parts should be willing to make available to farmers the services of an experienced travelling mechanic in an emergency.

Another significant recommendation of the Committee is that active steps should be taken to develop the internal production of tractors, tractor-drawn and similar agricultural implements and spare parts so as to achieve self-sufficiency in respect of these items within the minimum possible time. It wants this very important matter to be examined at the appropriate level by the concerned Ministers of the Government of India at an early date.

The Committee has also stressed the [illegible] for making available proper training fac[illegible] It has pertinently held that arrangement[illegible] the training of drivers on the particular types of machine should be made by the importers at frequent intervals. Although the ideal arrangement would be to train the farmer himself in the art of driving and servicing of tractors, it has felt that it would, perhaps, be too much to expect it at this stage. It may, however, be possible for the dealers to give further training to the drivers in the servicing of tractors, especially during the off-season.

WORLD WHEAT PACT

Will it be advisable on the part of the United Kingdom to continue to keep out of the International Wheat Agreement (I.W.A.)? According to the National Federation of Corn Trade Associations, it would be so, so long as the major exporting countries continue their monopolistic selling policies. The Federation has pointed out that, during the entire period of the first Agreement between 1949 and 1953, the exporting countries had charged the maximum price of $1.80 a bushel. Thus, the minimum price, according to the Federation, was of little significance. It has further held, that the very fact that, during the currency of the second Agreement, the exporting countries have not been able to maintain the new maximum price of $2.05 a bushel has amply justified the U.K.'s decision to keep out of the Agreement. The price has actually fallen to $1.72 a bushel, as against the maximum price of $2 a bushel, which the U.K. wanted the exporters to fix and which was refused by them. The Federation has, therefore, urged the U.K. not to participate in the Agreement.

In this connection, some wonder whether the I.W.A. has served to maintain a stable level of prices at all. They hold that the I.W.A., at least during the currency of the first Agreement, far from providing stability to wheat prices, which was the objective of the Agreement, had merely imposed a certain rigidity on prices. In fact, it is this consideration that leads these observers to conclude that price stability can be better achieved through a free market than through such pacts. For they say that shortages are only a temporary phenomenon and that they are best eliminated by high prices; the higher the price, the greater the economy in consumption, the bigger the incentive for the use of substitutes and finally the greater the desire to produce more in order to take advantage of the high level of prices, which would inevitably bring down the price levels in the end.

There are, however, others who argue that it is wrong to say that the first I.W.A. failed in its purpose. They point to the fact that, during the currency of the first Agreement, there was no obligation at all on the part of the U.K., or for that matter any importing member, to buy wheat from the U.S., Canada or other exporting member at the maximum price; it was free to import from Russia, Argentina, Turkey or any other non-member. It avers that the forces that pushed the prices towards the maximum were external to the I.W.A. Demand and supply forces, rather than the I.W.A. or exporters, should be held responsible for prices fluctuating near the maximum levels. Had there been no ceiling price, they feel that the consuming countries would have had to pay much higher than I.W.A. maximum. In fact, the free market prices, they point out, were higher than the I.W.A. price. According to this school of thought, the rigidity of the Agreement admirably served the interests of the U.K. at that time. They further argue that the present fall in wheat prices of the I.W.A. would have occurred even if the U.K. had joined the Pact.

GERMANY CUTS TARIFFS

At long last, the West German Lower House has passed the Bill which seeks to reduce import tariff rates on more than 1,000 items. The reduction was scheduled to come into effect last autumn, but a "quarrel" about the procedure between the Government party and the Opposition had held up the passing of the Bill. Most of the reductions now envisaged apply for a period of one year with effect from 1st April, 1955, and cover one-sixth of all German tariff items. The steepest cut in tariff is in respect of lorries weighing 13 tons and over; these will bear a duty of 15 per cent., as against 30 per cent.

Motor cars (up to 2,000 c.c.) also bear a lower rate of duty of 22 per cent., as against 30 per cent. Duties are proposed to be cut from 18½ per cent. to 15 per cent. on steel bars, from 25 per cent. to 20 per cent. on steel strips, from 28 per cent. to 18 per cent. on cold rolled sheet (1 mm. or thicker) and from 25 per cent. to 22 per cent. on rayon staple fabrics. The other items on which the tariff rates are proposed to be cut include, among others, a wide range of textiles, glass, chemicals, household appliances, musical instruments, agricultural implements, cutlery and jewellery. All rates of over 30 per cent. are also to be reduced by varying degrees.

Presumably, W. Germany now feels that it is economically strong enough to liberalise imports. Recent indications are that industrial output has been steadily moving up. The index of industrial production (Base: 1950=100) during September, 1954—the latest month for which statistics are available—stood at 164, as against 150 a year before. The improvement has been shared principally by investment goods and other producer goods, the indices of which during the one-year period under review have gone up from 165 and 140 to 188 and 164, respectively. The index of consumer goods production, too, has risen, albeit slightly, from 152 to 157.

Already, W. Germany is offering stiff competition in world markets for several goods and commodities. An indication of this is provided by the marked increase in exports of late. During the month of September, 1954, for instance, W. Germany exported goods worth 1,838 million DM., as compared with 1,504 million DM. in the same month in 1953, representing a rise of 22.2 per cent. The increase in the value of exports followed the rise in the quantum of exports, the index of which over the year ended September, 1954, advanced from 180 to 226, or an increase of 25.6 per cent. Thanks to the increase in exports, the foreign exchange assets of W. Germany have recorded a distinct improvement; these assets aggregated $1,903 million at the end of September, 1954, which compare favourably with $1,434 million a year before. It is this marked improvement in foreign exchange resources and the high degree of efficiency achieved by German industries which may have prompted the West German Government to bring about a downward revision in tariffs.

PRIVATE ENTERPRISE

It was only last week that we observed, while editorially commenting upon the resolutions passed at the Sixtieth Session of the Congress, that a definite place had been accorded to the private sector and that the need for encouraging it to play its role effectively had been recognised. This view is also shared by Mr. N. S. Shodhan, President of the Gujarat Chamber of Commerce. In the course of his speech at the recent annual meeting of the Chamber, Mr. Shodhan maintained that, in the society of a socialistic pattern as envisaged by the Government, private enterprise had a place and an opportunity for expansion. He, therefore, exhorted the business community to understand the changing times when such a socialistic economic pattern had been adopted by the Government as a definite policy. He rightly felt that private enterprise could contribute substantially to the industrialisation of the country, provided this socialistic policy was implemented on right principles. In this connection, Mr. Shodhan alluded to some disturbing features of the Government's economic policy. He pointed out that, "when proposals to replace the existing Articles 31, 31A and 305 of the Constitution of India are before Parliament, proposed amendments in the Companies Act are awaiting Parliament's confirmation, attempts to disband the managing agency system which has contributed largely to the industrialisation of the country are made, and the industries are taxed heavily, it is problematic how far the private enterprise will be able to contribute its share." He hoped that the Government would tackle these issues in a realistic manner, so as to enable the private sector to play its role in the development of the country.

Proceeding, Mr. Shodhan urged the Government to give due importance and consideration to the views of the business community. He cited the instance of the British Government which never hesitated to consult commercial bodies before any step affecting the trade and industry of the country was taken, and wanted the Government of India also to adopt the same policy. By doing so, the Government would, he said, be in a position to appreciate the difficulties of trade and industry.

OFF THE RECORD

By "Rover"

THERE is something radically amiss with Mr. Nehru's official family at New Delhi. I also cannot escape the impression that, at no time since Mr. Nehru formed his second Government in 1952, has the Union Cabinet worked as a happy family or a harmonious team. It takes more than a mere theoretical agreement about some vague and not very clearly defined principles and policies, for a got-together group of men and women, each with his own rough edges and sharp corners, to coalesce into a single design or pattern. The Prime Minister does command respect from all of them. He has attained a position where he is able to exercise almost unquestioned authority in the final disposal of great and small issues. But neither respect for a leader nor the authority wielded by him can so weld a group together as to function as a single personality. Perhaps, a greater degree of nearness, warmth and intimacy might achieve this alchemy.

But this very greatness of the Prime Minister and the increasing aloofness which surreptitiously but almost inevitably results from it, have possibly rendered it difficult for him to radiate this warmth and intimacy to all but a very few of his colleagues. Most of them have not been able to keep pace with him either emotionally or in his flights of thought. I suspect that at least some of them by this time have come to feel a lack of response, understanding and even cordiality, from one who leads them. They, perhaps, have come to feel that they are being asked merely to follow in the dark, in unlighted and tortuous labyrinths and round unfamiliar corners. Some of them, the lone ones especially, falter and fall and get up, all bruised and hurt and humiliated; the distance between the members of the team or the small groups into which it is being broken up widens. Some who have cause to feel more unfriended and depressed are apt to want to fall out and end what looked like a glorious adventure at the outset.

It may be that I have given full rein to my imagination and allowed it to run riot. The grimness of the picture I have drawn of the Union Government being in the process of virtual disintegration may be overdone. But I insist that the sketch, in its outlines and its essence, is not unreal. I might as well confess that I have stumbled upon this explanation, in my search for the key of the riddle of the repeated reports of Mr. T. T. Krishnamachari's resignation from the Cabinet.

I would like you to recall that there was a time when Mr. Deshmukh, the Finance Minister, did not feel comfortable, if not altogether unhappy and frustrated, in his present job. I doubt if this has happened only once in his case during the comparatively short life of the present Government and wonder if even now he is not uneasy about things in general. Mr. Giri, a comparatively mild and yielding man, though a likeable one, was never allowed to feel at home in his billet, as a result of a series of machinations of certain fellow workers in his own chosen field. Disillusioned and unhappy, this sincere and selfless worker in a good cause was driven so desperate that he came to resign on a wrong issue and sought relief in the wilderness.

And now Mr. T. T. Krishnamachari, a really capable man in charge of the Commerce and Industry portfolio, has found it necessary, for the second time in three months, to express his desire to be relieved of his responsibilities. The last straw on the camel's back which breaks him is not necessarily the heaviest. The specific issue on which a Minister takes this desperate step of jeopardising his public career is nothing more than this last straw. It is only the immediate cause and one has to look deeper to understand the cumulative force of various tangled issues and suppressed and subconscious emotional strains, which have brought about the final decision. Human behaviour, even at its most rational level, is never patterned on a purely logical sequence of thought. It is, therefore, not to logic but to psychology and, may be, even to psychiatry, that one must look for a valid and satisfactory explanation for it.

Mr. Krishnamachari may have resigned, as is reliably reported, because of the Prime Minister's reluctance to undertake immediately an urgent reorganisation of certain Ministries dealing with industries, which would secure a unified and rationalised direction of industrial development as a whole under a single Ministry. On purely logical grounds, nobody could resist this wise suggestion. At present, the position of the Minister for Industry is very anomalous indeed. Today, he is not really the Minister for Industry but a mere watchdog of the Government standing on guard duty over the private sector, which is disliked and distrusted by a large number of his colleagues. He is on police duty, as it were, and not allowed any scope for a constructive build-up of industry as a whole.

Unless there is a proper co-ordination and constant adjustment on agreed lines between the two sectors, there could be no worthwhile development. It is bad enough that there should be no single authority, short of the Cabinet as a whole, to bring about this adjustment at various levels and to provide the requisite degree of co-ordination; it is much worse when Ministers in charge of the various sequestered chunks of industry, though belonging to the same party, have basic differences in outlook and attitude, especially on economic matters. This state of affairs is bound to make for friction and irritations and give rise to a feeling of frustration to those who have strong convictions and are not given to join cliques or groups within the bigger and rather omnibus body like the Central Cabinet.

Mr. Krishnamachari, as he comes from a different world and lives on an entirely different mental plane from some of his more bigoted colleagues, with single-track minds unlike his own, possibly finds himself isolated and unfriended. And when the Chief has tended recently to lean more and more towards the radically leftist group, which has been strengthened with the addition of the new Labour Minister and emotionally to get farther and farther away from his Industry and Commerce Minister, one should not be surprised at the decisive step taken by Mr. Krishnamachari. The drift will not end with the exit of this able Minister. We are heading for high and heavy seas and I have a fear that the ship of State will roll and pitch perilously before it reaches calm waters again.

Republic Day Honours

It warms the cockles of my heart to know that we have got a Government in the country, which is not altogether impervious to public opinion. I find it somewhat reassuring to know that authority, so far, is not past the stage, where it is not prepared to acknowledge its mistakes, and, where possible, to make amends for them. I hasten to acknowledge this because evidence of such enlightenment on the part of Governments is a matter of very rare occurrence. Except for the few—very few, indeed—amongst political leaders, who are moved by the spirit of genuine humility, most men and institutions who succeed in climbing to positions of power soon come to believe in their own infallibility. They are also encouraged to do so by the many satellites who surround them. Even where the errors are so glaring that they cannot be easily ignored, considerations of prestige weigh heavily with Governments and Ministers and make any form of atonement not only difficult but painful for them. Unfortunately, our idols are never ethically and intellectually as integrated as we fondly take them to be.

I was, like many of my fellow citizens, agreeably surprised last week at some of the features of the Republic Day honours list. To begin with, the list was not crowded by names of officials. This is a definite break in tradition and has to be heartily welcomed. All of us must be glad that the ugly feature of classifying the recipients of the Order of Padma Vibhushan as first class, second class and third class has been wisely done away with. For a democratic republic, this did sound rather inappropriate, even if not downright vulgar. For those who were placed in the second or the third class, it seemed more like a subtle humiliation than an actual honour. The whole idea of the Independence Day honours and awards must have been hastily worked up at the last moment, otherwise such a solecism on so happy an occasion could not have passed muster with so many men of culture and refinement in the Government of India and at the Rashtrapati Bhuvan. Happily now, instead of this crude and offensive numerical qualification, we have the artistically appealing cadres of Padma Vibhushan, Padma Bhushan and Padma Shri elaborating the Order of the Padma. My congratulations to whoever is responsible for this very apt and urgently called for innovation.

My qualified gratification, however, springs not merely from these changes in the pattern of awards, but primarily from the fact that the Republic Day honours list does not repeat the harsh injustice of pointedly marking out and deliberately degrading an important section of society, by its studied exclusion from the earlier list last August. I commented bitterly then on this pariah-like treatment meted out to the business community. I wrote in the issue of 21st August, 1954, in this column:

"As the list is fairly long, the omission is frightfully significant. It seems that every society, classless or caste-ridden, must have its own pariah group, and the followers of Gandhiji, in uplifting the Harijans, have obviously considered it necessary and politic to restore the balance of the new social structure by declassing business men and industrialists. Nobody can pretend that the absence of a single name from amongst a dozen or more leaders of this community of outstanding merit and records of service as valuable as that of any in the list, is a result of accident or oversight. It defines more clearly and more ominously than anything else the attitude of those in authority in the country towards commerce and industry, as well as those engaged in promoting these highly useful and socially valuable activities.... It is the political crowd with its cheap clap-trap and slogans, which is responsible for this deliberate slight to a useful section of society on such an auspicious day of universal rejoicing. I consider it a bad augury for the future, when the ruling clique in a country cannot lay aside its prejudices and sets out studiedly to ignore a whole class, without whose service and active assistance it cannot do even for a day."

Having felt so strongly on this matter, it was but natural that I should derive some satisfaction from the award of Bharat Ratna to that doyen of industrialists, Dr. M. Visvesvaraya, and of Padma Vibhushan to the more youthful but equally idealistic Mr. J. R. D. Tata in the Republic Day honours last week. This is, perhaps, about as much as one can expect from the Government, conscious of its dignity and prestige, by way of admission of its original mistake or atonement for the wanton and undeserved slight shown to a class which had given the country its present industrial and commercial structure, by its irrepressible spirit of adventure and tenacity of purpose against heavy odds.

At the same time, I cannot help feeling that this admission could have been made more

(*Continued on page 233*)

MR. T. T. KRISHNAMACHARI'S EXIT FROM CABINET WILL BE A SERIOUS LOSS

HIS CONTRIBUTION TO INDIA'S ECONOMIC PROGRESS SUBSTANTIAL

From A Special Correspondent

NEW DELHI, 1st *February*

THERE is considerable regret in well-informed circles at the reported decision of Mr. T. T. Krishnamachari, Minister for Commerce and Industry, to leave the Government of India That the Nehru Cabinet will doubtless become poorer by his departure does not require emphasis in these columns. During the last three years of his stewardship, Mr. Krishnamachari has acquitted himself creditably in the handling of his portfolio and is easily one of the ablest of the many Ministers who have had the privilege of working in the Government of India during the post-war period. Himself being a shrewd business man, he has displayed considerable vigour, drive, imagination and originality in the tackling of many difficult problems that confronted the Ministry of Commerce and Industry during the last three years. It is to be hoped that wiser counsels will prevail and that Mr. Krishnamachari will be enabled to retain his Ministership during the coming years, when several large-scale industries have to be established in the country.

DELHI LETTER

That Mr. Krishnamachari has both been an idealist and a realist may be seen from the fact that he was the first to say that the target for the steel and cement industries should be fixed at six million and ten million tons, respectively. These targets have now more or less become an accepted fact, although the present rate of production of steel hardly stands at 1.25 million tons per annum. In cement also, India has to more than double the current production, in order to reach his target. Ever since he assumed charge of the office, he has been devoting considerable attention to increase industrial production by removing the bottlenecks wherever he found them. That the present rate of production stands nearly 50 per cent. higher than that prevailing some three years ago, is a tribute to his work and careful planning.

Industrial Development Corporation

The idea of setting up an institution for the promotion of industries at a rapid pace was at first conceived by Mr. Krishnamachari. He also gave practical shape to this idea by getting the consent of the Cabinet for registering the National Industrial Development Corporation in October last. Although not much progress has since been made by this institution, it is felt that this Corporation, if developed with care, could play a notable part in the industrialisation of the country. The main object of this Corporation, as conceived by Mr. Krishnamachari, is to bring about a close co-operation between the public and private sectors in a number of industries and establish a tradition for the orderly progress of Indian industries in the coming years.

Yet another contribution of Mr. Krishnamachari to increase industrial production in the country was the appointment of an Engineering Committee which was entrusted with the task of investigating the idle capacity in many engineering industries and giving suggestions for the proper utilisation of the surplus machinery. In other words, the idea of the Minister was to narrow the gap between the installed capacity and actual production, by encouraging the industries to take up other lines of production by the installation of some additional machinery in their factories. As a result of the efforts of this Committee, Government has been able to co-ordinate production and many concerns have been able to benefit considerably by following the advice of this Committee. The Government, too, helped them in the procurement of foreign technical personnel through the U.S. Technical Aid Scheme and also through the Colombo Plan Consultative Committee.

Small-scale and cottage industries have not been neglected either. Mr. Krishnamachari has been paying particular attention to stabilise these industries. It was only a few months ago that he reconstituted various bodies such as the Handicrafts Board, All-India Handloom Board, etc., to devote special interest in the development of various industries. Again, the Small-scale Industries Board has recently been constituted on account of the efforts of the Minister and the four Regional Institutes for small-scale industries, together with various proposed branch institutes, are expected to improve the position of these industries in the coming months.

Being an experienced business man, Mr. Krishnamachari is fully aware that costs could be brought down and the income of the persons engaged in the industries be raised only by improved methods of production. It is from this angle that he approached the problem of the handloom industry. He impressed on the people working in this industry to form as many co-operatives as possible and gave liberal grants and loans to these societies for improving production of handloom goods and also for providing more marketing facilities for their products. He might have given greater help to these co-operatives but for the fact that they have not been able to utilise profitably the loans given by Government. In regard to *khadi* also, Mr. Krishnamachari has been able to provide liberal help for its promotion.

Foreign Capital

In another sphere, too, Mr. Krishnamachari's initiative has brought fruitful results. He has been a strong believer in associating foreign industrialists with their Indian counterparts, in the establishment of new industries. It is common knowledge that through his intervention, a number of successful deals has been effected during the last three years between the industrialists of this country and foreign *entrepreneurs* with the result that India has been able to secure the necessary technical know-how from abroad for strengthening its industrial structure. Further, he has been successful in impressing upon and persuading foreign commercial concerns in the country that they should adopt a more friendly and liberal policy in the matter of 'Indianisation' in the higher ranks of their staff. During the last two years, the progress in this sphere is reported to have been fairly satisfactory and a good deal of credit for this state of affairs must go to Mr. Krishnamachari.

In the foreign trade sector also, the Minister, who now wants to leave the Cabinet, has been able to leave the impress of his personality. That India has now been able to step up exports of cloth to very near 1,000 million yards per annum is largely due to his efforts. He took special interest in establishing Export Promotion Councils. The first organisation in respect of textiles has already been functioning satisfactorily. Mr. Krishnamachari provided stimulus to the export trade by allowing a drawback of duty on several imported items used in the manufacture of articles exported from the country. By this and also by abolishing export duty in a number of cases, he tried to increase the competitive capacity of Indian goods in foreign markets. He also sent special trade delegations to foreign countries in order to establish personal contacts.

In the import trade sector, the Minister provided liberal quotas for the import of essential raw materials which were necessary for increasing the tempo of industrialisation in the country. That the import trade control began to function smoothly without vociferous complaints from the trading public after the advent of Mr. Krishnamachari to this Ministry bears evidence of his ability to restore order amidst chaos. He tried to be fair to consumers by diversifying the import trade as much as possible. It is during his period that black-marketing in consumer goods began to give way gradually. He also backed the Finance Ministry when it began to raise the import duties on a number of consumer goods articles, imports of which were liberalised. He also increased the quantum of goods available to the consumer whenever their prices were pushed up by unscrupulous traders. The normalcy that has now come to prevail in the import trade is largely due to the sagacious policy pursued by the Minister during the last three years.

THE ART OF BANKING

VIEWS OF BARCLAYS' BANK CHAIRMAN

(*From Our Own Correspondent*)

LONDON, 22nd *January*

MR. Anthony Tuke, Chairman of Barclays Bank Ltd., has been one of the first this year to give us the annual commentary by Lombard Street on the way we conduct our affairs. The Big Five range far and wide over the economic field, but the real interest in Mr. Tuke's speech lay in the part he devoted to the attitude of the banks in making private loans. There is still in existence the Capital Issues Committee of the Bank of England, which has complete powers of yea or nay over the whole investment field. These powers even reach down into the realm of the banker's own direct loans, in that the Committee gives advice as to types of loans considered undesirable in connection with the current policy being pursued by the Chancellor of the Exchequer, as, for example, hire-purchase loans or Stock Exchange loans. But, as Mr. Tuke said, "the directives under which this Committee works are not . . . very readily distinguishable from the doctrines of sound banking as laid down in the text-books written by eminent bankers of past generations."

LONDON LETTER

And these directives apart, the banks in this country have complete freedom on the making of advances and on whether the advances should be secured or not. The criticism is made that banks are not ready-enough lenders and that they are too anxious to demand security. On the first point, banks would much rather lend than not, since, as Mr. Tuke admitted readily, "advances give us a better yield than any other of our current assets." The nub of the matter is the second point—how far are the banks today prepared to lend "on a man's face"? The Chairman of Barclays knew that he was dealing with what has been before, and may be again, made a political matter: If the commercial banks will not lend to enterprising businesses without security, then, for the good of British industry, they had better be nationalised. Only the individual banker—and that means the branch manager as much as the head office—can be the judge of whether an advance should be unsecured or not. A bank looks at the assets of a concern (in banking parlance are they quick or slow?), it looks at the capital resources in relation to the size of the loan, it looks at the purpose of the loan (to tide over a seasonal shortage of cash?), it looks at the general history of the business and the general history of the industry of which the business is a part—and all these things add up to creditworthiness.

Farm Finance

Farm finance is a classic example. The big development in farming in this country (50 per cent. over 1939) has only been achieved by heavy capitalisation in which the banks have played a not inconsiderable part—but only where their knowledge of the farmer's skill and prospects assured them that an unsecured loan was safe. Indeed, the point has been made before that the so-called unsecured loan is probably a better investment than that backed by collateral. But the argument put up by Mr. Tuke was that only the individual bank could apply the sort of test by which unsecured loans could be made, in spite of the criticism that it was too much power to put into private hands to decide whether a firm should or should not have finance. Mr. Tuke revealed that between one-quarter and one-fifth of his bank's advances were unsecured and he contended that, if this business had to be put onto some formal and impersonal footing, the whole basis of assessment for creditworthiness would disappear.

The Chairman of Barclays will not have ended the controversy about public control over bank lending. But he has made a notable contribution to a clear understanding of the principles on which a bank can work in making unsecured advances. A great gap, however, remains—the need for some positive risk-taking at present left (in spite of the city finance corporations) to private investors. Even where the management is sound but the risks are obvious, the banker cannot lend without security—this is where there is room for a body with the resources of a bank to step in and, while only holding a watching brief over the fortunes of a concern, to help it step out of deep water.—*All Rights Reserved.*

AMERICAN LETTER

FORMOSA DOMINATES THE SCENE

FURTHER INDUSTRIAL INVESTMENTS PLANNED

By Our Own Correspondent

NEW YORK, *27th January*

THE question of defence of Formosa with the support of United States' naval forces is developing a crisis here. The nub of the question, as pointed out to me, is not love for Generalissimo Chiang Kai-shek, but strictly a matter of strategy. If the General did not exist, he would have to be invented. Formosa, it is argued in military and naval circles, was used by Japan as a spring board for the invasion of the Philippines and it is only a few hundred miles from Okinawa, another U.S. bastion on the defence perimeter. Hence, it must be maintained in friendly hands.

That, in effect, is the motivation behind U.S. action. However, as on various occasions in the past, there is a lack of consistency. The Seventh U.S. Fleet has been despatched into the troubled waters, but the precise tactical purpose has not been announced. Moreover, both the legislative and executive branch of the Washington Government are disinclined to bolster the defence of Formosa with U.S. ground troops, against the 2 million Chinese Communist soldiers, reported poised for invasion on the mainland.

Commitment of American troops would not be political expediency for an Administration which prides itself on having stopped the war in Korea and has dissipated much of the previously existing atmosphere of emergency, even though it has not regained the initiative which is still in the hands of the Communists, it is generally admitted. It is, therefore, no wonder that there are grave question marks in the minds of the average persons what the turn of events will be in the near future.

The stated philosophy of Mr. John Foster Dulles, U.S. Secretary of State, is that the Chinese Communists are bluffing and will back down after a show of strength by the U.S. What has not been said is what is likely to happen if the Chinese Communists think the U.S., too, is bluffing. There are increasing demands for the recall of General Douglas MacArthur who knows the Far East better than any other military man.

This chain of events had its impacts on the U.S. economy, coupled with the upsurge in domestic business which has taken place in the past month or two. There is again talk of an inflationary threat which had not been heard of in the past 18 months.

As a result, the Federal Reserve board has tightened its credit policy. Short-term interest rates in such areas as bankers' acceptances and commercial paper have gone up. Bond prices have been falling and yields, conversely, have been rising. The forthcoming Treasury financing to refund its February and March maturities are expected to conform to this pattern.

G.M. Offers to Buy Back Its Cars from Dealers

The current increase in production is, in part, due to greater output in the automobile industry. This great production effort is based not only on better sales, but on the fear of a major strike later this year. That automobile sales are not on boom levels was demonstrated the other day when General Motors offered to buy back from registered dealers any cars which could not be sold in the new 1955 line. This was to prevent price cutting in new models which has been a regular procedure for some time. Naturally, the companies want to prevent this.

Clearance sales are continuing to help retail trade sales push beyond the levels of last year. The demand for suits and dresses is good and better than last year, but the long ailing clothing industry is still operating at only 70 per cent. of capacity.

In two areas, it is quite prosperous—in the very expensive lines where dresses retail for $100 to $250 and above and in the low and lowest priced lines. Everything in between is most competitive.

Confidence in Future

Recent moves by business echoed President Eisenhower's confidence in the future as expressed in his messages to Congress. The New York Telephone Company, largest unit of the Bell system, announced plans for record expansion outlays of $200 million in 1955. The previous high was $194 million in 1952. The National Biscuit Company is stepping up its expansion programme to $20 million this year, against $15 million in 1954. Aluminium companies are pushing construction of new multi-million dollar units to cope with expanding markets. This, in turn, requires expansion of utilities to satisfy the rising electric demand. General Motors Corporation, also thinking of expansion, announced a forthcoming $435 million common stock issue, one of the largest in U.S. corporate history.

Other Favourable Indices

There are other favourable indices. In December, industrial production topped the year earlier level for the first time in 1954. Further gain is indicated for January by rising steel and auto output. The Federal Reserve production index for December was 128 per cent. of the 1947-48 level in December, against 124 per cent. 12 months previously. Auto output is a large factor in this index and, as indicated above, the large production in this field is a gamble against a major strike later this year.

Building and construction are still booming. Work was started in December on 91,000 dwellings in the U.S., a new high for the month. The boom is supported by the new extremely easy mortgage credit terms which run directly counter to the tighter money policy being pursued by the authorities in other segments of the market. There are voices of warnings from various quarters that terms are too liberal and that buyers are over-extending themselves. Future events will tell whether or not this is true.

Press Conference on Television

In closing, Indian readers may be interested to know that public response to the first White House Press Conference on television was overwhelmingly favourable. It seems here to stay, unless there is some egregious blunder. The first one went so well that about 70 per cent. of the film taken on the spot was released for television use after clearance with the President. The decision to do this came after months of soul-searching by President Eisenhower and his staff. In my opinion, it was a very smart move for the President to make himself available regularly to millions of listeners since he makes an infinitely better impression being seen and heard than merely heard or read.

Barring the outbreak of a shooting war around Formosa, the outlook for the U.S. economy is for continued stability and for greater liberalisation of world trade now being discussed in Congress. Extension of the Reciprocal Trade Agreements Act is favoured by a large segment of the business community and, therefore, passage by Congress seems to be assured. Worsening of the Far Eastern situation may change the minds of the legislators, however.—*All Rights Reserved.*

U.S. MAJOR CONTRIBUTOR TO INDIAN DEVELOPMENT

The figures released by the Government of India in connection with the fifth anniversary of the Indian Republic show that the United States has provided approximately 75 per cent. of the foreign economic aid received by India. No aid from Communist countries is listed. Outside aid towards India's economic development during the three-year period ended last July was put at some $497 million, half of which was in the form of grants. The remainder was in loans, including a U.S. emergency wheat loan of $190 million and a World Bank loan of $56,700,000. U.S. grant aid of $171 million was given for such things as iron and steel, railway equipment, fertilisers, tube-wells and hydro-electric equipment. About $18 million in U.S. technical aid was provided in addition.

Other contributors included Canada, Australia, New Zealand, and Norway. Aid was given by non-governmental agencies and organisations such as the Ford Foundation, which allocated funds to aid India's community development programme and kindred social, education and health projects. As for aid in the year which began last July, the review noted that an allocation of $60.5 million had been made by the United States, in addition to continued technical assistance. U.S. economic and technical aid is being given to India in accordance with specific agreements made by the two Governments.

PAKISTAN NOTES

SOLVING ECONOMIC PROBLEMS

ASSURANCE TO BUSINESS COMMUNITY

THE business community in Pakistan has reason to feel gratified at the speech of the Commerce Minister, Mr. Habib Ibrahim Rahimtoola, delivered on the occasion of the recent annual meeting of the Associated Chambers of Commerce of Pakistan, held at Karachi on Thursday last week. For, in the course of the speech, the Minister gave the assurance that the Government's policy was to keep in close touch with trade and industry, "so that the collective wisdom of all concerned is brought to bear upon problems that confront the country."

The Commerce Minister gave the assurance that the difficulties in the balance of payments position would soon be overcome and that import policy would be liberalised. He said: "We are allocating a major portion of the foreign exchange available for commercial imports for requirements of industries. Generous U.S. aid will enable us to fill the gaps in supplies and give substantial relief to the industrialist as well as the consumer."

Mr. Rahimtoola made particular reference to the jute trade and stated that, while the Government's machinery for enforcement of regulations and collection of crop statistics was being tightened, the trade too should desist from doing anything calculated to depress prices unduly. Claiming that the jute market had been firm in the past four months, he pointed out that jute exports up to date had been satisfactory and the year would close without any carry-over. This factor had been borne in mind in fixing the target of production for the next season. Enough jute would be permitted to be sown to meet the likely world demand. Incidentally, the Commerce Minister referred to the jute industry and stated that the target of 6,000 looms set for June, 1957, would be achieved ahead of schedule. Six jute mills comprising 4,750 looms have already gone into production and the remaining 1,750 looms are being installed.

Alluding to the cotton market, the Commerce Minister pointed out that, as the market had been persistently bullish, buyers of cotton were turning to other sources of supply. He observed: "I wonder whether trade has taken note of the fact that speculative resistance built up in the hope of big business to follow is pricing our cotton out of the export market. There is, therefore, need for correction here and I hope the trade will not allow things to deteriorate beyond remedy."

Speaking earlier, Mr. B. Fane Saunders, President of the Chambers, recalled the several disquieting problems facing the country in the past year. According to him, the continued shortage of foreign exchange, the unfortunate dispute with India over the use of the river waters of the Indus Valley, and the legal and constitutional problems are but some of the difficulties with which the Government has had to contend. Mr. Fane Saunders praised the hard and sincere work of the Government officials in preserving law and order and in maintaining the country's economic life.

Commodity Controls

The Government of Pakistan, it is learned, has decided to lift controls on a variety of imported consumer goods and other commodities by the end of this month. The decision is said to be a sequel to the improvement in the supply position. The items that are likely to be decontrolled include, among others, imported cloth, dyes, chemicals, tubes, tyres, baby foods and mechanically-propelled vehicles. As regards cement, however, supplies are said to be not satisfactory and no removal of control is, therefore, contemplated.

Oil Exploration

A Press report from Karachi avers that Caltex Limited is likely to take up oil exploration in Pakistan. Negotiations between this Company and the Government of Pakistan, it is said, are nearing a successful end and the necessary agreement is to be signed shortly. The first American concern to join the search for oil in Pakistan was the Standard-Vacuum Oil Company which has already commenced operations to explore 10,000 square miles each in both the wings of the country. Terms similar to those which the Government offered to this Company are expected to be offered to Caltex Limited.

BANKING TRENDS IN U.K. SINCE PRE-WAR

SIR OLIVER FRANK'S INTERESTING ANALYSIS

SINCE our reference last week to the annual statements of the chairmen of some British banks, the statements of a few more bankers have reached our hands. These statements, too, as did the others, highlight some of the interesting aspects of the British economy in 1954. Two of them, incidentally, contain a comparative study of certain changes that have occurred during the past two or three decades. The statement of Lloyds Bank Chairman, Sir Oliver Frank, gives a vivid picture of the changes which have taken place in the operations of the Bank itself since 1938. In the other statement, the Right Hon'ble Lord Harleck, Chairman of the Midland Bank, looks back in order to compare the economic situation of Britain today with that prevailing in 1928. Another Chairman, namely, Lord Aldenham of the Westminster Bank Ltd., however, confines himself to a review of the gold and dollar reserve position of the U.K. during the past two years and concludes that convertibility is still a distant goal.

In this issue, we propose to deal with the changes in the banking activities of Lloyds Bank since 1938 as outlined by Sir Oliver. For these changes may be taken as typical of the experience of the British banking system as a whole. The sixteen-year period from 1938-54 has, according to Sir Oliver, been one of monetary upheaval. The deficit financing practised in this period started a fall in the purchasing power of the pound which even today has not been completely arrested. With this method of financing followed a general expansion of bank credit. Lloyds Bank's share of the total deposits of 11 London clearing banks is slightly higher today than just before the war. The total movement of cash between the various offices and between these and the head office has risen enormously. Again, while deposits have trebled since 1938, the monetary turnover passing through the Bank's books has quadrupled and cheques drawn now amount to £34,000 millions a year. Before the war, the Bank had more than a million current accounts and about an equal number of deposit and savings accounts. The current accounts have since risen by more than half, while there has been a decline in the number of deposit and savings accounts. As a result of these changes the Bank is conducting today about 2.5 million accounts of all kinds of which 66 per cent. are current accounts.

Changes in Employment

There have been also changes in employment trends since 1938. Male staff today is smaller than before the war. But there are many managerial posts to be filled today. At least one in three joining the Bank will be required for management. Many more than in previous generations will step on to the ladder of promotion at an early age. The old dismal practice of 15-year or 20-year apprenticeship has now been ended. There is now the prospect of wider opportunity and accelerated promotion for the staff. Greatly increased use of machinery and expansion of female staff have, however, offset the disadvantage caused by non-availability of male staff in adequate numbers and have enabled the Bank to serve its clientele with a high degree of speed and efficiency. Some 500 of the Bank's branches are now fully mechanised, 300 of them since 1938. The Bank is constantly exploring new methods and devices and it is its intention to extend the process of mechanisation still further. The female staff has nearly trebled since 1938; there were then four men for every woman but now the numbers are moving towards equality.

Some notable changes are seen in the sphere of earnings and expenditure. These changes fall under two periods, namely, (a) 1938 to 1948, and (b) 1948 to 1954. An increase in deposits does not necessarily mean a proportionate rise in the earnings of banks, because much depends on the trend of costs. Large-scale increase in deposits is usually followed by a general rise in the price level and this affects a bank in more than one way. If prices rise, expenses, too, rise, though not necessarily in the same way. In other words, as Sir Oliver put it, whether an expansion in deposits will or will not benefit a bank's earning capacity depends on whether the earnings on additional resources exceed or fall short of the accompanying addition to its costs. Now, in the case of Lloyds Bank, the period between 1938 and 1948 witnessed almost the whole of expansion in deposits during the 16-year period. Thanks to rationing and controls, the rise in prices was less than proportionate to the expansion in credit. This should have actually led to a sharp expansion in the Bank's earnings. But actually it was not so, because strong forces were operating in the other direction. If costs were lagging, so were earnings on the additional deposits. The fall in the ratio of advances, the main earning asset of a bank, for instance, declined from over two-fifths to little more than one-fifth of deposits. The additional deposits had their counterpart largely in Treasury Deposits Receipts or money market assets earning a fraction of 1 per cent. Throughout these years, the rate of return fell steeply so that an increase in commission charges became necessary.

Recent Trends

In the second period, 1948 to 1954, the trends have been exactly opposite to those in the first. Thus, there has been little further expansion of credit. Over the past six years, the rise in the Bank's deposits has been no more than 11 per cent. This break upon credit expansion has not, in the opinion of Sir Oliver, sufficed to ensure monetary stability, inasmuch as (a) the volume of bank deposits in 1948 was abnormally high in relation to the then current level of incomes and prices and (b) the velocity of bank deposits has been increasing. Accordingly, retail prices have risen by some 33 per cent. This is three times as great as that in the deposits. Further, a combination of stationary deposits with steeply rising costs has reduced earnings. But the downward pressure on earnings has been mitigated to some extent by the rise in short-term interest rates. This has restored the yield on money market assets to more remunerative levels. With interest rates at their present levels, a more normal balance has been restored between current earnings and current outgoings. When the Bank rate was raised, the overdraft rates, too, moved up, though they have since come down from the peak levels. Sir Oliver's statement on this point brings out the interesting fact that the average rate on the Bank's advances in the second half of 1954, when the Bank rate was 3 per cent., was only ½ per cent. more than that in the second half of the cheap money year 1938 when the Bank rate stood at only 2 per cent.

It is common knowledge that "inflation destroys a large part of the real value of past savings." As a result, the capital and reserves of a bank depreciate in real value and require to be reinforced. In 1938, Lloyds Bank's paid-up capital was £15.8 million and the reserve fund £9.5 million, a total of £25.3 million of published resources; besides this, it had internal reserves, the magnitude of which was not known but which Sir Oliver modestly describes as adequate. The Bank has now decided to capitalise a part of its invisible reserves and with the amount transferred to reserves from the profit for 1954, the published resources will be raised to £34 million, an increase of about 36 per cent. In this context, the Chairman deals with the interesting question whether the capital of a bank should be raised in tune with the expansion in its activities. As this question is of some importance to banks in India also, his remarks on this question bear reproduction. He said:

"It is true that there is no rule-of-thumb method of deciding the size of the capital funds which a bank needs in order to carry on its business. The guiding principles are that the resources, as a whole, must be sufficient to provide absolute security for our depositors and the reserves sufficient to meet fluctuations in our trading from year to year.

"Obviously, the great growth in our deposits since before the war does not call for a commensurate increase in our capital resources, since for the most part the additional deposits have had their counterpart in Government obligations. Upon these, the question of ultimate loss does not arise, though provision must nonetheless be made against the difficulties associated with fluctuations in the market price of gilt-edged securities."

Role of Banks in National Economy

The banks have a vital role to play in their national economy. Sir Oliver contends that the British banks have been fulfilling this role to the extent justified by normal commercial risks. His analysis of the changes in the character of advances of his Bank makes interesting reading and shows to what extent lending to the public is the most difficult of a bank's several functions. The changes since 1938, referred to by him, are significant. Expressed as a percentage of the Bank's total lending, the iron and steel and engineering industries show a threefold growth, while agriculture is two-thirds more. On the other hand, the share of personal and professional advances has fallen by nearly half. Many millions of pounds are involved in these changes, for the total advances themselves are double the 1938 level and almost three times the low point reached towards the end of the war. Further, the swing from personal lending against realisable security to the greater hazards of lending to commerce, industry and agriculture—with nothing more tangible than an assessment of a balance-sheet position—involves now a greater measure of risk.

In recent years, there has been an increase in fresh demand for money. The reopening of the commodity markets, the derationing of foodstuffs and the resumption of building activities have resulted in placing additional calls for funds on banks. The removal of borrowing restrictions upon hire-purchase companies in 1954 has also led to an increase in lending in that field. In short, Sir Oliver claimed that bank advances today "are making a more valuable contribution to the national economy than ever before, especially in the sphere of productive industry. But the administration of these vast sums—and the banking system as a whole is lending almost £2,000 million—calls for a high degree of knowledge and skill on the part of officials, if undue losses are to be avoided." This, therefore, emphasise the need for maintaining strong reserves to meet the various contingencies.

HABIB BANK MAKES STRIDENT PROGRESS

The results of the Habib Bank Ltd. (General Manager: Mr. Razak H. Mahomed, Karachi) for the year ended 31st December, 1954, are excellent. They disclose that the past year was the most prosperous one so far in the history of the Bank. The profit has not only staged a rise of nearly Rs. 20 lakhs over that for the previous year but reached a record high level of Rs. 78.52 lakhs. The results reflect an impressive expansion in the Bank's activity. A rise of about Rs. 6 crores has occurred in the deposits. Advances have gone up by about Rs. 4 crores to a level not seen before. The liquid resources have also been considerably strengthened, so that the liquidity ratio is at the remarkably high level of 82.6 per cent. For the fourth year in succession the dividend has been maintained at 20 per cent. A sum of Rs. 50 lakhs has been transferred from the profit and loss account to the capital account.

A bird's-eye view of the Bank's progress during the past three years can be had from the following comparative table:

(In lakhs of Pak. rupees)

—	For the year ended 31st December			
	1954	1953	1952	1951

Investments ..	62.6	66.9	58.5	52.7
Cash	20.0	21.4	28.4	30.4

The Bank's gross income has gone up by Rs. 29.44 lakhs to Rs. 163.74 lakhs, the highest earned by the Bank in its history so far. Interest paid by the Bank is up by only Rs. 1.29 lakhs and expenses have risen by Rs. 8.52 lakhs, so that the profit discloses a rise of Rs. 19.64 lakhs. This marked rise in profit has more than made good the fall of Rs. 11.03 lakhs noted a year ago from the previous record profit of Rs. 69.91 lakhs earned in 1952. The provision for taxation has been stepped up by Rs 2 lakhs to Rs. 30 lakhs. With a

BA-3

COTTON MILL INDUSTRY'S CAPACITY EXPANDS FURTHER

RISE OF RS. 3.28 CRORES IN PAID-UP CAPITAL

THE cotton year ended August, 1954, witnessed a further expansion in the Indian cotton mill industry's capacity, although the pace of such expansion was somewhat slower than that in the previous year. The number of spindles in existence as at 31st August, 1954, was 11,888,165, which compares favourably with 11,721,139 on the same date in 1953, according to the latest annual Mill Statement (priced at Rs. 5) of the Millowners' Association, Bombay. The increase in spindleage during the year under review was thus 167,026, as against 294,105 in 1952-53. The number of looms was also higher at 207,763, as against 207,250, the net rise over the year being only 513; in the previous year, as many as 3,464 looms had been added. The addition to the number of mills in existence was four, same as in 1952-53.

The slower pace at which the capacity of the mill sector of the cotton textile industry expanded during 1953-54 is understandable. For, as readers are aware, the development programme for this sector in the first Five-year Plan does not envisage establishment of new composite mills. Whatever increase in the spindles and looms that took place in 1953-54 probably represents the completion of programmes that had already been initiated, before the formulation of the Five-year Plan. The number of mills in course of erection and/or registered at the end of August, 1953, was higher at 22, as against 17 a year before.

Quantitative Progress

The quantitative progress recorded by the cotton mill industry during the year under review, as compared with that in the preceding two years, is indicated in the following statement:

	As on 31st August		
	1952	1953	1954
Total number of mills	453	457	461
No. of mills in course of erection..	22	17	22
No. of mills idle	19	20	23
Paid-up capital (in crores of Rs.)	106.93	109.61	112.89
Spindles installed	11,427,034	11,721,139	11,888,165
Spindles working	10,104,719	10,292,112	10,502,832
Looms installed	203,786	*207,250	207,763
Looms working	187,282	188,606	189,548
Cotton consumption (in bales of 392 lbs.)	4,132,632	4,518,702	4,688,866
No. of hands employed (day shift).	432,588	435,138	435,421

The foregoing table reveals that, despite the slower pace of expansion in capacity, the paid-up capital of the mill sector improved by Rs. 3.28 crores, that is, from Rs. 109.61 crores in 1952-53 to Rs. 112.89 crores during the year under review. Practically the whole of this improvement seems to represent capitalisation of reserves, as no new capital was issued to our knowledge. The number of spindles and looms actually working was higher by 230,720 and 1,042, respectively, as compared with the previous year. Reflecting such a trend, the number of persons employed in day shift alone rose from 435,138 to 435,421, notwithstanding the increase in the mills remaining idle from 20 to 23.

The latest picture of the size and composition of the Indian cotton mill industry, as presented by the Bombay Millowners' Association's Statement, will be all the more interesting, if it is compared with the position that obtains in the other leading textile producing countries of the world. The table below shows the place which India occupies on the world textile map. (The figures relating to other countries refer to the middle of 1953.)

(Spindles in millions; looms in thousands)

	Spindles		Looms	
	Installed	Working	Installed	Working
U.K.	55.02	24.15	347	259
U.S.	22.83	22.14*	309†	239†
India	11.89	10.50	208	190
Japan	7.56	5.91	324	275
Germany	7.19	N.A.	141†	150†
Italy	5.51	4.86	186	101

* 1951. † End of 1952. N.A.—Not available.

It will be seen from the foregoing table that India possesses the largest number of spindles in the world, next only to the United Kingdom and the United States. It, however, ranks as the fourth country having the largest number of looms, preceded, in the order of size, by the U.K., the U.S. and Japan. The share of India in the aggregate world cotton spindleage—amounting to 129.44 million—is 9.2 per cent. and that in loomage—amounting to 2.73 million—7.6 per cent.

The expansion in the spinning capacity of cotton mills during 1953-54, as noted above, was shared by all the States. In Bombay, for instance, the number of spindles installed as at 31st August, 1954, was higher at 6,547,984, as against 6,506,959 a year before, although the number of mills remained the same (211) and although the number of idle mills rose from 10 to 12. In the States of Madras and W. Bengal, the number of mills increased by two each to 95 and 40, respectively. Similarly, spindles installed in these two States moved up from 2,034,864 and 505,944 to 2,109,704 and 508,868. While the number of mills in existence in all the other States remained the same as in the previous year, spindles installed showed improvement. As regards looms, with the exception of Bombay, Madhya Bharat and Bhopal, Punjab(I), and Hyderabad, the other States showed an increase. The fall in the number of looms in some of the States, including Bombay, indicates that the looms must have become worn-out and scrapped, without being replaced.

Capacity Actually Utilised

Although the installed capacity of cotton mills expanded at a slower pace than in the previous year, the capacity actually utilised was more. Thus, as against a rise of 167,026 spindles installed, the spindles actually working were higher by 210,720. The experience in regard to looms also was likewise. Whereas the number of looms installed moved up by 513 only, that of looms working improved by 1,042. The extent of the actual utilisation of installed capacity during 1953-54 was smaller in the case of spindles, being 88.4 per cent., than in the case of looms where it was 91.2 per cent. The corresponding figures for the previous year were 87.8 per cent. and 91.0 per cent. The increase in utilisation of the looms installed is evidently due to the restriction placed on erection of new looms, with a view to reserving a part of the market for handlooms. Since no new looms were allowed, the industry has apparently brought into use even the old looms.

The improvement in spindles and looms actually working was due to the prevalence of several favourable factors, such as comfortable raw cotton supply position, absence of any labour dispute of magnitude, better transport situation, improved position in respect of power and fuel, complete freedom accorded to the mills following the removal of all controls on prices and distribution of all varieties of cloth, greater demand for cloth from both the internal and the external markets. This improvement is reflected in a substantial rise in output. Thus, during the year ended August, 1954, 4,944 million yards of cloth and 1,542 million lbs. of yarn were produced, as against 4,902 million yards and 1,507 million lbs. in the previous year. An indication of the marked rise in cotton textiles production in the mills is also provided by the increase in the quantity of cotton consumed which, during 1953-54, aggregated 4,688,866 bales (of 392 lbs. each), as against 4,518,702 bales in 1952-53.

An idea of how the different States figure on the Indian cotton textile map can be had from the following statement:

Situation	No. of mills	Spindles installed	Looms installed	Average number of hands employed
Bombay—				
Bombay City and Island.	65	2,026,044	65,571	118,048
Ahmedabad	74	2,067,200	42,907	79,090
Saurashtra	11	189,244	2,639	6,861
Other States	61	1,225,496	24,071	45,498
Total Bombay State..	211	6,547,984	135,988	241,384
Madras	95	2,109,704	9,268	59,209
W. Bengal	40	508,868	10,576	22,468
Uttar Pradesh	29	612,581	13,289	29,883
Madhya Bharat and Bhopal	18	450,928	11,322	22,105
Madhya Pradesh	11	378,068	7,329	17,711
Rajasthan, Ajmer and P.E.P.S.U.	12	170,614	3,880	7,938
Punjab	11	227,800	5,060	5,743
Mysore	11	321,440	3,458	12,870
Travancore-Cochin ..	10	184,884	717	3,929
Hyderabad	7	158,060	3,228	8,197
Bihar and Orissa	3	78,660	1,611	2,788
Pondicherry	3	86,118	2,047	4,064
Grand Total ..	461*	11,888,165	207,763	435,421

* This number does not include 22 mills which have either been registered and/or in course of erection.

As will be seen from the above figures, Bombay is the major seat of the cotton mill industry. This State accounts for 55.8 per cent. of India's aggregate spindleage and 65.4 per cent. of loomage, although its share in the number of mills is only 45.7 per cent. It is thus evident that the average size of cotton mills in Bombay is larger than that in other States and that the mills are well-balanced composite units. It is no wonder, therefore, that Bombay accounts for the major portion of the woven goods manufactured in India.

WOOL AND WOOLLEN GOODS

With the release of the 1955 edition of *India and Pakistan Wool, Hosiery and Fabrics*, this annual publication of Messrs. John Worral Ltd., Oldham, England (Agents in India: Messrs. W. H. Brady & Co., Ltd., 12/14, Veer Nariman Road, Fort, Bombay 1. Price: Rs. 7 plus Rs. 2 for sales tax and packing and forwarding charges wherever it is necessary), has completed six years of useful existence. The utility of the publication lies in the fact that it provides a comprehensive and authoritative review of the recent trends in raw wool economy, and in the different sectors of the woollen industry, the wool, worsted, carpet and hosiery sections, a subject on which not much literature is available in this country. It also covers raw wool production, classification, marketing, and import-export trade. In the edition under review, the publishers have spared no efforts to bring up-to-date the statistical material on various aspects of the wool and woollen industries in India and Pakistan, as also the directory of individual firms, factories and associations concerned with these industries. The publishers have revised, too, the list of advertisers' trade marks and designs and the alphabetical lists of trade and brand names.

The publication contains several interesting feature articles written by experts in the line. There is, for instance, an article on foreign investment in India. The importance of wool and wool products in earning foreign exchange for India is lucidly analysed in another article. Mention may also be made of articles such as "Wool—a tribute to the fibre", "Carding in the production of woollen and worsted yarns," and "Effects of artificial lighting on wool fabrics." Two other interesting articles which deserve mention are "Some characteristic wool fabrics" by Mr. George Priestley and "Power-loom weaving of woollen and worsted fabrics" by Mr. D. C. Snowden. The deliberations of the 23rd conference of the International Wool Textile Organisation are covered in some detail in a separate article.

AHMEDABAD TEXTILE LABOUR'S DEMANDS

The 70,000-strong Ahmedabad Textile Labour Association has demanded a 25 per cent. increase in the emoluments of the workers of 20 textile mills in Ahmedabad whose "balance sheets showed losses" in 1953. The Association has served notices on these mills following the failure of the parties to renew the two-and-a-half-year-old collective bargaining agreement. Mr. Somnath Dave, Secretary of the Labour Association, said recently that, as the mills which had shown losses were exempted from payment of bonus to their workers by the decision of the Appellate Tribunal, the Association had preferred to demand increment in the emoluments so that the workers could be compensated for the deferred wages. The Association has also suggested that a committee of three persons—representing the employers and the workers headed by a neutral arbitrator or a judge of the industrial court—be appointed to enquire into the working of the mills which have shown losses and to recommend measures to avoid losses. The Association has also served notices demanding bonus and introduction of a scheme of gratuity in the textile mills.

YARN PURCHASE BY MILLS

It is reported that the Government of India has prohibited purchase of yarn by those who own spinning plants except with the permission of the Textile Commissioner. This step has been taken in order to make available sufficient quantity of yarn to the handloom industry in the country. Composite mills which wish to purchase yarn are now required to apply to the Textile Commissioner for permission to make any such purchases. In granting or refusing permission for such purchases, the Textile Commissioner will, among other things, take into consideration (a) the number of looms installed or working in the undertaking, (b) the productive capacity of the unit, and (c) whether the yarn is required for purpose of weaving a variety of cloth different from any of the varieties which are normally manufactured by the producer and for the manufacture of which a special type of yarn is needed.

U.K. MAN-MADE FIBRE FABRICS

The outlook for British exports of fabrics made from man-made fibres does not appear to be bright. In the course of a report published in its latest official journal, the British Man-made Fibres Federation observes that exporters of these fabrics are now encountering grave difficulties in developing trade in cheap mass-produced goods. "We," quote the Federation, "are now being priced out of most colonial markets by Japan and we are meeting intensive competition from Germany, whose industrial recovery has been very rapid and efficient, from Italy, and even from the American domestic trade which could be sold at prices which bear little relation to world standards." In view of such competition, it feels that the main opportunities for developing exports of man-made fibre fabrics lies in specialities in construction and design and "in being quicker off the mark with new ideas than our competitors."

DECLINE IN TEXTILE EXPORTS

IMPORTS OF UNBLEACHED CLOTH MOVE UP

By Our Special Correspondent

MANCHESTER LETTER

MANCHESTER, 25th *January*

A SHARP upturn in exports of British cotton goods which occurred last month, after the decline in November due to the dock strike, failed to make any impression on the annual shipments for 1954 which were substantially lower than for several years back. Earnings from all types of cotton goods amounted to £112,033,348 last year compared with £117,063,474 in 1953.

Cotton cloth shipments for the year amounted to 637,272,000 square yards against 709,905,000 yards in 1953. The value was £81,927,497, an average of 30.85*d*. per square yard, as compared with £87,926,319 in the previous year, averaging 29.73*d*. per square yard. Yarn exports were 40,460,798 lbs., earning £17,326,854 at an average price of 102.78*d*. per lb., as compared with 41,919,789 lbs. worth £17,013,605, an average of 99.51*d*. per lb. The following table shows the quarterly figures by volume in recent years:

Cloth (in sq. yds.)

	1952	1953	1954
1st quarter	211,616,000	173,407,000	176,756,000
2nd "	162,226,000	169,694,000	165,249,000
3rd "	151,549,000	183,020,000	151,035,000
4th "	185,207,000	183,925,000	142,644,000
Total (adjusted to nearest million)	711,000,000	710,000,000	637,000,000

Yarn (in lbs.)

	1952	1953	1954
1st quarter	12,190,500	9,879,300	11,174,900
2nd "	7,330,200	9,942,200	10,184,300
3rd "	8,756,000	9,857,300	9,004,500
4th "	9,319,200	12,385,400	10,044,700
Total (adjusted as above)..	36,000,000	42,000,000	40,000,000

Had it not been for the improvement with Australasia these results would have been poorer still. Australia remained the chief buyer of British-made cotton cloth taking 122,344,000 square yards against 96,100,000 yards in 1953. Other main customers were (in square yards with 1953 comparisons):

South Africa 83,376,000 (85,784,000), Nigeria 55,258,000 (80,496,000), New Zealand 37,864,000 (38,618,000), Gold Coast 35,488,000 (49,935,000), and Southern Rhodesia 19,126,000 (16,242,000).

More yarn shipments went to Australia than any other country, takings rising from 5,969,000 lbs. to 7,249,000 lbs. Other leading buyers were (with 1953 comparisons): Western Germany 3,328,000 lbs. (2,709,000 lbs.), Canada 2,773,000 lbs. (3,999,000 lbs.), New Zealand 2,149,000 lbs. (1,433,000 lbs.) and Finland 2,089,000 lbs. (1,278,000 lbs.).

Rising Imports

Important as exports are in shaping the trend of the industry in Lancashire, the growing volume of imports of foreign cloth has been a major factor in the situation and one which cannot fail to have a vital bearing on prospects. In December last, arrivals of grey cloth from abroad exceeded 30,000,000 yards for the first time in a month since 1951. This brought the total imports of unbleached material for the year to 236,417,000 square yards, valued at £13,301,244. In 1953 the yardage was 76,240,000 and the value £5,134,347.

Finished cotton goods reaching this country from abroad last year amounted to nearly 31,000,000 square yards, so that imports of all types of cotton fabrics amounted to over 267,000,000 yards, which represents more than 40 per cent. of corresponding exports.

This proportion is slightly lower than in 1951 when arrivals reached a peak of 377,000,000 square yards, but exports in that year were correspondingly higher at 864,000,000 yards. India then supplied 105,000,000 yards and Japan 85,000,000 yards. Detailed figures are not yet available about 1954 but the quantity from India has already exceeded the 1951 total.

Imports of all types of cotton goods last year cost £21,654,704—more than twice as much as in 1953. Supplies of foreign yarn increased substantially from 3,502,175 lbs. to 10,718,053 lbs.

Those who contend that too much fuss is being made about these purchases of cotton goods from abroad should study these figures. They will find that the movement gathered speed very markedly in the later months of last year. The anxiety of traders is not entirely concerned with the existing position but fear of the future should this trend continue with its demoralising effect upon the price structure in Lancashire.

Spindle Census

No radical change took place in the total number of cotton spinning spindles in place throughout the world in the six months which ended last July, according to the latest statistics issued by the International Cotton Federation. Compared with 12 months previously, spindleage was nearly 200,000 higher.

Lancashire, however, continues in the van of progress and can record a larger number of spindles in course of erection than any other country, with the exception of India. Last July, 64,000 spindles were being erected in Britain purely as an increase and 241,000 spindles were being substituted for existing machinery. In India the comparable figures were 187,000 new spindles being erected and 133,000 replacements.

Estimates of the total number of cotton spinning spindles in the United Kingdom showed an increase of nearly 110,000 spindles on the six months while, in the United States, there was a fall of over 200,000 spindles. In India, no appreciable change took place but, in Japan, spindleage increased by nearly 90,000.

Reflecting the slacker state of trade in the rayon industry, the number of spindles spinning *rayon staple fibre in Britain fell sharply from* the high peak of 3,812,000 spindles in January last year to 1,822,000 spindles in July. This total, however, remains by far the largest of any country, the only comparable figure being 1,144,000 spindles producing spun rayon yarn in the United States.

Despite the large quantity of machinery in place in Britain, which exceeds the entire spinning capacity of North America, and is only slightly less than the plant installed in Asia, the mills in this country still work shorter hours than any others in the world. There was a further fall in the spindle-hours worked in the six months to the end of July to 860 as compared with 974 in the previous half-year. In comparison, spindles in Hong Kong worked nearly 4,000 hours, while among Lancashire's main rivals, Indian mills worked 2,820 hours, the United States 2,493 hours and Japan 2,276 hours.

More Competition

British exporters of fabrics produced from man-made fibres are being priced out of most Colonial markets by Japan, the British Man-Made Fibres Federation said this week in a report. Exporters were encountering "grave difficulties" in developing trade in cheap mass-produced goods.

Apart from Japanese rivalry in the Colonial markets, intensive competition was coming from Germany, whose industrial recovery had been rapid and effective, from Italy, and even from America the surplus of which from its domestic trade could be sold at prices which had little relation to world standards.

"It is becoming increasingly obvious that the main opportunities for developing exports of fabrics in man-made fibres lies in specialities in construction and design and in being quicker off the mark with new ideas than our competitors," said the report.

Short-Time Predicted

A forecast of short-time working in some sections of the British cotton textile industry in the next few weeks was linked with the belief that there would be no repetition of the trade recession of 1952 in a report by the Executive Council of the Cardroom Workers' Amalgamation, the largest union in the spinning industry.

Mr. Alfred Roberts, the union's General Secretary, said the extended stoppages at some mills at Christmas, involving an estimated 15,000 workers, had "disturbed and concerned" union officials but they did not share the view that these presaged a trade recession similar to that experienced three years ago. "Today there are no really large stocks to be disposed of and apart from the bad summer which has undoubtedly had a considerable effect on sales, the economy of the country is buoyant enough to justify a belief that our home trade at least will recover fairly quickly," stated Mr. Roberts.

Export trade, however, had shown a further decline and the industry was now faced with the possibility of serious competition in the home market as a result of cloth and yarn imports from India, Hong Kong and elsewhere.

The most serious threat came from the Indian imports which, if the rate of import of October, 1954, was maintained throughout the whole of 1955, would amount to 191,000,000 yards, equal to 8 per cent. of Lancashire's total cotton cloth production. The availability of raw cotton to Indian mills at prices well below the world level enabled them to sell cloth to the United Kingdom at approximately 3*d*. a yard less than comparable Lancashire cloth.—*All Rights Reserved.*

INCREASE IN ACTIVITIES OF COTTON TECHNOLOGICAL LABORATORY

LARGER NUMBER OF SAMPLES TESTED

AN all-round increase in the routine and research activities of the Cotton Technological Laboratory of the Indian Central Cotton Committee is revealed by the Report of the Director of the Laboratory for the year ended 31st May, 1954, just published. After referring to the "all-round progress" of the work of the Laboratory, the Director observes that it has become a "very important link in the cotton-breeding work in this country." A large number of samples of new and improved varieties were received from the cotton-breeding stations and their spinning quality evaluated by determining the fibre properties and the spinning characteristics.

The total number of samples received in 1953-54 for testing at the Laboratory was 2,405, as against 1,894 in the previous year. These figures include the number of experimental strains received from the States' Agricultural Departments which was 1,285 in 1953-54, as against 1,022 in 1952-53. There was also a considerable increase in the number of samples received in the Testing House for tests on payment of fees, the number received during the year being 598 as against 413 in the previous year, thus showing an increase of 45 per cent. In addition to these samples, 146 samples were received from the East India Cotton Association, Bombay, for staple length and staple irregularity tests, the reports on which had to be sent very expeditiously. Here again, compared to 102 samples received in 1952-53, there was an increase of 45 per cent. in the number of samples received and tested in 1953-54. Most of the testing work related to the evaluation of the quality of the new strains and improved varieties which would be of immense use to the agricultural officers for selecting suitable strains for further propagation.

Technical Advice

As usual, the Laboratory was called upon by the trade and the industry to give technical advice on various problems and this was successfully done. Further, the large increase in the work of the Testing House is a clear indication of the increasing utility of the Laboratory to the trade and the industry as well. There is also additional evidence to this effect as may be seen from the fact that some of the mills are setting up quality control laboratories in their mills by taking technical advice from the Laboratory, besides equipping their laboratories with the instruments, such as A.N. stapling apparatus and its attachment and strength tester, which have been designed at the Laboratory. Furthermore, orders for a large number of other equipments (also designed at the Laboratory), such as, ginning percentage balance and model gin, have been received during the year.

Technological bulletins on trade varieties of fair average quality usually handled by the trade and on standard cottons grown in the experimental stations in the principal cotton-growing tracts were published for general information. Technological circulars on each trade variety were also issued as soon as tests on them were completed. These publications proved valuable to the cotton trade and the textile industry. Since several enquiries were received both from the cotton trade and the Union Government regarding the ginning percentages of all important trade varieties, these values have been added for the first time in the trade bulletins published by the Laboratory.

Research Work

As regards the research work carried out at the Laboratory, substantial progress was made under each item and several technological investigations were carried to the stage of completion, despite the heavy increase in the routine tests. This was, however, made possible because the arrears of routine work had been cleared in the previous year to some extent by running a double shift in the spinning and testing sections.

Pre-clearing and ginning tests were carried out on Kalyan cotton. The tests on this cotton in single-roller gin, after converting it from double action to single action, confirmed the previous finding that it increased the output per hour and reduced labour charges and attention during ginning. In an investigation on the neppiness due to different types of ginning, it was found that the saw-ginned lint gave the highest number of neps, followed by the roller-ginned lint and the hand-ginned lint.

Attempts are being made, it is stated, to measure the maturity of raw cotton with the air-permeator. An experiment to study the spinning performance of mixing of Indian cottons in relation to their fibre-properties and those of the pure cottons in the mixing is in progress. The ordinary ballistic tester was suitably modified to test the ballistic work of rupture of single yarns.

Experiments are being conducted with a view to ascertaining the possibility of breeding varieties that would give almost nep-free lint. An apparatus for easy examination of neps in cotton lint, yarn, etc., was designed and fabricated. Combing tests were conducted on Laxmi and Madras Uganda 1 varieties, in order to ascertain whether the fabrics prepared from them could come up to the same quality as those prepared at present by the industry from carded African cottons. It is gratifying to be told that the "test results are very encouraging."

The Laboratory continues to attract many foreign visitors who are generally very favourably impressed by the work that is being done by the research and other members of the Laboratory's staff. A team of American cotton technologists, led by Dean Malcolm E. Campbell, visited the Laboratory last year. The leader of the team testified to the fact that the Laboratory had a "very high reputation in America." Dr. Burt Johnson, a member of the team and a distinguished cotton technologist, stated that the Laboratory "fully lives up to the world-wide reputation it has."

LIVERPOOL COTTON MARKET

It is now nearly eight months since the Liverpool cotton market commenced functioning; forward trading in the market was resumed in May, 1954, after a break of 13 years. The monthly turnover in futures in the market is estimated at £15 million. Although this is a considerable achievement in the face of many problems and risks, differing from those of pre-war years, it is stated that there is urgent need for a broadening of activity in the market. This view has been stressed by the Liverpool representative of the London *Financial Times*. Reviewing the working of the market since it was resumed in May last, he points out that the current volume of trading is, by any previous standards, narrow.

At present, some of the trading in Liverpool is being carried through without the intervention of professional operators. Thus, considerable quantities of cotton are being bought by the large combine spinners directly through their own operators on the market floor. These large-scale operations are the natural results of the decision by the Liverpool Cotton Association to admit to the floor private limited liability companies, a radical departure from the pre-war pattern in which individual responsibility was the basis of membership. It is, however, recognised that the inclusion of limited companies was essential to the organisation of a futures market because of the need to attract capital.

An increase in the volume of trade, it is stated, is regarded by experts as essential to the long-term success and usefulness of the market. Also, an increase in professional operations would flow from, and in turn encourage, the growth in trading. It is further pointed out that the problem of an export subsidy on American cotton, though frequently shelved temporarily, cannot for ever be ignored. At some future date, the U.S. authorities will be compelled to deal with the question of surplus cotton. When that occasion arises, a Liverpool hedge, it is stated, "would seem superior, and the better that hedge can be made, the stronger the protection against such outside influences."

FORWARD TRADING IN COTTON

The Government of India and the Forward Markets Commission have recognised, as is well known, for purposes of forward trading in cotton, only the East India Cotton Association, Bombay. The Commission, however, has invited applications from cotton trading associations in other centres for recognition as bodies under which forward trading could be carried on. In this connection, the Commission, consisting of Dr. B. V. Narayanaswamy Naidu, Chairman, and Mr. W. R. Natu, Member, visited the three cotton marketing centres in Berar, namely, Khamgaon, Akola and Amravati The Commission recorded evidence on the basis of applications received from the cotton trading associations in the three towns.

The Government of Madhya Pradesh, it is stated, has informed the Commission that it would shortly submit a memorandum on the subject to the Commission. The Madhya Pradesh Millowners' Association has already submitted a memorandum to the Commission. Since cotton textile industry has spread to the cotton-growing areas of the country, the system of marketing of cotton, according to this Association, cannot be properly handled by one or two centralised markets located far away from the cotton-growing areas. The Association has, therefore, emphasised that decentralisation of cotton marketing has become necessary and that cotton exchanges should be organised at one centre each in Southern, Central and Northern India. The existing State enactment in cotton should be replaced by a uniform Central legislation.

Emphasising the importance of Madhya Pradesh in the country's cotton economy, the Association has pointed out that the State accounts for over 60 per cent. of the total production of Jarilla cotton and about 25 per cent. of the total Indian crop. The State, therefore, holds a "unique and important" position in the Indian economy, in so far as cotton is concerned. In view of this consideration, the Association has stressed that the need for establishing a cotton exchange in Madhya Pradesh under the Forward Contracts (Regulation) Act cannot be overestimated.

COTTON WEED KILLERS

Experiments conducted by research scientists at the Beltsville, Maryland, experiment station of the United States Department of Agriculture (U.S.D.A.) indicate, according to reports from Washington, that several carbamate and urea derivatives will control weeds effectively in cotton and other crops when sprayed on the soil before weeds emerge. Several of the most promising experiments, which can be made applicable to entire fields, controlled weed growth up to 90 days with little or no injury to the cotton plants. Tests are continuing on weed killers for cotton and other plants. The new chemicals are most effective when applied as pre-emergence sprays or to weeds in the seedling stage. In general, the chemicals have proved most effective against the annual weedy grasses which thrive in cotton fields.

Greenhouse experiments have been completed with more than 200 new chemical compounds. The U.S.D.A. scientists have evaluated them for control of weeds generally found in cotton, soyabeans, wheat and maize. The most promising have been given further study in field tests for 30 of the most important crops. The U.S. chemical industry is producing experimental quantities of the compounds for these field tests. While none of the compounds is yet available for commercial use, the scientists feel that only a little more trial effort is needed before growers will use the compounds in their fields.

DEBENTURES GUARANTEED BY THE GOVERNMENT OF ANDHRA

THE ANDHRA CO-OPERATIVE CENTRAL LAND MORTGAGE BANK, LIMITED

P. B. No. 5051, Armenian Street, MADRAS 1

Paid-up Capital and Reserves - - - Rs. 28.93 lakhs

President: Sri B. V. SUBRAHMANYAM, B.A., B.L., M.L.C.

Subscriptions are invited for:

	Issue limited to	Issue Price
4 per cent. 1965-67 Debentures	Rs. 24 lakhs	Rs. 98.0
4¼ per cent. 1965-75 Debentures	Rs. 16 lakhs	Rs. 99.8

The issue is open for subscription till 28th February, 1955 and will be closed earlier when subscriptions to the 4 per cent. Debentures amount approximately to Rs. 24 lakhs and subscriptions to 4¼ per cent. Debentures amount approximately to Rs. 16 lakhs.

The Debentures are Trust Securities under the Indian Trusts Act and are also approved Securities under the Insurance Act 1938, and the Banking Companies Act of 1949. A Redemption Fund will be constituted to pay off the Debentures on maturity.

Full amount is to be remitted with the application. Other particulars and application forms can be had from the Secretary or from any Banker or Broker.

M. DATTATRAYULU, *Secretary.*

STUDY OF INCOME-TAX RATES IN SOME COUNTRIES

INDIA'S DEVELOPING ECONOMY NEEDS SPECIAL RELIEFS AND ALLOWANCES

THE need for altering the structure of income-tax in India with a view to making it conform to the requirements of the country's developing economy, has been stressed in a comparative study, undertaken by the Association of Indian Trade and Industry, of the taxation of income of individuals and corporations in different countries, including India, the U.K., the U.S., Japan and W. Germany. The broad conclusion of the study, published under the title *Income-Tax Rates Compared*, is that the system of taxation of income in India does level down incomes, but not without reducing the economic incentive of the persons in the highest ranges of income, causing considerable hardship to large middle-class families, diminishing the capacity of the private sector to save and to invest directly out of its own savings, and substantially reducing the inducement to invest—especially in risky ventures. Confiscatory rates of taxation, such as those imposed on persons in India in high income groups, might, in the short run, serve to mop up private savings for the purpose of public investment; but, in the long run, they inhibit productive effort as well as the process of saving and investment. The study avers: "What can be saved must first be produced, and confiscatory taxation discourages the productive effort that makes such saving possible."

The study makes suggestions for suitable changes in the present income-tax law, in order to provide incentive for the private sector to work, save and invest. These include reduction of tax rates on the income of individuals now subjected to very high rates, introduction of allowances for dependents, medical expenses and investment in approved undertakings, and increased allowances for earned income relief, life insurance premia and contributions to charities; permission for carrying back losses and for setting off losses from any source carried forward or back against income from other sources, the conversion of initial depreciation allowances into investment allowances, as has been done in the U.K., and reduction in the rates of taxes on corporations, the provision of non-distribution relief to public companies, and the extension of the limit of profit retention for private companies.

Individual Income

A comparison of tax on income borne by a married man with two children in the countries covered by the study shows that the rates of tax on individual income between Rs. 1.50 lakhs and Rs. 10 lakhs are higher in India than in any other country except the U.K.; the rates of tax on individual income between Rs. 25,000 and Rs. 1.50 lakhs rise more steeply in India than in the other countries; and the allowances, rebates and reliefs allowed to individuals are fewer in India than in most other countries, although this hardship is, to some extent, mitigated by low rates of tax on persons in the lower ranges of income up to Rs. 25,000, in whose case such concessions are most significant.

There are no allowances in India for wife, children and other dependents, infirmity, old age and medical expenditure. Only personal allowances, insurance rebates, earned income relief, and allowance for contributions to approved charities are available in India. In view of the absence of social security in India, the study regards it worthwhile to consider the introduction of allowances for dependents and for medical attention, and the liberalisation of existing allowances in respect of earned income relief, insurance and other forms of saving, and contributions to approved charities. At present, losses from any source cannot be carried back, but can be carried forward and set off against future income only from the same source. The study suggests facilities for carrying back of losses and permitting losses from one source, carried forward or back, to be set off against income from any other source.

Corporate Income

In the countries covered by the study, the rate of tax on corporate income is higher in India at 43.4 per cent., than in other countries except the U.K. (57.5 per cent.), the U.S.A. (48.8 per cent.) and Canada (44.2 per cent.). It is higher than the rate even in industrially more advanced countries such as Japan (42 per cent.), France (34 per cent.) and Norway (30 per cent.). For an underdeveloped country, the rate in India is regarded as on the high side.

Moreover, the present practice of calculating depreciation on the basis of the original cost instead of the replacement cost of fixed assets has, in the background of severe inflation, led to the overvaluation of the real profits of old concerns, and, consequently, to overtaxation, which has caused extensive erosion of capital in the old industries. This may be illustrated by an example. Replacement of machinery purchased in 1939 for Rs. 10 lakhs would cost in 1954 about three times the original value, that is, Rs. 30 lakhs. Assuming that the entire original cost is written off, the company would have as depreciation reserves Rs. 10 lakhs. The remaining Rs. 20 lakhs would have to be found from other reserves. But, in order to set aside free reserves of Rs. 20 lakhs, the company would have to earn additional profits of Rs. 53.5 lakhs during the period 1939-54, from which Rs. 33.5 lakhs would have to be paid as tax. Thus, the company would have to earn as profits more than six times the original value of the assets during the period 1939-54 merely to keep its capital intact, and not to distribute any dividend or effect expansion.

No country has found a permanent solution of this problem yet, although expedients have been tried in almost all countries. The most common method is to allow accelerated depreciation on, or quick writing off of, new machinery. This method defers, but does not extinguish, tax liability, as it does not allow revaluation of old assets. Another method, tried out in Japan, France and Italy, allows revaluation of old assets for the purpose of depreciation. This is more realistic, but it cannot be adopted in India. The measure most suitable in the case of India is the conversion of the present 20 per cent. "initial depreciation allowances" into "investment allowances," as has been done in the U.K., so that industries may be partly compensated for the capital erosion they have suffered due to fiscal errors.

As rates of taxation of individual incomes have become more progressive, the saving capacity of individuals has been considerably reduced. Companies have, therefore, been compelled to rely increasingly in recent years on undistributed profits to provide for their modernisation and expansion needs. In the U.K., non-distribution relief is given to public companies from profits tax. It will be worthwhile introducing in India measures providing non-distribution relief to public companies.

In the case of private companies, the provisions in India militate against retention of profits. While other countries allow private companies to retain a reasonable proportion of profits at the discretion of the tax authorities, the tax provisions in India require a minimum distribution of 60 per cent. of a year's profits, and 100 per cent. distribution after the accumulated retained profits equal paid-up capital. It is advisable to empower tax authorities in India to allow in justifiable cases retention of profits by private companies in excess of the statutory limit.

The study regards as equitable the method now obtaining in India, the U.K. and certain other countries of giving credit to shareholders for income-tax paid by the company on its income distributed as dividends, as it does not result in double taxation of corporate income, and also as it enables shareholders to be taxed at rates appropriate to their income level. The old practice in the U.S.A. and certain other countries of not allowing any credit to shareholders for tax paid by companies on income distributed as dividends not only results in the double taxation of the income of shareholders, but also the taxation of their dividend income at a flat rate irrespective of their total income. The trend seems to be in favour of allowing credit to shareholders for tax paid by companies, and this year, the U.S. Government has introduced the method of allowing partial credit to shareholders for income-tax paid by companies in respect of their income distributed as dividends.

The study comes to the conclusion that, at present, there is no case in India for taxing bonus shares. In the first place, bonus shares are issued against the capitalisation of undistributed profits which have already borne tax. Secondly, shareholders do not get any cash or other benefit when they receive bonus shares, nor does the market value of their aggregate investment (original shares plus bonus shares) increase owing to the issue of bonus shares. Thirdly, any revenue income by way of profit received by shareholders on the sale of their holdings—including profit that may be attributed to a speculative price rise due to the issue of bonus shares—is already being subjected to income-tax.

Effects of Taxation

On examining the trend of individual and corporate income-tax rates in India in recent years, the study finds that, although personal allowances were increased and earned income relief was introduced during the war and immediate post-war years, the rates on the ranges of income from Rs. 50,000 and over are at present more than double the corresponding 1939-40 level in the case of individuals, and slightly less than double in the case of corporations.

This trend may be attributed to the equalitarian bias in Government policy and the need to prevent oversaving in the pre-war period, and to prevent inflation and to finance defence expenditure in the war years and to provide for reconstruction expenditure in the post-war years. However, in the last three or four years, a reversal of this trend is noticeable in the U.K., the U.S.A., West Germany and other countries, which are trying to restore incentives and stimulate savings, with a view to enabling industry to modernise and improve its competitive position in international markets. The rates have also been brought down in most underdeveloped countries. But the rates still remain high in India. These high rates reduce the saving capacity of the private sector, and act as a disincentive to enterprise and effort.

Finally, the study stresses that India's taxation system should be readjusted to suit the country's special circumstances. Thus, India does not have a mature economy, but a developing economy. Also, in view of the vital role that is expected to be given in the second Five-year Plan to the private sector in the field of industrialisation, on which the emphasis will now be shifted, the study expresses the hope that the Government will, in rationalising its tax policy, consider the need to provide for the private sector adequate incentives to work, save and invest.

MATHEW E. D'SOUZA, *General Manager.*

The House of Lords has dismissed an appeal filed by the Government of India against the dismissal by Mr. Justice Valsey and the Court of Appeal of its application for an order to compel the liquidators of the Delhi Electric Traction and Supply Company to allow proof in the members' voluntary winding up of the Company for a sum of about £120,000 which was alleged to be due by way of Indian income-tax and capital gains tax.

Viscount Simonds, who delivered the judgment, said that he was greatly surprised to hear it suggested that English Courts would entertain a foreign State's suit to recover tax. There was a well-established rule of law that English Courts would not regard the revenue laws of other countries. It was a rule enforced with the knowledge that in foreign countries the same rule was observed. In this case, the liquidator could discharge only legally enforceable claims and had no discretion in regard to those which were not so enforceable.

SUGAR SUPPLY POSITION COMFORTABLE

OUTPUT ESTIMATED AT 1.35 MILLION TONS

REFERRING to the prospects for the sugar industry and trade for the season 1954-55, we observed, in our last *Annual*, that the season would witness a distinct improvement in production. Alluding, in particular, to the estimate of 1.3 million tons of sugar, made by a section of the trade, we said that the estimate was quite a reasonable one. The trend of output during the three months that have elapsed since the season began on 1st November, 1954, seems to bear out this expectation. The quantity of sugar actually produced during the period up to 15th January, 1955, for instance, was 476,000 tons, which compares very favourably with 382,000 tons in the corresponding period of the previous season. Indeed, a section of the sugar trade estimates the current season's output at 1.35 million tons. Some even expect it to be 1.40 million tons.

The anticipated rise in sugar production is based on the justificable assumption that supplies of sugarcane to the factories will be larger in the current season, thanks to the improvement in sugarcane crop and to the diversion of cane in factory zones from *gur* to sugar production, owing to the relatively low prices commanded by *gur*. The aggregate output of cane during the season under review is expected to amount to 49.91 million tons, as against 46 11 million tons, that is, an increase of 8.2 per cent. This increase is attributed partly to a rise in acreage and partly to an improvement in the per-acre yield. Thus, the area devoted to sugarcane during 1954-55 is estimated at 3.81 million acres, as against 3.60 million acres, or a rise of 5.8 per cent. The anticipated per-acre yield is 13.1 tons, as against 12.8 tons. Another favourable factor pointing to the possibility of a larger flow of cane to sugar factories this season than in the past season is the low level of *gur* prices. At Hapur, the principal *gur* market, *gur* is now quoted at Rs. 10 per maund—this is the support price fixed by the Government of Uttar Pradesh —as against over Rs. 15 quoted a year before. As a result of the fall in *gur* prices, several sugarcane growers may find it more profitable to supply their cane direct to the sugar factories, instead of converting it into *gur* themselves or selling it to other *gur* manufacturers.

Available Supplies

Sugar production during the current season, as already stated, is estimated at 1.35 million tons. The Government of India has already contracted to purchase 450,000 tons of foreign sugar. Moreover, 100,000 tons of sugar are expected to be produced from the 131,000 tons of raw sugar for which licences have been granted to the factories. There are, besides, the opening stocks of 41,000 tons of sugar. The aggregate quantity of sugar available for consumption during the 1954-55 season will thus come to about 1.94 million tons, as against 1.87 million tons in the previous season. If it is assumed that the consumption of sugar will be 1.83 million tons, same as in the 1953-54 season, the carry-over stocks at the end of the current season may be estimated at 260,000 tons.

In view of the comfortable supply position, consumers do not seem to be experiencing any difficulty in getting adequate quantities of sugar at prices lower than those paid in the previous season. An idea of the fall in sugar prices in the last one year can be had from the following table which gives the latest mill delivery rates (per maund) prevailing at Hapur, as compared with those a year before:

	2nd February, 1954 Rs.	a.	*24th January,* 1955 Rs.	a.
Simbhauli	31	0	29	14
Jaswant	30	14	29	11
Daurala	32	0	31	2
Mansoorpur	32	4	31	8
Rampur	33	8	32	8
Mowana	31	0	29	12
Amroha	30	12	29	4

It is rather difficult to say whether the downward trend in sugar prices now prevailing will persist in the coming months. Much will depend on the way in which the controls over the releases of sugar are administered. As readers are aware, while there is no control on sugar prices as well as on distribution, the release of sugar from factories is being regulated by Government through the issue of quotas. The Government's policy is to keep a reserve of 25 per cent. of the sugar produced with factories from which, if need arises, the Government would requisition sugar at fair *ex*-factory prices to be fixed for controlled distribution. This policy of reservation has been criticised by several sugar interests. In its latest Annual Report, the Bombay Sugar Merchants Association Ltd., for instance, observes that the policy does not help the consumer. In its opinion, the experience of last year was not happy and hence its advice that "the Government needs to be vigilant." There is no exaggeration whatever in this view. As we had ourselves pointed cut while commenting on the Centre's sugar policy for the current season—*vide* page 1168 of issue dated 18th December, 1954—the administration of the control on this reserve portion of output left much to be desired. The consumer did not get the benefit of the low price at which the Government directed the factories to sell the reserve sugar to its nominees. Most of it went to the middlemen who got it as unearned profits and probably paid no tax to the Government on them. It is to be hoped that, in the current season at least, the Government will profit from its past mistakes.

DISTRIBUTION OF IMPORTED SUGAR

With effect from the 1st inst., the system of distributing imported sugar f.o.r. destination stations has been discontinued. Under the revised system, imported sugar is sold on *ex*-docks *ex*-godown basis at different ports at the reduced price of Rs. 29-8 per maund for British refined, East German, Polish and French qualities and at Rs. 29 per maund for Cuban sugar. The minimum quantity released to any party has been raised to 60 tons and the earnest money to be deposited with the tender is fixed at Rs. 2-8 per maund, the balance of price being payable before delivery. As regards tenders received before the 1st inst., however, supplies will continue to be made f.o.r. destinations at the rates prevailing prior to this date.

The special scheme of distribution in Calcutta through depots has been terminated with effect from the 1st inst. The ban on the movement of sugar from Calcutta to mofussil areas has also been lifted.

CENTRAL PALM *GUR* TRAINING SCHOOL

The Central Palm Gur Training School has been shifted from Cuddalore to Dahanu Road in Thana district, Bombay State. The school, it will be recalled, was started in August, 1949, and is run by the All-India *Khadi* and Village Industries Board. Since its inception, about 400 trainees from different parts of the country have been trained in the art of making palm *gur*, improved methods white sugar confectionery, etc. The problems facing the industry, such as saving in fuel consumption, preservation of palm juices, improvement in quality of *gur*, are being tackled in the research laboratory.

SUGAR STOCKS

The stocks of sugar with the factories on 15th January, 1955, stood at 424,000 tons, as against 348,000 tons on the same date last year.

The production of crystal sugar amounted to 476,000 tons and arrivals of imported sugar to 184,000 tons up to 15th January, 1955, in the current season. The figures for the corresponding period of the last season (1953-54) were 382,000 tons and 124,000 tons, respectively. Despatches of sugar from factories during the same period were 109,000 tons, as compared with 229,000 tons in the corresponding period of the last season.

SUGARCANE VARIETIES FOR NEW AREAS

The Sugarcane Research Station, Shahjehanpur, has been successful in developing a number of sugarcane varieties for dry areas. Experiments have shown that Co. 453 possesses a high degree of drought endurance, with Co. S. 510, Co. S. 321 and Co. S. 443 coming next best. All these varieties, it is claimed, have given fairly high yields under deficient irrigation (two irrigations during premonsoon period).

COALFIELD IN EAST MADHYA PRADESH

An analytical work of the coal bearings in East Madhya Pradesh carried out by the Coal Survey Station at Bilaspur has disclosed that most of the coal is of the highly volatile non-coking variety, suitable for combustion power generation and complete gasification. Such coal also occurs in Hyderabad, Vindhya Pradesh and in the Raniganj coalfields in Bihar. It will be noted that the Bilaspur Coal Survey Station is one of the five established on the recommendations of the Indian Coalfields Committee. It is administered by the Fuel Research Institute, Dhanbad.

U.K. COAL OUTPUT RISES

The output of coal in the United Kingdom in 1954 was a little higher than in 1953. At 223,795,000 tons, it compared favourably with the 223,519,000 tons in the previous year. Although open-cast production fell from 11,690,000 tons in 1953 to 10,230,000 tons last year, deep-mined output showed a rise of 1,700,000 tons.

FUEL SITUATION IN SOUTH

STEPS TO OVERCOME SHORTAGE

IT is common knowledge that one of the reasons why the pace of industrial development in South India is somewhat slower than in certain other regions of the country is the comparative short supply of coal in the South. Any development which serves to improve the fuel position of the southern region is of great significance to India's national economy, in general, and the economy of the South, in particular. Such a development will certainly facilitate industrial progress. It will open vast fields of employment opportunity to the unemployed and the underemployed population in the South and thus facilitate improvement of their living standards.

Viewed in this light, the constitution by the Government of India, in consultation with the Madras Government, of a project co-ordinating committee for the lignite project in South Arcot District of Madras is welcome. The Committee, with Mr. Jagannathan, I.C.S., Joint Secretary, Ministry of Production, as the Chairman, will prepare a project report on the most economical and suitable scheme for mining and utilisation of the lignite. In this work, the Committee will receive technical assistance from the consultants who have been appointed for the purpose. The Committee may also consult other experts, if such consultation is found necessary.

The Committee will carry out and complete, in co-operation with the Government of Madras, all the necessary investigations at Neiveli. The investigations will include the determination of the extent, situation and the nature of lignite depositions and ground water conditions. The Committee will also carry out the analysis and other tests on the nature of lignite and suitable methods for processing it.

Concealed Coalfields

From the point of view of the economy of the South, another important development is that the Geological Survey of India, at the request of the Hyderabad Government, has taken a resurvey of the coal-bearing formations, with a view to arriving at a fairly correct estimate of the entire coal reserves of the State. According to geologists, Hyderabad has large deposits of concealed coalfields.

The Government of Hyderabad has also undertaken a scheme for modernising the Singareni group of collieries. With the completion of this expansion scheme, the coal output in this area is bound to increase sizably. It is estimated that, in another three years' time, the coal production of the State will exceed 2,000,000 tons. In this connection, it may be mentioned that in the first 11 months of 1954, as much as 1,381,306 tons of coal were produced, as against 1,331,143 tons in the whole of 1953.

Coal Deposits in Godavari Valley

Further reports from Kurnool indicate that the Government of Andhra has sanctioned about Rs. 1 lakh for prospecting coal deposits in the Godavari Valley. Geologists are of the opinion that the coalfields of Hyderabad have extended southwards into Andhra, but are hidden by the thick alluvium. According to a report prepared by the Geological Survey of India, coal is known to occur in the Godavari valley near Lingala, Gavaridevipeta, Bedadanuru and Zangareddigudem, but the potentialities of the fields are yet to be explored. Mr. A. K. Dey, Superintending Engineer, Geological Survey of India, has suggested that the Government should take the initiative in undertaking deep boring operations in Godavari basin before it takes up the execution of the Rampadasagar scheme. If these operations yield anticipated results, he says, not only will there be great scope for industrial expansion but the construction of the Rampadasagar dam itself will be facilitated. Thus, the construction of the dam will benefit from the power available from the Godavari coal and limestone deposits existing in the neighbourhood for making cement. If coal is not found in sufficient quantities, then the plans for industrial development in Andhra will require reconsideration.

Thus, there appear to be good prospects for the improvement of the coal situation in South India. But they depend on the pace of measures to be taken by the authorities in exploring and exploiting the fuel reserves of the South. Clearly from the point of view of the Southern region, one of the major planks of the second Five-year Plan should be the development of fuel resources of South India.

THIRTEENTH REPORT OF DIRECTORS FOR THE YEAR ENDED 31st DECEMBER, 1954

TO THE SHAREHOLDERS,

The Directors have pleasure in submitting herewith the Thirteenth Balance Sheet and Profit and Loss Account of the Bank for the year ended 31st December, 1954, together with the Auditors' Report.

	Pak Rs.	a.	p.
Net profit for the year 1954	46,16,246	1	2
Amount brought forward from last year's account	26,77,148	7	8
Total .. Pak Rs.	72,93,394	8	10
Appropriations made during the year :—			
Amount transferred to share capital account during the year	50,00,000	0	0
Interim dividend paid during the year	16,25,000	0	0
The Directors now propose :—			
Payment of final dividend for the year ended 31st December, 1954, at As. 12 per share on 7,50,000 shares	5,62,500	0	0
To carry forward to next year's account	1,05,894	8	10
Total .. Pak Rs.	72,93,394	8	10

By the Grace of God the Bank has shown good progress during the year.

In accordance with Article 83 of the Articles of Association, Mr. Hamid D. Habib and Mr. Hyder Mahomedali, Directors of the Bank, retire and, being eligible, offer themselves for re-election.

In accordance with Article 91 of the Articles of Association, Mr. Ahmed Habib, Mr. Dawood Ebrahim Parekh and Mr. Mahomedali Habib, Directors of the Bank, retire by rotation and, being eligible, offer themselves for re-election.

You are requested to appoint Auditors for the year 1955 and fix their remuneration.

The Directors place on record their appreciation of the enthusiasm, loyalty and devotion to duty of the officers and other members of the staff.

By Order of the Board,
AHMED HABIB,
Chairman.

BRIGHT OUTLOOK FOR RUBBER MANUFACTURERS

PROBLEM OF RAW MATERIAL

THOUGH young in age, the Indian rubber manufacturing industry has made commendable progress during a short period. It was in 1920 that the industry was started in a small way, but it was not until the 'thirties that any appreciable development occurred. Between the years 1933 and 1940, some of the present-day big manufacturers entered the field in a relatively large way. A large number of smaller manufacturing concerns entered the field only after 1940 and today they number over 100. The production now covers a wide variety of goods. Last year, the rubber manufacturers planned some new projects and these are now in operation. The industry is now said to be in a healthy state and no insurmountable difficulties are being encountered in the matter of securing raw materials for manufacturing purposes. Its consumption of raw rubber during 1954 exceeded 25,000 tons (25,487 tons to be precise), an unprecedented quantity in its history, as against only 17,735 tons in 1950.

This, in short, is the history of the Indian rubber manufacturing industry, to which Mr. Cecil Stack, Chairman of the Association of Rubber Manufacturers in India, made a reference in his speech at the annual general meeting of the Association held in Calcutta last week. He foresaw brighter prospects for the industry. For, the increasing expansion of Indian economy, the implementation of the first Five-year Plan and the emphasis upon industry in the second Five-year Plan have, according to Mr. Stack, accentuated the importance of the rubber manufacturing industry in India. Agriculture and industry alike were making and would continue to make demands which manufacturers would have to meet by increased output and by the production of a wider range of articles, he added. In view of this bright prospect, Mr. Stack called for co-operation between the members of the Association and other bodies connected with the industry in framing a wise plan, in order to ensure that this industry can keep pace with the development of industry as a whole and the plans contemplated by the Government. He also laid emphasis on production of quality articles and said, in effect, that a certain amount of keen competition was needed among the manufacturers, in order to raise the quality of their products.

Raw Rubber

With a bright outlook on the demand side, the industry is naturally concerned with prospects for an adequate supply of raw materials. While happy to record that the quality of most of the rubber produced in India (with the exception of some latex) was comparable with that available from other markets, Mr. Stack pointed out that there was a shortfall of about 3,000 tons in the production of indigenous rubber. The statistics of the Indian Rubber Board, however, show that the production during 1954, at 21,493 tons, fell short of consumption by 3,994 tons. The following figures of production and consumption for the past three years show that the gap has been widening:

(In tons)

	Production	Consumption
1952	19,863	21,061
1953	21,136	22,373
1954	21,493	25,487

The shortage during 1954 was met, to a large extent, by imports, which aggregated 3,500 tons, made up of 1,850 tons against over-all shortage and 1,650 tons against dry rubber content of goods exported in 1953. The gap between production and consumption is likely to widen. Mr. Cecil Stack, therefore, drew the attention of the Government and the Indian Rubber Board to make urgent efforts to see that long-term plans for replanting with high-yielding strains were encouraged and every assistance given to the large number of small holders to modernise their methods and so increase their output and quality. A rapid increase in indigenous production is not possible, because alongside the increased crop from new plantings, there will be a decline in production by the felling of old trees for re-planting. This is no doubt a healthy process for increasing production, but it will affect the over-all production until a large area is thus brought under cultivation when the yield from new planting will be much more than the loss through felling of old trees. It is, therefore, inevitable that, during the interim period, imports will have to be allowed to meet the shortage.

There is another aspect of this question of imports. It is the rising trend in world prices of rubber. The price of spot rubber on the London Rubber Exchange stood last week-end at 30*d*. per lb. or Rs. 166.66 per 100 lbs. (as against 16¼*d*. or Rs. 90.28 per 100 lbs. a year ago), while the statutory Indian price has remained unchanged at Rs. 138 per 100 lbs. for R.M.A. 1 f.o.b. Cochin since October, 1952. The price at Singapore during this period has fluctuated between a minimum of Rs. 84 per 100 lbs. in March, 1954, and a maximum of Rs. 142 at the end of December, 1954. The Association of Rubber Manufacturers in India imported, during the past year, from Singapore, on behalf of some of its members, at an average price of Rs. 110 per 100 lbs. c.i.f. Calcutta for R.M.A. 2. Thus, the rubber manufacturers had a price advantage on their imports, but this advantage has now been lost, with the rise in world price over the Indian statutory price.

Synthetic Rubber

Mr. Cecil Stack, however, did not refer to this problem of imports or to the price difference thereon. He merely suggested that, at the same time the natural rubber position was safeguarded, equal thought and attention should be given to the place which would be occupied in future by synthetic rubber. He said that it was important that goods produced should be equal in quality to those manufactured overseas and where such goods required the use of synthetic rubber there should be no question of restriction on the import of this material. If the importation of synthetic was hampered, manufacturers might be placed at a serious disadvantage in the export market, a market so vital to the national economy.

The suggestion of Mr. Stack regarding import of synthetic rubber may be unpalatable to some of the natural rubber producers. Mr. Stack, however, believed that there was no reason whatsoever why natural rubber should not co-exist amicably with synthetic. Both had their uses, he added, and he did not envisage a time in the foreseeable future when there would be an unconsumable surplus of natural rubber. This is rather a controversial question, but, so long as demand for natural rubber in India exceeds production, it is only of academic importance. All the same, all fair-minded rubber producers will concede that it is important for India to develop its export trade in rubber manufactures and that the latter should be enabled to compete effectively in the overseas markets. If, for this purpose, the industry requires certain quantities of synthetic, it should be permitted to get it. After all, it is in the interest of Indian rubber producers themselves that rubber goods manufacturers should be in a strong and sound position, as they will be if they are helped to develop an export market for their products.

(*Concluded from next column*)

to the crop and on expectations of shortfall in the total supply, prices improved to about £90 per ton. The upward trend persisted and, from the end of September onwards, owing to a steady demand from overseas and slow import of supplies to marketing centres, raw jute quotations tended to harden and export firsts moved up to £105 per ton. At these levels, the cultivator received about Rs. 20 per maund for his produce and, with the present low prices for rice, he was, Mr. Boldy observed, in the happy position of being able to purchase about 3 maunds of rice for every maund of jute sold. This improvement in prices, we may mention here, should have a stimulating effect on the jute grower to bring under raw jute more land this year.

PAKISTAN JUTE CROP

DISCREPANCY IN ESTIMATES FOR 1953-54

WHILE reviewing official estimates of raw jute crop in Pakistan, we have often maintained, as readers are aware, that the figures did not always reveal the true position of supplies of raw jute. This view of ours has been substantiated by Mr. A. D. Boldy, President, Pakistan Jute Association, Narayanganj. The members of this Association and their associates, it may be noted, account for 95 per cent. of the volume of jute exports overseas and 80 per cent. of the jute business with India. The organisation consists of Pakistan, European, and Indian firms.

Speaking at the fifth annual meeting of the Association held at Narayanganj on 24th January last, Mr. Boldy pointed out a glaring discrepancy in the official figures of raw jute supplies during 1953-54. The crop forecast for this year issued by the Provincial Government put, he said, the carry-over at the end of June, 1953, at 2.2 million bales and the crop during 1953-54 at 2.5 million bales or a total of 4.7 million bales. As against this, it was later clear that by the end of June, 1954, the country had exported 5.2 million bales. In other words, the exports were 500,000 bales more than the estimated available supplies of 4.7 million bales!

Highlighting the discrepancy in the Government's figures thus, Mr. Boldy proceeded to consider the trade estimates. He said that the general view of the trade was that the carry-over at the end of June, 1953, was about 2.8 million bales and the crop during the year was 4.0 million bales. By March last year, it became, Mr. Boldy said, apparent that the Government forecast was inaccurate and that the jute available was possibly a little more than the trade forecast. In all about 5.2 million bales having been exported, and about 300,000 bales locally consumed, "we estimated the carry-over to be in the region of 1.3 million bales." Speaking of the crop in 1954-55, Mr. Boldy stated that, as the recent floods were unprecedented, it was still not clear whether there would be sufficient jute available to satisfy the world demand. However, he added that "it has now become clear that there will be little carry-over, if any, into the season 1955-56, and plans for future sowing should be based on that assumption."

Mr. Boldy next dealt with the difficulties created by Government action. Listing the actions of the Government, he pointed out that there had been a sudden announcement banning export of all *kutcha* bales without sufficient prior notice. Again, the procedure for obtaining the State Bank's permission to export through E.P.C. forms and export licences from the Jute Board had become lengthy and unwieldy. It was still difficult to get the State Bank to allow remittances to buyers of their legitimate claims. The Customs Department which had evolved an efficient and expeditious system of checking documents and passing jute was "delaying consignments where there is the slightest reason." All these difficulties, he added, were having an adverse effect on consumers of jute and causing confusion and uncertainty not only within Pakistan but also in the trade and industry all over the world. These remarks of Mr. Boldy underline the need for a thorough review of the position by those in India who are entrusted with the work of negotiating a new trade agreement with Pakistan.

The President of the Pakistan Jute Association dismissed as "loose-talk" all suggestions of nationalisation or semi-nationalisation of jute trade through an export corporation. He drew pointed attention to the fact that in the past many plans had been drawn up in this regard by theorists, and that they were all impracticable.

Reviewing the position of raw jute trade, Mr. Boldy said that, by March, 1954, it was clear that, despite Governments declaration of licensing a sufficient area to grow only 4.2 million bales, little attempt was being made properly to regulate the crop and the cultivators were sowing in excess. The trade feared then the crop might have been 5.5 million bales. Consequently, prices of raw jute commenced to recede. In July prices were at a very low level and caused considerable anxiety to the Pakistan Jute Board. In consultation with the Jute Association, the Board agreed to instruct the State Bank of Pakistan not to pass E.P.C. forms below the minimum of £80 per ton for export firsts. Meanwhile, prices continued to remain at a low level till the end of August. In this month, the unprecedented floods caused damage

PEACEFUL USES OF ATOMIC ENERGY

RESULTS OF LATEST EXPERIMENTS

THERE is probably no modern development as that relating to atomic energy in the case of which the time-lag between the discovery and its industrial application has been very little. It is now well known how soon the discovery of atomic power led to its use as a weapon of war. Now tremendous progress has been made both in the U.S. and the U.K. in the astounding peaceful uses to which atomic energy can be put. The United States Atomic Energy Commission (A.E.C.) has evolved a system of research and development which is expected to lead to production at an early date of power plants that can compete with other power sources. According to the Commission's 17th semi-annual report, just published, extensive material progress has been made in the field of reactor development during the past six months. Ground has been broken for the nation's first nuclear power plant. The country's first atomic submarine has begun its sea trials and private enterprise has taken an active interest in investing its funds in the study of peaceful applications of atomic energy. In fact, in the past six months, an increasing number of industrial firms has invested their money in the field of reactor technology approved by the Commission. Special interest is being shown in the Commission's power reactor programme. Under this programme, the Commission will consider bearing a portion of the expense of reactor plants "leading to the demonstration of the practical value of such facilities for industrial and commercial purposes."

The programme for industrial participation through study groups has been so broadened as "to allow a wider segment of industry to take advantage of the available technology." It would appear that five types of plants, which are most likely to lead to production of nuclear power economically, have been chosen and three are in the construction phase. One type, the pressurised water reactor, will be, it is stated, the nation's first full-scale civilian atomic power plant. The remaining four types are still in experimental stages.

Spreading Knowledge

This is not all. Pending the establishment of an international atomic energy agency to promote the atom-for-peace programme, proposed by President Eisenhower, the U.S. Atomic Energy Commission is proceeding with a number of projects designed to spread knowledge of how atomic energy can be used for man's benefit. This project includes:

1. The establishment of a reactor training school at the Argonne Natibnal Laboratory, near Chicago, scheduled to be opened in March, 1955. The school, will give a four-month training programme in the broad fields of reactor technology followed by a three-month session of applied engineering projects. The first session will have about 30 students, 20 of whom may come from other countries. In the fall of 1955, the course will be given to 80 students, 50 of whom may come from abroad.

2. A special session for persons from other countries of the four-week course in radio isotope techniques at the Oak Ridge, Tennessee, Institute of Nuclear Studies. This will begin on 2nd May, 1955.

3. Training courses in the utilisation of atomic energy in the fields of biology, medicine and agriculture.

4. Training courses in industrial medicine and hygiene.

5. Invitations to a number of doctors, surgeons and specialists to spend about two months in the United States visiting the Argonne and Oak Ridge Cancer Hospitals and other research centres.

6. Presentation of a number of A.E.C. technical libraries to countries or regional groups.

Rapid progress is being made in the United Kingdom also in developing new methods of using industrial energy for power production and other industrial purposes. A special group has been formed at the Atomic Energy Research Establishment, Harwell, to study new methods of harnessing nuclear energy by using it to produce power by the development of high temperatures instead of using it to produce electricity. According to the Scientific Correspondent of the *Financial Times*, London, heat-resistant ceramic coatings which prevent the uranium fuel from corroding and special uranium alloys which can withstand temperatures considerably in excess of the 400 degrees centigrade, which is the limit the aluminium canisters in which the uranium fuel of the older types of nuclear reactors is enclosed, have also been successfully developed. Work is also being undertaken on the possibility of controlling the activity of nuclear reactors by using a system in which the cooling fluid, or gas, which flows through the reactor and draws off the heat, can be made to stop the activity inside the reactor if the temperature gets too hot. Preparations are already being made for the effective wide-scale use of the fission products or "ash" from the nuclear reactors which will be built as part of the U.K. Atomic Energy programme. The first successful separation of one of these radio-active waste products so that it can be used for medical and industrial purposes is already nearing completion.

Work on Plastics

Research and development work on the improvement of the physical properties of plastics, such as polythene, nylon and silicone rubbers (which can be vulcanised by irradiation without the use of vulcanising agents) is being undertaken by commercial firms. It is pointed out, in this connection, that in the case of polythene, nylon and polyvinyl chloride, the exposure to the radio-activity thrown off by radio isotopes gives them, improved strength, greater resistance to both heat and to solvents which would otherwise dissolve them. The polythene insulation of cables would normally melt at 70 degrees centigrade, but cables which are insulated with irradiated polythene can be used at temperatures up to 200 and 300 degrees centigrade. Irradiated polystyrene can carry up to 100 times its own weight after irradiation as well as having improved heat resistance. Although such irradiation causes plastics to become more brittle it can be very accurately controlled and so enables any particular set of qualities desired to be achieved.

Other plastics, such as Perspex, can be broken down by irradiation to cause solid foam-like materials which are especially suitable for certain forms of electric insulation. The use of radio-active sources to eliminate "static electricity" is also increasing rapidly. The use of radio isotopes in industrial radiography is receiving good attention. They are used, for instance, in examining welds in pipes, in places where electricity is not readily available.

Particular success is being achieved at Harwell in experiments in sterilisation of drugs, such as penicillin, which are difficult to sterilise by other means, by exposing them to radio activity, as well as in pasteurisation and sterilisation of food. While food cannot be sterilised without giving heavy doses of radiation, it can be pasteurised fairly rapidly with relatively small doses. Experiments on the prevention of sprouting in potatoes over winter are also stated to have proved successful.

MACHINERY FOR RIVER VALLEY PROJECTS

The Government has accepted the principle of standardisation of mechanical equipment used on river valley projects in the country, subject to the condition that the position will normally be reviewed after every five years or earlier, if necessary. This decision has been taken in accordance with the recommendations of the first meeting of the Co-ordination Board of Ministers for River Valley Projects held in October, 1954. The Government has accordingly constituted a Standing Committee, with Mr. Kanwar Sain, Chairman, Central Water and Power Commission, as Chairman, for recommending the standardised makes of equipment to be used on projects now under execution or to be taken up in future.

The Committee will examine the question in the light of the recommendations of the Construction, Plant and Machinery Committee, and the discussions at the meeting of the Co-ordination Board of Ministers with specific reference to the following points:

(1) Neither inflation of prices nor other disadvantages should result from the proposal of standardisation;

(2) equipment manufactured in India should get overriding priority as soon as it is available in the country;

(3) safeguards should be provided against any adverse results arising out of monopolistic tendencies;

(4) the number of standardised makes of equipment should normally be from two to five, these limits not being wholly binding in each case;

(5) the interested firms should be given an opportunity to represent their cases; and

(6) it should be ensured that manufacturers whose equipment is standardised carry adequate stocks of spare parts and enter into price agreements with the Director-General of Supplies and Disposals.

The Committee is to submit its first report by 31st March, 1955.

MINERAL RESOURCES OF ANDHRA

REPORT OF GEOLOGICAL SURVEY OF INDIA

MR. A. K. Dey, Superintending Geologist, Geological Survey of India, has prepared a report on the mineral resources of Andhra. It would appear from Press versions of it that the Report is fairly exhaustive and contains valuable suggestions for exploration and exploitation of these mineral reserves. The Report discloses that, although Andhra does not generally compare favourably with those of the other States in the matter of mineral resources, a judicious exploration and exploitation will go a long way in expediting the industrial expansion of the infant Andhra State.

A significant feature of the Report is that, while the metallic reserves are meagre, there are considerable deposits of non-metallic deposits. In fact, according to Mr. Dey, the outlook for non-metallic minerals is bright. In his opinion, Nellore mica, under improved mining and marketing conditions, can obtain a large share of the world's trade in this mineral. Mr. Dey testifies to the abundance of structural minerals, such as ceramic, glass, earthenware and pottery used in building and other civil engineering constructions. Granites of Nellore and Chittoor, quartz and sandstones of Anantapur and Kurnool, limestone of Kurnool and Cuddapah, marbles of Anantapur and Madugula regions, are already famous throughout India, nay, even in some parts of the world.

The reserves of iron ore are limited and they are also of poor quality. Nor are there large deposits of copper, lead or zinc. Recent investigations of the old copper mines of Vinukonda in Guntur District have, however, yielded promising results. But they need confirmation by test drilling. Coal deposits are known to exist in certain places but their potentialities are yet to be explored.

There are some deposits of manganese. It will be recalled that Srikakulam District was the earliest producer of manganese in India. Between 1892 and 1951, this region produced 1,954,408 tons of manganese ore. Considerable quantity of this ore is still expected to be lying underground. It is estimated that at least 250,000 tons of ore, with 35 to 55 per cent. of manganese are available in the Kodur mine. But, as the high phosphorus content of the ore precludes its use within the country at present, Mr. Dey has suggested that it would be better to export it whenever possible. In order to obtain maximum prices for the ore, he has suggested that the ore may be upgraded by proper treatment and blended with better grades before export.

A few ancient gold workings near Palacheruvu and in Chittoor District are under investigation of the Geological Survey. The prospects for gold mining at Ramagiri in Anantapur District will depend upon an investigation into the causes that led to the closing of the mines in or about 1924. Between 1804 and 1902, quartz veins near Bisanattam in Chittoor District were opened down to a depth of 750 ft., and 10,000 tons of ore were crushed, yielding 6,000 ozs. of gold. Several further attempts were made during the past 30 years but, so far, there has not been any perceptible success.

To sum up, in the absence of considerable reserves of iron ore and coal, there are little prospects of establishing an iron and steel plant in Andhra. In fact, as the known reserves of iron ore are of poor quality, they can as well be exported wherever it is marketable. Although the deposits of copper, lead and zinc are not likely to be available in substantial quantities, yet, in view of the deficiency of these metals in India and its consequent dependence on imports, it will be worth our while to carry out intensive exploration for these reserves and try to exploit them at as economic a cost as possible. Mr. Dey has suggested the constitution of a central organisation to explore and exploit the ores available in small pockets throughout the State and make arrangements for their smelting at some appropriate centre or send them for smelting abroad.

One great difficulty, under which the search for valuable minerals in Andhra is subject to, is the lack of exposures of solid rock. A reason for this, in the opinion of Mr. Dey, is that the rivers in Andhra have reached their base levels of erosion. Further, the vast tracts in the country have become covered with thick blankets of surface decomposition products which effectually hide the underlying strata and demand the application of costly methods.

NEW PRODUCTS AND PROCESSES

"Atomic Clocks" Seek Time of Earth's Origin

WITH the assistance of "atomic clocks," Columbia University's new Lamont Geological Observatory near New York City is delving into mystery-enshrouded events which occurred billions of years ago. Through the intricate process of atomic "dating," scientists hope to "date" the origin of continents and seas, the beginning and development of man's life on earth and even the origin of the earth itself. Inside the new observatory, largest of its kind, are complex measuring instruments, massive electronic devices and the "atomic clocks," which are tomb-like enclosures where the radio-activity in ancient objects is measured. Minute samples of thousands of different materials, from one to billions of years old, are being "dated" in a series of tests. "Atomic clocking" dates back less than ten years and, although the methods used are complex, its theory is simple. Everything on earth contains radio-activity that can be measured—air, water, rocks, bones, petroleum, sulphur, volcanic ash, shells, pieces of wood. As these materials age, their radio-activity dies out at a definite rate. Through the use of atomic devices, their age can be computed accurately, possibly back to the beginning of time. Thousands of samples are being "dated" by the Observatory, ranging from rocks, ocean mud and fossils to mummy cloths and ancient objects of art and architecture. As the atomic examinations continue, scientists hope to learn the answers to many questions—how long the ice age lasted, how and when the crust of the earth was formed, where and when man first lived on earth, built homes, monuments, tombs, when and where he first learned to record thoughts and events in writing, sculpture and painting.

Trap for Car Thieves

An inventor from Vienna has designed a new kind of safety device against the theft of automotive vehicles. The new device is of most striking design, and as soon as the accelerator is pressed down by an unauthorised person, the ignition circuit is shut off and the electric circuit for the horn is closed so that it is impossible to drive away, because the horn begins to hoot incessantly. The most remarkable feature of this invention is, however, the fact that, at the same time, two steel cuffs clasp the legs of the thief and pin him down. All the parts of this trap can be installed in a perfectly invisible manner. The trap itself is completely immune against vibrations or even hard shocks, so that it is impossible that it might come into action unintentionally during normal driving. The trap functions only when the two steel cuffs have been adjusted accordingly. The device can also be used for safeguarding other objects, such as safes. Practical tests have shown the high value of this invention and the police authorities have given a written favourable statement on the serviceability of the device.

New Drug For High Blood Pressure

One small tablet of a new drug, Su-3088, taken before breakfast will reduce high blood pressure throughout the day, according to Dr. Keith S. Grimson of the Duke Hospital at Durham, South Carolina. Until Su-3088 was developed, hexamethonium had been widely used as the drug that most consistently reduced blood pressure. But four to six tablets of this drug must be taken each day. A small dose of Su-3088—50 to 100 milligrams—produces longer-lasting effect than hexamethonium. There are several drugs that can be injected to reduce blood pressure, but no drug in tablet form will reduce the pressure after a single dose as effectively as Su-3088, according to Dr. Grimson.

Machine for Turning Out Rolls of Wrapping Paper

An engineering works at Eerbeek (the Netherlands) has taken into production a machine with which large preprinted rolls of wrapping paper can rapidly be rewound to small rolls, ready for use in shops or storerooms. The paper runs from the mother roll *via* the guide rollers along the couch roller to the smooth winding shaft. This shaft can be removed and exchanged very rapidly. When the roll has been wound to the desired diameter, which is preset, the machine stops automatically. Then, within 20 seconds, the wound-up roll is ready for use and the machine is running again for the next winding operation. The winding speed of the paper is about 500 m. (1,640 ft.), per minute; the working width is 70 cm. (27½ in.), but other widths can be supplied to order. The diameter of the mother roll is normally 900 mm. (35½ in.), but can be made larger if desired. The diameter of the wound-up rolls is about 250 mm. (nearly 10 in.). A timing test showed that it takes 1½ minutes to make a 10-kg. (22-lb.) roll of 50 g/sq.m. (1¾ oz./10¾ sq. ft.) paper, 50 cm. (19½ in.) wide. On this basis, the capacity is thus 45 shop-counter rolls per hour. The machine is operated by one person.

New Door Seal for Dust Protection

An automatic door seal which protects rooms and passages against draughts and dust, is a new household invention in Australia which is now being marketed in South Australia. It consists of a steel plate, which is placed across the bottom of the door and holds a felt draught and dust stopper. When the door is closed, the steel plate on the door frame activates a small roller at the end of the plate. The plate gently forces down the felt stopper to the floor and seals the narrow opening between the door-bottom and floor level. On opening the door, a concealed spring automatically raises the stopper again and allows the door to clear the floor as it swings backwards or forwards.

STAGNANT CONDITIONS IN GENERAL INSURANCE BUSINESS

CONTROLLER DEPRECATES EVIL OF REBATING

AN analysis of the progress of life and general insurance business in 1953, covered by the latest issue of the *Indian Insurance Year Book*, 1954, shows that, while the new life business established a new record at Rs. 154.5 crores, as against Rs. 146.7 crores in the previous year, the general insurance business recorded no great improvement over the previous year. Thus, the premium income of the general insurers showed a small decline of Rs. 11 lakhs to Rs. 21 34 crores. This decline is, however, entirely due to the unsatisfactory performance of the marine insurance section, in which the premium income declined from Rs. 4.84 crores in 1952 to Rs. 4 38 crores in the following year. There was, however, a slight improvement in the premium income in the fire and miscellaneous insurance business. Fire premium income moved up from Rs. 10.49 crores to Rs. 10 59 crores in 1953 and miscellaneous premium income from Rs. 6.10 crores to Rs. 6.37 crores.

Indian insurers are gradually extending their operations to neighbouring countries, such as African territories, Burma, Ceylon and other South-East Asian countries. They derive a substantial part of their premium income from their overseas portfolio as the table below will show:

Premium Income

(Rs. in lakhs)

	Total premium income	Indian business	Foreign business
Fire Section—			
1953	7,87 (100.0)	2,43 (31%)	5,44 (69%)
1952	7,86 (100.0)	2,65 (35%)	5,02 (65%)
Marine Section—			
1953	2,73 (100.0)	1,26 (46%)	1,47 (54%)
1952	2,83 (100.0)	1,28 (45%)	1,54 (55%)
Miscellaneous Section—			
1953	4,46 (100.0)	3,08 (69%)	1,38 (31%)
1952	4,12 (100.0)	3,07 (75%)	1,05 (25%)

No significant variations were witnessed in the claims ratio, commission ratio and expense ratio of the general insurers, all of which remained practically at the same level as in the previous year. The following table gives the premium income, claims ratio, commission ratio and expense ratio in 1953 with corresponding figures for previous year within brackets:

General Insurance

	Premium Income (Rs. in lakhs)*	Claim ratio	Commission ratio	Expenses ratio
Fire Section	10,59	35 (32)	15 (15)	33 (33)
Of which—				
Indian insurers ..	2,67	86 (35)	17 (17)	30 (30)
U.K. insurers ..	2,06	23 (24)	8 (8)	38 (37)
Marine Section ..	4,38	56 (57)	6 (9)	24 (27)
Of which—				
Indian insurers ..	2,72	67 (64)	5 (5)	26 (26)
U.K. insurers ..	92	38 (48)	14 (13)	27 (25)
Miscellaneous Section ..	6,36	50 (49)	15 (15)	29 (29)
Of which—				
Indian insurers ..	4,46	49 (51)	16 (15)	29 (30)
U.K. insurers ..	1,63	48 (43)	15 (15)	28 (27)

* Net premium income.

It will be seen from the table above that, in the fire department, the expense ratio of Indian insurers at 30 per cent. is below that of the British insurers at 38 per cent. But the claims ratio of Indian insurers is higher at 38 per cent., as against 23 per cent. for British insurers. In the marine department, the expense ratio of both classes of insurers is nearly the same, about 28 per cent. But the claims ratio, as in the fire section, is much higher for Indian insurers—about 67 per cent., as against 38 per cent. for British. In the miscellaneous business, the performance of the two classes of insurers reveals little variation, in that the expense ratio and the claims ratio are about equal at 29 per cent. and 49 per cent., respectively.

A much fuller analysis of the experience of general insurers in respect of expenses has been made available this year. This analysis, however, refers to 1952 and 1951. In 1952, the number of insurers who spent less than the basic limit laid down under rule 17E of the Insurance Rules was 125, as against 142 in the previous year. Thus, the number of insurers who spent less than the basic limit went down. Also, of the 125 insurers who spent less than the basic limit in 1952, a large majority, namely, 75 insurers, spent only about 5 per cent. less than the basic limit. This suggests that, in the case of a large number of these insurers, the margin between the actual expenses and the expenses permitted is very narrow.

The number of insurers who spent in excess of the basic limit increased from 50 in 1951 to 78 in 1952. Although a large majority—about 47 insurers—exceeded the basic limit only by about 5 per cent., the fact remains that the number of insurers who transgressed the limits of expenses has increased between 1951 and 1952. Further, the number of insurers who exceeded the limit by 5 per cent. increased from 16 to 47 which shows that more and more insurers are beginning to think that a slight excess over the basic limit is not a serious offence.

An increase in expenses, if it is accompanied by an increase in business, is not, of course, a trend of which one should be perturbed. But experience shows that there has not been any significant improvement in the volume of business. Indeed, there is so much competition for available business that it has led to the evil of rebating. The main problem which has engaged the attention of the Executive Committee of the General Insurance Council is this widely prevailing practice of granting rebates of premium. A code of conduct was drawn up and it has been in force for some time now. An administrative machinery with investigating officers in Bombay, Calcutta, Delhi and Madras has also been set up to enforce the Code. The machinery, though it works under the supervision of the Executive Committee, is being run under the direct charge of the representatives of insurers in different regions.

It would appear that very few actual complaints of diversion of business through grant of rebates have been received by the Administrative Sub-Committee, though it is known that the "evil has not been checked to any great extent." The local sub-committees are still engaged in screening the salaried field workers and branches of insurers. It will take some time, it is stated, before the "check on bogus appointments will become effective." Also, the new accounting procedure which will enable the detection of false accounts has not yet been put into practice. Commenting on the evil of unfair business practices and the scheme which has been adopted for checking it, the Controller of Insurance says: "Ultimately, the success of the scheme must depend on the extent to which the insurers themselves are in earnest in eradicating an evil which, if it is allowed to go unchecked, is bound to prove suicidal to themselves."

The Controller has referred to the setting up of the Executive Committee and the Tariff Committee as an "experiment in autonomy" and says that it is designed to see that the representatives of the trade, in association with the Government, set their home in order and introduce healthy business methods and practices in a vital "auxiliary sector of the country's economy." Finally, he warns that if that experiment fails, it "will clearly be necessary to consider whether Government should assume greater police powers over insurers in the interest of the insuring public." This wholesome warning, it is to be hoped, will have the intended effect, for, unless the evil of rebating is checked, the future of general insurance is bleak indeed. But this will remain a vain hope, so long as there are far too many insurers competing for a limited volume of business. From this point of view, the solution probably lies in a wholesome and judicious reduction in premium rates, in encouraging the merger of smaller insurers so as to form larger groups and in merger of smaller insurers with certain larger insurers.

HEALTH INSURANCE SCHEME

Last week, the Employees' State Insurance Scheme was extended to two more areas in the country, namely, Coimbatore town (Madras State) and Madhya Bharat State. About 600,000 workers have been brought under the scheme so far, including the 30,000 workers who would now be covered with the coming into force of the scheme in Coimbatore town and the Madhya Bharat State. Inaugurating the Scheme in Coimbatore, Mr. M. Bhaktavatsalam, Minister for Labour, Government of Madras, observed that the Scheme was the most important step which the Government of India had taken towards protecting the workers against social and economic evils. In Madras State, Coimbatore town has been chosen as the centre for implementing the Scheme, because it is one of the most important industrial towns in the State and is full of potentialities for further expansion.

About 45 doctors have been chosen to work as panel doctors and 10 whole-time and part-time dispensaries have been started in the suburbs. To cater to the needs of the employees residing in out-of-the-way places and for sparsely populated areas, a mobile dispensary will be running with all necessary equipment, doctor and other members of medical staff. For indoor treatment, arrangements have been made for the time being with the Government Hospital. An independent hospital is, however, to be provided in the near future, with sufficient number of beds for general and serious sickness, T.B. and maternity.

For disbursing cash benefits to employees, four local offices have been opened in Coimbatore from where the workers can demand their cash benefits. In case an employee is unable to go to a local office to receive payment, he can get the same through his authorised representative. Payments will also be made in deserving cases by money order at the cost of the Corporation. The intention, it is stated, is that the employees should get the medical and other benefits "as easy and as best a manner as possible." Local committees will also be formed with a view to ensuring quicker and efficient administration of the Scheme in this area.

As regards the demand for extending the benefits under the Scheme to the families of the insured workers, Mr. Bhaktavatsalam said: "I can assure you that the Corporation and the State Government are considering this question very actively and it may be possible to extend the medical aid to the families of employees also sooner or later." Finally, he appealed to all the interests concerned, the employees, the employers and the doctors, to give their "co-operation and assistance to make this scheme a grand success."

In Madhya Bharat, the Scheme was inaugurated by Mr. V. V. Dravid, Minister for Development and Labour. Speaking at a meeting organised for this purpose in Gwalior, Mr. Dravid said that their cherished goal was the establishment of a Welfare State and the implementation of the scheme was an important step in that direction.

DEFICIT FINANCE IN ASIA—II

SCOPE NOT VERY GREAT—NEED FOR RAISING YIELD FROM TAXATION

By Frederic Benham

THE Working Party gave the following outline of the course which the development of most countries in the area is likely to take:

"First, the output of food will increase. This will come about by the reduction of losses through such causes as bad storage and pests and floods, by increasing yields per acre through the application of better methods of cultivation, and by bringing new land into cultivation or making possible two crops instead of one. Under-employment on the land may be reduced by the adoption of more labour-intensive methods of cultivation and in some areas by the expansion of mixed farming, with livestock. By these means, the populations will receive a more adequate and a better balanced diet.

"Second, the increased output of food will give the cultivators a larger surplus above their own needs and this surplus will provide the purchasing-power for a home market for local manufactures and other products. Some under-employed workers will be attracted off the land into other occupations. They will need training, and they will also need capital, in order to employ them in non-agricultural activities.

"These developments will be facilitated by the improvement of means of transport and communication and by the provision of more electric power.

"In countries which export a large proportion of their output, the development may take place largely in improving the efficiency and expanding the capacity of their export industries, thus enabling them to buy more food and other goods from abroad."

In am in complete agreement with this outline. The primary need is for more and better food. The average daily consumption in India is less than 1,600 calories, far too little for health and efficiency, and in most countries of the area it is not much higher. Moreover, the diet consists mainly of rice and other cereals and starchy vegetables. It contains relatively little meat, fish, or other protein and relatively little fats, milk, and leafy vegetables. Most of the people suffer from under-nourishment and consequent lack of energy and stamina. The remedy for this situation is a marked expansion of agricultural output.

Agriculture

In this respect, the situation in these countries resembles that of Great Britain before the industrial revolution. So long as one family's labour on the land provides little more than enough food for themselves, the great bulk of the population must be engaged in agriculture. Higher yields in agriculture are essential before much industrialisation can take place. In this area, there is considerable under-employment in agriculture but nevertheless yields per acre are much lower than in western countries. As they increase, a surplus of purchasing-power will be created with which to buy the products of workers who are being trained for, and will gradually be moving into, other occupations.

The conclusion which the Working Party drew from its analysis was that "development programmes framed on these broad lines will inevitably include a large number of projects which will only gradually expand output, although eventually they may give a high return. Hence a considerable and continued expansion in the money supply is almost certain to have inflationary consequences."

The Working Party felt that a moderate amount of inflation might do little harm, and might indeed stimulate private investment, provided that the public appreciates the paramount need for carrying out developmental projects and is convinced that the money is being invested wisely. "However, when the rate of inflation exceeds a certain magnitude, it will exercise an undesirable and distorting influence on the economy." Resources will be used wastefully in order to reap inflationary profits; there will be speculative hoarding; there may be balance of payments difficulties; rates of interest may rise, destroying the domestic market for Government bonds; and "if wage-earners and others find their real incomes considerably reduced by the rise in prices, there may be serious social unrest, and administrative and productive efficiency may suffer." Hence the section concludes with a warning: "Extreme caution should, therefore, be exercised to prevent inflation from becoming of such a magnitude that it distorts the economy, weakens confidence in the currency, reduces the incentives to saving and to productive investment, and inflicts hardships on large sections of the community."

Foreign Trade

One effect of an inflationary increase in money supply is to stimulate imports. The volume of imports tends to rise, because money incomes are higher and possibly also because the prices of domestic products which compete with imports tend to rise. At the same time, the costs of the export industries may be raised, somewhat curtailing the volume of exports. Hence foreign exchange reserves will tend to fall.

The importance of this factor, the Working Party points out, will vary with the proportion of national income which is spent on imports and with the extent to which increases in money incomes are spent on imports rather than on domestic products. In a country such as Ceylon or, to a less extent, Indonesia, with a high proportion of foreign trade, the fall in foreign exchange reserves is likely to be the first and most powerful check on inflation. In a country such as India, which exports only 5 to 10 per cent. of its output, this factor will be of less importance. Malaya is rather a special case. She relies heavily on foreign trade but has no central bank with powers of credit creation.

The points made by the Working Party are illustrated by the recent history of Ceylon. The story is told frankly in the annual reports published by the Central Bank of Ceylon. Briefly, the Government maintained its expenditure at a high level after the recession in export prices following the end of the Korean boom, running large budget deficits financed by credit creation. In 1952 and 1953, says the report published by the Central Bank, Ceylon maintained consumption at a much higher level than could be justified. "The result was that the country sacrificed external assets which it could have put to better use." External assets, which stood at Rs. 1,209 millions at the end of January, 1952, had fallen to Rs. 605 millions by the end of November, 1953.

In July, 1952, the Government took a series of measures which tended to restore equilibrium. The most important of these was the virtual abolition of the food subsidies, which had been accounting for nearly a quarter of all Government expenditure, although this meant raising the price of rationed rice from 25 cents to 70 cents a measure. Other reductions were made in non-developmental expenditure; taxes were increased; the charges for postal, railway, and electricity services were raised. Aided by some improvement in the terms of trade, the balance of payments gradually recovered.

Of course, a country may seek to protect its external reserves by imposing severe restrictions on imports. More than one deficit-finance country in the area is following this policy at the present time. Another possible course, followed, for example, by Indonesia two years ago, is to devalue the currency. But, in so far as the volume of imports is reduced, the internal pressure of inflation is correspondingly increased.

Conclusions

I have referred so much to the views of the Working Party that I should add that they discussed also several other questions, which I shall mention very briefly. They began by considering various concepts of a budget deficit and concluded that the most useful definition for their purpose was the decrease in the cash holdings of the Government plus Government borrowing from the central bank. They discussed indicators of inflation and concluded that the most sensitive indicator, together with a good overall index (if available) of domestic prices, is numerical estimates of factors accounting for changes in money supply, such as increases in foreign exchange reserves and in bank loans and decreases in the cash balances of all Government bodies and in savings deposits.

They discussed controls, to counteract or suppress the effects of inflation. They agreed that the effectiveness of such controls would vary between countries according to the efficiency with which they were administered. "If controls were not efficiently administered, they would lead to various abuses and injustices and would distort the economy without achieving their objectives. It was considered, therefore, that, to begin with, suitable means should be explored for checking inflation by designing the fiscal policy in such a way that a large portion of the excess income created by inflation would be mopped up by taxation or by borrowing from the public."

The countries of this area are certainly faced with a dilemma. Developmental expenditure is essential to increase their outputs and standards of living. It is difficult for them to find adequate resources to meet this expenditure without having resort to deficit finance. Yet, in my view at least, the scope for deficit finance is not very great; the limits beyond which the inflationary effects become harmful are soon reached.

Obviously, each Government must decide for itself how much it spends on such purposes as defence and social services rather than on developmental activities (including technical training). However, there is a possibility that more could be raised in taxation and similar ways as an alternative to deficit finance. Services provided by Governments or other public authorities, for example, postal services and rail transport and electric power, are not always charged for at rates which cover their full costs, including their capital costs. It may seem hard to charge such rates for, say, irrigation water provided to poverty-stricken peasants, but if the benefit to them is greater than the cost (as it should be if the schemes are sound), then there seems no reason for subsidising them and thereby diminishing the resources available for development elsewhere. On the same reasoning, it would seem that land which has been raised in annual value by developmental projects should contribute a large part of that increase in taxation.

Taxes on Semi-luxuries

There may be considerable scope in some countries for increased taxes on semi-luxuries such as tobacco. In most countries of South and South-East Asia, the personal exemption level for income-tax is two or three times as high as in the United Kingdom and only a tiny minority of the population pays any income-tax. A poor country cannot be expected to take as high a proportion of its national income in taxation as a relatively rich country. At the same time, it is a remarkable fact that, in most countries of the area (Burma, Ceylon, and Malaya are exceptions) the total yield of taxation, both central and local, is well under 10 per cent. of their national income.

There are undoubtedly great political and administrative difficulties in the way of increasing the yield from taxation, whether by higher rates of tax or by more effective methods of collection. Nevertheless, it would seem that further efforts in this direction might be made.

Finally, it is very clear that a substantial measure of external aid to the area is essential during these critical and formative years.—By courtesy of *Lloyds Bank Review*.

PROSPECTUS

OBJECT

1. The Company has been incorporated on the 5th day of January 1955 for the objects mentioned in the Memorandum of Association and particularly for the purpose of carrying on the business of assisting industrial enterprises within the private sector of industry in India

in general by

(i) assisting in the creation, expansion and modernisation of such enterprises;
(ii) encouraging and promoting the participation of private capital both internal and external, in such enterprises;
(iii) encouraging and promoting private ownership of industrial investments and the expansion of investment markets;

and in particular by

(i) providing finance in the form of long- or medium-term loans or equity participation;
(ii) sponsoring and underwriting new issues of shares and securities;
(iii) guaranteeing loans from other private investment sources;
(iv) making funds available for re-investment by revolving investments as rapidly as prudent;
(v) furnishing managerial, technical and administrative advice and assisting in obtaining managerial, technical and administrative services to Indian industry.

GOVERNMENT AGREEMENT

2. Under Articles of Agreement hereinafter referred to and to be entered into between the President of India of the one part and the Company of the other part, the Government of India have agreed to advance to the Company a sum of Rs. 7,50,00,000 (Rupees Seven Crores and Fifty Lakhs) free of interest repayable in fifteen equal annual instalments commencing from and after the expiry of fifteen years from the date of receipt of the advance by the Company. The said advance of Rs. 7,50,00,000 (Rupees Seven Crores and Fifty Lakhs) shall rank for payment and shall be payable only after payment of all outstanding debts and liabilities of the Company and the amount of the paid-up share capital of the Company together with any premiums payable thereon; Provided, however, that each annual instalment as it falls due (and the entire advance if it should fall due pursuant to the provisions of the said Agreement) will become a debt of the Company and will cease to be treated as part of the advance outstanding for purposes of the said Agreement. In the event of the Company being wound-up voluntarily or by or subject to the supervision of a Court, any surplus assets shall be divided between the holders of the Ordinary Shares of the Company and the Government of India in proportion to the amount paid-up on the Ordinary Shares and the amount of the advance or part thereof outstanding at the commencement of the winding-up. By the said Agreement it is further provided that if, as a result of the report of the Accountants it is found that the capital of the Company (including the said advance of Rs. 7,50,00,000 [Rupees Seven Crores and Fifty Lakhs] or part thereof then outstanding) has been impaired and:—

(i) If liabilities exceed assets by twenty per cent. of the aggregate of the paid-up share capital of the Company and the amount of the said advance then outstanding, a consultation will take place between the Government of India, the Company and The International Bank for Reconstruction and Development (hereinafter called "the Bank") to examine the situation of the Company and its prospects and to determine what remedial action may be recommended to the Board of Directors of the Company;
(ii) If the capital of the Company is further impaired and such impairment reaches thirty per cent., the Government of India in consultation with the Bank and the Company will have the right to apply to the Court for an Order for the winding-up of the Company in accordance with and subject to the provisions of the Indian Companies Act, 1913 (hereinafter called "the Act").

By the said Agreement it is also provided that so long as the said advance or any part thereof shall be outstanding, the Government of India shall have the right to appoint, maintain in office and remove from time to time one Director on the Board of Directors of the Company to represent the Government of India and the Director so appointed shall not be liable to retire by rotation nor be required to hold any share qualification.

AGREEMENT WITH THE INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT

3. Under Articles of Agreement hereinafter referred to and to be entered into between the Bank of the one part and the Company of the other part, the Bank has agreed to lend and advance to the Company from time to time an amount in various currencies equivalent to $10,000,000 (that is, Dollars one Crore) upon the terms and conditions therein contained.

GUARANTEE AGREEMENT

4. Under Articles of Agreement hereinafter referred to and to be entered into between India acting by its President of the one part and the Bank of the other part, the Government of India have stood guarantee for repayment of the principal, interest and other charges on the loan to be made by the Bank to the Company upon the terms and conditions therein contained.

MINIMUM SUBSCRIPTION

5. In the opinion of the Directors the amount to be provided (exclusive of any amounts payable, if any, otherwise than for cash) for the following, namely:—

(a) Preliminary expenses (inclusive of brokerage), and

(b) Working capital,

is Rs. 5,00,00,000 (Rupees Five Crores), which will be provided from the proceeds of the present issue.

BROKERAGE

6. Brokerage at the rate of Re. 1 per Ordinary Share in respect of Shares offered for public subscription will be paid by the Company on allotment made in respect of applications bearing the stamp of any Bank or any registered Broker or Brokers of a recognised Stock Exchange.

PRELIMINARY EXPENSES

7. The estimated amount of preliminary expenses (excluding brokerage) is Rs. 3,00,000 (Rupees Three Lakhs).

CONTRACTS

8. The following contracts (terms whereof have been negotiated) will be entered into:—

(i) Agreement between the Bank of the one part and the Company of the other part;
(ii) Agreement between India acting by its President of the one part and the Bank of the other part;
(iii) Agreement between the President of India of the one part and the Company of the other part.

Drafts of the Agreements referred to above may be inspected at the Registered Office of the Company at Fort House, 221 Dadabhoy Naoroji Road (Hornby Road), Bombay 1, at any time during usual business hours (except on Sundays and holidays).

INTEREST OF DIRECTORS

8A. No Director is interested in the promotion of the Company except to the extent of the remuneration payable to him as hereinafter specified.

PROVISIONS IN THE ARTICLES OF ASSOCIATION

Director's Qualification and Remuneration

9. The Articles of Association provide as follows:—

(i) *Article 118.* The qualification of a Director of the Company (other than the Government Director or any Debenture Director) shall be the holding of shares in the Company of the aggregate nominal value of Rs. 5,000. A Director may act before acquiring his qualification, but shall in any case acquire the same within two months from his appointment.

Article 119. The ordinary remuneration of a Director for his services shall be at the rate of Rs. 250 per month irrespective of the number of meetings of the Board attended by him. No Director who is a Government servant shall be entitled to receive any remuneration under this Article or under any other provisions of these presents except as authorised by his Government.

Article 120. Subject to the provisions of the Article 119 in the case of a Government servant the Directors may allow and pay to any Director who is not a *bona fide* resident of the place where a meeting is held and who shall come to such place for the purpose of attending a meeting such sum as the Directors may consider fair compensation for travelling expenses in addition to his remuneration as above specified and the Directors may from time to time fix the remuneration to be paid to any member or members of their body constituting a committee appointed by the Directors in terms of these presents and may pay the same.

Article 121. Subject to the provisions of the Article 119 in the case of a Government servant if any Director, being willing, shall be called upon to perform extra services or to make any special exertions in going out or residing at a particular place or otherwise for any of the purposes of the Company, the Company may remunerate such Director either by a fixed sum or otherwise as may be determined by the Directors and such remuneration may be either in addition to or in substitution for his remuneration above provided.

(ii) The Directors may fix the remuneration of local boards appointed by them.

Voting Rights and Restrictions on Transfer

10. (A) The Articles of Association provide as under:—

Article 100. (i) Upon a show of hands every member entitled to vote and present in person or (in the case of a corporation) by attorney or proxy shall have one vote.

(ii) Upon a poll every member entitled to vote and present in person or by attorney or by proxy shall have one vote for every share held by him.

Article 101. Any member who is a corporation present by a representative duly authorised by a resolution of the Directors of such corporation in accordance with the provisions of section 80 of the Act may vote on a show of hands as if he was a member of the Company. The production at the meeting of a copy of such resolution duly signed by one Director of such corporation and certified by him as being a true copy of the resolution shall on production at the meeting be accepted by the Company as sufficient evidence of the validity of his appointment.

Article 102. Subject to the provisions of the Act no member shall be entitled to be present or to vote at any General Meeting either personally or by proxy or attorney or as a proxy or attorney for any other member or be reckoned in a quorum whilst any call or other sum shall be overdue and payable to the Company in respect of any of the shares of such member for more than one month.

Article 48. Subject to the provisions of Agreement recited in Article 4 (1) (a) of these presents the Directors may at their absolute and uncontrolled discretion decline to register or acknowledge any transfer of shares and shall not be bound to give any reason for such refusal and in particular may so decline in respect of shares upon which the Company has a lien or whilst any member executing the transfer is either alone or jointly with any other person or persons indebted to the Company on any account whatsoever or whilst any moneys in respect of the shares desired to be transferred or any of them remain unpaid or unless the transferee is approved by the Directors and such refusal shall not be affected by the fact that the proposed transferee is already a member. The registration of a transfer shall be conclusive evidence of the approval by the Directors of the transferee.

(B) The said provisions of the said Agreement *inter alia*, as follows:—

"It is the mutual intention of the Government of India and the Corporation that the membership of the Corporation shall, so far as practicable, be broadly distributed and that there shall be no undue concentration of control. To that end, the Corporation agrees that:

(a) The Board of Directors shall at all times exercise their rights under the Articles of Association of the Corporation with respect to registration of transfer of shares so as to prevent any one person or company or group of affiliated persons or companies from acquiring effective control of the Corporation.
(b) Any dispute between the Government of India and the Corporation as to whether effective control of the Corporation shall have been acquired by any one person or company or group of affiliated persons or companies may be referred to arbitration under Clause 15 of this Agreement and in such event the arbitrator, if he shall determine that such control shall have been so acquired, shall order the outstanding balance of the Government advance to be repaid by the Corporation forthwith upon the expiration of a reasonable period fixed by the arbitrator unless prior thereto appropriate remedial measures prescribed by or satisfactory to the arbitrator shall have been taken or the winding-up of the Corporation shall have commenced. Any such order shall be binding on the Corporation."

(C) No restrictions are imposed by the Articles of Association upon the Directors of the Company in respect of their powers of management save and except such restrictions as are imposed upon them by law as also save and except the restrictions imposed upon them by Articles 13, 69 and 151 which run as follows:—

Article 13. Any unclassified shares (whether forming part of the original capital or of any increased capital of the Company) may be issued either with the sanction of the Company in General Meeting or by the Directors and upon such terms and conditions and with such rights and privileges annexed thereto as by the General Meeting sanctioning the issue of such shares be directed and, if no such direction be given and in all other cases, as the Directors shall determine; and in particular such shares may be issued with a preferential or qualified right to dividends and in distribution of the assets of the Company and with a special or without any right of voting and any preference shares may be issued on the terms that they are or at the option of the Company are to be liable to be redeemed, provided however that (1) no shares shall be issued pursuant to this Article without the sanction of the Company in General Meeting unless they shall be offered to the members in proportion to the existing shares held by each member (irrespective of class) and (2) no unclassified shares shall without the sanction of the Company in General Meeting be issued as preference shares if the aggregate nominal amount of issued preference shares would thereby exceed the aggregate nominal amount of the issued ordinary shares of the Company.

Article 69. Subject to the provisions of these presents the Directors may from time to time at their discretion borrow any sum or sums of money for the purposes of the Company: Provided that the Directors shall not subject to any restrictions imposed by the terms of the *Agreements mentioned in Article 4(1) (a) and (b) borrow or guarantee any sum of money which after such borrowing or guarantee will make the amount borrowed and guaranteed by the Company and at that date outstanding exceed an amount equal to three times the aggregate of (1) the unimpaired capital of the Company, (2) the amount at the time outstanding of the special advance from the Government of India referred to in the Agreement mentioned in Article 4(1) (a) and, (3) the surplus and reserves of the Company; Provided however that no lender or other person dealing with the Company shall be concerned to see or inquire whether any of these limits are observed or be bound by such limits. For the purpose of this Article, the amounts of the unimpaired capital and of the surplus and reserves of the Company shall be those ascertained and certified by the Company's Auditors at the time of such certification or if the Company so desires at the time of the last annual audits of the Company's books (not being more than eighteen months prior to the certification as aforesaid) as an evaluation of the Company's assets and liabilities in accordance with sound accounting practices on the basis that the Company is a going concern.

Article 151. The Directors shall every year after the expiry of five years from the incorporation of the Company before recommending any dividend, set aside out of the profits of the Company for that year, which would be otherwise available for dividend a minimum of twenty-five per cent. thereof towards a Reserve Fund to meet contingencies and for such other purposes other than the payment of dividends as the Directors shall in their absolute discretion think conducive to the interests of the Company until the total sum standing to the credit of such Reserve Fund shall amount to a sum equal to the amount at the time being remaining unpaid of the Government advance referred to in the Agreement recited in Article 4 (1) (a) of these presents.

*Being the Agreements referred to in clause 8 above.

APPLICATION

11. Application for shares should be made on the form accompanying this Prospectus or on the form which may be obtained at the Registered Office of the Company and sent in accordance with the directions contained therein with a remittance of the amount payable on application. Where no allotment is made the deposit will be returned in full and where the number of shares allotted is less than the number applied for the balance of the deposit will be returned. The shares when issued will be subject to the Memorandum and Articles of Association of the Company, a copy of which can be inspected at the Registered Office of the Company during office hours.

12. The Company shall, within nine months after the allotment of shares of the present issue, complete and have ready for delivery the certificates in respect of such shares.

No shares are under option or agreed to be put under option and no payment has been made or agreed to be made to any promoter except reimbursement of travelling expenses.

Application will be made to recognised Stock Exchanges in India in due course for the quotation of the shares.

*Attached to this Prospectus and forming part of it is a copy of the Memorandum of Association of the Company.

NEW PUBLICATIONS

Fundamentals of Business Organisation. By Dr. B. V. Narayanaswami Naidu and Prof. H. K. Datta. Published by Messrs. M. Seshachalam & Co., 7, Sunkurama Chetty Street, Madras-1. Price: Rs. 11-8.

THE fact that this publication has entered the third edition in the course of such a short period as seven years—the first edition was published in December, 1947—indicates its wide popularity. In the latest edition, the authors have thoroughly revised the analysis of the problems of business organisation in the light of the developments that have occurred in recent years. Special mention, for instance, may be made of the inclusion of important recommendations of the Company Law Committee and the main clauses of the Indian Companies Bill (Bill No. 46 of 1953), together with the author's own comments at the appropriate places. A perusal of these will, there is no doubt, enable one to follow the discussion in Parliament when the Bill comes up for consideration.

The authors begin their analysis with a brief description of the nature and formation of business units and proceed to a detailed discussion of joint-stock companies. They have devoted a separate chapter to the study of the managing agency system. The study reveals the notable part which the system has been playing in the industrial history of India. Emphasising the importance of managing agents in the matter of industrial finance, the authors observe: "In the absence of any other specialised type of financial institutions such as industrial banks or indirect agencies like investment trusts or fixed trusts, in good number, the help given by the managing agents is always welcome and has also become indispensable, even though it manifests some bad features." These, indeed, are pertinent remarks which the critics of the managing agency system will do well to note. The authors of the publication under review have also made a fairly detailed study of such subjects as industrial and corporation finance, combinations, co-operative institutions, public utilities, scientific management, rationalisation, problem of distribution, exports and imports, organised markets, etc.

A special chapter is devoted to the examination of the problem of State and industry. Commenting on the Government of India's industrial policy of April, 1948, the authors refer, in particular, to the second category of industries. They point out that the operation of industries by both private bodies and the State simultaneously will lead to unequal competition, "due to the privileges and prestige attached to the undertakings owned and managed by the State." The authors feel that it is better to avoid the possibility of such competition and, therefore, suggest that the State should combine with private bodies for establishing new industrial undertakings in this sector, subject to regulation and control of the Government. They are also of the view that the period of immunity (10 years) given to industries is too short to encourage the existing private concerns to invest funds in the development of their institutions. Indeed, the authors go to the length of remarking that "it has made the business community nervous and apprehensive of investment in those industries, as all the industries mentioned in the group require heavy capital outlay which pays but slowly. The period of immunity ought to have been longer."

Although the book is primarily intended for students of commerce, it will surely be found useful to business men. Even the lay public will find the book useful, since the authors have taken care to adhere rigidly to brevity and simplicity of style and to avoid use of technical jargon.

Economic Review, Congress Diamond Jubilee Session Number. Editor: H. D. Malaviya. Published by the All-India Congress Committee, 7, Jantar Mantar Road, New Delhi. Price: As. 12.

This Diamond Jubilee Number of the *A.I.C.C. Economic Review* is a bumper issue, containing contributions mostly from persons who are high in the hierarchy of the Congress Party. The highlight of the issue is the authoritative articles from the Chief Ministers of a number of States, namely, Mr. Morarji B. Desai, Mr. Srikrishna Sinha, Dr. B. C. Roy, Mr. Bhakshi Gulam Mohammed, Mr. Bhim Sen Sachar, Mr. Ravishankar Shukla, Mr. Mohanlal Sukhadia, Mr. Shambhu Nath Shukla, and Mr. Mishri Lal Gangwal. The articles give a survey of the economic progress since Independence in their respective States. They provide a good historical background for the student of economic history of India, as they cover the achievements in each State, in the sphere of industry, agriculture, health, education, communication, etc. The writers have paid particular attention to the progress made in their States during the first three or four years of the Plan.

Besides, as many as four full pages of the journal have been devoted to spotlighting India's march towards economic freedom under Congress leadership. The utility of this section would have been greater, if a reference had been made to the difficulties under which the Party had to work in order to achieve the results and the fields in which progress has been slow.

The *Economic Review* under reference will be noted also for the views of the Prime Minister on the task before the Congress. The note is written in a philosophical vein urging the Congress worker to "search his heart and seek an answer to the question as to how far he has kept up to the standards of old." In another article, Pandit Govind Ballabh Pant lays emphasis on the importance of cottage industries to the economy of the country and professes his belief that both large-scale and cottage sectors could exist together and supplement each other's efforts to raise the economic level of the country. Mr. V. L. Mehta's views expressed in another article on the same subject make interesting reading.

The journal contains, besides, other outstanding contributions on a wide variety of economic topics and from persons distinguished in public service. Thus mention may be made here of "the National Extension Movement" by Mr. V. T. Krishnamachari, "Democracy in Planning" by Mr. G. L. Mehta and "Growing Rice the Japanese Way" by Dr. Punjabrao Deshmukh.

Vocational Guidance in France. International Labour Office, Geneva, Switzerland. Available in India: Mr. V. K. R. Menon, 1, Mandi House, New Delhi. Price: Rs. 4.

When the International Labour Conference adopted the Vocational Guidance Recommendation, 1949, it also adopted a resolution recommending the Governing Body, among other things, to instruct the Office to assist member-States by conducting surveys and publishing manuals on vocational guidance. The present study on vocational guidance in France has been prepared in furtherance of the above resolution. The report gives a detailed description of vocational guidance in France and provides extensive illustrations of procedures and methods used in that country.

A careful study of the report discloses that the present state of vocational guidance in France is by no means final. It is still in the process of growth. The French vocational guidance services have undertaken an objective review of their methods. Here the aim is only to estimate how much of the task has been done in relation to the objectives set, to measure the road covered towards the ultimate goal and to define, where appropriate, the causes of any delay.

Guidance facilities have been made available to adult workers up to now only in exceptional cases. The main task at the moment is guidance of the disabled, which has been pursued energetically during recent years. It is not, however, possible to estimate with any degree of accuracy the extent of the needs and the proportion in which they have been met. The position is different in the case of juvenile guidance, where the competent services have had their goal laid before them by legislation, that is to say, the guidance of all young people who have not decided at the end of their compulsory primary schooling (at the age of 14) to go on to secondary schools and are faced, before leaving school, with a choice between preparing for an occupation through further training and immediate employment.

The expansion of vocational guidance in France and its extension to cover the entire juvenile population are no longer hampered by lack of technical personnel, which represented a serious problem in the period immediately following the war. There is now sufficient systematically trained personnel available to cover present employment opportunities, so that the number of pupils admitted to the National Labour Research and Vocational Guidance Institute has had to be deliberately cut down. If material resources were to allow an expansion of the services, however, it would be relatively easy to obtain staff, since the number of would-be trainees at the Institute is constantly increasing, thus showing the prestige attaching to this kind of training. The main obstacle hampering the extension of vocational guidance in France today, it is stated, is financial. This is true of many other countries too.

The "Eastern Economist" Annual Number, 1954. Editor: E. P. W. da Costa. Published by the "Eastern Economist," 52, Queensway, New Delhi. Price: Rs. 5.

The *Eastern Economist Annual Number*, 1954, is devoted to a study of the recent trends in Indian and South-East Asian economy. "The moral of this *Annual Number*," the Editor says, "is that India needs to associate herself more closely with her friends in South-East Asia." This cannot certainly be done without adequate knowledge of the South-East Asian economy. From this point of view, the *Number* is bound to be read with interest, for it describes the agricultural, industrial and educational problems in South-East Asia. This is followed by an economic survey of India in 1954. A notable feature of the publication is that it gives a series of statistical tables relating to different aspects of Indian and South-East Asian economy, supplemented by graphical representation of economic data presented in a manner illuminating to the mind and pleasing to the eye.

Report of the Bombay Chamber of Commerce, 1953. Published by L. A. Boult, Secretary, Bombay Chamber of Commerce, Ballard Estate, Bombay.

The Report continues to be a valuable reference work on official policy regarding industry, trade and commerce of India. It contains Government notifications, information on committees appointed by the Government during the year. It carries also the Chamber's replies to the various questionnaires circulated to it, and the views of the Chamber on some of the legal measures which appeared before the Indian Parliament in 1953. The stand taken by the Chamber on most controversial economic issues is well balanced and its suggestions, if implemented by the authorities, would go a long way towards solving many economic problems. Its views on the various provisions of the Bombay Sales Tax Amendment Bill, 1953, deserve special mention. The Chamber's statistical returns have always been found very useful by trade and industry.

Honduras—June, 1954. Overseas Economic Survey. By J. P. Coghill. Published by Her Majesty's Stationery Office, London. Price: 1s. 3d.

Although Honduras is one of the small Central American Republics, considerable opportunities exist for trade with the U.K. The principal British goods which find a ready sale in Honduras are whisky, motor cars, bicycles, diesel engines, cotton thread, tropical worsteds, sanitary ware, and cheap cotton goods. It may also be possible to secure a larger share of the market at present supplied from the U.S. These facts, together with full information about the finance, industry, and general conditions in the Republic, are given in the publication under review.

Life Insurance Directory. Edited by Ashutosh Banerjea. Published by Chaya Publications Ltd., 21, Mission Row, Calcutta. Price: Rs. 3-8.

This is the twelfth edition of the *Directory* which continues to be an increasingly useful publication. The earlier sections of the Directory give the lists of insurers, actuaries, fellows of the Chartered Insurance Institute, London, and their addresses, registers to be maintained under the Insurance Act as well as the important provisions of the Act. The bulk of the book is taken up by the summary of the results of working of the individual insurance companies and their premium tables. For each company, a summary of the latest valuation report as well as of the revenue account and balance-sheet is given. The *Directory* is thus a good reference work.

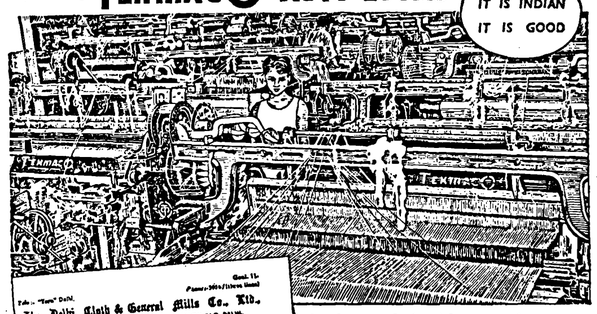
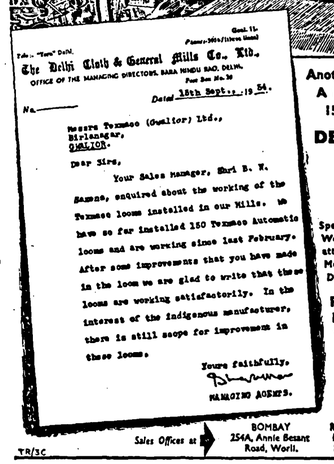
MAKE YOUR MILLS MORE PROFITABLE
By installing TEXMACO AUTO LOOMS
IT IS INDIAN IT IS GOOD





The Delhi Cloth & General Mills Co., Ltd.
OFFICE OF THE MANAGING DIRECTORS, BARA HINDU RAO, DELHI.
Dated 18th Sept., 1954.
No.
Messrs Texmaco (Gwalior) Ltd.,
Birlanagar,
GWALIOR.
Dear Sirs,
Your Sales Manager, Shri B. N. Samna, enquired about the working of the Texmaco looms installed in our Mills. We have so far installed 150 Texmaco Automatic looms and are working since last February. After some improvements that you have made in the loom we are glad to write that these looms are working satisfactorily. In the interest of the indigenous manufacturer, there is still scope for improvement in these looms.
Yours faithfully,
MANAGING AGENTS.

CAUSTIC SODA AND BLEACHING POWDER

PROTECTION GRANTED FOR FOUR YEARS

THE Government of India has accepted almost all the recommendations of the Tariff Commission on the question of granting protection to the caustic soda and bleaching powder industry. On the basis of the present tariff value of Rs. 28 per cwt. of caustic soda, an import duty of 32.37 per cent. *ad valorem* was considered as sufficient for providing adequate protection to the domestic industry. The Tariff Commission, however, did not recommend protection to this extent, as it would cause hardship to the consumer. In order to maintain the prices of caustic soda at a reasonable level, the Commission suggested that the existing preferential duty of 27.3 per cent. *ad valorem* on caustic soda of U.K. origin should be converted into a protective duty, the standard rate of duty being fixed in accordance with the terms of the relevant trade agreements. Further, it added that, if at any time it was found necessary to change the tariff value, the rates of duty should be so adjusted as to restore the quantum of tariff protection afforded to the domestic industry by the present rates of duty.

With regard to bleaching powder, the Tariff Commission's findings revealed that the fair ex-works price for this product for 1954-56 would be lower than the c.i.f. price of imported bleaching powder. In spite of this fact, actual output was very low and costs of production was, therefore, high. Part of the low output was found to be due to consumer's prejudice against the domestic product. The Commission, therefore, recommended that a protective duty of 15 per cent. *ad valorem* should be imposed on bleaching powder.

Tariff Protection for the First Time

In both the cases, the protective duties were recommended to be in force up to 31st December, 1958. Since the protective duties mentioned above came into effect on 28th January, 1955, the industry will enjoy protection for nearly four years. This, of course, is the first time that the industry is having tariff protection. It may be recalled, in this connection, that the late Tariff Board had recommended a subsidy at the rate of Rs. 2 per cwt. of caustic soda and Rs. 1-13 per cwt. of bleaching powder for a period of 15 months from 1st October, 1946, on the basis of actual sales. The grant of this subsidy was, however, subject to the condition that the Company would sell these chemicals at prices no higher than those of the imported products. No subsidy was recommended for liquid chlorine. The Government of India, in its resolution dated 22nd March, 1947, accepted the condition, but added a further provision that, if, upon examination of accounts, it was found that the only unit concerned had made profits on the sale of liquid chlorine, in excess of the profits allowed by the Board for this item in making its estimates of fair selling prices, the subsidy would be reduced. On an examination, in 1948, it was found that the conditions laid down by Government were not fulfilled by the unit concerned. The subsidy was, therefore, not paid. Again, in 1952, the industry claimed protection. This was considered and the Tariff Commission recommended certain protective duties. But by the time the Government was able to take a decision, the c.i.f. prices had risen so high that the Government considered that there was no need to give protection to the industry then.

Ancillary Recommendations

In addition to accepting the above suggestions, the Government has approved of a number of other ancillary recommendations. These include, among others, the formulation and implementation by the Government of an integrated plan for expanding the production of soda ash and caustic soda. This suggestion is a sequel to the fact that the domestic production of caustic soda is, at present, sufficient to meet only 35 per cent. of the domestic requirements. There is need, therefore, for the industry considerably to expand before the country can become self-sufficient in regard to caustic soda. Nearly 90 per cent. of the present production of caustic soda is by the electrolytic process. The scope for expansion of the electrolytic section, however, is severely restricted, owing to the relatively small demand for chlorine, a by-product of this process. The alternative process of causticisation is free from this drawback, but is, at present, uneconomical, because of the high cost of indigenous soda ash. The purpose of the integrated plan above is to see to it that the production of caustic soda by causticisation becomes economical. In this context, the Government has been advised to keep a careful watch over the prices of caustic soda (both solid and liquid) and bleaching powder and take, if necessary, suitable measures under the Industries (Development and Regulation) Act to regulate them.

Another recommendation of the Commission suggested that the Government should review the railway and coastal freights on caustic soda and chlorine products, particularly hydrochloric acid. The Commission considered that this was quite necessary, in order to minimise the burden on the consumer and also to assist the fuller utilisation of chlorine which is vital to the development of the electrolytic section of the caustic soda industry. The industry should also be provided with transport facilities for its raw materials and finished products. The Government in its resolution states that this, as well as the suggestion regarding the integrated plan mentioned above, has been taken note of by it and that it proposes to pursue the suggestions further.

Refund of Salt Cess

The Government has, however, not taken its decision in regard to either the granting of a rebate on the salt cess or exempting empty cylinders required by the industry for filling and exporting liquid chlorine from import duty, provided these are re-exported within a specified period. The rebate on salt cess was considered desirable by the Commission, as it would encourage expansion of the industry and reduce burden to the consumer. These two suggestions are stated to be under the examination of the Government.

Among other ancillary recommendations is included the grant of additional assistance by means of import control, so long as such control is, in any case, maintained for balance of payments reason. This suggestion seems to be intended for safeguarding the interests of the industry to which the protective duty fixed is less than the rate of duty necessary for providing adequate protection. Further, the Government of Madras has been advised to give special consideration to the requirements of the Mettur Chemical and Industrial Corporation for electric power. And the Union Government has been requested by the Commission to initiate special measures for developing industries which require large quantities of chlorine. Besides, emphasis has been laid on the necessity for paying due regard to the supply and demand position of chlorine in any region from which applications are received for setting up electrolytic plants. For liquid chlorine is the by-product of this process and its transport over long distances would be both costly and difficult.

Tata Chemicals

The Government has also been advised to examine the scheme of Tata Chemicals for manufacturing caustic soda from imported Magadi ash. The Company tendered evidence during the enquiry to the effect that, by using Magadi ash, it would make available for domestic consumption larger quantities of light ash now used for the production of caustic soda, on account of the difference between the costs of imported light ash and Magadi ash as well as the reduction in imports of caustic soda. The Company maintained that, if sufficient imports of Magadi ash were allowed to enable it to utilise its full capacity in the causticisation plant, its cost of production of chemical caustic soda would come down on account of the use of cheaper material and the reduction in overheads and would be comparable with the average cost of production of electrolytic caustic soda.

The Government has also been requested to assist starting the production of high test hypochlorite. It is stated that early consideration should be given to the question of installing washing plants at the Sambhar Salt Works.

The attention of manufacturers has been drawn by the Government to the necessity for intensifying efforts to develop new uses of chlorine, examining the suitability of salt at Kandla for producing caustic soda, adopting measures for improving the quality of caustic soda and the methods of packing it and for improving the strength and stability of the bleaching powder produced by them.

The Tariff Commission expects the demand for caustic soda to go up from 65,000 tons in 1954 to 94,000 tons by 1956. The demand for chlorine is expected to increase from 16,000 tons to 24,000 tons in the same period. As against this, the annual rated capacity of 8 caustic soda factories is 34,512 tons which is to increase to 40,671 tons by 1956. In addition, 4 paper mills have caustic soda units with a total annual capacity of 4,805 tons. Besides, a new unit with a capacity of 2,000 tons is under construction and plans for setting up two more units (with a total capacity of 5,600 tons) are under consideration of Government.

The total production of caustic soda, inclusive of the production by the 4 paper mills for their own use, amounted to 13,485 tons in 1950, and the quantity rose to 22,831 tons in 1953. On the basis of their present production programmes, the total production of caustic soda by the 8 existing units is expected to be 35,900 tons by 1956.

The annual rated capacity of three factories for the production of bleaching powder is 8,170 tons at present. Actual production amounted to 3,247 tons in 1950. This is expected to go up to 4,300 to 4,800 tons by 1956.

While the demand for chlorine by 1956 is, as already stated, estimated at 24,000 tons only, its output is expected to increase to 26,000 tons, leaving a surplus of 2,000 tons. The actual surplus will be much larger when account is taken of the production of chlorine by paper mills and by the new units. This emphasises the need for finding new uses for chlorine and for exporting liquid chlorine as pointed out above.

Before concluding, it may be mentioned here that caustic soda is used as an important raw material in the manufacture of soaps, textiles, paper, *vanaspati*, rayon, petroleum refining, chemicals including dyestuffs, aluminium and a few other products. The quality of indigenous caustic soda still does not compare favourably with that of the imported product. Owing to certain difficulties, the quality of bleaching powder too is stated to be not up to the mark. Its strength deteriorates in storage. This prevents municipalities in remote corners of the country from buying the indigenous product. Bleaching powder is needed, it may be mentioned, for sanitation or water purification. Hence the Tariff Commission's emphasis on the need for unsparing efforts by the domestic manufacturers at improving the quality of their products.

HYDROQUINONE INDUSTRY'S CASE FOR FURTHER PROTECTION

While examining the cases for continuance of protection to Indian industries, nothing makes a scribe feel gratified as the favourable report on the quality of the goods produced by them. For the enquiries taken up by the Commission generally reveal that, in the case of practically every indigenous industry that appears before it, there is still considerable scope for improving the quality of its product. In the context of this general experience, the remarks of Mr. M. D. Bhat, Chairman of the Tariff Commission, on the quality of hydroquinone make pleasant reading. Thus, in the course of his speech at the public enquiry into the question of continuance of protection to this industry, held on 27th January, 1955, Mr. Bhat said:

"In its last report the Commission observed that the quality of indigenous hydroquinone had attained a satisfactory standard. According to two of the leading importers and distributors of hydroquinone, the quality of indigenous hydroquinone differs in no way from imported hydroquinone and these two importing firms are also selling hydroquinone produced by Satyadev Chemicals Ltd. Consumers have also no complaint in regard to the quality of hydroquinone produced by Satyadev Chemicals Ltd. which conforms to the standard specifications laid down by the Indian Standards Institution."

It is evident from the above that the hydroquinone industry has won the approbation of the importer. It may be mentioned here that no testimonial, certifying the quality of the indigenous product, will be better than the one granted by the importer. For it is the importer who, in order to safeguard his interests in the trade, will lose no opportunity to find out the defects of the indigenous product and place them before his consumers. Consequently, half the battle will have been won by the indigenous manufacturer if he satisfies the import trader as to the quality of his goods. And it must be said to the credit of the indigenous producer of hydroquinone in India that he has done this. Accordingly, this industry deserves to occupy a high place among the protected industries. The example of this industry also strengthens the belief that given protection and the necessary assistance, Indian industrialists will not lag behind their confreres in other countries in producing quality goods.

Hydroquinone is an organic fine chemical. It is used as a developer of film and photographic negatives and positives and as a developer of dry plates in printing. It is used also as a dye intermediate, as an antioxidant in the rubber, paint and plastic industries, as an antiseptic and preserver of anæsthetic ether. It has thus a high economic value in the country and is being produced by only one firm, Satyadev Chemicals Ltd., Baroda. Prior to

EXPLOITATION OF LIGNITE IN SOUTH ARCOT

FOUR ALTERNATIVE SCHEMES SUGGESTED

THE Report of the British consulting engineers, Powell Duffryn Technical Services Ltd., on a programme for industrial development of Madras State, based on the exploitation of the Neyveli lignite deposits, has just been published. It will be recalled that the services of these Consultants were obtained under the Colombo Plan early in 1954. The Consultants began their work in May, 1954, and submitted the Report to the Government of India in November, last year, that is, in a period of about six months. This is, indeed, a commendable performance and another striking instance of Britain's valuable contribution to the economic growth of India. From the Press summary it would appear that the Report is comprehensive and deals with all aspects of the problems of exploiting lignite in South Arcot, including financial. The Consultants have recommended four alternative schemes for the exploitation of lignite deposits.

The first scheme envisages production of lignite to be used as fuel for generating electricity. The second, along with its two variants, provides for generation of electricity and production of ammonium sulphate. Under the third scheme, in addition to the generation of power and production of fertilisers, the production of lignite briquettes to be used both as domestic and industrial fuel is recommended. The fourth and the last scheme provides for a synthetic oil plant in addition to power generation, production of fertilisers and of lignite briquettes for domestic and industrial fuel.

In drawing up the schemes, the Consultants have, we are told, taken into account such factors as the quality and quantity of labour required, the need to train men for skilled jobs, the advantages of integration resulting from more than one scheme being taken in hand, the potential demand for electricity in the Madras area, the existing fuel supply in the State and the market for fertilisers and synthetic fuel. This shows that the Consultants have viewed the project from all angles. This is only as it should be, for, if the project is to be a profitable proposition commercially, it is necessary to examine not merely the technical feasibility of raising and using the lignite deposits but also the economic aspects, such as the cost of production, demand for the product, etc.

Third Alternative

Of the recommended schemes, the third alternative is generally considered to be economically the most suitable and, therefore, regarded as deserving adoption. This scheme envisages production of 3,273,000 tons of lignite needed to generate 211,000 kw. of power, to supply an ammonium sulphate plant producing 200,000 tons a year and a briquetting plant to make 714,000 tons a year of lignite briquettes. The briquettes will be processed in a low temperature carbonisation plant to yield annually 380,000 tons of carbonised briquettes, 43,000 tons char dust, 6,400 tons motor spirit, 51,300 tons tar and 1,032 tons phenol. This scheme is estimated to cost Rs. 58.30 crores.

Scheme No. 1 envisages the production of 1,070,000 tons of lignite per year to be used as fuel, an electricity generating station of 200,000 kw. installed capacity. This would entail a capital expenditure of Rs. 29.15 crores.

Under the second scheme, called 2A in the Report, 1,370,000 tons of lignite will be mined every year to supply a 200,000-kw. power station and an ammonium sulphate plant with a capacity of 100,000 tons a year. Scheme 2B, which is a partial modification of 2A, provides for a lignite production of 1,630,000 tons a year to produce 200,000 kw. of electric power and 200,000 tons of ammonium sulphate a year. The cost in this case goes upto Rs. 44.29 crores. The next scheme, 2C, which again is a variant of scheme 2A, envisages the production of 1,460,000 tons of lignite a year for producing 200,000 kw. of electric power and supplying a fertiliser plant producing 100,000 tons of ammonium sulphate and 20,000 tons of urea. This scheme, it is estimated, will cost Rs. 41.42 crores.

Under the last scheme, 6,268,000 tons of lignite will be mined every year. The power production will amount to 263,000 kw. Besides, 100,000 tons of ammonium sulphate and 20,000 tons of urea will be produced per year. Further, 1,428,000 tons of dried lignite briquettes will be made, of which one half will be sold and the other half will be processed in a low temperature carbonisation plant to yield 380,000 tons carbonised briquettes, 43,000 tons char dust, 6,400 tons motor spirit, 51,300 tons tar and 1,032 tons phenol. A synthetic oil plant to work on the Fischer-Tropsch system will also be installed to produce 85,000 tons motor spirit, 15,000 tons diesel oil, 12,000 tons tar and 7,300 tons sulphuric acid every year. This scheme will cost Rs. 85.40 crores.

Return on Capital

The estimated total return on capital varies from 4.76 per cent. under the first scheme to 15.12 per cent. under the third scheme. The return on capital has been based on the assumption that each of the projects for which the schemes have been prepared would operate as a single undertaking. The following table gives financial estimates and the expected return on capital at a glance.

Scheme	1	2A	2B	2C	3	4
Total capital requirement (in lakhs of Rs.)	2,915	3,710	4,429	4,142	5,830	8,540
Margin before deducting any interest on capital (in lakhs of Rs. per annum)	139	236	377	296	882	1,180
Annual return on total capital (percentage)	4.76	6.38	8.53	7.15	15.12	13.81

Regarding mining operations, the Report estimates that, for a production period of 30 years, lignite reserves of 33 million tons will have to be worked under the first scheme, while reserves of 190 million tons will have to be worked under the last scheme. The Report says that, in view of the prevailing ground and ground water conditions at Neyveli, production by open-cut mining is the obvious choice. It further states that, for large-scale production by modern open-cut mining method, the production cost can be kept low by complete mechanisation and the full employment of high capacity equipment for stripping, loading and transport. The Report has worked out schemes for the two open-cut mining methods now most commonly practised, namely, the dragline power shovel method and the excavator and dredger method.

The electric power station to be set up will supply power to the Madras grid system, which at present consists of four hydro-electric stations and two thermal stations. The four hydro-electric stations are Pykara, Moyar, Mettur and Papanasam and the thermal stations are at Madras and Madurai. The proposed station at Neyveli will have the advantage of using the low-grade fuel to be mined on the spot. The situation of the station is favourable as regards load development in the State in addition to meeting the demand for considerable quantities of power required for the mine and other associated plants.

Thermal Generation

The Consultants are of the opinion that additional thermal generation capacity is necessary for the adequate security of electric supply in Madras State and the proposed lignite burning station will fulfil this need admirably. Even after the Periyar and Kundah hydro-electric power schemes are executed in due course, a large thermal station will still be valuable for stabilising the system and levelling out the fluctuation in generation due to water availability.

It is estimated that the Neyveli power station will supply about 80,000 kw. of power to the Madras grid. The cost of generation per unit at the Neyveli station is estimated at As. 0.48 under the last scheme and As. 0.79 under the first scheme. This compares with the cost of generation at Pykara which is As. 0.29 and at Madras which is As. 1.09.

About the production of fertilisers, the Consultants recommend that the production of ammonium sulphate and urea should be considered for the Neyveli project. The immediate demand for fertilisers in Madras is estimated at 75,000 tons, while the demand in the neighbouring State of Andhra is even greater, that is, 100,000 tons. This demand is bound to increase as more fertilisers are consumed not only in these States but in the rest of the country. Since the smallest economic unit for the manufacture of ammonium sulphate should have a capacity of 100,000 tons per year the Report recommends the setting up of a plant of that capacity as well as a plant for the manufacture of 20,000 tons of urea. A plant to produce 200,000 tons of ammonium sulphate alone is also recommended.

Regarding the process of producing fertiliser, the Report advocates the adoption of the gypsum method and considers the Trichinopoly gypsum to be economically the best source of supply to a factory located at Neyveli. But, if it is confirmed that the supply of gypsum from indigenous sources is out of question, the production of ammonium sulphate should according to the Consultants be based on import of sulphur or alternatively on import of gypsum. The Report also estimates that the ammonium sulphate produced will cost Rs. 244-12 per ton.

Domestic and Industrial Fuel

Referring to raw lignite briquettes, the Consultants have opined that, if a good smokeless substitute for wood charcoal were available at an attractive price, there should be a ready sale for about 350,000 tons of briquettes, of which 300,000 tons would be for domestic use and the remaining 50,000 tons for buses and lorries. At present, Madras State is an importer of fuels, wood being the only indigenous fuel available. A new fuel produced locally will not only meet the local demand but relieve the strain on the railways transport capacity for carrying coal from the West Bengal-Bihar coalfields.

Discussing the use of lignite as industrial fuel, the Report says that it can be confidently said that raw lignite briquettes can be effectively substituted for existing fuel supplies in the existing stationary boilers and furnaces without entailing any major plant modifications. It estimates that about 400,000 tons of imported coal could be replaced by 475,000 tons of raw lignite briquettes. The Report does not consider it feasible for the railways to use lignite briquettes but says that a more attractive possibility is to assist the railway system by further electrification and in considering the demand for power this factor has been taken into consideration.

Dealing with the question of synthetic liquid fuels, the Report points out that the proposed plant would be of excellent quality. The motor spirit would be superior to that now used in South India which is obtained from crude petroleum. The plant will yield about 85,000 tons of motor spirit and 15,000 tons of diesel oil, in addition to 12,000 tons of tar and 7,300 tons of sulphuric acid.

On the basis of drilling records, the Consultants place the reserves of lignite in South Arcot at 200 million tons, which can be mined under relatively satisfactory conditions by a single mining operation in a zone in the lignite field, about 1½ miles wide from north-west to north-east. Describing the quality of the Neyveli lignite, the Report remarks that the moisture content in the lignite 'as mined' is 56 per cent., ash 2.5 per cent., volatile matter 22.4 per cent. and fixed carbon 19.1 per cent. Because of the high water content, the Consultants are of the considered opinion that the South Arcot lignite must be consumed or processed near the mine.

TEXMACO

Boiler & Heavy Engineering Division ● Ring Spinning and Drawing Frames

TEXMACO

is dedicated to sharing and solving your production problems.

By supplying exactly the right machine for your job, Texmaco secures for you incredible economies in time and cost plus higher quality production all along the line.

can meet your requirements in Smoke Tube, Marine, Water Tube and Locomotive Boilers, Flues, Mechanical Stokers, Economisers, Chemical and Pressure Vessels, Coal Handling Plant, Chimneys, Ductings, Cranes, Wagons and Rolling Stock, Penstock Pipes, Sluice and Spillway Gates for Hydraulic Dam Projects, etc.

are the products of extensive research and designed for improved yarn production in point of quality and quantity under varying mill conditions.

In addition to complete units a wide variety of spare parts and conversion material can be manufactured to required specifications.

CAREW AND COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, 4, Fairlie Place, Calcutta, on Tuesday the 22nd day of February, 1955, at 12 noon, for the purpose of:—

1. Receiving the Directors' Report and passing the Accounts for the year ended 30th June, 1954.
2. Declaring Dividends on the 6½ per cent. Cumulative Redeemable Preference Shares and Ordinary Shares.
3. Electing Auditors for the current year and fixing their remuneration.
4. Election of Directors.
5. Transacting such other business as may be brought before the Meeting.

The Transfer Books of the Company will be closed from 12th February, 1955, to 22nd February, 1955, both days inclusive.

Preference Shareholders and/or Ordinary Shareholders and holders of Preference Shares and/or Ordinary Shares under Blank transfer should note that upon the declaration of the Dividends the Dividend Warrants will be posted to Registered Preference Shareholders and/or Registered Ordinary Shareholders or their Mandatees. No application for payment will be necessary.

GLADSTONE LYALL & CO., LTD.,
Managing Agents.

4, FAIRLIE PLACE,
CALCUTTA, *27th January*, 1955.

TO ALL SHAREHOLDERS AND IN PARTICULAR TO THOSE SHAREHOLDERS WHO HAVE NO REGISTERED ADDRESS IN INDIA.

BALLY JUTE COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Seventy-third Ordinary General Meeting of the Shareholders of the Bally Jute Company, Limited, will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, on Wednesday the 2nd March, 1955, at 11-45 a.m., for the following purposes:—

(1) To receive and adopt the Directors' Report and Audited Accounts for the half-year ended 30th September, 1954, and the Balance Sheet as at that date.
(2) To declare a Dividend on the Preference Shares.

The Share Transfer Books of the Company will be closed from 16th February, 1955, to 2nd March, 1955, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary,
Managing Agents.

4, CLIVE ROW,
CALCUTTA, *21st January*, 1955.

Note.—Payment of any Dividend declared will be made only to those members whose names are registered in the Books of the Company on the 2nd day of March, 1955, or to their Mandatees.

No applications for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

HOWRAH MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE One hundred and twenty-eighth Half-yearly Ordinary General Meeting of Shareholders of Howrah Mills Company, Ltd., will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, on Wednesday the 2nd March, 1955, at 12 noon, for the following purposes:—

(1) To receive and adopt the Directors' Report and Audited Accounts for the half-year ended 30th September, 1954, and the Balance Sheet as at that date.
(2) To declare Dividends.

The Share Transfer Books of the Company will be closed from 16th February, 1955, to 2nd March, 1955, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary,
Managing Agents.

CALCUTTA, *21st January*, 1955.

Note.—Payment of any Dividend declared will be made only to those members whose names are registered in the Books of the Company on the 2nd day of March, 1955, or to their Mandatees.

No applications for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

THE RELIANCE JUTE MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Ninety-sixth Half-yearly Ordinary General Meeting of Shareholders of The Reliance Jute Mills Company, Ltd., will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, on Wednesday the 2nd March, 1955, at 12-15 p.m., for the following purposes:—

(1) To receive and adopt the Directors' Report and Audited Accounts for the half-year ended 30th September, 1954, and the Balance Sheet as at that date.
(2) To declare a Dividend on the Preference Shares.

The Share Transfer Books of the Company will be closed from 16th February, 1955, to 2nd March, 1955, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. FORDWOOD,

SHARP SETBACK IN EARNINGS OF SCINDIA STEAM NAVIGATION

DIVIDEND CUT—OUTLOOK BETTER

THE sudden slump in the value of the shares of the Scindia Steam Navigation Company, Ltd., from Rs. 17-3 to Rs. 14-3 in the last week of November, 1954, reflected the shareholders' disappointment over the cut in the Company's dividend for the year ended 30th June, 1954, from As. 12 to As. 8 per share. There were two reasons for their disappointment. First, it was only last year that they had the good fortune of having their distribution stepped up after the Company returned to the dividend list in the preceding year, after a break of three years, with a distribution of As. 8 per share. Secondly, the dividend for the year under review is on the enhanced paid-up value of Rs. 20 per share, raised during the year from Rs. 15 per share by the capitalisation of a part of the Company's reserves and consolidation of the shares and as such it works out to no more than 2½ per cent. per annum, which is the lowest rate paid by the Company for several years, barring, of course, the three years 1948-49, 1949-50 and 1950-51, for which no dividend was paid.

The aforesaid cut in dividend for the year under review was, however, fully justified by the financial results of the Company, which show a sharp setback in the earnings. Thus, the gross profit has dropped from Rs. 242.29 lakhs to Rs. 159.35 lakhs and the net profit (after providing for Agents' commission, depreciation, deferred taxation reserve and debenture sinking fund) from Rs. 38.08 lakhs to Rs. 23.45 lakhs. No allocations have been made to the fleet replacement reserve and the dividend equalisation reserve which had received in the previous year Rs. 10 lakhs and Rs. 11.75 lakhs, respectively. Nevertheless, the net profit is hardly sufficient to pay even the dividend of As. 8 per share.

Accounts Not Comparable

The Directors point out that the accounts of the Company for the year under review are not comparable with those for the previous year, because the previous year's accounts included the entire working results of the former Bombay Steam Navigation Company, Ltd., whereas those of the year under review include only part of the activities of the B.S.N. Company, Ltd., as a result of the formation of two new wholly-owned subsidiaries to take over the business of the former B.S.N. Company, Ltd. Nonetheless, a broad idea of the Company's working during the year under review can be had from the following table which presents the salient features of the year's results, against the background of those of the previous three years.

(In lakhs of rupees)

	For the year ended 30th June			
	1954	1953	1952	1951
Freight and passage money ..	9,17.87	11,41.74	9,84.07	7,56.00
Other income	34.92	1,07.81	1,30.88	1,85.18
Expenses	7,93.44	10,07.25	8,23.67	8,55.59
Gross profit	1,59.35	2,42.29	2,42.79	88.03
Agents' commission	15.08	20.57	17.01	8.80
Provision for depreciation ..	81.32	93.84	72.68	64.47
Deferred taxation reserve ..	29.50	60.00	..	..
Debenture sinking fund ..	10.00	10.00	10.00	10.00
Net profit	23.45	58.08	1,43.10	4.75
Provision for taxation written back	..	..	10.55	..
Loss on sale of shipyard written off	..	..	41.02	..
Fleet replacement account ..	..	10.00	..	..
Dividend equalisation fund ..	..	11.75	..	..
Dividend	23.46	35.18	22.00	..
	(2½%)	(5%)	(3½%)	..
Carry forward	2.73	2.74	1.58	—89.05

N.B.—Expenses for 1951-52 and 1950-51 include the amount transferred to capital account, namely, Rs. 1.52 lakhs and Rs. 2.54 lakhs, respectively.

The decline in the main income of the Company, namely, freight and passage money, is attributed partly to the exclusion of the income from passage money by the B.S.N., following the formation of the subsidiary, the B.S.N. Company (1953) Ltd., to look after the passenger service on the Konkan Coast and partly to the decline in the cargo carried and freight earned thereon. The comparative figures of the cargo lifted and freight earned for the past two years are as follows:

		1953-54	1952-53
Cargo	Tons	1,910,998	2,166,978
Freight earned ...	Rs.	8,42,82,239	9,81,75,315

Referring to the decline in cargo and freight earnings, the Directors observe:

"The sharp decline in both tonnage and earnings is attributable to (i) continued malpractices on the coast, particularly the West Coast, where the scramble for cargo assumed serious proportions, (ii) steep drop in our rice liftings induced by lesser imports of rice from Burma to India, and (iii) unavailability of remunerative charter engagements on the Pacific which it was our good fortune to secure in the preceding year. Apart from the above, there has been a reduction in the level of freight rates, particularly for bulk commodities like salt and cement, on the coast and exported ores and imported fertilisers—this has also affected the freight earnings."

The decline of Rs. 72.89 lakhs noted in "other income" is mainly accounted for by the absence of any revenue from workshop which brought an income of Rs. 73.92 lakhs in 1952-53, following the formation of the subsidiary, namely, Scindia Workshop Ltd., to take *over* ship repairing workshop. The formation of the two subsidiaries is also responsible for the decline in expenses noted from the foregoing table. Nevertheless, the expenses are said to have gone up so far as the working of the Scindia Steam Navigation alone is concerned. The Directors observe, in this connection, as follows:

"On the expenditure side, the trend of rising stevedoring costs has been further accentuated without any advantage by way of increased output to set off against such additional costs. The position has, in fact, been aggravated by the 'go-slow' tactics resorted to, from time to time, by both stevedore and port labour, almost in a planned fashion which have added heavily to the unremunerative port time, resulting in loss of the earning capacity of our vessels and in increased cost for marine dues."

The rise in stevedoring costs and marine dues and deleterious effect of the 'go-slow' tactics of labour on the earning capacity of vessels are not features peculiar to the Scindia Steam Navigation alone. They have been having a baneful effect on the working of the shipping industry as a whole.

Delay in Shipyard

The working of the Company would have been somewhat more encouraging had there been no delay in the delivery of the five 7,000-ton diesel vessels ordered from the Hindustan Shipyard Ltd.—the State-owned shipyard at Vizag. The Directors point out that the delay has, in some measure, affected the availability of tonnage that could have been employed in a profitable manner.

The following synopsis of the Company's balance-sheet as on 30th June, 1954, reflects its financial position:

LIABILITIES	Rs.	ASSETS	Rs.
Capital	9,40,10,673	Gross block	14,02,76,428
Reserves and surplus	6,76,50,843	*Less*—Depreciation ..	3,71,00,000
Deferred taxation reserve	1,11,50,000	Net block	11,21,76,428
Debentures	4,45,46,483	Stores and spares ..	23,53,777
Provision for taxation	2,41,122	Investments ..	4,78,78,932
Liabilities	3,67,42,766	Debenture trustees account	8,51,80,626
		Debts, deposits and advances	8,45,94,024
		Cash	1,99,80,313
		Debenture issue expenses	19,76,687
	Rs.25,41,50,887		Rs.25,41,50,887

The paid-up capital is higher by Rs. 2.35 crores, due to the capitalisation of a like amount, made up of Rs. 137.64 lakhs being the entire amount standing to the credit of the capital *reserve* and Rs. 97.36 lakhs being part of the amount standing to the credit of the premium on shares. The reserves and surplus stand depleted by Rs. 188.66 lakhs, mainly on account of (1) the capitalisation of the entire capital reserve and part of the premium on shares as stated above, (2) an increase of Rs. 34.05 lakhs in fleet replacement reserve, being the excess over the written-down value of ships sold and scrapped during the year, and (3) an increase of Rs. 11.65 lakhs in the debenture sinking fund. The deferred taxation reserve has been strengthened by Rs. 29.50 lakhs being the amount transferred from the year's profit. There has been a decline of Rs. 2.28 crores in current liabilities, mainly accounted for by the fall of Rs. 2.06 crores in the liability to the B.S.N. debenture and preference shareholders. The gross block shows a decrease of Rs. 2.28 crores, mainly due to sale or scrapping of ships and other assets. Investments disclose a decline of Rs. 1.31 crores, while debenture trustees account reveals a rise of Rs. 1.93 crores. Debts, deposits and advances account for an increase of Rs. 1.04 crores, while cash balances have shrunk by Rs. 62 lakhs.

Two Ships Sold

During the year under review, the Company sold two ships to the Eastern Shipping Corporation Ltd. In order to maintain the service in the U.K.-Continental trade, two cargo ships were chartered. Orders for two fast cargo ships to replace the ships sold to the Eastern Shipping Corporation have been placed in Germany. Two other cargo ships were replaced. The Directors have decided to borrow upto Rs. 6 crores for the construction of five fast cargo vessels to be put on the India-U.K.-Continent run—two for which orders have been placed in Germany and three in replacement of "Liberty" vessels which it is proposed to transfer to the coast in due course. This, the Directors observe, will enable the Company to modernise the overseas services.

The outlook for the Company for the current year is good, consequent on the general rise in freight rates and the heavy demand for movement of cargo.

The Rs. 20 paid-up shares of the Company are being currently quoted at Rs. 16 *cum-div.* On an *ex-div.* basis, the yield works out to 3.2 per cent. per annum, free of income-tax.

PROFIT OF CAWNPORE SUGAR DROPS

SUGAR OUTPUT DWINDLES

A DROP of Rs. 14.71 lakhs to Rs. 12.60 lakhs in gross profit is disclosed by the financial results of the Cawnpore Sugar Works, Ltd. (Managing Agents: Messrs. Begg, Sutherland & Co., Ltd., Kanpur) for the year ended 31st October, 1954. This setback is in distinct contrast with the rise of Rs. 14.16 lakhs noted a year ago and may cause not a little disappointment among the shareholders. But to those who have known how unkind nature had been to the sugar industry in U.P. during the past season, the aforesaid performance of the Company may not come as a surprise. The net profit, too, has suffered a sharp recession to Rs. 4.41 lakhs from Rs. 11.68 lakhs for 1952-53, to which level it had risen from Rs. 5.36 lakhs for 1951-52. It has, however, been augmented by a sum of Rs. 3.70 lakhs being taxation and other provisions written back, so that the Directors have been able to plough back Rs. 5 lakhs to the rehabilitation reserve from the amount available for distribution, without drastically cutting the dividend on ordinary shares.

The dividend has, no doubt, been reduced to 7½ per cent. from 20 per cent. paid for the two previous years, to which level it had been brought down from 30 per cent. paid for 1950-51. But it must be remembered that the latest dividend is on a higher capital doubled in August, 1954, by the capitalisation of a part of the reserves and the issue of a scrip-for-scrip bonus. The latest dividend thus represents a return of 15 per cent. on the old capital and does not, therefore, constitute a drastic cut from that paid for the previous two years.

The following comparative table gives an idea of the Company's progress in recent years:

(In lakhs of rupees)

—	For the year ended 31st October			
	1954	1953	1952	1951
Sale proceeds	116.41	234.28	128.17	180.50
Government subsidy on sugar ..	..	6.04	..	..
Other income	2.30	2.14	1.73	2.01
Stocks	1.78	8.71	57.03	21.97
Manufacturing and other expenses	63.12	127.03	133.89	137.21
U.P. and Bihar Governments' cane cess	5.70	11.67	8.83	9.49
Sugar excise duty	9.92	28.12	9.09	12.29
Gross profit	12.60	27.31	13.15	42.51
Managing Agents' remuneration	1.44	2.38	1.30	3.00
Depreciation	3.25	2.76	3.00	5.00
Taxation	3.50	10.50	3.50	17.50
Net profit	4.41	11.68	5.36	16.41
Other receipts	3.70	..	1.50	1.61
To reserves	5.00	7.66	3.00	13.20
Dividends—				
8 per cent. preference ..	0.80	0.80	0.80	0.80
Ordinary	2.25	3.00	3.00	4.50
	(7½%)†	(20%)	(20%)	(30%)
Carry forward	0.00	0.54	0.32	0.29

† On the higher capital of Rs. 30 lakhs doubled by the capitalisation of Rs. 15 lakhs.

The sharp setback in the earnings of the Company, as noted above, has been due to the substantial fall in the quantity of cane crushed and the rise in cost of production. The quantity of cane crushed by the Company's two factories was the lowest for some years past and was due to adverse weather conditions that prevailed during the monsoon of 1953, and in the case of the factory at Marhowrah, to heavy floods. The quantity of cane crushed at the two factories, the sugar produced and the yield for the past two years are as follows:

—	1953-54			1952-53		
	Cane crushed (Mds.)	Sugar produced (Mds.)	Yield %	Cane crushed (Mds.)	Sugar produced (Mds.)	Yield %
Marhowrah ..	1,920,390	199,528	10.39	3,613,618	882,416	10.58
Gauri ..	1,121,882	118,161	10.53	2,309,918	244,715	10.59

The sugar output at the Marhowrah factory was the lowest for the past six years and that at the Gauri factory the lowest for the past 15 years. The decline in the yield of sugar was also the result of adverse weather conditions. The number of crushing days at the Marhowrah and Gauri factories was 93 and 65, respectively, as against 169 and 132, in the previous season. The crushing period was the shortest for the past some years.

Commenting on the cane price fixed by the Government of India, the Directors observe:

"The cane prices fixed by the Government of India were Re. 1-7 per maund for gate cane and Re. 1-5 per maund for cane delivered at outstations. The sugar policy of the Government of India was announced before the crushing season commenced. The additional excise duty levied in the previous season was removed and the cane price raised to Re. 1-7 per maund at the factory gate and Re. 1-5 per maund at outstations. This, in effect, increased the cost of production by As. 4 per maund; controlled sugar prices, however, remained constant at Rs. 27 per maund."

The Company's distilleries worked for longer periods during the year under review, although stoppages occurred due to shortage of coal. While the Marhowrah distillery is stated to have continued to work at a modest profit, the Cawnpore distillery incurred a loss on account of higher cost of molasses.

The quantity of cane crushed by the Company has been varying from season to season. The variation is also rather wide, with the result that the production of sugar has been unsteady which has its effect on the Company's financial results. This problem has been receiving the attention of the Managing Agents for some time and a cane development scheme for execution during the next five years has, therefore, been drawn up and approved by the Board of Directors. Referring to this scheme, the Directors observe:

"The main object of the scheme is to bring about a considerable increase in the yield of cane per acre in the areas serving the Company's factories, with a corresponding increase in the quantity of cane crushed, and a consequent improvement in the Company's financial results. The requirements of finance for execution of the scheme will be substantial, however, and your Directors have also had those requirements in view while recommending the transfer to rehabilitation reserve of the sum of Rs. 5 lakhs from the amount available for distribution."

The financial position of the Company is impressive. Notwithstanding the capitalisation of a sum of Rs. 15 lakhs in August last, the reserves and surplus stand at Rs. 53.63 lakhs, as against the paid-up capital of Rs. 40 lakhs. The provision for taxation amounts to Rs. 3.83 lakhs and current liabilities aggregate Rs. 14.54 lakhs. The gross block, at Rs. 100.12 lakhs, including an addition of Rs. 3.48 lakhs during the year, has been substantially written down to Rs. 18.80 lakhs. The current assets aggregate Rs. 93.19 lakhs, of which cash balances alone, amounting to Rs. 34.57 lakhs, exceed the current liabilities and provision for taxation by a handsome margin of Rs. 16.20 lakhs.

The Rs. 20 paid-up ordinary shares of the Company are being currently quoted on the Calcutta Stock Exchange at Rs. 18-8 *ex-div.* At this rate and on the basis of the latest dividend, the yield works out to 4.1 per cent. per annum, free of tax.

INDIA GENERAL NAVIGATION AND RAILWAY CO., LTD.

Messrs. Kilburn & Co., Ltd., Managing Agents, have received advice from the Head Office of the India General Navigation and Railway Company, Limited, informing them that the Directors have decided to recommend a dividend on account of the year ended 31st December, 1953, of six per cent. on preference stock less standard rate of income-tax at nine shillings in the pound. The dividends will be payable in sterling on 11th March, 1955, to stockholders on the Company's Registers on the 18th February, 1955.

NEW INDIA SUGAR MILLS LTD.

In the summary of the Directors' report and audited accounts of the New India Sugar Mills Ltd. for the year ended 30th June, 1954, published in *our* issue of 22nd January, 1955, (*vide* page 134); the amount of outstanding debentures was shown as Rs. 9,60,543. This is not quite correct. The debentures outstanding aggregate only Rs. 1,000, the balance of Rs. 9,59,543 representing loan taken from the Imperial Bank of India.

ESTATE DUTY

An important question, under the Estate Duty Act, whether the properties attached to an office and enjoyed by the holder of the office are liable for levy of estate duty by reason of the death of his predecessor is to be decided by the Madras High Court under a writ petition admitted by the Court and filed by the Zamorin of Kozhikode, challenging the order issued by the Controller of Estate Duty levying estate duty on the properties attached to the office of the Zamorin.

The Controller of Estate Duty, according to the petitioner, called upon the present Zamorin to furnish accounts as regards the estate and about the properties passed on to his predecessor and to him in succession for assessments. The petitioner, in his reply, said that he was not in possession of the estate belonging to the two previous Zamorins. The properties attached to the office of the Zamorin were enjoyed by him as he was the present holder of the office. The petitioner further submitted that he could not do anything with the property but only enjoy the income derived from the property to maintain the dignity of the office. Under the Estate Duty Act, properties belonging to the holder of an office or a corporation were exempt from such duty. As such, the claim of the Controller of Estates Duty was illegal and without jurisdiction. The petitioner added that the explanation to section 7(4) of the Act, under which the present proceedings were taken, infringed the fundamental rights guaranteed under the Constitution. He prayed for an appropriate writ prohibiting the respondent from initiating any proceedings against him for assessment.

The Court admitted the writ, granted interim stay and issued *rule nisi.*

Points From The Chair

Monetary Upheaval

"THE sixteen-year period from 1938 to 1954 has been one of monetary upheaval. In this, as in other countries, the deficit finance of the war and early post-war years started a fall in the purchasing power of our currency which even today has not been completely arrested. The clearing banks are the chief instruments of Governments borrowing through the banking system. From the annual balance-sheets you will be familiar with the resulting expansion in our deposits; they are more than three times as large as before the war. In this process the clearing banks have, of course, been largely passive agents. It is decisions on the part of the monetary authorities which regulate the volume of bank deposits, since deposits cannot expand unless the authorities provide the necessary scaffolding of additional cash reserves and other liquid assets. When official policies bring about a general expansion of bank credit, an individual bank will share in it only so far as it can hold its own in competition with others."

SIR OLIVER FRANKS,
Lloyds Bank Ltd.

Gentle Inflation

"The idea of a 'gently inflationary' economy for Britain is not without its supporters. There are some people who think we ought to reconcile ourselves to a permanent condition of gradually rising prices. What this seems to me to amount to is that wage earners and profit earners would constantly be increasing their slice of the cake at the expense of pensioners, of other persons with fixed incomes, and of future savers. And the size of that cake would most likely become smaller and smaller as high costs led to the loss of overseas markets and ultimately to the depreciation of the pound sterling. A rise in Bank rate would seem to me much less undesirable than inflation."

LORD ALDENHAM,
Westminster Bank Ltd.

British Shipping Industry

"Shipowners face the new year in a much more cheerful frame of mind. Tramp shipping freights, time-charter rates and tanker rates have been rising steeply in the last quarter of the year from the unremunerative level at which they stood in the middle of the year. Good profits can now be earned even by older ships and, as a result of rising freight rates, the value of second-hand ships has risen steeply. The cost of new tonnage continues to mount and the 20 per cent. investment allowance for new ships is especially welcome to shipowners. Shipbuilders are now facing severe competition from the Continent and close co-operation between workers and management will be needed, if they are to surmount it when the present arrears of orders have been completed."

SIR ERIC A. CARPENTER,
Williams Deacon's Bank Ltd.

Road System in the U.K.

"In spite of the fact that for many years the Exchequer has collected by way of indirect taxation many millions of pounds from the transport industry, practically nothing has been done to provide an efficient road system in this country and thereby improve generally the nation's industrial efficiency. Apart altogether from the tragic loss of life and serious injury caused by road accidents, the state of the roads in this country today is such that they are inadequate to cope with the immense volume of traffic now operating upon them. There is little doubt that by far the largest percentage of all manufactured goods in this country move on our roads at some stage between producer and consumer. Road transport is now the major partner in the business of transportation."

LORD BRABAZON OF TARA,
Associated Commercial Vehicles, Ltd.

Unsatisfactory Features of British Economy

"There are, however, certain unsatisfactory features of our economy which cannot be ignored. The fall in the internal purchasing power of the pound has not been arrested; only slowed up. Whatever the successes achieved by the new monetary policy, a fall in purchasing power is hardly one of them. Of course, it can be argued that such a decline is only a small price to pay for full employment and freer trade conditions. From this it is but a step towards accepting the comfortable doctrine that we can afford a mild degree of inflation each year so long as production increases. But experience has shown that the promised objectives are not necessarily attained by such policy. The theory implies a precision in economic management that has yet to be displayed; it bumps up against a number of very baffling problems."

D. J. ROBARTS,
National Provincial Bank Ltd.

COMPANY MEETINGS AND DIVIDENDS

CAWNPORE SUGAR WORKS LTD. Annual General Meeting, Kanpur, U.P., 11th February, 1955. Dividend: As. 12 per share. Transfer books remain closed from 27th January to 11th February, 1955, both days inclusive.

JEYPORE SUGAR CO., LTD. Annual General Meeting, Rayagada, 14th February, 1955. Dividend: Re. 1 per share. Transfer books remain closed from 28th January to 14th February, 1955, both days inclusive.

SOUTH KARANPURA COAL CO., LTD. Half-yearly General Meeting, Calcutta, 15th February, 1955. Dividend: As. 2 per share. Transfer books remain closed from 1st to 15th February, 1955, both days inclusive.

ANGELO BROS. LTD. Annual General Meeting, Calcutta, 16th February, 1955. Transfer books remain closed from 3rd to 16th February, 1955, both days inclusive.

CHEMICAL, INDUSTRIAL AND PHARMACEUTICAL LABORATORIES LTD. Annual General Meeting, Bombay, 16th February, 1955. Dividend: Rs. 5 per share. Transfer books remain closed from 1st to 16th February, 1955, both days inclusive.

BRITISH INDIA CORPORATION LTD. Annual General Meeting, Kanpur, U.P., 26th March, 1955. Transfer books will remain closed from 26th February to 26th March, 1955, both days inclusive.

ATTOCK OIL CO., LTD. Interim dividend of 5 per cent. less income-tax at 9s. in the £ payable on 3rd March, 1955.

HATTIKHIRA TEA CO., LTD. *Ad-interim* dividend of Re. 1 per share, for season 1954, payable on 15th February, 1955. Transfer books remain closed from 3rd to 15th February, 1955, both days inclusive.

OODLABARI CO., LTD. *Ad-interim* dividend of Re. 1 per share, for season 1954, payable on 23rd February, 1955. Transfer books will remain closed from 14th to 23rd February, 1955, both days inclusive.

TEEN ALI TEA CO., LTD. *Ad-interim* dividend of Re. 1 per share, payable on 23rd February, 1955. Transfer books will remain closed from 14th to 23rd February, 1955, both days inclusive.

CHAMPDANY JUTE CO., LTD. Dividend of Rs. 3 per share, for the half-year ended 30th September, 1954.

INDIA PAPER PULP CO., LTD. Dividend of Rs. 7 per share, for the half-year ended 30th September, 1954.

COMPANY REGISTRATIONS

ADITYA TEXTILE INDUSTRIES LTD. (First Director: Mr. S. M. Parekh) Business: Cotton spinners, doublers, woollen spinners, etc. Authorised capital: Rs. 25,00,000. Private company. Registered office of the Company will be situated in the State of Bombay.

GOPIDAS NARSINGDAS LTD. (First Director: Mr. Gopidas Narsingdas Binnany.) Business: Importers, exporters and dealers in all kinds of metals and non-ferrous metals, ores, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 53, 2nd Bhoiwada Lane, Bombay.

KOSMEK PLASTICS MANUFACTURING LTD. (First Director: Mr. Hariprasad Vrajlal Mehta. Business: Manufacturers, buyers, sellers, importers, exporters and dealers of bottles and containers of plastics and polytainers, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Signal Hill Avenue, Sewri (old Mukund Iron and Steel Company's compound), Bombay, 15.

MINING BY SOUTH KARANPURA COAL BECOMING UNECONOMIC

ALLIANCE JUTE RAISES DIVIDEND LEVEL

South Karanpura Coal Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st August, 1954.

As much as 99,663 (1,05,393) tons of coal were raised and 96,490 (1,00,523) tons were despatched during the period compared with 1,00,734 tons raised and 90,855 tons despatched during the previous half-year.

Transport was slightly better as will be seen from the above figures, but directionwise restrictions continue.

The Company's quarries are beginning to approach the stage at which this type of mining becomes uneconomic and plans are in hand to resume under-cover extraction. This method will obviate the maintenance of a large labour force with attendant expenditure on subsidised food, housing, etc., but no immediate action can be taken without incurring heavy expenditure by way of compensation to workmen and pending the outcome of the Tribunal now in session on the All-India dispute between colliery labour and management.

Electric Power.—The directors report that negotiations with the State owned power house have resulted in a decrease in the cost per unit supplied. It is anticipated that power from the D.V.C. will be available shortly.

The profit and loss account after providing Rs. 32,469 (Rs. 31,444) for depreciation, bringing in Rs. 20,000 (*nil*) from stock adjustment reserve and Rs. 15,000 (*nil*) from provision against bad and doubtful debts and including the sum of Rs. 278 (Rs. 26,614) brought forward from last half-year shows an available balance of Rs. 25,728 (Rs. 50,663) which the directors propose to dispose of as follows:—

In paying a dividend at the rate of 2½ (2½) per cent. per annum without any deduction for income-tax paid by the Company Rs. 21,875 (Rs. 21,875) and in carrying forward Rs. 3,853 (Rs. 28,788).

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	17,50,000	Block ...	22,65,528
Reserves ...	10,35,425	Capital expenditure-in-progress ...	11,551
Provision for taxation ...	19,048	Stock-in-trade	1,71,237
Liabilities ...	7,41,229	Stores and spare parts	2,67,892
Profit and loss account ...	3,853	Debts, deposits and advances ...	8,69,198
		Investments	4,031
		Cash ...	13,120
Rs.	36,02,555	Rs.	36,02,555

Alliance Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod and Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th June, 1954.

The profit for the half-year, after making provision for doubtful debts Rs. 50,000 (nil) and providing for depreciation Rs. 1,28,000 (Rs. 1,50,000) amounts to Rs. 3,32,336 (Rs. 5,85,243) to which must be added the credit balance brought forward from the previous half-year of Rs. 35,656 (debit of Rs. 11,66,135), amounts overprovided in respect of liabilities in previous period Rs. 12,144 (Rs. 15,379) and amount received on account of post-war E.P.T. refund (net) Rs. 11,572 (Rs. 3,94,562), making a total of Rs. 4,11,708 (debit of Rs. 1,70,951). From this sum the directors have transferred to general reserve account Rs. 1,25,000 (nil), leaving an available balance of Rs. 2,86,708 (debit of Rs. 1,70,951). This sum the directors recommend should be distributed as follows:—

Dividend on 15,000 preference shares at Rs. 3 (*nil*) per share for the half-year ended 30th June, 1954 Rs. 45,000 (*nil*), dividend on 30,000 ordinary shares at 12 (*nil*) per cent. per annum for the half-year ended 30th June, 1954, or Rs. 6 (*nil*) per share Rs. 1,80,000 (*nil*) and leaving to be carried forward Rs. 61,708 (debit of Rs 1,70,951).

Jute stocks are shown at cost. Sold stocks of goods have been calculated at contract sale price and goods unsold on 30th June 1954, have been valued at market price.

In accordance with the main and supplementary working time agreements of the Indian Jute Mills' Association, working hours were 42½ hours per week with 12½ per cent. of the total looms sealed. Due to a re-allocation of loom hours on a group basis and the purchase of loom hours, the mills worked 45 hours per week with 12½ per cent. of their total looms sealed.

Trading conditions remained difficult throughout the half-year, but there was a marked improvement in heavy goods prices in the latter half of the period. The anticipated shortage of raw material did not materialise, and prices declined rapidly during May-June with reports of a large 1954-55 crop. Subsequent reports of flooding in the main jute growing areas and consequent shortage of and damage to the jute crop again raised prices. The Indian Jute Mills' Association announced increases in mill working hours as from 12th July, 1954 to 45 hours per week, and as from 18th October, 1954 to 48 hours per week.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	45,00,000	Block ...	27,02,895
Reserves ...	7,35,000	Stocks ...	56,27,943
Liabilities ...	60,28,757	Stores ...	12,02,754
Profit and loss account ...	61,708	Debts, deposits and advances ...	12,27,649
		Investments ...	2,10,000
		Cash ...	3,54,224
Rs.	1,13,25,465	Rs.	1,13,25,465

Naskarpara Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Howrah Trading Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th April, 1954.

The accounts showed a profit of Rs. 1,03,626 (loss of Rs. 1,52,890 exclusive of Rs. 5,104 being credit balance brought forward) inclusive of Rs 5,970 (credit of Rs. 5,104) being the carry forward of the last half-year after providing Rs. 50,000 (*nil*) for depreciation and Rs. 1,96,893 (Rs. 1,52,953) for interest, commission, allowance and other expenses, which the directors disposed of in payment of a dividend on 2,00,000 ordinary shares (free of income-tax) As. 8 (*nil*) per share Rs. 1,00,000 (*nil*) and carried forward Rs. 3,826 (net loss of Rs. 1,47,786).

During the period the mills have worked in accordance with the supplemental working time agreement of the Indian Jute Mills' Association.

Accounts in brief were as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	20,00,000	Block ...	11,41,407
Debentures ...	5,00,000	Stocks ...	27,72,396

Liabilities ...	35,31,026	Other assets	7,883
Profit and loss account ...	1,03,826	Debts, deposits and advances ...	22,58,010
		Investments	48,774
		Cash ...	11,09,370
Rs.	80,96,344	Rs.	80,96,344

Fort William Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bangur Brothers Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September, 1954.

The net result after providing for depreciation reveals a profit of Rs. 9,39,351 (Rs. 8,11,513) and adding to it the previous balance of Rs. 6,934 (debit of Rs 4,98,601), there remains a net credit of Rs. 9,46,285 (credit of Rs. 3,12,912). From this amount the directors propose to transfer to general reserve account Rs. 7,00,000 (Rs. 1,00,000), pay dividend on 10,000 7 per cent. cumulative preference shares for the half-year ended 30th September, 1954 at Rs 3-8 (Rs. 3-8) per share Rs. 35,000 (Rs. 1,40,000 for four half-years), pay dividend on 14,000 ordinary shares for the half-year ended 30th September, 1954 at Rs. 10 (Rs. 5) per share Rs. 1,40,000 (Rs. 70,000) and carry forward the balance of Rs. 71,285 (Rs. 2,912).

In accordance with the main and supplementary working time agreements of the Indian Jute Mills' Association, 12½ per cent. of the total looms continued to remain sealed and the mills worked 42½ hours per week upto 10th July, 1954. As already reported, the working hours were increased to 45 hours per week from Monday the 12th July, 1954. These were again increased from Monday the 18th October, 1954 to 48 hours per week to meet the demand from the consuming centres.

Accounts in brief are as under:—

Chemical, Industrial and Pharmaceutical Laboratories, Ltd.

The directors of the above Company (Managing Agents: Messrs. Hamilsons Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st October, 1954.

During the year under review there has been a slight improvement in the sales, both inland and foreign. The management has been making all possible efforts to fight the competition of foreign medicines which the directors regret to point out has not decreased in spite of protests from the industry. More and more foreign medicines are being allowed to come into India and used in the country.

The Pharmaceutical Enquiry Committee appointed by the Union Government to go into the problems facing this industry has submitted its report to the Government. Although the directors do not fully agree with many of the findings of this Committee and with some of the recommendations, they, however, hope that an early implementation of the recommendations would help the industry. In their opinion, if the import of foreign drugs similar to those which are made in India and also the activities of the foreign manufacturing concerns in this country are restricted, the indigenous pharmaceutical industry will substantially develop both in the volume of trade as well as research.

The directors are glad that in spite of many handicaps and difficulties which the management had to encounter, the Company's sales during the year amounted to Rs. 30,83,000 as against approximately Rs. 29 lakhs last year, yielding a profit of Rs. 4,73,145. The directors have made a provision of Rs. 80,000 (Rs. 1,00,000) for depreciation and Rs. 2,00,000 (Rs. 95,000) for income-tax, and Rs. 10,000 (Rs. 10,600) for bad and doubtful debts, leaving a net profit of Rs. 1,83,145 (Rs. 2,25,026). From this amount, the directors propose to make the following allocations:—

To provision for distribution of bonus to staff and workers Rs. 36,625 (Rs. 33,000), provision for special efficiency allowance Rs. 12,800 (Rs. 12,000), provision for declaration of dividend on 6,000 preference shares at Rs. 5 (Rs. 5) per share, free of income-tax Rs. 30,000 (Rs. 30,000), and provision for declaration of dividend on 18,773 ordinary shares at Rs. 5 (Rs. 5) per share free of income-tax Rs. 93,865 (Rs. 93,865), leaving a balance of Rs. 9,855 from this year's profit. Added to this last year's balance carried forward of Rs. 45,561 and Rs. 37,763 being the refund of post-war excess profits tax, the balance carried forward this year amounts to Rs. 93,180 (Rs. 45,561).

The directors inform that the chairman, Dr. K. A. Hamied, was deputed to visit the Foromycene Manufacturing Company in Glucksburg, near the Danish Border in Germany, to study and bring full information regarding the methods of sale and details of production of foromycene and also to renew the contract with the foromycene establishment in Switzerland. This has been done and it is hoped that now foromycene manufacture would be started if no other difficulties arise in the way. The chairman also was deputed to meet the President of the firm who are the Company's Agents in U.S.A. This meeting took place in Zurich and again in London. The arrangements arrived at shall be useful and prove very profitable to the Company. Contacts have also been made oy the chairman with firms in Germany and U.K. for export of the Company's products.

Northbrook Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs Bird & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th September, 1954.

After providing Rs. 1,76,455 (Rs. 39,000) for taxation, Rs. 47,000 (Rs. 67,000) for reserve for taxation contingencies and Rs. 1,55,108 (Rs. 1,84,332) for depreciation, the profit and loss account showed a profit of Rs. 2,61,309 (Rs. 2,34,509) to which was added the amount brought forward from previous half-year of Rs. 33,023 (Rs. 30,203), making a total of Rs. 2,94,332 (Rs. 2,64,712). From this sum is transferred to general reserve Rs. 50,000 (Rs. 1,00,000) and to jute stock reserve Rs. 33,556 (nil), leaving an available balance of Rs. 2,10,776 (Rs. 1,64,712). The directors disposed of this sum as follows:—

Paid a dividend on the preference shares at the rate of 5½ per cent. per annum, without any deduction for income-tax paid by the Company Rs 41,250 (Rs. 41,250), a dividend on the ordinary shares of As. 12 (As. 8) per share, without any deduction for income-tax paid by the Company Rs. 1,25,956 (Rs. 83,968) and carried forward Rs. 43,570 (Rs. 39,494).

Accounts in brief were as under:—

STRINGENCY IN MONEY

(From Our Own Correspondent)

BOMBAY, *2nd February*

The short-term money market experienced very free expansion in activity during the week under review. The turnover continued to be small, due to the absence of any broadening of demand for funds. Nevertheless, conditions were a little more stringent than in the previous week as the available funds fell short of even the restricted demand.

In the inter-bank call money sector, very few banks appeared as borrowers, while others were neither borrowers nor lenders. Even these few borrowers were not able to get their requirements in full. Inter-bank borrowings were done mostly at 3 per cent, while occasional transactions passed at 2½ per cent. House money at call was bid at 3 per cent. Short-term deposits were placed at 3 per cent. for 1 to 6 months and at 2½ for longer periods. Some banks, however, offered no more than 2½ per cent. for periods over 6 months.

The Government of India Treasury Bill borrowing rate, however, dropped a fraction this week from Rs. 2-8-6 per cent. to Rs. 2-8-3 per cent. per annum. The amount offered against an invitation for Rs. 1 crore aggregated Rs. 137.75 lakhs, as against Rs. 121 lakhs in the previous week. Tenders for Rs. 1 crore have been invited for next week also.

Minor variations are disclosed by the statement of affairs of the Reserve Bank of India for the week ended 28th January, 1955, as compared with that for the previous week. Thus, in the Issue Department, notes in circulation are lower by Rs. 1.75 crores, while notes held in the Banking Department have gone up by Rs. 1.91 crores. The small rise of Rs. 16 lakhs in total notes issued is covered by a similar change in rupee coin. In the Banking Department, deposits of the Central Government show a rise of Rs 67 lakhs and those of other Governments Rs. 4.59 crores. There has, however, been a shrinkage of Rs. 5.50 crores in deposits of banks. Cash balances disclose an increase of Rs. 1.91 crores, while balances held abroad have gone down by Rs. 3.68 crores. Loans and advances to Governments have declined by Rs. 98 lakhs. Other loans and advances are up by only Rs. 1.32 crores, of which outstanding advances to Scheduled banks against usance bills account for a mere Rs. 23 lakhs. The total amount of advances availed of by Scheduled banks against usance bills since 1st January, 1955, is Rs. 2.89 crores. Investments have dropped by Rs. 56 lakhs.

The Scheduled banks' statement for the week ended 21st January, 1955, reflects the paucity of seasonal demand for funds on banks. Demand deposits disclose an expansion of Rs. 8.87 crores over the week and time deposits Rs. 1 51 crores. Inter-bank borrowings are up by Rs. 1.43 crores. Borrowings from the Reserve Bank are down by Rs. 1.45 crores, while there has been no variation in borrowings from the Imperial Bank. On the assets side, loans and advances have gone down by Rs. 1.02 crores. Inland bills purchased and discounted are, however, higher by Rs. 86 lakhs and foreign bills purchased and discounted by Rs. 2.92 crores. Investments have been strengthened by Rs. 1.23 crores. Money at call and short notice disclose a rise of Rs. 1.48 crores. Total cash balances have increased by Rs. 4.30 crores and balances with other banks in current account by Rs. 57 lakhs.

The Gilt-edged market continued to maintain steady conditions during the week under review also, with further slight marking up in prices in many securities. The volume of business did not, however, show any large expansion. 2½ per cent. 1960 put on an anna to Rs. 94-9, as also 2½ per cent. 1962 to Rs. 92-9. 3 per cent. 1957 had business at the unchanged rate of Rs. 99-4. 3 per cent. 1958 gained an anna to Rs. 99-3, but attracted sellers at that level. 3 per cent. 1959-61 changed hands an anna better at Rs. 97-5. 3 per cent. 1963-65 and 3 per cent. 1964 had small offerings, but the quotation was unchanged at Rs. 93-11. The Reserve Bank raised its selling rate for 3 per cent. 1966-68 and 3 per cent. 1970-75, by an anna to Rs. 90-9 and Rs. 86-15, respectively. 3 per cent. 1986 Conversion Loan was an exception to the general trend, in that it dropped an anna to Rs. 81-3. 3½ per cent. 1961 National Plan Bond appreciated by As. 3 to Rs. 99-10. 3½ per cent. 1964 National Plan Loan had sellers at Rs. 98-9. The market completely ignored the rise in Bank rate in Britain last week.

In the foreign exchange section, there was no change in the rupee-U S. dollar rates, while sterling appreciated a fraction in terms of the dollar. Thus, in New York, spot sterling moved up from $2.78.5/16—2.78.7/16 to $2.78.7/16—2 78.9/16 and forward sterling (three months) from $2.78.5/16—$2.78.7/16 to $2.78½—2.78½. Transferable sterling rose from $2.71¼—2.72 to $2.71½—2.72½.

SLOW OFFTAKE IN HIDES

(From Our Own Correspondent)

MADRAS, *31st January*

Arrivals of cow hides have been on a moderate scale, but offtake slow, due to sellers quoting unworkable prices. U.K. carriers state that they are unable to sell dressed kip leather profitably at current levels and are, therefore, said to resist advances in prices required at origin. As stocks are accumulating in the local bazaar, it is not unlikely that Madras prices will ease slightly and come into line with U.K. levels ruling last week. Tanned cow calf, buff calf and buff hides rule firm, as arrivals have been small.

In the January London public sales, prices of goat skins weighing under 12 lbs. per dozen average and over 20 lbs. advanced by 6d. to 12d., while others ruled unchanged on December levels. Sale of tanned sheep skins will be taken up this week.

In the local market, prices of tanned goat skins ordinary and superior classes, as also of lining sheep, are firmer.

GOLD FIRM

(From Our Own Correspondent)

BOMBAY, *2nd February*

The deadlock in the bullion market referred to in these columns last week, having been resolved, following the settlement reached between the Board and the protesters as stated in the last report, trading was resumed on Thursday, 25th January. The political situation in the Far East soon fanned the bullish enthusiasm and, in broad and active dealings, prices forged ahead. The bullish forces exerted themselves more strongly in gold than in silver, as the good demand for the yellow metal from Calcutta also strengthened the sentiment. Towards the close, the weakness of commodity markets induced some heavy selling which erased a part of the earlier gains. Nevertheless, the yellow metal disclosed a rise of Re. 1-2 per tola over the week, while silver was better by no more than As. 8 per 100 tolas.

Forward silver (8th February settlement) opened the week at Rs. 160-7 and soon advanced to Rs. 161-10. Profit-taking at this level brought it down to Rs. 160-9 on Saturday. After a further rise to Rs. 161-8 on Monday, forward silver relapsed today to Rs. 160-14 at the close. Trading in the next settlement opened on Monday at Rs. 161-6, the carry forward charges being against buyers at As. 2, and closed today at Rs. 160-11, the budli charges having turned in favour of buyers.

Ready silver (.996 mint) was quoted on par with the forward rates for the current settlement, the opening and closing prices being Rs. 160-7 and Rs. 160-14, respectively. The floating stocks of silver are estimated at 2,500 bars. The daily average arrivals were 15 bars, while the offtake was 10 to 15 bars on an average.

Opening at Rs. 90-15, forward gold hardened to Rs. 91-14 and, after a temporary reaction to Rs. 91-6, resumed its upward trend touching a high of Rs. 92-7 yesterday. Today, however, it lost some ground closing at Rs. 91-13. Business in the next settlement opened on Monday at Rs. 91-10. After touching Rs. 92, forward gold for this settlement closed today at Rs. 91-6. The budli charges were throughout in favour of buyers widening from As. 5½ on Monday to As. 7 today.

Ready gold opened at Rs. 91-2 and closed at Rs. 92-2, the highest and the lowest levels touched being Rs. 92-10 and Rs. 91-1, respectively. The floating stocks of gold are estimated at 35,000 tolas. The daily average arrivals and offtake were even at 3,000 tolas.

In London, silver suffered a decline after several weeks from 74¼d. to 73¾d. per fine ounce for spot and from 74d. to 73¾d. for forward. Gold also dropped a little from £12 11s. 8d. to £12 11s. 7½d. per fine ounce.

The following comparative table shows the trend of the market during the week under review:

	2-2-55	Highest	Lowest	25-1-55
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint) ..	92 2	92 10	91 1	91 0
Forward*	91 13	92 7	90 14	90 11

SILVER				
Ready (.996 fine Mint) ..	160 14	161 10	160 6	160 6
Forward†	160 14	161 10	160 6	160 6
London Silver Ready ..	73¾d.	74¼d.	73¾d.	74¼d.
London Forward	73¾d.	74d.	73¾d.	74d.
London Gold	251s. 7½d.	251s. 8½d.	251s. 7½d.	251s. 8d.
New York Ready	85½c.	—	—	85½c.

* 7th February settlement.
† 8th February settlement.
N. B.—Foreign bullion prices shown in the above table relate to the previous day.

Notice

THE BANK OF INDIA LIMITED

BOMBAY

NOTICE IS HEREBY GIVEN THAT THE Forty-ninth Annual Ordinary General Meeting of the Shareholders of THE BANK OF INDIA LIMITED will be held at the Registered Office of the Bank, Mahatma Gandhi Road, Fort, Bombay, on Thursday the 3rd March, 1955, at 4 o'clock in the afternoon (Standard Time):—

(1) To receive the Report of the Directors and the Audited Accounts for the year ended 31st December, 1954,

(2) To declare a dividend,

(3) To elect Mr. Madanmohan Mangaldas who vacates his seat as a Director under Article 85 of the Articles of Association and who is eligible and offers himself for re-election,

(4) To elect Directors in place of those retiring by rotation, and

(5) To appoint Auditors and fix their remuneration.

NOTICE is also given that the Transfer Books of the Bank will be closed from Monday the 21st February, 1955, to Tuesday the 8th March, 1955, both days inclusive.

D. R. THOM,
General Manager.

BOMBAY, *3rd February, 1955.*

SLUMP IN COTTON PRICES

(From Our Own Correspondent)

BOMBAY, *2nd February*

It looks as though the morale of the Bombay cotton market has been lost. The past week has witnessed a heavy slump in cotton prices, the net decline over the week being as much as Rs. 23-4 in I.C.C. February contract and Rs. 22-12 in I.C.C. May contract. This is surprising, considering the continued high level of activity which prevails on the textile production and export fronts. To some extent, the slump in prices was due to the fact that the rejection of appeals against the room rates by the East India Cotton Association disappointed the bulls who exercised considerable pressure on the market by liquidating their holdings. The bulls were reported to have been reluctant to weigh over cotton against the February contract. They were busy squaring up their commitments by transferring their purchases to May contract. Curiously enough, yesterday there was no issuance of any tenders against the maturing delivery, thanks to the unwillingness of stockists to tender cotton in futures at the present unremunerative rates. Even this development failed to induce any recovery and cotton prices continued their downward march.

What then are the factors which have been responsible for the precipitous drop in cotton prices? The general trend of opinion among cotton circles is that, since the expectation of Government intervention to prevent the rot in the market has not materialised, bears have become very aggressive. Disappointment, for instance, is expressed at the inordinate delay in the announcement of an export quota for Jarillas and of additional quotas for the permissible short-staple varieties. Another important bearish factor is said to be that, being assured of plentiful quotas (115 per cent.), the mills do not appear to be in any hurry to cover their requirements. Apparently, they seem to be waiting for a further decline in cotton prices. The continued all-pervading bearish atmosphere has led the cotton interests once again to urge the immediate adoption of some corrective measures, instead of waiting till prices reach floor levels and thus be compelled to purchase cotton. To quote a well reputed firm of cotton dealers:

"With effective demand restricted and the entire crop reserved by individual quotas to mills, so that even competition among mills is reduced, the price level has to give way to which the bottom can only be the Government 'floor'. No wonder then that the Government's decision to give additional quotas to mills has fallen flat on the market and the tendering differences fixed for February have failed to arrest the sagging tendency. The East India Cotton Association has circulated all members inviting their suggestions for a revision of the contract. Shrewdly enough, the E.I.C.A. have taken care to elaborate the background of the working of the controls, within the highly rigid restrictions of which the futures are obliged to function with whatever degree of efficiency it is possible to achieve. In the context of the changed circumstances from the abnormal shortages of the post-war period, the real solution lies not merely in modifying the constitution of the contract, which is merely a means of registering prices, but in simultaneously persuading the authorities to take cognisance of the altered situation and radically modify their cotton policy by abolishing internal control on cotton and allowing increased exports of cotton upto ¾" in staple."

The forward section of the Bombay cotton market ruled distinctly weak during the week under review. The bull operators were reluctant to weigh cotton against their purchases of futures and were eager to sell in the February contract with a view to avoiding taking delivery. Spot houses and option dealers also joined the ranks of sellers, so much so that there was a stampede of selling and cotton values suffered a severe break. I.C.C. February contract opened at Rs. 602 and, after improving to Rs. 607 on Friday, fell to Rs. 563-8 today, the lowest level touched since forward business was resumed on 7th October, 1954. At low levels, profit-taking set in and the contract recovered slightly to Rs. 568-8 at the close. The net loss over the week was Rs. 33-4. I.C.C. May contract, which stood at Rs. 599 on the 27th inst., slumped to touch a low of Rs. 563 today before recovering to Rs. 567-12, the net loss over the week being Rs. 22-12. As selling pressure was relatively less in distant delivery, the spread between the two contracts narrowed down from Rs. 11-4 last week-end to As. 12 today.

The following is the trend of prices during the week under review:

		25-1-55	High	Low	2-2-55
I.C.C. February ...	Rs.	601¾	607	563¼	568¼
I.C.C. May ...	Rs.	590¼	597½	563	567¾

Spot cotton evoked little demand, although domestic qualities were on offer at prices lower than those a week ago. Small lots of 197/3 and 216F changed hands. Forward business was limited in Vijay and Surat-Navsari both for February-March delivery. Some mills purchased small quantities of Lakshmi, Vijay and Surti stocks of last season's crop at cheaper prices. Overseas enquiries were negligible, business being confined to a very few lots of Bengal and C.P. deshi. Foreign cottons failed to evoke the interest of local spinners. Spot prices of cotton yarn staged a precipitous fall during the week under review:

The following table gives today's closing rates, as compared with those eight days and fourteen days before:

(In Rs. per candy of 784 lbs.)

	2-2-55	25-1-55	19-1-55
Bengal deshi	580	600	610
Berar Jarillas	650	675	680
Khandesh	650	700	715
Vijay	730	770	780
Oomra deshi	600	625	640
Moglai	580	620	620

Exports of Indian cotton during the period 1st September, 1954 to 15th January, 1955, amounted to 64,965 bales, as against 51,157 bales in the same period last season. Of this quantity, 35,030 bales were shipped to Japan, 14,565 bales to the Continental countries, 6,837 bales to the U.K., 6,710 bales to the U.S., 1,383 bales to China and 440 bales to other countries.

The distinctly bearish trend depicted by the Karachi cotton market last week persisted this week too. Overseas enquiries continued to be absent. Exports of cotton from Karachi during the period 1st September, 1954 to 20th January, 1955, amounted to only 216,180 bales, as against 436,011 bales in the corresponding period last season. The decline in exports, coupled with reports of heavy accumulations of stocks in Karachi, pushed down prices of cotton further. A look at the table below gives an idea of the extent of the fall during the week under review:

(In Pakistan Rs. per 82 lbs. weight)

	1-2-55	24-1-55
Sind *deshi*	68 8	69 0 to 70 0
Punjab *deshi*	63 8	64 0
4F Punjab R.G.	68 0	69 6
S.G.	72 0	73 6 to 75 6
L.S.S. Punjab S.G.	76 8	77 6
N.T. R.G.	73 4	74 6
289F Punjab R.G.	76 0	77 6
S.G.	80 0	81 6

The Alexandria cotton market was active this week. Karnak and Giza 30 continued to evoke good attention of overseas buyers. Spot premiums and also premiums for entitlement currencies were fully maintained. China is reported to have bought last week about 3,000 bales, mainly Karnak. The Egyptian Government has declared that the basis for its selling prices on New York futures will remain unchanged. The Government, it is reported, is at present engaged in reviewing the cotton situation in consultation with the trade. The Ministry of Finance has already held discussions with several cotton interests. Cotton circles, it is stated, are generally in favour of the reopening of the Alexandria futures market.

The first auction of the 1954-55 crop Sudan cotton will be held at Khartoum on Wednesday next, according to the Sudan Gezira Board. The aggregate quantity to be offered for sale is estimated at 75,000 bales. Of this, long-staple cotton—consisting of 4,500 bales each of Gezira S and L and 1,200 bales of AL/WL L—accounts for 10,200 bales. The balance of 4,800 bales will comprise American types (Nuba Mountains) available for February-March shipment. The quality of the cottons is expected to be the fair average of the season. Reserve prices will be announced shortly before the date of the auction. The Board proposes to commence auctions of higher grades only after a few weeks, that is when buyers have had the opportunity of sampling cotton from individual lots.

At Liverpool, a fair volume of spot and forward business in actual cotton was reported. Spot transactions were principally in U.S., Brazilian-Sao Paulo, Russian and Argentine cottons. Shipment trading was mostly in American types, including U.S. longer staples, Mexican and Brazilian-Sao Paulo. A large part of the business covered February and later shipments. The cotton futures market was subjected to alternative bouts of selling and buying. Initially, prices had drifted lower on account of occasional bursts of selling mainly against outside growths, but prices recovered subsequently, following weaker sterling—dollar exchange rate and a fair amount of trade price fixing. The sentiment of the market is reported to be somewhat unsettled at present. The latest available quotations from the Liverpool market are: March-April 32.42d.; May-June 32.44d.; July-August 32.35d.; October-November 32.20d.

There are two developments worth nothing this week in so far as the New York cotton market is concerned. First, the U.S. Department of Agriculture announced that cotton has been put on the montly list of American surplus commodities for export, enabling private traders to sell it to foreign countries in exchange for the currencies of the countries concerned. Secondly, it is reported that the U.S. Agriculture Secretary has expressed his stiff opposition to any upward revision in acreage allotments for this year's cotton crop. The opposition, it is believed, is based on three grounds. First, the area of 18.1 million acres is the level indicated by law. Secondly, in the national referendum last month, 92 per cent. of cotton growers approved the allotment. Finally, current estimates indicate that there will be a carry-over stock of 9.8 million bales on 1st August next which is more than the domestic requirements for one year.

The aforesaid developments would appear to have had no marked effect on the New York cotton market. While the spot section remained firm, the futures section presented slightly easy conditions. This trend in the forward market was due to scattered liquidation, hedging in current crop deliveries and some profit-taking in new crops. Yesterday's quotations of futures were lower than those eight days before.

The U.S. cotton growers have urged for a more energetic operation of the surplus disposal programme. At a recent meeting of the cotton producers in Memphis, it was resolved to ask the Congress to fix and achieve an export goal of at least 5 million bales annually. The State Department was criticised for its lethargy in expediting sales under Public Law 480. It is understood that the Secretary of Agriculture has promised to consider a proposal to supply exporters with limited quantities of Government cotton for export at competitive world prices.

President Eisenhower recently reported to Congress on the authorised programme for disposal of $1,000 million worth of surplus farm products over a period of three years through sales and gifts. The report for the first six months of the plan showed that sales of surpluses aggregating $453 million had been or were being negotiated, while grants for surpluses valued at $125 million were being arranged to help friendly countries in need. It is expected that raw cotton will account for about 28 per cent. of the programme in the first year, indicating a figure for cotton of 850,000 bales at current prices. Sales of C.C.C.-owned cotton so far negotiated under the Surplus Disposal Programme appear to be: Under Public Law 480 (to Japan) approximately 175,000 bales and under Section 402 (to India, Spain, Yugoslavia, Formosa and Israel) approximately 270,000 bales.

The following are the latest available quotations for the New York market, as compared with those eight days and fourteen days before:

(In cents per lb.)

	1-2-55	24-1-55	18-1-55
Spot	35.10	34.57	34.95
March	34.59	34.64	34.44
May	34.90	34.94	34.75
July	35.12	35.13	34.93
October	35.13	34.93	34.73

SUGAR PRICES IMPROVE

(From Our Own Correspondent)

BOMBAY, 2nd *February*

The distinctly downward trend displayed by the sugar market in the past six weeks was checked to some extent during the week under review, thanks to prompt Government action. On Monday last, the Union Food Ministry announced discontinuance of the f.o.r. destination system for distributing imported sugar. Sugar will henceforth be sold on *ex*-docks *ex*-godown basis. Accordingly, traders in the interior wayside stations will, in future, have to come to the ports to make their purchases of sugar. This means that the demand for sugar in Bombay City will broaden in the coming weeks. The expectation of such enlarged demand led to a fractional rise in market quotations which had hitherto been forced down below the Government's issue prices. The Government's decision to reduce the price of imported sugar had no adverse effect, as it had been well discounted in advance and as the cut was not as much as had been anticipated.

In the spot section, small grain indigenous sugar improved by As. 8 to As. 87-8 per bag (inclusive of sales tax). Medium grain sugar was quoted at Rs. 88-Rs. 90, as against Rs. 86-Rs. 89 last week. Large grain sugar was fully steady at Rs. 92-Rs. 103. Among foreign sugars, French small grain advanced by a rupee to Rs. 79 per bag of 220 lbs. (exclusive of sales tax). Czechoslovakian small grain sugar spurted by a like amount to Rs. 85 per bag of 220 lbs. and large grains were steady at Rs. 88. Polish and German sugars were quoted at Rs. 79 per bag of 220 lbs. There was no stock of British refined sugar in sound bags. The cut and slack bags were sold at Rs. 82-8 per 224 lbs.

The Food Ministry's announcement stated that, with effect from the 1st inst., the issue prices for foreign sugar would be as follows:

Rs. 29-8 per maund *ex*-docks for British refined, East German, French and Polish qualities; Rs. 29 per maund *ex*-docks for Cuban sugar.

Sugar for *Maha* delivery rose from Rs. 81 to Rs. 81-8 *Fagan* delivery gathered As. 12 to Rs. 81-14 before finishing at Rs. 81-12.

Arrivals of indigenous sugar during the week under review were larger, being 4,800 bags, as against 4,100 bags a week before and 3,000 bags two weeks before.

The Regional Directorate (Food) sold by tenders about 28,000 bags of cut and slack bags of all imported varieties at rates ranging from Rs. 25 to Rs. 28-13 per Bengal maund for delivery *ex*-Government godowns in the city.

COTTON YARN EASY

(From Our Own Correspondent)

BOMBAY, 2nd *February*

The reported ban on purchases of cotton yarn by spinning units imparted easiness to the cotton yarn market this week. There were, besides, two other unhelpful factors, namely, continued weakness of raw cotton and lower yarn offtake by weavers. Some selling pressure was, therefore, in evidence and cotton yarn values staged a retreat. Among 80 count yarns, Elphinstones dropped Re. 1-12 to Rs. 59-4. Moderns lost As. 2 to Rs. 64-10. Among 60s, Moderns declined by As. 8 to Rs. 59-8. Finlays were quiet at Rs. 60, Srirams at Rs. 55-6 and Raghuvamshis at Rs. 55-6. Deals in 40s were done at prices lower than those a week before. Vasantas eased by As. 3 to Rs. 25-4 and Moderns by As. 2 to Rs. 25-10. Among 20s, Centurys fell by As. 3 to Rs. 16-8. Maduras and Raghuvamshis finished As. 2 lower each, the former at Rs. 17-14 and the latter at Rs. 17-2. Moderns and Seksarias lost an anna each to Rs. 17-2 and Rs. 16-6, respectively. Among 10s, Moderns gave way from Rs. 13-10 to Rs. 13-9. Yarns of 30 counts, however, proved an exception and tended to look up on buying support. Maduras picked up As. 2 to Rs. 23. Prakashs were fully steady at Rs. 20-12 and Sarojas at Rs. 21-4.

As stated at the outset, the Central Government is reported to have banned the purchase of yarn by those units which have their own spinning plants, except with the permission of the Textile Commissioner. This step, it is said, has been taken in order to make available sufficient quantities of yarn to the handlooms. Special permission for purchase of yarn by composite mills will, however, be given after considering, among other things, the number of looms installed or working in the mill, the productive capacity of the unit, and the question whether yarn is required for purposes of weaving a variety of cloth different from any of the varieties which are normally manufactured by the producer and for the production of which used in the type of yarn is needed.

The rayon yarn market continued to pitter-patter under pressed again this week too. The sentiment into the operators was adversely affected by the reduction of 3d. per lb. in superfine deniers and of 2d. in medium deniers by the Continental producers of viscose rayon yarns and the report of the latter's eagerness to book orders for forward delivery at the reduced prices. Nor were buying enquiries from consuming centres quite encouraging. Even the normal demand was on a reduced scale, on account of the stringency in the money market. Traders were somewhat nervous and indulged in unloading their stocks, while buyers were very much reserved, as they preferred to await the outcome of the bulk-purchase negotiations between the Silk and Art Silk Mills' Association and the overseas suppliers. Consequently, rayon yarn prices suffered a further decline. In the spot section, 120 Japan slided down by As. 2 to Rs. 4. 150 Italy dropped an anna and a half to Rs. 3-12-6. 150 Japan receded from Rs. 4-1 to Rs. 3-15-9. 120 Italy lost an anna to Rs 3-15. Among indigenous yarns, National Rayons Bt. Hanks first grade were lower by half an anna at Rs. 13-11-6. Rayon yarn (150 deniers) for March delivery was nominally quoted at Rs. 730.

Thanks largely to the depressed conditions in the rayon yarn market and also to slackness in demand from consuming centres, the staple fibre yarn section depicted an easy tone. Values suffered an all-round decline. In the forward section, 40 x 2 February contract slumped by Rs. 16 to Rs. 600 before closing at Rs. 801. Business in March contract commenced at Rs. 613 on Tuesday. The contract declined to Rs. 604 today, although, towards the close, it was a rupee higher. January contract terminated at Rs. 601 on Monday, as against Rs. 610 on the 27th inst. Spot staple fibre yarn (40 x 2) prices were also depressed. Among foreign yarns, Suicos were hammered down by As. 2-8 to Rs. 4. Shinces decreased by an anna to Rs. 3-15. Among indigenous yarns, Kohinoors fell by As. 2-9 to Rs. 2-15 and Citys by As. 2 to Rs. 3-4-9. Centurys lost an anna to Rs. 3-0-9. New Greats eased by nine pies to Rs. 3-3.

The table below gives the prices of art silk staple fibre and cotton yarns quoted today, as compared with those eight days before:

	2 2 1955	25-1-1955
	Rs. a.	Rs. a.

OILSEEDS BEARISH

(From Our Own Correspondent)

BOMBAY, 2nd *March*

Once again the oilseeds market came under a wave of heavy bear pressure this week. Operators were generally hesitant to commit themselves, following larger arrivals of the seeds and the withdrawal of monopoly trading in non-transferable specific delivery contracts in groundnuts and linseed under the auspices of the Bombay Oilseeds Exchange. The monopoly hitherto enjoyed by this body was lost to it in pursuance of the notification issued by the Centre on 25th January. On the other hand, this notification rendered it possible for the Grain and Oilseeds Merchants' Association, Bombay, to commence trading in these seeds. This organisation, in fact, started trading in non-transferable specific delivery contracts today, after a lapse of four years. While operators watched further developments in trading here, rumours that the deliveries against February-March groundnut would be greater than anticipated created a feeling of nervousness among them. On top of this, the weakness of the cotton market today served as the last straw on the camel's back to cause a sharp break in values. The undertone of the market, therefore, remained weak.

In distinct contrast to last week's recovery to somewhat encouraging levels, the performance of the groundnut section this week was extremely disappointing. Groundnut Bold declined from Rs. 20-10 to Rs. 18-14. February-March delivery was lower at Rs. 18-14 as against Rs. 20-15 and April-May at Rs. 20-2 as compared with Rs. 22. Groundnut oil, ready delivery, eased from Rs. 11-2 to Rs. 10-2. Groundnut oil was reported to be enquired in the Continent at £103, as against £105 a week back. H.P.S. was quoted at about £88.

Partly in sympathy with the groundnut section and partly due to lack of buying interest in linseed oil in the Continent, the linseed section also ruled easy. Bold ready disclosed a loss of as much as Rs. 2-2 at Rs. 21-8. February-March delivery receded from Rs. 22-8 to Rs 21-8 and April-May from Rs. 21-10 to Rs. 20-4. Linseed oil, January-February delivery, was reported nominally quoted at £94 (seller).

In the castorseed section, May delivery opened the week at Rs. 76 as against Rs 77. After fluctuating between Rs. 79-4 and Rs. 74-14, it closed at Rs. 75-4, touching thereby the lowest level for some years. The clearing rate for this delivery was today fixed at Rs. 75, that is Re 1 lower than the previous rate. F.A.Q. fell from Rs. 13-4 to Rs. 15. Madras quality, after minor fluctuations, closed quiet at Rs. 15-4. Castoroil First Pressure declined by As. 3 to Rs. 9-1. Commercial quality, however, put on As. 2 to Rs. 8-12, following good enquiries from the Continent. Commercial quality reported enquired there at £81 against £75 a week.

Among other seeds, *kardi* ready eased from Rs. 15-8 to Rs. 15 and Niger F.A.Q. from Rs. 18-12 to Rs. 17-8. Madras quality was down by Re. 1 at Rs. 18-8.

The following table shows the price of oilseeds and oil today, as compared with those at the end of the previous two weeks:

FOODGRAINS QUIET TO STEADY

(From Our Own Correspondent)

HAPUR, 31st *January*

The foodgrains markets ruled quiet to steady during the week under review and reports of widespread winter rains benefiting the *rabi* crops have been received. Owing to a slight failure of rice in the West Bengal and Bihar, there had been a heavy outflow of rice from the U.P. in the past one month, which accounted for the improvement in rice prices, which, at the beginning of the new rice season, had recorded an easing tendency. Again, there was good demand for wheat from east U.P. and the prices of *dara* quality improved by As. 4 per maund to Rs. 13-8 and fine quality was quoted at Rs. 14-12. The week's offtake amounted to 7 *khaties*, leaving a balance of 24 *khaties*. Gram also elicited moderate demand at Rs. 7 for local quality and at Rs. 7-12 for Punjab quality, resulting in despatches of 3 *khaties* to outside centres and the local gram stock is now estimated at 19 *khaties*.

The coarse grain prices, however, ruled easy at Hapur and in other parts of the country. In Bihar, maize prices declined from Rs. 23 to Rs. 22 per bag and in Silligurhi (Assam) from Rs. 8-12 per maund to Rs. 8-6 per maund. The U.P. Government is faced with heavy quantity of rice and other grains which it wants to dispose of at an early date. About 5,000 tons of rice purchased on behalf of the Union Government some three years ago, the prices of which have gone down appreciably, 10,000 tons of gram and barley, and 2,000 tons of imported wheat meant for austerity provisioning and hill provisioning schemes, which has since then been dropped, are to be cleared at an early date.

The prices of pulses also continued to rule depressed in the absence of ready demand and the loading facilities in the case of peas, too, being very restricted. The local stock of peas and *arhar* remained unchanged. The latest prices are: Barley Rs. 6-8, *bejhar* Rs. 6, maize Rs. 7-8, *bajra* Rs. 7-10, peas *dara* Rs. 5-8, white Rs. 6, *arhar* Rs. 6-8, *urd* Rs. 10-4, *moong* Rs. 8 to Rs. 9-8, *massor* Rs. 6 to Rs. 8-8. Stocks: Barley 1 *khati*, *bejhar* 3 *khaties*, peas 27 *khaties* and *arhar* 9 *khaties*.

Listless conditions prevailed in the futures section of pulses during the week in the absence of fresh incentive and trading was also limited. There were narrow fluctuations and the latest quotations are: Peas *jeth* Rs. 5-8, *arhar jeth* Rs. 6-5, *urd maha* Rs. 9-7 and *urd baisakh* Rs. 9-11.

FURTHER FALL IN SUGAR PRICES

(From Our Own Correspondent)

HAPUR, 31st *January*

Sugar prices continued to rule depressed and there was a fractional fall in mill-delivery rates here. Arrivals of crystal sugar were sufficient to meet the demand, but buying interest was dormant. Buyers are hesitant to enter into long-term commitments, as fresh quotas of indigenous sugar are expected to be released shortly. The latest figures available prove that the production of crystal sugar is expected to increase considerably. Up to 15th January, 1955, production amounted to 476,000 tons, as against 382,000 tons in the previous season during this period. The stocks with the factories on 15th January stood at 424,000 tons, as against 348,000 tons last year. Reacting to the weakness in the sugar market, the prices of *khandsari* have also gone down by about Re. 1 to Re. 1-8 per maund and are now quoted at Rs. 23 to Rs. 26 per maund. The latest mill-delivery rates are: Jaswant Rs. 29-11, Simbhauli Rs. 29-12, Mowana Rs. 29-12, Daurala Rs. 31, Amroha Rs. 29, Bijnore Rs. 29-2, Mansoorpur Rs. 31, Rampur Rs. 32-6 and retail Rs. 33-8.

Ready *gur* prices were depressed further and were quoted below Rs. 10 per maund, but, as yet, no U.P. Government purchases have been made. The State Co-operative Federation has been entrusted with the work of *gur* purchases and it is hoped that arrangements for the same at Hapur will be made shortly. Permission of exporting a total of 30,000 tons of *gur* from the States of Andhra, Madras and Northern Indian States had already been given by the Union Government and Bombay trade interests have represented to the State Government to recommend to the Central Government for permitting 50,000 tons of export from that State. Ready *gur* is now quoted at Rs. 9-11 per maund and the daily arrivals are also poor, partly due to fall in prices but mostly due to cloudy weather for most part of the week. Prices of *gur* in markets in the South have also gone down very much and are quoted Akloze (Sholapur) Rs. 8-8 to Rs. 10, Koppergaon and Shrirampur at Rs. 8-8 to Rs. 11 and Rs. 9 to Rs. 12, respectively, and Kolhapur at Rs. 9 to Rs. 13 per maund.

Future *gur* prices have also staged a downward trend in line with the fall in ready section and are now quoted at Rs. 10-1 for *phagun* delivery, as against Rs. 10-6 last week-end and *baisakh* delivery is quoted at Rs. 10-11.

LINSEED FIRM

(Messrs. A. Bradley and Co.)

CALCUTTA, 31st *January*

There has been very little change in the linseed market during the week. Although firm prices are maintained, trading has been small. Upcountry markets have remained firm and despatches to this centre are very scarce. Enquiries from local mills for ready goods have resulted in small daily turnover. The oil market is rather dull, with the export demand greatly diminished at these levels. There have been small enquiries from local consumers.

Latest quotations are: February Rs. 17 and April-May Rs. 16-8 per maund.

OFF THE RECORD

(Concluded from page 203)

graciously and the atonement more generously, had the Government undisguisedly recognised Messrs. Visvesvaraya and Tata as outstanding figures in the world of industry. Instead, it has tried to dissociate them from this world by designating one as an engineer and the other as merely a pioneer of civil aviation. I regard this as nothing short of a face-saving device, calculated to keep up the pretence that private enterprise, as such, is outside the pale and unworthy of being taken notice of or accorded any recognition by the powers-that-be, when it comes to honouring those who have served the country in some outstanding manner. To my mind, all that this proves is that our political leaders, great as they are, can still be so petty-minded on occasions, as not to be able to transcend class prejudices.—*All Rights Reserved.*

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figure except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years

* Including bonus. (k) Investments. ‡ For ten months ended 31st December 1951.

(j) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Rs. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (s) For seven months ended 31st March, 1954.

*The olowing explanatory notes relate to the abbreviations and marks shown on page 244 in the debentures section:—

§§ Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption on whole or on part at par on 30th June, 1952 or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1955 on six months notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeming on 3 months' notice at ½ per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March, 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months' notice.

MARKET GOSSIP

(Concluded from page 199)

should also be reduced. No variety ion of which is below one lakh bales allowed to be tendered. The long-staple should be applicable to varieties with length of 7/8" and above, with a staple tol- ce of 1/32" and with premium for better staples maximum 2/32". The basis should be Vijay 7/32" or any other suitable standard cotton. The suggested delivery periods are February, May and August. The medium-staple contract should have Jarilla 25/32" as basis, with tolerance of 1/32" and premium for better staples upto a maximum of 2/32". The suggested delivery periods are January, March and July. The weightage should be increased to 18¾ per cent. or at least to 12½ per cent. The provision to double the weightage in case of a bear raid and to abolish it altogether in case of a bull squeeze should be reintroduced. It is further pointed out that, when fixing the tendering differences, the spot rate of the basic cotton should be taken into account to a far greater extent than hitherto.

• • • •

No change in the form of the contract alone, as has been pointed out already, will alter the trend of prices. From this point of view, it is suggested that the Government should allow more exports of cotton. For the current season, the supply of cotton at 62 lakh bales, made up of 44½ to 45 lakh bales of crop (commercial) and carry-over of 17½ lakh bales, far exceeds the optimistic estimate of mill consumption at 40½ to 41 lakh bales. It is, therefore, argued that the Government could safely allow further exports of cotton, without in any way jeopardising the mills' interests. It could allow, at the first instance, 50,000 bales of Oomras, 50,000 bales of Dholleras, Mathias and Kalagins and 50,000 bales of Bengals and free exports of Cocanadas, and review the position at a later stage. Another suggestion is that the Government should stimulate mill consumption of cotton through facilitating exports of yarn. If yarn exports were more freely permitted, it is argued, the consumption of cotton could conceivably move up by 50,000 bales. Yet another suggestion is that the Government should raise the floor level or support the market without waiting for any further fall in prices. Since the Government cannot be an unconcerned spectator of a decline in cotton prices, it will do well to consider these suggestions for stemming the rot in the cotton market. It is needless to add that, if prices are allowed to fall further, farmers may grow less cotton next year, whereas the country will need more cotton.

• • • •

The Forward Markets Commission has done well to clarify the Government notification regarding the application of the Forward Contracts (Regulation) Act to various oilseeds and oils last week. Incidentally, the Act has been made applicable to a few other commodities, too. These are: spices, wheat, gram, sugar, cotton cloth and cotton yarn. This development, however, makes no important change in the present position of trading in these commodities. The only main departure has been in respect of trading in non-transferable specific delivery contracts in linseed and groundnut in Bombay, as will be clear from the following extract issued by the Forward Markets Commission last week:

"Forward trading in transferable specific delivery contracts in other oilseeds, such as groundnut, linseed, mustard seed, sesamum seed, rapeseed, copra and cottonseed, has remained closed under the Essential Supplies (Temporary Powers) Act, 1946, while non-transferable specific delivery contracts in these commodities have been freely permitted. This position will also be maintained under the notifications issued. In the case of Greater Bombay, non-transferable specific delivery contracts in these oilseeds also required to be conducted only through the Bombay Oilseeds Exchange. The notifications issued on the 25th January, 1955, however, permit such contracts in linseed and groundnut to be freely carried on through any association. This permission is granted to give effect to the recommendations made by the Forward Markets Commission in the reports submitted by it with respect to these commodities. Non-transferable specific delivery contracts in mustard seed, sesamum seed, rapeseed, copra and cottonseed will, however, continue to be conducted for the time being only through the Bombay Oilseeds Exchange. These commodities have not yet been taken up for study by the Forward Markets Commission, and it was considered undesirable to make any major change in the existing position unless such study was completed."

• • • •

Hitherto trading in forward delivery contracts in groundnuts and linseed was being carried on under the auspices of only one exchange, namely, the Bombay Oilseeds Exchange. But now the Commission has abolished this 'monopoly' and allowed any association to trade in these two commodities. No reasons are given as to why the Commission decided to take this retrograde step. One trading body has already availed itself of this freedom and commenced trading in non-transferable specific delivery contracts both in linseed and groundnuts. This is not a healthy development, in that it will lead to excessive speculation.

MARKET REPORTS

RAW JUTE QUIET

(From Our Own Correspondent)

CALCUTTA, 1st February

That overseas buyers of Indian jute goods are not prepared to support the present high prices is the conclusion that should unmistakably be derived from the trend displayed in the market this week. In spite of this, hessians did not yield any visible ground, as stockists believed that the stock position with mills being good from the market angle, foreign consumers would have to lift at least their day-to-day requirements. One of the causes for the high prices is certainly the very high rates quoted for raw jute, which have touched unrealistic levels, mainly because of the difficulty of getting jute from East Bengal. Considering the future of the mill industry, it is felt that the authorities in India should, without further delay, be able to persuade the East Bengal Government to continue to permit exports of raw jute in *kutcha* bales to India at least for the rest of the current season. At the same time, cultivators in India should be encouraged to grow as much as possible during the next season. Of course, if raw jute prices continue at present levels, this aim will be automatically achieved.

The Indian Central Jute Committee takes the view that there is enough jute to feed mills all over the world for the rest of the season, but that there is unlikely to be any carry-over both in India and in Pakistan. It ascribes the present tightness in India to manipulations by interested dealers for temporary gains. Such an appreciation of the present situation is readily admitted, but the whole confusion commenced from the lack of imports from East Pakistan for the reason already indicated. Of the annual imports of 1½ million bales from East Bengal, India has to get still a moderate quantity. During this season, which has four months more, this figure will hardly be reached because of poor *pucca* baling facilities in East Bengal.

In view of buyers' disinclination to support the higher prices for jute goods, the raw jute market was extremely quiet this week. Mills were silent and, although stockists were confident of realising higher prices, there were instances of discounted quotations. Latest rates given below show a recession of about As. 8 to Re. 1 for most varieties:

	Middles Rs. a.	Bottoms Rs. a.
Pakistani:		
Northern	40 0	36 0
District	41 0	37 0
Indian:		
Northern	38 8	35 8
Assam Upper	38 0	35 0
Assam Lower	38 8	35 8
Daissee	38 8	35 8
Murshidabad	37 0	34 0
Western	36 8	33 8
Jungli	36 0	33 0
Orissa	39 0	36 0
Uttar Pradesh	36 0	33 0
Bimli f.a.q.	32 0	

Ready 40" 10 oz. hessians after fractionally losing to Rs. 47, maintained that rate for most part of the week, but gave way to Rs. 46-14 yesterday. Eight oz. hessians were priced at Rs. 37-8. April-June 10 oz. varieties receded to Rs. 46-6 from Rs. 46-10 but closed at Rs. 46-8. March offers were one or two annas lower than the April-June rate. Business that was put through with overseas buyers was insignificant. The rates for heavy goods were visibly affected by the lack of business. Ready B. twills lost to Rs. 123-2 from Rs. 124, the closure for the week-end being at Rs. 123-6. Yesterday, a movement to Rs. 123-12 was recorded, although this was not due to the realisation of actual business. In contrast with hessian, the forward rates for B. twills were higher than the spot, April-June quoting Rs. 123-10 and February Rs. 123-8 over the week-end.

HEAVY DEMAND FOR KANPUR COW HIDES

(From Our Own Correspondent)

KANPUR, 29th January

The hides and skins market continued to experience a heavy demand for wet salted cow during the week under review also. The fresh arrival was quite considerable. The trend of price for cow was definitely upward. The main parties behind the transactions were the local tanners. There was a heavy demand for goat and sheep also which fetched fancy prices. As far as wet salted buff was concerned there was no notable features. The latest quotation are as follows:—

Wet salted cow, 1st grade heavy Rs. 440 to Rs. 450, 1st grade light Rs. 320 to Rs. 360, 2nd grade heavy Rs. 300 to Rs. 320 and 2nd grade light Rs. 200 per score; wet salted buff, 1st grade 1 lb. 6 ozs, 2nd grade 1 lb. 9 ozs. to 1 lb. 12 ozs., and 3rd grade 2 lbs. 8 ozs. per rupee; goat skins, 1st grade Rs. 300 to Rs. 330 and 2nd grade Rs. 275 to Rs. 300 per 100 pieces; and sheep skins Rs. 250 per 100 pieces.

BANKING

(Concluded from page 206)

sizable surplus of Rs. 26.77 lakhs brought in from the previous year to supplement the profit available for distribution, the Directors have chosen not to strengthen the reserves for the third year in succession. They have, on the other hand, capitalised a sum of Rs. 50 lakhs out of the profit. This is not the first time they are doing this. For, on three previous occasions, the Directors had followed this remarkably unique policy. Thus, in 1947 they straightaway transferred from the profit to the capital account a sum of Rs. 12.5 lakhs, Rs. 17.5 lakhs in

INDO-SOVIET STEEL PACT

IT is premature to feel elated over the Indo-Soviet steel pact signed last week. The agreement is too detailed to be called a preliminary one; yet, in effect, it is nothing more than preliminary and, if, for some reason or other, it fails to result in a final agreement, India will lose as much as Rs. 80 lakhs. No technical mission from India has visited Russia and satisfied for itself whether that country can supply what India needs. This is very unbusinesslike. No business man will enter into a deal with a party whom he does not know very well, without first verifying whether the party concerned is in a position to deliver the goods he wants. It is true that no such thing was done by the Government of India when it entered into a deal with a West German combine of steel producers for establishing a steel factory at Rourkela in Orissa State. But none who knows this job endorsed it as the ideal method of negotiating such agreements. In any case, there was at least no doubt about the ability of the German firms to manufacture and put up a modern steel plant, all these firms being well known throughout the world for their high degree of efficiency in the manufacture of various types of steel. As Russia has been a closed country, the outside world is generally in the dark about its capability to build plants of original design. Prudence, therefore, demanded that India should have first taken steps to check up Russian claims to carry out the task efficiently before entering into even a preliminary agreement. If the Soviet Government was unwilling to permit a technical team from India to visit its steel and metallurgical factories before concluding such an agreement, India should not have bothered to have any further talks on that subject.

Such a prior study of the conditions in Russia becomes all the more important because of the peculiar nature of the present deal with Russia. Under the agreement, India has committed itself to buy from Russia all the plants required for a steel factory, except those which can be fabricated in its domestic factories. A steel works consists of several plants such as coke ovens, blast furnaces, steel mills, machinery for casting, handling and tripping ingots, billet mills, sintering plants, plants for the production, supply and transmission of power, water gas, etc. All such plant and machinery which India is not in a position to manufacture—and these are many—will have to be bought only from Russia. In other words, India has entered into a package deal with Russia. Suppose that, during the course of the plants manufactured by Russia, the Indian technical team finds that some of the plants are not of modern type or that some other countries are in a position to supply us with better types of plants; in such an event, India cannot place orders with the latter countries, for the agreement, according to our reading, is specific on this point. If it wishes to buy a plant outside Russia for incorporation in this project, then the whole agreement will have to be terminated. In effect, this means that India will have to buy from Russia both good and bad.

In actual practice, this may prove to be a great disadvantage to India, especially as prices are not to be determined through the system of global tenders. The prices are, of course, subject to negotiation between the two countries, but how is India to determine what are fair prices if no global tenders are to be invited for plants of predetermined specifications. In this respect, the Indo-Soviet agreement is in striking contrast with the Indo-German agreement. The latter specifically provides for purchases of plant and equipment on a competitive basis, supply being arranged after the issue of global tenders. If, in the case of a particular plant, the blast furnace, for instance, the Swedish quotation is more favourable than the German, or the Swedish plant is superior to the German plant, there is nothing to prevent India from accepting the Swedish offer. Such a thing will not be possible under the agreement with Russia. It will be interesting to know whether the Public Accounts Committee will endorse a deal with such a condition. If the Government wishes to avoid a censure at the hands of this body at a later date, it will be well advised to take a ruling from the Committee in advance or to place it on record that it is deliberately endorsing this defective method of buying a steel works.

One will do well to bear in mind this important drawback before being carried away by the Russian offer to give India a long-term credit for 12 years at a low rate of interest, namely, 2½ per cent. per annum. For credits of this nature, the World Bank, for instance, will charge 4.5 per cent., including the commission of 1 per cent., a part of which will come back to India one of these days in the form of dividend on its share capital, or a reduction in the rate of interest on its borrowings. It is, of course, true that a difference of 2 per cent. in the rate of interest is not negligible. But that is not such a great concession as is made out by many, including the Government spokesmen. In the first place, repayment of the principal (the cost of the plants), as well as interest thereon, starts right from the first year after the delivery of the plants and not after the whole factory goes into production. Thus, the amortisation will begin even as the various plants and equipment arrive at the site, whereas, in the case of loans from the World Bank, it starts 5 to 10 years after the credit is drawn.

Even granting for argument's sake that the early commencement of amortisation is not such a great disadvantage and that there is some net gain in interest charges, the drawback of signing a package deal may more than neutralise this gain. If even one of the main plants of a steel works bought from Russia is of a sub-standard variety, this gain will not be there. Supposing, for instance, the coke ovens bought from Russia are of a variety in which the wear and tear are great and which, in consequence, require to be relined at short intervals of a few years, it is obvious that the saving made in the interest rate will then prove to be negligible, as compared with the cost of, and the temporary loss of production consequent on, relining the coke ovens.

No idea can, of course, be had at present of the cost of the steel project under reference. The figure of Rs. 43.40 crores is a tentative estimate. It excludes the cost of transport from Russia, as also that of the machinery and equipment that will be manufactured in India. It does not include the cost of opening up mines, laying down roads and communications and of town building. The Government has given no estimate of these capital expenditures. Accordingly, it is not possible to give any idea of the magnitude of the total capital investment involved. Perhaps, some information on this question will be forthcoming when the final project report is received from the Russian team in another nine months. Meanwhile, the country is being led to believe that the rates quoted by Russia will be cheaper than those given by other countries. There is hardly any precedent for nursing that belief; its quotations will in all probability be on a par with world rates, which are more or less equal to the American prices. The rates quoted by Russia, and already accepted by India, in regard to expenses incurred by its technical mission in preparing the reports and the service charges seem to substantiate our contention. In both the cases, the rates are higher than those accepted by the German combine for putting up the plant at Rourkela. The Russians are to be paid their actual expenses, subject to a ceiling of Rs. 80 lakhs, besides Rs. 2.50 crores by way of service charges; the corresponding figures in the agreement with the Germans are Rs. 70 lakhs and Rs. 2.10 crores, respectively. The difference may be small; nonetheless, it is significant of the trend. In saying this, we do not suggest that the agreement with the Germans is an acme of perfection. It is now admitted in all knowledgeable circles that the Government has committed some costly blunders in that agreement.

Great satisfaction has been expressed in some circles over the speed with which the Russians completed their exploratory work in India and submitted their first report, the basis for the preliminary agreement under review. They have doubtless done good work and a careful reading of the agreement shows that they are clever negotiators. This agreement is quite characteristic of their thoroughness. The fact that, in almost every section relating to time-limit for specific performances, they have made provisos to protect themselves against delays that may occur on the Indian side shows that they are fully aware that, in India, there is more talk and less action and that in this country things move very slowly, especially if it has anything to do with the Government. While giving credit to the Russians for their speed and devotion to work, it is necessary to add that the Russian effort had the advantage of the considerable spade-work that was done before in connection with the various delegations which visited India for putting up steel plants. The work done with the Russian team has doubtless enriched India's experience in negotiating such deals and will, perhaps, be of some assistance in negotiating the proposed deal with British manufacturers of metallurgical equipment.

It is gratifying to find that the Government of India has taken note of at least two important suggestions made by Mr. Padamji Ginwala in an article to this journal two weeks ago. One is the need for safeguarding India from the possibility of infringement of patents relating both to the designs of the plants and to the process of manufacture. Suitable provision has been made in the agreement to protect India. The other suggestion of Mr. Ginwala was that

a team of competent consulting engineers should be deputed to Russia to inspect Russian steel plants, with a view to satisfying themselves that the equipment in use in that country is reasonably up-to-date and that the engineering workshops where the plants are likely to be fabricated are of the right type to guarantee the quality of work and timely delivery. This suggestion, too, has been accepted in a way, in that the Government proposes to send a technical team consisting of Indians, who, while having very good experience of the steel industry, are not consulting engineers of the type recommended by Mr. Ginwala. While we realise the political difficulties involved in asking Russia to receive an inspection team from India consisting of U.S., British or German nationals, it should be possible for the Government of India to strengthen its technical team by including in it, with the consent of Russia, one or two consulting engineers belonging to a neutral country such as Sweden which has a fund of rich experience in steel-making. The Government of India is taking a grave political risk in accepting the Russian offer for reasons so ably stated by Mr. Ginwala in his article to this journal. The country has already been warned of the danger involved in taking aid from Soviet Russia. None who sought its assistance has been free from its domination. Yet, the Government of India has boldly decided to expose the country to this danger. Let the country, however, have the satisfaction that, at least on the technical and financial sides, the deal is not faulty. It behoves the Government of India to take adequate steps for this purpose.

OUTLOOK FOR RICE

THE radical change in the statistical position of rice, which has been noticed in the past year or two, is a notable development. The shortage in supply persisted for a long time after the cessation of World War II, but it has now been more than wiped out, and many rice-producing countries are faced with the problem of disposal of their surplus stocks. Even India, which not long ago seemed to be suffering from a chronic scarcity of rice, is no exception to the rule. Last week, Mr. M. V. Krishnappa, Deputy Minister for Food, pointed out how the comfortable position of rice supplies in the country had enabled the Government to lift the ban on exports of rice, and even to encourage them by reducing the export duty on this cereal. "For the first time after a period of over a decade," Mr. Krishnappa said, "India will be exporting rice to the tune of two to three lakh tons."

India is not, of course, a large-scale exporter of rice, though it has been one of the leading importers of rice in recent years and continues to be one of the important rice-growing countries. The emergence of India as a country with a rice surplus underlines the change in the world rice position from one of acute scarcity to moderate surplus. World production (excluding output in China and the U.S.S.R.) of unhusked rice (paddy), which increased from 100.5 million tons in pre-war years to 110.4 million tons in 1952, further increased to 119.2 million tons in 1953. The area under rice, too, moved up from 65.8 million hectares in pre-war years to 76.0 million in 1952 and still further to 78.7 million hectares in 1953. The following table gives the world rice (paddy) production in 1934-38 (average), 1952 and 1953:

World Rice (Paddy) Production
(In 000 tons paddy)

	1934-38 Average	1952	1953
*World Total**	100,582	110,400	119,200

* Excluding China and U.S.S.R.

It will be seen from the table above how nearly all the rice-growing countries shared the increase in output. The U.N. Food and Agriculture Organisation, in its latest number (devoted to rice) in the series *Commodity Reports*, draws attention to the fact that the scarcity of, and the accompanying high prices for, rice which prevailed in the early post-war years have stimulated governments and farmers to devote considerable attention to growing more rice, while the same causes have reduced the effective demand for rice by inducing the governments and consumers to turn to other foods. Weather conditions in the past two years have also been favourable to rice crops.

The increase in rice production has, of course, been unevenly distributed amongst rice-growing countries. But it is noteworthy that the increase was fairly evenly divided between the group of exporters and that of importers. The exporting group, which includes Burma, Thailand, Cambodia and Viet Nam, Brazil, the U.S., Egypt and Italy, improved their paddy output from 38.3 million tons in 1952 to 41.7 million tons in 1953. The production in the importing group, which includes India, Japan and Ceylon, improved from 58.5 million tons to 63.4 million tons.

Judging by the trend in exports, it seems that there must have been a decline in world trade in rice. Evidently, this reflects the growing tendency on the part of the rice-importing countries to meet their needs from domestic production. World exports of milled rice aggregated 4.4 million tons (preliminary) in 1953, as against 5.0 million tons in 1952, 5.2 million tons in 1951 and 9.7 million tons in pre-war years. Many exporting countries have not yet regained their pre-war export status. Burma is the most notable among them. As against its pre-war exports of 3 million tons, it was able to export only 1.3 million tons in 1952 and 971,000 tons in 1953. Among the countries which have increased their export trade in rice, mention must be made of the U.S. which exported 694,000 tons in 1953 (72,000 tons in pre-war years) and Italy which increased its exports from 149,000 tons (in 1952) to 217,000 tons.

A sizable increase is reflected in the estimate of the exportable surplus in rice in 1954. This surplus is estimated at 5.7 million tons (milled rice), as against 4.2 million tons in 1953. Burma and Thailand account for the major portion of the surplus, the totals of these countries being 1.4 million tons and 1.9 million tons, respectively. Both these countries have important trade agreements which assure them markets for a good part of their surplus. Burma, for instance, has such agreement with Ceylon, China, India, Indonesia and Japan. Thailand has similar agreements with British territories, Indonesia, Japan and the Netherlands. It must, however, be pointed out here that, although recent changes in marketing have tended towards the relaxation of restrictions on rice, there is at present no world-wide rice market.

An interesting trend in the export trade in rice is the trade in certain by-products of rice. Large quantities of broken rice have been available, particularly in Thailand, and the Thai Government has made special reductions in the export prices for this category of rice. In order to reduce its cost of rice imports, Japan specifically asked the U.S. to send rice, with a percentage of broken rice, so that the latter country was compelled to buy such rice from Thailand for purposes of mixing. Another by-product of rice is coarse flour, which the Bangkok millers are producing out of broken rice. It would appear that the flour finds a ready market in Europe and Malaya as animal feeding stuff. Burma is a chief supplier to the U.K. of another by-product, rice bran. Again, recent Italian developments in the industrial use of treated rice husks, it is stated, suggest the possibility of an international trade in this article, of which no use is being made at present in many countries.

What about the outlook for 1955? The supplies of rice available for export this year, according to the Report, will depend mainly on the 1954 crop and the carryover of the previous years. A survey of the position of the main participants in the international trade in rice indicates that exportable supplies in 1955 are likely to be greater than the quantities actually exported in 1954. Imports, on the other hand, are expected to fall off considerably. The "chief unknown" factor is stated to be India's policy of building reserves and consumption. As regards the reserve policy, Krishnappa has stated that the Government would hold as reserve stocks to the tune of 1½ million tons of rice and that the Government had no intention of allowing large imports. The Report asks: "Will the abolition of rationing gradually lead to greater consumption?" The answer to this question, of course, depends upon the trend of prices in the rice market. If prices are sufficiently low, consumption will doubtless show a perceptible rise. Although there has been a substantial fall in prices, they are still high as compared with the capacity of the majority of consumers.

As regards the wider outlook, the Report observes that, in view of the pursuit of the ideal of self-sufficiency in many rice-importing countries, it is probable that increasing exportable supplies might be confronted with a shrinking demand for imports. Here also, the principal factor is price. The Report itself points out that the population in the main rice-eating region has increased faster than rice production, so that the supplies in this region have had to be augmented by a reversal in the direction of trade; till very recently, this region, which used to be an exporter of rice once, had to import it. Surely, it can consume more, provided rice becomes available at reasonable prices.

TIP TO EMPLOYERS

RECENT investigations by sociologists and industrial psychologists have served to show that the causes of strikes and lockouts are deeper than the mere economic issues which precipitate them. The causes are at least as much psychological as they are economic. The modern economic system has frequently been condemned for creating conditions under which the worker has to work for one who does not care for him and for whom he does not care either. In the context of the rapid growth of industries in India, there is need for both labour leaders and industrialists to re-assess the value and importance of appreciation of their common economic problems. Perhaps, the one reason why State interference in the shape of all the costly apparatus of industrial courts and labour tribunals flourishes is that the employee seldom feels confident of being able to get, in his office or factory, a hearing, much less justice, from the employer. He feels, on the other hand, that, in a court at least, he can enjoy a certain sense of equality with the employer, denied to him in his office.

How to correct the deep-seated prejudices from which the employees, no less than the employers, suffer is a problem that is a challenge to all those who value industrial peace. The M.R.A. (Moral Re-Armament Movement) offers a solution, which, even if it borders on the mystical, is so essentially human that it appeals to more and more men. Speaking at a meeting in the city, Mr. Frits Philips, a well-known Dutch industrialist, gave his personal experience in handling labour problems. Towards the workers, the management adopted the attitude—"I will give all that is right to give; I will use only those arguments in negotiation in which I believe myself." Gradually, they gained the confidence of the workers. "In our last collective agreement," he said, "we were able to abolish strikes and lockouts, and to settle all disputes by negotiation." He added: "Our experience is that, when we are serious and really care for the people who work for us, we can succeed."

Mr. Philips then asked a very pertinent question, and that was: "Who is making the plans for the future of the world?" Answering the question, he deplored that, whereas the industrialists, as a class, possess great ability and experience, they shirk responsibility and keep out of politics. "And when the decisions are taken by the Government," he said, "we are full of criticism." He rightly held that industrialists must have a "global vision," in order that their efforts might match those of others who are planning on a world scale. Surely, the challenge of extremist political ideologies can be met only by a higher ethical sense on the part of industrialists, combined with a zeal for promoting the interests of the common man.

BUDGET APPREHENSIONS UPSET SHARES

MORE ABOUT CORNERING OF ASSAM TEA

THURSDAY, 5 P.M.

OWING to pre-budget uncertainty, coupled with the prospects of a cut in textile dividends, share markets have become unsettled. There has been a fairly general marking down of prices.

MARKET GOSSIP

The fall has been rather heavy in textiles and a few miscellaneous counters, moderate in steels and fractional in the rest. Market circles report that there has been a heavy turnover in Tata Ordinaries and Indian Irons, as some of the leading operators indulged in large-scale jobbing. Budget expectations range from subdued optimism to distinct pessimism. During the last monsoon months, almost everyone was confident that the Government would provide more incentive to the private sector, in order to stimulate expansion of existing industries and establishment of new ones. This optimism, of course, petered out in the last quarter of the year, following the shift of emphasis in the Government's policy towards the private sector. Now, market circles are afraid that more taxes would be imposed, with a view to achieving the objective of a socialistic pattern of society. They are afraid that Mr. Deshmukh will be required to trim the Government's fiscal policy to suit this end. With the budget only a little more than a fortnight ahead, this fear is growing and the majority of speculators prefer not to keep a long position. Indeed, the fear of taxes being stepped up is so much at present that, even if Mr. Deshmukh merely maintains the *status quo*, it will heave a sigh of relief.

• • • •

A year ago, market circles used to regard Mr. C. D. Deshmukh as the watchdog of the private sector in a Government and Parliament dominated by persons leaning more and more towards the left and by idealists who got accustomed to preach vague socialism during the days of our struggle against the British. They were confident that, so long as he was the Finance Minister, he would not allow any measures designed to starve the milch cow or to deprive it of its hearth and home. But now they are not so sure. They feel that Mr. Deshmukh has changed considerably. He does not now strike them to be that level-headed and practical-minded administrator he was till a couple of years ago. On the contrary, he has come to be regarded as one who has allowed idealism to get the better of him, without having regard to the realities of the situation. It is this impression of the person in charge of the portfolio of finance and taxation that has given rise to the fear that the forthcoming budget will not be conducive to the vigorous growth of the private sector, as is understood by the business community. There are some who fear that the new fiscal policy, which is expected to inform the budget for 1955-56, will not be in consonance even with the spirit in which a place has been provided for the private sector in the economic policy propounded at the Avadi session of the Congress.

• • • •

Whether or not there is any basis for such apprehensions is a question for which no answer can be given now. One will have to wait till 6 p.m. on Monday the 28th inst., when Mr. Deshmukh will unfold his taxation proposals. There are, however, some who feel that the budget will not be so bad as the majority thinks. Although they admit that there has been a complete transformation in the attitude of Mr. Deshmukh towards the private sector, they feel that he will not be so unrealistic as to kill the goose that lays golden eggs. They also argue, rather crudely, that the private sector is still the real backbone of the Congress Party and that such a shrewd Finance Minister as Mr. Deshmukh will not do anything that will weaken the keystone of the arch, especially when the next General Elections are not far off. Further, they stand convinced that the scope for fresh taxation is so limited that, willy-nilly, Mr. Deshmukh will have to plump for deficit financing to implement the development plans; and since deficit financing carries with it inflationary implications to the economy, these operators are inclined not to sell short. They have, on the contrary, been making discreet purchases of the leading speculative counters, albeit on a small scale, at every setback.

• • • •

It is probably in view of the face of pre-budget uncertainty that the market has practically ignored certain developments favourable to the Tata Iron and Steel Co., Ltd. The Central Cabinet has approved in principle that the Company should be given permission to undertake further expansion of its productive capacity up to 2 million tons of steel ingots. The details of the scheme are under discussion with the Government. It is reliably learned that the Government does not intend to provide any interest-free loan to the Company for implementing this scheme, as is rumoured in the share market. The Government has, however, agreed to assist the Company in raising finance in world markets or in getting a sizable loan from the World Bank. The broad picture of the Company's source of finance for this purpose would appear to be (*a*) suppliers' credit from countries where plant and equipment would be bought, (*b*) a long-term loan from the World Bank, and (*c*) some equity capital from Indian investors. It is very likely that, as the Company is now embarking on such a large-scale expansion programme, it may not be very keen on establishing a ferro-manganese industry, requiring a capital investment of Rs. 2 to Rs. 3 crores.

A fortnight ago, it was stated in these columns that the decisions of the Labour Appellate Tribunal on dearness allowance and bonus for 1952 would so severely drain the liquid resources of mills that it might adversely affect the dividends of cotton textile companies for the past year. It is not, therefore, surprising that the dividend of the New Great Mill, belonging to the Brady group of cotton mills, for 1954 has been reduced by 25 per cent., that is, from Rs. 10 per share (of Rs. 100 each) for 1953 to Rs. 7-8 per share. It would appear that, as a result of the aforesaid Awards, the Company has to pay its workers about Rs. 6.5 lakhs which has nearly wiped out its profit for 1954. We think that, in order to pay even this very modest dividend of 7½ per cent., the Directors must have drawn from the reserves built up in previous years. The New City Mill, belonging to the same group, has, we learn, maintained the dividend at 10 per cent. per annum. The effect of the Labour Awards on this Company is not so adverse as in the case of the New Great, because it has not to pay any bonus, as it made no profit in 1952. Nevertheless, even its profit could not have been large enough to absorb the cost of additional dearness allowance and still pay the same dividend as last year, without transferring from the reserves a sizable amount. The market has quickly reacted to the cut in New Great's dividend by marking down the value of the Company's shares to Rs. 155 from Rs. 167 a week before; at one time today, it touched a low of Rs. 153. A fortnight ago, this share was standing at Rs. 173.

• • • •

Among cotton mill shares, New Greats are by no means the only scrip to go down in value so *substantially. The other more active counters, too,* have shed quite a few points. Thus, Kohinoors have gone down from Rs. 333 to Rs. 321, the lowest touched today being Rs. 319-8. Bombay Dyeings have receded from Rs. 492-8 to Rs. 471-14, the lowest level seen being Rs. 468-12. Similarly, Centurys have gone down from Rs. 389 to Rs. 369-8. It would appear that the additional amount payable to workers by Kohinoors is about Rs. 16 lakhs, Bombay Dyeings about Rs. 24 to Rs. 25 lakhs and Centurys about Rs. 18 lakhs. Market circles are now reconciled to a cut of Rs. 2 or Rs. 3 in the dividends of Kohinoors and Centurys, though they are hoping that Bombay Dyeings will maintain the dividend.

• • • •

It now seems that the group of Indian operators which had cornered a large block of shares of the Assam Company—a sterling tea company—has practically lost the battle. As a result, the £1 ordinary shares of this Company have come crashing down on the London Stock Exchange from 57s., the highest level touched a few days ago, to 41s. 6d. with sellers over. The Indian interests are associated with Mr. Haridas Mundhra, an Indian business man, who has been extremely lucky in recent years and who has helped some of the foreign investors in Indian companies to repatriate their capital to their homeland with a handsome profit. Last week, he was reported to have succeeded in getting a large block of shares of Messrs. Jessop & Co., one of the leading structural and mechanical engineering companies in this country. It is reported that, although Mr. Mundhra has acquired a 40 per cent. control of the Jessop Company, there will be no change in its management and that the present Directors will continue to manage it as before, at any rate for the present.

• • • •

To revert to the Assam Company. It is stated that Mr. Mundhra—he and his associates are already said to have cornered about 40 per cent. of the shares—has gone to London to sue for peace with the Board of Directors of the Company. He is believed to have told them that it is not his intention to transfer the Company to India or otherwise to upset the present management and that he will be satisfied if he and his friends are given adequate representation on the Board of the Company. It is not known what response he received for his proposal from the Directors in London. Earlier reports from London stated that no arrangements had been made for Mr. Mundhra to meet the Board. He is unlikely to have met with any success in his mission, for, at the meeting held in London on Monday this week, the stockholders of the Company approved of the Board's scheme for creating a special class of one million 1s. ordinary shares and issuing one-for-two scrip issue. The scheme provides also for alloting 750,000 of the new 1s. ordinary shares, which will carry one-third of the total voting power, to the trustees of the staff pension fund. As the Board felt there was some validity in the criticism that the 1s. shares put one-third of the voting rights into the hands of the trustees in perpetuity, it reached an agreement with the trustees by which, after seven years, the ordinary stockholders could call upon the trustees to consolidate the 1s. shares into £1 units. At this meeting, the trustees would not use their voting power. Despite some opposition from a section of shareholders, which criticised the scheme on the ground that it was contrary to established practice, the resolution was carried on a show of hands. This means that the present management has secured its position with a comfortable majority.

• • • •

In the light of the above development, it remains to be seen what Mr. Mundhra will do. Will he fight the Board in a Court of Law under the British Company Law which contains provisions forbidding "oppressive" treatment of minority shareholders or will he quietly wait and gradually liquidate his holdings in the Company? It will be interesting to see what he does. Mr. Mundhra, however, can make an outright take-over bid to the Board, but he is said to be unwilling to do so, as that will cost him more and require large resources. It may be mentioned here that the new scheme of capital increase just adopted by the Company contains a provision to enable its Board to negotiate a take-over bid. Thus, the new 1s. shares will have no say on accepting or rejecting a take-over bid.

• • • •

The Government of India took a few welcome steps yesterday to arrest the downward trend in the price of cotton, though these steps have not yet yielded the desired result. It has abolished the quota system for mills, thereby enabling free competition among the mills for the available supply of cotton. It has allowed some more short-staple cotton to be exported, besides a small quantity of 25,000 bales of old crop of staple length up to ⅞". But these measures have had no effect on the market. Since the export demand for Indian cotton is not very keen, the liberalisation of the export quota has failed to have any stimulating influence on price. If the Government had simultaneously reduced the export duty from Rs. 150 per bale to Rs. 75 per bale, it would have had a tonic effect on the market. Similarly, the Government should have followed up the abolition of the quota system for the mills by entering the market as a Buyer. The mere announcement that the Government would buy cotton even on the basis of Rs. 550 for *Jarilla* would have induced a number of mills to enter the market. Now that the mills are the sole buyers of cotton, they are biding time in the hope that they will be able to buy it at still lower prices. Indian cotton is the cheapest in the world and yet the Government is diffident of investing some amount on this commodity. This attitude shows that the Government is chicken-hearted and is lacking in foresight. After all, the statistical position of Indian cotton is still healthy and the consumption of this cotton is steadily going up. If the Government decides to support cotton, it will be serving two purposes: *one, the hard-pressed cotton grower will get* some benefit and, secondly, it will provide an outlet through which the money supply can be increased, which, in turn, may arrest the sagging trend displayed by the other commodity markets as well. There is nothing wrong in the Government buying commodities at rates above its declared floor prices. Just as it buys its loans in the Gilt-edged market even at well above its national floor rates, so also it can buy cotton at above the floor levels, if the situation warrants, as it certainly does now, such a course of action.

• • • •

This has been a disappointing week to the shareholders of Rallis India Ltd. for they have suffered a further heavy loss in the value of their holdings. This Company's scrip (Rs. 100 paid-up) which has consistently been quoted below par for several months now, stood at Rs. 51 early this year. It slumped gradually to Rs. 45-8 on 7th February, and in the next two days, declined to touch a low of Rs. 39 yesterday, though it recovered to Rs. 42 today. The fact that the share of so well-established a trading concern as Rallis India should suffer such precipitous fall in prices has been causing concern in market circles. The management of the Company has, however, promptly issued an interim report to its members, explaining the trend in the Company's earnings. They observe that the accounts of the Company for the year ended 31st August, 1954, will, when they are published, reveal a serious loss of about Rs. 52 lakhs, inclusive of Rs. 8 lakhs paid in compensation to the staff who have been retrenched.

• • • •

It would appear that, after absorbing the general reserve and the profit and loss balance brought forward from the previous year, there will still remain a large debit balance on the profit and loss account of about Rs. 43 lakhs. Besides this, there are also arrears of depreciation. It may be mentioned here that the result of the Company's working during the year ended 31st August, 1953, resulted in a trading loss of Rs. 12.8 lakhs, after providing for Rs 10.35 lakhs as full depreciation of fixed assets. All this is, as the Directors themselves point out, a very serious development. But it is "more serious because it is only partly due to factors which may be regarded as non-recurring." The Directors have, therefore, decided to close down the Calcutta branch of the Company and have also indicated that they will make a proposal, at the appropriate time, for reconstructing the Company's capital structure with a view to writing off the losses incurred and to bringing the Company "back on to the dividend-paying list as soon as profits are available." Giving their reasons for this decision, the Directors observe:

"The year covered by the accounts was a difficult one for merchants in India. Owing to the intensity of competition, even small earnings were often hard to secure on the Company's business and, to do business often involved substantial market risks, some of which gave adverse results. The drastic curtailment of exports of oil was unfavourable to the working of the Company's oil mills and the restrictions referred to last February, imposed at one time by the Central Government on the Company's trading activities, had a most damaging effect, particularly on earnings from raw cotton. As a result of all these conditions, earnings were sharply reduced from Rs. 99.8 lakhs the previous year to about Rs. 41 lakhs. While some improvement in future earnings can reasonably be expected, the changed pattern of trade in India has adversely affected the scope and prospect of your Company in its traditional lines of trade. Efforts have been made to utilise premises and staff rendered surplus by loss of ground in some directions, by ventures into new fields of activity, but these have not all proved successful. On this picture your Directors cannot, therefore, encourage

SHARE MARKET EASY

PRICES REACT AFTER INITIAL RISE

(From Our Own Correspondent)

BOMBAY, 10th *February*

AFTER presenting a steady trend during the first two sessions of the week under review, the Stock Exchange developed easiness on Monday which persisted practically till the close today. The initial steadiness was due mainly to technical considerations which induced some replacement buying and short covering. Equity values, therefore, tended to rise. The upward trend was, however, halted on the 7th inst., when the market once again came under the influence of several unhelpful factors. Fears regarding the nature of tax proposals in the forthcoming budget and rumours of an increase in the excise duties on a number of items of daily use, for instance, had a deterrent effect on trading in shares generally. Again, the prospect of a reduction in dividends of many textile mills as indicated by the decision of the Board of Directors of the New Great Mills recommending a lower dividend of Rs. 7-8 for 1954, as against Rs. 10 in 1953—thanks to the impact of the recent award of the Labour Appellate Tribunal—depressed dealings, particularly in textiles. On top of these came reports of lower domestic and overseas offtake in piecegoods in recent weeks. Persistent weak advices from the cotton and other commodity markets, discouraging corporate news, and end-of-account considerations—all cumulatively influenced the operators to exercise much restraint on fresh business. In the result, the turnover was greatly restricted and values of shares drifted lower. Today's closing quotations of most of the scrips were thus lower than those a week ago.

In the steel section, Tata Ordinaries which had improved from Rs. 234-12 last week-end to Rs. 238 on the 5th inst., gradually receded to Rs. 226 on Tuesday. After staging a slight recovery to Rs. 230-8 yesterday, owing to technical correction, the shares reacted today to Rs. 227-4 before finishing a shade higher at Rs. 228. The net loss over the week was Rs. 6-12. Indian Irons opened firm at Rs. 33-8-6, as against Rs. 33-6-6, and advanced to Rs. 33-11-6 on Saturday. Selling pressure that ensued thereafter brought down the quotation to Rs. 32-11 on Tuesday. Following encouraging Calcutta advices, Indian Irons staged a recovery today. The recovery, however, was not sufficient to make up for the earlier loss, so that today's closing rate of Rs. 33 was As. 6-6 lower than that last week.

Textile shares were subjected to considerable selling pressure. New Greats reacted very adversely to reduced dividend announcement and their values were marked down by Rs. 12 to Rs. 155. Swadeshis were the next to suffer most, with a loss of Rs. 9 to Rs. 198-8. Gokaks slumped by Rs. 7 to Rs. 216-8. Srinivas dropped Rs. 6-4 to Rs. 225. Bradburys fell by Rs. 5 to Rs. 800 and Bombay Dyeings by Rs. 4-6 to Rs. 471-14. Finlays and Kohinoors declined by Rs. 4 each to Rs. 250 and Rs. 321, respectively. Centurys lost Rs. 3-8 to Rs. 369-8, Tata Mills Rs. 3-4 to Rs. 59-4 and Standards Rs. 2-8 to Rs. 351-4. Indores and Phoenix finished Re. 1-14 lower, the former at Rs. 93-12 and the latter at Rs. 113-12. Simplex shares eased by Re. 1-8 to Rs. 146-8 and Swans by Re. 1-4 to Rs. 328-12. Khataus were quiet at Rs. 152-8. Morarjis, however, met with special buying support and were lifted up by Rs. 3-12 to Rs. 225. Models were also favoured Re. 1-14 higher at Rs. 135-10. Central Indias, too, put on As. 8 to Rs. 126.

Bank shares failed to evoke support. Imperial Bank Fully Paids were pruned down to the extent of Rs. 35 to Rs. 1,597-8. New shares were poorer by Rs. 7-8 at Rs. 392-8. Barodas changed hands As. 4 lower at Rs. 101-12. Central Banks, United Commercials and Bank of Indias each lost a like amount to Rs. 52-4, Rs. 46-4 and Rs. 148, respectively. Union Banks were a shade easy at Rs. 6-8. Central Banks (new) were quiet at Rs. 53-4. Punjab National Banks, however, proved an exception. Following buying support, induced by higher dividend announcement, the shares of this Bank registered a handsome rise of Rs. 4 to Rs. 41-4.

There was very little activity in the insurance section. Orientals had more sellers than buyers and were hammered down by as much as Rs. 595 to Rs. 689. New Indias were unchanged at Rs. 54-8. Universals received good buying enquiries and improved by As. 10 to Rs. 9-14. Indian Mercantiles rallied As. 4 to Rs. 45.

Electricity shares were very much depressed this week. Tata Powers slipped by Rs. 16-4 to Rs. 1,482-8. Bombay Suburbans were pushed down by Rs. 6-14 to Rs. 126-4 and Andhra Valleys by Rs. 6-4 to Rs. 1,400. Surat Electrics gave way from Rs. 129-6 to Rs. 127-8. Tata Hydros lost As. 8 to Rs. 147-8 and Ahmedabad Electrics by As. 5 to Rs. 113-12.

In sympathy with the generally weak trend, business in the miscellaneous section was greatly subdued and there was all-round decline in prices. Among mining shares, Bombay Burmah old shares receded by Rs. 9-6 to Rs. 453-12 for want of support and B.B. Petrols eased by As. 2 to Rs. 3-12-6. Shivrajpurs failed to evoke the interest of operators, despite good demand for manganese, and shed As. 8 to Rs. 75. Indian Coppers lost As. 2-6 to Rs. 3-6. Deals in engineering shares were also done at lower prices. Alcock Ashdowns moved down by Rs. 9-6 to Rs. 453-12. Premier Constructions fell by Rs. 4 to Rs. 151. Sugar shares were neglected. Belapurs changed hands at Rs. 309-8, as against Rs. 313-8 last week. Walchandnagars lost Re. 1-4 to Rs. 223-12. Phaltans came down by As. 8 to Rs. 113. Scrips of cement companies, too, were weak. Digvijays were down by Rs. 5-4 at Rs. 165. Associated Cements dropped Rs. 3-4 to Rs. 170-12. Shipping shares were dull. Scindia Steams shed As. 2 to Rs. 15-11. Bharat Lines were quiet at Rs. 84 and Great Eastern Shippings at Rs. 17. Among miscellaneous scrips, National Rayons met with selling pressure, following weak advices from the rayon yarn market, and dropped Rs. 3-8 to Rs. 198. Killick Industries receded by Rs. 2-12 to Rs. 176. B.I.Cs. retreated from Rs. 8-14 to Rs. 7-14-6, following rumours that no dividend would be declared this year. Port Cannings weakened by As. 14 to Rs. 17-6. Wimcos declined by As. 10 to Rs. 211-14. India Investment Trusts were done at Rs. 80-8, as against Rs. 81. Tata Chemicals lost As. 3-6 to Rs. 16-12. Tata Oils, on the other hand, were favoured, their quotation moving up by As. 4 to Rs. 41.

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, 9th *February*

Earlier in the week the Calcutta Stock Exchange experienced a sharp reaction which restricted the volume of business. However, on both Saturday and Monday, the market struck a lively note and prices recovered. Various rumours were current about the Taxation Enquiry Commission's recommendations, including the possibility of its seeing the light of day earlier than the budget. There was naturally a keen desire among operators even to postpone ordinary business; but when the publication did not come off by the week-end, the pause was broken and on Monday a larger volume of business was put through. However, at this stage, Bombay demonstrated poor leadership, and, as a result, during the sessions yesterday and today prices declined.

A notable news of the week has been the change of hands of about 44 per cent. of the shares of Jessop & Co. from British to Indian ownership. This was reflected in the shares receding by about three points, although the price in the above deal was stated to be about Rs. 40. The downward trend was by way of the immediate reaction of the market to the prospect of Indian predominance in the affairs of this premier engineering concern. Another weak spot in the market this week was provided by Rallis, which is to close down its Calcutta business as from June next, following heavy loss in trading last year. The losses were due to the intensity of competition and to the cut in export quotas which adversely affected the working of the Company's oil mills. The Directors have, therefore, decided to close down the Calcutta branch, because they state that the country's pattern of trade has changed in such a way that the chances of revival of the Company's former earning capacity are remote.

Good business was recorded in the engineering section; shrewd operators considered the present lower levels touched due to pre-budget caution were a fine opportunity to buy. They expected that, judged from the Congress's economic policy resolution at Avadi, nothing unfavourable to the business community would be revealed in the budget this month-end. As such, the belief was that the budget would be followed by steady rises in the market. Speculative Indian Irons opened at Rs. 33-11 and after moving down to Rs. 33-7 rose to close for the week-end at Rs. 33-13. On Monday, Bombay advices were far from helpful and the rate fell to Rs. 33-6. Yesterday the quotation was further lower at Rs. 32-14, and today it, however, rose fractionally to Rs. 33-1.

For the reason already stated, Jessops recorded several transactions. Opening at Rs. 34-13, the quotation was hammered down to Rs. 34-2. At this stage, bulls appeared and their continued buying pushed the rate to Rs. 34-10. But since Monday, there has been a drop to Rs. 33-6. From Rs. 130 Indian Standard Wagons were done to Rs. 90-8 but subsequently recovered to Rs. 121. Indian Galvanizings were shifted from Rs. 20-15 to Rs. 21-6. Burn & Cos. maintained the higher rate of Rs. 256, Texmacos being lost to Rs. 15-5 from Rs. 16. Kumardhubis were fractionally lower at Rs. 11-5.

Jutes demonstrated weakness. Howrahs came down from Rs. 29-11 to Rs. 29-8. At Rs. 190, Kamarhattis were lower by Rs. 3 while Nationals, after realising Rs. 33-1, receded to Rs. 32-15. Birlas were quiet at Rs. 17-11, as were Agarparas at Rs. 14-8. Ganges were unchanged at Rs. 88, while Champdanys were transacted at Rs. 166-8.

Coals also registered a weakening tendency. Bengals realised Rs. 500 as against Rs. 504 a week ago. Raneegunges lost to Rs. 12 from Rs. 12-3, while Khatras Jherriahs were fractionally better at Rs. 48-2. New Beerbhooms were sought at Rs. 20. Burrakurs gave way to Rs. 12-1 from Rs. 12-5.

Miscellaneous industrials attracted attention at lower levels. Rallis were taken down to Rs. 39 after opening at Rs. 45-12 but subsequently recovered to Rs. 41-4. Niccos were traded between Rs. 21-8 and Rs. 22-2. This company has announced its decision to repay 10,000 cumulative redeemable preference shares at a premium of Rs. 15 a share. British India Corporations were affected by lower dividend prospects and at Rs. 8-4 lost As. 12. Dunlop Rubbers were reduced to Rs. 34-8 from Rs. 34-13, F. & C. Oslers being quiet at Rs. 15-15. Rohtas Industries eased to Rs. 22-10 from Rs. 23-2, and Martin Burns after moving down to Rs. 23-3 returned to the opening level of Rs. 23-8.

A zigzag movement was recorded in India General Navigations, which after opening at Rs. 101 lost to Rs. 99-8, subsequently recovered to Rs. 105 and closed lower at Rs. 102. Titaghur Papers showed strength by moving to Rs. 43-8 from Rs. 41-10. Indian Coppers, after being firm at Rs. 3-9, closed at Rs. 3-5.

Teas continued to reveal their active character. Rajgarhs spurted from Rs. 45-12 to Rs. 55, following interested transactions. At Rs. 36-6, Tezpores improved by Re. 1-10, while East Indians eased to Rs. 32 from Rs 33-14. At Rs. 452, Gungarams were marked lower by Rs. 12, Patrakolas being quiet at Rs. 240. Choonabhuttis were at one time higher at Rs. 500 but closed at Rs. 497. Hantaparas gave way from Rs. 422 to Rs. 400.

• • • •

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, 8th *February*

The moderate enquiry witnessed last week on the Madras Stock Exchange persisted during the earlier part of this week. But, subsequently, it petered out as there was a mild wave of selling pressure in almost all sections. A majority of the scrips, including textiles, therefore, registered a downward trend and disclosed losses over the week. The decline in textiles was presumably due to weaker advices from cloth markets. The Select Committee's recommendations on the Madras Agricultural Income-tax Bill had a softening effect on trading in planting shares. The miscellaneous scrips too were colourless in that the fluctuations were limited to a narrow range. The only encouraging feature of the week was the support lent to a few popular scrips in an otherwise declining market, which helped to prevent any serious fall in prices. The undertone was quiet.

In the textile section, Buckinghams lost Rs. 4 to Rs. 155 and Cambodias Re. 1 to Rs. 12-6. Colmbatore Pioneers eased from Rs. 203 to Rs. 200 and Coimbatore Spinnings from Rs. 72 to Rs. 71-4. Dhanalakshmis disclosed a loss of Rs. 3 at Rs. 300 and Janardanas Rs. 2 at Rs. 78. Krishnarajendras were down by Re. 1 at Rs. 75 and Maduras by As. 14 at Rs. 46-6 *cum-div.* Lakshmis, Rs. 50 paid up, declined by Rs. 3 to Rs. 141 *cum-div.* and 'A' (Rs. 25 paid up) by As. 4 to Rs. 71-12 *cum-div.* Mettups receded by Rs. 2 to Rs. 284 and Rajalakshmis by Rs. 6 to Rs. 132. Ashers, however, gained Rs. 14 to Rs. 119 and Premiers Rs. 9-8 to Rs. 151-8. Rajapalayams and Venkatesas advanced by Re. 1 each to Rs. 75 and Rs. 116, respectively. Cannanores gathered As. 8 to Rs. 131.

Among plantings, teas presented a mixed trend. Coonoor teas rallied Re. 1 to Rs. 31-8 and Udayagiris As. 14 to Rs. 19-14. Coorg Teas put on an anna to Rs. 10 and Emerald Valleys As. 2½ to Rs. 7-12. Haileyburias were better by Re. 1 at Rs. 29-12 and Parksides by As. 4 at Rs. 24-6. Devasholas, however, lost As. 8 to Rs. 27-12 *cum-div.* and Nonsuch Teas As. 12 to Rs. 35-12. Highland Produces receded from Rs. 17-4 to Rs 16-12 and Peermades from Rs. 47 to Rs. 46-4. United Nilgiri Teas suffered Re. 1 to Rs. 297 *cum-div.*

Be Bes, among rubbers, gained As. 2 to Rs. 4 and Nilamburs As. 4 to Rs. 11. Peninsulars advanced from Rs. 15 to Rs. 16-4 and Vellimalais from Rs. 6 to Rs. 6-4. But Cochin Malabars lost an anna and a half to Rs. 7-4, Kailas As. 2 to Rs. 5-4 and Rajgiris As. 7 to Rs. 13-15. Vaikundams eased from Rs. 23-8 to Rs. 23-4.

In the coffee section, Coffee Lands declined from Rs. 16-11 to Rs. 16-6 and Consolidated Coffees from Rs. 17-12 to Rs. 17-6. Puthutotams, however, were fractionally better at Rs. 4-9½. Amalgamated Coffees were quiet at Rs. 5-2 and Kadur Coffees at Re. 1-10½.

Miscellaneous scrips also were wanting in support. Rallis lost Rs. 7 to Rs. 41 and Spencers As. 2 to Rs. 17-2. Mysore Papers were down by As. 4 at Rs. 17-8 and India Cements by As. 6 at Rs. 20-14. Andhra Cements 'B' suffered As. 3 to Rs. 13-3. Mysore Chemicals and Manufacturings, however, put on As. 2 to Rs. 16-8 and Mysore Golds As. 3 to Rs. 3-9. Travancore Cements were better by an anna at Rs. 7-10.

BANK OF AMERICA

The Bank of America, San Francisco, California, a world-wide banking organisation, has extended its activities to India by establishing a Representative Office in New Delhi. Started 50 years ago in California by Mr. A. P. Giannini, a man of vision, courage and foresight, the Bank has grown so widely that today it has 543 branches in the State of California alone. In the international banking field, it provides every type of banking service through its branches, representatives and correspondents located in more than 300 cities all over the globe.

The office of the Bank's representative in New Delhi is in charge of Mr. M. R. Ahuja, a retired diplomat who acted for the Government of India in various capacities abroad. Mr. Ahuja has to his credit wide knowledge of trade and commerce in foreign countries and is expected to be of considerable assistance to Indian business men and industrialists wishing to do business outside India, especially with the United States.

NEWS IN BRIEF

DURING 1953-54, 17,980 cwts. of *vanaspati* valued at Rs. 21,10,000 were exported from India.

India's annual requirement of paints and varnishes amounts to 33,000 tons, all of which is met from indigenous production.

The average *per capita* consumption of fish in India is only 3.98 lbs., as compared with 83.3 lbs. in Japan, 70 lbs. in Burma and 16 lbs. in Ceylon.

The Government of India has decided to set up a new oil and natural gas division to expedite the oil survey and prospecting work in the country.

The Government of India has decided to release a quota of 5,000 tons of salad oil for export outside India by manufacturers of salad oil.

The Committee set up by the Government of India in October last to investigate the possibility of increasing tea auction in India has submitted its report to the Government.

The Government of India, as a result of a further review, has decided to license export of cane *jaggery* and cane *jaggery* powder (*gur*) freely on shipping bills for shipment upto the end of March, 1955.

The Union Government has decided to release further quota of *kardi* and *niger* seed for export. Licensing will be done on shipping bills from the ports of Bombay, Calcutta and Madras within a ceiling, subject to a maximum allotment of 500 tons to any one shipper from all the ports and on production of evidence of having booked shipping space.

669 public utility power stations in India generated during October, 1954 electricity aggregating 624.3 million kw.h., of which 511.6 million kw.h. were sold to ultimate consumers. As compared to September, the electricity output decreased by 21 million kw.h. The corresponding figures of output and sale for October, 1953, were 572.0 million kw.h. and 468.7 million kw.h. and for October, 1939, 216.4 million kw.h. and 180 million kw.h., respectively.

The Government of India has decided to allow further export of a limited quantity of pulses from the ports of Bombay, Calcutta, Madras, Rajkot and Cochin. Export will be allowed by internal dealers in pulses who had a minimum turn-over of over Rs. 50,000 in any of the three years 1951, 1952 and 1953, subject to a maximum allotment of 50 tons to any one shipper from Bombay, Calcutta and Madras and 25 tons from Jamnagar, Cochin, Tuticorin and Visakhapatnam.

The Punjab State Government's draft plan for industrialisation of the State, involving an overall expenditure of Rs. 40 crores during the second Five-year Plan period, was approved by the State industrialists at a two-day conference held last week. The various schemes, which include the setting up of a number of heavy industries, will be further scrutinised by the State planning experts before being forwarded to the Planning Commission for approval.

The first newsprint factory of India, the NEPA Mills at Chandni, Madhya Pradesh, has made trial production of newsprint with imported chemical pulp. The management proposes to send to important newspaper concerns sample rolls, enough for one day's consumption, with a view to getting their opinion on the quality of the production. The mill, when it goes into full production—100 tons of newsprint daily—will be able to meet about one-third of India's present annual consumption of newsprint.

The Reserve Bank of India has decided to treat the debentures of land mortgage banks, where these have been guaranteed by State Governments, as on a par with Government securities for the specific purpose of grant of accommodation under section 17(4) (*a*) of the Act which governs the Bank. This decision, which should help to improve the marketability of such debentures and, therefore, strengthen co-operative long-term credit for agriculture, has been taken in pursuance of one of the recommendations contained in the Report on the All-India Rural Credit Survey.

The General Manager of the B.E.S.T. Undertaking has sought the approval of the B.E.S.T. Committee, to apply the recent decision of the Labour Appellate Tribunal in respect of textile workers, increasing the dearness allowance by 10 per cent. with retrospective effect from May, 1953, to the employees of the B.E.S.T. Undertaking. The Undertaking follows the Millowners' scale of dearness allowance, which is based on the working class cost of living index number from month to month, in respect of employees drawing a basic salary/wages of less than Rs. 200 per month. This move on the part of the Undertaking will involve an additional cost of Rs. 22 lakhs to give retrospective effect and a further expenditure of Rs. 1 lakh per month hereafter.

Chittaranjan Locomotive Works, which had been manufacturing eight W.G. type broad-gauge goods locomotives every month since May, 1954, stepped up the production to ten locomotives last month. The W.G. is one of the heaviest types of locomotives in use on the Indian Railways—ten of these equating to 12.5 average size locomotives. The increased rate of production established at Chittaranjan is thus equivalent to the manufacture of 150 average size locomotives per year, as against 120 which was initially set as the target. Arrangements are well in hand for increasing the equipment and capacity which will enable Chittaranjan to reach in the near future the annual target of 200 locomotives and 100 boilers, as recently laid down by the Government of India.

The output of coal in collieries in India reached the peak figure of 3,503,459 tons in December, 1954, according to statistics released by the Chief Inspector of Mines. The output in the previous month was 3,321,715 tons. Despatches of coal amounted to 2,746,588 tons in December, 1954, as against 2,728,291 tons in the preceding month. Coal stocks at pitheads rose from 3,161,153 tons to 3,467,898 tons. Coke plants at collieries and elsewhere produced 369,320 tons of hard, soft and other kinds of coke during the month and despatched 169,049 tons. The number of workers employed on an average in 830 collieries, working during the period, was 349,271. The output per man-shift was estimated to be about 1.09 tons for miners and loaders, 0.60 ton for all workers underground and in open-workings, and 0.38 tons for all persons employed including surface workers. The percentage of absenteeism was 12.38.

• • • •

From Abroad

Lancashire textile mills produced 2,774.6 million yards of cotton and rayon cloth in 1954, as against 2,632.2 million yards in 1953.

The Indonesian Government has reintroduced an extra levy of 10 per cent. on rubber exports, which was withdrawn last year. This extra levy will be effective as from 1st March next.

The British rayon industry's production reached a record level of 447.7 million lbs. in 1954. This represented an increase of 6 per cent. over that of 419.3 million lbs. in 1953.

The daily output of steel in Germany during January amounted to 62,561 tons, the highest on record, even exceeding the peak touched shortly before the war.

A synthetic rubber plant will shortly be built near Ravenna in Italy at a cost of about $75 million. The plant will use natural gas from the Po Valley. The plant will be finished in two years and will supply butadiene for the production of 30,000 tons of synthetic rubber. It will also make about 350,000 tons of nitrogen fertilisers per annum.

Production of paper and pulp in Norway during 1954 established new records. Paper, with subsidiary items, amounted to about 570,000 tons, 11.5 per cent. more than in the previous best year, 1951. Mechanical pulp output at 643,000 tons and chemical pulp at 590,000 tons were also the biggest production figures ever recorded in Norway.

The target of 900,000 tons of rice earmarked for shipment to India, under the rice agreement between Burma and India, is nearing completion and the agreement will be fulfilled by the end of March. The State Agricultural Marketing Board of Burma will be opening a branch office in Hong Kong shortly to handle consignments of rice directly with that port.

Four U.S. concerns propose to invest $5.5 million in Japan mainly in chemical and glass industries, the first investment to be made through the Foreign Operations Administration's Guarantee Investment Programme to stimulate the flow of dollars to Japanese industries. Under this programme, these four companies will be insured against nationalisation and any liability to convert their income into dollars.

The South African Government has formally ended its guarantee to sell a minimum of £50 million sterling worth of gold per year to Britain. The agreement was made in 1949 when there was exceptional pressure on sterling. There is no need for continuing the agreement any longer, as Britain is again in a position to buy the major portion of South Africa's gold output in open competition with the rest of the world.

Australia has arranged to raise a second public loan in Switzerland of 60 million Swiss francs (£A6 million). The loan will be for 15 years, with the option of repayment after 10 years. The issue price will be 99½ per cent. and the rate of interest will be 3½ per cent. The proceeds of the loan will be used for public works. The last occasion when Australia borrowed a similar amount in Switzerland was in November, 1953.

Sales of British bicycles abroad are estimated to have reached 2,100,000 machines in 1954, as compared with the export of 2,019,685 machines in 1953, according to the British Cycle and Motorcycle Manufacturers Union. Sales of motor cycles were a near-record at about 76,000 machines. The total amount paid by overseas customers for British bicycles and motor cycles in 1954 is estimated at £3.63 million. Total production of the industry is calculated at 3,150,000 bicycles (compared with 2,996,000 in 1953) and 190,000 motor cycles (152,935 in 1953).

PERSONAL

MR. B. K. Kapur, Political Officer in Sikkim, has been appointed Charge d'Affaires at The Hague.

The Earl of Inchcape, Senior Director, Messrs. Mackinnon Mackenzie and Co., Ltd., arrived in Bombay last week-end on a month's business tour of India.

Mr. Ivar Rooth, Managing Director, International Monetary Fund, will arrive at New Delhi on the 15th inst. During his ten days' stay in India, he will visit Nangal Project, Agra and other places including Bombay.

Mr. O. G. Stoner of the Ministry of External Affairs and Mr. R. Cavel of the Department of Commerce and Industry, Canada, have arrived in India to confer with Indian officials on new projects under the Colombo Plan.

Mr. Arthur S. Kleeman, President, Colonial Trust Company, New York, arrived in Bombay this week in the course of a month-long business tour of India. He has already visited Madras and Calcutta.

Mr. P. V. S. Sarma, formerly Under-Secretary in the Union Ministry of Commerce and Industry, has been appointed Chairman of the Coir Board, in the vacancy caused by the death of Mr. M. C. Thomas.

Mr. T. S. Parasuraman, Deputy Secretary, Union Ministry of Transport, left for New York last week to attend a session of the Transport and Communication Commission of the U.N. Economic and Social Council.

Mr. Peter Richard Heydon has been appointed High Commissioner for Australia in India, in succession to Mr. W. R. Crocker, who will become the head of the Australian diplomatic mission in Indonesia.

Mr. U. K. Ghoshal, Chairman of the Indian Tea Board and Chairman of the Tea Auction Committee appointed by the Government of India to examine steps for increasing tea auctions in India, has returned from the U.K. after completing enquiries there.

Mr. Neville N. Wadia, Chairman, Bombay Dyeing and Manufacturing Co., Ltd., has been elected Chairman of the Millowners' Association, Bombay, in the vacancy caused by the resignation of Mr. Vithal N. Chandavarkar. Mr. Wadia will hold this office till the ensuing Annual General Meeting of the Association in April, 1955. Thereafter, Mr. G. D. Somani, M.P., who had earlier been elected Chairman for the year 1955-56, will take over.

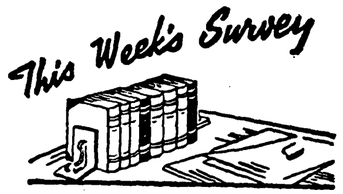
"COMMERCE" 1930

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 8th *February*

Silver's New Low Record

The tribulations of the silver market have not yet terminated for the price of the metal fell at the end of last week to a still lower level—it fell by three-eighths of a penny to 1s. 8d. per ounce, the lowest price on record. The recovery, which had previously taken place since the birth of the new year, had been largely due to a little Indian buying; but, as the Indian demand is now limited, the London market has relied upon China as the chief consumer, and it has been generally anticipated that the imports into that country during 1929 would prove to have been maintained at a high level. At the same time, this continued large demand is regarded as having been only the direct outcome of the low prices prevailing and the present tendency would seem to indicate that even in China saturation point may be coming within reach. The present weakness of the silver market constitutes another bond of sympathy between Mexico and China. The "Mexican dollar," with its large silver content, has been a popular currency in the Far East for a long time past. Now Mexico is perturbed on account of the effect of the price drop on its important silver-mining industry. This threatens to become unremunerative, which would lead to a considerable number of men being thrown out of employment. China sees a large part of its wealth, held in the form of silver, diminishing rapidly in value, with dire results to its exchange and, therefore, to its foreign commercial transactions. This arises from the fact that, in China, payments are very largely made by weight of silver, not by count of coin. The tael, in reference to which the Shanghai exchange rate is quoted, is itself really a native weight, and its value thus varies almost directly with the price of silver. Even in the early days of the war it went no lower than 2s. 1½d., but is now below 1s. 11-15/16d. and the "flight" from various Continental currencies, with which we were familiar a few years ago, seems now to be paralleled by a flight from silver on the part of some of the Chinese speculators in Shanghai. The continued severe decline in price has caused, indeed, a serious situation on the Shanghai Exchange.



OUTLOOK FOR CLOTH EXPORTS

EXPORTS of cotton textiles figured prominently in the address of Mr. Chinoobhai C. Javeri, President of the All-India Exporters' Association, at the twelfth annual meeting of the Association held at Bombay on Thursday last. This is not surprising, considering the recent growth of severe competition in the world cotton textile markets. It is true that shipments of cloth from India during the calendar year 1954 were substantially higher than in 1953, a detailed reference to which is made on page 256 of this issue. But, from this, one should not rush to the conclusion that the outlook for cloth exports is quite bright. On the contrary, it is none too happy. That there is no exaggeration whatever in this statement will be clearly evident from the lucid and interesting observations of Mr. Javeri. He said:

"India has already lost some of her traditional markets and is in danger of losing others in future. Since the textile industry here has not been able to discard the worn-out and outmoded equipment and keep pace with modernisation of textile industry in other major exporting countries, Indian cotton textiles will have to face severe competition as regards quality and price offered by such countries. Of late, demand from abroad has not been quite satisfactory and the problem of selling Indian cloth in world markets against increasing international competition is a great challenge to India.... Japan is making a fresh bid for recapturing former markets. Japan has practically recaptured her markets in Sudan, Burma and Indonesia. Exports of Indian cloth to Indonesia are greatly handicapped on account of complicated exchange restrictions and special regulations regarding the issue of import licences, and India has been able to export only 29.85 million yards to Indonesia upto 30th November, 1954, as against 259.61 million yards exported by Japan. Our exports to Iran account for 9.28 million yards during the first eleven months, as against 36.43 million yards from Japan exported during the first ten months only."

Mr. Javeri did well to draw the attention of Indian cotton textile exporters to three distinctive trends in world textile trade. First, there has been an increase in the world cloth output with more countries, such as Russia and even China, entering the field of export. Pakistan may not only cease to be India's potential buyer but also turn out to be an effective competitor. Secondly, there is growth of domestic industry under protective tariffs in several countries, as, for example, Egypt, Iran and Iraq. Sudan, a cotton-growing country, is also reported to be seriously considering schemes for setting up cotton textile mills inviting foreign money and technical aid. Thus, the countries which either grow cotton or are near cotton-growing areas are anxious to build up textile industry of their own. Thirdly, several countries are placing import barriers, necessitated by balance of payments and other considerations.

The aforesaid brief account of the recent trends in the world textile economy, as reviewed by Mr. Javeri, will clearly emphasise the utmost need for hard work and concentrated attention on the part of Indian cotton textile interests. A pertinent suggestion which Mr. Javeri put forward related to determined efforts to develop the export trade in those varieties of cloth in which India can effectively compete in foreign countries—the varieties which are manufactured from Indian cotton owing to its price advantage. Since quality and price are the two factors which regulate and promote the country's exports, he stressed that the quality of cotton textiles should be such as is approved by overseas buyers and the price should be competitive. Mr. Javeri rightly emphasised that these objects could be achieved partly by rationalising the industry and partly by supplying goods according to the sample and by delivering the same within the scheduled period contracted for. To quote him: "The major item that determines the price is the cost of production and there is no royal way to bring it down, save by increasing efficiency of men, machines and management and by rationalising wages and profits."

Incidentally, Mr. Javeri chose for special comment the issue relating to the formulation of a uniform standard contract form for export, which he considered was indispensable for promoting exports of cloth according to sample and within the stipulated time. Alluding, in particular, to the existing contract of the Millowners' Association, Bombay, he revealed that, in actual practice, many complaints had been received from buyers abroad which, he felt, could not be met and solved satisfactorily on the basis of that contract. In his opinion, it could not be gainsaid that the principles of equity and fair-play were not observed by sellers and buyers had often to suffer. Mr. Javeri, therefore, thought it imperative to evolve a uniform standard contract for export in collaboration with the different Millowners' Associations of the major cloth producing centres and the representatives of the Exporters' Organisations. This suggestion seems to have found favour with the Union Government. In response to a communication received from the Textile Commissioner, the All-India Exporters' Association, we are told, has prepared a draft contract for export on the basis of the Bombay Millowners' contract of 1953 by amending the latter in the light of the experience gained in its working. Mr. Javeri hoped that the Textile Commissioner would help evolve a uniform contract for export on an equitable basis acceptable to all the interests concerned.

PRINTING INDUSTRY

In this country, where five out of every six persons are illiterate, it is hardly surprising that the printing industry should languish for want of a clientele. If it is assumed that only a person with a middle school education is a potential buyer of books, there are not many who possess even this knowledge; only one in every forty persons, according to the results of the last (1951) census, has received that education. Depressing as these facts are, they serve at the same time to show what spread of literacy will mean to the fortunes of this primarily basic industry. Surely, there is wide scope for the development of the printing industry, as well as for the other allied industries and trades, namely, the paper and ink industries, the publishing trade and the book shop.

It is, however, small comfort to the industry to be told that it has—or that it deserves to have—a bright future. What causes the industry concern is that it has many pressing problems. Some of these figured prominently in the address of Mr. Kasturi Srinivasan, who presided over the All-India Printers' Conference, held recently at Madras. He pointed out how the way in which the import control on paper, the main "raw material" for the industry, had been worked, was not "as happy as one would wish." Only a part of the total consumption of 30,000 tons of paper is now met by the domestic industry, the rest having to be imported from abroad. He also deplored the "varied interpretations" of the customs tariff, which caused considerable harassment to the importers. "It is high time," he said, "the Government scrapped the present Tariff Classifications and drew up an entirely new one to meet present-day needs, on a rational basis."

Despite its many handicaps, the Indian printing industry does turn out some work which can stand comparison with the best in the world. Some units, notably those in which the *Times of India*, the *Hindu* and the *Statesman* are printed, and some others, among which the Caxton Press, in which this journal is printed, deserves mention, do show remarkable craftsmanship. Nevertheless, much shoddy work, euphemistically called "printing," continues to be done in this country. Such work is as remote from printing as the Neanderthal man from his civilised descendant. It is seldom realised that a good piece of printing, like a thing of beauty, is a joy for ever. But the fault in all cases of bad printing is not always the printer's. He has often to work with second-rate tools. Although it is true that he is a bad workman who quarrels with his tools, it is also true that even the best workman can produce only second-rate results if he has to work with bad tools. As Mr. Srinivasan said: "Tropical weather conditions obtaining in India do not help produce good results. Added to that, poor quality of paper, cheap grade inks and ricketty presses are some of the contributory causes of bad printing."

It must not, however, be forgotten that, in the final analysis, it is not the machine but the printer that matters. Many Indian workers do succeed in acquiring a very high degree of skill. It is the more remarkable, because some of them, as Mr. Srinivasan said, have "barely a knowledge of the alphabet." Nevertheless, systematic training in well-equipped institutions will ensure a steady supply of skilled workers for the industry. Mr. Srinivasan welcomed, in this connection, the Central Government's decision to establish regional centres to impart instruction and to give training in printing technology. He suggested that master craftsmen from foreign countries should be employed to train a "band of energetic and enthusiastic young men here, who, in their turn, could pass on the tradition to others." He also pleaded for the establishment of courses of training, on a higher level, such as will cover management training, machine maintenance, press work, book planning, designs, printers' accounts and estimating. In commending these suggestions to the Government's attention, we wish to emphasise that, in organising courses in printing technology, the Government should lay special stress on practical training for the prospective printers. Sound printing traditions, it is wise to recognise, are not built overnight. Intensive training and facilities for continuous research form the basis on which such traditions can be built up and maintained.

RETRENCHMENT OF WORKMEN

Have the Labour Appellate Tribunal, under section 22 of the Industrial Disputes (Appellate Tribunal Act, 1950, and the adjudicating authorities under section 33 of the Industrial Disputes Act, 1947, powers to impose conditions when they permit retrenchment of workmen? The Supreme Court held that they did not possess such powers. The case arose out of two appeals, one by the Automobile Products of India, Ltd., Bombay Branch, and the other by its workers against the decision of the Labour Appellate Tribunal, which permitted retrenchment of the workers subject to certain conditions only. The Company objected to the stipulation of any conditions. As these conditions only partially met their demands, the workmen appealed to the Supreme Court to enforce all their demands.

A brief review of the facts of the case discloses that, being unable to secure import licences for cars in knocked down condition to be assembled in India for sale, following the removal of the Company from the list of manufacturers by the Government of India, the Company was unable to provide employment for all its workers. Consequently, it laid-off a number of workers from November, 1953. Further, as there were no prospects of any increase in the scope of its operations, which would provide employment for workers who had been laid-off, it made an application to the Labour Appellate Tribunal under section 22 of the Industrial Disputes (Appellate Tribunal) Act for permission to retrench the workers, as there was already an appeal pending before the Tribunal arising out of a dispute between the Company and its workmen.

Section 22 of the Industrial Disputes (Appellate Tribunal) Act forbids employers from altering during the pendency of an appeal the workers' service conditions, to their prejudice or from discharging or punishing them without the permission of the Appellate Tribunal. Section 33 of the Industrial Disputes Act requires such permission to be obtained from the Conciliation Officer, Board or Tribunal before whom the adjudication is pending.

While admitting that retrenchment was inevitable and the application for it was *bona fide* and could not be refused, the Tribunal granted permission to retrench the workers subject to certain conditions. The conditions were that each worker should be paid at the rate of half the basic wages plus dearness allowance from the date of lay-off upto the date of retrenchment. Against this decision, both the Company and the workers went in appeal to the Supreme Court by reason of the special leave granted under Article 136 of the Constitution.

Delivering the judgment of the Supreme Court, Mr. Justice Das said that the object of section 22 of the 1950 Act and that of section 33 of the 1947 Act, as amended, was to protect the workmen concerned in disputes which formed the subject matter of pending proceedings against victimisation by the employers on account of their having raised industrial disputes or their continuing the pending proceedings. It was further the object of the two sections to ensure that proceedings in connection with industrial disputes already pending should be brought to a termination in a peaceful atmosphere and that no employer should, during the pendency of those proceedings, take any action of the kind mentioned in the sections which might give rise to fresh disputes likely to further exacerbate the already strained relations between the employer and the workmen.

In order to achieve this object, His Lordship said that a ban had been imposed upon the ordinary right which the employer had under the ordinary law governing a contract of employment. Section 22 of the 1950 Act and section 33 of the 1947 Act, which imposed the ban, also provided for the removal of that ban by granting express permission in writing in appropriate cases by the authority mentioned therein. The purpose of these two sections being to determine whether the ban should be removed or not, all that was required of the authority exercising jurisdiction under these sections was to accord or withhold permission. His Lordship was, therefore, of the view that the imposition of conditions was only collateral to this purpose and the authority could not impose any condition. Consequently, he allowed the appeal of the Company, set aside the decision of the Tribunal and remanded the case back to the Tribunal for appropriate orders according to law.

It would appear from this judgment that the Appellate Tribunal has no powers to prescribe the quantum of compensation under section 22 of the 1950 Act. Nor has the Adjudicating Authority such powers under section 33 of the 1947 Act. All that they have to decide is whether retrenchment is permissible or not and, if permissible, they should direct it to be done according to law. The question of detemination of the quantum of compensation can be referred to the Appellate Tribunal or the adjudicating authority only if it results in an industrial dispute. But, if there is only a difference in interpretation of the relevant provisions of the law, it is the Presidency Magistrates' Court that has to decide the case.

SMALL INDUSTRIES

The two-pronged drive to rehabilitate small-scale industries launched by the Government of India deserves to be watched with interest. Owing to long neglect, small-scale industries are having precarious existence. Lack of capital, outmoded processing, antiquated tools, uneconomic marketing methods have handicapped progress of small-scale industries. Consequently they have not been able to play a role that is expected of them in building up the national economy. In view of their immense potentialities to provide employment to the people, the Government invited a team of international experts to examine the position of these industries and recommend suitable measures for their uplift. The team made several recommendations, one of the most important of them being the establishment of a Small Industries Corporation and the setting up of four regional institutes. The latter, which form one prong of the drive to help small industries, have already been established. The other prong, namely, the Small Industries Corporation, has just been registered as a private limited company under the Indian Companies Act.

The function of the Small Industries Corporation is a dual one. On the one hand, it will accept contracts for supplying goods to the Government and then issue sub-contracts for these goods to small-scale industrial units. It will provide these units with loans, technical assistance, etc., so that the articles turned out by them are of the required standards. On the other, the Corporation will try to secure co-ordination in a similar way between large-scale and small-scale industries, so as to enable the small industries to manufacture ancillaries, components and other articles required by large units.

The Corporation will have an authorised capital of Rs. 10 lakhs which will be subscribed entirely by the Government of India. It is empowered to underwrite and guarantee loans to such units from banks and similar institutions.

The four regional institutes already established will soon start functioning and recommend improvements in the technique, organisation of production and marketing of small-scale industries.

They are expected to serve as servicing agencies to improve the competitive capacity of the existing small industries. They will help the industries in getting the right kind of raw materials and give them correct specifications for production.

The immediate aim of the two-pronged drive is to revive defunct or derelict industries and put them on their feet. Such of the industries the managements of which are unable to raise them would be bought over by the Government and handed over to co-operatives, the membership of which will be confined to only those working in that particular industry. Thus an attempt will be made to encourage industrial co-operatives also.

It is evident from the above that the scheme has been very well conceived. But its success depends on the personnel that man the Corporation as well as the Institutes. If the personnel is enthusiastic, energetic and eager to help the small man and is fully equipped with the requisite technical know-how, the scheme is bound to succeed.

IMPORT OF SODA ASH, RAW SILK AND CAUSTIC SODA

The decisions of the Government of India in regard to the import of caustic soda, soda ash and raw silk during January-June 1955 have now been announced. The Government has decided to continue to give a small quota of 7½ per cent. of caustic soda to established importers. Licences will also be issued to actual users of caustic soda to meet half of their requirements. In respect of sodium bicarbonate, a quota of 10 per cent. for established importers has already been announced. In addition, a certain quantity of caustic soda and sodium bicarbonate has been reserved for being licensed on an *ad hoc* basis. As regards light soda ash, the Government has decided that imports should be canalised through importer-stockists, who will be required to keep buffer stocks and effect sales in a manner, so as to eliminate fluctuations in prices and supplies experienced by consumers in the recent past.

The Tata Oil Mills Co., Ltd., and I.C.I. (India) Ltd. have been selected as selling organisations for this purpose. These two selling organisations have agreed to procure soda ash from suppliers selected by the Government on the basis of offers which are being invited by means of a public notice. The soda ash so imported will be stocked at convenient centres and sold in accordance with the general directions that may be issued by the Government from time to time. The sale price will be fixed by the Government on *f.o.r.* port basis and the importer-stockists will be paid remuneration for their services at the rate of 12½ per cent. of the landed cost, additional profits if any on the transaction being made over to the Government. In regard to raw silk, the Government has decided to canalise imports through the Central Silk Board.

An objectionable feature of the Government's decisions relates to the monopoly granted to the Tata Oil Mills and I.C.I. (India) for importing light soda ash. This monopoly has presumably been granted because these two firms are the best selling organisations. But this consideration, the traders contend, is no justification for restricting the scope of private imports of the product. Perhaps, the Government feels that the smaller importers were responsible for the fluctuations in the price of soda ash which occurred in the recent past. But this is a questionable assumption. For, it is pointed out that the fluctuations were mainly due to the changes in import policy followed by the Government, sometimes in favour of importers and at others in favour of manufacturers. It may be that the Government's decision has been taken following the manufacturers' demand to arrest the present downward trend in the price of light soda ash. But the traders and consumers insist that the manufacturers of soda ash, on their part, should realise that the consumer has paid in the last three years about Rs. 22-12 per cwt., the importers' price, as against Rs. 16-12 which was fixed by the Tariff Commission after providing for a profit of 10 per cent. Consequently, they feel that the manufacturers should not feel aggrieved if the price has declined to Rs. 19 per cwt. from Rs. 35 per cwt., the high level, which was reached in April-May last year following the stoppage of production and shortage of wagons for transport of soda ash. Besides, it is alleged that I.C.I. has charged during the past three years £5 more than the normal imported price of £15 per ton *c.i.f.* Indian ports. It has now agreed to import soda ash at £15, as competition from Japan and from East German sources has forced it to quote that price. As the imported price is 15s. per cwt. *c.i.f.* (Rs. 10) Indian ports, the selling price of soda ash will come to about Rs. 18-14, inclusive of import duty, clearing charges and 12½ per cent. profit. This is about the level at which the price for light soda ash has now stabilised. Thus, it is felt that there is no need for giving any monopoly preference to one or two interests. In fact, after the announcement of monopoly trading, the price has shot up to Rs. 21 per cwt.

Almost similar objections have been raised against the grant of monopoly to the Central Silk Board for import of raw silk. While this may be welcome by raw silk producers, as the Central Silk Board consists of a majority of producers, the manufacturers of silk yarn have questioned this policy. They admit that recently there has been serious speculation in the raw silk market which has precipitated the downtrend in raw silk prices. But they ask: Does the remedy lie in canalising imports through a single body? They feel that it does not and that the Government is extremely ill-advised in embarking upon a business in which it has no previous experience. Also, they are opposed to the principle of monopoly trading, whether by the State or a quasi-official body.

THE BOMBAY STATE CO-OPERATIVE BANK LIMITED

ESTABLISHED IN 1911.

HEAD OFFICE:

9, BAKE HOUSE LANE, FORT, BOMBAY—1.

Telegrams: FARMERBANK Telephone: 38381, 38382

Post Box No. 472

Money deposited with this Bank helps the Indian Agriculturists and Co-operatives.

PAID-UP SHARE CAPITAL:

Subscribed by the Shareholders	Rs. 34,06,750	Rs.
Subscribed by Government of Bombay ..	26,00,000	
		60,06,750

PRIVATE ENTERPRISE IN U.S.

It is seldom that an Indian with the intellectual background and technical equipment of the kind that Mr. Narayana Prasad possesses gets an opportunity to stay long enough in the U.S. and study closely the working of the economic institutions in that country. As the Indian Executive on the International Monetary Fund, Mr. Prasad has had that opportunity. Speaking at the Rotary Club this week, Mr. Prasad gave his impressions of the working of private enterprise in that leading industrial nation, the economy of which is based upon private initiative and responsibility. He commended the techniques and methods of U.S. private enterprise as being of a very high order. He expressed his considered opinion that private enterprise in India, which was under a cloud of suspicion, could acquit itself creditably, if it were to adopt the techniques and methods of private enterprise in the U.S., which had contributed immensely to the present economic strength of that country. Judged by the maxim of the "greatest good of the greatest number," that achievement of U.S. private enterprise, he claimed, was significant. He added: "Private enterprise has come to enjoy widespread popularity as an institution, which functioned efficiently both as an economic machine and as an instrument providing for the welfare of the people." What is the cause for the efficient and creditable functioning of private enterprise in the U.S.? Answering this poser, Mr. Prasad remarked that this was chiefly due to protection granted by the Government to new enterprises, particularly in their early stages. Rigid Government regulations relating to the quality of products, such as foodstuffs, for instance, were also a contributory factor.

Mr. Prasad disclosed that the production and distribution sides of private enterprise in the U.S. would give one an impression of two monopolistic organisations competing with each other to provide the utmost to the consumer. There was, he said, a constant endeavour to produce more goods of a better quality at a cheaper price and, at the same time, to encourage larger consumption. The industrialists, insurance and banking organisations as well as distributors, had embarked on a bold programme of extending credit to consumers and had evolved a system of deferred payment to the great benefit of the consumer.

The one aspect which struck him most was the cordial relations which existed between employers and employees. He said that labour appeared by and large to be treated on the enlightened principle of "giving as much as possible to the worker and taking advantage of the resultant higher efficiency and turn-out." In this context, it is hardly surprising that Mr. Prasad found that, in the U.S., the workers did not suffer from the kind of inferiority complex which was a source of much misunderstanding between employers and labour in other countries.

MODERNISATION OF COTTON MILLS

ONE MORE ENQUIRY COMMITTEE APPOINTED

From A Special Correspondent

NEW DELHI, *8th February*

DELHI LETTER

AN important step taken by Mr. T. T. Krishnamachari, the Union Minister for Commerce and Industry, towards the stabilisation and improvement of the country's premier industry, is the setting up of a survey party, with powers to collect data on the condition of machinery and equipment in cotton textile mills and also on their financial position, with a view to assessing their requirements for renovation where necessary. Two teams, consisting of both technical and economic personnel, have been sanctioned by the Government for this purpose. They are expected to start work immediately and will work under the direction of the Textile Commissioner of Bombay.

The establishment of this body appears to have been the outcome of indecision, conflicting views and divided counsel on the part of the Government as to the line of action it should take in regard to rationalisation and rehabilitation of the textile industry. This question has been pending with the Government for the last five years and more. As early as in November, 1949, Government appointed the Working Party under the chairmanship of Dr. A. Ramaswami Mudaliar. The Party submitted its report in April, 1952. This Report was kept pending as the Government appointed another committee under the chairmanship of Mr. Nityananda Kanungo, now Deputy Minister for Commerce and Industry to go into the problems confronting different sectors of the textile industry and to recommend a co-ordinated action for their rehabilitation. The Kanungo Committee submitted its report in September 1954, in which it devoted great attention to the modernisation of the handloom industry. No doubt it advocated the conversion of present looms in the mills into automatic looms at the rate of 5,000 per annum, but desired the non-extension of the weaving section of the mills. It proposed that the weaving section of the industry should be decentralised as much as possible. It also wanted the establishment of about 85 spinning mills in order to supply more yarn to the handloom industry.

The Commerce and Industry Ministry could not apparently take any decisive action on these two reports, due to the unhelpful attitude displayed, from time to time, by the spokesmen of labour. Although Mr. T. T. Krishnamachari got a resolution passed by Parliament on the rationalisation of the textile industry, he could not pursue it further owing to the very critical attitude taken by the doctrinaire section of the Congress Party. Meanwhile, the apparent prosperity of the cotton textile industry, as evidenced by high production and increased exports during the last two years and more, would appear to have diverted the attention of Government away from the ticklish question of the rehabilitation of the mill industry. The doctrinaire section of the Congress Party which has all along been displaying keen interest in protecting and safeguarding the interests of labour, appears to have overlooked the fact that the present prosperity of the textile industry, as also that during the war period, has largely been the result of control over raw cotton prices far below those of world levels.

Be that as it may, the Working Party for the Cotton Textile Industry has already investigated into the conditions of textile machinery in representative mills and suggested various measures towards the renovation of outworn machinery. Although it is nearly three years since this Committee made its recommendations, the progress of rehabilitation of the cotton textile machinery has not been impressive. Imports of cotton textile machinery during the last three or four years have averaged about Rs. 7.5 crores per annum, out of which spinning machinery has accounted for between 40 and 50 per cent. of the total. It will be remembered that the Millowners' Association of Bombay, in a memorandum submitted to the Working Party, stated that the requirements of the mills in Bombay City and Island alone for the renovation of the textile industry would amount to Rs. 80 crores and that the funds available in reserves and other funds would come approximately to Rs. 30 crores. The position has not changed much since then. Since the Bombay City area is responsible for about one-third of cloth production in the country and as the machinery of this industry in other areas is relatively of later type, it can be safely estimated that the cotton textile industry would require, even on a modest estimate, between Rs. 150 and Rs. 200 crores for purposes of modernisation in the coming years. At least half of this above sum will have to be incurred during the next Plan period. This sum does not include the cost of spinning mills which have to be set up during the next few years, in order to support the handloom industry.

Meanwhile, new developments have been taking place in the country's cotton economy. In the next few years, better staple cotton will be grown in considerable quantity in the Punjab and northern parts of Rajasthan, as also in a number of places in Bombay, Gujarat, Andhra, Madras, etc. Electricity will also be available in these areas in abundance. In the new set-up, many of the backward parts of the country will doubtless clamour for the establishment of new cotton mills.

In these circumstances, the Commerce and Industry Ministry and the Planning Commission will have to study the problems of the industry from different angles and evolve a suitable production policy for the mills in such a way as to reduce the intensity of competition among themselves. For instance, mills established in Bombay and very near coastal areas may be asked to concentrate their attention on the production of good quality cloth and such other varieties which are in demand in the leading export markets. Interior mills may be asked to produce such popular types of cloth as could easily be marketed in local areas. Such a system will also economise the transport needs of the country.

The Working Party in their report recommended that "a dozen textile centres distributed evenly over the country would serve the best interests of the industry and maintain the industry at a highly competitive level in the world market." It further stated that the centres should cover sufficiently large areas to provide country surroundings to the factory and houses to the workers. It did not desire the establishment of stray mills in many parts and suggested that a few mills at least should be located in particular areas. In this context, it remarked:

"If we consider the case of any country, it could be noted that industrial towns have developed only because of the centralisation of the industry. Even cottage industries are centralised in certain districts, towns and villages and not spread over the whole country. The handloom industry in the South produce cotton, silk, art silk and gold thread fabrics of exquisite colour, patterns, designs and textures. This is the result of centralisation and not isolation. Without centralisation, there cannot be much industrial progress."

The Working Party also made a number of recommendations towards the replacement and renovation of machinery. It is possible that the new survey party might also suggest more or less similar measures. The measures suggested by the former were:

Machinery prior to 1910 is obsolete in design and completely worn out and should be replaced by modern equipments at the earliest. Blow room process should be made continuous by adding blending feeders, hoppers, condensers, reserve boxes and automatic distributors. Cards and combers of the years upto 1925 should be replaced as they could not be set close enough. Size of the can should be changed over to 12 inches for the card, the comber and the draw frames. Slubbing frames must be scrapped and the existing intermediate frames in good condition converted to zone drafting. Ring frames should be equipped with high drafting tape drive and changed over to larger package. Reeling machines should be changed over to power drive. Ordinary winding and warping machines should be replaced by modern high speed machines. Slashers should be equipped with automatic controls to regulate cooking, level, temperature, stretch and moisture content. Warp stop motion and auto-pirn change device should be equipped on looms in sound mechanical conditions.

If the above improvements were effected, it was stated that the quality of yarn and cloth would not only be improved appreciably but there would also be an increase in production.

In view of what has been stated above, it is not clear why the Government should appoint another committee to go into this question. What is urgently needed is the Government's permission to the mills to go ahead with their modernisation plans. Surely, the managements of mills know better than the Government officials and investigators what is best for them.

PLANNING BRITISH TRANSPORT

NEW SCHEME FOR RAILWAYS

From Our Own Correspondent

LONDON, *5th February*

LONDON LETTER

THIS Government of private enterprise has now turned planner perforce in the matter of transport. It has been slowly making some progress with denationalising road transport by selling back the road haulage undertakings acquired by the Labour Government when they were in power. This process it proposes to continue where it can find buyers willing to pay an economic price for the trucks now operated by British Road Services. But it has never contemplated attempting to denationalise the railways, since no one can see any prospect of making these pay at present and without an expenditure on capital improvement which would not be found privately.

So the Government has now undertaken to find £800 million for railway modernisation over the next fifteen years, to which the railways will add £400 million from their own revenues, to give a total programme of £1,200 million. The Government is convinced that when this money has been spent British railways will once again be second to none. It has also calculated that in 15 years' time, the railways will, as a result of this modernisation, increase their revenues by £85 million and, after allowing for the capital charges on the money borrowed and depreciation on the new investment, should still leave a net £30 million increase which would make the railways solvent once again and even enable them to pay off some of their past deficits.

The Government is, therefore, presenting to the country that it now has a plan for the railways that will make them both as efficient as possible and a paying proposition. Cynics may remark that though the plan is with us now the results of it on the Government's own analysis will not be with us for another 15 years. Many things may happen between now and then, but one thing is clear and that is that the railways are likely to find themselves in financial difficulties which means possible repetitions of the same difficulties they have recently had with labour for many years to come.

On the road side, although the Government considers that private enterprise can operate road haulage more efficiently than a central nationalised body, it also recognises that the road system of the country is in an even more parlous condition than the railway system. It has conceded that a vast road modernisation plan must accompany the modernisation plan for the railways and over the next 15 years it is going to spend another £200 million. This gives an average rate of £13 million a year on new construction compared with something like the £3 million of recent years.

What this means is difficult to assess without more details of what will in fact be done with the money, but a comparison can be made this way: In addition to the Government's £3 million, Local Authorities have been spending about £3 million a year recently, thus a total of £6 million has been going on the roads, and this total will be raised to an average of £16 million so that something rather less than three times as much money is likely to be spent in due course. As regards the actual rate at which the money will be spent in practice, plans always tend to run very far ahead of reality. At present there is more than £20 million of authorised expenditure which has yet to be spent and, although the Government has said that in the next financial year £27 million will be allocated to capital expenditure by it, only one-third of this money will, in fact, be spent on actual construction. The figure may be doubled the following year, trebled the year after that, and quadrupled in four years' time.

What this country still needs is a long-term road plan in terms of real road mileage, but the Labour Opposition cannot even offer that. Their solution is to co-ordinate road and rail transport and having sorted out the goods traffic which should be transferred from road to rail to start planning then. The Government rudely calls this a scheme to subsidise the railways out of the roads, but the analogy is hardly fair, since heavy road transport is not required to pay its way as is rail transport. The only reality which the man in the street gets out of these polemics is that heavy goods vehicles block the antiquated British highways at present and there is little assurance that they will not go on doing so for ever!—*All Rights Reserved.*

PAKISTAN NOTES

IMPACT OF DEVELOPMENT OUTLAY ON NATIONAL INCOME

FALL IN "PER CAPITA" INCOME EXPECTED

THE large-scale development expenditure incurred by the Central, Provincial and State Governments in Pakistan in the past seven years—covering the period 1947-48 to 1954-55—would appear to have had no significant effect on the national income of the country. Thus, while the development expenditure is estimated at Rs. 476 crores, the rise in the national income has been only Rs. 80 crores, according to Mr. M. L. Qureshi, Chief Economist of the Pakistan Planning Board. Giving these figures, in the course of his address at the recent Peshawar meeting of the Pakistan Economic Association, Mr. Qureshi stated that, as compared with the Government estimate of Rs. 1,800 crores for 1951-52, the rise of Rs. 80 crores in the national income represented only 4.4 per cent.

The analysis of the different fields in which the public development expenditure of Rs. 476 crores was incurred, as made by Mr. Qureshi, reveals that the development outlay of Rs. 98 crores on defence—one-fifth of the total expenditure—is unproductive, in that the increase in national income brought about by it is negligible. The capital-output ratio of civil works and town development is very high, being 12 : 1, so that the annual addition to the national income, resulting from an expenditure of Rs. 52 crores, is about Rs. 4 crores only. Education and health accounted for Rs. 35 crores, refugee rehabilitation for Rs. 24 crores, and other social and beneficial services for Rs. 14 crores. These together aggregate Rs. 73 crores or 15 per cent. of the total development expenditure. This essential "social overhead" expenditure has resulted in the building up of social capital in the country. Since it has affected national income indirectly by improving the efficiency of the workers, it is not possible to estimate the increase in national income brought about by it. The expenditure of Rs. 90 crores on transport and communications has made a direct contribution to national income. Taking the capital-output ratio at 4 : 1, the annual addition to national income is estimated at Rs. 23 crores. The amount spent on projects which are directly productive is Rs. 157 crores, of which the share of electricity and industry is Rs. 72 crores and that of irrigation and agriculture Rs. 85 crores. Assuming that the capital-output ratio is 3 : 1, the annual addition to national income is assessed at Rs. 52 crores.

Population Rising

The population of Pakistan is rising at the rate of 1.5 per cent. per annum. The increase in the last seven years is over 10 per cent. It, therefore, follows that the rise in national income brought about by the development expenditure of the Governments is much less than the increase in population.

In addition to the development expenditure incurred by the Governments, a good deal of investment has taken place in the private sector of the economy. No reliable data relating to this are available. From indirect evidence, it is gathered that investment has been "very substantial." A large part of this investment has been in house-building, the capital-output ratio of which is "very unfavourable" and, by and large, unproductive. The rest of private investment is probably made in directly productive fields and must have, therefore, made a substantial contribution to the improvement in national income. There is, however, no evidence to suggest that net private investment in productive fields, after allowance is made for disinvestment involved in the deterioration of evacuee property, is large enough to compensate for the small development expenditure in the public sector relatively to the growth of population. It is, therefore, concluded that the *per capita* income after 1954-55 will be less than what it was about seven years ago.

In the opinion of Mr. Qureshi, the inequalities in incomes has increased since the Partition. This is due partly to the large profits made by the business community during the Korean boom and partly to the fabulous profits earned by the industrialists after the import of consumer goods were restricted. The high rate of exchange of the Pakistan rupee has also contributed to a shift of income from the agricultural classes to the business community. As the increase in national income has not kept pace with the increase in population, it may be considered that the national income relatively to the size of population has fallen. As this smaller national income is more unequally distributed than before, the living standards of the masses of the people, which were already very low, must have deteriorated still further.

Mr. Qureshi has put forward several suggestions for implementation in future. According to him, expenditure on civil works and luxury building constructions on both public and private accounts should be severely curtailed. Outlay on transport and communications must be restricted to the removal of existing bottlenecks and those that are likely to arise as a result of development programme. The projects which take a long time to implement, such as big irrigation schemes, should be deferred unless they are absolutely essential. Studies should be undertaken immediately to determine capital-output ratios in the various productive fields. The scope for the use of improved techniques of production in various fields should be clearly examined. Development expenditure should be concentrated on directly productive projects having low capital-output ratio.

World Bank Loan

It is reported that the Government of Pakistan is seeking a loan of Rs. 3.6 crores from the World Bank for renovating the east wharf of Karachi port. An official delegation, headed by Mr. F. M. Khan, is expected to leave Karachi for Washington towards the end of this month to negotiate the loan which is said to cover foreign exchange expenditure of the project. The aggregate outlay of the project is estimated at Rs. 7.8 crores. The implementation of the project, it is stated, will be expedited and completed within six years.

CO-OPERATIVE MOVEMENT IN MADRAS

COMMITTEE APPOINTED TO REVIEW PROGRESS

THE Government of Madras has done well in appointing a committee to review the progress made by the co-operative movement in the State since 1940 when the Vijayaraghavachariar Committee submitted a report on the same subject. The case for reviewing the position of the movement in the State is quite convincing. In fact, the political and economic changes which have taken place during the last 15 years in the State, which led other States in giving a lead to the movement, necessitate a review of its position.

Since the appointment of the Vijayaraghavachariar Committee three major events have taken place and these have had profound effect on the progress of the co-operative movement in the State. These are: the Second World War, the attainment of Independence by the country, and the partition of Madras. The war brought about scarcity of foodgrains and other materials necessary for living. This, in its turn, raised prices and necessitated Government controls. Co-operatives were, in most cases, called in to assist the Government in mitigating the evils of scarcity in commodities. The partition of Madras for carving out the new State of Andhra created opportunities for the more intensive economic development of a compact area. Against this background, the co-operative movement in Madras requires to be examined now, in order to assess the effects of these events on the movement and the opportunities for progress afforded by them, as well as the need to provide safeguards against abuses creeping into the movement.

There is also another good reason why the movement in Madras deserves to be studied at present. In order to raise the standard of living of the masses, the country has launched a Five-year Plan of which three years have been completed already and another Five-year Plan is on the point of formulation. The first Plan, as well as the coming one, looks to co-operative institutions as the right kind of agencies which can be used in the work of building up the economy of the country. Besides, other agencies such as the National Extension Service, the Community Projects, the All-India Handloom Board and similar other Boards established for helping small industries are all anxious to make increasing use of the co-operative movement to achieve their objects and to promote the economic welfare of the people. And what is more, the Reserve Bank of India, which has been entrusted with the work of providing rural credit to the farming classes, has taken on itself the responsibility not only to provide credit through the co-operative institutions but also to reorganise the movement itself on sound lines. In fact, the Bank appointed in 1951 the Gorwala Committee to survey the position of rural credit and and this Committee, as readers are aware, after a comprehensive enquiry, has made a number of suggestions to create a climate most suited to the rapid development of the movement. The findings of this Committee are bound to be of immense use to the Committee now appointed by the Government of Madras.

The State Government will stand to benefit from knowing how far the co-operative movement in the State has availed itself fully of the opportunities for expansion and development provided by the various national agencies enumerated above. Besides, it is desirable that the Government should know also the lines on which the movement can effectively participate in the working of these agencies. In these two respects it can expect guidance from the investigations conducted by the Committee it has now appointed.

The Committee consists of seven non-official members and one official member, and will be headed by Mr. T. M. Narayanaswami Pillai as Chairman. The members are: Mr. T. M. Chinniah Pillai, Mr. B. Venkataraman, Mr. M. Shiva Rao (South Kanara), Prof. R. Balakrishna, Dr. P. Natesan, Mr. Vasu Menon (Palghat) and Mr. A. Palaniappa Mudaliar, Registrar of Co-operative Societies. The Committee has been authorised to co-opt as members the Director of Agriculture, the Director of Industries and Commerce, the Commissioner of Labour and the Director of Harijan Welfare, whenever necessary. It will also co-opt members who are interested in co-operation, whenever any important deliberations of the Committee take place in mofussil districts and whenever such a course is found to be advantageous or beneficial to arrive at conclusions. A striking feature of the personnel of the Committee is the absence of any co-operator of all-India standing. This, by itself, should not be construed as a handicap. For the members chosen appear to be men who have a thorough knowledge of local conditions under which the movement has spread and as such it should be an added qualification.

The Committee has been appointed for a period of three months and will function from Madras where it will have its headquarters. The terms of reference to the Committee are very comprehensive, as they seek detailed information regarding every aspect of the co-operative movement in the State relating to the primaries at the bottom and the apex institutions at the top. Broadly stated, the terms of reference require the Committee not only to review the progress of the movement since 1940 but also to enquire into its present needs, difficulties and problems and to make recommendations regarding its consolidation, development and reform. The terms of reference are:

(1) to review the working of village credit societies and to make recommendations for their reorganisation so that they might function as economic units and cater to the essential economic needs of the agriculturists; (2) to examine the working of the co-operative central banks, the State Bank and the land mortgage banks, and the position in regard to the consumers movement in the State; (3) to review the progress made by co-operative housing societies with reference to the policy of the Government in regard to financing them; (4) to examine the working of land colonisation societies in the State, the progress made by co-operative marketing societies, the working of the weavers' co-operative societies and to formulate measures for their improvement with particular reference to the financial assistance provided by Government, (5) to make recommendations for carrying on propaganda, education, training and research in co-operation; (6) to consider the adequacy of the present cadres of officers to man the various posts in the movement; (7) to explore the possibilities of applying the co-operative method to development plans particularly in the fields of agriculture, cottage and small-scale industries and the amelioration of the economic condition of the Depressed Classes; (8) to examine the need for and the adequacy of concessions and privileges granted by the Government to co-operative institutions; (9) to examine the present system of audit and to make recommendations for any change considered necessary; (10) to examine the claim of industrial co-operatives for exemption from various labour laws; (11) to examine whether co-operative societies, more particularly consumers' co-operative societies, should confine their activities and service to members; (12) to examine whether non-co-operative organisations should be allowed to join together and form co-operatives; (13) to review the working of co-operative land colonisation societies and motor transport societies for ex-servicemen and to make recommendations for placing them on a firm footing; and (14) to examine whether any amendment or modification is necessary to the Madras Co-operative Societies Act and the rules framed thereunder.

In view of the importance attached to the co-operative movement in rebuilding the Indian economy, it is advisable if other States in the country where the movement has been in existence for a considerably long time also take up an enquiry similar to the one now undertaken by the Government of Madras. The findings of such enquiries are bound to make available a fund of useful information which could be used effectively in reforming the movement in India on right lines.

FINANCIAL CORPORATION SET UP IN U.P.

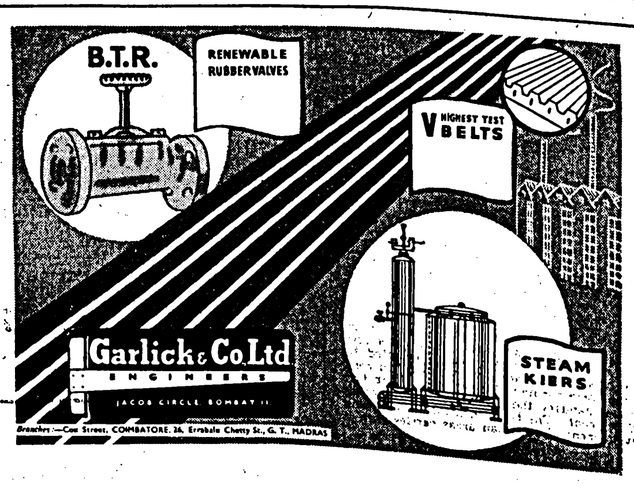
The role of small-scale industries and the importance of providing them with financial facilities through State Financial Corporation were emphasised by Mr. C. B. Gupta, Minister for Planning and Industries, U.P., inaugurating the U.P. Financial Corporation at Kanpur on 31st January last. In pleading the case for promoting small-scale industries, the Minister did not overlook the advantages of mass production in large-scale industries. His only grouse against these was that they were not labour-intensive. The country had, therefore, to look to rural and small industries for putting its large number of unemployed in gainful occupations. But even here the scope of village industries for absorbing unemployed, was limited, because they were confined to artisans and craftsmen. Consequently, it was only small- and medium-scale industries which offered a vast and unexplored field to educated and trained persons with initiative and drive. The 12 million new jobs in the country envisaged in the next Five-year Plan depended for nearly 50 per cent. on these very industries. To Mr. Gupta the role of small- and medium-scale industries was thus dual. One was to occupy an important place in the existing industrial set-up and the other to provide jobs and reduce unemployment in the ranks of educated classes.

The Minister then said that small- and medium-scale industries were being mostly run by private limited companies, joint-family concerns or sole proprietorships. The scope and pace of development of these industries had been restricted, he remarked, by the absence of adequate credit facilities. It was to cover this lacuna that the U.P. Financial Corporation was set up. But he took care to add that, for achieving any remarkable success, it must play a "dynamic role."

Mr. Gupta visualised that the new Financial Corporation would have to face many knotty problems, in regard to both policy and day-to-day operations. One of the main difficulties would be clearly to demarcate its sphere of action. In this context, he said: "We should, in the practical field, try to form a sort of pyramid for industrial financing, with industrial co-operatives and Government loans and grants for village industries at base, the State Financial Corporation for small and medium industries in the middle and the Financial Corporation of India for large-scale industries at the apex. There should be perfect co-ordination and understanding among all these agencies at every stage in order to avoid the overlapping and unplanned growth of industries. Mr. Gupta emphasised that these agencies should work for a common production programme—a programme which varied from industry to industry—taking into consideration the efficiency of large- and small-scale production, the scope of development through small-scale methods, solutions of unemployment problem and other socio-economic aspects.

"RESERVE BANK OF INDIA BULLETIN"

The Research and Statistics Department of the Reserve Bank of India has done well to enhance the utility of the monthly *Bulletin* by revising and enlarging the current statistics section with a view to making it more exhaustive. Thus, the latest issue of the *Bulletin* includes some of the more important series given in the *Banking and Monetary Statistics of India*. Moreover, for a number of tables, graphs are shown alongside the data to facilitate easy comprehension. The new tables included now relate to advances made by the Reserve Bank to scheduled banks and State co-operative banks under sections 17 and 18 of the R.B.I. Act, advances of scheduled banks against principal commodities, and bullion, business of State co-operative banks maintaining accounts with the R.B.I., money supply with the public on a monthly basis, movements in foreign exchange reserves, currency area-wise distribution of India's foreign trade, and liabilities and assets of State Banks in Japan and Germany. The existing tables have also been changed suitably and made more complete.



BUSINESS CONDITIONS IN THE U.S.

NATIONAL CITY BANK'S MONTHLY LETTER ON OUTLOOK FOR 1955

THE new year is off to a good start, with business in some quarters showing more strength than even the optimists had expected. The most striking report made during January comes from the Department of Commerce, which estimates that December retail sales aggregated $18 billion, more than a billion dollars greater than any previous month on record. Post-Christmas volume also has been exceptionally good. In the first three weeks of January department store sales averaged 10 per cent. above a year ago, and reports from other retailers including automobile dealers leave little doubt that total consumer purchases during the month have broken all January records.

Passenger automobile sales, estimated at 570,000 cars in December, have contributed heavily to the good showing. Seldom if ever have new automobile models been met with such a rush of buying. The big business is attributable not only to new designs and improvements, and to high consumer buying power, but to an unprecedented sales effort, including widespread price discounts given by dealers to keep abreast of competition and stimulate volume.

Optimistic forecasts for 1955 were the rule at the year-end, and the forecasters placed their chief reliance upon expanding consumer demand rather than upon business spending. As far as they go, the figures of recent weeks suggest that this reliance is not misplaced. In the end the controlling influences upon consumer purchases will be found in the figures of employment, hours worked, and consumer income; and indications are that jobs and wage payments will continue to increase in the next few months, except where the seasonally low level of outdoor work is a factor. The Federal Reserve Board's seasonally adjusted index of industrial production advanced to 130 in December (1947-49=100.) At that point, it had recovered half of the loss from the 1953 peak of 137 to the 1954 low of 123. Probably, it rose a little further in January. In the months just ahead, seasonal improvement in industrial output is expected.

Steel and Autos

The steel and automobile industries have been consistently accounting for the lion's share of production gains. In mid-January steel ingot output was exceeding 2 million tons a week, and automobile assembly lines were turning out a near record of 163,000 passenger cars a week. By all signs these industries will be running strongly during the next three months at least. The purchasing power created, directly and indirectly, by their demands for labour, materials, and services will flow around the circle.

In other lines, the improvement already realised is being held or moderately extended. Construction activity is giving greater support to general business than ever before. The textile and many of the other non-durable goods industries, which had a good upturn in the fourth quarter of 1954, entered 1955 in a good position. Activity in consumers' durable goods other than automobiles, after a marked recovery, seems to have stabilised at the higher level. Output of producers' equipment and military goods has been stable since early fall when the decline levelled off. Even the machine tool industry, which is expected to be one of the laggards in 1955, reported increased sales in December and January.

Business Forecasts

With reports of this kind, the predictions that 1955 will be a better year than 1954 now seem to have a secure basis, and are accepted almost everywhere. In judging how much further the rise has to go, two reasons for moderation appear. One is that the improvement has already been substantial; the 1955 upswing, instead of being wholly in the future, has already occurred to a considerable extent. The recovery, within about four months, of one-half of the ground lost during the recession, is an impressive performance. It has come about wholly through private demand since Government purchases of goods and services, currently at an annual rate around $74 billion against the 1953 high point of $86.6 billions, were still declining at the year-end.

The second reason for moderation is that the recovery has been so heavily influenced by the automobile and steel industries, and must be expected to slow down unless operations expand further in a wider variety of industries. Automobile output eventually must slacken. It may be curtailed by strikes, if the union demands for a guaranteed annual wage are pushed that far; otherwise, it will be curtailed by overstocking of dealers, since no one expects that a production equivalent to 8,000,000 passenger cars a year can be absorbed. Steel operating rates will be influenced by automobile requirements. These two industries account directly for almost 10 per cent. of the industrial output of the country. A summer let-up, exceeding the usual seasonal dimensions, is a reasonable expectation.

In construction, builders' plans promise an active spring. In the last five months of 1954 residential construction contract awards reported by the F. W. Dodge Corporation ran nearly 50 per cent. above the corresponding 1953 figures. In the first 22 days of January the gain over a year earlier was 29 per cent. The boom in home building and the development of suburban areas carries with it a great increase in construction of shopping centres, public utilities, schools, roads, hospitals and churches, to say nothing of household equipment and furnishings.

But in construction, as in other lines mentioned, there is a question as to how much improvement, other than seasonal, can be expected on top of the levels already reached. Government agencies estimate total construction expenditures in 1955 at $39.5 billion, a substantial increase over the $37.2 billion recorded in 1954 which in turn compared with $35.3 billion in 1953. However, the expected 1955 level was almost achieved in December, when on a seasonally adjusted basis the annual rate reached $39.1 billion. Approximately the same relationships are shown in the figures of housing starts. A total of 1,215,000 new homes were started in 1954, up from 1,104,000 in 1953 and second only to the 1950 record. December starts, seasonally adjusted, were at the rate of 1,473,000 per year. To hold this rate through 1955 would be a phenomenal performance.

Cumulative Influences

Since a broader industrial and trade advance will be required to carry the recovery beyond the summer, the outlook for the second half-year may turn not only on consumer demand, but on business spending as well. As order volumes increase, a tendency to take off the shelf plans which have been held in abeyance frequently appears. We have already referred to scattered indications of this kind, and to what is seemingly the end of inventory liquidation. Both of these illustrate the cumulative nature of recovery, in which each line of production and trade gives support to other lines and the whole stimulates an increase in investment and building up of stocks that cannot always be foreseen when the recovery starts. Such cumulative influences operate to carry on the upward movement.

The degree to which inventory replenishment is carried will have a great deal to do with the level of business in the coming months. It is also the most incalculable influence in the outlook. A general spread of forward buying would lift the business figures and prolong the rise. For the long run, however, it would also present hazards. Experience has shown that a rapid and general rise in inventories tends to go to excess, and usually proves to be an element of instability. Fortunately, fear of scarcities is playing little if any part in the improvement in buying. Copper comes nearer to being a scarce commodity than any other major industrial material, but strikes in this country and Chile last year, and in Rhodesia currently, are largely responsible. Given labour peace, and with the expansion plans under way, the tightness will ease in due course.

Meanwhile, recovery is promoted by success in attracting consumer demand, by offering new and better things, pricing them competitively, and selling them effectively. This is the sound way of expanding trade and realising the economy's potential for growth. It provides a solid basis for continuing recovery and real prosperity, in contrast to the weaknesses that must eventually appear if the construction boom is carried to excess or inventory accumulation is over-stimulated.—*Courtesy of the Monthly Letter (February Issue) of the National City Bank of New York.*

CLOTH PRODUCTION AND EXPORTS

RISE IN BOTH IMPRESSIVE DURING 1954

IN our last annual review of the Indian cotton textile situation, we estimated the output of mill-made cloth during the calendar year 1954 at 5,000 million yards on the basis of the figures for the first ten months. The production statistics now available for the whole of 1954 reveal that the estimate has very nearly proved correct, the quantity of cloth actually produced during the year being 5,011 million yards—an all-time record in the history of industry—as against 4,890 million yards in 1953 and the target of 4,779 million yards fixed in the first Five-year Plan for 1955-56. It will be interesting to note that the actual output represents nearly 102 per cent. of the rated capacity of 4,922 million yards for 1953-54. In respect of cotton yarn output also, our estimate has proved correct. Thus, as against the estimate of 1,545 million lbs., the quantity of yarn actually spun during 1954 was 1,565 million lbs. This figure, however, falls short of the Planning Commission's target and the actual installed capacity by 75 million yards and 216 million yards, respectively.

As a detailed reference to the factors responsible for the marked improvement in the cotton textile production has been made in the annual review, it is unnecessary to make a further reference here. Briefly, the main contributory factors are: Comfortable raw cotton supply position, improvement in labour-management relations, bettter transport facilities, availability of larger supplies of power and fuel, abolition of controls, and grant of some tax relief.

Trend of Output

The following table indicates the trend of cloth and yarn output—month by month, during 1954, as compared with the previous year:

(Cloth in million yards; yarn in million lbs.)

	Cloth		Yarn	
	1953	1954	1953	1954
January	416	418	131	132
February	379	397	115	122
March	399	405	118	125
April	417	424	122	129
May	422	428	124	129
June	414	419	125	128
July	436	441	133	136
August	414	416	127	132
September ..	396	412	126	131
October	407	379	130	123
November ..	369	421	120	135
December ..	421	451	126	143
Total ..	4,890	5,011	1,506	1,565

Statistical data relating to the different varieties of cloth produced in the Indian mills in the whole of 1954 are not yet available. Indications are that the improvement in mill-cloth output during the year was accounted for entirely by medium and superfine counts. The production of coarse and fine varieties, on the other hand, recorded a fall.

Exports

Thanks to the impressive rise in output, as also to the abolition of the 10 per cent. export duty on medium count cloth and withdrawal of import duty on foreign cotton, the export trade in mill-made cotton piecegoods registered a substantial increase during 1954. The quantity actually shipped in that year was 897.72 million yards, which compares very favourably with 700.60 million yards in the previous year, or a rise of over 28 per cent. The trend of exports of cloth in the twelve months of 1954 and 1953 is indicated below:

(In million yards)

	1953	1954
January	43.4	80.5
February	38.6	84.1
March	53.9	68.2
April	63.6	69.5
May	64.5	60.2
June	56.1	62.8
July	52.9	102.6
August	61.8	52.3
September	62.0	83.2
October	58.2	85.4
November	68.7	59.8
December	76.6	89.1
Total ..	700.6	897.7

A comparative statement relating to exports of different categories of cloth in the past two years is furnished below:

(In million yards)

	1953	1954*
Coarse	260.7	187.2
Medium	273.2	607.7
Fine	152.5	77.6
Superfine	14.2	25.2
Total	700.6	897.7

* Provisional

The export of 898 million yards of mill cloth, together with the estimated export of 55 million yards of handloom cloth, brings the total exports of cotton piecegoods during 1954 to 953 million yards, which fall short of the Buxton target by just 47 million yards. During the year under review, India is claimed to have ranked as the second largest cloth-exporting country in the world, preceded only by Japan which is estimated to have exported 1,200 million yards.

TEXTILE OUTPUT IN GERMANY

The past year was quite a favourable one for the German textile industry. For the year witnessed a marked rise in both production and exports The output of "textile yarn" (cotton as well as others), for instance, aggregated 637,000 tons, as against 599,000 tons in 1953, representing an increase of 6.4 per cent. Textile exports also were higher, the actual value of shipment during the first 11 months of 1954 being 1,326 million marks, as compared with 1,032 million marks in 1953 and 942 million marks in 1952. The rise in textile yarn output was accompanied by a corresponding advance in consumption which was shared by all categories, with the exception of fabrics for furniture. The largest increase was accounted for by carpet weavers, being 30.3 per cent. Cotton weavers used 4.1 per cent. more yarn than in 1953 and velvet and silk factories 3.5 per cent. more. During 1954, the cotton weavers produced 1,420 million square metres (a square metre=1.1196 sq. yd.) of fabrics valued at 2,500 million marks, as against 1,379 million square metres valued at 2,400 million marks. On an average, the prices were a shade below those in 1953.

The year under review was also favourable for man-made fibres. The output of staple fibre and rayon was higher by 12 per cent. and 17 per cent. at 134,000 tons and 59,000 tons, respectively. The output of fully synthetic fibres (other than staple fibre and rayon) is estimated at 7,400 tons. It is now reported to be at an annual rate of 10,000 tons. The most important synthetic fibres are said to be "Tai-shan" rayon fabric—the qualities of this come close to those of pure silk—and "orlon-dacron" type. There are three major trade marks of woollen-type fully synthetic fibres on the market or on the point of reaching the market. These are "dralon," "diolen" and "pan." Polyacrylnitril is also being manufactured under the trade marks "Redon" and "Dolan." Yet another fully synthetic fibre is "perlon" filament.

AHMEDABAD TEXTILE LABOUR DISPUTE

At its meeting held at Ahmedabad on Wednesday last week, the Ahmedabad Millowners' Association decided to reopen negotiations with the Labour Association on the issue of bonus to 120,000 textile workers for the year 1953 and for the renewal of the mutual arbitration agreement for settlement of disputes. A high-power committee of three members, including the Chairman, Mr. Surottam Hutheesing, was appointed for the purpose. This decision followed the notices served by the Ahmedabad Textile Labour Association on the mills, a reference to which was made in these columns last week. The 2½-year-old mutual arbitration agreement lapsed on 20th January, 1955, since the Millowners Association refused to renew it. The Labour Association, therefore, decided to withdraw all cases pending before the mutual arbitration machinery and take them to Industrial Courts.

The Government of Bombay has appointed a Committee under the chairmanship of Mr. P. D. Vyas to hold enquiries and advise it in the matter of fixing minimum rates of wages in respect of employment in any cotton ginning or cotton pressing manufactory in the State. The committee is to submit its report within six months.

The Central Government has decided to canalise imports of raw silk through the Central Silk Board.

TEXTILE TRADE IN U.S.

CUT-THROAT COMPETITION

CUT-THROAT competition seems to be the order of the day in the American textile economy. In the course of an interesting article published in *Textile Industries*, Atlanta (U.S.A.), Mr. Ringgold Arden points out that, at first, the members of the textile industry were busy trying to cut their competitors' throats, but, more recently, they have also been cutting their own. The fundamental cause of this problem of the U.S. textile industry today, Mr. Ringgold Arden says, is its ability to produce more goods than a peacetime economy can consume. According to him, although it is the same problem that arose just after the First World War, there is a tremendous difference between the over-production problems then and those facing the industry now. Thus, there is at present no considerable high-cost New England textile production to be wiped out to reduce the supply of goods to a manageable point. The cotton mills in the U.S. are now fighting each other on a fairly even basis, instead of under the unequal conditions which existed when a weaver was running 8 looms in Fall River and 80 looms in South Carolina. To quote the author: "The problem today seems to be much more of a dog-eat-dog proposition than it was then, when the Southern cotton industry could destroy the New England industry to save itself, while, today, it has only itself to destroy . . . the trouble with the cotton industry does not seem to be so much a matter of demand as of demand in proportion to the over-expanded capacity to produce."

According to Mr. Ringgold Arden, although the U.S. cotton textile industry operates on a very small margin of manufacturing profit, the price paid by the consumer is very high, as the cost of distribution is enormous. This statement bears out the remark made by an Indian industrialist, who had been to the U.S. recently, that profit-margins of retail dealers in the U.S. are many times higher than in India. So large is the retailers' margin in that country that the author of the article under reference observes that, by the time cotton goods reach the consumer, it is doubtful if the ultimate buyer can ever tell the difference in his price at which the mills will make or lose money. A cotton mill management, which will be happy to net a 5 per cent. profit for the production of goods, will see a department store mark its goods higher by 100 per cent. "just to move them from the rail-road car to the customer's parcel." The margin between a price which will keep the mills alive and that which will destroy them does not make much difference in the ultimate cost of what the consumer buys. The author says:

"If third-shift operation is generally continued and if the present cut-throat price situation continues for another year or so, a very large number of textile mills are going out of business, and it is doubtful if it would be good for the country to destroy a lot of these mills and leave the rest of them running three shifts, and may be overtime, to take care of the demand, when the experience of two wars has so definitely proved the absolute need for a tremendous and immediate expansion of textile production when war occurs. . . . It looks very much as if we are headed for another dose of Government interference with the affairs of our industry. If we seem determined to strangle ourselves with wilful overproduction and ruinous under-pricing, a wave of bankruptcies will be followed by an inevitable appeal to the Government to step in and save us."

The Solution

Mr. Ringgold Arden is strongly opposed to such Government interference, as also to the establishment of an industrial cartel or a labour cartel. He firmly believes in competition but stresses that such competition should stop short of the throat-cutting stage, where business people throw reason and prudence to the winds and sell the products of their factories at utterly ruinous prices. Competition, he opines, is what largely determines quality and regulates prices, and it has been primarily responsible for the development of the vaunted standard of living.

In the considered opinion of the author, the answer to the present problem of ruinous prices is a simple application of common sense, but this is very hard to apply when everybody wants everybody else to apply it while he overproduces. He observes: "If everybody insists on overproducing, everybody will probably go broke within a reasonable length of time, because it seems that, in the entire textile industry, there are virtually no manufacturers who are capable of saying 'no' to ruinous prices." The author considers that the simple resolution to refuse to sell anything at a loss and a general agreement to eliminate third-shift operation ought to relieve most of the pre-

(Continued in previous column)

(Concluded from next column)

sent acute trouble and get textile markets stabilised. In this connection, he emphasises that the U.S., as the leading world power needs, and must have, a strong flexible textile industry. He suggests that the industry should be planned as a two-shift operation, "so that, in time of national emergency, we can increase textile production by approximately 50 per cent. with a third shift."

GROWING AGITATION AGAINST IMPORTS OF CLOTH

EXPORTS OF TEXTILE MACHINERY DECLINE

By A Special Correspondent

MANCHESTER, 1st February

MANCHESTER LETTER

MORE developments have occurred in Manchester during the past week in connection with the agitation by Lancashire industrialists over the importation of foreign cloth into Britain. As in the past, the main criticism has been levelled against purchases of Indian fabric.

The Minister of State at the Board of Trade, Mr. A. R. W. Low, has accepted an invitation from the cotton employers' organisations to meet them in Manchester to discuss the threat to Lancashire from the heavy imports of cotton grey cloth from India and other cotton manufacturing countries. The meeting will take place on 15th February.

Mr. G. B. Fielding, Director of the Cotton Spinners and Manufacturers' Association, announcing this, following a meeting of the Association's Central Committee, said it was likely leaders of the cotton unions would also be invited to take part in the discussion. "The Association will hold consultations with the Master Spinners' Federation and with the unions before the meeting to decide what can be done to bring our anxiety about the position more prominently to the notice of the Government," said Mr. Fielding. On his visit to Manchester Mr. Low will also meet the Directors of the Manchester Chamber of Commerce and probably members of the Cotton Board.

Plea to London

The support of every Lancashire M.P. is also being sought by cotton leaders in a renewed attempt to impress upon the Government the serious situation which is likely to confront the cotton textile industry unless the heavy imports into Britain of foreign cloth and yarn are curbed. The Federation of Textile Works Managers has warned the M.P.s in a letter that the position is serious and calls for immediate action.

"The effect of this is now being seriously felt in Lancashire," the M.P.'s have been told. The federation says: "Some spinners, doublers and manufacturers are already working short time and confidence in the future is being weakened as prices are depressed by this volume of yarn and cloth on our home market. If nothing is done to check these imports the ultimate effect can only be to reduce the amount of cloth produced in Lancashire, causing widespread hardship and unemployment in the industry." It adds:

"We are well aware of the difficulties facing the Government but there is a growing feeling in Lancashire that the industry is being sacrificed and that the Government is refusing to impose quotas for fear of invoking restrictions on the exports of the engineering, motor-car and aircraft industries."

The Federation urges the M.P.'s to demand immediate action to remedy what is described as "this unfair position." They are also asked to continue to press for the removal of purchase tax on textiles.

More Short-time

The introduction of short-time working at a Stalybridge (Ches.) mill has been linked with the growing volume of Indian cloth reaching Britain at a cotton union meeting in Manchester. The Legislative Council of the United Textile Factory Workers' Association had been summoned to discuss the situation arising out of increased imports of overseas cloth and to hear an account of discussions which took place in London between the Minister of State at the Board of Trade, Mr. A. R. W. Low, and a Lancashire textile delegation.

The Stalybridge mill, it was stated, is a unit of the Lancashire Cotton Corporation and some 300 operatives would be affected. The type of yarn spun at the mill was similar to that used in many of the Indian fabrics now being imported into this country, it was stated.

Mr. William Roberts, the Association President, said after the meeting: "As long as there is no ceiling on these imports it is inevitable that we shall feel the draught very considerably." Mr. Harold Bradley, the Association Secretary, said: "If Lancashire order books continue to shorten there is bound to be unemployment in the spring."

Latest Import Figures

An analysis of cotton cloth imports into the United Kingdom during November by country of origin shows that while Indian shipments declined, arrivals from Japan and Hong Kong were among the highest recorded for these two suppliers during 1954. Total arrivals for the month were 23,794,000 square yards, including 21,092,000 yards of grey cloth. India's contribution was 8,374,000 yards compared with 15,848,000 yards in the previous month.

Japan's shipments of 8,125,000 yards (including 8,122,000 yards for re-export after finishing in the United Kingdom) were the second highest of the year while the volume of Hong Kong cloth arriving, at 3,075,000 yards, was the largest of the year. Belgian mills shipped 1,429,000 yards while Russia's textile industry sent 479,000 yards during the month, the largest amount recorded from this country during the year.

Plant Shipments

Textile machinery exports from Britain last year continued the decline from the peak recorded in 1952. Total shipments were 79,316 tons compared with 84,367 tons in 1953, respective values being £39,442,769 and £40,796,807. The tonnage exported in 1952 exceeded 112,000 and the value set up an all-time record of over £50,000,000.

An interesting development which may well foreshadow future events is the fact that Pakistan has ousted India as the leading buyer of British-made textile plant after India has held this position for many years past. Shipments to Pakistan increased from 193,662 cwt. to 312,983 cwt., while corresponding exports to India fell from 312,945 cwt. to 303,234 cwt.

Other leading buyers last year were (with 1953 comparisons): Italy 79,772 cwt. (150,733 cwt.), France 62,064 cwt. (75,131 cwt.), Australia 57,477 cwt. (55,439 cwt.), the Netherlands 54,341 cwt. (46,760 cwt.), and Western Germany 50,914 cwt. (47,191 cwt.). A marked drop occurred in shipments to Brazil which registered only 11,223 cwt. against 118,975 cwt. in the previous year.

Shipments of different types of plant were all affected by the reduced trend of exports. Preparatory machinery amounted to 206,178 cwt. against 244,617 cwt. in 1953, spinning machinery totalled 133,542 cwt. against 178,874 cwt. and looms and other weaving plant were 253,603 cwt. against 307,048 cwt.

Production Trends

An indication of the likely trend of activity in the Lancashire cotton trade was given at a meeting of the Bolton and District Productivity Committee by Colonel W. A. Grierson, a Director of several textile firms. He suggested that the future lay in halving the number of mills in Lancashire and the introduction of double-shift working on a wide scale.

In his view shrinkage in the number of mills was inevitable as there were 500 spinning mills, 1,400 weaving sheds and 500 finishing works in the British cotton industry. The majority were working single-day shifts while in other rival textile producing countries two and three-shift working was the rule.

In the national interest, Colonel Grierson continued, new machinery should be put into 250 spinning mills. This would not cause any hardship on the workers because the same number would be employed nor would there be any hardship for the foremen or technical management. It is not the first time such conditions have been put forward by the speaker but the revolutionary scheme now submitted caused a good deal of controversy in Lancashire textile circles.

The last few weeks have seen a revival of the moves to integrate more mills by take-over transactions. In some cases, at least, the eventual plan is to merge machine capacity in a smaller number of units so as to economise in labour and overheads and cut out redundant plant. This has certainly been the trend in recent years, although the movement has been slow. Even slower still has been the switch to two-shift working, despite the consideration given to such schemes both nationally and locally. Many millowners are deterred from trying out the system by the belief that it would not be economic because of the restrictions on hours imposed by the trade unions.—*All Rights Reserved.*

WINTER SESSION OF INDIAN CENTRAL COTTON COMMITTEE

CHAIRMAN REVIEWS RESEARCH SCHEMES

AN optimistic note about the possibility of reaching the targets for cotton production fixed by the Planning Commission for the 1954-55 cotton year was struck by Mr. R. S. Krishnaswami, Vice-President of the Indian Council of Agricultural Research, who presided over the winter session of the Indian Central Cotton Committee (I.C.C.C.), held last week in Bombay. In view of the fact that what the country needs is not merely a quantitative increase in cotton—this has been achieved in a fairly satisfactory manner, in any case—but the qualitative improvement in cotton, the President did well to emphasise the need for taking special measures for encouraging the production of long-staple varieties of cotton.

The targets of area and production, fixed by the Planning Commission for 1954-55, are 17.5 million acres and 39.8 lakh bales (of 400 lbs. each). The prospects of a bumper crop have been spoiled by the heavy rains during August and September in some parts of the country. Even so, the final area under cotton may be expected to be around 18.5 million acres. No official estimates of cotton production during the current season are available. The crop this season, according to trade estimates, is expected to be about a lakh bales higher than in the last season when the crop was estimated at 39.35 lakh bales (official). The President said: "As far as can be foreseen at present, the Planning Commission's target of area and production for the current season may be fully realised." It may be mentioned here that official estimates are always lower than the trade estimates which place the current season's crop at 44½ to 45 lakh bales, as against a little over 43½ lakh bales in the last season.

As regards the pattern of cotton consumption, the President referred to the notable development, namely, the increase in the consumption of Indian cotton and the decline in the consumption of foreign cotton. During 1953-54, mill consumption of Indian cotton was the highest at 38.9 lakh bales and that of foreign cotton the lowest at 7.2 lakh bales, since the Partition. The importance of this development to the national economy, he said, could be visualised from the fact that, whereas in 1951-52 imports of cotton amounted to 12.4 lakh bales, valued at Rs. 124 crores, they declined in 1953-54 to 6.9 lakh bales valued at Rs. 56 crores.

Proceeding, the President emphasised the need for taking special measures for encouraging the production of long-staple varieties of cotton like 170—Co. 2 and 134—Co. 2-M grown in Gujerat. He observed that, in connection with the recommendations made by the Committee for raising the production of extra-long-staple cotton (1⅛ inches and above) proposals for new schemes for the production of hybrid seed had been received from the Bombay and Madras States. It would appear that the Agricultural Research Sub-Committee of the I.C.C.C. has recommended the acceptance of the advice of Dr. S. C. Harland, Professor of Botany, Manchester University, who is now in India to advise the Committee on its research schemes, that the Committee might go slow with projects for production of hybrid seed until his final views in the matter are available.

The President did well to draw the attention of the Committee to several complaints of "watering" of cotton, particularly in Bombay and Madhya Bharat States. The State Governments concerned, it is stated, have been requested to investigate these complaints and to adopt suitable preventive measures. In these States, legislation already exists which prohibits watering of cotton. What is therefore necessary is to enforce the law. The President expressed the hope that steps would be taken to tighten up the administration of the relevant provisions of cotton legislation in the interests of maintaining the quality and reputation of Indian cotton and assuring to the grower full value for the cotton he produced.

The Committee reviewed the progress of the Cotton Extension Schemes in the States during the current season and the State Governments' plans for 1955-56. It approved two proposals relating to the multiplication and distribution of seed of Laxmi cotton in the Western tracts of the Andhra State and of H.14 American cotton in the Punjab. This cotton—that is, A14 cotton—is intended to replace 216F. The former is earlier maturing than the 216F cotton and is, therefore, said to be in a much better position to escape damage from pink bollworm attack.

The I.C.C.C. generally endorsed the recommendations of the Cotton Forecast, Cotton Ginning and Pressing Factories and Technological Research Sub-committees as well as of the Agricultural Research Sub-committee. The Cotton Forecast Sub-committee reiterated its previous recommendation that the introduction of crop estimating surveys on cotton in all the major cotton-growing States was the only method of improving the accuracy of the official estimates of production of cotton. It considered the question of undertaking a three-year co-ordinated scheme in different cotton-growing regions on the lines of the pilot survey already conducted in the Akola District of Madhya Pradesh and to obtain estimates of cost of production of cotton in different tracts from year to year. The need for such a survey was accepted in principle. In view of the large expenditure involved, it was recommended that the Planning Commission should be requested to allot the necessary funds to the Committee. The Agricultural Research Sub-Committee accepted proposals for the improvement of Western cotton in Mysore State and for expansion of medium-staple 35/1 and long-staple 216F variety in Uttar Pradesh. Increase of cotton production by use of honey bees was also discussed and the Sub-committee recommended that experiments might be conducted in certain selected areas to find out whether the honey bee would help increase the yield of cotton.

In view of the growing research activities of the Committee, which involve considerable expenditure, there is some controversy as to the manner in which the activities should be financed. It would appear that the Central Government has suggested that, after March, 1956, the research schemes (except those in respect of extra-long-staple cotton) should be financed on a 50-50 basis by the Indian Central Cotton Committee and the State Governments concerned, and that the research activities in respect of extra-long-staple cotton should be financed by the Committee for a 15-year period. The Committee has urged upon the Government the need for continuing the existing practice according to which research schemes are financed by the Committee for an initial period of 10 years and for a subsequent period of five years by the States concerned and the Committee on a 50-50 basis.

Another important resolution adopted by the Committee relates to the recent fall in cotton prices. Moved by Mr. Chimanlal B. Parikh, Vice-President of the Committee, the resolution expressed its "grave concern" over the fall in cotton prices and urged the Government to revise its cotton policy. It stressed the need for stabilisation of prices of cottonseed and stated that the absence of hedging facilities in cottonseed seriously depressed the prices of *kapas* in a period of heavy marketing. The resolution pleaded for the abolition of the system of allotment of cotton to mills by quotas and for a further export quota to the tune of one lakh bales of such varieties as were not wanted by the mills. It is true the abolition of the quota system will not, by itself, help improve cotton prices. But it will certainly create the right atmosphere. From this point of view, the Government has done well to abolish the quota system till the end of May, 1955, and also to release for export 50,000 bales of cotton of 11/16" and below, besides an additional quota of 25,000 bales of old crop of ¾" and below.

FREE WORLD'S COTTON OUTPUT

Because of recent increased estimates in the U.S., Mexico and Pakistan, the International Cotton Advisory Committee has placed the free world cotton production during the 1954-55 season at 28.5 million bales (of 478 lbs. each), an increase of 700,000 bales over its own previous estimate. This compares with the 1953-54 season's crop of 30 million bales. Despite the decline in production, the free world supply in the current season is computed at 46.3 million bales, the highest post-war level. This includes the output of 28.5 million bales and carry-over stocks of 17.8 million bales. In the last season, the supply was estimated at 45.3 million bales, made up of production of 30 million bales and carry-over stocks of 15.3 million bales.

The Committee estimates the supply in the U.S. at 23.1 million bales, consisting of a crop of 13.5 million bales and carry-over stocks of 9.6 million bales, as against 22.0 million bales (a crop of 16.4 million bales and stocks of 5.6 million bales) in the 1953-54 season. In the rest of the free world, the supply is placed at 23.2 million bales (production 15.0 million bales and carry-over stocks 8.2 million bales), as against 23.3 million bales (production 13.6 million bales and carry-over stocks 9.7 million bales) in the last season.

The gap between free world production and consumption is expected to be narrowed this season. Production, as already stated, is placed at 28.5 million bales or a decline of 1.5 million bales from the last season. Consumption, on the other hand, is expected to increase by some half a million bales. Taking account of cotton destroyed and exports to communist countries, production and total disappearance, according to the Committee, are likely to be in balance in the current season. Thus, for the first time since 1951, there should be little change in aggregate end-season stocks.

TECHNOLOGICAL RESEARCH IN SUGAR

WORK OF KANPUR INSTITUTE

CONSIDERING the imperative need for enhancing the technical efficiency of the Indian sugar industry, the part played by the Institute of Sugar Technology, Kanpur, is of great importance. This Institute, it will be recalled, was established as far back as in 1936. Since its inception, the Institute has been carrying on research work on (1) problems of sugar technology, with special reference to the requirements of Indian sugar factories, (2) utilisation of by-products, and (3) general problems of sugar engineering and technology. Thanks to the research work, the technical efficiency of the Indian sugar industry has gone up considerably in recent years. Thus, it is claimed that the milling results—one of the vital determinants of the efficiency of sugar manufacture—have improved, which means that the cane-crushing plants have worked well, although there is said to be still ample scope for further improvement in the milling efficiency. The pol. (sucrose) loss in bagasse—another index of the efficiency of sugar production—has recorded a fall. The loss of sugar in press cake and the loss of sugar in molasses are also believed to have been reduced. Indeed, it is stated that, on the whole, Indian factories compare favourably with the factories in foreign countries in this respect. Similarly, in the sulphitation factories, consumption of sulphur, filter cloth and lubricants has decreased. The percentage of extra fuel, namely, coal and firewood consumed by the factories has also receded. As a result of the improvements effected in technical efficiency, the quality of sugar now being produced is far superior to that produced several years ago.

This brief account reveals that the research and developmental work on sugar technology done by the Kanpur Institute has been satisfactory. There is, however, still a vast field which needs further and more intensive research. In view of the importance of the sugar industry, which is the second largest industry in the country, and also in view of the need for continuous research in this industry, the research and development wing of the Institute should be strengthened. It is also important to ensure that the results of research undertaken actually reaches the manufacturer at the factory without delay.

Research Work

Viewed thus, it is, indeed, gratifying to be told that the laboratories at the Indian Institute of Sugar Technology, Kanpur, are now well equipped with instruments required for research on sugar and allied products. The Institute is at present carrying out large-scale trials of the new technique of cane juice clarification as applied to mixed juice invented by Prof. J. N. Saha, Professor of Sugar Technology and Director of the Institute. These trials are being conducted in several sugar factories. The Institute is also conducting investigations on the methods of determining micro quantities of sugar by paper chromatographic and colorimetric devices, with the ultimate object of applying to all products of sugarcane. The other important problems on which research work is being done relate to cleaning of evaporator tubes on the steam chest side, physico-chemical studies of surface-active substances, and study on the production of citric acid by the action of Asp. Niger on saccharine raw materials. With regard to molasses, the Institute is examining waste molasses, with a view to reducing matter and nitrogenous bodies by paper chromatography and by analysing the physico-chemical aspects of the exhaustibility of molasses. The research study pertaining to sugarcane covers three aspects, namely, (1) pretreatment of cane sets prior to planting with different carbo-hydrate solutions and its effect on germination yield and juice quality, (2) effect of spraying different fertilisers on cane leaves at different stages of growth on the yield and quality of the harvest, and (3) polysaccharides (plant gums).

In addition to the foregoing research projects, the Kanpur Institute is engaged in the task of analysing the factors responsible for excessive fuel consumption in the sugar factories, with the primary object of making the factories self-sufficient on bagasse fuel only. Yet another field of useful activity is the scheme for extension lectures. Under this scheme, eminent persons are invited every year to deliver a series of two to four lectures on subjects germane to sugar and allied industries.

The Institute collects, compiles and publishes the technical data relating to the working of sugar factories. It also gives technical assistance and advice on various aspects of the sugar industry to mills, private parties, and the Central and State Governments. Among the more important types of work which the Institute undertakes for rendering technical assistance to the sugar industry are promotion of new factories, extensions and alterations of the existing units, improvements in the working of plant and machinery, improvement in and control of manufacturing operations, reduction in working expenses and cost of production, investigation of special problems, and analytical work. The results of the various experimental and research work carried out in the Institute are published every year in the Annual Report of the Institute.

Training Facilities

The Institute provides facilities for imparting training in sugar technology, with a view to meeting the needs of the industry in respect of trained technical personnel. There are three courses of training—associateship in sugar technology, pan boiling and sugar engineering certificate course. The syllabus of these courses is claimed to be exhaustive. Facilities for research are also provided and guidance is given in respect of even advanced research leading to the Ph.D. degree. In order to afford adequate facilities to the sugar factories for selecting properly qualified staff and, at the same time, reduce unemployment among the educated technical workers in the industry, the Institute maintains an Employment Bureau which collects authentic information about the qualifications and experience of persons seeking employment in the sugar industry and makes it available free of charge to the factories on receipt of enquiries.

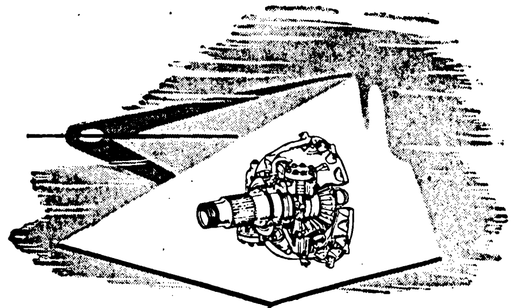
Attached to the Institute are the experimental sugar factory, workshop, Bureau of Sugar Standards (B.S.S.) and the section for research on problems of *gur* and *khandsari* industries. The functions of the B.S.S. are preparation and supply of sugar standards every year, publication of annual review of the quality of sugar manufactured, and maintenance of a museum of samples of sugar and sugar products.

DISTRIBUTION OF IMPORTED SUGAR

The Central Government's decision to distribute imported sugar on *ex*-docks basis at different ports, instead of on f.o.r. destination basis, has evoked criticism at the hands of a section of trade. In the course of a communication addressed to the Secretary, Union Ministry of Food and Agriculture, the Madura-Ramnad Chamber of Commerce, Madurai (South India), points out, for instance, that the new scheme of distribution will entail increase in the cost of sugar "which is not justified by circumstances." To quote it: "The new scheme is full of dangers to the sugar economy, especially from the point of view of the consumer." The Chamber considers that the previous system had been working very well to the satisfaction of all interests concerned. The system, it says, enabled the consumer who is far away from the ports to get his sugar at the same price as at the ports. According to it, with prices fixed f.o.r. *ex*-docks or *ex*-godowns, the transport charges would add to the cost of sugar and there will, therefore, be no uniformity in prices. Besides raising prices, the new system would create artificial scarcity of sugar in certain areas. In view of these, the Chamber urges the Government to continue the previous system of distributing imported sugar on f.o.r. destination basis.

The Chamber also wants the Government to fix the minimum quantity released to any party at 10 tons as before, instead of the present 60 tons. In support of this plea, it observes: "The old level of 10 tons enabled all dealers, big and small, to get sugar and, in the resultant healthy competition, the sale price of sugar was maintained at fairly reasonable levels. Now, with the raising of the minimum limit to 60 tons, small trades would be automatically eliminated and the trade in sugar would be confined to a few big dealers, with the possibility of cornering of stocks and sale price artificially maintained at a higher level, a state of affairs to be devoutly avoided."

A further quantity of 90,000 tons of sugar produced in India has been released for sale in the free market. This brings the total releases so far made by the Government to 30 per cent. of the sugar produced by all the factories up to 22nd January, 1955.



an aircraft is never old

Every component of an aircraft has a service life of its own, calculated at so many flying hours. Before one of them reaches the limit—that is, while it is functioning perfectly—it is replaced by an entirely new part. And after 12 months' flying an IAC aircraft is grounded for complete renovation, when it is taken apart section by section and reassembled with new components. With every part always as good as new, an aircraft is never old.

INDIAN AIRLINES CORPORATION

FUEL RESOURCES OF ASIA AND FAR EAST

INADEQUATE KNOWLEDGE RETARDS ECONOMIC DEVELOPMENT

THAT there is inadequate knowledge about the fuel resources of Asia and the Far East and that, if the economic development of this region were to be assured, steps must be taken to estimate the exploitable reserves of fuel and plan for their mining is abundantly clear. The discussions at the seventeenth session of the Committee on Industry and Trade of Economic Commission for Asia and the Far East (E.C.A.F.E.) on the fuel situation in the E.C.A.F.E. region, to be held in Tokyo from 15th to 24th March, will, therefore, be watched with interest by both Governments and private circles in the region.

It is, however, common knowledge that coal resources of this region are very meagre. Taking the coal in the lowest form (peat) into consideration, all countries of the region have some coal, though the quality and quantity vary. In most countries, low-grade coals predominate. Only China, India, Indo-China, Japan and Korea have some substantial reserves of high-grade coals. Coking coal reserves are, however, limited to China and India. So far as the quantity of coal reserves is concerned, China occupies the foremost position, followed by India, Indo-China and Japan. A conservative estimate made by the Geological Survey of China, including seams of only 3" and over in thickness and taking into consideration a depth of 3,000 ft., places China's reserves at 265,000 million metric tons. A more recent estimate, however, places them at 445,000 million tons. But, in view of the dense population of the region, China has, in terms of *per capita* reserves, only 965 tons, in striking contrast with over 34,000 tons in the U.S. Indo-China has 740 tons per head and India 187 tons. A rough estimate of coal reserves in the various countries of Asia and the Far East is given below:

(In million metric tons)

Burma	265
Ceylon	51
China	444,511
India	67,702
Indo-China	20,000
Indonesia	2,500
Japan	20,948
Korea (South)	1,001
Malaya	61
North Borneo	17
Pakistan	168
Philippines	42
Sarawak	20
Total ..	557,286

Latterly, intensive efforts are being made to exploit reserves of coal, especially lignite, in a number of countries. We are even told that the recommendations of the Study Group of Lignite Experts, which visited lignite mining fields in Australia recently, have already been implemented in several countries of the region including China, Taiwan, Japan, the Philippines and Thailand. There is also a proposal to send a team of mining and geological experts to selected countries in Europe, including the U.S.S.R. to study methods of lignite mining, etc. The U.S.S.R., has already agreed in principle to have the study tour undertaken in 1955 and the proposal is being considered favourably by the United Nations Technical Assistance Commission.

There is no gainsaying the fact that there is a need for a well co-ordinated programme, in every country of the E.C.A.F.E. region, not limited only to intensive geological survey and improved methods of exploration, but also including mining development, preparation and utilisation. Co-ordination between Government and industry in the mineral exploration programme is desirable. Attention should be paid to increased mechanisation of mines, in order to bring down costs of production. As pointed out pertinently by the United Nations' Report on coal and iron ore reserves of Asia and the Far East, published in 1953, no modern underground mines can operate efficiently without proper mechanisation of basic services, such as power house, hoist apparatus, pumping facilities and ventilation equipment. The Report has pointed out that excessive number of separate producing units in relation to the total tonnage produced is a situation which should be remedied at an early date. It has also emphasised the economic value of strip mining.

1916: Goodyear supplied the longest Conveyor Belt for a 735 feet centres conveyor at Zenith Furnace Co.

1920: Goodyear made first vulcanised splice with steam vulcanizer.

1924: Goodyear developed Electric Vulcanizer, eliminating mechanical splice.

1925: Splice Vulcanization enabled Goodyear install the world's longest belt 2,434 feet centres at H. C. Frick Coke Co.

1938: Goodyear supplied the world's longest belt installed at Grand Coulee Dam with 4,745 feet centres.

1940: Goodyear installed belts for world's longest over-land conveyor system at Shasta Dam; Conveyor length 9.6 miles.

1948: Goodyear supplied second longest over-land conveyor system at Bull Shoals Dam. Conveyor length approximately seven miles

1949: Goodyear installed world's longest single flight Conveyor Belt of steel cable construction, total length of conveyor 10,960 feet centre to centre at Walston Coal Company's Mine, West Virginia.

1950: Goodyear installed world's highest single flight lift belt for Chicago-Wilmingdon & Franklin Mine — total lift 868 feet.

1954: Goodyear developed and installed first Speedwalk belt at Hudson & Manhattan Railroads, Etre in Jersy City to unload and load 10,800 people per hour commuting to and from the city.

We are pleased to announce that in accordance with Goodyear's world wide expansion policy, we can offer you conveyor belting manufactured in India in the quality that is expected of a product bearing Goodyear's name.

IMPROVING QUALITY OF JUTE

I.C.J.C.'S WORK IN 1953-54

THE Annual Report of the Indian Central Jute Committee for the year 1953-54 gives, as usual, an interesting account of the good work that is being done by the Committee. The main responsibility that has devolved on it, following the disastrous consequences of the Partition to the jute industry, is to improve the quality of raw jute and increase the yield of this jute per acre, so that the minimum area of land the country can afford to leave at the disposal of jute might be utilised effectively and usefully. Although the successful discharge of this responsibility rests on the various wings of this body such as the Jute Agricultural Research Institute, the Technological Research Institute, the Economic and Marketing Research Section and the Publicity Branch, the report under review provides evidence of continued efforts at attaining the chief objective.

Work in the Jute Agricultural Research Institute proceeded apace especially in connection with the schemes already under implementation. During the year an area of 55 acres out of 101.4 acres of the Institute's farm was under cultivation. Besides jute, other crops, including substitute fibres, were grown in the *kharif* and *rabi* seasons in connection with studies in crop rotation, double and triple cropping and pests and diseases. A model scheme for the improvement of green manuring crops was taken up. Besides, a pilot scheme on extension of improved methods of jute cultivation of cultivators' plots at Barrackpore, Baraset and Basirhat centres was also taken up. The Government of India sanctioned Rs. 4,48,189 for setting up a seed multiplication farm under the Institute. As the land selected could not be made available in time, the farm could not be started.

Research work carried on in the Institute related to diseases and pests, soil studies, manuring and extension work on improved methods of jute cultivation.

On the technological side, the results of further work on the mechanism of the root softening process with ammonium phosphate supported the earlier theory. Some details have also been worked out of the process of woollenisation of jute fibre. The rough estimate of cost has come to about a rupee per pound of woollenised jute in the finished-air-dry state. A number of mill trials given to the fibre is stated to have revealed encouraging results. Some progress has been made in devising a method for the accurate determination of fineness of jute fibre. The results are reported to be fairly satisfactory, but the method adopted consumes, we are told, a good deal of time.

The Planning Commission entrusted to Mr. K. C. Basak, Director of Economic Research, an enquiry into the economics of farm management in the 24-Paraganas and Hooghly Districts of West Bengal. This enquiry will be conducted by him for about two years.

The investigation into the economics of jute growing completed its sixth year in 1953-54. It is interesting to note that the average cost of production of jute at the five centres of investigation—Belakoba, Purnea, Monoharpur, Nowgong and Kendrapara—was about Rs. 18 per maund in 1953-54, as compared with about Rs. 22 per maund in the previous season. The reduction in the cost was due to the lower wage rates and slightly higher average yield rate. With costs thus reduced and prices realised going up by about Rs. 2 per maund, jute cultivation in 1953-54 was considered generally profitable, though the disparity between jute and rice prices still adversely affected the jute growers as buyers of rice or paddy. Nevertheless, their position was somewhat better since parity ratio of jute and rice prices was in favour of jute growers in 1953-54 than in 1952-53. We may add here that in 1954-55 raw jute prices (Assam bottoms now ruling at about Rs. 38 per maund) are very much in favour of the jute grower. As was pointed out in these columns last week, the grower is now in the happy position of being able to purchase about three maunds of rice for every maund of jute.

The work on improved methods of jute cultivation at the five investigation centres was very much affected by the adverse weather conditions. However, the comparative results of improved, as against the traditional, methods were in favour of the former. The operation of the seed-drill was on the whole satisfactory. Only, seed rate should be regulated further, so as to make it suitable for the cultivator's plots. It was also found that the wheel hoe required further improvement, as the present one could not be operated in soils which are moist and full of weeds. The report observes that "the yield can no doubt be increased and cost reduced by improved methods in fair weather, but further research seems to be necessary for evolving methods that will attain the desired objective also in adverse weather so very common in our country."

The year 1953-54 opened, for raw jute, with a declining price trend which was temporarily halted; but it asserted itself again in September and October. Thereafter it improved and the improvement persisted upto February, 1954. After a pause in that month, the upward course continued in March and April, owing to drought conditions. On reports of larger sowings, however, a quiet trend was in evidence in the last two months of the season.

It will not be out of place to mention here the Indian Central Jute Committee's new scheme launched this season (1954-55) for educating growers in jute grading. This scheme is in operation in West Bengal, Bihar, Assam, Orissa and U.P., and has dual objectives, namely, teaching cultivators the know-how of grading and imparting to them a sound knowledge of the preparation of clean good fibre. The object of the grading scheme is to enable growers to prepare a good fibre and to place them in a better bargaining position to sell their jute.

The grading scheme is being worked in close collaboration with the jute development personnel of the States. It is also intended to expedite the Centre's plan for getting growers to realise the economic benefits of quality improvement. The Central and State Governments have been expending considerable funds with a view to creating conditions necessary for increasing internal supply of high grade jute by excavating new retting tanks and renovating old ones by multiplying seeds of high-yielding strains and by popularising improved cultivation methods and cultural practices with seed-drills, wheel-hoes, etc. The scheme is intended to take advantage of the work being done by the Central and State Governments.

All the five jute-growing States have been allotted itinerant grading parties consisting of expert assorters. Already thousands of propaganda leaflets in different regional languages explaining the direction and purpose of the scheme have been distributed among growers, and demonstrations have also been held. The grading parties are to select some central villages as their temporary headquarters, wherefrom they cover other neighbouring villages. Assortment will be taught on the basis of existing mill standards. Each grower's jute will be handled at a time and graded separately. In this process, the principal factors that go to constitute different mill grades as also the common faults found in jute will be demonstrated. The growers will be told the difference in price between the various grades and to sell jute on the grade basis. The scheme is thus expected to improve the earnings of jute growers.

MADRAS AGRICULTURAL INCOME-TAX

SELECT COMMITTEE'S RECOMMENDATIONS

THE Select Committee, to which the Bill to levy income-tax on agricultural incomes from plantations in the Madras State was referred by the Madras Assembly in August last, has submitted its recommendations, after deliberations prolonged over a period of six months. The Committee has made an important recommendation on the levy of income-tax on individual incomes, joint family incomes and company incomes, in that no distinction has been made among them so far as rate of duty is concerned. It has suggested that a uniform rate of tax should be levied on all these classes of assessees. It has raised the number of slabs of income on which a sliding scale of tax is leviable from six to seven and has also raised the maximum rate of income-tax from As. 4 to As. 5½ in the rupee. While thus raising the maximum rate of income-tax, the Select Committee has recommended the abolition of the levy of super-tax as contemplated under the Bill. The Committee has also suggested the abolition of land revenue surcharge on plantations.

The following comparative table will bring out clearly the changes in the rates of income-tax applicable to different slabs of income:

(On every rupee of the total agricultural income)

As proposed in the original Bill	As. Ni	*As recommended by the Select Committee*	As. Ni
On the first Rs. 1,500 ..	Nil	On the first Rs. 1,500 ..	Nil
On the next Rs. 3,500 ..	2	On the next Rs. 3,500 ..	2
,, Rs. 5,000 ..	1½	,, Rs. 5,000 ..	1½
,, Rs. 5,000 ..	2½	,, Rs. 5,000 ..	2½
,, Rs. 5,000 ..	3½	,, Rs. 5,000 ..	3½
On the balance ..	4	,, Rs. 5,000 ..	4½
		On the balance ..	5½

Under the original Bill, no agricultural income-tax was payable on a total agricultural income which was less than Rs. 3,000. In the case of joint family, the limit below which no tax was leviable was Rs. 6,000. The Bill had also provided that, in the case of every company, agricultural income-tax was payable at the maximum rate of As. 4 on the whole of the total agricultural income. A super-tax was also leviable, if the income exceeded Rs. 25,000. The Select Committee has not only removed the above exemption limits but has abolished the levy of super-tax, although it has raised the maximum rate of income-tax from As. 4 to As. 5½ in the rupee.

Although the above exemption limits have been removed, the Select Committee has taken care to give relief to small holders of plantations. Thus, it has proposed to exempt holdings of five acres in respect of tea and of 15 acres each in respect of rubber, coffee, cardamom and cinchona plantations from the payment of any income-tax. It has also provided for the compounding of income-tax on an acreage basis for the different plantation crops on the following basis, the assessee having in the alternative the option to submit the return and have the assessment fixed:

Tea: 5 to 10 acres, Rs. 10 per acre; 10 to 20 acres, Rs. 15 per acre. Rubber, coffee, cardamom and cinchona: 15 to 30 acres, Rs. 3 per acre; 30 to 60 acres, Rs. 5 per acre.

Another important recommendation of the Select Committee is the removal of differentiation made under clause 3 of the Bill in respect of joint families. It has suggested that such families should be treated as one unit for purposes of taxation. The aforesaid clause provides that in the case of a joint family whose income exceeds Rs. 6,000, the tax should be assessed at the average rate applicable to the share of income due a single member or to Rs. 6,000, whichever is higher. The Committee says that the dividend received by an individual from a plantation company cannot be treated as plantation income and, therefore, cannot be made liable for agricultural income-tax under the Bill. It is only collectively on a company that the State can levy a tax under the Bill. If a company can be treated as one unit, the Committee sees no reason why a joint Hindu family should not be treated as a single unit for purposes of this tax.

The Select Committee has also made some important recommendations on the computation of total agricultural income. In computing such income, it has suggested that provision should be made for deducting also the interest paid on the amount borrowed for current expenditure and the bonus paid to workers. The Committee has also recommended that deduction should be allowed for replanting expenditure, subject to a maximum of 2½ per cent. of the

(Continued in previous column)

(Concluded from next column)

acreage for rubber and coffee, 1¾ per cent. for tea, 8½ per cent. for cardamom and 10 per cent. for cinchona. A proviso has also been added by the Select Committee to the effect that no depreciation would be allowed under this Bill, if any depreciation is allowable under the Income-tax Act.

Yet another recommendation made by the Select Committee is in respect of land revenue payable by those who are liable for agricultural income-tax. The Bill did not exclude plantations from the purview of the Madras State Land Revenue Surcharge Bill of 1954. The Select Committee has felt the necessity for removing such an anomaly and has, accordingly, added a clause to the Bill which provides that where a landholder is liable to pay land revenue both in respect of a plantation and land which is not a plantation, surcharge under the Bill should be levied only on the land revenue payable in respect of such land, but at the average rate applicable to the aggregate of the land revenue payable in respect of such land and such plantation. In cases where a person owns only plantations, the Committee has recommended that he should be exempt from the payment of surcharge on the land revenue payable on plantations.

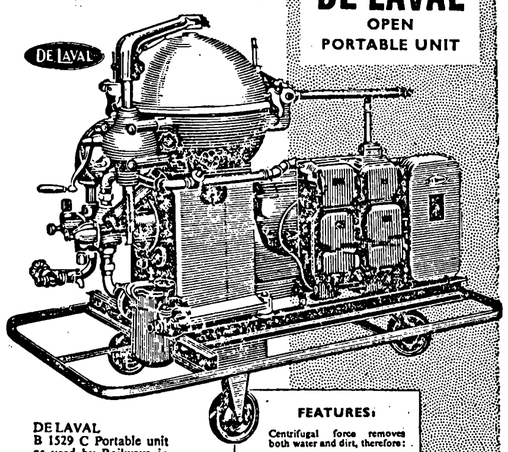
PURIFY TRANSFORMER OIL
in safest and easiest way by Centrifugal Separation with
DE LAVAL
OPEN
PORTABLE UNIT



DE LAVAL
B 1529 C Portable unit as used by Railways in this country.
FEATURES:
Centrifugal force removes both water and dirt, therefore:
1. No vacuum required for boiling off water, and no dependency on maintenance of vacuum pumps.
2. Separation can take place at a comparatively low temperature as high oil temperature is not essential for removal of water.
3. Always constant separating efficiency.
4. Filter material not required.
De Laval Separators also available for lubricating oil, diesel fuel oil, vanaspati factories, power alcohol distilleries, starch and a number of other industries.
THE SKF BALL BEARING CO., LTD.
De Laval Industrial Separator Section, P. O. Box 71, Bombay

INDO-SOVIET PACT ON STEEL PROJECT

ONE-MILLION-TON PLANT TO BE SET UP

ALL eyes the world over are set on the agreement entered into on the 2nd inst. between the Government of India and the Union of Soviet Socialist Republics for the setting up of a modern integrated iron and steel plant with an initial capacity of 1,000,000 tons of ingots, equivalent to about 750,000 tons of rolled products, and ultimate capacity of 1,000,000 tons of rolled products. For this is the first time that the Soviet Union has ventured to aid a non-communist country with its capital and technical know-how. It is stated that an attractive feature of the agreement is the low interest rate of 2½ per cent. at which Russia is prepared to give credit to India for purchasing the equipment needed from it and for technical aid. The agreement is not, according to Mr. K. C. Reddy, Union Production Minister, "in the nature of a turn key job, throwing the entire responsibility for the establishment of the plant on the Russians." The Indian authorities have an equal responsibility to perform in bringing the factory into existence. India has reserved for itself the right to reject the final project report, if it is not satisfied in regard to price or any other aspect. This, however, is a provision, in the opinion of Mr. Reddy, for meeting a "remote contingency" for every effort would be made to resolve points of difference.

It will be recalled that the Russian steel experts team, which arrived in this country in the later half of November, 1954, submitted a preliminary report early in January, 1955, together with its recommendations for the location of the new steel plant. The preliminary project report outlines the general, technical and economic considerations underlining the project, reserving the more detailed questions for further study and treatment in the final project report, which is to be submitted in another nine months' time. In the meantime, in accordance with the recommendations made by the experts, the Government of India has decided to locate the steel plant in Bhilai in Madhya Pradesh State.

Analysis of the Agreement

An analysis of the text of the agreement discloses that the two Governments have agreed to collaborate in establishing the plant with a capacity of 1,000,000 tons of steel ingots with the following general pattern of products, with provision for expansion to a capacity of 1,000,000 tons finished products, besides 100,000 to 300,000 tons of foundry pig iron for sale:

		Tons
(1)	Rails	100,000
(2)	Heavy structurals including, if possible, broad-flanged beams upto ...	175,000
(3)	Sleeper bars and crossing sleepers	90,000
(4)	Merchant bars	235,000
(5)	Billets	150,000
	Total	750,000

It is estimated that the cost of the plant, machinery and equipment that will be supplied by Russia will be about Rs. 43.40 crores f.o.b. Black Sea and Baltic Sea. Notwithstanding any such estimate, the actual price will be determined by mutual negotiation and agreement. The plant and equipment to be supplied from the U.S.S.R. are to be paid for in 12 equal annual instalments. The rate of interest on the amount outstanding each year will be calculated at 2½ per cent. per annum. The payment is to be effected in Indian rupees to be paid into a special account opened for this purpose in the Reserve Bank of India. The amounts thus credited to this account may be utilised for the purchase of goods in India and/or to be freely convertible into pounds sterling. If the parity of the Indian rupee (0.186621 grammes of fine gold per one Indian rupee) in terms of gold changes, the amount of the abovementioned account with the Reserve Bank of India will be revalued proportionately to the changes which may take place. This part of the agreement covers Russia against the risk of fluctuation in the official exchange value of the rupee. The price payable to plant and equipment are to be negotiated on presentation of the final project report.

India has agreed to pay for Soviet services, including those relating to the drawing up of the detailed project report, communications within the works boundary, power supply, gas supply, water-supply, buildings and foundations and erection drawings and spare part drawings for the machinery and equipment, the sum of Rs. 2.5 crores. This sum will be payable as follows: (1) On submission of the detailed project report Rs. 35 lakhs; (2) on acceptance of the detailed project report Rs. 45 lakhs; (3) annual payment thereafter for four years Rs. 120 lakhs; (4) on commissioning of the works and completion of guarantee Rs. 50 lakhs. The cost of the salaries, travelling and other allowances and expenses of the Soviet personnel for rendering the technical assistance and supervision in India will be determined additionally according to the number of Soviet specialists required and the period of their work in India.

There is provision for full association of Indian experience and talent at all the stages of planning, construction, erection, operation and other matters related to the execution of the project. The Soviet authorities have agreed to prepare a scheme for training Indian nationals. They will also provide qualified instructors at suitable centres of training in India, as well as in the U.S.S.R., for training under that scheme Indian personnel selected by Indian authorities for the operation and maintenance of each department of the works and, in particular, afford such training in works where the plant and equipment of the type selected for the works are in use. The question of the payment of the cost of such training will be decided by mutual agreement after the cost has been determined. The Soviet authorities will make available in India and the U.S.S.R. such number of experts as may be mutually agreed upon from time to time.

Visits By Indian Experts

There is a provision for visits by Indian experts to the U.S.S.R. to examine plants of a nature similar to the one to be set up in India which are in operation as well as factories manufacturing metallurgical equipment. The latest reports from New Delhi disclose that the Government of India has already deputed Mr. Sondhi, an officer of the Geological Survey of India, who is now in the Soviet Union, to visit some of the Russian steel plants and have a "look round them." He is expected to study the various plants connected with the processing of raw materials for the blast furnace and particularly sintering plant.

The Soviet Union will guarantee that the performance of the plant, machinery and equipment supplied from the U.S.S.R. will be according to their respective stated capacities. The guarantee will be fulfilled by the operation of each individual item of the plant, machinery and equipment for a period of two months as well as by the integrated operation of the complete works for a minimum period of six months. Both the above kinds of trial operations will be conducted under the technical supervision of the Soviet experts. Should the guarantee be not fulfilled to the satisfaction of the Indian authorities, in accordance with the accepted detailed project report and the contracts for the supply of the plant, machinery and equipment (the Indian authorities may for this purpose obtain such technical advice as they consider necessary), the Soviet Union will undertake at its own cost to correct the defects pointed out or to replace such plant or machinery as may be found unsatisfactory, or alternatively, reimburse the Indian authorities the cost of such rectification or replacement as the case may be.

The Soviet Union will post at its own cost a sufficient number of experts for a period up to three years after the works go into full operation for rendering such technical supervision and consultant services as may be required by the Indian authorities. The number of such experts shall be decided by mutual agreement from time to time.

Should any existing patent or other right subsisting in respect of any of the items of the plant or machinery supplied by the Soviet Union or made according to specifications provided be deemed to have been infringed in any part of the world and should any civil suit or action result therefrom, the Soviet Union would indemnify and keep the Indian authorities sufficiently indemnified against any claims, demands or liabilities arising therefrom. All costs, charges and expenses on account of such proceedings shall also be borne by the Soviet Union.

If the performance of this agreement were to be interfered with for any length of time by wars, enemy action, embargoes, blockades or any other cause beyond the reasonable control of either party, the representatives of the Government of India and the Government of the U.S.S.R. would immediately consult with each other and agree upon the action to be taken. If such agreement could not be reached within a reasonable period, the Indian authorities might complete the project and the works in such a manner as may be deemed necessary and, in such an event, the rights and liabilities of the parties arising under this agreement till then would remain in force.

The Government of India has reserved for itself the option of accepting, or otherwise, the scheme outlined in the final project report. In case the detailed project report is not accepted, India will have to pay the Soviet authorities all expenses in connection with the preparation of the project report, subject to a maximum of Rs. 80 lakhs.

With the conclusion of this agreement, further headway has been made towards the implementation of the Government's policy of creating a productive capacity of 6,000,000 tons of steel during the second Five-year Plan. The present output is 1,200,000 tons and, when the existing expansion programmes of the Tata Iron and Steel Works, the Steel Corporation of Bengal and the Mysore Iron and Steel Works are completed, it will be 2.3 million tons. But India will be short by nearly 4 million tons more to reach the target of 6,000,000 tons. For this, the Rourkela plant is proposed to be expanded straightaway to 1,000,000 tons capacity. The British, who have offered help for a third plant, have been contacted and invited to send a team of technical experts to India; this team is expected to come in March or April next. If the negotiations for the third project were to prove a success, India will be assured of another 1,000,000 tons. Besides, Tatas have proposed to expand their capacity by another 1,000,000 tons of steel ingots. All these will raise India's output of steel to 6,000,000 tons.

EXPLORATORY TUBE-WELL PROGRAMME

The execution of the project of the Government of India for sinking 350 exploratory tube-wells in 16 States throughout the country has begun in the Narmada valley. The first batch of drilling equipment consisting of six rigs of various types, some of which can drill up to a depth of 1,500 feet, has arrived in India and been taken to the valley. The project is being operated by the Government of India departmentally under the Indo-American Technical Assistance Programme and work is likely to be completed by 30th June, 1957. Large-scale tube-well construction in these areas under the second Five-year Plan will depend upon the results and data obtained under this programme. The operations which will cover 16 States throughout the country, started on 7th January this year in the Hoshangabad District in Madhya Pradesh in accordance with the predetermined geophysical observations and the recommendations of the Geological Survey of India. Water-bearing sands at the first bore, made at village Power Khera in the Government Agricultural Farm, were found at a depth of 48 feet and a discharge of 16,000 gallons per hour was obtained at a depression head of nine feet. After drilling up to 119 feet, hard rock was met and further drilling had to be stopped on receiving confirmation of continuity of hard rock below that level. This tube-well will be utilised by the State Government for supplying water to the State Farm and other adjoining areas. The drilling operations at village Samal Khera, about ten miles from the first site, have now started. Equipment worth 7.5 lakh dollars has so far been received and the balance equipment likely to cost another 15 lakh dollars is proposed to be procured on an emergency basis.

BURMAH-SHELL REFINERY GOES INTO PRODUCTION

The crude distillation unit, the second biggest unit in the Rs. 30-crore Burmah Shell Refinery and the main hub of refining operations, went on stream on 30th January, one year ahead of schedule. The first critical moments of the start-up operations in the refinery are now past and initial supplies of the product have begun to flow from the Refinery to the marketing installations. The crude oil intake capacity of the plant in the initial stages will be about 5,000 tons per day. The unit will be producing such petroleum products as raw kerosine for further refining, gasoline for motor spirit, high speed diesel oil, light diesel oil and furnace oil for India's immediate needs. The total output of the two Bombay Refineries, when in full production, will be about 773 million gallons per annum. The Burmah-Shell Refinery alone will produce about 475 million gallons per annum, which is more than 60 per cent. of the refining capacity of the two Bombay refineries, and over 50 per cent. of the total estimated refining capacity of all the three new Refineries which by 1957 are expected to be on full stream. The three refineries, together with India's oldest refinery at Digboi, Assam will meet about 80 per cent. of India's requirements of petroleum products. It will be remembered that the initial planning and investigation work for the refinery began in 1952, and, despite early difficulties, the 450-acre site, consisting of waste and arable land, was acquired in 1953. After clearing and levelling of the site, construction work on the distillation unit was taken in hand in April of the same year, and, by the end of 1954, nearly 20 months later, the major part of the construction work for the whole project was completed.

NEW PRODUCTS AND PROCESSES

New Hearing Aid Mounted in Eyeglass Frame

PEOPLE who are hard of hearing and don't like to admit it can now wear eyeglasses which have a hearing aid concealed in the frame. This new hearing aid was recently put on the market by Otarion, Inc., of Dobbs Ferry, New York. The device contains all the 200 or more parts found in a conventional large-size hearing aid. These are assembled in the eyeglass frame. The microphone is placed inside the frame directly behind the ear. The glasses look like a set of normal spectacles. The device contains two transformers, a special electronic circuit that controls sound, a volume control, and three tiny transistors. Transistors are small pea-size devices containing a small particle of the metal germanium, which are now being widely used in place of vacuum tubes.

Instruments for Physics Demonstrations

It is not only very costly, but also rather inefficient for schools to purchase a complete set of separate instruments for all their physics demonstrations, as most of these only take place a few times a year. The fact that many instruments have, or at least can have, many parts in common, has induced a concern in Amsterdam to manufacture a series of standard parts, which can be built up to complete instruments in a simple manner. The parts are simple, strong and produced in standard sizes and can be assembled without any tools. This build-up set is supplied in five designs: the *Junior* for teaching at elementary and trade schools; the *Standard* for higher-grade elementary education and comparable specialised schools and three *Senior* equipments for university and secondary education and for technical schools. A patent application has been filed.

Parking Meter

A novel type of parking meter is shortly to be launched on the market by the L.M. Ericsson Co., Sweden. Its design is claimed to embody several improved features in comparison with the American types now used in Sweden and the meter has been adopted by the City of Gothenburg for all time-paid parking lots. It is also to be installed on several lots in Stockholm. Being of the conventional two-hour model, the Ericsson parking meter has only one slot, which can be used for either of the three current types of silver coins, namely, 25 öre, 50 öre and 1 krona. The last few coins dropped into the slot are visible in a special window, which makes it possible immediately to detect whether counterfeit coins have been used, while, in addition, faulty or worn-out coins are automatically returned. Another feature is that the clock movement and the time indicator do not stop as soon as the time is out. After the red flag has appeared on the scale, it continues to move for a further ten minutes. This will help parking guards or policemen and make it difficult for drivers to maintain that "the time was out just a few seconds ago."

New All-purpose Footwear

A new type of all-purpose footwear for use by the Swedish soldier is the result of many years of experimenting by the Army's commissariat. Henceforth, two pairs of the new boots will be issued to each soldier instead of one pair of marching boots and one pair of ski boots. The new type combines the features of a flat ski boot with springiness for marching, and it has been designed to give the soldier a chance of wearing the two pairs alternatively. Previously, a conscript having started wearing one type of boots often found them comfortable, kept on using them till they were worn out and then took to wearing the other type. Thus, the purpose of supplying two different kinds of footwear was defeated. For use on leave, the Swedish soldier is issued with shoes that are measured for width as well as for length, each army unit having measuring apparatus available. Each soldier will also be supplied with a pair of crêpe rubber reinforced boots of a type that has been found very useful on manœuvres in soggy terrain.

New Battery Process

An Australian company, Wessberg and Tulander Pty. Ltd., which has been specialising in the manufacture of industrial drying and baking ovens, has installed a wicket oven in its plant at Sydney for treating zinc sheets for incorporation in locally-made batteries. This class of manufacture has not been attempted in Australia, before, and involves the coating of carbon, to a pre-determined thickness, on to the zinc sheets. The carbon is mixed with thermosetting material, and adhesion to the sheets is obtained by the heat treatment from the oven. Only thin coats can be applied so that each sheet must be passed through the oven several times to build up the required thickness. The special type of oven is gas-heated, divided into four heating, and two cooling zones. Fans in each of the heating zones circulate air upward through the wickets to the roof, and then downward to the heating chamber so that the heating of the sheets from top to bottom is very even. The final cooling is obtained by a vertical axial flow fan, blowing through the wickets to a discharge flue leading through the factory roof.

Germs Control Typhus Fever

Some 150 volunteers in the United States and more than 8,000 persons in Peru have now been given "shots" of living typhus fever germs to vaccinate them against the disease. This new vaccine gives protection for at least two years and "neither deaths nor truly serious reactions" are to be expected. The results of trials of the new vaccine were announced by Dr. John P. Fox of Tulane University, New Orleans, at a recent meeting of the American Public Health Association. It is stated that none of the persons treated with living typhus fever germs developed typhus fever, even when given doses of typhus germs big enough to cause typhus fever in unvaccinated persons.

LLOYDS BANK LIMITED

SIR OLIVER FRANKS REVIEWS POST-WAR PROGRESS

THE Annual General Meeting of Lloyds Bank Limited, will be held on 18th February in London.

The following are extracts from the statement by the Chairman, The Right Hon. Sir Oliver Franks, G.C.M.G., K.C.B., C.B.E., accompanying the report and accounts for the year 1954:

"The profit for the year, at £2,186,072, is £102,291 higher than last year. The down-turn in advances, to which reference was made a year ago, has been replaced by a gradual increase throughout the year which, together with the increase in our holdings of British Government securities, has offset to some extent the effect of the fall in interest rates following the reduction in Bank Rate. Business activity has remained at a very high level during the past twelve months and this has improved our earnings in other directions; on the other hand, staff and other expenses continue to increase, a factor which must make for caution in any estimate of future profits.

"A year ago, we were able to increase the dividend on the "A" shares by 2 per cent.; we propose for 1954 a further increase of 1 per cent., making 15 per cent. for the year. We also propose the capitalisation of reserves to the extent of £3,593,239 for the purpose of paying up 5s. per share on the "A" shares of £5 each £1 paid, making the shares £1 5s. paid up.

"In order to dispel any uncertainty in the minds of shareholders, we have already announced our intention to recommend in due course that the dividend on the "A" shares for the current year, subject to maintenance of the Bank's profits, should be at the rate of 12 per cent. per annum on the shares in their new form, being the equivalent of 15 per cent. on these shares in their present form.

"Current, deposit and other accounts show an increase of £41 million and on the assets side loans and advances are up by £12 million and investments by £14 million.

Changes Since 1938

"I feel sure that it will interest you, as shareholders, if I devote my first annual statement to discussing some of the ways in which the Lloyds Bank of today differs from the Lloyds Bank of pre-war days, and say something about the problems the Bank has been having to face.

"Our share of the total deposits of the eleven London clearing banks, or of the five larger banks, is slightly higher today than just before the war. But a large expansion in our resources, when it reflects a general inflationary movement, is by no means the unmixed blessing it is often assumed to be; it can create real problems in our internal finances.

Growth of Activities

"Last year, movements of cash between our various offices totalled £500 million, apart from movements of cash between our own and other banks. In silver alone, we handle over our counters about £100 million (or over eleven thousand tons) a year. While our deposits have about trebled since 1938, the monetary turnover passing through our books has quadrupled; cheques drawn by customers on their current accounts now amount to some £34,000 million a year.

"Since before the 1914 war there has not been a single year in which the number of current accounts has failed to expand. We are today conducting about 2½ million accounts of all kinds, of which two-thirds are current accounts.

Branches in India, Pakistan and Burma

"In spite of the far-reaching political changes in their part of the world, the Eastern branches can show a similar record of growth. Before the war a large part of their business was concerned with the accounts of British personnel in Government offices and the Armed Forces. Most of these accounts have been closed, but a new business has been built up to take their place. The present number of accounts is almost three times as large, and deposits are more than five times as large, as in 1938.

"Basically, the business we conduct is that of an exchange bank and is concerned with financing the movement of commodities in world trade. We have, nevertheless, taken our share in providing finance required for the industrial development of all three countries in which we operate, and have done this not only by making advances directly to private enterprise but also by participating in Government-sponsored ventures.

Credit Expansion

"I pointed out earlier that the threefold expansion in deposits since 1938 is not an unmixed cause for self-congratulation. An expansion of credit on that heroic scale is bound to be associated with a rise in the general price level and this affects the Bank in more than one way.

"If prices rise, our expenses are bound to rise too, though not necessarily in exactly the same ratio. Since 1948 retail prices have risen by some 33 per cent., a percentage increase three times as great as that in our deposits. The combination of more or less stationary deposits with steeply rising costs was calculated to reduce our earnings. But, as things have turned out, the downward pressure on earnings was mitigated by the rise in short-term interest rates which followed the return to more flexible monetary policies in 1951.

"But it is not through its incidence on operating expenses alone that a rising price level affects our finances. For example, there is the problem of pensions. It is obviously desirable that the pension funds should be progressively strengthened so that they can take care of our future pensions liabilities. The Bank has taken action to this end and it is an expensive matter.

"Similar problems arise in connection with the Bank's capital and reserves. Obviously, the great growth in our deposits since before the war does not call for a commensurate increase in our capital resources, since for the most part the additional deposits have had their counterpart in Government obligations. It is different with our lending to the public. The Bank has a vital role to play in the national economy and in fulfilling that role we take, as is proper, normal commercial risks.

Need for Strong Reserves

"Given the growth in our figures, something more has been needed than the additions to our published reserves, and throughout the period the increase of the internal reserves has continued to be a priority for us.

"I hope that I have shown that the Bank recognises its obligations to the various sections of the community with which it has dealings and does its best to meet them. For our customers we provide a first-class banking service at a reasonable cost. In the last two years we have been able to raise the payment to our shareholders, many of whom are themselves among the worst sufferers from rising prices. Within the limits set by our earning capacity, in competition with our rivals, we have been able to give both to the active and to the retired staff some relief against successive increases in the cost of living. But our over-riding duty is, and must always be, to maintain the strength and the stability of our great organisation."

TAX RELIEF FOR PREMIUMS

NEED FOR RAISING PRESENT LIMITS

IN India, as in certain other countries, the income-tax law provides for relief in respect of contributions to provident fund or of premiums on the policies taken out by the assessee. This relief, as is well known, is limited to one-sixth of income, with a maximum of Rs. 6,000 in the case of an individual and Rs. 12,000 in the case of a joint Hindu family; the rebate is allowed for only income-tax and not for super-tax. From time to time, the interests concerned have pointed out that the relief is inadequate and have accordingly pleaded for more liberal relief. This plea gains additional support through the findings of the Association of Indian Trade and Industry which studied the systems of income-tax in different countries and their comparative incidence and published its findings in a publication referred to in our last issue.

At the outset, it would be useful to set down briefly the quantum of relief from tax granted in different countries for premium payments. The following are details of such reliefs:

U.K.: An allowance of two-fifths of premiums paid, with a maximum allowable premium at one-sixth of the total income—the rebate allowed on income-tax and not on super-tax; *Pakistan*: allowance of premiums and contributions to provident fund upto one-fifth of income, with a maximum of Rs. 11,530 (P. Rs. 8,000) but not for super-tax; *Ceylon*: nil; *U.S.*: nil; *Canada*: contribution to provident fund allowed with a maximum of Rs. 4,434 (C.$900); *New Zealand*: allowance of 15 per cent. of income, with a maximum of Rs. 2,337 (£175); *Australia*: allowance of insurance premium and contributions to provident fund, with a maximum of Rs. 2,146 (A£200); *South Africa*: deduction from normal taxes given at the rate of 1s. 3d. per £ of premium paid, or subscriptions to sickness fund, etc., or contributions to unemployment fund, with a maximum of £7 10s.; *Japan*: premiums on policies for the family upto Rs. 106 (yen 8,000) deductable; *Norway*: premium upto Rs. 200 (Kr. 300) for an individual, and Rs. 333 (Kr. 500) for an individual with dependents; *Israel*: tax credit of 23 per cent. (40 per cent. in the case of taxpayers who maintain children) of the amount paid, upto 20 per cent. of the taxpayer's income, with a maximum of Rs. 2,671 (I.£200) plus 12½ per cent. (20 per cent. in the case of taxpayers who maintain children) of the excess upto 15 per cent. of the taxpayer's total income—tax credit also granted on approved long-term savings deposits.

When these provisions are studied, it might appear at first sight that the relief for payment of premiums, granted in this country, is by no means small. But such a conclusion would be wrong. In the first place, the quantum of relief granted in this country does not take into account the fact that the habit of insurance is not as widespread as in other countries and that insurance, therefore, deserves a certain special consideration. Secondly, in other countries there are, besides the relief for premium payment, special allowances, such as allowances for dependent relations and medical relief allowance, whereas there are no such allowances in this country. Also, the State itself provides old-age pensions and other forms of social security. If the tax relief for premium payments granted in this country is set against the background of the absence of a nation-wide system of social security and of special allowances, it will be seen that the relief is by no means a generous one.

In the U.K., for instance, where the relief for premium payments is practically the same as in this country, there is a free health service, and provision for "dependent" allowances which consist of Rs. 1,202 (£90) for wife, Rs. 1,135 (£85) per dependent child and Rs. 801 (£60) per dependent relative or housekeeper. Such special reliefs are not available in this country. In New Zealand and Australia, where the relief for premium payments is less than in India, both free medical service and old-age pensions are provided by the State. Nevertheless, some rebate in tax is granted for old-age pensions and medical relief in Australia and for provision against old age in New Zealand.

In sharp contrast to the practice in other countries, dependent, infirmity, old-age and medical allowances are not available in India. Only personal allowance, insurance rebate, earned income relief and allowance for contributions to approved charities are provided by the tax system in this country. There are thus no family and dependent allowances in India. This state of affairs is particularly deplorable, because "large families are common and tradition requires earners to support non-earning relatives." Because of the absence of these allowances, a married person with two children, having an income below Rs. 9,000, it has been computed, has to "pay more tax in India than in any other Commonwealth country and the U.S.A." Considering these special circumstances, it is, as the Association rightly suggests, certainly worthwhile to examine the need for introducing in India allowances for dependents, medical relief and investments in approved undertakings and also for "increasing allowances for earned relief, life insurance premia and other forms of savings and contributions to charity."

The need for raising the present limit of relief for premium payments is particularly urgent, because the limit was fixed in pre-war years when the cost of living was very much lower than what it is today. It is this consideration which prompted the Indian Life Assurance Offices Association to plead for raising the limits to one-fifth of the income with a maximum of Rs. 10,000 for an individual and Rs. 20,000 for joint Hindu family. The increased limits suggested by the Association would, if conceded, provide the incentive for the upper middle class to effect savings by investing more sums in the purchase of life insurance policies. This would, in its turn, make available larger funds for investment in Government securities and approved securities and in the nation-building activities. Thus, any slight loss in revenue, which the Government may have to suffer through an increase in the tax-exemption limits for insurance premium, will be more than made good in other ways.

HEALTH INSURANCE IN BOMBAY

A conference of representatives of all the interests concerned with the working of the Health Insurance Scheme in Bombay was held early this year, in order to review the progress of the Scheme and also to consider the complaints of some defects in its working. The Minister for Health and Labour, Mr. Shantilal Shah, who presided over the Conference, agreed to several suggestions made at the Conference. Several misunderstandings were also removed and the ground prepared for closer co-operation and co-ordination in the working of the Scheme.

An analysis of the progress of the Scheme reveals that the total number of insured employees is 420,456. About 40,929 acceptance cards have not yet been received. This is attributed to the assumption by some employees that they need be enrolled only when they get sick, the delayed issue of certificates by employers, and to the fact that some employees are on long leave. The total number of panel practitioners is 903 at present, including 124 Ayurvedic practitioners and six Unani practitioners. Fresh applications are to be invited every three months. As many as 284 beds have been reserved in 13 general hospitals while 100 beds have been reserved in two T.B. hospitals. Among the hospitals are included a number of well-equipped and leading Government hospitals and they have been instructed not to refuse admission to emergency cases even if the reserved beds were found occupied. Non-emergency cases are admitted when admission is recommended by the specialists and when there are vacancies.

So far as married insured women employees are concerned, ante-natal care is provided up to seven months of pregnancy at the diagnostic centres and then by the hospitals. Domiciliary confinements are provided by the registered midwife engaged by the panel practitioner in charge of the case. There are six diagnostic centres including one in Thana. Facilities for laboratory and X-ray examinations have been provided at these centres. Specialists in surgery, medicine, T.B., E.N.T., eye, gynæcology and radiology are attached to the centres. The services of specialists in T.B. and medicine are available for four days in a week while the others attend twice a week. T.B. clinics are also established at each of the centres. A free blood transfusion service has also been established for the benefit of insured patients.

Available figures show that the number of laboratory tests increased from 1,859 in October to 4,165 in November. The number of persons for whom X-ray plates were taken was 93 in October which increased to 495 in the next month. The corresponding figures for patients screened during the two months are 443 and 847, respectively. The total number of various tests carried out at the six centres was 2,395 in October and 5,507 in November.

The scale of medical benefit provided under the Scheme in Bombay, it is stated, is much above that envisaged under the rules or that provided elsewhere under the Scheme. The rule provides for general medical service only and hospital treatment for emergency cases alone. The diagnostic services and consultation services have been provided over and above the scale of medical benefit required under the rules. The hospital beds provided under the Scheme are in the ratio of 1 per thousand persons. This is much above the existing facilities for the general public, which is 1 bed per 4,000 persons in Bombay. It is intended also to increase the hospital beds for insured persons to 1 per 800 persons.

Under the terms of service, a panel practitioner is required to supply all medicines necessary for the treatment of the insured persons on his list. But with a view to preventing him from supplying only ordinary medicines, the Government has arranged, through 153 approved chemists all over Greater Bombay and its suburbs, to supply costly drugs, numbering 66, direct to the insured persons when the drugs are prescribed by the panel practitioner to meet a genuine need. Moreover, many other costly drugs are supplied free to insured persons when they are admitted in a hospital or when they are recommended by a specialist. Certain restrictions have been placed on the supply of a few costly drugs with a view to preventing toxic effects from indiscriminate use, and with a view to using such drugs only in genuine and deserving cases.

It is also intended to utilise the employer's medical facilities that are not lower in standard than those provided by the State Government. Out of about 1,600 factories in Greater Bombay and its suburbs, only about 20 have full-time doctors in their dispensaries and about 65 have part-time doctors. Under the Factories Act, factories with 500 or more employees should have an ambulance room with a medical officer for treatment of emergency cases and accidents and, therefore, the existing factory medical services should not be discontinued.

NATIONAL INSURANCE IN U.K.

Labour leaders in the U.K. have consistently realised the need for and the value of co-operating with the authorities in implementing Britain's comprehensive national insurance and industrial injuries schemes. Ever since these schemes began to operate in 1948, writes Mr. Herbert Tracey, member of the Trade Union Congress, it was generally recognised that their working might reveal anomalies that would have to be put right and that, from time to time, changes and improvements would need to be made. That the schemes should work well was the responsibility of the Government, and the Minister of National Insurance, in particular. But, in order to help him, advisory committees were appointed. The 17-member Industrial Injuries Advisory Council, for instance, which considers proposals for new regulations and passes opinion on the working of the Industrial Injuries Act, has four members appointed on the nomination of the Trade Union Congress as well as nominees from among the doctors, employers and other interested parties.

At local level, too, there are more than 220 representative committees on which trade unionists serve to advise the Minister on the working of the national insurance and industrial injuries schemes with particular reference to local conditions. In addition, local Appeal Tribunals of three people, which include representatives of insured persons and employers, deal not only with a whole range of disputed claims under the National Insurance Act, but also with claims arising under the Industrial Injuries Act. Most of those insured persons on the panel from which the Minister appoints to the tribunal are nominated by trade unions or trades councils.

For many years the T.U.C. has maintained a department which works closely with a committee of the General Council on national insurance, industrial health, and related questions. Many unions, too, particularly those in heavy industries, have also had departments busy with cases of workmen's compensation, particularly before the new post-war legislation came into force in 1948.

TRAINING FOR EXECUTIVES

THE "KASH" APPROACH FORMULA EXPLAINED

By B. K. Shah

GENERAL MANAGER, NEW INDIA ASSURANCE COMPANY, LTD.

THE concept of individualism is fast giving place to a corporate concept in every sphere of modern life, be it political, social or economic. The corporate concept deals with group actions. It is, therefore, imperative that every corporate activity is clearly planned to fulfil a precisely defined objective, and that, to this end, it functions in a well set up organisation. Necessarily, the organisation of a corporate body is complex, and highly specialised in many spheres. The organisation pattern as a whole is, therefore, divided into very clearly stated areas of responsibility and authority, with a well-trained competent team of executives to control and direct the functions and performances of each area of operation. There is no better model to demonstrate the corporate concept, and the divisions of responsibilities and of authorities into various constituent areas, each with a presiding executive directing and controlling it, than the human organism. Another good model will be the administrative and executive set-up of a Government. You know what a difference in performance it makes, if the functional set-up is well demarcated, and every functional area is presided over by a well-qualified executive with definite responsibility and authority.

It is the experience of all the progressive countries that the development of national life in all its spheres, entirely depends upon the organising ability of the people. It is rightly said that the qualities of individuals make up the national character. In the present era of mass organisation and mass production, however, the potency of the national character entirely depends upon the organising ability and the leadership quality of the people. It is these two qualities, organising ability and leadership, alone that can weld the individual strengths into a surging ocean of organised and potent strength. History has revealed, from time to time, that, despite the superiority in strength of the individuals constituting a group, victories and success have crowned those who, although inferior in individual strengths, knew the techniques of leadership, of sound organisation, and of co-operating and integrating the performance strengths of the individuals into a competent, massive and irresistible phalanx. Superior organisation, direction and control of the Task Force makes all the difference between success and failure. The fundamental principles of techniques in administration, organisation and management are common to all corporate undertakings, although they might assume varying forms. The basic concepts are thus applicable to every sphere of human corporate activity, including industry and commerce.

Textile Industry

Let us take the example of the textile industry to realise the efficacy of an executive in the corporate concept. Examine the problems facing an isolated individual plying his spinning wheel, on the one hand, and those of a textile unit, on the other. In the case of the former, the man can be absolutely self-sufficient in every way. He can throw a few cotton seeds in his backyard or farm, and pick up sufficient cotton to be used on his spinning wheel for the year round. He has no mechanical breakdown problems; he has no marketing problems; he has no time schedule to keep. All the motivation that he has to do is by himself, so that he will run the spinning wheel at least for some hours each day. He cares not for fashion, nor for quality; he worries not whether the count is uniform or not. He goes on from day to day much the same way as has been doing for generations. In sharp and vivid contrast to this, a textile unit is a very complex organism. It is a unit of responsibility, and represents a combination of techniques, both of production and personnel calling for integration and co-ordination at every level.

It is the responsibility of the textile unit to harness the efforts and the energies of a few thousands to work under one roof, to produce planned results. It has the responsibility of giving to its workmen the finest tools to enable them to yield the maximum output per man-hour; of purchasing raw materials in the cheapest market; of fashioning its produce to suit the taste of the consumer at home and abroad; of scheduling the work and keeping the time schedule, so that none of the thousands is held up in his part of the job, because someone else had failed in keeping to his schedule. The unit has to keep a very close watch on the price fluctuations, so that the sale price of the produce is competitive and does yield some profit. The most important of all these various operations need, on the one hand, substantial capital and prudent management of finances at every stage; on the other, a sound human understanding and management of men working in the organisation is called for to develop their know-hows, attitudes, skills of operations and sound habits of work through proper training, discipline and motivation.

Management and Men

In order to execute these various operations in an organised and productive manner, the unit has to have, above all, efficient management personnel competent to put the knowledge of technical processes to maximum use and to run the business in the most economic manner in a competitive market. The science of management, which I have attempted to detail earlier at some length, will remain largely ineffective in the absence of a high calibre managerial manpower. This aspect of the problem which we may call the art of management, where, through well equipped, well-chosen and capable executive staff, the science of management receives its character, form and purpose, is not sufficiently appreciated. We think, perhaps overthink, in terms of machines. It is time we thought in terms of management and men. It will be surprising to many that, according to investigations carried out in the United States, 50 to 70 per cent. of the wastes in certain enterprises, including textiles, is attributable to shortcomings on the part of management.

It is only the combination of the vital factors referred to above that makes it possible for a textile worker, in a textile mill, to produce per man-hour fifty or hundred-fold of what his prototype does on the spinning wheel. It is the method of the mill and not the way of the wheel which every progressive country prefers, whether it be a capitalistic, socialistic or communistic society. However, the former definitely demands, as has been seen, a very carefully planned organisation with areas of responsibility and authority clearly defined and in charge of a well-trained executive. Unlike the individual concerned with his spinning wheel, who organises all functions, a modern textile unit has to have a number of top executives to look after the planning and the co-ordination of the work of the organism as a whole, assisted by sub-executives, each responsible for the efficient management of his area, which is well defined.

It is thus clear that the progress and prosperity of any section of the national economy and of the national economy as a whole today vary in direct proportion to the quality and the adequacy of the executives the country can build up. Not only that. It is the general experience of all that at every crisis, political, social or economic, calling for rapid shifting from one form or phase of activity to another, or in any period of rapid industrial expansion, the main responsibility of organising and implementing the policies devolves on the executives. And it is invariably found that the most difficult bottleneck even in the highly industrially advanced countries is the lack of trained executives.

Productivity

We, in India, are passing through the most momentous times, and facing the most intricate problems of reorganising and remoulding our way of life. The most challenging problem on the economic front, is the problem of productivity. It is a national problem *par excellence*. We have got to tackle this problem and that, too, at a much faster pace than has been the case with many other countries in the past. The complexity of our task is multiplied manifold by the personnel problems, which call for the development of the technique of successfully controlling and guiding men and machines into channels of maximum output. As we grow from strength to strength, the complexity of our problems will grow, too. It is the executives, whose responsibility it will be to tackle these fast growing tasks. Our national progress, both immediate and future, therefore, entirely depends upon the army of executives we can build up and the pace with which we can build it up.

It is a matter for grave concern that this basic factor, so imperative for the success of a national life, a national economy, or a corporate enterprise, is not fully appreciated in our country. The earlier we realise the need of a sound organisation, administered and managed by well trained executives, the better and the easier it will be for the progress of the country's economy. Having defined the importance of a well-planned executive team, the most important problems every enterprise has to face are: (a) What are the functions of executives? and (b) how to induct and train them?

During the last two decades, there has been a marked change in the concept of an executive's functions. Against the concept and responsibility of an executive, two decades ago, which mainly centred round the material side of production, there has been an epoch-making evolution following the infinitely developing complexity of modern industrial mechanism.

Although the fundamental principles underlying execution and supervision do not change, their philosophies do. The social and industrial development of the past few years has led to a tremendous change, both in the attitudes of the men whose work the executive directs and in the methods of execution.

The executive occupies the key position in industry today, representing the management to the men and the men to the management. His job is essentially one of human engineering, or human relations. His success is primarily governed by his ability to sell himself to and manage the men, working both above and under him. He has to adapt his technique to changing conditions and the rapidly changing human attitude. Unlike in the past, he has to deal with better educated employees more conscious than ever of their rights, acting in the spirit and technique of collective bargaining, enjoying and demanding higher standards of living, and passing through momentous social and political changes. The executive's fundamental approach in a human relations programme has, therefore, to be adapted to fit in with these new conditions. While the executive of today is a leader and a planner, he is, of necessity, a student of the men at work.

Intricate Problems

It is pertinent to observe that the problems, in this country, are more intricate than in many other countries, primarily because we are backward in the technical aspects of industry. We have still to learn (1) to understand and harness machinery, and to develop elaborate production lines; (2) to design the machinery, tools and dies; (3) to train employees to handle the equipment; (4) to develop the techniques to successfully control and guide the men and machines into channels of maximum performance; and (5) to properly service the consumer.

Moreover, with the liberation of the country, there has been, as was but to be expected, an upsurge and a re-expression of the values and way of life among the masses. Perhaps, the swing of the pendulum has run too far, resulting in negative attitude, lack of positive and constructive response, and lack of regard for the larger interests of the enterprise and of the community. The problems facing the executive in this country, therefore, have been rendered more complex and intricate. The most vital part an executive in India, apart from his other functions, has to play is to correct these negatives and indoctrinate the men into positive and fundamental attitudes, viz., that their first and primary responsibility is to the community they serve, and that their well-being is directly dependent upon the performance they are able to give per man-hour.

USE
THE COSMIC RAY FOR ALL SKIN DISEASES!

AND

AMRUTANJAN

THE ATOM BOMB PAIN BALM

The problem of co-ordinating men and machinery is, therefore, far more difficult than it would be if we were passing through more normal times and normal conditions.

It is necessary to realise that the basic functions of executives will be the same, with some adjustments in detail, for the different spheres of activity in our national life. To give a more realistic picture, I propose to narrate an insurance company's needs of the executive staff, how they are inducted and how they are trained.

Certain major and general responsibilities, that every executive has to discharge in an insurance company, or in an industrial unit or elsewhere, are as follows:

(1) responsibility of assisting the top executive to make plans for his own area of operations;

(2) responsibility of fulfilling the plans and for maximising production;

(3) responsibility for the creation and maintenance of a suitable working environment and working conditions for men working under him, to ensure their health and safety and create a sense of general well-being;

(4) responsibility for development of morale, or proper mental attitude, in his men;

(5) responsibility for co-operation with management, fellow executives and supervisors, and his own subordinates;

(6) responsibility for training and developing his subordinates; and

(7) responsibility for keeping records, interpreting these records, and making reports.

In inducting and training our would-be executives, it is necessary to see that the men we induct are qualified enough to face the responsibilities referred to, in addition to a thorough grasp of the *modus operandi* of the job concerning them and the operations making up the job.

The work of an insurance company basically divides itself into two main groups—(1) administration, and (2) sales organisation.

As regards the administration, we, in the New India, have a system of a sectional head or a leader for each five or six assistants, a staff assistant for each group of four or five sectional heads, and a superintendent for each group of three or four staff assistants. There is an assistant manager in charge of the department. Persons in the superintendent's grade and above are regarded as executives, and given responsibility and authority for executive functions. In view of our rapid development, we realise we will need scores of more well trained executives and supervisory officials.

As regards the sales organisation, we have a system of a group of Agents working under an inspector, eight inspectors working under a superintendent of agencies, three superintendents of agencies working under a branch secretary, five branch secretaries working under a deputy superintendent of branches, and, at the top, one superintendent of branches to control three deputy or joint superintendents of branches. Under the development plans we have recently drawn up, we have estimated our overall requirements at about 80,000 agents, 3,200 special agents (or sub-inspectors), 3,200 inspectors, 800 superintendents of agencies, 300 branch secretaries, 65 deputy superintendents of branches and 15 superintendents of branches.

Both in the field of administration and sales organisation, the majority of our man-power requirements have to be built up anew.

How New India Is Doing It

It is customary to build up the supervisory and executive staff out of the existing personnel. Some managements will refuse to undertake programmes of expansion in the absence of an adequate supply of men who are already fully qualified or who can be easily built up. In our case, we had to give an answer to this all-important question. The conclusion we reached was that we did not have with us adequate raw material to build up the supervisory and the executive staff necessary even for our normal expansion—much less to meet the requirements of our rapidly growing business, and still less to answer the demands of the vast expansion programme we have envisaged for the immediate future. The problem for building up the supervisory and executive staff had, therefore, to be tackled on unconventional, unorthodox and, may be, on revolutionary lines. Our decision was to develop the executive and the supervisory staff simultaneously with the expansion on the production front. I must admit that this decision has meant placing a very high degree of strain on the management, executive and supervisory staff. I must also admit that our performances in the various fields are not as thorough as they should or could have been, if our development programmes were not so ambitious.

But, at the same time, I must point out that our overall results have been exceedingly satisfactory, and such as we can be legitimately proud of, even after making allowances for our shortcomings and lack of thoroughness in some cases. To illustrate, the New India Life Department stepped up its new life business underwriting capacity from Rs. 20 crores in 1953 to over Rs. 42 crores in 1954. I am using the phrase "new business underwriting capacity" and not "new business," because we are planning for the year 1955 a minimum new life business of our last year's magnitude. The building up of the requisite man-power, and the supervisory and executive staff will be, as it has been, a hard task. To put it allegorically—it will mean "blood, sweat and tears" for some of us. But we have learned all through the line one thing that "it can be done"—and we are doing it. Necessity is the mother of invention, and I must confess that, in our search for unorthodox revolutionary methods, we have developed some most novel approaches in induction and training.

In the induction of our new men, particularly in the sales organisation, we adopt a combination of open or competitive selection plus nomination methods. We request all our officials to look out for men who answer to our requirements, and nominate one or two candidates each. We also request hundreds of our friends to nominate young men who, in their opinion, will make good. These efforts for nomination are seconded by a well planned method of competitive selection through advertisement. I am pleased to say that this combination has worked fairly well. We now propose to include in our induction programme, a short film depicting "career possibilities in the New India," so that our message of the fine jobs going in the New India can be conveyed to thousands of young men in search of careers, and our nomination and advertising methods can be more effective.

One will naturally like to know how we propose to build up the task force and the supervisory and executive staff, simultaneously. Uptil now, we just used to select from whatever material that was readily available for supervisory and executive functions. However, beginning from this year, we are inducting under a well-devised system, along with our task force, a sufficient number of young men of suitable higher qualifications, who can be trained up as supervisors and executives. These men answer to some of our requirements for these higher positions, except the knowledge and know-how of insurance. We propose to put the young men selected for higher positions as monitors to each batch of eight or 10 ordinary trainees, who will also undergo a similar course of training preliminary to taking up their jobs, and whom they will be ultimately required to direct and control. During the period of their training for technical know-how, care has been taken to see that those selected for supervisory positions are helped to develop the personality for leadership and other essential qualities necessary in such responsible jobs.

"Kash" Approach

Regarding training methods. In the New India, we have adopted what we call "Kash Approach," in all our training programmes. This formula embodies the following qualities basic to success:

K—Knowledge;
A—Attitude;
S—Skills of work; and
H—Habits of work.

R. F. WISHART,
Managing Director.

We have found that, in every sphere of human operations, this formula adapts itself most fittingly. Thus, we have planned to indoctrinate our executives into theory and theoretical knowledge through practice of technical problems of supervision and executive actions selected from our past experience.

K—Knowledge: We have deemed it necessary to impart a thorough know-how of the job to everyone functioning in the New India. We have come to realise that every job can be divided into easy operations, and that by adopting what we call the "problem method" of training, we can train an average man within one-fifth or one-tenth of the time ordinarily taken up by the usual "learning through licking stamps" method of instruction. The concept of the problem method of training is very akin to what you call in industry a pilot plan method.

A—Attitude: We attach great importance to the attitude of every man, working in or representing the company. We sell security and service. It is, therefore, imperative that our men have correct attitudes towards the public with whom they deal on behalf of the company. It is also imperative that they have a positive attitude towards the company, meaning thereby loyalty to the institution and organising themselves and harnessing their talents and abilities to make the best possible contribution to the goodwill, good name and success of the company.

Since the executives report to the top management the performances and problems of the men working under them, and since they interpret the policies of the company to the latter, it is vital that the executives are discerning, constructive and loyal in their attitude towards both. They must radiate their personality, their enthusiasm and their goodwill to the men working under them, so that the latter are inspired to give of their best. Otherwise, their lack of these qualities will undermine the efficacy and the morale of the unit as a whole. The two most important requirements in their attitude are:

(1) a spirit of leadership to lead the men working under them into enthusiasm and team work; and (2) a spirit of co-operation between various executives, so that there is the necessary measure of co-ordination in the work of the company as a whole.

S—Skills of work: Skills of work are essential, if the work is to be done spontaneously and effortlessly, and if high performance standards are to be established. Skills can be built up by repeating the same operation over and over again, through the use of the problem method of study. By making our would-be executives work out hundreds of such problems, we feel, we have found an easy solution to this requirement.

H—Habits of work: Our experience suggests that the contribution of good habits of work to the performance standards of everyone, right from the top executive to those at the bottom of the ladder, is substantial. There is no other alternative between good and bad habits. During the period of training, we take the utmost care to see that good habits of work are inculcated, and come natural to the staff. It is not possible to teach these things by theorising; the only way is to make them realise what is a good habit in the fulfilment of their responsibility, and to drill them accordingly.

The "Kash" formula of training is also applied to the training of the staff at all levels, including the assistants.

I have mainly referred to the art of management, as distinct from its science. I have attempted to show what our problems in induction and training are; how indispensable a competent executive is to a business unit, as elsewhere; how on the fulfilment of this condition depend the progress and the future of a national economy. This is the most urgent problem facing any country. The urgency is all the more with us in India, as we are pledged to various schemes of expansion both in the private and public sectors. In this context, I would venture to emphasise one aspect of the problem under discussion, which I have only touched in passing and with which I may fittingly end. Our prime interest and objective should be production and ever-higher production, rather than profits. An executive is but a tool in the national workshop; he is the means to a higher end, if I may say so, to a nobler end. This objective, it is said, is often lost sight of in a capitalistic society. Through higher production alone can the national standards of living be raised and the national policies underlining a Welfare State, including employment for all and equitable distribution, fulfilled. We cannot divide poverty, but we can certainly aspire to share prosperity. It is for us to work for this prosperity. I appeal to all those who are in charge of the tasks of production, including the captains of industry, executives and labour, to appreciate this essential social function, so that service to the community with provision of plenty for all may come to be accepted as a professional objective.

[The foregoing is the text of a talk given by the author at Ahmedabad early this week under the auspices of the Ahmedabad Textile Industries' Research Association.—Ed.]

AGRICULTURAL LABOUR IN INDIA

POSITION WORSE IN SOUTH AND EAST

THE report on agricultural labour enquiry into rural man-power and occupational structure prepared by the Union Ministry of Labour is undoubtedly a document of outstanding value. The background of the rural economy it provides will be of immense use in framing the right kind of economic policies for improving the standard of living of the masses in India—the main objective of the Five-year Plan. It is common knowledge that a great majority of people in India derive their livelihood from agriculture and allied occupations, but agriculture is mostly a means of mere subsistence, as the average holdings are small and cultivation of land depends almost entirely on human labour. The enquiry enables one to ascertain the approximately correct position as to the number of people depending on agriculture, the area of land they hold, the means of their earnings, the extent of livestock they own and the type of implements they use, etc. It also provides us an idea as to the areas in which agricultural workers form a larger proportion than in others and the probable reasons for this phenomenon.

The agricultural labour enquiry, embodying the report under review, was conducted by the Central Labour Ministry in 1950-51, in three stages through different surveys. The three surveys were the "General Village," the "General Family" and the "Intensive Family." The present report relates to the "General Family" survey. The object of this survey was to assess the general economic conditions and occupational structure in the sample villages and to delimit the agricultural labour families living there.

The survey covered all the families in the 812 villages in the Indian Union that were selected for enquiry on the basis of stratified random sampling. The families surveyed numbered in all 103,548. A family was taken as a "household," with an independent common kitchen and living under the same roof, including temporary absentees but excluding guests. The villages consisted predominantly of agricultural families who formed 79.8 per cent. of the total. Agricultural landowners accounted for 22.2 per cent. and agricultural tenants 27.2 per cent. The percentage of agricultural workers to the total was 30.4. Non-agricultural families formed 20.2 per cent. This class includes artisans, village officers, teachers, domestic servants and petty traders. Of this group, the families depending on wages, that is, those who were not self-employed, constituted 5.5 per cent.

Rural Families

The table below gives the percentage distribution of rural families by the various categories:

Zones	Percentage Distribution of Families					
	Agricultural land owners	Agricultural tenants	Agricultural Labourers			Non-agriculturists
			With land	Without land	Total	
North India	7.7	56.1	5.7	8.6	14.8	21.9
East India	16.8	29.9	19.0	13.7	32.7	21.1
South India	23.0	6.1	27.3	22.8	50.1	20.8
West India	44.8	18.4	8.8	11.6	20.4	16.4
Central India	25.0	22.0	14.6	22.1	36.7	16.3
N-West India	42.2	25.0	2.7	7.1	9.8	23.0
	22.2	27.2	15.2	15.2	30.4	20.2

N.B.—The States falling under the six zones are as follows:
North-India: U.P.
East India: Assam, Bihar, Orissa, West Bengal, Manipur, Tripura.
South India: Madras, Mysore, Travancore-Cochin, Coorg.
West India: Bombay, Saurashtra, Kutch.
Central India: Madhya Pradesh, Madhya Bharat, Hyderabad, Bhopal, Vindhya Pradesh.
North-West India: Punjab, PEPSU, Rajasthan, Ajmer, Delhi, Bilaspur, Himachal Pradesh, Jammu and Kashmir.

The table above strikingly brings out certain disquieting features which deserve the attention of policy-makers, so that suitable action may be taken to eliminate them. The most important feature is the high proportion of agricultural workers to the total number of agricultural classes. It is as high as 50.1 per cent. in South India, 36.7 per cent. in Central India, 32.7 per cent. in East India, 20.4 in West India, 14.3 in North India and 9.8 per cent. in North-West India. The report says that the estimated total number of rural families in the Indian Union was 58 million. Of this, agricultural workers' families formed about 17.6 million. Among these families, those cultivating a plot of land numbered 8.8 million and the remaining 8.8 million were landless. Among the different zones, South India had the largest number of agricultural families, namely, 6.2 million. Out of these, as many as 5.1 million lived in the State of Madras alone. There were 5 million families in East India of whom 50 per cent. belonged to Bihar. Nearly 3 million families were in Central India, while North-West India had only between 1 to 2 million.

While there is evidence that, in pre-British India, there was no class of agricultural labourers as such in the rural areas, this class of population has since come into existence in different proportions in different zones as stated above. The report says that it is difficult to ascertain the precise reasons for these differences. According to it, the system of land tenure may be an important factor in the growth of agricultural labour. During the British period, the communal settlement came into being in northern areas. The *zamindari* settlement was superimposed in the eastern areas and the *ryotwari* settlement in southern parts of the country. While settlement operations in eastern areas were completed in the nineteenth century, the same took about 30 years more in the southern areas and about half a century in the northern areas. The alienation of land and, consequently, the growth of agricultural labour population was, according to the report, rather rapid in *ryotwari* areas, while the chance of alienation in the *zamindari* system was slightly less. It was lower still in the northern areas where communal settlement was prevalent.

Man-land Ratio

Another cause for the growth of agricultural workers' families is stated to be the man-land ratio. For example, in the southern and eastern parts, the growth of population during the last few decades had been more rapid than in the north and north-west regions. With the proportion of the population dependent on agriculture to the rapidly expanding total population remaining more or less constant during these decades, the conditions of agricultural classes deteriorated more in the south and in the east than in the north and north-west. Intensive cultivation made possible by the network of canals also arrested in a way such deterioration in the north-west regions of the country. These findings evidently point to the need for giving high priorities to the south and eastern regions in drafting development schemes in the second Five-year Plan. It is to be hoped that this aspect will not be lost sight of by those who are now busy preparing the Plan.

The report reveals that about 52 per cent. of the total rural population were males. Persons of 15 to 55 years accounted for 54 per cent. of the total, while those under 15 and above 55 accounted for 38 per cent. and 8 per cent. respectively. In other words, the working age group had to provide subsistence not only for itself but also for the non-working group of which the size was nearly as large as itself. The families of agricultural workers formed, as stated already, 30.4 per cent. of the total agricultural families. Of this, 25.8 per cent. was casual and 4.6 per cent. attached.

The average size of the rural family in India was 5.01 persons consisting of 1.84 men, 1.48 women and 1.91 children. The size of the family was larger in the case of owners and tenants at 5.5 persons and 5.4 persons, respectively. These compared with 4.7 persons per family of agricultural workers. The size of the family was the largest in North-West India at 5.2 and smallest in South and North India at 4.9.

Earnings

Of the 5.01 persons in a family, there were 1.57 earners, 0.96 were helpers and 2.48 dependents. In the agricultural labour family 2.42 persons out of 4.70 were earners. The average working strength for all India was 2.7 for agricultural labour families, 2.6 in the case of owners and tenants and 2 for families of non-agriculturists.

Of the total earners in the rural families, about 26 per cent. had subsidiary occupations of a non-agricultural character. In a few cases, cultivation of land was the subsidiary occupation. Only 21 per cent. of the agricultural labourers had subsidiary occupations but 50 per cent. of these were engaged in land cultivation.

Details of landholdings reveal that the average size of the holding was 7.5 acres of which 6.6 acres were cultivated and the rest uncultivated. The area actually owned accounted for 4.3 acres and land taken on rent 3.1 acres. The average size of the holding for the families of agricultural owners was 11.4 acres and for tenants 7.7 acres. It was only 2.9 acres in the case of agricultural workers. 59 per cent. of the total number of holdings were less than even 5 acres, indicating that the scope for employment of hired agricultural labourers was limited. On an average, a rural family had 0.7 ploughs, 2.2 head of cattle, 1.3 sheep and goats and 0.9 poultry.

The problem of housing is acute in rural areas. The majority of the houses is made of thatched roof and mud walls. They account for 84 per cent. of the total houses occupied. Again, most of them are single-room tenements. The average number of persons per room is 2.8.

The report thus bears full testimony to the backwardness of the bulk of the rural population in India. It emphasises the urgency for the rehabilitation of the agricultural worker whose position seems to have deteriorated considerably in recent years. Those in authority are fully conscious of the magnitude of the problem. The Five-year Plan, in fact, seeks to tackle it by pressing into service the Co-operative Movement, National Extension Service Schemes, Community Projects, rural industries and rural credit projects. These schemes, however, have been on trial only for a short period of two years. It is, therefore, premature to venture an opinion on the achievements of these agencies.

INTERNATIONAL EXHIBITION OF AGRICULTURAL MACHINERY

The International Exhibition of Agricultural Machinery, which will be held from 1st to 6th March, 1955 in the Exhibition Park of the Porte of Versailles, Paris, is at present the most important international exhibition in its field. It has been organised each year since its inception in 1922 by the Union of Exhibitors of Agricultural Machinery and Tools, an organisation of the syndicates representing manufacturers and importers of agricultural machinery, tractors, engines and vehicles. For six days every year, it constitutes in Paris a unique international centre for the dissemination of information and the popularisation of rural mechanical techniques, enabling cultivators and industrial agriculturists throughout the world to meet together and examine and understand the most recent developments in the field of agricultural equipment.

This professional exhibition presents more than 1,500 makes of equipment, of which 233 represent the principal foreign producer countries. All the well-known foreign manufacturers participate regularly. In 1922, the Exhibition was visited by 60,000 users and technicians. This figure has increased vastly over the years until in 1953 there were 170,000 visitors and, in 1954, 226,000, of which more than 5,000 were foreign specialists from the principal countries of the world.

The organisers give the greatest attention to the reception of visitors, ensuring, from the outset, that their particular interests receive sympathetic consideration, thus avoiding useless fatigue and loss of time in an exhibition of such considerable size.

DEVELOPMENT OF DYESTUFF INDUSTRY

PROTECTION FOR TEN YEARS GRANTED

CONSIDERING the fact that it would take 15 to 20 years for establishing a full-fledged dyestuff industry, the grant of protection to this industry for a period of 10 years by the Government of India, on the recommendations of the Tariff Commission, should cause no surprise at all. Lest this should encourage complacency in the industry, the Government has done well to impose a condition that such protection would be subject to periodical review by the Tariff Commission. This is the first industry in the post-war years to be granted protection for such a long period as a decade. In doing so, the Commission and the Government have reverted to the practice that was followed by the *ad-hoc* Tariff Boards in the inter-war years. It will be recalled that a suggestion to the effect that, for key and other important industries, protection should be given for fairly long periods extending over seven to ten years was made by Mr. Padamji Ginwala, a member and then President of the first Tariff Board (1923), in a series of articles to this journal in August, 1953. It is gratifying to find that this suggestion has been accepted by the authorities, at least in the case of dyestuffs which are doubtless a key industry.

Two other recommendations accepted by the Government are: (1) the prevailing revenue duty of 12 per cent. *ad valorem* on fast colour salts, rapid fast dyes, rapidogen dyes, and the solubilised vat dyes assessable under the Indian Customs Tariff item No. 30(1) should be converted into a protective rate and (2) the duty on congo red, acid azo dyes, direct azo dyes and sulphur black, which are assessable under item No. 30(13) of the above schedule should be raised from 12 per cent. to 20 per cent. *ad valorem* and converted into a protective rate.

Another recommendation accepted by the Government relates to the reduction of the standard rate of duty on certain specified intermediates used exclusively in the manufacture of dyes from 37.8 per cent. to 10 per cent. *ad valorem*. This concession will, however, remain in force until 31st December, 1955, when the position will be reviewed again.

In recommending the above changes in the Customs Tariffs, the Tariff Commission has suggested that the Government should take the necessary steps to secure complete freedom of action to impose such customs duties as are necessary on dyes, intermediates and other articles included in the Customs Tariff item Nos 30(1) and 30(13) when any new agreements are entered into with foreign countries on the expiry of the present General Agreement on Tariffs and Trade. The Commission opines that it is not possible to finalise the scheme of protection for the dyestuff industry until the necessary release from commitments in respect of the above items has been secured. In the absence of such release, the alternative form of protection which can be considered is, in its opinion, the grant of subsidies. But the amount of subsidy to be granted would itself depend on the quantum of protection which can be afforded to the industry by means of customs duties.

Release From G.A.T.T. Necessary

Although the rates of duties on dyes are bound under the G.A.T.T. at present, it will be possible, says the Commission, to determine the appropriate rates of duties when the commitments under the G.A.T.T. expire at the end of June, 1955. The Commission adds that a decision in regard to the protection to be granted to the industry by means other than tariffs has to be deferred until the rates of customs duties to be levied on dyes are determined. It, therefore, recommends that a fresh enquiry into this industry should be held by the Commission towards the close of 1955. Meanwhile, the scheme of protection mentioned at the outset is to continue to remain in force in addition to the continuance of the prevailing restrictions on imports of dyes.

The Commission has been informed that, as a result of negotiations completed by the Government of India with the other contracting parties, the duty on dyes included in the Customs Tariff item No. 30(13) can be increased to 20 per cent. *ad valorem*. The Commission seems to be of the view that nothing short of securing a complete freedom from the G.A.T.T. for these items will meet the situation facing the dyestuff industry. As the G.A.T.T. will continue to remain in session for a month more, Indian delegates can make a move to get a release from the commitments under the Agreement, as has been suggested by the Commission.

It will be interesting to recall here the considerations which prompted the Tariff Commission to recommend protection to the dyestuff industry in the manner stated above. The Commission emphasises that it is in the national interest that the industry should be firmly established in this country. The industry forms the nucleus for developing the organic chemical industry. Its progress is linked with the development of other essential chemical industries, such as the heavy inorganic chemical industry and coal-tar industry, on the one hand, and the fine chemical and pharmaceutical industry, explosives, synthetic plastics and solvent industries, on the other. It is undoubtedly a strategic industry, capable of serving the national economy in times of both war and peace. It has already made some progress and, in order to enable it to consolidate its position, conditions favourable for further expansion should be created. It is, at present, in the initial stage of manufacturing dyes from imported complex intermediates, but, unless protection and assistance are given to it at this stage, it might not be possible for it to make this stage of manufacture commercially successful and take up the next stage of manufacture, in the face of competition from foreign manufacturers who have combined themselves into international cartels.

Foreign Competition

The dyestuff industry has been well established in the U.S., the U.K., Germany, Switzerland for several decades. In these countries, it is backed by large investments, and has at its disposal highly trained and experienced technical personnel as well as vast resources of well organised research. It has, besides, built up extremely efficient sales organisations on a national scale and has entered into international cartellised arrangements for strengthening its position. The Indian dyestuff industry, on the contrary, has entered the field very late. It does not possess either the know-how, or the financial backing, technical skill, organised research or efficient sales service. Consequently, the industry in India will hardly be able to survive unless adequate protection and assistance are given to it by the State.

A peculiar feature of the dyestuffs industry is the long period needed for it to develop into a full-fledged industry. The development consists of several stages, namely, manufacture of dyes, intermediates and basic raw materials. At present, the industry is confined to the final stage of producing dyes out of imported complex intermediates. But it should plan and progressively develop the production of dyes from primary intermediates and basic raw materials. In other words, the scope for manufacture should be extended backwards so as to cover eventually the stage of primary intermediates and basic raw material as well. This would require heavy capital investment in each stage and, unless production is found to be commercially successful at each stage, sufficient financial resources might not be available to the industry to extend the scope of manufacture. At the same time, it is necessary to ensure that the manufacture of intermediates is not postponed or delayed unduly. The dependence on imported intermediates of the Indian industry has so far been a hindrance to the setting up of a nucleus around which other organic chemical industries can develop.

Large Units Needed

For any quick progress, production in this industry, the Commission says, should be concentrated in a few large units of the dyestuff industry, because the organisation and processes of production are such that the larger the scale of production, the lower will be the cost of production. And what is more, large units can secure heavy capital investment, which is beyond the reach of small units. In this connection, the Commission suggests that Atul Products Ltd. should draw up a revised programme on a long-term basis for the manufacture of dyes and intermediates on the lines suggested above. Similar programmes should be had from other units also. When these programmes are received, they should be referred to a committee of Government experts for examination in collaboration with the technical experts of the various units. This report should be made available to the Commission before the position of the industry is reviewed by it at the end of this year.

The dyestuff industry in India consists of eight units. Of these, Atul Products Ltd., Bulsar, and Associated Research Laboratories, Bhatghar, produce a fairly large range of dyes and account for most of the present capital investment in the dyestuff industry. The range of dyes covered by the industry includes (1) acid azo dyes, (2) direct dyes, (3) azoic dyes; fast colour salts, rapid fast dyes, rapidogen dyes, (4) solubilised vat dyes, (5) sulphur black and (6) others. The current demand for the various groups of dyes has been estimated at 11,402,000 lbs. The installed capacity and actual production in 1953 were 4,451,472 lbs. and 1,483,127 lbs. respectively. The quality of the dyes produced in India is considered to be generally satisfactory, but there is room for improvement in respect of stability and consistency in strength and shades.

With regard to fixation of c.i.f. prices, the Commission finds that it is not possible in the case of dyes to follow the usual procedure for obtaining c.i.f. prices and landed costs for the purpose of comparison with the fair ex-works prices of indigenous products. Absence of standard nomenclature for dyes and lack of recognised standards of strength of dyes make the tasks of selecting comparable c.i.f. prices difficult and complicated. Dyes are generally imported in concentrated forms and are subsequently processed to obtain varying strengths and shades. The strength of the product which is sold in the market, therefore, is not the same as that of the product which is imported. Again, the same product which is imported from different sources varies in strength, and, frequently, there are variations in the strength of the product imported from the same source. Since the strength of some of the dyes produced in the country differs greatly from that of the imported dyes, the Commission feels that it is necessary to adjust the c.i.f. prices on the basis of the relative strengths. It, therefore, obtained from the importers information regarding the strength of the imported dye as compared to that of the dye produced in the country. In some cases, it was considered necessary to give importers samples of indigenous dyes so that they might specify the relative strengths.

The Right Way

The Commission then adopted the lowest price of the latest consignment from important sources for each dye. It obtained quotations of the c.i.f. prices and landed costs of dyes and the information regarding the relative strengths as noted above of various dyes from the principal importing firms. Such data covered as many as 41 dyes imported from the U.K., Germany, Switzerland, Japan, and U.S.S.R. For estimating fair ex-works prices, three units were selected for carrying on cost investigation. After arriving at the required data, before fixing the quantum of protection, the Commission had to take two more factors into consideration. First, the tariff values of imported dyes, on which the import duties are levied, were higher than the c.i.f. prices. Secondly, the system of tariff values which results in the same amount of duty being charged per lb. of dye, even when different consignments of the same dye are imported in varying strengths and consequently, at varying c.i.f. prices, makes it economical for importers to import dyes as high a strength as possible. In view of these difficulties and complications, it felt that the right way will be to work out the rates of protective duties, on the basis of c.i.f. prices of imported dyes of strengths comparable to those of the corresponding indigenous dyes and then apply the rates to tariff values, provided

(1) the tariff values are fixed on the basis of the highest strengths in which the dyes are imported and

(2) they approximate to the actual c.i.f. prices for such strength over a period.

As the relevant data for this purpose are incomplete, the Commission has recommended that the Government should make the necessary arrangements for the selection of samples of indigenous dyes by an independent agency and for the testing of their quality by a well-equipped institution. The Indian Standards Institution should try to evolve standards of strength by which the actual strength of indigenous or imported dyes can be determined. Lastly, the Government has been advised to take steps to ensure that the tariff values for imported dyes are fixed on the basis of the highest strengths in which the dyes are imported. The Government should also arrange to record the strength adopted for the purpose of fixing tariff values. Meanwhile, the Commission has recommended, as already stated, that the scheme of protection suggested by it should be continued pending its next enquiry at the end of this year.

A FEW MORE CHANGES IN EXPORT POLICY

Once again, the Government of India has announced a number of changes in its export policy. These changes include a reduction of one-sixth of the normal rate of six annas per pound in the excise duty on certain varieties, other than the biri varieties of the 1953-54 crop on non-flue cured tobacco. This concession, however, is applicable only to such tobacco varieties as were lying with producers on 5th February and which were purchased from them for warehousing or are cleared on payment of duty on or after that date. Evidently, the reduction is intended to aid producers already in distress. It is stated that this concession is liable to withdrawal at any time.

(Continued on page 291)

Hopkinsons' VALVES FOR ALL PRESSURES & TEMPERATURES

PARALLEL-SLIDE LINK-VALVES
For compressed air, steam, water, oil or thick heavy liquids. Opens with less than a quarter turn of the handle: easy to operate under all conditions.

'S.T.S' VALVES
A general purpose valve of simple design and sturdy construction. Can be relied upon for long, fluid-tight service. Sizes 1/2" to 3" bore. Supplied with flanged or screwed connections.

PARALLEL-SLIDE VALVE
One of the best known valves in the world—designed and patented by Hopkinsons in 1881. Maintains fluid tightness under severe working conditions without wedging action.

The valves illustrated are a typical selection of the Hopkinson range of products.

The Dividend, if sanctioned, will be paid to those Shareholders whose names stand on the Register of the Company on the 24th March, 1955.

By Order of the Board,
FORBES FORBES CAMPBELL & CO., LTD.,
Agents.

BOMBAY, *7th February*, 1955.

SPENCER & CO., LTD.

MR. S. W. EDWARDS REVIEWS COMPANY'S RESULTS

ADDRESSING the ordinary shareholders of Spencer and Company, Ltd., at their Fifty-seventh Ordinary General Meeting, which was held on 21st January, 1955, at the registered office of the Company at Madras, Mr. S. W. Edwards, Chairman of the Company, said:—

"It gives me great pleasure in welcoming you here this morning, and it is particularly gratifying to see Mr. A. E. Thompson with us again.

"Mr. Thompson retired from the Board at the end of last year and I take this opportunity of wishing him good health, long life, and happiness in his retirement. He wide knowledge of our many ramifications and his wise counsel will be greatly missed.

"It is not as yet intended to fill the vacancy so caused.

"And now to the accounts. To get a true comparison with 1953 it has been necessary to adjust figures to the same method that is now applied by our auditors. The figures against sales, selling expenses, and unclaimed credit balances have been adjusted in the profit and loss account and the figures against book debts and liabilities for taxation have been adjusted in the balance-sheet.

"You will see that sales show a drop of some Rs. 11 lakhs and a drop in gross profit of approximately 2 per cent., as compared with the 1953 results. This I forecast at our last meeting and I think we are entitled to be pleased that repercussions have not been worse. During the year, our trading activities have been reduced by the cessation of our lesseeship of the Malabar Hotel, which we had held from its inception in 1935. Later in the year, we were forced, through continued adverse trading, to terminate our contracts for railway catering of some 75 restaurants throughout India. This, after over fifty years of service in that capacity. The effect will be to the advantage of your Company. The demand for Western style catering over the past few years had declined to such an extent that it was no longer possible to carry on profitably, but it is sad that contacts, such as these, should have to lapse after pleasant and co-operative relations of over half a century.

"The effect of legislation which involves liabilities carrying retrospective application has been felt during the year in respect of retrenchment of personnel at the Malabar Hotel, in the railway catering section and at our Kanpur factory. This is an example of what I had in mind when I referred to this point last year. It has hit us during the year of account, and will also be felt in the current year.

"For the future, I will not forecast, except to say that, if trading continues as it has begun in the first six months of our current year, our position at the close, in so far as trading goes, will be encouraging.

"In conclusion, I would like to register my appreciation of the loyal and willing support extended to my Board and myself to all those who have helped so indefatigably in the results attained."

The accounts and balance-sheet as at 30th June, 1954, were unanimously approved and adopted. A further and final dividend of 10 per cent., free of income-tax, on the ordinary shares as recommended by the Directors, was declared, making in all a total dividend of 15 per cent., free of income-tax, for the year.

SURVEY OF TEXTILE MILLS

The Union Ministry of Commerce and Industry has decided to conduct a survey of units in the textile industry in India. The survey is intended to collect data on the condition of machinery and equipment in cotton textile mills and also on their financial position, with a view to assessing their requirements for rehabilitation where necessary. Two teams, consisting of both technical and economic personnel, have been sanctioned for this purpose. The teams would start work immediately. They would form part of the Textile Commissioner's Organisation. The question of increasing the number of such teams will be considered later on the basis of the initial investigations conducted by these two teams.

PROFIT OF ANGELO BROTHERS NEARLY MAINTAINED

DIVIDEND REPEATED—FINANCES SOUND

ESTABLISHED in 1907 and registered in 1944 as a public limited company, Messrs. Angelo Brothers Ltd. (Managing Agents: Messrs. Turner, Morrison & Co., Ltd., Calcutta) is a leading shellac manufacturing and refining company in India, the shares of which have been very popular in Calcutta, as well as in other share markets. It had a very prosperous career until a few years ago, its turnover and earnings reaching record levels in the year ended 31st August, 1951. Since then, the Company has been experiencing unfavourable working conditions, resulting in a sharp setback in earnings. The gross profit had dwindled from the record level of Rs. 38.79 lakhs in 1950-51 to a low of Rs. 5.76 lakhs in 1952-53, a drop of Rs. 32 lakhs in two years.

The sharp rise in shellac price since March last had led to the hope that the Company would turn the corner and the profit for 1953-54 would be substantially higher. This, coupled with the general buoyancy of the market, pushed up the value of the Company's shares on the Calcutta Stock Exchange from about Rs. 17 to Rs. 25-12 in the last week of August. Later on, the operators seemed to have revised their opinion about the Company's performance and this was responsible for the drop in the value of its shares which stood at Rs. 20-8 in the last week of January this year. The marked steadiness in the value of the shares since the publication of the results—the shares are being currently placed at Rs. 19-8 *ex-div.*, as against Rs. 20-8 *cum-div.* a week ago—however, reflects the shareholders' satisfaction that the Company's financial results have not turned to be as disappointing as they had expected them to be. The gross profit has, no doubt, suffered a further small recession from Rs. 5.76 lakhs to Rs. 5.25 lakhs for the year under review, but this shrinkage compares well with the drop of Rs. 4.16 lakhs noted a year ago and of Rs. 28.87 lakhs two years ago. The profit for the year under review is the lowest for the last one decade of the Company's history since its formation as a public limited company. Nevertheless, the profit can be deemed to be satisfactory, considering the difficult trading conditions under which the shellac industry as a whole had to work.

An idea of the Company's progress during the past three years can be gained from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st August			
	1954	1953	1952	1951
Sale proceeds ..	178.43	126.82	217.95	271.73
Other income	1.58	1.78	3.06*	3.14
Cost of production and factory expenses ..	165.20	113.60	201.81	224.73
Other expenses ..	9.58	9.14	9.78	11.85
Gross profit ..	5.23	5.76	9.02	38.79
Managing Agents' commission ..	0.35	0.40	0.90	3.69
Provision for—				
Depreciation	1.06	1.24	1.38	1.37
Taxation ..	1.75	1.81	2.45	13.35
Net profit ..	2.09	2.32	5.19	19.88
Provisions and reserves written back ..	..	1.06†	0.25‡	..
To reserves ..	0.10§	0.83§	1.75	11.25
Dividend ..	2.75	2.75	2.75	7.50
	(D. 12½%)	(D. 12½%)	(D. 12½%)	(D. 12½% + B. 12½%)
Carry forward ..	2.40	4.25	5.25	5.81

* Includes E.P.T. refund of Rs. 1.50 lakhs.
† Transfer from advertisement reserve.
‡ Provision for taxation no longer required.
§ Bad debts reserve.

The net profit works out to Rs. 2.09 lakhs, as against Rs. 2.32 lakhs for the previous year. The Directors have not transferred, as in the previous year, anything to the reserves. The dividend has, however, been maintained at 12½ per cent., the sizable surplus brought forward from the previous year having served to augment the profit available for distribution. This is the third year in succession for which the distribution to the shareholders is being paid at this rate, to which level it had been reduced from 25 per cent., made up of a dividend of 12½ per cent. and a bonus of 12½ per cent., paid for 1950-51. The Company has a good dividend record to its credit, as the following table would show:

Year ended August	Dividend %	Bonus %	Year ended August	Dividend %	Bonus %
1945 ..	10	+ 7.5	1950 ..	10	+ 7.5
1946 ..	10	+ 7.5	1951 ..	12.5	+12.5
1947 ..	10	+ 2.5	1952 ..	12.5	+ *Nil*
1948 ..	10	+ *Nil*	1953 ..	12.5	+ *Nil*
1949 ..	19	+ *Nil*	1954 ..	12.5	+ *Nil*

The dividends for the years 1947-48 and 1948-49 shown above were the maximum permissible under the Dividend Limitation Ordinance of 1948. It may also be noted that the dividends from 1947-48 onwards are on the higher capital of Rs. 30 lakhs raised by the capitalisation of Rs. 10 lakhs from out of the reserves in February, 1948.

The sale proceeds for the year under review show an increase of Rs. 51.61 lakhs over those for the previous year, thus reversing the downward trend noted in the previous two years, thanks to the favourable prices of shellac and larger offtake from the U.K. and Continental markets. The benefit of such an increase has, however, been offset by the sharp rise in price of the raw material which has raised the cost of production, as seen from the table.

Commenting on trading conditions, in the face of the speculative fluctuations in prices, the Directors observe, in their report to the shareholders, as follows:

"T.N. was quoted at Rs. 104 per maund at the beginning of the season, and declined to Rs. 87 during March, 1954, when it was rumoured that the main crop was likely to be larger than first estimates. By July, 1954, it was obvious that the crop had not come up to expectations, and the price rose to Rs. 147. At the close of the season 31st August it was quoted at Rs. 140.

"Since then, the market has seen a sudden rise to Rs. 183 in December and at these high levels consumer resistance has become very obvious. There is considerable danger of users changing over to cheaper synthetic resins, if such prices persist. Speculative activity undoubtedly played a large part in exciting the market. Shortly before this report was written, it was learnt that the Government of India had used the powers conferred on it by the Forward Contracts (Regulation) Act, 1952, to ban forward shellac contracts other than non-transferable specific delivery ones. This has made *fatka* transactions impossible, and seems to have had a stabilising influence on the market which should be beneficial to the Company and all genuine shellac traders. As far as can be seen at the time of writing this report, the difficulties in obtaining supplies of raw material at reasonable parity will, however, remain until there are satisfactory crops, and the market is hoping for better conditions after the next crop in March/April, 1955."

Thanks to the favourable periods of working until three years ago, the Company has built up a sound financial position. Even after the capitalisation of Rs. 10 lakhs in 1948, the reserves and surplus now aggregate Rs. 40.61 lakhs, against a paid-up capital of Rs. 30 lakhs. The provision for taxation stands at Rs. 1.77 lakhs. The current liability amounts to no more than Rs. 8.27 lakhs. The gross block of the value of Rs. 31.68 lakhs has been written down to Rs. 10.57 lakhs. The current assets amount to Rs. 70.08 lakhs, of which stocks and stores account for Rs. 12.33 lakhs, book debts, deposits and advances for Rs. 39.98 lakhs, investments for Rs. 9.76 lakhs and cash balances for Rs. 7.92 lakhs. Thus, the current assets are nearly seven times the current liabilities and provision for taxation.

The Rs. 10 fully paid-up shares are being currently quoted at Rs. 19-8 *ex-div.* On this basis the latest dividend gives an attractive yield of 6.4 per cent. per annum.

MARSHALL SONS & CO. (INDIA) LTD.

A further small setback in earnings is disclosed by the audited accounts of Messrs. Marshall Sons & Co. (India), Ltd. [Managing Agents: Marshalls (Direction, Ltd., Calcutta], for the year ended 30th June, 1954. Thus, the gross profit, which had declined in the previous year from Rs. 4.14 lakhs for 1951-52 to Rs. 2.70 lakhs, has dwindled to Rs. 1.54 lakhs for the year under review. In fact, the profit of the Company has been on a downward trend since 1948-49, when the gross profit touched a peak of Rs. 26.21 lakhs. The general business recession in the years 1949-50 and 1950-51, which was further aggravated by the slump in the tea industry—the Company is an important supplier of machinery needed by this industry—was responsible for the setback during the last five years. Although the tea industry has retrieved its position substantially during the last two years, the Company has not yet recovered from the effects of the shake-out in its business.

A sum of Rs. 61,310 has been provided for depreciation out of the profit for the year under review, as compared with Rs. 63,915 set aside for the previous year. No provision for taxation had been made last year, as the Directors felt that, in view of the provisions made in the earlier years and actual assessments received, coupled with the low level of trading, no provision for taxation was necessary. Subsequently, the Company's income-tax assessments were completed up to the end of the accounting year 1952 and the Directors have now found it necessary to make good the short provision in previous years. Accordingly, they have set aside Rs. 70,000 for this purpose out of the profit for the year under review. Thus, the net profit amounts to only about Rs. 23,000, as against Rs. 2.06 lakhs for the previous year. The Directors have transferred Rs. 20,000 from the provision for bad and doubtful debts and Rs 30,000 from the contingency reserve. After making adjustments in respect of previous years, the Directors have maintained the dividend at 12½ per cent., to which level it had been raised last year from 3 per cent. paid for 1951-52. The Directors feel justified in repeating the dividend at 12½ per cent., in view of the brighter prospects.

The following comparative table shows the progress of the Company during the last three years:

(In lakhs of rupees)

	For the year ended 30th June			
	1954	1953	1952	1951
Sale proceeds	128.70	131.11	108.67	246.12
Other income	5.46	5.52	4.40	2.29
Expenses*	132.62	131.64	109.01	237.72
Gross profit	1.54	2.70	4.14	9.69
Provision for—				
Depreciation	0.61	0.64	1.73	1.48
Taxation	0.70	..	1.83	4.00
Net profit	0.23	2.06	0.58	4.21
Transfer from reserves and provisions	0.50	0.20	0.10	..
To adjustment in respect of previous years	0.48	0.86	0.15	0.27
To reserves	..	..	..	0.50
To staff fund	..	..	..	1.00
To dividend	1.81	1.81	0.52	2.02
Carry forward	(12½%) 0.94	(12½%) 1.30	(5%) 1.87	(25%) 1.86

Commenting on the working of the Company during the year under review, the Directors observe, in their latest report, as follows:

"During the year, the Company's trading continued to be affected by the general market recession, and the difficulty experienced in obtaining sufficient import licence facilities. Sales for the year in question show a decrease, being Rs. 1,29,00,000, as against Rs. 1,31,00,000 for the previous year. There was, however, an improvement in trading towards the latter part of the year; such orders, not having been executed, do not reflect in the trading results covered by this report.

"Although there is an increase in expenditure, your Directors have continued their efforts to reduce expenses where economically wise, and the increase of approximately Rs. 2,25,000 is due to expenditure incurred in connection with retiring senior staff and on account of advertising, which is considered an essential to keep your Company's name before the public."

The Directors have, however, taken active steps to improve the turnover. In order to offset the difficulties experienced in respect of import licence, they have finalised an all-India sales agreement with the Britannia Engineering Company, Ltd., for the sale of tea machinery and spare parts thereof manufactured by them in India. Arrangements have also been made for the manufacture in India by the Company of electric motors of the sizes which are banned for import, under the name of "Marshall." The Company is also actively pursuing arrangements for the manufacture in India of other machinery, such as pumps, tar boilers, etc., all of which are expected to assist the Company in maintaining its future turnover.

A subsidiary company under the name and style of John Fowler (India) Ltd. has been formed to acquire the selling and other rights of John Fowler & Co. (India) Ltd. The authorised capital of the Company is Rs. 10 lakhs, of which Rs. 2.50 lakhs has been fully paid. The formation of this subsidiary will be of benefit to the Company, in that it will retain the turnover in supply of parts for and servicing of plant and equipment which had in past years been imported by John Fowler & Co. (India) Ltd. Further agencies are being sought to increase the activities of this subsidiary.

Referring to the outlook for the current year, the Directors observe thus:

"The trading position is still difficult, but shows signs of improvement, particularly in regard to the tea industry, and to maintain turnover and meet competition, it has been necessary to reduce margins of profit considerably which should benefit the overall sales figures for the ensuing year, although profits cannot be expected to show a comparative increase, as would have been the case during a sellers' market period."

BHOPAL SUGAR

A gross profit of Rs. 5.87 lakhs is disclosed by the audited accounts of the Bhopal Sugar Industries Ltd. [Managing Agents: Messrs. A. H. Bhiwandiwala & Co. (Bombay), Ltd., Sehore, Bhopal] for the year ended 30th September, 1954, as against a loss of Rs. 2.30 lakhs in the previous year. It must, however, be noted that the results for the year under review are not comparable with those for the previous year, in that there was no crushing of sugarcane in the previous season, as no cane was available owing to acute drought in Bhopal. The year 1951-52 is the last one in which there was crushing and the results of which are, therefore, strictly comparable with those for the year under review. Such a comparison shows that the gross profit for 1953-54 falls short by about Rs. 92,000, although production was higher than in 1951-52.

The net profit, after providing for depreciation and taxation, is Rs. 2.80 lakhs. After adjusting the loss of Rs. 1.82 lakhs brought forward from the previous year, the balance available for appropriation has been supplemented by a sum of Rs. 1.78 lakhs drawn from the dividend equalisation fund. A dividend of 10 per cent. per annum, free of income-tax, on the ordinary shares has been recommended by the Directors. Last year, a dividend at the rate of 6¼ per cent. was paid, despite the adverse results, as against 10 per cent. paid for 1951-52 (by drawing from the dividend equalisation fund). The dividend for 1953-54 has thus been restored to the level paid for 1951-52.

The following comparative table shows, at a glance, the progress of the Company during the past three years:

(In lakhs of rupees)

	For the year ended 30th September			
	1954	1953	1952	1951
Sale proceeds	29.70	18.59	30.97	83.51

The quantity of cane crushed and output of sugar had shown a declining trend since 1948-49, when they touched a high of 1,586,602 maunds and 52,313 bags, respectively. This trend was reversed during the year under review. The Directors expect a production of 42,000 to 45,000 bags of sugar during the season 1954-55, because the cultivators' cane area has been gradually enlarging since the last drought.

The latest balance-sheet shows that the reserves and surplus aggregate Rs. 10.49 lakhs, as against a paid-up capital of Rs. 30 lakhs. The Company had a dividend equalisation fund of Rs. 3.30 lakhs as at the end of 1951-52, but this has since been utilised towards payment of dividends for 1952-53 and 1953-54. The gross block has been written down from Rs. 31.69 lakhs to a book value of Rs. 11.93 lakhs. The current assets aggregate Rs. 34.08 lakhs, exceeding the current liabilities (Rs. 4.84 lakhs) and provision for taxation by a large margin.

The Rs. 10 paid-up ordinary shares of the Company are being currently quoted at Rs. 15-12 *cum-div.* On an *ex-div.* basis, the latest dividend gives a yield of 6.7 per cent. per annum, free of tax.

ORIENT PAPER

The Orient Paper Mills Ltd. (Managing Agents: Messrs. Birla Bros., Ltd., Calcutta) proposes to issue 80,000 first preference shares of Rs. 100 each. The shares, which will be offered at par, will carry tax-free interest at the rate of 5½ per cent. The present paid-up capital of the Company is Rs. 121.95 lakhs, made up of 419,500 ordinary shares of Rs. 10 each, 20,000 5½ per cent. tax-free, cumulative preference shares of Rs. 100 each and 60,000 5½ per cent. taxable cumulative preference shares of Rs. 100 each, both redeemable.

Points From The Chair

Modernisation of Banking Methods

"FROM time to time there have appeared in the Press suggestions that banks are slow to modernise their methods, and in particular to take advantage of new processes and inventions that might readily be adapted to their purposes. The test to be applied in all such cases is a very obvious one, comparable to that which is accepted in other branches of business. It is provided by the answer to the question whether, in the particular circumstances, a given operation will be performed more efficiently and economically in terms of manpower, and with no less security and convenience for customers. Put in this way, it will be seen that only the standardised, repetitive operations, carried out on a large scale, are a suitable subject for mechanical installations which entail substantial capital outlay. In banking, operations of this kind make up a big part of the total work, and extensive use has, therefore, been made of a great variety of new mechanical aids."

LORD HARLECH,
Midland Bank Limited.

Profit in an Inflationary Economy

"In an inflationary economy, the profit, expressed as a percentage of its capital, earned by a business which gives necessary services to the community, must have a natural tendency to increase; but the increase in the percentage, and any attendant increase in distribution of dividend, is no direct measure of increase in real advantage to the recipients. Such a distribution appears to your Board to be in the interest of the public, as well as that of our shareholders. The discount market has limited functions and little plant. There is an optimum of the amount of capital which can usefully be employed in it. So long as that optimum, which must of course include ample reserves, is maintained, it is to the advantage of the national economy that profits should be released as dividends, to add to the supply of capital available for useful investment elsewhere."

LORD KENNET OF THE DENE,
Union Discount Company of London.

Curbing Inflation

"As the year approached its end, sterling showed an increasing tendency to weaken in terms of dollars, and the discount market progressively reduced the price of their tender for Treasury Bills. In this action, while we hope that we made some contribution to the solution of a national problem, no doubt, the market had in mind the possibility of a rise in the Bank rate, and the danger of end-of-the-year credit stringency with its resulting necessary recourse for loans from the Bank of England for at least seven days at Bank rate. This recourse did, in fact, prove to be necessary. In the result, an element of uncertainty was introduced into the whole structure of money rates on the London market. Time alone will show whether this technique is, in fact, effective either in curbing inflation or in dealing with the national problem of external balances."

SIR ERIC GORE BROWNE,
Alexanders Discount Co., Ltd.

Industrial Earnings

"Price control under the Iron and Steel Board is severe and tends to be arbitrary and doctrinaire. It is theoretical rather than practical, so that we have to work near to full capacity in order to earn a normal profit. Below this point the earning of profit is made impossible by the heavy burden of almost inflexible charges such as the guaranteed week, national insurance contributions, holidays with pay, pension schemes, etc. We can bear these charges under rigid price control only so long as demand is maintained and we are able to operate at a high proportion of capacity. In the event of a recession the effect would be very serious, for the charges mentioned above would continue to operate, but would become a heavier burden relative to the reduced sales. Plant replacement and new development should be provided out of earnings and good times should be made to provide for bad. That, as I understand it, is how this and many other fine businesses have been built up in the past. With such a high level of taxation as operates at present, high earnings are essential if industry is to be maintained in a state of efficiency and new developments made possible."

G. WILTON LEE,
Arthur Lee & Sons Ltd.

Synthetic Fibres

"The question of synthetic fibres continues to be of interest to every worsted spinner. While we are convinced that these synthetic fibres have come to stay in certain branches of the industry, including those for which we cater, the highest class end of the trade still prefers wool and pure wool. This is particularly true in the United States where eventually a substantial proportion of the yarns we spin find their way in the form of the highest quality cloth. We know that among manufacturers there is much experiment still going on in the proper use of synthetic fibres blended with pure wool and we have no doubt that new fabrics of this kind have yet to come."

LORD WILMOT OF SEL-MESTON,
Illingworth, Morris & Co., Ltd.

COMPANY MEETINGS AND DIVIDENDS

BHOPAL SUGAR INDUSTRIES LTD. Annual General Meeting, Sehore, Bhopal, 19th February, 1955. Dividend: Re. 1 per share. Transfer books remain closed from 5th to 19th February, 1955, both days inclusive.

CAREW & CO., LTD. Annual General Meeting, Calcutta, 22nd February, 1955. Dividend: As. 12 per share. Transfer books will remain closed from 12th to 22nd February, 1955, both days inclusive.

TITAGHUR PAPER MILLS LTD. Dividend: As. 12 per share on "A" and "B" ordinary shares for the half-year ended 30th September, 1954.

METHONI TEA CO., LTD. *Ad-interim* dividend: Re. 1 per share for the year 1954. Transfer books will remain closed from 16th to 28th February, 1955, both days inclusive.

COMPANY REGISTRATIONS

HITKARI BUILDINGS LTD. (First Director: Mr. Balakram Tulsiram Hitkari.) Business: Purchase, Lease and Exchange of Lands, Buildings, etc. Private. Authorised capital: Rs. 5,00,000. Address: Ghatkopar Road, Chembur, Bombay.

GOPIDAS NARSINGDAS LTD. (First Director: Mr. Gopidas Narsingdas Binnany.) Business: Importers and Exporters of all kinds of metals. Private. Authorised capital: Rs. 5,00,000. Address: 53, 2nd Bholwada Lane, Bombay.

FANCY NETS LTD. (First Director: Mr. Udaikant M. D. Thackersey.) Business: Manufacturers of nets from cotton yarn, silk or art silk. Public. Authorised capital: Rs. 25,00,000. Address: Sir Vithaldas Chambers, 2nd Floor, 16, Apollo Street, Fort, Bombay 1.

SIRUR AGENCIES LTD. (First Director: Mr. Raghavesh Venkatrao Sirur.) Business: Cotton trading and commission agency. Private. Authorised capital: Rs. 11,00,000. Address: Opposite Municipal Office Narayanpur, Hubli.

TRAVANCORE SUGARS AND CHEMICALS SUFFER LOSS AGAIN

JEYPORE SUGAR TO RAISE FRESH CAPITAL

Travancore Sugars and Chemicals Ltd.

THE directors of the above Company (Secretaries and Treasurers: Messrs. Parry & Co., Ltd., Thiruvalla) submit the audited accounts of the Company for the year ended 31st July, 1954.

The year under review has again been a difficult one, mainly due to the small quantity of cane available for crushing and the poor quality thereof, and the directors report that the result of the year's working has been a small loss.

The loss for the year was Rs. 2,962 (Rs. 50,242) to which has to be added the adverse balance brought forward from last year of Rs. 29,262 (credit of Rs. 20,980) giving an adverse balance to be carried forward to next year of Rs. 32,224 (Rs. 29,262).

The accounts for the year under review are the first fully to reflect the saving achieved by the closure of the Trivandrum Office. In the year ended 31st July, 1952, the expenses of this office were Rs. 1,23,238 and the reduction to Rs. 44,602 during the year ended 31st July, 1953, was the result of the closure during the financial year. This item of expenditure has been eliminated for the year under review without a corresponding increase in expenditure under any other head.

Review of Operations.—A summary of the activities of the departments of the Company during the year under review is as follows:—

Sugar.—Crushing for the 1953-54 season commenced on the 2nd November, 1953, and closed on the 20th December, 1953, the factory thus working only for 49 days, during which period 30,695 tons of cane were crushed and 2,189 tons of sugar produced, at the low recovery rate of 7.13 per cent. This represents a further deterioration as compared with the previous season, when 53,053 tons of cane were crushed in 85 days at a recovery rate of 7.32 per cent., yielding 3,814 tons of sugar.

Once again, owing to the high price of jaggery, ryots who had good quality cane available, diverted their crop from the factory for the purpose of sale in the form of jaggery, and the cane becoming available to the factory was mostly of low quality.

As a result of the non-availability of cane for crushing and the low recovery achieved, the cost of production of sugar was appreciably higher than its realisable value. The Government of India assisted by requisitioning only 5 per cent. of the Company's production for sale at controlled prices and by allowing this sugar to be sold at a rate in excess of the normal controlled price of Rs. 27-2 per maund. Despite this assistance, the Company's trading in sugar during the year resulted in a substantial loss.

Spirit.—Sales of arrack were restricted during the year, as a result of the continuance of the quota system imposed by the Government of Travancore-Cochin, thereby reducing the profitability of the Company's activities in this sphere of operations. In June 1954, the Company was asked to supply arrack in the area of the former Cochin State, but the supply commenced so near to the end of the financial year that its effect is not reflected in the accounts under review.

Pharmaceuticals.—The Company's Pharmaceutical Works reopened in Tiruvalla towards the end of the previous financial year, but manufacture of spirituous products did not commence until the 1st September, 1953 and, since that date, the Company has supplied the bulk of the requirements of the Government of Travancore-Cochin. The directors report, that the Company has now largely regained the pharmaceutical market on the West Coast of India which had been lost temporarily whilst the Pharmaceutical Works were closed for the move from Trivandrum to Tiruvalla.

The Company's financial position remains sound, and its liquid position has been improved by a reduction in stocks during the year of some Rs. 4 lakhs; this improvement has been offset to some degree by an increase of some Rs. 2 lakhs in its debtors, due to the recommencement of its manufacture of pharmaceuticals and to larger advances to cane ryots as a result of the greater acreage of cane registered for supply to the factory during the 1954-55 season.

Dividends.—The directors regret that, in view of the loss for the year ended 31st July, 1954, no dividend on the preference share capital has been declared and they are unable to recommend to the shareholders payment of an ordinary dividend for the year.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	45,00,000	Block ...	41,89,095
Reserves* ...	10,37,776	Plantation at cost ...	15,453

*The adverse balance of Rs. 32,224 in the profit and loss account has been deducted from reserves.

Jeypore Sugar Co., Ltd.

The directors of the above company (Managing Agents: R. S. Industrial Corporation Ltd., Rayagada) submit the audited accounts of the Company for the year ended 30th June, 1954.

The accounts show that a profit of Rs. 1,69,622 has been made for the year 1953-54 after providing a sum of Rs. 2,10,000 for taxation and three months' salary as bonus to staff, to which has to be added amount brought forward from the year 1952-53 of Rs. 1,24,353, making total of Rs. 2,93,974. From this is deducted the dividends on preference shares upto 30th June, 1953, Rs. 12,000, dividend on ordinary shares for 1952-53 Rs. 97,838 and dividend on cane growers' ordinary shares for 1952-53 Rs. 8,487, leaving an available balance of Rs. 1,75,649. The directors now recommend the payment of a dividend of 6 per cent. free of income-tax on preference shares, due for the year 1953-54 Rs. 12,000, dividend of 10 per cent. free of income-tax on the ordinary shares for the year 1953-54 Rs. 97,838, dividend of 10 per cent. free of income-tax on cane growers' ordinary shares for the year 1953-54 Rs. 8,487 and transfer to dividend equalisation fund (raising it to Rs. 1,35,000) Rs. 52,000, leaving a balance of Rs. 5,324 to be carried forward to the next year.

The Factory crushed 31,375 tons of sugarcane during the season 1953-54 as against 29,348 tons crushed in the previous season.

During the year under report the directors took steps to acquire a controlling interest for the Jeypore Sugar Co., Ltd., in the Jeypore Mining Syndicate Ltd., Rayagada under the following circumstances:—

For a long time past the Company has been experiencing difficulty in securing the required quantities of sugarcane for crushing. In fact, only in a very few seasons the Sugar Factory has been able to obtain the full quantity of sugarcane. Moreover, the directors felt that in the post-war set up of Sugar Industry the size of the Company's Sugar Factory was somewhat uneconomic, the Factory having a capacity of only 250 tons crushing per day. They therefore thought it advisable to take to other lines of business such as textiles and manufacture of ferro-manganese in order to improve the Company's earning capacity. Accordingly they took steps to get the Objects Clause of the Memorandum of Association of the Company altered suitably. With a view to undertake the manufacture of ferro-manganese the directors acquired a controlling interest during the year under report for the Company in the Jeypore Mining Syndicate Ltd., which has extensive mining rights in the Koraput District, Orissa State. At that time this appeared to be the most appropriate policy for the Company's directors to pursue. Since then, however, the Government of India's policy in regard to the expansion of Sugar Industry has undergone considerable change. In view of this, the directors had to reconsider their policy and come to the conclusion that it was best for the Company to concentrate on Sugar manufacture. They therefore applied to and got sanction of the Government of India for the extension of the plant now in operation at Rayagada to 600 tons a day crushing capacity, and also for erecting a new Factory of 800 tons a day crushing capacity in Repalle Tq., Guntur District, Andhra State. They have consequently dropped the idea of the Company undertaking the manufacture of ferro-manganese and have also decided to give up the controlling interest in the Jeypore Mining Syndicate Ltd., at a suitable time, in order to conserve the financial resources of the Company for the Sugar undertakings.

The directors report that the Government of Orissa have sanctioned an irrigation scheme which will irrigate about 2,500 acres of sugarcane lands situated near the Factory and capable of yielding about 60,000 tons of sugarcane a year.

In view of the heavy development programme on hand, the directors thought that the time was opportune to apply to the Controller of Capital Issues, New Delhi, for permission to the Company for the issue of bonus shares in the proportion of 4 ordinary shares for every 5 ordinary shares now held by the shareholders by the capitalisation of Rs. 8,50,600 out of the Company's existing reserves of Rs. 10,78,785, and also for the issue of a fresh capital of Rs. 10 lakhs consisting of 1,00,000 ordinary shares of Rs. 10 each at par to the existing shareholders for payment in cash. In case the existing shareholders do not subscribe fully for these shares, arrangements will be made for issuing the balance of unsubscribed shares to the sugarcane growers in the factory areas and others.

Accounts in brief are as under:—

Bengal Nagpur Cotton Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June, 1954.

The Company sustained a loss for the half-year of Rs. 5,23,389 (profit of Rs. 58,354) which on deducting the credit balance of Rs. 27,088 (Rs. 15,831) brought forward was reduced to Rs. 4,96,301 (profit of Rs. 74,185). The directors transferred from the general reserve Rs. 5,23,000 (after adding Rs. 23,808 being provisions no longer required), making an available balance of Rs. 28,699 (Rs. 97,993). The directors recommended a dividend at the rate of 7 per cent. per annum free of income-tax on the cumulative preference shares absorbing Rs. 10,500 (Rs. 10,500), leaving to be carried forward Rs. 18,199, making a total of Rs. 28,699) (Rs. 19,993, after paying a dividend of Rs. 87,500 at the rate of 5 per cent. per annum.)

Falling cloth and yarn prices and higher cotton costs provided margins insufficient to cover the production costs, which remained high, due to the volume of sale being too low to dispose of the stock already accumulated or to permit a higher rate of production.

Accounts in brief were as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	30,00,000	Block ...	23,53,000

Profit and loss account ...	18,199	Cash ...	1,63,991
Rs.	77,78,903	Rs.	77,78,903

Lansdowne Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th September, 1954.

After providing Rs. 66,873 (Rs. 65,198) for depreciation, the profit and loss account showed a loss of Rs. 53,836 (profit of Rs. 3,23,264) which was reduced by the amount brought forward from previous half-year Rs. 5,230 (credit of Rs. 22,344), transfer from general reserve Rs. 1,30,000 (Rs. 75,000), leaving an available balance of Rs. 81,394 (Rs. 2,20,308). Out of this sum the directors paid a dividend on the preference shares at the rate of 7 per cent. per annum, without any deduction for income-tax paid by the Company Rs. 52,500 (Rs. 52,500), a dividend on the ordinary shares of Re. 1 (Rs. 5) per share, without any deduction for income-tax paid by the Company Rs. 24,466 (Rs. 1,22,325) and carried forward Rs. 4,428 (Rs. 45,483).

In accordance with the working time agreement of the Indian Jute Mills' Association the mill worked 42½ hours a week from 1st April to 10th July, 1954. As from 12th July working hours were increased to 45 hours weekly and these hours remained in operation up to 14th August. From 16th August, the mill worked 48 hours weekly up to the end of the half-year in order to make up part of the loom hours lost during the strike. During the full period 12½ per cent. of total looms remained sealed.

From the labour angle the half-year was an extremely difficult one. Instigated by extremist propaganda a number of breaches of discipline occurred, culminating in a strike when working hours were increased throughout the industry from 42½ hours to 45 hours weekly from 12th July. Due to the prompt action of the authorities the sit-down strikers were cleared from the mill and no damage was done to the mill property. Work was resumed on 21st July but was followed by a period of "go-slow" work so that production did not return to normal levels until the end of August. The above labour difficulties had a serious effect on the financial results of the half-year, and were directly responsible for the loss sustained.

The directors have sanctioned a scheme for the partial modernisation of the mill. Tenders have been called for and plans to implement the scheme will be finalised at an early date.

The finance required for this scheme will be found partly from the Company's own resources and partly by the issue of a Rs. 25,00,000 debenture loan bearing interest at the rate of 5½ per cent. per annum and redeemable in 15 years.

Accounts in brief were as under:—

STRINGENCY IN MONEY PERSISTS

(From Our Own Correspondent)

BOMBAY, 9th February

Stringent conditions continued to prevail in the short-term money market during the week under review also. Though there was no broadening of activity to any appreciable extent, there was a steady demand for funds, which could not, however, be fully met by the available supply. Banks had to seek accommodation from the Reserve Bank or Imperial Bank, while some of them even preferred to sell sterling on London.

Inter-bank call money was bid throughout the week at 3 per cent. among all sections of banks. House money rate was maintained at 3 per cent., as also short-term deposit rate for 1 to 6 months.

The stringency in the market is further reflected in the hardening of the Treasury Bill rate this week. The average rate of accepted tenders for Rs. 1 crore of three months' Government of India Treasury Bills, which had declined last from Rs. 2-8-6 per cent. to Rs. 2-8-3 per cent. per annum, rose back to Rs. 2-8-6 per cent. per annum this week. The amount offered was, however, slightly higher at Rs. 159.25 lakhs, than in the previous week when it aggregated Rs. 137.75 lakhs. This may be due partly to the maturity of the bills amounting to Rs. 1.50 crores offered at the first sale in November when Treasury Bill borrowing was resumed. Tenders for a further sum of Rs. 1 crore have been invited for next week also.

After receding successively for two weeks, notes in circulation have risen by Rs. 14.10 crores during the week ended 4th February, 1955, as seen from the Reserve Bank's statement for that week. Notes held in the Banking Department have shrunk by Rs. 4.81 crores, so that the total notes issued are up by Rs. 9.29 crores. This is covered by a rise of Rs. 9.94 crores in foreign securities and a decline of Rs. 65 lakhs in rupee coin. In the Banking Department, the most outstanding feature is the decline in the Central Government's deposits to below the Rs. 50-crore level, considered to be the irreducible minimum. These deposits have dropped by Rs. 5.19 crores over the week to Rs. 48.84 crores, the lowest level for many years. The lowest level witnessed last year was Rs. 51.33 crores, as seen from the statement for the week ended 16th April, 1954. Deposits of other Governments also have declined by Rs. 1.41 crores. A drop of Rs. 3.25 crores is noted in deposits of banks. Cash balances have shrunk by Rs. 4.91 crores and balances held abroad by Rs. 4.68 crores. Ways and means advances to Governments are up by Rs. 1.29 lakhs and other loans and advances by Rs. 1.29 crores, of which advances to Scheduled banks against usance bills account for Rs. 1.22 crores. Investments are lower by Rs. 47 lakhs.

The Scheduled Bank's statement for the week ended 28th January, 1955, as compared with that for the previous week, discloses a decline of Rs. 2.39 crores in demand deposits and a rise of Rs. 1.73 crores in time deposits. Inter-bank borrowings are lower by Rs. 47 lakhs, while borrowings from Reserve Bank are up by Rs. 1.44 crores and those from the Imperial Bank by Rs. 31 lakhs. Loans and advances have risen by Rs. 6.01 crores. No notable variation is seen in inland bills purchased and discounted, but a decline of Rs. 1.54 crores is noted in foreign bills, purchased and discounted. Investments are better by Rs. 43 lakhs, while cash on hand and balances with the Reserve Bank have together declined by Rs. 2.89 crores, balances with other banks in current account have receded by Rs. 78 lakhs and so also money at call and short notice by Rs. 1.32 crores.

The Gilt-edged market presented steady, but listless, conditions during the week under review. Some small improvements were noted in selected counters and the volume of business was restricted. 3 per cent. 1957 changed hands a fraction higher at Rs. 99-4½. 3 per cent. 1958 improved by an anna to Rs. 99-4. 3 per cent. 1959-61 had small business at Rs. 97-6. 3 per cent. 1963-65 an anna better at Rs. 93-11 and 3 per cent. 1964 at had sellers at Rs. 93-10½. 3 per cent. 1966-68 was unchanged at Rs. 90-9 and 3 per cent. 1970-75 at Rs. 86-15. 3 per cent. 1986 Conversion Loan was, however, marked down by As. 3 to Rs. 81. 3½ per cent. 1961 National Plan Bond was done an anna lower at Rs. 99-9, while 3½ per cent. 1964 National Plan Loan had sellers at Rs. 98-9.

The rupee-U.S. dollar exchange rates were unchanged during the week, while sterling weakened a little in terms of the dollar. Thus, in New York, spot sterling dropped from $2.78.7/16-2.78.9/16 to $2.78½-2.78¾, forward sterling (three months) from $2.78¾-2.78½ to $2.78.3/16-2.78.5/16 and transferable sterling from $2.71½-2.72½ to $2.71½-2.71¾.

KIPS STEADY

(From Our Own Correspondent)

MADRAS, 7th February

The kip market ruled steady, due to good clearance of stocks by shippers. U.K. buyers are reported to have paid a penny more for light-weight kips. Trading with the U.K. has been irregular, due to higher prices demanded by shippers for fresh business which U.K. importers stoutly resist. Madras tanners are not able to meet U.K. prices for lower grade cow hides. Arrivals of buffs have been meagre and prices are 2d. above U.K. levels. There has been no change in the cow calf or buff calf section where top marks continue to attract attention.

In the London public sales, prices of tanned sheep skins advanced by 1d. all round on the opening and closed generally on December levels, excepting on common tannages 8/10 lbs. where the decline was 6d. per lb.

Shipments (in bales) in the month of January, 1955: To the U.K.: 3,289 td. cow hides, 246 td. cow calf, 124 td. buff hides, 222 td. buff calf, 896 td. goat, 710 td. sheep and 8 dry salted goat; to the Continent: 403 td. goat and 64 tanned sheep; to the U.S.A.: 2 td. cow calf, 50 td. buff hides, 25 td. buff calf, 40 td. goat and 82 dry salted goat; to Japan: 107 td. sheep skins.

BULLION STRONG

(From Our Own Correspondent)

BOMBAY, 9th February

The bullion market presented buoyant conditions during the week under review, with a sharp rise in values of both the metals. Persistent speculative buying and heavy bear covering by local operators, coupled with keen support from Calcutta interests, lifted up the prices of silver and gold to new high levels after many months. Forward silver, for instance, touched today Rs. 164-6, the highest since 25th May, 1953 and forward gold Rs. 93-6, a level not seen since 10th May last. The improvement in the commodity and cotton markets and the tense political situation in the Far East also assisted the bullish sentiment. Although at every bulge profit-taking set in and erased a part of the gains, prices recovered with renewed vigour on revival of buying. Over the week, silver disclosed a gain of Rs. 3 per 100 tolas and gold Re. 1-11 per tola.

There was no trading on Thursday last, though the Bullion Exchange was officially open, as jobbers refrained from trading as a protest against the arrest by the police, on the previous evening, of some brokers and jobbers during late trading. When the market resumed business on Friday, forward silver (February settlement) opened at Rs. 161-2 and advanced to Rs. 162-6 on Saturday. After reacting to Rs. 161-6 on Monday, forward silver appreciated to Rs. 163-2 before the settlement ran out yesterday at Rs. 162-8. Silver for forward delivery in the next settlement (10th March) rose from Rs. 160-13 to Rs. 162-1, before receding to Rs. 161 on Monday this week. The upward trend was, however, soon resumed and forward silver touched a peak of Rs. 164-6 before closing at Rs. 163-13.

Ready silver (.996 Mint) hardened from Rs. 160-14 to Rs. 165-10, but closed at Rs. 164-5. The floating stocks of silver are estimated at 2,400 bars. The daily average arrivals were 10 to 15 bars, while the offtake was placed at 15 to 20 bars on an average.

Gold for forward delivery (7th February settlement) advanced from Rs. 91-13 to Rs. 92-12 on Saturday. After a minor setback to Rs. 92-2 on Monday, forward gold for this settlement closed on that day at Rs. 93, a rate which was Rs. 5 above the starting point for that settlement. The bulls were, therefore, obliged to pay a margin of Rs. 7 per tola. The settlement also ran out on Monday at Rs. 93. Forward gold for the next settlement (8th March) rose from Rs. 91-6 to Rs. 93-6 before closing today at Rs. 93-1.

Ready gold opened at Rs. 92-2 and, after touching a high of Rs. 94-10, finished at Rs. 94-5. The floating stocks of gold are reported to be 25,000 tolas. The daily average arrivals were 3,000 tolas. The daily average offtake was 4,000 tolas.

In London, there was a rise in the price of silver and gold. Spot silver moved up from 73⅞d. to 74d. and forward silver from 73¾d. to 73⅞d. Gold advanced from £12 11s. 7½d. to £12 11s. 9½d. per fine ounce.

The following comparative table shows the trend of the market during the week under review:

	9-2-55	Highest	Lowest	2-2-55

EXPORT DEMAND FOR TEA MODERATE

(From Our Own Correspondent)

CALCUTTA, 8th February

Mixed conditions were in evidence during yesterday's export sale when offerings aggregated 13,199 chests. Demand was moderate. Offerings included some lots of poorer varieties, and only a small proportion had the autumnal character. While the few clean common varieties were steady, the poorer stalky teas eased by half to one anna. Whole leaf grades gave way by half an anna. Mediums realised prices which were favourable as compared to previous rates. Teas of autumnal quality realised valuations and black leaf fannings were shown keen attention by Middle East buyers. Darjeelings of the poorer types were easy, but the few lots that possessed the autumnal flavour were steady. The quotations were: best CTC Assam BP not quotable, medium Assam BP Rs. 3-11-6 (nominal), clean common BP Rs. 3-9-6 (nominal), and clean black pekoe Rs. 3-10-6 to Rs. 3-11 (nominal).

During last week's sale for domestic consumption, dusts offered consisted of 19,408 packages. At the outset, conditions were a note easy, but, as the sale progressed, the trend was towards steadier rates. Support from Egyptian buyers were readily given to black leafy teas. Best liquoring CTC Assams of improved quality were higher by As. 1 to As. 2. The rates were: best Assam CTC Rs. 3 to Rs. 3-1, medium Assam grainy dust Rs. 2-12, and medium Dooars Rs. 2-11.

Leaf offerings amounted to 8,745 packages. Despite good demand prices gave way by As. 1 to As. 2. The poorest teas remained steady. Medium Assam BPs were priced at Rs. 3 and clean common BP Rs. 2-14 (nominal).

FURTHER COTTON EXPORT QUOTAS

(From Our Own Correspondent)

BOMBAY, 9th February

At long last, the Government has intervened to stem the rot in the cotton market. Late in the afternoon yesterday, the Textile Commissioner announced suspension of the quota system for allocating Indian cotton to mills. This means that the mills and traders are now entitled to buy Indian cotton freely. The position is to be reviewed again at the end of May, 1955. The Textile Commissioner also released for export a further 50,000 bales of cotton (Bengal *deshis*, Oomras, Kalagin, Dholleras and Mathias) of old or new crop of 11/16" staple and below, of which the maximum quantity of Bengal *deshi* is fixed at 25,000 bales, and another 25,000 bales of old crop of 1953-54 and earlier years of staple length up to ¾".

The aforesaid measures are in line with the recommendation made by the Indian Central Cotton Committee at its recent meeting held this week. Even the Cotton Advisory Board is reported to have suggested such measures at its meeting yesterday. It is not so much the Government's implementation of these suggestions as its readiness to give effect to them without any loss of time that is to be commended. Evidently, the Government must have been prompted by the consideration that it would be in its own interests to take some corrective measures, instead of waiting till prices reach floor levels and thus be compelled to purchase cotton. The morale of the Bombay cotton market had already been lost, following the persistent precipitous fall in cotton prices. With the removal of quota restrictions for purchase of Indian cotton by mills and the release of further quantities for export, one thought that the downward trend in prices would be arrested. But this expectation has been belied. The market was once again subjected to selling pressure today and cotton prices suffered a severe setback, thanks to the speculative forces at work.

After opening with a weak tone, the forward section of the Bombay cotton market staged an impressive recovery till today when the market developed weakness again. The initial weakness was due to easy upcountry advices, poor spot reports and the general bearish sentiment. There was a wave of selling and cotton prices continued their downward march and touched the lowest levels for the past four months on Thursday. On Friday, the sentiment of operators somewhat improved, as a result of corrective short covering, and prices recovered. The recovery continued in the subsequent sessions also on hopes of Government intervention. It, however, gave way today. The spread between the two contracts which was just As. 12 last week widened to As. 11-6 today.

I.C.C. February contract receded from Rs. 698-8 to touch a low of Rs. 563 on Thursday. After gradually moving up to Rs. 596 yesterday, it reacted to Rs. 584-8 today before finishing at Rs. 585-4. I.C.C. May contract was at the lowest level of Rs. 562-8 on the 3rd inst., as against Rs. 567-12 on Wednesday last. Thereafter, it recovered to Rs. 582-8 yesterday, but finished lower at Rs. 573-12 today.

The following is the trend of prices during the week under review:

	2-2-55	High	Low	9-2-55
I.C.C. February ...	Rs. 568½	596	563	585½
I.C.C. May ...	Rs. 567¾	582½	562½	573¾

During the major part of the week, the spot cotton market ruled quiet, with purchases confined to small quantities. Some business was reported in 197-3 and Jarilla for immediate delivery. Occasional transactions were concluded in Vijay, Surti, and Navsari, Bardoli for March-April delivery. Ahmedabad mills displayed interest in new crop Kalyan. All prices lost further ground this week due to lack of enquiries. Exporters bought a few lots of C.P. and Berar *deshi*, but showed no interest in Bengals. There were some inquiries for Kalagin. Foreign styles had another week of poor demand. The only business transacted was in Giza 30 and low grade Sudans bought by upcountry mills for near shipment. The prices paid were reported to be very unattractive.

Following the announcement of Government measures, mill enquiry is reported to have broadened. Substantial business has been put through in Jarillas and Vijays. Prices, however, were generally lower.

The following table gives today's closing rates, as compared with those a week and a fortnight before:

(In Rs. per candy of 784 lbs.)

	9-2-55	2-2-55	25-1-55
Bengal *deshi*	580	580	600
Berar Jarillas	650	650	675
Khandesh	630	650	700
Vijay	750	730	770
Oomra *deshi*	610	600	625
Moglai	590	580	620

Importance is attached to the recent discussions between the Indian cotton interests and the Sudan Finance Minister and other members of his delegation. In the course of the discussions, the cotton interests emphasised the need for correct grading of Sudan cotton and consistent marketing policy. The Sudan Finance Minister is reported to have given the assurance that he would bear in mind these suggestions and would do all in his power to implement them, so that the Indian cotton interests would buy Sudan cotton on a much larger scale than now.

There was a slight improvement in the sentiment of the Karachi cotton market this week and prices staged a minor recovery. Nevertheless, deals were slow, since foreign enquiries continued to be slack. Shippers were interested in ready cotton. The latest available quotations (in Pakistan rupees per 821 lbs. weight) from the Karachi cotton market as on the 7th inst. are: Sind *deshi* 71 to 72;

Punjab *deshi* 63-4; 4F Punjab R.G. 68-4; S.G. 72-4 to 74-4; L.S.S. R.G. 72-12; S.G. 76-12; N.T. R.G. 73-4; S.G. 77-12; 289F R.G. 76-4; S.G. 80-4.

A recent Press report from Karachi avers that the Sind Chief Court has served show cause notices on the Karachi Cotton Association and its 12 directors stating why action should not be taken against them for alleged disobedience of its orders. The notices follow an order of injunction against the Association restraining them from enforcing a resolution passed by it on 24th January, 1954. Under the resolution, factory selection contracts (transferable) were to be deemed to have terminated the next day. The order of the Court restrains the Association from giving effect to the resolution in respect of contracts entered into by plaintiff. The petition states that defendants proceeded to give effect to the resolution on the 1st inst. and declared the plaintiff as a defaulter without proper notice.

Trading in the Alexandra cotton market was quite active this week too. Fully good Karnak met with renewed buying enquiries. Medium and low grades of Ashmouni were also well favoured. Giza 30, however, was neglected.

The first auction of the 1954-55 crop Sudan cotton is being held at Khartoum today, with offerings aggregating 15,000 bales. On the basis of the official reserve prices for the auction based on May New York 35.00 cents (as announced by the Sudan Gezira Board) and taking into account normal expenses and margins, the equivalent c.i.f. Bombay prices (in pence per lb.) work out thus: XG4 S—53.28; G4S—51.51; XG5S—50.25; G5S—48.93; XG 6S—47.67; G6 S—46.41; G4L—44.84; XG5L—43.18; G5L—42.42; XG 6L—41.51; G6L—40.25. The second auction of the new crop Sudan cotton (f.a.q.) is to be held on the 23rd inst. Total offerings are estimated at 15,600 bales, including 5,100 bales Gezira S cotton, 4,500 bales Gezira L cotton, 1,200 bales AL/WL L cotton and 4,800 bales Nuba Mountains. Reserve prices will be announced nearer the date of the auction and all bids will be considered as on call related to an arbitrary figure of New York futures which will be announced at the same time. Meanwhile, the Sudan Government has given the assurance that the Government and the Board are determined to ensure that the marketing of Sudan cotton is in no way endangered through manipulations. If, at the auctions of the new crop, any such danger were to arise, they would not hesitate to take steps in order to safeguard the "freedom of supply" at world prices to the Sudan's export markets.

At Liverpool, trading was hesitant and cautious, due to uncertainties of the 1955 U.S. cotton acreage allotment and the possibility of some form of export subsidy being introduced to liquidate surplus U.S. cotton stocks. Following Commission house selling and easy advices from New York, cotton prices tended to look down. Turnover of spot and shipment cottons was small, thanks to quiet conditions in textile trade. The offtake in U.S. qualities was limited to shorter to medium staples of rain-grown cotton for forward delivery. Tanguis, Pima and Brazilian-Sao Paulo were among the other varieties of cotton favoured by buyers. Quotations for cotton futures prevailing at Liverpool yesterday are: March-April 32.31d., May-June 32.33d., July-August 32.23d. and October-November 32.05d.

Persistent liquidation of nearby March and switches to forward positions characterised the trading in the New York cotton futures market this week. Commission house participation was limited, reflecting farm legislation and far eastern uncertainties. The mid-January parity price of cotton is 35.22 cents, according to the U.S. Bureau of Agricultural Economics. This figure is 50 points more than the mid-December parity. If, according to the usual practice, the loan rate for the 1955 crop is based on the mid-January parity price, there will, it is stated, be a high support price during the next season also. Based on an average premium of 165 points for Middling 15/16" over Middling 1", the prospective average loan rate for the next season will be 33.35 cents. Cotton circles feel that such a loan rate cannot be reduced but will be raised, should the mid-July parity be higher. In other words, the prospective average loan rate is actually 12 points higher than the current average loan rate of 32.23 cents.

The following are the latest available quotations for the New York market, as compared with those a week and a fortnight before:

(In cents per lb.)

	8-2-55	1-2-55	24-1-55
Spot	34.95	35.10	34.57
March	34.43	34.59	34.64
May	34.73	34.90	34.94
July	34.99	35.12	35.13
October	35.04	35.13	34.93

RAYON YARN BEARISH

(From Our Own Correspondent)

BOMBAY, 9th February

For another week in succession, the rayon yarn market depicted a distinctly bearish trend. The weakness was due to advices from the cotton yarn and staple fibre yarn sections. Reports from other commodity markets too were not helpful. Rayon yarns were, therefore, subjected to selling pressure and values continued their downward march. The fall would have been more marked but for encouraging news from the rayon fabrics market, where hopes of an early Indo-Pakistan trade agreement induced traders to expect possibilities of large exports of fabrics to Pakistan in future.

Trading during the week revealed that spot rayon yarn 150 deniers Japan was hammered down by As. 5 to Rs. 3-11. 150D Italy receded by an anna and a half to Rs. 3-12-6. 150 Japan lost an anna to Rs. 3-15. 120 Italy, which had slumped from Rs. 3-15-6 to Rs. 3-13 yesterday, recovered to Rs. 3-15 today on special buying support. Prices of indigenous rayon yarns were also lower, National Rayons 150 B1. cones first and second grades being quoted at Rs. 3-6-9 and Rs. 3-6-3, respectively. February delivery for viscose yarn was quiet at Rs. 730. Acetate yarns, too, fetched lower prices this week in sympathy with fall in viscose rayon yarn prices and due to unsatisfactory sales policy adopted by local producers. Thanks to reduced offtake, stocks are reported to be accumulating with traders.

Imports of rayon yarn into Bombay port during the month of January, 1955 were slightly less than those in the previous week, being 2,105,182 lbs., as against 2,141,545 lbs. Of this quantity, 604,153 lbs. were imported from Italy, 344,540 lbs. from France, 325,348 lbs. from Holland, 322,876 lbs. from Germany and 288,677 lbs. from the U.K. Imports from Japan were not more than 114,337 lbs.

The expectation of an improvement in staple fibre yarn output, following heavy imports of fibre (against last year's licences) in recent weeks, let loose a wave of selling in the staple fibre yarn section, resulting in a landslide in prices. In the forward section, 40×2 February delivery slumped by 19 points to Rs. 587. March delivery reacted from Rs. 609-8 to Rs. 592. Among foreign yarns in the spot section, Shincos lost half an anna to Rs. 3-14-6. Suicos, however, gained a like amount to Rs. 4-0-6 on special demand. Among indigenous yarns (40×2), Morarjis receded by nine pies to Rs. 2-14-9. New Greats and Citys finished half an anna lower each to Rs. 3-2-6 and Rs. 3-4-3, respectively. Sitarams were a shade easy at Rs. 3, Kohinoors at Rs. 3-5-3 and Srirams at Rs. 3-0-3.

Imports of staple fibre, as already stated, have been larger in recent weeks. The quantity actually imported into Bombay during January, 1955 was 190,164 lbs., as against only 11,849 lbs. in the previous month. The bulk of this quantity, amounting to 150,157 lbs., came from Belgium. Imports from Holland accounted for 39,688 lbs.

Conditions in the cotton yarn market were listless during the week under review. The continued fall in raw cotton prices brought about slackness in the demand for yarn, as buyers withdrew support in anticipation of a fall in yarn prices also. Besides, for the same reason, enquiries from consuming centres were not encouraging. Consequently, cotton yarn values drifted lower, with the exception of coarse count yarns which were fully maintained on enlarged demand. Among 80s, Moderns receded by As. 6 to Rs. 64-4 and Elphinstones by As. 4 to Rs. 59. Among 60s, Raghuvamshis dropped As. 12 to Rs. 54-10. Finlays and Srirams finished each As. 4 lower, the former at Rs. 59-12 and the latter at Rs. 55-8. Deals in 40s were done at reduced prices, Gokaks losing As. 4 to Rs. 25-10 and Moderns As. 2 to Rs. 25-8. Among 30s, Maduras slipped by As. 12 to Rs. 22-4. Prakash were quiet at Rs. 20-12. Among 20s, Maduras lost As. 2 to Rs. 17-12. Moderns, however, were steady at Rs. 17-2, Centurys at Rs. 16-8 and Seksarias at Rs. 16-6. Yarns of ten counts were steady, Moderns and Podars being quoted at Rs. 13-9 and Elphinstones at Rs. 13-4.

The table below gives the prices of art silk staple fibre and cotton yarns quoted today, as compared with those a week before:

	9-2-1955	2-2-1955
	Rs. a.	Rs. a.
Art silk yarn—		
150 February (per case of 200 lbs.) ..	730 0	730 0*

* Nominal.

GROUNDNUTS ACTIVE

(From Our Own Correspondent)

BOMBAY, 9th February

The most notable development of the week under review was the announcement of additional export quota of groundnut oil, *kardi* and *niger* seeds. Of particular interest to established shippers was, however, the absence of individual ceiling for groundnut oil export, which would result in the shippers being entitled to the maximum allotment to which they would be eligible on percentage basis. Each shipper is entitled to a quota of 10 per cent. of the best year's exports during any of the four years ended 1952. The decision of the Government to give facilities to crushers to participate in export trade of groundnut oil, subject to a ceiling of 250 tons for shipper, was another interesting feature. The Government also announced export quota for groundnut oilcake and deoiled groundnut meal. It has, besides, imposed a duty of Rs. 230 per ton on the exports of the former and Rs. 175 per ton on those of the latter.

Following the announcement of further export quota of groundnut oil, the groundnut section was very active this week. In fact, the market came in for considerable buying support. Quotations also revealed marked improvement. Groundnut Bold ready advanced from Rs. 18-14 to Rs. 21-6 and Khandesh quality from Rs. 19-4 to Rs. 22. April-May changed hands at Rs. 22-8, as against Rs. 20-2. Groundnut oil ready improved from Rs. 10-2 to Rs. 11-8. The U.K. was interested in groundnut oil at £100 to £101 for March-April delivery and Burma at Rs. 1,340 to Rs. 1,350 per ton for February delivery.

The Joint Chief Controller of Exports, Bombay, has announced that H.P.S. groundnuts in shells will not be allowed for export against the quotas of H.P.S. groundnuts. All exports of H.P.S. groundnuts will accordingly be allowed in the form of *kernels* only.

Traders received the *kardi* and *niger* seed quotas with a sigh of relief. They were, however, deeply concerned at the absence of announcement of total ceiling fixed for export. Although export enquiries at present are almost at a standstill, an improvement is expected in the near future. There have been enquiries for *niger* seed from the Continent at £50 to £51. Japan is reported to have enquired for *kardi* seed. As a result, *kardi* ready Bold improved from Rs. 15 to Rs. 16 and *niger* ready, from Rs. 17-8 to Rs. 18.

The performance of the castorseed section was relatively better this week in sympathy with other seeds. May delivery opened the week quiet at Rs. 75-4. After fluctuating between Rs. 79-10 and Rs. 74-14, it closed at Rs. 79-4. Ready Madras gathered As. 6 to Rs. 15-10 and Kanpur ready As. 4 to Rs. 14-8. Castor oil, First Pressure put on As. 11 to Rs. 9-12 and Commercial As. 8 to Rs. 9-4. U.S. was interested in Commercial quality at 9.75c. and the Continent at £78.

The linseed section proved an exception in that it ruled somewhat colourless. Bold ready lost As. 2 to Rs. 21-6, while April-May gathered As. 6 to Rs. 20-10. Linseed oil suffered As. 2 to Rs. 12-6.

Market circles are very critical of the export duty, particularly on groundnut oil cake. They say that the export duty of Rs. 230 per ton on groundnut oilcake is very heavy and leaves very little margin of profit and, consequently, it will not be possible to export the cake in sizable quantities. They are also disappointed at the cutting down of validity of shipping bills from 15 to 7 days.

The following table shows the price of oilseeds and oil today, as compared with those at the end of the previous two weeks.

	9-2-55	2-2-55	25-1-55
	Rs. a.	Rs. a.	Rs. a.

SUGAR STEADY

(From Our Own Correspondent)

BOMBAY, 9th February

The sugar market ruled steady during the week under review. The steadiness was due to rumours that Cuban sugar per s.s. *Carl Fischer* would be diverted to Malabar and, as such, Bombay would receive varieties of imported sugar priced at Rs. 29-8 per maund. Reduced arrivals of indigenous sugar into the market also aided the sentiment of operators favourably. There was, therefore, some buying support and sugar prices either tended to look up or were fully maintained. The release of 90,000 tons of sugar for free sale, announced by the Union Government on Friday, failed to have any effect on the market.

In the forward section, *Maha* delivery improved from Rs. 81-8 to Rs. 81-14 before finishing at Rs. 81-12 per bag. *Fagan* delivery advanced by As. 10 to Rs. 82-6.

In the spot section, large grain indigenous sugar was done at Rs. 92 to Rs. 105 per bag (inclusive of sales tax), as against Rs. 92 to Rs. 103 last week. Medium grain was fully steady at Rs. 88 to Rs. 90. Small grain was quoted at Rs. 87. Among foreign sugars, German sugar and French small grain put on As. 8 each to Rs. 79-8 per bag of 220 lbs. (exclusive of sales tax). Cuban sugar was done at Rs. 88-12 per bag of 250 lbs. British refined sugar was quoted at Rs. 81-12 per bag of 224 lbs.

Arrivals of indigenous sugar into the market during the week were, as already stated, lower. They amounted to 3,000 bags, as against 4,800 bags in the previous week.

On Wednesday last week, the Central Government announced its decision to licence freely exports of cane *jaggery* and cane *jaggery* powder (*gur*) on shipping bills for shipment up to the end of March, 1955.

PEPPER RECOVERS

(Messrs. Parekh and Co.)

BOMBAY, 8th February

During the earlier part of the fortnight since our last report, Malabar black pepper at Alleppey after showing some animation, exhibited quiet tendency. This was due to America bidding at lower price after buying February shipment at $0.43 by named steamers. Alleppey went down to Rs. 950 after touching Rs. 1,050. Cochin went down to Rs. 170 after rising to Rs. 182½. In the later part, New York having refused to follow the rise in India and the Formosan situation having somewhat eased, the bears in India tried to press down the market. They sold February shipment at $0.41¾, March at $0.42½ and April at $0.43.

Thereafter, however, New York dealers, having waited for some time for lower offers from India, came on the scene, when they realised that India is not in a mood to lower its price, particularly owing to the present uncertainty of the

Formosan situation. They bought February shipment at $0.44. The price in Malabar improved. At Alleppey, business was done at as high as Rs. 1,100. Garbled was done at Rs. 187½. In Bombay, March shipment was done at $0.45¼, while April was paid for up to $0.46¼. There was short covering in February shipment and the shorts bought a sizable quantity for February at $0.45.

In the delivery section, prices also improved in sympathy with primary markets. February and March deliveries were done at Rs. 800 and Rs. 945 respectively.

The Formosan situation seems to have given a timely tonic to the growers. Growers in Tellicherry area are reported not so anxious sellers as expected earlier. They are reserved. Growers in Alleppey area who are usually bullish did not fail to exploit the bull points in the picture and they now quote Rs. 1,075. The weak point in the entire picture is that the Indian consumers are resisting higher prices. They withdraw as buyers as soon as the market goes up.

Following are today's nominal quotations: Ready delivery Rs. 115 (as against Rs. 120 a fortnight ago) per Bengal maund, March Rs. 945 (Rs. 925-35) and April Rs. 960 per candy of 5¼ cwts.

TEA PRICES DECLINE

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 3rd February

Slightly over 1,000,000 lbs. of tea were on offer in sale No. 3 which was held on Tuesday, 1st February. There was some falling away in quality ruary. There was some falling away in quality from the previous sale, although several high-grown invoices maintained some flavour. Although there was a good general demand, prices were generally easier. Common and low medium brokens declined by 1 to 2 annas. Similar fannings showed slightly less decline. Medium teas were As. 2 easier, although stylish fannings were dearer. Best liquoring high-grown teas were well supported at rates which were barely steady and often easier. High-grown pekoes met with some competition and were occasionally dearer. Black, well made, Middle East types met with keen competition and were irregularly dearer. Whole leaf teas met with a poor demand and there were some withdrawals. The following were the quotations:

	1953	1954
	Rs. a. p.	Rs. a. p.
Low-grown Travancore B.O.P.	3 10 0	2 4 6
Medium Travancore B.O.P. ...	3 10 6	2 6 0
Anaimallais B.O.P.	3 13 0	2 10 0
Best liquoring Nilgiri B.O.P.	4 8 0	3 6 0
Well made black leaf O.P. ...	3 9 0	2 10 0

London Market—Sale of 31st January, 1955.—Mediums 1½d., commons 1d. lower.

Sale of 1st February, 1955.—Active market 2d. lower.

Colombo Market.—High-growns slightly easier. Mediums firm. Gulf types considerably dearer. Off grades and stalky teas distinctly lower.

Calcutta Market.—Export.—27,000 packages. Except for Middle East types and stylish whole leaf grades, market irregularly As. 2 to sometimes As. 3 lower.

Dust.—Dust 19,000 packages. Market opened easier, but strengthened as sale progressed and closed half to one anna dearer. Exportable types strongest feature. Leaf 9,000 packages. All types As. 1 to As. 2 easier, except stalkiest being fully firm.

Export quota.—Since our last report the market eased to 108 pies and business was done. The market has now revived to 132 pies, at which figure there are buyers.

Forthcoming Auctions.—Sale No. 4 will be held on Tuesday, 15th February.

As we go to press, Messrs. Forbes, Ewart and Figgis, Ltd. wire:—

"Dust *Sale C.*—346,000 lbs. Market opened easier, but closed one anna dearer, except milled dusts. Middle East types stronger and dearer."

RAW JUTE BUOYANT

(From Our Own Correspondent)

CALCUTTA, 8th February

With an impressive rise in prices, jute goods were steady during the week under review. In hessians, there was some enquiry from both the United States and the United Kingdom, and small business was put through. Unless prices break off, stimulating business is considered difficult to materialise. Argentina is believed to be in need of a considerable quantity of sackings but that country is postponing its purchases in view of the ruling high prices. However, the star feature in the market was the heavy goods section where the revival of Australian interest made all the difference. Shippers for Australia took possession of some quantity. Much covering business also took place. More orders from Australia were anticipated, but the fact that prices have moved up to very high levels is expected to prevent inflow of large orders by mills. The month of January, taken as a whole, was a good shipping month for jute goods, stocks of which, despite the lack of normal business in view of the higher prices, are believed to indicate little change at the end of January.

The West Bengal Government is believed to have favoured the mills to continue to work 48 hours a week as at present. But the situation in the raw material supply is becoming critical. Not much raw jute is coming from East Bengal, and the ban on the export of *kutcha* bales continuing, imports from Pakistan can be only insignificant for the remaining part of the season. Mills have, therefore, to fall back on the domestic fibre up to July when the new crop would begin reaching the mills. As such, the working of the mills is bound to be affected sooner or later. Prices of raw jute still available from the last crop in India have advanced too much, and mills' margin of profit has been affected rather considerably. Assuming mills are able to carry on somehow or other, possibly with a cut in working hours at least towards the closing months of the season, one thing is certain and that is that there would be no raw jute to be carried forward to the next season. Naturally, sowings of the next crop in India will be for a quantity greater than the harvest of 1954-55. One good thing which Pakistan's ban on the export of *kutcha* bales is doing is that it is teaching India to become self-sufficient.

Last Tuesday, ready B. twills were quoting Rs. 124-2 as against Rs. 123-12 on the previous day. This followed business in cornsacks, cotton packs and grainsacks on Australian account. Speculators rushed to the market and seized the opportunity to buy. Immediately the ready position was pushed to Rs. 125-8, sellers being reserved. On Thursday, there was a spurt to Rs. 127-4, and all positions attracted attention. By Friday, another advance took the price to Rs. 128-8, and the closure for the week-end saw a high of Rs. 129-8. Yesterday, a further gain of As. 2 was recorded to take the rate to Rs. 129-10. The forward positions were a few annas higher than the spot rate. April-June advanced to Rs. 130 from Rs. 124, March to Rs. 129-12 from Rs. 123-14, and one month delivery to Rs. 129-12 from Rs. 123-14. These advances are to be deprecated, but they are a direct result of the trend in raw jute. There were also good enquiries from Egypt, and further business with China was expected. That explains shippers' interest in forward deliveries. Mills were rather unable to meet the demand in full, in view of the uptrend in raw jute.

Hessians were also steady, although not so buoyant as sackings. From Rs. 46-14, the ready position moved to Rs. 47-10 by the week-end by stages only. The higher trend was maintained yesterday. Prices for February and March goods were in parity with the ready position, April-June being only a few annas lower. Thus, while the spot was quoted at Rs. 46-15, April-June was being offered at Rs. 46-10. These rates subsequently rose to Rs. 47-10 and Rs. 47-9 respectively. The eight oz. realised Rs. 38-8.

Raw jute was buoyant. Sellers were reluctant to make offers, and only small business passed. Expectations of shortage towards the closing months of the season were of considerable strength for inducing stockists to stick to their holdings. Latest quotations, showing an increase of 2 to 4 points during the week, are given below:

	Middles		Bottoms	
	Rs.	a.	Rs.	a.
Pakistani:				
Northern	38	8	39	8
District	44	0	40	0

Pucca bales first marks ready Rs. 225 a bale.

FOODGRAINS STEADY TO FIRM

(From Our Own Correspondent)

HAPUR, 7th February

The foodgrain markets ruled steady to firm during the week under review and prices of wheat here and in other parts of the country advanced appreciably. Wheat was very much in request from this centre and consequently, *dara* wheat prices improved by As. 12 to Rs. 14-4 per maund and fine quality is quoted at Rs. 15-8. Most of the despatches during the week were to Bihar and east U.P. After an offtake of 5 *khaties* during the week, the local wheat stock das dwindled to 19 *khaties*. Prices of wheat in the eastern districts of the State have also advanced appreciably, due to diminishing stocks and low arrivals from west U.P. In Punjab, P.E.P.S.U. and Madhya Pradesh markets, wheat prices have also marked an improvement from As. 4 to As. 8 per maund. In sympathy with the rise in wheat prices, barley prices have also advanced here by As. 4 to Rs. 6-12 per maund.

Rice prices continued to rule steady, but the supply position has improved. The Government of India is also anxious to export surplus quantity of rice and has, consequently, announced its decision to permit export of husked rice from all ports, which was hitherto allowed from Bombay and Calcutta only. The export duty on rice has also been reduced from 20 per cent. *ad valorem* to As. 2-3 per maund. It is, therefore, expected that export performance of rice will now improve, and the Union Deputy Food Minister has expressed the hope that exports will be 2 lakh tons. Gram prices have also advanced slightly, due to export quota of pulses announced by the Government. In Madras, prices have improved by Re. 1 per bag. Other coarse grain prices, however, continue to rule depressed and are quoted at: *Bejhar* Rs. 6, maize Rs. 7-4, *bajra* Rs. 7-6 per maund. Stocks: *Bejhar* 2 *khaties*.

In spite of the release of export quota of pulses, the ready peas prices continue to rule depressed due to poor offtake and loading restrictions. Peas *dara* is quoted at Rs. 5-8 and white at Rs. 6 and *arhar* Rs. 6-10 per maund. Some peas was despatched during the week to Madras and the local stock is now peas 24 *khaties* and *arhar* 9 *khaties*. Other pulses also declined fractionally during the week and are now quoted *urd* Rs. 9-12, *moong* Rs. 7-12 to Rs. 8-14 and *massoor* Rs. 6 to Rs. 7-8.

In the absence of new driving force, trading in pulses futures was marked by small turnover and narrow fluctuations. The new support was as yet generally lacking and the tone subdued. The latest quotations are: *Urd baisakh* Rs. 9-8, peas *jeth* Rs. 5-6-6 and *arhar jeth* Rs. 6-6, as against Rs. 9-7, Rs. 5-8 and Rs. 6-5 quoted last Monday, respectively.

SLIGHT RISE IN SUGAR PRICES

(From Our Own Correspondent)

HAPUR, 7th February

There was slight improvement in sugar prices during the week under review. This was due to the fact that the latest quota of 90,000 tons of sugar released by the Government of India for free sale found little place from mills on this side. The supply position, however, is satisfactory and the Government has decided to end the distribution system of imported sugar f.o.r. destination stations. This is likely to broaden the turnover in the market. The reduction in the prices of imported sugar is also a step in the right direction, as imported sugar was being sold at a loss in some centres, but the increase in the limit of minimum quantity released to any party from 20 to 60 tons has disappointed the small traders. Trade interests think that, provided transport is efficient, sugar prices are expected to move downwards during the current season.

The total output during the current season is expected to be around 1.4 million tons, as compared with the previous season's figure of slightly over 1 million tons. This is because sugar mills are getting adequate supply of cane, mostly due to lower *gur* prices. The proposed sugarcane growers' strike from 1st February, 1955, in the State has also been postponed, as the committee is holding further negotiations with the Government. The latest mill delivery prices at Hapur are: Jaswant Rs. 29-13, Simbhauli Rs. 29-13, Mowana Rs. 30, Daurala Rs. 31-4, Amroha and Bijnore Rs. 29-4, Mansoorpur Rs. 31-4 and Rampur Rs. 32-12; retail Rs. 33-4; *khandsari* Rs. 23 to Rs. 26-8. Owing to continued depression in *khandsari* prices, the U.P. *Khandsari* Sugar Association has urged the State Government to exempt *khandsari* sugar from the imposition of sales tax.

Ready *gur* prices slightly improved during the week and the U.P. Government has also arranged purchases here and some quality *gur* has been purchased at Rs. 10-4 per maund. This has improved the tone of the market and *gur* prices are now quoted at Rs. 9-12 to Rs. 10-4. The local arrivals now average 3,000 maunds daily and the local stock is estimated at 50,000 maunds. The Government of India has decided to license export of cane *jaggery* freely and this too had a sober effect on the local *gur* market.

Future *gur* prices also registered a steady tone. Opening at Rs. 10-1 and Rs. 10-11, *phagun* and *baisakh* deliveries are now quoted at Rs. 10-4 and Rs. 10-15.

STRONG DEMAND FOR HIDES

(From Our Own Correspondent)

KANPUR, 6th February

During the week under review, conditions in the hides and skins market continued to be one of confidence. There was a strong demand for all the items. Continuing tension in the Far East had a stimulating effect on the market. Fresh arrival during the week was not as considerable as during the previous week. The country tanners were in for inferior grade cow and the ordinary goat and sheep. The main transactions were done by the local tanners. The latest quotations are as follows:—

Wet salted cow, 1st grade Rs. 430 to Rs. 440, 2nd grade Rs. 340 to Rs. 360 and 3rd grade Rs. 160 to Rs. 180 per score; wet salted buff, 1st grade 1 lb. 7 ozs. and 2nd grade 1 lb. 10 ozs. per rupee; goat skins, 1st grade Rs. 325 to Rs. 350 and 2nd grade Rs. 275 to Rs. 300 per 100 pieces and sheep skins Rs. 200 to Rs. 250 per 100 pieces.

LINSEED EASY

(Messrs. A. Bradley & Co.)

CALCUTTA, 7th February

A generally easier trend has prevailed during the week under review and lower prices have been recorded, owing to poor demand. Upcountry markets indicate keener offerings for new crop delivery, although despatches of ready goods are still poor. Crushers have shown a feeble interest and the volume of trading during the week has been very small. In the oil market, quiet conditions prevail; sellers are fairly keen, but buyers have been cautious in anticipation of lower prices. The latest quotations are as follows:—

February Rs. 16-11 and April-May Rs. 15-14 per maund.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. e.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years

* Including bonus. (k) Investments. ‡ For ten months ended 31st December 1951.

(i) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (a) For seven months ended 31st March, 1954.

*The following explanatory notes relate to the abbreviations and marks shown on page 292 in the debentures section:—

(H) Option to repay on six months' notice, on any interest date after 31st December, 1951, at 102 per cent. Also redeemable out of a cumulative sinking fund of 1½ per cent. per annum (commencing in 1938) by drawings at 102 per cent. or by purchase at or 102 per cent

(a) Option of repayment at any time at 3 per cent. premium.

(b) Bearer bonds of Rs. 1,000 each repayable at par.

(c) Bearer bonds of Rs. 1,000 each repayable on 31st July 1959.

(d) Bearer bonds of Rs. 1,000 each with option of redemption on whole or on part at 7 per on 30th June, 1952 or on any subsequent interest date at one month's notice.

(e) Returnable on or after 31st July, 1950, at Rs. 102-8 or at par after 31st July, 1953 on six months notice in each case.

(f) Bearer bonds of Rs. 1,000 each with option of redeeming on 3 months' notice at 4 per cent. premium after 1st March, 1954, but before 1st March, 1957, and 1 per cent. premium on or after 1st March, 1957.

(g) Option of redemption on or after 1st July, 1949, at par.

(h) Option of repayment at any time at par at any time on or after 30th June 1947 on six months' notice.

MECHANISATION OF BANKING OPERATIONS

SAVING OF STAFF AND LABORIOUS WORK

By Paul Bareau

MECHANISATION is a word normally confined and applied to industrial processes. It recent years, however, the allocation to machinery of routine work done previously by the human hand or brain has made enormous advances in commerce and finance, and particularly in banking. Britain, which can still claim to be the banking capital of the world, has been well in the van of this movement to mechanise as much work as can be handled by machines. Some particularly interesting details of achievements in this field have recently been given by the chairmen of large British commerical banks in their annual statements to stockholders.

Lord Harlech, Chairman of the Midland Bank, the largest of the joint stock banks, gave a comprehensive account of what his institution has done. In the early years of this century, the only mechanical aids for banking were the typewriter and simple adding machines. As early as 1928, the Midland Bank took the initiative in installing machines for posting ledgers which, at the same time, prepared statements of account for depositors.

The laborious work of posting ledgers and pass-books by hand, which had gone virtually unchanged since the dawn of deposit-banking in the Middle Ages, is now vanishing fast; and within a comparatively short time even the smallest bank branches will be mechanised.

Complex Machines

Perhaps the most complex machines are those which help foreign exchange and arbitrage operators who need contrivances that will rapidly calculate minute differences in cross-rates on the basis of which exchange arbitrage between the various foreign exchange markets of the world is effected.

In bank branches where there is a particularly heavy intake of cash, many hours of laborious work are now saved by the use of high-speed note-counting machines. Similarly, at larger branches and at head offices, coin-counting machines are being increasingly used. Notes are also weighed, envelopes addressed and franked, and a host of purely routine jobs entrusted to machines with a considerable saving of staff and costs.

One of the most time-saving aspects of mechanisation has been the introduction of photography in bank operations. By the use of micro-filming, an immense amount of labour is being saved in the listing of details of cheques, dividend warrants, and traders' credits when they are forwarded from one bank office to another. Documents are photographed and the films retained as basic records. In the Midland Bank, departments responsible for this work are filming, on an average, about 300,000 items daily. On peak days, the totals are far larger.

One great advantage of the system is the gain in storage space. Sixteen thousand items are photographed on a single spool, which, with its container, is roughly only the size of a packet of 20 cigarettes. The banks' photographic departments rendered great service during the war, when all documents and ledgers were photographed, and films held in other branches, so that if bombing destroyed the originals—as happened all too often—the whole records of a branch could be reconstituted in a few hours.

Another example of mechanisation in use at some head offices, including the Midland Bank, is the punched-card method of recording, computing, and checking. Large blocks of salaries, pensions, and annuities paid from month to month are handled by this method. The same method allows records to be compiled of coupons paid or unpresented in respect of securities for which banks act as paying agents.

Saving of Staff

The immediate result of mechanisation has been not only a considerable saving of staff but a shift in the kind of tasks allocated to trained and efficient bank employees. Sir Oliver Franks, recently-appointed Chairman of Lloyds Bank, has pointed out that while the Bank's deposits have trebled in number since 1938, with a corresponding expansion in "ledger keeping," the total of the Bank's male staff has been reduced. The reason for this has been the increased use of machines many of which are ideally suited to the care of women employees.

In 1938, Lloyds Bank had about four men to every woman on its staff. Today, the numbers are moving towards equality. Mechanisation and the coming of the woman bank employee have gone together.

There is clearly a limit beyond which mechanisation of banking cannot go. In essence, the true business of banking is least susceptible of mechanisation or even of rule-of-thumb methods. Good banking is a matter of judgment. In the making of bank advances what matters most is not the security put up for a loan, or the figures and balance-sheets submitted by an applicant; far more important is the lender's capacity to assess the character, integrity and assiduity of the prospective borrower.

Mr. Anthony Tuke, Chairman of Barclays Bank, underlined this point most effectively when he answered the critic of banks' advance policy who says that their methods are too haphazard and unscientific, and that too much depends on the whim of the individual branch manager. "He (the critic) would perhaps like the prospective borrower to fill up a complicated form and send it to the appropriate planning authority, where the formula evolved by some clever ignoramus would be applied to it, and after a due lapse of time the bank would be informed how much credit should be allowed to that particular customer." No—said Mr. Tuke, if he were the customer, he would rather put his faith in the decision or recommendation of the manager of his independent competitive bank, however whimsical and unscientific he might be.

That assessment of human values and qualities is something which, fortunately, will never be mechanised. But in those realms of banking where mechanisation is appropriate, Britain has got off to a flying start.

MARKET GOSSIP

(Concluded from page 247)

hopes of a revival in earnings to anything like the extent required to meet present heavy establishment expenses of about Rs. 67 lakhs per annum, and depreciation of assets."

• • • •

Notable reductions in the expenses of each of the Company's three branches, at Calcutta, Bombay and Madras, have been made. But it is felt that it is vital that expenses should be reduced further and to a very great extent. The Directors observe that there is "no longer any possibility of retaining an unprofitable department simply to provide employment." The problem is particularly acute in respect of the Calcutta branch of the Company, it is stated. The Directors have, therefore, reluctantly decided to close down that branch. Explaining the reasons for this decision, the Directors add:

"The Calcutta branch, however, shows by far the heaviest loss and has only twice made a profit in the past six years. Its jute organisation and some other lines of its traditional business can no longer make a sufficient contribution towards the large overheads of the branch, which must rely on exports of gunnies for its main revenue, and competition in this article is very keen. All aspects of the problem have been very carefully considered but your Directors see no possibility of the Calcutta branch being run at a profit in the foreseeable future, nor can they see any prospect, under present conditions, of sufficient profits in Bombay and Madras to cover the losses which would be incurred in Calcutta. Your Directors have, therefore, concluded with reluctance that the Company must close the business of its Calcutta branch and the necessary resolution has been passed by the Board, effective on 31st May, 1955. Notice is accordingly being given to staff in the Calcutta area and the up-country jute and seeds organisations working under Calcutta, that their services will not be required after that date."

• • • •

Although the Bombay and Madras branches, for the first time since the inception of the Company, have also failed to cover, during the year ended 31st August, 1954, their expenses, it is believed that, with "ordinary fortune" in trading, particularly in cotton, and with a return on profitable working conditions in the Company's oil mills, the results of these branches can be again turned to show a working surplus. The Board, it is further revealed, has under consideration the strengthening of the business of the Bombay and Madras branches, and express the hope that these branches will bring back prosperity to the Company. In view of the long-established connections of this firm with India's rural economy, the traditions of fair dealing the Company has established and the fact that it has been one of the earliest of the foreign trading concerns to invite participation by Indian capital, many will hope that the Company will be able to get over—or the Government will enable it to get over—the serious setback in its fortunes.

• • • •

As we go to press, we learn that the Brady Engineering Co., Ltd., has reduced its dividend for 1954 to Re. 1-8 per share from the maiden dividend of Rs. 3 per share paid for 1953. The cut in dividend has been necessitated by the lower profits consequent on the continuous strike for three months by the Company's workers.

COMMERCE AND INDUSTRY

(Concluded from page 273)

The Government has also decided to permit exports of husked rice from all ports in India. So far, that is, since 24th July, 1954, to 4th February, 1955, exports of husked rice were permitted only from the ports of Bombay and Calcutta. Simultaneously the Government has announced a reduction in the export duty on rice from 20 per cent. *ad valorem* to As. 2½ per maund. Besides it has allowed a limited quantity of pulses to be exported abroad and Bombay has been allotted a quota of 3,600 tons.

The Government's decision to reduce the export duty on rice has been welcomed by the trade in the city. The revised duty is considered more or less nominal and hence prospects for exports have brightened to a considerable extent. It is stated that Aden and other buyers in the Middle East would evince greater interest in the near future than hitherto on account of the enhanced competitive position of Indian rice, thanks to the cut in export duty. The bulk of India's exports consists of boiled rice.

But the most important announcement, from the oilseeds market point of view, is the release of an additional quantity of groundnut oil for export through established exporters and crushers by 31st March, 1955. Established shippers of groundnut and groundnut oil have been allotted a quota of 10 per cent. of the best years' exports of the oil during any one of the four years ended March, 1952, subject to a minimum of five tons. No individual ceiling has been fixed for this quota. Shippers, therefore, will be given the maximum allotment to which they would be eligible on the percentage basis.

The Government has also given facilities to crushers to participate in the export trade. These are, however, subject to a ceiling of 250 tons per shipper from all ports. The crusher should produce certificates to prove his having paid cess on groundnut oil crushed by him during any of the three years 1952, 1953 or 1954.

Quotas for the export of oilcake also have been announced. The overall quota has been fixed at 25,000 tons (expeller variety). Licences will be issued for shipments by the end of March, 1955. The applicant should produce evidence of firm contract and of freight having been booked. A ceiling of 1,000 tons has been fixed for each shipper. Besides, exports of deoilled groundnut meal (solvent extracted variety) will also be licensed freely on the same basis as above till the end of March, 1955. This will be in addition to the ceiling of 250,000

CENTRAL BUDGET UNINSPIRING

THE budget statement for 1955-56 presented by Mr. C. D. Deshmukh to Parliament on Monday this week is rather disappointing, in that it is not designed to achieve the objective of increasing employment on a large scale as speedily as possible. Speaking on the Government's economic policy, Mr. Deshmukh stated in Parliament on 20th December, 1954, that "the central objective of our economic policy from *now* on must be to create full employment conditions within a measurable period, say, 10 years from *now*. This is, by no means, an overambitious goal. It is, perhaps, the minimum we ought to strive for. In achieving this, there is ample scope for expansion both in the public and the private sectors. This means, in the first place, that we have to create at least two million new jobs, if not more, every year, in order to provide for the annual increase of 1.8 million in the employable labour force. Secondly, it means that we must make some impression on the unemployment and underemployment already existing. These jobs must obviously be created in the non-agricultural sector." Lest one should get away with the impression that these observations of Mr. Deshmukh apply only to the second Five-year Plan, now being talked about, we have advisedly italicised the word "now" in the quotation from his speech. If this means anything, it is that the budget for the coming year itself should aim at fulfilling this need. The question whether the taxation policy that underlines the budget proposals is such as to be conducive to the creation of two million new jobs per annum from now is, therefore, a pertinent one. To us it looks as though the answer to this question is in the negative.

India, which has to find fresh sources of employment for as many as two million people every year, is doubtless an underdeveloped country. But the system of taxation to which it is asked to submit is one that will be found onerous even by a highly developed economy which wishes to maintain its existing standards. Heavy taxation in a free economy requiring large-scale development is not consistent with the goal to be achieved. To give an instance, when the U.S. was recently faced with a rising rate of unemployment, it did not tax more in order to find the resources necessary for creating more jobs, but it actually reduced the taxes. Similarly, when the U.K. wanted more investment in order to improve the productivity of its industries, it lowered the tax burden. In a free economy, additional taxes are generally imposed only when no further expansion of investment is required. A few weeks ago, Sweden, for instance, stepped up the taxes, with a view to curbing fresh investments as it feared that they might lead to scarcity of labour or overemployment. It is common knowledge that lower taxes stimulate enterprise and strengthen the desire to save and that the reverse is the case when taxes are kept at high levels. In other words, incentive is the first prerequisite for a free economy which is anxious to expand employment and raise living standards. Such an incentive is lacking in the budget for 1955-56. And this fundamental need, we are sorry to say, has not received the emphasis that it merits in the report of the Taxation Enquiry Commission which has been the principal basis for Mr. Deshmukh's new taxation proposals.

If employment, by which we mean gainful employment, requires to be expanded, production must go up and production can go up only if what is produced is consumed. This means that, if consumption is restrained, employment cannot be expanded. This is particularly true of a country which is concentrating its energy and resources not on production of defence equipment but on raising the living standards of its people by utilising its latent resources. It is, therefore, essential that the tax system followed by such an economy should be such as not to curtail consumption. The call for austerity and tightening the belt in such an economy will be most inappropriate. Viewed from this angle, the increase in excise duties and the introduction of new excises which account for Rs. 17.70 crores of the Rs. 26.7 crores of new taxation is most ill-advised. It is true that imports of manufactured goods are being replaced by expansion of production within the country, that, as a result, the importance of import duties and export duties on raw materials as a source of revenue to the Government is declining, and that the loss of this revenue requires to be made good. This is the justification for relying more and more on excise duties, a justification fully endorsed by the Taxation Enquiry Commission. There is considerable force in this argument. But there is a limit and time for everything, and the pressing need for *more* revenue has to be reconciled with the equally urgent need for providing more employment. Our contention is that the Finance Minister and his mentor, the Matthai Commission, have not done this job well.

The increases in excises on cloth and sugar are so steep that they may lead to a fall in consumption, resulting in accumulation of stocks and, ultimately, decline in production. In any case, profits will be less, more especially in cotton textiles, and, to that extent, the income and corporation taxes payable by these industries will also decline. The Government, therefore, will not be able to have it both ways. The law of diminishing returns is not a myth. And it is not understandable why the Government should take such chances. It is needless to add that, when the law of diminishing returns operates, it causes considerable hardship to the community. The manufacturer will try to pass on the incidence to consumers and, when he fails to do so, he will try to cut into the cake of raw material producers. When he finds that this also is not possible, he will try to lower the quality of his production, in order to effect a saving in manufacturing costs. When he exhausts all these alternatives, he will work at a loss for some time in the hope of better days and, ultimately, think of curtailing production, with all its attendant evils on employment.

There are serious limitations on the ability of manufacturers of sugar and cotton cloth to pass on the full effect of the increase in excises. To take sugar first. As domestic production is short of consumption, the maximum selling price of sugar is determined by the Government by fixing a price for imported sugar. Already, the Government has reduced the margin that has been in favour of domestic sugar by a rupee per bag by not raising the selling price of imported sugar in proportion to the rise in excise duty. The sugar producer cannot offer a lower price for sugarcane, because of the minimum price for the raw material fixed by the Government. A good part of the increase in excise duty will, therefore, have to be borne by sugar manufacturers themselves. To some extent, the resulting fall in profit may be offset this season by an increase in production, provided the increased production can be sold, which is doubtful in view of the rise in prices. Fortunately for the sugar producer, as the Government, too, is out to make large profits on imported sugar, the selling price of imported sugar will not be reduced substantially. He may not, therefore, have to suffer much. But all this runs counter to the Government's declared policy of cheapening the price of sugar and encouraging consumption. If the Government has reversed this policy—Mr. Deshmukh says that he does not want sugar consumption to go up—then it should say so, so that one need not bother about raising sugarcane production, putting up new factories and expanding the existing ones. Mr. Deshmukh, perhaps, means that he does not want consumption of sugar to run ahead of domestic production. But this line of argument is fallacious, for consumption is not like tap water which can be had whenever one wants by opening the tap. It has to be developed by creating a taste for it and sustained by ensuring adequate supply of the commodity. In any case, why discourage expansion of sugar industry by putting more and more burdens on it, for, being an agro-industry, it is eminently suited for providing employment in those rural areas where the climate is suitable and irrigation facilities are available or can be made available?

The incidence of increased excise on cotton cloth will be more serious than on sugar. Even before the excise rates were increased, mills

were finding it difficult to sell their production and a downward revision of selling prices was taking place. In these circumstances, it will be difficult for the mills to pass on this additional burden to consumers by a straight increase in prices. They may, therefore, try to shift at least a part of the burden on to the cotton grower, who has already been suffering from a sharp fall in prices. Some of them may also reduce the quality of cloth which is another form of making the consumer pay. The exact amount of this new burden on the industry must be more than the Rs. 9 crores estimated by Mr. Deshmukh. As a result of the change in the unit from linear yard to square yard and the reclassification of the varieties for levying the excise, the additional burden may easily be Rs. 15 crores, provided production is maintained at the current level. It may be further noted that the industry is being asked to bear this burden at a time when the volume of purchasing power in rural areas has appreciably shrunk owing to the fall in commodity prices and when export orders are slackening. During the first two months of this year, exports were only 126 million yards, as against 163.8 million yards in the same period of last year. The reduction in export duty on coarse cloth from 10 to 6¾ per cent. will no doubt lead to a slight improvement in exports, but the relief is meagre, especially because a substantial quantity of cloth hitherto exported as pseudo-medium without payment of duty has now come to be classified as coarse and will be liable to export duty. Unless, therefore, the Finance Minister revises the excise rates in a downward direction, the mills are likely to find themselves in a serious plight.

The extension of excise duty to a wide range of industries, such as woollen textiles, electrical goods, paints and varnishes, sewing machines, dry and storage batteries, and paper, may arrest their progress. Excepting, perhaps, paper, the rest of the industries have been struggling hard, with their production running below installed capacity. Many of these are new industries and deserve to be encouraged both as a source of employment and as consumers of power and raw materials. It was only last year that Mr. Deshmukh subjected, for the first time, cement, footwear, soap, and artificial silk to excise duties. The imposition of excise duties on new industries even before they are firmly established is not calculated to stimulate industrialisation. For, unless these new industries thrive, build up reserves and investors who participated in their establishment receive decent dividends, fresh capital will not be forthcoming for putting up more new industries. The State, therefore, will have to wait till these industries attain maturity and are able to yield luscious fruit. Till then, it will have to be content with whatever direct taxes that can be collected from them. It is definitely premature for the Finance Minister to tap such new industries as woollen goods, sewing machines, electric fans, electric bulbs, electric dry and storage batteries. They have suffered for a long time from consumers' prejudice and are just coming into the limelight. Another reason why they should not have been chosen by the Finance Minister is that most of these goods are subject to heavy sales tax. The increased direct taxes which the middle class have been called upon to pay may also adversely affect the market for them.

By stepping up the direct tax payable by assessees falling within the income range from Rs. 10,000 to Rs. 25,000, the Finance Minister has nearly offset the advantage which the middle class had just started getting by way of some relief in their cost of living. Now even this group is subjected to taxation at rates prevailing in most of the advanced countries. The progressive reduction of the earned income allowance on incomes in excess of Rs. 25,000, leading upto its virtual abolition at the income level of Rs. 45,000, has also the same effect. Similarly, the inclusion of the value of perquisites or benefits, whether convertible into money or not, received by salary earners drawing over Rs. 18,000 per annum and by directors of companies, in the income for assessment of tax, will also add to the burden of honest taxpayers, while it may be easily evaded by less scrupulous persons. There are ways and ways of evading the taxes within the four corners of the law and higher the incidence of tax the greater will be the tendency to evade. The introduction of an allowance for married persons is a welcome innovation long overdue, but the relief is so negligible that it is not worth mentioning, especially in the light of the increase in indirect taxes even on essential consumer goods. It must, however, be conceded that the relief given in the form of higher rebate on payment of premia on life insurance policies and subscriptions to recognised provident funds will mean something to the low-income middle class group. But it is not adequate for the middle class in the middle and upper income groups, in that it will not enable them to obtain sufficient cover to protect their families against unforeseen calamities, such as the sudden death of the breadwinner.

The main argument advanced by the Taxation Enquiry Commission in favour of taxing the middle class as noted above is to bring about "a reduction in the large measure of inequality that exists as between income-tax payers, in general, and the mass of the population." In other words, the Commission wants equality of incomes to be brought about by levelling down, instead of through levelling up. Here is a typical instance of the socialistic pattern of society being put into practice. But, ultimately, this method would only lead to distribution of poverty and eliminate the middle class, which produces *entrepreneurs* and the intelligentsia of the society and stands as a bulwark between democracy and communism. It is the existence of this class which provides a market for a variety of goods, such as motor cars, refrigerators, air-conditioning equipment, radios, sewing machines, etc., that is, goods that are the mark of a modern society and provide the basis for heavy industries planned by the Government and the private sector. Any restriction placed on this section of the society will mean a handicap to these modern industries. It is, indeed, surprising to hear from the Taxation Enquiry Commission that it is an exaggeration to say that higher taxation on the higher-income group acts as a disincentive to hard work. To describe this contention as exaggeration is a facile way of not wanting to face the economic truth. Here, we are, however, not concerned with theoretical niceties, but with the practical effects of levelling down incomes on the industries mentioned above. If this country is going to be a nation of small incomes, then it is idle to talk of and plan for large-scale durable goods industries. At best, such industries can thrive only with State patronage, which will finally end in serfdom for the people.

The only redeeming feature of the budget from the point of view of the need for expanding production and providing more employment is the introduction of 25 per cent. investment allowance on new plant and machinery. But, if full advantage of this facility is to be availed of by the existing industries, the Government's labour policy, in so far as it relates to modernisation and rationalisation of production, must be modified. The Government must be bold enough to tell labour that its opposition to these necessary improvements in the industrial set-up of the country must yield place to co-operation and willingness to face any hardship that may occur, albeit for a short period.

Our opposition to some of the budget proposals does not necessarily mean that we are completely opposed to all forms of additional taxation. Nor does it mean that there is no scope for such taxation. The reintroduction of salt duty, for instance, will have obviated the need for the direct taxation that has now been imposed on the already hard-pressed middle-class people. The grounds on which the Taxation Commission has opposed this tax are sentimental, if not political. Again, the abolition of prohibition will bring in a sizable amount of revenue, besides giving great relief to the police who, because of their preoccupation with enforcement of prohibition, are unable to devote their time to checking crime. Prohibition may be a desirable reform, but its introduction in a workable and more agreeable form can wait till the other pressing needs of the country are satisfied.

There is no need to feel alarmed over the large deficit-financing provided for in the budget, as a result of the increases envisaged in the developmental expenditure. In the first place, past experience shows that the Government may not be in a position to implement all the projects, for its machinery is still not fully geared for that purpose. And, secondly, the increased industrial and agricultural production, coupled with the ready availability of goods in overseas markets, can enable the country to absorb a large dose of created money without upsetting economic stability. Nevertheless, the authorities must take all possible care to check wastage of resources, to ensure that expenditure is incurred on productive projects and to prevent evasion of taxes which is still believed to be quite extensive. From this point of view, the various measures outlined by the Taxation Commission must be implemented expeditiously and vigorously.

THE BEGINNING OR THE END?

MR. R. A. Butler, Chancellor of the British Exchequer, has had to tighten his reins. This has not come as a surprise, for his gentle tug at the end of January failed to have any significant effect either on the stock markets in London or exchange rates abroad. The *Financial Times* share index which stood at 194 at the end of January climbed a further 3 or 4 points early in February. But the extra 1 per cent. on bank rate which has now been added to bring it up to 4½ per cent. puts it at a level not reached since the depression 23 years ago. The Chancellor seems well satisfied with the results—he has already declared that sterling is stronger (although the improved quotations have only been out for a couple of days) and that, while he is not prepared to prophesy, he thought the trade pattern was likely to become satisfactory.

But investors in Britain have been wondering whether the trouble was not entirely in the stock markets. They have seen shares fall nearly 9 per cent. in the past fortnight, tumbling from 196 on the *Financial Times* index on 11th February to 180 on 22nd February, showing a rally the next day, a nose dive on Thursday when the bank rate was put up, and then a small recovery at the end of the week. The institutional investors are not sure that the bottom has been reached. Evidently, they are holding off for the moment to watch the trends.

The higher bank rate was accompanied by a severe restriction both of hire-purchase business and of the finance extended to the companies who give consumer credit. No wonder the Opposition in the House of Commons derided the Chancellor for reversing his previous liberalisation policy—it was too *good a political* point to miss. Yet nothing could have been less fair, for the Chancellor was doing precisely what Mr. Gaitskell (Labour's ex-Chancellor) would have done in his place; "Butskellism," as by-partisan economic policy is called, has come into its own.

There are, according to our London correspondent, bound to be further repercussions on the domestic market. The big catering firms have found business nearly 10 per cent. worse this February than a year ago and a large section of the retail trade has found it some 5 per cent. worse. The exceptions have been the furniture firms and those making radio and television sets, household and electrical goods, motor cars, and other consumer capital goods. It is this sort of spending which the Chancellor is hitting at by his hire-purchase restrictions, though he is being criticised on the grounds that the wiping-out of stock market paper profits should have been sufficient to restrain credit spending. A great deal of such spending is, however, by people who do not invest, and the Chancellor wants to see them added to his army of new savers. He has asked for two million new savers in a nation-wide advertising campaign and so far he has got 1¼ million. As for the goods which the new savers are going to be discouraged from buying, he wants to see them being sold overseas. For it is in the trade balance that the Chancellor's real concern lies. He has seen an active balance diminishing and sterling becoming weaker both in the regular market and in the transferable market. He is now not content to let the raising of bank rates do its work in strengthening the £ by bringing short-term funds to this country for investment in the money market. These funds have already begun to move in but they are too flighty to give the Chancellor the security he demands. He is, therefore, intervening through the exchange equalisation fund to buy not only regular sterling but transferable account sterling as well.

Such a move could be the first step to convertibility, but, in any event, purchases of sterling offered in the market in excess of demand will draw away the gold reserves, unless the factors making for such excess offerings are removed. Too much should, therefore, not be read into the convertibility aspect of the Bank's new excursion into the transferable account field. The real point is that the Chancellor wants to see confidence restored in the overseas strength of sterling and he wants to see the trade balance becoming active once again. The whole policy is as logical and neat a bit of economic control as his political opponents could have devised. It is true that he has abandoned the principle of complete economic freedom at home, but he has recognised that this is not compatible with steering the economy the way it has to go in the interests of a healthy balance of payments.

SOME HIGHLIGHTS OF TAXATION ENQUIRY COMMISSION'S REPORT

BUDGET WELL RECEIVED BY SPECULATORS

THURSDAY, 5 P.M.

MARKET GOSSIP

EXCEPTING for the heavy increase in the excise duty on mill-made cotton cloth and the totally *unexpected* addition to sugar excise, the Central budget for 1955-56 does not contain any painful surprises. To this extent, therefore, the budget has been in accordance with market expectations. Indeed, the budget contains one or two pleasant surprises for the market, namely, the introduction of a development rebate to the tune of 25 per cent., the carry forward of business losses to unlimited period, the restoration of the right to adjust losses on speculation against the gains on business and the increase in the *limit for* rebate allowed for payment of premium on life assurance policies and subscriptions to recognised provident funds. These features of the budget, coupled with the provision for deficit finance to the tune of Rs. 320 crores in the next 12 months, *have imparted* some strength to the market. Most of the equities, except cotton textiles, have registered modest *gains* over the levels prevailing just before the presentation of the budget.

• • • •

It will, however, be quite misleading to say that the budget has brought about enthusiasm among *genuine investors*. Much of the rise in prices that has taken place has been confined to leading speculative counters, especially to Tata Steel Ordinaries and Indian Irons. Lest Mr. Deshmukh should make great play of the *rise in equities* in Parliament *and approvingly* quote it as an indicator of the reactions of business men and investors to his budget, the *real factors* responsible for the buoyancy of the market must be clearly stated. As already stated, the rise is due mainly to the technical *position* of the market. Before the budget, a prominent operator had sold short, according to knowledgeable circles in the market, several *lakhs of* Indian Irons and quite a few thousands of Tata Steels. Just on the *eve of* the budget a powerful *group* of speculators entered the market as bulls with the object of squeezing the bear. The bulls entered the ring in the hope that *Mr. Deshmukh* would not introduce a soak-the-rich budget. And Mr. Deshmukh has obliged them. He has not *done* anything to worsen the position of the private sector, though he has not done much to strengthen its hands *either*. Emboldened by this *development*, the bulls are after the blood of the bear. Their plan seems to be to absorb whatever floating *stocks are now* available of both the steel scrips and then pounce upon the bear. In order to create an impression *of buoyancy*, they have also *been buying* some of the other popular counters, too. Once the bear is hounded out and the short position gets squared, *the market* will become hollow and, perhaps, a part of the gains now seen may be wiped out.

• • • •

The new taxation proposals are not conducive to the growth of individual savings. On the contrary, the *heavy excise* duties on essential con*sumer* goods and the increase in personal taxation will lead to a reduction *in these* savings, unless the employment position in the middle class section of the population improves perceptibly. The chances for *this are* limited and the progress will *be very* slow. The amount available for investment in equities, *therefore*, is unlikely to show any *significant* expansion. But it must be said that the "development rebate" provides a good incentive to the *development* of industrial enterprise. *This rebate*, amounting to 25 per cent. of the cost of plant and machinery, is allowed as a deduction from the *assessable* profit for the purpose of taxes in respect of new plant and machinery installed in a business after 31st March, 1954, whether the busi*ness itself* is old or new. This "development rebate" is similar to the "investment allowance" given in the United Kingdom, and is in lieu of the *initial* depreciation otherwise available under section 10(2)(vi) of the Income-tax Act in respect of new plant and machinery. The development rebate materially differs from the initial depreciation allowance, in that (i) the allowance is to be made at a higher rate, that is, 25 per cent., instead of at 20 per cent., (ii) the allowance will not be taken *into* account in computing the normal and double depreciation allowances which will continue to be available for the new assets in addition to the development rebate, (iii) the development rebate will not also be taken into account for computing *the* maximum amount of allowances admissible or the balancing charge under section 10(2). The *rebate* is admissible only in cases of *businesses* and not in other cases to which initial depreciation allowances will continue to be available.

• • • •

It will be interesting to note here that, though the Taxation Enquiry Commission advocated the "*development* rebate" to be extended only to *select* industries, the *Government* has made it applicable to *all* industries. Since the rebate is allowed as a deduction from the profit, no *deferred* taxation is involved here. It should be particularly welcome to electricity companies which have been *fighting* in vain with the Government for a special element to be *included* in the standard rate of *return on* capital employed for the *deferred* tax liability arising under the system of initial depreciation allowance.

Following the aforesaid concession, the speculators have been concentrating their attention on the shares of those companies, *such as* T.I.S.Co., I.I.S.Co., and A.C.C., which have got large expansion programmes.

• • • •

The string of dividend and profit announcements of textile mills for 1954 made this week shows that their performance during the past year was not so bad as in the case of the mills that announced their results earlier. Thus, the Standard Mill has maintained the dividend at Rs. 20 per share; its profit amounts to Rs. 29 lakhs (after providing for increased dearness allowances for 1953 and 1954 and additional bonus for 1952, in terms of the L.A.T. award), as against Rs. 38 lakhs for 1953. Arvind Mill also has repeated the dividend at Rs. 25 per share, with a final distribution of Rs. 17-8; its gross profit is about Rs. 67 lakhs, as against Rs. 71.42 lakhs for the previous year. The Gokak Mill has declared a *dividend of Rs.* 13 per share on an increased capital raised by a 1 : 4 bonus issue, as against Rs. 17 per share for 1953. The profit of the mill (after providing for the managing agents' commission) is said to have dropped from Rs. 16.35 lakhs to Rs. 14.63 lakhs. The distribution to shareholders of the Bombay Dyeings has, however, been pruned from Rs. 22-8 to Rs. 20 per share, by withholding the bonus part (Rs. 2-8) of the final disbursement—the interim dividend having been maintained at Rs. 7-8 per share. The Century Mill, on the other hand, has maintained the distribution for 1954 at Rs. 22 per share, with a final dividend of Rs. 14 per share. The Company has earned a gross profit of Rs. 87.17 lakhs, as against Rs. 96.82 lakhs for 1953. The directors have provided Rs. 3.08 lakhs (as against *nil* in the previous year) for managing agents' commission, Rs. 12 lakhs (Rs. 12.50 lakhs) for depreciation and Rs. 29.50 lakhs (Rs. 32.5 lakhs) for taxation, but they have not transferred *anything* to the reserves which had received Rs. 20.24 lakhs in the previous year. The dividend absorbs

The report of the Taxation Enquiry Commission, the general recommendations of which are summarised elsewhere in this issue, will, as the Finance Minister pointed out, "deeply colour and affect taxation policy for some time to come." There are many specific and detailed suggestions in the Report which, when they are implemented, are bound to affect one way or another *all taxpayers*. As far as income-tax is concerned, the Commission has made many important suggestions of far-reaching significance to company finance. One such is, of course, the grant of "development rebate" for new industries which figures as part of the latest budget proposals.

• • • •

An important question which baffles many an assessee, and on which, if he is an honest taxpayer, he probably feels that the authorities are not always just towards his claims, is the determination of the quantum of income for tax purposes. On this question, the Commission has made several important suggestions. It recognises that it is difficult to give a succinct and workable definition of income. It has, however, suggested that the premium on leases, sale proceeds of patent rights and copyrights, compensation received for termination of managing agency agreements or similar business agreements and compensation for loss of employment should be made chargeable to income-tax. The Government has accepted this recommendation and a suitable provision has been made in the Finance Bill. The Commission has further advocated the taxation, at a special rate, of certain casual benefits, such as lottery prizes. The distinction between agricultural income and non-agricultural income, it is pointed out, should be given up. This suggestion is of interest to plantation companies and sugar *companies* which grow their own cane. It has, however, advocated preferential treatment of irregular and fluctuating receipts such as (a) income of single picture producers, (b) interest on long-term cash certificates issued by banks, and (c) income from *nidhis* and chit funds. The Commission has suggested that the income-tax authorities should be specifically empowered to question the reasonableness of the remuneration paid to employees who are relations of the management.

• • • •

Many disputes arise over the scope of admissible deductions for computation of income. In this connection, the Commission has suggested that the cost of acquisition of patent rights and copyrights, premium on leases, legal costs and other expenditure in connection with the acquisition of a lease for a period exceeding one year and cost of collecting securities and dividends should be treated as admissible deductions. Similar relief is recommended for any sum paid to a university, or college or any other approved institution. This recommendation, too, seems to have been accepted by the Government to a substantial extent.

• • • •

The Commission has generally accepted the Indian mineral industry's case for tax relief. Accordingly, it has recommended that the mineral industry should be permitted to charge against profits such items of expenditure as (a) capital expenditure incurred for acquiring minerals or the rights to work minerals, (b) expenditure on successful exploration, (c) expenditure on development of mines and (d) cost of the buildings, plant or machinery used for exploration or mining purposes. Expenditure on tangible assets should be admissible for depreciation and that incurred on intangible assets should be amortised. In order to prevent the abuse of these concessions, the Government, in consultation with the Bureau of Mines, should consider the desirability of imposing maximum limits for each industry beyond which expenditure on exploration would not be allowed. There is justification for tax incentives for mineral industries but they should be restricted to selective minerals and limited to undeveloped minerals or to those which are in initial stages of development or the development of which is considered essential for economic or strategic reasons. The concessions, it is further recommended, might also be confined to concerns which undertake to convert the minerals into finished or semi-finished products before export. Many mining companies—gold mining companies, for instance—face the difficulty of mining certain uneconomic ores. In this connection, the Commission has recommended that the extraction of lower grade ores might be encouraged by a rebate in income-tax based on the tonnage of sub-economic grades of ore mined in a year. No general rule for this purpose can be laid down, and each claim will have to be assessed separately. The Commission, however, does not favour the grant of depletion allowance to mineral industries, whether it is based on discovery value or on percentage or gross or net profits, in view of the fact that it has already recommended the amortisation of a large proportion of capital expenditure incurred by mineral industries. It has also suggested that the mineral industries should, subject to certain specific conditions, be eligible for the development rebate which it has recommended for industry in general.

• • • •

Insurance companies will accord a mixed reception to the Commission's recommendations. The Commission has held that the present practice whereby the tax-free portion of the valuation surplus—that is, the surplus reserved for policyholders—is limited to 80 per cent. of the surplus is fair and no further increase in this proportion is necessary. Nor does it advocate any change in the existing procedure which applies to life insurance business assessed on the "external incomings" basis. No further tax concessions in favour of mutual life insurance companies, according to the Commission, are called for. This represents the *status* quo part of the Commission's recommendations. Some changes have, however, been recommended. The present exemption of the profits of co-operative insurance business, the Commission says, should be withdrawn. The Government has accepted this recommendation and the necessary amendment has been introduced in the Finance Bill. This is bound to cause regret in co-operative circles. General insurers will welcome the Commission's two recommendations in respect of their business. In the first place, the Commission has recommended that companies carrying on general insurance business should be allowed to add five per cent. of their annual premia to the reserves every year free of tax, until the reserves reach 75 per cent. of the annual premia in respect of fire and miscellaneous business, 100 per cent. in respect of marine cargo business and 150 per cent. in respect of marine and aviation hull business. Secondly, the Commission has recommended that transactions of re-insurance placed by Indian insurers with insurance companies abroad should not be taken to establish a "business connection" within the meaning of section 42 of the Income-tax Act, and that the profits arising from such business should not be subject to tax. It is recognised that such taxation will make foreign re-insurance companies reluctant to accept re-insurance from India. In recommending the grant of exemption to such income, the Commission observes that no amendment of the law is necessary to give effect to the recommendation, for such exemption could be secured by the issue of suitable executive instructions.

• • • •

No credit is now given in respect of corporation tax in respect of the income of the shareholder. This, according to some spokesmen, constitutes double taxation of the same income. The Commission has held that there is no substance in this contention. This is because the Courts in India and in the U.K. have held that the company is not an agent of its shareholders. Apart from this legal aspect, the company is also a separate economic entity, the shareholders "resembling less an *entrepreneur* and more a lender of money." The Commission holds that so far from there being a case for the refund of the corporation tax, there is actually justification for scrapping the existing

SHARE MARKET CHEERFUL

REACTION TO BUDGET FAVOURABLE

(From Our Own Correspondent)

BOMBAY, *3rd March*

BARRING the one-hour Budget session on *Monday evening*, the week under review witnessed generally cheerful conditions on the Stock Exchange. In the special session on Budget day, the market reacted bearishly to the first thoughts on the Finance Minister's Budget proposals, as it was not able to make out clearly the net effect of the proposals on industries. In the subsequent sessions, however, equities staged a notable recovery. This was because, on second thoughts, the Budget was interpreted bullishly, and the speculative activity which followed lifted share values. Closing quotations on balance revealed sizable gains over a wide front.

In the pre-Budget trading, the opening day of the week under review was marked by restricted business, due to lack of fresh incentive and the raising of the British Bank rate. Fluctuations in prices were confined to a narrow range. In the following sessions prior to the Budget, however, sentiment became more cheerful, and prices advanced under the lead of steels. Factors such as heavy buying in steel shares, particularly by Calcutta operators, absence of any new tax measures in the Bombay Budget and expectations of a reduction in export duty on cloth all helped to bolster up the sentiment.

The trading during the Budget session was characterised, as stated at the outset, by a minor landslide on initial disappointment over the Budget *proposals*. The additional excise duty on cloth, the increase in excise duty on sugar and the imposition of new excise duties on a host of other articles, the levy on income-tax on entertainment and other allowances drawn by people with income over Rs. 18,000 per annum and the lowering of the super-tax limit were some of the proposals in the Budget which induced nervous selling. The favourable features of the Budget, particularly those relating to industries, would appear to have been overlooked by the market. In the result, the earlier gains in most of the counters were more than wiped out.

The reactionary trend was, however, reversed on the subsequent day, as the market regained confidence on a review of the Budget proposals which were found favourable to industries, particularly those which have expansion programmes. Advices from Calcutta, which did not react unfavourably to the Budget, were helpful in sustaining the bullish *sentiment*. Thus, the development rebate of 25 per cent. allowed on the cost of new plant and machinery installed for business purposes, in place of the present depreciation allowance of 20 per cent., is considered helpful to such companies which have large expansion programmes, such as the two main steel companies, cement industry, rayon industries and some cotton textile mills, such as Bombay Dyeing and Century. Another important concession given to new industries is the carry forward of losses in business indefinitely instead of for six years as at present. The cut of 6¼ per cent. in export duty on cotton cloth is also welcomed. The aforesaid favourable proposals had a bracing effect on many scrips. The inflationary aspects of the deficit financing also induced bullish sentiment. Consequently, activity broadened considerably and sizable advance in prices was recorded over a wide front. Towards the close, however, the disappointing dividends of some textile mills resulting in a sharp setback in these shares and the approach of settlement day induced some caution and, as a result, equities finished below their best levels.

Sectionwise, steel shares gave a lead to the market under a spell of heavy speculative activity. After an initial mild reaction from Rs. 232-4 to Rs. 230-12, Tata Ordinaries advanced to Rs. 236 on the eve of the Budget, but retreated to Rs. 230 during the Budget session. Renewed speculative buying and heavy short-covering, however, lifted them up to Rs. 238-12 before finishing the week at Rs. 237-12. Indian Irons moved up from Rs. 33-7 to Rs. 34-10 on Saturday, but dropped to Rs. 33-15 in the Budget session. Opening still lower at Rs. 33-11½ on Tuesday this week, the scrips rallied to Rs. 35-4½ *today*, but closed at Rs. 35-1.

The textile section, however, presented a mixed pattern, with some of the leading counters showing losses on disappointing corporate news. Bombay Dyeings advanced early in the week from Rs. 468-12 to Rs. 480. Though the shares were marked down to Rs. 457-8 at the close of the Budget session, they subsequently almost recouped the loss with a spurt to Rs. 477-8 yesterday. This was due to the expectation that the Company would benefit from development rebate and that it would issue bonus shares. However, disappointment over the absence of any announcement about the bonus issue and the cut in final distribution for the year ended 31st December, 1954 from Rs. 15 per share to Rs. 12-8 per share, caused a reaction to Rs. 461-4 at the close today, thus resulting in a net loss of Rs. 7-8 over the week. After moving up from Rs. 318-4 to Rs. 319-12, Kohinoors dropped to Rs. 307, reflecting partly the disappointment over the results for 1954 and partly the budgetary reaction. There was, however, a sizable recovery to Rs. 318-8, but the shares fell back to Rs. 311-4 at the close. Centurys displayed remarkable strength, despite the setback during the Budget session, and finished with a gain of Rs. 6-8 at Rs. 372. Central Indias were lower on balance by Re. 1-8 at Rs. 127. Finlays were marked up by a rupee to Rs. 249, Gokaks by Rs. 4 to Rs. 227, Indu Ordinaries by As. 1½ to Rs. 11-1½ and Khataus by Rs. 3-7 to Rs. 158-12. New Greats showed no change, on balance, at Rs. 157.

Bank shares were featureless, but the general undertone was steady. Barodas were unchanged at Rs. 102-8, Centrals gained a fraction to Rs. 52-8, while their New shares were held at Rs. 53-4. Imperial Fully Paids changed hands Rs. 13-8 lower at Rs. 1,377-8, while their Partly Paids held their own at Rs. 390. Bank of Indias put on a fraction to Rs. 149, while United Commercials shed As. 4 to Rs. 43-12.

Electricity shares were buoyant on favourable budget proposals. Ahmedabad Electrics were in good favour and rose by Re. 1-4 to Rs. 115-3. Surat Electrics also gained Re. 1-4 to Rs. 126-4. Bombay Suburbans were, however, unchanged at Rs. 127-8. Tata Hydros put on a fraction to Rs. 147 and their New shares were taken up Re. 1-8 higher at Rs. 112-8. Tata Powers hardened by *Rs. 13-12 to* Rs. 1,513-12 and Andhra Valleys by Rs. 7-8 to Rs. 1,412-8.

In the miscellaneous section, sugar shares were buoyant, despite the increase in excise duty. Thus, Belapurs stood Rs. 8 better at Rs. 323. Phaltans rose by Rs 6 to Rs. 120-8 and Walchandnagars by Re. 1-4 to Rs. 226-4. Among cement shares, A.C.Cs. were concerned in heavy speculative buying and rallied from Rs. 171-12 to Rs. 178-4. Digvijays, on the other hand, dropped Rs. 4-4 to Rs. 169-8. Fractional changes were noted in shipping shares Scindias were lower by As. 4 at Rs. 15-9, while India Steamships put on As. 4 to Rs. 7-12, as also Great Eastern Shippings to Rs. 16-12. Engineering scrips were firm, Alcocks moving up by Rs. 2-8 to Rs. 292-8 and Premier Constructions by Rs. 3-12 to Rs. 157-4. Among mining shares, Indian Coppers scored a gain of As. 11 to Rs. 3-8½, Shivrajpurs As. 8 to Rs. 78. In the other miscellaneous industrial group, Bombay Burmahs were prominent with a rise of Rs. 12-8 to Rs. 459-6. National Rayons advanced by Rs. 12-12 to Rs. 204-8 on strong speculative support.

• • • •

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, *2nd March*

Although industry and trade were expecting some unwelcome surprises in the budget proposals, business and trade circles were not certainly prepared for the plethora of new taxes, the news of which was unfolded by Mr. C. D. Deshmukh on Monday this week. At the special budget session held on the Calcutta Stock Exchange on Monday night, prices were held steady. For, sufficient time had not been allowed for market men to study and assess the effect of the new proposals. Subsequently, it was held that the budget did not increase the burdens in direct taxation on joint-stock companies, and on Tuesday and today conditions were steady, with prices registering fractional gains. The new slab system did not reveal any increase in the export tax on tea, and to this extent tea shares continued to attract both speculative and investment funds.

Due note has been taken in the market of the Finance Minister's statement that Government did not have sufficient time to examine the Taxation Enquiry Commission's report in greater detail, that the budget incorporates only some of the recommendations of the Commission, and that other possibilities arising from the recommendations would be considered and introduced in Parliament in the form of amending Bills from time to time in the light of economic and budgetary considerations. The market has, therefore, lost no time to note that further burdens on industry and trade are in store. Mr. Deshmukh is emphatic that he will look to the products of organised industries in the country to replace the loss from customs resulting from the replacement of imported manufactured goods by indigenous production. This means that excise duties on more varieties of industrial production can be introduced at any time. The excise duties now proposed may be passed on to consumers, but sales would be affected by possible consumer resistance to the higher prices. For, the variety of new taxation proposals is such that they are bound to increase the cost of living. The welcome feature for industry is the 25 per cent. rebate to be allowed on the cost of all new plant and machinery, which, however, replaces the existing provision of 20 per cent. as depreciation allowance. The provision to carry forward losses indefinitely instead of six years only as at present, is also a good feature of the budget.

Trading was lively in teas throughout the week. After the budget was announced, interest widened as the slab system of duty on tea exports did not amount to an increase in the existing levy. Tezpores were raised to Rs. 36-14 from Rs. 34-6 which was the rate in Monday's pre-budget session. At Rs. 407, Hantaparas picked up 32 points. Carrons hardened to Rs. 295 from Rs. 278, and Sonai Rivers to Rs. 24-8 from Rs. 20-8. Good support was accorded to Juttibaris which, as a result, spurted to Rs. 28-2 from Rs. 25-12. From Rs. 582, New Dooars improved to Rs. 608. Central Cachars were favoured at Rs. 164 at which rate the addition was by Rs. 12.

In the engineering section, Indian Irons opened at Rs. 33-6 and were held at that level up to the week-end. On Monday, the quotation gained to Rs. 34-6 and a further As. 6 was gained at the special session the same night. Yesterday's opening was lower at Rs. 33-3 but subsequently the quotation gained to Rs. 34-6. Today, a further support lifted the rate to Rs. 34-15. Jessop & Cos. were in better form at Rs. 35-2 as were Texmacos at Rs. 16-2.

British India Corporations were extremely quiet at Rs. 7-3 and this was due to the announcement of dividend of one anna only. The improvement in Rohtas to Rs. 22-12 from Rs. 22-5 was only temporary, as a recession to Rs. 22-5 followed the budget. Indian Cables were quiet at Rs. 23-8 but rose to Rs. 23-15 today. Nicros were dealt with at rates varying from Rs. 22-1 to Rs. 22-12.

Jutes were featureless, and unless a better relationship is established between the goods and the fibre, the industry has to be content with meeting a diminishing market for its output, at least as far as the dollar area is concerned. Nationals eased to Rs. 32-5 from Rs. 32-8, while Champdanies at Rs. 171 were better by two points.

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, *1st March*

Only a few favourites on the Madras Stock Exchange came in for support during the week under review. The rest of the scrips disclosed narrow fluctuations in prices. This trend was in evidence particularly in the textile section. It was due to the fact that, while the Government reduced export duty on coarse cotton cloth, it imposed at the same time the levy on pseudo-medium cloth of certain varieties. The changes in the levy of excise duty also acted as a deterrent factor on trading in textiles. Some selective buying, however, lifted the values of several popular counters in this section. So far as the planting section was concerned, the after-effects of the reduction in export duty on coffee appeared to have had a negligible influence on coffee scrips. The performance of teas and rubbers was not encouraging, as the shares had not still recovered from the effects of the proposed agricultural income-tax. Miscellaneous shares experienced sporadic support and gathered modest gains, while a few others recorded fractional losses. The undertone was quietly steady.

In the textile section, Ashers put on Rs. 10 to Rs. 140 and Bangalore Woollens Rs. 3 to Rs. 415 *cum-div.* Dhanalakshmis rallied Rs. 4 to Rs. 314 *cum-div.* and Vijayakumar Rs. 2 to Rs. 95 *cum-div.* Vijayalakshmis improved from Rs. 80 to Rs. 89. Lakshmis, Rs. 50 paid-up, were better by Re. 1 at Rs. 135 and 'A' (Rs. 10 paid-up) by As. 8 at Rs. 67-8. Buckinghams, however, lost Re. 1 to Rs. 150 and Rangavilas by Re. 1-8 at Rs. 60-8.

Teas, among plantings, were generally easy. Coorg Teas eased from Rs. 9-11 to Rs. 9-4, Hulleyburias from Rs. 28 to Rs. 27-8. Nonsuch Teas were lower by As. 4 at Rs. 34 and Talyars by As. 5 at Rs. 14-5. Blue Mountains lost an anna to Rs. 3-10 and Devasholas As. 4 to Rs. 25-8 *ex-div.*

In the rubber section, Kallas receded by an anna and a half to Rs. 5-6½ and Teekoys by As. 8 to Rs. 8-4. Valkundams declined from Rs. 23 to Rs. 22-14. Be Des, however, rallied an anna to Rs. 4-4 and Nenmenys As. 6 to Rs. 12-6. Rajapore disclosed a gain of As. 4 at Rs. 14-12 and Travancore Rubbers Re. 1 at Rs. 18-4. Malankaras were quiet at Rs. 23-2 and Thirumbadis at Rs. 2-0½.

Among miscellaneous scrips, Bruntons gained As. 8 to Rs. 6-10 and Mysore Chemicals and Manufacturings As. 4 to Rs. 16-12. Textools improved from Rs. 100 to Rs. 103. F.A.C.Ts were better by an anna at Rs. 5-2 and India Cements (Ordinary) by As. 2 at Rs. 20-10.

INTERIM DIVIDEND ANNOUNCEMENT

THE DIRECTORS HAVE DECIDED TO PAY an Interim Dividend of 5 per cent. per annum or 7 As. and 6 As. per share (free of tax) on Rs. 10 and Rs. 7-8 respectively paid-up shares for the year 1954-55.

The Dividends will be paid on 1st April, 1955, to those shareholders whose names stand on the Register of Members on 20th March, 1955.

By Order of the Board,
CHANDRIE & CO., LTD.,
Managing Agents.

1st March, 1955.

NEWS IN BRIEF

THE quantity of gold seized by Customs officers during 1954 was 98,472 tolas and 29 prosecutions were launched in this connection.

Of the total cane production in India, about 25 per cent. is used for manufacturing crystal sugar, 55 per cent. for *gur* and 3 per cent. for *khandsari*.

During the first nine months of 1954-55, the Central Government gave Rs. 19,06,300 as grants and Rs. 83,71,890 as loans for the development of small-scale industries.

The consumption of yarn by the handloom industry in India during the first ten months of 1954 amounted to 78,000 bales, as against 73,000 bales in the whole of 1953.

India has improved upon the Japanese method of rice cultivation in several respects. A number of countries have asked India for literature, information and films on the subject.

The Government of India has announced further grants aggregating Rs. 5.5 lakhs and loans amounting to Rs. 2.5 lakhs for the development of handloom, cottage and small-scale industries.

The total amount of compensation expected to be paid to the various air companies, which are nationalised, is about Rs. 6 crores. The estimates have now been worked out and sent to the companies to see whether these would be acceptable to them.

The Geological Department will investigate and verify a report that large quantities of gypsum are found in Bilaspur District, Madhya Pradesh. The availability of gypsum will make the proposed establishment of the fertiliser factory in the State a better business proposition.

India imported about 800,000 tons of foodgrains during 1954, as against 2 million tons in 1953, 3.9 million tons in 1952 and 4.7 million tons in 1951. The stocks of foodgrains with the Central and State Governments as at the close of 1954 amounted to 1.5 million tons.

The Madhya Pradesh Government's Bill introducing multi-point sales tax in place of the existing single-point tax, proposes to impose a uniform rate of Re. 1-4 per cent. at every change of hand of goods. Sales tax on motor cars will, however, be Rs. 3 per cent. and on bullion As. 8 per cent.

India exported 6,930 tons of rice and paddy during the latter half of 1954. They were exported to Mauritius, the Fiji Islands, the U.K., Saudi Arabia, Sudan, Ceylon, Kenya Colony and Aden. During last year, India imported 800,000 tons of rice, wheat and milo from Burma, Australia and the U.S. During the same period, India imported 733,580 tons of sugar valued at Rs. 53.28 lakhs.

The scheduled and non-scheduled air services in India flew about 12 million miles, carrying 281,611 passengers and 4.6 million lbs. of mails during the six months ended 30th June, 1954, as against 11.7 miles flown, and 232,157 passengers and 4.5 million lbs. of mails carried in the previous half-year. There was a slight drop in the freight carried from 82.5 million lbs. in the half-year ended 30th December, 1953 to 82 million lbs. in the first half of 1954.

The Government of India has raised the price of imported sugar by Re. 1 per maund with effect from 1st March, 1955. The increase in price has been effected in view of the increase in the excise duty on sugar from Rs. 3-12 to Rs. 5-10 per cwt., with effect from 1st March, as also in the customs duty from Rs. 11 to Rs. 13 per cwt. Thus, the revised *ex*-dock price of British refined sugar, Rs. 142 maund and that of Cuban sugar Rs. 30 per maund. German sugar and French sugar is Rs. 30-8 per

The Ninth Annual General Meeting of the Indian Confectionery Manufacturers' Association, Calcutta, will be held in New Delhi on 20th March, 1955. Mr. Brahma Swarup, the President of the Association, will preside over the meeting. Besides a review of the developments in the confectionery industry during the outgoing year, the meeting will also take up for consideration certain important resolutions having an important bearing on the future development of the industry.

The Indian telephone industry is exploring the position in Ceylon, Burma and Indonesia to see if a market for its products can be established. The agreement with the Automatic Telephone and Electric Co., Ltd., already provides for the export of the products to Ceylon, Pakistan and Burma, as well as the supply of Indian equipment to Indonesia. If it is found that India can establish a market in any other country, the question of obtaining the Company's concurrence to the export of telephone equipment to that country will be considered.

The Government of India has decided to allow the export of a small quantity of cotton seed oil for export from all ports upto the end of April, 1955. Exports will be allowed by crushers of cotton seed oil on shipping bills on production of evidence of firm sale contract, cess paid and freight booked, subject to a maximum of 300 tons by each crusher. Details of licensing procedure are being notified by the licensing authorities at the ports. The Government has also imposed an export duty of Rs. 60 per ton on cotton seed oil.

The Twenty-second Annual General Meeting of the Indian Sugar Mills Association, Calcutta, will be held in New Delhi on 19th March, 1955. Mr. Gulabchand Hirachand, the President of the Association, will preside over the meeting. Besides a review of the various important developments in the sugar industry during the outgoing year, it is understood that certain important resolutions having a vital bearing on the industry, such as measures for increasing the production of sugar, intensification of cane development work, etc., will also be taken up for discussion. The meeting will be inaugurated by Mr. Ajit Prasad Jain, Minister for Food and Agriculture, Government of India.

India drew $12 million from the sterling area's dollar reserves during 1954 for meeting its obligations in the dollar area, whereas, in 1953, it made a net contribution of $15 million to the reserves. This was due to the fact that, during 1954, India made a special payment of $47 million to the I.M.F. to repurchase a part of its currency from that organisation. The Government of India's intention was to repurchase from the Fund the equivalent of $72 million out of the total of $100 million it had purchased from it in 1948. The Government expects to make a further payment of $25 million this month, leaving an outstanding balance of about $28 million, which will not involve payment of any interest charges.

The question whether the exploitation of the Korba coalfields in the Madhya Pradesh should be undertaken by the private sector or the public sector, if in the latter case, whether by the Central Government or by the State Government, is still undecided. The Madhya Pradesh Government wants to work it as a State enterprise, while the Central Government wants to work a section (an area of 10 miles only) of it as a Central Government concern. Meanwhile, the Vice-President of the Madhya Pradesh Mineral Industry Association has called upon the Government to clarify the position of the private sector, which has been granted prospecting and mining leases. He has also drawn attention to the statement of Mr. K. C. Neogy to the effect that no question of socialising the future coal mining operations has been referred to the Planning Commission.

• • • •

From Abroad

The U.S. Department of Agriculture has decided to support the 1955 U.S. cotton crop at 90 per cent. of parity for middling cottons and at 75 per cent. of parity for extra long-staple cotton.

The Tanganyika Government has abolished the tax on coffee with effect from 23rd February last, consequent on the present low price level of the commodity. It was only a few days earlier the tax was reduced.

The United States has made available $7.2 million for technical aid to Indonesia during the current fiscal year. The expanded programme for this year includes $1.5 million for a special malaria control project and $5.7 million for increasing food production, improving public administration, and raising living standards.

In a bid to develop overseas markets for its products, Japan is expected to spend on export promotion 1,000 million yen (£986,000) during the fiscal year 1955-56, as against 310 million yen (£305,000) spent in 1954-55. The Finance Ministry is likely to reduce taxes on incomes from export trade and grant concessions for the export of plant and equipment.

The River Plate and Brazil Conference, which includes in its membership all carriers operating regularly from the U.S. and Canadian Atlantic ports, and the U.S. Gulf ports to east coast, South American ports in Argentina, Brazil, Paraguay and Uruguay, has announced an increase of about 10 per cent. in southbound freight rates with effect from 1st May, 1955.

The Italian Government proposes to introduce a Bill designed to encourage foreign investments in Italy. Under the proposed law, all profits derived from foreign investments in new or existing enterprises will be freely exportable, as well as the original capital invested. The amount of profit exportable from investments of a non-industrial character is to be raised from 6 per cent. to 8 per cent. of the sum invested.

The Statutory Tea Wages Board of Ceylon has given an award raising the daily wages of tea workers by 25 per cent. The increased wages will come into effect after the Government accepts the recommendation of the Board. The increase will raise the wages scale to Re. 1.50 for male workers, to Re. 1.30 for women and Re. 1.05 for children. The Board has also increased the paid holidays from 12 to 15 days per year. The award is expected to benefit over 300,000 workers.

The British iron and steel industry plans to raise its production capacity to 22 million ingot tons of steel per year by 1958. Last year, the output was 18.5 million tons. This programme is based on an expansion of the output of pig iron to 15.15 million tons and an increase of steel-making scrap supplies to 10.8 million tons. The output of tinplate and sheet will be higher by 85 per cent. and 50 per cent., respectively, in 1958. The cost of the schemes already approved is £257 million and the annual rate of additional expenditure over the next few years is expected to be £60 million to £70 million.

PERSONAL

MR. R. E. O. Carey has been appointed Managing Director of the Goodyear Tyre and Rubber Co. of India Ltd.

Mr. K. G. Ambegaokar, I.C.S. assumed charge as Deputy Governor of the Reserve Bank of India on 1st March, 1955.

Dr. P. S. Narayan Prasad, Director of the International Monetary Fund, left for Paris on Saturday last week *en route* to New York.

Mr. Harold E. Stassen, Director of the Foreign Operations Administration of the U.S., paid a brief visit to New Delhi this week on his way from Bangkok.

Mr. Justice P. B. Gajendragadkar, a judge of the Bombay High Court, has been appointed Chairman of the Bank Award Commission to conduct and complete the enquiry entrusted to the late Mr. Justice G. Rajadhyaksha.

Dr. B. K. Madan, Economic Adviser to the Reserve Bank of India, left for the U.S. on Wednesday this week on an invitation by the United Nations to be a member of a group of experts for the preparation of a report on the proposed special United Nations Fund for Economic Development.

Mr. Sam Broers, President of the Firestone International Company and the Firestone Inter-America Company, who is the head of all Firestone interests and operations in overseas markets, arrived in Bombay last week.

Dr. P. J. Thomas has been appointed a member of the Prohibition Enquiry Committee constituted by the Planning Commission in December last to review the working of prohibition and to recommend a programme for prohibition on a national basis.

Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, who had submitted his resignation to the Prime Minister a few weeks ago and left for Madras on 14th February, returned to New Delhi on 27th February and resumed work the next day, in deference to the wishes of the Prime Minister who was very keen that he should continue to be in office.

Mr. N. R. Pillai, Secretary-General of the External Affairs Ministry, Government of India and Governor-Designate of the Reserve Bank of India, will take over the Governorship of the Bank by the middle of May. He will not proceed to England to observe the working of the Bank of England before joining the Reserve Bank, as was originally programmed, due to preoccupations in connection with the Asian-African Conference in Bandung.

Mr. W. H. J. Christie, Vice-Chairman and Deputy Managing Director of the British India Corporation, Ltd., Kanpur, has been elected President of the Upper India Chamber of Commerce for the year 1955. Mr. R. L. Powell, Assistant Managing Director of the B.I.C., Ltd., has been elected Vice-President. Messrs. A. H. Buckland, J. M. Heeramaneck, H. Hill, Ram Narain and P. K. Sahgal have been elected and Messrs. K. Horton, M. L. Soni and J. K. Srivastava have been co-opted as members of the Committee of the Chamber.

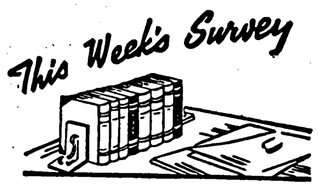
"COMMERCE" 1930

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *8th March*

The Central Budget

As forecast in *Commerce* a couple of weeks ago, the Budget of the Government of India, presented in the Legislative Assembly last week-end, envisages a deficit of nearly six crores of rupees—to be exact, Rs. 552 lakhs. The gap is reduced by Rs. 142 lakhs by ingenious economies effected in civil estimates and military expenditure and the balance is proposed to be met by new taxation. An increase in excise duty on kerosene is expected to yield Rs. 35 lakhs; enhanced duty on sugar, Rs. 180 lakhs; an increase in certain income and super taxes, Rs. 70 lakhs; import duty on silver, Rs. 100 lakhs and the raising, by 4 per cent., of the import duty on cotton piecegoods and an additional protective duty of 5 per cent. on non-British goods with a minimum of 3½ annas per lb. on plain grey goods, Rs. 125 lakhs. This last item introduces, for the first time in Indian fiscal policy, an element of Imperial Preference. Sir George Schuster will certainly be criticised—and criticised severely— for raising more revenue than appears to be immediately needed for actual outgoings; but he proposes to do so with an eye to the future. First, there is the paramount importance of creating reserves to strengthen our resources and credit at the present critical juncture and, secondly, for preparing the way for a more generous allocation to the Provinces of sources of revenue for nation-building services. It has rightly been said that the Reforms introduced by the late Mr. Montagu have failed to achieve their full effect owing to lack of adequate funds in the hands of the Provincial Governments. Sir George Schuster is determined to do all in his power to prepare for better success in the next step. A Finance Member has to suffer the slings and arrows of criticism for his immediate actions and rarely does he receive any meed of praise; but his efforts should be judged by their moral lasting results and Sir George Schuster hopes with confidence that, if his proposals are accepted, his successor from whatever quarter he might come will in the future look back to him with gratitude for his present drastic measures.



BOMBAY BUDGET

A WELCOME feature of the Bombay Budget, presented last week by the State Finance Minister, Dr. Jivraj Mehta, is that it carries no proposals for any new taxes. Also, the revised budget for 1954-55 and the budget for 1955-56 are surplus budgets—the surpluses being Rs. 58 lakhs and Rs. 23 lakhs respectively—unlike the budgets for many other States which show a deficit. The following are the revenue and expenditure figures for the Bombay budget in 1953-54, 1954-55 and 1955-56:

(In crores of rupees)

	Revenue	Expenditure
1953-54 (actuals)	72.27	71.11
1954-55 (budget)	72.38	72.19
1954-55 (revised)	71.80	71.22
1955-56 (estimate)	80.11	79.88

It will be seen that the budget estimates for 1955-56 place both revenue and expenditure at a slightly higher level than in any of the previous years. But these estimates include certain accounting adjustments which mask the real nature of the revenue and expenditure. Thus, the Rs. 3 crores, which the Government proposes to withdraw from the Fund for development schemes in order to finance capital expenditure in 1955-56, appears both on the receipt and expenditure sides. Excluding this adjustment, the revenue and expenditure estimates for 1955-56 will be Rs. 77.11 crores and Rs. 76.88 crores. It is noteworthy that a small decline in tax revenue is anticipated for 1955-56, such being placed at Rs. 52.3 crores, as against Rs. 53.4 crores in 1954-55 (revised estimates).

For the year 1955-56 which is the last year of the Five-year Plan, the State Finance Minister has provided for a capital outlay of Rs. 24.2 crores, which includes a provision of Rs. 2.86 crores for the Kakrapara project, Rs. 2 crores for Mahi project, Rs. 76 lakhs for Ghataprabha project, Rs. 4 crores for Koyna project and Rs. 1 crore for the tube-wells scheme. A provision of Rs. 100 lakhs has been made for the purchase of shares of co-operative sugar factories. The Government has so far contributed to the share capital of two such societies. Under this scheme, the cultivator-members of the societies are expected to raise Rs. 15 lakhs while the Government will contribute a maximum of Rs. 10 lakhs in the form of redeemable share capital. It may, however, be doubted whether the Government should waste its limited capital resources on these ventures, considering that private capital has not been conspicuously shy in this sphere.

The capital expenditure of Rs. 24.2 crores, to which reference is made in the foregoing paragraph, will be financed by borrowing Rs. 12.65 crores from the Central Government, withdrawal of Rs. 3 crores from the Development Fund and of Rs. 58 lakhs from the sugarcane cess and the Milk Fund and by borrowing from the open market to cover the balance. It may be noted here that next year's budget includes a provision of Rs. 2.97 crores for repayment of the Bombay Government Loan, 1955. It will, however, be possible to repay the loan out of the accumulations in the sinking and other funds. It will not, therefore, mean any drawing down of the cash balances or slowing down of capital expenditure. The total outstanding public debt of the Government is about Rs. 69 crores. The debt service charges absorb only 5.4 per cent. of the revenue receipts, so that the Government is certainly in a position to borrow more, though care should be taken to ensure that the funds raised should be put to productive uses.

Now that the 1955-56 budget figures are available, it is possible to assess the State's expenditure under the Five-year Plan which ends in 1955-56. Assuming that the money provided for 1955-56 is spent, the State will have incurred a total expenditure of Rs. 149.2 crores under the Plan, as against the target of Rs. 146.3 crores set by the planners. This means that the State will have exceeded the target by 2 per cent. The breakdown of the total expenditure with the target under the Plan within brackets is as follows:

(In crores of rupees)

Agriculture and rural development 25.69 (28.72); major irrigation and power projects 29.38 (33.00); industries 1.24 (3.53); transport 28.95 (13.89); social services 63.94 (67.17).

This break-down shows clearly that, even if the overall target under the Plan has been exceeded, there has been a shortfall in certain vital sectors such as agriculture and major irrigation projects, under each of which expenditure is only 89 per cent. of the target outlay, and in "industries," under which expenditure is only 35 per cent. of the target. It is true that the expenditure on transport is double the target fixed for it. But it is partly due to the fact that road transport which has been nationalised has absorbed Rs. 5.38 crores, as against Rs. 2 crores provided under the Plan, and not due to any large expansion in the construction of roads.

In the next Plan, the Government will do well to concentrate on implementing the irrigation and power projects more speedily than it has done under the first Plan. Industries also deserve a fresh fillip. Present indications are that the next Plan would involve a higher level of expenditure. Such expenditure would be needed both in order to develop the State's resources and to fight the growing unemployment in the State. Since the State's funds have now been drawn down to low levels, the Government will be compelled to impose fresh taxes. The success of the Government's next Plan will depend on its ability to tap fresh sources of revenue without imposing a too heavy burden on the already overburdened industrial sector of this premier industrial State.

PRIVATE ENTERPRISE IN MIXED ECONOMY

It is becoming increasingly clear that mixed economy has come to stay in the free world. Some even go to the extent of affirming that mixed economy constitutes the golden mean between capitalism of the extreme kind, on the one hand, and communism, on the other. Industrialists have recognised that public ownership has become a part of the social order. As Mr. G. M. Mackinlay significantly observed, in the course of his presidential address to the annual meeting of the Bengal Chamber of Commerce and Industry, "the justification for and the inevitability of a dual pattern of economy, namely, public and private, for the future has been accepted by industrialists operating in the private sector without reserve." He wanted to impress this especially on the many critics who sometimes overlooked "the very marked reorientation that has taken place in the capitalistic outlook of former days." So far as the future of the private sector in India is concerned, he expressed his confidence in the assurances of the Prime Minister and other leaders. On behalf of private enterprise, he assured full co-operation in the development of the nation. He said: "We shall, for our part, do our utmost to ensure that the private sector fulfils its role, given—to quote the Prime Minister—full play within its field which he described as 'wide' and given also the healthy attitude towards the private sector which he recognised to be necessary and counselled his Party to adopt." He desired that, in the second Five-year Plan, the private sector should be accorded, both in policy and administration, the place it deserved, so that it might have full opportunity to serve the nation in the best possible manner.

Mr. Mackinlay also dealt with some aspects of the labour problem. Stressing that only in an atmosphere of genuine encouragement could industry expand, he remarked that encouragement implied co-operation and will to work on the part of all concerned. He deplored the unfortunate tendency on the part of labour to look only to one side of the picture, namely, higher wages, and to forget the other side, that is, exerting greater efforts to increase production. Referring to a memorandum recently submitted by the Indian National Trade Union Congress (I.N.T.U.C.), where it was alleged that wages in India had not improved, in spite of the expansion of industry, he stated that, in jute, tea, coal and paper industries, the level of remuneration of the employees had shown "a substantially greater improvement than the corresponding increase in the cost of living; which was now steady or on the downward trend." He reiterated the view that employers would always be ready to discuss round the table with responsible representatives of labour all common problems, including those relating to norms and standards for industrial wage levels and rationalisation.

Finally, Mr. Mackinlay referred to the proposed policy of "progressive elimination of managing agency system." He put forth a strong plea that, before any drastic or irrevocable step was taken in this connection, due consideration should be given to the evolution of an equally effective and virile means, whereby planning of new industry could be conceived and nurtured and the existing ones maintained and revitalised. This is a point of view which has unfortunately received little attention. In their desire—not altogether ununderstandable—for the elimination of the managing agency system, the authorities are not only trying to throw the child with the tub-water but are making no effort whatever to conceive, much less to create, a system that could fill the void that would follow the disappearance of the useful, even if misused, albeit by some, system of managing agents.

LIQUIDATION OF PUBLIC SECTOR IN WEST GERMANY

In striking contrast to the strong move towards public ownership in India, West Germany has proposed to embark upon what is called a "de-socialisation" scheme. It has already constituted, a new *Bundestag* Sub-Committee to study the problems involved in desocialising the industries and suggest remedies for them. It would appear that the present move is a sequel to the growing pressure from big business for the creation of an atmosphere where private enterprise can play its part with as little restrictions and interference by the State as possible. The liquidation of the public sector, according to them, will create the necessary atmosphere.

At present, West Germany has a substantial number of industries under Government ownership. It is true that there is no precise inventory of the enterprises in the public sector. But it may be roughly stated that, besides the railways and many of the long-distance bus services, West Germany owns fully or partly more than 300 productive enterprises. It is calculated that it owns 75 per cent. of the nation's brown coal production, 30 per cent. of iron ore, and 20 per cent. of the aluminium production. It is the largest distributor of gas and electricity. As a trustee of Volkswagen factory, it is the nation's largest motor-car manufacturer. Dr. Hermann Reusch, head of Gutehoeffnungshuette, has stated that the Federal Government owns shares worth a face value of 1,200 million marks. No one, however, knows how much of the national productive capacity is in the hands of the municipal provincial governments. Dr. Reusch argues that Government participation in production has a dangerous deflationary effect. So far, it has been possible to counter it, because of the generally favourable foreign trade balances.

The biggest problem in the "re-privatisation" of the firms is to find buyers for these properties. It is said that some of the firms are so gigantic in proportion that it will be hard to sell unless they are broken. But it is feared that breaking them would be not only technically but also economically inadvisable. Furthermore, the Germans are emotionally and politically opposed to any breaking up of these industrial concentrations. Consequently, it is conjectured that the best way out of the riddle is to offer small packets of shares to private investors, with an option to buy more and more as they can, until eventually whole companies are transferred to private owners. Present indications are that the Government may be able to sell all the enterprises except the railways and road transport.

Thus, the compromise between Socialism and Capitalism sought by the Nazis during 1920 and 1930 by buying large blocks of industrial shares, particularly in coal and electricity, and building up new businesses, notably the Salzgitter Steel Works and the Volkswagen plant, to which the Bonn Government was the only logical successor, is likely to be given up. One of the objects of the Nazi Government in embarking upon a large scheme of public ownership was also to arrest the serious collapse of price in the early 'thirties and bolster up the morale of the markets. This policy is now being reversed. This "re-privatisation" move is regarded as the boldest experiment ever proposed. It is a challenge to private enterprise to prove its superiority over public enterprises in delivering goods to the common man at a price which benefits the largest number. Perhaps, its success will herald a new era for private enterprise not only in West Germany but the whole of Western Europe. Incidentally, it will also prove to be the biggest eyesore to Communism.

OUTPUT OF WORLD VEGETABLE OILS

World production of vegetable oils is on the trend. In fact, in 1953-54 it was the largest ever recorded. According to the *Review of Vegetable Oils and Oilseeds*, just published by the Commonwealth Economic Committee, world output is provisionally estimated at 3 per cent. over those in 1951-52, the previous peak year, and 4 per cent. over that in 1952-53. As compared with the pre-war period, the increase is approximately 25 per cent. In 1953-54, the Commonwealth is estimated to have accounted for 24 per cent. of world oil and oilseed production, as compared with 23 per cent. in 1952-53 and in pre-war years. In 1953, the Commonwealth provided 33 per cent. of the net supplies of vegetable seeds and oils entering international trade, as against 35 per cent. in the previous year, 26 per cent. in 1951 and the pre-war average of 32 per cent. A significant feature is that, in 1953, for the first time since 1939, there was a Commonwealth export surplus, although it was well below the pre-war level.

There were record harvests in groundnut, cottonseed, sesame and palm *kernel*. The world groundnut harvest in the 1953-54 season was at a record level of 10,900,000 tons, that is, about 10 per cent. higher than in the previous season and 12 per cent. above the quinquennial average of 9,700,000 tons from 1948-49 to 1952-53. Of this, the Commonwealth accounted for 5,300,000 tons or 48 per cent. of the world total, as compared with the 1948-52 average of 4,300,000 tons or 44 per cent.

World cottonseed production in 1953-54 is estimated at the record level of 15,100,000 tons, that is, about 2 per cent. larger than in the previous season and 17 per cent. above the 1948-52 average. The output in the Commonwealth is estimated at 2,300,000 tons, or about 15 per cent. of the world harvest, as against 2,100,000 tons or 14 per cent. in the previous season. India accounted for 1,377,000 tons and Pakistan for 505,000 tons.

Commercial production of palm *kernels* in 1953 is also estimated to have reached the new record figure of 870,000 tons, about 7 per cent. above that in the previous year and 26 per cent. more than in 1938. Commercial production of palm oil too attained a record level and is estimated at 655,000 tons or 28 per cent. larger than in 1938 and 12 per cent. larger than in 1952. The leading producer was Nigeria, with 434,000 tons of palm *kernels* and 212,000 tons of palm oil in 1953.

The Commonwealth production of linseed in 1953-54 is estimated at 630,000 tons, or 21 per cent. of the world total, as against 710,000 tons and 22 per cent. in the previous season, and 470,000 tons and 15 per cent. in 1938-39. India (355,000 tons) and Canada (248,000) were by far the biggest Commonwealth producers.

World production of castorseed (excluding the Soviet Union and China) is estimated at 450,000 tons in 1953-54, as compared with the average for the previous five seasons of 400,000 tons and the pre-war level of some 300,000 tons. India is by far the most important Commonwealth producer, its share in 1953-54 being 107,000 tons.

World production of copra in 1953 is estimated at 2,700,000 tons, which is slightly less than that in the previous year, 8 per cent. below the record total of 2,900,000 tons in 1951 but above the pre-war average of 2,500,000 tons. Commonwealth production of copra in 1953 is estimated at about 870,000 tons, slightly less than in the previous year, but 8 per cent. above the 1948-52 average. Commonwealth countries accounted for 32 per cent. of world total in 1953, as against 31 per cent. in 1948-52 and 33 per cent. in 1938. Ceylon, with an estimated 225,000 tons, was the leading Commonwealth producer in 1953 and the Philippines with 856,000 tons, the leading world producer. India was the second biggest Commonwealth producer with an estimated 190,000 tons.

The report notes that approximately one-fifth of the copra produced in India is for directly edible purposes. The supply of coconut oil for soap-making and other purposes in India has tended to fall short of demand, and the consequent high prices have encouraged increased production and lent impetus to the new planting schemes inaugurated by the Indian Central Coconut Committee.

(*Concluded from third column*)

then considered civilly dead and were legally barred from holding any property. Why not get an ordinance issued that all people should be considered as *sanyasis* at a prescribed age and that their property be treated for Estate Duty purposes as that of civilly deceased persons?—*All Rights Reserved.*

OFF THE RECORD

By "Rover"

AUGUST 15th every year is, and, shall always be, a day of national rejoicing. Republic Day on 26th January is equally so. But lest we should get too frisky and frolicsome, too light-hearted and irresponsible, our dour and austere rulers have wisely tried to maintain a balance, by providing two days of national mourning. It should not be difficult for you to identify these two dark days, which drive us to beat our breasts and rend our hair, seeing that we are all still reeling from the cruel blows inflicted by them. I doubt if there is a single honest citizen, of course, barring the Union and the State Finance Ministers, to whom these two days—one on which the State budget is released, followed close on its heels by the other, when the Union Finance Minister rakes in what is mercifully left to us by his counterpart in each State Government—do not bring severe mental prostration. At the same time, I must concede that the budget does bring some relief as well—relief from the painful nervous tension of the days and weeks preceding its dire disclosures of the new tortures invented by these financial fiends.

I doubt if even hypochondriacs derive any delight from taking medicine. The prospect of a visit to the dentist is certainly more distressing than the toothache which drives us to him. Nobody relishes an encounter in the dark, in a lonely place, with a highwayman. Extraction, whether it be of a diseased molar, which keeps you awake all night, or of a comfortably warm wad of currency notes tucked away safely in your inside pocket, is painful in the extreme. There are, therefore, many who are not unjustifiably inclined to look upon a Finance Minister as a dentist and a privileged bandit rolled into one.

There is no point in offering resistance to any of them—the dentist, the freebooter and the Finance Minister. Your best defence against these benevolent pests, who hold you at their mercy when you are cornered, is your sense of humour, if you happen to be endowed with it. If you can laugh at them, even though inwardly infuriated with rage or quaking with fear, it would at least save you from a sense of humiliation, though not from loss. If you are so unlucky as not to be blessed with this precious gift, all you can do is to look at this whole business philosophically and just shrug your shoulders.

I do not mind confessing that, not being a wealthy, or, even what you would call a well-to-do man, I was looking forward to Mr. Deshmukh's first socialist budget, with some glee. Of course, knowing his very balanced views, I had my own misgivings on this score. However, considering all the noise which was made in Parliament and at the Congress Session at Avadi about the adoption of the goal of a socialistic pattern of society, the echoes of which are still audible on a still night, I was hoping that the Finance Minister would soak the rich and bring some tangible relief for the likes of me. But I find to my utter disappointment that, instead of lightening my burden, he has only added to it.

Having still retained my sweet tooth till this advanced age, I like my morning coffee and afternoon tea sweet. But the recollection of the hateful, heavy additional excise duty will rob these invigorating hot drinks of all their sweetness and possibly make them taste bitter. Similarly, I must now abandon all my fond dreams of a new set of clothes, which I had promised myself for my next birthday. The only consolation left to me is that my wife will now be forced to put off the purchase of a new sewing machine on which she had set her heart. She will now be forced to make do with the old one, which, like our dock workers, threatens now and then to go on strike. But this is hardly a consolation, because, so also goes the new electric fan which we had been jointly planning together for our bedroom, to purchase and install before the dog days preceding the burst of the next monsoon. I don't know how many pleasant dreams of countless poor citizens like ourselves, Mr. Deshmukh must have shattered with his fell excise duties.

But what I have found more galling in the new budget, more exasperating than the many cruel deprivations, is the mockery underlying it. With a great show of consideration, he pretends to come to my succour by raising my existing tax exemption slab from Rs. 1,500 to Rs. 2,000, as a married person. To begin with, this scornful pittance amounts to even less than two rupees a month. And Mr. Deshmukh has the cheek to call this a relief. He must have some very strange ideas regarding the ever recurring and increasing financial burdens imposed by matrimony.

It makes me feel livid, this offer of a rebate of two rupees per month from the Government, to set off against my additional financial responsibilities as a married man. God alone knows how much my spouse has cost me every year in *saris* and blouses and other more intimate feminine garments during all these years. I could have understood and forgiven such miscalculation, if a happy-go-lucky bachelor had occupied the Finance *gadi* at New Delhi. Those living in single blessedness do not know the tortures of the damned: but one had a right to expect a more accurate appraisal of the financial straits of a family man from an experienced person like our present Finance Minister.

I could have borne these impositions with some show of equanimity, if Mr. Deshmukh had dealt with the rich with a greater degree of severity than he has shown to us, the black-coated, white-collared class of salary earners and those engaged in farming, business or industry of their own in a modest way, in the middle-income groups. To me a classless society would reasonably mean gradual approximation of the wealthier and the poorer classes to our class. The politicians, however, seem to view this business differently. Their idea of an approach to the attainment of such a society is the rapid demoralisation and consequent extermination of the middle class.

The politicians forget that, when this hard-working, frugal and patriotic class, which manned and sustained the long struggle for independence, disappears, the inequalities of income and wealth will be even more glaring than what they are now. But even Mr. Deshmukh, who is much more of a statesman than a tub-thumping politician, tries to tell us, by the way in which he has cast his budget, "either get rich or get poor; we have no room for those who are just comfortably off."

Take, for instance, the changes he has effected in the income-tax structure. I can understand his giving some incentives to corporate trade and industry. If we want rapid expansion—and we do want it badly, if for nothing else but to reduce unemployment—it would be highly foolish to go and tax them out of existence. But while framing his budget proposals regarding the modification in the income-tax structure, Mr. Deshmukh seems to have been wholly preoccupied with the middle-income groups.

All his dislike and practically all his demands have been concentrated on those drawing an income of Rs. 7,500 to Rs. 25,000 per annum. Nobody could question his decision to leave alone those earning Rs. 4,200 to Rs. 7,500 per annum. But I for one, fail to understand why those with an income ranging from Rs. 7,500 to Rs. 25,000 should be asked to make the same additional sacrifice as those earning fifty thousand a year or even five lakhs. Apart from the negligible incidence of the earned income allowance, which will disappear gradually in the case of those with an income higher than Rs. 25,000, the additional amount of income-tax for a man earning Rs. 25,000 and a man earning ten times that amount, under the new dispensation, will be the same.

I have, therefore, no hesitation in saying that the budget, admirable as it is from many points of view, suffers from a lack of balance in the distribution of additional revenue to be raised from income-tax. This is all the more so, because there is no significant change in the structure of super-tax, apart from its extension to the Rs. 20,000 to Rs. 25,000 income group. Even in the case of super-tax, the additional amount under this head which a man with an income of Rs. 25,000 or Rs. 30,000 is called upon to pay is the same as that for one earning three lakhs a year. Even amongst higher-income groups, fairness demands that new impositions should have some relation to the magnitude of the income. They should not descend with equal force on a man earning two thousand rupees per month and one so lucky as to have a six-figure income.

I find the same absence of balance also in the industrywise distribution of the extra impost of excise duties. It is not the heavy increase in the total receipts from this source which I question. This was anticipated for some time. It is but natural that, as industries in the country develop, they must make good what is lost by way of decrease in returns from customs duties resulting from reduction in imports. But why pounce upon just two industries—cotton textiles and sugar—for the bulk of the additional revenue required by the country.

Apart from the fact that the products of these two industries are already subject to heavy excise duties, one cannot ignore the fact that the country has quite a number of industries which are capable of bearing a share of this burden. But, out of an anticipated additional revenue of about eighteen crores of rupees, cotton piecegoods and sugar have been burdened to the extent of fourteen crores. I am afraid that, in taking this decision, Mr. Deshmukh has been guided solely by facile considerations of administrative convenience and has given a go-by to the more important principle of a smoothly streamlined tax structure. This will never do, especially if we are going to rely more and more on excise duties as a predominant source of Government revenues.

I should, however, not allow myself to get involved in a serious consideration of the various aspects of the budget. That is and should be the headache of the Editor of this journal. Mr. Deshmukh has placed so much load of taxation on my weak shoulders that, even if I were charitably inclined, I have no intention whatever of taking over even a part of the editorial responsibility. I must, therefore, try and end on a lighter if not a happier note.

What amused and entertained me most while painfully ploughing my way through the long budget speech was the disappointment, voiced by the Finance Minister at the poor return he obtained from his pet Estate Duty. It seems that the really rich people in the country have been singularly unobliging. They refused to die during 1954-55 in sufficiently large numbers for him to realise even his modest target of rupees four crores from this new source. So far only friends and relatives who expected large legacies from wealthy old cronies waited impatiently and possibly prayed for the early demise of these tenacious veterans. Now the whole tribe of Financial Ministers at the Centre and in the States, being in the position of beneficiaries, is added to this list of vultures.

I have a valuable suggestion to make in this respect, which will curtail the period of waiting for the Treasury. My suggestion is perfectly in keeping with the fundamental basis of our ancient civilisation. People at sixty, or thereabout were expected to embrace *sanyas Ashram*. They were

AMERICAN LETTER

INDUSTRIAL APPLICATIONS OF ATOMIC ENERGY

GIANT PLAN FOR BUILDING HIGHWAYS

From Our Own Correspondent

NEW YORK, *23rd February*

THE Far Eastern situation dominates thinking and discussion in the United States at this time. The Tachens have been evacuated successfully, to be sure, but the Formosa question is by no means settled. It sounds ominous to American ears that Communist China has turned down invitations to discuss a cease-fire or an armistice in the Straits. Reflecting this general concern over Asia, President Eisenhower's foreign aid message which is not due for several weeks, is understood to emphasise extended help for that part of the world. The figure will run into several hundred millions of dollars. And it is only the first instalment *in a long-range* programme. As a further measure of recognition of the importance of Asia, either Bangkok or Singapore are being considered, at the time of writing, as the permanent seat of the newly formed South-East Asia Treaty Organisation.

The potential explosiveness of the situation is given as the reason why the United States Atomic Energy Commission has not heeded Indian pleas and neutralist sentiment in other countries to stop all hydrogen bomb tests before the whole human race is endangered. In fact, a whole series of experimental explosions is in progress now in the Nevada desert. The first atom-powered submarine, *The Nautilus*, is now afloat. It can outrun any ship above or under water and its regenerative fuel supply is measured in terms of years, not miles.

Industrial applications of atomic energy are also proceeding rapidly. Consolidated Edison Company of New York, the largest public utility concern in the U.S., is building an atom-power plant. Thirty-five other companies have formed a group to study the possible application of this new source of energy for their own individual operations. In addition, isotopes and other atomic ingredients enjoy widespread use in industry, chemistry and medicine.

The two greatest deterrents to still greater use of atom-power is the disposal problem of the waste materials and the huge concrete protective shields required for housing the plants. So far as the first point is concerned, no method is yet known to de-activate the energy. In other words, a room or any other area contaminated by radio-activity can be washed off and the waste material can be transported elsewhere, but it cannot be destroyed. Its effectiveness has to wear off over a period of years. Industries using radio-active oil, for example, place their waste material in huge concrete dumps, but they do not let it run in the ground for fear of contaminating underground water-supplies, for instance. Minor quantities of waste materials are being dumped into the oceans—far offshore.

The second deterrent, that of a concrete protective shield, makes atom-power inapplicable, at the present time, for powering automobiles, planes, even locomotives. It is, of course, possible that in due course a material may be found which is much lighter than concrete and equally effective. Then, the field of propulsion may be revolutionised. At present, there is no such prospect. Water power and coal are still the cheapest mass fuels.

The general business situation in the U.S. continues on an even keel. Industrial production in January showed the fifth monthly rise in terms of the Federal Reserve Index. Auto output early in February was the highest ever for a week, but stocks in dealers' hands are piling up although they are still 22 per cent. below their highest point. The increases in business activity in the last few months of the year and in January have been unexpectedly great. In view of it, the credit and fiscal authorities of the U.S. decided on the issuance of a 40-year 3 per cent. bond. It was an immediate success marketwise, but legislators who want to see the former cheap money policy perpetuated, are protesting loudly.

Owing to the improvement in the business situation, the Federal Reserve Board has adopted a slightly firmer money policy. It cannot be called restrictive in any sense, but it is a departure from the "active ease" of previous months. It is designed to stem the business expansion from becoming a boom. Part and parcel of this picture was the increase in margin requirements from 50 to 60 per cent. for the purchase of listed securities on the New York Stock Exchange. About 52 per cent. of all individuals' transactions on the Exchange, according to a weekly survey in December, were on margin. Speculation, obviously, is quite rampant, but it is backed by huge savings of the speculators which did not exist in 1929, on the eve of the Great Depression.

One of the great sustaining factors in the economy is the segment of building and construction. In the home building field alone, more than one million units are being produced a year and have been for some time. Veterans may acquire houses with no down-payment and 30 years to pay. It is the only segment of the economy which has not yet responded to firmer credit, largely because of existing legislation. But the new long-term Treasury Bond has been a warning signal that, henceforth, money may be a little dearer and lenders on mortgages appear to have become a little more cautious.

Superimposed on the housing programme is President Eisenhower's plan for a 10-year $100,000 million highway construction plan which will be financed by the Federal Government and partly by States, municipalities and private capital. The President considers it essential to have a much more efficient network of highways throughout the U.S. than exists today in case of an atomic attack. Highway construction, even without the atomic threat, needs no excuse. The number of automobiles in the United States has been increasing steadily; plants have been located in outlying areas; nearly everyone is dependent on automotive transportation for his or her daily needs.

The roads out of the major cities in the U.S. are chocked every week-end and virtually every working day so that the premise can be accepted that the requirement for better and more highways is imperative, but the President is already being accused by such people as Senator McCarthy and others of leading the nation further to the Left as even Presidents Roosevelt and Truman did. More and more, official decisions being made at Washington have in view the Presidential elections of 1956. The parties are manœuvring for strategic spots in either confirming or protesting legislation.

The foreign trade programme of President Eisenhower came to a test the other day in the House of Representatives. The President was supported by 140 Democrats and only 66 members of his own party, the Republicans. It depended, in fact, on whether the Representatives came from regions where industries brought pressure for higher tariffs, or from areas where export interests predominated and favoured low tariffs in the hope foreign buyers would spend more.—*All Rights Reserved.*

SCIENTISTS ENDORSE U.S. ATOMIC POOL PLAN

The Federation of American Scientists (F.A.S.) has hailed steps taken by the United States to share the benefits of atomic energy as contributions to both material benefit of the world and to the cause of peace. In an open letter to President Eisenhower which it made public, a few days ago, the F.A.S. endorsed the "clear and positive programme" undertaken by the United States to put into effect President Eisenhower's proposals for an international atomic pool.

The Federation listed as "most significant" the setting aside of enough enriched atomic fuel for the construction of a number of experimental reactors. It also praised the initiative of the United States in bringing about an international scientific conference on atomic energy under sponsorship of the United Nations, the U.S. reactor training course for foreign scientists, and the offer of training for medical experts in the use of atomic energy in the study and treatment of cancer.

REVISION OF TAX STRUCTURE

RECOMMENDATIONS OF MATTHAI COMMISSION

THE long-awaited report of the Taxation Enquiry Commission (Chairman: Dr. John Matthai) was published this week. Although the full text of this report has not yet been made available to the Press, the summary of its findings and recommendations, which has been released for publication, shows that the Commission has covered very wide ground. It was a well-deserved tribute that Mr. C. D. Deshmukh, the Union Finance Minister, paid to the Commission, when he said, in the course of his budget speech, that the Report was a "magnificent work" and bore the "impress of a thorough and careful study." He called it a "massive and historic document."

As Mr. Deshmukh pointed out, the Commission's report will "deeply colour and affect taxation policy for sometime to come," even as the report of the last Committee, the Taxation Enquiry Committee, appointed 30 years ago, affected the taxation policy of a generation. The present Commission, it may be recalled, was appointed in 1953 to examine the present structure of taxation—Central, State and Local—and to make such suggestions at it thought necessary in the interest of India's economic development. Briefly, the recommendations made by the Commission are, in the words of the Finance Minister, designed to "widen the base and range of taxation, both direct and indirect," and involve readjustment of the rate structure. Its recommendations also cover the basis and procedure and the rates and rate structure of Central taxation. In so far as they concern the basis and procedure of taxation, effect can be given only by changing the law. In view of this consideration and of the fact that the Government could not, within the limited time it had, apply its mind to such serious study of the Report as the latter deserve, the Finance Minister has been content to give effect only to a few proposals contained in the Report. He, however, gave the assurance that the "remaining proposals will be examined by the Government and amending Bills placed before the House as early as possible."

Considering that the nearly 1400-page report of the Commission consists of three volumes (volume one dealing with tax system as a whole, volume two with general taxes and volume three, with States and local taxes) and that the total number of recommendations is as large as 198, it will be realised that it is difficult to present an adequate summary of the report. The main approach of the Commission to tax problems is that it is necessary to enlarge the role of taxation and borrowing as opposed to deficit financing for implementing the development programme of the public sector. The Commission has also emphasised the need for the longest practicable restraint on consumption by all classes. It also regards the extension of taxation to necessaries as unavoidable. In its opinion, the disincentive effect of higher taxation on the will to work of the higher income groups is generally exaggerated. It however, recognises the need to promote savings and investment through incentives in the income-tax system. In order to encourage productive enterprises, it has suggested the grant of a "development rebate" to concerns in selected industries "to take the place of the present initial depreciation allowance." Such concerns should be allowed to charge to revenue 25 per cent. of the cost of new fixed assets in the year of installation of the assets. It does not favour a tax on salt which, according to it, cannot be justified merely on the ground that its incidence by itself is relatively light, in view of the increase that has occurred and may occur hereafter in commodity taxes.

Volume I commences with an analysis of the tax system and trends in public revenues. The point is made that the sharing of the State Governments in the proceeds of Central taxes and the Institution of substantial grants by the Central Government for both general and specific purposes have imparted a considerably greater measure of elasticity to the State revenues than was the case before the war. In regard to public expenditure, it is pointed out that while the direct contribution to reduction in inequalities of economic circumstance is modest, there is a certain measure of territorial and rural-urban redress of inequalities. Certain broad conclusions regarding incidence of taxation are indicated by the Commission. It has, however, referred to the inadequacy of the data on which it has worked and the limitation of the inferences drawn by it for framing a taxation policy based on them. While no major shift in income between urban and rural areas as a whole can be established to have occurred since the war, certain shifts appear to have taken place *inter se* among the different groups within the respective sectors. The incidence of land revenue is no longer appreciable and there appears to be room for increased taxation of higher rural incomes. The large area of the non-monetised sector in the rural economy is at once the index of the limits of taxation and the pointer to the possibilities of extending taxation to the field of comparative essential with the knowledge that the great mass of the rural population will remain outside its bonds.

The Commission stresses the need to enlarge the role of taxation and borrowing as opposed to deficit financing for implementing the development programme of the public sector. When outlining future tax policy, the Commission emphasises the need for the largest practicable restraint on consumption by all classes. Restraint on the consumption of higher income groups must be greater than in respect of lower income groups. In order to divert the resources from private consumption to public investment, the structure of taxation must be properly diversified with both depth and range. The extension of taxation to necessaries is regarded as unavoidable. Increases in direct taxation also are considered necessary and it is stated that the disincentive effect of higher taxation on the will to work of the higher income groups is generally exaggerated. At the same time, the need to promote savings and investment through incentives in the income-tax system is recognised. Taxable capacity is considered to be related to the purposes for which the proceeds of additional taxes are expended, and the need for efficiency in administration and economy in expenditure is stressed. It is also considered to be relevant that public expenditure in India has been moving increasingly towards beneficient expenditure. The Commission is of opinion that a tax on salt cannot be justified merely on the ground that its incidence by itself is relatively light, in view of the increase that has occurred and may occur hereafter in commodity taxation. The Commission is not in favour as a rule of earmarking of the proceeds of taxes for specific purposes. While differentiation between organised and unorganised industry in the levy of certain excise duties is considered to be justified, the linking of a specific burden on a segment of industry with a benefit to another segment is not recommended.

Non-tax Revenues

There is discussion of the problems of raising non-tax revenues. The Commission is of the view that there is no objection to pricing policies which aim over a long period, at realising a surplus from the operation of State undertakings. Fiscal monopolies are mentioned as a possible alternative to excise duties and an early enquiry into this matter is recommended. As regards fresh avenues of taxation the Commission does not visualise a significant fresh avenue in the sense of an altogether new tax which was not included in one or other of the lists in the Seventh Schedule of the Constitution. It had, however, considered certain new forms of taxation which might be capable of fruitful use in the future but which they did not recommend for immediate adoption. As regards railway fares, the Commission sees no objection in principle to using travel as a basis of taxation although the monopolistic power of the State should not be used to determine fares with a view to maximising profits.

Volume II examines Central taxes in detail. Taxes on income, are considered first and then commodity taxes. In regard to computation of taxable income it is recommended that a specific provision should be inserted in the law for allowing costs of income-tax appeals in certain circumstance. The cost of collecting interest on securities and dividends should also, it is stated, be made an admissible deduction. There are several recommendations regarding the treatment of losses. Carry back is to be allowed with proper safeguards, only in cases where it may be impossible to adjust losses against profits in future years owing to cessation of business, profession or vocation. Such losses may be carried backward for one year and should be set off against profits arising from any source in the preceding year. The existing six-year limit for carry forward of losses should, in the opinion of the Commission, be removed. It is also suggested that the restriction that loss offsets should be against profits from the same business should be removed on certain conditions. It is recommended that carry forward of loss from a business, profession or vocation may be allowed to be set off against non-business income of the following year provided the assessee continues to carry on the business. In regard to depreciation allowance, the Commission is of the opinion that the principle of revalorisation of fixed assets for the purpose of allowing depreciation is not merely defective in theory but also unworkable in practice.

Incentive to Productive Enterprises

Several recommendations are made in order to provide incentives to develop productive enterprises. Concerns engaged in selected industries should, it is suggested, be granted a "development rebate" by being allowed to charge to revenue 25 per cent. of the cost of new fixed assets in the year of installation of the assets. This "development rebate" will be in lieu of the present initial depreciation allowance and it should be available for purchase for fixed assets, whether intended for replacement or for expansion, and to new as well as existing concerns. The additional depreciation allowance should be continued as at present. The criteria laid down for selection of the industries eligible for the development rebate are: (1) The importance of the industries concerned from the point of view of national development and (2) the extent to which they are unlikely to be developed, either by way of expansion of existing concerns or establishment of new concerns—if left to the voluntary effort of private enterprise and without any special stimulus by way of tax relief. Amendments are proposed to Section 15-C of the Income-tax Act to provide for a complete "tax holidays" for six years from the year in which production begins for all new concerns in the selected industries of special national importance. Any given concern will get the benefit either of the development rebate or of the tax exemption under Section 15-C, whichever is larger, but not of both.

There is a discussion of the taxation of special entities and receipts. It is suggested that Hindu undivided families with four or more members entitled to claim partition should be allowed an exemption limit for income-tax equal to three times the general exemption limit. Interest on securities and income from property received by co-operative societies with total annual income below Rs. 20,000 should be exempted from tax. It is suggested that the annual value of owner occupied property should be reduced by half or Rs. 1,800 whichever is less, the assessee being also given the benefit of a further reduction where necessary to 10 per cent. of total income as at present. It is recommended that the exemption from tax now available for two years in favour of income from newly constructed properties should be withdrawn.

In the discussion of the rate structure of income-tax (other than Corporation Tax), the Commission states that certain increase in the schedule of rates seems necessary, having regard to the objectives of tax policy. While the scope for increase in the lowest income ranges is limited the proportionate room for increase in respect of topmost brackets is smaller than for upper middle brackets. A maximum marginal rate of As. 13½ in the rupee or 85 per cent. on incomes above Rs. 1½ lakhs is suggested. The exemption limit should, in the opinion of the Commission, be reduced from Rs. 4,200 to Rs. 3,000. The introduction of a regular system of family allowance is recommended. While this may take time it is suggested that as a beginning, the present tax exempt slice of Rs. 1,500 may be increased to Rs. 2,000 for married assessees and reduced to Rs. 1,000 for unmarried persons. At the same time, the incomes of husband and wife and of the whole family should be aggregated. It is stated that earned income allowance should be given only in respect of incomes below a specified limit, say, Rs. 24,000. Contributions made by the employers maintaining recognised provident funds should not be treated as part of the total income of the employees. It is suggested that the maximum amount for abatement in respect of insurance premia and provident fund contributions may be increased to 1/5th of the total income subject to a maximum of Rs. 16,000 for Hindu undivided families and Rs. 8,000 for other assessees. Besides the increases suggested in direct taxation, a surcharge-cum-compulsory deposit scheme is proposed in respect of incomes of over Rs. 25,000.

Corporate Income

As regards taxation of corporate income the Commission is of opinion that the levy of a special tax on the corporation as at present is justified. The levy of income-tax on bonus shares is not recommended. It is suggested that loans and advances made by companies, in which the public are not substantially interested, to their directors and shareholders should be treated as dividends. The recommendation is made that distributions made out of accumulated profits on the liquidation of a company should be treated as dividends in all circumstances. The rates of Corporation Tax suggested for public companies which declare and pay dividends in India are one anna in the rupee on the first Rs. 25,000 of total income and two annas nine pies in the rupee on the balance. The report also recommends that the principle on which section 23-A of the Income-tax Act requiring distribution of 60 per cent. of income is sound, that necessary changes should be made in the operative part of the section to secure its more effective working than at present.

There are several recommendations relating to the prevention of evasion and avoidance and improvement in income-tax administration. It is, for instance, suggested that there should be a small advisory committee of non-officials attached to each Commissioner of Income-tax in order to discuss matters of administration.

In the discussion of the estate duty, it is recommended that the feasibility of reducing the exemption limit should be kept in mind. The rates of duty should be reviewed with a view to increasing as experience is gained. It is suggested that the period before death during which gifts *inter vivos* become allowable should be increased from two years as at present to five years. The introduction of a gifts tax is not favoured.

With regard to Central commodity taxes, the Commission has proposed increase in the rates of duty on kerosene, sugar, matches, loose and packaged, and all varieties of cloth. An enquiry into the cost of production of small-scale match factories is recommended in order to determine the appropriate preferential rates. The levy of excise duties on sewing machines, vegetable oils, woollen textile, biscuits, paper, dry and storage batteries, electric lamps, aerated waters, electric fans, glass and glassware, paints and varnishes and ceramics is suggested. It is also suggested that an Appellate Tribunal should be established to review the appeals that are at present decided by the Central Government.

Persons chargeable to tax on income from 'salaries' should be allowed the amount actually expended by them on the purchase of books and periodicals upto the extent that they were required for study and reference in the pursuit of their vocations. The concession should be limited to a maximum of Rs. 500 a year.

Dealing with the problem of evasion and avoidance, the Commission has urged that effec-

INDUSTRIAL CREDIT AND INVESTMENT CORPORATION

FINANCE MINISTER ON TERMS OF AGREEMENT

THE statement on the Industrial Credit and Investment Corporation made by the Union Finance Minister in the Lok Sabha is the first authoritative version given to the House after the registration of the Corporation last month in Bombay. Incidentally, the Corporation received considerable attention during the debate on the President's address to Parliament, as one of the members questioned the wisdom of the Government in placing such a large sum of Rs. 7.5 crores without interest at the disposal of such a purely private organisation as the Corporation. The Finance Minister, Mr. Deshmukh, intervening in the debate, clarified the position regarding the issue. Before dealing with this, it is necessary to refer here to the Minister's statement on the Corporation.

The Industrial Credit and Investment Corporation is, as stated by the Minister, a privately owned and privately managed limited liability company which was registered in January this year. It has an authorised share capital of Rs. 25 crores, and a subscribed capital of Rs. 5 crores. Of the subscribed capital, Rs. 3.5 crores, have been raised in India, Rs. 1 crore in the United Kingdom and Rs. 50 lakhs in the U.S. The Government of India will make an advance to the Corporation of Rs. 7.5 crores, voted by Parliament last September. The advance will be free of interest and will be repayable in 15 equal instalments beginning after the lapse of 15 years. The money for this advance will be found from counterpart funds derived from the proceeds of the sale of steel supplied by the Foreign Operations Administration of the U.S. under the Indo-American Technical Co-operation Agreement. In addition, the International Bank for Reconstruction and Development has authorised a loan to this Corporation of the equivalent in foreign currencies of $10 million. This loan will, as is customary with all loans from this Bank, be guaranteed by the Government. The loan and guarantee agreement will, the Finance Minister added, be laid on the table of the House when they are signed this month.

The management of the Corporation, the Minister continued, is in the hands of a board of 11 Directors. Of these, seven represent the Indian shareholders of the Corporation, two the British and one the American, while the eleventh Director is nominated by the Government of India.

The purpose of the Corporation is to assist industrial enterprise within the private sector of industry in India, through providing finance in the form of loans and equity participations or through sponsoring and underwriting new issues of shares. It will also help by furnishing managerial, technical and administrative advice and services to Indian industry.

Dwelling on the agreement with the Corporation, a copy of which he placed on the table of the House, the Finance Minister said that, apart from the provisions dealing with the making and repayment of the advance of Rs. 7.5 crores as already stated above, the main provisions of the agreement provided for:

(1) The Government has the right to apply for the liquidation of the Corporation, if the Corporation defaults in its repayment obligation or if the capital of the Corporation is impaired beyond a certain limit.

(2) The Government is given the right to appoint a Director so long as any part of the Government advance remains outstanding.

(3) The Corporation undertakes to prevent any one group of affiliated persons or companies from acquiring control of the Corporation, the object being to assure that the objective of the Corporation continues to remain that of national development rather than individual profit.

The reference to the advance of Rs. 7.5 crores to the Corporation brought in its wake, during discussions on the President's address in the Lok Sabha as stated at the outset, a controversy over giving the loan without interest. Recalling his statement to the House on a former occasion, on the justification for the interest-free advance, the Finance Minister remarked that the intention obviously was that "the Corporation should be enabled to give loans to new industrial concerns at a reasonable rate of interest." Explaining the point further, the Minister said:

"If one calculates the probable interest on this amount, say at Rs. 20 lakhs or Rs. 25 lakhs, and if one imagines that once the Corporation gets into its stride, its reserves would be of the order of about Rs. 25 crores, then it is easy to see that this might enable them to advance money at 1 per cent. less. Therefore, what the Director on behalf of the Government will have to see is that money is advanced to these industrial concerns at a reasonable rate of interest and that it is in balance with the rate of profit or dividend which the Directors of the Corporation declare for the shareholders. These are matters which come up irrespective of whether there is any particular or specific agreement bearing on this point. There are means open to the Government by way of issue of advice, apart from the deliberations in which the Directors will take part, to ensure that this kind of balance is maintained. Here is money to be advanced to industrial concerns and what we want to ensure is that they get it at a reasonable rate of interest, while the profits of the Corporation in balance are limited.

"In the case of co-operative societies, what we did is to advance money through the Reserve Bank, to the Apex Co-operative Banks at 1½ per cent., so that we ensure, or at least try to ensure, that by the time the money reaches the cultivator, it reaches him at a reasonable rate of interest. The objectives are the same; the methods are slightly different according to the circumstances of the case."

From the Minister's observations quoted above, it is clear that the Government, through its representative on the Board and through the proper enforcement of the various clauses of the agreement as well as the guarantee, can exercise effective control over the activities of the Corporation whenever such do not serve to attain the objective for which the financial institution has been brought into being.

While on this subject, it will be appropriate to mention here the views of Mr. Russel G. Smith, Vice-President of the Bank of America and a Director of the Corporation, representing American shareholders. Mr. Smith who was in the city last week to attend the Directors' meeting, told a Press Conference that the floating of the Corporation was a unique experiment in international investment. It was unique, according to him, in three ways; (a) the mobilisation of international finance, (b) the utilisation of the counterpart funds created from the proceeds of the wheat loaned by the U.S. Government and (c) its establishment for helping private enterprise in the country. Commenting on the counterpart funds, Mr. Smith was glad that India was making very good use of them by utilising them for the country's nation-building activities.

Mr. Smith said that the Corporation would be mainly engaged in helping the medium and small-scale industries. He did not think that it would be possible to finance big projects, some of which might require the entire capital available to the Corporation. These remarks of his are likely to cause some confusion, since medium and small-scale industries are, as is commonly understood in India, the sphere of State Financial Corporations already established in a number of States. It may, however, be mentioned here that Mr. Smith, coming as he does from a country where everything is planned on a gigantic scale, meant, when he talked of medium and small-scale industries, those industries which in India are classified under the term "large-scale."

Dealing with the functions of the Corporation, Mr. Smith stated that the organisation had been established for investment lending or underwriting the stocks of private industries. But he could not say which of these the Corporation would do most. It would depend, he added, on the circumstances and the type of the industry that required such help and might be any one or a combination of these. He was confident that the Corporation would pursue a dynamic policy in making available its funds to industries in whatever form it might be, and expected that it would be a great success. On its success would depend, he averred, the establishment of similar corporations in various other countries.

Speaking on foreign participation in the capital of the Corporation, Mr. Smith observed that the U.S. was contributing only 10 per cent. and the U.K. 20 per cent. of the total shares of the Corporation. This percentage of attribution did not, in his opinion, reflect the capacity of the institutions in the two countries to invest in the Corporation. For only this much was allotted to them, and India was allotted the bulk of the shares—70 per cent. of the total share capital. In the U.S., shares had been contributed to, Mr. Smith said, by the Bank of America and four leading companies manufacturing products internationally well known. The shares were not intended to be sold to the public.

According to an announcement issued by the Corporation, the whole of the issued capital of Rs. 5 crores has been subscribed. The Corporation is now in a position to apply to the Government of India for the advance of Rs. 7.5 crores under the agreement already mentioned above. The Corporation has applied to the Registrar of Joint Stock Companies for a certificate to commence business. It is expected to be in a position shortly to consider applications for financial and other assistance. At a meeting of the Board of Directors held on the 28th ultimo, it was decided to allot 150,000 ordinary shares of Rs. 100 each to the public from whom applications had been invited a few weeks ago. Applications upto 1,000 shares would receive full allotment, while those for a larger number would be allotted approximately 76 per cent. with a minimum of 1,000 shares. These particulars show that the issue of Rs. 1.50 crores thrown open to individual investors had been oversubscribed, an indication of their confidence in the Corporation. This is the more remarkable, because (a) the sponsors did not make any statement in the prospectus about the prospects of profits and dividends and (b) the issue was offered at a time when the investment market was in an unsettled state owing to pre-budget uncertainties and when the money market was tight. This initial success is a good augury for the Corporation.

HYDERABAD CURRENCY CEASES TO BE LEGAL TENDER FROM 1ST APRIL

Hyderabad *Sicca* currency will cease to be legal tender with effect from 1st April, 1955. All monetary transactions in that State on and after that date will be conducted in Indian currency. However, in order to enable the public to exchange their holdings of Hyderabad currency with Indian currency, the Government of India has, in consultation with the State Government, decided to provide facilities for the conversion of Hyderabad currency into Indian currency for a further period of one year from 1st April, 1955, at all the offices of the Hyderabad State Bank and the Treasuries and Sub-treasuries of the State Government. The rate of conversion will be 100 Indian rupees for every 116-10-8 *Hali Sicca* rupees.

The bulk of the Hyderabad currency has already been withdrawn and the small amount which is still in circulation is also expected to be withdrawn, without much difficulty, as a result of the extension of the period for conversion of *Sicca* currency into Indian currency.

MERCANTILE BANK OF INDIA LTD.

The Board of Directors of the Mercantile Bank of India Ltd. has recommended a final dividend of 7 per cent., less income-tax for the year ended 31st December, 1954, thus making the total dividend for the year 14 per cent. This is the third year in succession for which the dividend is being maintained at this rate, after it had been raised from 12 per cent. per annum paid for four consecutive years from 1948 to 1951.

INTERNATIONAL MONETARY FUND

ITS FUNCTIONS AND PROGRESS

By Mr. Ivar Rooth

MANAGING DIRECTOR OF THE I.M.F.

[A lucid analysis of the functions and the progress, that has been made so far, of the International Monetary Fund was given by its Managing Director, Mr. Ivar Rooth, in his address to the Bombay Branch of the Indian Council of World Affairs last week. Mr. Rooth was in India for about 10 days and, after making a rapid survey of India's economic progress, left for Ceylon on Friday, 25th February. During his visit to this country, he met officials and non-officials, including leading bankers, and addressed a Press conference in Bombay. Published on this page is his address to the Indian Council of World Affairs. He has explained therein, in simple language, the purpose for which the Fund was formed, its set-up, its way of working, and its achievements. In brief, it is a factual story of the Fund related by a person with intimate knowledge of the organisation. We have no doubt that it will be read with interest by business men and students of economics alike.—Ed.]

ALL of you have heard of the World Bank or the International Bank as it is often called. I guess, though, that very few knew anything about the International Monetary Fund before this meeting, and only few of those that had heard of the name of the Fund may be aware of what the Fund is trying to do.

Forty-four nations associated in the war, which was then still undecided, met in the summer of 1944 at Bretton Woods, New Hampshire, United States of America, to formulate a programme designed to secure order and stability in international trade and investment, to assist in the reconstruction of war-torn economies and in the development of underdeveloped countries. The programme was conceived as a part of a broader structure with the overriding objective of a prosperous and peaceful world. Of this structure, the United Nations was to be the most important single unit.

At the time of the Bretton Woods Conference, there prevailed an atmosphere of optimism. It was hoped that all nations would live in peace. There was an expectation that part of the resources formerly wasted in war would be devoted to raising the standards of living of people everywhere.

The Fund and the Bank were, as I said, planned for a peaceful world—a world of liberal trade and currency convertibility. They are designed not merely for a transition from war to peace but as a permanent structure for world-wide co-operation in the fields of currency and international investment. The problems of most of the members of the Fund and the Bank have been intensified by the failure of their wartime hope of friendly co-operation between the communist and non-communist nations. But I believe that, in spite thereof, the Fund and the Bank perform important and useful functions for their members. I shall try to describe here how the Fund has been and is operating. Before doing so, I will, however, mention a couple of differences between the Bank and the Fund.

The Bank and the Fund

The Bank lends money for special projects. If the loan is not taken by the Government itself, it has to be guaranteed by the Government. The Fund's main purpose is co-operation in the solution of payments and exchange problems. Therefore, it lends money only to central banks and treasuries in the member-countries, when they have a temporary need of foreign exchange. The Bank has only a small paid-up capital. Therefore, it has to borrow money on the capital markets in various parts of the world. The Fund, on the other hand, has very substantial amounts at its disposal in gold, dollars and other currencies, and will, for the foreseeable future, be able to carry on its business with its present holdings.

Each member of the Fund is assigned a quota. This quota is the basis of its subscription to the Fund and of its voting strength in the Fund and it is the measure of its ability to obtain financial assistance from the Fund. We have a Board of Governors that meet annually. The Governors elect a Board of Executive Directors, at present 16. Each of them have an alternate. The Indian Director is Mr. Prasad. His alternate is Mr. Pendharkar, both from the Reserve Bank. The Executive Board functions on a continuous basis and meets as often as its business requires. The Chairman of the Board is the Managing Director, who is also the head of the operating staff. He has a deputy who acts for him in his absence. The staff is internationally recruited and now numbers approximately 430 people drawn from 40 different countries. We are particularly happy to include in this number 10 employees from India, including Mr. Dey. Formerly on your Tariff Commission, Mr. Dey is Head of our Asian Department.

The Fund constitutes a code of behaviour for its members. This code recognises the importance of stable exchange rates to trade and payments relationships, and it makes the establishment and modification of exchange rates a matter of international responsibility. Members have to agree with the Fund on par values. A member who wishes to change its par value by more than an initial 10 per cent. must obtain the concurrence of the Fund. Members are obligated to maintain stable rates of exchange based on these par values. They are not to permit rates to vary by more than 1 per cent. on either side of the par values. Countries with multiple exchange rates are obliged to consult the Fund and obtain its approval before changing any of these rates. By and large, exchange adjustments since the Fund was established have been conducted in an orderly fashion.

The Fund stands for stability of rates and orderly changes in rates, but not for rigid rates that are to be permanently frozen. When a par value has become inappropriate because of changes in the economic position of a country, the Fund encourages a change to correct the fundamental disequilibrium that has come into being. Since the Fund was established, there has been a remarkable absence of friction in the economic relations of members arising out of adjustments of exchange rates. And competitive devaluation of currencies has been avoided.

Even when the countries have felt that they were no longer in a position to maintain fixed rates of exchange that move only within the narrow margins prescribed by the Fund's rules, they have consulted the Fund, and have explained in detail the difficulties that they face. The Fund has, for instance, raised no objection to the fluctuating rates of Canada and Peru. Both of these countries have no exchange controls.

Exchange Controls

Most Fund members have had elaborate exchange controls for many years and they use them as an important means of dealing with their balance of payments problems and other economic difficulties. One of the Fund's principal goals is ultimately to bring about the removal of all these restrictions on current international payments. The achievements of this goal depends primarily upon the policies followed by the members themselves. Internal financial stability is the essential prerequisite to freedom in exchange transactions. Since the war, the greatest problem that countries have faced in trying to bring about internal financial stability has been the elimination of inflation. It goes without saying that prices rise when the money supply grows more rapidly than the production of goods for consumption, export and investment. Consequently, the excessive demand created by the inflated money supply exerts pressure on the balance of payments through an increased demand for imported goods. During the post-war period, inflationary pressures have arisen partly from central bank financing of Government deficits, sometimes for defence purposes and sometimes as the result of over-ambitious reconstruction and development programmes, and partly from extensive bank credit which the monetary policies have not sufficiently kept in check. The Fund has, throughout this period, consistently urged its members to adopt budgetary and credit policies of a kind that will terminate inflationary pressures.

The Fund can advise and assist its members to bring about internal financial stability, but only the actions of the Governments themselves can accomplish this. Until inflationary pressures are eliminated, a country will find itself in continual balance of payments difficulties, and the excess demand for imports will have to be checked in one way or another. Exchange restrictions have been one of the most widely used techniques for suppressing the demand for imports.

In the Fund Agreement, there are certain transitional arrangements concerning exchange restrictions. Under these arrangements, members are free to maintain exchange restrictions on current transactions and to adjust them to changing circumstances. In exercising this privilege, however, members have to keep in mind the purposes of the Fund and to withdraw, as soon as feasible, their payments restrictions. In addition, members maintaining such exchange restrictions have, since 1952, to consult the Fund each year regarding their continuation. Most of the Fund's members are now involved in these consultations. These consultations are a substantial part of our work. This work is, as most of our work, done quietly and without fanfare.

Convertibility

One big task of the Fund is to help its members in establishing the convertibility of their currencies. The maintenance of general convertibility depends upon the restoration of international balance. That does not mean, of course, that all payments problems have to be solved before any currency can be made convertible. The convertibility of the leading currencies would be a powerful force to induce both the countries immediately concerned and others to put into effect and to continue the sound financial policies that are essential for a lasting solution of their payments problems.

There are today a few major currencies that are approaching the position where they could be made convertible. When a country decides to establish convertibility, it must, indeed, be sure of its ability, even under pressure, to maintain convertibility. The domestic situation must be free of inflationary pressures, the payments position must be strong, the country must have accumulated reserves of its own. The Fund will be happy to give such countries financial support to meet the initial stress or subsequent unforeseen difficulties.

Convertibility is an essential requirement for effective competition in international trade. It is the only way by which countries can sell freely in any market the goods that they produce most efficiently and buy freely in any market at the lowest possible price the goods that they consume. Convertibility would also help create conditions favourable to an expansion of international capital movements. The extension of convertibility is in the direct interest of the countries immediately concerned. But it is also in the interest of the rest of the world. Progress is now being made in establishing the basis for convertibility. The payments position of many countries and regions has been strengthened and the reserves which are indispensable for convertibility are being accumulated. The recovery of the reserves of some of the great trading countries from very low levels has already been an important factor in making possible a liberalisation of their import and exchange

COTTON GROWING PROBLEMS

ECONOMIC IMPORTANCE OF HYBRID SEEDS

THE Conference on cotton-growing problems in India (the sixth of its kind) that was held recently in Bombay discussed several agricultural and economic issues relating to the cultivation of cotton in this country. Dr. S. C. Harland of the Manchester University, a botanist of international reputation, who is now in India to advise the Indian Central Cotton Committee on its research problems, attended the Conference. Many of the leading cotton technologists in India participated in the deliberations of the Conference where about 70 technical papers were read and discussed.

Inaugurating the Conference, Mr. Purshotamdas Thakurdas, President of the East India Cotton Association, traced briefly the development of cotton cultivation in India. He recalled how in the pre-war years, India was known for its short-staple cotton and the entire export trade was based upon it. The war, which closed the export outlets and witnessed an increase in domestic consumption of cotton, brought about a "revolution" in India's cotton economy. He complimented the research workers on their work in improving the quality of cotton. Emphasising the importance of segregating the areas where improved varieties of cotton are grown, Mr. Purshotamdas Thakurdas said:

" ... it often happens that the useful result achieved by the scientists and technicians is being lost in the long run to the detriment of the grower and the country as a whole by the Government in the Centre not segregating the areas for different varieties of cotton and maintaining the purity of the seeds. In a country like India, with diverse soil and climatic conditions, there cannot be one single uniform seed grown for the entire country. But it is possible, given the will to do so, to maintain the purity of the seeds by the application of the Cotton Control Act and the Cotton Transport Act. The need for this is particularly felt in such places as Madhya Pradesh, East Punjab, etc., where due to the admixture of various seeds, the useful work done by the cotton breeders is lost."

Dr. Harland traced the history of cotton research and referred to the important landmarks which were responsible for the building up of modern genetics and plant breeding technique. He used the term "genetical architecture" for describing this development. He defined the "species" as an adaptative complex, precisely adjusted to environment, that is oscillating, and is not static from day to day and year to year. He laid particular emphasis on the need for intimate relationship between the plant breeder and the plant, which he compared to that between mother and children. Explaining the nature of a correct research attitude, he said that "passion" was the word for the research workers. Also, they must have "courage"—the courage to confront the unfamiliar.

The technical papers read at the Conference dealt with the problems of effecting qualitative and quantitative improvement in cotton cultivation. The problems were discussed under five headings—cotton breeding and genetics, cotton statistics, cotton technology, cotton agronomy and cotton pests and diseases—under each of which several papers were read and discussed. The problem of increasing the production of cotton resolves itself into the twin problems of extending the area under cotton and improving the yield of cotton. As regards the land under cotton, it is about 16.1 million acres now, of which less than 10 per cent. is under irrigated cotton. It is anticipated that, when the several irrigation projects, which have been taken in hand, are completed, a portion of the land brought under irrigation will be devoted to cotton. It is expected that there will be an addition of about 1.3 million acres to the area under cotton, inclusive of about 0.5 million acres in the Punjab, 0.2 million acres in P.E.P.S.U., 0.10 million acres in the U.P., 0.23 million acres in Rajasthan and 0.15 million acres in Madras. These are, of course, only rough estimates for much will depend upon price and other considerations.

An interesting development in regard to increasing cotton output is the cultivation of cotton as an off-season crop on paddy lands. An experiment on these lines has been conducted in certain paddy-growing regions of the Madras State. The experiment has shown some promising results. The Committee has already sanctioned a scheme for this purpose. It is believed that it should be possible to grow cotton in the Godavari and the Krishna regions also. It would also appear that cotton cultivation has been tried on an experimental scale in the Kapoli area in the Bombay State where the Tata Power stations are located. By utilising the waters that are running to waste, cultivators were encouraged to grow vegetables for which a good market exists in the two neighbouring important cities—Bombay and Poona. Now, cotton crop has also been tried in this area. What is necessary here is to evolve an early maturing variety which will be suitable for cultivation under the soil and climatic conditions which prevail in this region. Some research is needed in this subject.

Another aspect of the problem of increasing the output of cotton is the one relating to improvement in per-acre yields. Several papers read at the Conference dealt with the many facets of this problem. The effect of pre-sowing treatments of seed, of some hormones and of manures on cotton formed the subject-matter of a few papers. The average yield of cotton can be increased, as is well known, by at least 100 per cent. by providing irrigation facilities. Some experiments have shown that it is possible to increase the yield even by 200 to 300 per cent. by adopting early sowing with irrigation water. Manuring of cotton can increase the yield by 25 to 40 per cent. But this would be successful only in areas under irrigation or with an assured rainfall.

Yet another important aspect of the problem of increasing the output of cotton is the fight against pests and diseases which adversely affect the cotton crop both quantitatively and qualitatively. This aspect was discussed in several papers read at the Conference. Pink and spotted boll-worms inflict considerable damage on the crop. Black arm disease is also one of those diseases which afflict the cotton plant. There is no direct method of attack against this disease. In fighting pests and diseases, one must also take into account the cost of waging the fight. Some fungicides are effective but are too costly to prove of practical benefit to the farmers. Be that as it may, the fight must be carried on relentlessly. Victory would mean a 20 per cent. increase in India's cotton crop.

Continuous efforts are being made to improve the quality of Indian cotton. Much work has been done in the sphere of increasing the output of long-staple cotton. Thus, in the period 1939-44, the output of long-staple cotton (1" and above) formed 19 per cent. of the total output. It now forms about 32 per cent. of the total output. In the Vijay zone in the Bombay State, an improved strain, Digvijay, is gaining in popularity. Lakshmi is slowly supplanting inferior varieties of cotton in the Ceded Districts, in parts of Hyderabad State and Mysore State. This is regarded as a major development in India's cotton economy. A defect noticed in regard to Lakshmi is that it is susceptible to certain bacterial diseases. At the Sirguppa Station, research work is being done in order to evolve a disease-resistant Lakshmi strain. New long-staple varieties 170—Co. 2 and 134—Co. 3M are grown in Gujerat.

The main drawback of Indian cotton economy is the shortage of extra-long-staple cotton (1⅛" and above). Research is being directed towards meeting this shortage. Many papers dealt with this aspect of the cotton problem. A promising line of research is to cross the very long-stapled Sea Island cotton with the long-stapled Lakshmi or Punjab-American or Cambodia in order to evolve extra-long-staple cotton. The three hybrids which have been produced are: Co4—B-40×Quabradinho; Co2×Sea Island; Lakshmi×Sea Island. The first of these three hybrids, according to Mr. N. R. Bhat and Mr. S. R. Kaiwar of the Department of Agriculture, Bombay State, has proved better than either of the other two varieties for cultivation in the grass lands and waste lands of Bombay Karnatak. All the three are suitable for cultivation under irrigation conditions.

A scheme for the production of hybrid seeds which will produce long and superfine cottons capable of spinning 60s to 80s has been sanctioned by the Committee. Commercial production of hybrid seed has begun in Broach (Bombay State). The results of the research in commercial production of hybrid seed in Bombay State have been summarised by Mr. B. J. Thakkar, Cotton Breeder, Broach, and Mr. D. S. Sheth, Cotton Development Officer, Surat. They estimate the expenditure on account of crossing, use of paper bags, threads, picking, ginning, etc., excluding cultivation charges and the land lease at about Rs. 21 per lb. of hybrid seed. They emphasise that the commercial production of hybrid seed should be done under perfect technical control and guidance of experienced plant breeders, so that every hybrid seed so produced is genuine. The authors urge the Central and State Governments to encourage the production of hybrid seeds through the grant of a subsidy for every pound of the right type of hybrid seed produced. It is hardly necessary to add that the economic importance of hybrid seeds would justify the grant of any reasonable subsidy designed to extend and improve their production.

WOOLLEN INDUSTRY IN INDIA

PRODUCTIVE CAPITAL ESTIMATED AT RS. 9.10 CRORES

OUT of the aggregate annual value of India's industrial output, estimated at Rs. 980 crores, the share of the woollen textile industry is about 1.2 per cent. During the calendar year 1954, for instance, the 45 woollen mills—these relate only to factories employing 20 or more workers and using power—in the seven States of Bombay, Madras, Uttar Pradesh, the Punjab, West Bengal, Bihar and Saurashtra produced Rs. 11.68 crores (ex-factory value is assessed at Rs. 11.40 crores) worth of woollen goods. Of this, the share of woollen cloth was Rs. 4.83 crores, the quantity produced being 5.21 million yards. The value of yarn produced was Rs. 3.32 crores (5.76 million lbs.). Another important item consisted of rugs and blankets, the total value of the production of which was Rs. 1.51 crores, the number actually manufactured being 832,654. *Lohis* and shawls accounted for Rs. 1.14 crores, the number being 812,341.

The total productive capital employed in the 45 woollen mills under review amounted to more than Rs. 9.10 crores. Of this, working capital represented as much as 68.3 per cent. or Rs. 6.24 crores, to be precise. Fixed capital amounted to Rs. 2.86 crores or 31.7 per cent. The predominance of working capital is due to the large stocks of raw materials, valued at Rs. 2.83 crores, held by the factories. The funds utilised for holding stocks of finished products and by-products amounted to Rs. 1.96 crores and those of semi-finished products in stock or in process to Rs. 1.10 crores.

The woollen industry provides employment to 15,801 persons, of whom 14,142 are workers and 1,659 are persons other than workers. The total wages and salaries paid every year come to nearly Rs. 2 crores. In other words, the average earning of a worker in the woollen industry is Rs. 1,261 per annum, as against Rs. 1,600 earned by a cotton mill worker in Bombay, while the *per capita* income in India is Rs. 275. The value of the gross output per person employed amounts to Rs. 7,394. The cost of producing a pound of woollen yarn comes to Rs. 5-12 and a yard of cloth to Rs. 9-4.

A break-up of the several elements in the cost of production reveals that wool tops constitute the largest item. During 1952, the woollen mills consumed Rs. 4.03 crores worth of tops (6.95 million lbs.). Consumption of raw wool accounted for Rs. 1.31 crores (6.92 million lbs.), worsted yarn for Rs. 94.93 lakhs (1.06 million lbs.) and others for Rs. 1.58 crores. The value of coal used in the mills was Rs. 9.64 lakhs (27,591 tons), of electricity Rs. 7.31 lakhs (12.53 kw.h.), of lubricating oils Rs. 1.73 lakhs (41,741 gallons) and of others Rs. 10.70 lakhs.

The table below indicates the position of the woollen textile industry in the aforesaid seven States in 1952:

—	Bombay	Madras	U.P.	Punjab	W. Bengal, Bihar and Saurashtra
No. of factories ..	8	3	6	24	4
No. of persons employed ..	6,230	59	2,801	5,155	15,801
Fixed capital (in lakhs of Rs.)	117.34	0.63	19.55	71.75	77.49
Working capital (in lakhs of Rs.) ..	290.65	0.18	133.13	150.90	49.63
Salaries and wages (in lakhs of Rs.)	83.22	0.26	48.13	58.50	11.46
Fuels, etc., consumed (in lakhs of Rs.) ..	15.84	0.01	3.81	7.75	1.96
Materials consumed (in lakhs of Rs.) ..	854.28	0.74	80.31	255.46	96.35
Value of products manufactured (in lakhs of Rs.) ..	474.28	1.21	199.52	381.63	111.77
Value added by manufacture (in lakhs of Rs.) ..	93.80	0.40	101.49	76.36	9.62

MINISTER'S ASSURANCE TO TEXTILE INDUSTRY

LABOUR LEADERS EXPRESS GRAVE CONCERN OVER IMPORTS OF CLOTH

From A Special Correspondent

MANCHESTER, 22nd *February*

MANCHESTER LETTER

THERE has been no slackening in the controversy arising out of imports of foreign cloth into the United Kingdom and cotton traders in Lancashire are still discussing the pros and cons of the situation with great vehemence. The main event of the week has been the decision of employers and workers in the producing sections to protest direct to Sir Winston Churchill over the quantity of Indian cloth imports.

Following a meeting in Manchester with Mr. A. R. W. Low, Minister of State at the Board of Trade, a resolution was unanimously approved expressing "grave concern" at the threat to employment, stability and confidence in the Lancashire cotton industry. The resolution said the meeting had expressed "profound dissatisfaction at the Government's unwillingness to take action to safeguard the vital interests of workpeople and employers in the Lancashire cotton industry."

Addressing the Manchester Chamber of Commerce at its annual luncheon, Mr. Low said the Government's overseas commercial policy was to "hold the doors of world trade open. The situation in Lancashire is causing everyone concern and it is being treated by the Government with all seriousness and sympathy," he said. "But let us not forget the very solid assets which there are on the other side of the balance-sheet. Lancashire cloth commands well over 90 per cent. of the home market—one of the largest textile markets in the world—and she has a substantial export trade in a world which has learned to respect Lancashire quality because it comes from Lancashire. These are themselves good grounds for confidence in any industry but it is not I or the Government who can preach confidence. That is for the leaders of the industry."

Mr. Low, who recently returned from India, said the Indian Government knew we should like a substantial reduction in the duties of 60 to 80 per cent. which Lancashire textiles entering India had to face. "I made it quite clear to the Indian Government that the high rate of their tariff on cotton textiles, quite apart from its actual effect on trade, was bound to seem to everyone to be unfair when compared with the duty-free, quota-free treatment we gave to textiles from India."

Pledging the Government's awareness of the importance of the textile industry to Lancashire, Mr. Low said: "The Government has not written off the Lancashire textile industry nor does it consider the Lancashire textile industry expendable as some people complain." A most careful watch was being kept by the Government on the position in Lancashire but if we imposed quotas we should be encouraging other countries to "slam on a quota against our successful British exporters."

Mr. Low said statistics showed that the main difficulty facing the industry was shortage of export orders rather than imports of foreign cloth. "We are examining the question of what safeguarding action might have to be taken if the situation became too threatening."

Union Viewpoint

In the meantime, Trades Union Congress leaders have been warned that there is a serious threat of widespread unemployment in the Lancashire cotton industry this summer if imports of foreign cloth are allowed to continue at their present rate.

In a survey of conditions in the North-west, sent to Transport House, Mr. Lewis Wright, Weavers' Amalgamation Secretary, says: "Grave concern exists about increasing imports of cloth from India, which were eight times as much last year as in 1953—133 million yards, against 16 million yards. With more than half of this retained in the home market, order books have shortened alarmingly, and underemployment and mill stoppages are showing signs of increasing."

"Traders are suggesting that a limit must be set to imports of foreign cloths if Lancashire is to survive," declares Mr. Wright. Some propose an unofficial boycott of Indian cloth on the pattern of the Indian boycott of Lancashire cloth in the 1930's, which caused 70 per cent. unemployed in some Lancashire towns.

"The Government must move, and declare some positive policy," says Mr. Wright. "Unless some new factors emerge within the next few weeks, unemployment in the cotton industry is likely to increase markedly."

Loyalty Call

From the employers' side came a sharp attack on Lancashire firms who are importing cheap cotton cloth from abroad—"loyalty in the industry is imperative if its good name is to be retained"—was made by Mr. Percy C. Fish, Chairman of J. F. & H. Roberts, the £1,500,000 textile manufacturing and merchanting company, at the annual meeting.

"It is deplorable for large combines and well-established converters to give up the security of the United Kingdom textile trade for the short-lived glamour of Japan, India, Hong Kong or elsewhere. It is unthinkable that the present methods of unfair trading will be allowed to continue indefinitely," declared Mr. Fish, a veteran trade leader.

No other country in the world would tolerate a system which permits their legitimate trade to be sabotaged by granting "such advantageous conditions of trading to its keenest foreign competitors." Calling for "big thinking and big changes" in the Lancashire industry, Mr. Fish told the meeting that his own company refused to handle cheap overseas cloth. "To ask the Government for protection when you have the remedy in your own hands seems nothing less than childish. Quite a lot of these cheap imported cloths have not given discerning customers satisfaction but on account of cheapness inroads have been made into the home trade just as was the case in the export markets."

Urging a scheme which would give the United Kingdom and the Dominions "the opportunity of trading amicably with each other on an equal basis," Mr. Fish said where an importer had bought goods from abroad at less than the current home market price the Government should collect from the importer the difference for revenue purposes. This would have the result of goods made at home or abroad both being sold to the consumer on the same basis of cost.

Signs of Split

It is, however, true that Lancashire is far from unanimous on the subject of foreign cloth imports. This fact has no doubt been transmitted to the Government by Mr. Low when making his report on his exchanges with cotton trade leaders last week. For example, he heard Mr. H. E. Pardoe, President of the Manchester Chamber of Commerce, sum up the long-term advantages of such purchases.

Speaking at the annual meeting of the Chamber he described the present situation as a many-sided problem. In assessing the merits of the case for and against cloth imports, however, it was important to remember that spinners and weavers represented only a part of the cotton industry. The bleaching, dyeing, printing, packing and finishing trades with the converter merchants made up the rest.

"Owing to the inability of the spinners and weavers to increase their production to anything like the required amount it is easy to see that without the aid of this imported cloth there would be redundancy in the finishing trade and many of the converters would lose the hold they are able to maintain on a substantial re-export trade," said Mr. Pardoe.

"On a long-term view it is obviously in the interests of the whole industry that the re-export trade should be continued, especially if, as one would hope, Lancashire one day will again be fully export-minded and interested not only in winning back some of the lost markets but also in opening up new ones."

Mr. Pardoe told the Chamber he felt it would be an act of political wisdom on India's part which would only react to her ultimate benefit if she lowered her tariffs. Otherwise unless there was an unexpected increase in the demand for Lancashire cotton textiles, it was quite possible that the circumstances prevailing would soon be such that the Government would be forced to take action which, while being fully justified, would nonetheless be distasteful because it would be contrary to the principles of G.A.T.T. and the Ottawa Agreement.—*All Rights Reserved.*

GOVERNMENT OF INDIA'S BUDGET

REVENUE CONTINUES TO EXPAND

NO THREAT OF INFLATION, DESPITE AN OVERALL DEFICIT OF RS. 319 CRORES

THE Central Government's budget for 1955-56 reflects the increasing tempo of development expenditure. Thus, the revenue deficit and the overall deficit are larger than those for any of the post-war years. The year coincides with the last year of the Five-year Plan and the Government has planned to step up the expenditure on development projects, with a view to making good the leeway in previous years. Another feature of this budget is the incorporation of most of the principal recommendations of the Taxation Enquiry Commission. As a result, the number of new taxation proposals is fairly large; besides, there has also been some rationalisation of the existing taxes.

On the basis of taxation prevailing before the announcement of the new taxes, the budget for 1955-56—the fifth to be presented by Mr. C. D. Deshmukh, India's Finance Minister—shows a revenue deficit of Rs. 30.17 crores, as against the revised estimate of Rs. 5 crores and the budget estimate of Rs. 15.36 crores for 1954-55. As development expenditure has been stepped up considerably, the overall deficit for the coming year is placed at Rs. 340 crores, as compared with Rs. 239 crores (budget) and Rs. 208 crores (revised) for the year drawing to a close. The increases in direct taxation, modifications in customs and enhancement of excise duties, as per details that will shortly follow—all these are expected to yield an additional revenue of Rs. 21.70 crores—have, however, reduced the revenue deficit to a modest level of Rs. 8.47 crores and the overall deficit to Rs. 318.30 crores. In other words, if all the expenditure is incurred according to schedule, the Government will have created by the end of the year "paper money" of the order of about Rs. 320 crores. The "if" here is, however, a big one, for experience hitherto has shown that the authorities are incapable of spending such large amounts on development expenditure as is now planned by them.

The following table will enable one to get a bird's-eye view of the Government's revenue and expenditure in 1953-54 (actuals), 1954-55 (budget as well as revised) and 1955-56 budget:

(In crores of rupees)

	1953-54 Actuals	1954-55 Budget	1954-55 Revised	1955-56 Budget
Revenue	415.98	451.73	451.08	468.76
Effect of taxation proposals	..	..	..	21.70
Expenditure	407.48	467.09	456.08	498.93
Surplus (+) or deficit (—)	+8.50	—15.36	—5.00	—8.47

Before proceeding to discuss the accounts for the current year, it may be mentioned here that the actuals for 1953-54 show a revenue surplus of Rs. 8.50 crores, as against a deficit of Rs. 16.96 crores anticipated as per revised estimates for that year. This is an indication of the conservative outlook of Mr. Deshmukh. Throughout his term as Finance Minister he has been underestimating the revenue and overestimating expenditure. It would not be surprising, therefore, if the accounts for 1955-56, when finalised two years hence, were also to show a revenue surplus, instead of the modest deficit of Rs. 8.47 crores now estimated by him.

1954-55

The revised estimates of revenue show hardly any variation as compared with the budget estimates, while those of expenditure disclose a drop of Rs. 11 crores. Consequently, the current year is expected to end with a deficit of only Rs. 5 crores, just one-third of the anticipated amount. Explaining the variations in the revised estimates, as compared with the budget estimates for 1954-55, the Finance Minister stated that the credit of Rs. 9 crores taken in the budget for repayment of the Partition debt by Pakistan had not materialised but this shortfall was partly made up by the increase of Rs. 5 crores under customs revenue due mainly to the enhancement of the export duty on tea and Rs. 3 crores under other miscellaneous heads of revenue. The Finance Minister mentioned that further negotiations with Pakistan for the settlement of the outstanding financial issues were to take place in the near future and that he had every hope that these would result in a satisfactory settlement.

Of the savings of Rs. 11.01 crores in expenditure, Rs. 3.41 crores were in Civil expenditure and Rs. 7.6 crores in Defence expenditure. The former was the net result of a number of variations. There were savings of Rs. 1.18 crores due to the decrease in the share of the Union excise duties payable to the States consequent on the fall of revenue on excise duty on tobacco, Rs. 2.13 crores on educational schemes due to slower progress of expenditure in some States and Rs.4.49 crores in grants to States on Community Development Projects and National Extension Service. These savings were counter-balanced by additional expenditure of Rs. 4 crores on flood and famine relief, Rs. 89 lakhs for expenditure on displaced persons and Rs. 76 lakhs for the former French Establishments in India. The saving in expenditure on Defence Services was mainly due to economies and slower progress in the procurement of stores than anticipated.

The realisation of estate duty was now estimated at Rs. 1.26 crores as against the original

SUMMARY OF FINAL ESTIMATES

(In lakhs of rupees)

* Effect of Budget Proposals.

estimate of Rs. 4 crores but this did not affect the Central Budget as the proceeds were to go almost entirely to the States. In regard to the principles of distribution of estate duty among the States, the Finance Minister observed that the next Finance Commission would be asked to advise on this issue and that meanwhile, a provisional distribution would be made on the same basis as the States' share of the income-tax. This provisional distribution would be subject to revision by the next Finance Commission and that as the collections were not likely to be large for some time, this would not make any significant difference to the finances of the individual States.

1955-56

For the next year, the revenue is expected to go up by Rs. 38.38 crores to a little under Rs. 500 crores. Of this expansion, the new taxes proposed by the Finance Minister account for Rs. 21.70 crores. The balance of Rs. 16.68 crores is due to expectations of higher export duty on tea and a large profit on sale of sugar on Government account. Explaining the variations in the main sources of revenue for the coming year, the Finance Minister said:

"The revenue from customs in the coming year has been placed at Rs. 165 crores, against the current year's revised estimate of Rs. 180 crores. The recent enhancement of the export duty on tea will bring an additional revenue of Rs. 11 crores over the current year's yield. Imports of motor spirit, kerosene and lubricants will, however, decrease to almost a quarter of the present level, as a result of the second oil refinery at Bombay also coming into full production. In consequence, there will be a drop of about Rs. 20 crores under this head, as compared with the collections of the current year, but a substantial part of this revenue will be realised through excises. Imports of sugar are also expected to be less than in the current year. In the result, the customs revenue will show a net drop of Rs. 15 crores next year. The revenue from excise duty is put at Rs. 123.45 crores next year as compared with the current year's revised estimate of Rs. 103.65 crores. The increase is largely accounted for by revenue from the excises on kerosene and petrol following larger internal production; the collections of tobacco excise are also expected to improve by Rs. 3.3 crores, and, following better production, the collections from sugar by Rs. 1.5 crores.

"Under income-tax, the current year's figure of Rs. 165 crores is being repeated for next year. Collections recently have been somewhat lower than expected due to the progressive clearance of arrears, but I hope that improvement in normal collections will make up for this deficiency. Revenue from estate duty is estimated at Rs. 3 crores next year but, as I have already pointed out, this goes almost wholly to the States. Under currency and mint, profits of the Reserve Bank payable to Government are expected to be Rs. 20 crores next year, as against Rs. 17.5 crores this year, owing to the increased yield on Treasury Bills held by the Issue Department. I am also taking a credit of Rs. 8 crores from profits from the sale of sugar imported on Government account. On the other hand, I am not taking any credit for repayment of Partition debt by Pakistan in view of what has happened in the last two years. If, as I hope, a settlement is reached in the coming year, I shall take the credit into account in my revised estimates."

The expenditure estimates for 1955-56 have gone up by as much as Rs. 42.85 crores to Rs. 498.93 crores, the increase more than offsetting the expansion in revenue, as noted above. Of this increase, Defence expenditure accounts for only Rs. 4.66 crores, so that the bulk of the rise—Rs. 38.19 crores to be precise—will take place in Civil expenditure. The following quotation from the Finance Minister's speech will provide an idea of the increases in the more important items and the reasons for such variations:

"The total expenditure on nation-building and Development Services amounts to Rs. 75.3 crores, against Rs. 50.69 crores in the current year. Allowing for a transfer of about Rs. 4.6 crores from other heads, the net increase here comes to Rs. 20.01 crores. Thus, the budget for education increases by Rs. 7.3 crores to Rs. 18.31 crores which includes provision of Rs. 10 crores for grants to States for basic, social and secondary education, Rs. 3.5 crores for the University Grants Commission and Rs. 1.20 crores for scholarships to students of Scheduled Castes, Scheduled Tribes and other Backward Classes. Expenditure on scientific departments and research schemes increases by Rs. 2.01 crores; Medical and Public Health Services account for an increase of Rs. 1.98 crores; and development of village and small-scale industries will cost an additional Rs. 2.23 crores. For developments of khadi and handloom industries, a total provision of Rs. 4.25 crores has been made which will be met from the fund created out of the special cess on mill-made cloth.

"In addition to the increase of Rs. 20.01 crores under nation-building and Development Services, mentioned above, there is an increase of Rs. 4.44 crores in expenditure on Community Development Projects and National Extension Services; an increase of Rs. 2.41 crores in grants to Part C States, with their own legislatures for financing their development schemes; an increase of Rs. 81 lakhs in grants for the development of Scheduled Tribes and scheduled areas; an increase of Rs. 50 lakhs in grants to States for the development of primary education under the Finance Commission's award and an increase of Rs. 1.1 crores in grants for social welfare and welfare of Backward Classes. The total additional provision for Development Services next year thus aggregates about Rs. 29.27 crores.

"Of the rest of the increase in Civil expenditure, a sum of Rs. 3 crores represents the first instalment of the write off of the trading losses expected on the disposal of the existing rice stocks. . . . Government will be having a stock of about 1.5 million tons of foodgrains, mostly rice, representing partly stocks taken over from the States following decontrol last July and partly imports from Burma under the agreement with the Burma Government. In view of the recent fall in prices, the disposal of this stock, which will take two or three years to effect, is likely to result in substantial losses, which at present prices may be of the order of Rs. 45 crores, although it is not possible to estimate their extent accurately. These losses differ from the food subsidies given in the post-war years which were a part of price control and rationing. They are straight trading losses arising from the peculiar conditions of the current year, when, with a good crop and because of decontrol, we are having to carry large stocks liable to early deterioration in storage. With an improvement in food position, large losses of this nature are not likely in future. It will completely distort the revenue budget if all the losses are taken to revenue as they arise. I consider it both desirable and necessary to spread them over revenue over a reasonable period. Pending the emergence of the final figure of the loss, I have made an *ad hoc* provision of Rs. 3 crores in the revenue budget for meeting the losses."

An important pronouncement was made by the Finance Minister in regard to the separation of Audit from Accounts. He observed:

"We are making a beginning on the 1st April, 1955 with the separation of Audit from Accounts, on which the Public Accounts Committee have rightly been laying stress. As I stated during the budget discussions last year, there is no difference of opinion about the need for separation, but such a fundamental change in a long and well established system which affects both the Centre and the States can be brought about only by stages to avoid dislocation of administration. The Finance Ministry have been in close consultation with the Comptroller and Auditor-General and it has now been decided, as a first step, to introduce the reform in respect of the transactions relating to Supply, Food and Rehabilitation with effect from the 1st April, 1955. Accordingly, Departmental Accounts Offices are being constituted in the respective Ministries. To begin with, the extra staff will be provided for these offices from the Indian Audit Department and the scheme will be implemented in close and continuous consultation with the Comptroller and Auditor-General. The Comptroller and Auditor-General has been in correspondence with the States also for a similar change to be made in the maintenance of the Accounts relating to the States and it is hoped that it will be possible to make a beginning during the next financial year in some of the States as well."

Capital Expenditure

The Finance Minister then gave an account of the Capital expenditure as follows:

"For capital outlay the current year's budget provided for an expenditure of Rs. 145.75 crores. The expenditure is now estimated at Rs. 178.54 crores. The increase is accounted for by a worsening of Rs. 61.59 crores under Government trading schemes largely due to purchase of rice stocks from the State Governments, offset by saving of Rs. 28.80 crores in other items. A provision of Rs. 10 crores was made in the budget for possible purchase of shares in the Hindustan Steel Ltd., but this provision will now remain unutilised during this year. There is a saving of about Rs. 7 crores under civil works mainly due to slower progress in the construction of buildings and roads. For similar reasons, there is a saving of Rs. 4 crores in the grants for industrial housing and of about Rs. 4.7 crores in Defence capital outlay. For next year, Capital expenditure is estimated at Rs. 223.3 crores including Rs. 29 crores for Government trading schemes mostly for our normal imports of wheat for the central reserve. As I remarked earlier, outlay in the final year of the Plan will inevitably increase.

"For railways a provision of Rs. 66 crores has been made against the current year's expenditure of Rs. 32¼ crores. The Five-year Plan for Railways provided for an expenditure of Rs. 400 crores during the Plan period, of which railways were to find Rs. 320 crores from their own resources. While the total outlay during the quinquennium will be only slightly over the original Plan, there has been a shortfall during the period in the resources raised by the railways themselves. This explains the larger allotment for railways next year.

"Compensation to displaced persons in the form of cash and transfer of Government property and write off of loans is estimated at Rs. 31 crores of which about Rs. 9½ crores will be made from sale proceeds of evacuee property, that is, a net figure of about Rs. 21 crores against the current year's net outlay of Rs. 7½ crores. A provision of Rs. 5 crores has been made for investment in the Hindustan Steel Ltd. in addition to a loan of an equivalent amount. A sum of Rs. 7.7 crores will be payable to the Reserve Bank of India next year in lieu of Hyderabad securities forming part of the assets against Hyderabad note issue which has been taken over by the Bank. As part of the settlement for the allocation of assets and liabilities of the Hyderabad State, following its financial integration, it has been decided that this liability for Hyderabad securities which were created *ad hoc* by the State Government before integration for expansion of its currency will be taken over by the Government of India.

"Provision for civil works amounts to Rs. 32 crores against Rs. 24 crores this year, after excluding the adjustment in respect of Government property transferred to displaced persons as part of the compensation scheme. Capital outlay on Defence, next year, is estimated at Rs. 22.38 crores against Rs. 13.09 crores, the increase being due partly to the carry forward from the current year and partly to the normal expansion programme. In addition to the provision for capital outlay just mentioned, the estimates include, against the original provision of Rs. 249 crores, Rs. 306 crores this year and Rs. 355 crores next year for loans to State Governments and others mostly for their development projects."

Ways and Means

Discussing the ways and means position, the Finance Minister disclosed that the revised estimate for the overall deficit was estimated to be of the order of Rs. 208 crores against Rs. 239 crores in the budget estimate. As the opening balance was about Rs. 12 crores less than the minimum of Rs. 50 crores, the expansion of Treasury Bills would amount to about Rs. 220 crores. The response to the 3½ per cent. National Plan Loan 1964, floated this year, was satisfactory. Out of the total subscriptions of Rs. 158 crores realised, Rs. 25½ crores were lent to the State Governments which would otherwise have approached the market individually for their loans. The small savings scheme had also made notable progress and it was likely that for the first time the annual target of Rs. 45 crores, which was set some years ago for collections through small savings, would be exceeded. "While this is heartening" the Finance Minister observed, "I must appeal for still greater effort and for wholehearted cooperation on the part of every one in spreading the movement and making, through it, a massive contribution towards the country's development and prosperity. Mobilisation of small savings, necessary at all times for the country's economy, has now assumed added importance for the fulfilment of the development plans which will need increasingly larger resources."

For the next year, the overall deficit was estimated at Rs. 340 crores. As the cash balance would have no margin to be drawn up, the whole of this gap would have to be met by issue of Treasury Bills. Summarising the ways and means position for the coming year, the Finance Minister said that the Government needed Rs. 30 crores for meeting the revenue deficit, Rs. 578 crores for financing capital outlay and loan requirements of the State Governments and others and Rs. 69 crores for the repayment of the maturing debt. Against this, they hoped to raise Rs. 125 crores from the market loan and Rs. 52 crores from the small savings. Foreign aid expected next year would amount to Rs. 74 crores and other miscellaneous debt and remittance transactions might bring in Rs. 86 crores. This would leave a gap of about Rs. 340 crores in the available resources to balance the budget.

This sizable budgetary deficit, the Finance Minister observed, did not carry any threat of serious inflationary pressures and that the various economic indicators like production, prices, foreign exchange, etc., pointed out that the country could go ahead more boldly. Nevertheless, he assured the House that the situation would be watched constantly and carefully and that while the Government "would take the risk attaching to any significant development effort, it would be a calculated risk combined with caution."

New Taxation Proposals

The Finance Minister then proceeded to announce the new taxation proposals. He began by saying that it was a prudent principle to meet as much of the current expenditure as possible from current taxation and that he proposed to meet the major portion of the revenue deficit by fresh and additional taxation. Answering the question why the whole of the overall deficit should not be left uncovered, he said: "The fact that the various economic indicators suggest that deficit financing could be resorted to without undue risk does not mean that the attempts to mobilise domestic resources to the maximum extent should be given up and prudent finance replaced by the printing press."

Before proceeding to deal with the detailed proposals, the Finance Minister made a brief reference to the Report of the Taxation Enquiry Commission, which was being released with the Budget papers. The Report was a massive and historic document covering the entire field of taxation—Central, State and Local—and bore the impress of a thorough and careful study of the problems in all their aspects. In the field of Central taxation, the Commission's recommendations were broadly in the direction of widening the base and range of taxation, both direct and indirect, and involved readjustment of the rate structure. They related both to the basis and procedure and to the rates and rate structure. It had not been possible, within the short time since the Report was received, to make a detailed study of all the recommendations. In so far as the basis and procedure were concerned, he was implementing a number of recommendations immediately and he gave the assurance that the remaining proposals would be examined by Government and amending Bills placed before the House as early as possible. He added that the rates of taxation suggested or implied by the Commission were more an indication of the possibilities in these directions than in the nature of budget proposals and that the steps that might have to be taken from time to time must necessarily be considered in the light of economic and budgetary considerations.

Changes in Customs Duties

The Finance Minister's first proposal was to raise import duties on a number of goods such as articles made of paper, advertising circulars and cutlery not plated with gold or silver. This was in accordance with the general policy of gradually replacing, wherever possible, at least partly quantitative restrictions by higher import duties. On some items like zip fasteners and tiles of earthernware and porcelain, alternate specific duties were also being prescribed.

He next proposed, in pursuance of the policy of a gradual remission or reduction of duties on essential raw materials, to abolish completely, subject to the margin of preference being maintained where this is bound by agreement, duties on dyeing and tanning substances, gums, resins, plumbago and graphite.

The export duty on cotton cloth was being reduced to 6¼ per cent., as a measure of assistance towards the maintenance of the country's competitive position in world markets.

N.B.—For Hindu undivided families, the amount of tax and percentages are also as shown above except that such families are not liable to pay tax if the income is not more than Rs. 8,400 or Rs. 12,600 according as there are at least two or four members entitled to claim partition.

FUTURE OF SUGAR INDUSTRY IN U.P. AND BIHAR

SURVEY FOR ASSESSING CANE COSTS UNDERTAKEN

THE sugar industry in Uttar Pradesh and Bihar owes its present position not a little to the Upper India Chamber of Commerce, Kanpur. Consequently, it is natural that the Chamber should show extreme concern over the future of the sugar industry in the two States. This concern found itself fully expressed in the observations made by Mr. H. Hill, President of the Chamber, in the course of his address at its sixty-seventh annual meeting held at Kanpur on 25th February last. Mr. Hill's anxiety regarding its future stems from two important considerations. One is the Government's policy of extending the installed capacity by licensing new units to be established in the tropical zones of Deccan and South India. The other is the competition from Government-imported sugar; for, in order to protect its own purchases, the Government, he fears, would continue to retain control over marketing of indigenous sugar to the detriment of the industry.

Dwelling on the problem of expanding the rated capacity of the sugar industry, Mr. Hill first refers to the estimated consumption of sugar in the country. In order to obtain a plentiful supply of sugar in India, consumption estimates have been, he says, "the subject of much speculation, and previous estimates have been particularly wide of the mark, since the past year was the first where consumption was free to find its own level without restriction." It is now estimated, Mr. Hill continues, that the consumption is some 1.8 million tons of sugar per annum, although the Sugar Development Council considers that the consumption in the next five years will increase to over 2.5 million tons on account not only of the increase in the population but also of a natural preference among the masses for crystal sugar instead of *gur*. To these observations of Mr. Hill on estimated consumption, we may add the remarks made by Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture, in his inaugural address at the meeting of the Indian Central Sugarcane Committee, held at New Delhi on the 26th ultimo. He revealed that the second Five-year Plan had laid the target for white sugar consumption at 2.25 million tons in 1959-60, which is 0.25 million tons less than estimates made by the Sugar Development Council. He added that, even at present, more white sugar than the quantity produced inside the country was being consumed, and placed the current consumption at 1.8 million tons. During the last 25 years, the consumption of sugar including *gur* had, according to him, ranged between 25 and 30 lbs. *per capita* per year. While white sugar consumption had risen by about 50 per cent., that of *gur* had correspondingly decreased; but the total consumption had not, the Minister said, shown any signs of increase and thus the change had been qualitative and not quantitative.

Imports No Permanent Remedy

As against these estimates of consumption, actual production of white sugar in the country has been considerably low. Thus, according to Mr. Jain, production varied between 1 million tons and 1.5 million tons and, in this season, he expected the output to be 1.3 million tons. But even with this additional output, a gap of about 0.5 million tons had to be filled. For the last two years, this gap had been covered by imports of refined sugar and of some raw sugar for refining. This meant, Mr. Jain remarked, frittering away the country's foreign resources which it could not afford. In this context, Mr. Hill's remarks are worth recalling. He observed, in the speech referred to above, that, in order to meet the deficit, "the importation of foreign sugar was made to a considerable extent. It is recognised that such a procedure can only be a short-term policy and that it is essential for the industry in India to increase its capacity to meet the growing consumption." Mr. Hill, thus agrees with Mr. Jain that sugar imports provide no permanent remedy and admits the need for expanding the capacity. In this context he draws the attention of the two Governments to the proposal "to allow the installed capacity to be expanded by the erection of new factories in South and Western India where greater yields of sugarcane per acre are obtained, which would enable the Government to pursue their policy of reducing the price of cane." It is in this proposal that Mr. Hill sees the sugar industry in the U.P. and Bihar facing the danger of extinction. He remarks: "It is not certain that this policy of extending installed capacity will, indeed, solve the problem of cheap and plentiful sugar, since a reduction in the price of cane and the movement of the industry from its present concentration in the U.P. and Bihar would, under the existing conditions, paralyse the industry in these two States."

While scenting this danger, Mr. Hill derives some comfort at the thought that the Governments of the two States are now alive to the problem and that "they propose to take some action to save the situation." This can be only done, he says, by cane development programmes aiming at increasing the yields of cane per acre, so that the growers' cost per maund may be reduced to a figure comparable to that in South India and the Deccan. Mr. Hill opines that this "is not an impossible task, since yields of over a thousand maunds per acre are common in Northern India, although the average yield from *rayotti* cultivation is only some 200 maunds per acre. By doubling the maundage of cane per acre in Bihar and U.P., an almost complete solution to the problem of sugar in India will have been made, and the necessity for the expansion of the industry elsewhere in India need not arise."

Per Acre Yield

That the two States can, if they apply themselves to the work, achieve the aim of "doubling the maundage of cane per acre" is evident from the comparative figures relating to yields placed before the Indian Central Sugarcane Committee, by Mr. P. A. Gopalakrishnan, Joint Secretary, Union Ministry of Food and Agriculture. Presiding over the meeting of the Committee, he said: "Some of the varieties of cane evolved by the Coimbatore Institute have become world famous, with potential yields ranging up to 100 tons per acre and more, and these yields have actually been achieved by progressive cane-growers in certain parts of the country. The figures of maximum yields per acre are: U.P. 60 tons, Bihar 106.8 tons, Bombay 127.4 tons, Madras 94 tons, Andhra 101 tons and the Punjab 57 tons."

The yields per acre achieved in U.P. at 60 tons and in Bihar at 106.8 tons are indeed remarkable. But a point to be noted here is that these are only the maximum yields reaped in some select farms. The average yield is much less—in U.P. and Bihar it is about 12 to 14 tons only. All that the maximum figures given above show is that, under certain ideal conditions, a higher yield per acre than the present one is possible. It is, however, extremely doubtful whether those ideal conditions can ever be created in U.P. and Bihar. Again, the farmers in these two States have been demanding fantastically high rates for sugarcane and, if the whole of India were to depend upon these two States for the increased supply of sugar to meet the expanding demand, it would mean a much higher cost than would be the case, if production of sugar were encouraged in the Deccan, Mysore and South India.

The problem of sugarcane prices has been hanging fire for a long time, without any satisfactory solution being found for it. An important factor which has made it complicated is the introduction of politics into it. And whenever such a difficulty arises, a convenient way of shelving it is to appoint a committee. This is what has been done by the Government in regard to this problem. At the meeting referred to, Mr. Gopalakrishnan observed that no scheme for the development of sugarcane would prove a success, unless the producer got a reasonable price for his cane. Whether the price of cane was reasonable or not, he stated, could not be judged accurately, unless they know the cost of production of cane. Hitherto there had been no satisfactory assessment of this cost. The Central Sugarcane Committee, therefore, had now undertaken, he disclosed, this important survey, and representative samples which had been selected spread over the important sugarcane States of U.P., Bihar and Punjab, P.E.P.S.U., Madras, Andhra and Bombay. The scheme was under the technical control of Dr. V. G. Panse, Statis-

WORKING OF RAILWAY COLLIERIES

SHARP DROP IN PROFIT

THE report on Indian Railways for 1953-54, published by the Railway Board, to which a reference was made last week, contains, as usual, a review of the working of railway collieries. It discloses a severe drop in the profit for 1953-54, as compared with that for 1952-53. Thus, there was a net profit of only Rs. 1,35,163 for the year under review, as against Rs. 61,20,802 in the previous year, that is a drop of Rs. 59,85,639. This precipitous fall is attributed to the following factors:

(1) A landslide in the Bhurkunda colliery resulting in a sizable drop in the output of coal;

(2) writing back of capital to revenue during the year of a sum of Rs. 41,15,478 representing the capital cost of ineffective shaft and "quarry" incline of Jarangadih colliery; and

(3) debit adjustment to revenue during the year of a sum of Rs. 7,24,000, representing the amount of outstanding bills erroneously taken against capital account of Kurasia colliery instead of to revenue (proper head) in the first instance.

There are 11 railway collieries. The following table presents a clear picture of their working during 1953-54:

Colliery	Total capital outlay upto 31st March, 1954	*Profit or loss in working during 1953-54
	Rs.	Rs.
1. Bhurkunda	61,88,509	—3,14,781
2. Karsoli	1,55,42,866	+5,70,484
3. Kurharbaree	69,81,270	—24,97,765
4. Serampore	68,36,202	—24,30,049
5. Bokaro	1,14,21,538	+1,07,57,058
6. Sawang	24,06,170	—3,17,723
7. Jaramadih	40,31,357	—45,05,610
8. Kurasia	42,38,245	—5,07,617
9. Talcher	71,47,163	—4,19,733
10. Aranda	4,13,381	+1,65,926
11. Deulbera	26,02,211	—1,86,371
Total ..	6,76,51,161	+1,35,163

* In arriving at these figures, opening and closing stocks of coal have also been taken into consideration. The *plus* and *minus* signs against the figures represent profit and loss, respectively. The capital invested represents the fixed and floating assets, less sinking fund.

The total output from the principal railway collieries was 3,139,422 tons in 1953-54, as against 3,196,239 tons in 1952-53. This discloses a drop of 56,817 tons or 1.78 per cent. over the previous year's output. Coal despatched by railway collieries during the year under report amounted to 2,797,030 tons. Of this quantity, 2,767,424 tons or 98.9 per cent. were despatched to Indian railways. This represents 24.4 per cent. of the total consumption of coal by the railways during the year under review. The aggregate consumption of coal by Government railways during 1953-54 was 11,276,612 tons, as against 11,036,479 tons in 1952-53, and by non-Government railways 81,393 tons, as compared with 82,463 tons.

A notable feature of the year under review was the maintenance of cordial relations between the labour and the Railway Colliery Administration. The general health of labour and the sanitary conditions at collieries were, it is reported, satisfactory. The following amenities were provided during the year for labour employed in the railway collieries.

(1) As many as 145 blocks of miners' quarters and 290 community latrines for miners' houses were completed in the Sawang colliery. Besides, two Jewel filters were installed and water is being supplied through Jewel filtration plant.

(2) Construction of 17 units of miners' quarters in the Talcher colliery was completed and the construction of a further 17 units is in progress.

(3) One non-combined post office was opened in the Kurasia colliery.

(4) The building of miners' creche in the Kargali colliery was completed.

The surplus labour at deep pit of the Serampore colliery was accommodated in the newly started upper Kurharbaree workings at central pit and Hetla and Khadia inclines, where extension of endless haulage underground has opened up new working faces.

Fifty-six persons from various collieries completed a full course of initial training in rescue and recovery work at Jharia and Sitarampur Rescue Stations during 1953-54, according to the Annual Report on the working of the Rescue Stations Committee which is just published. This brings the total number of persons trained from both the stations to 1,129. The Report says that, during the year, 314 refresher practices and 133 pit practices were held which were attended by 1,879 and 801 persons, respectively. In order to enable the ordinary colliery workers to be helpful to the trained colliery personnel during emergencies, gas mask training was given to them at different colliery premises during the time of refresher practices in pits.

It is understood that the Ministry of Production has pegged the output of coking coals, namely, selected A and B grades, for the year 1955 at 7.35 million tons, as against 7.4 million tons for 1954. It has also decided to peg grades I and II coking coals at 3.95 and 3.05 million tons, respectively.

Britain invites the world to the new BIF
1955

The BIF—the world's greatest national trade fair—has a new look this year. With the entire London section now under one roof, at Olympia, it will be brighter, busier, more challenging than ever. At London and Birmingham all that's best in British industry will be on show.

Apart from its trade opportunities, you'll enjoy your visit to the BIF. Late Spring is a delightful season in Britain, and both London and Birmingham are ideal centres for touring the English countryside.

See the best in the world with the rest of the world at the
BRITISH INDUSTRIES FAIR

MADRAS PLANTATIONS AGRICULTURAL INCOME-TAX BILL PASSED

MINISTER'S REPLY TO CRITICISMS

THE Madras Plantations Agricultural Income-tax Bill, 1955, as amended by the Select Committee, has been passed by the Madras Legislature without any important changes. The main provisions of the legislation, as amended by the Select Committee, were referred to in these columns in our issue of the 12th February, 1955 (*vide* page 262). The Bill provides for the levy of agricultural income-tax on a graded scale on agricultural income derived from plantations, such as coffee, tea, rubber, cardamom and cinchona, situated within the State. It will be levied on incomes of not less than Rs. 3,000. The rate of tax will range from 9 pies to As. 5¼ in the rupee, the maximum rate being leviable on incomes over Rs. 25,000. Plantations in the State cover nearly 300,000 acres with an investment of about Rs. 8 crores, and provide employment for about 200,000 workers.

A number of amendments had, no doubt, been moved, but none of them sought to make any vital change in the various provisions. Almost all the amendments were withdrawn or rejected. The House, however, accepted an official amendment relating to the rates for compounding the income-tax on an acreage basis for the different plantation crops. Thus, in the case of plantations used for growing tea, exceeding five acres but not exceeding 10 acres, the rate has now been fixed at Rs. 9 per acre, as against Rs. 10 provided in the Bill. The discussions on the Bill disclosed that there was unanimous support to the principal underlying it. Several members, particularly of the Upper House, made some useful suggestions to the Government. The Minister said that the Government would watch how this measure worked and then extend it to other sections of agriculture.

Some members, however, criticised the decision of the Select Committee to abolish the super-tax, on the ground that in the neighbouring State super-tax was levied on incomes of over Rs. 25,000. They also urged that the rate of tax should be steeper on higher levels of income, while some of them pleaded for raising the exemption limit, with a view to affording relief to small planters. It was pointed out by some of the members that small planters having up to 10 acres should be exempted from the tax. One of them said that the principle of exempting small planters from the levy should not be given up on the ground that the number of exemptions would become very large. According to one member, 10 acres of tea or rubber would not yield sufficient income for maintaining a family. It was also suggested that the tax should be levied on a broad basis of acreage; there was no need to adopt the entire procedure followed in the Indian income-tax law. Another criticism against the levy of agricultural income-tax was that plantation labour in India did not have the housing and other welfare amenities which its counterpart in Ceylon possessed. Realising this, the plantation industry was trying to provide larger amenities for labour. At this juncture, this measure of taxation would take away the incentive of the industry to provide such amenities for the workers.

Again, the Bill was opposed by a member of the Upper House on the ground that it would adversely affect the urgent task of rehabilitation of the estates. According to him, there were over 83,000 acres of tea owned by 2,792 persons. About 150,000 persons owned a little less than 100,000 acres of coffee and in the case of rubber, 340 persons owned over 30,000 acres. In this connection, it may be pointed out that the Select Committee is said to have taken the economic life of tea plants as 60 years, that of coffee and rubber as 40 years, cardamom as 12 years and cinchona as 10 years. This is considered a reasonable estimate. The member observed that almost all plants in these estates were now overaged and replanting was, therefore, essential. The member also pointed out there was scope for expansion of plantations. While not being opposed to the principle of income-tax, he said that the levy at this time would be a deterrent to rehabilitation and expansion of the estates. Some of the members pointed out that the Government could have waited till the recommendations of the Taxation Enquiry Commission and the Plantation Enquiry Commission were available. One of them pointed out that the plantation industry depended largely for its success on the prices they got in the foreign markets. He added that the Government would have done well to provide for passing an annual Act—on the lines of the Income-tax Act—for fixing the rate of tax every year, instead of making the levy a fixed one.

In his speech introducing the Bill and in his reply to the members, the Minister for Revenue explained the object and scope of the measure. He said that this was the first time that the tax was being levied on agricultural income and it was, therefore, considered better not to impose super-tax. In view of the decision not to impose super-tax, he added, it was felt that the maximum rate of tax should be raised from As. 4 to As. 5¼ in the rupee. It was with a view to helping small owners out of the difficulty of maintaining accounts, that those who owned five acres of land under tea and 15 acres under other plantation crops had been exempted from the tax. Larger owners had been given the option to compound agricultural income-tax at concessional rates. The Government of India had pointed out that no agricultural income-tax could be levied on the dividends received by individuals from plantation companies. It was, therefore, decided that agricultural income-tax could be levied on the income of plantation companies collectively and not on individuals. The Government had further decided that joint families could be considered as a unit and that no special concession was necessary for the members thereof. The Minister also drew the attention of the members to the several concessions allowed in computing the agricultural income-tax and, in particular, to the fact that plantations had been exempted from the levy of surcharge under the Land Revenue Surcharge Act of 1954.

Replying to the criticism that the tax should have been levied on acreage basis, instead of on income basis, the Minister pointed out that even the U.P.A.S.I., which represented the plantation interests, had not favoured a rigid per-acre tax and preferred a levy based on income. A flat per-acre tax would result in hardship to many small planters, whereas the progressive method of levy, as contemplated under the Bill, would be just and keep pace with the income. Dealing with the demand for increasing the rate of levy, the Minister said that the plantation industry faced competition from foreign countries. There was, therefore, the danger of killing the industry as a result of imposing a heavy tax. By this Bill, they were making a beginning in this method of taxation. They should proceed cautiously, lest they killed the goose that laid the golden eggs. Referring to plantation labour, the Minister said that the Central Government had passed legislation for providing more facilities and better conditions. The process of improving working conditions had begun, and it would take some time before the conditions improved.

In reply to the criticism that the Government should have awaited the publication of the report of the Taxation Enquiry Commission, the Minister admitted that it could have done so, but he pointed out that there was an "inkling" that the Committee was not "disinclined" towards this Act.

The Minister also referred to the suggestion for making provision for replantation, and drew the attention of the members to a clause in the Bill which had taken into account this consideration along with bonus, capital depreciation, etc. He rejected the plea that the plantation industry was facing a crisis. In this connection, he pointed out that the people who had been affected by this levy had almost agreed to the provisions the Government had made.

As regards the receipts from the levy, the Minister said that he could not give the correct figure at this juncture. At first, the Government thought that it might get about Rs. 15 to Rs. 20 lakhs. According to present indications, the Government might get about Rs. 75 lakhs. Since there was thus great disparity in the estimates, he did not want to give any particular figure. But he expected that it would yield about Rs. 75 lakhs and he considered it a "good income."

U.S. BURLAP IN 1954

CONSUMPTION REVEALS FALL

LATEST figures relating to U.S. purchases of Indian burlap make somewhat encouraging reading. In December, 1954, Calcutta despatches of burlap to the U.S. aggregated 68.6 million yards which were higher by 15.8 million yards, as compared with the clearance in the same month in 1953. With the month's despatches, total quantity shipped during 1954 amounted to 621.3 million yards, as against 599.8 million yards in 1953 or a rise of 3.7 per cent. over the year. The average monthly offtake during 1954 was 51.8 million yards, as compared with 49.9 million yards in the previous year.

The slight improvement in the U.S. offtake of Indian burlap is no doubt welcome. But the statistics relating to U.S. burlap consumption and stocks for December, 1954, as also for the year as a whole, indicate no room for any complacency at all. For they reveal trends which are not helpful to India. During December last year, consumption of burlap, estimated at 69 million yards, though 6 million yards higher than that in November, 1954, was two million yards lower than during December, 1953. Again, the total consumption in 1954 amounted to only 782 million yards, as against 825 million yards in 1953. In other words, during the year under review, consumption of burlap dropped by 43 million yards, representing a fall of about 5 per cent.

The table below gives the U.S. consumption of burlap during each month of 1954, as compared with that in the corresponding month of the previous year.

U.S. Burlap Consumption

(In million yards)

Month	1954	1953	Month	1954	1953
January ..	65	73	July	60	86
February ..	62	58	August ..	70	75
March ..	72	69	September ..	77	80
April	63	64	October ..	66	83
May	57	69	November ..	63	74
June	61	69	December ..	60	71
			Total ..	782	825
			Monthly average ..	65	69

It will be seen from the table that the fall in consumption during the period of August-December—when normally consumption is higher—was rather pronounced. To mention the exact figures during the five months ended December last, consumption amounted to only 345 million yards, as compared with 383 million yards in the same period of 1953, or a decline of 38 million yards. Similarly, the monthly average consumption was just 65 million yards, as compared with 69 million yards in the corresponding period of 1953.

Many factors have been cumulatively responsible for the decline in the U.S. burlap consumption in 1954. Bag consumption registered a heavy decline, principally due to a decrease in the use of burlap feed and potato bags attributed to drought in the Southern States and to restricted purchases by suppliers of animal feed, thanks to a clear winter weather. Besides, the offtake by the armed forces was, it is stated, 10 million yards lower than that in 1953. Thirdly, there was a tendency to use more second-hand bags. Lastly, there were the inroads of multi-wall paper bags, window bags for potatoes and accelerated use of bulk shipment for feed and ingredients.

The reactions to this fall among those connected with the burlap trade in the U.S. are worth recalling here. According to one source, the decline is attributed to the hand-to-mouth buying followed at all levels of the burlap trade since the beginning of 1954. It says: "All levels appear to have shortened their purchases in an effort to avoid piling up inventories. This manifested itself sometimes in buyers preferring to draw upon spot stocks instead of making purchases overseas. Their action has proved successful and present inventories, particularly at the level of the ultimate consumer, are low, which may mean better business in 1955, although it is possible that the current close buying policy will be continued."

The burlap statistics referred to at the outset disclose that U.S. stocks of burlap at the end of December last year, stood higher at 240 million yards, as compared with 222 million yards in November, 1954, and 190 million yards in December, 1953. The increase is attributed chiefly to the fall in consumption mentioned above.

KOLAR GOLD MINING COMPANIES

RECOMMENDATIONS OF SIDDAVEERAPPA COMMITTEE

THE chief recommendation of the Gold Mining Enquiry Committee, which examined the working of the Agreement of 1949 entered into between the Kolar Gold Mining Companies and the Government of Mysore in 1949, is that the Agreement should be revised. Alternatively, the Committee has recommended the replacement of the Agreement by legislation, with the concurrence of the Government of India. The Committee is of the considered opinion that royalty that is being paid by the Companies to the Government of Mysore should be increased by 100 per cent. It has also recommended restriction on the recruitment of non-Indians in the mines.

It will be recalled that the Committee was appointed six months ago, with Mr. H. Siddaveerappa, Minister for Home and Industries, Government of Mysore, as Chairman, to examine the working of the 1949 Agreement and other matters relating to the gold mining industry.

The Kolar Gold Fields are situated in the south-east corner of Mysore State. Although prospecting in this area for gold by Lt. John Warren of the H. M. 33rd Regiment in 1802 may be taken as the forerunner of the modern gold mining industry in Mysore, the date of application of Mr. Michael Fitzgerald Lavele to the Chief Commissioner for Mysore and Coorg for mining rights in the Kolar District, on 20th August, 1873 may be considered as the commencement of this industry in the Mysore State. This application was made after his successful prospecting in 1871, preceded by sporadic prospecting by Europeans for about 60 years with no success. The present operating companies, Messrs. John Taylor and Sons., Ltd., London, took over the management of the mines in the beginning of the present century. At present there are only three gold mines operating, namely, the Mysore Mine, the Nandydroog Mine and the Champion Reef Mine. The fourth one, the Oorgaum Mine, was closed from 1st October, 1953.

Mysore Gold Mining Company

The Mysore Gold Mining Company to operate the Mysore Mine was incorporated in the United Kingdom in 1880 with an authorised capital of £135,000, divided into as many shares of one pound each. Gradually, the share capital was increased, and in 1919, it stood at £610,000. The paid-up capital of the present rupee company, constituted in 1951, was Rs. 81,33,400. The Company commenced crushing of the ore from 1884 and started payment of dividend in the following year. The highest dividend paid so far was 150 per cent. in 1898 and the lowest was in 1944 at five per cent. The total quantity of ore crushed upto the end of 1953 was 124.67 lakh tons, gold yield 78.58 lakh f. ounces, gross value realised Rs. 6,186.14 lakhs and dividends declared Rs. 1,805,79 lakhs.

The Champion Reef Mining Company was incorporated in the United Kingdom in 1889 with a nominal capital of £200,000, divided into as many shares of one pound each. The paid-up capital of the present rupee company was Rs. 43,33,400. The nominal capital was raised, and in 1939 it stood at £325,000. This Company commenced crushing of ores from 1892 and started payment of dividends two years later. In 1934 and 1935 it paid the highest dividend of 160 per cent. The total quantity of ore crushed was 84.73 lakh tons, gold yield 52.95 lakh f. ounces, gross value realised Rs. 4,607.27 lakhs and dividends declared Rs. 939.84 lakhs.

The Nandydroog Mine Company was incorporated in the United Kingdom in 1880 with an authorised capital of £100,000 divided into as many shares. The Company's capital increased to £283,000 by 1921. The paid up capital of the present rupee company was Rs. 37,73,400. The quantity of ore crushed was 78.89 lakh tons, gold yield 41.82 lakh f. ounces, gross value realised Rs. 3,931.84 lakhs and dividends declared Rs. 704.76 lakhs. The Mysore Mine operates in an area of 8,204,093 acres, the Champion Reef in 2,025,795 acres and Nandydroog Mine in 4,428,720 acres.

Overvaluation of Assets

The Committee points out that the overvaluation of assets, coupled with the transfer of disproportionate and unwarranted liabilities to the rupee companies at the time of their formation, had handicapped the new Companies at the very start and had affected their resources adversely. As regards Indianisation of the personnel of the Companies, the position is "not satisfactory" so far as key technical posts are concerned. It has held that the increases which have taken place with regard to certain items of working cost, such as the creation of the pension fund, revision of the scale of pay of covenanted staff, could have been postponed to a more favourable time. It has characterised the absence of provision of contribution to the depreciation development expenditure reserve up to 15 per cent. of working costs in each year, when funds were available, as a "clear violation of the Agreement." Further, it has pointed out that, when the Agreement was entered into, it was expected that, at least about Rs. 30 lakhs per year would accrue to the Government as contribution of the Companies. Actually, the contribution paid so far had in no year come up to anywhere near that figure. The Committee sees no prospect of anything more than bare royalty being paid to the Government so long as the expenditure and the price trends continue to be what they are. In view of these, the Committee is of the unanimous opinion "that the continuance of the Agreement in its present form will not serve any useful purpose." Accordingly, it has suggested to the Government "either to revise the Agreement in a suitable manner with the consent of the Mining Companies or to replace it by legislation with the concurrence of the Government of India." In any future course of action that might be decided upon, the Committee has recommended the following important aspects to be kept in view:

(1) This being the only industry of its kind in India, it may be treated as a national asset and measures for effective supervision over its working by the State and Central Governments should be devised. For this purpose, representatives of the Central and State Governments may be included in the Board of Management, the representative of the State Government being a wholetime Director in continuous touch with the K.G.F. audit unit on one side and the technical Adviser to the State Government on the other.

(2) In order to ensure the longevity of the mines and the working of low-grade ore, which involve technical considerations, the working of the mines should be systematically and continuously watched by the Technical Adviser to the State Government at the K.G.F. and periodically reported upon to the Government.

(3) A duly phased development programme on a planned basis should be drawn up in consultation with the Technical Adviser to Government, keeping in view the long-range objectives of the industry.

(4) The resources required for the development programme should not be dependent only on the surplus available out of the revenue earnings in any year. It is necessary to constitute a development fund on the basis of a predetermined charge at a fixed rate for every ton of ore raised. Accordingly, the existing Depreciation and Development Reserve may be split up into two distinct funds, namely, (a) depreciation reserve fund from which replacements and renewals of capital assets and capital developments will be financed, and (b) revenue development reserve fund from which the developments debitable to revenue will be financed. Development expenditure of a magnitude of a capital nature should, however, be financed from borrowed funds or issue of additional capital.

(5) As regards allocation of expenditure between capital and revenue, there has been no uniformity of practice so far. The correct procedure to be followed should be laid down to avoid doubts and disputes.

(6) So far as shareholders are concerned, they have realised in the form of dividends many times the capital contributed by them. In the case of a wasting asset like the mining industry, a high rate of dividend cannot be maintained for all time. At the present stage of the gold mining industry at K.G.F., the shareholders would not be justified in expecting dividends at a rate higher than what the industry can bear. Any dividend in excess of six per cent. is, in the opinion of the Committee, more than what is fairly due to the shareholders in the circumstances in which the industry is placed.

(7) An equitable allocation of surplus profits, if any, in a year should be made with due regard to the industry's own requirements, revenue needs of the State and the legitimate claims of the staff and labour. Any general increase in the scales of pay and allowances or wages should, however, be permitted only with the previous approval of the Government.

(8) Indianisation of the supervisory staff is a matter of national concern. In view of the fact that this aspect has not received the emphasis and attention it deserves on the fields as compared with other mining industries in the country, the following measures may be considered for adoption: (a) To restrict the recruitment of non-Indians only in exceptional and unavoidable cases; (b) to chalk out a definite programme of selection and training of Indians abroad to fit them for promotion to the posts of First Assistants and Heads of Departments in due course; (c) to fix a time-limit, say five years, within which all the posts of heads of departments and first assistants should be filled up by Indians; (d) to have all cases of recruitment to the covenanted cadre and promotion to selection posts examined by a high power committee composed of representatives of the management and of the State and Central Governments; (e) to fix and approve the qualifications and experience for different posts in advance instead of in ad hoc fashion at the time of advertisement of each post as at present, and (f) to require that an approved gradation and seniority list be maintained and circulated to the State.

Intention Defeated

According to the 1949 Agreement, each of the gold mining companies at Kolar Gold Fields incorporated on 27th December, 1950, in Mysore a rupee company as its wholly-owned subsidiary and sale agreements were executed with them on 23rd January, 1951, for the transfer of leases and of assets situated in the State of Mysore. The transfers came into effect from 1st April, 1951. Referring to this, the Committee has stated that the intention behind the demand for the incorporation of rupee companies in the State was to transfer the seat of management and control from the United Kingdom to Mysore effectively. But the present arrangements under which the sterling companies transferred the undertakings and assets to the rupee companies has "defeated that intention," as the sterling companies have become the holding companies. For, in effecting such transfers, "certain assets were valued in excess of their book values, which was not contemplated in the Agreement." The extent of such addition to the value, according to the Committee, are: Mysore Mine £78,241, Champion Reef Mine £15,960, Nandydroog £44,084 and Ooregaum £125,772. It may be noted that the actual transfers of assets and liabilities effected to the new companies were: (1) all assets situated in Mysore; (2) all liabilities of the sterling companies, except general reserves and unappropriated balances of profit and loss accounts; and (3) all liabilities, actual and contingent, of the sterling companies and also liabilities towards pension fund for initial contribution, annual bonuses, etc.

The sterling companies, according to the Committee, should have taken proportionately more liabilities than they actually did and corresponding to the assets retained by them. They did not do so which in turn increased the liabilities transferred to the newly formed rupee companies. The Committee has pointed out that, as the surplus liquid assets available with the new rupee companies were considerably depleted, the companies had to borrow funds in order to run their business. Thus, they had to incur interest charges, which in turn reduced the profits. The investments which were available before the transfer of assets to the rupee companies and which the sterling companies retained earned further interest for the companies, which added to other profits for the year and thus provided extra funds to the companies. The retention of these investments by the sterling companies, besides reducing the financial resources of the rupee companies, removed extra earnings therefrom also and thus reduced the latter's revenue. This in effect reduced their net surplus. The Committee observes that "the management have not been fair and square and they sacrificed to some extent the future of the industry to enable their shareholders to earn an extraneous income at the time of transfer of the assets to the rupee companies."

The working costs of the industry, the Committee says, have shown an upward trend

NEW PRODUCTS AND PROCESSES

Transmitting Handwritten Messages Instantly

"TELAUTOGRAPH" machines—electronically operated instruments that instantly transmit handwritten messages from one point to another up to 12 miles away—are coming into increasing use in the United States. The speedy system of communication is used chiefly by transportation companies, hotels and banks, but is now being installed in large factory buildings. A TelAutograph system was recently installed in the Northrop Aircraft plane-building factory at Hawthorne, California. The system includes sending stations and receivers at 37 places throughout the huge plant. The new system, it is claimed, eliminates the need for telephone service in reporting "delay-causing production problems," and will make it possible to solve such problems more quickly. The system is manufactured by the TelAutograph Corporation of New York City.

Colour-printing on Leather

A method of hand-screening colour prints on leather has been developed by a New York fabric printer for the American Hide and Leather Company at Lowell, Massachusetts. After the pattern has been printed on the calfskin, the tannery puts the leather through a special finishing process that binds the pigment permanently. The resulting leather has the natural beauty and feel of leather and can easily be cleaned with wax polish. The first leather with a floral design pattern in four colours is being used in shoes.

Another New Antibiotic

Scientists have announced the discovery of an antibiotic which they say has produced "impressive" improvement in severe pulmonary tuberculosis cases and "good" results in stubborn infections of the genito-urinary tract. The disclosure was made at the Veterans Administration-Army-Navy Conference on chemotherapy of tuberculosis in Atlanta, Georgia. The scientists have, however, warned that it is still too early to define the medical usefulness of the drug, called "Cycloserine," although early tests have proved promising.

New Pencil

Mechanical pencils that write with liquid lead, instead of solid lead, are now being produced by the Parker Pen Company at Janesville, Wisconsin. The company is so sure that the new pencil will appeal to the public that it has stopped production of conventional pencils and decided to manufacture only the new type hereafter. The Company claims that the new pencil represents the first basic improvement in the "lead" pencil since its discovery in the Middle Ages. The liquid lead pencil provides more than six times as much writing as a conventional lead pencil, and is capable of drawing a straight line three miles in length. The use of liquid lead, or actually liquid graphite, completely eliminates the need for sharpening. Each of the new pencils is loaded with a capsule of liquefied graphite, which is roughly the size of the column of lead in a conventional pencil. The graphite stays wet for the life of the capsule and flows to a ballpoint type pencil tip. The pencil produces more writing than a conventional pencil because all of the liquid graphite can be used, whereas in conventional pencils two inches or more of the graphite near the top of the pencil is not used. The liquefied graphite now being used has writing characteristics that are identical to graphite in solid form, but has one important advantage, inasmuch as it does not smudge.

Electrons for Food Preservation

The U.S. General Electric Company is experimenting with a 1,000,000-volt electron beam generator and is making some interesting discoveries. With electrons shot out through a narrow metal window, the machine becomes the source of a high-energy electron beam, which is being studied for its value in preserving foods, sterilising drugs and surgical equipment, and killing insects. Studies conducted by food processors indicate that electron beams may alter and improve existing food processing methods. There are three basic aims in food preservation: the method used must destroy bacteria and mould, must add little to the cost, and must not change food characteristics. Electron beams seem to fulfil the first two requirements quite well, and extensive research is under way on the third.

Special Resins for Paint and Lacquer Industry

Some time ago, an oil company at The Hague (the Netherlands) started in its Pernis refinery the manufacture of Epikote resins, which form a new and important ingredient for the paint and lacquer industry and for making glues and casting resins. The principal base material required for these resins, namely, diphenylol propane and epichlorohydrin, are substances prepared from products originating from the chemical plants of the petroleum industry. These Epikote resins have made it possible to compound paints and lacquers which provide excellent surface protection. They can be used for the preparation of normal paints drying in the air—so-called teaction lacquers—which are cured without being heated, and of baking enamels. The paints made from these resins excel in adhesion to metal, resistance to chemicals, elasticity and hardness. In accordance with the requirements of application, any one of these properties can be made to come specially to the fore by using the right method of processing. On account of their firm adhesion to a wide variety of materials, these Epikote resins are, it is stated, also suitable as a basis for the adhesives industry, for instance, as laminating resins for the manufacture of laminated materials.

Frozen Milk

A milk products factory at Rotterdam (the Netherlands) has started the supply of milk in frozen condition, especially for remote destinations. In tropical and subtropical areas in particular, where there is a shortage of fresh milk, this product is a valuable supplement, as it is equivalent to fresh milk as regards both composition and taste. The shipment of frozen milk, however, requires the fulfilment of certain conditions. They are as follows: (1) It should be possible to reach the ports of destination from the Netherlands direct by ships provided with deep-freeze holds. (2) It should be possible for the frozen milk to be stored at these ports in warehouses with deep-freeze installations. (3) A milk factory in the neighbourhood of such a warehouse should be capable of treating the frozen milk with adequate expert knowledge before bottling it and distributing it as fresh milk.

Washing Machine which Washes and Dries at the Same Time

A factory at Dieren (the Netherlands) produces a household washing machine, which washes and dries, the lower part being a washer and the top part a centrifugal drier. The latter makes 1,460 r.p.m., the washer about 600. The washing machine is driven by the electromotor hydraulically, thus without a gearbox or driving belt, which makes for greater safety. The clothes cannot be damaged by the agitator, because the latter rotates above the wash. Even if too much washing should be put into the machine, so that the agitator could touch it, the washing is not damaged, as the agitator then slows down and eventually stops. A patent application on this system has been filed. In this machine, the clothes are washed doubly: on the one hand by the rotation in the tub and on the other hand by the injection of air into the soapsuds. This considerably reduces the washing time. The centrifugal drier has three advantages over a wringer: first, there is the absence of personal exertion. Secondly, the washing dries better. Thirdly, no buttons are broken, nor are the clothes wrung to pieces.

The washing time can be set beforehand, due account being taken of the materials constituting the washing. While the first batch is drying, the second batch is washed, etc. The capacity of this machine is about 10 kg. (22 lbs.) per half hour.

WORKING RESULTS OF INDIA'S TWO AIR TRANSPORT CORPORATIONS

WHY THIS ENORMOUS DISPARITY?

By "Rudderbar"

THE financial affairs of the two air transport Corporations will, doubtless, come up for discussion during the present session of Parliament. A statement by the Deputy Minister for Communications indicates that, for the first year of operation as nationalised units, Air-India International has shown a surplus of Rs. 65 lakhs and the domestic Corporation a deficit of no less than Rs. 1.25 crores. There will be many who will be surprised and shocked, not without some justification, at the enormous disparity in the results of the two Corporations; this article, then, without attempting to minimise the losses of the Indian Airlines, which, in fact, are considerably heavier than they should be, seeks to show the fundamental differences between the operation of long-haul international services, on the one hand, and short and medium-haul services, as operated by I.A.C., on the other, in so far as financial returns are concerned.

It is, of course, an indisputable fact that generally speaking, long-haul operation is a more profitable undertaking than short-haul. There are those who claim that short-haul cannot be made to pay, unless supported by a proportion of long-haul routes and although, in practice, the financial results of certain domestic operators do not support such an assertion, the general truth of the statement remains unaffected. The underlying reason is that long-haul operation lends itself to better utilisation of the fleet and, consequently, requires a smaller fleet for an equivalent route mileage as compared with short or medium-haul operation. In the particular case of our two Corporations, however, the disparity is far too great to be thus accounted for, and there are other factors of more significance.

Petrol Taxation

Of these, by far the most important is the effect of petrol taxation. By international agreement, signatories to the pact exempt all aircraft operating international services from payment of any local petrol duty or taxation when uplifting fuel for flights which only commence, but do not terminate, within the territory of the State imposing the duty. Thus, Air-India International, on all flights, save those which lie wholly within the boundaries of India—and these constitute a negligible proportion of its total operation—flies on duty-free petrol. Indian Airlines Corporation, on the other hand, is by no means so fortunately placed. The great majority of its routes lie, necessarily, wholly within the boundaries of India, and the bulk of the petro: which it uplifts is, consequently, subject to very heavy taxation, amounting to a fraction under one rupee per gallon. The annual cost of this to the Corporation is in the neighbourhood of Rs. 1 crore, and this factor alone accounts for a large measure of the difference in the respective financial results of the two Corporations. It is not, however, the end of the story, as will be seen hereafter.

When nationalisation took effect in August 1953, Air-India International was a company jointly owned by Air-India and the Government of India. By agreement between the two parties, the management, sales, publicity, traffic handling, aircraft maintenance and overhaul, were all conducted by Air-India on behalf of A.-I.I. Consequently, apart from a small number of pilots, radio officers and hostesses, A.-I.I. had no personnel of its own. Immediately before nationalisation, some transfers in all branches were made so as to enable A.-I.I. to operate more or less independently on the due date. After 1st August, only those employees who had actually been transferred were deemed to belong to A.-I.I. and all the remainder of Air-India's personnel became the employees of Indian Airlines. At first sight, this may not seem to have conferred an advantage on A.-I.I. but, in fact, it did.

Surplus Personnel

It was apparent to all observers acquainted with our civil aviation that, on the integration of nine separate companies into one single unit, namely, I.A.C., there was certain to be a considerable surplus of personnel in almost all categories and particularly in the administrative cadre. In the view of many, then, it seemed unwise on the part of the Government to give an assurance to all employees that, on nationalisation, there would be no retrenchment. Nevertheless, this assurance was given with the natural results that I.A.C. today is more or less bound to continue to employ a by no means negligible number of surplus employees, however hotly this may be denied by the union and others. This effect, moreover, is likely to be accentuated with the introduction of new equipment when fewer aircraft—because faster and of greater carrying capacity—will be required. Be that as it may, I.A.C.'s situation was made no easier when, on account of pressure exerted by the various associations and unions, it was forced to abandon its plan to standardise salaries and wages at a lower level and to agree to perpetuate former pay scales. Nor is this to say that this correspondent does not sympathise with the case which the employees presented, but facts, however distasteful, must be faced and it is clear that, for many years to come, I.A.C. will have to employ a substantial number of surplus employees to the detriment both of its efficiency and finances.

A.-I.I., on the other hand, started on 1st August, 1953, from scratch. It can employ exactly that number of employees which the dictates of efficiency demand; it can lay down a salary and wage scale, in view of its comparative prosperity, of a generous nature and with plenty of scope for incentive; it is now in the process of rapid expansion and competition, to secure employment therein, is keen thus enabling the Corporation to select the best men available. These are assets, though intangible, of immense value.

Type of Aircraft

There remain two other factors advantageous to A.-I.I. The first concerns aircraft. With the exception of a few D.H. Herons, a small "feeder line" aircraft now on order, the whole of I.A.C.'s fleet is obsolescent. This, in view of the lack of competition on the majority of their routes, would be of no great moment were it not for the fact that both the Dakota and the Vikings, which form the great bulk of the fleet, are now uneconomical to operate.

The Dakota, although an excellent aircraft in many ways, has a single engine performance well below accepted modern standards. Its permissible all-up weight is, therefore, restricted by Indian regulations—and, in the opinion of this correspondent, quite rightly—to 26,200 lbs. This, however, precludes the installation of the number of seats which might otherwise be practical and our Dakotas, generally, carry only the standard 21 seats. Our domestic fare structure is, at the same time, one of the lowest in the world and the combination of these two factors requires a very high load factor if the aircraft is to pay its way. Indeed, the "break even" point is probably not less than 75 to 80 per cent., obviously a target which is impractical of achievement. In contrast to this, the British European Airways fly their Dakotas, under British regulations, at a permissible all-up weight of 28,000 lbs. and are thus enabled to fit 32 seats. The European fare structure, moreover, is considerably higher than ours, and the B.E.A. may, in the circumstances, make a very moderate financial success of their Dakota operation, although the point is doubtful. What is not in doubt, however, is that, under Indian conditions, I.A.C. are, more or less, bound to incur a loss on all Dakota operation—and this applies in almost equal measure to Vikings—which will continue till complete fleet re-equipment has been effected. This is, indeed, a grim prospect.

In contrast to this almost hopeless situation, A.-I.I. is equipped with Constellations and Super-Constellations, modern aircraft with a low economic load factor and, in the case of the Super-Constellations at least, fitted with high density seating. Add to this the fact that international fares are on a much higher level than domestic fares, and it will be seen that the working results of the two Corporations are based on entirely different conditions.

Utilisation Factor

The final advantage which A.-I.I. enjoys is a higher utilisation factor, that is to say, the amount of flying which can be obtained from each unit of the fleet, always to be obtained in long-haul operation and to which reference has already been made.

To sum up, then, whereas I.A.C. is obliged to employ personnel in excess of its actual requirements, to operate obsolescent and uneconomical aircraft, to pay approximately 12 per cent. of its gross income in petrol taxation and to submit to a fare structure which bears little relation to the actual costs of operation, Air-India International suffers from none of these disabilities and is solely concerned with the intense competition which prevails on the majority of the international routes which it operates.

It is as well to bear these facts in mind when judging the relative merits of the two Corporations and in sifting the criticism which will, almost inevitably, be levelled at the domestic Corporation when its financial affairs are discussed in Parliament. At the same time, it is an inescapable fact that, in incurring a deficit substantially larger than the aggregate loss of all the private companies during their last year of operation and taking the petrol rebate which they received into consideration, the domestic Corporation has a great deal to explain.—*All Rights Reserved.*

NEW COMETS FOR B.O.A.C.

The B.O.A.C. has decided to instruct the de Havilland Aircraft Company to proceed with the building of a fleet of new Comets. The Comet I aeroplanes, which formed the original B.O.A.C.'s fleet, will not be used again on public passenger service. This is a sequel to the technical finding of the Cohen report on Comet accidents that the failure of Comet I was due to the structural failure of the pressure cabin brought about by fatigue. The new Comets will be so designed as to obviate this defect. They will be heavier being more strongly built than Comet Is. The extra power that will be given by the Rolls-Royce Avon engines with which they will be fitted will, it is stated, give them a performance and range that make them commercially pre-eminent. No precise date, it is stated, can be given for the introduction of the new Comets.

UNLOADING AIRLINERS

An airliner can be emptied of its passengers, baggage, mail, express and freight loads in only four minutes in a newly-developed "Airdock." The process ordinarily takes from 20 to 30 minutes. The "Airdock" is now being tested by United Airlines, a U.S. air transport company. Instead of being unloaded on the airfield by a fleet of trucks, carts and tractors, the plane is towed into a special hangar where ramps, bridges, conveyor belts and hydraulic lifts do the work. Passengers file out on a bridge at the same level as the cabin door. Meanwhile, workers unload baggage and freight onto a conveyor belt. As the passengers walk down from the overhead bridge, their baggage is sorted for claiming.

VALUE OF INSURERS' ASSETS CROSSES RS. 300-CRORE MARK

MAJOR PORTION CONTINUES TO BE INVESTED IN GILT-EDGED

A NOTABLE trend in the sphere of Indian insurance is the steady growth of the insurers' total assets. At the end of 1953, to which the latest available figures refer, the assets of insurers crossed the Rs. 300-crore mark and stood at Rs. 315.8 crores, as against Rs. 293.9 crores at the end of the previous year. This is an impressive record which will become even clearer when the present level is compared with the pre-war total of a mere Rs. 70 crores. In recent years, the assets have grown at a rapid rate. Thus, the annual average increase over the 1939-45 period was only Rs. 11½ crores. In the following year, the rate of increase was nearly double this rate. During the 1946-52 period, the average annual increase was as high as Rs. 22½ crores. It is this rapid growth that has enabled the assets to reach an impressive total of Rs. 315 crores.

Assets

This growth in insurers' assets is certainly a matter of great consequence to national economy. Since insurers invest a large proportion of their assets in Government and other gilt-edged securities, they are indirectly participating in the Central and State Governments' national development programme. Indian insurers, as is well known, have to conform to the restrictions, specified in section 27 of the Insurance Act, in respect of investments of their assets. Briefly, this section prescribes a proportion of 25 per cent. in Government securities and 25 per cent. in Government securities or other approved securities. In 1953, insurers' investments in the Central and States Governments' securities formed 47.2 per cent. of their total investments.

The following table shows the investment pattern of insurers' assets in 1952 and 1953:

Insurers' Assets

(Rs. in lakhs)

	1952		1953	
	Amount	Per cent.	Amount	Per cent.
Securities of:				
Central Government ..	1,22,47	41.7	1,28,78	40.1
Part A States	12,67	4.3	19,37	6.0
Part B States	3,80	1.3	3,35	1.1
Foreign Governments ..	5,60	1.9	5,54	1.8
Municipal, Port Trust. ..	17,73	6.0	18,75	5.9
Mortgages on property ..	13,20	4.5	14,59	4.6
Loans on policies	19,76	6.8	23,44	7.4
Loans on stocks and shares ..	24	0.1	22	0.1
Other loans	1,48	0.5	1,64	0.5
Debentures	13,15	4.5	14,84	4.6
Preference shares	10,90	3.7	11,30	3.6
Ordinary shares	17,78	6.1	19,91	6.3
Land and house property ..	15,31	5.2	17,44	5.5
Agents' balances, outstanding premiums, etc.	14,61	5.0	15,46	4.9
Deposit, cash and stamps ..	17,43	5.9	18,55	5.8
Miscellaneous	7,09	2.4	6,89	2.2
Total ..	2,93,91	100.0	3,15,80	100.0

It will be seen from the table above that the bulk of the insurers' assets is invested in what are generally called gilt-edged securities—that is, the Central and States Governments' securities, Municipal, Port Trust and Improvement Trust Loans and securities of foreign Governments. Investments in this class of securities accounted for 54.9 per cent. in 1953, as against 55.2 per cent. in 1953. The share of the Central and State Government securities alone is, as already stated, about 47.2 per cent. of the total assets. This proportion is comparatively higher than that in the U.S. or the U.K.; in the former country, insurers invest only about 17 per cent. in Government securities, the corresponding figure for the U.K. insurers being 41 per cent. In the case of the latter, the share of British Government securities is about 30 per cent. and of Dominion Government securities about 11 per cent. British and American insurers invest a much larger proportion of their assets in industrial shares and debentures. Thus, American insurers' investment in securities of business and industry forms about 43 per cent. of their total assets. British insurers invest 30 per cent. of their total assets in industrial shares and debentures. In the case of Indian insurers, such invesments (that is, investments in debentures, preference shares and ordinary shares of joint-stock companies) form only 14.5 per cent. of the total. Another marked difference between the investment-pattern of Indian insurers and that of British and American insurers is that the latter invest a larger proportion of their assets in mortgages than Indian insurers. Thus, American insurers invest about 28 to 30 per cent. in mortgages and British insurers about 12 per cent. For Indian insurers, this proportion is only 4.6 per cent.

In recent years, the trends in the investment pattern of insurers, whether Indian, British or American, are somewhat similar. There has thus been a continuous decline in the percentage share of Government securities and a corresponding increase in the percentage share of industrial equities. Only, the trend is more marked in the case of British and American insurers than in that of Indian insurers. This will become evident when the pre-war or the early post-war investment pattern is compared with the investment pattern of recent years. In pre-war years, the share of Government securities owned by insurers in the U.S. was 26.7 per cent. of their total assets whereas it is now about 17 per cent. In the case of British insurers, however, the share of British Government securities is higher than in the pre-war years; it is 30.6 per cent. as against the pre-war proportion of 21.6 per cent. But it must be remembered that this proportion had gone up to about 42 per cent. in 1945. Since then, it has declined. In the case of Indian insurers, the share of Central and State Governments' securities was 53.7 per cent. of their total assets in 1939. This share increased, as in the case of the U.K., to about 64 per cent. in 1945 but has steadily declined to about 46 per cent. as at the end of 1953.

Industrial Shares

An upward trend in the proportion of insurers' investments in industrial shares and debentures is noticeable in the last few years. Between 1945 and 1952, the proportion of such investments by American insurers has increased from 27 per cent. to 43 per cent. In the U.K., it has increased from 27 per cent. to about 30 per cent. In India, the share of securities of joint-stock companies in the investments of insurers' assets was 6.8 per cent. in 1939. It advanced to 9.4 per cent. in 1945 and still further to 14.5 per cent. in 1953. Nevertheless, it will be seen that Indian insurers' investments in shares and debentures forms a much smaller proportion of their total assets than the investments of British or American insurers.

An analysis of the maturity distribution of insurers' investments in Government and other approved securities shows that there is a marked preference for short and medium-dated securities. Thus, the bulk of the Indian insurers' investments has gone into securities which mature before 1968; the exact proportion of such investments is as high as 65 per cent.

The following table gives the maturity distribution of the investments (as on 31st December, 1953) of Indian and non-Indian insurers:

Investments

(As on 31st December, 1953)
(Rs. in crores)

Years of maturity	Indian insurers		Non-Indian insurers	
	Amount	Percentage	Amount	Percentage
1954-58	18.73	11.3	8.78	22.8
1959-63	41.46	25.0	11.27	29.2
1964-69	47.68	28.7	7.95	20.6
1970-73	1.66	1.0	2.75	7.2
1974-78	18.51	11.2	5.93	15.4
1979-83	1.42	0.9	0.13	0.3
1984-88	30.86	18.6	0.25	0.6
1989-93	0.43	0.3	..	..
Irredeemable	4.96	3.0	1.50	3.9
Total ..	165.76	100.0	38.57	100.0

Indian insurers' investment of their "controlled fund" are governed by section 27A of the Insurance Act. The clauses of this section set forth the different classes of securities, shares or debentures which came under the list of approved investments.

It will be seen from the table below that Indian insurers invest 64 per cent. of their controlled fund and non-Indian insurers 71 per cent. of their controlled fund in investments defined by clauses (a) and (b) of section 27A. These clauses refer respectively to approved securities and U.K. Government securities. This compendious term "approved securities" covers all securities of the Central and State Governments and Government-guaranteed debentures, whether issued by a statutory corporation, municipal corporation or city improvement trust in any presidency town.

The following table gives the investments (as on 31st December, 1953) of the controlled fund of Indian and non-Indian insurers, classified according to the clauses of section 27A:

Controlled Fund

(As on 31st December, 1953)
(Rs. in lakhs)

	Indian insurers		Non-Indian insurers	
	Amount	Per cent.	Amount	Per cent.
Approved investments classified according to the clauses of sub-section (1) of section 27A:-				
1. (a) and (b)	1,64,24	64	38,65	71
2. (c) and (d)	1,51	..	3	..
3. (e) to (i)	27,57	11	3,25	6
4. (m)	14,70	6	24	1
5. (n)	10,53	6	75	1
6. (o) and (p)	23,03	9	4,32	8
7. (q)	1,98	1	24	..
8. (r) and (s)	2,24	1	6,41	12
	2,51,50	98	53,39	99
Non-approved investments ..	5,96	2	67	1
Total ..	2,57,46	100	54,06	100

Restrictions on Insurers

It should be clear that the bulk of the insurers' investments, whether of their assets or of their controlled fund, goes into the securities of the Central and State Governments, Municipalities and Port Trusts. Only a very small proportion is invested in shares and debentures of joint-stock companies. This is partly due to the statutory restrictions on insurers' investments imposed by the Insurance Act and partly to certain anomalies in the Act itself. In this connection, the Shroff Committee (the Committee on Finance for the Private Sector) recommended that the statutory minimum in Government and approved securities should be reduced from the present level of 50 per cent. to 45 per cent. It also suggested the removal of the anomalies in the Act. One such anomaly, for instance, is that, in certain cases, the debentures (a superior security) of a company may become a non-approved security whereas the ordinary shares and preference shares (an inferior security compared to debentures) may become an approved investment. A judicious relaxation of the present restrictions prescribing the level of investments in Government and approved securities and the removal of the anomalies in these restrictions will certainly enable insurers to increase their investments in industries.

CANARA MUTUAL ASSURANCE CO., LTD.

The Canara Mutual Assurance Company, Ltd. (Managing Director: Mr. T. R. A Pai, Udipi, South India), has completed two decades of useful service in the cause of Indian insurance. During this period, it has already carved out for itself a leading position among Indian mutual insurers. Although the figures of new life business transacted by the Company may not be as spectacular as those of many of the older insurers, there is no doubt that the Company has made steady progress since it was established in 1935, so that the valuing Actuary, Mr. K. A. Pandit, who made the valuation of the Company's business as on 31st December, 1953, remarked that the "valuation results are excellent." On the Actuary's recommendation, the management declared attractive rates of bonus—Rs. 15 per thousand on the participating endowment policies and Rs. 18 per thousand on the participating whole life policies. The valuation, it is noteworthy, was done on the stringent 2½ per cent. basis. "It is a matter of pride," wrote the valuing Actuary, "for a company of your size to be in a position to declare substantially high bonuses without relaxing the strong reserve position which you have been maintaining for the past many years."

During the year ended 31st December, 1954, the Company wrote, according to its latest annual report and accounts, Rs. 88.29 lakhs of new life business as against Rs. 50.04 lakhs in the previous year. There has thus been a substantial increase in the Company's new life business. The premium income and income from other sources aggregated Rs. 20.16 lakhs, as against Rs. 17.94 lakhs in 1953. The expense ratio (calculated in accordance with Rule 25 of the Insurance Rules), despite the large increase in new life business, is a modest 12.76 per cent. It is not strictly comparable with last year's expense ratio of 12.87 per cent. which was somewhat on the high side on account of the expenses incurred in connection with the opening of the Company's offices at Bangalore.

The following table gives the progress of the Company's premium income, other income and life fund (at the end of each year) during the 10 years ended 1954:

(Rs. in lakhs)

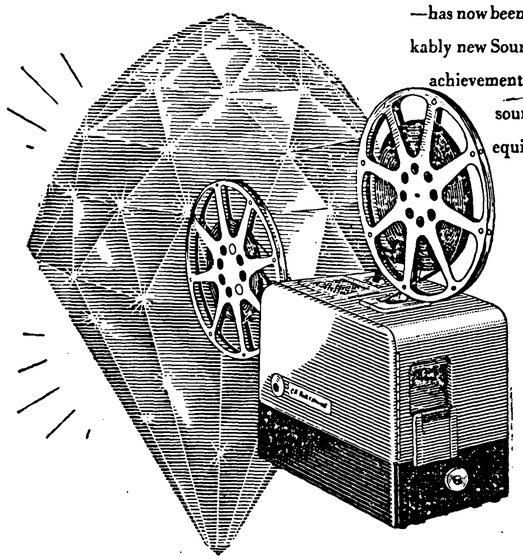
Year	Premium income	Other income (net)	Life fund at end of year
1945	8.84	0.50	16.24
1946	10.85	0.86	23.43
1947	13.41	0.84	32.27
1948	14.57	1.11	42.11
1949	15.61	1.37	51.60
1950	16.73	1.78	61.91
1951	17.72	1.96	71.92
1952	17.56	2.45	82.49
1953	17.94	3.34	93.80
1954	20.16	3.59	106.49

It is gratifying to note that the life fund has now crossed the Rs. 1-crore mark. It now stands at Rs. 1.06 crores, the net addition to the fund during the year being Rs. 12.69 lakhs. Besides the life fund, the Company has an investment reserve fund of Rs. 3.54 lakhs.

Bell & Howell FILMOSOUND

Now with jewelled critical parts ensuring **400% longer life!**

Sapphire, the hardest of precious stones—next only to diamond—has now been used in this remarkably new Sound Projector. This achievement has made Filmosound, a really perfect equipment. Precision-built for lifetime dependability.

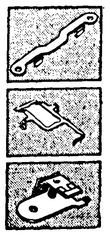


The jewelled action 16mm. sound projector

Fixed Guide Rail with Jewels.

The Shuttle with Jewels.

Film Tension Clips with Jewels.



Sapphire jewels are permanently bonded to these critical parts, which bear the brunt of the run. This gives perfectly smooth film run without tear or damage, rock-steady projection, brilliant pictures and natural sound, and 400% longer life. In one-case or two-case units. Compact, light and attractive, it is a complete Theatre; an essential outfit for:

Schools - Colleges - Churches - Hospitals - Industries and Clubs.

LAND REFORMS IN SOUTH INDIA

RECOMMENDATIONS OF TAMILNAD CONGRESS

THE question of land reform has been receiving the serious attention of the Congress Party in the South for some time now. The Madras, Mysore and Travancore-Cochin States have been contemplating radical changes in the existing pattern of land tenure. The most important of them relate to the proposed comprehensive land reform legislation, which is being framed by the Madras Government. According to Mr. Manickavelu Naicker, the Revenue Minister, the Bill will deal with virtually all the conceivable problems relating to landlord-tenant relationship. These include, among others, the assurance of tenure to the cultivator, the fixation of ceilings for personal cultivation as well as rents and the circumstances in which the landlord could exercise his right of resumption of lands for personal cultivation.

It will be recalled that the Tamil Nad Congress Land Reforms Committee, constituted in April, 1954, submitted its recommendations to the President of the Tamilnad Congress Committee (T.N.C.C.) early this month. The proposals are to be considered by the Tamilnad Congress Executive Committee. A copy of the proposals has also been forwarded to the Government of Madras for examination by the Revenue Department.

It is said that the recommendations of the Committee are based on the opinions and facts elicited from landowners, on the one hand, and tenants and labourers, on the other. The landowners were sounded on the maximum concessions they were willing to allow, in the interests of agrarian peace, in the matter of rights in land, security of tenure, rents and crop shares, as well as wages of agricultural labour. The *kisans* likewise were sounded on the minimum concessions they required in the interest of a reasonable standard of living. On the basis of the replies from these interests, the Committee is reported to have succeeded in evolving what it believes to be a generally acceptable and just programme of land reforms representing the greatest common measure of agreement.

Recommendations

The following is a rough outline of the proposed recommendations:

(1) All lands in respect of which a landowner is not a "resident landowner," as defined, to be cultivated only by tenants if they are not already so cultivated.

(2) Only "resident landowners" can have lands under their "personal cultivation" upto a certain maximum extent, such personal cultivation being defined to include "cultivation by labour, hired for daily or monthly wages according to the schedule of minimum wages fixed but not for any crop-share, under the resident owner's personal direction and/or supervision."

(3) Well-knit, compact and integrated farms, involving large capital investment, and most efficiently cultivated by their owners, to be exempted from the application of the ceiling limit on the recommendation of a specially constituted Board. Grazing lands reserved for cattle farms and topes to be similarly exempted.

(4) On lands in excess of the ceiling limit proposed, wherever such lands are now personally cultivated, tenants evicted since 1st July, 1951 (the date of publication of the Subramaniam Committee Report) to be fixed up, if they are not already in possession of other lands for cultivation. Next in the order of eligibility for tenancy on the personally cultivated excess lands are the permanent farm labourers, if any, who have been working on those lands.

(5) A "resident landowner" who has all or a part of his lands cultivated by tenants now is to have the right to resume land for personal cultivation upto the ceiling limit prescribed, subject to the conditions: "that he does not exercise this right during the period 1955-58" and "that, if after 30th April, 1958, he wishes to resume land from his tenants, he should do so within a period of three years, at the end of which his right of resumption will lapse automatically if it has not been exercised, such resumption being authorised by Government in such areas as it may notify."

(6) All existing tenants, whether cultivating for a fixed rent or for a crop share, to be confirmed in their possession of the respective holdings subject to the maximum area proposed for tenant-cultivation. An "existing tenant" is defined as a tenant who has cultivated a holding for all the crops in the agricultural year 1954-55 or for the first or the main crop in the agricultural year 1954-55.

(7) All existing tenants, all new tenants fixed up under the reform legislation an all tenants fixed up in future to have permanent security of tenure, subject to (i) payment of fair rents according to the schedule of fair rents proposed; (ii) possible resumption of land by eligible landowners in notified areas; and (iii) some simple grounds for eviction. "Permanent security of tenure" is defined as "a permanent cultivation right which cannot be sublet, partitioned, alienated, mortgaged except to a Government credit agency, or attached." Such a right could, however, be inherited by a major son, widow, or brother, or brother's son, if he or she has not any other holding already under cultivation.

(8) All existing "fixed-rent" tenancies to continue only on the basis of fixed rents according to the schedule of fair rents proposed.

(9) All existing or new *waram* tenancies to be converted into fixed rent tenancies at the end of five years.

(10) No tenants to have in his possession a holding of more than a certain extent of land prescribed.

(11) Failure to pay the rent in full before 30th April every year, sub-letting in any form except in the case of betel vine cultivation wherever necessary, and partitioning or alienating his cultivation right or mortgaging it except to a Government credit agency—these three to be the chief grounds for eviction of a tenant.

(12) No future transaction in land by its owner to be allowed to result in the eviction of a tenant from the concerned holding.

(13) A tenant to have the right to purchase the landowner's interest in the concerned holding, whenever he decides to sell it, at prices agreed upon between the parties concerned and within six months of the owner's notice.

(14) The possibilities of transferring the landowners' interests in their holdings to the concerned tenants under a suitably evolved tenant purchase programme financed by a tenant-purchase fund, to be explored.

(15) Institutional lands to be brought under the management of an autonomous public corporation called the "Land Management Corporation." The cultivating tenants, existing or new, of these lands to have all the prescribed tenant-rights except the right to purchase their holdings. Model co-operative farms to be organised wherever the lands taken over cover an entire village or a major portion thereof.

Land reforms are in the offing in Travancore-Cochin also. The Congress Ministry, which has succeeded the Praja Socialist Party Ministry, has, it is stated, proposed to implement the land reform policy of the defeated Ministry with such modifications as may be required. Refuting the allegation of the ex-P.S.P. Chief Minister that the downfall of his ministry was brought about by the reactionary landlord interests anxious to wreck his ministry's land reform proposals, Mr. P. Govinda Menon, the Chief Minister, stated, in the course of a Press Conference recently, that one reason why he did not want the dissolution of the present legislature of the State was to see that land reform legislations were not shelved. Proceeding, he observed: "The Congress has declared a socialistic pattern of society. To that end, I should strive and I pledge; gentlemen of the Press, that the Congress Party here in office will pursue the policies and programmes to that end." The land reform proposals of the P.S.P. Ministry, which might be revived, consist of seven Bills, framed by the P.S.P. Ministry some of which had already been placed before the State legislature. The chief among them were the *Verupattamdars* Bill and the Restriction on Possession and Ownership of Land Bill. These Bills cover entirely the whole gamut of agrarian reform. Some of the proposals, such as the fixation of the right of possession to 15 acres of double crop wet lands, have become matters of acute controversy.

The Government of Mysore, too, has proposed to bring forward a Bill for limiting landholdings in the State. According to Mr. S. Chenniah, the President of Pradesh Congress Committee, the family holdings should be limited to 25 to 30 acres. As it is, the States Government has already undertaken far-reaching land reforms with a view to ensuring more effective cultivation of land and to make the tiller, as far as possible, the owner of the land. The Personal and Miscellaneous *Inams* Bill is awaiting the assent of the President. The Mysore (Religious and Charitable) *Inams* Bill, as amended by the Select Committee, is on the legislation anvil.

Thus, big changes are in the offing. But the question is how far they would achieve the desired result of ushering in an economic and social pattern based on a better landlord-tenant relationship, without leading to a fall in production.

FOOD PRESERVERS MEET IN BOMBAY

PLEA FOR STATE ASSISTANCE

LAST week-end the attention of the city was sought to be evoked by the food preservers by holding their annual meeting and exhibiting their luscious wares with a fanfare. With these activities were associated the elite of the city, including the Governor of Bombay, the Mayor of the Corporation, Mr. B. G. Kher, ex-Chief Minister of the State, and the present Chief Minister, Mr. Morarji Desai. From the speeches made by these dignitaries, it was evident that all of them unanimously agreed that the food preservation industry had a great future before it. This unanimous verdict should spur the food preservers to increase their activities and place their industry on a sound footing.

Inaugurating the twelfth annual conference of the All-India Food Preservers Association—the apex organisation of food preservers in India—Mr. Morarji Desai expressed his confidence that the industry had a good future and urged the Association to realise that the Government, whether Central or State, had to fix priorities under the existing limitations with an eye on the greatest good of the largest number of people. He considered that fruit preservation and canning was essentially a rural industry which could be best promoted through small co-operative societies. If the conference devoted its attention to this aspect and decided to promote the industry on a co-operative basis, it would achieve, he said, a good purpose. Personally, he did not approve of preserved fruits as he preferred fresh ones. This, however, did not mean that he was opposed to the industry and its interests and those who liked the preserved fruit variety were welcome to have their choice satisfied by the products of the industry. While assuring the Association of all possible help from the Bombay Government, he took care to advise them to preserve only surplus foods and fruits and not those which were in short supply.

The importance of the preserved food industry to the Indian economy has been recognised by the Government of India. For the industry was among the earliest to be referred to the post-war Tariff Board for examining its case for protection and, since 1948, it has been enjoying protection. Its case for continuance of protection was reviewed only last year and the Government not only agreed to continue protection but also magnanimously allowed, in respect of two of its categories, the rate of protective duties to remain unchanged, although the Tariff Commission had, after a careful investigation, recommended a lower rate of duty. Besides, the Tariff Commission had requested the Government to remove the extra price charged for charcoal No. 2, as such would enable the prices of cans required for packing foods and fruits to be reduced by Rs. 36 per thousand. This and a number of other ancillary recommendations of the Commission were also accepted by the Government. According to the spokesmen of the industry, however, it would appear that some of the recommendations have not yet been given effect to by the Government.

Of late, it seems that the industry has been passing through bad days. That probably was the provocation for the industry to attempt to build public opinion in its favour for State assistance through holding an exhibition and associating public leaders with it. Its claims for assistance have, of course, been recognised already, as stated above. In the course of his welcome address, Mr. N. S. Pochkhanavala, Vice-President of the Association for the Western Zone, said: "We have put the consumer as the prior consideration and industrial morality required specially of a food factory on the highest pedestal. We insist that the interests of the canners are linked with those of the country. To achieve these aims, we have chalked out a path for our struggle which envisages lowering the costs of production, over which we have no control, and producing goods of high quality under hygienic conditions of manufacture." These aims are noble indeed, but their achievements, according to what the canners say, seems to be a difficult task. This is evident from the enumeration of difficulties facing the industry by the Chairman of the Association, Mr. K. U. Patel, in his address to the meeting.

One of the reasons for the difficult position in which the industry is placed is, according to Mr. Patel, the import of foreign products in substantially large quantities and the release of tinned products imported through Pondicherry port before the merger. Further, tomato products and green peas which are grown in large quantities and processed in this country are being imported into India even today. Another reason is the indiscriminate issue of licences for processing and packing "tinned foods." During the last nine years, the number of such licences has gone up from 248 to 720, and out of this only 15 factories are well equipped, conform to hygienic requirements and employ fully qualified technical personnel. These "factories account for 80 per cent. of the total production of the industry, excluding the production of *morabbas* and *achars*." In terms of rupees these factories account for also "about 75 per cent. of the capital and 100 per cent. of the technical personnel employed," but "suffer for the bad name given to the Indian products by the remaining so-called factories." This defect could be eliminated by taking action under the Fruit Products Control Order. Unfortunately, progress in this direction is stated to be too slow to be effective. Besides, there are also unlincensed factories in a large number which do not conform to any hygienic or quality standards and put in the market spurious products. The effect on human health of these products, it is needless to add, will undoubtedly be injurious and, therefore, virgorous measures must be taken to put an end to such manufacture. Recently, the Ministry of Health published rules and regulations under the Prevention of Food Adulteration Act. The rules are applicable to the fruit industry also. This means the transfer of administration of the Fruit Products Order to the Ministry of Health which in its turn would transfer the same to the States. The industry does not favour this change and wants the administration to be vested, as at present, in the Ministry of Food and Agriculture, Government of India.

High cost of production is another great difficulty facing the industry. This is due partly to the high prices paid by the industry for containers. For instance, both glass and tin comprise about 25 to 30 per cent. of the costs of finished products. The U.K. packer pays, it is stated, Rs. 164 for one thousand A 2½ (2-lb.) cans, whereas the Indian packer has to pay double the amount. Mr. Patel's remedy for this is the removal of the levy under the steel equalisation fund and the extra amount paid by the can manufacturers for charcoal No. 2. The cost of glass bottles, too, is higher by about 50 per cent. as compared with that in the U.K. Further, the glasses made in India are liable to breakage during sterilisation and transit. Sugar is another raw material for which the industry has to pay a higher price, namely, Rs. 30 to Rs. 32 per maund, than that (Rs. 18 per maund by the packer in Australia) paid by the foreign competitors. According to Mr. Patel, if the Government were to grant the remission of excise duty on sugarcane cess and other charges which amount to Rs. 11 per maund of sugar, the industry would get substantial relief on the 7,000 tons of sugar which it needs per annum.

The food preservation industry, too, has a grouse against railways. As railway wagons are covered without ventilation and painted black, heat is absorbed and nearly as much as 15 to 25 per cent. of fruits and vegetables are subject to spoilage in transit from the gardens to the factories. Rough handling and pilferage too add their quota to the high cost of the product. Canned products are clubbed with category No. 12 of the railway tariff schedule meant for luxury goods. Mr. Patel suggests that the products should be placed in a class where the incidence of freight is not more than 2½ to 4 per cent., as against 14 to 20 per cent. as at present for transport over an average distance of a thousand miles.

(*Concluded from next column*)

Be that as it may, Mr. Karmarkar's reply to the debate threw some light on Government's foreign trade policy. He said that, till now it had been of advantage to India to be a member of the G.A.T.T. In the past, no restrictive condition was attached and in future, if there was any such condition, India would certainly reconsider its position. As far as protection of industry was concerned, the G.A.T.T., he said, did not bind the country at all.

Dealing with the question of austerity in getting imports, Mr. Karmarkar remarked that, out of over Rs. 500 crores of imported goods, nonessential consumer goods were of the value of Rs. 14 crores only.

CONTROL OF FOREIGN TRADE

BILL SEEKS FIVE-YEAR EXTENSION

THE Imports and Exports (Control) Amendment Bill, 1955, moved by the Minister for Commerce, Mr. D. P. Karmarkar, in the Rajya Sabha on 22nd February last, seeks to continue for another five years up to 31st March, 1960, the powers at present enjoyed by the Central Government for the control and regulation of exports under the Imports and Exports (Control) Act, 1947. This latter measure, it will be recalled, was introduced in the then Central Assembly by Mr. I. I. Chundrigar, the then Commerce Minister. The purpose of that measure was to put on the Statute Book the control over imports and exports first imposed under Rule 84 of the Defence of India Rules and subsequently sustained by the Emergency Provisions (Continuance) Ordinance 1946, which ceased on 24th March, 1947. It was then considered that the continuation of the control over the foreign trade of India was necessary, in order to avoid any disturbance to economic recovery of the country during the transition from war-time to peace-time conditions.

Explaining the provisions of the Bill, Mr. Karmarkar said that it was a continuing measure and that though the considerations which held good when the control was first introduced might not necessarily hold good today, the need for such controls still remained on other considerations. Regulation of foreign trade had always been an important means of advancing the economic interests of the country. For India, such a control was absolutely essential, as (*a*) the country's foreign exchange was modest indeed as compared with the foreign exchange resources of some of the advanced countries of the West, (*b*) some of the nascent industries required protection through quantitative restrictions on imports, and (*c*) exports had to be regulated and directed to suit the domestic needs of the nation.

The statement of objects and reasons of the Imports and Exports (Control) Amendment Bill, 1955, referred to above, reads as follows:

"The need for the Central Government to have legislative powers to control the foreign trade of the country is as great today as it was in 1947. The balance of payments position, though slightly easier, will need to be watched closely and continuously to ensure availability of foreign exchange for the purchase of goods required to sustain the rapid industrialisation envisaged in the second Five-year Plan. On the export side also, it will continue to be necessary to rely on export controls to safeguard the interest of the consumer in respect of items that are primarily required for home consumption."

It is thus evident from the speech of Mr. Karmarkar as well as from the statement of objects and reasons that, at present, import controls are needed for conserving foreign exchange to finance industrial development of this country and export controls are necessary to safeguard the consumer's interest in respect of primary necessaries. In the debate on the Bill, the Government was criticised by the opposition benches that foreign exchange was being spent on importing luxury goods and goods of secondary importance, and one member went to the extent of suggesting that the Government should resort to State trading, as if that was the panacea for some of the economic ills of India. Another regretted that the country's foreign currency was spent on covering trade deficit, he did not pause even for a moment to consider that a part of the deficit was due to imports or plant and machinery and industrial raw materials required for the country's industrial expansion. A member complained that India was not concentrating attention on promoting trade with Communist countries. Here again he betrayed lack of proper study of the subject. For, as one of the members of the Congress Party pointed out, India had maintained trade relations with all foreign countries irrespective of their political structure. The Communist countries often had, he said, nothing to sell which were needed by India. This was evident, he continued, from available statistics, according to which imports by the Soviet Union were nearly $200 to $250 million in excess of its exports. Besides, it may be mentioned here that there is a good deal of uncertainty regarding prices, quality and the trade policy of the Communist countries, because of dislocation of trade between them and the free world. What is more, since they have State trading systems, it involves many times the association of the Governments of the free world for fulfilling a trade transaction.

BANKING

(Concluded from page 407)

policies and it is one of the steps taken towards introducing convertibility.

The Fund is the custodian of assets whose aggregate value is the equivalent of 8.8 billion dollars. These resources are intended to be used by members for short-term assistance in meeting deficits in their current account balance of payments. Members are supposed to use assistance from the Fund to meet the inevitable fluctuations in their external payments position so as to avoid rapid and sometimes difficult adjustments in policy every time there is a change in the pattern of trade or payments. Use of the country's own reserves and help from the Fund can give a country time to make adjustments gradually or to avoid changes in policy which, after a brief period, might prove to have been unnecessary.

Central Bank of Central Banks

The Fund is often referred to as a central bank of the central banks. That is correct in the sense that we deal only with member-Governments and their central banks. But we are not a bank that may give credits to its members along the lines normally followed by central banks or other banks. Nor are we supposed to invest our money to earn interest. All our assets are in gold, non-interest bearing notes of the member-Governments and in non-interest bearing checking accounts with the central banks in the member-countries. A member is on principle supposed to pay 25 per cent. of its quota in gold and the rest in its own currency. The financial assistance that a member gets from the Fund takes the following form:

The member buys from the Fund the currency it needs, be it dollars, sterling or another currency, and credits the Fund's accounts at its central bank with the corresponding amount of its own currency. The member repays the Fund by repurchasing its own currency from the Fund with gold or dollars.

Each time a member draws on the Fund, it has to pay a fee of ½ of 1 per cent. If the Fund has more of a member's currency than 100 per cent., of its quota, the member has also to pay interest on the amount in excess of the quota. These drawings may not normally exceed 25 per cent. of any member's quota in a period of 12 months. Nor are they to exceed for any member a total of 200 per cent. of its quota. The Fund has, however, authority to waive these limits in special cases and has in recent years done so on several occasions.

Drawings are not effected automatically. The Fund has the right to review request for these credits. Such decisions have, as a rule, to be taken within three days. In order to be able to do this, we have continually to follow the economic developments in the member-countries.

The credits may be used only to meet payments deficits that are temporary in character. The policies of the Fund regarding the use of its resources by its members have changed several times in the past and will undoubtedly be changed from time to time in the future. Adjustments are made in these policies as the international economic climate changes, as old problems are resolved and new problems arise for Fund members.

Extent of Activity

Since the Fund began exchange transactions in March, 1947, the total drawings by members have amounted to over 1,100 million dollars. The volume of transactions has varied considerably from year to year. More than half of the total took place in 1947 and 1948—the critical payments period before the Marshall Aid Programme. Most of these drawings were by countries in Europe and the sterling area. In 1948 and 1949, India drew $100 million from the Fund. Almost half of it was repaid in 1954. In 1947 and 1948 the Fund decided to help its members in order that the hardships of those years should, to some extent, be alleviated. When the large-scale aid programme of the United States came into effect the need for assistance from the Fund by countries receiving Marshall Aid declined. Thus, in three years from 1949 to 1951, our transactions amounted to only about 135 million dollars, and were mainly with countries not receiving Marshall Plan grants. Following the end of the large-scale economic aid programme of the United States, Fund operations again increased. During 1952 and 1953, our transactions aggregated more than 310 million dollars. In 1954, when the payments situation of most countries had improved, we had drawings only of less than 40 million dollars. In addition, there are now outstanding stand-by arrangements totalling more than 110 million dollars. Stand-bys are lines of credit opened for a certain period, as a rule six months or a year, on which the country may draw when it needs foreign exchange.

Our resources constitute a second line of reserves for our members. Thus, the central problem for the Fund in developing its credit policy has been to give members an assurance that, when they need temporary balance of payments assistance and are following appropriate policies, these resources will be available to them.

For example, members can now draw on the Fund up to an amount equal to the gold or dollars they have contributed to the Fund. We refer to this as our "gold tranche" policy. Perhaps more important, however, is the system of stand-by arrangements that I mentioned a minute ago. With a stand-by arrangement, a country can take somewhat greater risks regarding the maintenance or introduction of convertibility, or the relaxation of exchange restriction and discrimination, than would otherwise be possible.

Most members have wanted to get dollars from the Fund, and a couple of other currencies, mainly sterling, have also been drawn.

Repayments

On the other side of the ledger, we have, in recent years, developed a series of policy decisions regarding repayments. Of course, the Fund Agreement imposes upon members certain compulsory repurchase obligations depending upon any increase of their reserves at the end of the Fund's fiscal year. Our members also have been made fully aware that, over and above any compulsory repurchase obligations, they are expected voluntarily to repay amounts borrowed from the Fund within a time suited to their payments problem; this period is as a rule three years, with five years as the outside limit. Thus, members know that they must not look to the Fund for long-term loans, but should arrange their policies in such a way that they will be able to repay the Fund in a relatively short time. A member's indebtedness to the Fund is also reduced if other members draw its currency from the Fund. By the end of 1954, total repurchases had amounted to almost 540 million dollars. Over and above that other countries' drawings had reduced the net outstanding obligations of members to the Fund by some 200 million dollars. Thus, the Fund's members are maintaining the original idea of the institution; that its resources should be revolving—easily available and soon repaid.

To make it possible for the Fund to carry out the activities I have just described, it is, of course, as I said before, essential that our staff follow closely economic developments in all of our member-countries. To keep ourselves sufficiently informed, we have established regular procedures for the submission of data by all our member-countries. In addition, our technicians keep in close touch with the technicians of the treasuries and central banks in member-countries. And members of our staff frequently visit the member-countries on whose problems they work.

Some of the information that the Fund collects is, of course, confidential. There is, however, a considerable volume of data not supplied on a confidential basis that the Fund publishes at regular intervals. We publish monthly *International Financial Statistics*, which contains a mass of data on monetary reserves, international trade, prices, money supply, Government expenditures, investment, etc. I think this is a most useful publication. Those that are interested can subscribe to it. In addition, we publish annually a *Balance of Payments Yearbook*. The balance of payments of each member of the Fund, and some non-members appears in this publication in detail and on a basis which permits easy comparison with the payment balances of other countries. We distribute them in loose-leaf form. In co-operation with the International Bank and the United Nations, we publish a monthly bulletin on the *Direction of International Trade*. All of these publications are available to our member-Governments gratis. They are also available to the public on a subscription basis.

In addition, we issue a number of publications generally available without charge which contain valuable statistical data and economic research. Our *Annual Report* to the Board of Governors is such a public document. This contains a description and analysis of the world payments situation and a review of the Fund's activities during the year. We also publish an *Annual Report on Exchange Restrictions* which, among other things, includes a detailed account of the exchange restrictions of each of the Fund members maintaining restrictions. From time to time, we publish a journal called *Staff Papers* containing research papers which we believe are of general interest. And we issue a weekly *International Financial News Survey* now sent to over 10,000 institutions and individuals.

I would also like to say a few words about the role the Fund has been playing in the field of technical assistance. From time to time, members in various parts of the world request that technicians be sent from the Fund to assist them. I expect that these requests for technical assistance will continue to increase in the years ahead, as they have been gradually increasing during recent years. In addition to these technical assistance missions, the Fund has established a trading programme in Washington which annually trains about 15 technicians from the treasuries and central banks of our member-countries. We have had three Indians.

Aside from this regular programme, individuals and groups have been afforded training opportunities tailored to their particular needs. By all of these measures, the Fund is trying gradually to build up a stronger bond of understanding between the Fund and its members and among the members themselves. It is my earnest hope that this bond will continue to grow stronger in the years ahead.

Our working relations with India are excellent. I am very happy to be able to finish this little lecture by saying that the Fund uses as its slogan for our work with the not industrialised countries those words that have always been your motto: "Development with stability."

journey to prosperity

The huge, long train chugs and wheezes and groans to a stop. Villagers—eager, expectant, excited—gather round . . . it is an event of historic importance in the life of the community. For, village produce, the fruit of their labour, will travel to the city in this train.

In the years to come the produce of our villages will flow to the cities on thousands of miles of rails and roads. 3,000 miles of track will be rebuilt during the period of the Five Year Plan. 770 miles of new concrete roads, 66 giant bridges will be constructed to lay the foundations of an efficient communications system. Along these arteries of trade, commerce and culture our people will journey to a richer, more complete life.

Lakhs of tons of Steel will be used to implement the many diverse projects of the Plan. And so, in numerous significant ways Steel will provide the foundations for a richer, more rewarding future for our nation and our people.

THE TATA IRON & STEEL COMPANY LIMITED

TIN 3924

NORWAY PUTS UP BANK RATE

From Monday, 14th February, 1955, the Bank rate in Norway was raised from 2½ to 3½ per cent. It was the first time the Bank rate had been altered in Norway since January, 1946. Whilst interest rates generally are expected to rise, interest on loans by the State Housing Bank remains unchanged. The Government hopes that the increased cost of credit will help to reduce investments, and so ease the pressure on prices and wages and also bring down the level of imports.

On the same day, the Minister of Finance announced in Parliament new tax proposals designed to reduce imports and investments: a 10 per cent. levy on new ships, a 10 per cent. levy on imported motor vehicles, and a 10 per cent. levy on building work (excluding homes, agricultural buildings, and buildings rebuilt or repaired after war damage, fire or natural catastrophe). The Government emphasised that the levies were temporary and that the income from the levies on ships and motor vehicles would be lodged in a special account in the Bank of Norway and not touched without obtaining the special consent of Parliament.

Apart from the special measures approved on Monday, the Minister of Finance announced other steps to reduce imports this year. Imports from Eastern Europe would be kept at the level laid down in the trade agreements, and the liberal licensing policy for additional imports which was followed last year would not be repeated this year. The Minister indicated that steps woul. be taken to reduce lending by the banks. Saving would be encouraged. A State loan of 500,000,000 kroner (£25,000,000) would be floated at a rather higher rate of interest than before. The State would cut its capital expenditure, and the local authorities would be asked to do likewise.

The Minister of Finance said that Norway's foreign payments difficulties and the pressure on prices and wages were the result of the very high level of economic activity, and in particular the high rate of investments. The Norwegian economy was expanding more rapidly than ever before. The nation's capital equipment was better, and production greater, than any time previously. Output in 1954 was 56 per cent. greater than in 1938. The merchant fleet had increased from 4,900,000 to almost 7,000,000 gross tons, and the generation of electricity by almost 100 per cent. as compared with before the war. Private consumption was 30 per cent. greater per head than in 1938.

GOVERNMENT OF INDIA'S BUDGET

(Concluded from page 411)

Lastly, a slab system was being prescribed for export duties on tea in lieu of the existing flat rates. He explained that, while a specific rate tended to become onerous in a period of falling prices, the incidence of the tax in terms of value became, when prices were rising, progressively lighter with a flat rate. On account of the numerous qualities of tea, it had not been possible to devise a system of *ad valorem* assessment, and certain slab rates, varying with value, were being prescribed as a compromise.

The effect of these changes would be a loss of Rs. 50 lakhs in revenue.

Changes in Union Excise Duties

The Finance Minister then dealt with changes in Union excise duties. His first proposal was to raise the existing duty of Rs. 3-12 per cwt. on sugar to Rs. 5-10 per cwt. Consumption of crystal sugar had increased necessitating large imports at considerable expenditure of foreign exchange. The Taxation Enquiry Commission had favoured a substantial increase in duty. The additional revenue was estimated at Rs. 5 crores.

His second proposal was to classify cotton cloth into two categories, superfine and others, and to prescribe the rate of duty on superfine cloth at 2½ annas per *square yard* and on other cloth at one anna per *square yard*. This involved an increase equivalent to about three pies a linear yard on superfine cloth and six pies a linear yard on medium and coarse cloth. He explained that the present classification into four categories as a basis of tax differentiation and as indicating the broad sections of the community using the cloth had become somewhat unrealistic. The Taxation Enquiry Commission had also taken the view that there was a case for enhancement of the rate on all varieties. The special cess of three pies a yard for the development of the handloom industry would be levied in addition. The additional revenue from these readjustments would amount to Rs. 9 crores.

His third proposal was to increase the existing preference margin for the medium-sized and cottage group of match factories. The existing margin in respect of match boxes of 40's for medium-sized factories, which was one anna per gross of boxes, was being increased to two annas per gross of boxes and suitable increases were being made in the margin in respect of other categories. These concessions, which were being given in pursuance of Government's policy of fostering the development of small-scale industries, would result in a loss of revenue of Rs. 50 lakhs of which the States' share would be Rs. 20 lakhs.

His fourth proposal was to readjust certain duties on cigarettes, in accordance with the Taxation Enquiry Commission's recommendations. The temporary surcharge of 3 pies and 6 pies per 10 cigarettes was being removed from the category of the value of Rs. 10 to Rs. 15 per thousand and was being merged with the basic duty on other categories. The duty on the category of cigarettes of the value of Rs. 40 to Rs. 50 per thousand was also being increased suitably. These changes taken together had no revenue significance.

Turning to new excises, Mr. Deshmukh mentioned that the Taxation Enquiry Commission had recommended the imposition of a large number of new excise duties. "I feel myself," he continued, "that an expansion of revenue from excises is, in the context of our requirements and also in the pattern of industrial development in the country, inescapable and that we shall increasingly have to look to the products of organised industries in the country which have grown up under the shadow of protection, both for bringing in additional revenue and replacing the loss from customs resulting from the replacement of imported manufactured goods by indigenous production." He proposed to make a beginning with a number of these new excises in the coming year and to levy a duty of 10 per cent. *ad valorem* on woollen fabrics, sewing machines, electric fans, electric lighting bulbs, electric dry and storage batteries, paper (excluding newsprint) and paper board, and paints and varnishes. The total estimated revenue from these excises would be Rs. 4 crores.

The net additional revenue from the changes in excise duties would amount to Rs. 17.7 crores.

The Finance Minister then came to changes in direct taxation. He said that the broad pattern of adjustments suggested by the Taxation Enquiry Commission had been accepted by Government with such modifications as had been found necessary and desirable. The budget proposals did not cover all the recommendations of the Commission but only such of them as had been found immediately practicable and feasible.

Dealing with the changes in the tax structure, he announced the following:

(i) The existing tax exemption slab of Rs. 1,500 was being raised to Rs. 2,000 for married persons and reduced to Rs. 1,000 for unmarried persons as a first step towards a scheme of family allowances. The net loss of revenue was estimated at Rs. 90 lakhs.

(ii) The existing slab of Rs. 5,000 to Rs. 10,000 was being broken into two, the tax on the slab of Rs. 7,500 to Rs. 10,000 being raised by six pies from one anna nine pies to two annas three pies. This was expected to yield a revenue of Rs. 1.35 crores.

(iii) In the next slab of Rs. 10,000 to Rs. 15,000, the rate was being raised from three annas to three annas three pies. Additional revenue expected was Rs. 85 lakhs.

(iv) As a first step in the abolition of concession of earned income on higher brackets of income, the earned income relief of Rs. 4,000 would be reduced by Rs. 200 for each Rs. 1,000 of income in excess of Rs. 25,000, ceasing altogether when the level of Rs. 45,000 was reached. Additional revenue estimated was Rs. 1.9 crores.

(v) The super-tax slab would be readjusted and the level at which super-tax was attracted reduced from Rs. 25,000 to Rs. 20,000. The changes were estimated to yield an additional revenue of Rs. 5.75 crores.

(vi) The existing limit of one-sixth of income, subject to a ceiling of Rs. 6,000 for rebate, allowed for payment of premia on life insurance policies and subscriptions to provident funds was being raised to one-fifth of income with a ceiling of Rs. 8,000, corresponding increases being given to Hindu undivided families. This concession would cost the exchequer Rs. 25 lakhs.

(vii) Hindu undivided families consisting of four members or more entitled to claim partition would be exempted from tax so long as their income did not exceed Rs. 12,600 and for such families the exemption limit for the payment of surcharge would also be raised from Rs. 14,400 to Rs. 21,600. The financial effect of these concessions was not likely to be substantial.

(viii) A development rebate of 25 per cent. of the cost of all new plant and machinery installed for business purposes would be allowed, instead of the existing initial depreciation allowance of 20 per cent. Losses of business would also be allowed to be carried forward indefinitely, instead of only for six years.

(ix) A number of changes were being made in the direction of rationalising the tax structure. Thus, the tax value of any perquisite or benefit drawn by salary earners drawing over Rs. 18,000 per annum and of directors of companies, and entertainment allowances of all kinds were being made subject to tax; and similarly compensation received for loss of managing agency or other agencies and compensation received for termination of employment would be subject to tax. A flat rate of super-tax of four annas in the rupee was being imposed on the undistributed profits of a company falling under Section 23-A, if 60 per cent. of the profits had not been distributed. Certain further concessions were being given to co-operative societies but co-operative insurance societies would be made subject to tax. The cumulative financial effect was not expected to be appreciable.

The changes in customs duties would result in a loss of Rs. 50 lakhs and the changes in match excise a loss of the same amount, of which Rs. 20 lakhs would be passed on to the States. The new and increased excise duties would yield Rs. 18 crores and changes in income-tax would yield Rs. 8.7 crores of which the States' share would amount to Rs. 4.2 crores. In the result, Central revenues would increase by Rs. 21.7 crores, leaving an uncovered deficit on revenue account of Rs. 8.47 crores.

In the closing portion of his speech, the Finance Minister made a brief reference to the Plan. He said that, like the budget of the previous years, this budget had also been framed with the main purpose of securing the orderly implementation of the Plan. The Plan was formulated under difficult circumstances with inflation, shortages and the like clouding the economy. "The aim," he said, "was to make a good enough beginning and, looking back over the four years, I venture to suggest that this has been done with some success." He said that the next Plan must provide for more accelerated development consistent with the stability of the economy and the country's declared policy of adherence to democratic methods. In his view, the success of the second Five-year Plan would depend upon two main factors, organisation and finance. It was not and could never be a question of formulating physical targets and leaving financial considerations aside. Both had to be correlated and the maximum amount of resources currently raised for investment and production. "It is," he continued, "because the raising of maximum resources is necessary for planned development that I make the large draft which I have made today on the taxpayers' purse."

PROFIT OF KOHINOOR DROPS BY 37 PER CENT.

BONUS TO SHAREHOLDERS NOT REPEATED

A DROP of Rs. 24.30 lakhs, that is, from Rs. 65.22 lakhs to Rs. 40.92 lakhs, in gross profit is disclosed by the financial results of the Kohinoor Mills Company, Ltd. (Agents: Killick Industries Ltd., Bombay), for the year ended 31st December, 1954. Such a recession may not cause any surprise to the shareholders of the Company, inasmuch as they had been well prepared for such an eventuality, what with the declining trend in cloth prices and the burden of the additional excise duty on cotton cloth, the new excise duty on art silk, and the Labour Appellate Tribunal's Award in respect of additional bonus for 1952 and additional dearness allowance for 1953 and 1954. On the other hand, they have every reason to feel gratified that the recession in profit has not been more, as would have been the case if the Labour Appellate Tribunal had upheld the Industrial Court's Award *in toto*. Further, the cut in dividend has not been so drastic as the decline in profit would warrant. As readers are already aware, the distribution to shareholders has been reduced from 20 per cent. (*made up of a dividend of* 18 per cent. and a bonus of 2 per cent.) to 18 per cent. by withholding the bonus.

After providing a larger sum of Rs. 17.76 lakhs for depreciation, as against Rs. 14.97 lakhs in the previous year, and cutting down the provision for taxation from Rs. 17.80 lakhs to Rs. 5.55 lakhs, the net profit amounts to Rs. 13.51 lakhs, as compared with Rs. 25.88 lakhs for 1953. While a sum of Rs. 6 lakhs had been transferred to the reserves last year, the Directors have not allocated anything to the reserves out of the profit for 1954. On the other hand, they have drawn Rs. 1.75 lakhs from the dividend equalisation reserve and Rs. 75,000 from the general reserve to supplement the net profit. Even so, the amount thus available is not sufficient to pay the proposed dividend of 18 per cent. which requires Rs. 18 lakhs. The sum of Rs. 2.11 lakhs brought in from the previous year has, therefore, come in handy for this purpose.

The salient features of the Company's working results for the year under review are compared with those for the previous three years in the following table, which gives an idea of the Company's progress since 1951:

(In lakhs of rupees)

	For the year ended 31st December			
	1954	1953	1952	1951
Sale proceeds (net)	681.33	706.74	725.27	814.86
Other receipts	0.67	0.49	1.59	1.46
Cotton and fibre consumed ..	354.11	338.69	432.45	444.33
Silk and other yarn consumed..	15.96	14.33	30.02	22.03
Other expenses	301.00	289.00	240.37	256.46
Gross profit	40.92	65.22	23.22	93.02
Agents' remuneration	4.10	6.56	5.42	9.39
Depreciation	17.76	14.97	14.38	18.22
Taxation	5.55	17.80	3.00	28.00
Net profit	13.51	25.88	0.42	37.41
E.P.T. post-war refund (net) ..	..	..	18.83	..
Transfer from reserves ..	2.50	..	..	..
To reserves	..	6.00	1.00	12.00
Dividend	18.00 (D. 18%)	20.00 (D. 18% + B. 2%)	18.00 (D. 18%)	25.00 (D. 18% + B. 7½)
Carry forward	0.12	2.11	2.29	2.49

Note.—D.—Dividend. B.—Bonus.

The decline in net sale proceeds by Rs. 25.41 lakhs has been offset only partially by the fall of Rs. 14.58 lakhs in cost of cotton and fibre consumed. On the other hand, there has been an increase of Rs. 1.63 lakhs in cost of silk and other yarn consumed and of Rs. 12 lakhs in other expenses. It will be observed that, in the course of the last three years, the net sale proceeds have declined by Rs. 1.33 crores and the cost of raw materials consumed by Rs. 1.26 crores, but expenses have gone up by Rs. 44.54 lakhs. The rise of Rs. 12 lakhs in expenses during 1954 is mainly accounted for by the rise of Rs. 14.89 lakhs in salaries, wages and dearness allowance, against which other expenses have declined by Rs. 2.89 lakhs. A sum of Rs. 2.82 lakhs has been paid on account of additional bonus for 1952 and of Rs. 13.98 lakhs in respect of additional dearness allowance for 1953 and 1954, as per terms of the L.A.T.'s award. But for this additional impost of Rs. 16.80 lakhs, *there* would have actually been a saving of Rs. 1.91 lakhs under salaries, wages and dearness allowance, so that the total expenses, other than raw materials consumed, would have been lower by Rs. 4.80 lakhs. Even so, *that is*, even if the Labour Appellate Tribunal's award had not been there, the profit would have shown a slight shrinkage, as was indicated in our issue dated 19th February (*vide* page 295).

In addition to the aforesaid provision of Rs. 17.76 lakhs for depreciation set aside from the profit for the year under review, the Directors have appropriated a further sum of Rs. 8 lakhs for depreciation from the machinery reserve account. The Directors state that all taxation upto and including the Company's year ended 31st December, 1953, has been agreed to with the income-tax authorities.

Referring to the trading conditions that prevailed during the year under review, the Directors observe as follows:

"The only remaining control, namely, that on production, remained throughout the year, but, as mentioned last year, deviation orders were given fairly freely. The *Dhotis Control Order* remained in force throughout the year, but no further measures were introduced by the Government. Cotton prices remained fairly steady throughout the year, with a tendency for foreign growths to appreciate towards the close and the indigenous growths to weaken. Throughout the year, there has been a downward tendency in the price of fabrics."

The Company's financial position continues to be impressive. Thus, the reserves and surplus, as on 31st December, 1954, aggregate Rs. 144.62 lakhs, as against a paid-up capital of Rs. 100 lakhs. Of the reserves, general reserve (after the transfer of Rs. 75,000 to the profit and loss account) accounts for Rs. 22.25 lakhs, machinery reserve (after transferring Rs. 8 lakhs to depreciation account) for Rs. 90 lakhs, dividend equalisation reserve (after the transfer of Rs. 1.75 lakhs to the profit and loss account) for Rs. 21.25 lakhs and employees' pension and gratuity fund for Rs. 11 lakhs. Provision for taxation is nil and current liabilities aggregate Rs. 143.30 lakhs. There has been an addition of Rs. 23.69 lakhs to the gross block during the year, bringing the total value as at the end of the year to Rs. 349.59 lakhs. This has been written down by Rs. 246.94 lakhs, so that the book value is only Rs. 102.65 lakhs. The current assets aggregate Rs. 285.27 lakhs, of which stock-in-trade and stores, fuel, etc., account for Rs. 253.94 lakhs. The excess of current assets over current liabilities amount to Rs. 141.97 lakhs.

During the year under review, new machinery of the value of Rs. 19.71 lakhs was received and machinery to the value of Rs. 29.60 lakhs, including a sanforising plant, was erected.

The Rs. 100 fully paid-up shares of the Company are being currently quoted at Rs. 317 *cum-div.* On an *ex-div.* basis, the shares give a yield of 5.9 per cent. per annum, free of tax.

EXCELLENT RESULTS OF MADURA MILLS

PROFIT HIGHEST SINCE 1948

THE year ended 31st December, 1954, has turned out to be one of the most prosperous ones for the Madura Mills Co., Ltd. (Managers: Messrs. A. & F. Harvey, Ltd., Madurai) in its post-war history. Its gross profit for the year under review, for instance, aggregates Rs. 131.90 lakhs, a rise of Rs. 29.77 lakhs over that for the previous year. This increase compares well with that of Rs. 11.65 lakhs noted a year ago. Thus, this is the second year in succession for which the profit has shown an upward trend, after the sharp fall from Rs. 125.45 lakhs earned in 1951 to Rs. 90.48 lakhs in 1952. It will also be noted that the profit for the year under review has exceeded that for 1951 by a handsome margin of Rs. 6.45 lakhs; indeed, it constitutes the highest since 1948, when the profit aggregated Rs. 214.07 lakhs.

The net profit, which had shrunk from Rs. 59.33 lakhs in 1951 to Rs. 45.46 lakhs in 1953, has recovered to Rs. 55.31 lakhs; but it still falls short of that earned in 1951 by Rs. 4.02 lakhs. Notwithstanding the somewhat undulating profit curve, the dividend to shareholders has been kept unchanged at 20 per cent. per annum for the fourth year in succession, after it had been raised in 1951 from 15 per cent. for 1950. It is noteworthy that the dividend has been maintained only after strengthening the reserves by a sizable amount, as will be seen from the following table, wherein the main features of the year's results are presented against the background of those for the previous three years:

(In lakhs of rupees)

	Year ended 31st December			
	1954	1953	1952	1951
Sale proceeds (net)	16,01.79	16,22.48	16,51.70	16,80.56
Raw materials consumed	10,85.04	9,78.44	11,36.46	13,05.97
Wages and other expenses	4,86.84	4,56.11	4,87.03	4,01.59
Gross profit	1,31.91	1,02.13	90.48	1,13.45
Managing Agents' commission ..	13.30	7.99	8.79	12.99
Provision for—				
Depreciation	19.03	17.94	8.71	8.58
Taxation	45.26	30.80	26.71	44.60
Net profit	55.31	45.46	46.24	59.33
To reserves	20.00	10.00	15.00	25.00
Dividend	35.00 (20%)	35.00 (20%)	35.00 (20%)	35.00 (20%)
Carry forward	9.67	9.36	9.36	12.92

A gratifying feature disclosed by the above table is that the Company's earnings for the year under review are higher than those for 1951, despite the fact that its turnover, as indicated by the sale proceeds of yarn and waste, is lower by nearly Rs. 2.30 crores. This is due to the sizable fall (Rs. 2.71 crores) in cost of raw materials consumed. Notwithstanding the decline of about Rs. 13 lakhs during 1954, wages and other expenses are higher than those in 1951 by over Rs. 35 lakhs.

While on the subject of wages and expenses, it will not be out of place to point out that the agreement entered into between the management and the workers' unions in April, 1951, in respect of annual bonus to workers for the years 1950, 1951 and 1952 had expired and the management and the workers' unions were unable to come to a similar agreement in respect of the bonus for 1953. After attempts at negotiations with the unions and conciliation proceedings before the Madras Labour Commissioner had proved unsuccessful, the question was referred to the Madurai Industrial Tribunal. This Tribunal gave its findings in August, 1954, but these have been appealed against and the appeal is at present pending before the Labour Appellate Tribunal. The Directors have, however, made provision in the accounts for the year under review, in accordance with the award of the lower Tribunal. Any relief obtained as a result of the pending appeal will be brought into credit in the accounts for 1955. In the meantime, the Directors are unable to forecast what bonus, if any, will be payable in respect of the year 1954; but, if any bonus is payable in respect of that year, it will be treated as a charge against the trading results for the current year.

The balance-sheet of the Company as on 31st December, 1954, discloses a sound financial position. The paid-up capital is unchanged at Rs. 175.02 lakhs, of which Rs. 115.86 lakhs represent that raised by the capitalisation of reserves. The reserves and surplus aggregate Rs. 423.49 lakhs, made up of a renewal and replacement reserve of Rs. 243.82 lakhs, a general reserve of Rs. 170 lakhs and a surplus of Rs. 9.67 lakhs. The provision for taxation, less taxation advance payments, stands at Rs. 21.76 lakhs. The current liabilities have been reduced from Rs. 176.27 lakhs as at the end of 1953 to Rs. 137.86 lakhs, mainly due to the repayment of the loans from

(*Continued in previous column*)

(*Concluded from next column*)

banks secured by stocks and guarantee amounting to Rs. 47.23 lakhs, which had remained outstanding at the close of 1953, and a decline of Rs. 9.25 lakhs in sundry creditors. There has been a net addition of Rs. 20.67 lakhs to the fixed assets, bringing the gross value of the block to Rs. 566.33 lakhs. The depreciation provided so far on this block amounts to Rs. 344.90 lakhs; the book value thus stands at Rs. 221.43 lakhs. The current assets aggregate Rs. 536.90 lakhs, made up of stock-in-trade amounting to Rs. 289.45 lakhs, stores and spares Rs. 82.77 lakhs, book debts, deposits and advances Rs. 35.33 lakhs, investments in shares at or below cost Rs. 26.47 lakhs and cash balances Rs. 102.88 lakhs. Thus, the current assets exceed the current liabilities and provision for taxation by a large margin.

The Rs. 15 fully paid-up ordinary shares of the Company are being currently placed on the Madras Stock Exchange at Rs. 46-2 *cum-div.* On an *ex-div.* basis, the latest dividend gives a yield of nearly 7 per cent. per annum, free of tax.

DECARTELISATION IN SWEDEN

No less than one-third, or 470, of all cartel agreements registered by the Monopoly Investigation Office of the Swedish Board of Trade have been cancelled since its activities started in 1946, reports Mr. Sven Bouvin, head of the office. Last year, 115 new cartels were registered, as against 309 in 1953, while 68 agreements were cancelled. Altogether, 1,247 agreements on monopolistic practices were on record at the end of 1954.

Commenting on the results, Mr. Bouvin states that the voluntary decartelisation in industry and trade—promoted by the Cartel Bureau of the Federation of Swedish Industries—now seems to be functioning satisfactorily. The proportion of cancelled agreements within the total of cartels registered has increased year by year and most fields have now been covered, he says.

KUMERGODE ESTATE PAYS MAIDEN DIVIDEND

PROGRESS SATISFACTORY

THE financial results of the Kumergode Estates Ltd. (Managing Agents and Secretaries: Messrs. Peirce Leslie & Co., Ltd., Kozhikode, Malabar), for the year ended 31st October, 1954, disclose that the progress made by this young company since its inception in June, 1951, has been well consolidated. No doubt the output of coffee, the main produce of the Company, which had increased from 1,316 cwts. in 1950-51 to 1,987 cwts. in 1952-53, shows a slight decline to 1,880 cwts. in the year under review; but the upward trend in earnings has been maintained. Thus, the net profit, after providing for depreciation, which aggregated Rs. 29,369 in 1950-51, has risen to Rs. 69,186 in 1953-54, a rise of Rs. 39,817 in the course of three years.

From the aforesaid profit for the year under review, the Directors have written off the preliminary expenses amounting to over Rs. 24,000, created a general reserve aggregating Rs. 50,000 and declared a maiden dividend of 10 per cent. absorbing Rs. 20,000, leaving a surplus of about Rs. 70,000 to be carried forward.

The following comparative table giving the salient features of the Company's working results for the last three complete years provides an idea of the Company's progress:

	For the year ended 31st October		
	1954	1953	1952
	Rs.	Rs.	Rs.
Proceeds of coffee crop	3,75,902	3,48,554	2,06,523
Proceeds of other crops	2,492	2,775	7,630
Estate expenditure	2,58,552	2,30,270	2,11,840
Other expenses	82,057	39,066	38,645
Gross profit	87,584	76,485	56,858
Managing Agents' commission ..	8,603	6,199	4,708
Depreciation	9,775	9,005	8,737
Taxation	69,186	59,291	42,769
Net profit	24,380	..	..
Preliminary expenses written off..	..	26,846	..
Loss prior to incorporation written off	50,312	..	641
To reserves	20,000	..	..
Dividend	(10%)		
Carry forward	69,575	95,081	72,138
Coffee crop (in cwts.)	1,880	1,987	1,430
Value of coffee per point	Rs. 2-8-0	Rs. 2-4-0	Rs. 2-11-0
Cardamom crop (in lbs.)	132.75	269.50	580.75

The crop of coffee for 1953-54, at 1,880 cwts., shows a decline of only 107 cwts. from the previous year's crop, but is well above the estimate of 1,680 cwts. made a year before. The decline in crop has, however, been more than made good by the increase of As. 4 to Rs. 2-8 per point in the price of coffee, so that the sale proceeds of the crop are better.

The rise in estate expenditure, the bulk of which represents that on coffee, is due to the Company's policy of replanting poor areas and of consolidating and exploiting the good, so as to increase the yields. As will be seen from the table above, such a policy has yielded good results. Within two years, the Company was able to write off the loss prior to incorporation out of the profit for 1952-53. This year, it has been able to write off, as already stated, the preliminary expenses amounting to Rs. 24,380. In addition to the allocation of Rs. 50,000 to the general reserve, the Directors have provided Rs. 312 to the reserve for doubtful debts.

The coffee crop for the year 1954-55 is estimated at 125 tons and the present indications, according to the Directors, are that this estimate will be exceeded and 150 tons of coffee might be harvested.

The following extract from the visiting Agent's report on the Company's progress and the outlook will be read with interest:

"It is pleasant to be able to record the completion of another year of useful progress. Though Robusta crops have been poor, those from Arabica have maintained a steady upward trend, despite acreage drastically reduced by borer losses. This trend will continue in the coming crop and may be expected to improve as supplies and replantings come into bearing year by year from now onwards and also as a result of better manuring and spraying. Our greatest handicap hitherto has been Arabica stem borer, but indications are that we have now got the measure of it. If so, and in view of the factors mentioned above, the future can be viewed with some confidence."

The Company's paid-up capital stands at Rs. 2 lakhs, made up of 100,000 ordinary shares of Rs. 2 each. The reserves and surplus aggregate Rs. 1.25 lakhs. There is a debenture liability of Rs. 3 lakhs, on account of 7½ per cent. first mortgage debentures issued at par. These debentures are liable to be redeemed at par at the rate of Rs. 30,000 per annum commencing from 1st January, 1955, though the Company has the right to redeem them entirely at any time after 1st January, 1955, subject to three months' notice. The current liabilities aggregate Rs. 50,519. The gross block of the value of Rs. 5.74 lakhs has been written down to Rs. 5.44 lakhs. The current assets amount to Rs. 1.39 lakhs and exceed the current liabilities by a comfortable margin.

The Rs. 2 paid-up shares of the Company are being currently quoted at Rs. 4-1 *cum-div.* On an *ex-div.* basis, the latest dividend gives a yield of 5.2 per cent. per annum.

Points From The Chair

Duty on Tobacco

"THE more distant picture is, of course, clouded by the duty question. The Treasury and the Board of Customs and Excise are in no doubt of the views we hold as to the vital need in the interests both of the national revenue and of this industry for a start to be made soon in the process of reducing the rate of duty to a less penal level. There may be some who would say that a year in which the revenue from this duty is showing such buoyancy is a strange time to argue for a reduction. To that I would reply: first, that the apparent buoyancy is chiefly due to a long delayed availability of leaf tobacco in quantities sufficient to enable manufacturers to meet public demand (and partly, of course, to increased stocks in distributors' hands), secondly, that some of the extra revenue from this 'buoyancy' might wisely be regarded as a reserve towards meeting the first cost of a duty reduction that would help to strengthen the basis of future revenue. The demand itself has not grown, and great as, in my judgment, are the positive benefits which smoking can confer on mankind, the price of starting to smoke is made to look unduly high by the present rate of duty."

SIR ROBERT SINCLAIR,
Imperial Tobacco Co. (of Great Britain and Ireland) Ltd.

Steel Industry

"It must be remembered that in a basic industry such as steel the raising of production by a substantial amount entails the expenditure of vast sums of money, and the lapse of several years before the plan can be put into operation. Much has been said as to what should be the output of steel in this country, and widely varying totals have been mentioned, but the great progress in production that has been made since the war should not be overlooked. In 1946, the output was 12,700,000 tons; in 1954, it was 18,520,000 tons, and, with the present plans in contemplation, it is expected that by 1958 it may reach 22,000,000 tons or thereabouts. The whole question of the shortage of steel sheets is being earnestly considered by the industry and an endeavour is being made to forecast on a realistic basis the likely requirements in the next few years."

RICHARD F. SUMMERS,
John Summers & Sons Ltd.

Future of Tanning Industry in the U.K.

"With regard to the future, it must be admitted that the position of the tanning industry continues to give rise to anxiety. The fact that the United States now has an exportable surplus of some 6,000,000 hides a year, whereas before the war it used to import a net 2,000,000, has undoubtedly altered the pattern of the international hide market. As far as this country and Europe are concerned, the availability of these North American hides is greatly determined by the extent to which Governments are able to make dollars available for the purpose. The great increase that has taken place in freight charges, as compared with the charges before the war, has clearly placed the tanning industry in this country at some disadvantage. The seasonal increase in our domestic kill, which in recent years has been so much in evidence during the months of August to December, has also had a disturbing effect upon the market. Over and above all this, it has been difficult to gauge the extent to which substitute materials will replace leather for soling materials."

GEORGE W. ODEY,
Barrow Hepburn & Gale Ltd.

Economic Progress of Britain

"Since I addressed you in March, 1954, it must be a source of satisfaction to us all that the improvement in the country's economic position, to which I then referred, has continued and gathered strength in the year which has since passed. The high level of our export trade, with the related rise in imports, and the considerable increase in our gold and dollar reserves, are matters which entitle us to feel a certain measure of satisfaction. But that must not be accompanied by any feeling of complacency. Ever-increasing efforts are required to maintain, let alone increase, our share of world trade and to keep our prices competitive in world markets. The further increase in productivity recorded during the year is satisfactory, but it cannot be too often emphasised that it is only by greater and more efficient production that real wages can be raised. A mere increase of money wages, followed inevitably by a rise in prices, can only result in a further fall in the purchasing power of the pound and, if pursued, in our pricing ourselves out of world markets. It should also be borne in mind that boom conditions, if continuing too long or carried too far, may result in demand outstripping production—a tendency, which no doubt the recent rise in Bank rate was intended to curb."

THE DUKE OF BUCCLEUCH AND QUEENSBERRY,
The Royal Bank of Scotland.

COMPANY MEETINGS AND DIVIDENDS

HALL AND ANDERSON LTD. Annual General Meeting, Calcutta, 7th March, 1955. Transfer books remain closed from 22nd February to 7th March, 1955, both days inclusive.

KUMERGODE ESTATES LTD. Annual General Meeting, Kozhikode, 9th March, 1955. Dividend: As. 3 1/5 (10 per cent.) per share. Transfer books remain closed from 24th February to 9th March, 1955, both days inclusive.

BENARES ELECTRIC LIGHT AND POWER CO., LTD. Half-yearly General Meeting, Calcutta, 10th March, 1955. Dividend: As. 10 per share. Transfer books remain closed from 4th to 10th March, 1955, both days inclusive.

NATIONAL CO., LTD. Half-yearly General Meeting, Calcutta, 11th March, 1955. Dividend: Re. 1 per share. Transfer books remain closed from 25th February to 11th March, 1955, both days inclusive.

HUMAYAN PROPERTIES LTD. Annual General Meeting, Calcutta, 11th March, 1955. Transfer books remain closed from 4th to 11th March, 1955, both days inclusive.

GUZDAR KAJORA COAL CO., LTD. Half-yearly General Meeting, Calcutta, 14th March, 1955. Dividend: *Nil*. Transfer books remain closed from 3rd to 14th March, 1955, both days inclusive.

PURE SITALPUR COAL CONCERN LTD. Half-yearly General Meeting, Calcutta, 14th March, 1955. Dividend: *Nil*. Transfer books remain closed from 3rd to 14th March, 1955, both days inclusive.

SHREE MAHAKALI COAL MINES LTD. Annual General Meeting, Calcutta, 14th March, 1955. Dividend: *Nil*. Transfer books remain closed from 3rd to 14th March, 1955, both days inclusive.

UNITED MOTORS (INDIA) LTD. Annual General Meeting, Bombay, 15th March, 1955. Transfer books will remain closed from 8th to 22nd March, 1955, both days inclusive.

RALLIS INDIA LTD. Annual General Meeting, Calcutta, 17th March, 1955. Dividend: *Nil*. Transfer books will remain closed from 7th to 17th March, 1955, both days inclusive.

KOHINOOR MILLS CO., LTD. Annual General Meeting, Bombay, 17th March, 1955. Dividend: Rs. 18 per share (includes interim dividend of Rs. 6 per share). Transfer books remain closed from 18th February to 17th March, 1955, both days inclusive.

SAPOI TEA CO., LTD. Interim dividend of Re. 1 per share (10 per cent.), for the year ended 31st December, 1954, payable on 31st March, 1954. Transfer books will remain closed from 18th to 31st March, 1955, both days inclusive.

DHUNSERI TEA CO., LTD. Interim dividend of Re. 1 per share (10 per cent.), for the year ended 31st December, 1954, payable on 31st March, 1955. Transfer books will remain closed from 18th to 31st March, 1955, both days inclusive.

SHIVRAJPUR SYNDICATE LTD. Dividend of Rs. 8 per share (includes bonus of Rs. 3 per share), free of income-tax, for the year ended 30th November, 1954. Transfer books remain closed from 4th to 31st March, 1955, both days inclusive.

AHMEDABAD ELECTRICITY CO., LTD. Final dividend of Rs. 4 per share, for the year ended 30th September, 1954. Transfer books will remain closed from 10th to 28th March, 1955, both days inclusive.

DHANALAKSHMI MILLS LTD. Dividend of Rs. 30 per ordinary share, free of tax, for the year ended 31st December, 1954. Transfer books will remain closed from 7th to 20th March, 1955, both days inclusive.

PROFIT OF ALKALI AND CHEMICAL WELL MAINTAINED

RAYALASEEMA MILL RAISES DIVIDEND

Alkali and Chemical Corporation of India, Ltd.

THE directors of the above Company (Secretaries: Imperial Chemical Industries (India) Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th September, 1954.

The net profit of the Company for the year, after provision has been made for depreciation, is Rs. 8,37,316 (Rs. 8,14,151) to which has to be added the balance brought forward from the previous year of Rs. 1,03,311 (Rs. 2,51,871) making a total profit available of Rs. 9,40,627 (Rs. 16,08,236). The directors have allocated to reserve for deferred income-tax liabilities due to initial allowances Rs. 3,00,000 (Rs. 3,00,000). Last year, the directors had, in addition to this reserve for deferred taxation liability set aside Rs. 6,77,925 towards adjustment of provision for taxation in respect of previous years and provision for income-tax on sale of Khewra fixed assets. No such provision has been made out of the profit for 1953-54. The dividends paid on preference shares for the year to 30th September, 1954, have absorbed Rs. 1,55,000 (Rs. 1,55,000). The directors now recommended a dividend of 6 (6) per cent. on the ordinary shares for the year which will absorb Rs. 3,72,000 (Rs. 3,72,000), leaving to be carried forward an amount of Rs. 1,13,627 (Rs. 1,03,311).

The year's results reflect the working of the Rishra Factory exclusively. The Khewra Factory in Pakistan was sold in the previous year, and this explains the lower turnover this year.

Sales of caustic soda and chlorine continued to be reasonably satisfactory, though, due to strong competition, the off-take of chlorine was insufficient to allow the newly-extended plant to work at full capacity. Much attention continued to be paid to new outlets for chlorine in the manufacture of other products. The production of hydrochloric acid increased steadily during the year up to the plant's maximum output.

Good progress was made in the operation of the crude BHC plant, and production to full rated capacity has been achieved. Competition continued to be intense. The high reputation of the "Gammexane" formulations, however, assured a good demand for them, particularly for the "Gammexane" water dispersible powder.

In spite of competition in paints, production and sales of "Dulux" and "Duco" products showed an encouraging increase. During the year a complete range of metal pretreatment products was put on the market.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	93,00,000	Block ...	1,51,12,512
Reserves ...	53,00,020	Stock of finished goods ...	30,81,975
Provision for taxation ...	20,272	Stores and raw materials ...	42,50,989
Liabilities ...	1,09,52,745	Debts, deposits and advances ...	30,23,093
Profit and loss account ...	1,13,627	Cash ...	2,38,095
	Rs. 2,56,86,664		Rs. 2,56,86,664

Rayalaseema Mills Ltd.

The directors of the above Company (Managing Agents: The Rayalaseema Development Co., Rayanagar, Adoni) submit the audited accounts of the Company for the year ended 31st December, 1954.

The accounts show that a profit of Rs. 2,42,820 (Rs. 3,99,596) has been made for the year 1954 after meeting all the expenses of operation and management and after providing Rs. 3,82,687 (Rs. 3,15,342) for depreciation to which has to be added the amount of profit for the previous year of Rs. 4,43,981 (Rs. 10,14,238) making a total of Rs. 6,86,800 (Rs. 14,13,834). Out of this amount the following appropriations have been made in the year 1954:—

Bonus to employees Rs. 18,225 (Rs. 35,825), provision for taxes Rs. 50,000 (Rs. 50,000), plant replacement reserve Rs. 1,50,000 (Rs. 1,00,000), dividend equalisation reserve Rs. 50,000 (Rs. 50,000) and payment of dividend Rs. 1,34,028 (Rs. 1,34,028) leaving an available balance of Rs. 2,84,547 (Rs. 4,43,981). The directors now recommend the following appropriations:—

To provision for taxes Rs. 10,000 (Rs. 50,000), plant replacement reserve Rs. 50,000 (Rs. 1,50,000) and to dividend of 9 (6) per cent. on ordinary shares Rs. 2,01,042 (Rs. 1,34,028) leaving a balance of Rs. 23,505 (Rs. 41,727) to be carried forward to next year.

The Company has done satisfactorily during the year under report, inspite of the adverse contions of trade.

Price of cotton during the year 1954 was high. But the price of yarn produced by the mills was fairly steady throughout the year. The Government of India completely stopped all exports and no quota for export of yarn was issued. Contributions to provident fund of the Employees, fees for the State Insurance Scheme which is yet to be introduced in the area, maintenance of a canteen, elementary school, dispensary, creche, etc., are some of the amenities given to the workers of the mill which absorb a sizable portion of the business profits. Under these circumstances shareholders will indeed appreciate the satisfactory results achieved. This year four more godowns have been added in the mill premises for storage of cotton. About hundred quarters have been built for the workers in the Labour Colony site. A new well is being sunk there. Arrangements are being made to give them electric lighting also.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	22,23,375	Block ...	24,69,331
Reserves ...	11,60,000	Stock-in-trade	4,51,100
Provision for taxation ...	1,00,000	Stock of raw materials	8,60,685
Liabilities ...	8,28,048	Stock of mill stores, etc.	1,31,843
Profit and loss account ...	2,84,547	Debts, deposits and advances ...	3,68,548
		Investments	67,612
		Cash ...	2,46,851
	Rs. 45,95,970		Rs. 45,95,970

Benares Electric Light and Power Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th June, 1954.

Normal progress is being maintained as will be seen from the following schedule for the past three years:

Half-year ended	Units sold	Revenue
		Rs.
31st December 1951 ...	8,978,556	13,71,950
30th June 1952	9,544,518	12,56,930
31st December 1952 ...	9,926,818	14,50,157
30th June 1953	10,983,183	14,38,649
31st December 1953 ...	11,071,085	16,24,041
30th June 1954	11,233,253	14,49,894

After making adequate provision for liabilities and setting aside Rs. 19,884 (nil) to statutory contingencies reserve, a balance of Rs. 1,48,907 (Rs. 1,44,279) including Rs. 39,618 (Rs. 33,248) brought forward from the previous half-yay remains available, and this the directors recommend be disposed of as follows:—

Payment of a dividend at the rate of 10 (10) per cent. per annum free of income-tax Rs. 85,000 (Rs. 84,995), and additional As. 2 (As. 2) per share Rs. 21,250 (Rs. 21,249) and carrying forward to next half-year Rs. 42,657 (Rs. 38,035).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	17,00,000	Block ...	48,01,744
Debentures ...	12,00,000	Building and machinery under construction ...	8,57,627
Reserves ...	24,24,891	Stores, tools, etc. ...	11,23,769
Provision for taxation ...	1,14,623	Other assets	50,317
Liabilities ...	33,09,114	Debts, deposits and advances ...	15,95,075
Profit and loss account ...	1,48,907	Investments	1,72,168
		Cash ...	2,96,815
	Rs. 88,97,535		Rs. 88,97,535

Arthur Butler and Co. (Mozufferpore) Ltd.

The directors of the above Company (Managing Agents: North Bihar Trading Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st October, 1952.

The profits of the year after providing for depreciation but before provision for taxation, appropriation towards general reserve and provision for dividends on the cumulative preference shares as well as the ordinary shares in the Company for the previous year ended 31st October, 1951, declared on the 24th December, 1953, was Rs. 1,52,744 (Rs. 1,17,737) to which is added the balance brought forward of (Rs. 60,916 being the balance at credit of the profit and loss account as at the closing of the previous year, Rs. 50,000 (Rs. 35,000) being the over provision in taxation in respect of previous years no longer required and Rs. 6,275 being the total amount of miscellaneous receipts and realisations in respect of previous years) Rs. 1,17,191 (Rs. 91,775) making a total of Rs. 2,69,935 (Rs. 2,09,512). Out of the sum of Rs. 2,69,935 (Rs. 2,09,512) after providing a sum of Rs. 81,496 (Rs. 64,496) for taxation, placing a sum of Rs. 50,000 (Rs. 60,000) to general reserve, writing off miscellaneous expenses in respect of previous years amounting to Rs. 3,273 and allowing for the provision for dividends on the cumulative preference shares as well as the ordinary shares in the Company for the previous year ended 31st October, 1951 (for the year 31st October, 1950), amounting to Rs. 24,100 (Rs. 24,100), declared on the 24th December, 1953, there was a sum of Rs. 1,11,065 (Rs. 60,916) available for distribution.

As the Company has had to make heavy investments for purchase of large quantities of steel and other raw materials during the ensuing year for the execution of contract for Railway wagons on account of the Railway Board, Government of India, its liquid resources have been heavily depleted. That apart, the re-organisation and capital investments in plant, machinery, etc., necessitated on account of the new enterprise of wagon building, inevitably retarded the progress during the ensuing year. The directors, therefore, disposed of the amount of Rs. 1,11,065 (Rs. 60,916) available for distribution, as follows:—

Paid dividend on cumulative preference shares at 7 per cent. per annum, free of income-tax, Rs. 9,100 (Rs. 9,100) and carried forward the balance of Rs. 1,01,965 (Rs. 36,816 after paying dividend on ordinary shares at 2½ per cent. absorbing Rs. 15,000).

The directors would have declared a dividend on the ordinary share capital of the Company, but regretted their inability to do so due to the exigencies of circumstances, consequent upon the expansion schemes and the possibilities of a bright future they envisaged have acted as a deterrent factor in this regard which is nothing but a measure of prudence.

During the year, there was considerable improvement in the returns from the Structural Shop. This was due to the fact that an order for rebodying of 500 w.d. wagons for the N.E. Railway, kept this department fully occupied throughout the year. The returns from the other departments, however, have not been discouraging. The transport difficulties for raw materials as well as finished products to and from the works, no doubt, existed during the year, but on the whole, there was some improvement in this respect.

The Government of India, in the Ministry of Railways, has been pleased to place with the Company orders for building complete railway wagons for the next three years. The value of these orders is approximately Rs. 46 lakhs and the shareholders will be happy to learn that for the first time in the history of the Company an attempt to build railway wagons is being made and the progress since made in this direction has indeed been satisfactory. No doubt, switching over the Company on to this new venture calls for heavy capital investment which, the directors trust, will be forthcoming in due course. Situated as the Company's workshop are at Muzaffarpur, North Bihar, and that too on the metre-gauge line, best suited for the manufacture of metre-gauge wagons, which advantage no other wagon manufacturers in India at present enjoy, the directors hope, that this endeavour will in due course of time be crowned with success.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,30,000	Block ...	1,64,074
Debentures	3,00,00,000	Stock ...	13,59,504
Reserves ...	4,46,170	Work-in-progress ...	2,65,697
Provision for taxation ...	2,35,000	Goods-in-transit ...	18,013
Liabilities ...	13,40,599	Other assets	10,614
Profit and loss account ...	1,11,065	Debts, deposits and advances ...	11,34,775
		Investments ...	4,698
		Cash ...	2,05,459
	Rs. 31,62,834		Rs. 31,62,834

National Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st October, 1954.

After providing Rs. 3,30,000 (Rs. 3,15,000) for taxation, there is a balance of Rs. 5,55,626 (Rs. 5,08,618) at the credit of profit and loss account from which the directors recommend payment of dividends on preference shares at Rs. 3-8 per share Rs. 17,500 (Rs. 17,500), and on ordinary shares at Re. 1 (Re. 1) per share Rs. 3,50,000 (Rs. 3,50,000), leaving Rs. 1,88,126 (Rs. 1,41,118) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills Association the mills worked 42½ hours per week up to 10th July, 1954. From 12th July, 1954, working hours were increased from 42½ hours to 45 hours and again from 45 hours to 48 hours per week from 18th October, 1954. Throughout the period under review 12½ per cent. of the total looms remained sealed.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	40,00,000	Block ...	18,75,375
Reserves ...	44,29,326	Stock of jute	15,22,438
Provision for taxation ...	4,20,425	Stock of cloth and bags ...	7,46,875
Liabilities ...	11,08,128	Stores and spare gear	9,46,675
Profit and loss account ...	1,88,125	Debts, deposits and advances ...	4,53,379
		Investments	15,69,845
		Cash ...	30,31,417
	Rs. 1,01,46,004		Rs. 1,01,46,004

N.B.—Figures within brackets relate to the corresponding period of the previous year.

DIVIDENDS OF NETHERLANDS COMPANIES

Of the 443 Netherlands companies whose shares are dealt in on the Amsterdam Stock Exchange and whose dividends for the financial year 1953 were announced in 1954 (the financial year ending in the second half of 1953 or in the first half of 1954), 187 declared a higher, 201 an unchanged and 55 a lower dividend than for the preceding financial year. All the companies in the paper and cardboard industries, the pharmaceutical industry and the rubber-processing industry raised their dividends. Industrial sectors in which more than half the companies increased their dividends included the engineering and metallurgical industries, the chemical and electro-technical industries, the textile industry, the foodstuffs industry, breweries and public utilities.

STRINGENCY IN MONEY

(From Our Own Correspondent)

BOMBAY, 2nd March

After remaining somewhat subdued during the previous week, the short-term money market displayed liveliness once again during the week under review. The demand for funds broadened and almost all banks were keen borrowers. The floating funds were on an attenuated scale, with the result that the requirements of banks remained unsatiated and they had to seek help from the Reserve Bank or the Imperial Bank. The volume of business remained small on account of paucity of supplies.

In the inter-bank call money section, there were keen enquiries from all banks. The Exchange Banks, which were reported to be less interested in paying 3 per cent. at times during the previous week, were active bidders at 3 per cent. during the week under review, particularly after the steep rise in the Bank of England rate from 3½ per cent. to 4 per cent. last Thursday evening. Indian banks continued to offer 3 per cent. There was no change in the short-term deposit rates; these remained at the self-same level of 3 per cent. for one to six months and so also the rate for House Money at 3 per cent.

In the context of the aforesaid conditions, it is not surprising that the response to this week's tenders for the Government of India Treasury Bills showed signs of slackening. The amount offered against the usual invitation for Rs. 1 crore was a little over Rs. 2.76 crores, as against Rs. 3.72 crores offered in the previous week. It is, however, strange that the average rate of accepted tenders should drop from Rs. 2-8 per cent. to Rs. 2-7-8 per cent. per annum. It looks as though some investors in these Bills have been bidding at progressively lower rates in order to make sure of full allotment. This is the third week in succession that the rate has declined. The fall in the amounts tendered, however, shows that those who were keen on getting full allotment must have overestimated the extent of competition. The invitation for next week has been kept unchanged at Rs. 1 crore.

Very negligible variations are disclosed in the Issue Department by the statement of affairs of the Reserve Bank of India for the week ended 25th February, 1955, as compared with that for the previous week. Thus, notes in circulation show an expansion of Rs. 83 lakhs, while notes held in the Banking Department are lower by Rs. 46 lakhs, so that the total notes issued are higher by only Rs. 37 lakhs, which is covered by a corresponding increase in rupee coin. In the Banking Department, deposits of the Central Government are better by no more than Rs. 12 lakhs, while those of other Governments have gone up by no less than Rs. 8.56 crores. Deposits of banks have shrunk by Rs. 2.71 crores. Cash balances are lower by Rs. 42 lakhs and balances held abroad by Rs. 3.08 crores. A decline of Rs. 29 lakhs is noted in loans and advances to Governments, while other loans and advances have risen by Rs. 3.72 crores, of which advances to Scheduled banks against usance bills account for Rs. 1.47 crores. Government Treasury Bills purchased and discounted also disclose an increase of Rs. 2.60 crores. These variations are in tune with the increased demand for bank accommodation.

A rise of Rs. 9.59 crores in demand deposits is disclosed by the Scheduled banks' statement for the week ended 18th February, 1955, as compared with that for the previous week. Time deposits are also up by Rs. 56 lakhs. Inter-bank borrowings have risen by Rs. 25 lakhs, while borrowings from the Reserve Bank are lower by Rs. 1.24 crores. Advances show a decline of Rs. 1.10 crores. Inland bills and foreign bills purchased and discounted have, on the other hand, gone up by Rs. 6.47 crores and Rs. 1.75 crores, respectively. Investments have dropped by Rs. 91 lakhs. Total cash balances have risen by Rs. 1.69 crores and money at call and short notice by Rs. 2.20 crores.

The Gilt-edged market displayed featureless conditions during the week under review, but the undertone remained steady. Interest was confined to a few counters, but even here, the volume of business done was not on such a large-scale as to cause any marked variations in prices. 2½ per cent. 1960 continued to be in favour and rose by As. 2 to Rs. 94-14. 3 per cent. 1957 was placed at Rs. 99-4 *ex*-voucher, as against Rs. 99-5 *cum*-voucher a week ago. 3 per cent. 1958 dropped an anna to Rs. 99-3. 3 per cent. 1959-61 hardened by an anna to Rs. 97-5. 3 per cent. 1963-65 and 3 per cent. 1964 were unchanged at Rs. 93-11. 3 per cent. 1966-68 held its ground at Rs. 90-9 and 3 per cent. 1970-75 at Rs. 86-15. 3 per cent. 1986 Conversion Loan, which had improved by As. 2 to Rs. 81-2 in the previous week, was unchanged at that level. 3½ per cent. 1961 National Plan Bond was maintained at Rs. 99-9 and 3½ per cent. 1964 National Plan Loan at Rs. 98-8.

In the foreign exchange section, the banks' selling rate for the U.S. dollar was unchanged at Rs. 480¾ per $100, while the Bank's buying rate changed from Rs. 477 to Rs. 476½ per $100. Sterling continued to display strength in terms of the dollar. Thus, in New York, spot sterling hardened from $2.78-7/32—2.78-9/32 to $2.78⅞—2.78⅞, forward sterling (three months) from $2.77-9/16—2.77-11/16 to $2.77⅞—2.77⅞ and transferable sterling from $2.71⅞—2.71⅞ to $2.75⅞—2.75⅞.

TANNERS SUPPORT COW AND BUFF

(From Our Own Correspondent)

KANPUR, 27th February

During the week under review, conditions in the local hides and skins market were more or less the same as in the previous week. The supply position was quite satisfactory as far as the main items of the wet salted cow and buff were concerned. The main purchasers were the local tanners.

The latest quotations are as follows:—Wet salted cow 1st grade Rs. 430 to Rs. 440 per score; wet salted cow 2nd grade Rs. 340 to Rs. 360 per score; and 3rd grade: Rs 160 to Rs. 180 per score; wet salted buff 1st grade 1 lb. 8 ozs. per rupee, 2nd grade 1 lb. 10 ozs. to 1 lb. 12 ozs. per rupee, and 3rd grade 1 lb. 12 ozs. to 1 lb. 14 ozs. per rupee; goat 1st grade Rs. 325 and 2nd grade Rs. 275 per 100 pieces; and sheep skins Rs. 200 to Rs. 250 per 100 pieces.

SILVER FIRM

(From Our Own Correspondent)

BOMBAY, 2nd March

The silver section of the bullion market displayed buoyant conditions during the week under review, with a sharp advance in price to a level not seen for the past several months. Gold, on the other hand, was featureless and moved within a narrow range. The undertone of the yellow metal was, nonetheless steady.

The strength of silver was attributed to revival of strong bull support, encouraged by the deadlock in the election of the President of the Bullion Association and absence of any intervening influences. The expectation that the special margin levied on daily outstanding purchases would be removed also strengthened the hands of the speculative operators. Just before the close of the week, that is, today, however, there was a marking down from the week's peak level on renewed fears that the special margin might be enforced in the next settlement also and the graded margin system on the backwardation charges would be enforced with the sanction of the Government.

Gold, however, did not follow the trend of silver, on fears that import of gold might be allowed by the Government and that the Reserve Bank might sell the smuggled gold in its custody. Nevertheless, the good demand in the ready section and support from Calcutta interests were helpful in keeping up the sentiment, till today.

The election to the office of President of the Bullion Association, held last week, ended in a deadlock, as the two contestants got an equal number of votes. The Government Director did not give his casting vote, as is usually done in case of a tie, because he had already given his vote once as an ordinary director. The Government of Bombay, to which the question was referred, tried to bring about a settlement between the contesting parties. Having failed to do so, the Government decided that the Government Director should exercise his casting vote. A lot was taken to decide the contestant in whose favour the Government Director should give his casting vote, and the lot fell in favour of Mr. Jwalaprasad Tiwari. Accordingly, yesterday Mr. Tiwari was elected President for the current year. The Board also decided to continue the special margin on daily outstanding purchases.

To revert to the market trend. Forward silver (10th March settlement) advanced from Rs. 163-1 to Rs. 166 on Saturday last. Pre-Budget fears, however, brought it down to Rs. 163-11 on Monday, but the selling pressure soon abated and forward silver jumped up to Rs. 166 on the same day as the Budget disclosed no burden on this precious metal. The opening of business for the next settlement today disclosed a high carry forward charge of Rs. 2-6 to Rs. 2-7 in favour of bulls. This further strengthened the hands of the bulls who pushed up the price to Rs. 166-8 this morning. Fears about the levy of special margin, however, brought about a reaction and forward silver closed today at Rs. 165-11.

Ready silver (.996 Mint) maintained a premium of As. 8 over the forward throughout the week. Opening at Rs. 164, the ready metal rose to a high of Rs. 167 and finished at Rs. 166-3. The floating stocks of silver are placed at 1,800 bars. The daily average offtake was placed at 13 bars.

Forward gold (8th March settlement) hardened early in the week from Rs. 91-6 to Rs. 92-11. After reacting to Rs. 91-4 on Monday, the yellow metal recouped to Rs. 92-9, but failed to consolidate the gain. Reports of a slackening in offtake and absence of support from Calcutta brought the price down today to Rs. 91-13 at the close.

Ready gold had commanded a premium of As. 13 over the forward at the close of the previous week and the premium widened in the course of the week under review to touch a high of Re. 1-3 yesterday. The premium, however, narrowed to Re. 1 today on a slackening of the offtake. Opening at Rs. 92-7, ready gold rose to a high of Rs. 93-12 yesterday, but closed today at Rs. 92-13. The floating stocks of gold are estimated at 25,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was 4,000 tolas on an average.

In London, silver prices remained unchanged at 74½d. for spot and at 74d. for forward. Gold, however, weakened from £12 11s. 10½d. to £12 11s. 7½d., due to the strength of sterling.

The following comparative table shows the trend of the market during the week under review:

	2-3-55	Highest	Lowest	23-2-55
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

COTTON QUIET

(From Our Own Correspondent)

BOMBAY, 2nd March

It seems correct to describe the cotton market's reaction to the budget as a "wait-and-watch" attitude. So nicely are the bullish and bearish features balanced that the operators are clearly unwilling to make further commitments. The market has noted that there is to be no imposition of import duty on cotton, as was feared at one time. It has been encouraged by the reduction in export duty on cotton cloth from 10 per cent. to 6¼ per cent. The Government's decision to permit exports of yarn for which a good market exists in Aden, China and other countries should stimulate mill consumption of cotton. Further, these measures have come on top of the recent abolition of the quota system of cotton allocations to mills.

Despite these factors, the cotton market has steadily lost ground. I.C.C. May has lost Rs. 16¼ over the week ended today to quote at Rs. 565¼. The reason for this decline is probably to be found in the effect of the excise duty on cloth and of the procedure prescribed for the export of yarn. The Finance Minister announced that cloth would now be classified only into two categories—superfine and others. The rate of duty on superfine cloth would be As. 2½ per square yard (not linear yard) and one anna per square yard on other varieties. The special cess of three pies per yard for the development of the handloom industry will be levied in addition. Explaining the effect of this proposal, the Finance Minister said that it would involve an increase equivalent to nearly three pies a linear yard on superfine cloth and six pies a linear yard on medium and coarse cloth but the actual increase will be more than this. As regards yarn exports, the procedure prescribed is stated to be so rigid that many mills are not likely to be in a position to utilise the export permission. Although no quota, as such, has been prescribed for yarn exports, traders believe that the total export may not exceed 20,000 bales.

After a consideration of all relevant factors, the market seems to have taken a less optimistic view of the prospects for cotton. It would appear that the market was able to assess the importance of all factors only on 1st March. For, in the post-budget session on 28th February, there was no marked variation in values: I.C.C. May opened at Rs. 575 and, after fluctuating between Rs. 578½ and Rs. 573¼, closed at Rs. 574¾. On 1st March, it opened at as low as Rs. 569 and slumped towards the close to Rs. 567. Today, it touched the lowest level of the week at Rs. 561½, though it finished higher at Rs. 565¼.

I.C.C. February went off the boards of the E.I.C.A. on 25th February. It opened the week at Rs. 613 and moved up to touch a high of Rs. 620 on 24th inst. Thereafter, it steadily declined to Rs. 613 on the day of maturity. The total tenders against the February contract were 5,850 bales, consisting of Vijay 4,400 bales, Jarilla, 1,200 bales, P/A Buri 200 bales and L.S.S. 150 bales.

The following table gives the price-fluctuations in the forward section of the cotton market over the week ended today:

	Opening	High	Low	Closing
I.C.C. February	Rs. 613	620	612	613*
I.C.C. May ...	Rs. 581½	583½	561½	565¼

*On 25th February.

The spot market was somewhat dull and prices were generally lower. The following are the latest available quotations from the Sewri market:

Bengal deshi Rs. 570; Berar Jarillas Rs. 625, Khandesh Rs. 640; Vijay Rs. 730; Oomra deshi Rs. 590; Moglai Rs. 580.

The Government's decision to import American cotton was explained by Mr. Jaishukhlal Hathi, Deputy Minister for Irrigation and Power, in his reply to a question on the subject in the Rajya Sabha. He said that it was proposed to import 75,000 bales of cotton of staple length 1-1/16" and above (valued at $12 million) under the American aid programme through normal trade channels on licences issued by the Government of India. The suppliers in the U.S. would be paid by the U.S. Government and the importers in India would deposit the rupee equivalent in a Government account.

Steady conditions were witnessed in the Karachi cotton market. It is stated that there is foreign enquiry only at lower levels. The quantity of cotton endorsed for export from 1st September, 1954, to 2nd February, 1955, was 268,852 bales as against 499,417 bales in the corresponding period in 1953-54. The latest available quotations from the Karachi market are:

Sind *deshi* Rs. 66; Punjab *deshi* Rs. 59; 4F Punjab R.G. Rs. 63-6; S.G. Rs. 68-6 to Rs. 70-6; N.T.R.G. Rs. 68-6; S.G. Rs 72-14; 289F Punjab R.G. Rs. 70-10; S.G. Rs. 73-2.

The Egyptian Government has announced that the present cotton policy will remain unchanged till the end of the current season and that no change in buying and selling prices is contemplated. Following this announcement, there was a movement to liquidate stocks. Consequently, there was a decline in spot premiums for different varieties. There has been for some time now good demand for medium grades of Ashmouni and Giza 30 Fully Good. It is pointed out that there can be no further decline in the prices of Giza 30 and high grades of Ashmouni.

The Liverpool cotton market developed an easier tendency under hedge selling and on weak foreign advices. The latest available quotations are: March-April 32.04; May-June 32.00; July-August 31.83 and October-November 31.50.

In the New York cotton market, values eased under scattered hedge pressure, commission house liquidation and offerings by local traders. Sluggish conditions in the textile market were an additional factor for the decline in values.

A Bill has been introduced to amend Public Law 480 to permit a shipper to sell cotton abroad from his stocks without buying an equal quantity from the C.C.C's stocks.

The following are the latest available quotations from the New York market, as compared with those a week and fortnight before:

(In cents per lb.)

	1-3-55	21-2-55	15-2-55
Spot	34.70	35.10	35.00
March	34.06	34.44	34.39
May	34.29	34.73	34.71
July	34.54	34.97	34.96
October	34.43	35.08	34.95

STAPLE FIBRE YARN IRREGULAR

(From Our Own Correspondent)

BOMBAY, 2nd March

The notable feature of the yarn market during the week under review was the violent fluctuations witnessed in the staple fibre yarn section. This was due chiefly to three factors. The first was the expectation, earlier in the week, of excise duty on yarns which was, however, belied when the budget proposals were announced. Secondly, the Government invited applications for import of staple fibre yarn from actual users, which had a demoralising effect on the operators in the market. Thirdly, there was the sharp fall in the price of cotton which contributed to the further demoralisation of the market late in the week. These had an unsettling effect on the market. Thus, staple fibre 40 x 2 March delivery opened the week at Rs. 597 as against Rs. 602-8. In the pre-budget session, the prices improved to Rs. 598 on the 28th ultimo. But, after the Budget, it declined to Rs. 585 and the downward trend continued during the rest of the week with the result that the price came down to as low as Rs. 580-8 today, before closing at Rs. 581-12. The tendency of the market was to book profits at every rise. February delivery, which opened at Rs. 591 as against Rs. 597-8, declined to Rs. 581, where it closed. Among foreign yarns, Sulcos gained an anna and nine pies to Rs. 4-2-6. Auroras were quoted an anna higher at Rs. 3-14. Among 40 x 2 yarns, produced in the country, Sitarams lost 9 pies to Rs. 3-0-6. Pankajas eased from Rs. 3 to Rs. 2-14-9. Westerns changed hands lower at Rs. 2-15-9 as against Rs. 3.

The performance of art silk yarn also was not encouraging, for specifically the same reasons as those for staple fibre. 150D Japan fluctuated between Rs. 730 and Rs. 732, before closing at Rs. 731. 120 Japan rallied half an anna to Rs. 3-14. 150D Japan improved from Rs. 4-4 to Rs. 4-8. 120D Italy was, however, colourless at Rs. 4-2 and 150D at Rs. 3-14.

The permission to allow limited exports of cotton yarn failed to enthuse operators in the cotton yarn market. This was because the actual quantum for export was linked to deliveries made by mills to domestic consumers, which was considered rigid. As a result price fluctuations were limited to a narrow range. Among 80s, Finlays were quiet at Rs. 72 and Seksarias at Rs. 54. Moderns, however, lost As. 8 to Rs. 63-8 and Elphinstones As. 2 to Rs. 58-12. Among 60s, Finlays were unchanged at Rs. 59, Moderns at Rs. 59-12, Raghus at Rs. 54-12 and Elphinstones at Rs. 51-2. Among 40s, Gokaks gained As. 2 to Rs. 25, while Moderns were dull at Rs. 25-4, Vasantas at Rs. 24-4 and Seksarias at Rs. 23-8. Among 30s, Maduras were quiet at Rs. 22. Among 20s, Moderns lost an anna to Rs. 17, Maduras As. 2 to Rs. 17-8 and Centurys As. 4 to Rs. 16-4. Among 10s, Moderns were unchanged at Rs. 13-7 and Elphintones at Rs. 13-2.

The table below gives the prices of art silk staple fibre and cotton yarns quoted today, as compared with those a week before:

	2-3-1955	23-2-1955
	Rs. a.	Rs. a.
Art silk yarn—		
120 Japan (per lb.)	3 14	3 13½
150 Japan (per lb.)	4 8	4 4
120 Italy (per lb.)	4 2	4 2
150 Italy (per lb.)	3 14	3 14
Staple fibre yarn—		
40 x 2 March	581 12	602 8
Sulco (per lb.)	4 2½	4 0½
New Great (per lb.)	3 3½	3 2½
Cotton yarn (per bundle of 10 lbs.)		
10s Modern	13 7	13 7
20s Seksaria	16 4	16 4
30s Madura	22 0	22 0
40s Gokak	25 0	24 14
60s Modern	59 12	59 12
80s Finlay	72 0	72 0

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, 2nd March

The oilseeds and oils market ruled distinctly easy during the week under review. Despite the absence of any burdens in the Budget proposals for 1955-56 on oilseeds and oils trade, the market lacked nerve. Besides, it expected in the Budget statement of the Finance Minister a reduction in, if not the total abolition of, export duty on castor oil. Absence of any reference to the export duty caused disappointment among operators. They were, therefore, hesitant to commit themselves. This hesitancy was also due to lack of shipping space for export of especially groundnut oil and castor oil and to good arrivals of new groundnut crop from Hyderabad and Saurashtra. Consequently, there was a large volume of floating stocks. Besides, enquiries for linseed oil from the Continent at £92 to £93 per ton and for castor oil, Commercial, from the Continent at 9⅞c per lb. were not quite encouraging. Almost all the sections, therefore, came under a wave of selling pressure. And prices of both oilseeds and oils suffered substantial declines over the week.

In the groundnut section, Bold F.A.Q. eased from Rs. 21-2 to Rs. 20-4. April-May lost Re. 1-4 to Rs. 20-12. Khandesh quality eased from Rs. 21-6 to Rs. 20-10. Groundnut oil, railway receipt, lost As. 8 to Rs. 11-2. March and April deliveries changed hands at Rs. 11-3 and Rs. 11-2 as against Rs. 11-8 and Rs. 11-6, respectively.

Market circles are expecting either extension of the millers' export quota beyond March and upto the end of April or announcement of fresh quota in groundnut oil. They fear that otherwise prices of groundnut and its oil will decline further. Groundnut oil exported from Bombay from 1st January upto 24th February is estimated at 17,750 tons. Burma's quotation for groundnut oil is nominal at Rs. 1,270 per ton.

In the castorseed section, May delivery opened the week at Rs. 79-8 as against Rs. 79. It gradually declined to Rs. 72-2 before closing at Rs. 72-10. Madras quality disclosed a loss of Re. 1 at Rs. 14-4. Castorseed I Pressure eased from Rs. 9-12 to Rs. 9-10 and Commercials from Rs. 9-8 to Rs. 9-2. Exports of castor oil from 1st January up to 24th February are estimated at 3,750 tons.

Bold ready, in the linseed section, retreated from Rs. 22-11 to Rs. 21-8. April-May was lower at Rs. 21-10, as against Rs. 22-11. Small Sutna suffered Re. 1-3 and closed at Rs. 19-8. Linseed oil was down by As. 10 at Rs. 12-12. Exports of linseed oil from 1st January up to 24th February is estimated at 750 tons.

The following table shows the price of oilseeds and oil today, as compared with those at the end of the previous two weeks.

SUGAR PRICES RISE

(From Our Own Correspondent)

BOMBAY, 2nd March

Following the announcement of the Finance Minister's Budget proposals, the sugar market registered an all-round increase in prices of both indigenous and imported sugar. This was because the Finance Minister announced an increase of Re. 1-14 per cwt. in the excise duty on sugar, that is from Rs. 3-12 to Rs. 5-10 per cwt. *Pari passu* with this, the import duty on the commodity was increased from Rs. 11 to Rs. 13 per cwt. Besides, the Food Ministry simultaneously announced its decision to raise the selling price of imported sugar by Re. 1 per maund. The announcement added that the price was being raised in view of the changes made in the excise and customs duties on indigenous and imported sugar respectively as mentioned above. The revised ex-dock price of British refined sugar, East German and French sugars would thus, it said, be Rs. 30-8 per maund and that of Cuban sugar Rs. 30 per maund. In other words, the net effect of the changes announced by the Government was an additional burden of Rs. 3-12 per bag on indigenous sugar and of Rs. 2-12 per bag on foreign sugar. Thus the increase in the selling price of imported sugar was not commensurate with the rise in the excise duty on Indian sugar.

The reactions in sugar circles to the disparity in the increase in prices of both the indigenous and imported sugar, were of mixed nature. The sugar trade which was agitating for a reduction in the selling price of imported sugar was gratified to note that the changes mentioned above represented a genuine reduction of Re. 1 per bag of imported sugar. Consumers were, however, highly critical of this burden as it ran counter to the hitherto accepted Government policy of making available to them cheaper sugar. The industry for its part feared that the difference of one rupee in the price in favour of the imported sugar would automatically be a burden on it, apart from the prospect of having to bear a further burden in case there were to be consumer resistance at the higher levels. To the *gur* trade, however, the changes in duties were welcome, in that they arrested further decline in prices of *gur*.

Arrivals of indigenous sugar during the week at 2,400 bags were lower by 1,400 bags as compared with those last week.

WANTED

SALES Officers on Rs. 175/- P.M. to develop sales of Petroleum Products, Batteries, etc. Investment Rs. 251/-.

Apply in English.

Manager,

Dhakeswari Motors Ltd.,

7, Kasipara Road, Dum Dum, CALCUTTA - 28.

In the forward section, Fagan delivery moved up from Rs. 82-4 to Rs. 84-6 with buyers over. *Chaitra* delivery which fluctuated between Rs. 82-6 and Rs. 82-10, last week, improved this week to Rs. 84-10, an increase of Rs. 2 on balance.

Among indigenous sugar in the spot section, medium grains hardened from Rs. 87-8 to Rs. 89-91 per bag. Large grains were better at Rs. 93-104 per bag, as against Rs. 92 to Rs. 104 per bag last week. Among foreign sugars, British refined rose from Rs. 81-8 to Rs. 83-12 per bag of 224 lbs. and Cuban from Rs. 89-8 to Rs. 91-12 per bag of 250 lbs. French sugar advanced from Rs. 79-8—82 to Rs. 81-12—84 per bag of 220 lbs. German sugar was done at Rs. 81-12, as against Rs. 79-8 and Czech at Rs. 85-8 to Rs. 88, as against Rs. 85—87 per bag of 220 lbs.

N.B.—The rates for Indian sugar are inclusive of sales tax while those for foreign sugar are exclusive of the tax.

TEA DUSTS DECLINE

(Messrs. Forbes, Ewart & Figgis Ltd.)

COCHIN, 23rd February

The offerings in dust sale 'D' which was held on Tuesday, 22nd February, amounted to 300,000 lbs. Although there was a good general demand, prices tended easier. Low medium and medium types were irregularly half to one and half annas easier. Better liquoring dusts were about steady. There was slightly less demand for Middle East types and they were generally one anna easier. Milled dusts were often neglected and were difficult of sale.

London Market.—Sale of 21st February, 1955: Good demand with Assams fully firm and others 1d. dearer.

Sale of 22nd February, 1955: By comparison with last Tuesday, prices lower by 2d. to 4d., but market fully firm compared with North Indians yesterday.

Colombo Market:—Opened weak. Later demand improved, particularly medium and better sorts.

Calcutta Market:—*Export.*—25,700 packages. Middle East types again strongest feature. Selling considerably in excess of valuation. Others, commons As. 4 to As. 5 easier, mediums As. 2 to As. 3.

Dust:—17,255 packages. Market generally lower. Exportable types weakest feature. Others As. 2 to As. 3 easier. Closing weaker, especially fibrous sorts. Leaf: 9,628 packages. End of season quality irregularly As. 2 to As. 3 below last week.

Export Quota:—The market has again been irregular and business was done during the week down to 126 pies. The Calcutta market has now recovered to 144 pies with ready buyers and sellers scarce.

Forthcoming Auctions:— Dust sale 'E' will be held on Tuesday, 8th March.

As we go to press, Messrs. Forbes, Ewart and Figgis, Ltd. wire:

"*Sale* 5.—1,250,000 lbs. Only fair demand. Commons and low mediums As. 5 to As. 6, mediums and best liquoring As. 2 to As. 3 easier. Whole leaf strong. Middle East types good demand at slightly easier rates. Withdrawals heavy."

JUTE GOODS FALL FURTHER

(From Our Own Correspondent)

CALCUTTA, 1st March

Prices of jute goods showed a further decline, as there was no large-scale buying by overseas countries. This made stockists a bit nervous and resulted in selling pressure. Prices, therefore, fell. Raw jute also recorded a further decline, as mills paid little attention to offers of indigenous jute. They preferred to enter into commitments in Pakistani jute in view of its better quality and the very little price difference. This *factor* will, it is thought, bring Indian prices down to reasonable levels. To this belief is added the report that in North Bengal about a million maunds of jute are held up due to shortage of wagons. The Bengal Jute Dealers' Association, Calcutta, has already urged the railways to provide special trains to bring this jute to mills. The inferior varieties are still available in the required quantities, and the crop in *mesta* alone is estimated to have increased to 999,000 bales in 1954-55 from 574,000 bales in 1953-54. The increase has been mainly in West Bengal. Mills are confident that there would be no shortage in raw jute this season and that, in fact, there would be a satisfactory carry-over of at least the poorer quality jute. It is this confidence which arrested the upward tendency and set in motion a down-trend for the last two weeks. No doubt, the Pakistani jute prices have firmed up as Indian mills intensified their buying programme of the East Bengal low varieties.

The news that the Italian jute industry is considering a reduction in output in view of the growing competition in both the export and internal markets as well as of a decline in domestic consumption, following reduced farm output has been duly noted here. This shows that Indian prices are still competitive, and runs counter to recent reports coming from New York that business in burlap was declining and that consumers were considering changing over to substitutes in view of the high quotations from Calcutta. These reports cannot altogether be dismissed as coming from interested quarters, as burlap consumption in the United States has been declining during recent months. In the month of January, the consumption was only 60 million yards, as against 70 and 63 million yards in January and December, respectively of last year. Such a fall in the face of reports of higher agricultural output gives some credence to the reported preference of American consumers for using substitutes.

Prices of heavy goods were subject to fluctuation this week. But excepting for Australian irtest in sackings, there was no other feature. This to covering business, and prices for a time rose. Rs. 130-4 ready B. twills advanced to Rs. 131 on bull support. When actually the volume of business did not materialise in accordance with market expectations, stockists began to liquidate their holdings. By Friday, ready B. twills had fallen to Rs. 129. On Saturday, holders began to unload in greater quantity, and this saw the rate recede to Rs. 127. Yesterday, there was a recovery to Rs. 127-12. When prices were high, April-June goods were a few annas lower than the ready, and March the contrary. But, with the decline by the week-end, April-June reached parity with the spot goods. March goods were also for a time in parity, but by the week-end were quoted at Rs. 127-8 as against Rs. 127 for spot. Hessians were featureless and quiet. From Rs. 47-6, ready hessians 40" 10 oz. gradually lost to close at Rs. 46-2 for the week-end, April-June giving way to Rs. 46-2 from Rs. 47-4 and on one-month delivery to Rs. 46-3 from Rs. 47-7. Yesterday, in sympathy with heavy goods, the ready goods were fractionally higher at Rs. 46-6. The eight oz. was quoted at Rs. 37-4.

Raw jute prices were down by about a point as can be evidenced from latest quotations given below in comparison to those of a week ago given in brackets. There was no buying interest, and mills were enquiring more for the Pakistani fibre. Stockists were not, however, disheartened but derived encouragement from reports of poor arrivals in up-country centres. Unless the transport situation improves, there is no possibility of more imports; and this situation is a direct cause for the maintenance of higher prices. In Narayanganj, there was a slight easing in prices; this would have been more pronounced but for the keen enquiries and subsequent business in jute suitable for Indian consumption. Jat white bottoms declined to Rs. (P) 24-8 from Rs. 28, northern tossa bottoms to Rs. (P) 25-8 from Rs. 29-8, and northern white bottoms to Rs. (P) 21-8 from Rs. 25:

	Middles Rs.	Bottoms Rs.
Pakistani:

Pucca bale first marks ready Rs. 222-8 (225) per bale.

POOR DEMAND FOR TEA IN EXPORT AUCTIONS

(From Our Own Correspondent)

CALCUTTA, 1st March

Teas on offer during yesterday's export auctions amounted to 18,967 packages. Demand was poor. A small portion of the offerings consisted of autumnal teas and the balance was of poor quality. Prices of tippy sorts, B.O.Ps., stylish whole leaf grades, and fannings were supported at firm levels, but the poorer stalky teas, the better liquoring sorts, and mediums eased by As. 2 to As. 3. Clean commons declined by an anna. Darjeelings received fair support, but, in sympathy with the general trend, eased. A slightly easier trend was also in evidence in pekoes and orange fannings. Quotations are not possible in view of the majority of the offerings being of the poorer types.

Dusts offered at last week's internal sale aggregated 25,298 packages. Despite a fair general demand, prices declined in view of the low quality of teas on offer. Black leafy exportable types were not enquired of by exporters and, as a result, declined by As. 3 to As. 5. Common fibrous teas were lower by As. 3 to As. 4, and commons, medium Assams and Dooars by As. 2 to As. 3. Ordinary C.T.Cs. eased by an anna to As. 2 and those with liquors were sold at firm rates. The rates were: best Assam C.T.C. Rs. 3-1 to Rs. 3-2, medium Assam grainy dust Rs. 2-9 to Rs. 2-9-6, and medium Dooars Rs. 2-8 to Rs. 2-8-6.

Leaf on offer amounted to 10,089 packages, mostly of residue types. Demand was fair, and clean black N.O.Ps. and orange fannings tended to rise above previous rates, but closed easier. Commonest stalkiest teas gave way by about As. 4. Quotations could not be had in view of most lots being below quality.

METALS RULE STEADY

(From Our Own Correspondent)

CALCUTTA, 1st March

With prices remaining steady, trading conditions in the metal market during the week were a little cheerful. As usual, copper received the major attention of the market, and the electrolytic material sputted from Rs. 225 earlier in the week to Rs. 235. However, following lower advices from London, after it was known that in the Rhodesian copper mines about more than half of the workers have resumed their duties and others are expected to follow suit, the gain of Rs. 10 was lost, but the rate at Rs. 225 was firm. In the United States, the supply position continued tight, and the Government there was requested to release some more copper from its stocks. Locally, there was good demand for the virgin metal as well as for scrap. Stockists were disinclined to discount rates. The fire-refined metal was quoted firm at Rs. 220 per cwt. Mercury was priced at Rs. 1,250 a flask of 75 lbs. Reports from foreign markets anticipated an easiness in world prices. Business that was put through was naturally insignificant. Tin steadily improved from Rs. 467 to close at Rs. 472. The uptrend was due to the non-availability of spot metal in the required quantity as well as due to firm advices from the Far Eastern market. Some business was put through. Pig lead was nominally higher at Rs. 70-8, as against Rs. 70 earlier. Electrolytic zinc was firm at Rs. 60-8, at which rate stockists were not inclined to part with their holdings in view of the higher replacement cost.

LINSEED QUIET

(Messrs. A. Bradley & Co.)

CALCUTTA, 28th February

The general tone of the linseed market during the week has been quiet, and activity has been reported on a moderate scale. Lower upcountry advices and improved supplies have resulted in keen selling for forward delivery; crushers, however, have been operating cautiously and a limited daily turnover has been reported. The oil market has been active, with shippers covering their requirements against previous sales; overseas buyers, however, appear to be showing little interest except at lower prices. Latest quotations are as follows:—March Rs. 17-4 and April/May Rs. 16-4 per maund.

KIPS A SHADE EASY

(From Our Own Correspondent)

MADRAS, 28th February

Arrivals of kips have been moderate and clearance slow. Prices locally are a shade easier, but still out of reach of U.K. buyers. Shipment business has been small, in view of importers' sustained price resistance. If this stalemate continues, it is not unlikely that Madras tanners will have to revise their selling prices to meet U.K. levels.

In the tanned skins section, arrivals have met with good clearance. Market for goat has been steady and for sheep slightly weak.

FOODGRAINS WEAK

(From Our Own Correspondent)

HAPUR, 28th February

The foodgrain markets which had ruled quiet during most part of the week declined further in the week-end. Wheat *dara* is today quoted at Rs. 13-6 per maund as against Rs. 14 quoted last week-end. The week's offtake was negligible at one *khati* and the present wheat stock here is estimated at 12 *khaties*. Wheat prices also declined in Madhya Pradesh due to increased arrivals of the new crop and the latest rates are Rs. 32 to Rs. 35 per bag of 2½ maunds. Prices of wheat also declined in Punjab, P.E.P.S.U. and Bihar markets during the week. In the Bhatinda market, Punjab, wheat is quoted at Rs. 12-4 to Rs. 13-4 per maund and in Siwan (Bihar), wheat prices declined from Rs. 19 to Rs. 18 per maund. Rice prices, however, continue to rule steady with fractional advance in the markets in the country due to increased enquiries reported from the shippers for export. The standing crops are reported to be making satisfactory progress. After a fortnight, new crops of peas and other coarse grain will begin to arrive in the market.

The coarse grains also ruled weak, although trading in these commodities was slack due to poor stock positions. Gram, however, elicited small demand and the week's offtake aggregated 3 *khaties* and the local stock is estimated at 7 *khaties* and the prices at last week's level at Rs. 7 to Rs. 7-8 per maund. Barley and *bejhar* prices are quoted at As. 2 per maund lower than last week at Rs. 6-6 and Rs. 5-14 per maund respectively.

Pulses ruled quiet last week and despite good offtake during the week at 4 *khaties* of peas and 2 of *arhar* peas ready prices continued depressed at Rs. 5-8 to Rs. 6 per maund and *arhar* at Rs. 6-8 per maund. The trade is anxiously awaiting for a fresh release of export quotas in the near future. Pulses futures also ruled dull and featureless during the week in the absence of new driving force. The Union Food Minister, Mr. Jain, informed the Lok Sabha that the food supply in India was expected to remain satisfactory during the current year and with complete decontrol of rice and coarse grains and restrictions on the interzonal movement of wheat only, there was no longer any necessity of allotment of foodgrains to any State. Foodgrains from surplus areas would now automatically flow into deficit areas through normal commercial channels.

DECLINE IN SUGAR

(From Our Own Correspondent)

HAPUR, 28th February

There was a slight decline in the ready sugar prices during the week under review and this bearish trend was attributed to plenty of supplies and good prospects of arrivals in the near future. The Government of India announced a further release of 1.25 lakh tons of indigenous sugar for open sale in the market and the Government's announcement to the effect that it contemplated no increase in the sugarcane price in the current season from Rs. 1-7 per maund also acted as a bearish factor. The Central Sugarcane Committee met during the week in New Delhi and the Union Minister for Food, Mr. Ajit Prasad Jain, while inaugurating the Committee, said that he had decided to refer the whole question of fixing sugarcane price and profit-sharing relatively with sugar prices, to a committee of experts. There were objections to the existing formula both by the millowners and cane-growers and the emphasis on increased production had been overshadowed by the price controversy. The latest mill delivery rates here are: Jaswant Rs. 29-8, Simbhauli Rs. 29-10, Mowana Rs. 29-14, Daurala Rs. 31-4, Amroha Rs. 29, Bijnore Rs. 29-1, Mansoorpur Rs. 31, Rampur Rs. 32-12, retail Rs. 33-4 and *khandsari* Rs. 24 to Rs. 27 per maund.

The ready *gur* market continued to show a declining trend although the State Government is still purchasing quality *gur* at Rs. 10-4 per maund, but the dara *gur* prices have declined to Rs. 9-6 per maund quoted today. The State Government is purchasing in very few markets and its agents have been warned not to purchase heavy quantities. Unabated large arrivals here and in other centres coupled with the absence of any demand have imparted an easy tone to the market. The local stock is estimated at 70,000 maunds, including about 25 per cent. on behalf of the State Government. Over 70 per cent. of the entire crop has already reached the market. The daily arrivals average about 5,000 maunds and the loading facilities are too adequate. In line with the ready section, future *gur* markets have also recorded appreciable decline during the week and *gur phagun* and *baisakh* are today quoted at Rs. 9-5½ and Rs. 10-5½ as against Rs. 9-14 and Rs. 10-14½ respectively last Monday. The undertone is still bearish.

ENGINEERING

(Concluded from page 416)

although the 1949 Agreement provided that the "lessees will take all possible action to see that working costs are kept low by enforcing economy wherever possible." The increase in expenditure was due to increase in salaries and wages granted from time to time to employees (this includes grant of amenities like the pension scheme), increases in the price of raw materials as well as in the quantum of consumption and change in the mode of allocation of expenditure between revenue and capital. The Report says that the chief beneficiaries were the non-Indian covenanted personnel.

One of the items of expenditure which contributed to increase in cost since 1951 is the contribution to pension fund. The Government of Mysore has refused to recognise this fund. The Committee says that the creation of the pension scheme at a heavy recurring cost and involving heavy liability for the past periods in respect of which all profits and all investments had been removed by sterling companies had thrown a heavy financial burden on the rupee companies, reduced the surplus due to Government, helped only a small percentage of high-salaried officers, particularly non-Indians, and created discontent among other staff and increased the working costs in violation of the Agreement. The Committee has held that there is no justification for the pension scheme, in addition to the provident scheme, at a time when the price of gold is on the downward trend.

Royalty to the State

The Committee has pointed out that the average income of the Government of Mysore during the two pre-war periods, namely, 1935 and 1939, from the three mines was Rs. 20.63 lakhs and that during the two years, 1952 and 1953 Rs. 23.22 lakhs only, or a small increase of Rs. 2.59 lakhs or about 12.5 per cent. The State Government's total income from royalty, gold duty and contributions from 1881 to 1953 was Rs. 16.44 crores, as against Rs. 34.50 crores earned by the shareholders as dividend. If the duty on gold had not been introduced in 1940, the earnings of the Mysore Government would have been less and those of the shareholders even more. In making these calculations, the amount of income-tax recovered by the Government has, however, not been taken into account, since taxation is an aspect by itself. In the light of these factors, the Committee is of the opinion that a rate of not less than 10 per cent. of the net sale proceeds should be the royalty payable to the State. This means a 100 per cent. increase in the present rate of royalty.

Referring to the position of ore reserves, the Committee has expressed the view that the position of the Mysore Mine is far from satisfactory. With the present rate of depletion of ore reserve, the reserves would appear not to last for more than six years. But taking other factors into consideration, the Committee has felt that the life of the mine might on the most optimistic estimate be about 15 years, unless in the meantime fresh sources of ore were found. The total payable and low-grade reserves at the end of 1953 in the three mines were:

Mysore Mine: 168,000 tons of payable reserves at an average value of 12.76 dwt. and 188,470 tons of low-grade reserves at an average value of 3.68 dwt. per ton.

Champion Reef Mines: Payable reserve 978,722 tons at 9.95 dwt. per ton and low-grade 128,153 tons at 3.93 dwt. per ton.

Nandydroog Mine: 717,203 tons of payable reserves at 8.90 dwt. per ton and 619,027 tons of low-grade ore at 3.49 dwt. per ton.

**These share carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding up these shares have a preferential claim to repayment of capital.

† Only 7 per cent. out of the 10 per cent. dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent. these share carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

‡These carry the right to cumulative dividend of 7 per cent. and of any surplus profits available after 10 per cent. ordinary capital.

††† These shares can be redeemed, at Rs. 105 any time by special resolution.

§ These shares are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend Capita and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

ABBREVIATIONS.

A—Held by Government of India. B—Taken up by Imperial Bank of India. C—Held by Commissioners. D—Domestic Loan not marketable. N—Nominal.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nothing quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. I=Interim Dividend. F=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and Dec ber, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

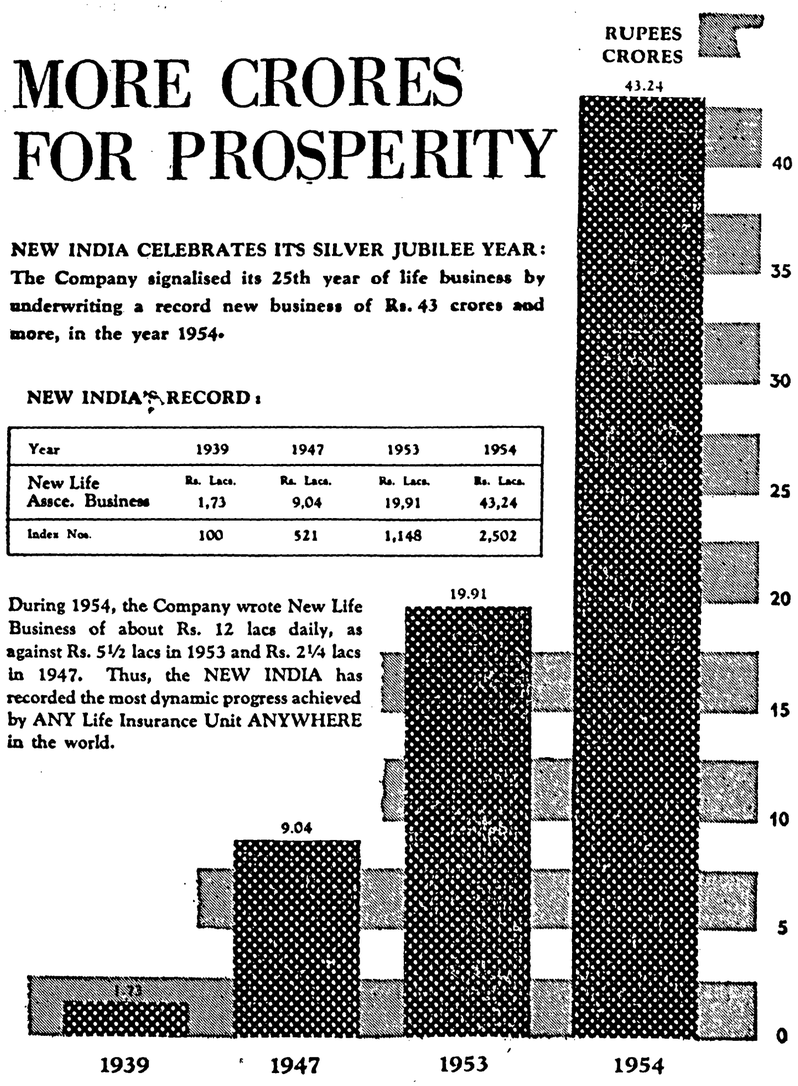
MORE CRORES FOR PROSPERITY

NEW INDIA CELEBRATES ITS SILVER JUBILEE YEAR: The Company signalised its 25th year of life business by underwriting a record new business of Rs. 43 crores and more, in the year 1954.

NEW INDIA'S RECORD:

Year	1939	1947	1953	1954
New Life Assce. Business	Rs. Lacs. 1,73	Rs. Lacs. 9,04	Rs. Lacs. 19,91	Rs. Lacs. 43,24
Index Nos.	100	521	1,148	2,502



During 1954, the Company wrote New Life Business of about Rs. 12 lacs daily, as against Rs. 5½ lacs in 1953 and Rs. 2¼ lacs in 1947. Thus, the NEW INDIA has recorded the most dynamic progress achieved by ANY Life Insurance Unit ANYWHERE in the world.

For this magnificent record, the Company expresses its deep gratitude to the public for their co-operation, and to its Field Force, Administrative Services and to all those who make the NEW INDIA Family, for their untiring efforts and fine team-spirit.

IMMENSE POTENTIAL:

And yet, more and more crores can be harnessed to the nation-building tasks. For, there is an immense potential for the growth of Life Assurance in India — AT LEAST 10 TIMES MORE. The NEW INDIA, in keeping with its unique record, is pledged to contribute its utmost to the progress of Indian Life Assurance.

DEDICATION:

The Company's trained representatives have dedicated themselves to bring to every hearth and home in the country a Life-Belt of Security. We invite you to avail of their expert advice and services.

***Insure with the* NEW INDIA**

and participate in the Prosperity and Strength of our World-wide Organisation

THE NEW INDIA ASSURANCE COMPANY LTD.

Mahatma Gandhi Road, Bombay

MARKET GOSSIP

(Concluded from page 399)

of refund of income-tax (paid by a company) to its shareholders. It has not, however, recommended such a drastic measure. It recognises that the discontinuance of the system of refunds of tax would act as a disincentive to equity investment. Rather, it has suggested a means whereby the method of calculating refunds could be simplified and the delay in making refunds reduced. The suggested method is that, when a company declares dividends, it will deduct income-tax at the maximum rate from the gross dividends, distribute the net amount to the shareholders and pay the tax to the credit of Government. The company will pay corporation tax on its total income as at present. The income-tax payable by the company will be calculated on its total income as reduced by the gross dividends. Adjustments could then be made in the course of the companies' income-tax assessments. Some change in the manner of preparing dividend warrants would, however, be involved. But the system, besides simplifying the present grossing procedure, would also lend itself to the grant of exemption certificates to the shareholders in lower income brackets and thus obviate the need for refund claims, the disposal of which is a source of irritation at present.

• • • •

There has for some time now been considerable apprehension in certain financial circles over the possibility of taxation of bonus shares. The question here is whether a bonus is a dividend or not, for, if it is the former, there is ground for subjecting it to tax. The Commission has examined this question at some length. It is gratifying to note that its conclusion is that "bonus shares are not income in any sense of the word as understood in income-tax." Further, judicial decisions both in the U.S. and the U.K. support this contention. It says that "there is not sufficient validity in the argument that non-taxation of bonus issues as income in the hands of shareholders leads to any loss of public revenues." It is true that the bonus issue confers some advantage on both the company and the shareholders. There may thus be a case, according to the Commission, for the levy of a small duty on the issue of bonus shares. In the U.K., there was till recently a stamp duty on bonus issues. But it has been given up. The Commission does not, however, favour such a levy. It says: "We are not in favour of levying any such duty here, especially because of the need for encouraging the retention of earnings within the company." Nevertheless, it has urged the Government to exercise control over the issue of bonus shares in such a way as to ensure that there is no overcapitalisation of the company and that any other misuse of the facility is prevented

• • • •

After an elaborate discussion of the relative merits of the systems of averaging, carry back and carry forward of losses, the Commission has recommended that, subject to modifications, the existing practice of carrying forward of losses is the most appropriate in the present circumstances, when new undertakings are coming into existence. The Commission has suggested that losses should be carried forward indefinitely instead of for six years as at present; such losses should be adjusted against income from any business instead of the same business as at present. Also, such losses should be allowed to be set off against non-business income for one year. Carry back of losses should be allowed only when there has been a cessation of business arising from circumstances outside the control of the taxpayer. This recommendation is sought to be given effect to by the Government through clause 16 of the new Finance Bill, now before Parliament, which seeks to amend the relevant section (section 24) of the Income-tax Act.

• • • •

The Commission has discussed the economic validity of section 23A of the Income-tax Act which is designed to prevent avoidance of super-tax by the shareholders of a closely held company. The section does not apply to a company in which the public have a "substantial interest"—that is, in which 25 per cent. of the voting power is held by the public. In other words, it applies to what are called private limited companies. Briefly, the section is intended to secure that at least 60 per cent. of the assessable income is distributed as dividends. This is to prevent the evasion of personal super-tax by the controlling shareholders of a closely-held company through retention of profits within the company instead of distributing them as dividends. The Commission says that the phrase "substantial public interest" should mean that shares carrying more than 50 per cent. (instead of 25 per cent. as now) of the voting power should be in the hands of the public and that the majority of the shares (that is, over 50 per cent.) should not be held by less than six persons (not close relations). In order to discourage tax evasion by such a company through retention of profits within it, the Commission has suggested an additional tax at a flat rate on the undistributed portion of the "distributable profits." These suggestions have been accepted by the Government. Clause 15 of the Finance Bill, which replaces section 23A of the Income-tax Act, is intended to give effect to the Commission's recommendations relating to definition of "public interest" and to tighten up the provisions for avoidance of super-tax by shareholders of private companies resulting from insufficient distribution or non-distribution of dividends in proper time. The clause further provides that the companies falling under that section shall pay super-tax on the undistributed income, subject to certain adjustments, at a flat rate of four annas per rupee. This super-tax is payable, apart from the income-tax and super-tax payable by the company, on its total income in the ordinary course, and the shareholders will not get any credit for it in their assessment.

REVISION OF TAX STRUCTURE

(Concluded from page 405)

tive liaison between the Income-tax Department and other Central Revenue departments such as Customs and Central Excise, and with State Revenue departments would be very useful. The Income-tax Department should, therefore, exercise the utmost caution in its dealings with informers. Government rewards are not likely to be large and where the evasion involved is considerable, there is a danger of the informer extracting a high price from the assessee.

It is also necessary, according to the Commission, to give additional powers to the Income-tax Department for adequate enforcement. The power to reopen past cases should be extended by eliminating the existing time limit and the need to secure the prior approval of the Income-tax Commissioner. Income-tax authorities should be placed in a position to be able to discover such evidence that was being withheld from them. Income-tax officers should also be authorised, subject to previous sanction of the Commissioner, to enter business premises, inspect the accounts and documents, place identification marks on them, make copies or impound documents and to search premises. They should also be empowered to inspect the contents of safe deposit vaults and lockers with the previous sanction of the Commissioner.

State Taxes

In the third volume of the report, the Commission deals with the sales tax and other State taxes. Complete centralisation is ruled out in view of variations in local conditions. However, it is stated that the Union is concerned when the sales tax of one State impinges administratively on the dealers and fiscally on the consumers of another State. Inter-State sales should be the concern of the Union. The Union should also have power to control the taxation of sales of raw materials which figure significantly in inter-State commerce. Parliamentary legislation will provide for the levy of sales tax on inter-State transactions, assessment and collection being delegated to the State Governments. The rate of Central tax should be low; it may be one per cent. when the inter-State transaction takes place between a registered dealer of one State and a registered dealer in another.

With regard to the State sales tax on goods of special importance in inter-State trade, the main principle of regulation will be that no State shall have a system of levy other than a single point tax on such goods. The tax may be either on sales or purchases but will be recoverable only on the last stage, and the rate should be three pies per rupee. The goods specified are coal, iron and steel, cotton, skins and hides, oil seeds and jute.

Dealing with sales tax, the Commission observes: "We are emphatically of the view that the sales tax cannot be transferred from the States to Central Government." It is recommended that the sales tax should reach a larger number of persons. A multi-point tax at a rate not higher than half per cent. with no exemptions is recommended. All dealers with a turnover exceeding Rs. 5,000 a year should be made liable. In addition a single-point tax with a higher turnover limit is recommended to reach middle and higher incomes.

In regard to the entertainment tax, the substitution of percentage rates for slab rates is recommended.

The Commission points out the decline in the significance of land revenue as an item of contribution to the exchequer and as a burden on the agriculturists. A sliding scale is recommended which aims at making readjustments over relatively long intervals, such as a period of ten years and over relatively larger areas, such as an entire State. Readjustment of assessment is recommended in relation to the dates of resettlement. The revised assessments should continue indefinitely within the limits set for revision and surcharges should be purely by local bodies for local purposes. Initial settlement including survey and classification should be undertaken in all areas where they have not been held so far.

Agricultural Income-tax

An agricultural income-tax on the higher agricultural incomes should be adopted by all the States which have not yet done so. Surcharges should be levied by all States on agricultural income-tax on the basis of the assessee's non-agricultural income. The land revenue charged should be revised once in ten years with reference to changes in price level. Changes in prices by 25 per cent. in either direction should not call for any adjustment; the proportions in which adjustments should be made if prices fluctuate by a wider margin are indicated.

A general principle laid down regarding water charges is that they should be such as to promote economy in the use of canal water and create conditions which will make the maintenance and development of irrigation schemes possible on a larger scale. Water rates must ordinarily cover the maintenance charges. The water rate voluntarily payable on supply of irrigation water should be so fixed as to cover the debit charges and overhead expenses on a project. Rates should be reviewed at not too long intervals.

As regards "State excises" or prohibition, the Commission has not made any recommendation in view of an equal division of opinion among the members. Three members are of the view that the constitutional directive should be implemented as early as practicable. The loss of revenue is counter-balanced by an increase in the welfare and purchasing power of the poor. The other three members, however, think that Prohibition is only one of the directives of the Constitution and the pace of implementation of Prohibition should be viewed in perspective. The relinquishment of revenue entailed by Prohibition is a factor that cannot be ignored.

It is recommended that the quantum of betterment levy may be fixed at a maximum of 50 per cent. of the increase in value of land due to irrigation, although the actual rates may be fixed at a level that will continue to afford an adequate incentive for irrigated farming. Provision should be made for adjustment to price changes.

Local Taxes

In the discussion on local taxes, the principle is laid down that a sound system of local finances should, as a rule, rest on a sound foundation of local taxation. A cautious policy is suggested in regard to the entrusting of functions to village panchayats. It is recommended that the State Governments should allow local bodies to develop exclusively certain taxes. It is stated that normally grants-in-aid should be preferred to assignment of shares of taxes as a method of financing local bodies. The proceeds from Motor Vehicles Tax and land revenue should, however, be shared. Certain principles are laid down for the system of grants-in-aid. The general adoption of a system of Government guarantee of municipal loans is suggested. It is recommended that the maximum limit for profession tax per person per annum should be increased from Rs. 250 to Rs. 500.

In respect of tax on prize competitions, the Commission has recommended the regulation and fixation of prize competitions on lotteries to be taken over by the Central Government. The Commission has no comments to make on the rates or on the arrangement for the collection of betting in different States. It is, however, recommended that the tax should be levied on all stake money including the winnings and not on winnings only as at present in a few States.

SUGAR

(Concluded from page 412)

tical Adviser of the Indian Council of Agricultural Research. On the results of this investigation, it is needless to add, depends the question whether it would be economical for the country as a whole to encourage the development of cane and the sugar industry in the sub-tropical areas of the country.

While on the subject of yields, Mr. Gopalakrishnan did well in emphasising the importance of increasing the sugar content of cane. He said that Bombay and elsewhere, where scientific farming of cane was carried on on a large scale, both the yield and the sugar content of cane were very much more than in other parts of India. The producer of cane had, however, no incentive, he added, to increase the sugar content by better technique, so long as the payment for cane was by weight and not by sugar content. In this connection, he referred to the difficulty of adopting a system of payment for cane based on sugar content, owing to the predominance of small producers supplying cane to factories. He revealed, as did Mr. Jain in his speech, that a Committee of the Development Council for the sugar industry was working on the problem and hoped that some solution would be evolved in the near future.

Mr. Jain's speech is notable particularly for his observations on linking cane prices and profit-sharing with sugar prices. They indicate the Government's attitude towards this vexed problem which is, to quote Mr. Jain, "a perpetual source of controversy." He reminded the Sugarcane Committee that the cane price fixed by the Government was the minimum and that it was always open to the grower to get a better price. In fact, in some cases, the grower got, he said, better prices. He stated that the Government had evolved a system whereby the cane-grower shared the profit resulting from higher prices. There were, however, objections about that formula both from the mill-owners and the cane growers, each side contending that it was unfair to them. The question of profit-sharing, therefore, had, he stated, been referred to a Committee of experts which, he hoped, would do its work with speed. In this context, he took care to warn the growers not to insist merely on increased prices ignoring the inevitability of economic laws. At a certain stage, high prices act, he rightly stressed, as a deterrent on increased production. Apart from the interests of the consumer, it was in the interests of the producer that the consumption must increase. He, therefore, advised the representatives of cane growers not to overwork their case, ignoring these elementary principles. Mr. Jain drew the attention of producers to the need for producing larger quantities of sugar, as its price even after allowing for taxes, was more than that of imported sugar. He pointed out that British refineries imported raw sugar from Cuba and, after refining it, supplied to this country crystal sugar at a comparatively lower rate than was done by the Indian factories. He did not, however, say how this could be done.

Notices

MARTIN BURN LIMITED

NOTICE

THE NINTH ORDINARY GENERAL MEETING of the Shareholders of Martin Burn Ltd. will be held on Tuesday, 29th March, 1955, at 12 noon at the Registered Office of the Company, 12, Mission Row, Calcutta, to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 30th September, 1954.

(2) To declare a Dividend and Cash Bonus.

(3) To elect a Director.

(4) To appoint Auditors for the current year and to fix their remuneration.

SPECIAL BUSINESS

(*As a Special Resolution*): That the Articles of Association of the Company be altered in manner following:—

The following proviso shall be added at the end of Article 150(6):

"Provided however that any Manager appointed under this Article who is also a Director of the Company shall not exercise the power to make calls on shareholders in respect of monies unpaid on shares in the Company, borrow monies except within the limits previously fixed by the Directors at a Board Meeting, make loans except within the limits previously fixed by the Directors at a Board Meeting or invest the funds of the Company except within the limit and upon such investments previously fixed and specified by the Directors at a Board Meeting and further provided that every such investment made by the Director/Manager shall be subject to confirmation by the Board of Directors at the first meeting held after such investment."

The Ordinary Share Registers of the Company will be closed from 22nd to 29th March, 1955, both days inclusive.

By Order of the Board,

A. G. GIDLEY,

Secretary.

CALCUTTA, *4th March*, 1955.

Note.—The Dividend and Cash Bonus, if sanctioned, will be paid on or after 22nd April, 1955, to those Shareholders so entitled whose names appear in the Company's books on the 29th March, 1955, or to their mandatees. No application for dividend warrants will be necessary.

MARTIN BURN LIMITED

NOTICE

AT A MEETING OF THE BOARD OF DIRECTORS of Martin Burn, Limited, held on 24th February, 1955, the Directors recommended the payment of a dividend at the rate of Rupee One Annas Four per share on the Ordinary Shares ranking for dividend for the year ended 30th September, 1954. In addition the Directors have recommended a cash bonus of Two Annas per share on the Ordinary Shares ranking for dividend. These recommendations await sanction by the Shareholders at the Annual General Meeting of the Company to be held on Tuesday, 29th March, 1955.

The Ordinary Shares Transfer Books of the Company will be closed from the 22nd to 29th March, 1955, both days inclusive, and the dividend, if sanctioned, will be paid on or after the 22nd April, 1955.

By Order of the Board,

T. LESLIE MARTIN,

Chairman.

24th February, 1955.

BUSINESS MEN ON WELFARE STATE

EVER since the Government started speaking about social control and socialistic pattern of society, its spokesmen have been repeating *ad nauseam* that the days of *laissez faire* are a thing of the past, as though business men in this country are not aware of it or are longing for their return. If any politician thinks that our business men are so backward in their economic thinking as to believe that the State need not or should not regulate their activities, they are adding insult to injury. No business man of any standing has, to our knowledge, asked for *laissez faire*. On the contrary, there is enough evidence to prove that the business community has itself asked for a considerable measure of State regulation to curb the undesirable activities of anti-social elements in its midst, to prevent unhealthy competition and monopolies, and to protect it from the adverse effects of trade cycles. The business community has even welcomed the entry of the State as an investor in certain spheres of industry and finance. It has wholeheartedly voted for a mixed economy and repeatedly expressed itself in favour of a Welfare State. If there are doubts still lingering in the minds of any politicians about this, they have only to read, in order to dispel such doubts the speeches delivered and the resolutions adopted at the twenty-eighth annual session of the Federation of Indian Chambers of Commerce and Industry, held at New Delhi on the 5th inst. Indeed, there are business men who are farsighted enough to realise that, unless the objectives of the economic policy adopted at the Avadi session of the Congress are quickly realised, democracy, without which there can be no private enterprise, will be in danger. Mr. B. M. Birla, who retired as the President of the Federation at its annual session last week, is one of them. In his presidential address, he fully identified himself with the spirit of the resolution adopted by the Congress at its Avadi session and endorsed its objectives.

Addressing himself to Mr. Nehru, in particular, who inaugurated the annual session of the Federation, Mr. Birla averred that business men shared Mr. Nehru's ambition of raising the standard of living of the people in the shortest possible time and that they were no less anxious to translate his ideas into concrete shape and would not lag behind him "in the glorious task of building a prosperous India." He went a step ahead of the Congress Party when he said that "the meaning and content of a Welfare State must quickly reach the masses by way of an improvement in their standard of living." "And we must see," he added, "that, at least in a decade from now, the *per capita* income is doubled." He was convinced that this was not difficult of fulfilment if all the different sections of the community thought and worked steadfastly towards this goal. There is thus no difference of opinion between the Government, or the ruling party, and the business community in regard to either the role of the State or the economic objectives. Where they differ is in regard to the manner of realising the objectives and the extent of State interference in the name of social welfare. This difference arises not because of any doctrinaire approach on the part of business men but because of their clear comprehension of the practical difficulties and the danger of too much State control and ownership leading to autocracy.

Mr. Nehru has repeatedly stated that the socialistic pattern of society envisaged by him is not the same thing as a socialist State as is generally understood throughout the world. Though he is yet to define what exactly he means by a socialistic pattern of society, he has broadly indicated what his objectives are. These are: increase in production, equitable distribution of what is produced, equality of opportunity for learning and finding a means of living, no privileged position to any group or individuals and no excessive concentration of wealth. The sum and substance of Mr. Nehru's ideal is that poverty should be abolished and employment should be found for all. The contention of business men is that all these very desirable objectives can be achieved only through rapid industrialisation, for there can be no Welfare State in an underdeveloped economy. Industries, it may be noted, not only provide employment but also produce goods necessary for use on the welfare front. The Government's economic policy should, therefore, be such as to expedite industrial development. Mr. Birla devoted a good part of his speech to this subject, which is only as it should be, since that is the topic of the day. He indicated not only what should be done by the private sector and how it should be done but also what is expected of the State.

To take the last mentioned topic. A Welfare State has many fronts and advance has to be made simultaneously on all fronts, such as industry, agriculture, transport, education, health, etc. Mr. Birla's suggestion is that the Government should concentrate its attention on the development of agriculture and basic social capital, such as housing, irrigation, power, roads, railways, posts and telegraphs, inland navigation, as also on the provision of civic amenities such as the removal of slums, extension of medical and educational facilities, water-supply and drainage. Then, there is another line in which the State has to take the initiative. It is the exploration of mineral wealth and development of scientific research, in close co-operation with industries. There is so much to be done in these directions that it will keep the State fully engaged for several years to come, leaving very little time to bother itself with the establishment of industries for which it has not the personnel of the right type. If at all it should engage itself in industries, it can usefully employ its talents and resources to the development of nuclear power and its application to industries, a sphere of activity which is not suited to the private sector in this country at present. Where the private sector is unable or unwilling to come forward to take up certain industries, the State, of course, should step in, but, before doing so, it should give a chance to the private sector to establish them by giving it all reasonable assistance. In short, the object of the State in these matters should be to help the people to help themselves. This object can be well served if the forces of creativeness are liberated.

One may ask as to why the State should not establish whatever industries it wishes. Apart from its lack of experience to run commercial enterprises, the inevitable red-tapism and the need for paying undivided attention to the creation of social capital and the provision of civic amenities as already referred to, there is one very good reason why it should not. Mr. Birla stated this very well in his speech when he remarked: "The larger the control over the people through a bureaucracy, the greater will be the tendency towards an authoritarian regime. Even in totalitarian Russia, their new Prime Minister Bulganin has felt it necessary to admit publicly that the cost of Government apparatus has to be reduced and bureaucracy brought to an end. The conclusion is obvious. People themselves must be encouraged to take to business not only to avoid regimentation, but also to decentralise power and authority."

There is scarcely any exaggeration in Mr. Birla's apprehension. Many democratic countries in the West which drifted into State-ownership and social control have realised the danger of this trend ultimately leading to State capitalism, the evils of which are well known, and have reversed their policies in favour of private ownership. In fact, the line which the Congress Party wants to follow in this country now is obsolete. It is a pity that this party, which calls itself a dynamic institution, should still cling to this outmoded idea.

State promotion of industries is supported on the ground that there is not sufficient *entrepreneurial* skill in this country and that increasing dependence on the existing industrial managements will lead to an undesirable concentration of economic power in a few hands. Many seem to be carried away by this argument but it is not free from fallacy. Enough *entrepreneurial* skill will be forthcoming if adequate incentive is offered and if the Government does not subject a person who wants to start industries to too many restrictions and regulations. One must try to float an industry to know what difficulties one has to undergo before getting a licence. If concentration of economic power is to be avoided, the Government should encourage individual savings but, in the budget proposals for 1955-56, the taxes on that very section of the community which saves and invests in industries and which provides *entrepreneurs* have been stepped up, while the taxes on corporations have been left unchanged. In fact, the 25 per cent. investment allowance on new plant and machinery will encourage savings of corporations, a trend which seems to run counter to the Government's desire not to encourage concentration of economic power. Again, the Government is keen on compelling the companies the shares of which are closely held—section 23A companies—to disperse their shareholding over a large number of persons by forcing them to a penal tax. It is not known how the dispersal of ownership can be brought about if the Government dips into the savings of the middle class. It is not suggested here that the Government was wrong in not raising company taxation or in providing the investment rebate. Far from it. What is suggested here is that individual savings, too, should have been encouraged. The observations of Mr. Birla on this subject are quite pertinent and bear reproduction:

"The picture that we have in mind of the future India is of new enterprises springing up all over the country. Therefore, for a bigger spread of the industrial sector and for quicker development of the country, we require more and more of the investing and *entrepreneur* class and all encouragement should be given to investors. While undoubtedly corporate saving is important, a reasonable balance must be kept between

personal savings and corporate savings and, in the present conditions of our country, the emphasis, indeed, should be on the encouragement of personal savings and risk capital. Risk capital is indispensable to industry and is a prerequisite for industrial advancement. The history of industrially advanced countries amply demonstrates that their industrial development was largely dependent in the initial stages on the supply of personal savings and risk capital and that only latterly corporate savings attained more importance in new investments."

If taxes are reduced, how will the Government find the revenue required for financing its development projects and other commitments? Surely, it is not desirable to depend on deficit financing up to a level which the country cannot absorb. Mr. Birla has a ready answer for this line of argument. Here it is:

"Taxation policy should be related to economic activity. It should be the aim to expand Governmental revenues through greater production in the country. Even with the present rates of taxes, more revenue can be obtained if economic activity is accelerated. In other industrially advanced countries even at lower rates of taxes, Governmental revenue is far higher than ours, because the tempo of economic activity is greater there. The way in which industrial reconstruction and expansion has been taking place in Western Germany provides an object lesson."

If the vicious circle of heavy taxation, less savings and slow development is to be broken, the course advocated by Mr. Birla is the only effective solution.

The improvement in production during the last two or three years seems to have created the impression in certain quarters that Mr. Birla's contention that the present rates of direct taxation and the increases in taxation on consumption act as a disincentive is an exaggeration. This impression does not bear scrutiny. The achievements of the private sector during the past two or three years are, as the Shroff Committee pointed out a few months ago, the result of greater utilisation of installed capacity, mainly in certain consumer goods industries. In terms of additions to the industrial potential of the country, the gains have been much less than those anticipated in the first Five-year Plan. Indeed, they are insignificant, as compared with either the employment needs of this country or with the great strides which several countries in the world have made. If, in the coming years, too, we are going to be content with the same pace of economic progress that had obtained during the last few years, then we should give up talking in terms of doubling our standard of living in a decade and providing two million new jobs every year.

PROBLEMS OF INDIAN SHIPPING

IN the Indian shipping world, the Scindia Chairman's speech at the annual meetings of the Company's shareholders has come to be looked upon as an event of major significance, and justifiably so. For Mr. Dharamsey Khatau speaks not only on behalf of the leading shipping company of India, but also with all the weight of prestige and authority of a leading business man who is well known for his broad outlook and progressive views. Yet the comprehensive survey of our shipping problems which he gave in his speech the other day is likely to evoke mixed feelings in the mind of a thoughtful reader. For the deep appreciation of Mr. Khatau's observations on some points will almost certainly be tempered by a feeling of equally keen disappointment over others.

Like the chairmen of the other shipping companies, Mr. Khatau has drawn pointed attention to the gravity of the dock labour problem. Since the decasualisation scheme was introduced—in Bombay in 1952, in Calcutta in 1953 and in Madras in 1954—the situation has gone from bad to worse; lack of discipline and deliberate "go-slow" tactics have become the order of the day; the output has fallen off almost to one-half, in some cases even lower. An average loss of five days, says Mr. Khatau, on account of poor loading and discharging operations in a round voyage—and this is by no means a high figure in present-day conditions—would, in the case of the Scindia fleet, amount to an aggregate loss of the order of 800 to 900 voyage-days, which is equivalent to 2½ vessels. The delays alone "would result in a virtual immobilisation of 2½ vessels, the maintenance cost of which would approximate to Rs. 20 lakhs." The object of the decasualisation scheme was to better the condition of labour, in order to achieve greater efficiency. These are laudable aims, but it cannot be denied that, in actual practice, the scheme has led to some gross anomalies, mainly because, while recognising the rights of labour, it practically ignored their corresponding obligations and made little or no attempt to relate reward to performance. The official enquiry now instituted into the dock labour question has not come a day too soon. It is our ardent hope that this Enquiry Committee will do its best to end the present one-sided state of affairs at our docks and thereby help rescue Indian shipping from the dangers of a creeping paralysis.

As for taxation policy and its effects on shipping, Mr. Khatau tells us the familiar tale of woe with some plaintive touches of his own—the difficult problem of replacing old tonnage when costs of ships have gone up four to five times as compared with the pre-war level; the inequitable incidence of the amendment of the Income-tax Act which, since 1946, has subjected to tax the sale proceeds as well as the amounts realised from underwriters for marine mishaps, and the need for exempting such amounts from tax when they are utilised for acquiring fresh tonnage; the inadequacy of the "accelerated depreciation allowances," which only serve to put off the evil day but give no net overall tax relief; and the plea for an "investment allowance" similar to what was granted to the British industry last year. On all these points, we find ourselves in substantial agreement with Mr. Khatau. The 'floating factory,' if so heavily loaded with taxes, can hardly be expected to withstand international competition on the high seas. Hardly had the echo of Mr. Khatau's speech died down than the Finance Minister announced his decision to grant a development rebate of 25 per cent. for new plant and machinery installed or acquired after 31st March, 1954. This sorely needed tax relief will be particularly welcome to Indian shipping.

There are other points made in Mr. Khatau's speech on which there could hardly be two opinions: the problem of manning India's expanding fleet and the need for recruiting foreign personnel in higher grades to meet the existing shortage; the necessity of creating one central co-ordinating agency for arranging the ocean transportation of all cargoes owned or controlled by the Government; the need for building up a nucleus tanker fleet in the immediate future, with its operation and management entrusted to some competent shipping company. That it is high time to develop our own tanker trade has been frequently stressed from all quarters, including the shipowners, the Government and the public.

So far, so good. But difficulty arises when we turn to Mr. Khatau's plea for a quota system in the coastal trade, for no charters on the coast, and for no tramp ships for India. Some of the observations made under these captions seem to be sadly lacking in realism. Is the prevalence of malpractices a good enough argument for plumping for a quota system? Will it help build up the stock of India's shipping industry as a private enterprise in the eyes of the public? One could legitimately expect that Scindias as the leader of Indian shipping would give a decisive lead in a matter like this and devise ways and means to end whatever malpractices may now be prevalent. Instead, we find them arguing the other way—because malpractices cannot be stopped, quotas must be resorted to, which is as good as a counsel of despair.

It is true that, before the war, a quota system was at work on the coast, but that was before India's independence and before coastal reservation, when quotas were the only practicable means of protecting India's infant shipping industry against the stifling competition of powerful non-Indian interests. What justification could there be for quotas in the changed political climate of 1955? The quota system, which is often but a prelude to a closed-door policy, will make it hard for new companies to enter into this trade; it will almost certainly affect the future growth of the younger companies. Should this happen, then the Indian shipowners, who often complain of the monopolistic tendencies of foreign conferences, will themselves be faced with similar charges within their own country, so that the accusers in the overseas field will become the accused at home. In such an altered context, the much-advertised "nursery of Indian shipping," too, will need a new metaphor; for the coastal trade will then become more like a strait-waistcoat for this industry.

On the question of employing charters on the coast, Mr. Khatau is quite categorical. None should be allowed to operate from the first of April, 1955, not even as substitutes for owned tonnage when transferred to an overseas [illegible] for "it would defeat the basic purpose of reservation." How and why, Mr. Khat[illegible] not say. In effect, such a thesis is no diffe[illegible] from saying: "Sentiment first, business next." It is clear that, at any given moment, the owned tonnage should be so employed as to yield the best results by way of freight earnings. It is equally clear that there are occasions when transfer of larger boats to the overseas sector and employment of time-charters as temporary substitutes for them on the coast would directly contribute to that end. We fail to see why on such occasions shipowners should be asked to sacrifice freight for what could at best be an intangible emotional satisfaction.

Now to take the case of tramp ships. Mr. Khatau reminds us of the dwindling tramp tonnage of the U.K. Before World War I, tramps accounted for as much as 50 per cent. of the total British tonnage, the percentage fell to 30 by 1935, and to only 15 by 1953-54. Countries like Germany, Italy and America which have developed mercantile marine on the basis of well conceived policy, he goes on to say, have made no special efforts to develop their tramp tonnage. "Tramps," he concludes, "are a dying breed."

But are they? Let us consider, for example, the following remarks made a couple of years ago by the President of the U.K. Chamber of Shipping at the annual meeting of the Chamber: "There is no doubt which way the tide is setting. In 1939, we had 3.5 million tons gross of tramps. In June, 1950, we had 3.1 million. In 1951, 2.8 million. In 1952, 2.4 million.... *This is ominous, not merely statistically, but because tramp tonnage is the shipping reservoir which should be continuously filled from below, by the springs of new ownership* ... and if the answer can be given in one word—and it almost can—the word is the familiar one—taxation." (Italics ours.) Must we draw our inspiration from a trend of development in Britain which its own leaders of shipping frankly deplore, which they want to arrest but have so far been unable to do so? Must we emulate what they look upon as ominous?

The case of post-war America, Germany and Italy is hardly relevant. The U.S.A. has a fleet of some 14 million gross tons in operation, but, in addition, it has some 13 million gross tons laid up as reserve, some of which make occasional sallies as tramps carrying bulk cargo across the oceans. This whole tonnage is, in a sense, nothing but a vast reservoir of potential tramps. Germany and Italy are busy recapturing their places in various conferences which they had to vacate during the war. They are doing so for the very sound reason that, otherwise, these places would be lost to them for good. India is not in that happy position. How to enter into the major conferences still remains its main headache. As Mr. Khatau has himself emphasised, the Indian members of the India/U.K.-Continent Conference cannot accept export cargo from Colombo, Aden and other intervening ports for the U.K.-Continent, and *vice versa*, for the simple reason that, in spite of frequent representations, they have so far failed to enter into these "Zonal Conferences." To think only in terms of liners when even such elementary rights as entry into these sister Conferences have been denied to India, is not a realistic approach.

Britain, as we have seen, has been steadily losing ground as a tramp operator, largely owing to the high level of its taxation. But there are other countries which are promptly stepping into this vacuum. Norway, Japan and Greece rank among the most important tramp operators of the world. Their fleets, which a year ago consisted of 6.0, 3.3 and 1.2 million gross tons, respectively, are still expanding. Besides, some of the leading maritime nations have found it handy to use other countries, especially Panama, Liberia and Honduras, as bases for tramp operation. The following figures for steam and motor vessels of 500 gross tons and over will tell the story:

(In thousand gross tons)

	3rd September, 1939	31st December, 1953
Panama ...	722	3,942
Liberia ...	—	1,619
Honduras ...	—	413

These three countries, which are politically and economically as good as nonentities, have one great thing to offer—low taxation. And so, like a powerful magnet, they have been attracting the tonnage, mostly tramps, from the high-tax areas. The net earning capacity of a vessel is greatly increased as soon as it hoists the flag of one such country. Tramps are not a dying breed, as Mr. Khatau describes them; they are a migrating one.

TARIFF BODY TO CONSIDER AGAIN RETENTION PRICES FOR STEEL

CARRY FORWARD OF LOSSES—INVESTMENT REBATE

THURSDAY, 5 P.M.

TEN days have passed since the budget proposals for 1955-56 were announced. The share markets have thus had sufficient time to study them and understand their significance. The fact that equities have continued to rule firm, with a number of them registering a substantial improvement in their value, shows that the markets refuse to take a pessimistic view. It is true that the technical position of top speculative counters has been in favour of the bulls. But, as there has been an all-round advance in prices, it seems that the rise is based on something more solid than the mere manipulations by a group of bulls. Even textiles, which were visibly hit last week, have recovered. It would appear that many investors who were waiting for budget uncertainties to be over, have been making selective purchases, now that the worst is over. Whether this support will be sustained remains to be seen.

MARKET GOSSIP

• • • •

The share markets' second thoughts on the budget seem to be one of subdued optimism. The operators feel that the adverse effects of the increase in taxation payable by the middle class on investments in equities are exaggerated. They attach great value to the development rebate; this concession is regarded as a major one and is expected to benefit many joint-stock companies. They are confidently hoping that the Finance Minister will revise, in a downward direction, some of the excise duties, owing to strong pressure from his party members. They are even ready to believe the report that he may yield a little in regard to the taxation on perquisites, too. The other factors on which the market is taking an optimistic view may be pin-pointed:

(1) The budget is not as bad as was feared at one time.

(2) The uncertainty about the recommendation of the Taxation Enquiry Commission is over. The main suggestions of the Commission, in so far as they relate to Central taxation, have been implemented. Nothing worse is in store from this source.

(3) The Government is reported to have modified its drastic proposals in regard to company law reform in favour of industrial managements.

(4) There will be no taxation of bonus shares and no hitch is likely to be experienced by companies which want to issue them.

(5) Most of the industries are working satisfactorily.

(6) As the Government is determined to step up its development expenditure, more money will be circulating and the demand for consumer goods will be well maintained.

• • • •

The present retention prices for the Tata Iron and Steel Company, Ltd., and the Indian Iron and Steel Company, Ltd., hold good only up to 31st March, 1955. What will be the position after this date? Will the price control on steel be removed or modified substantially? If the Government proposes to continue the present system, has it referred the issue to the Tariff Commission? These are some of the questions which are agitating the minds of speculators in the shares of both the companies. It is rumoured that the T.I.S.Co. has already submitted to the Government its demand for an increase of about Rs. 30 per ton in the price of steel. According to our information, the Government is not very keen on giving up the control over the prices of steel, nor is it very anxious to settle the question without first referring it to the Tariff Commission. In short, the present arrangement will be continued. The Tariff Commission is already reported to have commenced its preliminary study of the question and its active consideration is likely to be taken up two or three months hence. It is needless to add that whatever increase in retention prices is finally decided, they will be given retrospective effect from 1st April, 1955.

• • • •

The possibility of the recent increase in excise duty on cloth being modified is hinted at by reports from New Delhi. A cut of quarter anna in the enhanced duty on coarse and medium counts is forecast. The Finance Minister is reported to have indicated at a meeting of the Congress Parliamentary Party that he was considering a modification of the duty in deference to the criticism that the poorer sections of the people would be hard hit by the increases effected by him under his budget proposals. In the meantime, the textile industry itself is greatly agitated over the increased levy, because it will have to bear the major portion, if not the whole, of the extra burden, if consumers resist the incidence of the levy being passed on to them. An idea of the extent to which mills will have to pay more in such a case was given by Sir Joseph Kay, Chairman of the New City of Bombay Manufacturing Co., Ltd., in reply to a question from one of the shareholders at the annual general meeting of the Company held on Monday this week. So far as the New City was concerned, the average excise duty paid last year amounted to Rs. 52,000 per month. On the basis of the revised rates per square yard, the duty will amount to Rs. 1 lakh per month. Sir Joseph visualised a none too bright outlook for the industry, because of the mounting costs and dwindling margin of profit. He pointed out, at the aforesaid meeting, as well as at the meeting of the New Great Eastern Spinning and Weaving Co., Ltd., held on the same day, how the recent award of the Labour Appellate Tribunal and other higher costs had affected the profits of both the Companies though production was well maintained.

• • • •

One of the grounds on which the shares of the Bombay Dyeing were being consistently supported in recent months was that the Company would issue bonus shares. It was all along believed that, if the Government decided not to tax bonus issues, the Company would plump for capitalisation of reserves. Hopes, therefore, ran high when it was known that bonus issues would not be taxed. They were no doubt shaken a bit last week when the Directors' decision on dividend for 1954 was not accompanied by any announcement about bonus shares. But, subsequently, operators began to console themselves by saying that the Directors might meet again later and vote in favour of the issue. There is, however, no room for any such speculation now, for, at a meeting held today, the Directors decided not to issue bonus shares. The reasons for this decision may be the shrinking margin of profit on cloth and the Company's intention to spend large amounts on modernisation the effect of which on its earnings may not be felt for some years to come.

• • • •

Saurashtra will have a soda ash plant in the near future. Preparations for its establishment are in full swing. The project is being promoted by Birlas, who have already registered a company in Bombay for this purpose under the name of Saurashtra Chemicals Ltd. The authorised capital of the Company is Rs. 5 crores, of which Rs. 1 crore is expected to be issued to the public. An approach is likely to be made by the sponsors to the Industrial Credit and Investment Corporation for a part of the finance required for this project. The assistance expected from this source is placed at as high as Rs. 2 crores, but it is too early to say anything definite about that amount. The sponsors also hope to find a part of the finance by buying the plant and machinery on "supplier's credit" basis, repayable in seven or eight years. It is reported that at least three countries—Switzerland, Sweden and Japan—are competing for this business. The plant will be installed at Porbandar; its initial capacity will be 100 tons of soda ash a day, capable of being expanded ultimately to 200 tons a day.

• • • •

Although the provision in the Finance Bill which provides for the grant of a development rebate to industries has been generally welcomed in this country, it has been criticised by Dr. V. K. R. V. Rao, a member of the Commission, on the ground that it has been made applicable to all industries instead of to certain selected industries (as suggested by the Commission). Now, clause 8 of the Bill amends section 10 of the Income-tax Act providing for a deduction (called "development rebate") in respect of new plant and machinery installed in a business after 31st March, 1954, whether the business itself is old or new. This rebate is, as was briefly pointed out in these columns last week, similar to the "investment allowance" given in the U.K. and is in lieu of the initial depreciation. The important respects in which it differs from the latter were also mentioned here last week. It is true that the Commission, as Dr. Rao has pointed out, meant this development rebate as a special concession only to industries of national importance. The Commission's approach to the question is that since it has recommended an increase in rates of personal income-tax, it would be necessary to afford specific incentives to productive investment. The Commission's scheme of tax relief deals with three categories of enterprise. The first includes all companies, whether commercial or industrial. They are at present given a rebate of one anna in the rupee on their undistributed profits. Since this concession has been of some use in stimulating a greater retention of corporate profits, it has recommended its continuance. The second category consists of selected industries of national importance. It is to this class of industries that the Commission has urged the grant of development rebate. The Commission has noted that the existing concession under section 15C, the main feature of which is the exemption from tax for profits upto the extent of six per cent. per annum on the capital employed in new undertakings, has not been very useful. In 1952-53, the income exempted under section 15C was no more than Rs. 8.57 lakhs, although it was larger than in the previous year when it was Rs. 3.41 lakhs. The number of assessees who obtained concession under section 15C was again small, being 118 in 1952-53, though it was larger than in the previous year when it was 91.

• • • •

After explaining the nature and scope of the development rebate—clause 8 of the Finance Bill, to which reference is made above, incorporates the Commission's recommendation—the Commission has suggested that the criteria for selection of industries for the grant of the rebate should be: (1) the importance of the industries concerned from the point of view of national development and (2) the extent to which they are likely to be developed, if left to the voluntary effort of private enterprise and without any special stimulus by way of tax relief. The Commission has further stated that it would be necessary for an appropriate body constituted by the Government such as the Planning Commission to draw up a list of industries which conform to the criteria for selection laid down by it. The third category includes only a small number of industries selected from time to time by the Government as of special national importance, the Commission's intention being to give a somewhat greater stimulus to this group as compared to either of the other two categories. Accordingly, it has recommended for the third category a complete tax holiday (that is, exemption from tax). This category would include producers' goods and capital goods industries.

• • • •

Such, in brief, is the outline of the Commission's scheme for tax relief to industries. It will be clear that the Commission's intention is to give development rebate to the second category of industries only. But the Government seeks to extend it to all industries. Thus, the Government's decision is a significant departure from the Commission's recommendation. Commenting on this decision, Dr. Rao says:

"The Commission had wanted to use the development rebate as a specific form of tax incentive for promoting investment in selected categories of industries. They had, therefore, confined their recommendations, for a development rebate exclusively to certain categories of industries of national importance and had indicated that in practice this should mean confining the concessions we have recommended to the group of industries that are broadly described as producer goods and capital goods industries. If the Government require time to give further detailed consideration to these proposals, one can understand their deciding to retain the status quo regarding the initial depreciation allowance, pending the completion of their enquiry. But it is difficult to understand how a decision could be taken in the meanwhile to extend the development rebate of 25 per cent. to all industries. Such a decision completely negatives the possibility of guiding investment in desired channels and is certainly not consistent with economic planning in the private sector. I hope that even at this late stage the Government will see their way not to extend this concession of a development rebate to all industries but confine them exclusively to the producer goods and capital goods industries as suggested by the Taxation Enquiry Commission."

Although there is considerable force in Dr. Rao's criticism, it must be admitted that it would be difficult to draw up a satisfactory list of industries of national importance. The criteria for selection, laid down by the Commission, are too general to serve as a practical guide in selecting industries for the grant of the rebate. In any case, the existing machinery in the shape of Capital Issues Control and of other forms of Governmental control, vests sufficient power in the hands of the Government to see that non-essential industries are not started.

• • • •

Last week, it was stated in these columns that the budget proposals envisaged the restoration of the right to adjust losses on speculation against the gains in business. This is a mistake. The correct position is that the facility to carry forward losses, as we indicated in the last issue, will extend to an indefinite period; thus, there will be no six-year limit, as now. Also, business losses (other than speculation losses) carried forward will be allowed to be set off against the profits of the same or any other business, profession or vocation carried on by the same assessee in future years. But losses sustained in speculative transactions are allowed to be set off only against the profits and gains, if any, of any business in speculative transactions carried on by the assessee. There is, therefore, no change in the position in respect of adjustment of losses in speculation, but such losses also can be carried forward for an indefinite period, which was not the case before.

• • • •

The main change, namely, the abolition of the six-year limit for carrying forward losses, implements the recommendation of the Taxation Enquiry Commission which suggested that the losses should be allowed to be carried forward indefinitely, that is, until they are fully absorbed. The second change, namely, the facility for adjustment of business losses (other than speculation losses) against the profits in the same or any other business also stems from the Commission's suggestion. The Commission said that it had been pointed out to it that the present restriction on the adjustment of carried forward loss of a business against the income of the same business should be abandoned. It had been told that apart from the difficulties of interpretation of the word "same" it was not equitable that the loss offset should be restricted on arbitrary grounds. It added: "The rates of taxes have also steeply risen since 1939 and the situation has altered materially from the point of view of the assessee since then. We recommend that the restriction for loss offsets against the same business should be removed, subject to the safeguard that the business in which the loss is occasioned is carried on by the same assessee in subsequent years. We also suggest that the working of this recommendation should be reviewed after five years.

• • • •

Justifying the continuance of the segregation of speculative losses, the Commission avers, in effect, that the position is not as bad as its critics make out, since many genuine hedge transactions are not treated as "speculative." Such exempted transactions include: (a) a contract in respect of raw materials or merchandise entered into by a person in the course of his manufacturing or merchanting business to guard against loss through future price fluctuation in respect of his contracts for actual delivery of goods manufactured by him

(*Continued on page 496*)

FIRM TONE IN EQUITIES

TEXTILE SHARES REVIVE

(From Our Own Correspondent)

BOMBAY, *10th March*

THE week under review was a short one for the Stock Exchange on account of the intervention of holidays. The Exchange remained closed on Saturday last, as it was the day following the settlement. On Tuesday, operators indulging in *Holi* revelries, refrained from doing business though the exchange was officially open. The Stock Exchange remained closed yesterday, it being a bank holiday for *Holi*. During the short week, equities displayed a cheerful tone on strong speculative buying and some investment support.

Trading was somewhat subdued, except in steels, on the opening day, operators' enthusiasm having been dampened by settlement considerations and weakness of textiles. In slow dealings values backed away slightly. Buoyant conditions were, however, soon restored, with leading scrips attracting sizable speculative support. Lower carry forward charges than expected in the last settlement, unconfirmed reports that Tata Iron and Steel Company might receive an increase in retention prices, optimistic expectations of a possible reduction in the proposed excise duties on cloth and the sharp rise in notes in circulation were some of the factors which induced support and attracted short covering. In the result, equities registered handsome gains on a wide front.

As in the previous week, steel shares provided the lead to the market. Tata Ordinaries hardened from Rs. 237-12 to Rs. 243 and, after a reaction to Rs. 240-12, gathered strength to close at Rs. 242-8. Indian Irons rallied from Rs. 35-1 to Rs. 35-13 and closed at Rs. 35-10.

Textile shares shook off their nervousness noted in the previous week following the increase in excise duties, and staged a revival all-round on reports regarding the modification of the excise duties on cloth, as stated above. Besides, the maintenance of dividend by a number of cotton mills engendered hopes of similar announcement by other mills also. Consequently, sentiment hardened and quotations advanced, thereby retrieving the bulk of last week's losses. The highlight of the section was provided by Century Mill shares which spurted from Rs. 372 to Rs. 383-12, following the good working results and on speculative support. Bombay Dyeings very nearly recouped last week's loss by advancing from Rs. 461-4 to Rs. 468-2. There was a revival of support to Kohinoors which gained Rs. 4-12 to Rs. 316. Central Indias were better by Rs. 3 at Rs. 130. Finlays accounted for a rise of Rs. 2 at Rs. 251 and Gokaks for Re. 1 at Rs. 228. Models put on Re. 1-4 to Rs. 138-12, so also Podars to Rs. 157-8 and Shree Niwas to Rs. 238-12. After being marked up from Rs. 147 to Rs. 149, Simplex shed a good part of the gain and closed at Rs. 147-8. Standards appreciated by Rs. 3-12 to Rs. 368-12, Svadeshis by Rs. 5-12 to Rs. 194-4 and Tatas by Rs. 2-8 to Rs. 60-8.

A feature of the bank section was the sharp rise in Barodas from Rs. 103 to Rs. 107-8. But Centrals dropped a fraction to Rs. 52-4, as also their new shares to Rs. 53. Imperial Fully Paids suffered a loss of Rs. 32-8 to Rs. 1,545 and their Partly Paids Rs. 5 to Rs. 385. Bank of Indias were taken As. 12 higher at Rs. 149-12 and Punjabs Re. 1-8 better at Rs. 40-8, while United Commercials changed hands at the self-same rate of Rs. 45-12.

Insurance shares ruled dull with very little activity. After last week's spurt, New Indias attracted profit-taking and closed at Rs. 58-4. Orientals were unchanged at Rs. 7,215, while Jupiters changed hands As. 2 lower at Rs. 10-6. British India Generals were done an anna better at Rs. 13-15. Empires were sticky at Rs. 700, as also Indian Mercantiles at Rs. 44-8 and Industrial Prudentials at Rs. 42.

Barring a setback in select issues, electricity shares were generally steady. Ahmedabad Electrics dropped suddenly today from Rs. 115-5 to Rs. 114-1 and their new shares from Rs. 31-12 to Rs. 30-8. After hardening from Rs. 127-8 to Rs. 128-12, Bombay Suburbans gave way to Rs. 127-8, in sympathy with Ahmedabad Electrics. Andhra Valleys (old) gained a fraction from Rs. 1,412-8 to Rs. 1,415. Tata Hydros were unchanged at Rs. 147, but Tata Powers were picked up Rs. 3-12 higher at Rs. 1,517-8.

The miscellaneous section presented generally a firm trend with leading scrips attracting good attention. Cement shares were particularly in fine form, Associated Cements shooting up from Rs. 178-4 to Rs. 184 on good buying enquiries on reports of good earnings for the current year so far and substantial benefits accruing from development rebate allowed by the Government. Digvijays rallied from Rs. 169-8 to Rs. 176-8. Sugar shares were dull, but the undertone was steady. Belapurs moved between Rs. 320 and Rs. 325 before closing at the previous week's level of Rs. 323. Phaltans gained a fraction to Rs. 121, while Walchandnagars were done Re. 1-4 lower at Rs. 225. In the engineering and mining group, Alcocks were steady at Rs. 292-8, while Premier Constructions were bid actively on reports that the Company had secured a big contract from the U.P. Government and, consequently, the shares moved up from Rs. 157-4 to Rs. 164-4. Shivrajpurs improved by Rs. 2-4 to Rs. 80-4. Indian Coppers recorded a rise of As. 1¼ to Rs. 3-10 and B.B. Petrols a fraction to Rs. 3-14. Shipping shares were buoyant, Scindias recording a rise from Rs. 15-9 *cum-div.* to Rs. 15-12½ *ex-div.* India Steamships improved from Rs. 7-12 to Rs. 8-1. Great Eastern Shippings were, however, unchanged at Rs. 16-12. Among miscellaneous industrials, Bombay Burmahs (old) shaped well with a rise from Rs. 459-6 to Rs. 465, on rumours about the possibility of a bonus issue, and their new shares from Rs. 160 to Rs. 162-8. B.I.C. rose by As. 9 to Rs. 7-14 on revival of support. Killick Industries were quiet at Rs. 171-4. National Rayons advanced from Rs. 204-8 to Rs. 207-12 on rumours of an increase in dividend to Rs. 11 per share. Tata Chemicals were just ready at Rs. 16-5, while Tata Oils were a shade quiet at Rs. 42-4. Selling pressure in Wimcos pushed them from Rs. 205 to Rs. 203-12.

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, *8th March*

Trading during the week on the Calcutta Stock Exchange took a cheerful turn; enquiries widened, prices gained all round and the number of transactions increased. Scrips of companies having expansion programmes were in good form, as they were in good demand, in view of the benefit accruing to them from the development rebate provided in the Budget. By and large, the Budget proposals have had a favourable reception in the market, inasmuch as they provide for and encourage expansion and growth of industries. No doubt, the fear whether the excise duties would affect consumption is strongly entertained; but, on the other hand, the Finance Minister would appear to be confident that the huge amounts spent on development programmes would be reflected in an increase in the general income level of the working class, the middle class and the peasants.

The Railway Minister's willingness to reduce the proposed surcharge to 6¼ per cent. from 12½ per cent. on consignments weighing less than 20 maunds is noted with relief, as manufacturing industries whose products are required to be railed in small lots, either in view of lower production or of requirement being only too small at a time, are not a few in and around this city. The coal industry is looking forward to the Railway Minister dropping his proposal to increase coal freight by 10 per cent. within 300 miles. The difficulties which the coal industry is facing are many, such as accumulation of stocks in pitheads, increased output costs, inadequate transport, etc. And, now, to add to freight will indeed be the last straw on the camel's back.

After the recent inter-State conference held in New Delhi, the view that the Government of India will soon take a decision to raise the return for electricity supply undertakings is gaining ground. Considering the average return on other industries, and the interest rates charged by the Industrial Finance Corporation and the World Bank, the plea of the electricity industry to raise the 5 per cent. limitation is sound and reasonable. Earlier, it had been reported that the Government of India had already taken a favourable decision in this regard, and that a Bill was likely to be introduced in the present session of Parliament.

Sectionwise this week, engineerings received the keen attention of operators as well as investors. Indian Irons opened last Thursday at Rs. 35-3, and after being firmly held around that level spurted to Rs. 35-7 during the week-end. Yesterday, the rate touched the mark of Rs. 36. Texmacos in buoyant trading gained to Rs. 16-13 from Rs. 16, and Jessop & Cos. were raised to Rs. 36-4 from Rs. 35-7. Kumardhubis were steady at Rs. 12-10 and Indian Standard Wagons changed hands at Rs. 118.

Jutes received more attention, speculative Howrahs rising to Rs. 30-2 from Rs. 29-6. Nationals were lifted to Rs. 33-8 from Rs. 32-6, and at Rs. 232, Anglo-Indias put on Rs. 8. Cheviots were unchanged at Rs. 295, but Belvederes were better at Rs. 218. Champdanies were transacted at Rs. 176, which showed a gain of Rs. 6. Budge Budges were enquired at Rs. 195, while Megnas were weak at Rs. 103-8. Ballys changed hands at Rs. 193, as against Rs. 189 previously. Orients were taken to Rs. 191 from Rs. 187.

Wide interest was shown in tea shares. Gungarams climbed to Rs. 500 from Rs. 455, while Nagaisurrees lost from Rs. 374 to Rs. 371. Birparas were raised from Rs. 301 to Rs. 307. But Carrons remained unchanged at Rs. 306. Hansquas gained from Rs. 29-12 to Rs. 33, Tezpores from Rs. 36-6 to Rs. 37-4, East Indians from Rs. 32-12 to Rs. 33-12. Jutlibaris rose from Rs. 25-12 to Rs. 27-6 and Bormahjans from Rs. 22-2 to Rs. 24. Moheemas scored to Rs. 20-12 from Rs. 19-8, and Sapois to Rs. 42 from Rs. 37-8.

Shares of paper mills were in good demand, Orients advancing to Rs. 28-1 from Rs. 24-13, India Pulps to Rs. 257 from Rs. 245, and Titaghurs to Rs. 44 from Rs. 42-2. Stars were steady at Rs. 14.

Miscellaneous industrials were mentioned in buoyant trading. F. & C. Oslers reached a high of Rs. 19 from Rs. 16-7. Martin Burns received moderate support and rose to Rs. 23-13 from Rs. 23-4. Indian Cables at Rs. 24-13 were fractionally higher as were Niccos at Rs. 23-5. B.I. Corporations recovered to Rs. 7-9 from Rs. 7-4, and Rohtas Industries advanced to Rs. 25-1 from Rs. 23-1. Indian Coppers hardened to Rs. 3-11 from Rs. 3-7.

• • • •

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, *8th March*

The Madras Stock Exchange displayed hectic activity during the week under review. Under the leadership of planting shares, almost all the other sections witnessed heavy buying. As a result, prices firmed up and recorded notable gains over the week. This improvement was partly in sympathy with the buoyant tone in the Bombay share market. Expectations of satisfactory profits by the majority of the planting companies and, consequently, of better dividends also strengthened the sentiment. The feverish buying enthusiasm was marked in tea scrips, although the prices of tea leaves in London persisted to decline. The enthusiasm was so high that the continued fall in prices of tea leaves even in Cochin for some weeks past was completely overlooked. The sentiment of the operators in rubber and coffee scrips was influenced by the strength of tea scrips. Business done on balance was substantial and the undertone remained strong.

Textiles put on a good appearance. Ashers advanced from Rs. 140 to Rs. 149 and Metturs from Rs. 282 to Rs. 285. Coimbatore Pioneers gained Rs. 2-8 to Rs. 206 and Coimbatore Spinnings Rs. 3-4 to Rs. 72. Janardanas were up by Re. 1 at Rs. 78 and Rangavilas by Re. 1-8 at Rs. 62. Lakshmis (Rs. 50 paid-up) shot up from Rs. 135 to Rs. 144 and "A" were better by Re. 1-12 at Rs. 29-12. Vijayakumar gained from Rs. 29-12 to Rs. 33, Tezpores from Rs. 36-6 to Rs. 37-4, East Indians from Rs. 32-12 to Rs. 33-12. Jutlibaris rose from Rs. 25-12 to Rs. 27-6 and Bormahjans from Rs. 22-2 to Rs. 24. Moheemas scored to Rs. 20-12 from Rs. 19-8, and Sapois to Rs. 42 from Rs. 37-8.

Shares of paper mills were in good demand, Orients advancing to Rs. 28-1 from Rs. 24-13, India were raised from Rs. 301 to Rs. 307. But were better by Re. 1-12 at Rs. 29-12. Vijayakumar were As. 11¼ better at Rs. 14-10. Buckinghams changed hands at Rs. 152 *cum-div.*, as against Rs. 130.

Among teas, Blue Mountains improved by As. 2½ to Rs. 3-12½ and Chandramalais by As. 6½ to Rs. 5-9. Coorg Teas rallied As. 9 to Rs. 9-13 and Devasholas As. 8 to Rs. 26. Hulikeyburias advanced from Rs. 27-8 to Rs. 28 and Highland Produces from Rs. 15-12 to Rs. 16-3. Mlamallays gathered Re. 1 to Rs. 64-8 and Nonsuch Teas Re. 1-4 to Rs. 35-4. Peermades gained Re. 1 to Rs. 45. United Nilgiris shot up from Rs. 285 to Rs. 290. Twyfords were higher at Rs. 26, as against Rs. 24-12. Udayagiris, however, lost As. 2 to Rs. 19-8. Emerald Valleys were quiet at Rs. 7-11 and Coonoor Teas at Rs. 31-8.

Cochin Malabars, among rubbers, gained As. 4 to Rs. 7-10 and Kailas As. 3 to Rs. 5-9¼. Nenmenys were higher by As. 6 at Rs. 12-12 and Rajagiris by As. 13 at Rs. 15-9. Vaikundams improved from Rs. 22-14 to Rs. 23-4. Pullangodes were slightly better at Rs. 3-5¼, as against Rs. 3-4. Thirumbadis were fractionally up at Rs. 2-1. Bes, however, were unchanged at Rs. 4-4, Malankaras at Rs. 23-2 and Shevcroys at Re. 1-9.

In the coffee section, Consolidated Coffees were enquired higher at Rs. 18-4, as against Rs. 17-6, and Coffee Lands at Rs. 16-8, as compared with Rs. 16-1. Puthutotams were up by As. 2¼ at Rs. 4-10. Mysore Kadur Coffees were dull at Re. 1-10¼.

Miscellaneous scrips witnessed some selective enquiry. Bruntons advanced from Rs. 6-10 to Rs. 7-4 and F.A.C.Ts from Rs. 5-2 to Rs. 5-5. India Cements (Ordinary) gathered As. 2 to Rs. 20-12 and Travancore Cements As. 5 to Rs. 8-2. Mettur Chemicals disclosed a gain of As. 5 at Rs. 8-10 and Mysore Gold an anna and a half at Rs. 3-9½. Parrys were up by an anna at Rs. 4-8. Rallis, however, were colourless at Rs. 38 and Indian Aluminium at Rs. 180. Aluminium Industries were quiet at Rs. 17-6 and India Steel Rolling Mills at Rs. 12-14. Binnys were uninspiring at Rs. 130 *cum-div.* The Directors have declared a final dividend of 4 per cent. thereby making a total of 8 per cent. for the year ended 31st December, 1954, that is, the same as in the previous year.

DISTRIBUTORS WANTED

FOR Bombay Presidency and Western India. Sale of Rosin and Turpentine. Minimum Sale guarantee of 600 tons of Rosin and 150 tons of Turpentine. Write stating experience and giving Bank references to Box No. 951, c/o. "Commerce," "Brady House," Veer Nariman Road, Fort, Bombay.

NEWS IN BRIEF

THE Union Government has not yet taken any decision on the question of nationalising insurance companies in the country.

The total Indian-owned shipping is 468,110 g.r.t. This represents about ½ per cent. of the world tonnage.

No decision has been taken to raise Indian participation in the share capital of the Burmah-Shell Refinery.

The gross revenue derived from opium during the nine months ending December, 1954, amounted to about Rs. 1,92,11,000.

During 1954, the number of electric lamps manufactured in India was 22.29 million, as against 19.67 million in the previous year.

India will export 4,000 tons of coffee during the first four months of 1955. Further allocation of export will be determined when a better estimate of the crop is available.

During the first nine months of 1954-55, the Central Government gave Rs. 73,53,000 as grants and Rs. 2,31,00,000 as loans for the development of the handloom industry.

The Government of India has decided to license freely the export of abestos cement products to all permissible destinations other than Portuguese Possessions in India till the end of June, 1955.

The all-India first estimate of gram for 1954-55 puts the area at 19,180,000 acres, as against the adjusted first estimate of 17,326,000 acres for 1953-54. This shows an increase of 1,854,000 acres or 10.7 per cent. over last year.

The all-India final estimate of groundnut for 1954-55 puts the current year's area and production at 12,647,000 acres and 3,823,000 tons, as against the partially revised estimate of 10,869,000 acres and 3,573,000 tons for 1953-54.

The Indian Trade Delegation to the Middle East, led by Mr. M. P. Birla, which toured eight Middle East countries recently to explore the possibilities of increased trade between India and these countries, has submitted its report to the Commerce and Industry Ministry.

The Union Government is considering the setting up of a pilot plant in the Nilgiris (South India) for the manufacture of newsprint from wattle pulp. Researches carried out by the Forest Research Institute in Dehra Dun have shown the possibility of newsprint manufacture from wattle pulp.

The Air-India International Corporation proposes to introduce a luxury service from Bombay to London with effect from 9th May next. The Corporation also proposes to include Beirut, Prague and Zurich on its Bombay-U.K. flight. The frequency of the service between Bombay and Singapore will also be raised from one to two trips per week from 1st July, 1955.

India imported 60 bales of Russian cotton during 1954. The c.i.f. price of this cotton was Rs. 1,560 per candy (2 bales), which is approximately the same as for similar cotton imported from other countries. Giving this information in the *Lok Sabha*, the Deputy Minister for Commerce and Industry said this week that imports of cotton were at present being freely licensed from all countries.

The Government of India hopes to appoint the next Finance Commission during the course of the coming year, after it has received and considered the States Reorganisation Commission's report. The distribution of the net proceeds of the Estate Duty among the various States will be one of the questions referred to the Commission. The report of the States Reorganisation Commission is expected to be available in June next.

The West Bengal Government proposes to undertake 131 irrigation schemes in the State under the second Five-year Plan at a cost of Rs. 102 crores. The State Government has so far spent, since Independence, Rs. 19 crores on irrigation, executing 177 schemes. These have benefited an area of 1.2 million acres, bringing an additional yield of 15.4 million maunds of foodgrains.

The all-India first estimate of *rabi* cereals (wheat and barley) for 1954-55 puts the area at 33,861,000, as against 30,756,000 acres in the adjusted first estimate for 1953-54. This shows an increase of 3,105,000 acres or 10.1 per cent. over last year. The area under the individual *rabi* cereals during the current year with the adjusted first estimate for 1953-54 is: wheat 25,567,000 acres (23,137,000 acres), and barley 8,294,000 acres (7,619,000 acres).

A method of utilising *neem*, *karanj* and *undi* oils for the production of good quality washing soaps has been worked out at the Village Industries Research Laboratory, Poona. The use of these non-edible oils in the preparation of soaps has not been popular because of their undesirable odours and colours. In the process developed at the Laboratory, the non-edible oils are not directly mixed with other oils.

The Union Government does not propose to undertake State trading in foodgrains. What is now proposed is to purchase certain foodgrains directly from agriculturists in certain areas where prices have fallen very low. The Governments of six States have already been allowed to buy coarse grains in affected areas. Though there has been a general fall in prices of foodgrains and oilseeds (except in certain isolated pockets), the Government considers that prices have not reached unremunerative levels.

Production of crystal sugar up to 15th February in the current season amounted to 8.19 lakh tons and arrivals of imported sugar to 2.67 lakh tons. The figures for the corresponding period of last season (1953-54) were 6.78 lakh tons and 1.93 lakh tons, respectively. Despatches from sugar factories during the same period amounted to 1.98 lakh tons, as against 3.48 lakh tons in the corresponding period of last season. Stocks with factories on 15th February stood at 6.78 lakh tons, as against 5.33 lakh tons a year ago.

The Government of India has issued a notification under the Indian Merchandise Marks Act, 1889 (IV of 1889), to the effect that zip fasteners manufactured in India should have the country of origin marked on the goods themselves. This notification will come into effect from 15th June, 1955, so as to give time to the industry to comply with the new regulation. This is in accordance with the recommendation of the Tariff Commission to the effect that all manufacturers of zip fasteners should mark their productions as "made in India" on the goods themselves.

A number of subsidiary industries are expected to develop around the proposed Steel Works at Rourkela in Orissa. A large area contiguous to the Steel Works and the township is proposed to be reserved for the location of these industries. During the recent discussions between the Managing Director of Hindustan Steel Ltd., Mr. S. N. Mozumdar, and the Orissa Government, Mr. Mozumdar also suggested that a stretch of land lying between Rajganpur and Panposh, near Rourkela, should be reserved for location of industries in future. Rajganpur already has a large cement factory and a large factory for refractories is being set up there. Hindustan Steel Ltd. has also started an enquiry regarding the capacity of the indigenous structural engineering industry to find out to what extent its requirements of machinery can be met in India. A team of engineers of the consultants of Hindustan Steel have already visited Calcutta and Bombay in this connection. They met representatives of the major engineering concerns in both the cities. The enquiry is continuing.

• • • •

From Abroad

World production of rayon and acetate in 1954 is tentatively placed at 4,360 million lbs. It is a record high output and represents an increase of 5½ per cent. over 1953.

Imports of grains into Holland will be freed as from 1st September, 1955. This will mean the end of Government intervention in this trade, which will be returned to normal private channels.

The U.S. corporations offered a larger volume of new securities during 1954 than in any year since 1929. The new issues in 1954 aggregated $9,600 million, an increase of 8 per cent. over 1953.

The Netherlands had a population of 10,679,563 on 1st January, 1955, an increase of 129,363 or 1.2 per cent. over that a year ago. For an area (land only) of 12,500 square miles, this constitutes a density of population of 853 persons per square mile.

World consumption of wool declined in 1954 by 4 per cent. to 2,530 million lbs., but this was still 20 per cent. above the average for the immediate pre-war years. The principal decrease occurred in the U.S. where consumption was 23 per cent. less than in 1953.

A study undertaken by the Bankers Trust Company of the U.S. reveals that demands for investment funds in the U.S. are likely to rise to record heights in 1955. Investment demands, it says, are not likely to be satisfied with the ease and facility, as was the case in 1954, so that an upward pressure on long-term interest rates is likely.

Industrial production in the United States continued its rise in January. Although small, the advance during January exceeded seasonal expectations. Increases were registered in the output of durable goods, non-durable goods, and minerals. The rise in hard goods production is attributed chiefly to continuing strength in the steel and automobile industries.

The scientists of the U.S. Agricultural Department have produced experimentally a new grade of cane sugar for direct consumption by a process using resin materials to purify the cane juice. This process is said to be a low-cost one and gives higher yields than does the conventional process. The cane sugar obtained through this process is suitable for use without refining in many food products.

Business activity in the U.S. continued to advance in early 1955, following the pronounced rise in the fourth quarter of 1954, according to the Department of Commerce. Retail sales in January were 5 per cent. above the 1954 monthly average and most lines of trade registered increases over last year's average figure. Continued increases were noted in sales of automobiles, output of manufactured goods, and production of steel.

World output of tinplate in 1954 reached a record total of 6,438,000 tons, as against 5,969,000 tons in 1953. Production was at new high levels in the U.S., France, Western Germany, Belgium and the Saar. The output in the U.K. and Japan established post-war records. Of the total world production, the U.S. accounted for 4,453,000 tons, as against 4,269,000 tons in 1953. The U.K. came next with a production of 795,000 tons, as compared with 699,000 tons in the previous year. India produced 66,000 tons a rise of 9,000 tons over the previous year.

PERSONAL

MR. John A. Thivy, India's Minister to Syria, has been appointed Ambassador of India to Italy.

Mr. B. N. Chakravarty, former officiating High Commissioner for India in London, has been appointed Indian High Commissioner in Ceylon.

Mr. D. N. Mahta, Director (Cotton), Office of the Textile Commissioner, has been appointed a part-time Member of the Forward Markets Commission.

Mr. W. R. Natu, Member, Forward Markets Commission, has been appointed Chairman of the Commission until further orders, vice Dr. B. V. Narayanaswami Naidu, who died recently at Rajkot.

Mr. Shantilal Mangaldas, a prominent industrialist of Ahmedabad, and Mr. Lakshmipat Singhania of Calcutta, have been elected President and Vice-President, respectively, of the Federation of Indian Chambers of Commerce and Industry for the year 1955-56.

Mr. Murarji J. Vaidya has been elected President of the Indian Council of Foreign Trade for the current year. Messrs. D. C. Kothari (Madras), B. N. Banerjee (Calcutta), P. B. Advani (Bombay) and Dr. B. N. Ganguli (Delhi) have been elected Vice-Presidents.

Mr. D. P. Karmarkar, Union Minister for Commerce, will lead the Indian delegation to the eleventh session of the E.C.A.F.E. which will commence at Tokyo on 28th March, 1955. The other members of the Indian delegation are: Mr. B. R. Sen, Indian Ambassador to Japan, Mr. K. B. Lall, Joint Secretary to the Union Ministry of Commerce and Industry, Dr. V. B. Gandhi, M.P., Mr. S. L. N. Simha of the Reserve Bank of India, Mr. S. Swayambu of the Central Water and Power Commission, Mr. B. C. Roy of the Geological Survey of India and Mr. Harbans Singh.

OBITUARY

Dr. B. V. Narayanaswami Naidu

We regret to record the untimely death, due to heart failure, of Dr. B. V. Narayanaswami Naidu, Chairman of the Forward Markets Commission, at Rajkot, on Saturday last. Dr. Naidu was on a four-day tour of Saurashtra and reached Rajkot on Saturday afternoon. He suddenly took ill on that night following a heart attack and died within a few hours. He thus died in harness. He had not been keeping good health for some months and yet he refused to take rest, as he felt that the task entrusted to the Commission brooked no delay. He was very keen that the Commission should be established on firm foundations as early as possible and the strenuous tours he undertook all over the country in the discharge of his duties told heavily on his health.

Dr. Naidu started his official career as Professor of Economics at the Annamalai University, of which he later acted as Vice-Chancellor. He was Principal of Pachiappa's College, Madras, for some time before he was appointed a member of the Indian Tariff Board in November, 1947. When the Tariff Board was converted into the Tariff Commission he became a member of the Commission. Later he was appointed the first Chairman of the Forward Markets Commission. Dr. Naidu had also a number of publications on economic subjects to his credit. He made an outstanding contribution to the literature on rural economics.

"COMMERCE" 1930

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *15th March*

Low Indian Freights

A matter of considerable comment in shipping circles latterly has been the abnormally low freights which have been accepted for certain Indian routes. Not for many years past have shipowners experienced such bad times or been forced to take such low rates. The generally depressed state of the world's chartering markets is fully reflected in the increase in the returns of the amount of laid-up shipping at the principal ports of Great Britain and Ireland. The returns for the quarter ended 1st January, 1930, showed an increase of 86,662 net tons, or 32.58 per cent., as compared with the returns for the quarter ended 1st October, 1929, and an increase of 22,888 net tons, or 6.94 per cent., as compared with the quarter ended 1st January, 1929. It is expected that the returns for the current quarter ended 1st April, 1930, will show a further increase, as shipowners everywhere are laying up their tonnage as a last desperate measure. Chartering on the deadweight basis for general cargo from Bombay showed rather more interest, but rates fell to exceptionally low levels, tonnage being fixed from Bombay or Karachi to the United Kingdom-Continent-Mediterranean at the low rate of 15s. for prompt loading. This figure compares with 20s. paid in November last and the normal rate of 26s. secured at this time last year; since when terms have steadily declined.

ECONOMIC POLICY

THE "economic policy" resolution, which was adopted by the Federation of Indian Chambers of Commerce and Industry at its annual session, held last week in New Delhi, was as neatly worded as it was ably moved. By this resolution, the Federation urged the Government to "pause" and give further consideration to such policies as were aimed at the ultimate elimination of well-proven and established methods of management which have "commanded the support of the investing public and banking institutions all these years." The Federation was confident that given reasonable freedom and facilities, the private sector could play a considerable part in the attainment of the country's objectives. It called upon the Government to create an atmosphere of confidence in the private sector and encourage large investment of capital in industry. Referring to the contemplated amendments to the Constitution, the Federation urged the Government not to proceed with measures which would make "compensation for the acquisition of property rights discretionary and non-justiciable, thus striking at the root of one of the most important of the fundamental rights given to the citizen in every free society."

Moving the resolution, Mr. Homi P. Mody did well to emphasise three aspects of the role of the business community in the task of economic improvement of the country—the relation between the community and the Government, the relation between the community and the public and its attitude towards the law and Constitution. He pleaded for a closer liaison between the business community and the Government. He said: "I assure the Government that they will not be the losers for taking the business and industrial community into confidence a little more and for trusting them a little further." He advised the community to co-operate with the Government. But it was not uncritical co-operation that he insisted upon. Rather, he was understandably opposed to such co-operation. He wanted the community to be forthright in its criticism of the Government whenever it had a legitimate cause for complaint. He, however, warned the community against "cheap and vulgar agitation." In this, he was, of course, speaking as the elder statesman and industrialist he is. Surely, it would be wrong for the community to identify itself with any agitation or to use unconstitutional means for gaining its ends. For instance, we ourselves have long held that sales tax, in its present form, is a great burden but strongly dissuaded certain sections of the community from indulging in vulgar manifestation of its opposition to the tax. But strong criticism, far from being inappropriate, is a distinct and positive act of co-operation, for, in the absence of such criticism, even the best administration may inflict serious harm on the country.

Mr. Mody deplored that, although the business community was prepared to advance with the times, and to co-operate in all schemes for the advancement of the real welfare of the people, there was a general distrust of the community. He attributed this to the anti-social activities of a certain section of business men. He suggested that members of a recognised body who were found guilty of having indulged in such activities should be debarred from being members of that organisation. We heartily commend this suggestion to the attention of all business men and commercial bodies, for, if it were implemented, it would enhance the reputation and standing of the community in the public eye. What is equally necessary is that the community should strive hard to correct the "imperfect understanding" of the role of private capital. Here, it is sad to have to observe that even reputed business and industrial houses, which have nothing to fear from giving adequate publicity to their activities, still choose to treat their work as their own affair, as if it had little public or national importance. It would be much better, both for themselves and the general public, if they recognised the value of informed publicity. There is no reason why such "imperfect understanding" should be allowed to go uncorrected. Surely, "capital" is not what it was some 30 or 40 years ago. There has been, as Mr. Mody said, a progressive reorientation all over the world and capital has come to play a "significant part" in the creation and general diffusion of wealth. Even in the countries which accepted socialism in the post-war years there has been a gradual change towards the right. In W. Germany and in the U.K., to mention only two, there have been many sound second thoughts on socialism and there has been a new realisation of the role of private enterprise.

A criticism that is often heard in discussions on the private sector is that it is actuated by profit motive. It is, of course, of the very essence of this sector that profit should govern its activities. It is open to the State to mop up what it regards as excess profits. Only, it should be careful to see that all profits are not mopped up, for that would be to bring the private sector to a standstill. Again, it must be realised that there is, as Mr. Mody said, "nothing ignoble" about profit motive; "every man has a right to expect a reward for his work."

The general climate for the private sector is not as pleasant as it would like it to be. In fact, it is likely to be less attractive when the proposed amendments to the Constitution become law. These proposals seek to place enormous powers in the hands of the executive. Thus, the adequacy of the compensation it grants for property taken over by the State may not be questioned by a court of law. In this connection, Mr. Mody said:

"When you arm the Government with such drastic powers, you create a great deal of insecurity and uncertainty. It is true that, after all Parliament will make the law regulating the grant of compensation. But the danger lies in the fact that there are not safeguards, as exist in other countries."

Small wonder then that many in this country look upon these proposed constitutional amendments as ill-conceived measures which are likely to prove detrimental to the building up of sound democratic traditions. Many more are frankly alarmed that they would undermine public confidence in the Government's ability to protect rights of private property.

PLIGHT OF COAL INDUSTRY

Despite increases in raisings and despatches, it is common knowledge that all is not well with the coal industry. Mr. J. W. N. Baldock, Chairman of the Indian Mining Association, rightly pointed out at the annual general meeting of the Association, held on the 4th inst. at Calcutta, that the affairs of the industry are "in a state which is far from healthy." This is, according to Mr. Baldock, due to a number of factors, the chief among them being the gradual shrinking of the margin between the cost of production and the selling price of coal. While prices fixed on the basis of production costs in 1947 have since been reduced, the cost of production has been steadily increasing. Small wonder, "a stage," to quote the Chairman, "has been reached where further burdens cannot be imposed upon the industry, if it is to survive at all." But the need of the hour is not mere survival of the industry. It is to stimulate production to a level which the nation's development requires. Coal is a basic industry and accounts, in the form of fuel, for a major portion of the cost of production of a number of industries, especially the metallurgical. Unless coal is supplied at a price which is reasonable, the cost of production of the entire industrial sector would spiral up, and this will be detrimental to the short-term and the long-term interests of the country. But this does not mean that producers of coal should work at a loss. Ways and means should be found for making coal raising a profitable proposition without burdening consumers unduly. Increase in productivity, for instance, is one of the chief ways in which this can be done.

Among the many obstacles which beset the industry's path of progress, mention must be made of the threat of nationalisation. Now that the period of assurance given in 1948, namely, that the coal industry would not be nationalised for ten more years, is coming to an end, and that the Government's proposed amendments to the Constitution forecast the possibility of the Government acquiring the ownership of the mines at an arbitrary price, it is only natural that the coal industry should regard its future with misgivings. This explains, to a considerable extent, why the needed funds for rationalisation of the coal industry are not forthcoming. The slow progress of rationalisation is also due to the restrictions which the Government has placed on the industry. The Government's fear is that rationalisation would involve large-scale retrenchment of labour. Besides, according to Mr. Baldock, the outmoded rules by which the Coal Board determines the quantum of assistance to mechanisation has placed a premium on inefficient manual methods. The reason for this unfortunate anomaly is to be found in the methods which the Board uses for assessing the allowance for depreciation, repairs and renewals of capital equipment. The result is that the cost of winning coal from the mines is high and is rising.

There are also a few other factors which impede the progress of the industry. The collieries cannot open new mines without the approval of the Government. Nor are they allowed to close uneconomic pits without the prior approval of the Government. Again, they cannot exceed production quotas set for metallurgical coal by the Coal Board. There are, besides, controls on the use of wagons. Thus, the industry has to carry the crushing burden of a multiplicity of controls. A disturbing feature of these controls is that they are evolved and imposed without prior consultation with the industry which is affected.

Mr. Baldock, however, was realistic enough to admit that freedom from all controls is not possible, "if the wage-price structure is not to be destroyed." Nevertheless, few can dispute his contention that a number of unnecessary restrictions imposed on production and distribution can be safely eliminated. In the opinion of the Chairman, "the present-day conditions warrant the abolition of distribution control and the petty restrictions which go with it." Proceeding, Mr. Baldock referred to an aspect of controls which has been causing great concern to the industry. This is the concentration in the hands of one Government official of the administrative functions of the Chairman of the Coal Board, the Coal Commissioner and the executive head of State collieries. The functions of the head of the State collieries and the private collieries are clubbed together and invested in one man, although the interests of the State differ from those of the market collieries. Surely, the present situation is not only bad in practice but also in principle. For, this places, as it has already done, the Coal Commissioner in the position of both the prosecutor and the judge in settling problems relating to private collieries. As if to aggregate the situation, the same person has been made the Chairman of the Coal Board also. For good reasons, Mr. Baldock did not favour the present set-up of the Coal Board. He observed:

"We have complained repeatedly, and unfortunately in vain, about the composition of the Board. Certainly, in its present form, the Board is but a pale shadow of the National Coal Commission which the Indian Coalfields Committee of 1946 recommended as an overall authority for the coal industry; that National Coal Commission was to involve the active participation of the private sector of the industry and it was welcomed and strongly supported by the private sector as probably the best answer to the administrative problem. The Coal Board today, however, bears little resemblance to the body which the 1946 Committee had in mind, and, with all due respect to the abilities and qualifications of the gentlemen who constitute the Board, it is difficult to see why the Government refuse to avail themselves of the accumulated experience and knowledge of the industry itself in such complex matters as confront them today."

The Chairman, therefore, pleaded for the reorganisation of the Coal Board by including in it the representatives of the private sector.

Mr. Baldock referred to the problem of transport of coal also. While giving credit to the railways for their better performance in recent months, he remarked that this improvement still fell short of what was required. For movement capacities to the north, west and the south still continue to be restricted. Referring to the statement of the railway authorities that the coal industry could not be supplied with the same amount of wagons in the busy as in the slack season, he said:

"It has been said that to provide the coal industry with all the wagons which it requires during the period from November to June would mean that many wagons and locomotives would remain idle for the remainder of the year and that such idleness would be fatal to railways' economy. This is a point of view which commands respect, but it must be remembered that the present gap between the supply of wagons in the two seasons referred to results in the locking up of a great deal of capital in stocks of coal at the collieries and in the expenditure of considerable sums in handling these stocks. This, in its turn, has its effect upon the country's economy in due course and I would suggest that this aspect of our transport problem should be examined very carefully. We do not expect the gap to be closed but we do feel very strongly that much could be done to lessen it."

Here is a convincing answer to the stock argument by which transport authorities in this country explain—rather explain away—their failure to meet promptly the traffic needs. Mr. Baldock's observations are capable of wider applicability, though they are particularly true of coal.

OFF THE RECORD

By "Rover"

I SUSPECT that there must be a strong but hidden strain of being abused running right through the subconscious foundations of the mental make-up of the vast majority of our top business men and industrialists. It looks as if some inner compulsion drives them to create situations and opportunities, when they could be roundly lectured to and humiliated by the more predatory and assertive sections of society. They have, perhaps, in the mass and as a body, never realised that dignified aloofness is a virtue or that such an attitude might win for them a greater appreciation and understanding of their legitimate privations and difficulties.

New Delhi is the political capital of India. Beyond this fact and a certain degree of historical associations, it has nothing to commend itself to any social, economic, educational or cultural organisation of the citizens of this country. Its social life is both artificial and superficial. Its climate, suffering from extremes, is uninviting at any time of the year. Its atmosphere of self-seeking, ruthless climbing and petty intrigues and gossip could hardly be considered as conducive to cool and calm consideration of important issues. Its present overcrowding and preoccupation with politics make it unsuitable even as a physical background for week-end gatherings or reunions. It must, therefore, be something abnormal which compells business men to select this horrid upstart of a city for their annual spree.

All the important political parties hold their conventions in out-of-the way places. The Indian National Congress, the most important of these bodies, is not only peripatetic but ostentatiously rural in its selection of a site for its annual session and often even for the periodical meetings of the A.-I.C.C. Both from the point of view of the suitability of atmosphere and of accommodation, Bombay and Calcutta, because of their economic importance, should prove more attractive as the venue for the most important annual gathering of the captains of commerce and industry. They have failed to mark that the European business community, small as it is, and far less important from the point of view of the economy of the country than its vast Indian counterpart, has stuck to its tradition of making Calcutta the centre of its annual deliberations.

This self-respecting and dignified behaviour on the part of this tiny group has resulted in either the Prime Minister or the Finance Minister going all the way from New Delhi to Calcutta, to address it and to unfold the economic and industrial policy of the Government before it. Indian Big Business, on the other hand, creeps cringingly to New Delhi from all corners of the country in the hope of inducing the Prime Minister to condescend patronisingly to come and take notice of them, to scatter a few snubs and a few smiles, a few stern admonitions to bad boys, followed by some grudging words of encouragement that, if they behaved, perhaps, they would be allowed to play decorously for a brief hour within certain prescribed narrow limits.

I cannot understand why these people fear that, unless they wend their weary way to New Delhi, unless they undertake this arduous pilgrimage to the Capital, or that if the Federation of Indian Chambers of Commerce and Industry holds its jamboree at Bombay, Calcutta, Madras, Ahmedabad or Kanpur, the high and mighty ones in the Government of India would not extend to them the same consideration and courtesy, which they have consistently shown to the Associated Chambers of Commerce. And, even if they had some valid reason to fear some such outcome, born either of their inferiority complex or their guilty conscience, why should they not be content to hold their session and to go quietly through their agenda, without the dubious and doubtful blessing of inauguration by the Prime Minister or any Minister for the matter of that? Why should they not feel happy to invite for this purpose an old and honoured colleague like Dr. M. Visvesvaraya?

Even if, for some unavowed and secret reason, they consider the presence of the Prime Minister or a great political leader imperative at the start of their session, even if some subconscious urge within them requires that they must be metaphorically scourged by someone they look up to, by someone they love and respect and fear at the same time, they should know by this time that, if they need him for this purpose or any other, the need of the prominent politicians for suitable and specialised platforms, apart from frequent mass gatherings of people, is as great as the business men's craving for being noticed, though that notice takes the form of a frown.

Mr. Nehru himself told them last Saturday that he was not speaking to them as an opposition group, and candidly informed them that he did not also regard them as such. He assured them that he was speaking to them as their countryman. This avowal undoubtedly does great credit to Mr. Nehru. But as a citizen who takes great interest in the affairs of the country, I have not neglected occasions which come my way of listening to our great national leader, both from the platform and on the air, addressing various groups of his countrymen—agriculturists, artisans, manual workers, students, women, educationists, artists, thinkers and scholars. And I could not help noticing that his tone and attitude, his approach and treatment on all these occasions were markedly different from what I found in his address to his hosts of the Federation.

Perhaps, it was difficult for him to bring himself on the same plane as his listeners; perhaps, he was addressing his words, over their heads, to a vaster audience, as political leaders are often apt to do. But even without attempting to analyse the rather vague and airy contents of his admonition, I feel compelled to say that, to me, it read more like a somewhat put-out pedagogue harshly rebuking a class of greedy and ungainly brats for some of their misdeeds. I say ungainly advisedly; had they been merely unruly and boisterous but on the whole not unattractive, he would have treated them with more leniency if not actual indulgence, as he generally treats workers and farmers, who too are no angels. For the matter of that, quite a number of Congress leaders also squabble endlessly amongst themselves and are as greedy as business men in their lust for both wealth and power, but Mr. Nehru does not let the school master in him come up as readily and take a similar line with them, as he does when he speaks to big boys from the class of commerce and industry.

I cannot, however, altogether blame Mr. Nehru for this tone and demeanour, which he reserves for special occasions like the one on Saturday last. The business men did not invite him as a countryman to talk to them as a group of his countrymen. Mr. Nehru might protest to them that he was speaking to them as their countryman. The business men had, however, approached him solely and purely as the Prime Minister. They had approached him for what concessions that they could wheedle out of the head of the Government for their class, after assuring him that they were good boys unjustly maligned. It would be idle to pretend that the Federation would have invited him to inaugurate their proceedings, if he had not been the Prime Minister of India but only an eminent public leader without the reins of Government in his hand. Had it been so, they could as well have requested Mr. Dhebhar, the Congress President or Mr. C. Rajagopalachari and not Mr. Nehru every time.

With regard to the actual proceedings of this meeting, I have purposely left myself only a small space to comment on them. Apart from its tone and the stern line of approach, there was nothing new or worthy of special note in the Prime Minister's inaugural address. Considering that with the exception of his frequent and valuable pronouncements on world affairs and international politics, Mr. Nehru has been publicly busy for the last four or five months with nothing, so far as the internal affairs of the country are concerned, but a repetition of his new thesis—a socialistic pattern of society as the country's objective—it was not to be expected that he would say anything arresting or fresh on this subject. It was equally difficult for the Federation, at least so far as its resolutions went, to express any new opinion on the issues they touched, beyond what has been repeated from many a platform and in a host of statements issued by various organisations representing private enterprise. I must, however, concede that the presence of Mr. Homi Mody did succeed in making the proceedings sound more self-respecting and putting a little ginger in the tone of the resolutions and the speeches supporting them.

I wonder if any of you have noticed that, except in the case of foreign affairs, where his vision and insight are remarkably uncanny and still sharply well defined and precise, Mr. Nehru is apt to be tiresomely vague, and provokingly ethereal in his enunciation of important political principles and policies and still more so when speaking on economic affairs. He was even more annoyingly airy and platitudinous on this occasion, which afforded him an excellent opportunity to fill in the contents of his oft-repeated outline of a socialistic pattern of society. All that he did, instead, was to exhort business men repeatedly "to adjust themselves to this ideal" or vaguely "to understand the spirit of the people and to be in tune with this spirit," when he was not unnecessarily asserting the determination of himself, his Government, his Party and, as he said, of the country, to go in the direction indicated by him.

Both the direction and the pattern of this now openly accepted objective have been implicit in the political and economic history of post-independence India and private enterprise has accepted them and possibly worked them in a more practical manner and with better results than politicians have with their mass of undigested and hasty legislation. In any case, after Mr. B. M. Birla, the President of the Federation, had, at the very outset of his address, categorically accepted the "good intentions behind our economic policy as adumbrated in the resolution on the subject at the recent Avadi session of the Indian National Congress" and their taking "concrete shape within a measurable period of time," the Prime Minister looked more like flogging a dead horse, in his enthusiasm to preach his gospel.

Not only vague but nebulous as the Prime Minister's conception of the shape and nature of the future social organisation of the country and the place of private enterprise in it is, reading between the lines of his address to the Federation, I have been able to decipher two important aspects of these. My first discovery of this somewhat elusive subject is that there will be room, possibly a great deal of room, for private enterprise in the socialistic pattern of our society. But the Prime Minister gives a much wider connotation to the term "private sector" than that commonly accepted. Dealing with the broad outlines of this sector, Mr. Nehru observed that it would include agriculture and all manner of small enterprises, including small-scale and cottage industries, as well as the co-operatives. He would not rule out big private enterprises, but the emphasis and the preference would be on and for small organisations. That the politicians, whose aim is to wield as much authority as possible, do not want big men and big enterprises, great captains and pioneers of new industries and new forms of commerce should really cause no surprise to us, because there would then be so much less scope for and possibility of challenge to the whims and vagaries of political leaders.

This, however, does not disturb me unduly. What causes me alarm is my second discovery which partly emanates from this emphasis on mediocrity in the economic field and partly from an unguarded admission which the Prime Minister made on this occasion. After stating that some people no doubt felt that private enterprise should be given full and unrestricted scope and after declaring that there could be no such unrestricted private enterprise and that the State had to come into the picture in a big way, which was not strictly called for as nobody nowadays pleads for such unrestricted private enterprise, he went on significantly to say that, *with their limited resources, they could not allow people to go in all sorts of directions.*

In a democratic society, I am afraid, people do go in various directions as dictated by their individual genius and inclinations and they are allowed, nay, encouraged to do so, so long as they do not harm or hinder others in exercising and enjoying similar freedom. But the picture which emerges before my mind's eye from the weighty words of the Prime Minister, purposely put by me in italics, is not of a free and democratic society but of a vast flock of bleating sheep, driven by a shepherd in a given direction and along a dictated path, with the help of a small number of watchful and powerful sheep dogs, to bring the straying ones into line. I have little doubt that, if and when the socialistic pattern of society, which the Prime Minister has in mind is fully achieved, this country of ours will be transformed into a colossal sheep pen and the nation into a vast flock of meek rams, ewes and lambs under perfect control of their few pastors. I may be sorely mistaken—I sincerely hope I am—but, if this is what planning means and implies and is going to lead to, a prayer will go forth from my heart: "God save our country from the planners."—*All Rights Reserved.*

INDUSTRIES IN PUBLIC SECTOR

GREATER EMPHASIS LIKELY TO BE LAID ON MACHINERY MANUFACTURE

From A Special Correspondent

NEW DELHI, *8th March*

THE first week of March every year happens to be an extremely lively week in the Capital. It is during this week that the Ministers, the administrators, the Parliament members and the party leaders rub their shoulders with merchant princes, industrialists, bankers and business men. Besides providing a forum for the spokesmen of industry to ventilate their grievances, difficulties and handicaps before Government members, the annual meeting of the Federation of Chambers of Commerce and Industry gives business men a first class opportunity to renew their acquaintances and friendship with members of the Government and enables them to discuss informally with the latter various matters of commercial and economic problems pertaining to their individual industries and business.

DELHI LETTER

These apart, the last few days in the Capital have been of considerable interest in view of the discussions on the Railway and Central budgets. These discussions and the replies of the Government members have been providing the public broad indications of the policies that the Government would be pursuing in the coming months. Considerable emphasis is now being laid both by the Government spokesmen and the leaders of industry on the manufacture of capital goods and plant for the purpose of accelerating the tempo of industrial expansion. The various schemes for the expansion of the steel industry, the initial investment allowance of 25 per cent. on new plant and machinery and the budget allocation of Rs. 5 crores for the National Industrial Development Corporation, the main purpose of which is to set up such industries as are not being readily taken up by the private sector, are expected to quicken this process.

During this week, for instance, Mr. B. M. Birla drew the attention of the Government as well as the industrialists assembled at the gathering, in the course of his presidential speech at the annual meeting of the Federation, to the importance of machinery manufacture industry. Besides emphasising the need for finding metallurgical coal and alternative fuel in order to increase the industrial tempo of the country, Mr. Birla pointed out that in order to consume the additional steel proposed to be produced during the second Five-year Plan, efforts should from now on be made to establish on a large scale the fabrication and machining capacity of the engineering industry. The enormity of the problem was indicated by him when he observed: "It is estimated that to process 1,000 tons of steel per year, an average investment of Rs. 20 to Rs. 25 lakhs is necessary for putting up a fabrication or machining plant. Assuming that we may have to process or fabricate 2.5 million tons of steel only out of the increased production in the next five years, it will mean an additional investment of Rs. 500 crores in the engineering industry, apart from the investment of Rs. 400 crores in the iron and steel industry. In the fabrication and machining sector of the engineering industry alone, we will have to have about 250 fairly large factories." In this connection, Mr. Birla also emphasised the importance of the proper development of the machine tool industry and wanted that as against the present production of 1,000 machine tools per annum, the total output should be raised to about 30,000 before the end of the second Plan. "We should aim in the next five years," he stated, at installing 1.5 lakh machine tools for machine making as well as for expanding our machine tool manufacturing industry."

That the Government is also becoming particularly conscious of the importance of the machinery manufacture industry may be seen from the fact that the Railway Minister, Mr. Lal Bahadur Shastri, addressed this week the Railway Equipment Committee on the necessity of making the country self-sufficient in the production of railway equipment. The Minister stated that along with encouragement of manufacturing capacity in the country, a high standard of quality would have to be insisted upon. He claimed that the railways had already achieved a significant success in its policy of self-sufficiency in respect of rolling stock, stores and other equipment needed for the railways. However, since moderate quantities of rolling stock were being imported, he was of the opinion that some new factories had to be set up. At the same time, it was necessary to locate within the country idle manufacturing capacity in the private sector so as to avoid any duplication of effort. The Minister was fully aware that the economic development of the country would throw the maximum strain on the country's railways and that the railways had to increase transport capacity by 50 per cent. during the second Plan. It was therefore proposed that the railway workshops would not only have to be expanded but the private sector would also be induced to develop their capacity.

That the Railways would be absorbing a large size of the money to be allocated in the second Plan was also indicated by Mr. Shastri in the course of his reply to the debate on the Railway Budget. The Minister's speech also provided some broad indications regarding the possible lines of development of railways and the quantum of equipment, materials, etc., needed for the purpose. According to him, the three important lines of development would be new construction, including doubling and other works designed to increase the present line capacity, self-sufficiency of rolling-stock, stores and other equipment and improved working, including extension and expansion of their present maintenance workshops. The Minister declared that in all these three matters, the Railway Board was not only planning on an ambitious scale but was also in fact going ahead with many schemes which would gradually show results as time passed.

That the public sector would shortly be taking up many new industries, including some of those for the production of plant and machinery, was also indicated by Mr. K. C. Reddy, Production Minister, who intervened in the discussion at the Federation meeting. He disclosed that the Government would soon be constituting an industrial management service. The Government's intention was, he said, to recruit men to the service not only from the Indian Administrative Service and other services or universities but also from industry. The Minister stated emphatically that there was no discrimination between the public and private sectors and assured the industrialists that the Government would be prepared to associate industrialists with the Government enterprises provided they entered the public sector without any reservations or scepticism and had faith in the public sector as much as in the private sector. It is already well known that the Production Ministry has been planning to establish a heavy electrical equipment industry during the last one or two years. Until now these plans have not taken any definite shape. A year ago, the sum earmarked for this purpose was Rs. 50 lakhs, out of which only Rs. 50,000 would appear to have been spent, as seen from the revised budget estimate for 1954-55. For the next financial year, the sum allocated for this purpose is Rs. 15 lakhs. It may, however, be mentioned that these allocated sums are only nominal in character and if the scheme takes an advanced shape, the Government will be in a position to allot a larger sum for the implementation of the project. In regard to the synthetic oil factory also, the provision has now been revised from Rs. 10 lakhs to Rs. 4 lakhs. For 1955-56, the sum provided for this purpose is Rs. 10 lakhs.

Now that three new steel factories, including the Rourkela plant, are expected to be set up shortly, the Government is becoming more conscious of the need to step up or undertake the production of various machinery required for the installation of these factories. If the Government finds it necessary to add to the equipment, in any existing concerns, in order to quicken the pace of progress, it is expected to give high priority towards the implementation of such schemes. In other words, the Government is keen on seeing the machinery manufacturing industry set up and developed in the country.

RAILWAY BUDGET MODIFIED

SOME SMALL CONCESSIONS

AFTER a heated discussion in both the Houses of Parliament, Mr. Lal Bahadur Shastri, Railway Minister, modified his budget proposals by making three important concessions. First, there would be no increase in fare in the case of third class passengers travelling by ordinary passenger trains within a radius of 50 miles. Secondly, the surcharge of 12.5 per cent. on freight for all consignments less than 20 maunds has been reduced to 6.25 per cent. Thirdly, the minimum freight for "smalls" would remain at the existing basis of Re. 1, instead of the proposed Re. 1-8. The telescopic fare structure announced in the budget proposals would, however, remain unaltered.

These concessions imply substantial gains to a large section of passengers and trading public. The fare concession, for instance, is expected to benefit nearly 90 per cent. of all passengers travelling by passenger trains. For, it is estimated that, on an average, about 650,000,000 people travel in third class ordinary trains upto a distance of 50 miles. As these people will not have to pay anything more than what they are paying now, the railways are expected to lose Re. 1 crore per annum on account of this concession. One important result of this announcement is that there will be no increase in suburban single tickets. It had already been announced that there would be no increase in ordinary season tickets, in student or market vendors' season tickets, whether on the suburban or the non-suburban railways. Another result of the concession is that, to a certain extent, overcrowding on mails and express trains would be reduced. It is gratifying to note that the concessions announced for the benefit of long-distance passenger traffic will remain unaltered.

It is stated that, as a result of the concessions, those travelling by ordinary trains for a distance of 50-105 miles will now have to pay only one anna more than what they are paying at present; those travelling a distance of 110-160 miles two annas more and 160-300 miles three annas more. In some cases, because of rounding off, the increase may be less. In respect of those who travel over 300 miles, the maximum increase will be four annas, which will gradually come down as the telescopic reduction takes effect. Under the proposals suggested in the Railway budget, the increases would have been, for distances 1-50 miles one anna, 50-110 two annas, and 110-300 miles three annas. The concessions do not affect fares by mail or express trains. On these trains, for distances of 1-49 miles the increase will generally be one anna, two annas for 50-97 miles and four annas for 98-200 miles.

While announcing these concessions, Mr. Shastri regretted the unhelpful and exaggerated criticism of the working of railways by the Opposition. Emphasising that the railways had recorded "distinct improvement" on the operational side, he asserted that it had come to "stay." He hoped to plan for an increase of 5,000 miles in line construction in the second Five-year Plan. He, however, did not want to commit himself to this figure, until he was sure about the resources available. Present indications were that there would be an increase of at least 4,000 miles including doubling of lines.

Other important developments to which Mr. Shastri referred in his speech included:

(1) Suggestions for an alternative route for the Assam link were being considered and a survey was likely to be ordered soon.

(2) It was intended to raise the speed of the Grand Trunk Express to that of a mail train. This would involve cutting down some of the halts, but alternative arrangements would be made for these stations.

(3) The Government had decided that Government railways contiguous to light railways should undertake a comprehensive survey of the narrow-gauge lines in their jurisdiction and report whether it would be advantageous to replace them on the same or other suitable alignments by broad- or metre-gauge lines or by roadways.

(4) An expert committee would be appointed soon for examining the question of co-ordination of railway and coastal shipping.

Finally, dealing with the suggestion of Mr. V. V. Giri that the railway workers must be given a voice in the management of Indian railways, Mr. Shastri assured him that he was prepared to consider the proposal favourably provided conditions for implementing it were first created by the workers themselves. Relations between the railway labour and administration had, he maintained, been cordial during the past few years.

CALTEX RPM

the *only* Motor Oil that gives ENGINE Lubritection

Manufactured from specially selected "crudes", *R.P.M. The Premium Heavy Duty Motor Oil* has a very high basic "oiliness", which gives modern I.C. engines complete *lubritection* under all operating conditions. An added "detergent" helps keep engines clean. *R.P.M.* keeps fine carbon deposits in suspension and prevents the accumulation of damaging engine deposits. *R.P.M. reduces engine wear—saves your automobile—saves you money.*

Ask your friendly Caltex Dealer about RPM this wonder motor oil. He knows how good it is because it LUBRICATES and PROTECTS.

PARTICIPATION OF FOREIGN CAPITAL IN INDIAN INDUSTRIES

VIEWS OF FEDERATION OF INDIAN CHAMBERS

EVER since the Government of India announced its policy on participation of foreign capital in the development of Indian economy, a section of the business community has been voicing its opposition to this policy. This opposition has created a misapprehension both in India and abroad that Indian business men are entirely opposed to the idea of encouraging the flow of foreign capital into this country, especially for starting consumer goods. Recognising the harm which this agitation may do to the economic development of this country—some of the anti-foreign capital business men went even to the extent of demanding imposition of restrictions on the activities of foreign companies already operating in India—we urged the Federation of Indian Chambers of Commerce and Industry, the apex body representing almost all sections of Indian business community, to clarify its stand on this subject and advised it to take a stand that will be conducive to the flow of foreign capital into this country (*vide "Commerce"* dated 16th October, 1954). We are, therefore, gratified to find that the Federation has done this. Soon after we went to press last week, it issued a statement clarifying its stand on the question of encouraging participation of foreign capital. A large measure of credit for this goes to Mr. B. M. Birla, the retiring President of the Federation. It was he who appointed a sub-committee, under the chairmanship of Dr. Ramaswami Mudaliar, to consider the problem and restate the views of the Federation in the light of present-day conditions. The Sub-committee reported to the main Committee of the Federation early this year. The statement under reference has thus been preceded by considerable deliberations by some of the top-ranking captains of Indian industry, including Mr. J. R. D. Tata, who was a member of the Sub-committee.

The statement, we are told, has been prompted by two chief considerations. First, the Federation feels that the country being on the threshold of large-scale industrialisation, it is necessary to be clear as to how and to what extent foreign capital can be of assistance. Secondly, as the central body representing Indian commerce and industry, the Chamber feels that its attitude towards foreign capital will be of interest to foreign investors as well as to the Government and the public in India.

The statement by the Federation is welcome in that its views are broadly in agreement with the general principles laid down by the Government for dealing with applications from foreigners wishing to start industries in India. The Government considers that—this is one of its basic principles—participation of foreign capital and enterprise is of value to the rapid industrialisation of the country. This is so because the inflow of foreign capital (a) strengthens immediately the country's foreign resources, (b) helps develop industries by providing capital, technical skill and 'know-how,' (c) lessens the need for taking recourse to deficit financing to the extent capital is procured from abroad, and (d) confers on the community all the benefits which flow from setting up industries. These are claims in favour of foreign capital which few can deny and, therefore, the Federation is realistic when it says that "foreign capital would be particularly welcome in specialised industries requiring high degree of technical skill and which have not been now developed in the country and in industries in which domestic capital shows definite shyness." Indeed, this trade body now goes even a step further and adds that "in the interests of increasing the standard of living of the people by making available to them goods in sufficient quantities and of the requisite quality as quickly as possible, foreign capital may operate in the consumer goods industries also where Indian units are fairly established." In this context, however, the Chamber adds that "in such cases, Indian enterprise should be duly informed in advance of the Government's programme" and that "if after due notice of, say, one year, and notwithstanding such assistance as the Government might extend, Indian capital is not forthcoming then foreign capital might be permitted to come." The Federation's readiness to welcome foreign capital even for starting consumer goods industries is in refreshing contrast to the attitude of some of our business men who want only the most difficult industries to be left for foreign capital, reserving for Indian capital all the industries which are easy to establish and in which the scope for a large margin of profit is good. But there seems to be two snags in the Federation's concession, if we may so describe it. What does it mean by adding the words "where Indian units are fairly established." Does it mean that, in those consumer goods industries in which Indian capital is still not fully established, foreign capital should not be allowed? If so, is such a condition in tune with the need for increasing production of consumer goods in sufficient quantities and of the requisite quality—a need which the Federation has conceded? It appears to us that there is a contradiction here. The object of allowing foreign capital in consumer goods industries is to encourage competition and thereby to improve the quality, as well as to bring down the prices of these goods. The demand for such goods will increase when the expenditure on development is stepped up, as is now proposed. If this demand is not fully and ably met, there will be inflation which, in turn, will add to the cost of heavy industries which this country wishes to establish. This being the case, the qualification made by the Federation seems to be somewhat out of place.

The second snag is the demand that the Government should give a year's notice. This means that a foreigner who wants to start a consumer goods industry will have to wait for a year from the date he applies to the Government of India for permission to do so, not knowing whether his offer will be turned down or accepted. It also means that any Indian *entrepreneur* can veto such an offer, by coming *forward to do that job himself*. But, supposing he fails to keep his undertaking within a reasonable period, what is the remedy? Will the Federation agree to the Government subjecting this *entrepreneur* to a penalty? It is true that Indian capital and enterprise should be given a chance to establish consumer goods industries, but to demand that they should be given a year's notice whenever a foreigner wants to start an industry is most unrealistic and impracticable. Even if the Federation's demand is conceded for argument's sake, what certainty is there that the foreigner would come back after a year? Probably, he may seek outlets in other parts of the world where his funds are welcome. Besides, it must be remembered that foreign capital is not just waiting in a queue at India's door to rush in as soon as it is permitted to enter. In our view, the best judge in all these matters is the Government of India. The present Government is fully national and not overfond of foreign capital. It can be safely expected to decide what is good for the country and what is not.

As regards permitting foreign capital to engage itself in lines of manufacture where Indian enterprise is not forthcoming on account of lack of experience and for any other reason, the view of the Federation is "that such foreign interests should be persuaded to offer a part of equity capital to Indian investors, if not from the very beginning, at least later, after a reasonable period of, say, five years. It is also the view of the Committee that, in all cases, the foreign investors should be prevailed upon to utilise Indian services such as banking, shipping, insurance, etc." This, in our opinion, is a very reasonable demand. And the Government itself has, in most cases, been insisting on the association of Indian capital in foreign ventures, both existing and new, although it has not—and this for very good reasons—laid down any rigid rules, and has been judging each case purely on merits. It is needless to add here any rigid rules would act as a deterrent to the flow of foreign capital. Pakistan tried it and failed.

The Federation, however, has done, well in providing a definition for the term 'Indian unit.' This definition is in broad terms and reads thus:

A unit may be regarded as Indian

"(1) where foreign capital is not normally 49 per cent., in exceptional cases, however, the percentage being placed at 50, and

"(2) where the majority of the Board of Directors are Indians and are actively participating in management, and

"(3) where majority control on the managing agency company or firm is in Indian hands."

The Federation believes that foreign cap[illegible] has an important role to perform in our economic development and that, in order to attract foreign capital, particularly equity capital, certain minimum assurances need to be given in respect of treatment of foreign capital. The Government's present policy, it says, gives all these assurances in respect of profits, capital repatriation, etc., and therefore, investment in India should be, it adds, an attractive business proposition for the foreign investor.

Besides facilities for repatriation of capital, interest, etc., the Government's policy provides for non-discrimination and does not permit imposition of any such conditions on foreign enterprise as are not applicable to similar Indian enterprises. Again, while generally foreign investment is channelled into fields of high priority, in allowing foreign capital in existing Indian industries, the Government considers that it is its duty to encourage competition generally. The Federation is broadly in agreement with these principles of policy governing permission for foreign participation. It further adds that in its view "the crucial test of whether or not foreign investment is in the interests of the importing country is not merely how rapidly it increases employment or production, but also how rapidly it builds up local enterprise." This process of building up local enterprise which is, after all, the essence of a country's development, would be greatly assisted, in the opinion of the Federation, if the Government keeps in view its suggestions.

FURTHER DROP IN STERLING AREA RESERVES

The downward trend in the gold and dollar reserves of the sterling area continues. They dropped from $2,763 million in January to $2,681 million in February this year. This drop of $82 million in the reserves is regarded as the worst drain for any month in the past three years. In January the reserves had risen by only $1 million, while in December, 1954, they fell by $163 million.

During February, U.S. defence aid amounted to $15 million. The net receipts from the European Payments Union were of the order of $4 million. If these receipts, aggregating $19 million, are excluded, the result of trade and currency movements was a net outflow of $101 million. In January such movements were in balance.

The large outflow of currency was anticipated by the authorities and, in order to reverse the trend, a threefold action was initiated. These consisted of (a) raising the Bank rate from 3½ to 4½ per cent., (b) prevention of abuse of transferable sterling, and (c) restrictions on home consumer credit. As a result of these steps, towards the closing days of February a sharp turnround in the flow of currency was in full evidence. This was reflected in the "substantial inflow of short-term funds into the U.K. to take advantage of the higher level of interest rates following the rise in the Bank rate." Gains on this account have, it is stated, more than offset the additional drain caused by the operations of the Exchange Equalisation Account in support of transferable sterling. This support has reduced the discount on transferable sterling from 3 per cent. to a shade over 1 per cent., a level which has rendered "commodity shunting" unprofitable.

The course of gold and dollar reserves of the sterling area since the end of 1950 is shown below:

INDUSTRIAL FINANCE CORPORATION

The Union Ministry of Finance is shortly to institute a departmental enquiry into the working of the Industrial Finance Corporation of India. The enquiry will concern itself with the transactions leading to the taking over by the Corporation of the Sodepur Glass Works to which large sums of money had been lent.

The Sucheta Kripalani Committee's report on the working of the Corporation was, it will be recalled, highly critical of the lending policies and procedures adopted in this case. A subsequent audit report also expressed similar dissatisfaction.

PROFIT OF IMPERIAL BANK OF INDIA AT RECORD LEVEL

ADVANCES DECLINE—HIGH CASH COVERAGE

A RISE of Rs. 10.09 lakhs in profit, from Rs. 126.82 lakhs to Rs. 136.91 lakhs, to be precise, is disclosed by the statement of accounts of the Imperial Bank of India (Managing Director: Mr. S. K. Handoo) for the year ended 31st December, 1954. This welcome increase in earnings has not only more than made good the shrinkage of Rs. 6.53 lakhs noted in the previous year's profit but also restored the upward trend in the Bank's profit witnessed since 1948. With the aforesaid rise, the profit has established a fresh record in its history, surpassing the previous best of Rs. 133.35 lakhs touched in 1952. Though the improvement in the Bank's profit is in consonance with the general trend, it may appear somewhat surprising to many because the trend of advances has generally been downward and the expenses have again gone up substantially. But a closer study of the Bank's balance-sheet will provide a convincing explanation. The Bank's deposits have gone up by over Rs. 24 crores and this has enabled it to step up its investments by about Rs. 14 crores. This increase, coupled with the fact that the entire rise in deposits was in current account on which the Imperial Bank does not pay any interest, must have been chiefly responsible for the improvement in profit. It must, however, be added that one cannot be quite dogmatic about this, for the income shown in the profit and loss account is after providing for secret reserves and, in the case of a big bank like the Imperial, it is always possible to vary the profit by a few lakhs this way or that by either reducing or increasing the transfer to secret reserves.

No addition to the reserve fund has been made out of the year's profit and this is the third year in succession when the reserves have not been openly strengthened. The provision for bonus to staff has been kept unchanged at Rs. 40 lakhs, to which level it had been raised from Rs. 39 lakhs last year. The allocation to the pension fund has been raised slightly from Rs. 5.65 lakhs to Rs. 5.97 lakhs. The dividend is unchanged at 16 per cent. per annum for the fifth year in succession.

The following comparative table of the Bank's financial results for the past four years shows the trend of progress in the Bank's working:

(In lakhs of rupees)

	For the year ended 31st December			
	1954	1953	1952	1951
Gross income	7,51.35	7,23.00	7,60.54	6,02.98
Interest and discount earned	5,62.61	5,49.82	5,52.10	4,95.21
Commission, exchange, etc.	1,66.16	1,70.68	2,05.29	1,91.23
Interest paid	1,30.27	1,34.71	1,70.13	1,20.08
Expenses	4,65.84	4,49.66	4,43.53	4,20.11
Depreciation and repairs	12.49	12.71	13.63	13.11
Profit	1,36.91	1,26.82	1,33.35	1,30.07
Transfer to—				
Reserve fund	..	..	..	2.50
Pension fund	5.97	5.65	5.44	5.03
Bonus to staff	40.00	40.00	30.00	37.50
Dividend	90.00	90.00	90.00	90.00
	(16%)	(16%)	(16%)	(16%)
Carry forward	34.19	33.25	42.08	43.17

The gross income of the Bank shows an increase of Rs. 27.45 lakhs during the year under review, as against a fall of Rs. 36.64 lakhs in the previous year, but is still lower by Rs. 9.19 lakhs than that for 1952. Of the rise in gross income, interest and discount earned account for Rs. 12.79 lakhs and commission, exchange and brokerage for Rs. 14.48 lakhs. It will be noted that the rise in income from the above sources has been offset to the extent of Rs. 1.56 lakhs in interest paid on deposits and borrowings and to the tune of Rs. 16.12 lakhs in expenses. It will be interesting to note that the Bank's income from interest and discount is higher by Rs. 10.51 lakhs than that in 1952, the previous best year of the Bank's working, while commission and exchange show a drop of over Rs. 20 lakhs. The outgo by way of interest paid is, on the other hand, lower by nearly Rs. 34 lakhs, which is offset by the rise of over Rs. 22 lakhs in expenses. An idea of the rising spiral of expenses of banks in general can be gained from the fact that the expenses of the Imperial Bank alone have swelled by Rs. 1.11 crores in the course of the last five years, of which salaries and allowances and provident fund alone account for over Rs. 79 lakhs.

The main assets and liabilities of the Bank as at the close of the past four years are compared in the following table:

(In lakhs of rupees)

	As on 31st December			
	1954	1953	1952	1951
Capital	5,62.50	5,62.50	5,62.50	5,62.50
Reserve fund	6,35.00	6,35.00	6,35.00	6,35.00
Deposits	231,35.57	207,20.58	206,08.81	231,64.48
Borrowings from other banks	..	..	15,62.37	13,00.00
Advances*	102,05.61	106,04.01	112,00.55	142,20.23
Investments—				
Government securities	96,47.40	82,60.89	82,70.11	71,00.93
Other†	12,24.53	11,52.79	14,44.46	14,15.85
Cash	30,63.69	10,91.20	25,72.17	29,94.04
Fixed assets	1,30.10	1,30.23	1,63.90	1,59.24
Balance-sheet total	251,06.70	223,66.62	239,31.28	261,74.85
Ratio to deposits of—	%	%	%	%
Advances	44.1	51.2	54.8	61.4
Investments	47.0	45.4	39.5‡	31.2‡
Cash	15.8	9.6	12.5	12.9

* Include bills purchased and discounted and money at call and short notice.

† Include Pakistan and other Government securities.

‡ Ratio arrived at after taking into consideration the securities deposited against loans from other banks, but only to the extent of such borrowings.

In consonance with the general trend of bank deposits, deposits of the Imperial Bank as at the end of 1954 show an expansion of Rs. 24.15 crores and follows the rise of Rs. 1.12 crores noted at the close of 1953. A break-up analysis of the Bank's deposits reveals that fixed deposits have fallen from Rs. 35.11 crores to Rs. 34.24 crores and savings bank deposits from Rs. 27.97 crores to Rs. 27.49 crores, while current accounts, contingency accounts, etc., have risen from Rs. 144.12 crores to Rs. 169.63 crores. Notwithstanding such an expansion in lendable resources, the Bank's advances as at the close of the year are lower by Rs. 4 crores. This is the third year in succession when the Bank's advances have declined, the decline over the three years being Rs. 40.15 crores. A study of the Bank's weekly statements reveal that the general level of advances was lower than in the previous year and much lower than in 1952. Thus, the peak level of the Bank's advances during the busy season of 1954 stood at Rs. 134.47 crores, as against Rs. 136.94 crores in 1953 and Rs. 165.53 crores in 1952. Also, the lowest level of advances touched in 1954, at Rs. 94.46 crores, was lower than that of Rs. 96.08 crores in 1953 and of Rs. 107.14 crores in 1952. Of the total advances at the close of 1954, loans, cash credits and overdrafts account for Rs. 94.65 crores, as against Rs. 90.56 crores a year ago, bills purchased and discounted for Rs. 6.17 crores, as compared with Rs. 14.28 crores and money at call and short notice for Rs. 1.23 crores, as against Rs. 1.20 crores. Investments show an increase of Rs. 14.58 crores, in contrast to the decline of Rs. 3 crores, of which securities of the Central and State Governments and Trustee securities account for Rs. 13.86 crores. Cash balances have been strengthened to the extent of Rs. 16.73 crores, in contrast to the fall of Rs. 5.81 crores noted at the close of 1953. Such an impressive expansion in cash balances has improved the cash coverage to deposits from 9.6 per cent. to 15.8 per cent., which is much higher than the average of 11.01 per cent. for all Scheduled banks in India.

(*Concluded from next column*)

increase in deposits, the Bank has had to borrow from other banks, evidently to meet the increased demand for credit, as is indicated by the rise of Rs. 77.41 lakhs in advances. The outstanding of such borrowings from other banks at the end of the year under review amounts to Rs. 40 lakhs, of which Rs. 31 lakhs are secured by part of the Bank's investments, and the balance unsecured. A sizable part of the rise in advances is accounted for by bills purchased and discounted, the exact increase in this portfolio being Rs. 41.65 lakhs, that is, from Rs. 59.10 lakhs to Rs. 100.75 lakhs. Loans, cash credits and overdrafts have also gone up from Rs. 247.24 lakhs to Rs. 282.99 lakhs. At Rs. 383.75 lakhs, the total advances constitute a fresh record (as far as can be seen from the year-end figures) and exceed the previous highest of Rs. 346.23 lakhs at the end of 1951. Investments (at or under market value) have declined by Rs. 46.45 lakhs, but cash balances are slightly better, so that the cash coverage to deposits are at the comfortable level of 12.6 per cent., which is well above the all-India average.

UNION BANK OF INDIA MAINTAINS PROGRESS

ADVANCES AT NEW HIGH LEVEL

THE accounts of the Union Bank of India Ltd. (General Manager: Mr. F. K. F. Nariman, Bombay) for the year ended 31st December, 1954, indicate a welcome improvement in the Bank's turnover. Thus, the balance-sheet total as at the close of the year shows a rise of Rs. 94 lakhs; deposits are higher by Rs. 10.66 lakhs; advances have recorded an increase of Rs. 77.41 lakhs; and borrowings from banks have gone up by Rs. 25.50 lakhs. In consonance with these trends, the gross income of the Bank for the year has risen by over Rs. 4 lakhs. If such an expansion in business is not duly reflected in the Bank's profit, which is just maintained at about the previous year's level—Rs. 6.76 lakhs to be precise—it is due to the higher outgo by way of expenses and interest.

The following comparative table presenting the salient features of the Bank's profit and loss accounts for the past four years and the balance-sheets as at the close of the years gives a good idea of the Bank's progress in recent years:

(In lakhs of rupees)

	For the year ended 31st December			
	1954	1953	1952	1951
Gross income	31.07	27.00	28.28	25.20

† Ratio arrived at after taking into account the investments earmarked against borrowings from other banks.

It is gratifying to note that the upward trend in the Bank's gross earnings made a great stride during the year under review. Of the increase of Rs. 5.87 lakhs during the past three years, the rise during the year under review alone amounts to Rs. 4.07 lakhs. This is partly due to the larger income other than that from interest, discount, commission and exchange. However, as pointed out earlier, such an improvement in earnings has unfortunately been offset by the increase of Rs. 1.82 lakhs in interest paid and, to a greater extent, by that of Rs. 2.39 lakhs in expenses. This feature is not peculiar to the Union Bank alone. However, the effect of it in the case of the Union Bank has been more pronounced than in those of many others, so that the profit for the year under review is not higher than that for 1953, as has been the case with many others. The provision for taxation has, nonetheless, been raised from Rs. 1 lakh to Rs. 1.15 lakhs and bonus to staff from Rs. 80,000 to Rs. 90,000. The transfer to the reserve fund under section 17 of the Banking Companies Act has been maintained at Rs. 1.50 lakhs. In addition, the Directors have transferred to the contingencies account, as in the previous year, a sum of Rs. 50,000, but no allocation has been made to write off Bank premises, for which a sum of Rs. 50,000 was utilised last year. The dividend has been maintained at As. 5½ per share of Rs. 5, or 6¼ per cent. per annum, for the fourth year in succession.

Notwithstanding the decline of Rs. 2.16 lakhs in the Bank's profit over the past three years, the Bank has been consistently strengthening its reserves, so that they now stand at Rs. 33 lakhs, as against a paid-up capital of Rs. 40 lakhs. There has been an expansion of Rs. 21.84 lakhs in the Bank's deposits (as seen from the year-end figures) during the last two years, but the decline of Rs. 40.02 lakhs noted at the close of 1952 has still to be made good. The bulk of the rise of Rs. 10.66 lakhs in 1954 has occurred in current accounts, contingency accounts, etc., the exact increase being Rs. 7.13 lakhs. Despite this

TAX ENQUIRY COMMISSION OUTLINES AIMS OF FISCAL POLICY

MORE PRODUCTION AND BETTER DISTRIBUTION

THE general considerations which must govern India's fiscal policy have been examined at some length by the Taxation Enquiry Commission which, in the chapter on "Outlines of Tax Policy", has indicated its approach to the whole problem of reorganising the tax system. This chapter, therefore, forms the key to the whole report.

Briefly, the Commission's terms of reference required it to examine the tax system in relation to four main aspects: (1) the incidence of the tax system and its suitability for reducing inequalities of income and wealth; (2) the suitability of the tax system with reference to the development programme of the country and the resources required for it, including fresh avenues of taxation; (3) the effects of taxation of income on capital formation and maintenance and development of productive enterprise, and (4) the use of taxation in dealing with inflationary and deflationary situations.

Interpreted broadly, these aspects may be described as the objectives of (a) improvement in distribution, (b) furthering the development in the public sector, (c) improvement in production in the private sector, (d) promotion of the stability of the economy. An important question of tax policy is posed by the need to strike a balance between the objectives of achieving economic equality through the tax mechanism and of maintaining unimpaired the flow of investment and savings which make for the continued progress of productive enterprise. It is true that other industrially advanced countries have passed through stages of great economic inequality. But the Commission points out that the question of better distribution cannot be left to historical process. One of the Directive Principles of the Constitution affirms it. Simultaneous progress should be made in both directions—greater production and better distribution.

There is no reliable measure of inequality in India, though it is known that it is wide. The tax system can certainly assist the process of attaining equality of incomes. Any emphasis on this aspect of the function of tax system should, however, be based on a "realistic appraisal of what the tax system can, at any time, achieve in the direction of lessening inequalities and, secondly, how far the process can be carried without undue adverse repercussions on private productive effort and enterprise." If the problem of inequality is to be effectively tackled an increase in progression in direct taxation must be supplemented by measures of more effective tax enforcement, with a view to extending the coverage of the taxes. The Commission emphasises the need for taxation of the consumption of luxuries and draws attention to the fact that, if public revenues have to be augmented, "some contribution must come from the masses of the population through taxes which have a wide base."

Equity

As regards equity in taxation, the Commission examines the importance of the principle of "ability-to-pay" in the context of the disincentive effects which progression in tax rates may have on savings and investment and, therefore, of production. It says: "The degree of progression considered desirable over various income-ranges will depend, therefore, on the need to strike a balance between the aim of lessening economic inequalities through the use of tax instrument and that of sustaining and strengthening the incentives to invest and to increase production." In its opinion, it is inevitable in underdeveloped countries that there should be some departure from the strict basis of ability to pay adopted in developed economies, though it should be possible to correct specific elements of inequality in the tax system.

Although taxation reduces incomes and lowers private investment and consumption, the proceeds of taxation are available to the public sector. The relative priority of the need to encourage consumption or investment may change with the economic situation. But the general emphasis of the tax system should be directed towards "countering the natural propensities of the economy by restraining consumption and stimulating investment and savings." Discussing the role of taxation in investment, the Commission says:

"If taxation goes to increase the volume of public investment, and not to swell administrative and non-development expenditure, total investment will be larger to the extent that additional public investment made possible by taxation takes place at the expense not of private investment but of consumption. In fact, taxation may be a most effective means of increasing the total volume of savings and investment in any economy where the propensity to consume is normally high. And probably the only really effective way to step up capital formation in such an economy is for the State to assume a major responsibility for securing a diversion of resources from private consumption to public investment. It follows that the structure of taxation, which will be most suitable and efficacious for the purpose, is a properly diversified scheme of taxation—direct and indirect—which seeks to secure the diversion of physical as well as financial resources from consumption to public investment, in forms and on a scale appropriate to the development programme. In other words, the tax system must have an adequacy of both depth and range, if it is to promote an accelerated pace of development.

"Additional taxation of a wide range of luxury or semi-luxury products, at fairly substantial rates, accompanied by broad-based taxation of articles of mass consumption at comparatively low rates, is, therefore, indicated. In the field of direct taxation, higher rates in respect of personal income-tax should be accompanied by some relief for income which is saved or invested. On the whole, the kind of tax system which would be best adapted to meet the requirements of the Indian economy, having regard to the development programme and the resources required for it, appears to be one which would increase the resources for investment available to the public sector with as small a diminution as practicable of investment in the private sector, and which, therefore, is accompanied by the largest practicable restraint on consumption by all classes. Restraint on the consumption of higher income groups must, of course, be greater than in respect of low income groups."

What are the limits to which taxation can be carried without danger to the stability of economy? These limits are to be judged in terms of the taxable capacity of the economy as a whole, of particular sections of the population and of "scope for optimum utilisation with reference to particular tax heads." Indian tax revenues only amount to between 7 and 8 per cent of the national income. This is lower than in certain other countries. The low ratio of taxation to national income in India is to be attributed to the low *per capita* income levels, the existence of a large non-monetised sector and the low ratio of international trade to national income (which restricts the area of large-scale commercial sector). Any direct conclusions regarding the scope for further taxation in the country based on comparisons with similar proportions in more advanced countries are inappropriate. Referring to the question whether the proportion of taxation to national income (8 to 9 per cent.) indicates whether the taxable capacity has been reached or not, the Commission says that, if people appreciated the correspondence between taxes and the beneficent expenditure which they make possible, the limit of taxable capacity would be higher. Again, efficiency in administration and economy in public expenditure "should at least diminish people's unwillingness to suffer an increase in tax burdens." The Commission's general conclusion is that there is a "presumptive case" for holding that administration in India has not fully tapped the taxable resources of the country and that there is "justification for some increase in Indian taxation."

The Commission finds it difficult to lend its unqualified support to the statement that revenue deficit should be covered by taxation and capital deficit by borrowing. "There is nothing unsound in theory," it says, "in using a budget surplus to finance investment on public account." The Commission, however, underlines its view that it is not suggesting that the whole of the Government's development programme should be financed by taxes. It holds that the financing of a part of the programme by budgetary surpluses does not cause any greater real burden on the current consumption of the community than would be done by an equivalent amount of public borrowing. Discussing this question, it says:

"An argument which has been often advanced in the representations made before us against the use of taxation for financing capital expenditures is that there is no justification for burdening through taxation, the present generation with the whole cost of development programmes intended to benefit future generations. The argument contains the hoary fallacy of assuming that a part of the current cost of development can be shifted to posterity. There is no way of securing this postponement of the cost, in terms of real resources, of a large investment programme; the programme involves a deduction, here and now, from the resources available to the community for current consumption. The question of the relative use of taxation and borrowing relates, therefore, not to the question of distributing the burden between the present and the future, but to the appropriate method of meeting, in the present, the cost of the investment programme. A decision on the question only determines the distribution within the community of the burden imposed by the investment programme; for the community as a whole, this burden has to be borne in real terms in the present."

The other method of financing development programme is by incurring deficit. A consideration highly relevant to the amount of deficit-financing which may properly be undertaken would be how far there are already indications in the general economic situation of the presence or otherwise of inflationary pressures. In the Commission's opinion, a moderate measure of deficit financing in the context of present conditions and of immediate trends in the economy "would not inflict any injury on the economy."

There is need, according to the Commission, for deepening and widening the coverage of the Indian tax system. This implies increase in direct and indirect taxation. Broadly, it appears to the Commission that over and above an increase in direct taxation under income-tax (and later in estate duties), which should receive priority in the investigation of additional resources, reliance will have to be placed on indirect taxation—mainly through a further extension of Central excises and State sales taxes.

Explaining its general approach to the need for incentives for savings and investment, the Commission says:

"Increase in commodity taxation undoubtedly affects consumption; increase in the progression of the direct taxes may affect savings and investment. We are definitely in favour of taxation that would reduce the consumption levels especially of the upper income groups in India. The disparity in consumption levels prevalent at present in this country is a matter of common observation and there can be no doubt about its demoralising effect on the large masses of workers in the country as regards their willingness to accept higher tax burdens and yet work harder. The disincentive effect of higher taxation on the will to work on the part of the higher income groups is generally exaggerated. There is need for the upper income groups to adjust themselves to the reductions in money rewards that the changing social and economic conditions of the country necessitate. It is unrealistic to stress the disincentive effect of income-tax progression on the upper income groups, while the tax system calls upon the lower income groups, who constitute the masses of the country, to contribute an increasing portion of their meagre incomes. It must be remembered that even with the present comparatively high rates of tax, the range of inequality between the disposable incomes of the few and the many is wider than in many countries where the rates of taxation on higher incomes are, in fact, lower.

"The fixing of a ceiling on personal incomes on the basis of a reasonable multiple of the per capita or per family national income is a matter to which we have given much thought and it is our view that there should be a ceiling on net personal incomes after tax which, generally speaking, should not exceed approximately 30 times the prevailing average per family income in the country. We do not suggest that this is capable of immediate implementation, but we think that it is important to strive by stages for its implementation over a period of time. The accomplishment of this objective cannot merely be the result of tax changes, but must be related to an integrated approach along several directions. The most important phase of this approach would be an acceleration of the tempo of economic development and a widening of employment and production opportunities. . . .

"The approach must be realistic in the sense that the tax system should not be strained to a limit which will endanger the productive system of the country or impair the possibilities of its expansion by affecting savings and investment in the private sector. We have, therefore, paid special attention to the importance of promoting savings and investment by suggesting appropriate incentives for the purpose in the income-tax system. In particular, we have suggested tax concessions for encouraging industrial expansion. With a view to making maximum use of the limited funds that can be released for the purpose and in the belief that the maximum effect is attained most speedily by concentrating the concessions on specified lines of production, we have recommended the adoption of the selective principle in the application of several of the tax incentives we have recommended in the industrial field. We have also suggested measures for ensuring as far as possible that the funds released for investment are utilised for the purpose. Such investment should be encouraged by our proposals irrespective of whether it is undertaken by corporate or non-corporate, including individual and proprietary concerns."

The Commission's terms of reference require it to examine the use of taxation as a fiscal instrument for dealing with inflationary or deflationary situations. Tax system should be geared to the task of maintaining economic stability. This can be achieved either through frequent changes in tax rates or by devising a tax structure (say, *ad valorem* commodity taxes) which will automatically adjust themselves to economic disturbances as they arise. The more general way in which a tax system can operate to mitigate the effect of an inflationary or deflationary spell is to reduce or increase the quantum of national income available for private expenditure by a policy of surplus budgeting or deficit budgeting respectively.

In so far as an inflationary disturbance originates from external influences, export duties constitute one recognised way of preventing a strong foreign demand for domestic products from exerting an inflationary influence on the domestic economy. When prices fall within the country on account of external influences, it is difficult to counteract the decline through a change in the tax system. The elimination of export duties and a substantial reduction in internal commodity taxation may, however, help to stem the decline in foreign demand and to sustain domestic demand and thereby reduce the fall in producers' incomes. Referring to commodity taxation in the State sphere, the Commission says that the position is complicated by the inability of States to incur deficits, unless the Central Government devises a systematic programme of loans and grants specifically to enable tax reduction by the States.

Even in the fiscally advanced countries, where tax receipts constitute a significantly larger proportion of their national incomes, reliance is placed more upon an expansion of public expenditure rather than on the lowering of taxes as an anti-depression device. The Commission points out that in a country like India, where the proportion of national income taken by way of taxation is of the order of 7 to 8 per cent. (as against 25 to 40 per cent. in many other countries), there is very little that the tax system can do by way of an income effect for mitigating the effects of deflation; even what can be done by way of deficit-financed public expenditure is of limited value in the light of the structural rigidities and other peculiarities of the Indian economy. It adds: "All the same, in India, it is in the direction of public expenditure rather than of taxation that more effective action can be taken to mitigate the effects of a deflationary spell."

Clearly, the taxes that fall directly on the large additional incomes and commodity taxes that fall on the increase in general purchasing power resulting from inflation have a significant part to play in anti-inflationary policy. When, however, inflation gets beyond a certain level, taxation no longer provides even a partial remedy. Costs chase incomes in a rising spiral, and public expenditure keeps increasingly ahead of public revenues. In such cases, the only effective remedies, the Commission says, are "either to stop the increase in public expenditure and bring about a radical reduction in the same or to institute a drastic monetary purge by imposing what in effect is a capital levy on the holdings of money supply or liquid assets; often, the two may be required in combination." Referring to the anti-inflationary potentialities of the Indian tax system, and the changes that would be needed in the event of depression, the Commission says:

"The Indian tax system already contains in its income-tax and commodity taxes important means of countering inflationary situations. The income-tax is a highly progressive levy. Under conditions of boom or inflation, as explained above, it automatically yields larger revenues, and restricts the growth of disposable incomes left after tax. Over and above this inherent anti-inflationary feature of the tax, the feasibility of using it to curtail incomes still further through enhancement in rates of tax when inflation develops will be limited if rates are pitched normally high. With any pronounced inflationary trend, however, there would remain possibilities of screwing up direct taxation. An increased use of commodity taxes by a wider coverage and higher rates can, similarly, help to restrain consumption demand. It may become necessary, in particular, to levy special taxes on those sectors of the economy that benefit the most from the inflationary bias of development expenditure. These measures, together with the possible imposition of special taxes like the excess profits tax, should normally be sufficient, in the tax sphere, to deal with ordinary inflationary situations that may be expected to develop.

"In the unlikely event of a depression emerging, reduction in taxation is unlikely to make much difference as the income it will release for private expenditure will be a very small proportion of the national income; the fiscal remedy in such a case would be to increase public expenditure and finance it by deficit till the economy recovers, and prices and sales resume their pre-depression trends."

From the long-term point of view, the objective of maintaining stability in the economy, the Commission says, merges into the "larger objective of economic development." The problem is thus one of adapting fiscal and other policies to the end of maintaining an even course of development, and of adjusting the pace and content of public expenditure, the level and forms of taxation and the overall budgetary position. All the elements of fiscal policy, the Commission emphasises, should remain basically attuned to the climate of economic development.

why 'Alkathene' Film is ideal for textile baling

Because 'Alkathene' Film is flexible and yet tough, it does not split or crack at the time of baling, or in transit, as other packing materials do. 'Alkathene' Film is:—

- impermeable to moisture
- light
- easily cut and heat-sealed
- transparent

More and more mill-owners are convinced that 'Alkathene' Film is ideal for textile baling, and are now using it in place of ordinary packing materials.

LABOUR UNIONS SUBMIT SCHEME TO REGULATE CLOTH IMPORTS

PRICE-FIXING CONDEMNED

By A Special Correspondent

MANCHESTER, 1st *March*

MANCHESTER LETTER

A PLAN to restrict the flow of foreign cloth and yarn into Britain without contravening the country's obligations under international agreements has been put forward by the cotton unions in conjunction with Members of Parliament for the textile constituencies of Lancashire. It provides for the placing of responsibility for all textile importing in the hands of a Government buying commission which could limit imports of cloth and yarn produced under conditions of unfair competition.

The plan was outlined by Mr. Harold Wilson, a former President of the Board of Trade, after Lancashire and Cheshire Labour M.Ps had met the Legislative Council of the United Textile Factory Workers' Association in Manchester. The Legislative Council is the central assembly of Lancashire's 290,000 cotton operatives.

It urged that the import trade in both cotton piecegoods and yarn should be centralised under a system of bulk purchase and that a Bill should be introduced in Parliament creating a Cotton Goods Import Commission which would have the sole right of importation of cotton goods into this country. The Commission, he said, would be entrusted with the duty of importing all textile goods offered on a basis of fair competition. It would have discretion to refuse to import goods which were based on unfair competition.

Mr. Wilson cited Indian competition as unfair not because Indian wages were too low but because Indian mills acquired their raw material at 10*d.* to 1*s.* per lb. less than Lancashire paid. This was equivalent to about 3*d.* a yard on cloth. Even if Lancashire weavers worked for no wages at all they could not compete with that. He added:

"We imagine that such a Commission would allow a fairly free import of cotton goods; for instance, piecegoods produced by certain European countries. It would probably feel free to import substantial quantities of Indian goods for finishing in Lancashire and subsequent re-export. There would, however, be limitation on piecegoods for the home market in so far as they were produced under conditions which were unfairly competitive."

Mr. Wilson said that the unions and the M.Ps believed the proposals put forward would be simple, effective and consistent with Britain's international obligations. He said: "We believe that if they were carried out it would provide a basis under which the Lancashire cotton industry could go forward full of confidence, able to devote its energies to its priority task of maximising productivity in the industry."

Mr. Harold Bradley, Secretary of the Legislative Council of the United Textile Factory Workers' Association, announced that the Council had decided to accept an invitation to meet the textile sub-committee of Conservative M.Ps to discuss Lancashire's present problems next week.

Report on Price-fixing

After several months in which the main talking-point in the cotton industry has been the increasing arrivals of foreign cloth, controversy has switched back to the price-fixing arrangements as a result of the decision of the Government to accept the Monopolies Commission report on calico printing.

When the report was first issued there was much disquiet in the industry at the implications of the document, which roundly condemned the schemes in operation in this important branch of the textile trade. The Commission thought the plan to maintain prices and particularly the percentage quantum scheme was "against the public interest."

Implied criticism was therefore levelled against the other similar price systems in force in other sections of the trade, chiefly in spinning and doubling. It was felt that these would soon be also under fire, as although details differed the basic system—to regulate prices and maintain margins—was on similar lines.

Price protection against internal undercutting in the cotton textile industry dates back to before the war, when a series of "gentlemen's agreements" were drawn up to end the unfortunate price "wars" which broke out in many directions during the depression of the 1930's. These became legally enforceable nearly 10 years ago after the war-time experience of control and strict regimentation. In the spinning branch the scheme was supported unanimously by producers offering yarn in the open market and in the various processing branches the main groups have sufficient control over their respective sections to exercise adequate sway over the rest.

Despite outbreaks of criticism in subsequent years, the systems have been operated steadily ever since. Among merchants and manufacturers the view has often been expressed that the margins permitted are too high, but when trade was booming in 1950-51, the prices charged were far above the minimum rates. The agreements only stipulate prices below which members should not sell—there is no "ceiling" on the rates in question.

As a result of the schemes, the spinning and finishing sections of the cotton industry have built up very satisfactory reserves in recent years. Financially the industry is stronger now than ever before, although individual firms have had varied experiences in profit-earning according to their success or otherwise.

Spinners' Theme

How official figures of output and undelivered contracts can effectively mask the actual conditions prevailing in the trade is the theme of the most important section of the Annual Report of the Master Spinners' Federation for last year. Spindle activity and the state of order lists during 1954 would give a totally misleading picture of the situation, it declares.

Yarn production reached 96 per cent. of the 1951 average in the first quarter of 1954, but by December it had fallen to 87 per cent. More important still, order books were contracting at a time when they should have been building up. This will undoubtedly affect the lean period for purchases normally expected during the second and third quarters of the current year.

Commenting on declining exports and rising imports, the Federation says: "What the figures do not and cannot show is the potential threat to the very existence of the cotton industry if steps are not taken in advance by the Government which would enable a still great industry to survive a sudden and devastating blow based on unfair competition."

There is underlying criticism of the "wait-for-it" attitude of the Government in the report. "Comparatively small imports of an unfair character have already damaged certain sectors of our industry," it states. "The fact that the overall position still appears reasonably healthy should be no reason for complacency, either in the industry or in Government circles. It is only necessary for a slight recession in world trade in textiles to arise and distressed or subsidised goods will pour in from every quarter of the world."

A Fair Start

Exports of cotton yarn and piecegoods from the United Kingdom in January both exceeded the monthly average during 1953, but traders did not derive much encouragement from the totals as it was felt that they represented some of the backlog of orders held up during the dock strike. The earnings of shipments of cotton goods in January were £9,802,983, as compared with £9,990,327 a year previously.

Cotton yarn exports amounted to 3,547,215 lbs., the chief consuming countries being Australia with 733,490 lbs., Irish Republic 319,890 lbs., and Finland 302,923 lbs.

Shipments of piecegoods were 59,631,000 square yards, at an average price of 29.46*d.* per square yard—more than 1*d.* a yard cheaper than a year ago. Australia was again the main buyer, absorbing 10,740,000 square yards, followed by Nigeria 6,506,000 yards, South Africa 6,371,000 yards and the Gold Coast 4,641,000 yards.

Imports of cotton goods during the month cost £2,693,488 against £1,469,277 in January, 1954. There was a further sharp increase in the quantity of grey cloth reaching this country, which amounted to 33,569,000 square yards, of which 15,243,000 yards was from India. Other suppliers included Japan with 11,972,000 yards and Hong Kong 4,296,000 yards. Little change occurred in the quantity of finished cloth imported or in the amount of yarn arriving from abroad.—*All Rights Reserved.*

COTTON BAGS FOR ONIONS, POTATOES AND FRUITS

A coloured goods mill at Slagharen (the Netherlands) has started the manufacture of cotton bags for packing onions, either entirely red or red stamped with a white or an ecru band; in both cases a more closely woven strip is provided for the stamping. These bags are now also available for export. In addition, the same mill has for some time been turning out circular-woven cotton bags for the retail sale of potatoes, lemons, oranges, nuts, etc. These bags can be supplied in all colours.

ZAGREB
SPRING FAIR

The Spring Fair will be bigger and brighter with greater emphasis placed on the breadth and variety of Yugoslav goods. This Fair, which will include both the General Craft Fair and the Wine Industry Fair, will give the visitor a good idea of the vast potential of Yugoslav Industry and Trade. It will furthermore be a unique opportunity to examine as well as purchase Yugoslav goods. The Fair will be held from the 25th March to the 3rd of April, when the weather in Yugoslavia is at its best.

To enable the maximum number of visitors to visit the Fair, the Yugoslav Government has sanctioned special reductions in the fares both on the Yugoslav State Railways and Yugoslav Shipping Lines to visitors.

FURTHER INFORMATION IS AVAILABLE FROM
THE YUGOSLAV COMMERCIAL AND DIPLOMATIC REPRESENTATIVES, AND TRAVEL AGENTS
AND AT
THE ZAGREB FAIR, 25 SAVSKA c. ZAGREB, YUGOSLAVIA.

SOME PROBLEMS OF COAL INDUSTRY

I.C.U.'S MEMORANDUM TO PLANNING COMMISSION

IF a steady development of the industrial sector of this country is to be assured, there is no gainsaying the fact that the coal industry must be stabilised on sound economic foundations. Various suggestions have been made both by owners and workers of the collieries to the Planning Commission for consideration for fixing the targets for coal production in the second Five-year Plan. The latest of them is a memorandum submitted by the Indian Collieries Union (I.C.U.), Katrasgarh, to Mr. K. C. Neogy, Member, Planning Commission. Expressing concern at the persistence of the threat of nationalisation, lack of rail transport facilities, competition from State collieries and labour unrest, the I.C.U. has suggested a number of remedies, the chief of which are as follows:

(1) The Government of India should declare immediately its policy in regard to nationalisation of coal mines in clear and unequivocal terms. For, unless the present sense of insecurity arising from the persistence of the threat of nationalisation is removed by immunising the private collieries from the inroads of State ownership for at least the next 25 years, there will be little progress in this sector. Further, the industry should also be assured that, if and when mines are nationalised, the owners would be adequately compensated.

(2) The Planning Commission should appoint an *ad hoc* committee to investigate and report on the present conditions of the coal industry in regard to production, transport and labour problems.

(3) The Coal Board should be reconstituted with a majority of non-official mining engineers and experts and non-technical representatives of the industry with a non-official Chairman possessing the requisite technical qualification. The duties of the Chairman of the Coal Board, Coal Commissioner and the administrative head of the State collieries, which are at present exercised by the Coal Commissioner, should be properly reassigned. A mining engineer should be appointed as Deputy Coal Commissioner (Production) or be attached to the Coal Board as production officer, who should be responsible for ensuring a steady increase in the output of private collieries. Coal grading by the Coal Board should strictly conform to the rules framed by the Government in this behalf.

(4) A Standing Committee with a non-official majority, to be called Public Relations Committee, should be constituted to investigate into all complaints made either by consumers or the collieries regarding production and distribution of coal, with powers to check daily wagon allotment sheets.

(5) All Government-sponsored industries, like the steel, power and fertiliser, should be made to "own their own wagons."

(6) The present transport rationalisation scheme and restrictions on cross-traffic should be re-examined by an expert body with due regard for the geographical position of the industries and availability of different grades of coal in different parts of the country.

(7) A Standing Committee, to be called Siding and Loading Facilities Committee, should be appointed, consisting of representatives of the Coal Commissioner, Railways, and of the coal industry to deal with all applications for siding facilities and relevant matter relating to coal loadings.

(8) All State collieries should be run on commercial basis and placed in the hands of a Board of Directors like other State-owned industries and not managed by the Coal Commissioner as at present. So long as the private sector of the coal industry is not nationalised, the control over private and public sectors of the industry should be in different hands, as their interests very often clash with each other. All State collieries should be placed on the same footing with market collieries in all respects including fixing of quotas for brick burning coal.

(9) Seam samples for grading of seams in State collieries should be drawn by a neutral body. Similarly, wagon samples of State collieries should be drawn not by the departmental officers as at present but by persons appointed by the aforesaid neutral body.

(10) All previous price cuts on original control prices including those of grade IIIA and grade IIIB coal should be restored.

(11) Higher priority should be given in the matter of wagon supply for domestic coke and brick-burning coal as this has a direct bearing on rural economy and middle-class employment.

(12) The wage structure of mining labour, as also the bonus scheme for them, should be based on production *per capita* and not on attendance only and collieries should be allowed to employ temporary *ad hoc* labour for meeting emergency and occasional demands.

A study of the recommendations reveal that the biggest obstacle now is the threat of nationalisation. It has assumed greater proportions not only because of the proposed amendment to Article 31 of the Constitution but also because the no-nationalisation time-limit given to this industry is drawing near. It will be recalled that, in the policy statement on industries made in 1948, the Government had assured the coal industry that it would not be nationalised for a period of 10 years and that, thereafter, the position would be reviewed. Now that there are only three more years for this period to be over and that recently some persons in authority hinted at the possibility of the Government deciding to nationalise the industry, it is but fair that the Government should make the position clear. It is needless to add that, so long as this uncertainty lasts, an uncertainty which has been heightened by the move to make the question of compensation in the event of nationalisation a non-justiciable issue, the industry in the hands of the private sector will not be in a position to raise the additional capital required for its development and mechanisation.

This is not enough. The shareholders of the coal mines should be assured of a reasonable dividend on their investment. In view of the mounting labour demands for more remuneration and other amenities, and the rising costs of production, following restrictions on rationalisation, there is hardly any prospect of even the present meagre dividends being maintained. In fact, what is needed is the restoration of the price cut of 1949 and the linking of wages and bonus not merely to attendance but also to productivity per worker. There is also sense in the suggestion that provision should be made for employing labour temporarily to meet unforeseen demands that arise at times.

Further, there is an imperative need for providing wagons for transporting coal in sufficient quantities, so that stocks do not accumulate at pitheads and thereby retard production, resulting in diminution of profit. In this connection, the allegations that the scheme of rationalisation of transport and restriction on cross-traffic has failed, as also that the State collieries are shown preference against private collieries in allotment of wagons, require to be examined. But the suggestion that the State-owned industries should be allowed to own their own wagons is faulty in principle. For it will create vested interests and interfere with the discretionary powers of the railways in the matter of allotment of wagons.

The demand for the reconstitution of the Coal Board incorporating technical and non-technical personnel is based on the ground that it would induce confidence in the industry about its proper working. It is stated that, because the Chairman of the Board is a non-technical person and is also entrusted with other responsible duties of the Coal Commissioner and the administrative head of the collieries, there is woeful inefficiency in the working of the Coal Board. To quote the remarks of the I.C.U.:

"The Coal Board, as at present constituted for all practical purposes, instead of shaping the future of the coal mining industry with the help of the collective intelligence of high-level experts, is being administered by its Chairman and is devoting its energy mostly in preparing doubtful statistical data and taking unsound decisions. Many mining experts consider that some of the Board's decisions are faulty and that, instead of helping conservation, they are in the direction of destruction of our valuable coal reserves. The Committee of the Union reiterate their opinion that, in direct negation of the Government's desire, the Board have definitely depressed coal production. The Committee suggests that the personnel of the Board and its officers should be whole-time ones, except the non-official members. There should not be any question of economy in expenditure by engaging part-time officers."

It will be interesting to know what the Chairman of the Coal Board has to say on these allegations. It can, however, be stated that the criticism that he has definitely depressed coal production does not stand scrutiny, as witness the fact that, at 36.77 million tons, the production of coal in 1954 was actually 0.55 million tons higher than the previous record high output and about a million tons higher than in the previous year.

IMPORTS OF RAW SUGAR

TERMS AND CONDITIONS

AS readers are aware, during the 1953-54 sugar season, the Government of India allowed imports of raw sugar in limited quantities as part of its programme for bridging the gap between domestic production and demand for sugar. Thus of the total imports of 676,000 tons in the 1953-54 season, the share of raw sugar was of the order of 48,500 tons. Imports of raw sugar were confined only to those sugar factories which were willing to refine it and market the refined sugar subject to its scrutiny. While announcing the sugar policy for the 1954-55 season towards the close of last year, the Government had stated that imports of sugar would have to be continued and that these would include raw sugar in a much larger quantity than in the preceding season. Full details of the scheme for import of raw sugar were, however, announced only a few days ago. By a notification published in the *Gazette of India Extraordinary* dated 22nd February last, the Central Ministry of Commerce and Industry has invited applications to be submitted to the Chief Controller of Imports and Exports, New Delhi, from such of the vacuum pan sugar factories as are willing to undertake the refining of the imported sugar. These factories will have to furnish information on a number of aspects, such as the process to be used for refining, daily capacity for refining in tons, the date by which crushing of cane is expected to be completed, railway freight from the port concerned to the factory and the quantity of raw sugar to be imported, the country of origin of such imports, the currency area and the price of raw sugar c.i.f. Indian port. The last date by which the applications had to be submitted was 9th March.

The notification mentioned above has stipulated the terms and conditions under which the licences will be issued for importing raw sugar. According to these terms, the factory wishing to import should furnish a guarantee from a Scheduled bank for an amount calculated at the rate of Rs. 8 per ton of sugar licensed. The guarantee should be executed in favour of the President of India within 15 days of the grant of import licence. It will be valid for a period of one year and is returnable. However, the guarantee will be forfeited, if no raw sugar is imported for reasons not beyond the factory's control.

The imports are subject to an import duty at the rate of Rs. 4-12 per cwt. In addition, an excise duty on the refined sugar will be payable in the usual manner at the rate prevailing at the time of payment of this duty. This excise duty will be at the rate of Rs. 5-12 per cwt., if the budget proposals for 1955-56 are placed on the Statute Book.

All the raw sugar imported should be refined in the factory and should not be used or disposed of in any other manner without the prior approval of the Ministry of Food and Agriculture. Such permission will, however, be granted only in exceptional circumstances. The raw sugar should conform to the definition laid down in the Customs Notification No. 160, dated 27th November, 1954, namely, that "it shall be sugar with associated impurities having a sucrose content not exceeding 99 per cent. by weight on the material dried at 105°C." All the quantity applied for should be imported and its refining be completed by 31st October, 1955. The Ministry of Food and Agriculture should be informed of the details of the quantity purchased, the price and other terms of purchase.

Immediately after the arrival of the raw sugar at the specified port, the factory is required to inform the Ministry of Food and Agriculture and give the programme for its refining. The factory should also submit a fortnightly report about the quantity of raw sugar processed and the quantity of refined sugar produced. The factory has to make its own arrangements for the movement of sugar from the port to its premises. The Government will, however, provide priority movement as far as practicable. The factory is also required to keep separate accounts relating to the purchase, clearance handling and transportation and refining of raw sugar and shall produce the same for inspection or checking by any Government officer. Lastly, and this is more important, the refined sugar produced in the factory may be disposed of without any restriction on its sale or price, but should not be sold, unless a release order from the Ministry is issued.

The total quantity of raw sugar for which licences will be issued is 150,000 tons, which is more than three times the quantity allowed in the previous season. This decision of the Government, namely, to allow larger imports of raw sugar is to be welcomed, because, it is more advantageous to the country than imports of refined sugar. The processing of raw sugar will provide employment to workers in factories during the off season, enhance the profits of factories and result in a saving of foreign exchange to the extent of the difference between the cost of raw sugar and refined sugar, minus the cost of imported chemicals used in refining the raw sugar. Incidentally, it may be noted here that the loss on refining raw sugar is 10 per cent., so that 150,000 tons of raw sugar will yield approximately 135,000 tons of white sugar.

BABCOCK
Steam Raising Plant
SOLD NOW HAVE AN AGGREGATE EVAPORATION OF APPROXIMATELY
4,000,000,000
LBS. PER HOUR
BABCOCK
can supply
Whether your requirement is 1,000 lb./hr. of process steam at 100 lb./sq. in., saturated . . . or steam for 100,000 kw. of power at 1,500 lb./sq. in., and 1,050° F., from one boiler unit, BABCOCK can supply it; and not only the boiler but also all the essential auxiliary services—coal handling plant, ash disposal equipment, pipework . . . In fact, a complete steam raising plant, designed and manufactured entirely within the BABCOCK organisation, backed by 75 years of experience in steam engineering and by a world-wide service.

SALES TAX ON RAW JUTE

CENTRE ADVISED TO ASSUME CONTROL

THE levy of sales tax on raw jute in some States is considered by the jute industry as a serious burden. Often, complaints have been made as to the discriminatory character of the levy. Jute is a raw material of an industry, the fortunes of which depend on overseas markets. This industry is no longer a monopoly of India. It has many competitors, but its importance to India as an earner of foreign exchange has not diminished. As cheap and ample supply of raw jute is thus the basic condition for expanding production of jute goods and their export, and as the various State Governments themselves are the beneficiaries from the revenue derived from the export on jute goods, it is in their own interests that they should refrain from taxing the raw material. In view of these considerations, the Jute Enquiry Commission had recommended last year that the State Governments should exempt raw jute from the levy of sales tax. This advice of the Commission was not heeded by the West Bengal Government. On the contrary, it set a bad example for other State Governments by doubling the existing cess of As. 2 per maund to As. 4. In reality, the cess is a purchase tax and has been having a deleterious effect on the economy of the industry.

What is rather very disquieting is the method of this levy. Thus no cess is payable when dealers or mill agents despatch the raw jute to Calcutta, but when dealers or even co-operative societies buy for sale or hold stocks within the State limits, they become liable to this tax. In view of the discriminatory character of this impost, the Jute Enquiry Commission recommended the removal of this disability. This advice too has remained unimplemented.

In the light of this background, it will be interesting to mention here the views of the Taxation Enquiry Commission on the levy of sales tax on raw jute. The Commission has, among others, recommended Central legislation and Central control in respect of all inter-State transactions and also certain transactions, whether or not inter-State, in respect of goods which are important in inter-State trade. The Commission has emphasised that such control should be strictly confined to a very small number of well-defined commodities of special significance to inter-State trade. It has observed that, broadly speaking, no commodity should be selected which does not combine the following characteristics:

(i) it should be raw material or largely in the nature of raw material;

(2) either as raw material or later as finished goods based on such material, it should, in terms of volume of inter-State transactions, be of special importance in inter-State trade; and

(3) in terms of the country as a whole, it should also be of special importance from the point of view of the consumer or of industry.

Raw jute is one of the six commodities mentioned by the Commission as having the aforesaid combined qualifications. The commodities are called "specified goods." The Commission says that in regard to levy of a tax by the States on sales or purchases of these goods, the Central Government should take power to impose conditions subject to which the States can levy the tax. These conditions should be that

(1) the States shall levy a single-point tax (at the last stage of sale or purchase) on these goods, and

(2) the rate shall not exceed one-fourth anna in the rupee. This is the rate at which the Central tax will be imposed on these goods in the course of inter-State trade.

Commenting on the application of the above conditions to jute, the Commission observes: "This tax has been in force in Bengal since 1942 under the Bengal Raw Jute Taxation Act, 1941. It is levied at the rate of two annas on every maund of raw jute purchased by a mill or by a person exporting jute out of Bengal. The mills and exporters are required to register themselves, send monthly returns of their purchases and pay the tax every month. It is, in effect, a purchase tax on jute collected from registered mills and exporters. As very little of the raw jute is retained for local consumption and as it is grown by numerous growers, the point of purchase is undoubtedly the most convenient for taxing this commodity. The proceeds from this tax amounted to about Rs. 43 lakhs for undivided Bengal. West Bengal obtains from it a revenue of about Rs. 33 lakhs.

"Under the scheme of sales tax recommended by us, it will no longer be possible for the Bengal State to levy this tax at a rate higher than one-fourth of an anna in the rupee. But any loss from a reduction in the rate of this tax will be more than made up by the receipts that the State will realise from the tax on inter-State transactions and in general by the increase in revenue implicit in our suggestions regarding sales tax in their application to Bengal."

It is to be hoped that at least this Commission's suggestion, as mentioned above, will appeal to the State Government's concerned. For, unlike the Iyengar Commission which advocated the abolition of sales tax without indicating alternative sources of revenue, the Matthai Commission confidently asserts that any loss of revenue consequent on the implementation of its recommendation will be more than made good in other ways.

JUTE SUPPLY POSITION

The earlier possibility of an acute shortage of raw jute during 1954-55, consequent on damage done to the crop by floods last year, is now regarded as somewhat exaggerated. According to circles close to the Indian Jute Mills Association, there are ample supplies of jute in the mofussil centres to keep the mills going till the commencement of the new crop arrivals in August next. This report is already having a moderating influence on prices of raw jute which have been gradually coming down under pressure of sales by stockholders. A few weeks ago, Assam bottoms, for instance, stood at as high as Rs. 40-8 a maund. Currently, they are being quoted at Rs. 37 to Rs. 38. It is stated that the rates would have declined sharper still had there not been transport bottlenecks holding up the flow of stocks freely into Calcutta.

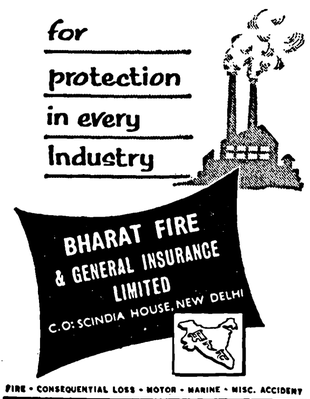
Nevertheless, most of the mills, we are told, have already covered themselves fairly well. They have jute either in stock or under contract to cover about four months. They have, therefore, to buy, between now and August, jute to cover their needs for about two months, or, approximately, 1.2 million bales. Consequently, it is believed that the mills will not be anxious buyers in the jute market for some time to come and that prices will have to come down further.

According to the aforesaid source, the stocks supply and consumption position of raw jute in 1954-55 is as follows:

(In lakh bales)

Supply		
(1) *Opening stocks*		
I.J.M.A. mills' godown stock	...	11.32
Indian carry forward ...	...	7.00
Pakistan carry forward	...	15.00
		33.32
(2) *New crop*		
Jute crop in India ...	...	35.00
Jute crop in Pakistan ...	...	46.00
Mesta crop in India ...	...	7.00
Total supply		121.32
(3) *Consumption*		
Mill consumption in India ...	...	60.34
Non-mill consumption in India	...	1.00
Pakistan exports overseas ...	...	35.00
Mill consumption in Pakistan	...	7.00
		103.34
(4) Carry-over at the end of 1955	...	17.98

According to the Minister for Commerce and Industry, Mr. T. T. Krishnamachari, India exported in 1954, 372,000 tons of hessian. This was, he said, 108,000 tons less than that exported in 1953.



EXPORT DUTY ON TEA

SLIDING SCALE INTRODUCED

THE Government of India had announced in January last that it would soon introduce a slab system of export duty which would slide in accordance with the changes in the prices of tea, instead of the flat rate system as hitherto. This decision was taken when it stepped up the export duty from As. 7 to As. 10 per lb. of tea on 7th January, and it has since been implemented by making a suitable provision in the Finance Bill for 1955-56, presented to Parliament on 28th February, 1955. The slab system is as follows:

When the price of tea does not exceed Rs. 2-8 per lb. the export duty will be As. 4 per lb.; if the price exceeds Rs. 2-8 per lb., but does not exceed Rs. 3-4, but does not exceed Rs. 4 per lb., As. 8; if it goes beyond Rs. 4, but not Rs. 4-12 per lb., As. 10 and if it goes above Rs. 4-12 per lb., As. 12.

Thus, the minimum export duty on tea will be As. 4 per lb. which was the same as that which prevailed before the first upward revision of the duty was made in October last. The maximum duty will be As. 12 per lb., which is As. 2 more than the present flat rate of duty.

The export duty will be revised appropriately, if and when prices move out of the particular range. For the purpose of levying duty, the price of tea will be fixed by the Government of India from time to time by notification in the Official *Gazette*, having regard to world prices. In other words, the fixation of the "price of tea" will not be based on the auction prices in India alone, because a large quantity of tea is being shipped unsold; but also on those prevailing in other world markets, mainly London, to which a large part of Indian tea is consigned. The computation of the "price" is, therefore, important and any mistake made here will alter the incidence of duty. Since the trade and the public should have full knowledge of the tea price fixed, the Government will do well to announce the factors that go to determine the price. In the meantime, it is learned that the Government had already fixed the "price" of tea last week at Rs. 4-3 per lb., so that the export duty will be As. 10 per lb. under the slab system, the same as the present flat rate of duty.

The aforesaid price of Rs. 4-3 per lb. does not seem to be based on the prices current at the time of fixation of the price, but on those prevalent sometime ago. For, during the past few days, there has been a decline in export auction prices at Calcutta and Cochin, as also at Mincing Lane and if the "price of tea" is revised downward in consonance with the decline in auction prices, the export duty will have to be levied at the lower rate of As. 8 per lb.

Be that as it may, the introduction of the sliding scale of export duty will be welcomed by the industry, provided the price of tea fixed by the Government from time to time is not unreasonable. This is probably the first time that such a system is being tried in so far as the tea industry is concerned. The Government feels that there are advantages from every point of view in a system which would automatically adjust itself in relation to variations in price. While speaking on the financial proposals for 1955-56, Mr. Deshmukh referred in particular to the slab system and said:

"A slab system is also being prescribed for export duties on tea in lieu of the existing flat rates. A specific rate tends to become onerous in a period of falling prices; on the other hand, when, as now, prices are rising the incidence of the tax in terms of value becomes progressively lighter with a flat rate. On account of the numerous qualities of tea and because such teas are often sent for sale in auction in the United Kingdom and the price at the time of export is not ascertainable beyond reasonable doubt, it has not been possible to devise a system of *ad valorem* assessment. As a compromise, certain slab rates varying with the value have been prescribed in the present Bill. This will not result in any change in the revenue yield at present prices."

One notable feature of the slab system of export duty is that the Government seeks to retain a permanent minimum levy of As. 4 per lb. as a source of revenue. This is probably in accordance with the recommendations of the Taxation Enquiry Commission which considers tea as one of the commodities on which the levy of export duty can be safely levied as a revenue-yielding measure. The Commission thus observes:

"The choice of suitable commodities for the levy of export duties chiefly for revenue purposes may be examined in relation to the items of this type already on the tariff schedule. Tea is a commodity, for example, the exports of and the revenue from which have been relatively stable. The

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Union Bank of India, Limited, as at 31st December, 1954, and also the foregoing Profit and Loss Account of the Bank for the year ended on that date, in which are incorporated the audited Returns of Kalbadevi, Rajkot, Mandvi and Surat Branches and the certified Returns from Jaipur, Jamnagar, Veraval, Ahmedabad and Calcutta Branches, and report that:—

(a) we have obtained all the information and explanations we have required and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) the Returns received from Branch Offices of the Bank have been found adequate for the purpose of the audit;

(d) in our opinion the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;

(e) such Profit and Loss Account shows a true balance of profit for the year;

(f) such Balance Sheet exhibits a true and correct view of the state of the Bank's affairs according to the best of our information and explanations given to us and as shown by the books of the Bank, and

(g) in our opinion the books of account have been kept by the Bank as required by Section 139 of the Indian Companies Act, 1913.

BOMBAY, 18th February, 1955.

WORLD CONSUMPTION OF STEEL

UNITED STATES HEADS THE LIST

GENERALLY speaking, the consumption of steel per head of the population provides a fair index of a country's progress in industrialisation. Judged by this standard, the United States, with a consumption of 1,373 lbs. per head in 1953, stood at the head of all the other countries in the world. Next in order of consumption were the United Kingdom and Sweden, with a consumption of 704 lbs. each *per capita*. The following statistics provided by the *British Iron and Steel Federation* in its latest *Monthly Statistical Bulletin* gives the apparent consumption of steel per head in a few important countries of the world:

(In ingot lbs.)

Country	Average, 1937-38	1951	1952	1953
U.S.A.	640	1,342	1,134	1,373
Sweden	532	709	777	704
Canada	336	793	782	696
United Kingdom*	493	653	701†	704
Australia‡	428	677	688	547
Germany§	300	493	661	652
France‡	239	397	524	414
Belgium-Luxembourg	353	518	518	465
Netherlands	333	417	398	447
Italy	123	165	186	191

* Adjusted for stock changes.
† Year ended 30th June.
‡ 53 weeks.
§ Includes the Saar in 1937 and 1938; West Germany only in 1951-53.
‖ Includes the Saar in 1951-53.

It is evident from the above that steel consumption per head in the U.K. in 1953 was second only to that of the U.S., for the first time in its history. Previously, the U.K. had occupied the fourth place, consumption per head being higher in the U.S., Sweden and Canada. A depressing feature of the year 1953 was that many leading steel producing countries began to feel the effects of a relaxation in demand and, in some instances, consumption per head fell, consequently, even below the 1952 level.

Stock Changes

The Federation says that, owing to lack of information, no allowance for stock changes, except in the case of the U.K., could be made. It admits, however, that, during 1953, stocks of steel were being run down in some countries and, to that extent, the figures of consumption as given above might underestimate the true level of consumption in that year.

The influences which affected the apparent consumption per head in 1953 varied from country to country. In the U.S., for instance, the recovery of the steel industry from the strike of 1952 raised the output during 1952 to record levels, although the first signs of the general business recession appeared in autumn that year. Referring to this development, the Federation says: "It has subsequently become apparent that a substantial tonnage of steel produced in 1953 was not consumed in that year but was put to stock. However, on the present basis, the U.S.A's apparent consumption per head reached a record in 1953."

American steel executives point out that the *per capita* consumption of steel in 1929 averaged 968 lbs. of finished steel. But, in 1953, it averaged as much as 1,373 lbs., which represented a gain of more than 42 per cent. This was due to increased use of steel in automobiles, highways, buildings, bridges and the like. The country's population also had increased by 40 million during the 1929-53 period, thereby enlarging the scope for the steel market.

One of the steel executives is of the considered view that the amount of disposable personal income (income after taxes) has a direct effect on the quantum of steel consumption and he goes even to the extent of saying that the recent increases in steel consumption in that country had been due, to a great extent, to this factor. If the disposable personal incomes were to increase, as many economists anticipate, a large proportion of consumer spending would become available for consumer goods that use steel, such as automobiles. For the amount of income spent on food and cloth will more or less be constant.

Apart from the U.S., the U.K. was the only major producer to consume more steel per head in 1953. The consumption in 1953 was, in fact, an all-time record. Consumption in the Netherlands and Italy also recorded increases during the year under review, as compared with that in the previous year. Barring these countries, consumption of steel was generally low in the rest of the countries of the world. Western Germany, France and Belgium-Luxembourg, the biggest producers of the European Coal and Steel Community group, all suffered a decline in steel production in 1953, reflecting the slackening of demand at home. In France, and Western Germany, however, large exports did something to cushion the fall. Sweden reduced its imports in order to allow expansion in home production. In Australia and Canada, production rose but imports were cut, the reduction being rather drastic in the case of Australia.

PRODUCTION OF DIESEL ENGINES

The production of diesel engines in India in 1954 rose by more than 100 per cent., due largely to the active assistance rendered by Government to the industry. The production aggregated 8,652, as compared with 3,716 in 1953. There has been a steady increase in the installed capacity and progressive manufacture of diesel engines in India during the past few years. In 1954, 12 units were in production and seven more schemes were sanctioned by Government. These are expected to be established in the next two years. The demand for diesel engines required for agricultural purposes in India has been estimated at about 15,000 engines per year. With the existing and the projected capacity, the entire demand can be met by indigenous production.

Although a small beginning was made long before the Second World War with the manufacture of diesel engines, the stimulus for establishing the industry on a sound basis was provided by the last war. Diesel engines have now become increasingly popular with the agriculturists for driving pumps, chaff cutters, thrashing machines, etc. They also generate power at a cost lower than other types of internal combustion engines. By 1952, five units were engaged in the manufacture of diesel engines, with a total capacity of 6,300 engines. Recognising the need for expanding the capacity and developing the industry on firm lines, the Government of India allowed the setting up of additional units. One more unit went into production in 1952, while two of the existing firms expanded their capacity. During 1953, two more units started production and one of the existing units expanded its capacity. The year 1954 saw four more units being established.

The industry has so far concentrated on the production of engines mainly suited to agricultural needs. All except two firms manufacture single-cylinder, water-cooled, slow-speed horizontal engines. The most common size ranges from 5 to 15 h.p. The other two firms can manufacture engines of 30 h.p. capacity. Some firms have now started taking up the manufacture of other types of engines as well, namely, high speed engines and multi-cylinder engines.

The total capital invested in the industry in 1954 amounted to Rs. 1,64,94,000, of which less than 10 per cent. was foreign capital. The diesel engine industry employs 2,860 persons. At the same time, the power-driven pump industry, which has a capacity of 61,000 units, employs 3,530 people. The total capital invested in the industry is Rs. 2,10,30,000, almost entirely Indian. The pump industry is now well established and is in a position to meet the entire internal demand, except for specialised chemical pumps, large pumps for water-supply undertakings, boiler-feed pumps, etc. The production of pumps in India in 1954 totalled 8,650, as compared with 3,700 in the previous year.

Along with the diesel engine industry, some of the important ancillary industries also made considerable progress during 1954. These include pistons, piston rings, piston pins, fuel injection equipment and thin walled bearings. The Government is keen on seeing that diesel engines of more than 30 h.p. are manufactured in India and is taking steps in this direction. It is also expected that some of the existing manufacturers will undertake the production of such high-powered engines.

BATTERY MANUFACTURE

Addressing a three-day conference of battery dealers, Mr. H. R. Gregson, General Manager of Chloride and Exide Batteries (Eastern) Ltd., reviewed the progress of the industry in India, since its inception, and the efforts that were being made to make the country self-sufficient in batteries. He said that it was only during the last war that the manufacture of storage batteries, on any considerable scale, was first undertaken. Since then, the industry had been steadily developing. There were in 1954 some 20 manufacturing units, their output being 180,000 units. It is true, he admitted, that some very specialised types of batteries were still being imported, but he said that efforts were being made to manufacture them, too, progressively.

Mr. Gregson considered that the principal problem facing the industry was its dependence on imported raw materials, although a sizable part of them was already being processed in the country itself. Expressing the concern of the battery manufacturers on the effect of the declining number of vehicles being registered year after year, he hoped that, when the Indian automobile industry had overcome its teething troubles, sales would present a rising curve in keeping with the country's general development.

The Ministry of Irrigation and Power, Government of India, will undertake shortly a systematic survey of electricity requirements throughout the country. The field parties will, in the first instance, operate in areas to be served by projects proposed to be taken up in the near future, extending their activities to adjacent areas as the work in each area is completed. It is proposed to cover the entire country as expeditiously as possible. This survey will be carried out periodically.

FUTURE OF INDIAN SHIPPING

REPORT OF STUDY GROUP

WE understand that the Study Group of Indian Consultative Committee of Shipowners has recommended to the Government of India a scheme for the expansion of Indian shipping in the second Five-year Plan. This scheme provides for acquiring additional shipping of not less than 445,000 gross registered tonnage. This addition is expected to cost Rs. 80 crores. Of this, the share of the Government-owned shipping company is estimated at Rs. 21 crores, the balance being the share of companies in the private sector. The Study Group has recommended that the latter companies be given a loan of Rs. 49 crores by the Government. This leaves a sum of Rs. 10 crores, which will have to be found by the private shipping companies.

It would appear that the Study Group has suggested a new passenger-cargo service from Tuticorin to Colombo. It has recommended a total of 250,000 tons for passenger service on the India-U.K. route, in addition to three modern passenger vessels of 15,000 tons each with a cargo capacity of 5,000 tons and a service speed of 20 knots. It has also pleaded for putting on sail at least one more ship on each of the Indo-Malayan and Indo-African routes, where only one ship is being run at present. The other recommendations of the Study Group include the plying of three ships of 4,000 tons each on Indo-Indonesian service, an additional passenger-cargo vessel on Indo-Persian Gulf service, two cargo ships aggregating 9,000 tons and two passenger-cargo ships on Indo-Red Sea service and the revival of Indo-American service.

It is now common knowledge that efforts are being made by the Government of India to set up a second shipping corporation which is expected to engage itself mainly in tramp trade. It will be formed on the same lines as the Government-Scindia-Eastern Shipping Corporation. Commenting on this subject, the Study Group is said to be of the view that it is opposed to giving a monopoly of tramp trade to any one company or corporation. It is believed to have recommended that, in all, 16 ships, aggregating 120,000 tons, should be acquired for tramp service on Indo-U.S. and Indo-African routes.

Opposition to Tramp Shipping

There are, however, some shipowners who are entirely opposed to giving any encouragement to tramp shipping. The prominent among them is the Scindia Steam Navigation Co., Ltd. Its views on this subject will be clear from the following extract from the speech of its Chairman, Mr. Dharamsey M. Khatau, at the annual general meeting of the Company held a fortnight ago.

"...it would be prejudicial to an early growth of a national marine, if India today proceeded to encourage tramp tonnage as a matter of definite policy, particularly as bulk cargoes of coal and ores, regularly shipped from India are generally low-rated and their normal destinations are countries from which we do not obtain dry cargo in substantial quantities. It is sometimes stated that tramp tonnage can, in due course, be promoted into liner trade, but it is forgotten that, in these days of speed, the fast liners will always outbid the tramps whose only saving factor lies in their low fuel consumption due to slow speed, which makes up for gaps in employment and voyages in ballast. Tramps are a dying breed."

Another important problem that appears to have engaged the attention of the Study Group is the acquisition of tankers. Recognising that a national fleet would be incomplete without its appropriate quota of tankers, the Study Group has emphasised the desire of the Indian shipowners to participate in the carriage of oil both on coastal and overseas routes. The Group has considered that it is essential that the Government should effectively help create conditions in which Indian shipping could, in due course of time, carry all the refined products on the coast and participate even in the carriage of imported crude oil. The oil companies have given the assurance that they would use Indian tankers, provided they are owned by the Government or a corporation in which the Government holds the controlling shares. Already, two tankers of 8,500 tons each are on order for the Eastern Shipping Corporation. One of these is being built at Visakhapatnam Shipyard. In the meanwhile, it is stated that the Government has proposed to consult oil interests to build a fleet of tankers for India. Initially, the fleet will be owned jointly by the Government and the oil companies but, ultimately, the former will assume complete ownership.

NEW PRODUCTS AND PROCESSES

Wool Wax Recovery

THE Australian Commonwealth Scientific and Industrial Research Organisation has reported progress in the commercial exploitation of a flotation process, devised recently by its Division of Industrial Chemistry, for the recovery of wool wax, or lanolin, from wool scour liquors. A number of wool scouring firms in Australia have now installed the flotation plant in their treatment works. Overseas firms have also shown interest in the process, and a large American engineering corporation has taken up a world licence for the manufacture of the wool wax recovery plant. The equipment is cheap to install and operate, costing in Australia between £A3,000 and £A4,000, fully installed. At current wool wax prices scourers, handling 6,000 lbs. of greasy wool per eight-hour day, can profitably operate the process. Recoveries of 50 to 60 per cent. of the wool wax present in the scour liquors can be obtained, as compared with 20 per cent. by usual procedures. It is estimated that up to 90,000 tons of lanolin are present in each year's Australian wool clip.

"Kitchen-on-wheels" at Railway Station

A new-design mobile food trolley, a miniature kitchen on wheels, has been introduced for the convenience of passengers at the Moghalsarai station, (India), on the Eastern Railway. Introduced as an experiment, the trolleys enable passengers to get their food fresh and crisp, straight from the oven. Built in aluminium, rectangular in size and "double-storeyed", the trolley has an arched roof to protect food from rain. Each trolley has an oven, a glass cupboard to store snacks, and a chimney which can be removed. The lower chambers of the trolley are divided into two compartments, one used as a coal scuttle and the other as a store room. Moghalsarai has also another, slightly differently built and smaller, mobile trolley which serves tea and tit-bits, has running water arrangements and a basin for washing crockery. Drums placed in the lower chambers collect the used water flowing from the basins.

Framed Miniature Paintings

A firm in Rotterdam (the Netherlands) supplies framed miniature paintings measuring 7½x7½ c.m. (3x3"), 10x12½ c.m. (4x5") and 12½x17½ c.m. (5x7"), or diamond-shaped: 12½x12½ c.m. (5x5") and 15x15 cm. (6x6"). These paintings are specially intended as souvenirs. They are made on the basis of photographs or other illustrations to be sent in by the buyers. The paintings resemble the originals closely and are valuable for those who wish to have a souvenir of any given place or region in any part of the world.

Vacuum Drier for Drying Cereals and other Seeds

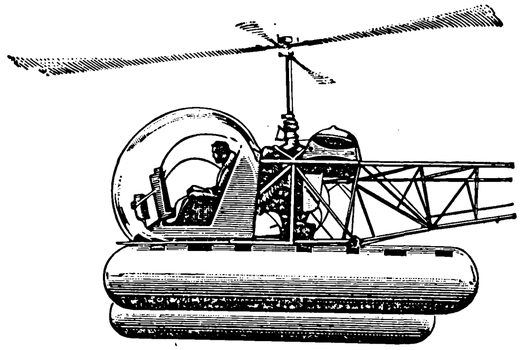
When drying cereals and other seeds, it is of great importance, with a view to maintaining the germinating power and, if necessary, the baking capacity, to keep the drying temperature as low as possible. This condition is fully met by a vacuum driver designed by a firm at Groningen (the Netherlands). This patented vacuum drier, which has already been used by some concerns, operates on a mercury pressure of a few inches only, so that the moisture is extracted from the seeds at a comparatively low temperature. The characteristic feature of this system is the intensive circulation of the seeds in the drying space, so that not only is the transfer of heat favourably influenced, but the seeds come into contact with the heating elements for such a short time that damage to the germs is out of the question. The drier, which is perfectly reliable, calls for little maintenance and is easy to operate.

High-speed Slicer

A high-speed weighing machine and slicing machine factory at De Bilt (the Netherlands) turns out an entirely new type of machine for slicing meat, meat products, cheese, bread, fish, etc. This machine has an electrically driven, rotating, hard-chromium-plated special steel blade with a diameter of 300 m.m. (11¾ in.), which is fully protected. The frame of the machine and the sliding platform are of a special aluminium alloy, which is anodized (to a silvery colour). Both parts are streamlined, without seams or sharp angles. All the other bright metal components are made of stainless steel. This renders the machine perfectly corrosion-proof and allows of very easy cleaning. Cleaning is also facilitated by the fact that the clamp plate and the meat clamp are very easy to remove. The food to be sliced is placed on the sliding platform and held by the clamp in such a way that a complete slice is cut at once. The meat table is operated by hand, so that the stroke does not become larger than is necessary. This ensures rapid and economic work. The thickness of the slice can be adjusted simply but accurately by means of a control knob. The whole machine forms a compact unit and has a base of 41x52 c.m. (16x20 in.). A grinding apparatus with accessories is supplied separately with the machine. The weight of the complete machine is 33 kg. (72¾ lbs.).

Endurance Machine which Tests Ball Bearings

Railroad engineers in the United States are expected to find out in a few days what will happen to their newly-designed ball bearings, axles and lubricants after years of hard and constant service. A machine which has been installed in the Research Centre of the Association of American Railroads, at Chicago, can produce the combined long-term effects of load, speed, lubricants and temperature on the wheels and wheel fittings of railroad cars.



it's a BIG job... flying for oil

Have you ever seen a Whirlybird? Or a Helicopter, to give it its proper name? At the Assam Oil Company's helicopter base in Digboi an Indian pilot and his mechanics specialize in this new branch of aeronautics.

In the rough jungle country where the Assam Oil Company is engaged in the never-ending search for new sources of oil, helicopters are invaluable. They can land straightaway in places where it would take months to prepare airstrips for conventional aircraft. They can even come down on water or swamp, when fitted with rubber floats.

What are they used for? For fetching and carrying, mostly. Much valuable and expensive equipment is used by the oil prospectors. Helicopters move this equipment quickly and safely, wherever and whenever it is wanted.

Helicopters are expensive "vehicles" of course. In fact the Assam Oil Company spends crores of rupees just in looking for oil. And the company intends to spend more—so that India's vital flow of oil may be supplied to an ever-increasing extent from India's own resources.

TAX PROBLEMS OF LIFE INSURERS

ENQUIRY COMMISSION SUGGESTS WITHDRAWAL OF EXEMPTION TO CO-OPERATIVE OFFICES

LIFE insurance offices have, on the whole, some reason to welcome the report of the Taxation Enquiry Commission. The Report, which was released last week, does not, of course, propose any special tax relief for life offices. But this should not by itself cause regret, for they should not overlook the fact that, whereas the Commission has recommended increase in tax burdens on many sectors of the economy it has not suggested any increase in taxes on insurers. Rather, they might well derive some satisfaction from the fact that it has urged the need for raising the maximum amount for abatement in respect of insurance premia and provident fund contributions. Also, insurers will welcome the general reduction in the rate of corporation tax applicable to the first slab of profits in respect of all companies, which the Commission has recommended. This recommendation applies to insurers also. Co-operative insurers will, however, regret the Commission's recommendation that the exemption from tax, a facility which they now enjoy, should be withdrawn, but the grounds on which the Commission has supported its case are convincing.

Briefly, in assessing life insurance companies, the law requires that the assessable income is to be computed at the higher of the two following figures:

(1) Gross external incomings *less* management expenses or (2) annual average of the valuation surplus disclosed by the last valuation made under the Insurance Act after deducting a part of the surplus paid to or reserved for or expended on behalf of the policyholders. This part, which was originally 50 per cent., was raised to 80 per cent. in 1953.

Since 1943, the rates of tax for life insurance business, as fixed by the Finance Acts, have been lower than for other businesses. The reduction in rate has, since 1951, taken the form of an abatement of corporation tax at the rate of two annas in the rupee on the profits of mutual life insurance business, and of As. 1½ in the rupee on the profits of other life insurance business. Insurance companies had represented to the Commission that a ceiling should be fixed for rates of tax on life insurance business, at levels substantially lower than on other business. But insurers, as the Commission observes, already have the benefit of special lower rates. It adds:

"The position in this country in the matter of tax differentials compares favourably with that in other countries. The pitch of taxation does not appear to have exercised any distinct restraining effect in relation to the growth of life insurance business. We have recommended a reduction in the rate of corporation tax applicable to the first slab of profits (of Rs. 25,000) in respect of all companies, which reduction will also apply to insurance companies. We do not consider that a further reduction in the rates of tax, or a further increase in the present differential in favour of insurance companies is justified."

Insurers have been urging that, where the assessment is made on the basis of a valuation surplus, the full amount of surplus reserved for policyholders should be allowed as a deduction. The main argument that has been put forward in favour of this proposal is that the premiums are calculated with reference to certain assumed rates of mortality and interest, and that the bonus is only a return of the excess amount. Secondly, it is pointed out that the full amount is admissible as deduction under the law in the U.K. Referring to the first argument, the Commission cites the opinion of the Income-tax Investigation Commission which held that the surplus has two elements, one arising from the specific load on premiums on participating policies and the other derived from favourable rates of mortality and interest; that the former should be allowed as deduction and the latter treated as a return on premium. Insurers, on the other hand, claim that the entire load represents the policyholders' contribution. In this connection, the Commission says: "This argument confuses the position of the company with that of the policyholder. Even if the policyholder were treated as having a right to the bonus represented by the load, the question of treating any excess or loss can only arise in his assessment; in practice, the question does not arise, because no part of the bonus is treated as taxable profit."

As regards the argument based on the tax procedure in the U.K., the Commission says the anology is "misleading" because, in actual practice, the British insurers are generally assessed on the "investment-income-less-expenses" basis. The Commission adds that, in India this basis would show low profits or a loss since the expense ratio is high. At the same time, the valuations reveal a surplus which enables the companies to declare bonuses. "This shows," says the Commission, "that a considerable part of the surplus comes from favourable mortality and interest rates." It has, in effect, held that there is some basis for differentiating between return of premiums and return on premiums. Also, it believes that the existing allowance of 80 per cent. is on the whole quite fair and that no increase in this proportion is necessary.

Mutual Companies

As regards the claim of mutual insurers for exemption, from tax, the Commission has drawn attention to three considerations. In the first place, the distinction between mutual insurers and proprietory insurers is very small. After all, proprietory insurers distribute only 7½ per cent. of the surplus to shareholders. The fact that the board of directors of a mutual insurance company consists solely of representatives of policyholders is "hardly relevent for the purposes of taxation." The average sum assured per policy is not significantly lower than for proprietory companies, so that it is not established that policyholders in mutual insurance companies come from lower economic strata. Secondly, mutual insurers already enjoy an advantage as compared with proprietory companies in respect of the rate of tax. Thirdly, mutual insurers derive an advantage through the fact that there are no shareholders. When assessment is made on the valuation surplus basis, 80 per cent. of the portion reserved for policyholders is allowed as a deduction. In a mutual company, the entire surplus belongs to policyholders since there are no shareholders. The taxable income is accordingly lower in the case of a mutual company. In view of these considerations, the Commission has held that no further tax relief for mutual insurance companies is called for.

The complete exemption enjoyed by co-operative insurance societies, according to the Commission, is "fortuitous." This relief is not available to other insurers, nor to co-operative societies doing other business. It gives them a competitive advantage as compared with other life insurance companies, though "there is no essential difference in the method of working." Accordingly, the Commission has recommended that the "present exemption in favour of co-operative insurance companies should be withdrawn." This is now sought to be done through a suitable amendment of section 2 and section 4 of the Income-tax Act. Such an amendment forms part of the Finance Bill now before Parliament.

All insurers, whether proprietory, mutual or co-operative, will welcome the Commission's recommendation in respect of the abatement from tax for insurance premiums and contributions to provident fund. At present, the maximum amount of life insurance premiums *plus* contribution to provident fund in respect of which abatement is admissible is limited to one-sixth of the total income or Rs. 12,000 for a Hindu undivided family and Rs. 6,000 for any other assessee, whichever is lower. There is an additional restriction to the effect that the amount of premiums on which abatement is admissible should not exceed one-tenth of the sum assured on each insurance policy. The Commission is convinced that the relief covering insurance premiums and provident funds is "one of the most appropriate means of promoting personal savings." Accordingly, it has recommended that the maximum amount for abatement may be increased from one-sixth to one-fifth of the total income, subject to a maximum of Rs. 16,000 for Hindu undivided families and Rs. 8,000 for other assessees, and that the present limit of 10 per cent. of the sum assured for the insurance premium on each policy should also continue. The Commission's recommendation falls short of the insurers' demand (for raising the maximum limit to one-fifth of the total income, subject to a maximum of Rs. 20,000 for Hindu undivided families and Rs. 10,000 for other assessees). Even so, the Commission's proposal which forms part of the Finance Bill (as a suitable amendment to section 15 of the Income-tax Act) seeks to effect an improvement on the existing position.

BOMBAY STATE INSURANCE FUND

The budget memorandum presented by the Government of Bombay to the State Legislature at the recent budget session gives details of the working of the State Insurance Fund. This Fund, it may be mentioned here, was constituted in August, 1951. It is intended to serve as a common insurance fund which would act as an insurer for all Government commercial and industrial schemes. The Fund is governed by the following general principles:

(1) Industrial and commercial undertakings run by the Government including all State trading schemes, will provide for adequate insurance of their property in accordance with the practice prevailing in private commercial and industrial undertakings. (2) Property held by the Government and included in clause (1) above will continue to be uninsured and any damage to such property will be met from the ordinary revenues to the extent necessary and possible. (3) The premia payable in respect of property in clause(1) will be credited to a separate fund and will be included in the working expenses of the appropriate undertaking. (4) Damage covered by the insurance thus provided for will be met from the Insurance Fund. (5) Government property will not be insured with private insurers. But where the risk involved is of such a nature that it is considered that the Fund should not carry the risk, the officer in charge of the Fund will, with the previous approval of the Government, take out the necessary policy with a private insurance company (this will usually be the Indian Insurance Companies Association Pool) and pay the premium out of the Fund.

The working of the State Insurance Fund in 1953-54 (actuals), in 1954-55 (revised estimate) and in 1955-56 (budget estimate) is given below:

(In lakhs of rupees)

	Accounts 1953-54*	Revised estimate, 1954-55	Budget estimate, 1955-56
Opening balance	25.28	22.88	29.71
Receipts	11.28	9.54	4.97
	35.56	32.22	34.68
Disbursements	13.68	2.51	2.48
Total ..	22.88*	29.71*	32.20*

* Includes Rs. 10 lakhs invested in securities.

The two hurricanes, which occurred in August and September, 1954, in the U.S., according to the *Review*, are estimated to have cost $128 millions; no less than 745,000 claims were made on the insurers. The third wind-storm of October, 1954, was far more serious; the loss is estimated to have amounted roughly to as much as the other two combined, giving a total hurricane loss for the year of $276 millions. It is stated to be the heaviest loss that has ever fallen on the insurance market.

ANNUAL GENERAL MEETING OF INDIAN MINING ASSOCIATION

MR. J. W. N. BALDOCK'S LUCID ANALYSIS OF PROBLEMS OF COAL INDUSTRY

FRESH SURVEY OF EXPANDING INDUSTRIES' REQUIREMENTS OF COAL ADVOCATED

THE several urgent and vital problems confronting the coal industry in India, which have their effect not only upon the industry itself but also on the country's economy as a whole, were lucidly analysed by Mr. J. W. N. Baldock, Chairman of the Indian Mining Association, in the course of his address at the Annual General Meeting held at Calcutta on 4th March, 1955. Mr. Baldock drew pointed attention to the growing inadequacy of the margin between the cost of production and the controlled selling price of coal. He also warned that, at this rate, the production of coal was not likely to increase at a rate which was necessary to meet the requirements of the expanding industries. In this connection, he suggested that a fresh survey should be undertaken to assess India's requirements of coal in five to ten years' time. He also gave an impressive account of the various impediments which hampered the full mobilisation of the private sector's resources for implementing the country's development plans. Fear of nationalisation, multiplicity of controls, inadequacy of rail transport, high cost of stowing, the anomaly of the basis of financial assistance given for stowing, the delay in hearing disputes with colliery labour, etc., were among the problems referred to by Mr. Baldock.

The following is the full text of Mr. Baldock's address:

"GENTLEMEN,

"On the occasion of our annual general meeting in the past, it has been customary for my predecessors to engage in a review of the affairs of the coal industry for the past year. On this occasion, however, there are so many urgent and vital problems immediately ahead of us that I propose to devote a greater part of my time this morning towards the future.

"I make no apologies for stating once again, and at the outset of my remarks, that the affairs of the coal industry are in a state which is far from healthy. A year ago, your Chairman said that the most immediate and vital problem with which we were faced then was that of the inadequate margin between our costs and the controlled prices at which we are allowed to sell our product. The position today is worse than it was a year ago and it is common knowledge that there are many companies which are now working at a loss. We have repeatedly drawn the attention of the authorities concerned to this serious state of affairs, but I am sorry to say that it seems that our submissions go unheeded.

Margin Shrinking

"The margin between our costs and our selling prices has been steadily reduced for many years and the reasons for this reduction are well known to you all. Prices were fixed on the basis of production costs in 1947 and have since then been statutorily reduced. Costs, on the other hand, have steadily increased and the stage has now been reached where further burdens cannot be imposed upon the industry if it is to survive at all.

"From another platform, two months ago, I referred to this unhappy state of affairs and I tried to point out the effect which it was having upon the industry and upon the country's economy as a whole.

"I said then that production was falling and, in spite of the fact that figures have since been published to show that production in 1954 was slightly higher than in 1953, the point which I tried to make then still holds good. Production is not increasing at the rate which our Government's plans require that it should and I should be failing in my duty if I were not to utter another warning. Unless something is done, and done quickly, to put matters right, production is not likely to increase at the required rate and, when further industrialisation has come about, much needed coal may not be available.

"I suggest that a new survey should be undertaken now of the requirements of our expanded industries in five and ten years' time and of the plans which are being made to meet these needs. This survey should be made by a small committee of experts, on which coal producers are adequately represented, so that they may put forward their plans and give frank expression to their views.

"The private sector of the industry, as represented by this Association, has the strongest possible desire to play its full part in the industrial development of the country and is capable and eager to do so now. We fear, however, that there are a number of impediments which prevent the full mobilisation of the private sector's resources behind the country's development plans.

"Hanging over us is the shadow of nationalisation with its attendant fears and uncertainties. I do not propose to dwell on this subject since our views are already well known, but I do maintain that a clear announcement of the Government's policy with regard to nationalisation is immediately essential, if much needed development work is to be encouraged.

"Apart from this fear of nationalisation, there are many other hindrances which seem so unnecessary in the larger interests of the country.

Multiplicity of Controls

"I will refer first, gentlemen, to the multiplicity of controls with which the industry is beset and which, I regret to say, increase almost every day. We are hedged in by severe restrictions in every sphere of our operations and the time has come when a halt must be called to the increase in the number and the scope of these controls. We cannot open new mines without approval and we cannot close uneconomical pits without similar approval. We are not allowed to exceed production quotas set for us by the Coal Board in the case of metallurgical coal. We cannot despatch a single wagon from our collieries without a sanction from the Coal Commissioner's Office. In fact, I cannot think of any phase of the normal operation of a colliery company that we are allowed to undertake without some form of approval from our Controllers. Moreover, it seems to me that the main object of control has been lost sight of and that it is now being applied more in the sense of direction and, I would even say, interference than in the sense for which it was properly intended.

"A most disturbing feature of the controls from which we suffer is the fact that many of them are sought to be imposed without prior consultation with the industry. One would have thought that it was normal prudence to seek the advice of the people who know before introducing measures which vitally affect the running of the country's basic industry. Unfortunately, this has not been done in several recent cases and we do feel most strongly that we are entitled to be consulted before decisions are taken which, in most instances, have very far-reaching effects. Above all, we ask that control, if it must be exercised at all, should be applied in a realistic and businesslike fashion.

"We, in this Association, have for a long time advocated the decontrol of distribution. We feel that some control over prices must remain if the industry is to retain that measure of stability which it has attained in recent years and if the wage-price structure is not to be destroyed, but we also feel that present-day conditions warrant the abolition of distribution control and the petty unnecessary restrictions which go with it.

"Whilst on the subject of controls, I must refer to a particular aspect which causes us considerable concern. This is the concentration, in the hands of one Government official, of the administrative functions of the Chairman of the Coal Board, the Coal Commissioner and the executive head of the State collieries. Let me say here and now that our complaints in this respect are directed against the system and certainly not against the present incumbent of these offices with whom personally we have no quarrels.

"I maintain that it is indefensible that the functions of the head of the State collieries should be performed by the same official as holds the post of Coal Commissioner. It is well known that the interests of the State collieries and those of the market collieries frequently diverge and it is utterly wrong that an official, holding the powers of the Coal Commissioner, should also be the executive head of the State collieries and, when the two interests are at variance, be the judge in his own case.

"It is equally wrong that this same official should also be the Chairman of the Coal Board and there is no doubt that a division of powers and responsibilities is urgently needed.

Composition of Coal Board

"The composition of the Coal Board, too, is a matter to which I would like to refer. It is composed entirely of Government officials with the Coal Commissioner as Chairman. The private sector of the industry can participate in the Board's deliberations and decisions only through the medium of Advisory Committees, whose powers are not mandatory and whose advice may or may not be accepted by the Board. We have complained repeatedly, and unfortunately in vain, about the composition of the Board. Certainly, in its present form, the Board is but a pale shadow of the National Coal Commission which the Indian Coalfields' Committee of 1946 recommended as an overall authority for the coal industry; that National Coal Commission was to involve the active participation of the private sector of the industry and it was welcomed and strongly supported by the private sector as probably the best answer to the administrative problem. The Coal Board today, however, bears little resemblance to the body which the 1946 Committee had in mind, and with all due respect to the abilities and qualifications of the gentlemen who constitute the Board, it is difficult to see why the Government refuses to avail itself of the accumulated experience and knowledge of the industry itself in such complex matters as confront them today.

"I would urge the Government very seriously to consider the reformation of the Coal Board. It should include representatives of the private sector in its memberships; it should be an independent body, divorced completely from the office of the Coal Commissioner and the State collieries and it should be under the chairmanship—as envisaged by the 1946 Committee—of an independent person of the status of a High Court Judge.

"In addition to the administrative measures which I have referred to as being necessary for the full utilisation of the private sector, I feel that a new psychological approach might also contribute to the removal of a host of misunderstandings. We maintain that the private sector must be recognised as having an honourable part to play, within its own field, in the development of the country's economy and that, having demarcated its place in the overall industrial pattern, the Government should allow it to function with the minimum of interference.

"I have so far been dealing with fundamental issues, but I feel that I must mention some of the other problems with which we are confronted today.

"There is the depressed state of the industry, to which I have referred, consequent upon the steady and substantial reduction in our profit margin. Until the industry is permitted to return to reasonably prosperous times, this depression is bound to remain. In such a state of affairs it is not surprising that it is difficult to attract capital which might otherwise be easily available for badly needed development work.

Inadequacy of Rail Transport

"Another important factor which is affecting the development of the industry is the malady from which we have suffered for many many years. I refer to the inadequacy of rail transport to move the coal which we produce to the places where it is required, regularly throughout the year. The railways' performance

in moving more coal last year than they did in 1953 is one which calls for our sincere congratulations. Unfortunately, however, this performance still falls far short of what is required and, in spite of improvements, I am sorry to say that our main complaints against the railways are far from being satisfied. Movement capacities to the north, west and south of the country continue to be restricted. We have received assurances from the railway authorities that everything is being done to remove existing bottlenecks, but I would urge that a much higher priority should be given to this problem than it appears to receive at the present time. In the context of elaborate plans which are being made to cater for the industrial expansion of the country, I sincerely trust that the railways will not neglect the smaller plans which, in their cumulative effect, could materially ease the transport position in a very short time.

"What the coal industry needs most in this respect is a regular supply of empty wagons to the collieries. We have been told that we cannot expect to be supplied with as many wagons in the busy season as in the slack since the country's climate alone leads to wide seasonal variations. It has been said that to provide the coal industry with all the wagons which it requires during the period from November to June would mean that many wagons and locomotives would remain idle for the remainder of the year and that such idleness would be fatal to the railways' economy. This is a point of view which commands respect, but it must be remembered that the present gap between the supply of wagons in the two seasons referred to, results in the locking up of a great deal of capital in stocks of coal at the collieries and in the expenditure of considerable sums in handling these stocks. This, in its turn, has its effect upon the country's economy in due course and I would suggest that this aspect of our transport problem should be examined very carefully. We do not expect the gap to be closed, but we do feel very strongly that much could be done to lessen it.

"A Committee has recently been appointed to examine existing pilot and depot capacities. I sincerely trust that this Committee will take up its duties expeditiously and that, as a result of its investigations, certain glaring deficiencies in this respect will be removed. There is no doubt that much needs to be done and can be done, if this very vexed problem is tackled in the right way.

Underground Stowing

"I will turn now for a few moments to mention a matter which requires the urgent attention of the Board. As the years go by, we find that more and more emphasis is being placed—by the Government and the industry alike—on the question of underground stowing. As we all know, stowing is of vital importance to the coal industry, both for the promotion of safety, and as a measure of conservation. But stowing is expensive and, if its use is to be materially expanded, it is essential that urgent attention be paid to the methods by which financial assistance is extended to the producers who are already stowing, and to those who plan to install stowing plant in the future.

"The Coal Board has stated that the average cost of stowing is in the neighbourhood of Re. 1-12 per ton of sand stowed, and that the Board renders assistance up to 75 per cent. of the cost, subject to a maximum of Re. 1-5 per ton. What has not been made clear, however, is that this cost of Re. 1-12 has been calculated according to the Coal Board's formula and bears little relation, in many cases, to the actual cost of stowing. As a result, far from receiving 75 per cent. of the expense of stowing, most concerns are receiving assistance at a rate considerably below this.

"This situation applies particularly to those who have mechanised their arrangements for excavating and transporting the stowing material. Although it is universally conceded that mechanisation is more efficient—and in the long run cheaper—the outmoded rules by which the Coal Board determines the quantum of assistance place a premium on inefficient manual methods, while the heavy capital cost of mechanical equipment goes partially unrequited. The reason for this unfortunate anomaly is to be found in the way the Board assesses allowances for depreciation, and repairs and renewals of capital equipment.

"It is the Board's practice to take the maximum theoretical designed capacity of the installation; using this as a basis, it determines the rate per ton allowable for depreciation, calculated as a percentage of the written down value of the plant. But if the plant fails, in any particular year, to reach the maximum designed capacity, the depreciation allowable is reduced proportionately. Suppose, for instance, that an installation with a designed capacity of a lakh of tons only achieves 70,000 tons, and that the depreciation due to be written off is Rs. 10,000; then the producer is paid only on the basis of Rs. 7,000, and the remaining Rs. 3,000 is lost to him for ever, because the plant's value will be written down by the Board to the full extent of Rs. 10,000. And so each year the unfortunate owner is deprived of increasingly large amounts of depreciation allowance. The same procedure is followed when dealing with the cost of repairs and renewals.

Elementary Consideration Ignored

"Now it is patently absurd to expect any machine to run continuously, week in and week out, at its maximum designed capacity. Still less can this apply to sand-stowing plant, the operation of which must be adjusted to cope with natural conditions, such as monsoon floods, poor sand deposits in the river-bed, and so on. Additionally, as such plant has to work in rugged conditions, time must be allowed for necessary repairs and major overhauls. It is for these very reasons that colliery owners install plant possessing a higher optimum capacity than they will require for continuous operation—just because they know quite well that they will never be able to run it continuously on full load. The Board has chosen to ignore this elementary consideration, with the result that operators are discouraged from pursuing maximum efficiency by installing mechanical plant.

"Another factor affecting those who have to transport sand considerable distances is the method by which the cost of aerial rope is allowed for. Although the Board admits that haulage rope, scraper rope, pipes and conveyor belts should be charged on a usage basis, it insists that aerial rope should be put on a time basis and included in the list of items subject to depreciation, which means that it is virtually impossible ever to recover more than a portion of the assistance for which this recurring item is eligible.

"It is now several months since the Board announced in the Press that the level of assistance payable in respect of sand-stowing for reasons of conservation would be raised from 75 per cent. to 85 per cent. of the admitted cost. Unfortunately, the industry does not yet know when these new arrangements are to come into force, nor have we been told what is the dividing line between stowing for safety and stowing for conservation. In actual fact, the vast majority of stowing projects fulfil both objects simultaneously. I hope that the Coal Board will accept this view, and will take early action to increase the level of assistance payable to stowing collieries, which at present are labouring at a grave financial disadvantage compared with their non-stowing neighbours.

"It would indeed be strange if, in the course of this annual address, no reference were to be made to the industry's relations with its labour force. It would be particularly strange on this occasion since so much of our time, in the past twelve months, has been taken up with labour matters.

"As you know, the All-India Industrial Tribunal (Colliery Disputes) was set up over a year ago and it is a matter of great regret to me, and to my colleagues, that so little has been achieved in so great a time. This Association has done everything in its power to ensure an expeditious hearing, but our efforts have met with no success. Many lengthy delays have occurred for none of which are we responsible and no sitting of the Tribunal has been held since 17th January. The uncertainty which prevails, as a result of these interminable delays, is another factor which has had a depressing effect upon the industry's fortunes and I appeal to the authorities concerned to arrange for the hearing to be resumed at once and to be continued without further interruption.

"On the subject of our labour's demands, let me repeat once more the Association's stand. Within our present resources, with statutorily controlled selling prices, this Association has been in the forefront with measures to improve the lot of our workers. Obviously much more could be done if the economy of the industry permitted it and if labour themselves would improve their contribution to the productive effort.

Coal Washeries Committee Report

"During the past year, the report of the Coal Washeries Committee has been published. This Report makes very far-reaching recommendations and it is a matter for regret that the Government has not yet announced its intentions in this regard. The Coal Commissioner has expressed his personal views which, broadly speaking, are to the effect that he does not favour the establishment of a Central Marketing Agency and is of the opinion that the Coal Board should confine itself to the setting up of washeries on a large-scale. We entirely agree with his views on central marketing, but require a clear indication of the Government's intentions with regard to washing. It is within my knowledge that several companies, have their plans for washeries well advanced and are keen to go ahead. Much time and considerable thought has gone into the preparation of these plans, but final decisions cannot be taken on them until the Government's policy is made known. I suggest that the Government should take us into its confidence, discuss this most important matter with us and formulate plans under which the private sector can contribute its full share towards projects which are much needed, if industrial efficiency is to be improved on these lines.

"Gentlemen, since the industry is faced with so many vital problems, it behoves us all to endeavour to our utmost to overcome them and for this purpose we look forward to working in close accord with the other Associations within the industry.

"Before I conclude, gentlemen, I want to pay tribute to the most valuable assistance which has been given to me by your Committee during the past year. Particularly, do I wish to refer to the Vice-Chairman and to the members of our Labour Sub-committees, both in Calcutta and the coalfields, who have all devoted a great deal of time and effort to the Association's affairs. We have also continued to receive very able service from our Secretariat in Calcutta and the coalfields and my sincere thanks go to all who have helped me through what can only be described as a rather difficult year."

Estd. 1906. Head Office: UDIPI (S. India)
THE
CANARA BANKING CORPORATION
LIMITED
(A Scheduled Bank)

REPORT OF THE CENTRAL BOARD FOR THE YEAR ENDED 31st DECEMBER, 1954

The Directors report that, the usual and necessary provisions having been made, the net profit of the Bank for the half-year ended the 31st December, 1954, amounted to Rs. 68,54,842-9-3 which, with Rs. 33,65,703-13-1 brought forward from the half-year ended the 30th June 1954, makes a total of Rs. 1,02,20,546-6-4.

This sum the Directors of the Bank have disposed of as follows :—

		Rs.	a.	p.
1.	In payment of a Dividend to the Shareholders at the rate of 16 per cent. per annum	45,00,000	0	0
2.	Transferred to Pension Funds	3,01,900	0	0
3.	Bonus to Staff	20,00,000	0	0
4.	Balance carried forward to the Profit and Loss Account	34,18,646	6	4
	Total .. Rs.	1,02,20,546	6	4

The Balance Sheet of the Bank as at the 31st December, 1954, and the Report of the Auditors are annexed, together with a statement of the Profit and Loss Account for the year ended the 31st December, 1954 (wherein the figures for the past half-year have been shown separately).

By Order of the Central Board,
S. K. HANDOO,
Managing Director.

CALCUTTA, *4th February, 1955.*

REPORT OF THE AUDITORS TO THE SHAREHOLDERS OF THE IMPERIAL BANK OF INDIA

We, the undersigned Auditors of the Imperial Bank of India, elected under Section 58 (1) of Schedule II of the Imperial Bank of India Act, 1920, do hereby report to the shareholders upon the Balance Sheet as at 31st December, 1954, and the Profit and Loss Accounts for the half-year and the year ended 31st December, 1954.

We have examined the above Balance Sheet (which contains the particulars prescribed by the Imperial Bank of India Act, 1920, and the Bye-laws of the Bank) and the Profit and Loss Accounts, and the Accounts relating thereto of the Central Office and of the Local Head Offices in which are incorporated the Returns submitted and certified by Branch Agents and report (i) that we have obtained all the information and explanations we have required and that they have been found to be satisfactory ; (ii) that the transactions of the Bank which have come to our notice have been within the powers of the Bank ; (iii) that the Returns received from Branch Agents have been found adequate for the purposes of our audit ; (iv) that in our opinion the Balance Sheet and Profit and Loss Accounts are drawn up in conformity with the law ; (v) that in our opinion the Balance Sheet is a full and fair one and is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us and as shown by the Books of the Bank ; (vi) that in our opinion the Profit and Loss Accounts show a true balance of profit for the period covered by the accounts ; and (vii) that in our opinion Books of Account have been kept by the Bank as required by law.

The audit of the Books and Accounts for the six months to 30th June, 1954 was carried out by Messrs. K. J. H. Hartley, B. S. Billimoria and J. S. F. Gibb. The accounts for that period have been accepted and incorporated for the purpose of the accounts for the year to 31st December, 1954.

The audit of the Books and Accounts of the Local Head Offices at Calcutta, Bombay and Madras has been carried out by Messrs. A. K. Joscelyne, B. S. Billimoria and J. Deavin respectively.

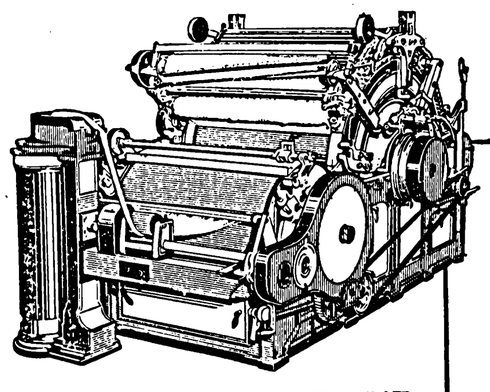
MMC revolving flat cards

are now being extensively used in Textile Mills in India. Their efficiency is undisputed, their reliability guaranteed.



Outstanding features

1 Five distinct setting points, used singly or in combination to control setting to .001 inch.
2 Johnson bronze bearings for cylinders and doffers. Roller bearings to cylinder; ball bearings to doffer and ball bearing comb box also provided as optional equipment.
3 Ball bearings to licker-in pedestals.
4 Self-lubricating 'Oilite' bearings at several locations.
5 William's patent stripping motion for flats.
6 Drop lever with new disengaging handle.
7 Fluted lap roller with positive gear drive from feed roll helps uniform feed of lap at the back with minimum possible stretching.
8 Cards can be geared for any production in a mill organization.

MATTHAI COMMISSION ON SALES TAX

DIFFICULTIES OF TRADE APPRECIATED—SIMPLE SYSTEM RECOMMENDED

[The business community expected a great deal from the Taxation Enquiry Commission in regard to sales tax, which is a source of great inconvenience to it. From a simple fiscal weapon, sales tax has now emerged as a complicated system of taxation. The forms required to be submitted by traders are innumerable and the particulars asked for are enormous. The number of authorities to be seen and satisfied is far too many. The laws and rules in the various States of India are vague. The types of sales taxes in some States are so many that they cause confusion which is made worse by the numerous exemptions. About the incidence, the little said the better; "regressive" is the word for it. In fine, sales tax is literally a headache and cause of irritation to the business houses having inter-State trade; it is a curse on consumers, a cause of great harassment to retail traders, a boon to lawyers and tax consultants. All business men were sincerely hoping that the Taxation Enquiry Commission, headed by such a distinguished economist-cum-administrator as Dr. John Matthai, would suggest a simple system of sales tax which would give great relief to them. A perusal of the Commission's report reveals that if the Governments at the Centre and in the States listen to what has been recommended, business men will not have hoped in vain. We publish in these pages a detailed summary of the 76 closely printed pages devoted by the Commission to this important form of taxation, the main prop of many a State Government.—Ed.]

NO State had a sales tax before 1938 and today few are without it. Few taxes have raised so many problems as the sales tax. It impinges on a larger number of people and interests than most other taxes. There is the consumer—the buyer of taxable goods—the seller, from whom it is collected, industry on which it has various repercussions and the State Governments anxious to secure optimum revenue but confronted with large and growing evasion. There is also the problem of co-ordination between the different States within the framework of the Constitution.

Sales taxes raise a number of problems. There is the problem of collusive evasion between consumer and trader. There is the problem of the trader collecting the tax and not paying it to Government. There is the problem of the complexity of requirements placed on the dealer. Industries interested in buyers all over India have a grievance in the lack of uniform rates and regulations. The State Governments face an almost intractable problem of evasion.

Suggestions regarding sales tax have ranged somewhat widely; some have suggested centralisation, others a uniform multi-point tax, a single-point tax by all State Governments selective sales taxes and the adoption of the device of a purchase tax.

A sales tax should be distinguished from a purchase tax. Both could be levied by the States but only on goods except newspapers. A sales tax is levied on the seller in a transaction of sale-cum-purchase while a purchase tax is levied on the purchaser. When the tax is assessed on the turnover of the sales of a registered dealer, it is a sales tax, while, if collected on the turnover of the purchaser, it is a purchase tax. Where the article bought is conspicuous and readily traceable, as, for example, a motor car, the purchase tax can be collected from the private buyer. Apart from this, the purchase tax is confined usually to the dealer.

Turnover Tax

The turnover tax is used to describe the sales tax in some States. There is, however, no special characteristic of a turnover tax, which, in systems developed in India serve to distinguish it from the sales or the purchase tax; it merely describes a practice of convenience, which has been adopted. Sometimes what is emphasised by the use of the word "turnover tax" is that the sales tax concerned is of a general type. The distinction is best conveyed by another term, which has come to be used, namely, "general sales tax" as distinguished from "selective sales tax."

There are two varieties of the general sales tax, the multi-point and the single-point. There is also a double-point tax, designed to keep control over the total amount of tax, which might have been added. Single-point and double-point taxes are usually levied at relatively high rates. A large number of exemptions is usual and the term "incidence controlled" will be broadly descriptive of the single-point and double-point systems. The multi-point system is not incidence-controlled in structure or purpose; the rate is relatively low and exemptions few.

A system of registration is necessary in either instance. In an incidence-controlled system, an important requisite is that the class of the registered dealer should be able to maintain the necessary accounts.

In the multi-point sales tax, the dealers are registered, but each pays the tax irrespective of the preceding or succeeding dealer. This makes for relative simplicity of accounts, fewer exemptions and more numerous registered dealers. The rate is also substantially lower than under the incidence-controlled system.

The term 'sale' has been defined in a number of reported judgments in the courts of law. The actual meaning attached to the word in the Acts of different States varies. In Madras, Mysore, Travancore-Cochin and Hyderabad, 'sale' means transfer of property in the course of trade or business. West Bengal and Delhi define 'sale' as transfer of property in goods for money consideration. According to the Acts of certain States, a sale is deemed to have taken place in the territory of the State if at the time the contract of sale or purchase is made, the goods are actually in those States. The term 'goods' is usually defined to include only movable property, stocks, shares and securities. In some States, the term includes growing crops, grass, trees, etc. A 'dealer' is defined in most Acts as a person carrying on the business of selling or supplying goods; other refinements differ from State to State.

The liability of a dealer is fixed on his turnover—the aggregate amount of the sale prices of the goods. Different limits of turnover are laid down in different States for fixing liability. Usually, there are two distinct limits, one for importers and manufacturers and the other for all other dealers. Limits for importers and manufacturers are usually low while for others it is high.

Exemptions

Certain sales are excluded from the purview of the tax in different States, either because of the definition of 'sale' adopted, or by specific provision, in the Acts. Among these are sales not in the course of trade or business, sales for other than money considerations, sales of immovable property, actionable claims, stocks, shares, or securities, sales of agricultural produce grown by the cultivator himself or on land owned by him and sales by dealers whose annual turnover was below the taxable quantum. Many of these exclusions are dictated by administrative considerations. Specific exemptions are granted either by the Acts or by notifications. These fall into four categories, namely, essential goods, goods already taxed, products of certain cottage and village industries and other goods. The list of exemptions vary from State to State. It is larger in the single-point States than in multi-point States.

As a rule, exemptions are fewer in multi-point States. Even foodgrains are not exempt in certain instances. Most States levy higher rates of tax on luxury goods generally consumed by the relatively well-to-do classes. The schedule of these goods differ from State to State and the rates of tax vary from 9 pies to 24 pies. In the multi-point States, the higher rate is levied at the first stage of sale in addition to the ordinary rate of tax, while, in a single-point State, the tax is collected at a higher rate and as an additional levy.

Every registered dealer is liable to the sales tax. Returns of turnover, together with the receipts for the payment of tax, have to be submitted periodically every quarter in most States. A dealer discovering an error or omission, could submit a revised return. The year of assessment is usually the financial year, though, in some States, the accounting year, according to the State practice, is observed.

Assessments are made on the basis of the returns, but, after due notice, the sales tax authority can also assess the dealers to the best of his judgment. Books of accounts and other documents can be called for and in most States, sales tax authorities have the power to enter into and search premises of the dealers and their godowns, seize and detain books of accounts, documents, goods, etc. Assessments can be reopened. For small dealers, several States provide a scheme of composit— under which the amount of the tax is determined on the basis of taxable purchases.

Against assessment orders, the dealers have the right of appeal or to seek revision by higher authorities. In some States, semi-judicial appellate tribunals exist. In others, Boards of Revenue or Financial Commissioners function as the final appellate authority. A reference can be made to High Courts on points of law.

Offences against the sales tax laws are punishable with fine and in some States with imprisonment. Most States provide for composition of offences by payment of prescribed amounts.

In most States, administration is in the hands of a separate department; in some, additional duties have been allotted to such departments. In most States, assessment work is done by officers of gazetted or senior rank. Appellate and assessing authorities are different in most States. A few States have advisory committees consisting of representatives of trade and industry to serve as a liaison body between the administration and the taxpayer.

Development of Sales Tax

A selective sales tax was first introduced in 1938 in Madhya Pradesh in the form of a tax on petrol. The general sales tax dates from 1939, when Madras introduced the multi-point system. Bengal adopted a single-point system in 1941. The Punjab also introduced a multi-point tax that year. In 1944, Bihar followed the single-point system of Bengal. Five other States introduced a sales tax between 1946 and 1948. Bombay, Assam, Madhya Pradesh and Orissa, adopted the single-point system and Uttar Pradesh the multi-point system but with significant modifications. Since April 1948, the remaining States, including almost all the Part B States, have introduced the sales tax, some adopting the multi-point system and others the single-point system. Purchase taxes have been introduced to a limited extent in different States and the models originally introduced have undergone substantial modification in various States. The exemption lists vary widely as do the levels of turnover at which dealers are licensed or registered.

The main features of the tax as they developed in the various States make it clear that, along with the growing complexity of the system, there has grown also the need for all-India co-ordination. Prompted by revenue needs, the States have started levying taxes on exports. Some States have so defined the term 'sale' as to include all sales of goods actually in their territories, irrespective of the place where the contract of sale takes place. Some of the measures also involve the taxation of raw materials and goods entering into inter-State trade more than once. In October, 1948, the Government of India convened a conference of Finance Ministers of States at which a committee of officials was appointed to investigate the possibilities of having some uniformity in the taxation of inter-State trade in certain essential commodities, which were of all-India importance. This Committee had made a number of recommendations, and while there was general agreement about the principle, no tangible results could be achieved, though a few States gave effect to the recommendations. Meantime, the drafting committee of the Constituent Assembly had also considered the question, and, although they were opposed by many States, provisions, restricting the powers of the State Governments in respect of the levy of sales tax in the course of foreign and inter-State trade and on essential commodities, were included in the Constitution. As a result of the restrictions, there is a large diminution in the sales tax revenue of several States. Because of these restrictions, there is also greater scope of avoidance resulting in an indirect loss of revenue in almost all States.

Different measures have been taken by different States for meeting the loss of revenue resulting from the provisions of the Constitution. Bombay had first changed over to a multi-point tax system and when this was found unsuitable, the State devised a two-point system. States like Bihar and Orissa withdrew exemptions previously applicable to sales of raw materials. Hyderabad imposed a purchase tax on dealers who brought the State's main exports of agricultural raw materials within its territory.

The Supreme Court gave an authoritative interpretation of Article 286 of the Constitution on appeals from Bombay and Travancore-Cochin. For examining the various representations made to them and, in particular, for considering how best the trading interests could be met consistently with the interpretation of Article 286 by the Supreme Court, the Government of India

ed a conference of officials in November. It was generally agreed at this conference that importing States could not insist upon non-resident dealers presenting themselves to get the books of accounts examined but should assess the liability on the basis of returns, deputing officers, where necessary, to get the points in dispute settled. Each State could also supply to the other States names of dealers who exported the goods and claimed exemption. As a long-term solution the proposal was also put forward that, instead of the importing State taxing non-resident dealers, a purchase tax could be levied by them in the course of inter-State trade. The reciprocal arrangement for the supply of information had been accepted by most States but not all had agreed to reciprocal arrangements regarding the introduction of a purchase tax. The position regarding this is uncertain but States have started recovering the tax from non-dealers by making them liable for registration under their own Sales Tax Acts. At first, this liability had been made retrospective from the 26th January, 1950, by some States, but it was agreed at the official conference that the tax must be recovered with retrospective effect from any date prior to 1st April, 1953.

The Constitution also enjoins it on the States not to tax sales or purchase of goods declared by the law to be essential for the life of the community except with the previous assent of the President. A law was passed in 1952 declaring as essential for the life of the community a number of goods. The object of the restriction is obviously to achieve some degree of uniformity in the tax burden of these goods and not necessarily to eliminate altogether sales tax on them. This provision has been criticised by Governments. States, which had taxed the goods before the law, are placed in a position of advantage. The list of essential goods is too wide and some of the commodities are being taxed by the Centre in the form of excise and customs duties.

Different measures undertaken by the States to adapt their systems to the growing needs and to the restricted provisions of the Constitution and the conditions resulting from them have made the system very complicated. The high rate of tax has tended to eliminate intermediates. A large number of exemptions has been necessitated even under multi-point tax system. Concessional rates have also to be given. Measures taken by importing States to exercise jurisdiction on non-residents have led to harassment.

Examination of Certain Suggestions

A variety of suggestions about the sales taxes has been made, some for enlarging the scope of the tax and others for its virtual abolition through taking over some of its functions by other taxes like customs, excise and octroi. Various systems have also been advocated for universal adoption, such as a selective sales tax, a first-stage sales tax, a low multi-point tax and a purchase tax. There is also a proposal that the sales tax should be placed within the purview of the Union.

A number of suggestions relate to the taxation of services. Services might be divided into services proper, services entering in a special manner in the making of certain articles and services forming part of total transactions inclusive. The Commission do not recommend the extension of sales tax to services proper as that would raise serious administrative difficulties. Evasion would be easy and taxes on services might be a duplication of profession taxes. Almost all the States were opposed to the extension.

Taxation of special articles, into the making of which a degree of service or skill has entered, is already being regulated by various States, some of them excluding special categories. No recommendation is made in regard to them. The position regarding the taxation of sale of goods involving both services and supply of materials is generally satisfactory. Different formulæ for varying contexts are adopted by different States.

Transactions in forward markets are more appropriately taxed through the stamp duty than by a sales tax, stamp duty should be recovered through the clearing house, which every important forward market kept or ought to be made to keep.

A tax on newspapers and advertisements will not at this stage be worth the fairly widespread opposition, which it is bound to evoke. A large variety of newspapers will, in any case, have to be exempted on the ground of hardship. The exemptions will add to the difficulties of administration and the revenue itself will hardly be substantial.

Selective sales taxes have been advocated on the ground that, in practice, the bulk of the revenue is derived from a few commodities and this would also mean a relatively small number of traders. An analysis of receipts by commodities did not support the view that only a small number of traders would be involved. Restriction of the tax to a few commodities would necessarily lead to a levy at a high rate; the incidence on the less-well-to-do classes will be higher and the tax system more regressive.

The first-point tax has been suggested in replacement of the existing system. Foreign experience is sometimes cited in support of the proposal. From the revenue point, the first-point tax will have to cover an adequate segment of the totality of sales tax transactions. This could happen only when the bulk of trade and business fans out from a few big manufacturers, importers and wholesalers. It was claimed for this system that administration would be easy as the taxpayers would be smaller in number and more capable of complying with the requirements of the tax authorities. This might be true of certain other countries but is not valid to conditions in this country. The Bombay Sales Tax Enquiry Committee, which had considered the suggestion, had come to the conclusion that there would not be much relief under it either to the dealers or to the Sales Tax Department. It has also certain disadvantages as compared with a single-point sales tax. It is not, therefore, suitable for general adoption in this country but could be used in combination with other systems and under certain conditions. The petrol tax, which, in some respects, was a variant of the first-stage tax at one point, stood in a special category, because of the organised production and distribution of petrol and the fact that it could bear a relatively high tax.

Feasibility of Multi-point Tax

The feasibility of a low multi-point sales tax in all States has also been raised. It would doubtless simplify the accounts, but a low rate would not give the States the revenue which they now derive. As a complete substitute for the existing system in multi-point or single-point tax, it is not a valid solution, though it might well play a significant role as one of the complementary features of a reorganised sales tax system.

The suggestion for the substitution of sales tax by the purchase tax is, it seems, intended to solve the difficulties arising from the levy of the tax on non-resident dealers. The suggestion that the States should levy a purchase tax on their own dealers rather than on the non-resident dealers, who had sold them, might seem attractive, but it has many serious limitations. Multi-point States, such as Madras, stand to gain more revenue from collection of the tax on non-resident dealers than by imposing a purchase tax on their own dealers. There is also the difficulty of getting the different States with different interests to co-ordinate in enabling the importing State to levy a purchase tax on its own dealers. A purchase tax is, therefore, clearly not a solution to the particular difficulties it is supposed to solve.

Superficially, the sales tax might seem similar to customs, excise and octroi, but, in its application to generality of goods, its incidence, which virtually falls in its entirety on the consumer, and its mode of collection, which is based on the responsibility of the dealer to pay, are distinguished from excise and octroi. Excise is a tax on production and not on sales or proceeds from sales. Excise duties usually have proximity to the points of production. Octroi as a tax at a point of entry into a specialised area is, in many instances, unrelated to different grades of consumption. It is collected from the consignor, carrier or consignee and not necessarily from the dealer.

By themselves, customs duties cannot replace sales tax. Many imported goods are matched by goods produced within the country and excise duties cannot be extended to all domestic industrial goods. It is, therefore, obvious that no combination of excise and customs can yield the same results in terms of revenue as a system of sales tax which, through its operation at points nearer the consumer, can take all such goods within its purview. The merit of the sales tax lies in the fact that it is dispersed over a large number of goods and of dealers making possible substantial revenue from a comparatively low rate of tax. Even if levied centrally, it will not be a superfluous item in the tax system, which can be conveniently replaced by a combination of excise, customs and octroi. A change in the present system of sales tax on the lines suggested will not constitute a solution to the problems created by the working of the sales tax within the context of the existing Constitution.

The future of the system of sales taxation demands decisions on major issues of policy. The most important issue is the place to be accorded in that system to the Union and the States. Expressed tersely, the States cannot do without the sales tax and, in terms of two or more States, sales tax cannot do without the Union. There is an insistent need to give a place to the Union in the system. That place is the whole sphere of inter-State sales. The inter-State sphere of sales taxation is occupied by constitution rigidities, instead of by law and administration that could adapt themselves to changing needs. The law and administration in inter-State sphere should formally and effectively be with the Union. In actual practice, the administration should be delegated to the States. The revenue, inter-State and intra-State, should wholly devolve on the appropriate States. In the inter-State sphere, the State should be free to develop systems suitable to their varied conditions. "There will then be,' to quote the Commission, "in each State a system adapted to its own needs and for the whole of India a composite one in which effective co-ordination will be possible between State and State and between the States and the Union. This . . . is our main finding compressed into terms of which further explanation is necessary and will in due course be given."

The grounds of comparison of trade and industry against the sales tax are twofold. The effects of the tax on internal trade and its effect on inter-State trade. The burden of tax compliance is on the trader. There is thus an agitation against the system and a clamour for its replacement. Opposition mainly comes from retail merchants obliged to maintain various accounts. Opposition also comes from consumers, who directly feel the burden of a high duty; also from the trading community at large on the ground that a multi-point tax involves a reduction in the trade links among manufacturers, importers and retailers, causing diminution of business and unemployment. Measures taken after the Supreme Court judgment have made matters worse for the traders. In consequence, interests representing trade, industries and commerce have demanded the centralisation of the sales tax. But this has been strongly opposed by practically all the States.

Elasticity Must Remain

Sales tax has become an integral part of the State systems, which would be dislocated if so important and flexible an item were taken away. The chief characteristic of the sales tax is its elasticity as a fiscal instrument, enabling State Governments to adapt and modulate it in its application to widely differing conditions in different States. Grades of consumption as well as classes of dealers differ widely from State to State. "This elasticity must remain," observe the Commission, "if the sales tax is to remain. Centralisation of the tax must be ruled out if only on the ground that it is inconsistent with the preservation of the elasticity."

Grades of consumption, as well as classes of dealers, differ from State to State. Difficulties confronting tax administration are common to most States but they vary considerably from State to State and, taken together, present a large, and almost bewildering variety of problems. It will be almost impracticable for any departmental agency of the Central Government to administer the tax. What is specially important, it will be hardly possible for legislative and rule-making power located in the Central Government to deal effectively and promptly with local grievances, which often needs to be remedied without delay. "Against this background," the Commission observes, "we are emphatically of the view that the sales tax cannot be transferred from the States to the Central Government."

While the tax has to be continued to be levied by the States, certain aspects have to be considered from the standpoint of the national economy. These are foreign trade, industry and commerce and taxation of goods essential for the life of the community. In regard to foreign trade, the present position under the Constitution is satisfactory and hardly any State has complained about this particular provision. Provisions relating to inter-State commerce have given rise to major complications for the trade and universal protests from State Governments. The Constitution has, in effect, laid down that the tax should go with consumption and that the exporting trade should not levy any part of it. This has led to a type of evasion by consumers and unregistered dealers of the tax-collecting States making purchases from other

States. Complete co-operation and co-ordination have in practice been lacking. There is also the difficulty of adopting a line of treatment equally applicable to single-point and multi-point systems. States which have the multi-point system in effect retained a considerable portion of the tax on inter-State transactions.

There is an important point of distinction between essentiality and inter-State trade as grounds for limiting the powers of the States. In regard to inter-State trade, the Constitutional restriction operates between the Government of one State and the consumers and dealers of another. In regard to essentiality, Parliament and the Central Government intervenes in the internal tax system of a particular State. There is logically no reason why the Central Government should not declare different sets of commodities as essential for different States. But the Central Government invariably thought in all-India terms and in the result exemption tended to concentrate itself on such goods as were of importance, not to individual States but to States generally. There has thus been a significant degree of overlapping between the logically different concepts of essentiality and inter-State trade. Besides, the Constitutional provisions do not extend to goods on which sales taxes have already been imposed. There is no reason why a State should not determine the range and rates of its sales tax, the incidence of which rested on its resident consumers and the collections of which fell on its resident dealers. "In regard to the impact of the sales tax of a particular State on the people of that State, it seems to us," the Commission suggests, "unnecessary that the Central Government should exercise, through Parliamentary legislation, a jurisdiction which, in terms of the States' own powers, is at once concurrent and overriding." The provisions that existed in the Constitution for the interference of the Central Government in regard to sales tax on inter-State transactions seems inappropriate. This will, however, be subject to the proviso that the sales tax is not of such a character as to constitute a levy on non-resident consumers. Conformity to the national economic policy is a matter which affects not only sales tax but other aspects of fiscal and economic action. The appropriate way to provide for this will be by way of proper co-ordination in economic development, including fiscal policy, and not by a special provision relating to sales tax.

Broad Considerations

The broad considerations of policy as basic for the future development of sales tax are:

the sales tax must continue to be a State tax;

the power and responsibility of the State must end and those of the Union begin when the sales tax of one State impinged administratively on the dealers and fiscally on the consumers of another State;

inter-State sales should be the concern of the Union;

sales of goods should be divided between those in the course of inter-State trade and commerce and those not in the course of such trade and commerce;

the Union's powers of levy and control should be so exercised that there is no avoidable duplication and there is incentive for co-ordination between the States;

subject to this, each State should be free to evolve the system of sales tax best suited to its conditions.

The Commission then goes on to suggest constitutional amendments necessary to give effect to the policy regarding the sale tax outlined above. In brief, it provides for Central legislation in respect of all inter-State transactions and certain transactions, whether or not inter-State, in respect of goods which are important in inter-State trade. "The Central Government will impose the tax; at the same time, Parliamentary legislation will have to provide for delegation to the States the powers of the Central Government in respect of assessment, collection, etc." There would also be a system of retention of receipts collected, subject to certain exceptions.

It is imperative that control over inter-State items of taxation should be strictly confined to a very small number of well-defined commodities of significance for inter-State trade. These should be raw materials or largely in the nature of raw materials. In terms of volume of inter-State transactions, it should be of special importance to inter-State trade and in terms of the country as a whole it should be of special importance from the point of view of consumer and of industry. Certain amendments of the Constitution will be necessary to secure this. This will provide for all inter-State transactions and certain transactions in respect of goods, which are important in inter-State trade becoming subject to Central legislation. The proposed Central legislation will specify the rate at which tax on sales in the course of inter-State trade should be levied. These rates should be comparatively low, say 1 per cent. on all articles, except on goods of special importance, on which it should not exceed three pies in the rupee. Transactions between registered dealers in one State and unregistered dealers or consumers in another should be taxed at the same rate at which exporting States taxed similar transactions within their own territories. The legislation need make no distinction between ordinary goods and luxury goods, on which the State Governments may have their different rates for internal sales.

An important aspect of the Central legislation should be concerned with the definition of the *locale* of sales for defining in detail the relative jurisdictions of the Union and the States. The relevant principles could only be formulated after an expert examination. This shou'd be done and the principles embodied in the legislation.

For regulating the State sales taxes on goods of special importance in inter-State trade, Central legislation should specify such goods and impose conditions and restrictions for the taxation of internal trade in those goods. The main condition should be that no State shall have a system of levy other than a single-point levy recoverable at the last stage of sale or purchase by a registered dealer.

Receipts on the imposition of the proposed sales tax on inter-State trade should be retained entirely by the State levying it on behalf of the Central Government, but where trade between a registered dealer in one State and an unregistered dealer and a consumer in another is taxed, the State imposing the tax should retain the portion representing receipts at the rate fixed for inter-State trade and hand over the excess to the State which received the goods. Goods exempted within a State from sales tax should be exempt from the Central levy and no purchase tax should be levied by the State on the specified goods on which a Central tax on inter-State sale has already been levied.

Coal, iron and steel, cotton, hides and skins, oilseeds and jute should be specified in the Central legislation as articles of special importance in inter-State trade. The list should not be expanded except in the light of the principles recommended and the inter-State Taxation Council should be consulted before any addition is made to this list.

States and Sales Tax

For raising substantial revenue, a general sales tax is suitable. For reaching lower-income groups, the rate of tax has to be low and the system a multi-point one. Tax compliance requirements will have to be simplified and otherwise adapted to the capacity of small dealers. Extension of the tax liability to the turnover will secure a wide coverage both in point of dealers and in point of goods. The low rate of tax will also prevent any undue rise in the cost of living of the poorer classes. For dealers at a higher level of turnover, this tax should be combined with a single-point tax. It will take some time for State Governments to effect the necessary changes and the pace of change and the length of the transition period will have to be related by State Governments to the individual circumstances of the State. Dealers with turnover of over Rs. 5,000 a year should be made liable to the multi-point tax; exceptions should be made in the case of agriculturists, who grow and sell their own produce. There should be a scheme of composition for retailers unable to maintain even the elementary accounts required to be kept. The return forms should be simple and easily understandable.

A low rate of multi-point tax would not by itself constitute an adequate system of sales tax for any State. The best method of levying a tax at a higher rate is under a single-point system, with the point of levy at the last stage of sale. If the taxable quantum were fixed at a relatively high limit, say Rs. 30,000 a year, the dealers were likely to be largely from urban areas better able to maintain accounts. The rate of a single-point tax and the taxable quantum will have to be determined by each State with reference to its requirements and circumstances. The higher rate of a single-point system should apply to goods other than those entering the cost of living of the poorer classes. It would not necessarily be uniform on all types of goods and some of the luxury articles should be subjected to higher rates of duty.

In some States, no distinction is at present made between ordinary and luxury articles. These States should impose higher rates of tax on luxury goods. States which are levying such differential rates should enlarge their luxury articles. Exemption from single-tax should be given to a few large and well-defined classes of goods, which figures substantially in the cost of living of poorer sections. An exception has to be made in the case of raw materials sold by the producers themselves. Apart from this, sales tax concessions are hardly a suitable method of encouraging particular trades or activities. Exemption should be expressed in terms of well-defined categories of goods, which both the trade and the administration can easily understand. Exemptions relating to prices of commodities, that is, exemptions which become operative only when a commodity belonging to general category is sold below a specified price, add to confusion, complications in accounts and tax evasion. States should, therefore, desist from notifying such exemptions.

One effect of a scheme of a basic multi-point tax of half per cent., with the single-point tax on higher turnovers at rates suitable to the States, should be an increase in the sales tax revenue of State Governments. The possibilities are that the adoption of the flexible pattern would mean that every State would gain in revenue in addition to achieving a simpler and more rational system. The State should also gain from the proceeds of the Central tax on inter-State transactions and from a reduction in evasion. It would make it unnecessary for States to resort to taxation of non-resident dealers. In the event of the recommendation being accepted, it would be imperative that the States should not attempt either to tax non-resident dealers or impose a purchase tax.

A considerable part of the opposition to the sales tax from trade and industry is a result of the methods of administering the tax. Allegations of corruption could not be wholly discounted. Assessments have not been prompt and arrears have, on the whole, been increasing. Prompt and rigorous steps should be taken to uproot corruption, and rules and procedures made understandable, unambiguous and capable of easy compliance. Not all the requirements of tax collection are mentioned in the Act imposing the tax and some of them are not specified even in the rules. The time allowed to trade, industry and the public to study the modifications proposed in the rules from time to time was often inadequate. Complaints have also been made that changes in the rules are frequent. The State Governments should note these complaints. Complaints in regard to the regulation of sales taxes and the connected requirements centred round exemptions, accounts and returns. Exemptions are sometimes couched in loose and often in ambiguous language. Exemptions are sometimes conditional on sales being for certain purposes or to certain classes of buyers. All this makes for difficulty; it is necessary that exemptions should be definite in scope and not dependent on conditions requiring rather an elaborate proof.

Complexity of Accounts

The complexity of accounts is another main grievance. The difficulties are generally recognised by State Governments. Many States have a scheme of composition for the smaller traders. Returns have to be made and taxes paid every quarter in most States. Such frequent submissions become an unnecessary burden on dealers dealing mainly in exempted goods. A half-yearly period for submitting returns and for payment of tax will be more suitable for such traders. The administrative powers of sales tax authorities are extensive and there is need for vigilant watch by the higher authorities over the exercise of these powers.

Assessments are in arrears in most States. Delayed assessments involve troublesome and intractable disputes. The collection of outstanding amounts would be easy if this were done shortly after the close of the year; otherwise, in many cases, they might not be recovered at all. In certain States, heavy arrears are due to inadequate staff and it is necessary to strengthen the establishment.

Inspection and investigation have not received the attention that they should. It is extremely desirable to have a separate inspection staff to detect evasion, and maintain liaison between the Department and dealers.

There is a good case for the creation of an intelligence section in every Sales Tax Department, for the maintenance of statistics about the pattern of trade, consumption, etc., in the State and assist in checking evasion by obtaining information from railways and other taxing authorities about the business of dealers. It would also greatly assist if authoritative pamph-

PAINT INDUSTRY IN INDIA

CHANGE IN GOVERNMENT POLICY NEEDED

THE Government of India, being the largest consumer of paints and varnishes in the country, it is natural for the paints industry to look to the Government for patronage and assistance. From the industry's experience of its relations with the Government, it, however, looks as though the practices and procedures adopted by the Government as a customer of the industry are far from satisfactory. As we shall see presently, they are hardly conducive to create conditions in which the industry can expect to fulfil the targets set for it by the Planning Commission. In 1950-51, the industry had, according to the Commission, an annual rated capacity of about 65,000 tons, while the actual production was far below, at 28,975 tons. Taking into consideration the various economic factors governing the position of the industry, the Commission has set a production target of 60,000 tons per annum with the rated capacity raised to 70,000 tons by 1955-56. Unfortunately, the industry has not been able to make much headway in respect of both. This is indicated by the figures provided by the *Monthly Statistics of Production of Selected Industries of India*. The rated capacity which rose to 64,800 tons in 1951 has since remained unchanged. But the actual production in the four years ended 1954 was as follows:

Year	*Rated capacity* Tons	*Actual production* Tons
1951	64,800	33,400
1952	64,800	32,172
1953	64,800	32,052
1954 (January to October)	64,800	28,852

It will be observed from the above that the actual production shows a downward trend, from 33,400 tons in 1951 to 32,052 tons in 1953. The figures for 1954 relate only to the 10-month period, January-October, 1954, when the actual output aggregated 28,852 tons. The output for the entire year, calculated on the monthly average for the 10 months, may be placed at about 34,622 tons, or 53 per cent. of the rated capacity. This is of course, more than a thousand tons in excess of the production in 1951 and shows that the downward trend has been arrested. But this improvement is no cause for consolation, for 47 per cent. of the plant and machinery still remains unutilised, and brings no benefit to the economy. Now that the budget for 1955-56 has imposed a 10 per cent. *ad valorem* excise duty on paints and varnishes, the plight of the industry which is already facing a number of handicaps will become harder. The relevant section in the Finance Bill introduced in the Lok Sabha states that paints and varnishes for the purpose of the excise levy include "all sorts in or in relation to the manufacture of which any process is ordinarily carried on with the aid of power." The section is applicable "to the excisable goods lying on 1st March, 1955, within the precincts of any factory or their premises where the said goods were manufactured or produced or in any premises appurtenant thereto, as they apply to such goods or produced on or after the said date."

In order to understand the difficulties facing the paint industry, one has only to turn one's attention to the address of Mr. G. J. M. Dyer, Chairman, Paint Federation, Calcutta, at the annual meeting of this body held on 23rd February last. The address shows that a change is needed in the attitude of the Government towards the industry in respect of its purchase policy. The Government's supply officers, after having invited public tenders, are often known to conduct negotiations outside public tenders and even for items included in the tenders. This attitude results in shaking the faith of the industry in the system of tenders and ultimately discourages manufacturers to submit any tender at all. The net outcome of this is that it gives scope for unscrupulous traders to tempt the supply officers to go in for their wares.

Another difficulty is stated to be the unhelpful interpretation of the term "delivery date" for the acceptance by the Government and payment of bills. This has resulted in heavy outstandings for longer periods, as considerable time is spent on negotiation of extended delivery dates. Again, even in regard to payment of bills accepted, the Government is not prompt. Inordinate delays, at a time when the money market is tight, cause severe hardship not only to those engaged in the manufacture of paints but also to those who supply them with materials. Further, as regards the tenders themselves, the Governmental delays in finalising the actual acceptance are stated to be very common. Besides, even after receiving approved samples from tenderers, much time is wasted on those who have not supplied approved samples. This causes delays in testing samples at the Government Test House, Alipore.

Summarising the speech of Mr. Dyer, a note issued by the Federation aptly puts the attitude of the Government as follows: "He reported irritating delays through all the successive stages of Government purchases—delay in testing samples at the Government Test House, Alipore; delay in finalising acceptances of tenders; delay caused by negotiation of extended delivery dates, which in turn was caused by the previous delays, and, finally, delay in Government's payment of bills, which, in the last instance, was felt by the supplier of raw materials, who was often greatly embarrassed. These matters affected the paint industry and had been taken up by the Associated Chambers of Commerce. Furthermore, the Federation had, in common with other organisations, submitted replies and recommendations to an extensive questionnaire from the Stores Purchase Committee and were hopefully awaiting its report."

It is to be hoped that the remarks made by Mr. Dyer will bring about a suitable change in the attitude of the officials concerned towards the industry.

It is gratifying to note that there has latterly been a great improvement in the import policy of the Government in so far as this industry's requirements are concerned. The paint manufacturers can now apply to the Development Department in Delhi for recommendations in respect of raw materials for the industry, with the result that all paint manufacturers in India are treated alike on a common basis. And import licences are now more rapidly received than had been the case formerly. However, the industry is stated to have been adversely affected by a sharp reduction in the number of licences for lithophone. Mr. Dyer says that restrictions on such imported raw materials should be introduced on a gradual basis, "since," to quote Mr. Dyer, "it is not only the paint manufacturers that are involved in changes in formulations and specifications, but also consumers whose tastes and preferences have to be re-educated to products made from indigenous raw materials." Again, we are told that the Government on many occasions imports finished paints, although such paints are available in India. This runs counter to its own policy of extending patronage to indigenous materials.

The paint industry has urged the Government to permit it to drawback import duty on raw materials used in its products exported to Near and Far East countries. The industry imports, we are told, a very high proportion of its raw materials upon which it pays an import duty of not less than 25 per cent. which manufacturers of paint in other countries do not pay. In the result, the industry's competing strength *stands impaired considerably*. Its plea for this concession deserves to be viewed sympathetically by the Government.

IMPORT AND EXPORT (CONTROL) AMENDMENT BILL

The Imports and Exports (Control) Amendment Bill, 1955, considered by the Rajya Sabha two weeks ago, was passed by the Lok Sabha also on 5th March. In the course of discussions in the Lower House, a number of suggestions was made, such as India's dissociation with the G.A.T.T., abolition of Imperial Preference, control of imports with a view to protecting industries, extension of the life of the Bill for ten years instead of five, avoidance of wastage of foreign exchange on imports of luxuries and adoption of drastic action to end corruption in the Department of Commerce.

Replying to the debate, Mr. D. P. Karmarkar, Commerce Minister, who introduced the Bill in the House, said that the Government's import policy had been influenced by foreign exchange availabilities, while, at the same time, the Government's greatest concern had been to help industry in its onward march. Dealing with corruption and nepotism, he said that licences were issued to established importers and wherever necessary the entry of newcomers was encouraged. While denying that there was large-scale corruption in the Department, he assured the House that action would be taken, if members helped, to wipe out the small percentage of corruption that might be still lurking. He said that the system of Imperial Preference had not been disadvantageous to India. Referring to the suggestion for further decentralisation of the Commerce Ministry, the Minister stated that there was already decentralisation. There was a large number of offices all over the country and the Ministry dealt with only a small range of goods at Delhi. The House then passed the Bill without any modification.

LOCATION OF FERTILISER PLANTS

CLAIMS OF BOMBAY STATE

LAST week, the Chairman of the Fertiliser Production Committee, Mr. B. C. Mukherjee, I.C.S., was acquainted with the claims of the Maharashtra Chamber of Commerce for the location of a fertiliser factory in Bombay State, preferably at Karad. Welcoming Mr. Mukerjee at a lunch party held in his honour, Mr. B. D. Garware, President of the Chamber, declared that the claim of the Bombay State for a plant was "just" for a variety of reasons. He also submitted to the Chairman a preliminary note on the desirability of starting an ammonium sulphate plant in Bombay State which deals with certain technical and economic aspects and discloses that a detailed memorandum would be submitted to him shortly.

The thesis of Mr. Garware's speech was that an ammonium sulphate or nitrate plant, based on electrolysis of hydrogen, could be easily established in the Bombay State. The principal raw materials for the manufacture of ammonia could be obtained, he said, either from coal, coke or charcoal or by electrolysis of water. But, as it was difficult to obtain coal or charcoal in large quantities at a reasonable cost, he was of the considered view that ammonia should be obtained from electrolysis of water. The power needs would be available from the Koyna hydro-electric scheme. As the cost of electricity was a determining factor, he stressed the fact that the fertiliser plant would have to be located at as close to the generating site of the Koyna Project as possible.

Should, however, an ammonium sulphate plant be decided upon, one of the important raw materials required is either gypsum or sulphur or pyrites. As the reserves of gypsum in India are limited and concentrated chiefly in the State of Rajasthan, their transport to Bombay would involve a heavy cost. Consequently, Mr. Garware preferred the import of sulphur or pyrites. On the other hand, if an ammonium nitrate plant were to be preferred, he said that it could be easily had by oxidising a part of ammonia into nitric acid and, in such a case, the problem of importing sulphur could be easily eliminated.

Mr. Garware adduced one more reason for locating the fertiliser factory in Bombay State. That was that within a radius of 50 miles in the area comprising the districts of Belgaum, Poona, Kolhapur and Satara, the annual consumption of ammonium sulphate was about 27,000 tons. If other districts like Nasik, Ahmednagar and Khandesh, etc., adjoining this area were also taken into account, the demand would be as high as 35,000 tons, even on a conservative estimate. Besides, with increase in irrigation facilities and the starting of a few more sugar factories as well as the systematic propaganda being carried out for the utilisation of ammonium sulphate, he estimated the demand to increase to as high as 100,000 tons or even more in about five or six years. In view of these considerations, Mr. Garware held that an *ammonium sulphate factory* with a production capacity of 500 to 600 tons was essential for the Bombay State.

As regards the location, Mr. Garware favoured Karad for a number of reasons. First of all, it is situated only 45 miles from the Koyna generators, and power here could be made available at 0.3 to 0.35 of an anna or even less per unit, which is considered quite economic for the manufacture of ammonia. Secondly, it is connected by the Southern Railway. Thirdly, as it is situated on the banks of the Krishna and the Koyna, plentiful river water is available. Fourthly, it is connected with a network of good roads to various consuming centres. Most of the sugar and other agricultural farms in the Deccan area are within easily accessible distance from Karad. Finally, Karad is connected by rail from the port of Bombay. If the proposal for Karad-Chiplun rail link were to materialise, then Karad would be connected with Port Jaigad. The preliminary report, referred to at the outset, says that Jaigad could initially be developed, at least as an industrial port. Karad is already connected with Goa by railway.

As a sequel to the revision of duties in the Indian Finance Bill, 1955, it has been decided to enhance the import quotas for certain items like pickers, cotton ropes, skins—tanned or dressed—certain leather manufactures, for skin, certain articles made of paper and papier mache, second-hand gunny-bags, refills for thermos flasks, and cutlery, a Ministry of Commerce and Industry Press Note announced recently.

INDIAN OVERSEAS BANK LTD., MADRAS

(Incorporated in India)
Established 1937

Through a network of branches in India, Burma, Ceylon, Malaya & Thailand and our correspondents at all important commercial centres of the world, we are in a position to offer the most complete Banking Service to Businessmen and Manufacturers engaged in the export and import trades.

How banking helps the OILSEEDS INDUSTRY

OILSEEDS and oil-bearing nuts are grown on more than 25 million acres in India, of which almost half lie in the South. From oilseeds we get cooking oil, paints and varnishes, lubricating oil and soap.

The growing of oilseeds and the extraction of oil forms a major industry in South India. Banking has greatly helped the growth of the oilseeds industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the oilseeds industry.

We at Palai are proud that so many leading concerns connected with the industry in South India employ the *complete* banking service we offer:

Current Accounts — Demand Drafts — Telegraphic Transfers — Investments — Letters of Credit — Bill Collection — Deposits — Loans and Overdrafts — Confidential Credit Reports, etc.

* * * *

If you have business interests in the South, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

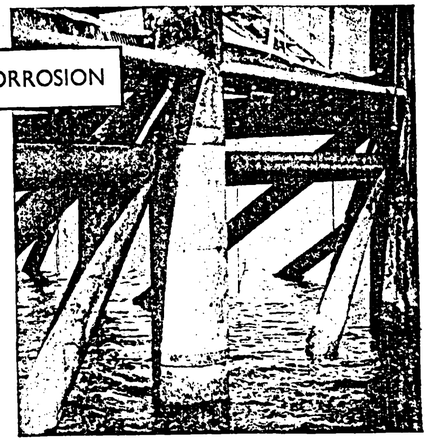
A LEADING BANK IN SOUTH INDIA

MONEL CONQUERS CORROSION



Waves and biting spray threatened this steel derrick in the Gulf of Mexico with corrosive disintegration. Built miles from land in warm sea water, the area of the piling that caught the spray and wash was rapidly losing the ceaseless battle against the corrosive sea. Then Monel sheathing was used to cover the exposed areas. For three years these Monel sheaths have been subjected constantly to attack by the Southern seas, but both the sheaths and the piles they protect are still undamaged.
If you are faced with a problem involving exposure of metals to corrosion or high temperatures, consider the Wiggin Nickel Alloys.

PROFIT OF EAST INDIA DISTILLERIES AND SUGARS SHRINKS

FINANCIAL POSITION, HOWEVER, GOOD

A SIZABLE shrinkage in the output of sugar, following a shortfall in the quantity of cane available for crushing, a fall in sugar prices, and in the sale of confectionery during the latter part of the year, have cumulatively been responsible for the setback in the earnings of the East India Distilleries and Sugar Factories, Ltd. (Managing Agents: Messrs. Parry & Co., Ltd., Madras), for the year ended 30th September, 1954. Thus, the gross profit of the Company (before providing for depreciation and taxation) amounts to only £274,082 as against £358,885 for the previous year. The net profit has dropped from £170,700 to £110,053. This decline in profit has not, however, affected the return to the shareholders, as will be explained below, but the allocation to the general reserve has been cut substantially.

The dividend on the "A" ordinary shares is as usual kept at 10 per cent. per annum. The dividend on the "B" ordinary shares, which are entitled to receive any surplus profit which is determined to be distributed after paying the 7 per cent. preference dividend and a dividend of 10 per cent. on the "A" ordinary shares, has been proposed to be paid at the rate of 15 per cent. as in the previous year. The "B" ordinary shares had, in addition, received in the previous year a special dividend of 5 per cent. and this special dividend has been raised to 12½ per cent. (already paid in December last). Out of this 12½ per cent. special dividend, only 5 per cent. represents cash distribution, while the balance has been distributed in the form of 300,000 ordinary shares of Re. 1 each in Parrys Confectionery Ltd. In other words, the "B" ordinary shareholders receive the same cash dividend (20 per cent.) as in the previous year and, in addition, are in receipt of a dividend of 7½ per cent. in specie.

The sale proceeds of the Company have declined from £2.84 million to £2.14 million. This is due mainly to (1) the smaller quantity of cane available for crushing, (2) the lower prices realised for sugar, and (3) the working of the confectionery department for only seven months before it was sold to Parrys Confectionery Ltd. The Company crushed only 254,000 tons of cane, producing 23,475 tons of sugar, as against 306,000 tons of cane crushed in the previous year which yielded 27,552 tons of sugar. The rate of recovery was, however, better at 9.22 per cent., as compared with 8.91 per cent. in 1952-53. "The shortfall in the crop of cane available for crushing during 1953-54 season," the directors say, "was the result of the reduction in the minimum price for cane fixed by the Government of India, which encouraged ryots to utilise their land for the production of alternative crops." The Government of India requisitioned 25 per cent. of the Company's production at a price of Rs. 741 per ton, thereby reducing the proceeds of sale of the Company's sugar below the free market price. In addition, the price of sugar was adversely affected by the flooding of the South Indian markets with imported sugar.

The Company's confectionery business was sold to Parrys Confectionery Ltd., an Indian Company formed for that purpose, with effect from 1st April, 1954. Up to the time of such acquisition, the confectionery department of the E.I.D., Ltd., earned satisfactory profits. The demand for the higher grade wrapped varieties is said to have increased substantially, largely due to the introduction of a new range of consumer packings.
